The basis on which renewals are negotiated has also been changed. It has been customary hitherto to scrutinise each account over a three-year period and, if the account has been unprofitable, to assess increases in premium rates on that basis. The period has now been extended to four years, with—as previously—provision for excluding an exceptional claim if it distorts the picture. The extension will not, of course, automatically favour shipowners, but it has been welcomed as realistic, as there are so many delays in these times that a three-year basis has become unsatisfactory. Shipowners are naturally not enthusiastic about the third change, which raises from £9mn to £10mn the dividing line between Category A and Category B. "A" risks have an aggregate value below that figure, "B" risks an aggregate value above it; and a larger credit balance—70% of premiums—is required in Category "A" than in Category "B"—65% of premiums—to qualify for a reduction in the rate. More business is thus brought within the range of higher penalties; but the underwriters can convincingly argue that the change is only in accord with the increase in value of ships. The main point at issue, anyway, has been whether shipowners whose accounts show very favourable underwriting results can expect concessions on renewal; and that point has been decided in favour of the shipowners.

Extension of Export Credit

In the field of export credit insurance also there has been an important development in the past month. The kind of cover provided by the Export Credits Guarantee Department hitherto only for big capital equipment has been extended to include engineering goods which, though of a capital nature, have not until recently involved long credit. These goods—such as tractors, heavy vehicles, radio transmitters, light machinery—have been confined hitherto within the Department's "short-term" range, with credit-insurance limited to six months. This category comprised "whole turnover" policies, whereby an exporter insures his whole trade (paying premiums according to the business that he declares), and "spread of markets" policies, whereby an exporter insures enough of his trade to spread the risk. Apart from big capital equipment, virtually all trade could be covered within the six-month range while the sellers' market was in force, but in a buyers' market periods up to two years are needed if British exporters are to offer terms as attractive as their competitors'. So, up to a maximum of two years, the "intermediate" engineering goods are allowed broader facilities.

The manner in which the new provisions were put forward was interesting. Official spokesmen (the Department is a Government body) were at pains to emphasise that the Government had no intention of stimulating competition in export credit. It has, indeed, consistently opposed such competition in international trade; for Britain's current balance of payments is not so strong that the country can afford to allow payment for exports to be deferred longer than is necessary. On the other hand, if credit terms are uncompetitive the payments position will suffer from a decline in export trade. So the Department has done just

enough to help exporters to offer adequate credit but not enough to encourage them to "splash credit about unnecessarily" (in the words of Mr. A. R. W. Low, of the Board of Trade). The goods now moved out of the short-term-cover range—six months—have not been put into the medium-term-cover category—with a range up to five years. The sensible compromise is further evidence that the Department is aware of traders' needs (which some traders say is unusual for a Government Department). Its services are being used increasingly and are playing a useful part in the export effort. But they are still essentially insurance; no kind of export subsidy is intended. The Department favours "whole turnover" policies, because like any commercial insurance business, it wants to spread its risks widely; so it grants lower premiums on such policies than on "selected markets" policies—which are assumed to relate to the business in which the exporter has least confidence.

With-Profit Pensions

Not all life offices have been able to report increases in their group pension business. One explanation is that many big industrial and commercial companies operate their own pension schemes; but that is not the only explanation. Some offices have not been offering quite the right kind of plan. At the annual meeting of the Scottish Widows' Fund and Life Assurance Society Mr. A. C. Blair, the chairman, said that pension provisions were being made increasingly on the basis of endowment policies in preference to group pensions combined with temporary life assurances, so that new group pension business had tended to fall away. He was able to report, however, that interest in such business had revived immediately when his society offered a plan for group pensions on a with-profits basis. It seems that this kind of proposition can give a new impetus to the insurance companies' group business as a whole.

THE MINERAL RESOURCES OF NIGERIA

GOVERNMENT EAGER TO ATTRACT FOREIGN CAPITAL

(FROM A CORRESPONDENT IN LAGOS)

SOME fifty years ago, the first geological investigations were commenced in Nigeria. The pioneering work of the Mineral Survey of Southern Nigeria, which began to the east of Lagos in 1903, became the foundation of all geological work and mining in the southern part of Nigeria and led, in particular to the discovery of lignite and coal, and to the appreciation by the Government of the value of sub-bituminous coals near what is now Enugu. The need for a firm estimate of Nigeria's coal reserves to serve as a basis for industrial development has been recognised by the Government's allocation of a sum of £120,000 for drilling on the Enugu and other nearby coalfields. This drilling, estimated at a total of 30,000 ft. was completed in 1954-55. Drilling west of Enugu has, however, been completed and the proved reserves are about 30 million tons with a probable reserve of 6 million tons. In some other divisions in the Enugu area, there are about 9 million tons of coal with a thickness of over three feet six inches. But it is unlikely that this could be mined, as waterlogged sandstones rest directly on the seam and are separated from it by only a small thickness of shale.

Further underground development has been held up by flows of ground water into the lode channels. The lead-zinc lodes in the Abakaliki Division of Ogoja Province are also outstanding. Towards the end of 1952, the American Smelting and Refining Company which held an option over the property, announced its intention to withdraw, and prospecting has been suspended for the present. While mention was made of the limestone at Uduma in Awgu Division, which was found to be thin and of no economic importance, no mention has been made of the limestone deposits at Nkalagu in the Abakaliki Division, the site of the proposed cement factories for which nearly £2 million has been voted by the Central Government and the Eastern Regional Production Development Board. Of importance to Nigeria in general is the report that this country continues to produce almost the whole world supply of columbite, the scarcest of the steel alloy metals, in the tin

mines of the Plateau Province. The current world market price of this metal is £2,080 a ton for ore containing 65 percent combined oxides.

Attracting Capital

By the middle of 1954, the Government of the Eastern Region had appointed an Economic Mission to Europe and America with the following objects: To attract investors to Eastern Nigeria for the purpose of economic development. To make contacts for the expansion of the trade, commerce and industries of Eastern Nigeria. To seek co-operation for training and recruiting technicians. To make arrangements for facilitating higher vocational education in Eastern Nigeria. The Mission visited the United Kingdom, Holland, Western Germany, Austria, the United States, Sweden, and Italy. The journey lasted for two months and six days covering a distance of approximately 26,000 miles. It received the support of the greater part of the 33 million people of Nigeria although certain factions contrived to prevent its success. The official report of the Mission will be released later by the Government of the Eastern Region.

The Mission succeeded in attracting many investors to Eastern Nigeria, made valuable contacts, obtained and secured the necessary co-operation of overseas investors and succeeded in making arrangements for the desired object. As a result the economic problems of the Eastern Region will be optimistically tackled. Subject to the advice of the newly-created Economic Planning Commission, the Eastern Region hopes to cultivate a variety of food and cash crops extensively, exploit forest products intensively, and expand its industries. In implementing this programme, the Government, it is understood will bear in mind the natural resources of the region, particularly coal, iron ore, limestone, natural gas, palm oil and kernels, rice, sugarcane, coffee, rubber, cocoa, teak, mahogany, cedar and iroko.

Increasing Employment

There is strong ground for believing that the diversified patterns of the economy of the region will produce more balanced conditions because more commodities will be produced. There will be increased employment, wages will be more stable, and prices will be depressed as a result of fair competition under State supervision. The result will be increased earning capacity and more purchasing power. The economic policy of the Government of Eastern Nigeria has been officially stated to be the reduction of the cost of living and the improvement of the standard of living of the people; when the various industries which the Mission envisages begin to operate on a full scale, they will absorb about 100,000 workers. By the utilisation of indigenous raw materials and the promotion of ancillary industries, not only will the region accumulate savings in foreign exchange, but develop skills and thereby make a fair contribution towards national prosperity. The Eastern Region's capital investments from abroad are just over £130,000. The Government is irrevocably committed to a policy of vigorous commercial and industrial expansion. Irrespective of prejudiced criticism and inspired opposition to this policy, it will not only welcome foreign investors on terms which are mutually agreeable, but will give active encouragement to local investors as well.

GOING ON LEAVE THIS YEAR?

THE NEW BASIC ALLOWANCE IS
ADULTS £750/- CHILDREN £375/-

If you need a new car for your leave investigate our "Sale & Repurchase" plan, most makes of popular cars can be supplied at short notice for permanent retention, temporary use in the U.K. or on basis of Guaranteed Repurchase.

MORE PEOPLE buy LARGER POLICIES in QUICKER TIME with the ORIENTAL

In 1954, which marked the end of the eighth decade of its history and the beginning of the ninth, Oriental afforded life insurance protection of Rs. 4,668 to someone somewhere every minute of every working day—i.e., nearly Rs. 16½ Lakhs every working day.

IN 1954

OVER 1,23,000 POLICIES WERE ISSUED
ASSURING OVER Rs. 47,50,00,000

Way back in 1874, even as its first policy was issued, the ORIENTAL adopted as its motto: HEAVENS LIGHT OUR GUIDE. Behind this motto lay the pledge—

- to foster thrift among the people, to help them conserve their savings, to ensure security for their families through life insurance—adequate for their needs and well within their means—and to invest the accumulated savings in Government and other securities that ensure the greatest good to the largest number,
- to provide **TRIPLE-PHASE SECURITY** for the savings of the people—firstly, by introducing in the Policy Contracts benefits designed to completely safeguard every rupee invested; secondly, by handing over a major part of the annual income to the official Trustee of Bombay to be held in trust for the Policyholders; thirdly, by giving qualified Policyholders the right to attend and vote at meetings of the Company,
- to secure the largest possible returns for the investment of the people,
- to maintain absolute honesty in its transactions.

By steadfastly adhering to these sound principles of working, the ORIENTAL has built up a name that is synonymous with absolute integrity, unimpeachable security and utmost honesty. As a pioneer in Indian Insurance, it has overcome the resistance arising from ignorance and economic backwardness. Its sustained growth has virtually shaped the history of Indian Insurance. And in 1954, which witnessed the triumph of the First National Plan and the Blue-prints of the Second, even as this great Nation of ours made rapid strides towards economic prosperity, the ORIENTAL, this great National Institution, standing foursquare in the forefront of Indian Insurance, recorded another year of splendid achievement by providing greater security for more families and releasing more money for greater achievement in the National economic field.

In conformity with its tradition of serving the people, the ORIENTAL now underwrites every risk that can be insured and, in doing so, it affords the opportunity to its life Policyholders of sharing in the profits of not only life but also all classes of general insurance business.

"Five wonderful years! Time to build, time to create. For my child

it will bring health, free schooling. For my family, security... may be, with
hard work, a home to call our own!"

Nearly a quarter of the funds of the Five Year Plan will be used in

increasing, improving and widening the scope of our Social Services.

Rs. 425 crores will go to raising the standard of living of the people, training 13,000
new doctors, 20,000 new nurses and midwives. By 1956, more than 60% of all
children over six years of age will be in our 2,02,142 primary schools.

This long-range planning makes manifest our faith in the future. Here, indeed, is...

a pledge to posterity

Lakhs of tons of Steel will be used to implement the
many diverse projects of the Plan. And so, in numerous
significant ways Steel will provide the foundations for
a richer, more rewarding future for our nation and
our people.

Calcutta Markets

CALCUTTA TEA SALES FAIR DEMAND FOR DUSTS AT IRREGULAR RATES

AT Sale No. 41, held on 13th April Dust offer
ings in the internal section consisted
of 17,444 packages for which there was a fair
demand at irregular rates. The medium Assam
and Dooars with useful leaf appearance and
liquors in cup, were irregular and were slightly
easier on last week's rates. Those Dusts with
different leaf and liquors were easier by 3 to 4
annas while the very fibrous end-of-season types,
were up to 6 annas easier and were at times diffi-
cult of sale. The upper C.T.C. good liquoring
Assams again showed a drop of 2 annas.

Quotations

	1955	1954
Medium Dooars Dust	Rs. 2 1 6	Rs. 2 1 0
Medium Assam Dust	2 5 0	2 2 0
Best Assam C.T.C. Dust	2 13 0	2 4 6

SUGAR MARKET

During the week ended 12th April, sugar sales
in the Calcutta market averaged 2,500 bags a day.
Arrivals were 1,500 bags daily on an average and
stocks totalled 115,000 bags. Rates for ready sugar
ex-Kantapur delivery were Rs. 30-10 for ordi-
nary grain and Rs. 31-8 for big grain. Forward
delivery sugar sold at Rs. 30-8 for ordinary grain.
The market remained quiet with prices tending to
decline.

LINSEED

The tendency of the market was quieter and
prices declined to slightly lower levels activity
was on a limited scale. Buyers were operating
rather cautiously despite lower offerings from
sellers who appeared rather keener owing to better
arrivals from the centres. The oil section was
fairly active; overseas buyers were showing some
interest; local buyers were rather reserved in an-
ticipation of lower prices. Latest quotations are
as follows: Ready Rs. 15-4 a maund; April-May
Rs. 15-2 a maund.

HIDES AND SKINS

The market was steady. Stocks were less than
in the previous week.

Bazaar Sales

(Between 5th April and 11th April, 1955)
Cowhides:—Wet salted (Ord.) 5,000 pcs. on the
basis of Annas 10-6 to Annas 12; Wet salted (Ord.)
7,000 pcs. on the basis of Rs. 12-4 to Rs. 12-12; Wet
salted (Slaughtered) 14,500 pcs. on the basis of
Rs. 14 to Rs. 26.

Goatskins:—Wet salted (Daissee, Killed) 39,850
pcs. on the basis of Rs. 225 to Rs. 250, Assam-Dinaj-
pur-Murshidabad 10,000 pcs. on the basis of Rs. 285
to Rs. 330; Purneah-Kissenganj 1,800 pcs. on the
basis of Rs. 300 to Rs. 320; Patna-Pakur 12,500 pcs.
on the basis of Rs. 200 to Rs. 225; Muzafferpore-
Patna 33,800 pcs. on the basis of Rs. 290 to Rs. 320.

Bazaar Stocks

(11th April, 1955)
Cowhides:—Wet salted 1,02,500 pcs.
Goatskins:—Wet salted (Daissee, Killed) 16,000
pcs.; Assam-Dinajpur-Murshidabad 1,00,000 pcs.;
Muzafferpore - Patna - Pakur - Purneah - Kissen-
ganj 2,23,000 pcs.

SHELLAC MARKET EASIER

During the week ended 12th April, the market
was quiet at the beginning and easier at the close.
The range of quotations was as follows:

Pure Buttonlac	Rs. 184; 182-8; 168 buyers.
Lemon No. 1 Shellac	Rs. 187 done; 176-8 done and sellers; 170 done and buyers; 165 done.
F. O. Std. 1 Shellac	Rs. 171-8 to 160-8 buyers.
Pure T. N. Shellac	Rs. 158 buyers; 158 to 150 done and buyers.
4% I.T.N. Shellac	Rs. 148 to 140 buyers.
No. 1 Kusmi Seedlac	Rs. 170 buyers; 170 done; 162-8 value.
No. 2 Kusmi Seedlac	Rs. 168-8 buyers; 160 buyers; 158-8 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 164, 162 buyers; 155 done and sellers; 147 buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 155 buyers; 150 done and sellers; 152 done and buyers.
Ord. Bysaky Seedlac (C. P.) under 5%	Rs. 148-8 to 138 buyers.
Ord. Bysaky Seedlac (C. P.)	Rs. 66-8 buyers; 66 done and buyers; 65 buyers.
Kirgelaac	Rs. 160 to 145 buyers.

NEW WORLD RAIL SPEED RECORD BY FRENCH LOCOMOTIVES

Two French electric locomotives set up a new
world rail speed record, running at the rate of 331
kilometres an hour (205.6 m.p.h.), near Lamothe,
South-West France, on 28th and 29th March. The
last world rail speed record had been established
on 21st February, 1954 by another French electric
locomotive, running at the rate of 243 kilometres an
hour (151 m.p.h.). Compared to the last record,
the new record shows a remarkable increase in
speed. The new record was established on 28th
March by the electric locomotive CC-7107, built
by the French firm, Alsthom.

COMPANY AND PUBLIC NOTICES

SHREE KRISHNA GYANODAY SUGAR LIMITED

NOTICE TO DEBENTURE HOLDERS

NOTICE is hereby given that a General Meeting
of the holders of Debentures of the above-named
Company constituted by the Trust Deed dated on the
26th April, 1944 and made between the Company on the
One Part and SHRI VISHNU HARI DAL-
MIA, SAHU SHRIYANS PRASAD JAIN AND
SHRI M. K. ROY as Trustees of the Other Part
will be held at the Registered Office of the Com-
pany at Dalmianagar on Saturday, the 30th April,
1955 at 12 noon for the purpose of considering and,
if thought fit, passing an Extraordinary Resolution
assenting to the following modifications in the con-
ditions contained in the Debentures, namely:—

- That the time for repayment of the principal
moneys secured by the said Debenture Trust
Deed be postponed from 30th April, 1955 to
30th April, 1965.
- That the rate of interest on the Debentures
be increased from 4½ percent per annum to 5½
percent per annum with effect from 1st May,
1955 as proposed by the Company and recom-
mended by the Trustees of the said Debenture
Trust Deed and empowering the Trustees
with a view to effectuating such modification
to concur with the Company in executing a
Supplemental Trust Deed in terms of the
draft which will be submitted to the Meeting.
- The principal indenture shall be construed as
if the following clause is added thereto and
numbered as clause 1A:

"The Company shall always have the option
of issuing further Debentures ranking pari
passu with the already issued series of Deben-
tures as to charge on the mortgaged assets
and on such terms as to rate of interest and
on other terms as may be decided by the Com-
pany at the time of issue subject to the face
value of all such Debentures issued by the Company
shall not at any time exceed 33.1/3% of the
cost of the mortgaged assets."

This notice is issued pursuant to the provisions
contained in Clause 2 of the Third Schedule to the
said Debenture Trust Deed.

Debenture-holders are further informed that
the Company's Managing Agents Messrs. Sahu
Jain Ltd. have agreed to purchase at par all such
Debentures as are offered to them upto 30th April,
1955. Interest in respect of coupons falling due on
30th April, 1955 will be paid directly by the Com-
pany to the Debenture-holders. Any Debenture-
holder who is not agreeable to the above proposal
and desired payment of his Debentures, may at his
option deliver the same against payment to Messrs.
Sahu Jain Ltd. either at Dalmianagar (Bihar) or
at 11, Clive Row, Calcutta, on any working day
during business hours upto the said date.

By Order of the Board,

A. K. JAIN,
Chairman.

Dalmianagar,
Dated, the 26th day of March, 1955.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. P. F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CHARTER OF THE STATE BANK OF INDIA

THE HERITAGE OF THE IMPERIAL: THE TASKS OF THE NEW INSTITUTION

THE State Bank of India has taken shape in the Bill published this week and we can now see what sort of institution it is going to be. On all present indications it will be like the Imperial Bank, only more so. The complicated re-arrangement of its ownership, which takes up most of the enactment and attracts most attention in the markets, cannot fundamentally alter the policies and abilities of the Bank. The Bill lays it down that: "The Central Board in discharging its function shall act on business principles, regard being had to public interest." As near as words can get us to the truth, this is an accurate description of the Imperial Bank's policies for many years past. Only its fanatical enemies believe otherwise. Walter Bagehot told the Bank of England in the last century that if it wanted to avoid being nationalised it must pay it back. The Government should blush to suggest that the officers and directors of the Imperial Bank—all of them public figures attached to an incorruptible institution—have been behaving since 20th December last like a gang of thieves, helping themselves to gratuities and compensation while the going was good. The suggestion is too mean to be worth discussing and too mean to be included in a Bill presented to India's Parliament.

There are in India less than 3,000 banking offices, of which the Imperial Bank now has over 400. With an extra 400 branches in five years, the State Bank will have more than a quarter of all scheduled bank offices, and it will progressively increase this fraction as it absorbs other State-associated banks in the fashion provided for in Clause 35 of the Bill. Meantime the private banks, whose branches have been falling in number, will see the best sites for new offices taken by the State Bank as it continues its programme of unlimited expansion. This is another aspect of the slow strangulation of private banking that we forecast on this page two weeks ago. The private bankers who for years past have been complaining that the Imperial Bank was too stand-offish, too exclusive, will from this summer onwards see the Imperial Bank (under another name) being the very opposite of stand-offish: they will see it gradually extending its control over the credit nexus while private banking contracts, or at most holds a smaller fraction of a growing volume of savings.

In fact, the multiplication of the State Bank's branches will almost certainly be slower than its supporters would like. The Bill recognises this possibility by saying that the time limit of five years for the opening of 400 new offices may be extended by the Central Government. Here again, the belief that the State Bank will be able to do very much better than the Imperial depends on the belief that the Imperial was not really trying. The State Bank, with subsidies guaranteed by the Reserve Bank and by the Central Government, will naturally be able to incur greater losses on new branches. But willingness to incur losses is not by itself sufficient. One of the main limitations on

has been a baleful influence on the Indian monetary economy and that its directors have been a fearful bunch of scamps. For those who are childish enough to think that, the State Bank Bill will be the dawn of a new age. But those who have entertained less extravagant suspicions in the past will have less extravagant hopes for the future.

Childish as those suspicions are, there is evidence that the framers of this Bill are not free of them. There are sections of the Bill that are disgraceful, and which Mr. Deshmukh should have hesitated to include in a piece of law dealing with an honourable institution. We refer to several parts of Clause 7 which say in effect this: If any officer or director has wronged money out of the Imperial which he was not entitled to, since notice was given of impending nationalisation, then he must pay it back. The Government should blush to suggest that the officers and directors of the Imperial Bank—all of them public figures attached to an incorruptible institution—have been behaving since 20th December last like a gang of thieves, helping themselves to gratuities and compensation while the going was good. The suggestion is too mean to be worth discussing and too mean to be included in a Bill presented to India's Parliament.

There are in India less than 3,000 banking offices, of which the Imperial Bank now has over 400. With an extra 400 branches in five years, the State Bank will have more than a quarter of all scheduled bank offices, and it will progressively increase this fraction as it absorbs other State-associated banks in the fashion provided for in Clause 35 of the Bill. Meantime the private banks, whose branches have been falling in number, will see the best sites for new offices taken by the State Bank as it continues its programme of unlimited expansion. This is another aspect of the slow strangulation of private banking that we forecast on this page two weeks ago. The private bankers who for years past have been complaining that the Imperial Bank was too stand-offish, too exclusive, will from this summer onwards see the Imperial Bank (under another name) being the very opposite of stand-offish: they will see it gradually extending its control over the credit nexus while private banking contracts, or at most holds a smaller fraction of a growing volume of savings.

When all is said and done, the State Bank of India has great possibilities before it. The strongest critics of the plan do not deny that it has its grand and inspiring side. It is a pity that an old and respected institution had to be sacrificed, and it is deplorable that the men who have run that institution had to be wantonly insulted in the legislation designed for that end. But a large-minded scheme has been launched expeditiously, and shareholders have been fairly dealt with in the process—despite the fears awakened by recent amendment of the Constitution. Even those who doubt that the State Bank will do so very much more than the Imperial was doing in this field will not seek to impugn the new Bank's credit and will join the architects of the Bill in hoping that it accomplishes some of the wonders expected of it. The institution will have every advantage that the support of the Government can give it, including the complete security of deposits that the Indian saver has learnt from bitter experience to demand. It will of course have the disadvantages of close association with Government. Rightly or wrongly, many clients are going to have less confidence in the secrecy of their dealings and it will require some experience of the State Bank's discretion and reliability

U. S. ECONOMY REGAINS GROUND LOST IN LAST YEAR'S RECESSION

OUTPUT OF GOODS BACK TO ALL-TIME RECORD LEVEL

THE business recovery in the United States made further progress in March according to the April Letter of the National City Bank of New York. After several months of vigorous advance, many people had expected the upswing to level out by this time, but industrial and trade reports have continued buoyant. Further gains have been made in automobile and steel output, on top of the high levels reached earlier. Construction activity is unabated. The tendency of improvement to become cumulative is seen in surveys of prospective demand, which show that business expenditures on plant and equipment are expanding, while consumers are planning to buy more durable goods and housing this year than last. The Department of Commerce and the Securities and Exchange Commission report that the decline in business outlays for capital goods appears to have hit bottom in the first quarter, approximately 10 percent below the peak in the third quarter of 1953, and that an upturn has begun. For 1955 as a whole, purchases of new plant and equipment are scheduled at \$27.100 million compared with \$26.800 million in 1954. Business men on the average seem to expect a 5 percent increase in sales this year. On the whole they look for better earnings, despite the effect of keen competition on margins. With faith in expanding markets, and with a high rate of innovation and technological progress, it will be no surprise if final figures on capital expenditures in 1955 are better than the forecasts. Furthermore, purchasing agents are taking a longer view on inventories and commitments. Delivery time on many items has lengthened. Consequently, needs are now being covered 30 to 90 days ahead, whereas only a few months ago most buying was in the hand-to-mouth to 30 days range. Consumers are also confident and optimistic, according to a survey conducted for the Federal Reserve Board. They feel better off financially. In particular, plans to buy or fix up homes are greater than in any recent year. Seasonally adjusted sales of all retail stores (including automobile dealers) were greater in January and February than ever before, except for last year's record Christmas season. Department stores report substantial year-to-year sales increases in March even after allowing for the earlier date of Easter. Retail automobile sales in the first three months exceeded any other first quarter on record.

It now seems likely that the nation's total output of goods and services during the first three months of 1955 has drawn even with the all-time record set in the second quarter of 1953. In other words, the gross national product is now in the neighbourhood of \$370,000 million a year. Thus, all—or virtually all—of the ground lost in last year's recession has been regained. The improvement is in real terms, reflecting gains in the volume of goods and services rather than price increases, for the price level is steady. This recovery has taken a much shorter time than most observers anticipated only six months ago. Significantly, the upswing is in private demand with a minimum of Government intervention and without the inflationary measures still being advocated in some quarters. Further encouragement is found in indications that the recovery is broadening—a necessary development if expansion is to continue. During the past six months, the upswing in automobiles, steel and construction has been the major force behind the recovery. In the next six months, support must come from other sources.

The key question is whether the advance in other lines has acquired enough momentum to sustain the rise in business activity should steel, auto, or construction activity slacken. One need not be a pessimist to see a decline ahead in automobile and steel output. Even the most bullish estimates for the full year fall short of current production rates. Passenger car output totalled 790,200 in March, an all-time record. Schedules for the second quarter call for over 2 million cars, approximately the same as the first quarter. This indicates a daily and weekly production rate close to that achieved in March. In other words, auto production is pressing against the ceiling. At best, the industry will not add anything to overall activity during the second quarter. At some point a few months ahead, whether because of labour troubles, inventory adjustments, or model changes, it is likely to be a temporary source of weakness. In early March, President Curtice of General Motors raised his estimate of 1955 domestic output and demand by nearly one-seventh to 6.6 million passenger cars, but this record level would still be a 2 million or more short of current production rates. By the week ended 20th March steel mills had pushed operations to 94.2 percent of capacity. Annual output at that rate would total 118.5 million tons, well above the 111.6 million turned out in 1953, the best year in the industry's history, and

even further above most estimates for 1955 as a whole. During 1954, 18.7 percent of all steel shipped went directly to the automobile industry. By January, 1955, auto companies were taking 26.9 percent of steel shipments.

Where opinions as to the second half-year diverge, the difference centres chiefly on the weight to be given to the prospective automobile decline. From one point of view, the longer the automobile and steel industries operate above sustainable levels the greater will be the letdown when it comes. The opposite view is that the recovery itself is generating cumulative strength as expanded purchasing power flows around the circle, and that increased business investment in plant, equipment and inventories, plus residential construction and strong consumer demand, will carry the upswing further regardless of a summer slackening. Since it is easy to find in current report indications to support either way of thinking, both optimists and pessimists can make persuasive arguments, and opinions tend to fall definitely on the bullish or bearish side. Actually, the probabilities may fall between the two extremes. The expected decline in automobile and steel output moderates any tendency to over-estimate the outlook and to carry capital expenditures and inventory accumulation to speculative extremes. Conversely, the tendency toward cumulative improvement and expansion diminishes the effect of the expected summer drop in production, which is also foreseen and presumably discounted in some degree. From this point of view, automobile and steel curtailment may check demand in other lines before it becomes excessive and builds up to a climax such as occurred in the spring of 1953. It would apply brakes not to the extent of depressing business, but to restrain over-buying and maintain fairly stable overall levels.

It should go without saying that this is the outcome to be hoped for. Total business inventories changed relatively little between October and the end of January, but the increase in new orders all along the line indicates that re-stocking is starting. As long as inventory replenishment stays in line with increased shipments and backlogs of unfilled orders, it is a normal and necessary development. But the danger of carrying such movements too far is recognised and was illustrated in 1953. Fortunately, most business men seem to be keeping a careful eye on development. To some observers, the very speed of the recovery has seemed too good to be true. They express misgivings about the high rate of housing starts, the growing burden of consumer instalment and mortgage debt, declining farm income, and scattered indications of commodity price weakness.

MR. DESHMUKH'S SECOND THOUGHTS

A BETTER BUDGET FOR CONSUMPTION

THE comment that Mr. Deshmukh has presented a new Budget for the financial year 1955-56 rather than simply an amended version of the previous one is not far off the mark. That so many changes should be required to a Finance Bill in such a short time is a remarkable reflection on the amount of careful thought and far-sighted consideration which originally went into it. But the changes are no less welcome for being unexpected and if the revenue deficit has now been doubled it is a small price to pay for the timely amendment of a number of ill-conceived measures which have threatened to cause irritation and disruption out of all proportion to the revenue they were designed to raise. The concessions on perquisites are a fair example of relief from a form of tax which would be difficult and expensive to collect, would inevitably lead to the frustrations and injustices inseparable from arbitrary assessment, would be damaging to incentive and could be expected to yield little to the national coffers. Mr. Deshmukh has wisely dropped some of the more important original items from his definition of perquisites in favour of tighter measures against abuses of the system.

Some change in the controversial amendment to Section 23A of the Finance Bill was to be expected because in its original form the amendment would have been a serious blow to the private sector. Mr. Deshmukh has reaffirmed his conviction that some measure of the sort is necessary to prevent certain forms of tax evasion, and has now decided that non-industrial firms included under the Section should be allowed to retain more than 60 percent of their profits provided they are able to convince the tax commissioner that their case is a special one. This change should provide a loophole for many deserving cases, but a great deal of discretion has been given to the commis-

sioner and the scope for arbitrary judgment remains a large one. Industrial establishments have been treated better. They will be exempt from Section 23A if the closely-held portion of their capital does not exceed 60 percent of the total, instead of the 50 percent originally proposed. They will also have the added privilege of being able to appeal against the commissioner's decision to a board of referees. These are small concessions to grant on the working of a provision of this importance, and they could certainly have been more accommodating towards the genuine grievances of non-industrial concerns. As it is, the worst trouble to which the amendment threatened to give rise should now be avoided: closely-held industrial concerns will at least now be able to build up and maintain their development reserves intact, an important provision in a developing economy.

By reducing the duties on coarse and medium cloth to pre-Budget levels the Finance Minister has gone a fair way towards meeting the criticism that his Budget was damaging to consumption. The importance of cloth in the expenditure of the poor and middle classes makes this concession among the most significant granted, and the Rs. 10 crores forfeited will be a small but useful supplement to the prosperity of India's largest industry. Both in cotton and woollen textiles discriminations against the larger and better-organised sections of the industry remain as taxes on efficiency. The reduction in the excise on sewing machines, and the consequent removal of the corresponding customs duty on the imported item, will meet the criticism that these taxes imposed an unnecessarily heavy burden on a large number of small and individual businesses.

The increases in income and surtax are about the only important revenue-raising proposals of the original Finance Bill left intact. The Budget of 28th February now emerges in a completely different light. The discouragement it imposed on consumption has been weakened, at least for the lower income groups. For the middle and higher earning classes welcome relief will be gained in the lower excise duties and the more liberal definition of perquisites. From industry's point of view there will be the temptation to regard the new excise concessions as a return to the status quo so far as consumption demand is concerned. This may prove to be the case if the newly-taxed classes maintain consumption and simply reduce their savings by the amount of the new income and surtax impositions; or if the falling price of foodstuffs, and the paper benefits of continued deficit financing, combine to offset the new burdens. When the benefits of the 25 percent rebate and the new rules governing the carrying forward of losses are considered, the Budget, as amended, is seen to be a favourable document for those industries and firms which can keep themselves outside the scope of Section 23A.

PRICE SUPPORTS FOR FARM PRODUCTS

THE Government of India's agricultural price support policy, announced a few days ago, has already had the effect of imparting a bullish outlook to the grain markets in Northern India. The effect is primarily psychological, but it points to the fact that the markets have taken the Government's announcement seriously. That in itself may be a stabilising factor in the short run. Some of the leading State Governments such as Bombay and Uttar Pradesh have already started purchasing wheat and other grains in hard-pressed areas in accordance with the price minima fixed by the Central Government. The move to set up warehouses as a long term measure, supplemented by co-operative marketing and processing, against the depression of agricultural prices, is also under way. That however is likely to take some time, as more than the mere provision of finance is involved; it will also pose a formidable administrative problem.

The task has to be accomplished nevertheless, and the sooner the better. There can be no serious disagreement with the price support policy. A reasonable parity has to be maintained between the prices of manufactured goods and those of agricultural products. Terms of trade adverse to agriculture, such as have now developed, can only depress the rural population's standard of living while increasing the real income of its urban counterpart in the immediate period, but that will ultimately diminish the total demand for manufactured goods, for which the rural population constitutes a sizable market at present, not to speak of the big market it is likely to become with the rise in rural incomes as a result of increasing money expenditure under successive plans. Yet this price parity problem begs other questions. In the first place, why is it that the prices of manufactures show no signs of falling while those of food articles and industrial raw materials have been constantly falling over the past year. According to the wholesale price index maintained by the Government of India, the average index for food articles came down to 339.8 in 1954-55 from 384.4 in 1953-54, and that of industrial raw materials to

436.2 from 467.7, but the average index for manufactures went up to 377.3 from 367.4. Even textiles, which is an article of essential consumption for the rural people, recorded a rise of 16 points to 421.

The reason clearly is the rigidity of costs due particularly to relatively high wages for industrial labour and a host of indirect taxes. If the prices of manufactured articles were lower, the price parity problem would be easier. If the rural people can buy goods from towns at cheaper prices they would surely not feel so hard hit when the value of their own products declines. Correspondingly, the Government's commitments in terms of maintaining minimum prices would be reduced to more manageable proportions in the short run as well as in the long run. The Government must therefore help industry in solving its problems of high costs, which is the Achilles heel of the Indian economy as a whole.

CURRENT COIN

Anxiety over Sugar Stocks.—Considering that he retired from the position of the President of the Indian Sugar Mills' Association only last month, Mr. Gulabchand Hirachand can be regarded as an authority on the problems of the sugar industry. One of the most urgent of these was dealt with by him in the course of his speech at the general meeting of Walchandnagar Industries Ltd. last week. He mentioned the large stocks of sugar which the industry feared it would be required to carry over into the next season. Mr. Gulabchand said this problem might assume serious proportions unless tackled in time. He pointed out that the Government already had heavy stocks of imported sugar in its godowns. In addition to this, it had also entered into large commitments for further imports during the year. Mr. Gulabchand believed that domestic production this season would show a rise of at least 40 percent over last year, and his complaint was that, while the Government was selling its imported sugar, a greater part of this production was still held by the factories. Mr. Gulabchand was of the opinion that consumption was definitely on the downgrade and he feared that, in view of the low price of gur, it was bound to show a decrease of at least 200,000 and possibly 300,000 tons at the end of the year. In efforts to dispose of their stocks rapidly, the authorities have effected price cuts which now place the indigenous product (subject to enhanced excise duty) at a slight disadvantage. It must be pointed out in this connection that imports were originally intended to make good the shortfall in production and not to compete with Indian sugar. What Mr. Gulabchand was worried about was that, with its rigid control over the release of sugar from factories, the Government might so arrange things as to compel the sugar factories to bear a substantial part of the burden of the large carry-over which would be left unless the programme for imports was drastically revised in time and a part of the commitments regarding purchases for distant deliveries liquidated. If the sugar mills are obliged to hold a substantial part of their production undisposed of, it would certainly mean great financial difficulty, both because of the locking up of their resources, and the deterioration in quality during the rainy season. Mr. Gulabchand therefore warned the authorities that unless timely steps were taken to avert this undesirable situation, the Government would be creating conditions which would again tend to reduce domestic production of sugar and perpetuate the vicious cycle of alternate rise and fall in production, which had been characteristic of the history of the industry. Further, this would have a deleterious effect on the demand from the factories for the cultivators' cane in the coming season, just at a time when strenuous efforts were being made by official and non-official agencies to secure a heavy increase in cane production. In addition to curtailing future imports of sugar to avoid a huge carry-over, it may be suggested that the proper thing would be for the Government to hold its stocks in hand as buffer stocks, to be released whenever the markets showed signs of stringency in supplies and if prices tended to get out of control. Unless a satisfactory solution to the problem posed by Mr. Gulabchand is found before the rains set in, the Government will be defeating its own purpose of increasing the production both of sugar and sugarcane.

Cotton Textile's Good Year.—In his presidential address to the annual general meeting of the Ahmedabad Millowners' Association recently, Mr. Surendram P. Huthiesing referred to the high level of production and exports of cotton textiles in 1954 which he described as "not a small achievement". There was also a striking rise in the consumption of Indian cotton by the mills. In the year, the quantity of indigenous cotton consumed reached 38.9 lakh bales. The import of foreign cotton declined proportionately to 6.9 lakh bales. Mr. Huthiesing considered this a development of great significance to the Indian economy since the saving in foreign exchange expenditure was considerable. According to his figures, total cotton imports in 1951-52 amounted to 12.4 lakh bales valued at Rs. 124 crores (he did not give 1952-53 figures), whereas in 1953-54, the value of cotton im-

ports came down to Rs. 56 crores. Larger consumption of Indian cotton was an important factor in the expansion of Indian textile exports. During 1954, exports totalled 898 million yards, well short of the 1,000 million yard target, but some 38 percent higher than the 1953 figure of 652 million yards. To stimulate exports further Mr. Huthiesing pleaded for positive action other than the establishment of the export promotion council and the scheme for re-inspection for cotton textiles meant for export. Among the measures needed to increase the competitive strength of Indian textile goods, rationalisation is an important one. He deprecated the agitation against rationalisation, which has been accepted as a desirable goal both by the Lok Sabha and the Textile Enquiry Committee. The industry at present has to work with worn-out machinery and plant which has been affecting productivity considerably. He dissented from the Kanungo Committee's recommendation that the loomage of the composite units should not be increased while spindleage should be. An increase in loomage was necessary in the case of uneconomic units, to make their operations economic. Since that is the stated aim of the Government, and since allowing the uneconomic units an increase in their loomage would not make any appreciable addition to the existing mill output, Mr. Huthiesing's suggestion is reasonable. Besides, the premises on which the Committee has based its recommendation to expand handloom output are of highly doubtful economic value.

Heavy Electrical Plant.—The project to manufacture heavy electrical equipment in the public sector was in conflict with the expansion programme of the private sector, Mr. L. P. Shah said in his presidential address to the Indian Electrical Manufacturers' Association. Mr. Shah claimed that the Government's decision to set up the plant "has completely upset the expansion plans of manufacturing units, for according to the Press report there is going to be a certain amount of overlapping in the production of the private and public sectors." Production in the State-owned factory of the equipment that is being manufactured by the private sector, Mr. Shah said, "will snatch away the orders emanating from the Government. Government being the biggest buyer of transformers and other electrical equipment, it need hardly be pointed out that the private sector, upon the establishment of the State-owned factory, will have to depend upon the requirements of the public which will not be sufficient to keep them engaged for the full utilisation even of their existing capacity, not to speak of an expansion." The electrical engineering industry, according to Mr. Shah's statistics has a rated capacity of production of transformers up to 4,000 K.V.A. at 37.5 KV and motors up to 300 H.P. Its expansion schemes for the second five year plan, provide for the manufacture of transformers up to 4,000 K.V.A. and motors up to 1,000 H.P. The industry is confident of meeting the needs of the expanding economy if orders are placed sufficiently in advance. The Government has just constituted Development Councils for light and heavy electrical industries and it should verify the claim of this industry fully before proceeding with the project to set up its own heavy electrical equipment plant. Saving of resources apart, there is the advantage of effecting appreciable technical economies through the enlargement of the existing units in the private sector.

Workers Condemn Health Scheme.—That good intentions do not always lead to good results is well illustrated by the growing discontent in Bombay against the Employees' State Health Insurance Scheme amongst the very people for whose welfare the scheme was devised. It is not as if the scheme was hastily put together. For a considerable time it was tried out in Cawnpore. Elaborate preparations were made before it was extended to the industrial region of Bombay State. Large contributions from employers were collected during the whole of the period before the scheme was implemented in Bombay, under the plea that industries in Cawnpore should not be handicapped by having to bear this extra burden when their competitors in other parts of the country had no such liability. This enabled the authorities to build up their finances well in advance. In spite of all this, the way in which the scheme has been worked so far in Western India has evoked so much opposition that an important section of industrial workers in Bombay not only observed a protest week to bring to the notice of the Government the difficulties experienced by insured workers in obtaining medical treatment, but a veteran labour leader of the standing of Mr. N. M. Joshi was forced to declare at a Press conference that instead of ushering in an era of social security this scheme had brought great disappointment, dejection and frustration among insured workers who were now unanimous in their demand that it be either scrapped or radically changed. A joint memorandum is being prepared by the various labour organisations in Greater Bombay and part of the adjoining Thana District for presenting to the Union Labour Minister next week protesting against the unsatisfactory working of the scheme.

The agitation is not confined to the more leftist unions. Even the pro-Government Indian National Trade Union Congress has voiced its discontent. A deputation from the I.N.T.U.C. waited last week on the State Labour Minister who is in charge of the scheme, and placed before him a detailed memorandum pointing out its defects and shortcomings and suggesting remedies to eliminate them. One of the most significant points made by this deputation was that, before the implementation of the new health scheme, workers in Bombay were entitled to four different health benefits free of cost. These were medical treatment, employment injury benefit, maternity benefit and sick leave. All these were provided by employers at their own cost. Now that the employers are required to contribute more than what they were actually spending on the original scheme and in addition, the workers are contributing from two annas to Rs. 1-4, or 2 percent to 2½ percent of their wages, the State should definitely be able to provide better and larger relief to the workers. It must also be remembered that, in addition, the State is also contributing its share. But it is obvious by implication that, in spite of the greater resources and the very much higher expenditure incurred for this purpose, the lot of the worker has failed to improve and both the quantity and the quality of the relief he is getting now are not equal to what was being received direct from the employers at the latter's cost. Apart from red tape and inefficiency inevitable when the State enters into unaccustomed fields of activity, the trouble with such welfare schemes is that a lot of money is required to be spent purely for administrative purposes. This means that what is actually spent for welfare, as such, is much less than is the case when such work is handled by industrial units as a part of their own organisation.

The Need for Roads.—As the debate on the proposals for the second five year plan progresses one point is emerging which calls for immediate attention; that is the inadequacy of the provision for new roads. The road transport industry is already crippled by a burden of legislation which has no relation to the realities of the year 1955, and revision is now overdue. But without adequate high-

ways a completely free road transport industry would be unable to meet the calls which development will undoubtedly place upon it. Consideration of Professor Mahalanobis's draft outline for the second five year plan, together with the railways' own Rs. 800 crore development programme, reveals that a maximum outlay of Rs. 100 crores is all that the roads can expect if these proposals are adopted. This is clearly a ridiculously low sum to allocate to a form of transport with which, it is often considered, the future of convenient and economical transportation must lie. Quite apart from the military and economic disadvantage of having so many of the transport eggs in the same basket, there is the fact that it is unlikely the railways will be able to achieve the rate of growth planned for them. Even if they did they would be hampered in their usefulness if adequate provision is not made to keep them regularly fed with goods to and from the districts surrounding the railheads. The road problem has two aspects. The first is that of providing local roads which should account for little real expense, much of the labour being voluntary and most of the techniques of surface binding being comparatively cheap. The key to the problem of local road transport lies more with the revision of the present legislation hampering vehicle operators and their relief from anxieties over nationalisation, than with planning at the national level. The second is that of encouraging long-distance road haulage as a definite alternative to rail transport. Fear of what this might mean for the railways is at the root of the existing legislation and control. But this fear dates from the early nineteen thirties when undoubtedly the railways did suffer from competition. Nowadays, when the inability of the railways to expand is already impeding the progress of a number of industries, notably coal, and when the second five year plan threatens to impose even greater strain, the time for a new attitude towards the problem has definitely arrived. The Vice-President of the Indian Roads and Transport Development Association, Mr. V. Vagh, has published a number of proposals for encouraging road transport. He starts by dismissing as inadequate the suggestions of Planning Commission on nationalisation, the abolition of

double taxation, counter-signatures on permits, review of octrois and reciprocal arrangements for inter-State traffic, and urges that the first step should be to scrap altogether the Code of Principles and Practice and overhaul completely Chapter IV of the Motor Vehicles Act. This would involve a revolution in the official attitude towards road transport and would mean its being accepted as a fully-fledged competitor of the railways. Whether the Government could face such a prospect and still provide vehicle operators with the necessary incentive of promises against nationalisation may be a helpful indication of its intentions towards the private sector generally. There is little chance now that the country will be provided with the roads it requires during the second five year plan; it seems to be almost inevitable that transport is given a poor priority position while planners dazzle themselves with physical targets. But a start could be made by the provision of a through-road network even if it does fall short of what was proposed in the Nagpur Plan. The Government could do a great deal in the meantime to prove that road transport is at last being recognised as the essential asset it is, by setting about the removal of present restrictions so that long distance motor transport can find its feet and accumulate sufficient experience to keep them.

Bandung and Economic Co-operation.—It is no doubt early to expect the Bandung nations to have achieved sufficient unity and common purpose to be able to produce an integrated plan of economic development covering the whole Asia-Africa area. The regional unit of planning must still be South-East Asia and a call for further assistance and co-operation in this region was made at the 11th session of the United Nations Economic Commission for Asia and the Far East (ECAFE) held in Tokyo recently. Reports on progress were encouraging, but a plea was made by delegates for more foreign aid. The prospects of foreign aid, which must essentially mean American aid, will depend largely on the political situation existing in and around the area. There is no doubt that the United States' sympathy with the aims of the Bandung Conference in eliminating colonialism is second only to its fear of Communism. The chief object of the Conference, which seems to be to shake off colonialism and its aftermath and only incidentally to strengthen the area against Communist intrusion, might well appeal to the United States. There has been talk at Bandung of an Economic Secretariat on the lines of the OEEC, but the United States would be unlikely to support it if the influence of Communist China at the present Conference proves to be strong. In its report to the United Nations Economic and Social Council, ECAFE has noted South-East Asia's continued progress towards industrialisation, often against heavy odds in the shape of financial weakness. The Commission felt that the time had come to give closer attention to programmes of economic development and planning. The secretariat was authorised to proceed on a high priority basis with continuing projects and activities dealing with economic development and planning, and in particular to provide for a periodical review of these plans and their implementation in the countries of the region. National sensibilities are considered in the stress laid by the Commission on the fact that these studies would be concerned solely with the techniques of economic planning and were not intended to infringe on national prerogatives. The basic problem of food supply almost solved, South-East Asia would seem to be ready for a substantial burst of industrial development. Local difficulties are still encountered, especially where economies are too dependent on one or two crops for their prosperity. But the verdicts of the ECAFE session and the spirit of the Bandung Conference both indicate the fact that the time was never more favourable for progress. A too cavalier attitude towards the foreign investor now stands out as being one of the chief factors working against rapid development.

Sugar Refineries.—The question of setting up refineries to cover the additional capacity of 450,000 tons fixed for the second five year plan will come up for consideration before the third meeting of the Development Council for the sugar industry to be held here on 26th April next. At its second meeting in December last, the Council had set up committees for (1) preparing a plan for shifting unsuitably located sugar factories and investigating into the affairs of factories lying idle, (2) devising a system for making payment for sugarcane on the basis of its quality, (3) advising on the establishment of subsidiary industries for the utilisation of the by-products of the sugar industry, (4) introducing a uniform system of chemical control, and (5) determining the comparative suitability of 'A' and 'L' twill bags for packing sugar. At its forthcoming meeting, the Council will examine these reports. The other subjects to be considered by the Council relate to the system of inspection for ensuring correct grading of sugar, sending a Government-sponsored delegation to study the developments in the sugar industry in important cane-growing countries of the world, and encouraging the employment of technically qualified persons in the sugar industry.

Without Prejudice

INDUSTRIAL RELATIONS
MODERN STYLECLAIM FOR COMPENSATION NOW
PRELUDE TO BATTLE

GENEROSITY does not pay; nor sympathy, nor benevolence, nor consideration, nor charity, nor affection, nor regard. Not in modern industrial relations anyway. Give nothing, concede nothing, admit nothing voluntarily, since every gift, or the least concession becomes immediately thereafter a legal right in perpetuity and is simply the prelude to further demands. That is not intended as cynicism but as a sober statement of fact and of the effect on the attitude of master to servant and servant to master of modern industrial legislation. It cuts both ways. It may be that neither party is to blame or that both are. But to anyone who reads the periodical law reports it is indisputably true. The writer at one time had a good deal to do with Workmen's Compensation work; and the case which is discussed later is chosen, not for anything particularly remarkable in it, but merely as illustrative of the marked deterioration during the past twenty-odd years in the mental approach of both sides to a claim for compensation. In times not so long past one has settled amicably and justly after a single friendly chat with an insurance company's representative claim after claim which, if contested, would have been riddled with legal points with the ultimate issue doubtful. Nowadays the two parties are in hostile camps. Every inch of ground is contested. Not a single concession or admission is made on either side and the very word "compromise" is taken out of the dictionary. It is the same, only worse, in industrial disputes. Arbitration, whether by agreement or compulsion, implies mutual goodwill, respect, a genuine desire on both sides to arrive at a just and equitable solution. Unhappily these qualities no longer exist. Hence the loss of 3,36,961 man-hours during the year 1952 in industrial disputes resulting in work stoppages in India.

None seems to have any solution to offer because no one appears to give systematic thought based on experience to the problem of finding the reason behind this deterioration. The writer has been reading again Mr. Noel Barwell's masterly book on the law of Master and Servant and with special interest the long introduction, almost a complete work in itself. The latter is a history of service from the days of Greek and Roman slavery to the present, when labour is or seeks to be, the boss. Incidentally, and just as a matter of interest which may cause the descendants of Edmund Burke, Mr. Gladstone, and of sundry worthy merchants of the city of Bristol as well as, across the Atlantic, the denizens of the Deep South to blush a little, Mr. Barwell assures us on the authority of Mesgasthenes and Pliny that slavery was unknown to the Indian people. Mr. Barwell does not present any real solution other than, if one may say so with great respect to his memory, a number of scholarly platitudes on the "interdependence of units" logically involving "reciprocal loyalties, reciprocal admiration and equal devotion to duty as such." But he does ingeniously suggest one of the contributory causes and one peculiar to this country, and that is that the average Indian considers manual work as something in itself rather shameful, resents being engaged in it and consequently is instinctively hostile to those who employ him at it. "The server is seen entertaining the idea that service as such is degrading... But that notion is frequently absent where the master's attitude is what it should be; that is to say where the fibres which go to make up the personal tie between them include elements both of sympathy and affection.... Where the personal tie is otherwise composed, or, under industrial conditions may either be allowed or more or less compelled to perish, the fruits which the relationship of master and man are capable of producing are not to be gathered. In the result, from that stage of human history in which the employed person got little or no protection the pendulum has now swung wholly the other way: the effect of modern industrial legislation being to give the workman every sort of advantage and to leave the employer very few rights...."

All of which gets us precisely nowhere. If it takes two to make a quarrel that number is equally necessary to compose it, and as reconciliation these days with our enemies is only a desire to improve our own condition at the other man's expense plus fear of consequences, one may as well accept the fact and make the best of it. These are days of democracy, the bludgeoning of the people, by the people for the people. And that brings us to the process at work in a typical modern Workmen's Compensation case.

The workman—Bahadur Singh was his name—was employed in an engineering factory. He suffered injury and he claimed compensation under the Act. He was drawing a salary of Rs. 180 a month plus free quarters valued at Rs. 18 a month. The Commissioner had awarded compensation of Rs. 5,600, on the basis of his salary plus the benefit of a free house of Rs. 18, total Rs. 203 a month. Now there was no doubt about the main facts.

The workman had sustained an accident, it arose out of and in the course of his employment,

1. For further details see *Damle on Labour Adjudications*, pp. VI and VII Orient Longmans.
2. Barwell and Kar on *Master and Servant*, (Orient Longmans) xli.

it was not caused by any misconduct of his own and his salary was admittedly as stated. A mere question you may think of "how much". Not at all. Not in these days. Both parties stripped for the fray armed forensically to the teeth, each prepared to take every technical point available to him to frustrate and defeat the other. The company having lost before the Commissioner appealed to the High Court. Their first ground of attack was that the workman was out of time, he not having made his claim under the Act within one year from the date of the accident as prescribed by the Act. This was true. But the delay, as both the Commissioner and the High Court found, was accounted for by the fact that after the accident the man had for months been suffering from typhoid fever and its after-effects and had been in hospital. The employing company was, of course, perfectly within its rights in raising this technical defence. No one disputes that. But it is also just the sort of defence which twenty years ago hardly a single employer, and certainly no insurance company, would dream of raising with such a reasonable cause for the delay before it. Perhaps the employer thought the whole story of typhoid a bogus one, though it turned out to be demonstrably true. Nevertheless, the incident shows the progressive deterioration in the relationship between employer and employee and that to talk nowadays of "an ennobling relationship", "loyalty and devotion", and sympathy and affection", as one's old friend in his kindly way did in his book, is simply to talk idealistic gibberish.

The plain fact is that employers, having as the result of legislation precious few rights left at all, are more and more inclined to insist drastically on what they have. And having regard to the inimical, suspicious, even violent, attitude they have to face on the other side, it is only natural that they should do so. In this case the Commissioner, having a discretion to condone the delay did so, and the High Court confirmed him.

The second line of defence, when one remembers that the whole object of the late Mr. Joseph Chamberlain in framing the Workmen's Compensation Act was to produce a simple, cheap, easily understandable measure which an illiterate workman could himself comprehend, is even more illustrative of the present trend. The workman's application was defective in that it was not in the form prescribed by the Rules under the Act. Therefore, said the employers, the claim should be thrown out. It was not thrown out. The Commissioner had the defect rectified and the High Court upheld him in so doing.

The third ground was that disability had not been proved since the workman had produced only the Civil Surgeon's certificate testifying to it, and not the Civil Surgeon himself. This was hairsplitting in excelsis. For the employers had themselves admitted what they termed "total disability" in writing, and, said Agarwala J., "from the other evidence it is established beyond doubt that the respondent was totally disabled by the injury caused to him." So this technical defence failed too.

Nor was the learned Commissioner himself spared. "It was then urged", said his lordship, "that certain irregularities had been committed by the Commissioner so far as the procedure was concerned." But as not a word had been said before the Commissioner himself about these so-called "irregularities", and as the High Court found that none had been committed, this technical defence went the way of the rest.

There was one point of general and practical importance decided in this case. It was contended by the employers that, in calculating compensation, the monetary value of free accommodation could not be taken into consideration. But the definition of "wages" in the Workmen's Compensation Act "includes any privilege or benefit which is capable of being estimated in money...." The High Court held that "privilege or benefit" did include free accommodation and the latter's monetary value was rightly to be assessed in arriving at the amount of compensation.

Well, in this case one can see compulsory arbitration at work and almost at its worst. Not quite, for proceedings under the Industrial Disputes Act, having still no clearly-defined principles of law or equity to guide them and being concerned more with organisations than with a solitary individual, appear still less to contribute harmony and mutual accord between capital and labour. At best they produce an uneasy truce, a state of armed neutrality between the particular parties comprised in the particular dispute to be decided; while outside the curtain the cold war develops and increases in scope and bitterness.

[B. M. & G. Engineering Factory v Bahadur Singh. A.I.R. 1955. (Allahabad), 183.]

Government of India have decided to release for export with immediate effect a further one lakh bales of Indian cotton of staple length 1" and below of any crop (i.e., old and new) subject to the condition that, of this quantity, 35,000 bales shall be exported from Saurashtra Ports.

a comprehensive Telecommunication Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving interdependent systems of various types.

Standard Products Include:

Systems:—

Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Railway Communication and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Street and Airfield Lighting Control
Signalling (Office and Factory)
Communication Cable

Equipment:—

SenTerCel Selenium rectifier equipment
Power Factor Correction
Heat Treatment
Broadcast Studio equipment
Transmission Testing apparatus
Cable Testing equipment
Loading Coils

Components:—

Quartz Crystals
Transistors
Capacitors and Interference Suppressors
Germanium Rectifiers and Photo-electric Cells
Thermionic Valves

Magnetic Materials

Thermistors
Relays
SenTerCel Selenium Rectifiers
Rubber, Plastic and Textile insulated cables and wires

THE IRON HORSE IN A STEEL CAGE

Chittaranjan is the largest locomotive manufacturing unit in Asia, designed to build 120 locomotives and 50 spare boilers every year under single shift production. In the construction of these immense workshops no less than 11,000 tons of STEEL were used.

The largest structure in the whole Project is the Main Assembly Shop, which measures 1560 feet long, 212 feet wide and rises to

a height of 75 feet. From this massive workshop roll India's locomotives—the visible results of the new industrialisation of India.

MR. RAB BUTLER will no doubt be accused of having produced a shamelessly vote-soliciting Budget in time for next month's election. This should not worry him for if he had done anything less he would have been accused by precisely the same people of being a heartless wretch whose meanness disqualified him for the Chancellorship. The moral is that five weeks before a general election no budget will be judged on its merits; its every provision will be a dart to be flung in the ensuing campaign. This situation is not as bad as it looks, because even economically what Britain needs most today is a Government with a clear enough majority to be able to push through a long-range programme. If Mr. Butler has done some things he shouldn't in this Budget, he may still have acted in the best interests of the economy by helping ensure four or five years of genuine, confident governance founded on a stable Commons majority from this summer forward. In fact, from what we have so far seen of his Budget, he has not given away more than he can strictly afford. The increase in earned income allowance and the reduction in tax levels may be presumed to encourage harder work and more overtime, while the special consideration shown to married men with children will serve to direct that encouragement toward the type of worker most likely to respond to it. The cut in purchase tax should take up some of the slack in Lancashire, which is not only a source of votes but the scene of unused productive capacity. The domestic situation amply warrants all these concessions. As for the balance of payments, which might be thought to need sterner measures, Mr. Butler probably realises that the balance does not have to be achieved at any one level of activity; it is no harder to safeguard the reserves when external trade is greater than when it is less. So on the whole the Chancellor of the Exchequer has sent the Tory hosts into the field with a quiverful of arrows and a great heart. Santa Claus at the Treasury and Prince Charming in Downing Street, the Communists in Fleet Street and Mr. Bevan in the Labour Party, the Russians offering an Austrian treaty, and twelvence off the income tax in three years: was there ever a more favourable constellation of omens for a truly impressive Conservative victory?

"The American Press began to dwell on the terrifying prospect of leaving the representatives of 1,250 million Asians and Africans (half the world) alone together for a few days without a single White Man to tell them what to agree or disagree about, and pointed out that this had never previously been permitted in the world's history". Now, I don't know that the American Press (whoever that is) dwelt on any such thing, but Thomas Hodgkin said it did in a magazine article on the Bandung conference last week. I can well imagine certain people in South Africa quaking at such a prospect, and even some British newspapers have been hinting darkly that the only thing 29 coloured leaders could possibly agree on was the wickedness of white men. Therefore, it was implied, the Bandung meeting was a nasty piece of work and the West had better watch out. This is a ridiculous reaction. Until I encountered it, I had been thinking that the conference was perhaps a bit pointless, since no one quite seemed to know what it should talk about. But if it is really having the effect of putting the fear of God into some of our self-righteous white-supremacy racists, then it is a very good thing and I hope they have another every year. Anyone who knows this continent also knows that Asians have something better to talk about among themselves than the haughtiness of some whites. Nothing very definite can emerge from the conference in the way of agreed resolutions, but if the drafting committee can beat the vagueness of some Common-

A DITCHER'S DIARY

wealth conference communiques they will be doing well. No one thinks it funny when Mr. Nehru confronts Dr. Malan and Mr. Mohammed Ali over a table in London while they cast about for something to agree on, so the exercise might be no less useful when repeated with more motley company. Mr. Chou En-lai's speech on Tuesday was a pretty little piece of glibness but anyone in the West who thought that other Asians needed their big white brothers to tell them talk is cheap would be showing just the sort of superiority Asians properly object to.

The new Calcutta Telephone Directory appeared this week much to the relief of subscribers who have been finding the old book hopelessly out of date. The new directory is infinitely better printed and laid out, the smaller but more legible type being a credit to the Sree Saraswati Press. What is not a credit to anybody, however, is the curious system of arranging entries. A half-hearted attempt at a more rational classified list has been made, but exactly because it is half-hearted it has led to some extraordinary confusion. Thus, subscribers will be interested to see that the Chartered Bank is not under "C" but that Lloyds Bank is under "B", the New Empire is under "N" but the Metro is not under "M", Capital is not under "C" but Indian Finance is under "I", and so on with the long list of unexpected discrepancies. The reason for this is explained on page xxx, and I advise subscribers to study this before attempting to look up any number. Departures from the straight alphabetical list have been made in favour of a number of group headings such as banks, cinemas, newspapers and periodicals, but subscribers have been "permitted to list their free entries under the group headings or in their alphabetical order according to choice". Some subscribers do not recall being offered such a choice, but even if they were this is no help at all to their friends and clients who will not know which they have chosen. The idea is perhaps a good one, but, as with all attempts at classification, it is worse than useless unless carried out thoroughly and with no exceptions.

While weightier aspects of the State Bank of India Bill are dealt with elsewhere, I would like to put my spoke in on a subject of some interest to ditchers. The Bill provides that the successor to the Imperial Bank shall have its central office in Bombay, whereas the Imperial's central office used to move around the country between Bombay, Calcutta and Madras. The idea is no doubt to keep the new Bank under the thumb of its master, the Reserve Bank, whose head office is in Bombay all the year round. We shall continue to have a local board here of course, and the Bengal circle (or whatever it is going to be called under the new regime) will continue to be the biggest part of the institution, just as the Bank of Bengal was the biggest of the old Presidency banks. But the long winter sojourn of the Imperial's central office in this city was a good arrangement and should not be discontinued. It is common knowledge that the fixation of the Reserve Bank in Bombay has great disadvantages, and officers of that institution will readily confess that in consequence they know much less about the economy of Eastern India (and in particular the jute, tea and coal industries) than they should. It would be a mistake to submit the State Bank to the same disability. I realise it sounds very nineteenth-century to have a bank floating around the country like a travelling circus, but India is a big place and bankers need to know all about it. It is increasingly fashionable, espe-

cially in financial circles, to imagine that the world begins in Bombay and ends in Delhi but we in Calcutta know otherwise.

I never properly understood what Albert Einstein did, let alone how he came to do it, and I am confident that most other people who took to using his name as a synonym for pure intelligence never understood much more. All we lesser clay know for sure is that he did something so terribly clever that only a few hundred other men are in a position to say whether or not he was right. Then how do we all come to be so certain—for we are certain—that he was one of the most extraordinary geniuses that ever lived? I expect we did precisely what scientists like Einstein told us never to do: we took it on trust, each accepting the authority of someone a bit cleverer than himself. Theoretically, this should have caused all rationalists, scientists, democrats and free thinkers to gnash their teeth. What hope is there for us if we are ready to canonise a man on hearsay? If we will build up a world reputation for genius by means of a highbrow whispering campaign, then might we not surrender our judgment before the claims of another St Thomas, another Hitler, another Mary Baker Eddy? Evidently the theory of democratic rationalism is all bunk. We let a college of cardinals expert in physics nominate the genius of our age, and the rest of us agree like sheep. And the odd thing appears to be that we are perfectly right to do so. The college of cardinals picks only winners, while when we exercise our democratic right to independent judgment we pick film stars, jockeys and apostles of social credit. Maybe it was just a fortunate accident that the genius our more learned betters chose for us was also a thoroughly decent little man: civilised and sensitive in a way scientists are not always, with old-fashioned and rather silly views about politics, not liking to be pushed around and failing to see why anyone else should be. Our sordid "age of the common man" has some hope in it yet when an uncommon man can secure acceptance of credentials that none of us can decipher.

When bankers break out, they really let themselves go. A staid English bank says this of its new cheques: "It's a new and lovely way to give a money present. It's a — Bank Gift Cheque, one of several timely and heart-warming designs specially created for the Bank by well-known artists and reproduced in full, glowing colour". The object in question was designed by an artist who must have been dug up for the purpose: it depicts a covey of plump, naked cherubim, who bear no resemblance to any known banker, hovering over a cornucopia from which belches forth a selection of fruit, vegetables, flowers and shellfish which could not be purchased at their present prices with any cheque that was ever given away. Still, sneer as we may, I don't suppose for a minute that anyone will actually mind receiving one.

Apparently Lancashire's best, the old Mancunian Incurruptible, cannot quite replace her rock-ribbed sister of the South. In dealing with the London newspaper strike, a weekly columnist warned posterity: "Historians, not alone or even predominantly of this country, have cause to view with alarm the suspended animation of *The Times*. Into what pregnant (and unwarranted) speculations might not a scholar of the distant future be led if he relied for his list of the guests at Sir Winston Churchill's farewell dinner party on the *Manchester Guardian*, who omitted from it the Leader of the Opposition but included Mrs. Attlee?"

UNCERTAIN MOOD IN STOCK MARKETS

INDUSTRIALS SCORE SMALL GAINS

London, 19th April.

THERE was no definite trend on the stock markets here following the Easter holiday and before the Budget. Business was at a very low level in view of the present uncertainties. The continued newspaper strike, the threatened rail strike and the March trade figures, together with the Far Eastern political situation, were not helpful factors. During the week, there was no great change in prices, but the undertone was satisfactory. Gilt-edged advanced modestly before the week-end but eased later before the Budget and were generally unchanged on balance. Foreign bonds were neglected and recorded little material change. Dollar stocks improved following Wall Street. Industrials attracted small and selective investment demand, and there were small but widespread gains. Brewery shares were firm on Budget hopes and steels advanced on hopes of Government victory at the coming General Election. Kaffirs were quiet, but after a dull start, improved slightly on news of Welkom's financial arrangements with Anglo-American. Copper shares moved erratically. Oils lost ground with Royal Dutch and Shell dividends being disappointing. Rubbers were subdued and teas were quietly irregular.

The Money Market

Credit conditions were tight in the past week and funds were in eken demand. Neither clearers nor non-clearers had much excess funds to lend and under the resultant scarce conditions money rates hardened to 4 percent. The poor cash position led to a restricted demand for bills and the market had to concede higher rates. It also increased its tender rate for last week's offer of treasury bills by about 1/16 percent. The average rate was 75s 3/8d percent compared with 74s 5d in the previous week. Applications for treasury bills totalled £420,700,000 of which the amount allotted was £250 million. This week £230 million are on offer. The Bank of England return for the week ended 13th April, showed notes in circulation about £6 million higher at around £1,729 million.

Banks' deposits were about £2 million higher at around £74 million.

U. K. Antimony Consumption

Consumption of antimony metal and compounds (in terms of antimony metal) in the U. K. in February totalled 483 tons, according to figures issued by the British Bureau of Non-ferrous Metal Statistics. This compares with 451 in January and 391 in February last year. Most main trades increased their consumption in February especially bearings which used 57 tons against 36 in January, while batteries took 144 tons against 126. Use in oxides for white pigments was 152 tons against 137, while antimonial lead uses, other than batteries, accounted for 46 tons against 40. However, use in oxides other than for white pigments was lower at 63 tons compared with 89 in January, while miscellaneous uses totalled 21 tons against 23. Consumption of antimony scrap in February declined slightly to 432 tons from 443 in January and compared with the exceptionally high consumption of 508 tons in February last year.

Copper Prices Crash

Copper prices fell heavily on Wednesday of last week following the Board of Trade's announcement that up to 45,000 tons of copper would be sold from the U. K. Government stocks. Dealings were active with approximately 2,000 tons traded in the first ring. Cash copper fell nearly £30 a ton to £302½, while three months at £296½ was £29 lower. Meanwhile, it is learned in London that the quantity to be sold by the Government would be made principally to two big British producers who supply the metal for stock-pile in the first case. The companies concerned are Rhodesian Selection Trust and Anglo-American Corporation of South Africa, Limited. Mr. R. L. Prain, Chairman and President of Rhodesian Selection Trust, said that the new supplies would certainly bring the price of copper down. "We welcome that because the price has been ridiculously high," he said. "This will relieve the pressure on supplies. The price has been high because we had not any 'chips' to play with but now we have." Although the Government's decision meant fresh supplies on the copper market, Mr. Prain continued, the metal would not press on the metal exchange as such. It would be up to individual companies concerned to decide what they did with copper, whether to offer some on the exchange or sell it privately. Their decision would be influenced by the way in which the market developed.

Copper Prices Fall in New York

The U.S. copper trade was caught by surprise by

the announcement from London that the British Government is releasing to the industry up to 45,000 tons of Government-owned copper. The announcement has already been reflected in the sharp drop in scrap copper prices to 33 to 34 cents a lb. from 35 to 36 cents as the new British supplies will tend to relieve the pinch in world supplies of refined copper. The British release is now expected definitely to halt all prospects of further increase in the U. S. price of 36 cents a lb. New York copper futures prices are expected to break sharply on release of this copper. The release is also expected indirectly to relieve some of the export buying pressure in the U. S. market, as London prices are now only a few cents above the domestic level in New York. Some quarters believe, however, that the opening London pressure has been overdone and that some price recovery should occur on the second call. The domestic copper producers expressed confidence that the U. S. price of 36 cents would hold for a foreseeable future as copper in New York would remain in tight supply through the second quarter, regardless of British developments.

Mexico's Silver Trade

The Bank of Mexico reported that in 1945 Mexico bought \$18 million worth of silver for internal consumption. Exports were about \$24 million or 28.2 million ounces. The best buyers were Germany, the United States and France who took 13.5 million and 2.5 million ounces respectively.

London Platinum Market

The platinum market was steady but featureless, supported by good industrial demand. Primary sellers continued to quote \$77 to \$80, an ounce, depending on quality, while dealers quoted \$75 to \$75½. Supplies appear to be adequate to meet the requirements and no pressure is currently reported from European offerings.

U. S. Steel Boom

The Iron Age writes that the U. S. steel boom is mushrooming. Some major producers are operating far in excess of the capacity without making any appreciable dent in order backlogs. Incoming business is running as much as 50 percent above the capacity among larger mills. Steel ingot production may break the all-time record of over 2.3 million tons set in the week of 23rd March, 1953. But production is not the only problem confronting the industry. Scrap supply is another. Foreign steel consumers are up against it. They are short on productive capacity and long on demand. They need semi-finished material from the United States to feed their finishing mills. But U. S. producers are not so interested as they were several months ago. As a result, export business from England, West Germany, Holland, France and other countries is going abeying.

U.K. License for Cottonseed Imports

The U. K. Board of Trade has issued a notice to importers confirming the existing arrangements for the import of cottonseed under the open individual licence from any source.

U. S. Rubber Consumption Forecast

U. S. consumption of new rubber in the first half of this year will probably total 730,000 long tons including 420,000 tons of synthetic, according to a forecast by Mr. A. S. Richardson, President of the B. F. Goodrich Company. The President believes however that at the second half of the year consumption will fall to 620,000 tons—or by around 15 percent. Because its price continues high he thinks consumption of natural rubber is likely to fall by almost 20 percent to 250,000 tons. The high rate of consumption in the first half was due to "unusually large requirements of tyres and other rubber products for new cars and to above normal pattern of shipments of tyres for replacement."

Vegetable Oil Market

Generally firm conditions prevailed for linseed oil and groundnut oil following the holiday, with advances in the former held on improved demand for U. S. oil from Germany and France. American oil was quoted at £86 compared with £83½ in the previous week. Indian linseed oil was sold to the U. K. on Thursday at £94, c.i.f. May arrival against £91½ wanted a week ago. Sellers of Indian groundnut oil were finally asking £94, April-May, compared with the interim high of £96½. Coconut oil was quiet with the holiday in Ceylon hampering developments on the market. American cotton oil advanced \$4 a ton over the period but Indian castor oil was £1 a ton cheaper. Palm oil was neglected with £81 wanted for Nigerian 5 percent.

IMPORT OF AIR CONDITIONERS

Under the import policy for the first half of 1955 applications from actual users for the import of air conditioners (unit type or packaged type) were to be considered on an ad hoc basis. The Government has considered the matter in the light of the fact that licenses to established importers have been subjected to a price ceiling. Individuals and others who have applied for licenses may, therefore, approach the established importers for meeting their demands. In regard to hotels and others whose demand is for 12 or more units the indigenous industry has now agreed to supply one-ton air conditioning units at Rs. 2,400 and 3/4 ton units at Rs. 1,745 a unit for an order of 12 or more units for the same premises. Applications received from public and charitable institutions, hospitals, laboratories and other deserving institutions and bodies will, however, be considered on merit by the licensing authorities.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

EASIER INTERBANK TREND

Wednesday, 20th April.

MONEY is still in good demand in upcountry centres, but in Calcutta conditions have eased. There are more funds on offer in the interbank market and the call rate has fallen to 2½—27½.

In the exchange department very little export business has been done. There has been good demand for remittance in Bombay and rather less in Calcutta. The principal exchange rates are unchanged.

Silver was easier on account of slackness of demand. The ready price declined from the previous week's level of Rs. 166-9 to Rs. 166-4 quoted to-day. The rate for forward delivery was quoted at a discount and stood at Rs. 165-14. The price declined from 75½d. to 75½d. in London, and remained unchanged at 87 cents in New York.

Gold continued to rule firm and prices improved further from Rs. 96-8 to Rs. 97-8. The sovereign at Rs. 61-6 showed a gain of 10 annas.

Tenders for Rs. 1 crore of three month Government of India Treasury Bills, which were opened on 19th April, totalled Rs. 1,51,00,000. The average rate of acceptance was unchanged at Rs. 2-9-0 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent were allotted approximately 99 percent. Tenders for a further Rs. 1 crore of treasury bills will be received at all centres up to the close of business on Monday, 25th April, 1955. During the week ended 15th April, 1955 Government of India Treasury Bills for Rs. 27,77,50,000 were sold in favour of the Reserve Bank of India.

Further increases of Rs. 2.56 crores and Rs. 9.88 crores in notes in circulation and the total note issue to Rs. 1,325.33 crores and Rs. 1,341.07 crores, respectively, were the main features of the statement of the Reserve Bank of India for the week ended 15th April, 1955. The expansion in currency was covered by raising foreign securities by Rs. 10 crores to Rs. 661.98 crores. This was made possible by a transfer from the Banking Department, where balances held abroad have fallen by Rs. 10.51 crores to Rs. 63.35 crores. Notes held in the banking department consequently improved by Rs. 7.32 crores to Rs. 15.74 crores. Deposits of the Government of India and other Government accounts fell by Rs. 2.42 crores and Rs. 5.84 crores to stand at Rs. 55.39 crores and Rs. 24.32 crores, respectively. Balances of commercial banks at Rs. 50.49 crores were about Rs. 5.54 crores higher than in the previous return. Investments declined from Rs. 47.23 crores to Rs. 46.12 crores. Other loans and advances increased from Rs. 30.95 crores to Rs. 33.94 crores, of which advances to scheduled banks against usance bills totalled Rs. 23.28 crores against Rs. 16.85 crores. These advances amounted to Rs. 60.64 crores since 1st January, 1955. Ways and means advances stood at Rs. 31 lakhs (Rs. 1.19 crores).

The statement of the position of Scheduled Banks for the week ended 8th April, 1955, discloses Demand and Time liabilities at Rs. 584.38 crores (Rs. 9.38 crores on account of borrowings from Banks) and Rs. 378.90 crores (Rs. 1.41 crores) compared with Rs. 580.92 crores (Rs. 5.89 crores) and Rs. 376.37 crores (Rs. 1.41 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.04 crores and Rs. 2.47 crores to aggregate Rs. 34.77 crores and Rs. 47.39 crores, respectively. There is a drop of Rs. 1.94 crores in investment to Rs. 342.37 crores. Advances and bills discounted at Rs. 631.11 crores reveal a decline of Rs. 1.41 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.5 percent and 65.5 percent against 8.1 percent and 66.1 percent.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during February, 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports—Rs. 4,946 lakhs, re-exports—Rs. 39 lakhs (transit trade—Rs. 3 lakhs); Imports—Rs. 5,646 lakhs (transit trade—Rs. 2 lakhs); Total trade—Rs. 10,631 lakhs. Treasury Exports of currency notes—Rs. 13 lakhs; others—negligible. Imports of currency notes—Rs. 166 lakhs, others—negligible. Balance of trade: The merchandise imports figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports including re-exports of merchandise, gold and silver fell short of imports by Rs. 662 lakhs.

The return of the Imperial Bank of India for the week ended 8th April, 1955 shows a fall of Rs. 7.93 crores in total deposits to Rs. 223.35 crores. Investments in Government Securities are down by Rs. 1.91 crores to Rs. 92.73 crores, while other authorised investments remain unchanged at Rs. 11.50 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 1.44 crores to

Rs. 127.75 crores. Cash and balances are, in consequence, shown at Rs. 14.14 crores or Rs. 1.24 crores less.

The following is the statement of the cash balances of the Central Government on the last day of December, 1954:

	Rs.
(1) At the Reserve Bank of India in India	54,12,27,000
(2) At treasuries in India	1,80,08,000
(3) In England (Sterling converted at 18d. the Rupee)	2,02,43,000
Total	57,94,78,000

LONDON FINANCIAL LETTER

AN OVERBURDENED MECHANISM

By Air Mail.

THE City waited for the Budget this year in a mood of confidence that could hardly have been imagined a few weeks earlier. In the first week of April the stock market's recovery from the relapse occasioned by the second rise in Bank rate was completed. (Rather curiously, it was the gilt-edged section that recovered first, but industrial shares were later hoisted more vigorously by evidence of continuing inflation.) About the same time the sterling-dollar rate regained parity, \$2.80; but it did not quite maintain that level subsequently. Mainly, the improvement in sentiment was due to the moderation of the loss of gold and dollars in March (when the sterling area's deficit on commercial account was \$28 million, compared with \$101 million in February) and to the almost complacent optimism of the Economic Survey and other official statements. But it had to be admitted that the external payments position was still precarious and that the tone of official pronouncements could have been affected, at least subconsciously, by the imminence of a general election.

It had to be admitted, too, that not even the Budget would make the financial position much clearer. After February's dramatic effort it was assumed that the authorities were determined to administer that "lug on the reins" that would put

the economy back on to a straight course, and that the tug had been administered by central monetary control, not by the Budget. But by April Mr. Manning Dacey, editor of "Lloyd's Bank Review", was suggesting that the "tug on the reins" was being "administered by the horse"; and that perhaps "the behaviour of the (gilt-edged) market should in fact be construed not as a vote of confidence in the outlook for sterling but rather as a vote of no-confidence that the tighter monetary policy will be carried through to its logical conclusion". The need for a general election has become urgent, but the preparation for it—including "popular" economic policies—could scarcely be less opportune. The Conservatives have always advocated tax-reduction, and with an ordinary surplus for the past financial year more than £400 million larger than the estimate it may seem that no more favourable opportunity could present itself. Yet independent estimates of the "inflationary gap" in the economy are even larger than the surplus, and no concessions to the consumer can really be justified. But when a Chancellor is preparing the ground for an election he cannot be very strict. It seems, therefore, that central monetary policy must still bear a heavy burden in the coming months. It is an instrument that Mr. Butler's Socialist predecessors almost completely ignored—they relied almost entirely on the Budget. In the prevailing circumstances Mr. Butler has to rely almost entirely on control of credit.

The Problem of the Balance

If the problems were obvious to the general community it would be easier for the Government to act on them. Directors and executives who can watch a steady expansion of turnover, and workpeople who, almost anywhere, can see more vacant jobs than unemployed workers, and consumers for whom even the Economic Survey has forecast a further (though more moderate) rise in the standard of living, do not easily realise that if the balance of payments is unstable the prosperity is partly an illusion. This month's statistics on the payments position are worse than the City imagined. They relate to 1954, for the first half of which year we had already had satisfactory figures. The whole year was almost as good as 1953, with a surplus of £110 million, only £5 million less than that of 1953. It is the deterioration between the first half-year and the second that is alarming: against a surplus of £148 million there was a deficit of £38 million—a "turnround" of £186 million. In the same period the adverse swing of the whole sterling area's balance with the outside world was as much as £257 million.

The two halves of the year are not directly comparable: the second half-year is seasonally less

favourable than the first, and in the second, also, fall the annual payments on the U.S. and Canadian loans. (Britain was also paying other non-sterling debts in the second half of last year, and in the event it must be questioned whether this policy was over-confident.) But no breakdown of the figures reveals a satisfying explanation of the decline. "Visibles" and "invisibles" suffered equally—notable in the latter category being the continuing decline in net receipts from interest and dividends, because dividend payments by the U.K. are increasing. A regional analysis is more depressing still, showing a big transfer of income from the outside world to the sterling territories and a big transfer of payments from the sterling territories (which are in a sense internal) to the outside world (where they weaken sterling). The worst feature of all is not the figures themselves but their trend. The visible trade figures for the current year so far suggest (in the absence, of course, of the invisible estimates, which appear much later) that the deterioration of the second half of 1954 continued into 1955. It can now be seen that the strong position of the first half of 1954 was itself illusory: imports did not rise with production (largely because of fears that the American recession would have repercussions here), and they rose the more strongly later (when such fears subsided). The easing of import prices has lately provided some relief, but, with production still increasing (and new peaks are officially expected this year), there is no major change among the factors that caused the credit.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 22-4-55.				
Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate	
22-4-55	22-7-55	1,00,00	Rs. 2-9-0%

RURAL CREDIT AND INDIAN BANKING

NATIONALISATION OF IMPERIAL: LIMITS OF CO-OPERATION

By R. M. Mitra

A Bill has been introduced in Parliament to convert the Imperial Bank into the State Bank of India. This Bill implements the announcement made by the Government of India immediately after the General Report of the All-India Rural Credit Survey was published in December last. Though the provisions contained in the Bill do not embody the procedural recommendations of the Committee of Direction (the Gorwala Committee), the main purpose of socialisation of an important sector of the Indian commercial banking structure, as advocated by the Committee, is fully secured. The Committee of Direction recommended retention of private share-holding representing 48 percent of the expanded share capital of the proposed State Bank, but the Bill provides for immediate transfer of the entire share capital of the Imperial Bank to the ownership of the Reserve Bank, though there is provision for subsequent sale by the Reserve Bank of 45 percent of its holding. Full nationalisation of the Imperial Bank was also contemplated in the enunciation of policy made by the then Finance Minister in February, 1948. Though this high level pronouncement appeared at one time to be regarded by the present Finance Minister as premature, if not hasty, nationalisation of the Imperial Bank, and even of the entire banking system, has since continued to be advocated in some responsible quarters as part of economic and social reconstruction of the country.

When the Indian Central Banking Enquiry Committee of 1929 considered the future of the Imperial Bank, following transfer of its central banking functions to the proposed Reserve Bank, the Committee expected that the Bank would operate as a private commercial bank, though with a carefully nurtured and controlled bias in favour of industrial finance. The inauguration of the Reserve Bank was accompanied by an amendment of the Imperial Bank of India Act, designed (among other things) to remove former restrictions imposed on it in regard to certain types of commercial banking business, including foreign exchange transactions. But the Bank did not only wholly shed its exclusive character, which was underlined by its appointment as sole agent of the Reserve Bank with the right to manage currency chests at places where the Reserve Bank was not established. The distinctive role and status of the Imperial Bank receive unmistakable recognition when, as a result of the recommendations of the Rural Banking Enquiry Committee of 1950, the Imperial Bank was asked to open a number of branches at new places and allow a higher rate of commission on the Government business handled at the places, so that it might be re-imposed a part of the usual losses on new branches.

It would appear then that, contrary to the expectation of the Banking Enquiry Committee, the Imperial Bank was not left to follow the course of a privately owned commercial bank, with a policy determined by the forces of competition and guided by the decision of its shareholders. Outright ownership, or direct control, of the Bank by the State might, therefore, seem but a logical consequence. Arguments against the decision to operate a State-owned or State-controlled commercial bank in a system of competitive banking might also perhaps seem to be easily met by reference to developments abroad. A close neighbour, Burma, has but recently set up a commercial bank largely owned by the State. The Commonwealth Bank of Australia provides an example of a bank engaged in ordinary commercial banking business, having powers of control on private commercial banks with whom it competes. France furnishes yet another type, where four big commercial banks were wholly nationalised without being merged into one unit. And in New Zealand one finds a close parallel to the case of a socialised or nationalised Imperial Bank of India.

State-owned Commercial Bank

It may seem, therefore, to be alarmist to express misgivings about the soundness of the decision to socialise the Imperial Bank. Yet it is not only fair but imperative to reiterate (as the Gorwala Committee recognises) that the same recipe does not necessarily achieve the same or similar results under different historical, economic and social conditions, and that an action does not become right for India simply because another country has taken it. Burma differs from India in having a banking system owned and managed mostly by foreigners. The Commonwealth Bank of Australia did not represent conversion of a well-established existing commercial bank from private ownership to public ownership. France, New Zealand and Australia possess firmly rooted banking systems with unshaken public confidence. The State-guarantee of some deposits, which is associated with nationalisation of a bank, does not, therefore, constitute a threat to the stability of deposit-business of the privately owned banks in these countries. It should also be remembered that protection of privately owned banks has long been regarded as an integral part of the unwritten banking law in Australia and New Zealand, and so nationalisation of a bank does not affect the credit of private banks in Australasia, where the economy is geared to State socialism. It is interesting to recall that as far back as 1893 the Government of New South Wales declared the notes of several banks to be

legal tender and guaranteed their payment for a period of about six months. Again, it is significant that the nationalisation of the Bank of New Zealand was an unplanned and belated consequence of the protective measures taken by the State during the crisis of 1933. It is said that, in order to allay panic, the Bank of New Zealand Share Guarantee Act was passed in a single night. The State's participation in the share-capital of the Bank of New Zealand was an unintended result of implementation of its guarantee in respect of this bank, which was authorised to take over the business of other banks in trouble. It is also noteworthy that the State Commercial Bank of Burma has been authorised to take over the assets and liabilities of any other bank, if such action is considered necessary in the interest of maximum distribution to depositors of such a bank.

Indian banking presents a different landscape. Unlike Burma, the number of indigenous banking units is adequate to the needs of the country and they can hold their own against the well-established foreign banks operating in India. The Indian banking system does not therefore need the guidance and support of a State-sponsored commercial bank, however much the same may be considered necessary in Burma. On the other hand, unlike France, New Zealand and Australia, the social and economic conditions of India are such that if State protection of deposits is available in respect of a particular bank or banks, deposit-business will tend to be diverted from banks remaining outside the scope of such protection. The Indian public is normally more security-minded than business-minded, and will prefer to deal with a State bank, even at the cost of slower and less efficient service. The anxiety to enter the charmed circle of State protection will overpower the instinct of business convenience. The decision to extend State protection to a bank commanding about one-third of total deposit resources of Indian banks, becomes, therefore, a question of far-reaching importance: and the situation will assume still graver proportions if the recommendations and suggestions of the Gorwala Committee are fully implemented in so far as they relate to the absorption into the State Bank of India of other "State-associated" banks. The Bill now introduced contains provisions which may be used to amalgamate other State-sponsored banks with the State Bank, or to operate them as subsidiaries.

Supply of Rural Credit by Selected Banks

It appears that the recommendations of the Committee have been influenced by the dual objective of building a system of co-operative banking and of creating conditions which will promote effective employment of rural credit. No elaborate argument is necessary to prove or emphasise the need for a properly organised scheme of rural credit in a country whose economy is basically bound up with agricultural production and rural consumption. It has also long been apparent that credit in sufficient quantity and on reasonable terms for the essential needs of production and distribution in rural areas, has failed to be provided by the existing credit agencies, including commercial and co-operative banks. But two important questions pertaining to the organization of credit arise out of the recommendations of the Gorwala Committee. The first question, affecting commercial banks, is whether a State-owned commercial bank formed with a few selected banks will be an efficient and beneficial instrument for creating facilities for rural credit on the desired scale and in the desired manner. The other question, of comparable significance, relates to the role which co-operative banking should perform in the rural economy.

There is likely to be general agreement that the problem of rural credit is not simply one of supply, nor even wholly a matter of prudent assessment of the inevitable factors or risk, but is primarily a question of socio-economic reorganisation. In the integrated scheme of banking formulated by the Committee, lending by the State Bank of India for direct rural needs or to the co-operative banks is not enjoined as a directive principle, or regarded as a primary purpose. The Committee expects the State Bank, in association with co-operative banks, to bring about a cheap and smooth flow of monetary instruments in rural areas. The Committee looks to the Reserve Bank mainly to provide rural credit, though it counts upon the State Bank to adjust its lending policy as to promote such productive and distributive activities as directly or indirectly bear on the fruitful employment of rural credit. It may be assumed that there is also no intention that the State Bank will withdraw the existing financial support that the Imperial Bank and other State-associated banks provide to commercial and industrial activities, or reduce their present level of participation in Government securities.

Selection of a few banks does not seem, therefore, to be a specially suitable method of producing the anticipated results. Neither the Imperial Bank nor any of the other designated banks possesses any inherently special technical or organisational advantage over the other commercial banks in mobilising rural credit, assessing risks involved, or otherwise helping proper employment of credit for rural needs. Separate and special arrangements will require to be made to evolve the necessary technique and organisation. One cannot see why the benefits of such special arrangements could not be extended equally to all commercial banks. A little reflection will show that diffusion of the necessary knowledge among all commercial banks would not only serve to promote progressive improvement of technique and organisation, but would also enable rural or "rural-minded" credit to be raised without disturbing the distributive character of a bank's

assets or involving a large resort to created money. And participation in an "integrated scheme" by all commercial banks would obviously eliminate the necessity for discriminatory protection of a particular bank. The Gorwala Committee seems to have erred in ignoring the fact that the flow of deposit money will be powerfully influenced by the availability of State protection for one particular bank and that mere absence of competition in respect of other functions, will not be sufficient (at least, in the existing economic environment) to create a fruitful field of operation for other commercial banks.

Co-operative Banks

It is often difficult to bring a detached mind to bear on a study of the co-operative movement, which owes its origin to sacred charity. Though the co-operative movement has travelled far beyond the stage of charity, and though co-operative societies are no longer regarded as purveyors of relief, the purpose and objective of the co-operative organisation are still befogged by sentiment. The history of the co-operative movement suggests that Benson Y. Landis may be correct when he says in the preface to his book *A Co-operative Economy* that consumers' co-operatives are likely to be more in the public interest than producers' co-operatives. If the movement launched in England by the Rochdale weavers in 1844 has been successful, and the business of credit unions in the U.S.A. has grown in volume, that is because the generally understood organisational principle of co-operation operates effectively were the task involved is distribution (whether of goods or borrowed money), and not production of goods or creation of credit. A structure of co-operative banking on the basis of deposit-currency, as distinguished from co-operative distribution of money lent by individual or institutional savers or the State, has not yet been a notable success anywhere.

The restriction of membership of a co-operative bank to persons having common local or functional interests will tend to foster a parochial outlook and militate against the functioning of a broad-based monetary system. Historical and sentimental factors cloud the real character of banking business, on the one hand, and proposals for special treatment of co-operative banks are calculated to produce undesirable effects on joint-stock banks, on the other hand. It is perhaps an unfortunate result of these historical and sentimental influences that the Gorwala Committee has not considered it necessary to distinguish between a "form of co-operative association of the borrowers" (which may be necessary in a scheme of rural credit) and the system of deposit-banking which is not compatible with the structural design contemplated in the law of co-operative societies.

Again, the creation of a gigantic State Bank, with State-partnered co-operative banks straddling the entire banking system, hardly fits in with the scholastic justification of the co-operative movement as an alternative to State-ownership of economic organisations.

It seems strange that while the Gorwala Committee shows keen awareness of the ineffectiveness of co-operation in "the narrow technical sense" and calls for co-operation in a "wider and more positive sense", the Committee fails correctly to interpret this "positive sense" in relation to the banking system.

It is necessary, therefore, to emphasise that co-operative or collective absorption of losses, and neither State-ownership nor a restricted form of collective ownership, represents the real principle of co-operation in the sphere of banking. A dispassionate study may yet show that insurance of deposits is the only efficient instrument of co-operation in the mechanism of credit. Further, no larger contribution from the banking system or the State would be necessary to build an adequate fund for a scheme of insurance of deposits embracing the entire banking system, than is recommended by the Gorwala Committee for the "Integration and Development Fund" in the service of the proposed State Bank of India only. A constructive re-examination of the various issues involved is, therefore, an urgent necessity.

Stocks and Shares

SENTIMENT SUBDUED BY SHARP REACTION IN IRONS

GILT-EDGED BETTER ON EASIER MONEY

Wednesday Evening.

SPECULATIVE issues turned quiet today but the undertone in the share market is still generally steady. Much less business is being transacted but prices have stood up encouragingly well considering this and the sharp fall in Indian Irons. That fall was due entirely to technical factors and appears to have been stayed.

Weak holders of tea shares are disposed to book their profits, and in addition some gamblers have been selling scrip short. This gave the tea section a subdued appearance, but here too the opinion is that prices are justified by imminent dividends and present working.

Details of the week's trading follow.

After many dull weeks there was a change for the better in the gilt-edged market. This improvement was brought about by easier conditions in the money market following a flow-back of funds from upcountry. Three percent Conversion Loan 1966 after being quoted down to Rs. 80-5 recovered smartly to close at Rs. 80-12, with buyers over. In short-dated issues 2½% 1955 was steady at Rs. 99-10 while 3% 1957 and 1958 were unchanged at their previous quotations of Rs. 99-4 and Rs. 99-3. Among medium-dated loans, 3½% 1959-61 had buyers at Rs. 97-6 while 3½% National Plan Bond 1961 continued on offer at Rs. 99-8; 3½% National Plan Loan was quoted lower at Rs. 98-7 after payment of the half-yearly interest but 3½% 1963-65 firmed up to Rs. 93-10 and 3½% 1964 was quoted at Rs. 93-9. In the long-dated group 3½% 1966-68 after being taken lower to Rs. 90-7 closed one anna better while 3½% 1970-75 had buyers at Rs. 86-14 ex-voucher. Provincial loans were a dull market though there were buyers of selected issues but in the absence of sellers little business was recorded; 4½% U.P. and Saurashtra 1964 continued to meet with support at Rs. 100-3 and Rs. 99-13 respectively.

Selected preference shares were, as usual, difficult to obtain and consequently it was not possible to complete buying order. Among jutes, both Anglo-India and Union were taken at Rs. 118-8. In the miscellaneous group, Calcutta Electric were quoted at Rs. 12-7, Indian Aluminium were done at Rs. 71 x.d. and National Tobacco 1st were better at Rs. 80-8. Rallis were marked at Rs. 55. A fairly large parcel of Richardson & Cruddas changed hands at Rs. 83. Small lots of Rohtas B were transacted at Rs. 70 and Shaw Wallace were taken at Rs. 86.

The announcement that the Reserve Bank will pay Rs. 1,765-10 for each fully paid up Imperial Bank share and Rs. 431-12-4 for each partly paid up share resulted in the hardening of the open market prices from Rs. 1,577-8 and Rs. 383-12 to Rs. 1,670 and Rs. 407-8 respectively. United Commercial were dealt in at Rs. 44-8.

In the railway section a solitary transaction was recorded in Dehri-Rohtas at Rs. 10-7.

In the cotton section there was a good enquiry from the Calcutta area for Elgin Mills and Cawnpore Textiles which had ready buyers at Rs. 17-12 and Rs. 9-2. Dunbar were easier at Rs. 201 and Basanti at Rs. 4-10. Swadeshi Cotton Preferred Ordinary were done at Rs. 9-1.

Coal shares were fairly steady following the announcement last week that rail traffic between India and Pakistan is to be fully restored. Burrakur spurted from Rs. 12-14 to Rs. 13-4 but closed lower at Rs. 13. Bengal were steady at Rs. 520 x.d. and Bhalgora rose to Rs. 7-6. Central India were dealt in at Rs. 7-4, East India were done at Rs. 29-8 and Equitable at Rs. 31. Katras Jheriah were quoted at Rs. 49-4 and New Beerboom rose from Rs. 19 to Rs. 20-2. Standard were done at Rs. 18-4 and Talcher at Rs. 3-11. Union were steady at Rs. 18 and several deals were recorded in Western Bengal at Rs. 7-6.

The increase in mills' stocks at the end of March and the easier trend of goods prices during the week cast a shadow over the jute section of the market. Prices were dull and trading was restricted. Howrah receded steadily from Rs. 29-10 to Rs. 29-2 to close at Rs. 29-1. Agapara were easier at Rs. 14-2 and Auckland at Rs. 148. Business was reported in Bally at Rs. 188, Belvedere at Rs. 218 and Champdany at Rs. 172. Birla dropped from Rs. 19 to Rs. 18-9. Ganges were marked at Rs. 104. Mogna at Rs. 100-8 and Nuddea at Rs. 55-12. Presidency were done at Rs. 7-8. National fluctuated between Rs. 34-1 and Rs. 34-8 to close at Rs. 34-2.

Although electric supply issues were fairly steady, little business was recorded owing to scarcity of sellers. Calcutta Electric were steady at Rs. 15-8 and Benares were taken at Rs. 19-7.

The outstanding feature in the sugar section was Carew & Company which spurted further from Rs. 14-8 to Rs. 15-10; tonight's closing quotation is Rs. 15-2. Belund were done at Rs. 10-14. Cawnpore at Rs. 19-5 and Durbhanga were crossed at Rs. 17-2. Champaran were steady today, improving from Rs. 28-14 to Rs. 29-4.

Jessop & Company featured in the engineering section improving from Rs. 34-2 x.d. to Rs. 35-14 x.d. (dividend maintained at Rs. 1-8 per share). Richardson & Cruddas were fairly steady at Rs. 17-6 as were Bhartia Electric Steel at Rs. 15-8. Britannia Engineering were done at Rs. 36, Braithwaite at Rs. 23-11 and Burn and Company at Rs. 267. Indian Galvanizing were easier at Rs. 22-12 while Indian Standard Wagon were steady at Rs. 135-8. Kumardhubi Engineering and Marshalls were subdued at Rs. 11-12 and Rs. 6-12. Indian Iron & Steel opened at Rs. 34-13 but as a result of large-scale unloading by a prominent bull operator the price was knocked down from Rs. 34-14, which was the official closing rate yesterday, to Rs. 33-13 today (settlement day); tonight's closing quotation is Rs. 33-15.

In the miscellaneous section Bengal Paper were steady at Rs. 65-8 while India Paper Pulp were shaded at Rs. 253. Orient Paper were steady improving from Rs. 26-12 to Rs. 27-9. Titagur Paper were taken at Rs. 43-8 as were Assam Bengal Cement at Rs. 6-13. Sone Valley Cement were unchanged at Rs. 7-11, Ruby General changed hands at Rs. 7-6 and Triton Insurance at Rs. 161. India General Navigation were easier at Rs. 92 and India Steamship were done at Rs. 7-10. Balmer Lawrie were easier at Rs. 157 while British Burma Petroleum and Assam Saws were steady at Rs. 3-5 and Rs. 6-8 respectively. British India Corporation were marked at Rs. 7-15 and Calcutta Trams were well maintained at Rs. 17-8. Dunlop Rubber were

SHREE KRISHNA GYANODAYA SUGAR, LTD. earned a profit of Rs. 3.98 lakhs for the year ended last July, compared with Rs. 8.65 lakhs in the previous year. Bringing in Rs. 3,338 there is a balance of Rs. 4,01,475. The ordinary dividend is the same at Rs. 5.475.

The Hathwa factory crushed cane of 15,06 lakh maunds (29,52 lakh maunds) and the Lauriya factory 17,41 lakh maunds (35,06 lakh maunds). The company has begun to refine imported raw sugar. The cane crush is expected to be higher during the current season, and so the directors hope that results will show an improvement.

There is a rise of Rs. 4.81 lakhs to Rs. 7.71 lakhs in the profit of the KANKNARAH COMPANY for the half-year ended last December. Taking credit of Rs. 75,000 waived by the managing agents from commission, bringing in Rs. 32,487 and transferring Rs. 2 lakhs from reserve for derequisition purposes there is Rs. 12,03,189. Taxation absorbs Rs. 4,05 lakhs (Rs. 1.45 lakhs) and machinery renewal re-

serve Rs. 24 lakhs (nil). The ordinary dividend has been raised by Rs. 2 to Rs. 5 per share, leaving a carry-forward of Rs. 84,189.

The directors have under consideration a scheme for the replacement of some of the obsolete machinery in the mills. It is proposed to instal preparing and spinning machinery of the most modern type and an expenditure of approximately Rs. 35,00,000 is contemplated. To a substantial extent this amount will require to be found in the first instance from the company's own resources, according to the directors.

The profit of the WESTERN INDIA MATCH COMPANY rose by Rs. 2.23 lakhs to Rs. 75.92 lakhs for the year ended December, 1954 after reducing depreciation by Rs. 11.64 lakhs to Rs. 6.66 lakhs. The dividend is the same at 11%, including a bonus of 1%. General reserve gets Rs. 6 lakhs (Rs. 4.56 lakhs). Reserve for taxation receives Rs. 34.45 lakhs (Rs. 30.65 lakhs). The carry-forward is Rs. 5,28,887 (Rs. 4,26,760).

Results of the KITTLEWELL BULLEN group of cotton mills for the half-year ended last December are published. Dunbar's profit fell from Rs. 2.06 lakhs to Rs. 1.18 lakhs without providing for depreciation. The carry-forward is a debit balance of Rs. 9,27,404. There is again no distribution.

Bowreah's loss rose from Rs. 1.40 lakhs to Rs. 2.96 lakhs without providing for depreciation. Dividends have again been passed, leaving a debit balance of Rs. 21,82,781 to be carried forward.

The profit of the KANKNARAH COMPANY increased by Rs. 2.11 lakhs to Rs. 5 lakhs for the half-year ended December, 1954. Bringing in Rs. 68,418 and making other adjustments there is a balance of Rs. 7,18,312. Taxation gets Rs. 2.60 lakhs (Rs. 1.1 lakhs). The ordinary dividend is Rs. 1-8 higher at Rs. 4 per share, leaving Rs. 62,312 to be carried forward.

THE WEEK'S TRANSACTIONS

New Delhi

RECOMMENDATIONS FOR THE GOVERNMENT'S STORES AND PURCHASING POLICY

AIMED TO ASSIST DEVELOPMENT OF INDIGENOUS INDUSTRIES

(FROM OUR NEW DELHI CORRESPONDENT.)

THE fact that the Stores Purchase Committee has made its report to the Government of India, and that it will be published soon, was disclosed by the Works Minister, Sardar Swaran Singh in Parliament during the past week. According to reports, the Committee holds that the Government's purchase policy should provide an effective instrument for the economic development of the country and that the Central Purchase Organisation should be used continuously and effectively for that purpose. In the context of Congress ideology, the Committee's recommendations are aimed at stimulating production in general and that of cottage and village industries in particular. The Committee has suggested a special purchase procedure to facilitate the manufacture in India of stores at present imported. It has, for example, recommended a price preference up to 15 percent for indigenous products over imported stores and a suitable weightage system for offers with a larger proportion of indigenous components. In addition to the reservation of certain fields of purchase, the Committee has recommended a price preference of 25 percent or more for the products of cottage and small-scale industries. Here again, the Committee would give preference to the products of cottage industry rather than those of small-scale industry by giving a price preference of 2 percent to offers from co-operative societies. Relaxation of standards is also recommended for indigenous products and an even greater relaxation of standards for hand-made products.

Except in the case of certain specialised defence stores, or where purchases are made on a Government-to-Government basis, all purchases should be made in India, it is suggested. Contracts should be placed for payment as far as possible in Indian currency. Other suggestions are:—Contracts for imported stores should be placed with agents in India of foreign manufacturers or with India-based establishments. Exceptions could be made in certain cases in the initial stages. Stores should not be imported just because the cost is paid from "foreign aid" funds. While formulating schemes under "foreign aid", the Project Authorities should ascertain well in advance the availability of indigenous equipment with a view to ensuring maximum utilisation of indigenous products. Indian shipping should be utilised to the maximum extent for transport of imported goods purchased on Government account; a suitable clause reserving the right to nominate ships should be inserted in the larger contracts. Special whole-time committees should be appointed in the major indenting departments for a continuous study of scales of provisioning for spare parts. While rejecting the Estimates Committee's suggestion for a Store Purchase Corporation, the Committee would like the existing Central Purchase Organisation to continue. A strong Purchase and Development Board should be established to control and co-ordinate Government's purchase activities with particular reference to the development of industries, it is suggested. The establishment of a non-official Purchase Advisory Council to advise the Government on procurement policy and procedure and non-official Advisory Committees to tender similar advice to regional offices of the Central Purchase Organisation is also recommended.

The Board should consist of a whole-time Chairman and five members. Its functions, as suggested by the Committee would be as follows:—(1) To advise on the most effective methods for implementing the Central purchase policy as an instrument for industrial development, to authorise the Director General S & D to issue policy directives in suitable cases; (2) To advise on any other matters of purchase policy or any procedural or organisational matters, with a view to improving the effectiveness of the Central Purchase Organisation. It would also have the power itself to authorise the Director General (S & D) to issue policy, procedural or organisational directives in suitable cases; (3) To advise the departments undertaking direct purchases, as well as Government Corporations, on general matters of policy and the scope of such direct purchases. Individual purchase cases of importance may also be referred to the Board by Departments or Corporations and the Board will offer its advice in such cases; (4) To advise on all cases of purchases having unusual

features which may be referred to the Board by the Director General (S & D) or such other cases as are beyond the Director General's power, namely, cases relating to price preference margins, the waiving of liquidated damages, etc. (The contracts in such cases will continue to be executed by the Director General (S & D); (5) To keep under constant review the Government's purchases abroad, to ensure that no purchases are made abroad of any items which can be produced indigenously, and also with a view to developing capacity in the country for the future production of such items; (6) To undertake periodically a review of the principles followed by indenting departments in formulating their indents, with a view to ensuring economy in outlay and the better development of indigenous capacity; (7) To advise on purchases in excess of the purchase powers of the Purchase Missions in London and Washington which are referred under the rules in force to the Ministry; (8) To review the existence of surpluses which come to notice, either as a result of an actual declaration by the stockholding department, or in the process of reviewing an indent for the store.

Lastly, the Committee has recommended that Purchase and Development Organisations be placed under one common Ministry. It is explained that with the re-organisation of the Ministries in 1951, "Industry" and "Supply" were separated, and the unified control under one Director General over "Purchase" and "Development" disappeared. With this transfer, the Directorate General of Supplies and Disposals has ceased to be directly responsible for the development of industries. Development through Government purchases was one of the fundamental objectives with which the Central Purchase Organisation itself was started over three decades ago. The arrangement placing the Purchase Department and Development Wing under two different Ministries has resulted in decreasing consultation between the two organisations and a lack of liaison, and has consequently militated in practice against a real and effective policy of development of industries through purchases.

The various Trade and Industrial Associations which appeared before the Committee were unanimous that more valuable results in the development of indigenous industries would be achieved if the Purchase and Development Organisations are again combined in the same Ministry. Official witnesses also supported this view, though some of them feared that this might present some organisational difficulties. The Committee are strongly of the view that organisational arrangements could be so devised that the maximum benefits will flow to indigenous industries from a co-ordinated policy of purchase and development. The constitution of the Purchase and Development Board, as recommended by the Committee, may partially meet this objective, but the Committee does not think it could be a complete alternative. It, therefore, recommends that the purchase and development organisations be placed under a common Ministry.

The State Bank Bill

The State Bank of India Bill was introduced in the Lok Sabha during the week. The general scheme is that the Imperial Bank of India should be taken over as a going concern from a day to be selected by the Government. On the "appointed day", the undertaking of the Imperial Bank of India, including all its assets and liabilities and all other interests and rights and obligations of whatever kind, will be transferred to the State Bank of India. All officers and employees of the Imperial Bank (except the Managing Director, the Deputy Managing Directors and other Directors) shall from that day hold corresponding office, for the same tenure and on the same conditions as previously, with the State Bank of India. (There is provision however for remuneration and terms and conditions to be subsequently altered by the State Bank of India.) On the "appointed day" all shares in the capital of the Imperial Bank will be deemed transferred to the Reserve Bank. The Reserve Bank will pay to every shareholder compensation based on a certain formula. A provision has been made for fixing the amount of compensation in the Bill itself. The amount mentioned is arrived at on the basis of the average market value over a period of twelve months prior to 20th December, 1954. The particulars about cash payment and payment in Government promissory notes are laid down as previously decided by the Government. The provision for compensation is similar to that adopted when the Reserve Bank was nationalised and is in conformity with the announcement made on 20th December, 1954.

Compensation will be payable up to the amount of the first Rs. 10,000 in cash if so desired by the shareholder. The issued capital of the State Bank of India will stand allotted initially to the Reserve Bank in lieu of the shares of the Imperial Bank that it would take over and compensate. Of this shareholding, the Reserve Bank will be authorised to dispose of up to 45 percent to private parties. That is to say, a minimum of 55 percent of the

shareholding in the State Bank of India will always be held by the Reserve Bank of India. In the disposal of 45 percent of the shareholding to private parties a preferential position in the allotment of shares is accorded to the former shareholders of the Imperial Bank. The management of the State Bank of India will be vested in a Board of Directors which will be composed of:—A Chairman and a Vice-Chairman to be appointed by the Central Government after consultation with the Central Board. Not more than two Managing Directors to be appointed by the Central Board with the approval of the Central Government. Six directors to be elected by the shareholders other than the Reserve Bank. Eight directors to be nominated by the Central Government in consultation with the Reserve Bank. One (official) director to be nominated by the Central Government, and one director to be nominated by the Reserve Bank. Apart from the Central Board, there will be a limited number of local boards corresponding to an equal number of local head offices. The Central Office of the State Bank of India will be in Bombay and three of the Local head offices will be at Madras, Calcutta and Bombay, the remainder being at such places as the Central Government, in consultation with the Central Board of the State Bank, may determine.

Detailed provisions have been laid down governing the business the State Bank of India may or may not transact based largely on the regulations of the Imperial Bank which at present govern such matters in that institution. Provision is however made for the State Bank of India to acquire or hold shares in the capital of other banking companies and to form or conduct any such banking companies as its "subsidiaries". This provision is intended primarily to enable the State Bank of India to take over as subsidiaries in suitable cases the State-associated banks to be integrated with it. Section 35 includes a provision designed to facilitate the amalgamation of other banking companies with the State Bank of India. This provision is intended to facilitate the amalgamation of such units with the State Bank of India. A provision has been made whereby the State Bank of India is under an obligation to open 400 branches according to a programme to be approved by the Central Government in consultation with the Reserve Bank, as suggested in the Rural Credit Survey Report. An integration and development fund will be maintained by the State Bank of India into which will be paid the dividends payable to the Reserve Bank on its shareholding of 55 percent in the State Bank. The amount of this fund is to be applied for meeting losses incurred on losing branches established in pursuance of the relevant provision.

Steel Retention Price

It been decided to refer to the Tariff Commission the question of the retention prices of steel, which have been on a provisional basis since 1st April. The principle of assisting the development programme of steel manufacturers through the ploughing back of profits accruing from prices higher than retention prices is believed to have been accepted. The steel manufacturers will have to enter into agreements giving unequivocal guarantees that such profits will not be doled out to the shareholders or to the managing agents but will be used exclusively for financing development plans. A rise in existing price of steel is expected.

Foreign Remittance

The Finance Minister told Parliament that during the year 1954 Rs. 1922.02 lakhs were remitted from India by foreign firms and companies, including banks, on account of profits, compared with Rs. 1667.29 lakhs during 1953. He added that in 1954, Rs. 59.39 lakhs were invested by foreign firms and companies in India against Rs. 153.60 lakhs in 1953. These figures, Mr. Deshmukh stated, did not include individual remittances of less than Rs. 20,000 as such inward items were not reported to the Reserve Bank.

Metric System of Weights and Measures

The Commerce Minister, Mr. T. T. Krishnamachari will convey to Parliament during its current session, the Government's decision on the proposal to introduce the metric system of weights and measures. The Indian Standards Institution, it will be recalled, had constituted a Special Committee in 1949 to make recommendations on the introduction of the metric system in the country. This Committee, after conducting a detailed investigation and obtaining the opinion of the State Governments, Central Ministries, commercial institutions, and other allied bodies, submitted its report to the Ministry of Commerce and Industry. The principal recommendations made by this Committee were: (a) The metric system and decimal currency should be introduced in India and legislation undertaken as soon as possible. (b) The change should take place in three stages spread over a period of 15 years, the first being devoted to publicity and propaganda, dissemination of information and preparation and modification of text-books; the second being the introduction of the metric system of weights and measures in Central and State Government departments and Public bodies, and the third stage for the general adoption of the metric system.

The report of the Special Committee which was endorsed by the General Council of the Indian Standards Institution remained under consideration of the Government for some time. The whole matter was, however, taken up afresh by the Ministry of Commerce and Industry in 1952. An inter-departmental Committee with a Joint Secretary of the Ministry of Commerce and Industry, as chairman, and with representatives of Central Ministries and the Planning Commission as members, was set up to work out the different stages in the introduction of the metric system, including the expenditure involved and the impact of the measure on Government transactions in particular.

The Planning Commission considered the question at a meeting on 3rd December, 1953, but deferred its decision until the views of the various Ministries were known. The matter came up again for consideration by the Planning Commission on 30th August, 1954. An analysis of the views expressed by the various Ministries indicated that while the Ministries of Food and Agriculture, Education, Railways, Works, Housing and Supply, Natural Resources, and Scientific Research, and the Posts and Telegraphs Department favoured the introduction of the system, the Ministries of Defence, Finance, Irrigation and Power, Communications and Health considered that the present time was not opportune for introducing a change-over to it. The replies from a number of Ministries did not furnish any estimate of the approximate cost of the change-over. It was also intimated to the Commission that the State Governments had been consulted on the subject in 1949 and that Bihar, Bombay and Madhya Pradesh were opposed to the introduction of the metric system or considered the time inopportune for it, while the remainder had generally approved. In view of the difference of opinion among the State Governments and the various departments of the Central Government it was decided by the Commission at this meeting that a comprehensive paper reviewing the disadvantages of the present system and the benefits that would accrue from its introduction should be prepared by Mr. Pitambar Pant in consultation with the Indian Standards Institution and that thereafter the subject should be brought up for further consideration by the Planning Commission.

Cost of Change

The Ministry of Commerce and Industry, through a circular letter issued to a larger number of industrial units, obtained first-hand information regarding organised industry's views on the subject and also of the cost that was likely to be incurred by industry if the metric system was finally adopted. The general conclusion reached on the basis of the replies received from these industrial units was that the metric system could be adopted without much difficulty or adverse repercussions provided the transition was spread over a period of 10 to 15 years. As regards the cost of conversion, it would appear that in the chemical industry, by and large, it would not be very significant. It might as a first approximation be put at 5 percent of the investment in plant and machinery. The cost would be considerably higher in the engineering industry, ranging from 5 percent in the case of cement to 10 percent in the case of machine tools. In some specific industries, the cost of conversion may be much higher than 10 percent, while in some there may be no cost involved. If the transition is gradual and spread over a number of years, the capital cost of conversion may be considerably reduced. In the case of industrial units in the public sector, the cost of conversion would appear to be even lower, being less than 1 percent of the value of plant and machinery. It appears that already Bharat Electronics Limited, the Hindustan Machine Tools Prototype Factory, Ambarnath, and the Hindustan Steel Limited are equipping themselves on the metric system. No major difficulty is visualised by others in effecting the changeover. As regards the textile industry, it has been stated that the silk and rayon industries are already working on the denier system which is based on the metric system of weights and measures. Even in the remaining sectors of the textile industry, no serious difficulty is envisaged in the changeover excepting what may be involved in re-calibrating testing equipment. Applying the results of these studies to industry as a whole, it has been computed that the cost of conversion for the entire sector of organised industry, if the changeover is spread over 10 to 15 years, would be only of the order of Rs. 1 crore a year.

Difference of Opinion

The Posts and Telegraphs Department is generally in favour of the introduction of the metric system. It feels however, that the changeover should begin with a decimalised currency. On an *ad hoc* calculation, the cost of changeover in the Posts and Telegraphs Department has been estimated at about Rs. 1 crore. The Ministry of Transport has accepted in principle the adoption of the metric system. It, however, anticipates certain difficulties during the transitional period, particularly for the railway workshop, although the difficulties are not considered insuperable. The approximate cost estimated by the railways for effecting the changeover is Rs. 1 crore. The Ministry of Health has indicated that the present time is not opportune for the introduction of the metric system. However, the Indian Medical Association has favoured its introduction. Although the Ministry of Communications was not in favour of introduction at the present time, the Directorate-General of Civil Aviation has indicated that since Civil Aviation will have to conform to international practices, the introduction of the metric system is desirable. The Ministry of Finance has indicated that the introduction of the decimal coinage should follow the general introduction of the metric system in other sectors of the economy. The replies received from the Masters of Mint, Calcutta and Bombay, however, show that they are in favour of introducing decimal coinage and according to them such a changeover is not likely to involve any substantial expenditure. The Ministry of Defence does not consider it feasible to introduce the metric system since most defence equipment is obtained from the U. K. and the U. S. A. which follow the F.P.S. system. However, recent discussions with the military authorities indicated that, as far as the Army is concerned, the changeover does not present any insurmountable difficulties. It is however likely to result in a fall in the efficiency of

certain types of units during the transitional period and some additional cost is also likely to be involved. If the Ordnance factories and the civil industry in the country change-over to the metric system, the Army will not find it difficult to adopt it. The views of the Navy and Air Force are not available. The Ministries of Food and Agriculture, Education and N. R. and S. R. have generally favoured the introduction of the metric system. So far as the Ministries of Irrigation and Power, and of Works, Housing and Supply are concerned, their attitude is unknown.

Sodium Hydrosulphite Plants

Mr. T. T. Krishnamachari told Parliament that three Bombay firms, Popatlal Ghalabhai and Company, Eastern Chemicals, and Indian Electro Chemicals Limited had been given licences for starting Sodium Hydrosulphite plants. The plants are expected to go into production in 1956.

Electricification of Railways

The Government of India is at present negotiating with the World Bank for a loan of Rs. 30 crores to finance the electrification programme of Indian Railways, as provided in the current Budget.

U. S. Aid Under the Colombo Plan

The Colombo Plan Consultative Committee is meeting at Singapore this year. As already known, at the instance of India the representatives of ten recipient countries under the Colombo Plan will meet at Simla from 10th May to discuss the utilisation of the offered U.S. assistance. Later, another meeting of the donor and the recipient countries will be held probably in Washington to finalise the scheme.

Income-Tax for Government Employees

Some changes in the income-tax provisions of the Finance Bill are expected. The Government employees, for example, who pay a subsidised house rent, are allowed free maintenance of their house gardens and are beneficiaries of the contributory health scheme. Under the Finance Bill, they will be taxed on the market rent of their houses as also on other concessions they receive as conditions of their service. The Finance Bill as it stands today will reduce the emoluments of Government employees to a level below that recommended by the Central Pay Commission—one reason for modifying the Bill.

Attitude to Foreign Capital

The Lok Sabha approved all demands for Budget grants and passed the Constitution Amendment Bill by an overwhelming majority. Replying to the debate on the second reading of the Constitution Bill, the Prime Minister reiterated his earlier assurance to foreign capital. He said that "no country in the world where, communist, non-communist, socialist, non-socialist, would proceed in the manner that apparently suggests the expropriation of foreign capital."

Mr. K. K. BASU (Communist): If the situation so demands, if the community so wishes.

Mr. M. P. MISHRA: Now the Russian factories are coming in.

THE PRIME MINISTER: I put it to the honourable Member that I should like him to tell me of any country, whatever its social structure might be—I am leaving out that particular period where there is an upsurge and civil war and the like going on, when, of course, no law holds, when large numbers of people run away, they leave their properties, they are seized, other things happen, all kinds of things happen, there is no law, and it is the might of the strongest that prevails there—but leaving that particular period out I do submit that countries do not behave this way, whatever their social structure or policy. In regard to foreign capital, foreign interests, you control them; of course, you control them, you deal with them, but you do not expropriate them. These are things which in the ultimate analysis are very bad for a country. After all, when you judge of it, you can judge of it in two ways. Anyway, I may be acquiring some money or acquiring some property without paying for it. That is one thing. Or you can judge of it from the point of view of acquiring something that is strategic to your plan, something that comes in the way. I said yesterday that so far as anything is concerned, which from the point of view of our larger planning we think should be State-owned, it does not matter whether it is foreign or Indian or whatever it may be, because that becomes an essential part of our plan to hold that strategic point. That is a different matter. But apart from that, just to push out this person and that person does not bring about Socialism. It does not bring about any particular thing, and so far as foreign capital is concerned, it merely brings about a hostile world, a hostile opinion; your credit goes. India's credit is much too valuable a thing to be bartered for a few crores or whatever sum of money that you get.

Policy for Trade and Industry

During the discussion on Budget grant, Mr. Krishnamachari made the following statement: Sir, maybe in due course, imperial preference will go; maybe, in due course the Indo-British trade agreement might be revised; maybe, it may be on my own volition and not because of somebody else's determination.

We find that certain conditions have come to pass either because the Ministry has been imple-

menting the recommendations of the Engineering Capacity Survey Committee or by force of circumstances, and we find that there is no surplus capacity in the engineering industries in many cases.

There is no spare capacity in the steel casting industry. In the year 1952, the total production of steel foundries was less than 5,000 tons. In 1954, the production rose to 14,000 tons. And, the total capacity of the foundries being somewhere in the region of 15,000 tons, I think, I am right in claiming that there is no surplus capacity there.

In the structural industry, the order books of all the big structural factories are fully booked for the next six to 12 months.

In regard to machines, the position is far better than it was in 1952, and our trouble is we find in many cases the deliveries are delayed.

In regard to textile mills, the survey is not intended so much to rationalise textile mills but to find what are the needs for the textile machinery in the future. I find today, with the Government freely licensing spinning units, that they are not able to get machinery from local manufacturers. Therefore, we have to have an evaluation of what our needs will be for replacement of machinery, knowing as we do that quite a lot of our plants are working with what may be called "worn-out machinery." The survey is intended to tell us what the state of the machinery is, whether our plants are capable of producing machinery and where imports have to be allowed, if they are necessary at all.

Recently, we have undertaken a machine tool survey, which is very nearly complete, and that has revealed that, although some time back in 1952 there was a conflict between private machine tool producers about the possibility of Jalahlali Factory impinging on their sector, the Government will have to put in not merely one, but two or three machine tool factories in order to take up the slack that now exists in regard to machine tools in the private sector. The private sector will also have to augment its production. These are some of the things that we are doing. Fortunately or unfortunately, there will be a lot to be done in the future.

Apropos a target of 6 million tons of steel, we are thinking of 4.5 million tons at the moment and we might expand it later. The 4.5 million tons of steel means the haulage of about 36 million tons of other material, and I can say that it is a problem that baffles the best brains in the country. As I said, in regard to the development of electricity, the number of structural factories that we will have to put up in the country, the new factories that will come and the structural material that they need, the cranes, etc., and the survey of all these things, it gives a very big potential so far as future work is concerned. In fact, I am thinking, in consultation with my colleagues who are concerned with this particular matter, of more or less asking for tenders for fabricating units. Here is a case where we are thinking of reconciling both the interests of the public and private sectors. If the private sector would not come up, then ultimately Government would have to step in. We might import the steel that is necessary. Seriously, I am thinking in terms of setting up three units, with forging and foundry capacity, which are fairly big, and to which any person who is a manufacturer could go and give his designs and be sure that the design will not be used for some other purpose. The Government is seriously thinking of sponsoring three units in different parts of India.

SEVERE DEPRESSION IN
COTTON PRICES
ECONOMIC EQUILIBRIUM OF
W. INDIA DISTURBED

(FROM OUR BOMBAY CORRESPONDENT)

THE equilibrium of the economy in Western India has been disturbed because of the depression of prices of commercial crops such as cotton, sugarcane, and oilseeds. Even the shrewdest observers in the cotton trade are puzzled by the extent of the price fall in cotton both in the forward and the spot markets. In the past, the forward market used to be depressed because of the essentially bearish nature of the standard contract; but the spot market worked more or less on normal lines. This created a sense of unreality about the forward prices of cotton during last year which stayed far behind the spot prices. Now, however, the contract has been revised and much of the emphasis on the bearish side which had characterised it in the past, has been removed, especially since last month, with the change brought about in the manner and method of fixing room rates, or the price differentials, at the time of maturity of each contract. In spite of this and in spite of genuine efforts, though belated and half-hearted, to check the persistent fall in cotton prices, the recession continues and cotton stands today below Rs. 550 which leaves a very small margin over the floor price. The Government announced an additional export quota of one lakh bales of the staple length of 3" and below, of any crop old or new, subject to the condition that of this quantity, 35,000 bales should be exported from ports in Saurashtra. Both the producers of cotton and the market men had been clamouring for this additional release and everybody believed that if and when the export quota was increased, cotton prices would show some strength as well as stability; but when the actual announcement came, apart from a small rise in kerb-trading, there was not only no rise in price, but a sizable reduction as a result of a rush of selling orders from those who had been waiting for this opportunity. If the announcement had come earlier when the world cotton position had been stable, it might have helped in securing the desired objective. But when New Delhi was cogitating whether or not to release more cotton for export and if so, on what terms, the position abroad had changed and there was a slump in the world textile market, with much more increased competition from exporting countries. A large part of the previous quota for export has remained unused and it is not certain whether with the export duty at its present level, there will be any chance for shippers in India to market the cotton that is released for export. There is a general feeling in the market here that there is something wrong with the machinery of export also. Exports are confined mostly to established shippers, some of whom are not in a position to find buyers for Indian cotton abroad. On the other hand, those who are in a position to do so have utilised their full quota and have to pay an unofficial premium to those who have unused quota left with them. This adds to the price for the foreign buyer and Indian cotton is priced out in what is now virtually a buyer's market. On the other hand, as the crop in India this year is expected to be about 4.7 million bales, the whole of this production cannot be used within the country in spite of the fact that textile mills are doing their best to switch over to Indian cotton of medium and long staple varieties as far as possible because for them, Indian cotton is definitely cheaper. If hopes regarding exports are not realised, it is clear that a surplus of about two lakh bales from this year's production will continue to weigh heavily on the market and the possibility of a healthy price trend for cotton during the rest of the season will be remote. A reduction in the present export duty of Rs. 250 a candy seems therefore called for.

Fresh Fetters for Industry

The industries in this State are faced with the prospect of a fresh spate of labour legislation. The Minister for Labour, Mr. Shantilal Shah, made a statement at the meeting of the Labour Advisory Board here last Friday. No fresh Acts are proposed to be enacted, but there will be additions and amendments to the several existing Acts, such as the Workmen's Compensation Act, the Payment of Wages Act, the Minimum Wages Act, the Industrial Disputes Act and the Industrial Employment (Standing Orders) Act, to safeguard and promote the legitimate interests of the workers and to contribute to harmonious relations between employers and employees. The proposed amendments to the various Acts have been considered by the Labour Advisory Board. One of the most important changes which the State Government wants to bring about relates to the Workmen's Compensation Act, in order to cover more categories of workmen and to provide for an increased quantum and expeditious payment of compensation to them. In this connection, the Minister stated that the number of accidents in factories resulting in personal injury to the workers was increasing. While the Factory Inspectorate endeavoured to prevent such accidents, the control it exercised could only be of a remote nature and prove effective only if the management were alive to its duties. The State Government had for a long time under consideration this question of amending the Workmen's Compensation Act, but it had not taken any concrete step in view of the contemplated move of the Union Government to enact comprehensive legislation on this subject. As there seems to be no prospect of Central legislation in the near future, the State Government has decided to go ahead with

its own. The proposed amendment to the Industrial Disputes Act and the amendment to the Payment of Wages Act are equally important. In this connection, the Labour Minister stated that one difficulty which the Government had to face was about determining the amounts of lay-off or retrenchment compensation due to workmen. The determination of the amounts raised several contentious issues which could be decided properly by judicial authorities only. It was, therefore, proposed that such determination should be made by the authorities appointed under the payment of Wages Act and that for this purpose, compensation payable under the Industrial Disputes Act should be treated as "wages" as defined under the Payment of Wages Act. In this connection, the Minister also revealed that representations had been made that the financial burden imposed on small and growing industries by the provisions for the payment of lay-off and retrenchment compensation retarded the growth of industry. It had also been urged that such compensation should not be payable in addition to other cash benefits such as gratuity or in case of temporary or permanent closure of any establishment or a section thereof for which the employer could not be held responsible. The amendment to the Payment of Wages Act would try to accommodate these views and to remove the burden of small and growing industries. Referring to the agitation against the way in which the Employees' State Insurance Scheme is being implemented, the Minister said that all possible efforts had been made both by the Insurance Corporation and the State Government to execute the scheme satisfactorily. The Minister also informed the Board that much of the friction in day-to-day relations between the employers and employees arose out of the absence of standing orders clearly defining the conditions of employment. The Bombay Industrial Relations Act and the Industrial Employment (Standing Orders) Act provided for the settlement of standing orders but they differed in some aspects as a result of which workers were left in a state of uncertainty. It was, therefore, proposed that the Central Act should be applied to all establishments employing at least 50 workers and that a provision should be made for application of the Model Standing Orders notified under the Act to all such establishments until standing orders for each individual establishment were settled. The Board also considered the draft scheme relating to labour and labour welfare which had been formulated by the State recently for inclusion in the second five-year plan.

Textile Magnate's Suggestions

The annual general meeting of the Ahmedabad Millowners' Association last week was noteworthy for some important suggestions made by Mr. Surendra Hutheesing, the retiring President in his address. So far much attention has not been paid by industrialists to fuel which forms an important item in the cost of production. Mr. Hutheesing urged the Government to lift price control on coal and observed in support of his suggestion that the Government had successfully adopted a policy of decontrol in various fields without any adverse effect on the country's economy. He wanted this experiment to be extended to coal because coal production now was satisfactory. Mr. Hutheesing held that this would result in cheaper coal and that cheaper coal would lead to cheaper cloth. Another novel suggestion made by Mr. Hutheesing was to levy excise duty on cloth on an *ad valorem* basis. His contention was that as levied at present, the incidence of excise duty worked out much higher on low-priced goods. His suggestion, if accepted, would therefore spread the burden more evenly and the poorer sections of the population would be benefited without the Government losing any revenue in the process. One of the complaints voiced by Mr. Hutheesing was that, though the Government had been in a hurry to implement the Taxation Inquiry Commission's recommendation to increase excise duty on cloth, it had at the same time ignored the Commission's categorical suggestion about withdrawing the cess levied on mill cloth for giving aid to the handloom and khadi industry. He observed that though the Matthal Commission had ruled out the proposal that sales tax should be administered by the Centre, it had suggested that the power and responsibility of the State must end and that of the Union should begin when the sales tax of one State impinged administratively on dealers and fiscally on consumers of another State. Mr. Hutheesing added that the Commission had also suggested that while necessary constitutional and legislative measures for implementing its proposals in this respect were being carried out, States should not attempt to tax non-resident dealers or to levy purchase tax. Nothing, however, had been done in this connection and Mr. Hutheesing urged the Government speedily to implement the recommendations of the Commission to remove the present handicaps on inter-State trade and commerce. He also referred to the Constitution (Fourth) Amendment Bill and the Companies Bill. He was of opinion that such severe restrictions as these two Bills proposed to inflict would retard seriously capital formation during the second plan period. At this meeting, Mr. Madanmohan Mangaldas, a prominent millowner, was elected President of the Association and Mr. Jayakrishna Hari-valabhdas was re-elected Vice-President for 1955-56.

Indian Interests Against Lancashire

Following the visit of the British Textile Trade Mission and the pressure which is believed to have been brought on the Government of India by the U.K. Government to seek a reduction in cloth import duty, to enable Lancashire to export certain varieties of textile piecegoods in larger quantities, certain business organisations here have made representations to the Union Government expressing their opposition to the move. Foremost amongst these is the Indian Merchants' Chamber which, in a representation to the Commerce and

Industry Ministry, has stated that the British proposals for relief by reduction in cloth import duty is designed to facilitate and make possible increased imports of cotton textile into the country not only immediately but also progressively in the years to come. Increased imports would inevitably mean displacement to the extent of such imports of the demand for Indian made textiles. The representation adds that from a long-range point of view it would mean the re-emergence of competition in an important sector of national production, where a stage of comparative self-sufficiency has been reached after years of pioneering effort. Once increased imports were facilitated by any reduction in the level of duty it would at a subsequent stage be difficult to check the damage of the gradual penetration. The Chamber's representation states that the effect of the reduction in import duty would be specially felt in respect of finer varieties where even now an element of consumers' preference for imported goods persists. Lower tariff for such items would mean increased import competition and a consequent setback to production in such varieties. The Committee has, therefore, urged that nothing should be done at this stage which would impair the competitive capacity of the Indian industry in the home market or lead to the gradual re-emergence of increasing imports of cotton textiles into the country. The Swadeshi League has also made a similar plea to the Union Ministry of Commerce and Industry. Mr. Pranlal Devkaran Nanjee, President of the League, has urged that the British proposal for reduced cloth import duty is inspired by a desire to secure increasing markets for British textiles in this country and every yard of additional import of cloth means displacement of that much of home-produced cloth. In the long term interest of preserving the existing conditions of cloth requirements of the country, he has urged the Government not to entertain any proposal to reduce the level of the existing textile tariff.

Protest Against State Bank

The Indian Merchants' Chamber here is not only against the Government acquiring control over the Imperial Bank of India but it considers the scheme of Government establishing a competitive State enterprise in the form of a State bank, while the banking industry is still struggling hard against serious impediments, as "most undesirable." In a memorandum submitted by the Chamber to the Union Ministry of Finance on this move, it has pointed out that the creation of a State bank on commercial lines with a network of branches to meet the needs of the co-operative and rural credit might present a formidable obstacle in the progress of joint stock banking institutions in the country. The Chamber has also warned the Government that the principle of State control in the sphere of banking through complete or partial nationalisation would raise issues of far-reaching implications not only for the progress of commercial banking but also for the future stability of the credit structure in the country. The communication from the Chamber stresses the need for maintaining faith and confidence of the investing public in the future role and scope of investing institutions and, therefore, suggests that any step or measure which would even indirectly impair such confidence would necessarily have a detrimental effect on the national economy and would thus defeat the very objectives of the Government. It goes on to say that in case the Government still wants to acquire control over the Imperial Bank it should try strictly to adhere to its assurance that due regard would be paid to the unimpaired continuance of credit and banking facilities generally enjoyed by commercial and other interests from the bank in the past. At the same time, the Chamber suggests that even without nationalising the Imperial Bank, this bank could have been made to subserve the larger objectives of expanding rural banking facilities and ensuring the development of both commercial and co-operative banking on sound lines. In the opinion of the Chamber, the main object of providing rural credit was to have proper integration of the agencies now operating and that the Reserve Bank of India was the proper body to bring about that integration between different credit institutions. The establishment of a State Bank would, therefore, result in duplication of functions of these two institutions. On the manner of acquisition of shares of the Imperial Bank, the Chamber has suggested that in deciding the basis and method of payment of compensation, the Government should consider the fact that the market value of shares had fallen considerably due to persistent reference to the intended nationalisation of this bank in Parliament and should, therefore, take into account the share values prevailing before 1948 and, finally, the Chamber has urged the Government to refrain from implementing the proposal to acquire control over or to nationalise several other banking institutions which are functioning efficiently.

Management Executives Meet

The Chief Minister, Mr. Morarji R. Desai, inaugurated on Saturday the two-day session of the first All-India Conference of Management Executives consisting of more than 200 representatives from leading industrial and commercial concerns in the country. The Conference discussed problems relating to financial, legal, technical and scientific aspects of various business undertakings. The Conference was presided over by Mr. Murarji J. Vaidya, chairman of the All-India Manufacturers' Organisation, while Mr. P. M. Chinai, president of the Indian Merchants' Chamber was the chair of the Reception Committee. It was organised by the Bombay Labour Bureau having a membership of over a hundred industrial and commercial concerns spread all over the country. Soon after the inauguration and the president's address, the chairmen of the five sectional meetings delivered their addresses.

London

SIR ANTHONY NAMES
ELECTION DAY
BUDGET SPECULATION
REACHES PEAK

(FROM OUR LONDON CORRESPONDENT)

THE Easter holidays and the continued absence of newspapers in London have combined to make the past week an unusually dull one from the point of view of the commentator. So dull, in fact, that the City Editors of the provincial Press have been driven to falling back quite frequently on articles in the various bank reviews to furnish them with topics for their daily columns. Hard facts, indeed, have been difficult to come by. There has been all the more time, therefore, for speculation, and this has naturally centred on two main subjects—the probable date of the next general election and what Mr. Butler was likely to do in his Budget. As to the former, Sir Anthony Eden's comings and goings were carefully studied as a possible guide. The Prime Minister has been hard at work at Downing Street interviewing individual Ministers and no doubt acquiring the "feel" of his new responsibilities. There has only been one Cabinet meeting. May continued to be the favoured month for an election, but in some quarters the date had been advanced from the 26th, to the 19th, and even to the 12th, though in doing so the protagonists overlooked the difficulties associated with the absence of the newspapers and the fact that the Chancellor of the Exchequer would be obliged to introduce his Finance Bill in two parts, and even so require the co-operation of the Opposition in getting the urgent provisions passed in time. Doubts were set at rest on Friday evening, when Sir Anthony announced over the B.B.C. that Parliament would be dissolved on 6th May and polling for a new Parliament take place on 26th May.

None of these things, however, has had much impact on the City, which traditionally ought to be especially sensitive to the slightest influence at this particular time. Instead, stock market prices have maintained a slow but steady rise to a point which more or less offsets the fall occasioned by the raising of the bank rate and other credit restriction measures. The absence of the newspapers, and therefore of the usual spate of advice to the Chancellor as to what he ought, or ought not, to do, may be partly responsible for this, but it does not go quite far enough to explain the inner confidence of the City—and it does not often make mistakes—in the face of a heavy accumulation of discouraging facts. The Budget will prove the deciding factor, and it is interesting to find the Economic Adviser to the National Provincial Bank, Mr. H. G. Hodder, telling the National Association for the Advancement of Education for Commerce that it was hard to see the optimistic forecasts of substantial tax concessions. There might, he said, be some concessions to encourage industrial investment and personal incentive. Beyond this, however, it would be unwise to encourage expectations of an appreciable reduction in a burden of taxation which was still about the heaviest in the world. It was imperative that the recent strains and stresses on sterling, because of election uncertainties, should be eased as quickly as possible. But whatever the Chancellor did in his Budget it was only fair to say that over a period of four years he had seldom been wrong in his judgment.

The Newspaper Strike

The strike of maintenance engineers and electricians on the national newspapers entered upon its most serious phase yesterday when, as a result of the action of these 600 or so men some 20,000 of their fellow employees who belong to various printing trade unions were thrown out of employment with the termination of the notices which were issued to them by their employers a fortnight earlier. Following upon the publication of the report of the Court of Enquiry appointed by the Minister of Labour, which issued on Wednesday, the Ministry of Labour's Chief Conciliation Officer got the interested parties together in a series of joint and individual conferences which lasted from 10 a.m. on Thursday morning until past midnight, when it was accepted that the negotiations had broken down. The Court of Enquiry was critical of the action taken by the maintenance men, which it called "unjustified," though it admitted that they had a sense of grievance in that they were not represented in the printing unions with whom the N.P.A. negotiated. This, it suggested, might be met by setting up a joint negotiating body representative of all sections of the industry. On the other hand, it also referred to the engineers' claim for a 58s. 6d. a week rise as "unrealistic" and showed that it far exceeded comparable rates paid in other industries and that the printing industry worked fewer hours a week.

So far the T.U.C. has taken no part, but at the intervention of the Minister of Labour it has at last taken measures to get the various unions' representatives to a meeting with the T.U.C. President in the chair. The printing unions have been anxious for T.U.C. intervention, and as there are at least some indications that the A.E.U. and the E.T.U. to which the maintenance men belong, and the N.P.A., the employers' organisation, are both prepared to give way a little on the inflation side and they have hitherto adopted, it is to be hoped that the new moves will be productive of better results. The increasing shortage of copper has recently caused a steady rise in the price—and consequently had an adverse effect on the balance of payments position by pushing up the cost of our im-

ports. On Wednesday the Government stepped in to correct this tendency by announcing that the Board of the Trade is to release some 45,000 tons of electrolytic copper from official trading stocks—not the strategic stockpile, which is to be kept intact—for sale mainly to United Kingdom users, just under half the amount is being released through the agents of the Rhodesian producing companies to whom it has been sold; the balance is to be disposed of over the rest of the year after consultation with the London Metal Exchange and other trade associations. According to the Board of Trade "the intention is that so far as practicable the copper will be delivered and priced at an even rate." The immediate effect was a drop of over £30 a ton in the price of copper on the London Metal Exchange, while Reuters' index of commodity prices fell to its lowest level for five or six months at 485.1, against 515.3 only two months ago.

The long-term effects of the release of this holding are less easy to gauge. Mr. R. L. Prain, Chairman and President of the Rhodesian Selection Trust, was of the opinion that the new supplies would certainly bring down the price of copper on the world market. "The price has been high," he said, "because we haven't had any chips to play with but now we have." In New York, the copper market reacted quickly. It was expected that any further increase in the price from its present level of 36 cents a pound was now out of court. On the other hand, some people in the City say that this release by the Board of Trade will do no more than fill a gap until the copper produced in Rhodesia since the strike there ended becomes available in June. At the moment the attitude of Chilean producers is unknown; already some people are suggesting that Chile may hold off the market now that prices have fallen.

Lancashire Mission to India Returns

The Lancashire textile mission to India returned to this country on Tuesday, but apparently we are not to be furnished with any details about its discussions and discoveries until it has reported to the Cotton Board and the Manchester Chamber of Commerce. At all events, the leader, Mr. Angus D. Campbell, was particularly careful to reply to press representatives after his arrival to deal only with generalities. For the moment it is probably true to say that the Indian public is better informed as to the outcome of the mission's visit—there does not appear to have been the same reticence at your end—than we are here.

Mr. Campbell said the mission had proved to be "well worth while" and had been "very well received by the Government of India and Indian millowners" and he hoped that it would "have some good results." This hope presumably referred to the possibility of a reduction in import duties. While those duties remained, Mr. Campbell said, there was little likelihood of any expansion in British cotton exports to India, except in high-class goods. India's own textile industry was improving rapidly—particularly in the quality of its products—and there was a wide difference between prices of home-produced and imported goods.

British Shipyards Losing Orders

Although British shipyards are keeping busy, the rise in labour costs and the backlog of past orders are combining to create some anxiety about the outlook for the future. The situation was made clear by a prominent Norwegian shipowner at a recent launching ceremony at the Sunderland yard of Short Brothers. Between 12th October, 1954, and the end of March, Norwegian owners placed 73 shipbuilding contracts in Norway, Sweden, France and Western Germany, but one in Britain, said Mr. H. C. Henriksen, Managing Director of the Norwegian American Line. After the launching of the 10,000-ton motor-ship *Vigra* for his company, Norwegian owners, he explained, were reluctant to order their new tonnage in this country because delivery dates were too far ahead, and because the cost of new ships in Britain was high. Labour costs had gone up several times and unless the spiral was halted British yards would experience difficulty when it came to competing with those in Europe.

Brevities

The Purchasing Officers' Association, in its quarterly business report, states that industrial activity has continued at a high level and prices generally have moved upwards. "The recent round of wage awards has set off a sharp upward movement because, unlike certain awards made twelve months earlier, the increased costs could not be absorbed any longer."

The Board of Trade announces the issue of an open general export licence authorising the export to any destination other than China, Macao, North Vietnam or Tibet of specified brands of zinc ingots and slabs (or plates). These licences are dated 7th April, 1955, and have come into operation on 18th April. This means that traders will not need to apply for separate export licences.

IMPROVEMENT IN EMPLOYMENT
SITUATION

There was an improvement in the employment situation during the first two months of 1955 as the average number of vacancies notified to employment exchanges during the period were 21,242 against 19,990 a month in 1954. This information was given by Mr. Khandubhai Desai, Union Minister for Labour, in reply to a question by Dr. Ram Subhas Singh in the Lok Sabha last week. The number of employment seekers on the live register of exchanges also decreased from 609,780 at the end of December, 1954, to 605,933 at the end of February, 1955, added the Minister. The Minister further stated: "These figures may be signs of an improvement in the situation, but it is not possible to draw any final conclusions from them just yet."

Uttar Pradesh

U.P. GOVERNMENT'S CONCERN
ABOUT LABOUR UNREST
PROPOSED SURVEY OF
SUGAR INDUSTRY

(FROM OUR LUCKNOW CORRESPONDENT)

THE U. P. State's Labour Minister, Mr. Jugal Kishore, stated early last week that the Government was watching the labour situation in Kanpur and taking steps to see that the general strike proposed for 2nd May did not materialise. He did not indicate what these steps were but the Government's attempts to contact labour leaders direct instead of dealing with the Suti Mill Mazdoor Sabha have been attacked by certain sections as "attempts to disrupt the workers' unity." According to these sections, if the Government persisted in its attempts the Sabha would be free to permit the workers to commence the strike even before 2nd May. "The unrest is not confined to the textile labour but has spread to workers in most industries in Kanpur. The beginning of this month witnessed serious trouble, for instance, in the leather industry when about three thousand workers of the Cooper Allen Mills staged a stay-in strike to enforce their demand for payment of bonus. A large armed force and a unit of the fire brigade had to be stationed on the mill premises to prevent trouble. The City Magistrate also passed prohibitory orders under Section 144 Cr.P.C. to prevent a breach of the peace. The strike was eventually called off after six days on the intervention of the I.N.T.U.C. chief and an assurance by the management that no one would be victimised."

The Prime Minister Mr. Nehru's criticism of the U. P. Bill to ban cow slaughter in the State as "completely wrong" has not deterred the State Government from going ahead with it. The State's Chief Minister, Dr. Sampurnanand, has reiterated his firm intention to place the measure on the statute book. The State Government obviously takes its stand on the recommendations of its Goswamvardhan Inquiry Committee, but the Bill is clearly a concession to sentiment and takes little note of the more important proposals made by the Committee. Breeding, rearing and improvement of livestock cannot be left entirely to private enterprise with the State merely punishing people who kill cows. The cow protectionists have taken heart from the U. P. Government's policy of "no retreat" and it looks as though a powerful group of Uttar Pradesh politicians will by no means cease their agitation for a Central enactment against cow slaughter. In their opinion, a State ban will not be enough, and they trot out the finding of the Goswamvardhan Inquiry Committee to the following effect: "It is an open secret that in large cities like Bombay and Calcutta cows of good breed are rendered dry for the butcher's knife. There is, therefore, a general feeling that the partial ban on cow slaughter which was intended to save all useful and productive stocks from destruction has not yielded the results for which it was promulgated."

Local Industries

The first cycle manufacturing factory in the State was inaugurated in Lucknow last week by the Industries Minister, Mr. C. B. Gupta. Styled "Raulex (India) Ltd.," the factory is equipped to produce complete bicycles and bicycle parts. The average annual output of bicycles in India is estimated at about 400,000 as against an estimated demand of some 600,000. With the development of roads, the demand is expected to increase. The Lucknow factory is equipped to manufacture 200 complete bicycles a day, but has been obliged to restrict production for the present to only 50 a day. This is stated to be owing to the non-availability of quality rims which are manufactured only by Dunlop Rubber Co. Efforts are being made by the Director of Industries to secure these for the firm which has plans to expand its output to 375 cycles a day and complete a turnover of 100,000 a year.

Sugar mill-owners in the State have been perturbed by heavy accumulations of stocks. According to a six-man deputation of factory owners which waited on the Government on 11th April, they have been able to sell barely 20 percent of this year's production and as much as 80 percent is lying unsold in the godowns. It is feared that in consequence the carryover of sugar may total 4.5 lakh tons this season. Until the end of March this year, factories in the State are estimated to have crushed 20.24 crore maunds of cane, an increase of 4.93 crore maunds over the total for the entire crushing season of last year. The U. P. Co-operative Cane Unions Federation has said that large crops of cane are still standing in the fields in many parts of the State, and in a representation to the Government it has demanded that no factory should be allowed to close until the entire cane crop has been bought up and crushed.

The accumulation of sugar stocks with the factories is teraced to the steep fall in the price of gur, the imposition of an extra excise duty on Indian sugar, and the import of foreign sugar. Reports from Hapur indicate that the slack in the demand for Indian sugar is reflected in a drop of as 4 in the mill delivery prices. The Government of India has further reduced the prices of imported sugar, but as there have been too frequent price changes of imported sugar during the last three months dealers are following a cautious policy. As regards gur, the falling trends have not been wholly arrested by Government purchases of small quantities at the floor price of Rs. 10.4 a maund. Meanwhile, there has been some perplexity caused by the announcement of the Industries Minister, Mr. C. B. Gupta, that the Government propose to conduct a survey to find out whether any new sugar mills could be established

in the State. When the existing units are struggling for survival, the move to establish new mills seems ill-advised. But the proposed survey, it is stated, will also take into account the question of shifting some of the existing mills to more suitable locations. Replying to a question in the Legislative Assembly, Mr. Gupta said that steps would be taken to assist the sugar industry in the State "which is suffering from lower recovery and lesser duration of the crushing season as compared to other parts of the country, especially South India." As a first step, it has been decided to give a subsidy of about one-third to one-fourth of the total cost of construction of wells, roads, etc. for developing sugarcane areas. It is also proposed to re-demarcate cane zones for the factories and allocate them for longer periods in order to encourage factories to take more interest in the development of these areas. Official quarters here expect this year's sugar production in the State to reach 830,000 tons which is equal to the record output during the first year of the five year plan.

Mining Restrictions

A judicial decision of some interest to mining concerns is pending in the Allahabad High Court which has issued an interim injunction restraining the State Government from permitting any person other than the petitioner, the Northern India Lime Marketing Association, Dehra Dun, to quarry or remove minerals from the area covered by the petitioner's applications. Under the Mineral Concession Rules, the firm had made two applications in 1949 for mining leases. The Government passed no orders on these applications for two years and a writ petition was filed praying for a writ of mandamus ordering the State to pass orders on the applications. The Advocate-General gave an undertaking on behalf of the Government that the applications would be disposed of without further delay and the undertaking was incorporated in a judgment of the High Court in 1953. But the Government passed no orders and the party had to make another application praying for a peremptory writ of mandamus and for contempt proceedings against the State. It was then contended by the Advocate-General that the petitioner had an alternative remedy by way of an application for review to the Central Government and that he was not entitled to any remedy under Article 226 of the Constitution. The petitioner's claim is that appeal for review by the Central Government is no remedy at all as the Central Government could decide the application *ex parte* after calling for an explanation from the State Government. The Centre was also not bound to assign any reasons. Such an order would, therefore, be a non-speaking order and would not be open to correction by a writ of certiorari.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

OPTIMISM PREVAILS IN SPITE OF INFLATIONARY ELEMENTS

ALTHOUGH pessimistic predictions on the future of British industry continue to be freely voiced both officially and otherwise, the fact remains that, judged by the profits which are being made, the tide of British industry runs strongly in most directions. This is brought out by the numerous company reports for 1954 which have been issued during the past few weeks. The great majority of these documents show handsome increases of profits over those for the previous year, and the chairmen in their speeches have mostly conveyed that the year 1955 has begun well. But even the most buoyantly minded cannot forget altogether that there is still a feverish inflationary element at work. Wages and prices continue to rise and pressure groups in sheltered industries have far too much ability to hold the public—and the Government—to ransom. These facts cause a sense of uneasiness to be never very far away, especially among those people who contemplate heavy financial commitments. If the London newspaper maintenance men now on strike succeed in getting their demands, then they will be receiving wages from £850 to £900 a year. The number of men involved in this case is small, but forcing wage rates beyond a truly economic level is becoming the practice all over the country. It is obvious that in spite of all the industrial conciliation and arbitration machinery that has been devised the adage

"The good old rule, the simple plan,
That they should take who have the power
And they should keep who can"

is, in one form or another, a working principle of many people today. It is clear that as the movement increases for driving wages upward without regard to economic factors, so must the trading opportunities grow of the, at present, lesser industrialised countries, although it may be a considerable time yet before the latter have sufficient trained labour or the machinery necessary to take full advantage of the situation which is developing in the United Kingdom. Admittedly, British industrialists today frequently complain of being "priced out" of markets, but these remarks are mostly inspired by the hope of checking further wage claims or warning the Government that the existing rate of taxation cannot be borne indefinitely.

Importance of Research

If British industry is being squeezed between the exactions of the tax collector and the claims of workers, there are factors which prevent the rollers from coming too closely together. That Britain has been an industrial nation for so long means a good deal in terms of organisation and equipment. What also aids the industrialists is the large sums they have been able to put aside for research work and for advertising. Big concerns are putting aside several million pounds a year for research and comparatively small concerns several hundred thousand. This money is being used to finance machinery improvements and new products well ahead of current usage, as well as making more acceptable already established lines.

The policy is one which has brought substantial financial rewards to prominent British industries, among which may be mentioned the chemical, plastics, electrical and other kinds of engineering. It has also contributed to the prosperity of industries as far apart as building and radio, motors and domestic aids. However, with these the demand has been so spontaneous that the market would have been assured in any event. But it has now become undeniably plain that although research in Britain helps to keep production costs lower than they otherwise would be, it cannot prevent keen competition from other lands. This is most evident at the moment in the cotton manufacturing industry. It is true that research expenditure by companies so engaged is not on the high average level that it is with undertakings in the more modern industries—that is, those which have arisen during the last 30 years or so. Nevertheless, the level has improved during the past decade and the expenditure on collective research through the Shirley Institute has reached an impressive yearly sum.

A fact which has to be taken into account is that there are many kinds of consumable goods, in connexion with which further research is not a matter of urgency until tastes change. Moreover, some types of consumable goods can only find a market gradually because the cost of research is embodied in their prices and demand therefore waits upon a rise in the purchasing power of likely buyers. So it is that whilst the world's exports of cotton pricegoods during 1954 increased by nearly 600 million square yards, practically the whole of this gain was represented by greater exports on the part of Japan and India. The significant fact from Britain's point of view is not so much that she had no share in the expansion of the world trade in cotton goods during 1954, as that orders at the time of writing are quantitatively much lower than they were a year ago. Indeed, unless some marked change for the better soon occurs it would be reasonable to conclude that Britain's export trade in cotton goods is entering a decline of a serious nature.

The long depression which the Lancashire cotton industry experienced from 1920 to 1938 is a painful memory, and it is not surprising that apprehension has been aroused at the existing trend. The demand for the taking of protective measures

has grown so strong that the Government, which was at first reluctant to take any step, has virtually promised to sponsor a Bill for the safeguarding of the industry. The contents of the Bill, which is to be introduced into Parliament after Easter, are unknown. The immediate provisions may be expected to be fairly moderate, although it would be wise not to overlook that with a General Election not far off, the Government will have to give full heed to the demands of so large a body of voters as constitute Lancashire. Whether we have now the climax of agitation, or whether, even after the passing of a Bill, it may take more acute expression, will depend largely upon the course of the home market for cotton goods. As with a number of other industries, the export trade in cotton goods has benefited from the phenomenal demand by domestic buyers which has enabled much longer manufacturing runs than would otherwise have been possible. There are no pronounced signs of a weakening of home demand at the moment, and the indications are that there should not be a severe recession during the remainder of 1955—if wages continue to rise and if also there is something approaching normal weather during the spring and summer months. These are, it must be confessed, problematical factors, even though the Government assures us that nuclear experiments have no effect upon climatic conditions and wages, if not "under control", are not out of it.

British Jute Industry

The chairman of Jute Industries Ltd. was able to state at the annual meeting that the order books of the company are better than a year ago, but he was careful to insist that it is only in quality goods that successful competition with Indian goods is possible "and it is upon these that the company has concentrated in recent years." Members of Parliament continue to pepper the President of the Board of Trade with questions concerning jute. A member for Dundee urges that the Dundee industry should be given the Government's special care. The member for Kidderminster (a carpet manufacturing centre) is not so sure about this. The President of the Board of Trade thinks that the industry should be safeguarded unless some alternative of equal efficacy can be devised. It may be noted that in a report issued on 2nd April the Federation of British Carpet Manufacturers remarks that there has been an improvement in the quality of both Dundee and Indian jute yarns, although the opportunity is taken to lay stress upon the ill-effects of badly spun yarn—"unevenly spun yarns having the most serious effect on the quality of a carpet, particularly so in the case of Axminster goods." It may be noted that the British carpet industry used 24,825 tons of Dundee yarns in 1954 and 2,122 tons of Indian Ludlow yarns. The use of synthetic yarns in carpet manufacturing has made scarcely any progress in Britain; indeed, the Federation does not hesitate to refer critically to their value for this purpose. Although the price advantage, as compared with wool, is still considerable, the proportion of carpet synthetic surface yarns in 1954 was only 2.35 percent of the total used.

Textile Literature

The output of textile and fibres literature has been considerable during the past few months—all of it very high attainment. Wool: *Its Chemistry and Physics* (35s.) is extremely technical, but hardly to be dispensed with on the part of the serious workers in wool research. *The Review of Textile Progress* (35s.), issued by the Textile Institute, abstracts most of the salient information relating to the whole textile field during 1953 and 1954, and gives copious references. It is of value equally to the specialist and to those who want to take a broad view of textile trends. *The Microscopy of Animal Fibres* (£2-2-0) by Dr. A. B. Wildman has very fine illustrations and bids fair to become a standard work. *Testing and Control in the Wool Industry* (25s.), issued by the Wool Industries Research Association is well produced. It is useful to the general textile student as well as to those concerned with the wool industry, since most of the subjects discussed have wide applications. *Worsted Drawing and Spinning* by J. Walker is the first of two volumes to be concerned with the machinery and processes of worsted drawing. It is clearer and more comprehensive than most of the preceding works which have appeared on this subject. *Mechanics for Textile Students* (25s.) by W. A. Hanton is a revised edition of a book first issued a few years ago. The report of the Director of Research, Wool Industries Research Association, shows record activity. Chemical technology was well to the fore and 379 investigations of this nature were made on behalf of member firms.

NEW RADIO BATTERY IN INDIA

The economic and technical advantages of the new "Eveready" "Mini-Max" Type 758 radio battery recently introduced in this country should help to spread the radio listening habit here, and thus benefit the radio trade as well as the public. At present the manufacturers plan to concentrate on the domestic receiver pack battery since this class of dry battery receiver is more numerous than any other in India. However, as production gets into full swing, they expect to turn their attention to other classes of dry battery receivers, such as portable receivers, where the small size and low weight of the "Eveready" "Mini-Max" flat-cell construction make it particularly suitable. Looking further ahead, the introduction of this new type of battery construction, which had made possible the Handie Talkie, the "personal" receiver, and the vest-pocket hearing aid set in more advanced countries, brings these devices one step closer to the Indian man-in-the-street, to make living pleasanter and safer for everyone.

Jute

DULL WEEK IN THE GOODS MARKET

BUSINESS CHIEFLY IN HEAVY VARIETIES: ARGENTINE BUYERS STILL HOLDING OFF

THERE has been a little more activity in the Calcutta goods market over the past week, but it has been generally confined to the heavy goods section. The long awaited Argentine order has again failed to materialise and it is feared that the recent rise in rates, and the general instability of the local markets, which has been very marked over the past few weeks, has scared off this potential buyer. Overseas interests are these days very reluctant to put out feelers or make any enquiries whatsoever, because they know that as soon as there is the slightest hint of any possibility of business, speculators jump into the market, and rates are pushed up against the buyer. These conditions are not conducive to good business, as the present dearth of any large-scale enquiries confirms, and unless more settled conditions prevail we may well lose many markets to substitutes which are on a steadier price basis, enabling the consumer to compute his costs to a greater degree of accuracy. Admittedly, this is the off season for jute goods, but the present inactive market cannot be entirely put down to this, and it is felt that the major portion of the blame may be laid at the feet of the speculators.

Foreign buyers would appear to be trying to combat the effect of the speculators' manipulations by changing their buying policy, and there has been a myriad of small enquiries, designed to have the least inflationary effect on local markets. West Africa, Egypt and Australia have all shown a little interest during the week in the sacking section of the market, and small business is reported with all three parties. This business coincided with the bi-monthly settling day, and its effect was exaggerated by the firmness resulting from the covering business indulged in by the fatka operators. Throughout the week the hessian section of the market has been completely neglected, and any price movements have been in sympathy with heavy goods. Variations in quotations here have only been in the region of 2-4 annas, and on Tuesday prices had reverted to the week's opening levels. Heavy goods, on the other hand, experienced some fairly wide fluctuations and at the top of the market quotations were Rs. 3-8 up on last week's closing rates. There was an easier feeling towards the end of the period and the market fell about Re. 1 due to profit-taking at the high levels.

THE JUTE MARKETS

Jute Imports.—The latest figures for jute imports into the Calcutta area form an interesting comparison with last year. In the current season, up to and including March 1955, total arrivals from India were 37.5 lakh bales. This is slightly more than the arrivals from India for the whole of last season, and the current season has still three months to run. Arrivals from Pakistan, however, now total 9.5 lakh bales for the July 1954-March 1955 period as against 12 lakh bales in the corresponding period of last season. Total arrivals now amount to nearly 47 lakh bales, and this figure is about 4.75 lakh bales ahead of the corresponding total for last season. Thus arrivals of the indigenous fibre more than offset the shortage in arrivals from Pakistan, which augurs well for India's prospects of self-sufficiency in jute. During the same period Calcutta mills are reported to have consumed 43.73 lakh bales of jute, and therefore the industry as a whole has, on paper, stocks amounting to about 3.25 lakh bales plus any carryover from last season. To get the true position however we must add to this figure the jute contracted for but not yet delivered.

Pakistan Jute.—The present situation in Pakistan appears to be one of increasing difficulty for the jute sellers. Normally at this time of year a fair amount of business is done for New Crop jute both for export overseas and to India, especially as now, when conditions point to a bumper crop. Business of this nature is invariably done for forward shipment at a reasonable discount, but under recent Pakistan legislation transactions of this nature are banned. New Crop forward business may be done however providing the price is not less than that ruling at the time the contract is entered into. It is not likely that overseas manufacturers or Indian consumers will fall into line with this ruling which alters the "normal practice of the trade", and pay the same for their New Crop jute as they are paying for Old Crop supplies. If this policy is persisted with then it may have far reaching effects and in the long run jeopardise the running of the complete jute industry. The recent trend of events in Pakistan has made the majority of sellers nervous about entering into any contractual obligations for fear of falling foul of the authorities, and normal business is at a standstill from both the buyers' and the sellers' points of view. Sellers of the higher grades of jute are finding no outlet for their stocks, and it is reported that in many cases prices have been cut to such an extent that Firsts and Lightnings may be procured at the same rates. Low grade jute however would appear to be in very short supply, and this section of the market is very firm.

Manufactured Goods.—Some small enquiries for heavy goods at the beginning of the period

under review caused some excitement in the market and bear covering forced up prices. Moderate business was reported in Cornsacks, Liverpool Twills and Cotton packs, and at the opening on Thursday morning sacking rates had advanced Rs. 1-4 to Rs. 1-8 in all sections. April shipment B Twills stood at Rs. 122 a 100 bags, and July-September shipment at Rs. 115 with a tendency for higher prices. There was no interest being shown in the hessian section and prices remained constant at last week's closing rates of Rs. 44-10 for April 40 in. 10 oz. Hessians, and Rs. 44-2 for July-September shipment. During the day the small real goods business transacted was overshadowed by heavy fatka operations in preparation for the mid-month settling day, and rates rose out of all proportion to the volume of business done. Friday was a holiday and all markets were officially closed, but on Saturday morning opening quotations were again up, B Twills recording Rs. 123-14 for the near positions, which was Rs. 1-14 better than the previous day, and forward shipment rose Rs. 1-8 to Rs. 116-8. Heavy speculation over the weekend and small overseas business continued to have a steadying effect on the market, and prices reached their peak on Monday morning with B Twills at Rs. 124-6 for April shipment and Rs. 117-8 for July-September shipment. During this period the hessian section had been completely neglected, but quotations improved slowly in sympathy with heavy goods to reach Rs. 45 for ready 40 in. 10 oz. and Rs. 44-6 for forward shipment. Speculators now indulged in profit-taking at the higher levels, and heavy selling pressure caused a steady decline in prices throughout the day, and by Tuesday morning April B Twills had lost Rs. 1-2 to Rs. 123-4 a 100 bags, and July-September shipment lost Rs. 1-4 to Rs. 116-4 a 100 bags. The hessian section, in spite of the news of the

slight increase in burlap consumption in the U.S.A. during March, followed the downward trend, and lost all the gains of the week by dropping 6 annas in the near positions and 4 annas in forward shipment. Quotations in this section were now the same as they opened last Thursday.

At the close the market is slightly easier due to the scarcity of any real goods business and selling pressure in the fatka market. Quotations on Wednesday morning were 8 annas to Re. 1 lower in the sacking section and about 2 annas in the hessian section. Opening prices were as follows:—

	April	May	June	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.	Rs.
40" 8 oz. Hessians	35-12	35-10	35-8	35-2	34-10
40" 10 oz. Hessians	44-10	44-9	44-8	44-0	43-4
B. Twills	122-12	121-8	120-8	116-0	111-0
Heavy Cees (Plain)	123-4	122-8	121-8	116-8	111-0
A. Twills	157-8	154-0	150-0	143-8	126-0
Liverpools	140-0	138-8	136-8	131-8	126-0
Cornsacks	128-0	126-0	124-8	118-8	112-0

Raw Jute. Throughout the week under review fairly steady conditions have ruled in the Calcutta jute markets, and the improved goods market earlier in the week brought out buyers for limited quantities. Sellers were inclined to be reserved, and in many cases buyers were not able to buy the categories they required. This was most marked on Saturday when a mill group indicated that they were buyers of Old and New Crop jute combined, preferably at combined rates. New Crop sellers were diffident about offering any jute at all, and the mill had to revise its ideas. It is understood no business of this nature was transacted. After the weekend when the finished goods market tended lower, raw jute prices continued to rule firm, and no interest was shown in anything below the quoted rates. The main reason for this is apparently the very small imports in the upcountry areas with the consequent steadying of rates there, which are above the parity of those quoted to Calcutta mills. The reluctance of New Crop Sellers to operate is possibly due to the fact that no business is possible in the meantime in forward contracts for Pakistani jute, and Indian sellers see in this an opportunity of pushing up their rates. Conditions in the jute growing areas have

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

been favourable over the past week, and a bumper crop is forecast, which in the normal course of events would make sellers eager for business.

Raw jute quotations opened at the beginning of the week at Rs. 33-8 a maund for Upper Assam Bottoms, but soon advanced 8 annas in sympathy with the improved gunny market. Business was done at the enhanced rates which boosted the sentiment but no further advances were recorded before the weekend. On Monday prices again rose 8 annas a maund but no business was recorded and rates stayed at this level even after goods' prices fell on Tuesday. Thus quotations have gone up about Re. 1 a maund over the week and sellers are reserved.

The bulk of the business transacted over the week was carried out before the weekend. In the second half of the week buyers stayed completely out of the market. Dhubri jute was done at Rs. 34 to Rs. 35 a maund basis Bottoms for April-May shipment and Ordinary Assam jute at Rs. 34-8 a maund for the same shipment. Demand for Tossa

was brisk and various categories of this fibre were purchased. Bongaon-Karimpore Tossa changed hands at Rs. 35 a maund, whilst Cossimbazar-Beldanga Tossa was done at 8 annas less both for April-May shipment. In the Daissee section small quantities of Sheoraphuli Daissee were contracted for at Rs. 35 to Rs. 36 a maund, and Daissee Mesta at Rs. 29-8 to Rs. 31-8 a maund basis Bottoms for one month's shipment. Small business was done in Daissee Mesta Tops, suitable for bright weave hessian at Rs. 37-8 to Rs. 38-8 a maund for Tops. Jungli Mesta was done at Rs. 28 a maund.

The only business reported in the pucca bale section was in Pakistan Jat Cuttings at Rs. 125 a bale for April-May shipment and Pakistan Northern Cuttings at Rs. 123 to Rs. 130 a bale for ready delivery.

At the close the raw jute market is a little easier in sympathy with the goods market and rates are down by about 8 annas a maund. Opening quotations on Wednesday morning are as follows:—

	Landed at Mills Rs. a maund Basis Bottoms.	Shipment.

A NEW CAR FOR YOUR LEAVE...

SALE & RE-PURCHASE

The unique advantage of our Sale and Re-purchase scheme for overseas visitors is that the owner remains free to dispose of the car as he pleases, notwithstanding the guaranteed repurchase price given by ourselves.

In this way visitors are protected against any downward trend in the used car values, whilst able to take advantage of any upward trend.

Very steady conditions have ruled in the local Cossipore markets over the past week, although only limited business has been transacted. Imports are still small and wagon arrivals have averaged out at about 45-50 a day, but most of these contain low quality jute of which there is already a surplus. Good quality jute is, therefore, at a premium and stocks cannot be tempted to release any at the current rates. At the close Kishanganj jute is quoted at Rs. 35-3 a maund for garsat quality. There is nothing to report from the Daissee markets and nominal quotations in Sheoraphuli are based on Rs. 35 a maund for garsat quality.

Mofussil: Upcountry markets in India have continued to be steady, and sellers have been experiencing difficulty in covering recent sales. Imports are negligible and only small business is reported. New Crop reports have been favourable from all areas, and present conditions point to a healthy crop. Only small business has been reported in forward New Crop and sellers are inclined to be very reserved. Quotations in Dhubri are based on Rs. 30 to Rs. 30-8 a maund for Dhubri Bottoms.

In Pakistan the market is very steady in the lower grades of jute, but high class jute, for which there is no demand at present, tends to be weaker. Imports into Narayanganj are slightly less than last week averaging about 4,000-5,000 maunds a day, but more than half of this is reported to come from outside agencies. Favourable weather conditions are again reported from the majority of the growing areas and the growth of the New Crop is satisfactory. Price have increased over the week for loose jute, and are about Re. 1 a maund higher than this time last week. Latest quotations in Narayanganj are based on Rs. (P) 25 a maund for Jat Bottoms with Jat Tossa at a premium of Re. 1 over White Jute.

Arrivals of Raw Jute

During March, 1955, arrivals of raw jute in Calcutta and Mill Stations amounted to 500,719 bales compared with 589,796 bales in February, 1955. Of March's total 376,054 bales were of Indian origin and 124,665 bales were from Pakistan. Total arrivals for the period July, 1954, to March, 1955, now amount to 4,699,648 bales of which 3,743,262 bales were Indian jute, and 956,386 bales had their origin in Pakistan. In the same period last season total arrivals were 4,227,525 bales of which 3,033,347 bales were Indian jute and 1,194,198 bales were Pakistani jute. Thus arrivals in the current season are now ahead of last year's arrivals over the same period by 472,123 bales and arrivals from India are up by 709,915 bales, but imports from Pakistan show a drop of 237,812 bales.

INDIAN JUTE CROP REPORT

In their fifth Crop report of the current Indian season for the week ended 16th April, Messrs. Sinclair Murray & Company, Ltd. say that weather conditions in most areas have been hot and dry with occasional showers and this has been quite favourable for the promotion of crop growth and to allow cultivators to carry on with sowings. The condition of young plants is generally satisfactory and germination of seeds has also been satisfactory.

DANPUR: Moderate rainfall experienced earlier in the week has enabled cultivators to carry on land preparation in all areas and some sowings have commenced on a small scale in low land areas. These are estimated to amount to 3 pies as against sowings on the corresponding date last year. Further rainfall is however necessary to allow cultivators to proceed freely with sowings. The river level is normal for this time of the year.

JAJPUR ROAD: Although conditions have been mainly hot and dry, favourable rainfall was experienced mid-week and this has allowed cultivators to carry on with land preparation in the mid and high lands. No sowings have yet, however, been reported. The river level is much the same as at this time last year.

COSSIMBAZAR: Hot and dry weather has been experienced and heavy rainfall is now required to allow cultivators to proceed with land preparation. The river level is normal for this time of the year.

RANAGHAT: Weather conditions have been mainly hot and dry with the exception of a light shower in the early part of the week. Estimated sowings to date amount to 6 pies in extreme low lands as against no sowings at this time last year. The condition of young plants is not so satisfactory and heavy rainfall is now required to promote growth of young plants and for the germination of seeds. The river level is slightly lower than this time last year.

FORBESGANJ: Moderate rainfall was experienced in interior areas and this has been favourable for sowings as well as for young plants. Estimated sowings amount to -/4/- and sowings are going on freely. Germination of seeds has been successful and the earlier sowings and plants are healthy and range in height up to 9 in.

NOWGONG: Weather has been very favourable with alternate rain and sunshine and this has promoted growth of the standing crop and allowed cultivators to carry on with further sowings. Estimated sowings amount to -/7/- as against -/6/- at this time last year. Seed germination has been satisfactory and plants now range in height up to 9 in. Weeding operations are going on as required. The river level is rising very slowly and is the same level as last year at this time.

PALASHBARI: Weather has been mainly wet and a spell of hot and dry weather is now necessary to enable cultivators to carry on midland sowings. Low and midland land preparation has been completed. Estimated sowings to date are -/5/- as against -/6/- as at the same time last year. Seed germination has been satisfactory so far but a spell of hot and dry weather is now necessary to promote the growth of young plants. The river level is steady but is still 2 ft. 6 in. higher than at this time last year.

DHUBRI: Weather has been very favourable with alternate rain and sunshine which has promoted growth of the standing plants and the germination of seeds. Land preparation in the high lands is progress-

sing and weeding operations are going on where required. Estimated sowings to date are -/13/- as against -/10/9 at the same date last year. Plant condition is satisfactory and the plants range in height up to 1 ft. 3 in. The river level is slightly higher than normal and stands 5 in. higher than on the same date last year.

DAISSEE DISTRICTS: Hot and dry weather conditions prevailed with the exception of scattered rainfall in some areas. Further rainfall is now necessary to allow cultivators to continue with land preparation, sowings and for the germination of seeds. Estimated sowings amount to -/4/- as against negligible sowings at the same time last year. The condition of young plants is not altogether satisfactory and they range in height up to 6 in.

Rainfall	For the week		Total from 1st Jan.

I.J.M.A. PRODUCTION FIGURES IN MARCH

The Indian Jute Mills Association reports the total production of manufactured goods during the month of March, 1955.

Exclusive of all Government Orders.	
Description	Quantity
1. Twist and Yarn	
(a) For sale	2,081 tons
(b) All other including that used in sewing bags.	1,045 tons
2. Canvas	211 tons
	4.8 lakh yds.
3. Gunny Bags (Tonnage excludes sewing twist)	
(a) Hessian	1,738 tons
	74.9 lakh yds.
	41.7 lakh Nos.
(b) Sacking	47,206 tons
	11,11.6 lakh yds.
	4,61.8 lakh Nos.
4. Gunny Cloth	
(a) Hessian	33,028 tons
	13,12.8 lakh yds.
(b) Sacking	3,268 tons
	69.9 lakh yds.
5. Other manufactures (including ropes)	301 tons
6. Total production (above figures combined)	
(a) All kinds	88,876 tons
(b) Hessian (both bags & cloth)	13,87.7 lakh yds.
(c) Sacking (—do—)	11,81.5 lakh yds.
(d) Canvas (—do—)	4.8 lakh yds.

(B) Total reported production of goods manufactured on Government account.

Description		Quantity		
7. Sandbags		Nil.		
8. Scrim Cloth		10 tons

*Based on production figures from July, 1948 to April 1949 (full working months excepting March with full complement working 48 hours a week). At present 12½% of looms are sealed.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagal-bhai.

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption for March, as estimated for industry, was 71 million yards, 6 million yards more than last month and just the same as March last year, if deliveries to the armed forces are excluded from last year's figure. Consumption so far this year is running a shade better than for the same period last year. U.S. burlap stocks at the end of March were little changed from the previous month. At an estimated 254 million yards at the end of March, 134 million yards were spots and 120 million yards were floats. Below are two tables which include the March figures—(1) based on member reports to the Textile Bag Manufac-

turers Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S.A. Burlap Consumption (as reported to TBMA)			U.S.A. Burlap Consumption

THE FOREIGN JUTE MARKETS

CONTINUED DULLNESS IN ALL SECTIONS

(FROM OUR DUNDEE CORRESPONDENT)

THE jute market is very quiet in all departments and there is little stability to be seen in raw jute or goods. The former is in only slight demand here and also on the Continent, buyers taking a little interest in spot or adhoc parcels, of which there is an abundance offered to spinners at less than shipment prices. The position is such that, if bids were made for any jute that can be seen, they would in all probability be accepted. At the same time, it is reported that there is quite a lot of material in warehouse, sent from Pakistan on consignment, of very poor quality and this will take some time to get rid of. A few arbitrations have been held lately and some heavy allowances given, one lot carrying as much as £16 a ton. Sellers generally are quoting £104 lowest for Mill Firsts, £94 for Mill Lightnings and £90 for Mill Hearts, April-May, but also up to £6 more asked. It is said that £103 has been done for shipment, and up to £108 also. Good marks of Daissee-2/3 are from £104 and grade from £94, with good Tossa-2/3 from £124 and grade £109, and Tossa-4 at from £113 and £99 respectively, all cif U.K.

Reports of the new crop usually state that conditions are fairly satisfactory, but the Pakistani official statements say that the prospects are not bright. There is no doubt that everything possible is being done to prevent prices from declining to more reasonable levels. This is really required by the jute industry. In comparison with pre-war levels, raw jute is very dear, and this no doubt accounts for the fact that jute is the only raw commodity that has declined in consumption over the intervening years. Substitutes have made big inroads into the industry, and it is noticeable that paper bags and paper yarns are now largely used in place of jute. Calcutta goods are somewhat irregular, but being fairly well maintained in price in spite of the heavy increase in stocks of both hessians and sackings during March. Last mid-week quotations were 72s 9d for 10 oz. 40 in. and 54s 0d for 7½ oz. April-June, and 72s 0d and 53s 6d July-September, with B twills at 196s 0d April and May and 193s 0d June, also 188s 6d July-September, fob Calcutta. Dundee goods and yarns are very quiet and only a trifling business is being done.

At a meeting of the Dundee branch of the U.K. Jute Goods Association held today Mr. Neil Leitch, the popular general manager of Taybank Jute Works (S.C.W.S., Ltd.) demitted office as chairman, and, at the same time, retired as a director of the Board after 25 years' continuous service.

Mr. Leitch said that it had been his privilege to be chairman of the local branch on quite a few occasions and also to hold the very high honour of President of the Association. The years had been interesting and the work on many occasions difficult. The Association had, however, progressed amazingly over that period.

Mr. David Crichton of Andrew Mitchell & Stewart, Ltd., is the new chairman of the Dundee Board.

BRAZILIAN JUTE INDUSTRY

DRIVE FOR BURLAP MARKET IN U.S.A.

THE following item of news appeared in *New York Times* recently. We print the story in full before commenting on its significance for the Indian jute industry.

"Brazil will soon have a new dollar earning export—burlap. Systematic cultivation of jute, the source of this fabric, was started in the Amazon Valley by Japanese planters about eight years ago. Production now is in excess of domestic requirements. As a result, one Brazilian burlap manufacturer has set out to develop a market in this country. He is Dr. Adalberto Valle, a pioneer industrialist of his native state of Amazonas. Its capital, Manaus, was the world's rubber centre until cultivation in South-East Asia came to the fore. Dr. Valle, who was in New York last week to develop business contacts, said his efforts were receiving the active support of the Brazilian Government. He has appointed the Charles Josias Corporation as New York representative of his Companhia Brasileira de Fiacao e Tecelagem de Juta.

"Brazil's main export, coffee, can no longer produce enough dollars to carry her heavy debt obligations and import requirements. Consequently, diversification of exports is being pushed vigorously. Initially, Brazilian exports of burlap will be relatively small, Dr. Valle noted, but they will make a helpful contribution. He said he hoped to ship 10,000 yards to this market in 1955. This would be the equivalent of 5,000,000 bags. Consumption in this country has been running at 800,000,000 yards a year.

"Dr. Valle expressed confidence in his ability to meet price competition from India, the world's leading producer of burlap. Brazilian jute, he asserted, grows longer than that in India or Pakistan and is finer in quality. Until recently, Dr. Valle observed, Brazil did not produce enough jute for her own needs in bagging coffee and other products. As late as 1953, it imported raw jute. After a slump in jute production in 1952, when only 32,700,000 pounds were raised, the crop has been expanding fast. Last year, 77,000,000 pounds were raised. While this is small in comparison with the more than 2,000,000,000 pounds raised by India and Pakistan, it nevertheless puts Brazil in third place among the world's producers. This year, Dr. Valle said, Brazil's jute crop will be even bigger. He estimated that the surplus over domestic requirements would run as high as 11,000,000 pounds.

"The Manaus burlap factory, of which Dr. Valle is president, is just one year old. Last year it turned out 2,000,000 bags. The rate now has been raised to 400,000 a month, and it can be increased to 500,000. Plans for doubling its size are now under study, Dr. Valle said. The plant works on a twenty-four hour schedule and employs 1,000 persons. Although Manaus is 1,100 miles up river, Dr. Valle said there would be no problem in shipping directly to New York or other ports. Ships of up to 12,000 tons can reach Manaus, and sail on for another 1,000 miles.

"Dr. Valle said he found a degree of poetic justice in the jute programme. Brazil lost its dominant position in rubber growing after the British took tree stock and seeds to Malaya and the East Indies. Brazilian rubber could not contend with the competition and Empire preference tariffs. Now he observed, Brazil is using former rubber lands to grow jute, once a virtual British monopoly and still in the main a Commonwealth production."

Significance of Brazilian Move

The emergence of Brazil in the role of an exporter of jute goods might in time confront the Indian industry with a further and formidable competitor in its principal market for hessian in view of the natural advantages which the Brazilian jute industry might reasonably expect to enjoy. Certain areas of Brazil appear to be well suited to the growth of raw jute of good quality and that country is in fact already independent of supplies of imported jute. It will be appreciated that the cost of importing raw jute from Pakistan constitutes perhaps the principal handicap experienced by the jute industries of other countries in their efforts to compete with the Indian industry. A further advantage likely to be enjoyed by the Brazilian jute industry is that the freight rates from Brazil to North America will probably be very much lower than those prevailing from Calcutta to North America—and which in the last few years have themselves experienced a steady rise.

In the light of these advantages it is reasonable to suppose that, should the quality of Brazilian jute goods prove comparable to those produced elsewhere, her exports may account for a steadily increasing proportion of the offtake of jute goods in the North American market. It should also not be overlooked that other important markets for Indian jute goods, namely, the Argentine and the West Indies sugar market, lie closer to Brazil and may be regarded by her as further potential outlets for her jute products.

RECORD TURNOVER OF SHIPPING AT EDEN

The rapid expansion of Aden as a result of the opening of a new oil refinery operated by the British Petroleum Company is indicated by the fact that during the year ended 31st March just over 5,000 steam and motor vessels of over 200 tons called at Aden port. This is the first time that the annual turnover of shipping has exceeded 5,000 mark, and represents a total tonnage of 22,500,000.

EXPANSION OF INDIA'S TEA EXPORTS IN 1954-55

SHIPMENTS TO U.K. DECLINE : U.S. IMPORTS RISE

IN their review of the Indian tea year 1954-55, Carritt Moran and Co. Ltd., say: Sales have continued their later this season in Calcutta than in the previous year due to delays in the despatch of end-of-season teas as a result of a strike of the employees of the river steamer companies in January. Export sales were completed with Sale No. 40 held on 4th April, but sales of Dust are likely to continue until the middle of May. Delays in despatches occurred as a result of the disruption of rail and road communications due to floods, particularly in the Doora, but this had only a very slight effect on monthly arrivals in Calcutta from August onwards as compared with the previous season. Buoyant market conditions again helped in the quick disposal of the crop without resort to any regulations in offerings, with the exception of Dusts, in spite of strikes and "go slow" tactics on the part of shore labourers in the Calcutta port which caused continual difficulty, of varying degrees, to shippers from the beginning of November until the end of the season.

In spite of the incentive of high prices to produce large crops, the general standard of quality and leaf appearance maintained the improvement noticed in the previous year. First flush teas from Darjeeling were rather above average having attractive appearance and bright liquors. Second flush teas were also of a high standard; more for the good selection of useful flavoured invoices on offer than for a number of fine teas. Rains teas from this district maintained the improvement in leaf appearance noted in the previous season but attractive autumnal invoices were again limited by a sudden close to the season. In spite of unfavourable climatic conditions, the quality of second flush teas was very satisfactory. Tippy teas were in plentiful supply but best liquoring Broken Pekoes and Fannings of C.T.C. manufacture were rather limited. An improvement in the standard of manufacture of a number of estates in the medium and low medium categories was again noticeable and rains teas from this district maintained a satisfactory standard of leaf appearance. The quality of teas from the Doora was disappointing at the beginning of the season and far too many teas were rough and stinky in appearance with thin, dull liquors. This was presumably due to drought conditions and later teas were of a fair average standard but cup quality was often dull and many estates suffered from the hold-up in despatches as a result of floods. Out-turn from Cachar showed wide variety. The majority of estates maintained a good average standard but a number of teas of poor appearance and plain liquors were also seen. A few selected estates however produced teas much above that expected of the district.

Demand

The first sale of the season was held on 17th May and first flush Darjeeling met a very strong demand particularly those with stylish leaf appearance and good flavour. There was also good competition for the Doora teas offered at this sale, particularly those with useful first flush quality. First flush Darjeelings with flavour continued to meet good support in the following sales but the demand for all other descriptions was less general and there was an absence of interest from out-markets. Clean common B.P., which was quoted at Rs. 2-10-6 a lb. in the first sale of the season, which was 15 annas above the similar quotation for the previous year, had declined to Rs. 2-7-3 by the end of June. Thereafter good buying demand developed and the price advanced until the end of January when the peak quotation of Rs. 3-11-9 was reached. A feature of the sales during August was the strong buying for internal consumption both in the export and the internal catalogues, which resulted in the price of common teas continuing to advance in spite of the decline in quality. Buying on account of the U.K. did not develop in any strength until September when there was particularly keen competition by U.K. buyers for the best liquoring Broken and Fannings which, in spite of declining quality, continued to obtain prices equal to those realised for the best second flush teas in the previous month. At the beginning of October the export duty was raised by 3 annas a lb. but this increase produced no decline in price and was fully absorbed by the continued rise in price in all world markets. Demand continued a very strong until the end of December, but the market reacted by 2 to 3 annas in the second sale in January as a result of a further increase of 3 annas a lb. in the export duty which was announced on 8th January. Nevertheless, this reaction was fully absorbed in subsequent sales until the final sale in January when demand was less general and prices showed an easier tendency. During February and March prices continued to decline although they remained appreciably above the London level due to the strong support of local buyers.

Internal Sales

Offerings on the internal market showed a much better selection than in any recent year, due to the shortage of export quota, and the quantity offered up to the end of March amounted to approximately 415,000 chests as compared with only 97,000 chests to the same date in the previous year. The trend of prices in the internal market was influenced by the price of export quota and prices showed some decline from September until the middle of December. The release of addi-

tional export quota, amounting to a further 4.5% of the standard export figure, during the first week of January caused a reaction however to the trend of prices for internal consumption and clean common B.P. which had been quoted at Rs. 1-12-6 a lb. in Sale No. 26 in the middle of December had risen to Rs. 2-15-6 in Sale No. 31 held at the end of January. Thereafter prices showed some decline but the quantity and selection on offer became more restricted due to the further release of export quota which enabled sellers to offer a greater proportion of their teas for export. The quantity of Dusts sold up to the end of March showed only a very slight increase over the quantity sold to the same date last year. Weekly offerings were again adjusted to meet demands and to spread the quantity available over the season. The demand was generally satisfactory although a sharp decline occurred at the end of November and the beginning of December. Prices in January, however, again advanced by several annas following the release of additional quota which indicated the possibility of a shortage of tea for internal consumption if the additional quota was not used. Large, leafy, and Dusts again met support from export buyers and best C.T.C. Assam also sold well and generally realised a satisfactory premium over dusts of ordinary manufacture. High prices have attracted a considerably larger quantity of poor residue and artificial types of Dust.

Shipments of Canada during the season showed only a very slight increase but those to the United States were approximately 34 million lbs. higher than in the previous season. Shipments to Egypt were very similar in quantity to the previous year but those to the Red Sea ports and the Persian Gulf showed an appreciable decline. Persia however was able to increase shipments to nearly 3 million lbs. as compared with only 900,000 lbs. in the previous season and Australia took nearly 7 million lbs. as compared with slightly less than 14 million lbs. in the previous year. Exchange difficulties reduced the shipments to Turkey from 5 to 2 million lbs. but a satisfactory increase in shipments to the Irish Republic, Holland and West Germany have been recorded. In spite of the shortage of stock in the U.K. the shipment to British ports declined by 22 million lbs. as compared with the previous season and this decline is greater than the total decline in shipments from North India during the season which amounted to only 16 million lbs. approximately. Total shipments were, however, approximately 28 million lbs. higher than in 1952-53.

Export Rights

The total allotment of export quota amounted to 1334% of India's standard exports against the permissible 135% which could have been released under the International Tea Agreement. The initial allotment made in April amounted to only 105% of India's standard export figure and export quota rights, which had changed hands at 21 annas a lb. in forward dealing in March, advanced steadily in price until the beginning of June when business was done at 57 pices. Thereafter there was a slight reaction to 50 pices before the price again advanced strongly throughout July to 8 annas a lb. at the end of that month. On 4th August, the Government of India announced a further release of 15% of India's standard exports making a total of 120% but this further release had little effect on the price of quota which continued to rise sharply to nearly 13 annas by the middle of August. Thereafter, there was a further reaction and the price declined to about 8 annas at which level it fluctuated during the last half of August and during the first half of September. In the second half of September the price again advanced and, after a number of fluctuations, reached 14 annas by the end of October. At this stage, the Government released a further 9% of India's standard exports bringing the total to 129% against the permissible maximum of 135%. The total quantity of export quota released at this stage was 449.23 million lbs. and it was estimated that little further quota could be released if, as was understood, it was the intention of the Government to retain within India between 180 and 190 million lbs. of tea for internal consumption. On this assumption, and in view of the strong demand for export teas, this further release had no effect in bringing down the price of quota which continued its upward course, showing rises of up to 1 anna during the course of a single day in November, until the peak price of Rs. 1-14 was reached at the end of the first week of December. Thereafter an easier tendency prevailed although quota continued in very short supply and transactions were few and mostly small.

In the first week of January the Government made two further releases of export quota within a few days of each other amounting to 2.5% and 2% of India's standard exports. A sharp fall in price of quota followed to 8 annas but the price again rose in January to 13 annas before further decline again at the end of the month to 9 annas a lb. After further fluctuations in February, during which the price touched 14 annas, the price declined to 6 annas on 19th March which was the last day for registering transfers of old season's export quota. Since that date, business in special export licences has been transacted down to 4 annas at the end of March. It is understood that approximately 12 million lbs. of export quota had not been utilised in North India on the expiry of their validity and 7 million lbs. were not utilised in South India. If the bulk of these special licences can be utilised in the early part of the season, it would follow that export quota may not be in such short supply in the coming season as was the case last year up to the end of December. In this event it seems likely that the high prices and wide fluctuations seen during the past year will not be repeated during the coming year.

The outlook for the coming season is still obscure. Stocks in the U.K. have risen considerably in recent weeks and are now appreciably, though by no means excessively, above those at the same date last year. Shipments from North India have virtually ceased and the quantity of teas afloat will show the normal seasonal decline during the coming weeks. Against this, deliveries to the trade in the U.K. have contracted sharply during recent weeks and it will not be clear for some weeks whether this reflects a real check in consumption in the U.K. as a result of the high prices at the beginning of the year which become the subject of political pressure and vigorous Press campaigns. The reduction in deliveries in recent weeks may be due at least in part to an adjustment of the heavy deliveries in the early weeks of the year when consumers and retailers were probably increasing stocks in anticipation of a further price rise. Further, the increase in the bank rate is likely to be having the effect of making blenders reduce as far as possible their stocks and it may be several weeks before the combined effects of all these factors will be adjusted and disclose the present state of U.K. consumption. Heavy crops in the early months of this year in Ceylon and the favourable conditions in North India following good rain in the tea districts in recent weeks, indicate the probability of increased supplies this year. If therefore consumption in the U.K. has received a definite check, it would seem probable that the supply position will be greatly eased before the end of this year and that, after the sale of quality teas in July and August, the market may fall to lower levels than those ruling at present.

CALCUTTA TEA AUCTIONS IN MARCH

DECLINING TREND IN EXPORT DEMAND

THE market showed a declining tendency throughout the month but the limited quantity of clean black tea and the better liquoring C.T.C. types showed the least decline, say Carritt Moran & Co., Ltd. in their monthly tea market review. Thin and plain liquoring stinky teas were frequently difficult of sale and Fannings were generally weaker than broken grades. Whole leaf grades met with a fair enquiry, especially those with style, and Persian operators took a limited interest in the few tippy parcels on offer. During the last two sales of the month it was noticeable that exporters generally were showing very little interest and in Sale 39 the buying was practically confined to the smaller local dealers. No quotations are given this month on account of the lack of suitable teas.

Darjeeling offerings continued very small, and quality generally was typically end-of-season in character, most teas being brownish in appearance and lacking in flavour. Assam teas on offer indicated that the season was approaching its close and although there were a few quite attractive voices available, these were mainly teas which had been delayed for one reason or another. There was also a fair quantity of residue types of tea with dull stinky appearance and thin liquors. Leaf appearance of Doora teas showed a further slight decline, the dry leaf becoming browner and more stinky whilst cup quality was generally of a fairly ordinary description, the liquors being rather plain in character. Much of the comparatively small offerings from Cachar consisted of dull stinky residue teas with plain liquors but there were a few invoices with good black leaf appearance and reasonable cup quality.

Internal Sales

The Leaf offerings from most districts consisted of dull stinky end-of-season types with plain ances and the quantity of tea with good appearance and cup quality was very small. Here again the market showed a steady decline throughout the month and, as in the case of the export market, those teas with good black leaf appearance and the better liquoring C.T.C.s. were the strongest features. In the last sale of the month there were rather more C.T.C. type invoices on offer and towards the end of the sale the demand for these slackened somewhat. Dust offerings were controlled at approximately 20,000 packages a week and for this reason offerings were of a reasonable standard as they were not by any means final invoices. Nevertheless, a considerable number of dull and plain liquoring Dusts of undesirable appearance were catalogued. Dusts came to a fair market but showed a decline during the month of about 4 annas C.T.C. Dusts with good liquors were strongly competed for and showed the least decline, whilst the worst feature was the large grainy types suitable for export to the Middle East, as the demand for these was practically non-existent from exporters. No quotations are given for Leaf teas on account of the lack of suitable offerings but Dust quotations are given below.

Quotations	1954-55		1953-54
	Rs.	As.	Rs.
Sale No. 36 Clean Common Dust	2	7	5
Sale No. 37 " " "	2	8	9
Sale No. 38 " " "	2	6	9
Sale No. 39 " " "	2	4	3

Export sales up to the end of March, totalled 1,564,450 chests at an average price of Rs. 3-1-8 compared with 1,633,789 chests at an average price of Rs. 1-15-10 a year ago. Internal Sales at 414,166 chests of leaf and 630,036 chests of dust (Rs. 2-3-11 and Rs. 2-7-4) compared with 94,202 and 621,666 chests (Rs. 1-12-5 and Rs. 1-12-8) in the corresponding period last year.

During the month under review the price of Export Quota showed a steady decline, starting at 126 pices a lb. and coming down to three annas a lb., after which the price rose to about six annas mainly on account of purchases made by sellers to cover teas sold with Export Rights. Dealings in Export Quota closed at this rate on 19th of March and no further dealings were recorded until 1st April.

Arrivals in chests in Calcutta warehouses during the period 24th February to 23rd March, 1955 with the corresponding figures of the previous year in parentheses, were as follows: by steamer 106,250 (9,197), by rail 11,398 (2,785) and by air 2,087 (1,759), making a total of 119,735 (13,741). Since the beginning of the season, 1st April, 1954 to 23rd March, 1955 arrivals have been: by steamer 3,458,609 (3,315,134), by rail 867,306 (9,70,320), by air 1,79,502 (90,641), making a total of 4,505,417 (4,376,095) chests.

LONDON TEA SALES

Offerings at the tea sales on 19th April, totalled 9,843 packages of Ceylon teas which met with a decidedly better demand than the Indian teas of the previous day. Even so, prices recorded losses of a 1d to 3d a lb. for all descriptions other than best quality High Growns which generally moved in the sellers' favour. Plain Broken Pekoe was indicated at 57d a lb. nominal against 60d nominal previously. Some 3,581 packages of South Indian teas were offered and cleared fairly rapidly, though some irregularity was noticeable and prices frequently showed declines of 2d to 3d a lb. The few really outstanding invoices fetched full prices.

COCHIN TEA SALES

At Sale No. 8, 1,300,000 lbs. of tea were on offer. There was a poor demand. Sweet Liquoring and Low Medium types were three to four annas lower. Mediums and Good Mediums were four to six annas easier. Best Liquoring grades opened firm but closed weaker. Whole Leafs were fully firm to dearer.

At Dust Sale H, the 355,000 lbs. of tea on offer met with a fair general demand. Well-made natural Dusts were firm; others were irregular and often four annas easier.

U.K. TEA CONSUMPTION IN FEBRUARY

While Britain's tea imports for consumption declined further during February, warehouse and customs stocks have risen appreciably, and prices fetched at London auctions have continued their downward trend. This is revealed by the latest statistical summary from the International Tea Committee in London, giving United Kingdom imports (net) for consumption as 38,450,000 lb. in February (compared with 39,950,000 lb. in February 1954), bringing the total for the first two months this year to 81,810,000 lb., compared with 87,380,000 lb.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received for the month of March, 1955.

Upper Assam: Weather generally very wet; unusually heavy rain with floods as reported from portions of Dooar Dooma and North Lakhimpur; hailstorms causing little damage are reported from most of the districts; severe storms without hail are reported from Panitola; crop prospects generally favourable.

Central Assam: Weather generally seasonable but abnormally wet in Moran and is interfering with outturn; crop prospects generally favourable.

Lower Assam: Weather generally seasonable; rainfall in Barsola is much above normal for the season to date; immediate prospects fair to good.

North Cachar: Good rain has fallen generally and prospects are now brighter; hailstorms causing little damage are reported from Lakhimpur and Happy Valley; crop prospects generally favourable.

South Cachar: Good rain has fallen generally and prospects are now brighter; severe hailstorms resulting in considerable damage to crops are reported from Hailakandi; hailstorms are also reported from Longai but little damage has resulted; red spider blight prevalent in Hailakandi; crop prospects generally favourable.

Eastern Doora: Weather has improved; outturn to-date ahead; crop prospects generally favourable; immediate prospects good; fairly free from blights.

Western Doora: Immediate prospects fair, weather favourable; outturn last month poor; hailstorms are reported but little damage has resulted; the outturn to date is slightly under last year.

Darjeeling: Outturn last month about normal; good rain has fallen generally and prospects are now brighter; hailstorms are reported but little damage has resulted; red spider blight prevalent in some districts.

Terai: Manufacture has commenced; weather dry; unless rain falls shortly leaf prospects generally will be poor; red spider blight evidence.

Engineering and Transport

NEED TO DEVELOP ROAD TRANSPORT IN INDIA

CRIPPLING RESTRICTIONS OF MOTOR VEHICLES ACT

ON the problems of developing goods road transport in India, Mr. B. V. Vagh, Vice-President, the Indian Roads & Transport Development Association, makes the following useful suggestions:

Recently there have been indications that the Central Government has been gradually realising the need to encourage the development of road transport. The Planning Commission has suggested the postponement of the nationalisation of goods transport for seven years, the adoption of a phased programme of nationalised passenger transport and the issue of permits to operators outside this programme for three years for small units and five for large. The Transport Advisory Council has recommended the abolition of double taxation, an examination of how octrois can be abolished, a review of the working of State and Regional Transport Authorities and State transport undertakings, of reciprocal arrangements for inter-State traffic and of encouragement of tourist traffic. It has also suggested the waiving of counter-signatures on permits in certain cases and the issue of permits under certain conditions on distances of from 100 to 150 miles.

All these suggestions are very welcome although some of them have taken more than three years to materialise and some which relate to a review by 28 States will take at least that much time to bear fruit. Directives like the waiving of counter-signatures and the issue of permits on short-distances are minor concessions designed more to do away with the vexations imposed by the code of principles and practice than to develop road transport. It is also important to note that they are all strictly within the four corners of the Motor Vehicles Act and its off-shoot the Code. It is, therefore, necessary to see whether any concessions within this enactment will result in any development of road traffic of the order required by the first five year plan.

Motor Vehicles Act

Based on estimated production the first five year plan requires about 1,09,000 wagons including replacements and 85,000 trucks. Of the former only about 61,000 will be available up to 31st March, 1956. In place of the remaining about 48,000, which cannot be had about 125,000 trucks are needed in addition to 85,000 of the existing over 200,000 new trucks against the existing about 90,000. This position indicates two aspects: (i) The requirements of goods road transport for the first five year plan are over twice the present number of trucks in the country. (ii) More than half of them are in place of railway wagons and, therefore, for long-distance travel. The object of Chapter IV of the Motor Vehicles Act being just the opposite of this, viz. to restrict road transport and to prohibit it on long distances it is obvious that no concessions under that Act can solve the present problem. The remedy is to overhaul it completely but this is not being considered presumably for fear of rail-road competition. Therefore, it is necessary to see how far this fear was justified at the time the Motor Vehicles Act was passed and what the position is today and is likely to be in future in the thirties.

Road-Rail Position

After the first world war the peak railway earnings were about Rs. 108 crores a year during 1922-23 to 1930-31. During the depression of 1931-32 to 1934-35 they dropped to about Rs. 95 crores a year. Of this drop of about Rs. 13 crores a year, that due to road competition was about Rs. 5 crores a year on the basis of the Wedgewood Committee's Report. To make good this loss, the Motor Vehicles Act and particularly Chapter IV thereof were devised, but by the time the Act came into force on 1st April, 1940, the railway earnings had started improving as the depression disappeared to Rs. 100 crores in 1935-36, Rs. 104 crores in 1936-37, Rs. 107 crores in 1937-38 and 1938-39 each and Rs. 111 crores in 1939-40. That is, when the Motor Vehicles Act came into force the railway earnings were Rs. 3 crores more than their peak earnings of about Rs. 108 crores before the depression and there was no loss to the railways on account of road competition. The obvious explanation of why the Act was proceeded with was that those in charge were so obsessed by the position during the depression that they overlooked, perhaps unconsciously, an upward trend in railway earnings as the depression disappeared gradually. Then came the second world war as a result of which the railway earnings went on increasing progressively.

Road-Rail Position in 1950-51

During 1950-51 and 1951-52, the gross railway earnings were about 300% of their gross earnings during their peak period of 1922-23 to 1930-31, their capital-at-charge about 129%, net earnings about 160%, passengers carried about 270%, goods carried about 142%, and their passenger miles and goods miles about 242% and 168% respectively. The ratio of net earnings to capital was about twice that during the depression and about 139% of that of the peak period. On the basis of the

Wedgewood Committee's estimate and taking into account changes in railway rates between 1938-39 and 1950-51, the loss in railway earnings on account of road competition in 1950-51 which could have occurred had there been no Motor Vehicles Act, works out to about Rs. 14 crores based on the number of passenger vehicles and trucks then in the country. Against this, the railway earnings in 1950-51 and 1953-54 were about Rs. 174 crores and Rs. 184 crores more than during the peak period of 1922-23 to 1930-31. It is obvious, therefore, that had there been no Motor Vehicles Act and, therefore, no restrictions on motor transport road competition would have made no impression on railway earnings in 1950-51.

Road-Rail Position During the Plan

Since 1950-51 the position has changed completely on account of the first five plan. In 1953-54 the freight carried by railways was about 35% more than in 1938-39. It has been mentioned that "with about 1,300 fewer locomotives, about 3,000 fewer passenger coaches and about the same number of wagons than in 1939, the railways are carrying 100% more passengers and 60% more goods. Thus, the traffic is far in excess of railway's capacity to carry and therefore, even if the whole of this additional traffic is made over to road transport the railway's earnings as in 1950-51 would not be affected. Thus, whether in 1939-40 before the Motor Vehicles Act was passed or in 1950-51 just before the five-year plan or in 1953-54 after the first three years of the plan there was and has been no fear of loss in railway earnings on account of road competition and, therefore, no justification for the restrictive provisions of Chapter IV of the Motor Vehicles Act. It has been mentioned above that the wagon deficit at the end of the first plan will be about 48,000. It is understood that in the second plan about 60,000 more wagons will be obtained. This is about 30% of the 1950-51 strength and assuming at least the same increase in production in the second as in the first plan will be barely sufficient for it. Therefore, the gap of 48,000 wagons will still remain and a further provision for replacements of about 5,000 a year will have to be made. This indicates that on the basis of information available at present the position at the end of the second plan will, if anything, be worse than that of the first. Clearly the railways cannot continue to be in such a position for such a long period without danger to themselves and it has become necessary to encourage more road transport in the interests of the railways themselves.

To do this the most essential first step is to scrap the Code of Principles and Practice and overhaul completely Chapter IV of the Motor Vehicles Act removing all restrictions and permitting long-distance traffic. That seems to be only way to handle effectively the production aimed at in the two plans and to save the country's most important national undertaking viz., the railways from the heavy strain they are being put to.

INDUSTRIAL DISPUTES DURING JANUARY

There were 64 cases of fresh disputes during January, 1955, according to the provisional statistics of industrial disputes released by the Labour Bureau, Government of India. The number of workers involved in 62 cases was 37,086. The number of disputes current at any time during the month was 87. Of these 85 involved 47,694 workers, and the man-days lost in 83 cases were 320,651. The number of disputes current at any time during the month, and the number of workers involved, registered a fall as compared with the previous month. But the number of man-days lost increased. Although the number of workers involved was smaller compared with the previous month, the average duration of disputes (6.9 days as against 4.9 days in December) was longer. Thirteen of the disputes during the month were lock-outs involving 9,421 workers and accounting for a time-loss of 84,720 man-days. Eight of the lock-outs were in West Bengal, two in Bombay and one each in Madras, Uttar Pradesh and Delhi.

Fifty-eight disputes terminated during the month under review. Of these 35 lasted for less than five days each and seven for more than 30 days each. The main causes of disputes in 33 cases were grievances relating to personnel. Wages and allowances, retrenchment and other causes accounted for 22, eight and ten disputes respectively.

The workers achieved complete or partial success in 18 cases. In 15 cases they were unsuccessful. The result was indefinite in 20 cases. Among the States, West Bengal recorded the highest number of disputes, workers involved and also man-days lost. Compared with the previous month, the figures in all cases were on the higher side. The time-loss declined appreciably in Bombay, Madras, Bihar, and Punjab, but went up in Madhya Pradesh, Uttar Pradesh and Delhi. Among the industries, transport (others) accounted for the highest time-loss during the month followed by cotton textiles, engineering, jute textiles, miscellaneous industries, docks and ports, railways, minerals and metals (others) and other textiles. Compared with the previous month, there was less time-loss in jute textiles, minerals and metals (others), food, drink and tobacco, wood, stone and glass, coal-mines, plantations and miscellaneous industries. Increased time-loss was registered in cotton textiles, other textiles, engineering, iron and steel, paper and printing, other mines, railways, docks and ports and municipalities. No dispute was recorded in skins and hides and gins and presses industries.

THE INDIAN OVERSEAS BANK LTD.
MADRAS

(Incorporated in India)
Established 1937

Through a network of branches in India, Burma, Ceylon, Malaya & Thailand and our correspondents at all important commercial centres of the world, we are in a position to offer the most complete Banking Service to Businessmen and Manufacturers engaged in the export and import trades.

Commodity Markets

BRITISH TEXTILE REVIEW

ANOTHER BLOW TO LANCASHIRE

LANCASHIRE would have been more philosophical about the restriction of Australian imports if it had not been in the throes of its trouble with India. One trouble on another made the prospect seem unnaturally bleak. And in respect of textiles the restriction was more drastic than had been anticipated. For Lancashire's textiles no other single market abroad is as important as Australia, which took about £30 million worth of Cotton and synthetic yarns and piecegoods from this source last year. The restriction indicates a reduction of this figure by approximately £10 million at a time, when order books have become so thin that many mills are operating hand-to-mouth. It is not forgotten that Australia's import restriction in 1952 was an important factor in Lancashire's recession in 1952-3, but the restriction was then, of course, even more drastic than this year's. The industry's leaders have made some brave declarations on the need to attack other markets with more than usual energy. Demand for yarn, both for weaving and for knitting, is diminishing in this country, and spinners will soon be in trouble unless they can replace elsewhere a substantial proportion of the lost Australian trade. More business with Argentina is in prospect as a result of the finance and trade agreement with that country, but the sum involved—about £700,000—is modest by comparison with the Australian figures.

Eyes are turning in the direction of Canada. That country took almost 4 million pounds of cotton yarn in 1953 but not much more than 2 million pounds last year. These figures compare with about 6 million and 7½ million pounds, in the respective years for Australia. In 1952, however, when the Australian trade was restricted, the difference between the two markets was much narrower. Lord Rochdale, president of the National Union of Manufacturers, has recently returned from Canada, of which he has said: "We cannot afford to fluctuate on a market made so highly competitive by keen and persistent effort from the United States." But he admitted: "At the moment the temperature on the Canadian market seems rather cool." The British industry has been criticised for the relative neglect of non-sterling markets until the sterling markets go wrong. It has possibly learned its lesson; for it will certainly find that trade cannot be easily diverted to overcome temporary difficulties. In any case, some sterling markets—India and Pakistan particularly—are permanently shrinking.

The Gordian Knot

Irrespective of the Government's plans for dealing with Lancashire's predicament, there is a growing awareness—outside, if not inside, the industry—that drastic action is needed to avert slow and painful decay. As last month's report of the Textile Committee of the Organisation for European Economic Cooperation has shown, the problem relates to West Europe's textile industries in general, not only to Lancashire's cotton-textile industry in particular. Exports of fabrics from the West European countries diminished from 9,000 million yards in 1913 to 2,000 million yards in 1953, and in that period of 40 years internal demand did not rise commensurately with real incomes. Even the recovery of 1954 left activity in the "true" textile industries (excluding man-made fibres) considerably reduced in relation to the average of manufacturing industries.

The OEEC Committee stated bluntly that machine capacity in the West European textile industries was excessive, and that much of it might "gradually disappear". That is the background to the complaints of "dumping" heard increasingly in Europe—notably in Switzerland and Germany of late. But the demands for protection do not touch the basic problem of excess capacity; though, of course, additional protection could partly conceal the problem for a time. A correspondent of *The Investors' Chronicle* (which is concerned with underlying financial realities as well as current trade) has suggested that the remedies for Lancashire's surplus capacity be applied consciously, and be applied now, while conditions for appropriate action are still relatively favourable. The present rate of "deaths" among producing companies is not high enough to deal effectively with the problem. Companies' assets and reserves are still relatively high, and it seems that "no better time will occur for returning the shareholders' capital by taking companies out of the industry".

Relative Positions

These problems do not, of course, relate at all to the new synthetic fibres; nor are they at present disturbing the rayon industry—though there has been some apprehension of surplus capacity there since the war. Rayon (as the recent study by the Food and Agriculture Organisation of the United Nations showed) has defied the prophets of surplus by steadily increasing its share of the total of consumption of textiles; so the established producers have continued to increase their exports despite the establishment of rayon industries in South America, Egypt, and other "new" territories. The wool industry seems to be in an intermediate position between cotton and synthetics. It is certainly not as comfortable in this country now as it was during most of last year. Export trading has become more difficult, and in consequence firms that are normally concerned largely with exports are competing more strongly in the home market. Spinners' and manufacturers' delivery

dates have been reduced from months to weeks—and in many cases the moderate delays are due not to accumulated orders but simply to the technical need to "rest" during the process of production. A "squeeze" may now be developing in the wool trade; for prices of raw wool, though somewhat reduced, are still high in relation to the prices which can be realised for the finished, and therefore for the intermediate, products. This relationship, at a time when "dearer" money makes stockholding more expensive, will exert some downward pressure on raw values.

WHOLESALE PRICE INDEX
RISES

THE official wholesale price index (base: year ended August, 1939=100) after a continuous fall since the middle of February, 1955 witnessed a rise of 0.3 percent to 350.3 during the week ended 2nd April, 1955. Relative to the corresponding weeks of the last month and a year ago, the index was, however, lower by 2.2 and 12.3 percent respectively. Higher prices of wheat at Amritsar (+7%) and at Hapur, gram at Patna and jowar (+3% each) at gur at Muzaffarnagar (+2%) raised the Foodstuffs index by 0.8 percent to 295.3, although the prices of wheat at Jabalpur (-5%) and gram at Hapur (-2%) move downwards. The index for Industrial Raw Materials also moved up by 0.8 percent to 403.4 due to the increases in the prices of raw jute (+9%), raw cotton, Karungani at Tirupur (+6%) and Umra at Amravati (+4%) and linseed in Calcutta (+3%) despite the fall in the prices of manganese ore (average export prices) (-16%), rapeseed (-6%), cottonseed (-5%), raw silk, lac and copra (-2% each) and Jarilla and Bengal raw cotton in Bombay, groundnuts and linseed in Bombay (-1% each). Lower prices of mustard oil (-7%) and groundnut oil (-2%) brought down the index for Semi-Manufactures by 0.9 percent to 328.9 as compared with 332.0 (revised) for the previous week. Gingly oil (+4%), however, advanced. An increase in the prices of jute manufactures (+2%) was responsible for an advance in the index for Manufactures by 0.2 percent to 375.3. The index for Miscellaneous showed an increase of 0.2 percent to 546.7 on account of the rise in the prices of betelnuts (+2%) and chillies (+1%); cashewnuts moved down by percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100)				
Groups and Sub-groups	2-4-55	Week Ended 26-3-55	5-3-55	3-4-54

POST-WAR WOOL CONDITIONING RECORD
IN U.K.

A new post-war record for the volume of material handled, showing the healthy state of the United Kingdoms wool textile industry, was set up by the Bradford Conditioning House during March. For the first time, the monthly total for tops, wools, noil, wastes, and yarns exceeded 10,000,000 lb. (the actual total was 10,273,239 lb.). This compares with 7,688,671 lb. in February and 9,473,167 lb. in March last year. The Conditioning House set up another record during March, carrying out 27,586 tests, compared with 21,167 in February, and 25,654 in March 1954. In the first quarter of 1955, the House dealt with about 26,300,000 lb. of materials, against 23,700,000 lb. in the first three months of 1954 and 20,800,000 lb. in the same period of the previous year.

ROLLS ROYCE DIESEL FOR RAILWAYS

A new diesel engine designed to power diesel rail cars is to be produced by Rolls Royce. The engine is of the horizontal type and will operate lying on its side so that it can be mounted beneath the floor of the rail car.

BRINGING ELECTRICITY TO
THE COUNTRY-SIDE

Rural Electrification. Published by the United Nations. Price \$0.80 (U.S.) 6s 0d sterling, or equivalent. Pages 86.

Rural electrification is a task which raises many difficulties both technical and financial even in the richest and most populous rural areas of the world. But in relatively pastoral or agricultural countries such as India and China it is as well to appreciate at the outset that the problems posed are almost insuperable. Many people forget that the cost of electricity in rural areas depends not so much on the generation cost but on the expenditure necessary for transmission and distribution. Naturally, the greater the number in the community to share these costs the lower the sum involved per head. Because in rural areas the numbers who will share these costs are relatively small they must in consequence be high or very high, although the income per head may be low or very low. Mr. Lokanathan and his associates have made a spirited endeavour to show firstly how construction costs can be reduced to a minimum; secondly how consumption costs can be reduced to a minimum by maximum utilisation of the supply, and lastly how the almost inevitable loss can or should be subsidised. But they do not pretend to find a solution to India's particular problem. In the section dealing with finance, it is mentioned that proposals to devote a part of the electricity duty levied to rural electrification might be implemented, but this suggestion would conflict with the recommendations of the Matthal Commission, and it is now doubtful if it will be acceptable.

In the first chapter of this outstanding treatise, an indication is given of the progress made in rural electrification, not only in Asia, but in other parts of the world as well. This study highlights one quite remarkable feature and that is the extraordinary development in Taiwan (Formosa). The statistics quoted show that every city or town consisting of more than 1,000 families is electrified; of the 3,470 towns and villages with a population of more than 200 families, not less than 3,289 are at present receiving a supply—i.e. 94.8 percent. The authors do not explain how this electrification was achieved but it must be presumed that it is the result of the erstwhile Japanese occupation of the island. Japan itself is highly electrified and no doubt Taiwan received the benefits of Japanese experience. Japan and Taiwan are however areas where rural electrification becomes an economic possibility. Even in these areas however, and in a highly industrialised country such as the U.K., rural electrification is not possible without some form of subsidy.

Now the best way of obtaining a subsidy is to raise it from people who are unaware that they are paying it. As soon as there is an awareness—there is trouble. Everybody in towns and cities says—"why should I pay to electrify rural areas when people living there pay only about one-fifth of the rent which I have to pay for my home in the city?" It is very hard to defeat this argument but if it is accepted then there would be little or no electricity in rural areas at all.

In many parts of the world, responsibility for supply is given to an Authority, not for a single town, but for an entire area which may cover many thousands of square miles. This policy enables the Authority to proceed with rural electrification and to formulate tariffs so that the charges in cities and towns are slightly higher than they would have been had there been individual Authorities for each town. An arrangement like this works very well providing that there are no "self-contained" towns adjacent or contiguous to such an area but this is not always the case and in the U.K. before the war many difficulties arose as a result of it. For instance, consumers in the industrial cities of Smethwick and Oldbury in the Midlands of England had to pay considerably more for industrial power than did neighbouring consumers in the city of Birmingham. The city of Birmingham was supplied by a Municipality and had no rural area at all to cope with, but the supply Authority responsible for Smethwick and Oldbury had an area of no less than 3,000 sq. miles to electrify. Naturally, Smethwick consumers complained at being charged higher rates than those applying in Birmingham, and it was perhaps inconsistencies of this nature more than any other factors which resulted in the nationalisation of the industry in the U.K. By nationalisation, the U.K. Government hoped to even out tariff differences. In this they succeeded to a certain extent although only by raising the charges of the "privileged"—not by lowering the charges of the "oppressed". However, the measure of uniformity achieved appears to have silenced criticism in spite of the increase in charges.

Progress in rural electrification is to a large extent linked to the price of copper or its substitutes, which at present are at a very high level indeed. This factor when allied to the financial problem provides a stumbling-block which is unlikely to be surmounted by this generation. Nevertheless, it can only be surmounted by men who refuse to accept defeat and for those interested in this absorbing task, no better publication could be found than the one under review.

The Commonwealth and the Sterling Area, 74th Statistical Abstract, 1950-1953. (Issued by the Board of Trade. Available from Her Majesty's Stationery Office, London. Price 15s; pages 238.9

This is the 74th edition of this Statistical Abstract. Basically it is unchanged from the last edition. It consists of three main parts: summary tables analysing the trade of the Commonwealth and sterling area for the period 1948-1953, together with particulars of world production, consumption and prices of selected commodities; tables showing the direction of trade of individual Commonwealth countries for the year 1950-1953; and tables giving a commodity analysis of the trade of individual Commonwealth countries for the year 1950-53. These tables are designed to show the total trade of the Commonwealth and its constituent parts, the direction by currency and other areas of imports and exports, the commodity pattern of exports and imports of the sterling area, production and consumption of world output of primary commodities, and index numbers of unit value and volume of imports and exports.

"See India" series—Bombay & Saurashtra (Pages 124, Price Rs. 1-8); Madhya Bharat, Madhya Pradesh and Vindhya Pradesh (Pages 106, Price Rs. 1-4); West Bengal and Assam (Pages 64, Price Re. 1). Issued on behalf of the Tourist Division, Ministry of Transport, New Delhi.

These publications represent an aspect of the Government of India's expanding campaign for the promotion of tourism. Designed to provide information for the guidance of foreign as well as inland travellers, these illustrated books contain brief historical introductions to the areas covered, followed by accounts of current developments. Their usefulness has been enhanced by the incorporation of maps and appendices giving lists of the principal festivals, hotels and other accommodation with rates, shopping notes, etc. It needs pointing out, however, that the text as well as the technical side of production could be much improved.

The new booklets on Assam, Coorg and Himachal Pradesh in Burma-Shell's "The States of India" series are quite in line with the ones previously published. Each of these tells in simple language the story of the agricultural, industrial and economic development of a state and provides useful statistical data in the form of a centre spread. In the usual Burma-Shell tradition, these publications are attractively got up with many line sketches in colour to brighten the pages.

How banking helps the
LEATHER INDUSTRY

INDIA produces more than 60 million hides and skins a year. Raw and tanned leather forms her fourth largest export, valued at Rs. 24.38 crores during 1953/54. The bulk of the shipments of leather are made from Madras. Around Madras, too, is a growing industry of mass-produced footwear.

Banking has greatly helped the growth of the leather industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the leather industry.

We at Palai are proud that so many firms in the leather industry, and indeed leading firms in every field of business and industry in South

India, employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and 2 in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head office: PALAI, TRAVANCORE-COCHIN
Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

THIS YEAR'S INDO-BRITISH TRADE TRENDS

EXPORTS AND IMPORTS AT HIGHER LEVEL

INDIA'S exports to the U.N. in January and February this year showed an increase of more than 20 percent on the same two months of 1954, while her imports from Britain were up by nearly 10 percent. This is revealed in the *Trade and Navigation Accounts of the U.K.* which also shows that some three-fifths of Britain's increased exports to India were accounted for by British iron and steel and their manufactures. During the two months, India sent Britain £36,000 worth of her products compared with £29,546,000 in the same period last year, and took in return goods worth £20,129,000 compared with £18,405,000. Taking into account a small amount of British re-exports, overall trade between the two countries amounted to £56,690,000 compared with £48,004,000. Iron and steel and the products of industries using them as basic materials accounted for some £12,000,000 worth of India's imports from the U.K. during the first two months of this year (compared with about £11,000,000 in the corresponding period of 1954). India took 23,322 tons of British iron and steel (£1,319,000) compared with 13,777 tons in the same two months last year. This included 6,833 tons of tubes, pipes and fittings worth £488,000; 3,295 tons of bar, angle, section, and girders (£186,000) compared with 1,421 tons, and 9,260 tons of plate and sheet (£435,000) compared with 2,644 tons.

Iron and Steel Manufactures

Machinery headed the list of iron and steel manufactures—268,700 cwt. of non-electrical plant (valued at £5,157,000) against 236,498 cwt. in the same period of 1954, and £2,860,000 worth of electrical machinery, apparatus and appliances. The former included \$4,243 cwt. of textile machinery worth £1,272,000; 39,313 cwt. of power-generating machinery, including boiler-house plant, steam and internal combustion engines (£637,000); 2,842 cwt. of agricultural machinery (compared with 1,324 cwt.) and 349 tractors (as against 190) totalling £209,000; 16,796 cwt. of metal-working machine tools (£375,000) compared with 12,193 cwt.; 21,278 cwt. of mechanical handling equipment (£307,000) compared with 11,884 cwt.; 17,521 cwt. of earth-moving plant (£242,000) compared with 2,852 cwt.; and 3,285 cwt. of printing machinery (£140,000) compared with 2,480 cwt. Among the electrical machinery sent by Britain to India during January and February were 13,906 cwt. of generators and motors (£462,000) compared with 11,246 cwt. in the same two months last year, and 27,930 cwt. of converting, rectifying, and switching gear (£782,000) compared with 23,364 cwt. During January and February, India took from the U.K. £650,000 worth of railway vehicles aggregating 2,666 tons, and road vehicles and aircraft to the value of £1,478,000. Leading items under these headings were: 310 tons of railway locomotives (£163,000); 432 cars (£126,000) compared with 388 in the first two months of 1954; 202 chassis for commercial vehicles (£23,000); and 21,545 cycles (£168,000) compared with 15,341. India also took £748,000 worth of the wide range of products listed as "manufactures of metals" (largely of iron and steel). These included hand and portable power-tools to the value of £152,000; wire cables and mesh (£85,000); and cutlery (£51,000).

Chemical and Other Products

The next most important group of India's imports from the U.K. in the first two months of this year consisted of chemicals, to a total value of £2,361,000. These included elements and compounds worth £337,000; 3,455 cwt. of dyestuffs (£303,000); pigments, paints, and varnishes (£84,000); drugs and medicines (£437,000); and 11,154 cwt. of plastic materials (£153,000). Britain also sent India £379,000 worth of petroleum products, consisting mainly of 2,978,000 gallons of lubricating oils (£341,000); and £313,000 worth of non-metallic mineral manufactures, including asbestos manufactures and plate and sheet glass. India took well £1,000,000 worth of British textiles in January and February. The U.K. sent £937,000 worth of wool products among which was £863,000 worth of "wool and other animal hair", including 1,723,000 lbs. of wool tops (£787,000) compared with 1,319,000 lbs. in the first two months of last year; and woollen and worsted yarns and woven fabrics to the value of £74,000. Cotton yarns and woven fabrics sent by the U.K. to India amounted in value to £261,000, and included 290,000 lbs. of cotton yarns (£145,000); 49,000 lbs. of finished thread (£28,000); and 479,000 sq. yds. of standard woven fabrics (£72,000). India also took £105,000 worth of synthetic fibre yarns and woven fabrics, consisting mainly of artificial silk yarn, thread and straw, and miscellaneous textile manufactures—a group consisting largely of hemp, and other special yarns and fabrics—value at £151,000. Among other leading Indian imports from the U.K. in January and February were: non-ferrous base metals to the value of £320,000, the largest item being 17,963 cwt. of aluminium and alloys (worth £206,000) compared with 7,027 cwt. in the same period last year; 28,400 cwt. of paper, paperboard and their manufactures (£350,000) compared with 12,546 cwt.; £484,000 worth of the wide range of products listed as "scientific instruments, photographic and optical goods, watches and clocks", and miscellaneous manufactured articles to the value of £232,000.

Exports from India

Tea accounted for about two-thirds of the value of India's exports to the U.K. during the first two months of this year, totalling 874,439 cwt. at £24,029,000. Britain's overall imports of tea from

sed 1,029 cwt., only 67,142 cwt. coming from non-Commonwealth sources. One of the most important groups of India's exports to Britain consisted of textile raw materials and products. The largest item under this heading was £3,017,000 worth of miscellaneous textile manufactures, a category that includes jute, hemp, and coir yarns and piecegoods. This was followed by £1,421,000 worth of cotton yarns and woven fabrics, including 27,740,000 sq. yards of standard grey cloth (£1,341,000) compared with 16,214,000 sq. yards in the same period last year; and by £1,093,000 worth of wool and other animal hair, consisting mainly of 4,763,000 lbs. of raw sheep's- and lambs'-wool, £1,050,000. To round-off the textiles group, India sent 7,122,100 lbs. of raw cotton, valued at £581,000, and £222,000 worth of miscellaneous textile fibres and waste, falling mainly under the heading of vegetable fibres. Among other leading Indian exports to the U.K. were £1,977,000 worth of leather and furs; "miscellaneous animal and vegetable crude materials", including gums and resins, horn, bone and various grasses, to the value of £905,000; 107,326 cwt. of animal and vegetable oils, fats, greases, and derivatives (£526,000); £389,000 worth of crude fertilisers and minerals, 44,199 tons of metalliferous ores and scrap (£479,000) including 22,600 tons of manganese ore at £307,000; and 32,852 cwt. of fruits and vegetable (£323,000), including 18,770 cwt. of edible nuts (£184,000).

Calcutta Markets

GOOD GENERAL DEMAND IN INTERNAL TEA SALE

BEST C.T.C. ASSAMS STRONGEST FEATURE

AT Sale No. 42, held on 19th April, Dust offerings consisted of 18,587 packages. There was a good general demand which tended to ease at the close of the Sale. The strongest feature of the Sale were the best CTC Assams and Commons of clean black leaf appearance and these were firm to occasionally dearer. Medium Assams and Doorgs received fair support at about last rates. The poorer fibrous CTC Assams were in less demand and were 2 to 4 annas easier while the residue end-of-season types were very irregular and were generally selling 3 to 5 annas below last rates.

	1955	1954
	Rs.	Rs.
Medium Doorgs Dust	2 1 6	2 1 0
Medium Assam Grainy Dust	2 5 0	2 1 6 to 2 2 0
Best Assam CTC Dust	2 13 to 2 14 0	2 4 6

Offerings of other grades consisted of 5,847 packages for which there was a good general demand. The market opened at about last rates but strengthened as the Sale progressed. Teas of clean leaf appearance and good liquors were dearer often by several annas. The remaining offerings which consisted mainly of residue types and poor liquoring teas were very irregular but generally dearer. No quotation can be given.

RATES WELL MAINTAINED IN FREIGHT MARKET

RATES were again well maintained throughout the week and dominated by fixtures for American coal to the Continent. There have been many enquiries for ore carriers from Indian East Coast ports to Japan and charterers are firm at 87s f.i.o. for April-May shipment from Calcutta. A small vessel of 3,500 tons was fixed Kakinada-Yawata prompt shipment at 90s. Tonnage is also required from Masulipatam. An interesting enquiry is for 10,000 tons of ore from Hongkong to Japan for which shippers' ideas are \$4.85 f.i.o. A fair rice enquiry was circulated and included handy cargoes from Rangoon to Colombo and prompt shipment from Karachi to Cochin and China to Jeddah. Australian grain charterers still require tonnage for India and the Mediterranean but no business is reported. The Time Charter section was very quiet and only one fixture for a trip home from Australia was reported at 25s.

SUGAR MARKET DULL

During the week ended 19th April, sugar sales in the Calcutta market averaged 3,500 bags a day. Daily arrivals were 1,500 bags and stocks totalled 100,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-6 for ordinary grain and Rs. 31-8 for big grain. Forward sugar ordinary grain was quoted at Rs. 30-11. Ex-mill delivery rates ruled nominally at Rs. 29, and buyers' ideas of value were even lower. The mills were not interested to sell at lower rates than Rs. 29. The market continues to be dull.

LINSEED

The market remained firm during the last week and scarcity of supplies was the main feature. Up-country markets remained steady and despatches were very limited. There were keen enquiries from local millers but sellers were reserved and a small turnover was reported. Activity in the oil market was keen and there was a notable advance in prices; shippers were in the market and a fair demand continued from both local and overseas buyers. Latest quotations were as follows: April—

HIDES AND SKINS

The market in skins ruled dull and prices showed a downward tendency. Stocks were less than in the previous week.

Bazaar Sales

(Between 12th April and 18th April, 1955)
Cowhides:—Wet salted (Ord.) 5,000 pcs. on the basis of Annas 10-6 to Annas 11-6; Wet salted (Ord.) 30,000 pcs. on the basis of Rs. 9-8 to Rs. 12; Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 14 to Rs. 25-8.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE BANDUNG CONFERENCE OF AFRO-ASIAN POWERS

INDIAN FOREIGN POLICY AND THE IDEA OF A NEUTRAL THIRD FORCE

THERE must be very few people left in the Western democracies, even among the most right-wing circles, who are now sorry that independent India produced and implemented the particular foreign policy associated with the name of Mr. Nehru. There are many who still believe that the reading of international affairs on which Mr. Nehru bases his policy is wrong—for instance that it is excessively suspicious of American intentions, that it is ungratefully impatient of Europe's efforts to inter imperialism peacefully, and that it is curiously indifferent to the subversive, aggressive and tyrannous aspects of Communist government. But even they would be ready to grant that a man may be mistaken in all these things and yet do service to the world than none other could perform. On the morrow of the Bandung conference no one is likely to deny that Mr. Nehru's work has brought results for which all the world must be truly thankful. Never mind what that work has been exactly—whether we call it the attempt to build a neutral bloc, to delineate a no-war area, to forge unity among coloured peoples—whatever it is, it has had the consequence of bringing together the governments of half the world's population at a meeting where they can state their disagreements in a civilised way and without anyone thinking that differences must lead to war. They have even found matters of agreement. These may be of so general a character that dissent would be publicly impossible, but in international affairs (as in love affairs) the situation is often improved by repeating politely and frequently points on which both sides heartily agree.

Obviously the architects of alliances and collective security pacts would like to see more and more recruits rally to their respective banners. But does anyone whose profession is not diplomacy really believe that the world would be a better place today if, instead of going to meet at Bandung, the Chinese and North Vietnamese had gone to Moscow to underwrite another Russian propaganda bulletin, while the Indians and Indonesians had gone to Washington to say they thought Admiral Radford a good fellow? Of course, the Chinese do go to Moscow frequently for the former purpose, while the Indians never go to Washington with the equivalent intent. But that does not prove that the arrangement is a bad one. The Bandung conference has done nothing but good. Asians everywhere will be proud of its achievements—which did not need to be very great, for the fact of the meeting itself was a subject for pride. And there are many Americans and Europeans who will not be ashamed of the perhaps irrational sentiment: "I disagree violently with my enemy but in a world of atom bombs I am glad there are people who disagree with us both".

Statesmen such as Mr. Nehru who decline to accept commitment to either of the great armed alliances have a good case, though it is often misunderstood and mis-stated in their own countries. Thus in India we find the significance of Mr. Nehru's policy and philosophy sometimes being perverted until it is very difficult for anyone but a bigoted nationalist to feel any sympathy for it. This comes about in a rather complicated way which is worth considering because until the real meaning of Mr. Nehru's views is understood by his own countrymen they will not be as powerful for good as they might be. Briefly, the error consists in imagining that Mr. Nehru wants to divide the world into three blocs, rather than just two—that he wants to add a "third force" to the U.S.-led alliance and the Communist bloc. Mr. Nehru has often repudiated that belief but that did not prevent many of his countrymen hoping that the Bandung conference would issue in the consolidation of such a third force. It has not; it could not; but there is still some feeling that the inconclusive nature of the meeting has to be apologised for, and explained away. Worse, there is a suspicion that

if only certain Asian powers linked by treaty to the West had behaved more decently, the Bandung conference could have had a much more satisfactory result.

The proof of this is in the quite unfair and sometimes scurrilous treatment that Sir John Kotelawala received in sections of the Indian Press for his spirited interventions at Bandung. Indian newspaper correspondents took to recording the opinions of the Pakistanis, Ceylonese and Iraqis with pained distaste, never failing to identify them as the powers attached to the West. In some despatches Sir John was plainly referred to as a lackey of Washington, while a cartoonist has conceived him as a trouble-making Ariel sent out by Prospero Dulles to wreck Mr. Nehru's ship in the Java Sea. Mr. Mohammed Ali was depicted as having gone to Bandung with the firm intention of putting the pro-Western case against the neutralists. This sort of reasoning betrays an attitude of "who is not with us is against us", which is typical of the extremist lobbies in the United States, and is a settled part of Russian policy. Thus, there are Indians (and no doubt Indonesians and Burmese) who think that if a man does not wholeheartedly subscribe to the Nehru orthodoxy (as misunderstood by them), then he must plainly be a warmonger camp follower of the Americans or the Russians. This might be neutralism or "third-force" politics but it is thoroughly unpleasant and does not correspond with Mr. Nehru's published views on the subject.

BRITAIN'S INCENTIVE BUDGET

MR. BUTLER'S BOLD GAMBLE ON EXPANSION

THE worst that can be said of Mr. Butler's budget is that it encourages present inflationary trends by consistently pursuing Conservative economic policy; the best, that it is a bold departure from the dreary restrictionary methods of handling periodic balance-of-payments crisis which became so fashionable under Labour Governments. It is now up to the British elector to decide which method will be the best for the economy in the long run. Considering the indifference which this elector has shown towards economic crisis since the war, and that his determined ignorance is now fortified by an extra sixpence off the standard rate of income tax, there seems little doubt which he will choose. From the economist's point of view the issue is not such a simple one. The real criterion on which the budget must be judged is the effect it can be expected to have on the threatened internal inflation and the deterioration in the balance of payments. On these points the budget will remain a subject of controversy until either the danger passes away under the monetary measures already taken, or the Chancellor has to admit the defeat of his policy.

The favourable side of this budget is not difficult to see. Britain still ranks as the most taxed country in the world, and there can be no doubt about the damage which the implications of that fact have inflicted on the country's strength both economically and politically. The recent prosperity in the British economy has been due in no small measure to the policy of less restriction at home and greater liberalisation abroad. The stimulus which greater freedom has given to harder work, keener competition, increased incentive and all the other constituents of economic expansion will be of inestimable value for years to come. Some relief of taxation is inevitable during expansion in order simply to maintain at constant ratios the distribution of the national income between its various constituents. It must be remembered that increasing money incomes are continually driving deeper into the area of progressive taxation. The suspicion that the budget might increase the present inflationary pressure is a serious one, nevertheless. In an article on the budget in the *Financial Times*, Mr. Roy Harrod attempted to prove in physical terms that budgetary concessions amounting to £135 million this year, by adding only one-third of one percent to the total of consumer demand, would not contribute to any appreciable extent to the volume of inflation. But Mr. Harrod has ignored the psychological effect which such concessions will have at a time when the situation calls for restraint in consumption. Mr. Harrod himself admits that Britain is now in the midst of a boom of the classical type, and it is well known that booms have a habit of gathering momentum out of proportion to the stimuli they receive. If the situation were not dangerous, why did Mr. Butler himself consider it necessary to increase the bank rate by 1½ percent in less than six months? And why, if incentive is so important and consumption is indispensable to incentive, did the Chancellor impose restrictions on hire purchase transaction only a few weeks ago? These will remain as some of the unanswered riddles of the budget. While Mr. Butler plugs the incentive theme he must expect the railwaymen, the dockers, the electricians, or any other body of workers to use the same argument in favour of their wage claims when they make their annual appearance. It will be no help to the country's economy to have a Conservative Government wedded to the cause of expansion if the trade unions cannot be persuaded to restrain their claims on the economy, and there is no time when that restraint has been so necessary as it will be during the next six months.

Controls were accepted in Britain during the war, in spite of their disincentive effect, because they were considered necessary to maintain all resources fully employed without running the risk of inflation. Before the war it was already accepted that full employment in an economy such as Britain's, where the balance of payments had to be watched with more than usual care, would require some measure of physical and fiscal restriction. Part of the recognised price of full employment has been either the maintenance of controls or the occurrence of frequent balance of payment crises, or both. Now that the Conservative Government has set its face permanently against physical controls, and has shown in this budget that it is unwilling to use fiscal controls as well, the choice is fast becoming a straightforward one between the balance of payments and full employment. With the present spirit of trade unionism in Britain it may not be long before that choice is presented in an acute form. Mr. Butler is well aware that by increasing the rate of interest almost

at the same time as he is lightening the burden of fiscal control he is altering the whole emphasis of economic management. He is in fact moving away from the principles of Keynesian economics which have been so fashionable since the war.

Mr. Butler appears to have based his policy on two main principles. The first is that the long-term influences under which the British economy must work have so changed that full employment can now be maintained without inflation; with the large measure of demand constantly being generated by the need for more exports this might very well be so. The second is that world inflation is moving faster than in Britain itself. On this point the Chancellor might be on even safer ground. With the end of the recession in the United States it is possible that, at least in the first stages of American recovery, the prices of Britain's exports may increase faster than those of her imports. The effect of the increase in bank rate may take some time to develop, but Mr. Butler must know already what the trend promises to be, although the trade figures for March certainly showed no sign of beneficial effects. When the balance of payments situation is reviewed it becomes more than ever clear that Mr. Butler is taking a big risk by pushing his new policies at the present time. It is to be hoped that such a commendably bold move will succeed, because it is all too easy to take the safer course in economic affairs.

BRITAIN WITHDRAWING FROM COAL EXPORT TRADE

POWER SHORTAGE FORCES ECONOMIES

THE protracted cold of this passing winter would have caused another fuel crisis in Britain, like that of 1947, if the National Coal Board had not increased imports and curtailed exports of coal. The cost of this policy has been considerable, but much less, of course, than the cost of a fuel crisis. Two elements in the position are especially worth noting. Britain is no longer, and has no hope of becoming again, a major exporter of coal. On the contrary—and this second point is still more serious—she will have to rely increasingly on imports of coal in the period while atomic energy is being developed but is not yet contributing much to her resources of power. The National Coal Board is in process of reorganisation, in consequence of an investigation into its organisation by a special committee of experts. The committee found some serious faults, and if they can be rectified it should be possible to accelerate the programme of capital development and to produce more by current operations. Every million tons, and less, is important, but the improvement in output over the next few years is not likely to keep pace with the growth of consumption, as coal is used at present. The first need, anyway, is to rebuild stocks, which are precariously slender at present and will be much too small for next winter unless they are rapidly fortified during the coming months.

Last year the mines and the open-cast workings produced about 224 million tons of coal. The 15-year "Coal Plan" (revised since it was drawn up in 1950) envisages an output of 250 million tons by 1965, but results in the past five years do not suggest that that target can possibly be reached. Big capital projects take years to mature; so recent experience is not necessarily an accurate guide to future experience. But it is ominous that output in the past two years has been below that of 1952. It would be optimistic to expect an annual figure above 225 million tons within the next few years. Consumption, on the other hand, is increasing rapidly, by 6 million tons last year. On the basis of present resources the long-term estimates of requirements are alarming; especially the estimates that to satisfy the demand for electric power the generating stations, which used 37 million tons of coal last year, would need about 100 million tons 20 years hence, if they had no other fuel than coal. To satisfy such requirements of coal would be prohibitively costly, whether coal were mined at home or imported.

It is in order to make good the prospective deficiency that Britain has this year formulated, with every appearance of urgency, the first big nuclear-power plan anywhere in the world (unless the Soviet Union, which put the first nuclear power-station into operation, has a plan of which the outside world is unaware). Britain's intention is to build 12 nuclear power-stations by 1965, and subsequently to convert an increasing proportion of her electrical capacity to nuclear power. The potentialities of nuclear power have caught the

public's imagination. The theoretical energy-content of the world's estimated resources of uranium and thorium is vastly greater than that of the estimated reserves of coal and oil, and even in the present elementary phase of technical development this energy can be converted into electricity at costs no higher than those of conventional power-stations. It may well be that neither Britain nor any other developed country will have any deficiency of power some decades hence.

It may be futile to brood on lost opportunities but the fact remains that nuclear fission, discovered in 1938, has been developed too late to save Britain for a period of acute difficulty. From home-produced coal and imported coal and oil, the country has enough—just enough—power for her present requirements. Unless the experts' calculations are all wrong, she will have abundant power a few decades hence, when nuclear energy is liberally supplementing the energy of her coal. In the intervening period, however, the deficiency may become acute. Even 10 years hence, when the atomic-power plan announced recently is completed, the capacity of the nuclear power-stations will probably be only about one-twentieth of the total electrical capacity. Their contribution will be valuable, but by no means decisive. Various expedients will have to be employed during, perhaps, the next two decades. Coal will have to be saved. Imports of coal will have to be increased; exports of coal, perhaps, stopped altogether. Oil will have to be substituted for coal, though the possibilities of saving are immense; 15 years hence the railways will have been converted to electric and diesel traction, with a saving of about 15 million tons of coal a year. By then, however, the problem will be in sight of solution by nuclear power. The railway plan, also, has come too late to help much during the crucial period. By one means or another, industry will have to use its coal more efficiently; it could thereby save tens of millions of tons of coal a year—that is, refrain from using that much extra, which industrial development would require at the present rate of consumption. Much less large coal will be needed for household fires when new methods of briquetting coal-dust are being applied on a commercial scale; but, again, years in the future.

Meanwhile, however, electricity will require not less coal but more. In 20 years' time nuclear power-stations may be generating the electricity equivalent of some 40 million tons of coal—more than the power-stations consumed last year. Yet the estimated need for electricity will have increased so much by then that the coal-fired stations will still need, perhaps, 15 million tons more coal a year than they consumed last year. There is little doubt that Britain will withdraw from the coal-exporting trade completely within the next few years. This year she plans to sell abroad 11 million tons. She cannot afford to continue exporting even at that rate.

CURRENT COIN

National Income Estimates.—The national income of India was Rs. 10,600 crores in 1953-54 as compared with Rs. 9,960 crores in 1952-53 and Rs. 9,990 crores in 1951-52. This is revealed by the second issue of the Annual Paper on National Income just released by the Central Statistical Organisation. The per capita income worked out to Rs. 267.4 in 1952-53 and Rs. 283.9 in 1953-54 as against Rs. 274.5 in 1951-52. The estimates for 1952-53 are based on the detailed method of estimation followed for the earlier years. The estimates for 1953-54 are, however, based on partial material and are subject to revision. The national income in 1952-53 showed a decline of Rs. 130 crores or 1.3 percent relative to 1951-52. If the necessary adjustments were however made for the price levels in the two years, an increase in real terms of 3.9 percent in 1952-53 over 1951-52 would be indicated as compared with an increase of 4.5 percent between 1952-53 and 1953-54. The corresponding increase in per capita income in real terms would be 2.5 percent and 3.3 percent respectively. On the whole, between 1948-49 and 1953-54 the per capita income rose by some 8 percent at constant prices.

Progress in Shipping. Changing values in the passenger shipping industry were brought out most successfully by Sir William Currie, Chairman of the P. & O. Company, when he appeared recently in the unaccustomed role of the reader of a paper to a professional institution. His subject was *Liners of the Past, Present and Future on Service East of Suez*, and as a basis of comparison he discussed a number of aspects of the design and operation of two ships built roughly 50 years apart, the *Marmora* and the *Arcadia*. The former was built in 1903, had a gross tonnage of 10,509, was powered by twin-screw quadruple expansion engines developing 10,500 h.p., and carried 377 first-class

and 187 second-class passengers. The latter was completed early in 1954, has a gross tonnage of 29,734, is powered by two sets of geared turbines developing a normal power of 34,000 s.h.p., and has accommodation for 679 first-class and 735 tourist passengers. It was when he turned to finance, however, that Sir William was most arresting. In pre-1914 days, he said, the first-class fares in the *Marmora* to Australia were from £85 to £75, and second-class from £38 to £34. Rates to-day for first-class berths on board ships such as the *Arcadia* varied from £155 to £240, and tourist from £96 to £145. The round voyage to Australia in the *Marmora* took 112 days, and when all berths were occupied the annual earnings amounted to £250,000. In one year, the *Arcadia* was capable of completing nine cruises and two round voyages, and again assuming all berths were occupied, her annual earnings were about £2 million. But it was quite unlikely that the *Arcadia* would always have a 100 percent load factor of passengers and cargo. Sir William then dealt with expenditure, referring to the "staggering increase" in the cost of the ship herself. The first cost of the *Marmora* was, he said, £250,000, while that of the *Arcadia* was £6,500,000. At an average speed of 15 knots the *Marmora* consumed 9,000 tons of coal each round voyage. The cost of coal in 1904 varied considerably, but the average price was 19s. 6d. a ton. On her maiden voyage, at an average speed of over 20 knots, the *Arcadia* consumed oil fuel costing a total of £73,500. The total basic monthly wage of the European crew on the *Marmora* had been £856. To-day the total basic monthly wage of the European crew on the *Arcadia* was £10,350, with an additional £1,500 for National Insurance, etc. On the question of dock labour and canal dues, the author said that for each transit of the Suez Canal by the *Marmora* the fee had been £1,994, plus a special charge of 8s. a passenger. To-day, the additional passenger charge was eliminated, but the single transit fee for the *Arcadia* was £8,374. Dock and harbour dues for entry into London Dock had been £392 18s. 6d. for the *Marmora* and were now £2,984 for the *Arcadia*. In one year the average cost of *Marmora's* port dues, light dues, pilotage and towage had been £2,022; the corresponding figure for the *Arcadia* was £15,000.

Vegetable Oil Exports.—In his address from the chair to the Calcutta Grain, Oilseed and Rice Association recently, Rai Bahadur G. V. Swaika analysed the difficulties of the Indian oilseeds industry in maintaining its overseas markets. The existence of the industry depends largely on its ability to sell a considerable part of its oil output abroad, which it now finds extremely difficult because of severe competition from its rivals. The Government of India has moved to increase the competitive strength of Indian vegetable oil products, and during the past year there was unusual promptness in reducing export duties, but the bureaucratic tendency not to take action until forced by circumstances still remains. The Rai Bahadur gave the example of oilcakes, particularly linseed, which are not allowed for export though now at a premium in overseas markets. The production of linseed has been increasing and he quoted official statistics to show that the current annual production of linseed cake must be at least double pre-war, apart from the increase in the supply of other oilseed cakes. He concluded that there must be a domestic surplus, especially because of the larger use of chemical fertilisers which replace oilseeds in agricultural operations. Argentina and Uruguay are able to reduce the selling price of their oils because they reap a large gain from oilcake exports with which they offset the relative loss in oils. It is suggested that the Indian industry be allowed to compete with them on their own ground by exporting oilcakes in much larger quantities than the small quota of 50,000 tons allowed since this year. Rai Bahadur Swaika's suggestions that the export policy for oils and oilseeds should be an integrated one rather than separate as now, with the licensing period coinciding with the crop year, is sound. At present, oilseeds prices have fallen to uneconomic levels and the Government has been encouraging export to stabilise prices. But it would be better if the export of oilcakes was encouraged instead, particularly when prices are high in overseas markets.

Progress of Dunlop.—An example of the calls which rapidly changing conditions make on the ingenuity and research resources of the modern industrial organisation was revealed by Mr. Cecil Stack, Managing Director of the Dunlop Rubber Co. (India) Ltd. at the annual general meeting last Monday. In his review, published elsewhere in this issue of *Capital*, he was able to report a satisfactory year for the industry with an increase in sales volume of all products. The benefits of this increase did not all accrue to the company because a reduction was made last year in the selling prices of tyres for passenger cars, trucks and buses, motor cycles, cycles and animal drawn vehicles. Distribution was satisfactory, although transport bottlenecks were still encountered. With

the exception of cycle tyres there was no overall shortage of stocks. Raw material problems were, however, created by delays at the Calcutta ports. Last year the company's operations saw the introduction of the new tubeless car tyre, which Mr. Stack considered the most important development in this field since the advent of the balloon tyre in 1922. In the truck and bus tyre range the Trakmaster tyre introduced during the previous year could not be produced in sufficient quantities to meet the demand, and the company has decided to install more manufacturing equipment. The Dunlopillo Latex Foam Cushioning is proving popular in this country, and partly due to intense publicity efforts, the sales of this product also increased during the year. The sales of conveyor belting, which the company started in the previous year increased during 1954, and the increase in demand for industrial vee belts and fan belts had been so great, stated Mr. Stack, that the company was able to reduce their selling prices. In the past year the manufacture of pneumatic tool, welding and high-pressure braided hoses by the lead press moulded process was undertaken for the first time. The introduction of these new products caused considerable strain on the company's technical staff, but their work is closely connected with the world-wide group research establishments of the Dunlop Rubber Co. Ltd. This fact must have contributed in no small measure to the number of new activities which the company had undertaken during the past few years.

Cooks to Leave Calcutta.—It is always with regret that we hear of the end of an old-established institution. For six decades "Thos. Cook & Son Ltd." has been a familiar sign around this city and its branch office has arranged for the transport of literally hundreds of thousands of travellers from anywhere to anywhere. Now it is said to have fallen on lean times and it has been decided to put up the shutters with effect from the end of June next. It is to be hoped that the London head office of the firm will find reasons to revise this decision and declare in favour of the branch's continued operation. The firm dates its beginning from Thomas Cook's chartering of special trains for outings for London's temperance workers back in the middle-nineteenth century. This Derbyshire man was a very striking character. He was a staunch enemy of the "fragrant weed", but his puritanism was not without the redeeming feature of a strict personal honesty. Although he founded the organisation, its expansion and consolidation were the work of his son, John Mason Cook, who had to go through the grind, working fourteen hours a day for 15s. 6d. a week. It is not surprising that an organisation with these origins should emphasise the ethical aspect of travelling, as can be seen from the articles published in *Thos. Cook's* house organ *The Excursionist*. Since those times, however, the firm has shifted the emphasis from ethics to comfort, the modern religion, and through its world network of branches has undertaken tours for Kaisers and commoners for well over a century.

CORRESPONDENCE

THE PRICE FOR PROGRESS

(TO THE EDITOR OF "CAPITAL")

SIR,

I usually read The Ditcher's article with interest and approval but there is a paragraph in your 7th April issue which I find disturbing, not so much because The Ditcher holds certain views but because I believe that these views are fairly widely held. I refer to the paragraph concerning the export of peanut shells and butterflies.

It seems to me to be right and proper although a little surprising that the gentleman in the Khasi Hills is to be prevented from exporting his butterflies and moths. However, I doubt whether his activities were very important. What does concern me is the reference to the effect of hydro-electricity schemes upon the countryside. The Ditcher states that "The extinction of a few lines of Lepidoptera seems a small price to pay for the benefits of electric power". Personally I feel that the destruction of beauty and the extermination of some of the loveliest if seemingly least useful of God's creatures is a very high price to pay for the benefits of electric power, and of course not only butterflies are affected. Are only those creatures to survive which serve mankind, and are our descendants destined to live in a world where all lands are filled with model farms and plantations, neat model villages and neat model townships joined by arterial roads and railways and served by efficient air services with a few pathetic parks and nature reserves here and there? I doubt whether I am alone in hoping that the future is not to be as dismal as this.

I have no views quaint or otherwise concerning peanut shells.

Yours faithfully,
A. J. Sharman

Madras, 19th April, 1955.

Without Prejudice

FRUSTRATION OF THE ADVENTURE

CHANGE IN THE CIRCUMSTANCES OF A CONTRACT

(FROM OUR LEGAL CORRESPONDENT)

HERE is an exercise in common sense for the non-legal commercial reader; and, if he goes wrong on it, he will have the consolation of knowing that so did an eminent judge, and, for what little the fact is worth, this deponent also. It concerns the legal doctrine known as "frustration of the adventure" as applied to the law of contract, a modern theory which has been developed by the judiciary based on the principle that in the last resort, in trying to get at what the parties to a contract really intended on a point on which the contract itself is silent, the court is entitled to act on its own sense of what is just and expedient. Emerging from obscurity in a host of cases after the first world war, and enlarged after the second, the doctrine is at the present time of value in regard to the question of liability on contracts the performance of which has been rendered impossible through labour unrest, strikes, sabotage, riots or civil commotion. We may enunciate the doctrine thus. Where the fulfilment of a contract according to the true intention, is rendered impossible by emergent fact not within the control or contemplation of the parties, the court will treat the contract as if it had been conditional and hold performance excused. To be fair to the non-legal reader in what is a really difficult problem we will emphasise seven words in the above definition which are the crux of it. "Not within the contemplation of the parties". The case started in the year 1948 has, in the leisurely manner peculiar to this sub-continent, ambled its way through the courts for the past six years or so, and these were the facts.

The suit was for the recovery of Rs. 24,115 on the basis of four railway receipts as the value of goods consigned to the North-Western Railways, in undivided Punjab, for delivery at Nabha, in the former Nabha State and now in Pepsu, and non-delivery of the same. On 11th August, 1947, four consignments of iron sheets, G. C. sheets and iron-rouds were booked from Lahore railway station to Nabha railway station of the N.W. Railway by the plaintiff and three others under four railway receipts. In each case the railway receipt was endorsed to "self". On the same day the plaintiff with the three others left Lahore for what, later on, after partition became the (then) Dominion of India. The goods were not delivered to the plaintiff at Nabha or at all, anywhere; wherefore the plaintiff by now the sole endorsee for value of all the railway receipts, after serving the statutory notices, filed his suit at Delhi for recovery of the value of the goods, Rs. 24,115. The railway administration filed a number of defences all of which were rejected by the learned District Judge who found for the plaintiff and decreed his claim in full, with costs.

The railway administration, by that time the Union of India, appealed to the High Court on a number of grounds, of which we are here concerned only with one, namely, the doctrine of frustration and with reference to the second paragraph of Section 56, Contract Act, which says: "A contract to do an act, which after the contract is made becomes impossible,—becomes void when the act becomes impossible".

In a leading English decision¹ the Lord Chancellor (Lord Loreburn) expounded the modern interpretation of the doctrine of "frustration" as follows: "When a lawful contract has been made and there is no default, a court of law

1. F. A. Tamplin Steamship Co. Ltd. v. Anglo-Mexican Petroleum Products Co. Ltd. 1916. 2AC. 397. (P).

has no power to discharge either party from the performance of it unless either the rights of some one else or some Act of Parliament give the necessary jurisdiction. But a court can and ought to examine the contract and the circumstances in which it was made, not, of course to vary, but only to explain it, in order to see whether or not from the nature of it, the parties must have made their bargain on the footing that a particular thing or state of things would continue to exist. And, if they must have done so, then a term to that effect will be implied, though it be not expressed in the contract.....An examination of (recent) decisions confirms me in the view that when our Courts have held innocent contracting parties absolved from further performance of their promise it has been upon the ground that there was an implied term in the contract which entitled them to be absolved. Sometimes it is put that the parties contemplated a certain state of things which fell out otherwise.....No court has an absolving power, but it can infer from the nature of the contract and the surrounding circumstances that a condition which is not expressed was a foundation on which the parties contracted....."

But as time passed the doctrine, obviously a dangerously vague one, and so to be exercised with caution, has been whittled down. Said Lawrence J. in a later decision: "No such condition should be implied when it is possible to hold that reasonable men could have contemplated the circumstances as they exist and yet have entered into the bargain expressed in the document". And in Patna in 1945, the same view was expressed and the doctrine whittled down a little further.² The learned judges said: "Before the doctrine of frustration can be invoked, it must be shown that the event which has produced frustration was an event which the parties to the contract did not foresee and could not with reasonable diligence have foreseen". The latter is a very pregnant sentence indeed and we will now have a look at the facts in the light of it.

The date on which the four consignments were booked from Lahore station was 11th August, 1947, that is only three days before undivided India was to be split up into two separate Dominions. The certainty of the imminent partition was, of course, well known to everyone. On and before 11th August vast numbers of Hindus were evacuating the city of Lahore in justifiable fear of their personal safety; incidentally, among these involuntary exiles were the plaintiff and his three co-consignors. They left on or immediately after 11th August. Passenger and goods train services, if not totally dislocated, were not far from being in a state of chaos. At the railway station itself the Hindu staff had virtually all left and the staff that remained were nearly all Muslims. The plaintiff's consignment of iron sheets eventually landed up in Karachi and he never saw them again. The Advocate General's explanation made on behalf of the railway administration was that the Muslim servants of the railway "probably deliberately despatched the goods to Karachi rather than to Nabha and for this the railway administration was not to blame". On the railway station and outside in the city stabbing, looting and general violence were rampant. On these facts you may conclude, as the writer did, that the performance of the contract became impossible and that therefore the railway was discharged from liability under it. You might have been before the findings of the Patna judges quoted above. But you would be wrong today. This is the case: "There is no manner of doubt..... that the non-Muslims of Lahore were already quitting the city on 11th August.....(and) before that there was wholesale evacuation of the non-Muslim population beyond Lahore.....and there could be no question of there being normal goods train service in those days.....(The) disturbances were already on in Lahore on 11th August and the railway administration could not possibly ignore the circumstances in which it accepted the consignment and the disturbances had already started when the acceptance was made. It does not now was something that could not be foreseen by reasonable men. I think the tempo that the disturbance was to reach was too apparent by 11th August and the defendant cannot say that what happened could not be foreseen, and that therefore an implied term in the contract must be read that the necessary of things, i.e., the peaceful atmosphere necessary for efficient running of the railways, the continuance of which they expected at the time of the making of the contract, had ceased to exist because of the disturbances thus rendering the performance of the contract impossible and that the supervening events could not be contemplated or foreseen by the parties.....There is no substance in that argument".

So the plaintiff won on that point which is of importance to those who effect consignments in times of pending or actual riots or civil commotion. But the railway's appeal was allowed on another technical ground with which we are not here concerned.

MR. DULLES has fortunately lost no time in removing the very bad impression caused by the State Department's first reaction to Chinese conciliation. Last Saturday's performance in Washington was no doubt quite unrehearsed, but it looked like nothing so much as a lot of debutantes diving for the exit when a bearded gentleman asked for a dance. The Asian statesmen who had worked so hard in Bandung to bring Mr. Chou to the point of making a very reasonable offer must have been rather distressed to hear the retort that the United States would talk to him provided he renounced Communism and stopped looking like a Chinese. However, long experience has taught America's friends that when someone in Washington says something too bad to be true, it usually isn't true, and promptly gets denied. Mr. Dulles has now done this in the handsomest possible way, and no harm has been done. The decision to enter into negotiations with Peking without bringing General Chiang Kai-shek into the picture probably seems to foreigners an easy one to make, but in the conditions of American politics (for which the present Administration is not to blame) it is actually a very courageous one. Chiang is no doubt a great nuisance and America's commitments to him will still be an obstacle to a final settlement in the Far East. But it is difficult to see just what the United States is expected by her allies to do about him. I find it frankly blood-curdling to listen to some of the advice Mr. Dulles gets on this point. A great number of people want him to do to the K.M.T. just what they want him never, never to do to them—namely, sell out in the interests of world politics. Wiseacres are so clear on the fact that the United States backed the wrong horse in China that they rarely consider that what they are saying is that the wrong horse should then be thrown to the lions. Yet the present alliance of democratic countries is supposed to be founded on the principle that no more small nations will be thrown to any lions; we had enough of that just before, during and just after the war. Of course General Chiang and his legions are not a "nation" any more, but no more were such wartime heroes as General de Gaulle and Marshal Tito. Inevitably, General Chiang will have to be deserted, sold out, thrown to the lions because the stakes are now too big. But I do not hold it against the Americans that they have some qualms of conscience about this. Mr. Dulles by consenting to talk to Mr. Chou about Formosa in the absence of the inhabitants of that island has set his foot on the path, and those of us who are usually so brimful of advice for the Americans might now think up some ideas on how he can do a nasty job in a decent way.

The report that they are going to construct a ropeway from Gangtok almost up to Nalu-la will be good news for someone, I suppose. It cannot be for the Tibetan muleteers who make a living running their caravans over the pass, and who will now see their business lost. And it certainly will not be good news for those of us plainsmen who have dined out in Calcutta and London on the story of How We Walked Into Tibet. The jeepable road from Gangtok was a bad enough blow for us, but there is some doubt about how far road goes and we could always say we went further—"well up into the regions where road-building becomes impossible, you know". But with a ropeway, the romance will have quite gone out of the thing. Slothful trippers, up from the cloying comforts of Darjeeling and Kalimpong, will be able to sail through the air high above the flowered valleys, the icy lakes, the lonely monasteries and the weatherboard dak bungalows, and will complete in a matter of hours a journey that took us days and days of toilsome climbing. They will

A DITCHER'S DIARY

look briefly down from the pass into the green valleys of Tibet, from a point where we stood feeling like a combination of Mallory, Cortez and Sir Aurel Stein—and hurry back the same day to the bus that waits for them in Gangtok. That is of course supposing that they get the required permits, because officialdom these days is rather sticky about letting people peer over China's back fence. Maybe political obstacles will replace the physical obstacles that made our trip through Sikkim an adventure; but still, the thing will never quite be the same again. A little bit of romance-leaks out of the Indian scene every day. Last week, for example, I saw a dead tiger in Park Street. This was another blow, for I recalled the miles and miles I have stumbled to see a newly dead tiger—let alone a live one. And here was a magnificent beast in full view of the pampered ladies taking their tea in Trinacas. It was strapped over the front of a jeep, in which sat half a dozen Sikh gentlemen, all trying to look as though the tiger weren't there, or at least as though it were something they picked up on the Maidan. They'll be doing the rope trick in the New Empire next, and then India will have become the Tired Tourists' Paradise.

The first consequence of the London newspaper strike (apart from the appearance of an issue of *The Times* that gives the impression that the whole population of the British Isles has just died or been married) is an increase in the price of the three evening papers to twopence. It was denied during the strike that some of the papers were already running into financial difficulty, but the alacrity with which they have seized the opportunity of recent losses to push their prices up suggests otherwise. It is now expected that the mass circulation morning papers will also have to go up to twopence—specifically the *Mirror*, *Express*, *Mail* and *News Chronicle*. The men on Fleet Street are naturally worried about the effect of this increase on readership, especially because the relative lack of sympathy they encountered during their labour troubles indicated that Britons are not as addicted to the Press as had fondly been imagined. A halfpenny increase is not much, but then the popular dailies rely for their circulation on the family man who buys two papers for threepence—and he may henceforth prefer one at twopence to two at fourpence. The moral is that even in London, where a sheet of printed paper is an absolute necessity to distract one from bad restaurant food and to serve as cover in the train, the newspaper business is as chancy as any, the fortunes of the Press Moghuls notwithstanding. When the Lok Sabha debates the Press Commission's report on the midget Indian newspaper industry, it might consider how the mighty are tottering in London.

The monkey export controversy has now been settled to everybody's satisfaction (except the lunatic fringe of anti-vivisectionists), though it might not have been resolved so quickly if Dr. Jonas Salk had not produced his polio vaccine at just the right moment. It was interesting while it lasted because of the widespread franciscan prejudice it revealed. I look cursorily at pretty nearly all the Indian newspapers, and I should guess that no one subject has brought in so many Letters to the Editor for years past. Monkeys of course soon got lost in the press, for the whole animal kingdom was brought in for protection. Readers will even find on another page of this issue that I have been taken to task by a correspondent for talking lightly of butterflies. Religion in any strict sense, and including the particular veneration accorded by Hindus to certain

animals, seems to have had little to do with this upsurge of opinion: certainly few people claimed special treatment for monkeys on the ground that they are sacred. (They are not nowadays in many parts of India.) Letters to newspapers are of course a quite unreliable guide to popular feeling on this (or any other) subject, because only people who think animals should be treated in some different way write letters about it; those who think present customs are good enough, don't bother. Still, I confess I have been surprised at the number of people apart from the orthodoxly religious who hold extreme notions about animals and about the inconvenience humans should suffer on their account. Once we get past the school-boy sadism stage of kicking cats for fun, half the human race settles down with an unemotional view about animals, content to let them be used for our benefit but disapproving of anything that reminds us of what we did to the cats of our boyhood. The other half retains an abnormal sensitivity on the subject. I suspect neither half can bring forward rational arguments in support of its case. So it is probably a situation where half of us must decide that the rest are sentimental fools and the other half that the first are heartless brutes. Which is perhaps an accurate classification of humanity anyhow.

Speaking of Letters to the Editor, *The Hindu* published this one last weekend: "Sir, Those who want to communicate report of a snake bite by telegram to the Poison King, Jeeyapuram, Southern Railway, for a cure of the poison may now communicate by telegram to Tiruppalaturai Post Office which has become a telegraph office since March 17 and is only three miles from Jeeyapuram, his residence. Telegrams can thus reach him much earlier than through the railway system and the purpose can be served expeditiously and effectively.—Humanitarian". So now you know what to do if you run into a Russell's viper: send off a wire to the Poison King, special runner will walk three miles to Jeeyapuram with the news and three miles back again to Tiruppalaturai with the advice, and by the time you receive it, your heirs and survivors will know what they should have done to save you.

The gentle art of giving nothing away still has expert practitioners. Some readers may remember the magnificent "war communiques" released by Beachcomber about twelve years ago. There was one supposed to issue from the War Office that went like this: "As for the situation on the western front, granted there is no sudden deterioration, I think we can fairly assume, on the basis of the information that we have, that all things considered the position should not get any worse. But of course if there is some improvement in the outlook there, obviously things should tend to get rather better." Mr. Dag Hammarskjöld, the Secretary-General of the United Nations, equalled this last week when he was asked what he was doing about the American airmen imprisoned in China. He said: "Contacts are continuing. I would not continue these contacts unless I felt they served some useful purpose. That I think a full reply. That is to say, I feel that this operation which was started by the talks in Peking is not concluded, and as long as it is not concluded, as long as possibly it is not exhausted, I don't see any reason to change my previous judgment. That is to say that efforts should continue because there are sufficient chances for a success for them to continue". Mr. Hammarskjöld would do well at the style of modern poetry invented by Jean Cocteau: it was called Nudisme and consisted of publishing bound volumes of blank sheets of paper.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank as far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from Branches not visited by us.

We have satisfied ourselves as to the Cash, in hand, with Bank of England and Eastern Reserve Banks, the Balances with, and Cheques in course of collection on, other Banks in the United Kingdom and Ireland, the Balances with Banks abroad, and the Bills. We have also verified the correctness of the Money at Call and Short Notice and the securities representing the Investments of the Bank. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account at Head Office and certified returns from the Branches—the Eastern Branches accounts being brought in as at the 31st October, 1954. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1948, and, on the basis authorised therein, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at the 31st December, 1954 and the Profit and Loss Account gives a true and fair view of the profit, ascertained in the manner therein indicated, for the year ended on that date.

In our opinion the group accounts (comprising the Balance Sheet and Profit and Loss Account of the Bank and the annexed accounts of The National Bank of Scotland Limited), have been properly prepared in accordance with the provisions of the Companies Act, 1948 applicable to banking companies and, on this basis, give a true and fair view respectively of the state of affairs and of the profit of Lloyds Bank Limited and its subsidiary dealt with by such group accounts so far as concerns members of Lloyds Bank Limited.

Our City Cable

LONDON TEA AUCTIONS SUSPENDED

FURTHER EFFORT TO REDUCE STOCKS

London, 23rd April.

THE producers and brokers have agreed to suspend the auction of 52,261 packages of tea which had been catalogued for auction in London next week. A meeting of the Tea Trade Committee on Monday morning, 25th April will review the position created by the congestion of stocks and will consider whether one week's suspension of the auctions will be sufficient. The tea to have been offered next week comprises North and South Indian, Ceylon, Pakistani and other miscellaneous growths. Prices at the auctions last week weakened all round and lack of buying interest caused heavy withdrawals of tea. Plain North Indian Broken Pekoe dropped to 54d a pound nominal against 59d before the Easter break. The resumption had already been postponed one week from normal in order to give the trade a two week's break in the auctions and so hasten the liquidation of stocks built up when prices were rising steeply a short time ago. But even this extended break has apparently proved inadequate and another effort is to be made to allow a reduction of stocks that will permit a resumption of more normal buying through the London auctions.

The London Stock Market

Stock markets sustained a sharp setback under the lead of Gilt-edged Securities prior to the weekend, but steadied subsequently in the absence of sellers. The immediate response to the Budget was satisfactory and small gains were recorded, but these were not held in the face of the weakness which developed in Gilts. There was a great deal of selling in Gilts but persistent offerings in the absence of support brought sharp losses. The decline mainly reflected talk of dearer money. The fall in Gilts brought the whole market down in sympathy. Despite the recovery after the weekend Gilts were well down on the week. The industrial market responded to the Budget proposals, but fell back in sympathy with Gilts. Occasional movements against the trend usually reflected good dividend statements but generally extensive losses were sustained. Foreign bonds and rails were subdued while dollar stocks improved in sympathy with Wall Street. The quarterly reports failed to stimulate interest in Kafirs, which lost ground on small selling and lack of support. Copper and other base metals also eased. Oils were lower with the rest of the market and Teas were depressed by nervousness over the commodity price. Rubbers by contrast attracted small and

selective buying following recent good company news.

The Money Market

Credit conditions were again difficult in the Money Market during the past week. For three days running the market had to borrow small amounts from the Bank of England on bank rate terms to bridge a shortfall in credits. This squeeze kept money rates in the open market at high levels and 4 percent was frequently paid, whilst towards the end of the week bill rates hardened and treasury bills were raised approximate 3½ percent to 7½ 1.000 percent.

There was evidence that the authorities intended to keep a tight rein on short-term credit and thus discourage banks from extending advances. For three days during the week, the market had to borrow from the Bank of England in order to balance books, as a result of the squeeze on the credit market which tended to secure a higher rate for last week's offer of treasury bills. Outside competition, however, was keen and by undercutting the market's bid it secured the bulk of the bills, the market only securing 39 percent. The average tender rate for treasury bills was 7½ 1.000 against 7½ 3.000 in the previous week. Applications for treasury bills totalled £385,190,000 of which the amount allotted was £230 million. This week £220 million are on offer. The Bank of England return for the week ended 20th April showed notes in circulation about £6 million lower at around £1,723 million. Bankers' deposits were about £2 million higher at around £276 million. Fine trade bills, three months, were 4½ to 4½, and six months, were 4½ to 5½ percent.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 20th April showed gold stock unchanged at \$21,670 million. Foreign deposits rose by \$27 million and foreign investments rose by \$2 million. The Federal Reserve sold \$37 million worth of Government securities previously held under repurchase agreements. Member banks' borrowings fell by \$68 million to \$569 million, while the excess reserves fell by \$13 million to \$609 million. Their daily average borrowings rose by \$129 million to \$696 million while the daily excess reserves fell by \$246 million to \$426 million. Business loans of the New York City banks fell by \$33 million to \$7,581 million compared with the fall of \$90 million to \$7,996 million a year ago.

Some British Imports Liberalised

The Board of Trade has announced that henceforth British traders can import cotton linters, calcium silicide, phosphate rock and naval stores from any country without the need to apply for a separate import licence. Separate licences have hitherto been required for imports of these goods from certain countries.

Industrial Consultants to Pakistan

The Union Chimique Belge—Belgian Chemi-

cal Union—has concluded an agreement with the Pakistan Development Corporation under which they will act as consulting engineers for the construction of two pharmaceutical factories (one in East and the other in West Pakistan) according to well-informed sources. The Union Chimique is already acting as consulting engineers on the building of the nitrogen fertiliser plant in the Punjab. It is further reported that the firm has been appointed permanent consultants to the Development Corporation and the chemical fertiliser industry generally.

U.S. Metal Markets

Despite near record production, some U.S. motor-car makers claim that they are not receiving adequate steel supplies. Auto manufacturers in the first quarter built and sold products at a record pace and had no chance to build up steel stocks. In view of this, they are now placing firm orders for June and tentative commitments for July. This, coupled with further rises in demand from other consumers explains confidence in mill quarters that business will continue strong through the summer. Export demand for tinplate is described by producers as fairly good to excellent. There is said to be a fair chance that Britain will order additional tonnage beyond the 50,000 tons already booked. Scrap prices tended lower reflecting seasonal improvement in supplies. In non-ferrous metals, copper firmed in sympathy with London and practically wiped out the preceding weeks' decline. Lead was firm on good consumer buying, while demand for zinc broadened although some price resistance was still apparent. Tin hardened in small dealings, mainly reflecting Argentine enquiry for 500 tons. Domestic copper producers are still quoting 36 cents and do not expect a price change in the coming months. Domestic copper supplies remain tight and no real improvement is expected until European consumption tapers off. The Senate Finance Committee is to consider shortly amendments to the Trade Bill which would impose higher tariffs or restrictive quotas on products such as lead and zinc.

Dundee Jute Yarn Market

Dundee buyers of jute yarns are still holding off and buying only to cover immediate needs. They have been out of the market so long that their stocks are now running low. However, spinners in many cases are able to quote for immediate shipment. Fine yarns are well booked up and delivery of four and five lbs. cannot be obtained for some months ahead, especially in twist. Cloth is in quiet demand with consumers covering only their imperative needs. Raw jute continues to show wide variations in rates quoted with Mill Firsts ranging from £104 to £110 for shipment, August-September, c.i.f. U.K. Meanwhile small business has been done ex-quay or ex-warehouse at several sterling less.

AUDITORS' REPORT:

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at 31st December, 1954, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta Branch and report that:

(a) We have obtained all the information and explanations which we have required;

(b) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches; and

(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 28th March, 1955.

Company Meeting

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. CECIL STACK'S REVIEW

At the 29th Annual General Meeting of The Dunlop Rubber Co. (India) Ltd. held on the 25th April in Calcutta, Mr. Cecil Stack, Managing Director, said:

Gentlemen,

The Directors' Report and Accounts for the year 1954 have been in your hands for some time, and with your permission I will take them as read.

I should like to preface my remarks this year by referring to a change in our Board of Directors. Sir Satendra Nath Roy, who has been a Director since 1948, resigned his seat on the Board for reasons of ill health. His wide knowledge, experience and astute judgment have been of great help to us and I would like to express our sincere appreciation of the valuable service he has rendered to the Company, also the hope that it will not be long before he will be well again.

The Year's Trading

The year under review has generally been a satisfactory one. The volume of sales of all our products was higher compared with the previous year. In terms of production and using our principal raw material, crude rubber, as the basis, we exceeded 1953 by 18%. On the other hand, total sales in value increased only 9%. This difference is largely explained by the reduction made last year in our selling prices of tyres for passenger cars, trucks and buses, motor cycles, cycles and animal drawn vehicles.

Our consumption of crude rubber in 1954 was the highest since our factory commenced production in 1936 and this is indicative of the progress made by the Rubber Manufacturing Industry as a whole, which in my opinion can be regarded as evidence of the sound manner in which the industry has been allowed to develop. The increasing expansion of India's economy, the implementation of the Five Year Plan and the emphasis to be placed on industry in the second Five Year Plan all help to accentuate the growing importance of our own particular industry. The development of mechanisation in agriculture as well as the expansion of industry as a whole will make demands which rubber manufacturers will only be able to meet by expanding their output and by producing a wider range of articles.

With the exception of Cycle, there was no overall shortage of tyre stocks throughout the year under review but difficulties associated with the distribution of our products continued to be experienced as the result of transport bottlenecks and inadequate availability of Railway wagons.

The net profit for the year was Rs. 96,37,915 compared with Rs. 92,88,299 for 1953 but because of the selling price reductions already referred to, the ratio to turnover has declined in 1954 from 7.4% to 7% before taxation and from 4.6% to 4.3% after taxation.

Products

Our Technical staff work in close contact with the world-wide Group research establishments of the Dunlop Rubber Co. Ltd., the benefits of which are fully available to your Company. In this way we are able to keep abreast of all new developments such as the tubeless car tyre, the introduction of which during the year was an outstanding achievement. This tyre is the most important development since the advent of balloon tyres in 1922. It provides added protection against punctures and bursts. It also retains the air much better than the conventional tyre, thus maintaining a more constant air pressure and so reducing tyre wear. With all its advantages it costs no more than a conventional cover and tube of the same size.

In the truck and bus range our Trakmaster tyre, introduced only the year before, became so popular that it proved impossible to meet the demand. More equipment is now in use which will help to remedy the situation.

Our sales of pneumatic tyre equipment for animal drawn vehicles were well in excess of any previous year; likewise our sales of tractor and aero tyres. In addition, the continued rapid expansion of India's bicycle manufacturing industry helped us to break the record set the year before in our production and sales of cycle tyres and rims.

In line with tyres, sales of all our other products advanced substantially. The intensity of our sales efforts, supported by sustained publicity, has popularised Dunlopillo Latex Foam Cushioning throughout the country.

The remarkable progress made in our Industrial Transmission Belting business in the previous year continued throughout 1954, and our Conveyor Belting, the manufacture of which only commenced in 1953, is already being used on the major hydro-electric projects as well as in mines, power stations, steel works and numerous factories where the inexpensive handling of large quantities of materials is vitally necessary. Our Industrial Vee Belts and Fan Belts also continue to sell in increasing quantities and as the result, we were able to reduce our selling prices.

During the year we commenced the manufacture of pneumatic tool, welding and high pressure Braided Hoses by the lead press moulded process. This type of hose in long lengths had not formerly been made in India and I am glad to say that our hoses are already proving popular wherever there is a demand for them.

This overall expansion of our manufacturing activities contributed in no small measure to the fact that in 1954 rubber manufacturers consumed approximately 4,000 tons of rubber more than India produced. That the deficit this year is expected to be over 5,000 tons should encourage the Rubber Planting Industry in South India to make serious efforts to increase their production.

Raw Materials

The raw materials supply position was satisfactory

throughout 1954, but delays in the clearance of shipments through the Calcutta Port due to labour troubles caused anxiety at certain times. There were no significant changes in prices except of crude rubber of which we were allowed to import part of our requirements because indigenous supplies were insufficient. Prices ranged between Rs. 84/- and Rs. 150/- per 100 lbs. as compared with the controlled price for local rubber of Rs. 138/-.

Profit & Loss Account

As I have indicated earlier, the net profit for the year was Rs. 96,37,915, and after deducting the charge for taxation the balance of profit available for disposal is Rs. 69,45,891 compared with Rs. 62,39,833 for 1953. The Directors are recommending the same rate of Ordinary Dividend as for 1953, that is 15%, which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 30 lakhs to General Reserve as against Rs. 24 lakhs last year. This will increase General Reserve to Rs. 1 crore 68 lakhs as shown in the Balance Sheet. The total amount transferred to Reserves during the last 10 years was Rs. 2 crores 45 lakhs. These appropriations represent shareholders' profits retained and fully employed in the business. I would like to stress here the great need for such conservation of the financial resources of the Company. In addition to the funds required for development and expansion schemes the Company is continually striving to improve the standard of living conditions for its factory employees by providing more residential, hospital, educational and other welfare facilities. During the last ten years the Company has spent over Rs. 80 lakhs on buildings for this purpose and very considerable additional expenditure, depending on the continuing prospects of the Company, is planned for the next three years. The Company's housing estate at present accommodates just over 3,700 persons representing employees and their families, and this number will continue to rise over the next 3 or 4

years if, as we hope, the resources are available to complete our plans.

Balance Sheet

The additions to Fixed Assets during the year amounted to Rs. 30 lakhs, consisting mostly of plant for expansion and rehabilitation. The amount of depreciation written off in 1954 was Rs. 30,20,000 as against Rs. 27,78,000 in 1953.

Stock Inventories at Rs. 395,81,000 are Rs. 33,22,000 higher than at the close of the previous year. This was due mainly to increased production, raw material prices having remained fairly stable throughout the year. Sundry Debtors are up by Rs. 41,40,000 as a result of the greater sales turnover. Bank and Current Balances are also higher than last year, making the total increase in Current Assets Rs. 80,15,000. The net working capital increased by approximately Rs. 68 lakhs during the year, which is partially reflected in the closing bank overdraft of Rs. 128 lakhs compared with Rs. 88 lakhs at the end of 1953.

Employee Relations

During the past year we have striven further to extend and improve our social amenities for employees. The 64 new staff flats constructed in 1953 were all allocated and occupied in 1954, the building of new quarters for the Watch and Ward staff was commenced, as well as additions to the existing facilities for sport, and the survey work was put in hand for the construction of a further 100 married operatives' quarters. Thus we endeavour to maintain our high reputation for working conditions and general labour relations, which have remained consistently good throughout the year. Staff and operatives have continued to exert their best endeavours and have contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in expressing warm thanks for their loyal and faithful service.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FEW EXPORT BILLS

Wednesday, 27th April.
MONEY is still in good demand upcountry. In the Calcutta inter-bank market the call rate quotes 2½ percent, with lenders over.

The bill of exchange department is having a very dull time, with very few export bills reported. There has been a fairly large demand for remittance. Sterling is slightly stronger against the dollar, but there has been no change in local rates.

Silver ruled steady on increased demand and the price advanced from the previous week's level of Rs. 166-4 to Rs. 169-8, quoted to-day. The rate for forward delivery was quoted lower at Rs. 165-12. The price was unchanged at 87 cents in New York and at 75½d. in London.

Gold continued to rule firm and the price increased from Rs. 97-8 to Rs. 98-8. The sovereign at Rs. 62-2 showed a gain of 12 annas.

Tenders for Rs. 1 crore of three month Government of India Treasury Bills, which were opened on 26th April, 1955, totalled Rs. 1,10,00,000. The average rate of acceptance increased from Rs. 2-9-0 to Rs. 2-9-5 percent per annum. Tenders at Rs. 99-5-9 percent were accepted in full and those at Rs. 99-5-6 percent allotted approximately 82 percent. Tenders for a further Rs. 1 crore of three month Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 2nd May, 1955. During the week ended 22nd April, 1955, Government of India Treasury bills for Rs. 13,64,75,000 were sold in favour of the Reserve Bank of India.

A decline of Rs. 9.19 crores in notes in circulation to Rs. 1,316.14 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 22nd April, 1955, while the total note issue was up by Rs. 52 lakhs to Rs. 1,341.59 crores. Notes held in the Banking Department consequently rose by Rs. 9.71 crores to Rs. 25.45 crores. Deposits of the Government of India fell by Rs. 2.28 crores to Rs. 53.11 crores but other Government notes rose by Rs. 6.10 crores to Rs. 30.42 crores. Balances of commercial banks at Rs. 48.31 crores showed a decline of Rs. 2.18 crores. Investments dropped by Rs. 2.49 crores to Rs. 43.63 crores as did balances held abroad by Rs. 5.12 crores to Rs. 58.23 crores. Other loans and advances increased from Rs. 33.94 crores to Rs. 35.15 crores, of which advances to scheduled banks against usance bills totalled Rs. 24.76 crores (Rs. 23.28 crores). These advances amounted to Rs. 68.86 crores since 1st January, 1955. Ways and means advances stood at Rs. 17 lakhs (Rs. 31 lakhs). Government cost reserves.

The following is a statement of the cash balances of the Central Government on the last day of January, 1955:

	Rs.
(1) At the Reserve Bank of India in India	62,03,90,000
(2) At treasuries in India	1,71,61,000
(3) In England (Sterling converted at 18d. the Rupee)	2,65,02,000
Total	66,40,53,000

The statement of the position of Scheduled Banks for the week ended 15th April, 1955, discloses Demand and Time liabilities at Rs. 591.90 crores (Rs. 10.28 crores on account of borrowings from Banks) and Rs. 380.98 crores (Rs. 1.67 crores) compared with Rs. 584.38 crores (Rs. 9.38 crores) and Rs. 378.90 crores (Rs. 1.41 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.19 crores and Rs. 60 lakhs to aggregate Rs. 35.96 crores and Rs. 47.99 crores, respectively. There is a rise of Rs. 19 lakhs in investments to Rs. 342.56 crores. Advances and bills discounted at Rs. 622.62 crores reveal a drop of Rs. 8.49 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.6 percent and 64.0 percent against 8.5 percent and 65.5 percent.

The return of the Imperial Bank of India for the week ended 15th April, 1955, shows a fall of Rs. 2.98 crores in total deposits to Rs. 220.37 crores. Investments in Government Securities are down by Rs. 16 lakhs to Rs. 92.57 crores, while other authorised investments remain unchanged at Rs. 11.50 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have dropped further by Rs. 1.89 crores to stand at Rs. 125.86 crores. Cash and balances are, in consequence, shown at Rs. 17.05 crores or Rs. 2.91 crores higher.

There is a profit of Rs. 2.12 lakhs for the Indian branches of the BRITISH BANK OF THE MIDDLE EAST for the year ended last December. Deposits stood at Rs. 1.75 crores. Investments amounted to Rs. 20.50 lakhs and advances totalled Rs. 64.83 lakhs. Cash was shown at Rs. 64.83 lakhs.

The BANK OF CHINA (Indian branches) made a profit of Rs. 4.29 lakhs for the year ended last December. Deposits totalled Rs. 1.72 crores. Investments and advances amounted to Rs. 21 lakhs and Rs. 1.82 crores, respectively. Cash stood at

Rs. 2.47 crores. A sum of Rs. 1.64 lakhs paid as interest on deposits borrowing, etc. was more than offset by interest and discount earned at Rs. 12.56 lakhs.

The Indian branches of LLOYDS BANK LTD. earned a profit of Rs. 16.39 lakhs for the year ended last October. Deposits amounted to Rs. 41.81 crores for the year ended last December. Investments totalled Rs. 20.44 crores and advances Rs. 17.60 crores. Cash was shown at Rs. 5.92 crores.

The total number of branches opened by the Imperial Bank in different States from 1st April, 1954 to 31st March, 1955, is 19. During its five-year expansion programme beginning from 1st July, 1951, the Imperial Bank of India agreed to open in all 114 branches; 62 branches have already been opened up to 31st March, 1955. The number of branches to be opened during the remaining period from 1st April, 1955, to 30th June, 1956 is 52.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 28-4-55.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
29-4-55	29-7-55	1,00.00	Rs. 2-9-5%
22-4-55	22-7-55	1,00.00	Rs. 2-9-5%
16-4-55	16-7-55	1,00.00	Rs. 2-9-0%
1-4-55	1-7-55	1,00.00	Rs. 2-9-0%

ASSAM OIL COMPANY

does it all

A member of the
Burmah Group of Oil Companies

PROSPECTING • DRILLING • PRODUCING • REFINING

turning oil
into petrol

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery—and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil—in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil—the oil that keeps the mills running smoothly.

Engineering and Transport

BRITAIN'S DESIGN FOR ATOMIC POWER

A BOLD PLAN TO SUPPLEMENT COAL SUPPLIES
IN ELECTRICAL GENERATING

THE U.K. Government's 10-year plan for nuclear power development, which was announced last month, bears witness to the belief of Britain's nuclear experts that the time is already at hand for exploiting the economic potentialities of atomic power for meeting the country's future needs of energy. The £300 million programme aims at bringing into commercial operation by 1965 twelve full-size nuclear power stations capable of feeding 14.2 million kW into the national grid. This article summarises the salient points of the official White Paper *A Programme of Nuclear Power*, setting out the technical details of the scheme, its cost aspects, and its general implications for Britain's fuel and power economy.

Britain is the first country to make nuclear energy an integral part of its power economy. According to the U.K. Government's recently announced £300 million 10-year provisional programme of nuclear power development, it will have by mid-1965 no less than a dozen full-size nuclear power stations in commercial operation to feed electricity into the national grid. These 12 atomic plants will be built by private industry for the several state-owned U.K. Electricity Authorities, which will own and run them. It is hoped they will save some 5-6 million tons of coal a year and produce electricity at a cost comparable with that of the most efficient coal-fired stations. Their total installed capacity is planned to be between 14 and 2 million kW, equivalent to 74-10 percent of the aggregate generating capacity of all U.K. power stations at present in service, and to 4.5 percent of anticipated total requirements by 1965.

Given the successful accomplishment of the principal targets of the first 10-year plan, a very rapid expansion of nuclear electricity generation is foreseen. If the technical and other resources available by the early 1970s permit the stepping-up of construction of new atomic power stations so as to cover the U.K.'s total needs for new generating capacity, the overall contribution of nuclear power stations may conceivably be raised to as much as 10-15 million kW. This would be equivalent to an output of electricity normally requiring some 40 million tons of coal a year, which is more than the total annual coal consumption of Britain's power stations today.

The implications for the United Kingdom's fuel and power economy of this bold and truly revolutionary plan are thus self-evident, and its magnitude testifies to both the vision and the sense of urgency that prompted its inception. It also provides fresh proof that the technology of atomic power production for peaceful purposes is already far more advanced than previous authoritative pronouncements seemed to indicate. While the programme is firm and distinct in its aim, wide room is left for modifications in the methods of its execution. The most desirable lines of development in matters of technique will only emerge as the work proceeds. The application of atomic energy at present considered as most practicable as well as economically most attractive is the use of nuclear fission as a source of heat for raising steam to drive turbo-electric generators in power stations. The building of the first full-size experimental installation of this kind, costing £15-£20 million, and intended to generate several tens of thousands of kW of electricity (in addition to producing fissile material for military uses) was commenced in the U.K. two years ago at Calder Hall, Cumberland, and it is due to go into operation by 1956-57. Many of its technical features will, of course, also be embodied in the design of the first commercial stations.

The Ten-year Plan

Most of the stations to be erected during the earlier part of the programme will, like the Calder Hall experimental plant, have gas-cooled graphite-moderated reactor of the "thermal" type. The nuclear fuels used will be either natural uranium metal or slightly enriched uranium, i.e., uranium to which, by special processing, a somewhat higher proportion of fissile matter has been imparted than is contained in natural uranium metal. The first reactors will only be capable of utilising a rather small percentage of the theoretical heat content of their uranium fuel. But they will, in addition to heat, also produce the element plutonium, which by chemical extraction from the burned-up fuel charge, after its removal from the reactor, can likewise be turned into a nuclear fuel. Indeed, this secondary fuel, plutonium, is much more potent than its parent element, since it is wholly fissile, whereas in natural uranium only one part in 140 is fissile, i.e., capable of being split by neutrons, and it is only through this fission that the heat-releasing nuclear chain reaction can be set off.

Some of the atomic power stations to be built in the U.K. during the latter part of the 10-year plan period may have liquid-cooled thermal reactors, involving more complicated techniques than the gas-cooled types, but permitting on the other hand higher rates of heat production per unit of fuel used. These reactors will need more highly enriched fuels, possibly plutonium produced from the natural uranium burned in the earlier

reactors. In other words, the first series of power stations will, in addition to its primary function of generating electricity, produce some of the special fuels needed for the second series of power stations.

The construction of the first two stations will be started in the middle of 1957, and they will begin to operate in 1960-61. The next two stations will be erected in 1958-59 and be ready for use by 1963. These four stations, comprising two reactors each, will have a combined capacity of between 400,000 and 800,000 kW. The subsequent eight stations, each consisting probably of only one, but more powerful reactor, are expected to be built between 1960 and 1962, and to be brought into operation between 1963 and 1965. Their aggregate capacity will be well over 1,000,000 kW.

The overall total of 14.2 million kW, thus provided under the 10-year plan and materialising in stages during 1960-65, would meet during this period roughly a quarter of the U.K.'s annual requirements for new generating capacity, which by 1965 will be of the order of about 2 million kW per year. The U.K. Electricity Authorities' current estimates foresee a rise in their total demand for installed capacity, which in 1954 was about 20 million kW, to 35-40 million kW by 1965, and to perhaps 55-60 million kW by 1975. Though the contribution of nuclear plant to the total new capacity needed would still be modest in ten years' time, it would grow rapidly from then onwards. By 1975, Britain's atomic power stations may conceivably furnish as much as 10-15 million kW per annum. Indeed, it is possible that from the middle 'sixties it will be found economically desirable to cease building new coal-fired stations in the U.K. and to meet all additional requirements for generating capacity solely by the expansion of nuclear plant capacity.

Capital Costs

The capital cost of the first two commercial stations (4 reactors) under the 10-year plan is expected to total £30-35 million, and the next two stations, though of appreciably higher capacity, may cost only slightly more. The last eight stations are estimated to cost about £125 million. The total cost of the initial fuel charges for these 12 stations is put at £40 million, while another £30 million will be needed for the construction of additional ancillary plant for the fabrication and reprocessing of the nuclear fuels. Finally, £30-40 million will be expended on prototype development. The overall cost of the 10-year programme thus comes to approximately £300 million. However, apart from the 12 commercial atomic stations scheduled to be in operation by 1965 under the present 10-year plan, further stations—not included in this programme—will in all probability be under construction by that time.

Britain's total expenditure on commercial applications of nuclear power over the next ten years will in fact be appreciably in excess of £300 million. But this will not be entirely an additional demand upon the country's capital resources. In

the absence of atomic power, the Electricity Authorities' requirements for new generating capacity would have called for an investment in new coal- and oil-fired stations over the next ten years to the tune of £1,200 million. The advent of nuclear power will permit a significant reduction on this figure, which can be set off against the investment in nuclear power. Also, the U.K.'s investment programme for coal production from the middle of the next decade may be smaller. But above all, nuclear power promises, in the long run, both cheaper and ampler supplies of electricity, and this prospect is clearly a primary reason of the urgency with which Britain is striving to take the earliest possible advantage of the challenging potentialities of atomic energy for her industrial economy.

Fuel Costs

It is expected that the atomic reactors will extract from a ton of nuclear fuel the heat equivalent of about 10,000 tons of coal. As the commercial atomic stations will be run as base-load stations at a high load factor—possibly 80 percent—they will by 1965 be producing electricity at a rate

equalling that obtained from conventional base-load stations for a consumption of 5-6 million tons of coal a year. The cost of the initial charge of fabricated uranium for the early types of reactors may be as high as £5 million per station, and a new charge will be needed every 3-5 years. But appreciable reductions in fuel costs are foreseen later on, when new factories for the processing of uranium come into operation. On discharge from the reactor, the nuclear fuel residue still represents a high value owing to its content of plutonium which, as mentioned before, can be extracted and concentrated for subsequent use as secondary fuel. As this concentrated fissile material will become available in growing quantities, there will be increasing scope for developing more efficient reactors running on more and more enriched fuels.

Eventually, concentrated material in the form of either uranium 235 (the fissile component of natural uranium) or plutonium will be required for "fast breeder" reactors. These types of reactors are at once the most fascinating and desirable generators of nuclear energy, since in the process of generating heat energy for power plant, they not only produce fresh fuel, but even produce more fuel than they consume. The design work for building a full-scale experimental model of such a "fast breeder" station in the North of Scotland is already in hand. But a prototype of a commercial breeder station will probably not emerge before 1965, and production types are not expected to be in operation until the 1970s. During the last quarter of this century, however, a point may be reached when more plutonium will be produced than is needed for use in new power stations. The resultant fall in its market price may then make it attractive to substitute plutonium for natural uranium as reactor fuel.

The net cost of electricity, thus, depends largely upon the economic value of plutonium. A high value in the early stages of the programme means a lower net running cost for the early reactors which produce it. By the same token, this means a correspondingly heavier capital charge for fuel for the later stations which use it. These later stations will, however, have a higher thermal efficiency. The cost calculations for the 10-year plan include an allowance for the value of plutonium for civilian uses of the order of many thousands of pounds sterling per kilogram, but they exclude any credit for atomic materials which may be supplied to the military authorities. On these assumptions, the cost of electricity from the first commercial nuclear stations in the U.K. is put at about 0.6d. per kWh. This is an appreciably lower figure than was foreshadowed by previously announced estimates from authoritative quarters. It equals the present cost of electricity generation in Britain's most modern coal-fired stations, and is nearly 18 percent below the current average of about 0.7d. per kWh sent out. And the latter will hardly fall in the foreseeable future, since rising coal prices will probably continue to offset any gains from further improvements in the fuel economy of conventional power stations.

Nuclear Fuel Supplies

Nuclear power offers the prospect of becoming a time goes on. As already mentioned, in the first commercial stations the heat extracted from a ton of atomic fuel will be equivalent to that obtained from 10,000 tons of coal. However, the theoretical heat content of a ton of wholly fissile material, e.g., uranium 235, equals that of well over 2 million tons of coal. Nothing like that can ever be realised in practice, but the atomic reactors of the 1970s and 1980s will certainly be capable of utilising an appreciably higher proportion of the thermal energy content of their fuels than those of present-day design. And these improvements in fuel economy are bound to be reflected in reductions in the operating costs of nuclear stations, and hence in the ultimate unit cost of electricity.

These advances will have an equally far-reaching bearing on the future supply-demand situation, and consequently on price developments, in the field of nuclear fuels. By the end of the next decade, the first atomic stations will already produce plutonium for use in later reactors. But the present U.K. programme and its subsequent expansion will also call for increased supplies of uranium. In other countries the demand for nuclear fuels is certain to rise too. Recent evidence suggests that uranium is more plentiful than was once thought. Considerable workable deposits of medium-grade ore are known, and the widespread existence of low-grade ores implies that adequate quantities can be produced if necessary. Meanwhile, the growth in demand for uranium should be mitigated by increasing economy in its use, as well as by the possible development of the earth's substantial deposits of thorium, which may be used as a substitute for uranium. There appears to be no foreseeable danger of any shortage in supplies of nuclear fuels.

However, all the raw materials for making the fuels for Britain's atomic power stations will have to be imported, since the country possesses no known uranium or thorium deposits of any significance. But a large part of the U.K.'s future additional coal requirements for electricity generation would probably also have to be imported. And since the fuel element accounts for well over 50 percent of the total cost of electricity production in the case of coal-fired stations, whereas in nuclear stations its share is of a very much smaller order, the incentive from the balance of payments aspect to supplementing the U.K.'s power supplies from atomic sources becomes all the stronger.

Stocks and Shares

SHARES QUIETLY STEADY BUT LESS BUSINESS DONE

FEW BUYERS AND MANY SELLERS IN TEA: GILT-EDGED FIRMER

THE share market is dull but rates are steady except in tea shares, where there has been a sharp reversal of the long bull market. Sellers predominate in teas and buyers are hard to find. If, as market observers believe, forthcoming good dividends have already been discounted, further falls in this section may be expected.

Elsewhere the undertone is steady. The gambling counters are comparatively neglected and even reliable reports of an increase in Tata's retention price could not stop the decline in steel shares. Indian Irons are quoted this evening at Rs. 34.

Easier money has provided support for gilt-edged, and the list is generally better than last week.

Details of the week's trading follow.

The recovery in the gilt-edged market reported last week gained further momentum under the influence of very easy money conditions which led to sustained buying. Prices were marked up on a broad front as will be seen from the following table:—

		Opening	Closing
		21.4.55.	27.4.55.
		Rs.	Rs.
3 % Conversion	1986	80 12	80 13
2 1/2 % Loan	1955	99 10	99 11
2 1/2 % "	1961	91 14	91 15
2 1/2 % "	1962	92 9	92 11
3 % "	1957	99 4	99 5
3 % "	1958	99 3	99 4
3 % "	1959/61	97 6	97 7
3 % "	1963/65	93 10	93 11
3 % "	1964	93 9	93 10
3 % "	1966/68	90 8	90 9
3 % "	1970/75	86 14	86 15
3 1/2 % "	1961	99 9	99 10

The improvement in Central Government loans was reflected in provincials, particularly 4 % State Loans standing at a discount. Four percent Saurashtra 1964 was in demand at Rs. 99-14 while 4 % Hyderabad 1963 moved up to Rs. 99-15; 4 % Mysore Loan 1963 was enquired for at par and 4 % Bihar was wanted at Rs. 99-13; 4 % U.P. 1963 and 1964 were in demand at around Rs. 100-3 but no business was reported owing to the absence of sellers. There was a fair enquiry for 3 % short-dated issues.

Demand for first-class preference shares continued and any offers which came on the market were readily taken up. Among jute shares, India were taken at Rs. 118-8. Birla at Rs. 105 and Dalhousie at around Rs. 116. Empire were marked at Rs. 116-8 and Hoghly at around Rs. 15-6. Kinnison were done at Rs. 118-8. Among miscellaneous industrials, Bengal Assam Steamship were crossed at Rs. 81. Burrakur were taken at Rs. 123 and several deals were reported in Calcutta Electric at Rs. 12-6. Humayan Properties were marked at Rs. 11 x.d. Indo-Burma Petroleum were crossed at Rs. 101-12 and Indian Cables were taken at Rs. 24-8. Indian Iron & Steel were done at Rs. 107-8 x.d. Jardine Henderson at Rs. 78 and Orient Paper 2nd at Rs. 73-12. Rohtas 1st were crossed at Rs. 130-8 and the 'B' at Rs. 69.

In the banking section Imperial Bank Fully-Paid and Contributory were quoted at around Rs. 1662-8 and Rs. 402-8 respectively. Hindustan Commercial changed hands at Rs. 9-14. United Commercial at Rs. 44-14 and United Bank of India 'D' shares at Rs. 4-8.

In the railway section, transactions were noted in Arrah-Sasaram at Rs. 74 and Dehri-Rohtas at Rs. 19-8. Howrah-Amta were crossed at Rs. 74.

Little interest was shown in cotton shares with the exception of Elgins which continued to find ready buyers at Rs. 17-12. Basanti were done at Rs. 4-12. Cawnpore Textiles were crossed at Rs. 9-1. Dunbar were marked at Rs. 202 and Kesoram at Rs. 26-6. New Victoria changed hands freely at Rs. 1-7.

With the exception of Burrakur which were fairly steady at around Rs. 13-6, coal shares were rather dull. Bengal receded to Rs. 503. Central India were done at Rs. 7-4. East Indian at Rs. 29-6. Katras Jheriah at Rs. 48-14 and Western Bengal at Rs. 7-5. Shares which met with nibbling enquiry included Bhalgora at Rs. 7-15. Equitable at Rs. 31-12. Pench Valley at Rs. 23-3. Ranegunge at Rs. 11-10. South Karanpura at Rs. 11-4 and Talcher at Rs. 3-14.

Business in jute shares was on a very restricted scale and price fluctuations were narrow. Howrah were quoted throughout the week at around Rs. 29-4 but today there was a sudden enquiry for the shares and the price rose to Rs. 29-15. Here is a chart illustrating price movements of a few selected shares:—

	Closing	Opening
Anglo-India	21.4.55.	27.4.55.
Birla	224	219
	18 12	19 4

Ganges	106	106
India	192	194
National	34 8	34 4
Nuddea	55 8	56
Empire	25	25 12

Although prices were steady, business in electric shares was on a small scale. Benares were marked at Rs. 19-8. Calcutta Electric at Rs. 15-8 and Sijua Jheriah were taken at Rs. 12-10.

The feature in the sugar section was Champaran which improved from Rs. 29-6 to Rs. 30-8. Carew after being done up to Rs. 15-8 slumped to Rs. 12 on profit-taking but recovered at the close to Rs. 12-10. Cawnpore were marked at Rs. 19-5. Durbhanga at Rs. 16-6 and U.P. at Rs. 35-14. Dyer Meakin Breweries were better at Rs. 7 and Ramnugger Cane recovered smartly from Rs. 23-7 to Rs. 25 to close at Rs. 24-8.

The outstanding features in the engineering section were Jessop & Company and Richardson & Cruddas, the former improving from Rs. 35-9 to Rs. 36 and the latter from Rs. 17-7 to Rs. 18-2. Indian Galvanizing were steady at Rs. 23-2 while Indian Steel & Wire Fully-Paid Ordinary were marked down to Rs. 80-12. Kumardhubi Engineering were quoted at Rs. 11-9 and Marshalls at Rs. 6-14. Indian Iron & Steel shares fluctuated narrowly between Rs. 33-14 and Rs. 34-4 to close at Rs. 34.

Among miscellaneous issues, Bengal Paper were easier at Rs. 64-12 but India Paper Paper were better at Rs. 259. Orient Paper were steady throughout at around Rs. 27-6. Shree Gopal were steady at Rs. 17 and Titaghar at Rs. 44. Assam Bengal Cement were taken at Rs. 6-13 while Sone Valley were unchanged at Rs. 7-10. Con-

An entry in the meter-man's book—to appear later as your electricity bill. And an item of expenditure however small should be economically justified at this point, when you're working out costs, that we tell you about the economics of Philips Fluorescent Lighting. As a factor in raising output and maintaining a high level of production the value of adequate and correct lighting is now increasingly appreciated. Philips Fluorescent

Lamps and Fittings give an ample supply of even, diffused, glare-free light. Add to these advantages the factor of economy in running charges: Philips Fluorescent Lamps give over three times more light, for the same amount of electricity, and last many times longer than incandescent lamps. All in all, with Philips Planned Fluorescent Lighting you get the most efficient lighting with the greatest economy.

PLANNED LIGHTING

GENERAL BANKING BUSINESS TRANSACTED
D. R. THOM, General Manager.

improved from Rs. 40-4 to Rs. 43-8 to close easier at Rs. 41. Rohtas Industries were a feature rising from Rs. 24-4 to Rs. 25-6 c.d. Shaw Wallace changed hands freely around Rs. 14-10.

In the mining section Orissa Minerals were unchanged at Rs. 25 as were Indian Copper at Rs. 3-8 and Non-Ferrous Metals at Rs. 1-1. Burma Mines were lower at Rs. 1-10.

Once again tea shares have been an extremely dull market and in the absence of any buying enquiry prices have tended towards lower levels. Among Assam shares, Baghmari were on offer at Rs. 30-8 as were Bormah Jan at Rs. 22-12, Dhela-khat at Rs. 21-6 and East India at Rs. 30-12. Dessai and Parbutia dropped sharply to Rs. 445 whilst Jutibari were marked down to Rs. 27. Moheema to Rs. 22 and Namburnadi to Rs. 25-4. Murphulani ordinary were fractionally better at Rs. 40-6 and there were small buyers of Ledo at Rs. 32-12. Of the Doocars shares Birpara had sellers at Rs. 265 and Carron were slightly easier at Rs. 305 as were Gaikhat at Rs. 365 and Nagai-suree at Rs. 370. A small lot of Hantapara changed hands at Rs. 370 and Huldibari were freely offered at Rs. 50 with Ranicherra coming back to Rs. 26-4. Amongst the remaining shares Pashok dropped to Rs. 20-14. Eastern Cachar to Rs. 12-10 and Sonai River were easier at Rs. 25-8 as were Hansqua at Rs. 31-4 and Jay Shree at Rs. 12-8.

The profit of the ORIENT PAPER MILLS, LTD. declined by Rs. 11.03 lakhs to Rs. 43.02 lakhs for the half-year ended last September. Allowing Rs. 18 lakhs for taxation and Rs. 6 lakhs for depreciation and making other adjustments the available balance amounted to Rs. 27,58,395. Repairs and renewals are allocated Rs. 16 lakhs. The ordinary dividend is 5 percent against 4½ percent, leaving a carry-forward of Rs. 2,47,582.

The company has placed orders for two new paper machines to manufacture paper of lighter substances and for auxiliary pulp and paper equipment. A new boiler and turbine have also been ordered. The directors think that the installation of these new machinery will result in increasing the productive capacity of the mills by about fifty per cent. Order has also been placed for an electrolytic bleach plant capable of manufacturing eight tons of chlorine and nine tons of caustic soda per day. The expansion and modernisation programme of the company is reported to be proceeding satisfactorily.

The ASSAM MATCH CO., LTD., earned a profit of Rs. 7.10 lakhs for the year ended December, 1954, compared with Rs. 11.15 lakhs in the previous year. Providing Rs. 83,666 (Rs. 2.47 lakhs) for depreciation and Rs. 3.02 lakhs (Rs. 5 lakhs) for reserve for taxation, there is Rs. 4,07,965. Adding Rs. 1,34,528 brought in there is a balance of Rs. 5,42,493. The distribution is the same at 12½ percent, including a bonus of 5 percent. General reserve gets Rs. 50,000 (Rs. 1.66 lakhs), leaving a carry-forward of Rs. 1,17,493.

There is a loss of Rs. 52,592 of the MANBHOM COAL COMPANY for the half-year ended last September. Bringing in Rs. 4,643, transferring Rs. 40,000 from general reserve and making other adjustments there is a balance of Rs. 2,485 which is carried forward. There is again no dividend. Raisings totalled 62,220 tons (62,554 tons) and despatches 61,393 tons (65,134 tons).

The GONDALPURA JUTE MILL incurred a loss of Rs. 76,869 for the year ended last December, compared with a profit of Rs. 1.18 lakhs in the previous year. Bringing in Rs. 4,743, taking credit of Rs. 69,535 on account of E.P.T. refund and making other adjustments there is a debit balance of Rs. 74,093, which is carried forward. There is no distribution (5 percent).

The profit of the BELSUND SUGAR COMPANY is Rs. 4.75 lakhs lower at Rs. 1,38,925 for the year ended last September. Taxation reserve gets Rs. 10,255 (Rs. 2.90 lakhs). Bringing in Rs. 1,66,138 there is a balance of Rs. 2,94,006. The dividend is the same at 12 annas per share. Reserve receives Rs. 50,000 (Rs. 2 lakhs), leaving Rs. 49,905 to be carried forward.

The cane crushed declined from 2,833,894 maunds to 1,306,997 maunds. The crush during the current year is expected to be much higher than in the previous season.

The accounts of AIR-INDIA INTERNATIONAL CORPORATION for the operating period from 1st August, 1953 to 31st March, 1954, show a profit of Rs. 18.30 lakhs after providing for depreciation. Allowing Rs. 5.25 lakhs for taxation and Rs. 6 lakhs for interest on bonds to be issued to Air-India International, Ltd. there is a balance of Rs. 7.05 lakhs. Insurance fund absorbs Rs. 2.10 lakhs, reserve fund Rs. 4½ lakhs and writing off goodwill Rs. 10,000, leaving a carry-forward of Rs. 35,000.

New Delhi

OUTLINE FOR THE SECOND FIVE YEAR PLAN

MORE TAXATION RECOMMENDED: NO EXPANSION OF FACTORY CONSUMPTION-GOODS INDUSTRIES EXPECTED

(FROM OUR NEW DELHI CORRESPONDENT.)

THE panel of economists, which held its second meeting early this month, has submitted a memorandum to the Planning Commission. The memorandum is divided under three main heads, namely, the size of the second five year plan, the structure and contents of the plan and its policy and institutional implications.

The following are the suggested allocations in crores of rupees of net investments in the economy:

Agriculture	950
Power	500
Transport and Communications	900
Industries and Mining	1,400
Construction	1,350
Stocks and Miscellaneous	500
	5,600

To finance this plan, the panel has stipulated that i) deficit financing should not exceed Rs. 1,000 crores for five years and ii) foreign reserves should be kept for unforeseen emergencies, or as a safeguard against the miscarriage of calculations; they should not be committed to any significant extent in respect of planned expenditure. The panel estimates an expenditure of Rs. 600 crores on imports of capital equipment and machinery. The alternative is self-evident. The panel holds that considerable fresh taxation would be necessary even for ensuring that "tax revenue maintains its present share of about 7 percent of national income. Given the order of the proposed plan, we think something like 9 percent of national income will have to be directed into national fisc in the form of total taxation, if deficit financing is to be kept within safe limits." The panel, therefore, has recommended the need for the full and speedy implementation of the recommendations of the Taxation Commission.

The panel has urged that special attention be paid to the planning of work programmes for backward areas where communications are poor, where climatic or other conditions are unfavourable, where the economy is largely unmonetised, agriculture is insecure, the standard of living is low or which are inhabited by aborigines or other similar classes. The panel says:—

"The other important problem is one of organising the supply of labour for whom jobs are to be found in the second plan period. Theoretically, the existence of a large volume of unemployment and the substantial additions that are made to the labour force every year by the growth of population should perhaps make such organisation unnecessary. In actual fact, however, labour in India has a great deal of lack of mobility as between rural and urban areas, and as between different regions. It also suffers a great deal from lack of training either in skills or even in disciplined or regular hours of work. There is also the further fact, so glaringly revealed by the findings of the Agricultural Labour Enquiry and the National Sample Survey rounds, that large sections of the working force in rural areas obtain either wages or incomes much below the national average; and social justice demands that this class, which in a way is the most exploited class in the country, is given the first chance to improve its condition when new jobs are being created in the country. Moreover, the incidence of distribution of this class is unevenly spread over different parts of the country and social justice demands that special attention is directed to what may be called the distressed areas in the country as distinguished from other areas which are better off, though in absolute terms their condition is no matter for satisfaction either. In view of these facts, a suggestion has been made for the organisation of a National Labour Force, recruited from the classes which at present have either little or no income and particularly from those areas where the incidence of economic distress is comparatively high.

"This proposal might be likened in its effect to that of the continuous recruitment in the army during war. If it is possible to make use of such a labour corps in particular aspects of the general programme of development a number of advantages may arise. Firstly, it will withdraw significant numbers from labour in the countryside and thus relieve the unemployment and underemployment situation in many parts. Secondly, it will create a mobile force which can, as in the army, be fully trained in a variety of skills required for purposes of the development plan. This training may have an important civic aspect also. The labour force may form a revolving body from which suitable recruits can be obtained for new and growing scattered townships and centres of industrial and other activity. We suggest a careful examination of the proposal to organise a National Labour Force.

"It is also important to provide a positive policy for the stimulation of additional employment opportunities for self-employed persons, particularly in view of the fact that the major portion of the additional employment visualised in the plan is in this field. In this connection, we would recom-

mend the development of a large number of small towns widely distributed over different parts of the country into industrial townships with planned provision for small-scale and light industries. Unlike the townships for refugees that had been set up without due care for their employment potential, the towns proposed for development should be selected after the most careful inquiry undertaken by competent persons in each region or locality and after most careful examination of the raw materials, markets, and other relevant factors in the region.

"Finally, there is the question of the relation between small-scale and large-scale industries in the field of consumption goods. As we have already pointed out, every attempt should be made to bring about the fullest possible utilisation of existing capacity in the factory consumption goods industries; but we do not contemplate, for the second plan period at any rate, any significant increase in their installed capacity. This is not only because we want to concentrate our scarce resources of foreign exchange and essential materials on the setting up and expansion of the heavy industries and economic overheads; but also because we want to provide more employment opportunities for those who are already engaged in the small-scale and cottage industries and find employment for the new additions that are being made to the labour force every year. Hence the emphasis on small-scale and cottage industries in the second plan.

"The fact remains however that these hand industries are technically inferior and cannot obviously face unaided the competition of factory industries. At the same time, the needs of development with its accent on increased productivity cannot be reconciled with a continuance of the present inferior technical level of the existing hand trades. It is therefore necessary to have a common production programme that will provide a secure market for the products of these industries and at the same time provide for gradual improvement of techniques and skills among their workers. Details of such a programme will need careful working out, but it can be stated at this stage that there will have to be organisation on a regional and a national scale co-operative and other forms of organisation for the supply of raw materials and finance and for the marketing of finished products of the workers engaged in hand industries. A beginning will also have to be made in setting up a special sales organisation for these industries.

"To sum up, the structure of the plan that is visualised for the second plan period provides for increased capital formation and also for increased consumption. It emphasises the importance of economic overheads and heavy industries in creating the base for larger and faster economic development in subsequent years. It underlines the need for looking after employment and sets out a pattern of decentralised and small-scale economic activity that will not only deal with the problem of unemployment and of growing numbers, but also with that of creating a socialistic pattern of society that can function within a democratic set-up and reconcile development and increased productivity with individual initiative and a large and fair field for all small units of economic activity. The structure that we have outlined cannot come by itself. It needs organisation for being brought into existence, and in it lies a challenge to the organisational talent of our people."

Policy Implications

Explaining the policy implications, the panel says:—

"We assume as basic the social philosophy appropriate to Indian federal democracy progressing towards a socialistic pattern of society. In terms of economic organisation and activity we interpret this as denoting the following salient characteristics. A society composed chiefly of small, decentralised units of economic activity in which the increase in scale required in any activity is brought about chiefly through mutual co-operation, horizontal and vertical, and in which centralisation and very large-scale operations are resorted to only to the extent necessary to derive appropriate advantage from modern technology. In such a society the rôle of the State assumes the following forms, in the main. i) Central planning, direction and conduct of economic development and increase of welfare; ii) State assistance and participation in the formation and conduct of co-operative units; and iii) State action to eliminate or to counter the effects of the continuance of privilege or the exercise of monopoly.

"In considering the exercise of state authority we start with the assumption of a continuance of the existing forms of regulation and control of economic activity. In the context of this report, the most important form of these are capital issue control, the regulation of establishment, location and operation of certain types of industrial units, control over the imports of capital goods and consumer goods, control over the allocation of products like cement and steel, control over the exports of selected commodities. The only recom-

mendation we would make in relation to existing regulations is that the fullest co-ordinated use be made of them for a proper and detailed implementation of the plan. It is also assumed that legislation will shortly be enacted which will more adequately regulate the activities of public companies, and in particular to deal with the problem of managing agents and the concentration of economic power that it creates in the private sector.

"We do not suggest any radical departure from the Industrial Policy Declaration of 1948. In fact, the sphere of state activity indicated in that resolution will be more fully covered as a result of investment in this plan. It may also be found necessary, during the plan period, to include within the public sector some activities closely related to the present declared scope, such as, basic minerals. The proper organisation of coal production in the country and conservation and utilisation of coal resources may also require including that industry in the public sector. Similarly, the special importance that will now be attached to production of small establishments will make it necessary to include not only the generation but also the distribution of electric power fully within the public sector. While we do not recommend any significant extension of the public sector beyond the terms of policy accepted by Government, we must make it clear that there is no objection in principle to such extension. In fact, the limiting factor is one of being able to cope with the administrative burden that would result from such extension. The cost of compensation may also have to be considered. If, however, during the course of the plan period, circumstances become either more favourable from the administrative point of view, or if it is found that opportunities for monopolistic or quasi-monopolistic exploitation are increasing in the private sector, there should be no objection to a further extension of the public sector. State trading in exports of jute, for example, was recommended many years ago by a representative committee consisting of administrators, businessmen etc. In view of the peculiar position of these exports and the methods of trading in them, it is worth examining again whether state trading in jute should not be undertaken.

"We are not in a position to make specific recommendations at this stage, but we would certainly emphasise the need for Government to examine each possibility of extension of the public sector in any important activity where, because of the policy under the plan or other factors, a group of producers or traders is reaping special advantages.

"While we do not suggest in the near future any general extension of the public sector, it would, certainly, be necessary for implementing the plan to extend the scope of the regulatory regime in particular directions. Thus confining to hand industries all increases in consumption goods during the second plan period will make it necessary to extend the operation of licensing legislation to include even processing activities. The best way of dealing with the situation would be for all State Governments to deal with licensing and regulatory legislation such establishments carrying out the processing and preparation of primary products and the production of consumer goods as are not covered by the existing Regulation of Industries Act."

"A number of other regulations on consumption goods industries will follow from the common production plan for machine and hand industries in particular spheres. The division of markets between machine and hand industry is sought to be maintained today in the case of cloth production by a system of excises and subsidies on the one hand and reservation of fields on the other. The principle of reservation may not be so easily applicable to all industries and in their case a comparatively stable relation between prices of hand and machine products could be maintained only through excises and subsidies. There may be doubts whether these purely fiscal measures will prove successful; and if these doubts were justified, other measures may be required to implement effectively a common production programme. In any case, the organisation of increased production through hand industry will require considerable financial assistance to the dispersed producers and the collection and sale of their product. This would be largely done through co-operatives and as problems encountered will in part be similar to those dealt with by the Rural Credit Survey Committee in the case of agricultural production, the same expedients could be used in this case as well. In relation to technical guidance, and purchase and sale, the problems of cottage industry may, however, be different and more difficult. Bringing about increased production through this agency will therefore require as we have already mentioned, very considerable organisational effort in the plan period. Such failure may create a difficult situation. On the one hand, there may be shortage of production by hand industry through inability of co-operatives to organise production or to carry out sales of products and their distribution. And, on the other, there may be profiteering by producers and traders in that situation. If such a situation arises, it may be necessary for the State to intervene and to consider the possibility of State trading of products. In the initial stages of the organisation of this production it may, however, be wiser not to undertake State trading in this sphere.

"As the spheres common to machine and hand industry will cover a large number of consumption goods in general use, the prices and supplies of goods over this large sphere will have to be constantly under State observation and regulation. In a number of important producers' goods, such as cement and steel, the existing allocation controls will continue and price controls could be imposed if this is found necessary. This leaves mainly the

prices of agricultural goods for consideration. In the present context, the stability of agricultural prices has special importance. Already Government have announced their intention and readiness to put a floor to prices of some agricultural products. Government's ability to do this effectively depends on their having an operative system which extends to all parts of the country. From this point of view, an early implementation of the recommendations of the Rural Credit Survey Committee regarding warehousing, processing and marketing of agricultural produce is of the utmost importance. It is only the setting up of the warehouses etc., recommended by the Committee that will put the State in a position to meet emergencies. We recommend that the warehousing system be used by the State for purchase and sales of buffer stocks of agricultural commodities not only for the purpose of dealing with any sharp falls in agricultural prices such as we are witnessing today but also with the objective of preventing any sharp seasonal fall or rise in prices. Need for action in this regard may arise either in all commodities all over the country or only in an individual important commodity in particular regions. Such a system of buffer stocks will not only serve the limited purpose of evening out seasonal fluctuations but would come in useful and serve even larger purposes if the occasion arises. For example, the system could be put to use in case of an adverse monsoon for a sharp inflationary rise in prices."

The Metric System

The Constitution Amendment Bill was passed by the Rajya Sabha during the week. It now awaits the President's assent to become the law of the land. The Lok Sabha adopted the Finance Bill as amended by the Finance Minister himself. It also adopted a non-official resolution accepting the principle of uniform weights and measures in India based on the metric system. The Commerce Minister, Mr. T. T. Krishnamachari, accepting the resolution, said that the Union Government had decided to adopt the decimal system for coinage and the metric system for weights and measures. The Finance Minister, he indicated, would shortly introduce a Bill for the adoption of the former which would precede the introduction of the latter. A Committee with the Deputy Minister, Mr. Kanungo, as Chairman, has already been appointed to draft the necessary legislation and to prepare a phased programme for the adoption of the metric system. "I hope" the Commerce Minister added, "that the phased programme will be for a reasonably short period and not 25 years as suggested by some". He proposed to write to the State Government, the provinces and he had no doubt that their full co-operation would be forthcoming.

The Minister for Revenue and Defence expenditure, Mr. A. C. Guha, intervening in the debate on another non-official resolution, opposed the proposal for a State Agricultural Finance Corporation. The Planning Commission's target at the end of the first five year plan was, as said, Rs. 120 crores. "If that target was not reached, it was not due to the paucity of funds or the unwillingness of the Government to provide funds, but largely because of the paucity of suitable machinery for the distribution of money to the cultivator". The amendment of the Reserve Bank of India Act and the creation of the State Bank by nationalisation of the Imperial Bank were measures designed to provide rural credit. "I can assure the House that there will be no dearth of money for agriculturalists after these two Bills now before Parliament have been enacted into law." He also referred to the Agriculture Ministry's plans for a National Co-operative Board and a Warehousing Corporation, both of which were intended to facilitate rural credit. The Resolution is under discussion.

Schemes for Sugar

The Development Council for the sugar industry will meet here on 28th April, to discuss the proposal for setting up sugar refineries in India. The other subjects to be discussed by the meeting relate to the visit of a Government-sponsored delegation to study the development of the sugar industry in important cane-growing countries of the world. The Council will also discuss the reports of the Committees appointed earlier. i) to prepare a plan for shifting unsuitably located factories ii) to devise a system of making payment for sugarcane on the basis of its quality iii) to prepare a blueprint on subsidiary industries for the utilisation of the by-products of the sugar industry. Meanwhile the industry itself, has launched its mid-year campaign protesting against the imports of sugar, the rise in the excise duty and the proposal to instal refineries, alleging that offtake of sugar has gone down due to the fall in the price of gur. The following figures should be read with some interest:—

	Production	Consumption	Imports	Opening stock
		(Estimates)		
1950-51	11.16	10.80	.55	.88
1951-52	14.97	11.6	...	1.80
1952-53	12.97	16.6	.59	5.09
1953-54	10.01	18.3	6.9	1.96
1954-55	14.00	...	7.0	0.57

It can be seen that 21.57 lakh tons should be available during the period November, 1954 to October, 1955. On the basis of last year's consumption, the carryover in November 1955 should be three lakh tons.

It may be added that, but for the policy of the late Mr. Rafi Ahmed Kidwai, under which sugar was imported in time, there might have been a repetition of the man-made sugar famine at the time of the Hindu festivals of Durga Puja and

Deepawali. With repeated sugar crises, the Government could not and should not take risks but should build up a safe sugar reserve to defeat the manipulations in sugar trade, it is urged here.

Indian Airlines Working

The working of the Indian Airlines Corporation for the current year, according to latest estimates, is likely to disclose a deficit of Rs. 2 crores. It is generally not realised that the Corporation has inherited a group of financially unhealthy undertakings. Except for a few companies, all other units before nationalisation were running at a loss, notwithstanding the substantial subsidies on petrol, which totalled as much as Rs. 52 lakhs a year. Here are the figures of subsidy, and losses excluding subsidy, of the air companies before merger, and of the Indian Airlines Corporation after nationalisation.

	Subsidy	Loss excluding subsidy
	Rs.	Rs.
1949	33,91,000	80,34,000
1950	52,50,000	79,04,000
1951	51,66,000	54,51,000
1952	35,00,000	47,07,000

1st August 1953 to 31st March 1954 Nil 80,42,000

1st April 1954 to 31st March 1955 Nil 115,59,000

The budget estimates for 1955-56 compared with 1954-55 are given below.

	1955-56	1954-55
	(in lakhs of rupees)	(in lakhs of rupees)
Revenue	782.62	680.60
Expenditure	887.12	736.26
Operating deficit	124.50	55.66
Depreciation	50.34	44.00
Interest	20.00	15.93
Total deficit	194.84	115.59

It will be seen that the anticipated deficit in 1955-56 is Rs. 79.25 lakhs more than the deficit for 1954-55. This is mainly made up of the following items:—

	Rs.
(a) Implementation of the Services Committee Report.	35.00 lakhs
(b) Normal annual increments and additions to staff namely, pilots, engineering personnel, substitution of air hostesses for stewards and instituting internal audit staff.	11.00

(c) Interest on pounds and borrowings	4.00
(d) Depreciation	6.30
(e) Loss on account of the operation of "Heron's"	15.00
(f) Training	6.00
(g) Insurance	2.40
	79.70

The aggregate loss for 1952, however should have been Rs. 75 lakhs. The difference of Rs. 27.8 lakhs could be explained as under:—

Inadequate provision of depreciation as judged from the normal provisions made by these companies in previous years.....

	Rs.	Rs.
Airways (India)	1,00,000	
Air-India	15,00,000	
Air Services of India	1,00,000	
Bharat Airways	9,00,000	26,00,000
Adjustments made in "Maintenance Costs" by crediting stores and spares once charged.....	1,00,000	
Airways (India)	50,000	
Indian National Airways	25,000	
Air Services of India	2,00,000	3,75,000
Bharat Airways		

Adjustments of other differing types, observed in 1952 accounts.

a) Profit made by Bharat Airways on a subsidiary business of trading in cloth, gunnies, etc.	2,90,000
b) Previous unclaimed balance of passengers, treated as 1952 revenue by Bharat Airways and Airways (India), after adjusting previous irrecoverable debts.	50,000
c) Salaries capitalised and allocation from revenue to capital heads for various jobs performed (abnormal feature arising out of compensation).	2,00,000
d) Excess Income-tax provision of previous years taken back into revenue by Air India	1,20,000

G.E.C. OFFICE LIGHTING FOR EFFICIENCY

An Example of G.E.C. Planned Office Lighting

Irritating shadows are non-existent when the light is provided by Osram lamps in G.E.C. fittings. Over-all efficiency can only be achieved by complete freedom from visual and mental strain.

Consult the G.E.C. on all your office lighting problems

THE GENERAL ELECTRIC CO. OF INDIA LTD.
Representing THE GENERAL ELECTRIC CO. LTD. OF ENGLAND

e) Liabilities once provided but now written back to profits by I. N. A.	1,25,000
f) Exchange difference between Pakistan and Indian currency, pertaining to previous years but given effect to in 1952 by I. N. A.	1,00,000
g) Credits of previous years given effect to in 1952 accounts by Air Services of India.	46,000
h) Undercharge of engine overhauls of Air Services of India in 1952.	1,00,000
i) Non-operating profit of an abnormal type earned by Deccans due to realisation of insurance covers on two crashed aircraft	2,00,000

Cost Factors

The following factors added to the financial burden of the nationalised undertaking—i) The standards of servicing and maintenance of aircraft were unsatisfactory in some companies and in certain cases overhauls were not carried out on due dates, planes were not painted or renovated, and upholstery was not renewed. ii) The standards of cabin services, food etc., also varied and were unsatisfactory and inadequate in some companies. Arrangements were, therefore, made to remodel the galleys with a view to providing hot meals for passengers. iii) Various kinds of tools and equipment, furniture etc., were not replaced in time and were used to an extent which involved either replacement or very heavy repairs, particularly the condition of surface transport in some companies was deplorable. iv) Injudicious investments and unbusiness like and uneconomic agreements and contracts. v) Very high emoluments in certain cases and grants of abnormal increases in pay by some companies on the eve of nationalisation. vi) Some companies did not meet their legitimate liabilities, namely the grant of annual increments as they fell due. In some cases wages were so low that the Corporation had to raise immediately the minimum emoluments of certain categories of staff at some stations in anticipation of the report of the Services Committee. vii) Large sums were shown as liability on account of depreciation in the Balance Sheet, but there was no corresponding depreciation fund on the side of assets. The rates of depreciation were also different in different companies and inadequate in some cases. viii) Aircraft not insured by the Indian National Airways Limited. ix) The system of training pilots etc. was different in different lines, in some cases it hardly existed at all. Steps had, therefore, to be taken to provide standardised training at the three bases. x) The setting up of an headquarters organisation. xix) Interest on loans from the Government of India not only for meeting capital expenditure but also deficits and interests on compensation bonds. xii) Appointment of certain Committees namely, Services, Technical and Finance with a view to advising on the various aspects of a nationalised Corporation. xiii) Expansion of workshops in Delhi to meet the workload from Bombay consequent on the transfer of workshops to Air India International.

Inherited Liabilities

The Corporation could not escape these liabilities, some of which were directly the result of the manner in which the former airline companies conducted their business, while others are the inevitable corollary to nationalisation. It is obvious that a nationalised undertaking in a Welfare State cannot be run on the "profit motive" but only on principles of social justice and public service. For instance, the Corporation operates on certain air routes which are not economically paying, but it cannot stop these services because, in pursuance of national policy, it is regarded desirable that as many towns in various states should be connected by air as possible. The Corporation had to continue employing some highly-paid staff which, strictly from the business point of view, was not necessary. It had to recruit all the technical staff discharged by Aeronautical Services of India. Private airlines could withhold annual increments on grounds of financial stringency, but the Corporation is not in a position to do so. On the other hand, reduction of staff on grounds of rationalisation, as visualised by the Air Transport Inquiry Committee, is hardly possible in view of the tentative assurance given in Parliament that retrenchment will be avoided as far as possible. It cannot be over-emphasised that this fundamental difference between the concept of "public" and "private" sectors should not be ignored when comparing the financial results of the two. The methods of carrying on private business are very different from those of a public Corporation. For example, the Directors of some airline companies had financial interests in other companies also, and profit and loss transactions were sometimes transferred from an airline company to its associate organisations and vice versa, when considered expedient. In other words, in the case of certain airline companies, it is not possible to assess the financial results of their purely flying operations. Moreover, some of the companies exploited their labour to the full and paid low wages to their workers. This is not possible in a nationalised institution. In fact the revised scales of pay and allowances and the liberalisation of service conditions would increase the wage bill by about Rs. 40 lakhs a year, with a further recurring liability on normal yearly increments,

When the airline companies started their operations they raised funds by the issue of shares on which they did not have to pay any interest although subsequent borrowings from banks did involve payment. If the companies suffered losses the value of shares went down, namely, the capital was reduced by the amount of losses incurred.

Revenue Losses

While there had to be an increase in expenditure on the one hand, there has been a fall in revenue on the other. The reasons for this are the decline in traffic in the first year due to a number of causes, the loss of the subsidy on petrol, the loss of the managing agency of the Air India International Ltd., which was formerly entrusted to Air India Ltd., and the income for which was credited to the accounts of the latter, pooling arrangements with the A. I. I. C. in respect of purely internal traffic which is solely within the purview of the I. A. C., and the low productivity of the staff owing to suspense and uncertainty about their future. The results of these psychological factors, though difficult to assess exactly in terms of money, are considerable.

The outlook may be gloomy at present but it is not altogether discouraging. The Corporation has taken, and proposes to take, measures designed to secure greater efficiency, to provide better facilities and more comforts for the passengers and to reduce its expenses and increase its revenue. a) Orders have been placed for the purchase of eight "Heron" to open up new feed-er lines which, it is hoped will, in the course of a year or two, tap new sources of traffic. The purchase of modern aircraft for trunk routes is also under consideration to make air travel more attractive. b) The appointment of a Committee to review and rationalise the freight and fare structure. c) Orders have been placed for surface transport some of which is already in position. d) Aircraft have been and are in the process of being overhauled, painted and renovated. e) Improvements have been made in the catering and cabin services with a view to providing a better type of food, and hot meals. All food for passengers is now cooked in I. A. C. kitchens. f) Proposals are being examined for increasing freight traffic by the maximum use of aircraft and flying crews. The Corporation is also examining the possibilities of developing foreign charters. It has agreed to carry second-class airmails, and if the proposal materialises it will add considerably to its revenue. g) The examination of schemes to own office accommodation at Delhi and Calcutta so as to avoid recurring payment of heavy rents. h) The examination of schemes for residential accommodation in the vicinity of aerodromes. This will add to the efficiency of the staff and reduce expenditure on transport. A scheme for building 100 staff quarters in Bombay has already been approved. i) The creation of an internal audit organisation with the object of ensuring that there is no waste, extravagance or pilferage.

An Air Transport Council

The Government of India has set up an Air Transport Council. The former Labour Secretary, Mr. S. Lal, has been appointed Chairman, other members being the two Chairmen of Indian Airlines Corporation and Air India International, a former Chief Justice, Mr. Malik, a member of the Railway Board, Mr. Mathur, and a Member of Parliament, Mr. Chandulal P. Pareikh. Enquiries show that two out of the eight "Heron" aircraft ordered by the Indian Airlines Corporation for its feeder services have already been delivered during the week and the rest are expected to be delivered by the end of this month. So far as the aircraft for trans-continental traffic are concerned, the Government has already decided to order five "Viscounts". Eighteen months' delay in reaching this decision, however, will delay their delivery by two years. It is now proposed to acquire three more "Skymasters". It is hoped that with a fleet of six "Skymasters" (there are three "Skymasters" already in service) it will be possible to modernise the service on trans-continental routes. "Viscounts", when available, will meet the demands of the growing traffic. In any case, "Viscounts" were not intended for night service.

British Steel Mission

The British Steel Mission returned to New Delhi on Sunday, 24th April after having visited industrial areas in West Bengal and Assam. It met the Special Secretary of the Industry Ministry, Mr. S. Boothalingam on Monday and the Negotiating Committee on the following day before returning to England to write its Project Report. The Mission, it is anticipated, will indicate the broad outlines of its report; the most suitable site for the plant and the most economical size for the plant, to the Government before leaving New Delhi. The Mission, it is expected, will submit the report to the Government of India within three months after it returns to England.

The Mission, as it has already been reported, came out to India under the Colombo Plan to prepare a blueprint for an integrated steel plant. The Government of India, after it receives the report, will negotiate with the British steel interests for the Commission of the plant.

Steel Retention Prices

Pending the report of the Tariff Commission, the Government has fixed the provisional price of steel at Rs. 385 a ton, as against Tata's present price of Rs. 331 a ton. The new price should give a profit cushion of Rs. 54 a ton to Tata to enable them to finance their programme of further developing the steel production by 500,000 tons. The present prices of the other two Companies are:—

Indian Irons—	Rs. 378 per ton.
Mysore Iron and Steel	Rs. 384 per ton.

Bombay

INDIA'S COTTON TEXTILE EXPORT TARGET

THREAT OF COMPETITION FROM COTTON GROWERS

(FROM OUR BOMBAY CORRESPONDENT)

IT is now generally accepted that India's annual export target for cotton piecegoods should be stabilised at 1,000 million yards. This figure was estimated by the International Textile Conference held at Buxton in 1952. More recently, the Kanungo Committee formally accepted this "norm" and reported to the Government of India accordingly. Mr. J. C. Burns, Deputy Chairman of the Millowners Association, speaking at the annual general meeting, expressed the view of the cotton textile industry when he said, "The export target, should, in my opinion, not be less than 1,000 million yards per annum." In actual practice, this target has been achieved, indeed exceeded, only once. In 1950 an all-time export record of 1,072 million yards was set up. But 1950 was an abnormal year because of the boom touched off by the Korean War. Since then exports have dropped well below this level. The figures for the last three years are: 543 million yards in 1952; 652 million yards in 1953 and 898 million yards in 1954. The export for the first quarter of this year is estimated at 192,500,000 yards which is over 40 million yards less than in the corresponding period last year. In the light of past experience it would seem that the target figure is a bit excessive. Neither are there any grounds for believing that the target will be achieved in the future. On the contrary, all the evidence points in the reverse direction.

Admittedly there has been a progressive improvement over the last three years, but this has been largely because of the increased exports to Britain which accounted for nearly 60 million yards in the first half of 1954 alone. The volume of trade with Britain has been maintained at a high level. But the British market is at best uncertain. It seems probable that an adjustment in the quantities shipped to Britain may have to be made eventually. It would be rash to forecast just what form this adjustment will take. Also, increasing competition from other sources is ignored while assessing the export potential of this country. Exports to the countries of South East Asia, India's traditional markets, have declined seriously. Sales to Africa have also dropped, while competition in the Australian market is becoming keener. The Cotton Textiles Export Promotion Council, in its current issue of the Bulletin, attributes this downward trend to "the increasing inroads of Japan in the markets of Asia and Africa and to the United Kingdom's determined efforts to augment exports to Australia and New Zealand." There is no reason to suppose that competition from these sources will slacken. On the other hand, a great deal would have to be accomplished within the Indian mill industry to match Japan's tremendous capacity for undercutting with an industry which was thoroughly renovated and rationalised in 1950.

Growth of Competition

In making long-term plans an allowance must be made for possible developments which are likely to alter the existing situation. One of these possible developments is the growth of the cotton textile industry in the cotton growing areas of the world. Serious from India's point of view is the rapidly-developing textile industry of Pakistan. With her expanding cotton resources and the latest type of equipment installed Pakistan will, in the not too distant future, emerge as a formidable competitor. On 1st January, 1949 Pakistan had an installed capacity of 177,418 spindles and 4,824 looms which last year increased to 792,898 spindles and 10,469 looms. The same development trends are seen in Egypt and Turkey. From 1,200 looms in 1930 Turkey now has 6,200 while Egypt's have increased from the same number to 13,700 over this period. Admittedly, the output of these countries is not yet sufficient to influence the textile markets of the world but with the tempo of industrialisation gathering momentum their development is likely to be accelerated. It may be well to remember that hardly 15 years ago India had no cloth to export while today she is one of the world's leading exporters. A similar development in Pakistan and in the other cotton growing areas of the world is not impossible. Account must also be taken of increasing competition from industrial countries such as West Germany.

Increased productive capacity and the consequent scramble for markets comes at a time when the cotton textile market is shrinking in the face of competition from synthetic fibres, a process which has received impetus from the generally high price level of cotton largely brought about by the American policy of support based on a concept of parity. The world output of artificial fibres is steadily rising and with it the world production and trade in synthetic fibre fabrics. Japan increased her production of rayon yarn and staple fibre to the record level of 654,274,000 pounds in 1954, compared with 503,604 pounds in 1953. The output of other synthetic fibres also rose from 13,195,000 pounds in 1953 to 21,358,000 pounds last year. Holland's industry, increased its synthetic fibre output by over 30 per cent last year as compared with 1953. The same trends are noticeable in Britain, West Germany and the United States. The expansion of the synthetic fibre industry poses a real threat to the cotton textile industry. The whole pattern of the textile trade is changing and this will inevitably influence the cotton export markets of the world.

It is therefore difficult to see how export targets established on the basis of conditions prevailing in abnormally favourable years can be fulfilled under somewhat hardening conditions. The domestic demand for cotton textiles, on the other hand, is expected to increase. In his speech Mr. Burns referred to the Kanungo Committee's estimate that by 1950 the annual per capita consumption of cloth would increase to 18 yards from the present consumption figure of approximately 15 yards, because of the expected rise in living standards as a result of the development schemes under the five year plans. It is also expected that the population of the country will increase to 400 million. On the basis of these two assumptions it is computed that the domestic consumption of cotton piecegoods will amount to 7,200 million yards by 1960. Further assuming that the export target of 1,000 million yards will materialise, the optimum production of the country is estimated at 8,200 million yards per annum from 1960. The committee has recommended that the production of the mill industry should be pegged at 5,000 million yards—actual production in 1954 amounted to 4,993,000 yards—and of this 1,000 million yards be earmarked for export and 4,000 million yards for the domestic market.

It is proposed that the balance quantity of 3,200 million yards for home consumption be supplied by the handloom and the cottage-scale powerloom industries. The present combined production of these two industries is estimated at 1,600 million yards per annum which means that to meet the expected demand these two sections must increase their output by 100 per cent by 1960. Mr. Burns said: "Apart altogether from the question of cotton supply and the doubt which must exist as to whether in the present uncertainties the spinning side of the mill industry will expand to the required extent, can the handloom industry expand to the extent visualised, even on the basis of the conversion of a large proportion of the handlooms to powerlooms with a very much larger output per unit, as recommended by the committee? I cannot help feeling doubtful in this respect; firstly, because of the finance required for the conversion, secondly because of the size and the scope of the organisation required to implement the recommendations, and lastly, because of the fact that these powerlooms will introduce competition into the handloom industry itself and the non-powerloom may find it impossible to compete."

Financing the Project

In regard to finance, it is estimated that a total of Rs. 70 crores will be required for expanding the output of the handloom industry from 1,600 million yards to 3,200 million yards. Of this, Rs. 36 crores is proposed to be spent on machinery and Rs. 22 crores as working capital for the new spindles required and Rs. 12 crores on the conversion of handlooms into powerlooms and the installation of the new semi-automatic handlooms. The committee recommended that preference be given to co-operative institutions and their members for bringing about the required conversion of looms or, if adequate support is not forthcoming from this direction, there should be increasing resort to private enterprise. Discussing this aspect Mr. Burns rightly remarked: "Here the committee themselves seem to entertain some doubt. A special agency will have to be set up for dealing with the planning and execution of the financing of the conversion of looms, and loans will have to be made by the government to co-operative organisations. I think these suggestions are much less easy of implementation than they might appear at first glance and they certainly involve very large sums of money being spent both by the government and by the private sector. As regards internal competition in the handloom industry, this may seriously affect the total production."

Mr. Burns warned that if for some reason the handloom industry fails to achieve the target, and the demand for cloth reaches the expected figure by 1960, an artificial scarcity would be created with all the attendant evils of demand exceeding supply. "I will only refer to two of these evils. Firstly, there will be a ban on exports and India will lose her export markets, which have been so hardy won, perhaps for all time, and with the closure of exports, the exchange so essential to India in her efforts to industrialise. Secondly, it seems to me that the second five year plan must result in a greater demand for consumer goods. If the increase in the national income aimed at is achieved, the spending capacity of the population in the non-essentials will go up in a higher ratio than in the essentials. The Committee also subscribes to this view that more money will be available for spending on consumer goods. If the opportunity of buying goods is not made available, the real standard of living will not have been raised. It therefore appears to me that cloth, at least, should be in ready supply. This should be the criterion and if it proves necessary—as I think it will—for the mill industry to play its part by increasing its production of cloth, that opportunity should be given early rather than late."

Preventing Abuses

Mr. Burns urged stricter supervision over the cottage industry. The handloom industry receives protection and encouragement by various government measures. Apart from the genuine cottage industry, "sheltering under the same umbrella, there are other units whose claim to protection must, in my view, be suspect." Mr. Burns said, and added, "I refer to those units, in some cases of 200 and possibly more powerlooms, which comprise weaving establishments only and do not include spinning. Surely they can hardly be considered as cottage industry and it does not seem to me to be

right that they should enjoy the same protection. I suggest that they should be subject to the same excise as is paid by the ordinary composite unit and that such unfair competition should not be allowed to continue." Referring to rationalisation in the mill industry, Mr. Burns said he was glad to learn that the Kanungo Committee was not entirely opposed to it. The Government, he said, should keep an open mind on the subject and not be influenced by the views of one section to the detriment of the other. He stated however, "The industry is being encouraged to modernise its machinery, but modernisation without some rationalisation is a waste of money."

Pointing out that superfine cloth is not, as would appear from its description, a luxury, but a necessity in the hot weather and used by all sections of the community, Mr. Burns appealed to the government to reconsider its excise policy in regard to this quality. The present incidence of excise duty on superfine varieties works out to 17.2 per cent. It is estimated that the excise, including handloom cess, will amount to Rs. 3.73 crores as against the total amount of Rs. 28.4 crores estimated to be received from excise on all varieties of cloth for the year 1955-1956. Mr. Somani was elected Chairman of the Association and Mr. J. C. Burns Deputy Chairman for 1955-1956.

The Dangers of the Amendment

The retiring Chairman of the Millowners Association, Bombay, Mr. Neville N. Wadia, speaking at the annual general meeting of the Association held on 21st April, 1955 warned against the possible consequences of the latest amendment to the Constitution. "It places in the hands of an unknown government of the future a weapon which could destroy our democracy, if used most ruthlessly. This added uncertainty may make the investing public undesirably cautious, and thus slow down the pace of development in the private sector and hinder the co-operation which has been coming from abroad," Mr. Wadia said. He stoutly defended the managing agency system on which the industrial development of this country has been based and said the public has been encouraged to share in the risk of new enterprises with the managing agents who are prepared to back sound venture with their own resources. Referring to the new clauses proposed by the Select Committee, Mr. Wadia said the report of the Company Law Committee gave the government all the powers necessary to exercise effective control. "One of the most important advantages of the managing agency system is that the services of those few who are experienced in running industries can be utilised for more than one concern. If it is sought to prevent the concentration of too much power in a few hands, the lines of the recent enactment against monopolies and cartels in Great Britain would serve the purpose."

Mr. Wadia was deeply concerned at the recent fall in agricultural prices which would lower the purchasing power of an important section of the community. "It may well be asked," he said, "what good are the plans for industrial expansion without the basis of an assured market. For instance, how will the farmer benefit if electricity is brought to his door unless he has the means to buy a bulb?" Although the government had helped the farmer in many ways, "what is needed most urgently is a system of floor prices based on the cost of production and a margin for their simple needs," Mr. Wadia said. Referring to the proposed expenditure of Rs. 5,600 crores under the second five year plan, half of which is to be provided by the private sector, Mr. Wadia said: "With so much to be achieved, there is clearly no room for dispute between the public and the private sectors."

The retiring Chairman advocated the establishment of a liaison body between the government and industry which would keep the private sector "fully informed of what was expected of it. Such a body would be invaluable in advising the order in which it is desirable to establish new industries and help expedite the erection of them." Within the mill industry, Mr. Wadia referred to an agreement between the employers and the Mill Mazdoor Sangh to set up panels from the Association and the Union from which suitable men could be selected to settle disputes without recourse to the courts. If this proves successful, as Mr. Wadia hoped it would, a similar method could be adopted in all labour disputes.

A TELE-GUIDED FRENCH LOCOMOTIVE

On 14th April, 1955, between Paris and Le Mans, an electric locomotive has been successfully driven by radio-control at a speed of 80 m.p.h. This locomotive was of a type similar to that which recently set up a new world rail record of 205 m.p.h. The waves emitted by the radio-control post of a remote railway station made four times in succession the locomotive start, pick up speed, slow down and stop. The engineers of the French Railways emphasise that this is only an experiment and that there is no question of applying in the very near future the system of radio-control to the everyday running of French trains. The generalisation of radio-control will cause very arduous problems to arise and will necessitate a new planning of the global organisation of the railway system. But much importance is attached to introducing a post of automatism in the command of the mechanism of locomotives in view of increasing the safety. Experience proves that human errors are generally the cause of railway accidents.

London

BRITAIN'S ELECTION BUDGET

MR. BUTLER'S RELIANCE ON INCENTIVES

(FROM OUR LONDON CORRESPONDENT)

FINDING himself in the fortunate position of having a surplus of £280 million on the basis of the Treasury's income and expenditure estimates for 1955-56, and faced, it must be remembered, with an election only five weeks off, the Chancellor of the Exchequer apparently decided upon adopting the middle course of retaining half the total and returning the other half to the taxpayers in the form of as few and as widely dispersed reliefs as was possible. He has not resiled from his confidence in the future despite the new problems which have arisen to menace the country's economy, but has tempered this with caution by holding something in reserve against the possible rainy day. The bulk of the relief (£102 million) goes in the 6d. reduction in the standard rate of income-tax and the 3d. drop in each of the reduced rates; the increases of £20 and £30 in the single and married allowances, to £140 and £240 respectively, partially offset by the reduction of the first reduced rate band from £100 to £60, will account for a further £14 million the raising of the child allowance from £35 to £100 will take £15 million; the halving of the purchase tax on non-woollen textiles to 25 per cent will cost £24 million; and the three minor reliefs, the increase in the income limit for small income relief to £300, the increase in the income limits for the dependent relative allowance, and the removal of the "emoluments" limit for apprentices, etc. otherwise qualifying for child allowance, between them account for just over £600,000. The aggregate cost of these reliefs is just under £134 million this year, and would be £155 million in a full year, to leave the Chancellor with a surplus of £148 million.

Criticism from the Labour Opposition was inevitable, but Mr. Butler has produced a Budget which is not easy to attack although Mr. Gaitskill made a number of pertinent points when relating it to the economic situation. There can be no denying that Mr. Butler has taken a number of calculated risks in believing that further incentives will produce results in the directions of greater production, more saving, the investment rather than distribution of profits and restraint on consumer spending so as to expand exports. Generally speaking, however, his Budget has been well received, and not least of all by the City for nearly half the tax relief will benefit either companies or their shareholders. At the same time, Mr. Butler has freed another 2,400,000 from the payment of income-tax and given some much-needed assistance to the family man. The Lancashire cotton industry, on the other hand, has received a lot less than it hoped for since the purchase tax reduction applies to sheets, towels, curtain, table-cloths and to cotton, linen, rayon and other non-woollen cloth sold by the yard, including plastic sheeting. The Government has indicated that the Lancashire "case" is still under consideration, which suggests that some further action may be expected and in all probability it will be announced before the election. And finally, the Finance Bill will be both short and so drafted as to render amendment difficult—useful details with time limited and an election ahead.

Election Portents

With the Budget out of the way, public interest will be transferred to the election. At the moment the pollsters place the Conservatives in rather a favourable position, which the Budget will not affect adversely. The various party machines are busy drawing up their election programmes, and it is believed that Labour intends to fight on the basis of a manifesto aimed at keeping down the cost of living, reinforcing the Welfare State and fighting monopolies, and most of its detailed proposals will fall within these spheres. Conservative plans are not yet apparent, but no doubt the past rather than the future will be emphasised, though electors will no doubt keep in mind that the Chancellor still has a surplus in hand and, provided the economic situation shows no further deterioration, may well feel disposed to be rather more generous in an autumn Budget. The April figures of the gold and dollar reserves and the overseas trade returns for that month could make a lot of difference.

One big handicap to all prospects, the stoppage of the national newspapers, has at least been removed. They reappeared last Thursday as a result of the T. U. C. getting the owners and the various unions engaged in the printing industry together to work out an agreement. The striking maintenance men finally returned on the basis of the N. P. A. offer, but the whole structure is to be re-examined within two months and settled within three, and any revisions will be back-dated to the date of resumption of work. So far, so good; but what might well be an even more serious difficulty is presented by the threat of a strike of the majority of locomotive engineers and firemen on British Railways on 1st May. It will be remembered that the union to which they belong, the A.S.L.E.F., refused the increase offered by the Transport Commission, which the other railway unions accepted, on the ground that it failed to maintain differentials and preferred that the matter was referred to the Railway Staff Tribunal. That body has just turned down the men's claim

for a further rise, and the strike threat is the outcome.

Economic Difficulties

The provisional figures of Britain's overseas trade in March show a considerable expansion in both imports and exports. Imports have gone up more and, as a result, the trade gap—the excess of imports over total exports—has widened. At £92.4 million it was greater than it has been for a long time. Exports are put at £260.3 million and re-exports at £127.1 million. The Board of Trade has calculated that exports in the first quarter averaged £247.3 million a month, which is 10 percent more than in the corresponding period a year ago. In the six months since October—a period which was affected by the dock strike—exports have risen 3 percent over the same period a year before. Imports last month are provisionally estimated to be £366.4 million. In the first quarter of the year the average monthly import figure was £335.5 million, or 23 percent more than in the first quarter of 1954. Exports to North America fortunately have shared in the general expansion in shipments abroad. Sales to the United States were £15.7 million and to Canada £10.8 million, making a total of £26.5 million.

The steel situation is also rather a problem. The Iron and Steel Board estimates that steel supplies to the home market this year should increase from just over 16.5 million tons delivered in 1954 to over 18 million tons in 1955. This assumes imports of nearly 1.5 million tons compared with imports of only 500,000 tons last year. The plan is to import about 600,000 tons in the form of raw and semi-finished steel and 800,000 tons in finished products, about half of which will be sheets. In addition, imports of iron ore, scrap and other materials will have to be considerably increased, according to the Board's statement. There is no certainty that these supplies will be available abroad. Meanwhile, British output continues to rise. Steel output in March was at an annual rate of 20.5 million, the highest yet achieved. Production in the first quarter was over five million tons compared with less than 4.7 million tons in the first quarter of last year. The Board states that output has been increasing rather faster than was estimated. But it points out that steel users (far from stocking up as has been previously suggested) reduced their stocks by 124,000 tons, or 3 percent, in the second half of last year. All this does not look like an early end to the steel shortage.

One favourable factor, however, is that on the whole, manufacturing industry, other than the food industry, paid slightly less for its raw materials in March than in February. But prices were still higher than in January and well above last year's level. The Board of Trade Journal provisionally puts the index of basic material prices at 150.9 for March against 152.2 for February and 149.1 for January. The chief reason given for the decline is the fall of about 10 percent in the price of rubber. On the other hand, dearer copper, and therefore brass, have caused prices of materials used by the mechanical engineering and electrical machinery industries to rise sharply in the past three months. Over the first quarter of the year these two industries have risen 5.4 percent and 9.4 percent, respectively.

P. and O. Pay More

Improved profits and a higher dividend are announced by the Peninsular and Oriental Steam Navigation Company. A final dividend of 13 percent allows for an effective increase of 5 percent allowing for last year's 100 percent scrip issue. The preliminary statement shows a surplus for 1954 of £8,285,500, against £8,476,052, before tax but after charging £10,172,594 (£9,240,477) depreciation and income-tax relief of initial allowances. If these and other charges are added back the gross result appears to have improved by about £800,000. Taxation absorbs substantially less at £3,058,986 (£3,522,059) and after crediting tax recoveries of £950,793 (£467,689), transferring £1,060,693 (£2,120,076) to replacement reserves and deducting £757,997 (£802,028) for minority interests, the balance available works out at £3,458,617 compared with £2,491,558.

A circular issued by the P. and O. Stockholders' Association in January, it will be remembered, criticised the Board's policy. Following meetings with representatives of the Association, the Board said that the Association's approach to the problem was contrary to stockholders' interest. It was also stated that the group's structure and organisation were under review and although the report would not be ready in time for consideration with the accounts, the Chairman expected to be able to make a further statement on the subject at the annual meeting next month.

Tea Prices Decline

Lower prices were quoted at the tea auctions in London on Wednesday, with the exception of one or two specialised lines which were in some demand and went up a few pence. All the signs are that the blending and packing concerns are still living on relatively small stocks, which is possibly as good a sign as any that the housewife continues to make her own tea go a little further. This fact is also having its effect on the retailer. The owner of a chain of 200 grocery shops in London has announced his intention to reduce the price of his cheapest brand by 4d. a pound to 5s. 4d. a pound, and anticipates that within a month tea will be down to 5s. a pound.

Madras

DEFICIT FINANCING AND DEFLATIONARY THREAT

MRS. ROBINSON ANALYSES INDIAN ECONOMY'S PARADOXES

(FROM OUR MADRAS CORRESPONDENT).

THE well-known Cambridge economist, Mrs. Joan Robinson, in the course of her four days stay at the Annamalai University, gave two talks on employment policy. She made four important points. First, she felt that the dangers of deficit financing in India had come to be exaggerated largely because the problem of inflation had come to be viewed through purely monetary spectacles. The proper approach to inflation in under-developed economies, she stressed, must be in terms of a real approach as opposed to any monetary approach. She argued that deficit financing would have no dangers if the necessary elasticity in the supply of consumer goods was ensured to absorb the increased generation of purchasing power in the country. Secondly, she argued that if deflationary tendencies, which had begun to work in the Indian economy of late, were not arrested in time, the multiplier effect from any increase in public investment was likely to become feeble. She specially instanced the recent paradoxical fall in agricultural prices as an alarming symptom of present-day Indian economy. Such a fall, if not checked by a bold policy of building up buffer stocks of agricultural produce by Governments, would slow down any expansionary bias supposed to be inherent in any increased tempo if public investment. Thirdly, to accelerate the tempo of investment and to secure the necessary funds for such investment, she put in a plea for a ban on all imports of luxury and unessential consumer goods and also a ban on the manufacturing of such goods in the country. Fourthly, she thought that increased funds could also be secured if the State enterprises made it a point to make profits regularly and plough back such profits for the expansion of public enterprise units.

Views on China

In her discussions with Professor M. K. Muniswami and others of the Economics Department of the University, Mrs. Robinson also gave her impressions of China and Russia—countries that she had visited. China, she felt, had more or less successfully solved the problems of landlordism, of securing co-operation between the administration and the intelligentsia and of harnessing the labour force of women. The rationalist attitude of the average Chinese perhaps had a good deal to do with the present success of the Chinese administration. Chinese labour traditionally accustomed to patient and hard work, trained and supervised by the skilled technicians of Russia, was sure to transform the industrial face of the country and make China one of the great nations of the world. The social prestige and the incentive salaries paid to Russian engineers had increased their supply and quality with the result that the country was now in a position to lend technicians to China. While in a sense, the food problem was likely to persist in Russia for some time because of the comparative failure of collective farms, she thought that China would not pass through any such difficulty as the average Chinese could eat any and every kind of plant or animal food. Nature has provided China with a magnificent system of waterways so that the country had no need to import on any large scale locomotive engines, lorries, and similar equipment. Water transport, in spite of its slowness, was destined to play an increasing rôle in the transportation pattern of China.

Record of Protection in India

Reverting to India, she considered that protection, on the whole, had failed here even as it had failed in England. The country was riddled with numerous inefficient units, she said. To provide continuous employment opportunities, however, she was of the opinion that the handloom industry in India should be protected from the competition of mill-made goods by these goods being suitably taxed. If underdeveloped economies were to make rapid headway at all, a certain amount of totalitarianism both in economic and social planning would be inevitable, she continued. Of course, care should be taken to prevent totalitarian planning from becoming inefficient, for all totalitarian planning meant simultaneously an improvement in the quality of public administration. The real danger in India lay not in any paucity of economic planning or legislation but in the unsatisfactory enforcement of planning measures. She also thought that some pruning in the excessive overhead expenditure of Government projects in this country would not spell any inefficiency.

Second Plan for Madras

Official spokesmen in Madras have revealed further details of the Government's second five year plan. The plan, it is stated, will involve an outlay of Rs. 200 crores—double the outlay in the first plan period. Of this outlay, village-level development will absorb Rs. 25 to Rs. 30 crores. Electricity development, aimed at increasing power generation from the present 3 million kws. to 6 million kws., will involve a total outlay of Rs. 80 crores. Although in the field of irrigation Madras has reached almost the end of its resources, some pending projects are expected to cost Rs. 25 crores. Development of lignite at a cost of Rs. 60 crores

will be a Central responsibility, and this amount is not included in the proposed outlay of Rs. 200 crores. The possibility of locating a steel plant in Salem district is also visualised but that will largely depend on the development of lignite. Besides these major industrial projects, a Rs. 50-crore scheme for the manufacture of heavy electrical machinery is also being considered. In this connection, the Union Government is being pressed for locating the industry in this State. The Madras Government makes this claim on the ground that the climate is very favourable in Madras for developing the industry, as there are a large number of trained personnel and numerous engineering and technical institutions to supplement extra hands. Moreover, electrification has made very great advances in this State both in urban and rural areas. Thus conditions here are held to be most favourable for locating the industry. Such a step, it is further stated, will also go to meet the claims of Madras in the matter of industrial development in which the State is comparatively backward. This project too would be a Central responsibility, if accepted, and the outlay on it would not be covered by the second five year plan expenditure of Rs. 200 crores. If the lignite, iron and steel and heavy electrical industry projects get going, the five year plan outlay as far as this State is concerned might come to about Rs. 400 crores. As the Government here is exploiting assiduously the public campaign for better treatment of the 'neglected South', it may not be a surprise if the Centre deems it politic to accept the said industrial projects and finance their execution. Andhra, which is industrially more backward than Madras, on the other hand, is not likely to get as much consideration at the hands of the Centre except in the case of its huge irrigation projects. In Andhra, the only large industrial project that is being considered by the Government of India is a fertiliser factory near Vijayawada.

Manufacture of Pumps

Madras is making, and is likely to make, further progress in the private sector of industry. A notable development is the recent establishment of a factory jointly by Messrs. Best and Company, Ltd. and William Jacks and Company Ltd. for the production of Worthington-Simpson pumps. The factory is situated in Tondiarpet, Madras City, and is equipped with the most up to date machine tools for manufacturing pumps. The factory would produce about 300 pumps of assorted sizes for a month, working single shift. Another big industrial project in the private sector is likely to come to fruition in the next two years for the manufacture of precision tubes. Chairman and Managing Director of the Tube Investments Ltd., Birmingham, and Director of the T. I. Cycles of India Ltd., Sir Ivan Stedeford, has, at his Press conference at Ambattur, hinted at the possibility of his firm starting this enterprise at Avadi, just two to three miles west of Ambattur. The total outlay on the projected factory for the production of precision tubes used in the manufacture of bicycles and in other industries, might come to Rs. 2 crores. Even though he could not forecast whether the manufacture of precision tubes here itself would necessarily bring down the prices of bicycles, he said the production of these tubes in India would definitely help the development of several other industries like railways, aircraft and automobiles which use such tubes. At the Press conference, Sir Ivan referred to the present high quality of the cycles made at the Ambattur factory. The quality of Ambattur cycles had now attained such a high degree of perfection that they had agreed to the stamping of machines produced by the T. I. Cycles of India Ltd. as 'Hercules' in place of the hitherto 'Hercules (India)'. When asked by Pressmen whether in that case they would stop exporting their cycles made in England to India, Sir Ivan said that they were expecting to do that in any case as soon as production in India coped with demand. He also paid a compliment to the technical efficiency of Indians. Incidentally he thought that a categorical statement of the Government of India's future industrial policy might provide greater encouragement to people in England who were eager to invest capital in India and help her in her industrial growth. He, however, conceded that the recent speeches of the Indian Prime Minister in Parliament allayed the fears of many people to some extent.

Industrial Progress in Mysore

According to an announcement of the Mysore Industries Minister, the Planning Commission has just approved a programme for the expansion of steel production in the Mysore Iron and Steel Works at Bhadravati, from the present 25,000 tons to 100,000 tons including stainless steel and alloy special steel at a cost of Rs. 12 crores. The Industries Minister has also succeeded in getting the Assembly to approve the recommendations of the Solar Gold Field Enquiry Committee. The Assembly has also urged the Mysore Government to take such measures as it might consider necessary in this regard.

FOREIGN INVESTMENT IN NEW INDUSTRIES

Out of total protected investment of Rs. 105 crores on new industrial units licensed since January, 1954 under the Industries (Development and Regulation) Act, the approved foreign investment amounts to Rs. 28 crores including Rs. 23 crores on account of the oil refineries.

This was stated by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, in a written reply to a question by Mr. M. Valiulla in the Rajya Sabha last week.

FINISHED GOODS MARKETS WAIT FOR OVERSEAS BUYERS

HESSIAN STEADY BUT BIG DROP IN SACKING

OVER the past week conditions in the finished goods markets have been stagnant and there are no reports of any business having been done. Overseas buyers have once again shown no eagerness to enter the market in spite of a considerable easing in the sacking section. A feature of the market has been the steadiness in the hessian section, which at the close on Tuesday was quoted at the same rates as those ruling at the beginning of the week. During the same period sacking rates have dropped by about Rs. 25 a ton and the general tendency appears to be for still lower prices. It is reported that the hessian section has been kept up by anticipation of overseas business, and the fact that fears have been expressed that there may be a shortage of certain fabrics on settling day. On the whole hessian prices have shown very little movement since the beginning of the month, fluctuations being confined between the prices of Rs. 44-4 and Rs. 45-4 a 100 yards of 40in. 10 oz. Heavy goods on the other hand have shown wide variations and have dropped over Rs. 6 from the highest levels touched at the beginning of the month. The gap between jute and gunnies has steadily widened over this period, and on the present price ratio it is impossible for mills to do simultaneous business and show a profit. It is also reported that shipping has again been very poor this month, and speculators have construed the possibility of a further increase in the industry's stocks of goods as a sign of weakness, with a resultant fall in rates.

The raw jute section lately has not conformed with the normal run of events and instead of falling in sympathy with the goods market this section has tended to be steady. Sellers appear to be content to sit out of the market, and they confidently predict that prices in the near future will again rise. Mills left the market completely alone at the beginning of the week, but after the weekend some business was done by a large group at slightly reduced rates. This incursion into the market probably did more harm than good, as it confirmed the sellers' contention that mills were very near buying, thus strengthening their resolve to hold out for higher rates. The only way for mills to get the price of jute down is for them to leave the market severely alone, but it is very doubtful if their present jute stock position will allow such a policy to be carried through to its ultimate conclusion.

THE JUTE MARKETS

Manufactured Goods: The finished goods market has been devoid of any real goods business over the week, and speculation has been fairly heavy. Overseas buyers continue to hesitate, causing market rumours to build up and fade away just as quickly. The heavy goods section has been dominated by speculation and prices have varied over a range of about Rs. 2-8 a 100 bags. The hessian section on the other hand has ruled fairly steady and rates have only shown an alteration of a few annas either way. The market on Thursday last opened on a quiet note and an easier tendency was apparent. April delivery B Twills opened at Rs. 11-6 a 100 bags which was six annas down from the previous day, and October-December shipment dropped eight annas to Rs. 11-0 a 100 bags. The hessian eight annas to Rs. 11-0 a 100 bags in all deliveries and section eased by two annas in all deliveries and the near and forward positions of 40/10 oz were quoted at Rs. 44-8 and Rs. 43-2 a 100 yards respectively. At this stage the sentiment of the market was affected by speculations as to the possibilities of a further rise this month in the mills' stocks of jute goods, brought about by reports of poor shipping instructions and the painfully slow loading procedures that have been adopted by the port labour. The heavy goods section came in for the majority of this speculation and rates here fell eight-12 annas in all fabrics, whilst hessian prices were unaltered. Speculative manipulations in the B Twill fatka market caused a further drop in rates, and by Friday heavy goods near deliveries had fallen another Re. 1 and the forward sections eight annas. Hessians lost two annas in sympathy but the undertone in this section was steady. Local shipper interests now indulged in some fairly heavy covering at the lower prices which gave a temporary boost to rates in all sections, but this was shortlived, and the continued absence of any overseas enquiries, coupled with speculation over the weekend once more pulled prices back. On Monday Ready B Twills were quoted at Rs. 120 a 100 bags which was 12 annas less than before the weekend, and Rs. 2-6 down from the opening levels. The forward section only lost four annas and was quoted at Rs. 109-4, this being Rs. 1-4 below the week's opening rates. The hessian section still seemed to be obsessed with the idea that business was imminent and continued to rule steady at Rs. 44-4 for 40/10 oz. ready delivery and Rs. 43 for October-December shipment, and this attitude persisted on Tuesday when the first gains of the week were recorded bringing 100z quotations back to the opening levels. The heavy goods section had mixed fortunes and tended to be a

little steadier in the near positions where ready B Twills were unchanged but July-September shipment was up eight annas. The October-December period however continued to fall and B Twills lost four annas to Rs. 109 a 100 yards. During the day a much weaker sentiment developed and rates dropped rapidly in the heavy goods section due to the lack of overseas enquiries and local speculation, and towards evening ready B Twills had fallen about Re. 1 from the morning's rates.

At the close the market is very much easier due to heavy speculative selling pressure. Heavy Goods have fallen about Rs. 2-8 in the near positions and Hessians about six annas. Opening quotations on Wednesday morning are as follows:—

	April	May	June	July-Sept.	Oct.-Dec.
Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
40/10 oz.	38	34-14	34-12	34	34
40/10 oz.	44	43-14	43-12	43-6	42-12
B. Twills	117-10	117-4	116-14	113-4	108-8
Heavy Cees					
(Plain)	118-8	118-8	118	113-12	109
A. Twills	157	152	148	140	134
Liverpools	138	135-8	134	129	124
Cornacks	125-8	121-8	120	116	110

Raw Jute: Conditions in the raw jute markets have been very steady throughout the week, and before the weekend mills took very little interest in purchasing any raw material. The depressed goods market gave buyers very little incentive to buy as simultaneous business at a profit was out of the question, and any business concluded was either for special lots or covering against cancelled contracts. Sellers held very reserved ideas and were governed in their attitude by the very firm upcountry markets. Reports from all areas indicate that imports have stopped completely, and even if sellers entered into any Old Crop contracts there was very little chance of them being able to cover at anything like a profit as upcountry rates are well above the parity of those quoted to Calcutta mills. As regards New Crop Jute, here again sellers were not keen to enter into any obligations and all week negotiations have been going on to find a satisfactory basis to work on, but there is still about Re. 1 a maund difference between the respective indications, and no business has been reported. After the weekend a large mill group came out as buyers, and along with other mills who operated on a smaller scale, did business up to about one lakh maunds. This caused the undertone of the jute market to be very firm, as sellers anticipated that other buyers would soon be following suit. The position of New Crop jute appears to be nebulous at the present moment and the whole outlook of the trade is governed by

MARKET STABILITY WILL
DEPEND ON HIGH QUALITY
TEA TRADE PROSPECTS FOR
1955 ASSESSED

IN their assessment of the tea trade and industry's prospects for the current year, Messrs. J. Thomas & Co. Ltd. say: We embark on our task of forecasting the tea market for the coming season with the gravest misgivings. With the examples of the years 1952, 1953 and 1954 behind us, when the prophecies of both the pessimists in the year 1952, and the optimists in the years 1953 and 1954 were confounded, it would seem that due to the speed with which situations affecting the tea market change nowadays, we would be wiser to issue a monthly forecast throughout the year instead of endeavouring to look ahead over a period of 12 months. However, having ended our Annual Report with a forecast for the coming season for so many years past, we will, herewith, attempt to enumerate the various factors which may affect the trend of the market in the coming season. Although, at one time in the past year, many optimists forecast a far bigger crop from North East India, the final output of 500 million lbs., when added to the combined production figures from the rest of the major producing countries of the world, brought the total production of these countries to 1,195.8 million lbs., which was 52 million lbs. in excess of the largest amount of tea ever produced, which took place in 1951.

At the time, the foundation work on gardens for the season 1955 was commenced, it was a strongly held opinion that more tea must be produced to meet the daily increasing demand of the world's tea drinking public. Although, at the time of writing, there are certain doubts whether the world can absorb very much more tea, the majority of North Indian garden owners have endeavoured to procure as much manure for their properties as will produce the maximum crop they can possibly manufacture in the coming season. It is understood that Southern India and Ceylon are also capable of producing larger crops of tea than the record production already manufactured in the past season, while Pakistan and East Africa are also quite liable to manufacture enough extra tea for their own internal requirements to allow them to export an increased amount for the world markets. It would seem likely, therefore, that the amount of tea manufactured by the world producing countries in 1955 may be at least as large as that manufactured in 1954, and very likely larger, and so in order to assess the market for the coming season, it must be considered whether the world consuming public are able to absorb an increased amount of tea, or whether any increase in production over the present world tea crops will flood the market and again produce slump conditions as in 1952.

Opinion on Consumption

Previous to the last war the world price of tea kept comparatively stable and the rise of 1d a lb. in the London auctions was, in those days, almost a matter for headline news, whereas nowadays, a market fluctuation of 1d a lb. does not even merit a mention in the Press and the public have now become quite accustomed to a rise or fall of 6d to 1s. a lb. for tea in the London auctions and an equivalent amount in Calcutta or Colombo. The reason for these violent fluctuations of the post-war tea market is the very delicate balance between world supply and demand. Unfortunately, no country has yet settled down sufficiently, since the turmoil of the second world war, to enable the tea buyers and blenders to assess accurately either the number of people drinking tea, their individual financial capacity, or their per capita tea consumption. At times, various figures are produced and published which show that world consumption in all countries is rising to a degree which still makes it seem level with or even in excess of world production, but what these figures probably show in reality is not actual consumption but a temporary absorption of tea due to stock-piling. Before the war, when tea prices were less than half what they are today, neither the small distributing shops nor the tea drinking public could afford to hold any appreciable stocks of tea. On the other hand, large tea blenders and dealers were probably able to afford to hold much bigger stocks than they can at the present day, and as small shop-keepers and the tea drinking public were buying their tea for immediate use, blenders and dealers were able to assess their clients' requirements in advance. If it was still financially possible for big blenders and tea dealers to hold stocks of tea sufficient to keep the world tea market stable, this should prevent the price of packet tea fluctuating as it has done recently. As unknown stocks of tea are now held by small grocer's shops and individual tea drinkers all over the world it is impossible for the primary distributor to assess how much tea actually is being drunk as against how much is being stockpiled by his clients. And, as it is this hidden stock figure which forms the delicate balance between world production and consumption, the tea markets of the world are likely to continue to fluctuate to the detriment of the whole trade, until the per capita consumption in all countries, can be more accurately assessed.

For instance, when the 1954 tea market boom was at its height, the price of the packets of tea sold to the public was also forced up till, eventual-

ly, the public and also the small distributing shops throughout the world started to buy tea as fast they could, anticipating a further rise, and this sudden buying of tea in increased quantities misled large blending houses into assuming that the consumption of tea in their various districts was rising, whereas, in fact, the heavy buying and absorption from their factories was merely stock-piling by the consumers and small shops. As soon as the price of tea dropped, however, small shop-keepers and consumers ceased to buy and subsisted on the stocks of tea they already held; thus the outbreak from big blenders' warehouses started to slow down giving them the idea that consumption had also started to fall. At the present time, therefore, nobody seems to be in any way certain whether or not there is an excess of tea being manufactured in relation to world consumption.

Tea Consumption in U.K. and U.S.A.

There would seem no doubt whatsoever that world tea consumption is rising but whether it is rising as fast as world production is difficult to assess. The United Kingdom, by far the biggest consumer in the world, has a considerably increased population since the war. Due to almost total employment in that country and the great increase in the weekly pay packets of the working class family, which has enabled it to improve its standard of living, and also the large amount of canteens serving tea and other refreshments which have come into being all over the country, the per capita consumption of tea in the United Kingdom has almost certainly risen. It would seem that considerably more tea is also being drunk on the American Continent and the Continent of Europe and this is probably due to a combination of the effect of the high price of coffee and the tea drinking habits acquired by the inhabitants of these various countries during last war. It should, however, be remembered that apart from coffee, the sale of other beverages is always being advertised in all these countries and it is only because tea has been able to overcome all competition by being the cheapest drink of its type available to the public that it has maintained its popularity for so long. Should, however, the price of tea ever get so high as to bring coffee or any of the other many excellent beverages on offer to the public into the competitive range, then the tea consumption both in the United Kingdom and in all other countries might very soon fall. Since the war years, world production of tea has continued to rise steadily and, as far as North East India is concerned, this has been in spite of occasional bad crop years. However, it must be remembered that, in India, to have a climatically perfect year for the growing of tea is the exception and not the rule. Apart from the dangers, from the tea grower's point of view, of having too much rain during a cold spell or too little rain during a hot spell, the tea districts are always liable to natural calamities such as floods, earthquakes or hail storms.

World Output and Offtake

To sum up, therefore, we consider that it is probable world production has now reached a stage when it must at least equal world consumption. It would therefore seem advisable, remembering that there are many acres of young tea which will shortly be coming into full bearing, that the machinery for the voluntary crop regulation scheme which came into being in 1952 should be kept as a safeguard against another sudden and disastrous slump such as took place in that year. The fact that world production may have at last reached that debatable figure of world demand should not necessarily forecast a sign of bad times for the tea industry. On the contrary, it is to be hoped that this situation will render big blending and distributing houses able to procure tea at prices economic both to themselves and to the producer and, at the same time, enable them to hold stocks of tea on their own account large enough to meet any sudden demand from their consuming clients. We base our forecast for 1955 on this hope and although the tea market is a lower market than the extraordinary boom which took place in 1954, we think good and economically very satisfactory prices will be paid for well made and desirable tea, while, perhaps, the buyers in auction may be enabled to serve their public by neglecting ill-manufactured and stinky grades, thus improving the blends of tea put out to their clients. Prices should rise to very satisfactory levels when the second flush quality teas are on offer in Calcutta, but there will probably be a recession in September when the quality of tea on offer deteriorates. The extent of this price recession will depend on the amount of tea manufactured to the end of August when the announcement of this crop figure is made in early September. Should, however, world auction prices of tea be too dear to enable world tea buyers to hold adequate stocks, it is our fear that the tea market may fluctuate somewhat violently to the detriment of the whole trade for several years to come.

DEMAND BETTER IN INTERNAL
TEA SALECOMMONS AND DOOARS DUSTS
STRONGEST FEATURE

AT Sale No. 43 held on 26th April. Dusts offerings consisted of 17,700 packages. There was a better demand this week in the Dust Sale and Commons and Dooars Dusts with black leaf appearance were the strongest feature which were 1 to 2 annas dearer in price. Medium Assams eased as the sale progressed and closed 1 to 1½ annas below last week's rates. The best C.T.C. good liquoring teas from Upper Assam were very irregular but the poorer and more fibrous types were 2 annas easier. The residue fibrous types, which in previous weeks have been difficult of sale received better attention and often sold several annas above valuations.

	1955	1954
Medium Dooars Dust	2 2 0 to 2 2 6	2 0 6 to 2 1 0
Medium Assam Grains	2 4 0 to 2 5 0	2 1 6
Best Assam C.T.C.	2 12 0 to 2 14 0	2 5 6

SURCHARGE ON JAPAN-CALCUTTA
FREIGHTS PROPOSED

A SURCHARGE of 25 percent will be imposed from 1st June on all cargo to and from Calcutta, excluding ores, carried by shipping lines belonging to the Calcutta-Japan Conference and the Japan-Bay of Bengal Freight Agreement. The Conference says that the surcharge will not be imposed if working conditions in Calcutta Port have substantially improved by the end of May.

Quiet conditions ruled in recent trading and the market tenor showed no change. The demand for American coal cargoes was well maintained and charterers conceded a further shilling to 5s 6d for May loading to the U.K. North American grain fixtures were higher at 65s for St. Lawrence and 87s 6d for Gulf to the U.K., the latter comparing with 77s 6d in March. Quiet conditions prevailed in the Indian ore trade but the undertone was firm. Mormugao-Yawata was fixed at \$ (U.S.) 11.50 f.i.o. for May shipment. Coal from Calcutta to Mauritius was fixed at 87s 6d for May shipment. The Time Charter market was quiet. A British motorship was taken for round trip Continent-Persian Gulf-India with delivery at Hamburg-Bremen for 31s 9d but a Finnish motorship was fixed at the lower rate of 29s 3d for a round trip Continent-Persian Gulf and/or Indian with delivery Gothenburg.

SUGAR MARKET DULL

During the week ended 27th April, sugar sales in the Calcutta market averaged 2,500 bags a day. Arrivals were 2,000 bags daily and stocks totalled 250,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-4 for ordinary grain and Rs. 31-8 for big grain. Forward sugar ordinary grain and big grain sold at Rs. 30-4 and Rs. 31-8 respectively. Ex-mill delivery rates for some standard grades of sugar were between Rs. 28-14 and Rs. 29, but offtake at the rate was small due to the prospective release of sugar from Government stocks. The market is going dull.

LINSEED

Generally firm conditions prevailed during the earlier part of the past week although a slightly easier tendency developed in the market during the latter part and a further small decline in prices was recorded. Arrivals from the centres, although

still small, were on a slightly better scale and crushers were purchasing small quantities daily at gradually decreasing prices. The turnover was on the whole small with buyers generally rather reserved. The oil section was less active owing to a somewhat poorer demand; prices remained more or less unchanged. Latest quotations were as follows: April-May Rs. 15-4 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 19th April to 25th April, 1955)

Cowhides:—Wet salted (Ord.) 8,000 pcs. on the basis of Annas 10-6 to Annas 11-9; Wet salted (Ord.) 7,000 pcs. on the basis of Rs. 9-4 to Rs. 11; Wet salted (Slaughtered) 17,400 pcs. on the basis of Rs. 14-4 to Rs. 25-8.

Goatskins:—Wet salted (Daissee, Killed) 53,400 pcs. on the basis of Rs. 225 to Rs. 375; Assam-Dinajpur-Murshidabad 41,800 pcs. on the basis of Rs. 232-8 to Rs. 310; Purneah-Kissengani 12,200 pcs. on the basis of Rs. 282 to Rs. 315; Patna-Pakur 39,500 pcs. on the basis of Rs. 220 to Rs. 240; Muzafferpore-Patna 2,300 pcs. on the basis of Rs. 290 to Rs. 355.

Bazaar Stocks

(25th April, 1955)

Cowhides:—Wet salted 89,000 pcs.

Goatskins:—Wet salted (Daissee, Killed) 25,700 pcs.; Assam-Dinajpur-Murshidabad 75,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissengani 2,38,000 pcs.

SHELLAC MARKET QUIET

During the week ended 26th April, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 162 to 149-8 value; 145 buyers.
Lemon No. 1 Shellac	Rs. 163 done and buyers; 150 buyers; 147 value.
Lemon No. 2 Shellac	Rs. 158-8 buyers; 141 done and buyers; 139-8 buyers.
F. O. Std. 1 Shellac	Rs. 152-8 buyers; 140 done; 135 buyers.
Pure TN Shellac	Rs. 145 to 132 done and buyers.
4% I. T. N. Shellac	Rs. 136-8 to 125 value.
No. 1 Kusmi Seedlac	Rs. 152-8 to 136-8 value.
No. 2 Kusmi Seedlac	Rs. 147-8 to 130-8 value.
Fine Bysaky Seedlac (Manbhum)	Rs. 142 to 123 done and buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 139-8 buyers; 123 done; 118-8 buyers.
Ordinary Bysaky Seedlac (C. P.) under 5%	Rs. 136 done and buyers; 118 done and buyers; 116-8 buyers.
Ordinary Bysaky Seedlac (C. P.)	Rs. 130 buyers; 115 done and buyers; 113-8 buyers.
Kireelac	Rs. 62-8 to 53 buyers.

Shipments during April until the 23rd were 10,717 packages.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 1.3 percent to 346.1 during the week ended 9th April, 1955, as compared with 350.6 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.5 and 14.4 percent respectively. Due to the re-appearance of tea and sugar quotations at lower levels and a fall in the prices of rice at Vijayawada and salt in Calcutta (—6% each), baira (—5%), wheat at Amritsar and gram (—4% each), gur at Muzaffarnagar and dal ahar (—2% each) the Foodstuffs index declined by 3.0 percent to 286.4 although the prices of rice at Patna (+4%) and coffee (+1%) showed advances. The index for Industrial Raw Materials also moved down by 1.1 percent to 399.1 as a result of lower prices of manganese ore (average export prices) (—7%), rapeseed (—6%), linseed (—5%), raw silk (—3%), raw cotton (—2%), and lac and cottonseed (—1% each). The prices of castorseed in Bombay, groundnuts, gingellyseed and copra, however, moved up by one percent each. The index for Semi-Manufactures fell by 0.3 percent to 328.9 as compared with 329.5 (revised) for the previous week. Items which witnessed significant variations during the week were gingelly oil (—10%), mustard oil (—6%), groundnut cake (—5%), coir yarn (—2%), coconut cake (+8%), brass and copper (+3% each) and coconut oil at Cochin and buffalo hides (+2% each). The index for Manufactures remained unchanged at the last week's revised level of 376.1. A fall of 0.7 percent to 543.0 in the index for the Miscellaneous group was brought about by decreases in the prices of betelnuts in Calcutta (—4%) and tobacco leaf (Jati-Poola) and chillies (—1% each); prices of betelnuts at Bangalore and black pepper increased by 2% each.

INDIA'S TRADE WITH CHINA IN 1954

During 1954, India's exports to China were valued at Rs. 1,77,12,000 while imports from China were of the order of Rs. 94,41,000. The commodities exported included jute manufactures, tobacco, spices, mica, lac, oils (other than linseed), drugs and medicines and machinery. Indian imports during the period included raw silk, raw hides, spices, drugs and medicines, oils, chemicals, instruments and appliances. Giving this information in reply to a question by Mr. D. C. Sharma in the Lok Sabha recently, the Deputy Minister for Commerce and Industry, Mr. Nityananda Kanungo said it was too early to evaluate the results of the Indo-China Trade Agreement. He added that the friendly trade relationship established as a result of these contacts had borne fruit, specially in the matter of exports of Indian tobacco.

RATE OF TEA CESS INCREASED

The Central Government after consultation with the Pakistan Tea Board, has raised with immediate effect, the rate of tea cess from Rs. 1-6 to Rs. 2 a 100 lbs. on all tea produced in, and issued from, tea factories in Pakistan. The proceeds of the cess will be utilised by the Board to promote the sale and consumption of Pakistan tea in Pakistan and in foreign countries, to organise and assist in research connected with the tea industry, and generally to take such measures as may appear advisable in the interest of the tea industry of Pakistan. The increase of the cess being negligible is not expected to result in any increase of the retail price of tea.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds	Accrue under Tea	Outturn and Average Price per lb realised for crop. THE PLACE OF HANDICRAFTS IN AN INDUSTRIAL ECONOMY

WEST BENGAL SURVEY REVEALS DISCOURAGING PICTURE: HIGH PRICES AND POOR MARKETS

THE reason the sales of hand-made products are languishing is that there is no effective market for them. This is the not very startling conclusion of the recently published Survey of Retail Markets in Certain Selected Areas of West Bengal. The Survey was conducted by the Bureau of Industrial Statistics, Calcutta, at the instance of the Ministry of Commerce and Industry, Government of India. In its own words: "The poor expense pattern and the small margin of income left after meeting essential household expenses clearly indicate low purchasing power of buyers; and this is undoubtedly the greatest handicap for the promotion of sales of hand-made products." This comment could be used to support those critics of the Budget who doubted the wisdom of deliberately cutting personal consumption. But in fact it leaves many other questions about the potential and direction of demand unanswered. It is true that when the object is maximum employment, hand industries and crafts have a place in the economy, and that unlike large-scale State-sponsored projects they cannot rely on the Government to provide their markets. Hand industries depend upon the purchasing power and personal tastes of the individual consumer first, and such matters as more organised marketing, easier credit facilities and protection from cheaper factory-produced goods a long way second. In bringing out this one point the Survey is useful. Since the investigation was completed, another factor may have contributed to the general depression of the hand goods market: the recent sharp fall in the prices of agricultural products is bound to curtail purchasing power of rural buyers even further, although this effect may be somewhat offset by the gain to the city dweller who provides the more valuable market but who is also more likely to be attracted by machine-made substitutes.

The Survey covers 80 different products of which 78 are hand-made. These have been grouped into a number of broad categories and the demand patterns for each have been studied on the basis of types of market, the three types chosen being Calcutta, outstation urban and rural. Of the last two, outstation urban covers Burdwan, Raniganj, Asansol, Bankura and Kharagpur, while the rural areas have been chosen from such places as Memari, Dalubazar Hat and others falling within the Damodar Valley area of West Bengal. The expense of the hand-made product was an important factor working against an increase in demand in all three types of area covered, but was most important of course in the rural ones where poverty is greatest. But in Calcutta, the richest area, a good deal of the advantage is lost through competition from factory goods.

On the aspects of hand-made manufacture other than price, the Survey was reassuring. Improved quality ranked after lower prices or higher purchasing power as being one of the best ways of stimulating demand. Quality control is no easy matter for hand industries and it is doubtful if much can be done about it without a system of centrally-administered standards. Uniformity of quality is almost impossible to attain, and might not necessarily be desirable if it were; one of the few advantages the hand product has over that produced in the factory is that it can more easily be adapted to suit individual or local needs. Some form of branding might be found useful for guaranteeing quality, but as long as risk exists, the buyer will be tempted to play safe and choose the more reliable factory product. Protection against this sort of competition is among the suggestions offered for improving sales. No doubt in the short run this could be partly effective. But without the stimulus of competition quality would deteriorate further, the consumer would suffer and his purchasing power would be reduced. The loss of the more efficient factory manufacturing capacity and

human skill would be too retrograde a step for a country which aims to double its wealth in the next 25 years. Generally speaking, if hand industry cannot compete with factory manufacture in the present state of the Indian market, it might as well be allowed to languish. It has little chance of competing in future years when the productivity of factory industry has improved and the expense of the labour used in hand manufacture will no doubt have increased.

The Survey meets much of the criticism on these points in its recommendation for a central marketing organisation which would regard its main task as market research. A thorough knowledge of the wants of consumers, and a genuine effort to meet them, would advantage hand manufactures. Factory-made articles are at best an approximation of the consumers' requirements and of necessity take little account of local needs and tastes. The Survey shows that most hand-made articles are being sold chiefly in nearby markets, if only because transport charges would add considerably to their already high cost. This fact could be exploited with considerable advantage if the necessary organisation could be devised, and could be kept free of the abuses to which such systems are prone. Last year Capital published an article on the achievements of an American firm, Sears Roebuck, in developing the hand and cottage industries of Central America. This Survey shows that there is much to be learned from that example.

To restrict competition in urban areas where purchasing power is strongest and therefore the prospects for hand-made goods are best, is one tempting solution. Consumers would no doubt turn to hand industries for at least part of the needs which factory industries were prevented from satisfying—but only at the expense of reducing purchasing power further and therefore the market for other consumer products as well. A healthier attitude would be to encourage hand industries to improve their share of an expanding market. This expansion will take a great deal of time, but the community can scarcely

REVIVED HOPES OF
CONVERTIBILITYSTRENGTH OF STERLING AND
WEAKNESS OF COMMODITIES

LONDON is not the only centre where short-term interest rates have risen this year, and trends in other centres can exert a strong influence on sterling. It is common knowledge that the recovery of sterling has been assisted by an influx of short-term balances from abroad since Bank rate was raised to 4½% in London late in February, but the flow has dwindled to a trickle since the middle of April, when money rates hardened in New York. Although Bank rates have been raised this year in the United States and Scandinavia as well as in Britain, British short-term interest rates may appear to be still sufficiently above world rates to attract foreign money in considerable volume. In fact, however, the inflow—reckoned in tens, not hundreds, of millions of pounds—has not been large in relation to the normal turnover of the international money markets, even before the recent moderate rise in New York rates. The explanation is that much of the benefit of high rates in London (where money invested in Treasury bills has been earning about 3½%) has been lost in covering the risk of loss on exchange, by purchasing forward dollars at a premium (equivalent to an interest rate of about 1½% a year). The effective margin between rates in London and those abroad has been quite slender, and a slight rise in rates abroad can stop the flow of money.

That the sterling-dollar rate continued to improve after the flow had subsided is evidence that other important forces were operating in the exchange markets. And these forces, by reducing the premium on forward dollars (as they did at the end of April, for the first time in many weeks), can stimulate the flow of money into London again. Indeed, if confidence in the currency could be fully restored it might be considered unnecessary to cover short-term investment by selling sterling forward. The exchange markets are so sensitive that the element of confidence is sometimes overestimated. The recent recovery of sterling has apparently been due mainly to commercial factors; and—though it is still early to judge—it may be the first real evidence that this year's stricter monetary policy is as effective as intended. The increased cost of bank loans and of bills of exchange, and the increased difficulty of negotiating bank loans, is evidently restricting purchases of non-sterling goods by merchants in the sterling area; and the weakening of some commodity prices, which is partly caused by the contraction of the sterling area's demand, is also dissuading merchants from accumulating stock. It can now be seen that the weakening of sterling a few months ago was due partly to abnormal buying of non-sterling goods for stock. Some recovery might therefore have occurred anyway when merchants had accumulated as much stock as they felt was necessary to protect them against import restrictions or monetary stringency. But the monetary stringency, when it became effective, certainly helped to restrain demand for foreign goods.

Various European countries are now short of sterling, and the currency appears to be soundly based, in the region of its official parity with the dollar, for some weeks or months. But the situation can change again when accumulated stocks of imports have been used; and the continuing growth of production and trade, especially in Britain, hastens the sale of these stocks. The policy of monetary stringency will be more severely tested when it is no longer possible to delay buying non-sterling goods (in so far as they are freely importable) without reducing turnover. Some observers believe that another supporting factor will become operative in the meantime. Convertibility has come under discussion again, and there is a growing belief that if the Conservatives are returned to power in the general election of 26th May they will proceed more rapidly than in recent months towards full convertibility of sterling. As that belief gains ground, foreigners will be willing, as they were a year ago, to move their balances to London in advance of convertibility. It is widely believed that the persistent weakening of sterling late last year was due partly to withdrawal of foreign funds that had been moved to London in the false expectation that sterling would soon be convertible. If money is moved there again for the same reason, it will assuredly be moved out again if, again, the expectation proves false. The British Government (which will certainly not be opposed in this respect by the other Governments of the sterling area) will probably be willing to take some risk rather than let another favourable opportunity pass by.

Naturally, the sterling area would not move out of step with the other countries concerned. But Continental (especially German) pronouncements have lately suggested a more positive attitude to-

wards convertibility. The report to the Council of Ministers of the Organisation for European Economic Co-operation, by the experts studying the European Payments Union, has recommended changes—especially an increase in the proportion of gold required for settlement of the monthly deficits, and a post-EPU fund for supporting the weaker convertible currencies—which are clearly tending in the direction of convertibility. The British authorities have not stated publicly whether they are prepared to risk convertibility at fixed exchange rates or would require a flexible, or "floating", rate to take the strain from the gold and dollar reserve in difficult periods, but it is understood that official British opinion has moved recently in favour of the flexible system. In this respect the British show less confidence than the German and Netherlands authorities; but the difference, though not unimportant, is not serious enough to check progress if the leading countries are agreed on the principle of convertibility. British ideas are still necessarily fluid, and (apart from the election) it will be the behaviour of sterling in the coming months that crystallises them.

INDIA'S STEEL PLANS

INDIA'S steel development programme is, as the *Economist* commented in a recent issue, of "formidable proportions, compared either absolutely or proportionately with the plans of any steel industry in the world". After controversy about the feasibility of attaining a six-million ton target by the end of the second plan, the draft schemes on industrial development submitted to the Planning Commission fix the target at five million tons of finished steel, which would be the equivalent of over six million tons of ingot. The panel of economists and the Commission's experts are said to approve of this target. To reach this level of production within five years, from the present level of 1,600,000 ingot tons, involves a programme of spectacular dimensions that must call for the most exacting effort. In financial terms, it means an expenditure of Rs. 425 crores or 30.4 percent of a total planned outlay of Rs. 1,400 crores on industries and mining in the second plan.

Of this production target of six million tons, the new units in the public sector are to account for half. The production capacity of the existing units is 1,600,000 million tons which is to be raised to 3,000,000 tons by the second plan period, through a programme of modernisation and expansion at Tata and extension to the plant capacity of the Indian Iron and Steel Company. The Bhadravati Iron and Steel Works at Bangalore, a State-owned plant is to increase its production to 100,000 tons of finished steel from its present capacity of only 25,000 tons. Of the new public units the one at Rourkela, designed initially for half a million tons, is being refashioned for one million tons. The Russian plant in Madhya Pradesh will be of similar capacity and it is presumed that the British plant, which is still under negotiation, will have a capacity of one million tons.

The Government of India is said to be unwilling to accept the British plant on credit at a higher rate of interest than the Russians will charge, unless the cost of production compares favourably with the German and Russian plants. If that is to be possible, either Sindri or Durgapur must be the site and the British mission has chosen Durgapur because of certain extra advantages. Calcutta is the chief market for finished steel and the location of the new plant in Durgapur will ensure that the steel produced here will be competitive with that from the other two plants. It will also minimise the haulage problem because of the comparative nearness of the sources of raw materials. The economic case for Durgapur is thus strong and it is to be hoped that the Government of India will appreciate the arguments of the British mission. It is also to be hoped that the mission will prepare its project report as quickly as possible.

One cannot but refer back to Mr. Krishnamachari's statement on the feasibility of the target. Despite the official explanation that Mr. Krishnamachari was referring to finished steel production and not to ingot output, the point he raised on the haulage problem remains unanswered. He is reported to have stated in Parliament that to produce 4.5 million tons of steel, about 36 million tons of other materials would have to be hauled and that posed a problem which was baffling "the best brains in the country". It is not known if the brains that have produced the draft schemes have found a way out. It will be interesting to know from the draft second five year plan, which is likely to be published in September this year, how this "baffling" physical limitation is to be overcome. Finally the aspect of India's steel plans that comes in for least discussion is the economy's ability, even in 1960, to absorb so much steel. The planners are convinced that India "needs" so much steel—which in one sense she obviously does. But whether her industries will be able to buy and process so much is a separate question altogether.

CURRENT COIN

Fears of Private Enterprise.—Mr. V. Rangachari's presidential address to the seventeenth annual general meeting of the Madras Stock Exchange Association was not only a review of the major economic events and the performance of stock exchanges in the country during the past year, but it was reflective of the mood of uncertainty and suspense which beset business psychology today. The creation of a welfare state, Mr. Rangachari conceded, was a worthy ideal, but its practical implementation was complex and had implications that would clearly "fetter" the stock markets. The private sector has nevertheless been given an important place in the second five year plan. Of the proposed total outlay of Rs. 5,500 crores, investment in the private sector is placed at Rs. 2,500 crores or Rs. 500 crores annually. Referring to this, he stressed the difficulty of obtaining finance and was not optimistic that this large sum could easily be found under the existing conditions of the capital market. Nor did he think that the Industrial Development Corporation and the Industrial Investment and Credit Corporation were in themselves enough to solve the problem of investment. They were merely short-term "expedients", he said, and he pleaded for long-range reliefs in the shape of reduced direct taxation to the investing class. As a specific example of the harmful effects of direct taxation on enterprise he mentioned the case of agricultural income-tax on plantation companies. These companies had no depreciation reserves unlike industrial companies to undertake rehabilitation or extension of planting areas and the heavy taxation of their net profits can only mean a gradual decay of the plantation industry. The exemption allowance for replanting purposes at 2½ percent of the expenditure per acre for rubber and 1 2/3 percent for tea at the maximum was grossly inadequate.

A Banker's Optimism.—A generally optimistic view of the future of the Indian economy was taken by Mr. S. P. Jain in addressing the shareholders of the Punjab National Bank as chairman. He based his optimism on the present trend of growth in the Indian economy which had regained its equilibrium after years of inflationary pressure and disturbed conditions. With the Government's economic and social objectives, he was in agreement. "The common aim", he said, "is to create wealth and ensure its equitable distribution. The Avadi Resolution on the socialistic pattern of economy is in accord with the common objectives." But the difference lay in the emphasis as to the order of priorities, and in the method of going about the agreed task. To provide the common man with increased economic opportunities was a reasonable goal and Mr. Jain said he believed in the possibility of full employment in India. The best way to attain it was by way of increased productivity, which both the public and private sectors should aim at. Mr. Jain stressed in this connection that the principle of private profit should not be decried since profit was the reward for performing a socially useful function, creating more wealth. He called attention to confused thinking and conflicting policies on economic matters, particularly where private enterprise was concerned, and pleaded for a clear lead. Mr. Jain added: "Capital formation need not wholly arise through restriction on consumption, and in India during the last three years while consumption expenditure has risen by about 9 percent capital formation has approximately doubled. . . . What is required in our country is large-scale development to create more employment giving more purchasing power to the people to stimulate consumption." Greater employment was one of the principal means of increasing purchasing power. Mr. Jain suggested that a positive correlation between employment and investment was possible if the pattern of investment were suitably chosen, and for a banker he ventured the rather unorthodox opinion that "the primary criterion for any project at present, economical or otherwise, should be the amount of employment it creates", because it would be a tremendous psychological factor in inspiring people to the gigantic task of national construction.

U.S. Cotton to Aid Pakistan.—The ingenious scheme whereby surplus U. S. cotton should be bartered with other countries so that Pakistan might derive the benefit in the form of cloth which does not compete with the products of its own expanding cotton industry, to which we made reference recently, appears to be running into a number of snags. The general idea was that the countries supplying the cloth which Pakistan needs would receive payment in the form of United States raw cotton. Textile producers in both Asia and Europe are eligible to take advantage of the scheme, and it is understood that several British interests have already submitted details of their piece-goods, within the range recently exempted by Pakistan from the import licensing prohibitions, for approval, including sarees, canvas, furnishing fabrics, umbrella cloths,

sateens, gaberdine and cotton flannel of lower counts. The difficulties of working the scheme, however, are now becoming apparent. The United States policy that cotton granted from its surplus for aid purposes should be additional to the receiving country's requirements and not merely a replacement of cotton that it would have taken in any event, prevents much juggling with the terms. These might be fairly straightforward for a spinner, who would be agreeable to taking cotton in payment for his yarn, but a merchant would presumably expect to be recompensed in a more conventional medium. Details of prices and qualities have to be thrashed out and, as they would presumably have to satisfy the authorities, final approval might be long delayed. Those interested have not despaired, however, and the problems are under discussion. In spite of its involved procedure British exporters find much to commend in this barter scheme and though it is not the way in which they would prefer to do business it is a way in which much trade with Pakistan has been done by other countries in the last few years, and they realise that even unconventional means may be necessary to try to restore the position of British high-quality cotton fabrics in this formerly important market.

Colonial Development Corporation.—The Colonial Development Corporation is assisting in financing 56 projects in colonial territories to supplement what is already being done by private enterprise and by colonial governments, states the Corporation report for 1954, just published in London. Seven new projects were started last year in association with experienced private enterprise, and further possibilities of local and commercial participation are continually being sought. Financial results show a considerable improvement on the previous years. Of the 56 projects, 20 are in the Caribbean area, six in the Far East, 11 in East Africa, 14 in Central Africa, and five in West Africa. Mr. H. N. Hume, Deputy Chairman, presiding in the absence of the Chairman, Lord Reith, explained that fundamentally the Corporation was called upon to assist in the financing of enterprises which private capital might not be sufficiently adventurous to undertake but which, after close investigation, showed they would or could be of benefit to the local economies of the countries concerned. He said the tone of the report had changed, the turning-point been reached, and a more forward-looking policy been introduced. Following a period of retrenchment, having learned that it was inadvisable to go too fast, they were proceeding with projects which presented most promise of being fundamentally sound. "You will find the report wears a new look and bears a better look than any we have hitherto produced," said Mr. Hume.

World Bank's Progress.—The International Bank for Reconstruction and Development reported a net income of \$18.6 million for the nine-month period ended 31st March, 1955, compared with \$15 million for the corresponding period ending 31st March, 1954. This income was placed in the Supplemental Reserve against Losses on Loans and Guarantees, and raised the Reserve to \$115.4 million. Loan commissions amounted to \$9.9 million and were credited to the Bank's Special Reserve, increasing that Reserve to \$58.9 million. Total reserves on 31st March, 1955 were \$174.3 million. Gross income, exclusive of loan commissions, was \$43.8 million compared with \$37 million for the corresponding period in 1954. Expenses, including interest on bonds and expenses of bond issuance, totalled \$25.2 million. During the nine-month period, the Bank made 13 loans totalling \$254.4 million in Austria, Australia, Belgium, British East Africa, Ceylon, Colombia, El Salvador, Finland, India, Mexico and Peru. These loans increased total loans signed by the Bank to \$2,168.9 million. Disbursements on loans were \$188.7 million, bringing total disbursements to \$1,594.2 million. Principal repayments received by the Bank amounted to \$120.6 million, which included \$113.1 million of prepayments made on loans to the Netherlands and Iraq. Total principal repayments to the Bank, including prepayments, were \$137.1 million on 31st March, 1955. In addition, \$56.4 million of borrowers' obligations which had been sold by the Bank were paid on or before maturity. During the period the Bank sold or agreed to sell \$63.3 million principal amount of loans—\$62.5 million without the Bank's guarantee and \$800,000 with guarantee. On 31st March, 1955, the total of loans sold or agreed to be sold amounted to \$168.1 million, of which \$109.6 million were sold without the guarantee of the Bank. The total of Bank bonds outstanding on 31st March was \$839 million. During the last quarter, the Bank redeemed \$10 million of the 2½% Serial Bonds of 1950. Can. \$700,000 of the 4½% Ten Year Canadian Dollar Bonds of 1952, and Sw. Fr. 3.5 million of the 2-1/2% Swiss Franc Serial Bonds of 1950. In March, 1955, the Bank agreed to sell Can. \$15 million of 3-1/4% Ten Year Canadian Dollar Bonds dated

1st April, 1955, with settlement arranged for 19th April, 1955.

Charter for I.F.C.—The charter of the proposed International Finance Corporation, which will encourage the growth of productive private enterprises, particularly in the less-developed areas of the world, was sent on 14th April to the 56 governments which are members of the International Bank for Reconstruction and Development. Governments desiring to join the new organisation may now take whatever legislative or other action that may be required to accept membership and to subscribe their respective share of the I.F.C.'s capital. The new Corporation will be an affiliate of the International Bank, whose Board of Executive Directors have spent several months drafting the proposed charter, or Articles of Agreement, together with a memorandum explaining the main features of the Corporation, and have approved them for submission to governments. Membership in the Corporation will be open to governments which are members of the International Bank. The Corporation will have an authorised capital of \$100 million and will come into being when at least 30 governments have subscribed a minimum of \$75 million to its capital. The United States would be the largest shareholder in the Corporation, with a subscription of \$35,168,000. The United Kingdom would be next largest, with \$14,400,000. The Corporation will make its investments without governmental guarantee, and will be authorised to make both fixed interest loans and investments of other kinds. The I.F.C.'s charter gives it more latitude in financing private enterprise than has the International Bank, which may lend to private borrowers only with a governmental guarantee and may make only fixed-interest loans. The Corporation will have authority to invest in any kind of productive private enterprise, including agricultural, financial and commercial undertakings; but its main emphasis is likely to be on industry. In addition to its financing operations, the I.F.C. will serve as a clearing house to bring together investment opportunities, private capital and experienced management.

Progress of SUNFED.—The committee of experts appointed to draft advisory recommendations on the creation of the proposed Special U.N. Fund for the Economic Development of less-developed countries (SUNFED) has reached the conclusion that the establishment of the Fund need not necessarily be delayed until the sum of \$250,000,000 for its financing has been pledged by at least 30 countries—the condition laid down by the original group of experts which first formulated plans for the Fund in 1952. The purpose of the Fund would be to provide grants, or long-term, low-interest loans for the development of the countries concerned. After hearing a report by the Special Rapporteur for the Fund, Raymond Scheyven of Belgium, the General Assembly at its ninth session recommended that the Fund be established "as soon as practicable". It also advocated the appointment of the special eight-member committee to advise M. Scheyven of further action. The committee has been meeting in private with M. Scheyven at U.N. Headquarters in New York for the last three weeks. The findings of the experts were not immediately made public, and it is expected that M. Scheyven will include them in the report he is to submit to the Economic and Social Council this summer. However, an authorised press release, issued at the end of the season gave some indication of the ground which was covered. The recommendation on the establishment of the Fund, it said, was made in the light of comments received from governments, and also in consideration of the information gained during M. Scheyven's visits to a number of countries last year. As well as discussing the financing of the proposed Fund, the press release noted that the experts worked out a possible organisational structure under which the activities of SUNFED would be co-ordinated with those of other international organs concerned with technical aid, such as the International Bank for Reconstruction and Development and the Technical Assistance Programme of the United Nations and its Specialised Agencies. The proposed arrangement envisages a Director-General, who would be the administrative head of the Fund, a General Council, consisting of all the Fund's member countries, an Executive Board, on which industrialised and less-developed nations would have equal representation, and a Joint Committee composed of the Director-General, the Secretary-General of the United Nations, and the President of the International Bank. The Joint Committee would arrange for the Fund to receive the technical services of the Secretariats of the U.N. and the Bank. The experts devoted the first week of their session to a general study of the problem before them. During the second week discussions were held with representatives of the U.N. Secretariat, the Bank, and the U.N. Technical Assistance Board, and during the third week recommendations were drafted. Now that the session has ended, M. Scheyven is preparing to leave on a second round of visits to various capitals.

PROPOSED REVISION OF AGENCY SYSTEM SELECT COMMITTEE'S REPORT ON COMPANY LAW

(FROM OUR NEW DELHI CORRESPONDENT)

THE report of the Joint Select Committee on the Bill to amend the Indian Companies Act was presented to the Lok Sabha on Monday. The Select Committee has urged the Government to take early steps for the enactment of the Bill into law. According to lobby reports, the next Session of the Lok Sabha will commence on Monday, 18th July.

The Select Committee has suggested the creation of a special department in the Central Government to deal with company law and allied matters, such as stock exchanges, the control of capital issues, insurance and banking companies.

The provisions of the Bill relating to managing agents have been considerably amended by the Committee. It has divided all joint stock companies into two broad categories: scheduled and non-scheduled companies. The amended Bill lays down that the term of office of managing agents, "if it does not expire earlier, shall expire at the end of three years from the date specified in a notification by the Central Government, which shall also specify the class or description of industry or business to which that notification shall apply, or on 15th August, 1960, whichever is later." The company shall not re-appoint or appoint the same or any other managing agent, and where any such company has no managing agent on the specified date or where it is incorporated on or after that date, it shall not appoint a managing agent.

In other words, the target date for the abolition of the managing agency system in scheduled companies is 15th August, 1960. In respect of any other company, unspecified in the schedule, "a managing agent shall not be appointed or re-appointed—

- a) except by the company in general meeting; and
- b) unless the approval of the Central Government has been obtained for such appointment or re-appointment.

The Central Government shall not accord permission unless it is satisfied—

- a) that it is not against the public interest to allow the company to have a managing agent;

- b) that the managing agent proposed is, in its opinion, a fit and proper person to be appointed or re-appointed as such, and that the conditions of the managing agency agreement proposed are fair and reasonable; and
- c) that the managing agent proposed has fulfilled any conditions which the Central Government require him to fulfil.

Maximum of Ten Companies

After 15th August, 1960, no person shall hold office at the same time as managing agent in more than ten companies. Where a person holding office as managing agent in more than ten companies before that date fails to comply with sub-section (1), the Central Government may permit him to hold office as managing agent with effect from that date in respect of such of those companies not exceeding ten in number, as it may determine. In calculating the number of companies of which a person may be a managing agent, the following companies shall be excluded:

- a) a private company which is neither a subsidiary nor a holding company of a public company;
- b) an unlimited company;
- c) an association which does not carry on business for profit or which prohibits the payment of a dividend.

Where the managing agent of a company is not an individual, each of the following persons shall also be deemed to hold office, or to be or to have been appointed, as managing agent of the company, for the purposes of this section—

- a) where the managing agent of the company is a firm, every member of the firm;
- b) where the managing agent of the company is itself a company, every person who is a director, the secretaries and treasurers, or a manager of the latter company, and every member thereof who is entitled to exercise not less than 20% of the total voting power.

A transfer of his office by the managing agent of a company shall not take effect unless it is approved both by the company in general meeting and by the Central Government.

Any agreement made by a company with its managing agent after the commencement of this Act shall be void in so far as it provides for succession to the office by inheritance or devise.

Where the office of the managing agent of a company is held by an individual at the commencement of this Act and the managing agency agreement provides for succession to the office by inheritance or devise, no person shall succeed to the office on the death of the holder unless the succession of such person is approved by the Central Government; and the Government shall not accord such approval unless, in its opinion, such person is a fit and proper person to hold the office of managing agent of the company.

Change in Constitution

Notwithstanding anything to the contrary contained in any other provision of this Act, where the managing agent of a public company, or a private company which is a subsidiary of a public company, is a firm or body corporate and any change takes place in the constitution of the firm or body corporate, the managing agent shall cease to act as such on the expiry of six months from the date on which the change takes place or such further time as the Central Government may allow, unless the approval of the Central Government has been accorded before such expiry to the changed constitution of the firm or body corporate. For this purpose a change in the constitution of a body corporate means—

- a) its conversion from a private to a public company, or from a public to a private company;
- b) any change among the directors or managers of the corporation, whether caused by the death or retirement of a director or manager, the appointment of a new director or manager, or otherwise;
- c) any change in the ownership of shares in the body corporate or in the case of a body corporate not having a share capital, any change in its membership.

Where a managing agent is a body corporate (other than a private company) the shares whereof are for the time being dealt in, or quoted by, a recognised stock exchange, no change in the ownership of the shares of the company shall be deemed to be a change in its constitution within the meaning and for the purposes of Sub-section (1), unless the Central Government, by notification in the Official Gazette, otherwise directs. Provided that no such notification shall be issued in respect of any company, unless the Central Government is of opinion that any change in the ownership of its shares has taken place or is likely to take place, which has affected or is likely to affect prejudicially the affairs of any company which is being managed by the managing agent.

Secretaries and Treasurers

The Committee have no wish to make changes in the system of "secretaries and treasurers" who ordinarily exercise much the same functions as "managing agents" or "managers" but with this vital difference, namely, that "secretaries and treasurers" have no right to appoint any of their nominees to the directorate. The system is free from most of the abuses to which the managing agency system has unfortunately been subject. The Committee consider it very desirable to give statutory recognition to the system of secretaries and measures, laying adequate emphasis on the safeguards subject to which alone the office can be held. The definition of "secretaries and treasurers" makes it clear that only a firm or body corporate can hold that office, but that in other respects, "secretaries and treasurers" should fulfil all the requirements of the definition of "managing agent". Provision is made in clauses 378 to 383 for the appointment, functions and powers, and remuneration of secretaries and treasurers. "Secretaries and treasurers" cannot be appointed when there is a managing agent (proviso to clause 378). The Government will have no power to notify that there shall be no secretaries and treasurers in companies engaged in particular classes of business (clause 380). Their remuneration will be subject to a maximum of 7½ percent as against the 10 percent fixed for managing agents (clause 381). Secretaries and treasurers cannot be appointed as selling or buying agents either by the articles or by the agreement entered into by them with their companies but only by the Board of directors and to the extent determined by the Board (clause 383).

GOODS TRAFFIC THROUGH EAST PAKISTAN

The first goods train to move from India via East Pakistan since the through goods traffic over that route was suspended in December 1949, left Calcutta last Friday. The train carried rice, salt, sugar, cement and other consumer goods booked to stations in North Bengal and Assam. An agreement to resume through goods traffic via East Pakistan was reached after a conference between the Railway and Customs officials of India and Pakistan which was held in Calcutta on 4th April. The agreement was recently ratified by the Governments of the two countries. The booking of this traffic opened in Calcutta two days before the train's departure. Under the present arrangement, the traffic will be planned and regulated by the Director, Rail Movements, Calcutta, and it will be sponsored by those authorities who sponsor the traffic over the Assam Rail link route. An Assistant Director of the Railway Board, posted at Santahar (East Pakistan), will supervise the diversion and transhipment of the traffic to and from Assam and assist the Customs officials at Santahar. The Pakistan Railway has agreed to grant a rebate of 30 percent over its existing freight rate on commodities moving on the Pakistan route.

A DITCHER'S DIARY

MR. S. P. JAIN's announcement that the Punjab National Bank is going to take an interest in hire purchase will be well received by both consumers and manufacturers. The Punjab National is the most vigorous child of Indian banking, and it is not surprising that it is casting about for new ways to use its great and growing resources. By setting up a special department to deal with credit for instalment buying it has chosen a field of activity that is almost virgin in India, but in which there is ample instructive precedent in Britain and the United States. Buying a houseful of goods on the "never-never" is thought rather funny in Britain, at least by those members of the upper middle class who can afford to pay cash, and in America there are many jokes about the worker who is stoney broke two days after pay-day because he has paid all his wages out in instalments on his "automobile" and furniture. But in modern Western society where young men are prevented by military service from earning money before they are well into their twenties, by which time they are expected to get married, the never-never is the only way young people can make a decent beginning with a home of their own. Frankly, it is a way of reconciling biological and economic necessities. These factors are not so important in India, but in a society that wants to make expensive things like motor cars but also wants to limit incomes, hire purchase is the only answer. Mr. Jain said he thought this line of business was "quite profitable", and experience abroad supports him. This is because the hire-purchase companies have a very low bad-debt ratio, despite the extent to which some people on low salaries avail themselves of the service. In the United States, even after the depression of the thirties, the bad-debt ratio was only 1½ percent, and in Britain it is about ½ percent. Yet the interest rates charged would be justified by a much worse debt experience. Consumer instalment credit in the States today is around \$139 per head of population, and in Britain about £8 per head. If the Indian figures get to anything near that level, the Punjab National is going into big business.

It had to come, of course, but there will probably be many who will deplore the fact that the brewing of tea will no longer be an art, nor the drinking of it a ritual. Mechanisation has caught up with tea-making in the same way as Espresso did with the preparation of coffee. At the Tea Centre in London at the moment a young man in an Old Etonian tie demonstrates to an interested audience how the simple pressure of a cup against a lever fills that cup with freshly made tea, complete with a suitable amount of milk, but without sugar. The machine produces 225 cups before it needs refilling, and as soon as 210 have been dispensed, a warning bell reminds the operator—who meantime may have been busy doing something else—that fresh tea and milk supplies are needed. There is nothing new in the brewing of tea in bulk—the samovar and the canteen bulk infuser have done that for years. What is new is that fresh boiling water is used for each cup of tea. As one cup is drawn off, another is being brewed in readiness for the next pressure on the lever. The main purpose of the machine is to cater for the needs of industrial canteens, large offices, railway stations and the like, where the usual standard of brewed tea gives much cause for dissatisfaction. On the other hand, if you happen to be one of those misguided people who prefer milky tea, or tea strong enough to hold a teaspoon erect, you will still be dissatisfied for the press-button method will give you only a standard product.

Mr. K. C. Mahindra, who declares that he does not "belong to the gloom and doom tribe of businessmen", usually takes the opportunity of the

annual meeting of his Indian Aluminium Company to publish a year's reflections on the economic scene. They are generally lively, because Mr. Mahindra does not shrink from disagreeing with anyone—even on occasion with himself. This year he aptly quotes Lenin in support of the business man's case for capital accumulation and higher labour productivity: "I only wish he had gone further and quoted Stalin on the 'rotten bourgeois idea of equality'". He suggests that the dispute about labour-intensive and capital-intensive production methods be resolved by the Government taking on the labour-intensive jobs like slum-clearing, roads and irrigation, while private industry undertakes investment where modern efficiency is more important than increased employment. Mr. Nehru might think that this sounds like the view he attacked lately in Delhi: that the Government should "stick to parks and water-works" while big business does all the interesting jobs. Even if it does, I suspect that Mr. Mahindra is right and that Mr. Nehru's sarcasm is misplaced. In a country that is largely arid and where living conditions are so poor, a Government need not be ashamed of building "parks and water-works". Some of our water-works, like the Damodar Valley and Bakhran Nangal, are respectable tasks for any Government, while the slums that so shocked Mr. Nehru in Kanpur and Bombay would be the better for a few parks. But then all economic thought in this country today, whether in the public or private sector, is misdirected toward the bright shiny things: thus we all worry about cars and ships and jet planes while we let the coal industry go to rack and ruin. Parks and coal-mines are disgracefully old-fashioned—but maybe we are too modern for our own good.

Have you ever stopped to consider whether your office chair helps you or hinders you in your work? Apparently it can do one or the other, according to "physiological and anthropometric studies" in sitting positions. This is especially true if your work involves "reading and referring to records, with writing and mental calculations." Four U.K. Government Departments, the Federation of British Industries, and scientific and commercial bodies all co-operated with the British Standards Institution in a search for the ideal office chair. The results have been embodied in a standard for office chairs just issued. This lays down, first, that all chair seats shall be padded, detachable, and covering material must produce the minimum "shine" on clothes. Second comes the finding that most office chairs are at present too high. The Schools of Anatomy at the Universities of Oxford and Birmingham found that 50 percent of women and 30 percent of men are uncomfortable in the 17½ in. to 18 in. chairs in common use. The ideal chair, it says, should have a seat 16 to 17 in. wide and 14½ to 16 in. from front to back placed at a level 16½ to 17½ in. from the ground. The backrest must also conform to certain heights, widths and angles, while for typists a seat adjustable over a range of 4 in. is specified, with the lowest height from the floor not more than 16½ in. What are referred to as "special type chairs" such as those with arm rests which may be required by executives" are not covered by the new standard, but the burra sahibs need not despair for the Institution has stated that it is considering a further standard for armchairs and revolving chairs.

An entry in this Diary a short while back made reference to the Pensions (India, Pakistan and

Burma) Bill and its application to Indian Service pensioners living elsewhere than in the United Kingdom. The Bill has apparently been misunderstood by some pensioners, so the Commonwealth Relations Office's Public Relations Officer, Mr. A. H. Joyce, has issued a letter to the Press to remove any misunderstanding. Mr. Joyce writes: "It is clear from many inquiries that have been received that some Indian Service pensioners have formed the erroneous impression that the intention of the recent Pensions (India, Pakistan and Burma) Bill was not merely to provide for the transfer of the administration of Indian pensions from the Governments of India and Pakistan to the Commonwealth Relations Office but also to result in a general rise in their pensions. I am asked to make it clear that this is a complete misapprehension. Mr. Dods-Parker made the position clear in introducing the Bill in the House of Commons. In particular, he said in his closing speech on the second reading, 'I would not like to give the House a feeling that there was any suggestion in the Bill which would commit any future Government to give increases in pensions.' On the other hand, the United Kingdom Government has already, from United Kingdom Government extended the benefits of the Pensions Increase Acts of 1947, 1952 and 1954 to all comparable pensioners of the India, Pakistan and Burma Governments living in the United Kingdom, and to certain classes of such pensioners living elsewhere. So far as further statutory authority is required for the grant of these benefits, it is conferred by Clause 3 of the Bill."

One of the changes the Select Committee has made in the Company Law Amendment Bill is said to be aimed at enabling employees more easily to buy shares in the firm they work for. To judge from the prominence with which the daily Press reported this dispensation, it is popularly regarded as a progressive move. I quite fail to understand why. That members of the working class or of the salaried classes should be encouraged and assisted to buy shares in Indian industry is certainly a very good thing, though there will be groans from the Left that the workers are being turned into a lot of little capitalists. (There will also be groans from the Government's small savings people that money is being diverted from State coffers.) But buying shares in industry is one thing; buying shares in one's employer's company is quite another. Why should the workers be expected to follow a different investment policy from their richer fellow-citizens—who certainly do not choose their investments on sentimental grounds, or for the insufficient reason that they happen to be connected with a particular firm. If you are going to take a risk with your money on industrial equity, you buy the best share you and your broker can decide on—and we do not all have the good fortune to be working for companies whose shares are a blue chip in the stock exchange.

I wrote here a few years ago about a perfectly true case where directors of a company sold shares to their workers at the fair price of six shillings each. A few months later, the shares had dropped to half-a-crown. The union sent a deputation up to the board to say: "We think you're a bunch of crooks". So the directors offered to buy the workers out at five shillings per share, and the offer was gratefully accepted. Six months later the shares went to fifteen shillings. The union sent a deputation up to the board to say: "You're just a bunch of crooks, like we said". The board decided that it was not a good idea to sell shares to employees.

Our City Cable

UNCERTAIN CONDITIONS IN THE STOCK MARKETS

GILT-EDGED AND INDUSTRIALS RULE WEAK

London, 3rd May. UNCERTAIN conditions prevailed in the stock markets during the past week and under the lead of gilt-edged securities prices lost ground on small but persistent selling coupled with lack of support. A number of favourable influences had little effect in view of the uncertainty created by the forthcoming general election. The renewed weakness of gilts was the outstanding feature and further appreciable falls were recorded following renewed selling. Fears of dearer money again affected sentiment. The industrial market took its cue from the gilts and despite numerous items of good company news prices fell back. Business in industrials as elsewhere was very small and the major movements in prices followed dividend and profit statements.

The improvement in the international situation brought an increase in activity in the foreign market and Chinese bonds in particular were favoured. Japanese bonds also went ahead while Germans and a number of other foreign improvements were selectively firm while dollar stocks lost ground with Wall Street but rallied following the modest recovery at that centre. Gold shares were subdued throughout, but the trend was firm and widespread gains were recorded under the lead of Free Staters. Coppers moved uncertainly. Diamonds were firm. Oils were in demand while rubbers attracted selective buying following recent good dividend statements. Teas by contrast fell back steadily following the fall in the commodity prices and expectations that the fall will continue.

The Money Market

The London money market had a slightly better week generally in financing Government paper. Although they had only a small allotment, bills to pay for credits still remained in restricted supply. However, conditions moved in the market's favour during the early part of the period and loans at one time eased to 31 percent. End-of-the-month influences in the latter part of the period on the other hand brought a return of tighter conditions and higher money rates. There was a further increase in the treasury bill rate last week. Applications for treasury bills amounted to £380,315,000 of which £220 million were allotted at the average rate of 77s 11.45d compared with 77s 10.8d in the previous week. This week £230 million are on offer. The Bank of England return

for the week ended 27th April, shows notes in circulation about £8 million higher at around £1731 million but bankers' deposits about £23 million lower at around £253 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 27th April, shows gold stock \$1 million higher at \$21,671 million. Foreign deposits fell by \$24 million but foreign investments rose to \$37 million. The Federal Reserve sold no Government securities previously held under re-purchase agreements. Member bank borrowings fell by \$83 million to \$486 million, while excess reserves dropped by \$197 million to \$412 million. Daily average borrowings fell by \$42 million to \$654 million, while daily average excess reserves rose by \$36 million to \$462 million. Business loans to the New York city banks rose by \$31 million to \$7,612 million compared with a fall of \$74 million to \$7,922 million a year ago.

Recovery in Sterling

With the return of confidence following the rail strike settlement, sterling was again firm on all centres on Monday. Bear covering produced an appreciable improvement early, but the highest levels were not always held. At one time it touched parity with U.S. dollar before reacting slightly to 279-31/32.

Rubber Market Dull

Trading in the London rubber market lacked feature during the past week with only small movements. Initial steadiness was short-lived due to lack of support and values declined. In the continued absence of demand from factories there was again a tendency for prices to sag and finally landed positions showed a loss of 1/4 to 1/2 a lb on balance. Small Continental inquiries and modest offtake on home account relieved a very slow market for sole crepe, and the basic quotation of 34 1/2 a lb for 1 in smooth No. 1 spot was maintained with difficulty.

Increased Freight Charges to Bombay

Member lines of the West Coast of India and Pakistan-U.S.A. Conference will impose a surcharge of 35 percent on freight and charges on cargo from Bombay on vessels commencing to load there on and after 1st June, the Conference Secretary said. The action was taken because of "very serious" delays at Bombay because of labour and port conditions. The decision might be reconsidered if these conditions improved before 1st June.

Vegetable Oils Decline

Linseed oil was occasionally active during the past week but most of the buying enthusiasm faded and prices of Indian oils now show a fall of 10s on the week with the near position unable to retain the premium. The effect of Russian and French purchases of last week had no longer any

influence and most shipment positions of Indian oils can be had at £91 a ton, c.i.f. in bulk. Further ahead than June-July, offers are on "subject to licence" basis and although attractively offered at times they are finding only scant interest. Rumours concerning castor oil were contradictory but it is believed that there is no likelihood of Indian export duties being reduced. Prices moved up £1 to £2 with business rather casual for BSS April-May.

LONDON TEA SALES RESUMED

DEMAND AND PRICES FALL

THERE were few signs of buyers being prepared to re-enter the market when the tea sale was resumed in London on Monday. At the outset, a few of the better quality invoices sold fairly well, although at about 6d a lb. below the previous level. Otherwise, the bulk of the offerings was neglected and withdrawals were heavy—many without bids. There was no official quotation for Plain Broken Pekoe but some trade quarters suggested 45d as the nominal indication. At the last London Sale on 20th April, Plain Broken Pekoe was nominally indicated at 54d. Offerings totalled 20,794 packages of North Indian and other Miscellaneous teas.

At the auction on Tuesday, 10,256 packages of Ceylon tea were offered which met considerably better demand than Monday's Indian offerings with Fannings the strongest feature. There was good competition for flavour descriptions at prices which showed final losses of generally 1d to 3d a lb. Medium-grown teas were irregularly lower by 3d to 6d while low-grown sorts were not wanted even at greater declines. There was no quotation for Plain Broken Pekoe which at the last sale was quoted at 57d. South Indian teas were very weak and withdrawals without bids were heavy. Offerings totalled 4,236 packages.

Two new directors have been added to the Board of Aluminium Limited Montreal, Canada. The new directors are Field Marshal Rt. Hon. Earl Alexander of Tunis, K. G., P. C., and Mr. M. B. de Sousa Pernes, both of London. Alexander Lord Alexander was formerly Governor General of Canada and Supreme Allied Commander in the Mediterranean theatre during World War II. He is a director of Barclays Bank Limited, London, and the Phoenix Assurance Company Ltd., London. Mr. de Sousa Pernes has served with Aluminium Limited for 20 years, mostly in Europe and more recently in England where, as Chairman and managing director of Aluminium (Canada) Limited, the company's correspondent in London, he has important responsibilities for Aluminium Limited's affairs in the British Commonwealth and Scandinavia.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG & SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT 1949.

We report that we have audited the Balance Sheet of the Indian Branches of the Hongkong & Shanghai Banking Corporation dated the 31st December, 1954 and above set forth and the annexed Profit and Loss Account for the year ended that date with the books and accounts of the Calcutta Branch and the certified returns of the Bombay Branch and have obtained all the information and explanations we have required.

In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank's Calcutta Branch and the certified returns from Bombay.

In our opinion books of account have been kept as required by law.

Calcutta, 25th April, 1955.

Company Meeting

INDIAN ALUMINIUM COMPANY, LIMITED

MR. K. C. MAHINDRA REVIEWS A DISAPPOINTING YEAR

Speech delivered by Mr. K. C. Mahindra, Chairman at the Seventeenth Ordinary General Meeting held in Calcutta on 27th April, 1955.

The year just ended was the second successive year in which the Company has suffered a loss on its operations. This result is no doubt as disappointing to you as it is to me, particularly in view of the fact that the market demand for aluminium in the past year has been relatively good and sales of the Company's products, amounting to almost Rs. 2 crores, were the highest achieved in any year.

As has been briefly stated in the Directors' Report accompanying the audited accounts sent to you the main factors responsible for our not being able to make any profits were the highly competitive market conditions during the greater part of the year and the loss of metal production due to inadequate power supply to the Company's Alupuram smelter.

Until recently, imported aluminium sheets and circles were being offered in India at prices which bore no relation to the level of prices in their respective home markets; for instance, circles from the U.K. were being quoted as low as £222 per ton, and circles from Japan at £215 per ton c.i.f. Indian port. Such prices would hardly cover the full cost of production, and can only be explained in the light of surplus fabricating capacity in their respective countries, and the vital need, in the case of Japan, to earn foreign exchange for its national economy. In the face of this severe competition, the prices that the Company could obtain for its products were quite unremunerative, but with better market conditions are now improving and I look forward to profitable trading conditions during the current year.

However, the outlook for the immediate future must be one of restrained optimism. The aluminium industry is still a nascent industry, and low prices and considerable product development are necessary to win markets which in turn will bring larger and lower-cost production. Our customers may rest assured that we do not seek high prices, but only reasonable prices, and that we look to increasing consumption of aluminium, on the basis of favourable quality, service and prices, as the source of future prosperity for our industry.

At practically every Annual Meeting, I have had occasion to speak on the subject of power supply to our Alupuram Works. I regret having to refer to it again and the distress it has caused us in respect of our past year's operations. Under our agreement with the Travancore Government, power supply should have been increased to 14,000 kW by March 1947, but after long delay and repeated postponements, the Government finally intimated that the additional power would be made available to Alupuram Works from 1 June, 1954. The expansion of the smelter to 5,000 tons annual capacity was accordingly completed by June 1st, but it was not until 18 February, 1955 that full power was made available, almost nine months after the revised agreed date for the supply. This delay in receiving full power supply resulted in the loss of over 1,000 tons of metal production at the smelter, which had to be replenished owing to our commitments by purchases of imported and indigenous metal at considerably higher cost. However, the plant is now operating at full capacity and we are assured that there will be no need for any interruptions in full power supply in the future. I hope this ends the unhappy chapter in our relations with the Travancore-Cochin Government and that future co-operation will not be marred by recrimination over past events.

Expansions Completed

The expansion of the Company's smelting facilities at Alupuram and rolling facilities at Belur, started in 1953, has now been completed. The extrusion plant located near the smelter at Alupuram has also come into operation. The new equipment at Belur can roll coils of lesser thickness and greater lengths, required for the manufacture of foil. Sheet over six feet in width can also be rolled for the needs of the transportation industries. A corrugating machine turns out roofing and siding sheets for pre-fabricated constructions—cellars, offices, storage godowns and grain bins. The extrusion plant at Alupuram is designed to produce a variety of shapes, tubes and sections for structural or architectural applications.

By making aluminium available in an increasing variety of semi-fabricated forms and at the same time providing other manufacturers with technical help so that they can design and fabricate numerous finished products where aluminium can be suitably used, the Company is trying to promote the use of aluminium

in all applications where it has proved its superiority over other materials. It is a pioneering effort, but in this virgin field the potentialities for growth for this young metal are great indeed.

One relieving feature of this year's Finance Bill giving effect to the Central Government's budget proposals, is the provision for a development rebate of 25% of the cost of new plant and machinery installed after 31 March, 1954 which will be deductible from business profits for tax purposes. Particularly welcome to us is the fact that the Company will obtain this benefit for the entire plant and machinery involved in the recent Alupuram and Belur expansions. The Government has also under consideration the recommendation of the Taxation Enquiry Commission for a tax-holiday for six years for certain industries of national importance, and if this proposal is accepted and the concession extended to the aluminium industry, it would constitute a substantial encouragement for further expansion of production facilities which are still quite inadequate for the country's needs.

During the past year, the project to build a smelter at Hirakud has been under active consideration, and your Directors have had consultations with the major shareholders in regard to its financing. The complex issues involved require further examination before a decision can be reached, and in the meantime, the position in regard to the date when adequate firm electric power will be available from the Hirakud power stations will also have been clarified.

In my address to you last year, I stated that the problem of chronic and enforced idleness amongst millions in this country cannot be resolved unless we adopt long-term measures for restricting the birth rate. Too many mouths to feed will remain a standing which all our plans are directed.

Unemployment and Productivity

During the year, the Finance Minister prescribed the goal of providing 12 million new jobs by 1961 but did not tell us how to reach it. It cannot be too strongly emphasised that unemployment remains a direct coefficient of the productivity of the nation. While in the matter of population, this productivity needs to be restrained, in the matter of work, every effort should be exercised to make people work more intensively if we are to arrive at a sensible solution of this chronic problem. Today, the average American though he works 15½ fewer hours, has roughly 50% more purchasing power than he had 25 years ago. This remarkable advance is almost entirely a result of the fact that national productivity which may be defined as average output per man hour, has shown an average increase since 1930 of more than 2% a year. The most important requirement for increasing productivity is the "will to realise it—not only the desire for it but the hope for it and the optimism about it—packed by resourcefulness and inventiveness and coupled with the willingness to sacrifice to accumulate capital". I am tempted to give a quotation:—"In the last analysis, productivity of labour is the most important, the principal thing for the victory of the new social system. Capitalism created a productivity unknown under serfdom". In our present tolerant receptive mood for things and ideas flowing out of the Russo-Chinese zones, I commend this quotation from the pen of Nicolai Lenin.

In the adoption of modern technological methods of production what do we find in actual practice? The call for support of handicrafts and cottage industries comes from various quarters, but I do not see there any recognition of the fact that efforts in this direction have so far been clouded with the illusion of primeval simplicity and provide support for backwardness and inefficiency. We seem to be skidding back in time. Even the Prime Minister has stated, perhaps in an unguarded moment that "we could remove the unemployment problem in India today by breaking down all the factories in India". He added, however, that although everybody will be working, their average income will go down and that there will be trouble. Yet some very sincere advocates of what has come to be known as the Sarvodaya theory of economics, have taken issue with the Prime Minister on the statement that the average income will go down. They seem to believe implicitly that the closing of all factories would provide living for a larger number of people and that there would be no shortage in the production of goods and articles. Their theory seems to be that if the factories were to close down, everyone now compelled to remain unemployed, would be inspired to take to some work or other and we would have more production as a matter of course!

The case for intensive industrialisation in India lies in a bare recital of the facts of the situation today. In temperate zones where rainfall is uniform throughout the year, one arable acre will support one person. India has only three-quarters of an arable acre per person and unpredictable rains. By a combination of research and agricultural credit renovations, Japan was able to increase in pre-war years its standard of living cumulatively by 3% every year. This, however, necessitates the development of manufactures side by side in an increasing measure and over the years Japanese economy became a typical export economy in order to sustain the increasing standard of living. Likewise, with similar emphasis on intensive up-growth of our agricultural economy, India would develop her manufactures, inclusive of ever-widening the volume and the sphere of our exports.

Domestic capital formation in India is running about Rs. 20/- per capita or \$4 annually as compared with \$130 for U.K. and \$385 for U.S. Another worthy comparison is the average deposits per head.—In India Rs. 25, in U.K. Rs. 1,636 and in the U.S.A. Rs. 4,493. We have, however, to be satisfied that finance is no problem and we may accordingly ignore this slack. But an important factor which usually escapes the attention of planners is what may be called the consumption element. More and more production is asked for but unless consumption keeps pace, such production will not add to the strength of our economy. Lord Beveridge in his classic thesis on unemployment in Great Britain, has attributed the growth of unemployment, principally to chronic or recurring deficiency of total demands for the products of industry. He comes to a valid conclusion that state policy should be one of socialising demand rather than socialising production. Only recently, our Prime Minister stated that the most important consideration must be what can be done for providing employment because mass production of commodities would not raise the standard of living unless there was mass consumption which means that the mass, as a whole, must have greater purchasing power.

Virtues of Levelling Up

We accordingly come to the theme of social justice. There is a cry for redistribution of wealth and for taking the spending power away from the rich unto the hands of the poor. In the latest fashioning of society into socialistic pattern, the well-known classic method has been preached and partly accepted by the Government, namely, to intercept the flow of wealth before it reaches private pockets. No one appears to have stopped to compare the virtues of levelling up instead of the levelling down which the present socializing process has done.

It still remains true that general purchasing power must increase in order to be able to absorb increased production. It is generally recognised that a more nian liberal treatment of the working class is necessary, but it is not at all necessary to smother the carefully nurtured plant of industrial control in the hope of replacing it by a full-grown tree transplanted from elsewhere.

One fact of the unemployment problem is the maximum utilisation of resources available in the country. Direction no doubt must come from the central planning authority. It is agreed that Government actions, its decrees, its engagements should provide the maximum propulsive push to development, but in the designing of such a movement businessmen can play a leading part and I would like to submit that initiative in this direction should come from individuals—men of experience and knowledge, ungrudgingly and with no personal motives, should come forward to assist. We have the sorry spectacle of Government planners in their zealous search for technical collaboration becoming a ready prey to over-eager talk from questionable interests. For steel we have gone to Russia, for shipbuilding to France, for machine tools to Switzerland—all very amiable arrangements, but Russians are not reputed to have the most modern technology in steel operations, nor the French in shipbuilding, nor the Swiss in machine tools manufacture. Must we import antiquated practices in our haste to instal industrial facilities in the country? Businessmen must take a share of the blame for such happenings and should proceed now to initiate actively the promotion of safeguards for the future. Then again, in the pattern of development isn't it wise for Government to concentrate on projects of the maximum labour-employing type and leave the capital-intensive schemes for private sector to develop? Government has had long experience and has necessary personnel and organisation to develop intensively the housing programme, the slum clearing projects, the roads and communications, the large irrigation and hydro-electric multiple works—all these provide employment to largest number of people, per rupees of investment. To the private sector may be left such schemes where heavy capital investment is involved proportionately to the number of people who will receive employment.

Advising the Government

Full employment is not a ridge but a plateau where there should be considerable room for manoeuvre. Here is where cumulative business experience can be most helpful. I do not belong to the "gloom and doom" tribe of businessmen. If Government in its collective wisdom has restricted the free play of economic forces which we, as businessmen consider detrimental, we should in our turn attempt, honestly and convincingly, to persuade Government of the error of its ways; such should be the democratic concept of behaviour. We have failed to do so because of our sectional interests. Appeals have been made for a closer liaison between Government and private industry. In the present atmosphere no number of advisory or consultation bodies will supplant the honest, true to fact recitals of arguments for or against certain policies and procedures and I suggest that we as men of experience should provide such a service to Government irrespective of whether it is heeded or not. Confidence in the business sector has to be re-generated in Delhi and I submit that through service, service on a national level and inspired by the national ideal, legislators, the vista of our industrial horizon presents a glorious opportunity and all are needed by each one; nothing is fair or good alone" (Emerson).

In conclusion, I would like to express, on your behalf and mine, our appreciation of the loyal services rendered by the employees of the Company during the course of another difficult year.

Company Meeting

THE PUNJAB NATIONAL BANK LIMITED

MR. S. P. JAIN'S REVIEW

The following is the summary of the speech delivered by Shri Shanti Prasad Jain, Chairman, The Punjab National Bank Ltd., Delhi, at the 108th Ordinary General Meeting of the Shareholders held on the 12th day of April, 1955, at the Head Office of the Bank, 8, Underhill Road, Delhi.

The Chairman described the occasion as a momentous one in the history of the Bank for it was on that day, 60 years ago, that a few enterprising patriotic individuals established the Punjab National Bank. Reviewing briefly the history of the Bank he paid glowing tributes to Sardar Dava Singh Majithia, Lala Harkishan Lal, Lala Lajpat Rai, Babu Purushottam Das Tandon, and other Chairmen and Directors who had made valuable contribution in the building up of the Bank.

Commenting upon the audited Balance-Sheet and Profit and Loss Account for the year 1954, Shri Prasad stated that the working capital of the Bank as on the last day of the year was Rs. 91.16 crores which represented an increase of Rs. 11.38 crores over the previous year. Deposits aggregated to Rs. 75.64 crores which showed a gain of Rs. 10.33 crores over 1953. The increase in deposits during the year worked out to 15.82 per cent. as against 10.85 per cent. in case of other Scheduled banks. The percentage increase in the number of depositors during the year worked out to 4.71 as against 3.18 in case of other Scheduled banks. This was a testimony of the growing faith and confidence of the people in the Bank and its management.

Loans at Rs. 32.40 crores were higher by Rs. 6.85 crores as compared with the previous year. The percentage of loans to deposits worked out at 42.83 as against 53.80 in case of other Scheduled banks, which fact showed that the Bank could increase its advances further substantially. The Chairman continued that in order to ensure increased utilisation of Bank's resources in export and import trade of the country, the Foreign Exchange Department of the Bank had been reorganised and expanded.

On the Assets side of the Balance-Sheet the figures indicated a strong liquid position. Assets in cash, bank balances, money at call and short notice, investment in Government and Trustee securities, bills discounted and purchased totalled to Rs. 50,23,67,136 which represented 66.42 per cent. of deposits of the Bank against 55.39 per cent. in case of other Scheduled banks.

Strong Position

Speaking about the profits and their appropriation, Shri Jain said that transactions for the year had resulted in a profit of Rs. 56.86 lacs including a sum of Rs. 3,10,289 brought forward from the previous year's account against a profit of Rs. 41,79 lacs last year. Out of these profits, the following appropriations were made: Rs. 16 lacs for taxation; Rs. 2.5 lacs for contingency reserve; Rs. 40,000 for charity; Rs. 2,47,140 for reserve fund raising; Rs. 92.5 lacs; Rs. 50,000 to staff gratuity account; Rs. 9.5 lacs for bonus to staff and Rs. 10.5 lacs for dividend @12 per cent. per annum to the shareholders. These appropriations left a sum of Rs. 4,99,040 to be carried forward to next year's account.

Speaking about the staff the Chairman said that the staff on the rolls of the Bank numbered 6,265 on December 31, 1954. The establishment expenses for the year amounted to Rs. 1,46,59,993 giving an average of Rs. 2,340 as yearly salary paid per head. This figure for the year 1950 was Rs. 1,951 only. The bonus paid to the staff during 1954 was Rs. 1,50,000 as against Rs. 750,000 in 1953, Rs. 5,48,462 in 1952 and Rs. 3,77,201 in 1951. In order to give improved and quick service to the constituents, modern banking methods were being studied and a training school had been started at the head office of the Bank to equip the staff with better knowledge and broader outlook.

Shri Jain added that the Bank placed at the disposal of its clients a chain of properly equipped safe deposit vaults. There were 94 safe deposit vaults with 40,568 lockers as on 31.12.1954 in different branches of the Bank.

The Chairman disclosed on this occasion that the Bank was shortly constructing a modern six-storied building to house the Head Office at the junction of Parliament Street and Asoka Road in New Delhi.

Avadi Resolution

Making a few observations about the achievements of Indian economy during the last few years, the Chairman said that efforts in various fields of activity had steadied the economic forces and the disequilibrium and inflationary trends that appeared to gather momentum after independence had been rectified as a result of increased agricultural and industrial production. There had been a gradual fall in prices. The contribution made by the private industrial sector in these achievements was commendable. He continued that on objectives there was certainly no difference in this country. The common aim was to create more and more wealth and ensure its equitable distribution. Referring to the Avadi resolution on the socialistic pattern of economy, he observed that it was in accordance with the common objectives. The socialistic pattern envisaged in the resolution did not imply State ownership of the means of production, but an economy maintaining efficiency in productive mechanism; and both public and private sectors working to give to the common man increased opportunities for work and higher standard of living within his life time. If the socialistic pattern did not generate a rate of developmental activity which gave to the community the desired advancement, the common man would consider it as sentimental philosophy. The people should have minimum requirements of living standards and amenities in respect of medical attention and education etc. This was outside the means of existing national income. Our national income had to be multiplied many times for which there has to be tremendous all round activity. As maximum production of goods and services was the need of the times, if the country's advancement would be slowed down, if the rate of doing everything possible to stimulate developmental activity, sluices were built all

that the Reserve Bank would place at the disposal of the nationalised banks was not known and had probably not been worked out. There was also no information about the machinery through and the basis on which the credit would reach the cultivator.

Production Trends

Striking a note of optimism about the future of the country, he said that agricultural production would further go up with the completion of various irrigation projects. Industrial production was also sure to keep its upward trend. Although the rate of increase in production, statistically, compared favourably with the position in foreign countries, he did not consider it satisfactory and sufficient for meeting the expanding needs of our people.

The Chairman was anxious that the Punjab National Bank should provide credit to industry, trade and consumer in a bigger way. The list of securities for loans was proposed to be enlarged so that financial accommodation could be extended to small manufacturers after proper scrutiny of their assets. In the internal market the Bank might finance sales on instalment basis which had proved so profitable and useful to American economy.

He further said that as regards banking habit, the country was indeed backward as compared with other advanced countries. The deposits of our Scheduled banks formed only 78 per cent. of currency in circulation whereas they were about four times of currency in circulation in U.K. and U.S.A. With the improvement in economic prosperity for which efforts on national scale were afoot, further development of banking would surely take place. In this context Shri Jain referred to one or two points from the Shroff Committee report. The first was the desirability of making issuance of cheques on a bank without funds a criminal offence. The second point was that of maintaining the secrecy of bank-customer relations. These points, he felt, should receive the attention of the Reserve Bank and the Government for further consideration. Referring to the order of the Government that the funds of quasi-Government institutions etc. could only be deposited with the Imperial Bank of India, he suggested that the Government should draw a list of approved banks for this purpose instead of prohibiting operations as they had done. Expressing his abiding faith in the economy of the country, he said, "even the most pessimistic must feel optimistic about the future destiny of our country and the material well-being of our people. In this task of building up of our country, may it be the destiny of our Bank to play its rightful part gloriously as it has endeavoured to do during the last 60 years."

Before concluding Shri Shanti Prasad Jain thanked all the constituents of the Bank, Directors of the General Board and local Advisory Committees for their continued confidence and co-operation. Making a special mention of the work done by Shri B. N. Puri he said: "To our General Manager, Shri B. N. Puri, genuine appreciation is due for his zeal, organisational ability and drive. But for his invaluable assistance and the loyal and unstinting labours of the officers and the staff, I would not have been in a position today to report to you as I have done about the increasing strength, stability and prestige of your Bank."

SOME REMARKABLE CUSTOMS PROCEEDINGS

(FROM OUR LEGAL CORRESPONDENT)

THESE are the material facts in regard to what it is perhaps rather an understatement to describe as some remarkable proceedings by the Collector of Customs, Madras.

Messrs. Turner Hoare & Co. Ltd., one of the main importers of diesel engines into this country, and with whom the firm of Lala Gopikissen Gokuldas, from now on referred to as the respondent firm, had dealings, approached a Mr. Phansi, Principal Appraiser, Machinery Department, Customs House, Bombay, and made an enquiry as to whether the National Gas & Oil Engine Company's horizontal engines of O.B. or O.B.S.E. type rated at 20-22 h.p. fell within paragraph 4 of a Ministry of Commerce circular. This circular dated 11th September, 1950, had been issued inviting the attention of importers to the fact that the Government had decided to allow the import of diesel engines falling under serial No. 30 from all sources of import on the basis set out in the said notice during the period July to December, 1950. Paragraph 4 is the relevant clause of the circular for the purposes of this case. It says: "It has further been decided that licences for imports of diesel engines of more than 20 h.p. will be granted freely from all sources." Messrs. Turner Hoare & Co. Ltd. wanted the position clarified as regards engines of the type above referred to rated at 20-22 h.p. and were orally assured that the engines did fall within para. 4 of the circular. Not unnaturally they desired confirmation of this in writing. So on 19th October, 1950 they sent a letter to the Assistant Collector of Customs setting out this oral information. They also stated that these engines of the National Gas & Oil Engine Co. had hitherto been imported as 20-22 h.p. and no alterations in design had been made since the new import regulations. They requested a confirmation in writing to enable them to cable their indents to the makers. This oral assurance was formally confirmed in writing by the department on 15th November, 1950. The oral assurance was communicated by Messrs. Turner Hoare & Co. to the respondent firm and the latter, relying on the assurance, applied for the grant of two import licences authorising them to import diesel engines above 20 h.p. The licences were granted by orders dated 26th October, 1950, and 11th November, 1950 by the Deputy Chief Controller of Imports, Calcutta, to the first licence enabling goods of the value of Rs. 200,000 to be imported while the second permitted the importation of goods of the value of Rs. 600,000. The description of the goods was stated in both the licences to be engines above 20 h.p. Pursuant to these licences orders were placed by the respondent firm with Messrs. Turner Hoare & Co., Bombay, who were the sole agents in India for the products of the National Gas & Oil Engine Co. Ltd., London. The orders, which related to twelve units of O.B.S.E. type 20-22 h.p. were duly accepted and executed by the shipper in the United Kingdom. The goods were shipped to Madras Port and arrived by four steamers on 8th January, 22nd January, 13th February and 16th March, 1951. The respondent firm duly filed five bills of entry for clearing these goods which had been landed from the ships. Nothing was done on the first bill which had been filed as early as 6th December, 1950. So Messrs. Turner Hoare & Co. took the matter up. They sent a letter on 14th February, 1951 to the Assistant Collector of Customs, Madras, enquiring as to the reasons for the delay in clearance: they drew the Assistant Collector's attention to the fact that even before accepting the indent their technical engineer, Mr. Emerson, had visited the Customs department at Bombay and had ascertained and got confirmation from the authorities, that the engines which were the subject of import fell within para. 4, above quoted, of the Ministry of Commerce's notification of 19th September, 1950; and they also enclosed copies of the correspondence already referred to. The respondent firm also obtained through Messrs. Turner Hoare & Co. a certificate from the manufacturers that O.B.S.E. types of engines were rated to develop 22 h.p. maximum when running at a speed of 375 r.p.m. and this certificate was placed in the hands of the authorities. The reaction of the authorities to all this was remarkable. The five bills of entry relating to these 12 units were returned on 19th May 1951 with the remark that there had been an evasion of the Import Trade Control Regulations under the Import & Export (Control) Act 1947, read with the Sea Customs Act, that the goods had been confiscated and stating that they would be released only on payment of varying amounts of

fines ranging from Rs. 2,800 to Rs. 44,500 in respect of the different bills of entry. That meant that the fines payable for clearing would amount to Rs. 70,550, very nearly the full value of the engines; this was later aptly described by the trial judge as "a Draconian fine".

The respondent firm aggrieved by this enormous fine and by the fact that they had been fined at all, applied to the Madras High Court for an order on the Collector of Customs requiring him to permit the clearing of the goods by them without any penalty or fine and subject only to payment of such duties or other charges as might be properly leviable. The case was originally heard by P. Aiyar J. His lordship rejected most of the contentions of the respondent firm but held that as the correspondence clearly established that there was no *mens rea* (i.e., no dishonest intention) on their part, the fine was excessive; and not mildly excessive, judging from the learned judge's observations thereon. Said he: "I am satisfied that the order of the Collector of Customs is not in consonance with right and justice, and so, I must give him a direction which will be in consonance with right and justice. When two other trained Customs Collectors had held that licences to import diesel engines above 20 h.p. would cover the import of diesel engines of 20 to 22 h.p. it is obvious, that, ordinarily, a lay individual like the petitioner cannot be expected to know that it will be contrary to the licences to import such engines. It is a case for a reasonable penalty and not for a Draconian fine equal or almost equal to the value of the engines. This becomes even more reasonable when we remember that the makers and the manufacturers certified that the engines could generate power up to 22 h.p. and it is the maximum power which has to be taken into consideration in such cases for the purposes of awarding punishment."

Proceeding on the above lines his lordship held, first, that a fine of 12½ per cent of the entire value of the engines was a reasonable penalty and fixed this as the sum on payment of which the goods should be released to the importers. It is not surprising that the respondent firm, having been found to have acted both honestly and not unreasonably but nevertheless, substantially fined, should have appealed from the above decision on the ground that they should not have been fined anything at all. And they did so appeal. But what the reader may find really astonishing is the fact that it was the Collector of Customs who launched the original appeal to which the appeal of the respondent firm was a rejoinder. The Collector was of the opinion that he was right and the trial judge was wrong; and the Appellate Court accepted the contention that the trial judge was wrong, but in a sense very different from that which the authorities contended. The report of the appeal occupies some 27 closely printed columns and will repay careful study. We have space here for little more than the actual decision in the appeal.

The Appellate Bench, consisting of the Chief Justice and R. Ayyangar J., said: "We are of opinion that though it is no doubt true that the question whether the engines.....were over 20 h.p. or not is a question of fact, there can be no doubt that these engines are admittedly capable of developing over 20 h.p. It is not stated in the notification that it is the minimum horsepower that would be produced by an engine that determines the class under which it falls. In the absence of such indication we are of the view that an importer ought not to be penalised when, in fact the goods which he imports fall, according to the trade, into a category which are permitted to be imported and that the order of the Customs authorities holding that the goods are not covered by the import licence is not authorised by law."

The Court held that the Customs authorities were not barred from contending that the engines were not over 20 h.p. by the fact that their own expert had been of opinion that they could be freely imported as being above 20 h.p. within para. 4 above quoted. Nevertheless the interpretation of the expert on which the importers had relied completely disposed, the Court held, of the charge that there had been any attempt by the importers to evade the regulations. Moreover the expert's interpretation was "a circumstance which would show that the notification would bear the construction put on it by the respondent and by the trade and in fact should actually bear that interpretation." The Advocate General's contention that the trial judge was wrong in himself imposing what he thought was a proper penalty in place of that imposed by the Customs authorities was upheld. By so doing his lordship was converting himself into a Customs authority. But that did not help the authorities. Even if the regulations had not been complied with the fines could not stand. In imposing them "the discretion.....vested in the authorities has not been exercised at all in any rational or intelligible manner," so that "even if the goods did not fall within the terms of the licence we would have been inclined to set aside these fines on the ground that the discretion..... had not been exercised at all.....But in the view we are taking of the legality of the confiscation it is unnecessary to pursue this matter further." The Court held that the respondent firm was entitled to the issue of orders permitting the clearance of the goods without the payment of any penalty or fine and subject only to the payment of such duties or charges as might be recoverable in due course of law.

The appeal was dismissed and the respondent firm's cross appeal allowed with costs in both Courts.

Collector of Customs v Lala Gopikissen. A.I.R. 42. (Madras) 1955. April, 187.]

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

TIGHT CONDITIONS CONTINUE

Wednesday, 4th May.

MONEY is still in good demand, both locally and uncountry. Advances to the sugar industry are at an extremely high level and there has been an increase in the credit requirements of the grains trade because of poor offtake in a falling market. In these circumstances, it is still too early to speak of an end to the busy season. Money is tight in the Calcutta interbank market where the call rate has hardened further to 3 percent.

There has been more activity in the exchange department where some fairly substantial gunny bills have been seen after a long interval. There is the usual demand for remittance. Sterling has strengthened gradually against the dollar and the local rupee-dollar rate has accordingly moved to T.T. selling Rs. 478-4 per \$100.

Silver declined from the previous week's level of Rs. 169-8 to Rs. 168-8, quoted today, due to profit-taking. The forward rate was quoted lower at Rs. 167-2. The price was unchanged at 75½d. in London and at 87 cents in New York.

In spite of a quiet feeling, gold and the sovereign were unaltered at Rs. 98-8 and Rs. 62-2, respectively.

A further decline of Rs. 5.37 crores to Rs. 1,310.77 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 29th April, 1955, while the total note issue increased by Rs. 40 lakhs to Rs. 1,341.99 crores. Notes held in the Banking Department consequently rose by Rs. 5.77 crores to Rs. 31.22 crores. Deposits of the Government of India fell by Rs. 2.09 crores to Rs. 51.02 crores but other Government accounts rose by Rs. 4.58 crores to Rs. 35 crores. Balances of commercial banks at Rs. 48.66 crores showed an increase of Rs. 35 lakhs. Balances held abroad dropped by Rs. 5.04 crores to Rs. 53.19 crores as did investments by Rs. 2.06 crores to Rs. 41.57 crores. Other loans and advances increased from Rs. 35.15 crores to Rs. 35.45 crores, of which advances to scheduled banks against usance bills improved from Rs. 24.76 crores to Rs. 24.84 crores. These advances totalled Rs. 72.88 crores since 1st January, 1955. Ways and means advances were Rs. 89 lakhs (Rs. 17 lakhs).

Tenders for Rs. 1 crore of three month Government of India Treasury Bills which were opened on Tuesday, 3rd May, 1955, totalled Rs. 1,22,25,000. The average rate of acceptance declined from Rs. 2-9-5 to Rs. 2-9-3 percent per annum. Tenders at Rs. 99-5-9 percent were accepted in full and those at Rs. 99-5-6 percent were allotted approximately 56 percent. Tenders for a further Rs. 1 crore of three month Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 9th May, 1955. During the week ended 29th April, 1955 Government of India Treasury Bills for Rs. 13,12,00,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 22nd April, 1955, discloses Demand and Time liabilities at Rs. 591.06 crores (Rs. 9.13 crores on account of borrowings from Banks) and Rs. 382.14 crores (Rs. 2.17 crores) compared with Rs. 591.90 crores (Rs. 10.28 crores) and Rs. 380.98 crores (Rs. 1.67 crores), respectively in the previous week. Cash and balances with the Reserve Bank have diminished by Rs. 1.44 crores and Rs. 1.86 crores to aggregate Rs. 34.55 crores and Rs. 46.13 crores, respectively. There is a rise of Rs. 13 lakhs in investments to Rs. 342.69 crores. Advances and bills discounted at Rs. 623.54 crores reveal an increase of Rs. 92 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.3 percent and 64.1 percent against 8.6 percent and 64.0 percent.

The return of the Imperial Bank of India for the week ended 22nd April, 1955, shows a fall of Rs. 1.41 crores in total deposits to Rs. 218.96 crores. Investments in Government Securities and other authorised investments are down by Rs. 12 lakhs and Rs. 10 lakhs to Rs. 92.45 crores and Rs. 11.40 crores, respectively. Advances including loans, cash credits, overdrafts bills discounted and purchased have diminished by Rs. 81 lakhs to aggregate Rs. 125.05 crores. Cash and balances are in consequence, shown at Rs. 18.01 crores or Rs. 96 lakhs higher.

The Indian branches of the HONGKONG AND SHANGHAI BANKING CORPORATION earned a profit of Rs. 4.25 lakhs for the year ended last December. Deposits amounted to Rs. 8.03 crores. Advances totalled Rs. 10.88 crores and investments Rs. 1.58 crores. Cash was shown at Rs. 59.04 lakhs.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during March 1955, are as follows:—Merchandise, Exports Rs. 50 lakhs. Exports to Eastern Pakistan—Rs. 14 lakhs. exports to Western Pakistan—Rs. 27 lakhs, exports to other countries—Rs. 9 lakhs. Merchandise, Imports Rs. 251 lakhs. Imports from Eastern Pakistan—Rs. 221 lakhs, imports from Western Pakistan—

Rs. 2 lakhs, imports from other countries—Rs. 28 lakhs. Total trade Rs. 301 lakhs. Re-exports Nil. Trade in Treasure Nil. The total value of exports fell short of imports by Rs. 201 lakhs.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during March, 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 4592 lakhs; Re-exports (transit trade—Rs. 3 lakhs) Rs. 77 lakhs; Imports (transit trade—Rs. 7 lakhs) Rs. 5279 lakhs; Total trade Rs. 9948 lakhs.

Treasure: Export of currency notes Rs. 19 lakhs; Export of others nil; Import of gold Rs. 1 lakh; Import of currency notes Rs. 49 lakhs; Import of others nil.

Balance of trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 607 lakhs.

SENTIMENT SUBDUED AND BUSINESS RESTRICTED IN SHARES

HEAVY LOSSES IN TEAS: SPECULATIVE COUNTERS WEAK: GILT-EDGED STEADIER

Wednesday Evening.
THE expected fall in tea shares got under way this week and fairly heavy losses have been reported throughout the section. This reverse coincided with sharp falls in the jute manufactures market, and this produced bearishness in the gambling shares—Indian Irons losing one rupee in two days. Uncertainty about the effects of the proposed amendments to the Company Law was an additional, though less important, factor making for an easier undertone.

Actual weakness can only be reported of the tea section. Elsewhere the sentiment was cautious and the amount of business done was very small. The movements of the gambling counters will continue to depend on technical considerations, but there is no cause to expect a setback in industrials. Gilt-edged moved against the general trend by firming up, despite tight conditions in the money markets. The Reserve Bank's open market operations contributed largely to this steadiness.

Details of the week's trading follow.

The demand for Government securities was fully maintained and prices were marked up throughout the list. Except for the loans in which the Reserve Bank is operating, it has been very difficult to complete business owing to the shortage of scrip. Three percent Conversion Loan 1946 was better at Rs. 80-14, while 3% Non-terminable Paper was marked up to Rs. 80-3. In short-dated loans, 2½% 1955 was taken at Rs. 99-11, while both 3% 1957 and 1958 were one anna better in each case at Rs. 99-6 and Rs. 99-5. In the medium-dated group, there was a good enquiry for 3% 1959-61, which was taken higher to Rs. 97-5 and 3½% 1964 firmed up to Rs. 99-11; 3½% National Plan Loan 1961 was taken higher to Rs. 98-9 while both 3% 1963-65 and 1964 were fully steady at Rs. 93-11; 2½% 1961 was asked for at Rs. 91-15 with sellers reserved, while 2½% 1960 was better at Rs. 94-15; 2½% 1962 had sellers at Rs. 92-11 but 4% 1960-70 improved to Rs. 101-14. During the week the Reserve Bank raised their selling prices for 3% Loan 1966-68 and 3% Loan 1970-75 to Rs. 90-10 and Rs. 87 respectively.

State loans were a very firm market but once again practically no business was reported owing to the absence of sellers. Four percent issues, standing at a discount, continued to be asked for but there were no price changes except in the case of 4% Saurashtra Loan 1964, which was quoted at Rs. 99-13 x.d. Amongst other provincial issues, 4% U.P. 1963 and 1964 were quoted two annas higher at Rs. 100-5 while 4% West Bengal 1964 changed hands at Rs. 100-6.

Selected preference shares continued to be in short supply and because of scarcity of sellers, little business was reported. In jutes, Anglo-India were taken one rupee higher at Rs. 119-8, Clive 6% were marked at Rs. 91 and Gourepore at Rs. 104-8. Hooghly changed hands at Rs. 15-6 and Kamar-hatly were taken at Rs. 104-6. National were quoted at Rs. 125-8 and Northbrook at Rs. 94. Amongst miscellaneous industrials, Allahabad Bank were marked at Rs. 135, Associated Hotels were placed at Rs. 65, Calcutta Electric were taken at Rs. 12-8 and Indian Iron at Rs. 107-8. Indian Aluminium were done at Rs. 72, Titaghur Paper 1st at Rs. 153 and Rallis were crossed at Rs. 54-6.

In the banking section, Allahabad Bank were transacted at Rs. 182, Punjab National at Rs. 42-12, United Bank of India 'D' shares at Rs. 4-7 and United Commercial at Rs. 44-8. Imperial Bank Fully-Paid and Contributory improved from Rs. 1,655 and Rs. 402-8 to Rs. 1,670 and Rs. 408-12 following Government's decision to maintain the status quo with regard to payment of compensation.

Among railways, Dehri-Rohtas were better at Rs. 10-15 and a small lot of Howrah-Amta changed hands at Rs. 72-8.

Elgins provided the feature in the cotton section improving from Rs. 17-12 to Rs. 18-6. Basanti were done at Rs. 4-13, Cawnpore Textiles at Rs. 8-14 and Kesoram at Rs. 26-4. Swadeshi Preferred Ordinary were marked at Rs. 9-8.

Very little interest was shown in coal shares. Burrakur receded steadily from Rs. 13-5 to Rs. 12-15. Bharat Collieries were maintained at Rs. 7-14. New Beerbhoom were steady at Rs. 19-10. Pench Valley were marked at Rs. 23 and Ranegunge at Rs. 11-10. South Karanpura were steady at Rs. 11-14 but closed easier at Rs. 11-8. Contrary to the general trend, Central India rose from Rs. 7-4 to Rs. 7-14 and Western Bengal from Rs. 7 to Rs. 7-5.

The sharp break in prices of finished jute goods depressed operators in jute shares and prices closed below the week's best. Howrah changed hands in fair quantities up to Rs. 30-12 but at the close reacted to Rs. 29-12. Agarpara were lower at Rs. 13-15. Auckland were quiet at Rs. 142, Bally at Rs. 184 and Budge-Budge at Rs. 188. Other transactions included Champdany at Rs. 170, Chitavalsah at Rs. 14-3, and Dalhousie at Rs. 141. Empire were

fairly steady at around Rs. 25-8. Ganges were done at Rs. 103 and Kanknarrah 'B' at Rs. 135. Kinnison changed hands at Rs. 193, Lansdowne at Rs. 131 and Megna at Rs. 99-8. National receded steadily from Rs. 34-7 to Rs. 33-8. Northbrook changed hands at Rs. 26, Nuddea at Rs. 55-4 and Reliance at Rs. 14-7.

Little business was reported in electric supply shares. Calcutta were steady at Rs. 15-6. Benares were done at Rs. 19-6 and Bareilly at Rs. 15-8. Cuttack were quoted at Rs. 8-15 and Patna at Rs. 12-14.

Business in sugar shares was on a small scale and there were no features during the week. Carew closed quiet at Rs. 12. Balrampur were subdued at Rs. 9-8, as were U.P. at Rs. 25. Champaran were steady at Rs. 31.

The outstanding feature in the engineering section was Indian Galvanizing which came in for good enquiry at around Rs. 23-10. Indian Iron and Steel shares receded steadily from Rs. 34-3 to Rs. 33-2. Bhartia Electric Steel were steady at Rs. 15-8 as were Braithwaite at Rs. 24 and Burn at Rs. 261. Indian Steel & Wire Products Fully-Paid Ordinary were taken at Rs. 81-8 and the Contributory at Rs. 19-12. Jessops were fairly steady at Rs. 36 while Richardson & Cruddas were easier at Rs. 17-14. Kumardhubi Engineering and Marshalls were shaded at Rs. 11-5 and Rs. 6-11.

In the miscellaneous section, Bengal Paper were slightly better at Rs. 64. India Paper Pulp were steady at Rs. 255 and Titaghur at Rs. 43-12. Orient Paper fluctuated between Rs. 26-15 and Rs. 27-11 to close at Rs. 26-15, while Shree Gopal were steady at around Rs. 16-12. Dalmia Cement were taken at Rs. 14-4 and Sone Valley were unchanged at Rs. 7-11. Business was reported in New Asiatic Insurance at Rs. 5-13 and Ruby General at Rs. 7-10. Calcutta Steam Navigation changed hands at Rs. 110. India Steamship were easier at Rs. 7-6 as were Angelo Bros. at Rs. 19-8, Alkali & Chemical at Rs. 16-2, and Balmer Lawrie at Rs. 160. Assam Saws declined from Rs. 6-3 to Rs. 5-10 while British Burma Petroleum were unchanged at Rs. 3-4. Bararee Coke came to hand at Rs. 20-4 and Birds Investments were steady at Rs. 17-12. British India Corporation after improving to Rs. 8-10 turned sellers at the close at Rs. 8-3. Calcutta Trams were steady at Rs. 16. Cherra Chhatrakopeway were done at Rs. 6-10 and Dunlop Rubber at Rs. 35-10.

BIRKMYRE BROTHERS, LIMITED
NEWCASTLE

is dedicated to sharing and solving your production problems.

By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

Boiler & Heavy Engineering Division * Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

BRITISH STEEL MISSION
CHOOSES DURGAPURPRELIMINARY WORK PROCEEDS
ON ROURKELA SITE
(FROM OUR NEW DELHI CORRESPONDENT.)

THE British Steel Mission left for home last Friday, 29th April, after having had a series of meetings with the Negotiating Committee set up by the Government of India. The Mission had come out under the Colombo Plan to prepare a project report for the third one million-ton State-owned steel plant. It made a detailed tour of industrial centres in West Bengal and Bihar and more particularly, visited Durgapur and Bokaro. It was no secret that the Mission's choice of site for the plant would fall on Durgapur. The Mission has recommended that a plant of an installed capacity of one million tons of ingots as being the most suitable for India. It has preferred a three-furnace plant and has recommended for production such items as are not planned to be manufactured at either of the two new State-owned plants, namely the medium variety of end-products.

Following the acceptance of the preliminary project report for the Rourkela plant by the Government in June, 1954, the technical consultants (Messrs. Krupp-Demag) submitted the first volumes of the final project report in January, 1955; the other volumes are expected before the end of the month. Dr. H. Kilnar, technical adviser to the company, is engaged in scrutinising the project report. He has recently left for Germany to discuss and settle with the consultants all matters which require clarification, or alteration to suit Indian conditions. Satisfactory progress is being maintained on the preliminary work at the site. The aerial and contour survey of the entire area in which the works and the township will be located has been completed along with the malaria survey of the region. A project estimate for the township has been submitted by the chief civil engineer and is under scrutiny.

The resident engineer and his assistants deputised by the technical consultants have arrived from Germany and are preparing the layout plans for this plant. Approach roads to the iron ore deposits have been constructed and the detailed prospecting and proving of the ore are proceeding. Limestone sources are being investigated, also pyrite deposits for sulphuric acid. A pilot plant to test coal blends is being installed at the Fuel Research Institute and is due to be completed by September, 1955. A survey of the Sankh, Koel and Brahmani rivers has been completed. Hindustan Steel has assumed responsibility for providing water to the plant and the township. A scheme for the water supply distribution is under preparation. The Ministry of Transport has sanctioned the doubling of the line between Rourkela and Manoharpur, and other items of work are under examination.

Planning the Site

Based on the recommendations of the consultants, the company has laid out the boundaries of the several villages and plots of land where the plant and township are to be located and the Government of Orissa has been approached to requisition the necessary land. The development officer of the company has taken census of the population to be displaced with the purpose of finding employment for all and training those who have the necessary qualifications as skilled workers. Meanwhile the Government of Orissa has selected an area to rehabilitate the displaced persons. The technical consultants have submitted their scheme for training key personnel in Germany. Thirty-four engineers have already been sent for training in the design, operation and maintenance of the steel works. It is also proposed to provide training in India on a wide scale. An apprentice training scheme for this purpose has been prepared and is expected to come into operation on 1st January, 1956.

It was originally stipulated in the agreement with the German combine that the plant would be expanded to a capacity of one million tons of ingots after initial operation on the basis of 500,000 tons. It has been decided to speed up the plan so as to integrate the expansion into the present planning, with the result that the plant will now have a capacity of one million tons of ingots from the very start. A supplementary agreement with the German combine in this matter is being negotiated. As things stand at present, India's target for steel production at the end of the second five year plan is placed at six million tons of ingots or four and a half million tons of finished steel, as against the present normal demand of 2.3 million tons, the present annual production being 1.1 million tons. The issue is an obvious one. India must create the demand for steel from now, so that the production from the three additional units and from the expansions of units in the private sector is consumed in a normal way. The second five year plan, it is expected, will stimulate demand for steel. The iron and steel requirements of the Indian railways at the end of the second five-year plan are placed at one million tons a year. This would represent nearly a 200 percent increase over the steel requirements of the Indian railways during recent years.

The average for the last few years has been the neighbourhood of 350,000 tons. The railway requirements have in the past however

complained that these were largely "paper allocations", as deliveries took anything up to 18 months or two years to be completed against a specified allocation. Deliveries are almost always far behind allocations. In fact, an official spokesman admitted in Parliament a few days ago that there was no difficulty in securing allocations but actual supplies were "very much behind". Not all the steel requirements of Indian railways can be met from indigenous sources. During the year ended last March, for instance, as much as 140,000 tons of steel had to be imported from foreign countries on railway account. Presumably, such imports would go up as the railway development plans for the next five-year period take shape. According to present calculations, the additional requirements of steel may be 600,000 tons next year, 900,000 tons in 1957-58 and 1.3 million tons in 1958-59. The Ministry of Commerce and Industry has therefore requested the Planning Commission to undertake a study of the availability of steel for the country's increasing requirements.

Some factors in the situation should however be evident. Firstly, the cost of production of the new units will be higher than those of the existing units. Secondly, considering world prices the present Indian prices of steel are uneconomic. They are too low. It is, therefore, suggested that the Indian consumer should be acclimatised to higher prices of steel from now to enable the production of the new units to be fitted into the price structure in due course. Incidentally such a course would finance the new units without throwing much burden on the taxpayer. In short, it is suggested India should increase its imports of steel and step up the internal price of steel from the present average of Rs. 400 a ton to say Rs. 425 a ton as against Rs. 600 a ton for imported steel. The Planning Commission's reactions are being awaited.

Indian Shipping Problems

Shipping was highlighted at both the ECAFE meeting in Tokyo and the Bandung Conference. Shipping freights, it was pointed out, continued to operate detrimentally to Asian and African countries. The ECAFE Conference has formed a committee to study the problem and report. In the present context two developments are expected. Western shipping companies will be pressed to revise their rates. They will also have to revise their attitude to Asian shipping undertakings. The Bandung Conference asked its member countries to patronise Asian shipping. The idea of a payments union for Asian and African countries did not find much support. Payments union presupposes that some countries will be financially strong enough to lend funds. It is obvious that no country in the region is so well off as to become a banker for the union. The Bandung Conference urged development of regional trade. In the present economic pattern, this trade is with the industrially advanced countries of the West. India, Indonesia and Ceylon, three founder members of the Conference, are competing with each other for western markets in tea, for example. In spite of this handicap there is scope for closer co-operation between various countries. It was therefore decided that each country should appoint a liaison officer to explore the possibilities of inter-State trade in the region. Another important decision related to foreign aid in commodities. It was suggested that commodities from the region should be preferred if foreign aid were offered in commodities.

Cotton Import Duties

The Government of India's decision on the representation by Lancashire for some reduction in the import duties of cotton textiles will shortly be available. The Lancashire delegation, which visited India last month, submitted a brief but moderately-worded memorandum to the Government of India urging the reduction of import duties on the British textiles. Incidentally, the import of British textiles has been practically stopped since January last when the quota system was replaced by free imports under heavy import duties. Indian textile interests, which discussed the problem with the Lancashire delegation last month, are believed to be sympathetic to Lancashire's demand, particularly in regard to the import of certain categories of cloth which are not manufactured in India. The scaling down of duties, however could not be category-wise nor could it be confined to British goods. Under G.A.T.T. there would have to be a general scaling down in line with preferential duties for British goods. It may be added that in addition to increasing imports of Indian textiles in Great Britain, India, under the Indo-British Trade Agreement, enjoys preferential treatment in Commonwealth countries. This is of considerable value in meeting the growing Japanese competition. Although cotton textiles are no longer a legally protected industry, it would not be surprising if, in any scheme for giving relief to Lancashire, excise duties were computed with import duties. This principle has been incorporated in the Finance Bill for the first time.

In 1954, 3.8 million yards of cotton piecegoods were imported into India from the United Kingdom. This compares with 3.9 million yards in 1953, 4.3 million yards in 1952, 5.3 million yards in 1951 and 4.7 million yards in 1950. Imports of other cotton manufactures from the United Kingdom were valued at Rs. 14 lakhs in 1954, Rs. 12 lakhs in 1953, Rs. 19 lakhs in 1952, Rs. 13 lakhs in 1951 and Rs. 3 lakhs in 1950. The imports of cotton twist and yarn from the United Kingdom in 1954 amounted to 1,763,000 lbs. as against 2,061,000 lbs. in 1953, and 2,516,000 lbs. in 1952. In 1950 and 1951 imports were 135,000 lbs. and 572,000 lbs. respectively. During 1954, 340,000 lbs. of sewing and darn-

ing thread was imported from the United Kingdom. This compares with 1,068,000 lbs. in 1953, 732,000 lbs. in 1952, 947,000 lbs. in 1951 and 218,000 lbs. in 1950.

State Loans

For 1955-56 a Budget provision of Rs. 18 crores has been made in the Central Government's Capital Budget for loan assistance to States for financing schemes under the programme for permanent improvements in scarcity-affected areas. A State-wise break-up of this provision of Rs. 18 crores is as follows.—

Name of State	Amount (Rs. in lakhs)
Andhra	200
Assam	60
Bihar	142
Bombay	250
Madras	200
Uttar Pradesh	210
West Bengal	60
Hyderabad	149
Mysore	150
Rajasthan	125
Saurashtra	140
Ajmer	10
	1696
Reserve	104
Total	1800

Sugar Problems

The Development Council for the sugar industry, meeting here during the week, decided to set up a joint committee of the Indian Central Sugar-cane Committee and the Council to formulate a programme for inclusion in the second five year plan. The Planning Commission had asked the Council to estimate the requirements of the country for crystal sugar at the end of the next plan and suggest ways and means of achieving the target. At its last meeting, the Council had recommended that the production target be fixed at 2,250,000 tons, to be attained by increasing the installed capacity of the industry from two million to 2.5 million tons. The question whether this should be done by expanding the existing factors or installing new units, or partly by establishing raw sugar refineries in the country, has been under the Council's consideration for some time. Another proposal for stepping up sugar production has been the shifting or rehabilitation of factories unsuitably located or lying idle due to inadequate supplies of cane. At the meeting the Council expressed itself against the setting up of refineries to cover the additional capacity fixed for the second plan. Mr. E. P. Moon, Chairman of an expert committee appointed for the purpose at the Council's first meeting in August last year, presented an interim report to the Council. Replies to the committee's questionnaire indicated that 16 factories lay idle and 20 were suitably located. He stated that if proper measures were taken for developing the cultivation of cane in the operational areas of some of the factories, there would be no need for them to be shifted.

The Council accepted the reports of expert committees set up for (1) establishing subsidiary industries for the utilisation of the by-products of the sugar industry, and (2) the introduction of a uniform system of chemical control and reporting of technical data by the industry. The Council also decided to recommend that a Government-sponsored delegation be sent to the important cane-producing countries of the world to study the developments in the industry abroad.

Delhi Invites U.N.E.S.C.O.

India has invited U.N.E.S.C.O. to hold its 1956 session in New Delhi. According to preliminary estimates, the session will bring 800 non-nationals to the capital for which residential accommodation has to be provided. Delhi's hotel accommodation is placed at 250. Arrangements are in hand to create additional accommodation for 600. An up-to-date luxury hotel to cater for 400 is being planned for the Diplomatic Enclave. It is estimated that it will cost Rs. 1 crore, at least Rs. 25 lakhs of which will be subscribed by the Government. The Jamsahib of Nawanagar, it is believed, is taking an active interest in the project. A Government hostel in two blocks facing each other is being built on Queensway to accommodate 250 people. It is estimated that it will cost Rs. 40 lakhs. New Delhi has neither a Central Library nor a hall big enough to hold 1,000 delegates to an international conference. The U.N.E.S.C.O. session has provided the incentive to build both. A conference hall with committee rooms is being built on Queensway to match the building which houses the national archives. In its initial stages it will cost Rs. 88 lakhs but when completed its capital outlay may run to over Rs. 2 crores. All the three buildings are expected to be completed in 18 months, by November, 1956. The foundation stone of the building for the National Museum which is to be completed in four stages at an estimated cost of Rs. 76 lakhs, will be laid by the Prime Minister on 12th May.

Regional Cotton Markets

The Government of India has accepted the recommendations of the Forward Markets Commission to recognise one regional cotton market each in Madhya Pradesh and Madhya Bharat in addition to the recognition of the East India Cotton Association on all-India basis. The Commission has recommended similar recognition of regional cotton markets in Punjab, Gujarat and Saurashtra in due course. The Commission is being asked to invite applications from various bodies dealing in cotton in Madhya Bharat and Madhya Pradesh for recognition purposes.

Bombay

THE PROBLEM OF INDIA'S
LARGER COTTON CROPPOOR QUALITY AND COMPETITION
DIM EXPORT PROSPECTS

(FROM OUR BOMBAY CORRESPONDENT)

ALTHOUGH the domestic cotton crop for 1954-1955 is estimated at 4,750,000 bales which represents an increase of approximately 250,000 bales over the previous year, the marked deterioration in quality is causing deep concern to the cotton trade. The unusually heavy rains last year ruined what might have been an excellent crop. The Punjab and Laxmi growths are among the worst affected. Rain in September, 1954 stained the Khandesh crop and there have been numerous complaints that the spinning strength is low and heavy losses are incurred in ginning and pressing. In Madhya Bharat the stock of unwanted cottons is accumulating and is estimated at 40,000 to 50,000 bales, while the Akola Cotton Merchants Association reports: "The quality of the cotton grown in Madhya Pradesh this season has deteriorated, most of the growths being of 11/32" to 25/32" staple." The Wagad crop is stated to be weak in strength and similar discouraging reports are received about the South Indian crop. Many textile mills have shown a marked tendency to purchase from the previous year's carryover stock in preference to the cheaper new arrivals. A condition of scarcity has therefore arisen in relation to good cottons for spinning counts of 24s and above.

It is believed that in the coming months the textile mills will have to depend increasingly on foreign cottons supplemented by the comparatively restricted supplies of the domestic Surati and 2087 growths whose quality, curiously enough, has not been affected by the rain. The restrained purchases of these off-grade cottons by the textile mills has led to an accumulation of stocks and a fall in prices. There has been a fall of approximately Rs. 250 a candy from the peak levels for spot cottons. Khandesh was Rs. 175 on when the contract was quoted at Rs. 640. With the contract at Rs. 550, this cotton was quoted as low as Rs. 40 on. Operators in the futures market believe that May tenders will show a decline because a large quantity of the available supplies will be rejected in tenders on grounds of bad quality.

Government's Obligations

Neither can the cotton trade seek Government assistance. Normally, under circumstances of falling prices the Government would be bound to intervene by stepping in as a purchaser at the floor prices to maintain levels but the Government is committed to buy only under certain conditions. It is stipulated that for the Government to intervene the quality must not be lower than 2/32" off in staple and one grade off in class as compared to the qualitative basis laid down. Most of the cottons which have shown deterioration do not conform to the condition and are much lower in quality than the prescribed specification. Those growths that do conform to this standard are above the floor price levels. There is therefore no obligation on the Government to maintain levels in terms of the price schedule.

In order to arrest falling prices and to dispose of the accumulated stocks, the Government of India has recently modified its export policy of raw cotton by sanctioning a further export quota of 100,000 bales of 17" staple and below. In the first half of the current season, India exported 130,000 bales of cotton as against the original quota of 200,000 bales. This leaves a balance of 70,000 bales which together with the fresh release of 100,000 bales brings the total exportable quota to 170,000 bales. But it is extremely doubtful if this quantity will actually find outlets abroad. There are many difficulties which arise because of the peculiar conditions of demand and supply. The main obstacle is, of course, the slump in the cotton textile trade. That the Lancashire cotton textile industry is facing a serious crisis is now a well-known fact. According to a Cotton Board statement over 4,000 full and part-time spinners have left Lancashire's mills since the beginning of this year. Over 800 quit in the week before Easter which represents the most serious loss to the spinning section in any single week for nearly three years. Many Lancashire mills have had to resort to forced holidays due to lack of orders. All this has led to a steep fall in production and therefore in the offtake of raw cotton.

Downward Trend in Japan

The same downward trend is seen in Japan where the output of cotton yarn during March totalled 179,639 bales of 200 lbs. each representing a fall of 9,835 bales as compared with the previous month. Correspondingly, the production of Japanese cotton piecegoods has been affected. The output during March amounted to 85,844,000 yards registering a drop of 5,588,000 yards as compared with the February figure. This despite the fact that the number of spindles in operation at the end of March increased by 12,000 to a total of 8,019,368. Latest advices from Tokyo indicate that when the final Japanese production figures for April are available the situation will not have changed materially for the better. This fall in British and Japanese production must inevitably reflect on India's prospects of exporting her unwanted stocks of raw cotton because thus far Japan has been the biggest importer of Indian cotton with Britain a close second.

As against the somewhat restricted demand, the world supply position of raw cotton is extremely easy. Crops have been satisfactory throughout the world and stocks have accumulated in all the cotton growing areas. Mexico, for instance, produced 1,780,000 bales in the 1954-1955 season with a record yield topping the previous season's figure by 45 percent. Since Mexico's domestic consumption of cotton is estimated at only 365,000 bales, over 1,400,000 bales will be available for export. In money equivalents, this would represent about 30 percent of the total Mexican export trade. With such a vital interest at stake, Mexico will inevitably be a serious competitor. The Sudan too is finding it difficult to sell her cotton. At a recent auction of Sudanese cotton, some 14,000 bales were offered for sale but there were no buyers. The Sudanese Minister for Finance and Economy in a recent statement to Parliament expressed concern over the cotton situation and said the Sudan Government would be prepared to consider the sale of the cotton stock on a barter basis should such a method stimulate exports. To allay fears, the Minister stated that the other cotton producing countries, and he specifically mentioned Egypt and the United States in this connection, were also going through a cotton slump at the present time. But he also revealed that the Ministry of Finance and the Gezira Cotton Scheme Board had sent missions to study conditions in Europe and America in a determined bid to boost Sudanese exports of raw cotton. It will indeed be a determined bid considering that cotton constitutes the bread and butter item in the entire Sudanese economy.

New Competitors

In addition to the traditionally established exporters, comparatively new competitors have emerged who are developing their cotton resources on an internationally commercial basis. Pakistan, for instance, produced 1,500,000 bales in the 1954-1955 season. Her textile industry is not yet sufficiently developed to consume a sizable proportion of this production and substantial quantities are available for export. In fact, cotton exports account for 45 percent of Pakistan's total export trade. Similarly, Iran, Syria and some of the other countries of the Middle East area are stepping up their cotton production and are showing a willingness to cut prices in an effort to crash into the cotton trade of the world.

The export situation seems discouraging and the Indian cotton trade will have to find an alternative solution for its difficulties. It is an astonishing fact that export policies are laid down and export targets are fixed without any attempt to relate them to the prevailing world conditions. It is forgotten that a mere intention to export, or the physical capability to export, is not in itself an open sesame to world markets. There is a marked reluctance to accept the fact that international trade in cotton textiles, yarns and, therefore, in raw cotton is contracting. Yet this is exactly what is happening. A recent survey conducted by GATT experts in Geneva reveals that the world's export trade in raw cotton has fallen by 21 percent over the pre-war years.

Textile Exports

The same refusal to face the reality of the situation arises in the question of cotton textile exports. A hypothetical export target of 1,000 ports. A hypothetical export target of 1,000 million yards was tenaciously held on to, despite the fact that this target has been achieved only once in the textile history of India and then too because of a particularly fortunate combination of circumstances. Yet the one factor which could perhaps help to materialise the export target of 1,000 million yards a year is consciously relegated to the background. Labour has consistently resisted all efforts at rationalisation. The All-India Textile Workers' Conference meeting at Sholapur on 25th April, 1955 passed a resolution that "the principle of co-partnership should be applied to the textile industry through a phased programme." The resolution asked the Government to associate labour with the management of mills and to invest it with rights and responsibilities "in no way less than those of capital." One of the rights demanded was that no labour saving machinery or other automatic machinery should be installed at least for another five years. Quite recently the Commerce Minister made a statement in Parliament that the Government enquiry into the textile industry did not mean that steps were contemplated to rationalise the industry. The object of the enquiry, he said, was to ascertain what mechanical replacements were necessary because most of the equipment now in use was "very old." Clearly it is intended to import some equipment from abroad but it is equally clear that it will not be of the latest type which makes for economic production even if it is vaguely suggestive of some form of rationalisation. If rationalisation, and therefore efficient and economic production, will lead to a loss of employment then obviously labour must be put to alternative work. To allow the country's major industry to continue to function on an uneconomic basis, no matter what other considerations are involved, is extremely dangerous to say the least.

U.S. Sale Offer

An element of uncertainty is introduced into the already difficult export position of raw cotton by the offer of the U.S. Agriculture Department to sell 175,000 bales of its surplus cotton stock to consumers and exporters. This is the first time since last autumn that the Agriculture Department has offered to sell its surplus stock. This offer of release coupled with the fact that the Department holds a total stock of 1,750,000 bales has had a sobering effect on the futures market. There is a tendency in the purchasers of raw cotton to "wait

and see"; to wait and see what particularly the American policy will be in regard to export subsidies in the American cotton year beginning from August. It is very likely that the cotton textile industries of Britain, Japan and Western Germany will receive a "shot in the arm" in the very near future but this will not mean an increased offtake of Indian raw cotton even though Britain and Japan have been India's leading customers in the immediate past.

Triangular Trade

The triangular trade pattern evolved under the U.S. aid programme does not benefit India. On the contrary, it restricts her outlets for raw cotton and cotton textiles. Under this programme, Pakistan is to purchase cotton textiles from Western Germany valued at \$ (U.S.) 1,500,000. This import will be paid for in terms of American cotton which the U.S. Government will supply to Western Germany on Pakistan's account under the aid programme. A similar arrangement has been made with Britain under which Pakistan will import British cotton yarns and piecegoods to the value of \$ (U.S.) 5,200,000. Payment would be made in the form of supplies to Britain by the United States of raw cotton of the same value. The President of the Board of Trade, Mr. Peter Thorneycroft, while informing the House of Commons of this development stated that supplies of British cotton yarns and textiles would be exported to Pakistan within the next few months. "The arrangements for working the somewhat complicated procedure involved have been agreed in discussion between my department and different sections of the cotton industry and banks," Mr. Thorneycroft explained.

Japan too is very much in the picture. Although no definite agreement has yet been reached, it is very likely that one will be signed in the near future. The terms of the proposed Japanese agreement are that Japan will receive American raw cotton within six months after the agreement comes into effect, cotton yarn and cloth manufactured from the raw cotton so supplied will be shipped to Pakistan within five months of the agreement becoming effective. Pakistan will issue import permits within 30 days of the agreement coming into force. Settlement will be made solely on the basis of the Pakistan rupee under a barter system. The chief concern of Japanese spinners and weavers is said to be the rupee barter provision. Under such a plan, Pakistan is required to deposit in a nominated bank a rupee sum for covering the processing charges, and raw cotton equivalent in value to the amount will be imported by Japan from the United States. Japanese cotton interests fear that there may be an unfavourable fluctuation of the rupee exchange rate during the interval when processed items are shipped to Pakistan and raw cotton obtained from the United States. As a guarantee against such a danger, Japanese spinners and weavers want the Government to treat the Pakistan rupee as a designated currency. This presents no major problem and it is very likely that a United States-Japan-Pakistan agreement will be concluded in the very near future.

U.S.-Pakistan Deal

The value of raw cotton to be acquired by Pakistan with the American Foreign Operations Administration funds is estimated at \$23 million. Whether or not this represents any excess import from Pakistan's point of view is a different matter. The fact remains that a sizable transaction is involved which means increased production in Britain, Japan and West Germany which will altogether ignore Indian cottons at a time when India is keen to dispose of her unwanted stocks. The second implication is that Pakistan as a potential export market for Indian cotton piecegoods is lost to India, at least for the time being. This development comes at a time when the political atmosphere between India and Pakistan is showing signs of improvement which might lead to normal trade relations between the two countries. Even if this happy event should occur, India will have to wait for a long time before she sells her cotton textiles to Pakistan. It is reported that India was invited to participate in this programme and to ship cloth to Pakistan valued at \$9 million under similar terms and conditions as applicable to Britain and Western Germany and as proposed to be applied to Japan but Indian textile circles were hesitant to accept the offer because of the prospects "of a bumper cotton crop at home", which has now proved disappointing and because of the existing provision for India to receive \$12 million worth of American raw cotton under a separate Foreign Operations Administration aid programme. It was felt here that Britain, Western Germany and Japan would find this sort of barter agreement acceptable because they themselves were not producers of raw cotton but India, it was pointed out, had her own cotton growths.

It is difficult to follow this line of argument. An adherence to this plan would have brought in Pakistan as a valuable export market which would have meant a greater turnover for the Indian mill industry. So long as the cotton acquired under this plan is fully consumed in the manufacture of yarns and cloth for export to a guaranteed market, which otherwise would be non-existent, it matters less whether or not India is a cotton growing country, or what her commitments to purchase raw cotton from abroad may be. These additional supplies of cotton would not affect the general overall plan of India's trade, external and internal. Such considerations seem irrelevant and it would appear that a valuable opportunity has been lost which might have brought the export target of 1,000 million yards nearer to realisation.

London

BRITAIN'S DANGEROUS LABOUR SITUATION

PARTIES LAUNCH THEIR ELECTION CAMPAIGNS

(FROM OUR LONDON CORRESPONDENT)

THE threatened strike of engine crews on British Railways which was due to start at midnight last Sunday represented so serious a question to the whole life of the country, socially but more especially economically, that it rendered the discussion of any other topic of a long-term interest almost academic. There was no real dispute to settle, since the A.S.L.E.F. was holding out on a matter of principle rather than one of cash, while all concerned were not only ready but anxious to negotiate, mediate or do anything else which would contribute to a settlement. The threat did nevertheless, emphasise the danger which the present labour situation as a whole represents in the absence of some basic plan for a wage structure and some means of ensuring that arbitration decisions reached within the negotiating machinery established are faithfully honoured by both sides. In the first quarter of this year wage increases totalling £120 million have been awarded, or almost as much as in the whole of 1953 and the award to the railwaymen in January is to mean increased freights and fares by June, another rise in the cost of living, and, inevitably, another claim for an increase in wages. The spiral goes on and on—and it makes nonsense of all the labour's criticism of the rise.

The first broadside is the election campaign have been exchanged with the publication of the Party programmes. Briefly, the Conservatives promise to carry on what they contend they have already started, measures aimed at doubling the standard of living in 25 years. Labour is rather more ambitious, and freer in its promises, but delightfully vague as to where the money is to come from to finance all its grandiose schemes for expanding the Welfare State. The "squeezing the rich" proposals which the Party's manifesto includes, the taxing of capital gains, the nationalisation of industries, and the like will certainly not produce it. Both sides, perhaps, are banking on some easing of international tension and a substantial saving in defence expenditure, but Labour rather more than the Conservatives. Public reaction will take some time to manifest itself.

The Budget and Lancashire

The Budget has enjoyed an unusually serene passage in the House of Commons during the week, largely because the Finance Bill was so drafted as to make the moving of amendments extremely difficult. The Opposition tabled a large number, but most of them were ruled out of order by the Chair when the Committee stage was reached, and the Government found little difficulty in securing adequate majorities whenever the odd amendment or prayer was forced to a division. The out-of-order ruling gave rise to some rather synthetic heat on the Labour benches and Mr. Dalton even claimed that it represented an outrageous example of Parliamentary dictatorship, but he did this with a smile, and Mr. Butler accepted all the criticisms and uproar in the same spirit. He made another able defence of the policy which had led him to give the concessions he had done, especially the reduction in the standard rate of income-tax, and

it was not without significance that the Labour speakers were reduced to reiterating their original arguments and that even Mr. Gaitskell was less severe in his strictures about the Chancellor's "gift" to companies.

Mr. Butler was also very blunt about Lancashire's pleas for the complete removal of purchase-tax. He was not, he said, prepared to give the industry a gift of £42 million, but indicated that the Government's decisions on the proposals put forward by the recent delegation would be made known before the House rose next week. Meanwhile, Mr. Low, the Minister of State at the Board of Trade, received the Cotton Board's mission to India last Monday to learn of their negotiations, but parried several adroit questions in the Commons next day which sought a line on what the Government intended to do. Lancashire's "pressure" campaign shows no signs of letting up, but it looks as though there is a better appreciation of the fact that the industry itself has a big contribution to make and Government help alone will not be enough.

More Economic Pointers

Discussion continues about whether or not Mr. Butler has taken too optimistic a view of the economic outlook, and every development in this sphere is examined to see what influence it may have had. This week there have been three which seem to justify or at all events to explain, the Chancellor's view. The first was the improvement in the terms of trade in March, with the index of import prices falling back 1 percent (after rising by 5 percent between May, 1954, and February of this year) against export prices continuing stable at the level which has prevailed more or less unchanged over the past twelve months. This benefit, though it might well continue with food prices dropping, is offset by the fact that the volume of imports is rising more than their price, being 22 percent up this year on the first quarter of 1954 while exports only rose by 10 percent. If the credit squeeze works to restrict imports the whole outlook would change. Export figures are less easy to assess because of the effects of the dock strike, but the Board of Trade says the March total was 51 percent higher than in the same month last year, which is pretty good going in the circumstances. The snag here is whether the wage increases granted so far this year, which amounted to £2,432,900 a week to 7,638,000 employees in the first quarter, will not cause export prices to rise and make foreign competition even greater than it is.

Next on the list comes the improvement in industrial production during the first quarter of this year. The Treasury's index was 129 in December, rose to 134 in January, to 138 in February, and is provisionally estimated at 139 to 140 for March. The increase over the corresponding months of last year is 6 percent for February and 51 percent to 6 percent for March. After the leveling off which took place in the second half of 1954, this improvement is indeed welcome. Finally we come to the third, and probably the most remarkable development—the strength of sterling, which touched parity for the first time since the beginning of last November, without any large intervention by the control and despite the widening of the British trade deficit in February and March.

Trouble in the Tea Market

Whether Sir John Kotelawala is now regretting the indiscretion which led to the present fall in tea prices there is no way of knowing, but the repercussions which this correspondent then anti-

cipated have most certainly followed. Around the time he was interviewed, plain broken Pekoe from North Indian gardens was quoting 6s. 11d. a pound. At last week's auction the price was 4s. 6d., and that was purely nominal as bidders were holding back. The fall in demand has obviously been even greater than was imagined, and it looks now as though there may well be a supply surplus, for last week's auction followed an Easter break of two weeks against the usual one, but the absence of buyers led to the cancellation of this week's auction as well in the hope that stocks might be lightened. The optimists are hoping that stock changes rather than lower consumption is the explanation for the present difficulty, but there is no certainty of that, and developments in the markets in the producing countries hardly confirm that view. Buyers holding stocks of high-priced teas are facing a heavy financial burden—one or two Mincing Lane firms are reported to be in real difficulty—and under present credit restrictions it is not surprising that they are unable to put more tea on stock at the moment. Only the hand-to-mouth buyer is happy.

From the point of view of the consumer the outlook for the current year seems to be fairly good. It must continue to be emphasised, however, that the tea now coming forward is below average quality in many cases, and that explains some of the drop in prices. In a few weeks time the better quality teas will again reach the market and price levels may alter. There is apparently little prospect of any substantial rise, however, unless adverse weather affects present anticipations of a larger crop than in 1954, or the Ceylon Government's efforts to "bolster" its market are extended to other producing countries.

Burma Oil (1954) Pays Dividend

From the first year's trading of Burma Oil (1954) a dividend of about £450,000 for 1954 is being distributed after paying taxes of about £525,000. To the Burmese Government, which takes one-third of the dividend, the net return is almost 6 percent on the money invested by it. The remainder is shared by three British-owned oil companies—Burmah Oil, the Indo-Burma Petroleum Company and the British-Burmah Petroleum Company. The four partners, it will be remembered, agreed last year to restore and develop the country's oil resources following the ravages of war and the new State's Constitution which provides for Burmese participation in development of natural resources.

Shipbuilding Statistics

British shipyards will be heartened by the fact, just disclosed by the Shipbuilding Conference, that new orders booked in the first quarter of this year total 80 ships of 273,000 gross tons to bring the figure for the last six months to 624,000 tons, almost the same tonnage that was ordered during the whole of 1954 and more than was booked in 1953. Few of the orders were for tankers and most were from British shipowners. The total order-book is now over 41 million tons, so that most yards have at least two full years' work on hand and some even more. Curiously enough, this is not an unmitigated blessing, for it complicates the quotation of fixed prices, reduces the incentive to keep costs down, makes it harder to resist wage demands, and increases the likelihood of orders being diverted to other countries not similarly placed. It is apparent from Lloyd's Register of Shipbuilding Returns for the first quarter of this year that output from the yards needs stepping up. Launchings in the period were the lowest for two years and both tonnage commenced and completed was a little below average.

Steamships and motorships under construction at the end of March totalled 335 ships, of 2,144,145 tons gross, an increase of 3,394 tons on the previous quarter. Of the total, 91 ships, of 529,013 tons, were fitting out afloat, and 244, of 1,615,133 tons, were still to be launched. During the quarter 71 ships of 313,988 tons, were commenced (75 ships of 437,376 tons in the previous quarter); 57 of 264,633 tons, launched (75 of 250,632); and 64 of 308,822 tons, completed (64 of 356,736). Under construction for registration abroad or for sale were 91 ships, of 756,072 tons, 18,287 tons less than at the end of December, and representing 35.3 percent of the total tonnage being built in Britain. Of these, 23 ships of 136,295 tons were commenced during the quarter.

A drop is reported in the volume of orders outstanding—ships for which plans have been approved or material ordered, but which have not been commenced. This has fallen steadily from a peak of 2,684,263 tons in September, 1952, to the present figure of 1,359,117 tons, a decrease of 132,375 tons since last quarter. During the last two years the proportion of oil tankers has fallen from 62.6 percent to 48 percent. Altogether, 36 percent of the 1,276 ships, of 5,963,187 tons gross, under construction in the world, and 34.6 percent of the 2,187,842 tons under construction for countries other than the country of build, were being built in Great Britain and Northern Ireland.

Brevities

Peninsular & Oriental Steam Navigation announce the appointment of five new directors. They are: Mr. A. L. Anderson, Mr. F. J. Hallett, Mr. F. E. Harmer, Mr. I. M. Hooper and Mr. H. A. J. Silley.

Both Germany and Holland have now formed organisations to participate in the triangular trading plan in cottons which is taking shape under the United States economic aid programme for Pakistan.

The Board of Trade announces that from 5th May, 1955, separate licences will no longer be needed for the import from any source of unwrought aluminium, unwrought aluminium alloy and aluminium scrap.

Uttar Pradesh

U.P. LABOUR TROUBLES LEAD TO STRIKE

LARGE RISE IN WAGES SINCE PRE-WAR

(FROM OUR LUCKNOW CORRESPONDENT)

THE proposed general strike began in Kanpur last Monday. The final strike call depended on the Government's decision on labour's demand for the appointment of a Special Tribunal to adjudicate on four issues framed by the Suti Mill Mazdoor Sabha. These issues are:—(1) Whether intensification of the workload in the Kanpur cotton mills is the only way for the industry to survive; (2) Whether the proposed schemes for reorganisation are desirable and if so, to what extent? (3) Whether the existing workload and relative wages in the New Victoria Mills, the Laxmi Rattan Cotton Mills and the J. K. Cotton Manufacturers Ltd. need any revision. (4) Whether the schemes of rationalisation submitted by the employers are in the interests of the industry and the nation as a whole. A memorandum submitted to the Government by the Suti Mill Mazdoor Sabha also lists about a dozen demands for immediate implementation. The more important of these are that the workers of the Kanpur Woollen Mills should get at least 21 days' wages in any month irrespective of the period of lay-off, that the retirement gratuity obtaining in the British India Corporation Ltd., with suitable modifications, should be enforced in all cotton and jute mills, that nine hours' work on Saturday and Mondays in the Swadeshi Cotton Mills should be stopped forthwith and that wage cuts of workers due to their absence on May Day 1953 and Shahed Day 1953, 1954 and 1955 should be restored. The memorandum also demands that the Suti Mill Mazdoor Sabha should be recognised as the sole bargaining agent for textile workers—rather a tall claim considering that the Sabha, according to employers' circles, does not have much more than 3,000 members on its rolls whereas the textile workers in Kanpur nearly 50,000. It may also be mentioned that nine hours' work on Saturdays and Mondays in the Swadeshi Cotton Mills, which is the largest textile unit in Kanpur, had been in operation since January, 1954, as the result of an agreement between employers and employees. The agreement was arrived at after a month-long tussle between the parties, during which there was no work in the mill.

Steady Rise in Wages

The Chairman of the Employers Association of Northern India, Mr. Purushottamdas Singhania, referred at length to the danger signals in his presidential address to the annual general meeting of the Association on Thursday last. Quoting figures to show the steady improvement in workers' earnings in Uttar Pradesh in the organised industries, Mr. Singhania said that they went up from Rs. 235 in 1939 to Rs. 593 in 1949, to Rs. 930 in 1951, Rs. 1,003 in 1952 and Rs. 1,019 in 1953. The increase works out to 333 percent of the pre-war figures and represents 23 percent of the value of output. As a result of labour troubles, however, a number of textile mills in the State remain closed—in Agra, Hathras, Banaras, and Lucknow. Mr. Singhania declared that it has become increasingly difficult for the management to deal with the situation when in any single industrial unit there are half a dozen trade unions, each claiming representative status. He also called for statutory prohibition against such unions being represented before the Labour Tribunals by lawyers or law graduates just as employers and their organisations are prohibited from being represented by them.

I.N.T.U.C. Against Strike

The prospects for a settlement of the proposed strike seem rather remote at the moment, especially in view of the arrest of the more recalcitrant of the ringleaders of pronounced communist views, numbering 150. Assurances of support for the strike have been coming from different organisations in the State, the most considerable being the United Chini Mill Mazdoor Federation led by Mr. Shibbanlal Saxena. The only organisation that has so far openly come out against the strike is the I.N.T.U.C., whose Executive Committee met in Lucknow last week and adopted a resolution advising against the strike. The resolution said: "The Committee notes with regret the attitude of certain trade union leaders in not co-operating with the Government in its efforts to settle the differences arising out of the employers' desire to enforce rationalisation. As a result of the unreasonable attitude of some of the employees and employers, a serious situation has arisen. This committee is of the opinion that a strike will not help the workers in solving their problems." The INTUC's solution is the appointment of a tripartite committee to negotiate a compromise. A communique issued by the Employers' Association points out that besides the workers who will be rendered idle as a result of the strike, more than 100,000 persons depending on them will also be deprived of their bread. The country will lose one million yards of cloth every day and the loss of one day's production will deprive 90,000 persons of their share of cloth for one year on the basis of a per capita consumption of 12 yards. Growers who supply cotton for the Kanpur mills will be hit by a further fall in price and lack of demand for cotton. A large number of handloom weavers who obtain cotton yarn from Kanpur mills will have to face unemployment.

In Bareilly, the Western India Match Factory has been indefinitely closed following a two-week old strike by 1,800 workers. The strike began on a complaint of alleged assault on one of the workers by an official of the factory. The strikers have, by picketing and threats of violence, successfully prevented anybody reaching the factory with the result that lighting, water supply and other essential services failed in the factory, including the workers' colony.

The Problem of Wheat

There has been a sudden and steep fall in wheat prices in the "mandis" of the State consequent on a rush of arrivals, and the State Government has set in motion their purchasing machinery for giving price support. According to agricultural statistics for the current year, there has been an increase in the production of wheat, gram and barley and a slight decrease in rice and "dala". The total acreage under wheat is now estimated at about 95 lakh acres as against 85 lakh acres last year. The wheat surplus is estimated at about 1 lakh tons. While the problem of wheat is enough of a headache for the State Government, cart loads of jowar from Vindhya Pradesh are daily coming to Bundelkhand, the jawar-belt of Uttar Pradesh. The reason for this influx is that the U.P. Government has been buying up jawar at Rs. 5-8 a maund, the floor price fixed by the Centre for this cereal, whereas the Vindhya Pradesh Government is still watching the situation although the price of jawar there also has fallen below Rs. 4 a maund. Since the buying operations started, the U.P. Government has bought 48,000 tons of jawar. But

PORVIC has eliminated the commonest cause of premature battery failure

This battery is something new

★ The separators, which formerly limited battery life by slowly wearing out and finally 'killing' the plates, are now made of PORVIC—the microporous plastic that does not wear in battery service.

★ The special long-life Exide plates, with C. B. 95 alloy are freed from dependence on separator life and can now show their full lasting capabilities.

★ The tough, shock-resistant container, designed to outlast even the long-life plates it holds, is built of hard rubber.

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

DHUBRI: Weather has been mainly wet and cloudy and a spell of sunshine would benefit standing plants. Sowings to date amount to -15/6 as against -13/3 last year. Second weedings on the low lands and first weedings in the midlands have been com-

and they range in height from seedlings to 1 ft. 9 in. The river is rising and stands at the same level as last year.

FORBESGANJ: No rainfall was experienced and this has resulted in the suspension of sowings. Sowings to date amount to -13/- as against -16/- at this time last year. Weeding operations are going on slowly. The condition of young plants is deteriorating due to lack of rain and they range in height up to 1 ft. 3 in.

DAISSEE DISTRICTS: Moderate rainfall was experienced and this should prove beneficial. Sowings to date amount to -16/- as against -16/- at this time last year. The condition of young plants is improving and they range in height from seedlings to 9 in.

N.B. As a basis of comparison last season's sowings have been taken as -16/-.

PAKISTAN JUTE CROP REPORT

In their eighth crop report for the current Pakistani season, covering the week ended 30th April, Messrs. Sinclair Murray (Pakistan), Ltd., say that, the weather has been favourable in all areas with alternate rain and sunshine. Sowings are now complete in the lowland and midland areas and plants are reported to be healthy, but more rain would be beneficial. River levels are normal.

NARAYANGANJ: The weather has been favourable with two heavy showers. Total sowings to date

are estimated at -19/- annas as against -11/6 pies at this time last year. Weeding is being carried out in low and midland areas required, and the condition of plants is satisfactory. River level is the same as this time last year. Plants range in height up to 2 ft. 3 in.

DACCA: Weather has been favourable with alternate rain and sunshine. Weeding is going on where required, and the plants are reported to be in good condition and range in height up to 2 feet. Total sowings to date are -21/- annas as against -11/6 pies this time last year. River level is normal.

CHANDPUR: Except for two showers in mid-week, the weather has remained hot and dry and has been beneficial for the plants, though more rain is required. Sowings are now complete at -21/- annas as against -14/3 pies at this time last year. Weeding is being carried out in all areas and the plants range in height up to 3 ft. 3 in. The river level is 1 1/2 ft. higher than this time last year.

NIKILIDAMPARA: Rainfall has been moderate and the weather favourable for the crop. More rain is required for completion of sowings and for the benefit of the standing crop. Total sowings to date amount to -17/- annas as against -16/- at this time last year. Plants are healthy and range in height up to 1 ft. 6 in. The river level is normal for this time of the year.

SARISHABARI: The weather has been favourable with alternate rain and sunshine. Sowings are complete at -18/- annas as against -3/3 pies at this time last year. The condition of the plants is satisfactory and they range in height up to 1 ft. 6 in. The river level is normal for this time of the year.

SERAJGANJ: Weather has been favourable with alternate rain and sunshine. Sowings are complete at -22/- annas as against -10/- pies at this time last year. The rainfall has been beneficial for the standing crop and the plants range in height up to 2 ft. 9 in. The river is normal for this time of the year.

NAKALIA: Weather has been cloudy with moderate rainfall, but good rainfall is reported in neighbouring areas. Total sowings to date are estimated at -19/- annas as against -2/9 pies at this time last year. Condition of the plants is reported to be healthy and they range in height up to 3 feet. The river level is normal for this time of the year.

BHANGOORA: Weather has been favourable with rainfall, which has been beneficial for sowings and the standing crop. Sowings to date are estimated at -12/- annas as against -2/- annas at this time last year. The condition of the plants is good and they range in height up to 2 ft. 6 in. The river level is a little lower than this time last year.

Sowings completed.

THE FOREIGN JUTE MARKETS

SLACKNESS AFFECTS EMPLOYMENT

(FROM OUR DUNDEE CORRESPONDENT)

THE long spell of inactivity in the yarn and cloth markets is having an adverse effect on employment in the mills and factories. Already there is a tendency to cut down working hours and in one or two cases the working week is restricted to three days. Employers consider the cutting down of working hours is the best method of dealing with the present situation, as paying off of workers often leads to their being lost to the industry altogether. Owing to the very strict agreement which sellers have in regard to adhering to the fixed prices for yarns and cloth there is no shading of terms to secure orders. The raw jute market is quietly but steadily falling, and, under the circumstances buyers of any jute trade commodity cannot be blamed for withholding their orders. There are too many "bear" points in the market to expect anything else but a decline and it looks as if values will revert to the minimum rates fixed last year, viz., on the basis of £90 a ton for Mill Firsts. Business has been done in new crop at £95, and at £85 for Mill Lightnings, compared with the old crop quotations late last week lowest at £101 and £93 respectively. Reports indicate that prospects for new crop are satisfactory and the general opinion in Pakistan is that there should be a crop next season of 6,500,000 bales, compared with the jute crop of 5,500,000 bales. At least another 4,000,000 bales are expected from the Indian crop, though it is possible the yield will be more.

Good marks of Daissee-2/3 are quoted at £102 lowest, and a bid of £115 has been refused, May-June, somewhat to the surprise of the buyer. The position is such that it is generally thought that even ridiculous bids might be accepted, as has been the case with some parcels afloat and ex-quay. Good Tossa-2/3 is from £122 and grade £108, and fairs £112 and £98 respectively, cif, U.K. May-June. It is reported that bids are being solicited for new crop good single marks at £92 for Mill Firsts, August-September, cif, U.K. Calcutta goods are irregular at 71s 6d for 10 oz. 40 in. and 53s 6d for 7 1/2 oz., May-June, 71s 0d and 52s 6d July-September, and 70s and 51s 6d October-December, with B twills at 191s 9d, May, 191s 0d June, 187s 6d July-September and 176s 6d October-December, all f. o. b. Calcutta. As

stated above, the market for jute yarns and cloth is depressed and very little fresh business is taking place. At the A.G.M. of the Samnugur group the other day, Mr. Charles Robertson asked the directors' opinion as to the future of the three Companies in view of the fact that Pakistan was building numerous mills and controlling a large part of the raw jute supplies. Mr. G. M. Garrie, the chairman, said there was no doubt, with Pakistan growing 70 percent of the raw material, it was essential in time that the Government of India should see to it that sufficient jute was grown in India to run the mills there. This year, the Indian crop, including Meshta, was expected to reach 4,700,000 or 4,800,000 bales, while mills' consumption was estimated at around 5,800,000 bales. Mr. Garrie felt progress towards efficiency was lagging behind. With mills going up in various parts of the world, the raw jute position was uncertain. A great deal would depend upon this season's crop. Asked by Mr. Robertson if it was likely that Pakistan, with its increasing mill capacity, would one day need all the jute it grew, the chairman said he doubted if that would ever come about. Mr. George A. Mason was re-elected a director of the Samnugur, Titagur and Victoria companies. Dividends were confirmed.

DUNDEE'S RECORD POSTWAR OUTPUT

With little physical expansion of plants and with but 25 percent increase in the labour force employed, the Dundee jute industry in 1954 produced 85 percent more than before the war, reports Indian Central Jute Committee. The record output last year is attributed to the deconcentration of production units after the war, the modernisation programme on which a sum of £6.75 million has been spent, and the greater use made of capital equipment through an increase in shift working. With the rise in production has come a rise in wages. Since 1939 the wage rates have gone up by 172 percent for male operatives and 200 percent for females. Jute workers have asked for another 10 percent in basic rates and their request will be considered by the Jute Wages Council in Dundee soon. The last increase came into effect on 16th June, 1954, when the award was 4 percent. In 1953 rates were raised by 5 percent, in 1952 by 61 percent and 1951 by 61 percent. Since 1947 the basic rate of pay for male jute workers has increased 77 percent and the female rates have shown an increase of 90 percent.

PAPER-LINED BURLAP COVERING

Burlap and paper, two competing materials in the field of packaging, have been combined by a leading American bag company to make an ideal waterproof rug cover, reports the Indian Central Jute Committee. The new construction, consisting of a layer of burlap and paper laminated together with asphalt, is available in either pre-cut sheets or large wide-width rolls. The paper-lined rug cover is said to be flexible enough not to break apart puncture as easily as a carton and provides extra protection against moisture. It has also shown savings in time, labour, space and shipping cost because of its lighter weight. Manufacturers claim that closure of the cover takes one-tenth the time that a carton demands. One million yards of goods can be stored in the space that would hold only 300,000 yards when the rolls are packed in corrugated containers. The lighter weight of the cover means less shipping cost. For the shipping and storage of various sized cloth rolls and for handling broadloom carpeting, cotton, nylon and rayon mills and upholstery manufacturers in the U.S.A. have found the new cover much more suitable than cartons.

Along with paper-lined rug cover another new "non-woven" bale covering made partly of cotton has entered the packaging field. According to the National Cotton Council, U.S.A., bale coverings with a fibre content as high as 40 percent cotton have been used to cover bales in Arizona. The non-woven fabric is made by putting together layers of fibre webs and bonding with resinous-type substances under heat and pressure. Though generally thin and lightweight, non-woven have good strength and high stretch—both, according to the Council, are important in determining an improved bale package. Its additional value is in its water-repellent character.

SLIGHT RISE IN U.S. TEXTILE BAG DEMAND

The U.S. Department of Commerce reports slight improvement in textile bag demand in the third quarter of 1954 over the comparable period of 1953. As a result, the quantity of both burlap and cotton cut-up increased. The Department states in its quarterly report on containers and packaging that burlap consumption in the third quarter was 0.1 percent above the corresponding period of 1953 against an increase in cotton consumption by 1.0 percent. Total textile bag business in the third quarter was 0.7 percent above the 1953 volume for the same period. For the first nine months, consumption of textile for bags was 1.8 percent below the corresponding period of 1953. For this same period, burlap cut-up for bags increased 0.5 percent, whereas cotton consumption decreased 5 percent. Price of textile bags was generally unchanged although burlap bag prices were spotty in some areas of the country. Raw materials was plentiful with inventories normal. Bag users' inventories were low as most ordering was for immediate shipment.

Plantation Topics

SOUTH INDIAN TEA OUTPUT REACHES RECORD LEVEL

LARGER BUSINESS ON COCHIN MARKET IN 1954

THE year 1954 will undoubtedly be acknowledged as a year unparalleled in the history of the tea trade, say Forbes, Ewart & Figgis Ltd. in their review of the tea year 1954. The demand remained strong throughout the year in spite of the fact that, by the end of December the North Indian crop was approximately 13 million pounds ahead of the 1953 figure and the South Indian production was almost 8 millions in excess. Coupled with the high price of tea was the market rate for Export Quota which reached a peak of 360 pies a lb. This caused great concern to producers, particularly in South India where increased crops have not yet brought a corresponding increase in the allocation of quota. Many estates found themselves short of quota by the end of the year and were forced to enter the already high market to cover their export teas.

During the year, the Government appointed two Commissions to enquire into the workings of the trade. The first of these, the Plantation Enquiry Commission was formed in April 1954 and its task was to enquire into the economic conditions and problems of the industry. In the course of the year the Commission made its investigations by means of a questionnaire to all sections of the trade and later by travelling round the producing areas in order to meet the representatives of the trade. The Commission is still sitting and has not yet made its report. In October 1954, the Government appointed an auction enquiry committee in order to investigate the possibility of increasing the quantity of tea sold by auction in India and correspondingly reducing the amounts sent to London auctions. At the time of writing, the Committee has completed its investigation and has submitted its report. It is understood that their recommendations envisage a gradual increase in the quantity of tea to be sold in India but an assurance has been given to the British Government that at no time will the quantity available for Auction in the United Kingdom be less than 20% of the exportable crop.

Once again it is a pleasure to record a further increase in the quantity of tea sold in the Cochin market. In 1954, the total quantity of tea sold through the Cochin market amounted to approximately 40 1/2 million lbs., this was an increase of 5 1/2 million lbs. over 1953. Forward crop contracts in 1954 were considerably greater than in 1953 and there were also the usual internal contracts for dust and whole leaf grades.

Leaf Market

On Tuesday, 5th January, 1954 the first Export Sale of the year was held, there was a good demand at this sale and prices were generally 2 annas dearer than the last sale of 1953. The low grown Travancore B. O. P. quotation at this sale stood at Rs. 2-1-6 a lb. The second sale of the year was a major advance and prices were 2 1/2 annas dearer. Prices fluctuated throughout February but in March they continued to advance and at the end of the month the low grown quotation stood at Rs. 2-10-0. From the beginning of April, the market started to decline and by mid-July Low-Growns were quoted at Rs. 2-5-0. Sale No. 15 was held on 27th July and from this sale onwards the market advanced steadily week by week, by mid-October Low-Growns were selling at Rs. 3-5-6. Thereafter the market steadied until the last sale in November, which saw a rapid leap to Rs. 3-8-3 and at the end of the year the market for Low-Grown teas was Rs. 3-6 a lb. With such high prices ruling for the low grown teas the range of quotations from low to high grown was comparatively narrow. The margin between these two quotations rarely exceeded 8 as. until the end of the year when the better quality teas came on to the market. During the year the price gap between the Low-Grown and medium teas was very small and often little more than one anna. Best liquoring High-Grown teas were well supported throughout the year and the peak was reached in the last sale of the year when the highest price realised for a Nilgiri B. O. P. was Rs. 4-8-0 a lb. Generally speaking, the quality of the cold weather teas in the second half of 1954 was not so good as in the early months of the year. The year 1954 has been marked by the constant demand for fannings grades of all qualities and these teas have sold consistently at a premium over equivalent broken grades. Whole leaf teas have met an irregular demand, although the good quality Pekoes and Flowery Pekoes have continued to sell well to exporters. Lower-Grown Leaf teas were less popular but realised fair rates. Very few stylish tippy teas were manufactured in 1954 and there were no "very tippy teas." There was some demand for Middle East type fannings in the middle of the year and again towards the end of the year. In the second half of the year the export auctions were somewhat complicated by the inclusion of considerable quantities of tea which were not covered by export rights. Due to the very high price of Export Quota and the shortage of quota on estates many producers were disinclined to purchase quota for their export grades and the onus thus fell on the exporter. As the quota market fluctuated widely week by week many exporters were loth to take the risk of purchasing these uncovered teas. However, the extremely strong demand shortly before the end of the year

brooked no denial and exporters competed for these teas discounting them to the value of quota and the necessary cess.

Cochin Auction Averages

1952	Rs. 1	9	9	a lb.
1953	Rs. 1	14	6	a lb.
1954	Rs. 2	13	2	a lb.

(These averages are ex-warehouse Cochin and do not include excise duty.)

Dusts

Prior to Christmas, 1953, the average price of Dusts sold in the last auction of the year was Rs. 1-13-0, at the first sale of 1954 the market advanced sharply and the average was Rs. 1-15-5 a lb. This advance continued in the next sale when prices rose to an average of Rs. 2-5-7. However, in Dust Sale C the market started to decline and fell until Dust Sale E when it again strengthened. By the beginning of May the market had steadied to an average of Rs. 2-4-4 but it then strated to fall away sharply and by the end of July, the quotation stood at Rs. 1-13-6 a lb., which was the lowest price of the year. From August onwards, the Dust market marched hand in hand with the export leaf grades and steadily advanced sale by sale until it reached an average of Rs. 2-9-5 at the beginning of October. Thereafter it fell by 2 as. and the quotation was around Rs. 2-7-6 until the last sale of the year at which there was a very poor demand and very heavy withdrawals. The average of those teas sold amounted to Rs. 2-3-9. However, by the end of the year unsold Dusts were mainly cleared up and the prospect seemed good for the first sale of 1955. Although the usual forward contracts for Dusts had been concluded in 1954 there was some increase in the quantity of Dusts sold in auction. Towards the end of the year some exporters participated in the Dust market for black grainy Middle East type Dusts and these sold remarkably well and at one stage, certain Dusts, suitable for this part of the world, realised over Rs. 3 a lb.

Shipments

The shipment of tea from South India in 1954 showed an increase of just over half a million lbs. over 1953. The United Kingdom increased its imports from South India by almost 4 million lbs. shipments to the U.K. being 53 1/2 million in 1954 as against 49 1/2 million in the previous 12 months. In the North American Continent the exports to Canada remained almost exactly steady on the previous year's figures at 6 1/3 million. However, exports to the U.S.A. fell by 1 million. Australia, which had taken 2 1/3 million lbs. of tea from South India in 1953 took a little over 1 million in 1954 and there was a heavy fall in the shipments to all other destinations which dropped from 4 1/2 million in 1953 to just under 3 million in 1954. Total shipments from South India in 1954 were just over 78 million.

Production

Not only was 1954 a record year for prices it was also a record year for crops. The South Indian crop rose to its all-time high figure of 13 1/2 million in the months of January and February 1954 showed a decrease in production over the 1953 figures. The month of January 1954 was down by almost a million lbs. in comparison to January 1953. February remained about steady but in March the crop was 2 1/2 million higher than in 1953 and April was over 6 million up on the equivalent months in the previous year. The May figures were down by just under 3 million and June remained almost steady. In July, 1954 there was an increase of a million lbs. which was offset in August by a deficit of a million and a half lbs. The September figures for both years were about the same but October 1954 was again approximately a million lbs. down. November figures for both years were about 91 million but in December 1954 there was a very heavy cropping and the figures were 3 million up on the 1953 total. This was due to the heavy rains experienced in late October and November and it also affected the quality of the high-grown teas.

Internal Consumption

Finally a note of warning. India is drinking very much more of the tea she produces—so much so that the internal consumption in India now figures largely as a controlling factor of the world price of tea. During the past 8 to 10 years consumption has been doubled from 90 million lbs. a year to the present day figure of approximately 180 million lbs. a year. The average crop for the past eight years, including 1954 is 602 million lbs. as against a crop figure of 560 million pounds for 1947—an increase of 42 million. Consumption in India is increasing rapidly and at a far greater pace than the increase in production of tea. India now consumes nearly 30% of its production—how long will it be before 50% or more is consumed? Will production catch up with this increase? Not unless drastic and immediate action is taken to plant new areas of a considerable average. If this is not done the amount of Indian tea available for sale to export markets will yearly diminish with a corresponding falling off in India's foreign trade balances.

PRICE OF TEA FOR DETERMINING EXPORT DUTY

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 3-5-6 a pound for the month of May, 1955.

Commodity Markets

COTTON TEXTILE IMPORT DUTIES CUT

PIECEGOODS EXPORTS

THE Finance Minister announced in Parliament on Tuesday morning reductions in import duties on British textiles. The new duties will be As. 2-3 a square yard plus 25 percent *ad valorem*. Two annas a square yard is the highest excise duty at present leviable on Indian mill-made piecegoods, in addition to which three pies a square yard is also levied to subsidise handloom and khadi cloth. Two annas three pies is roughly equivalent to 5 percent *ad valorem*. In other words the present import duties on British textiles have been scaled down by half, to between 30 percent and 40 percent. Indian textiles will continue to enjoy a protection of 25 percent, the As. 2-3 being tax payable by both types. For British textiles the relief will be of the order of 30 percent on varieties mostly in demand in India. The scheme of preferential duties under the Indo-British trade agreement will continue, non-British textiles paying the higher duty of 20 percent. The new arrangement is for a period of 12 months after which the whole position will be re-examined in the light of its effect on the Indian industry.

Looking back, India, which was the principal importer of Lancashire textiles, average imports pre-war being of the order of 200 million yards, has become a large exporter of textiles to the United Kingdom. In 1954 exports for domestic use were 60 million yards as against India's intake of 3 million yards. Actually the U.K. imported 125 million yards and the Commonwealth 400 million yards in 1954. After Independence imports ex-Lancashire, which were previously subject to an import duty of 17 1/2 percent, were banned. In 1953 a small quota of 20 percent was permitted with enhanced duties ranging from 60 percent to 80 percent. The Indian textile industry, which was taxed at an average of 5 percent on Excise Duty, therefore enjoyed a two-fold protection, namely, quantitative control, the import quota being 20 percent, and the differential duties ranging from 55 percent to 75 percent (the difference between import duties paid by Lancashire and Excise Duties paid by Indian mills). In response to British representation quantitative restrictions on Lancashire textiles were removed in 1954, a move which, although it attracted a large number of applications for import licences, proved illusory as there was hardly any increase in import following liberalisation. On one side duty-free Indian textiles were gaining a footing in Britain; the last three months' off-take averaged 272 million yards a year. On the other hand, British textiles, faced with heavy duties, had lost the Indian market, the last three months' imports being insignificant.

Lancashire's Power to Compete

The Lancashire delegation which visited India last month was convinced that with heavy import duties and the range and quality of Indian production it was impossible for Lancashire to compete in Indian markets. In a memorandum to the Indian Government it suggested equitable terms of trade to enable Lancashire to compete in the Indian market. The Government of India saw justice in the demand, but before reaching any decision sought agreement with the mill-owners' Associations of Bombay and Ahmedabad, on the basis of which relief for Lancashire textiles was announced on Tuesday. In reaching their decision the Government was influenced by a number of considerations. Duties which were primarily levied for revenue purposes had failed to provide any more yield and their scaling down would obviously give better results. The British Government's counter moves could be the imposition of quantitative control or the levying of import duties on Indian textiles, either or both of which would have reduced Indian imports into the United Kingdom, leading to a reduction in production and unemployment in the Indian textile industry. It is in India's interests to nurse the British textile market and retain colonial demand for Indian piecegoods for which purpose Lancashire's goodwill is needed. Rough estimates place possible Lancashire imports at 15 million yards a year as against practically nil at present. The chances of the Japanese staging a come-back in the Indian market provides an element of risk for which purpose provision for review of the concessions after 12 months has been made. The Government moreover possesses emergency powers to deal with the flooding of the Indian market.

EXPORT OF OILS AND OILCAKES

The Government of India have reviewed the export policy of oils and oilcakes and have decided that with immediate effect the export of cotton seed oil and sesame oil should be licensed freely for shipment up to the end of July, 1955. By a separate notification issued simultaneously, the Government of India have abolished the export duty on cotton seed oil and reduced the duty on sesame oil from Rs. 300 a ton to Rs. 75 a ton. They have also decided to release a small quantity of sesame seed for export. The present level of duty which is Rs. 150 a ton will remain unchanged. Exports will be licensed freely for shipment till the end of July. By another notification issued last week, the duty on decorticated and undecorticated cotton seed, oilcakes has been reduced from Rs. 100 and Rs. 50 a ton respectively to a uniform level of Rs. 30 a ton, whereas the export duty on niger seed cake, kardi seed cake and castor seed cake

NATIONAL CONDUITS LTD.

has been abolished. The duty of Rs. 50 a ton on the remaining cakes, namely, linseed cake, sesamum cake and musard cake will remain unchanged. Except in the case of linseed cake, exports of all the above cakes will be licensed freely up to ceilings previously announced for shipment up to the end of July. The quota earlier released for export of linseed cake has already been exhausted. There will be no change in the existing level of duty on groundnut oilcake and meal. A further small quota for export will be released as soon as the ceiling announced earlier has been reached. Shipment against this ceiling will be permitted up to the end of June.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.6 percent to 344.2 during the week ended 16th April, 1955 as compared with 346.4 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.3 and 14.8 percent respectively. The Foodstuffs index declined further by 1.4 percent to 282.4 due to a fall in the prices of wheat at Hapur and Jabalpur (-1.0% each), jowar (-0.8%), rice at Patna (-4%), gram (-3%), bajra (-2%) and gur (-1%) despite an increase in the prices of wheat at Amritsar and tea for internal consumption (+6% each), dal arhar and coffee (+2% each) and sugar (+1%). A fall of 0.9 percent to 396.9 in the index for Industrial Raw Materials as compared with 400.4 (revised) for the previous week, was brought about by a decrease in the prices of lac (-9%), groundnuts (-5%), cottonseed (-3%), linseed in Calcutta and rapeseed (-2%) each and raw cotton and raw jute (-1% each). The prices of manganese ore (average export prices) (+21%), iron ore (+6%), linseed in Bombay (+5%) and castor-seed in Bombay (+1%) were marked up. The index for Semi-Manufactures however, advanced by 0.2 percent to 327.7 due to an increase in the prices of mustard oil at Kanpur and groundnut-cake (+5% each), copper (+4%), linseed oil (+3%), gingelly oil and zinc (+2% each) and sheep skins and coconut oil (+1% each) although the prices of gingelly-cake (-5%), Coconut-cake (-3%) mustard oil at Patna (-2%) and groundnut and castor oils (-1% each) showed declines. A decrease in the prices of jute manufactures (-2%) brought down the index for Manufactures by 0.2 percent to 375.3. Lower prices of chillies at Patna (-5%) and black pepper at Cochin and tobacco leaf (-1% each) were responsible for a fall of 0.6 percent to 539.8 in the index for the Miscellaneous group; the price of turmeric, however, moved by 5 percent in Calcutta.

SHARP RISE IN U.K. WOOL CONSUMPTION

A sharp increase in British wool consumption in February is noted by the Wool Industry Bureau of Statistics, which has just issued figures showing the total as the best since September, 1953. Wool-top production showed a bigger-than-normal seasonal increase, and worsted-yarn deliveries were slightly up on January, although a little below those a year earlier. The wool consumption rate was more than 2,000,000 lbs. (clean) higher than in January and 6 percent up on a year ago. Top-making consumption showed a sharp increase on January, and the rate of wool consumption in woollen spinning was slightly higher than in the previous month and 16 percent up on February last year. Top production rate was almost 9 percent better than January, although only 1 percent above the previous February. Total deliveries of worsted yarn—at a delivery rate 2 percent lower than in February, 1953—were 17,700,000 lbs. A decrease in weaving and hosiery yarns was largely offset by an increase in carpet and rug yarns and the substantial rise of 45,000 lbs. in hand-knitting yarns, total deliveries of the last-named being the highest for any February since the war.

Calcutta Markets

FAIR GENERAL DEMAND AT TEA INTERNAL SALE

EASIER TREND OF PRICES

AT Sale No. 44 held on 3rd May Dust offerings consisted of 18,200 chests. There was a fair general demand and the market on the whole was 2 to 4 annas below last week's rates. However those teas with clean black appearance and bright liquors were only 1 to 2 annas easier, while the good liquoring CTC's were 2 to 3 annas below last week's rates. The very fibrous, end-of-season residue types were irregular but received good support, especially the lowest priced teas.

Quotations

Offerings of other grades consisted of 102 chests of the new season's tea and 1,776 chests of the old season's tea. There was a fair general demand but at irregular rates and Fannings grades were the weakest feature of the sale. No quotations can be given this week.

	1955 Rs.	1954 Rs.
Medium Doars Dust	2 0 0 to 2 1 0	2 0 6 to 2 1 0
Medium Assam Grainy Dust	2 2 0 to 2 3 0	2 1 6 to 2 2 0
Best Assam CTC Dust	2 10 0	2 5 0

FREIGHT MARKETS DULL

SHORTAGE of May tonnage and the higher rates subsequently sought by owners resulted in few fixtures being concluded during the past few days. A further concession has been made by charterers for grain rates from St. Lawrence and 72s was paid for May loading for the U.K. as compared with 65s paid previously. There was a strong demand for U.S. coal but little business was done due to a shortage of tonnage. Cuban sugar charterers require tonnage for India and Iran and business is also arrangeable for grain Pacific Coast to Japan. Indian ores are still quoted freely but no business has been reported. A vessel was taken for Calcutta-Singapore coals at the very low rate of 52s 6d with prompt shipment. The Timer Charter section was very quiet with one vessel fixed for five to seven months trading at \$ (U.S.) 3.40.

SUGAR MARKET QUIET

During the week ended 4th May, sugar sales in the Calcutta market averaged 2,000 bags daily. Arrivals were 2,000 bags a day and stocks totalled 200,000 bags. Rates for ready sugar ex-Kanpur delivery were Rs. 30-4 for ordinary grain and Rs. 31-8 for big grain. Forward sugar sold at Rs. 30-4 and Rs. 31-8 for ordinary and big grains respectively. Ex-mill delivery rates were quoted between Rs. 28-14 and Rs. 29 a maund for standard grades of sugar. There was no improvement in the market tone.

LINSEED

There was little change, and the general undertone of the market remained firm. Ready goods were rather scarce and sellers for forward delivery were reserved; enquiries from millers were moderate and there was a small daily turnover of ready goods. The oil section was rather dull, but prices remained unchanged; enquiries were very scarce. Latest quotations were as follows: May Rs. 15-4 a maund.

HIDES AND SKINS

The market in skins ruled dull, while that of hides was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 26th April and 2nd May, 1955)
Cowhides:—Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 11-8 to Rs. 25-8.
Goatskins:—Wet salted (Daissee, Killed) 36,560 pcs. on the basis of Rs. 170 to Rs. 480; Assam-Dinajpur-Murshidabad 42,300 pcs. on the basis of Rs. 265 to Rs. 325. Purneah-Kissenganj 7,500 pcs. on the basis of Rs. 250; Patna-Pakur 5,100 pcs. on the basis of Rs. 175 to Rs. 210.

SHELLAC MARKET QUIET

T=Dividend Taxable.

H indicates that Share capital is half paid. O, C and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PROSPECTS FOR HIGH-LEVEL TALKS ON GERMANY

TENTH ANNIVERSARY OF END OF WAR IN EUROPE BRINGS NEW HOPE OF PEACE

LAST week brought the tenth anniversary of the end of the war in Europe, and incidentally two significant events among the many which have followed in the wake of the "unconditional surrender" of 7th May 1945. The ratification of the Paris Agreements has returned Germany once more to the status of a sovereign nation, this time as a federal republic with a duly elected democratic government, but constituting only about two-thirds of the area and population which can be regarded as Germany proper. The second event, the negotiation of an agreement for the restoration of sovereignty to Austria, is a direct consequence of the first. The prospects for peace in Europe are now probably better than they have been at any time since VE day, although any peace will be precarious while Germany remains divided. That is why the proposed meeting of the heads of State of the four leading war-time allies of the West is being hailed with enthusiasm throughout the world.

After ten heartbreaking years in which the ideals of the preceding six gave way to the realities of the "cold war" and the established processes of old-style diplomacy and new-style international co-operation alike have been completely discredited, it is not surprising that the prospects of a new approach should meet with such widespread popular acclaim. The hope of a top-level meeting was the acknowledged aim of Sir Winston Churchill's later political career, and it is not easily forgotten what part the hope of such a solution played in returning the Conservatives to power at the last General Election in Britain. It may well stand as one of the paradoxes of modern diplomatic history that the prospects of the very meeting which Sir Winston sought should occur within a few weeks of his retiring from the leadership of his country's affairs. With their distrust of this type of high-level conference the Americans are not so enthusiastic as are the British and French, and the recent publication of the proceedings at Yalta is unlikely to have changed their views. The American attitude towards this type of negotiation is often misunderstood in Europe, and perhaps even more so in Asia, as indicating the lack of any desire for a settlement. Nothing could be further from the truth; it is simply that the Americans, who tend to rate the diplomatic ability of the rest of the world much higher than their own, often mistakenly, have come to distrust the Communist in negotiation. It is perhaps fortunate for their international reputation that after their initial lack of warmth towards the suggested top-level meeting, they should have expressed their willingness to take part. This may be because they have at last come to realise the damage which the refusal of such an offer can do, or because their trust in President Eisenhower is greater than that felt for his predecessor. Whatever the reason, what cannot be questioned is the United States' sincere and prevailing wish to see the problems of Europe settled swiftly and peacefully.

*

Whatever misplaced resentment their attitude has aroused elsewhere, there is no doubting the fact that it has been the American's reluctance to bargain on any grounds other than those equally favourable for the western democracies which has brought the leader of the Soviet Union within reach of the conference table. When the establishment of Russian post-war policy has clearly been to swallow in lieu of negotiation only the determination of the United States to oppose all further subjugation with force if necessary has prevented the independent nations of western Europe from going the way of Czechoslovakia. If the Americans have erred on the side of intransigence it would be ungracious for any nation which valued peace and did not want to see Europe's problems solved by the Soviet Union occupying the whole

Continent, to deny that the emphasis has been the correct one. Fortunately, when the United States learned the lesson of the Berlin Blockade the rest of Europe absorbed it as well, and nowadays responsible opinion in all the western countries is unanimous in supporting the American stand. Nowhere has this been more evident than in the long-drawn-out negotiations preceding the ratifications of the Paris Agreements. It has been easier for the United States, with her less bitter experience of German aggression, to recognise that the threat to peace now comes from a different source. But it has been no simple matter for Britain to appreciate that view, and the achievement of bringing the French to accept it, and even more difficult to do anything about it, is a miracle for which that remarkable magician M. Mendes-France should get a fair amount of the credit.

If the ratification of the Paris Agreements has been a triumph of American determination, the form in which Germany now emerges is certainly a defeat for world diplomacy as a whole, and is far and away the most dangerous outcome of the cold war. While Germany remains divided peace in Europe, and therefore the world, will hang by a shoestring. If the Russians are now making a belated acknowledgment of that fact by showing willingness to negotiate on any basis other than that of incorporating the whole of Germany into the Soviet sphere, the world can be thankful. But if the Soviet Union accepts the idea of top-level talks for solving the problem, it is not reasonable thereafter to place the onus for reaching agreement on American shoulders. It is known from experience that a good deal of unthinking world opinion will do just this, and the Communist propaganda machine will work hard to encourage the tendency. The arrival of the Soviet leader at the conference table, and possibly even his subsequent departure leaving a broad basis of agreement behind him, would not mean that Russia was in fact prepared to work out a solution to the German problem in detail on the only principles acceptable to the Western powers, that the Government of a reunited Germany should be the outcome of free elections and that the country should then be free to pursue a limited measure of rearmament and to make what associations and alliances it chooses. Because the Russians have accepted something of the sort for the much less important Austria it does not mean that they will be prepared to do so for the potentially powerful Germany.

BRITAIN'S PROBLEMS OF RESEARCH

NEW DEVELOPMENTS ON THE WAY

It is understood—though no details on the subject are publishable at present—that a British aircraft factory is working on an entirely new principle of flight, embodied in an aircraft with no wings, either fixed or moving. The invention is attributed to Dr. Barnes Wallis, Chief of Aeronautical Research and Development at Vickers. It may be compared with, though is not necessarily related to, the contraption called the "flying Bedstead", evolved by Roll-Royce, which demonstrated a few months ago the possibilities of vertical take-off. Recently, too, rumours that Mr. Harry Ferguson, the brilliant inventor of agricultural machines, was working on an entirely new kind of motor-car were confirmed—by Mr. Ferguson himself. It is believed that Mr. Ferguson will simplify the whole system of transmitting power from engine to wheels, but he may have new ideas about engines as well. Already the application of gas-turbines to motor-cars is well advanced in the British motor industry, which aspires to gain a lead in turbine cars as its sister industry gained a lead in turbine aircraft. After the amazing performances of French electric locomotives this year, we must concede that France is the leader in modern rail traction; and Britain's ships are not noticeably in advance of other countries—though the stern-engine "Southern Cross" embodies some new principles. But in general Britain can take some pride in the technology of her transport.

Industrial technology is more difficult to judge—there is so much of it. On a rough assessment, Britain seems to be comfortably placed among the leading nations: not in many respects seriously behind the others, nor in many respects appreciably ahead of them. But, if the present position is satisfactory, the prospect is not altogether reassuring. When Mr. Reginald Maundling, Britain's Minister of Supply, said recently that Britain must maintain a lead in research and development in order to maintain her position in world trade he was uttering not a conventional platitude but a general feeling of anxiety. What troubles Mr. Maundling, and many others, is the scarcity of scientists qualified to undertake the needed research. Most industries are now aware that they must devote much money to the task, but money will not buy results if there are not enough men to put it to good use. It is now perceived that the implications of the big rearmament programme were wider than most people envisaged when it was initiated in 1951. Attention was focussed then on the material resources that it would require, not on the scientists whom it would divert from creative activities. There should be consolation in the thought that the same problem has appeared in America. On the contrary, America's problem only aggravates Britain's, because America attracts skilled men from other countries. Dr. Stanley Hooker, Chief Engineer of the Bristol Aeroplane Company, said recently in Montreal that the United States and Canada were taking away Britain's best aircraft designers and engineers, and the same complaint has been heard in other industries.

The universities—notably Oxford and Cambridge and Manchester, but others too—are extending their facilities for training scientists and technicians in industrial subjects, and in nuclear development science and industry are working together with a harmony that other activities might usefully imitate. That atomic energy is being rapidly applied to industry despite the priority of nuclear weapons is encouraging, but there is still no guarantee that this development will proceed unhindered by shortage of technicians. The application of the latest electronic marvels is also being studied rationally, after delays that may cost Britain much trade in the future. Progress towards mechanisation of offices and automatic working of factories should be accelerated by the office-management conference in May and the conference on "automation" in June; for the discussions at such gatherings are not abstract but related to the practical problems of daily work. Britain's progress towards automatic factories has been so far disappointing. The essential equipment has been evolved, but there has not been close enough association between the scientists and the engineers to co-ordinate the equipment with the detailed functions of the production-line. Recent discussions of the United States Society of Automotive Engineers have shown that "automation" has materially reduced costs in American aircraft plants, and conferences of Soviet scientists and engineers have revealed rapid progress in "automation" in the USSR.

Several times in the past year or two British industrialists have referred somewhat apprehensively to reports of such progress, and it is now reluctantly admitted in Britain that the Soviet Union may be ahead of the western countries in both the theory and the practice of automatic control. This situation seems anomalous when the western countries are the more developed indus-

trial, and it may have important political effects in the coming years unless the European countries apply themselves more seriously to the technique of automatic production. But the task cannot be performed efficiently if there are not enough technicians to apply the developments achieved by scientific research and invention. There may be a gap between awareness of a problem and the solution of it, but that the problem itself is now generally recognised in Britain is in itself an important advance. Each generation may produce only a few inventors of genius, but there are surely many enterprising young people to take up the new careers that are presenting themselves. We do not hear much criticism now of compulsory free education of the people, for, if the system works properly, any young person who shows aptitude for technical work can be duly encouraged and guided into the appropriate channels. Lack of opportunity must never again cause shortage of technologists.

THE CO-OPERATIVE MOVEMENT AND OFFICIAL CONTROL

ROLES OF THE RESERVE BANK AND THE STATE BANK

THE amendment to the Reserve Bank Act, enacted last week, is yet another measure taken by the Government of India for the quick promotion of co-operative credit in the countryside. This measure, like the one to nationalise the Imperial Bank of India for its conversion into a State Bank, follows the recommendations of the Gorwala Committee and its integrated scheme of rural credit. The State Ministers' Conference held in New Delhi on the eve of the enactment gave its complete approval to the scheme. State participation, it agreed, was an unavoidable necessity for aiding the growth and development of co-operative institutions in the country, as otherwise it would be impossible to raise the required funds from among the rural people themselves.

That State participation in what is fundamentally a people's movement based on self-help, self-reliance and initiative is harmful to the very spirit of the movement seems to have been impliedly recognised in the elaborate justifications offered in support of the proposal. But there has never been a true co-operative movement in this country in spite of the precious half century that has been devoted to this cause. As that great British co-operator, Sir Horace Plunkett once remarked, co-operation in India is not "so much a movement as a governmental policy". So it still remains. The Gorwala Committee, in explaining the cause of the movement's poor record, has said that the very money-lenders and other village usurers from whose clutches the co-operative credit institutions were meant to free the needy agriculturist, are in many cases found to be in control of the institutions themselves. Wherever they do not control, they offer competition of a most unfair kind. That however is not as important a cause as the weakness of their organisation. Unless the movement is thoroughly reorganised with proper-type men placed in charge, mere State participation cannot make it the moral force that it is in Germany or Ireland. Pouring crores of rupees into the countryside will be a deplorable waste of public money if there is no proper machinery to enforce the cannons of co-operative finance.

This is not overlooking the fact that the needs of agricultural finance are greater today than ever. In the present context of socio-economic changes in rural India, when the existing landed class is vanishing with the land reform measures, the new class of owner cultivators need plenty of financial assistance, which only the Government can provide. Their long-term and medium-term credit needs are also proportionately greater. The co-operative financial institutions are the ideal channel for the pumping of agricultural credit, but these institutions must be in a position to ensure that the money lent to the agriculturist is spent for the desired purpose, such as the capital improvement of land and better modes of cultivation, rather than in some unproductive way. Here is where the direct check and supervision of the

State comes in. That is unavoidable. But the control could be so exercised that the cultivator does not get unduly frightened of co-operative officials. They should, above everything else, appear in the role of educators.

It is perhaps not yet clear how the Reserve Bank and the newly-created State Bank will function in the field of rural credit, though it is generally realised that they will have distinctly separate functions. Judging from the trend of measures and legislative enactments taken so far it appears that the two institutions will operate in a complementary manner. The Reserve Bank will be responsible primarily for organising long-term and medium-term credit, while the State Bank will provide short-term accommodation to co-operative and marketing societies. It will also be the main instrument in mobilising rural savings as well as spreading banking habits in the countryside. The Reserve Bank Amendment Act makes that clear.

The amended Act authorises the Reserve Bank to set up two funds, namely, the National Agricultural Credit (long-term operations) Fund with an initial sum of Rs. 10 crores and the National Agricultural Credit (Stabilisation) Fund with an initial sum of Rs. 1 crore. The purpose of the former is to advance loans to State Governments to acquire share capital of apex, land mortgage and central banks and even primary societies and to advance loan to their members for long-term agricultural purposes. The other Fund is for the assistance of the State co-operative banks in converting their short-term loans to medium-term ones when due to unexpected emergencies reoccur. In verities of short-term advances are delayed. In other words, they mark the beginning of effective State participation in and control of the co-operative movement.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a rise of 13.1 points during November, 1954. Contributing chiefly to the increase were advances in cotton consumption, jute manufactures, steel ingot, pig iron, paper and coal. Cheques clearances and notes in circulation also rose.

Average Cash Holdings.—The amount of circulating currency per head of population is obviously no index of wealth as long as exchange restrictions and controls over external trade falsify the real value of the currency. A Frenchman may have an immense number of francs but that is less evidence of his wealth than of the debasement of the franc. But allowance can be made for currency depreciation and trade restrictions by calculating currency per head in terms of the U.S. dollar if we translate the local currency into dollars not at the official exchange rate (which is artificial) but at the free (or black) market rate, because these uncontrolled rates may be presumed to take account of "real" currency values—or at least of the actual supply and demand of each currency. Only where the currency is freely and legally convertible into dollars (and where trade is unrestricted, at least for exchange control reasons) can the official rate be taken for comparing various national currency holdings in terms of the U.S. dollar. The method has obvious limitations: the black market value of a currency in terms of the dollar may indeed be "truer" than the official exchange parity but it is still not necessarily the value that currency would have if controls were removed. Nevertheless the results obtained have some interest. The following table of circulations per capita at the end of 1954, with countries arranged in order of the size of currency holdings, is taken from the current *Pick's Currency Year-book*.

CIRCULATION PER CAPITA AT END OF 1954

Plan Optimism and Doubts.—The proceedings of the National Development Council in New Delhi last week reflected both the optimism and doubts which prevail over the financial as well as the physical targets of the second five year plan. The total investment outlay in the plan has been estimated tentatively at Rs. 5,600 crores, to which the contribution of foreign assistance is expected to be not more than Rs. 1,000 crores. The Chief Minister of West Bengal, Dr. B. C. Roy, himself an enthusiastic believer in the Welfare State, is credited with the suspicion that the total strain involved in the Plan-frame is too great for the existing capacity of the country. His counterparts in other States, notably Bombay and Mysore, were however optimistic and they pleaded that a plan of bolder dimensions than that framed by the panel of economists and other experts of the Planning Commission should be drawn up for the next quinquennium. The Prime Minister was as usual optimistic though he qualified his optimism by the statement that the figures in the draft schemes need not be taken as absolutely accurate and were subject to revision; he did not appear certain whether the resources of the country could support an investment programme of the magnitude of Rs. 5,600 crores. Nor did Mr. Deshmukh, the Union Finance Minister. He disclosed that the Government had decided to appoint a Committee consisting of some members of the Cabinet and the members of the Planning Commission to scrutinise the estimates so that some firm figures could be arrived at. The draft plan, as Mr. Nehru announced, is likely to be ready by next November and the final plan should be available by March, 1956, with the basic objective of an annual increase of 5 percent in the national income and the creation of some 10 to 12 million jobs. Since the Government is committed to a policy of full employment, or the banishment of involuntary unemployment in the Keynesian sense, within a period of 10 years, the above broad objectives of the second plan will have to be stuck to. The objectives are undoubtedly desirable but their implications in terms of physical and financial resources are formidable. A school of economic opinion, led by Professor Mahalanobis and Dr. D. R. Gadgil, believes that these targets are not impossible if the pattern of investment is chosen wisely. Another school has been urging the Finance Minister for a considerably larger dose of deficit financing than he is prepared to administer at present on the ground that the rate of rise in the real national income over the last few years has been proportionately faster than the increase in money supply, and that the present deflationary tendencies in the economy are largely due to this fact. Whether the Finance Minister will be tempted to this course on such grounds it is difficult to say, but he is right in describing the proposed large measure of deficit financing as a calculated risk. The sum total of capital formation, as an authority has described, is not merely money-capital formation, technical know-how, machinery and other equipments are its equally important components. Whether India will be able to command these latter components in an adequate measure for the second plan is a matter that forms precisely the core of the problem.

Nationalisation Study.—The British Trades Union Congress has always taken a sane view of the nationalisation of industry, even to the extent of opposing the views both of certain member unions and the Labour Party policy. Considerable interest will attach, therefore, to the fact that the T. U. C. leaders are now reviewing the whole field of State control and plans for nationalisation. It is even possible they may decide against any extension of public ownership so far as Britain is concerned. Nothing will be done to interfere with the Labour Party's decision to soft-pedal on nationalisation issues during this election campaign, but the T. U. C. chiefs are setting down their own idea in a report for presentation to the Trades Union Congress at Southport in September. The principal item will be a detailed study of the engineering industry—particularly machine tools, aircraft and shipbuilding. The aim is also to analyse the flaws and errors of existing nationalisation and suggest ways of improvement. Some of the most influential members of the T. U. C. are opposed to fresh nationalisation until the present state-owned industries are working more effectively. The outcome of this inquest into nationalisation may be proposals for more powerful Development councils in which workers and management would operate more closely. Outright State control would then be considered only if private owners were unable to run their industries efficiently.

U.S. Business Plans.—American industries expect their sales to be five percent larger this year than they were in 1954. They also expect to spend one percent more for new plant and equipment this year than they did last year. This was revealed in the annual survey of business anticipations conducted jointly in February and early March by the U.S. Department of Commerce and

the U.S. Securities and Exchange Commission. The agencies' report said that capital expenditures are expected to rise in the second quarter of this year, ending a decline that began in late 1953. The expected total for this year is \$27,063 million. This compares with \$26,827 million in 1954 and the record \$28,322 million in 1953. An earlier report from the Federal Reserve (Bank) Board stated that a survey in January and February found that consumers have bigger spending plans than they had a year ago. The two reports taken together point to increasingly strong business activity and consumer demand in 1955. Plant and equipment purchases are expected to rise to the second highest level in history in 1955 despite the decrease in outlays for manufacturing, mining, railroads, and non-rail transportation. The joint report said these cuts will be more than offset by boosts in commercial and public utility spending. The agencies predicted that commercial investment will climb 7 percent to an all-time high of \$8,819 million. They attributed the rise chiefly to store construction, particularly in new shopping centres, and to extensive store modernisation programmes. Public utility outlays are scheduled to advance four percent to \$4,384 million. The report said the increase is due entirely to a sharp jump in gas company outlays, largely for new pipeline construction. Manufacturers intend to decrease their outlays 3 percent from \$11,038 million in 1954 to \$10,704 million in 1955. This compares with a drop of 7 percent from 1953 to 1954. The estimated manufacturers' outlays for 1955 reflect a 4 percent reduction by durable-goods producers and a two-percent decrease in nondurable-goods industries from 1954 to 1955. However, the report said "there is considerable variation in the anticipated changes of individual industries and some significant reversals of trend." An example cited by the report is that large manufacturing concerns generally expect their capital outlays this year to equal those of 1954. In the durable-goods industries, four of the major industries plan to increase their plant and equipment outlays this year while the remaining four major industries plan cutbacks. Three durable-goods industries that reduced their outlays in 1954—iron and steel, non-ferrous metals, and machinery—have scheduled increases for 1955. The four major durable-goods industry planning higher outlays this year is the stone, clay and glass products industry. In contrast, the automobile industry now expects lower capital outlays, after having accelerated its programmes considerably in late 1953 and in 1954. Although increases are planned by producers of transportation equipment other than automobiles, the total outlays for transportation equipment are expected to decline about 6 percent this year to \$1,235 million. Of the seven major nondurable-goods industries, two plan increases and five plan cuts. In this group the petroleum industry plans to boost its outlays three percent while a slight advance in rubber manufacturing investment also is in prospect. As for the non-manufacturing groups, railroads intend to cut their spending 11 percent while the mining and nonrail transportation industries have scheduled cuts of eight percent and 1 percent, respectively. The agencies say that total plant and equipment outlays are due to climb from a seasonally-adjusted annual rate of \$26,000 million in the first quarter of this year to a rate of about \$27,500 million in the second quarter. Discussing their forecast of a 5-percent rise in business sales, the agencies said manufacturers expect a 4-percent rise in sales while trade firms look for a rise of six percent and public utilities for an advance of eight percent. All major manufacturing industries, the report added, believe their sales will be larger this year than in 1954. Durable-goods companies expect a 5-percent rise while nondurable-goods companies anticipate a 4-percent gain, it said.

Employment in March.—The Employment Exchanges placed 13,763 persons in employment during March, 1955, against 12,293 in the previous month. The number of vacancies notified to the exchanges during the month was 22,706 as compared with 20,094 in February, showing an improvement in both private and public sectors. The number of employers using the exchanges during March was 4,847—412 more than the February figure. The employment situation during the month improved in a number of States. The number of fresh registrations of unemployed persons during the month was 119,875 as against 109,464 in February. The number of unemployed on register during the month was 595,828; the figure in the previous month was 605,933. For the first time since the end of November, 1954, the number of registered unemployed was less than 600,000. Under the training scheme of the Ministry of Labour, 7,766 persons, including 565 women and 2,171 displaced persons were receiving training at different training centres at the end of March. The number of instructor-trainees at the Central Training Institute, Koni-Bilaspur was 97. Under the Apprenticeship Training Scheme for displaced persons, 590 apprentice-trainees were undergoing practical training in production work in U.P. and West Bengal at the end of the month.

CONDITIONS IMPROVE IN THE STOCK MARKETS
PRICE TREND MIXED IN RESTRICTED TURNOVER

London, 10th May.

RATHER more cheerful conditions have prevailed in the stock markets during the past week although business has continued at a low level and buying has been selective. On balance, price movements were mixed and mostly small. The approaching general election again restricted activity. Fears of dearer money affected gilt-edged securities where small selling and absence of support produced a downward drift in prices. Undated stocks offered some resistance but dated and especially short-dated stocks weakened. The strength of German bonds following heavy Continental buying was the feature of the foreign bonds market with rises ranging to 10 points or more in the potash issues. Japanese bonds also gained ground but Chinese lost some of their recent gains. Dollar stocks tended higher in response to Wall Street. Most of the attention in industrials centred on shares of companies announcing dividends. Prices generally advanced although there were occasional reactions on dividend disappointments. Steel shares went ahead strongly on election hopes and other sections scored a fair number of gains. Gold shares drifted lower in the absence of interest. Copper issues attracted modest demand and other base metal shares held steady to firm. Oils moved somewhat erratically but on balance went ahead under the lead of British Petroleum and Burmah. The latter improved on dividend hopes and the former following the publication of results. Tea shares developed a better trend despite the weakness of tea prices. Rubbers were mostly well maintained.

The Money Market

The money market had a short period credit ease in the early part of past week, with money

cheapening to 2-1/2 percent. This was partly due to an inflow of funds from overseas sources following a fresh advance in sterling. Later in the period, however, their sharp turnaround and credit stringency again sent loans firming up once more to the 4 percent level. Business bills remained on a moderate scale, with July dates commanding 3-13/16 percent. There was a further small increase in last week's treasury bill rate. Applications for treasury bills totalled £384,845,000 of which £230 million was allotted at an average rate of 78s 3.59d compared with 77s 11.45d in the previous week. This week £230 million are on offer. The Bank of England return for the week ended 4th May showed notes in circulation about £11 million higher at around £17,742 million, but bankers' deposits about £9 million lower at around £24 million. Fine trade bills were unchanged.

U.K. Gold and Dollar Reserves

The sterling area's gold and dollar reserves rose by \$19 million in April to \$2,686,100,000. The E.P.U. surplus in April was £22 million compared with the surplus of \$9 million in March.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 4th May, shows gold stock at \$21,871 million. Foreign deposits fell by \$27 million but foreign investments rose by \$28 million. The Federal Reserve bought \$11,800,000 worth Government securities under the re-purchase agreement. Member banks' borrowings rose by \$234 million to \$720 million, while their excess reserves rose by \$488 million to \$900 million. The daily average borrowings fell by \$178 million to \$464 million, while the daily average excess reserves rose by \$2 million to \$464 million. Business loans of the New York City banks rose by \$27 million to \$7,639 million compared with the rise of \$26 million to \$7,943 million a year ago.

U. S. Treasury Loans

The U.S. Treasury announced that it had received about \$4,000 million in subscriptions for the current cash offerings of \$500 million in 2 percent Treasury notes. Preliminary reports from the Federal Reserve Bank indicate a probable allotment of 62 percent to investors for securities they ordered. The Treasury said. It added that the allotments would be made in full on subscriptions for \$100,000 and less. The new cash offering was a part of the \$6,400 million issue of 15-month 2 percent note. Besides the \$2,500 million of new cash, the Treasury offered \$3,900 million of the new issue in exchange for the one year 1-1/4 percent certificate maturing on 1st May. The Treasury has no official estimate as yet when the results of the exchange offering will be announced. Most likely it will be next week.

Insurance Company's Purchase Offer

The North British and Mercantile Insurance Co. Ltd. and three of its American subsidiaries are negotiating to buy the entire capital stock of Central Surety and Insurance Corporation of Kansas City for \$9,250,000.

Weak Tone in Rubber Market

Moderate European orders and better New York advices gave a steadier tone to the London rubber market at the beginning of the week, but values eased in a dull phase after minor fluctuations in thin trading. Further orders found sellers reserved. Early shipment of No. 1 RSS, especially held tightly. Lower grades were not so much wanted and were obtainable at widening discounts. Towards the close, values again advanced on covering demand which found offers limited. Finally, prices were slightly below the best bid 1d a lb. higher on balance. The sole crepe market remained slow but some small orders were enough to prevent material stock accumulation. Thus, prices were maintained on a steady basis of 34 1/4 a lb. for No. 1 on spot.

Rubber Grading

The main discussion at the Second International Rubber Quality and Packing Conference, New York, centred on efforts to reconcile the two types of crude rubber grading now prevailing, and to develop one world-wide type of grading. It was learned, Singapore, in the past year, has developed grading for types of natural rubber which have either been of a lower quality or higher than R.M.A. grades. Differences in grading have centered on R.S.S. fours, fives and remilleds—the so-called off-grade rubbers. It was learned also that there is a good chance that Singapore producers and the rubber trade in London may agree on world-wide types with R.M.A. changing some of its grading. Another question discussed was the packing of raw rubber. This is considered to be a transport problem which can be easily solved.

With effect from 16th May, 1955, the new Delhi-Bombay feeder service via Agra, Gwalior, Bhopal, thence weekly frequency. The newly arrived Herons will be utilised on the route. The service will leave Delhi on Mondays, Wednesdays and Fridays and return from Bombay on Tuesdays, Thursdays and Saturdays. This is the first route in India to be operated by the four-engined Heron aircraft. It will provide an air connection to the residents of Agra, Gwalior, Bhopal, Indore and Aurangabad with Delhi and

Without Prejudice

WHEN VIOLENCE IS CONTEMPLATED
PREVENTIVE DETENTION AS A KEEPER OF THE PEACE

(FROM OUR LEGAL CORRESPONDENT)

WE resume our occasional survey of "an ennobling and not a degrading relationship, founded or at least nourished by mutual respect and regard, the personal tie between parties, the fibres of which include both sympathy and affection." The inspiring reference is, of course, to the present-day relationship between master and servant; still technically so viewed though one might perhaps more accurately nowadays describe it as the relationship between two joint contractors. In our last essay we considered the case of employers drastically insisting on every technical defence available to them, irrespective of the real factual merits of the case, on the principle that having, as the result of industrial legislation, very few rights left, and every concession being inevitably made the immediate basis of a legal right, it is unsafe to make any concessions at all. In this note we will look at the other side of the picture and the conduct which provokes and renders necessary and justifiable this unconciliatory attitude. And the particular exemplar of this ennobling relationship and exponent of the exemplary qualities of sympathy and affection with whom we are concerned is a gentleman named Raghunath Prosad. Mr. Prosad found himself under the painful necessity of invoking the aid of the Calcutta High Court to secure his release from *durance vile* to which he had been consigned by order of the District Magistrate, 24-Farganas, for and during the term of one year certain. He sought his remedy by way of an application in the nature of Habeas Corpus; and lest the non-legal reader may be a little vague in his mind as to what this remedy is, it may be explained that under the Habeas Corpus Act in England and under the inherent common law jurisdiction in India, if any man, woman or child is, or is asserted on apparently good grounds to be, deprived of liberty, the courts will always issue a writ to anyone who has the aggrieved person in his custody to have that person brought before the Court, and, if he is suffering restraint without lawful cause, set him free. Sometimes the Act (in time of war for instance), or the common law equivalent to it in India, is suspended by Act of Parliament. But these being days of cold peace, Mr. Raghunath was entitled to avail himself of his rights and he forthwith so did in manner herein after appearing in his capacity as a citizen innocent and aggrieved. Nevertheless, we will glance at some of the unjust allegations against him.

Raghunath had been ordered to be detained under Section 3(a) of the Preventive Detention Act 1950. Now the very words Preventive Detention have an ugly sound; and there is probably no exercise of power which more readily excites public resentment and suspicion, especially, if one may say so with due modesty, in countries within the Commonwealth, than arrest and internment without trial. This suspicion is fully shared by the High Court judges and a very good thing it is that this should be so. Only some four years ago, an eminent judge, Patanjali Sastri J., had these pungent words to say on the subject. "The outstanding fact to be borne in mind in this connection is that preventive detention has been given a constitutional status. The sinister-looking feature so strangely out of place in a democratic constitution which invests personal liberty with the sacrosanctity of a fundamental right and so incompatible with the promise of its preamble." This obsession about personal liberty has been carried occasionally almost to lunatic lengths by the British. When an aggressive but chastened gentleman named Napoleon presented himself to Captain Maitland, R.N., on board H.M.S. *Bellerophon* and was then and there subjected to preventive detention, Sir Samuel Romilly, the greatest lawyer of his day, was consulted by Sir Francis Burdett, M.P., the famous radical with a view to getting him released by exactly the same procedure as that adopted in 1955 by Mr. Raghunath Prosad—Habeas Corpus—and their lordships of the King's Bench might have ordered his release had not the constitutional knot been cut by a highly exasperated but perturbed Government rushing through a special Act of Parliament to legitimate his detention.

We find the conservative and correct legal view expounded and adopted by the last person we should expect it from, that arch-radical the late Professor Harold Laski: "Liberty does not mean absence of restraint.... We cannot live together without common rules.... I shall not feel my liberty is endangered when I am refused permission to commit murder.... My creative impulses do not suffer frustration when I am bidden to drive on a given side of the road.... Wherever there are avenues of conduct which must be prohibited in the common interest, their removal from the sphere of unrestrained action need not constitute an invasion of liberty."

Leaving the constitutional experts we may take this to mean that while Mr. Raghunath is entitled to walk around a free man on his lawful occasions so long as he does not stray into one of these prohibited avenues of conduct, the European officers and all other employees of the Titagur Paper

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought to November, 1954. Compared with the preceding month there were increases in cotton consumption 11.1 points, jute manufactures 16.0 points, steel ingots 4.5 points,

pig iron 6.3 points, paper 32.9 points, coal 29.1 points, wagons loaded 8.1 points and electricity 8.3 points, while cement decreased by 3.4 points.

The indices for cheque clearances and notes in

circulation rose by 19.4 points and 4.0 points, respectively.

Correlating all the factors the Capital index of Indian Industrial Activity advanced by 13.1 points during November, 1954.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND FOR MONEY REMAINS STRONG

Wednesday, 11th May. DEMAND conditions in the money market have remained strong throughout the past week, especially in the case of the sugar industry where the present bumper crushing season is absorbing a large quantity of funds. Money remains tight in the interbank market and the call rate is unchanged at 3 percent.

It has been a quiet week in the exchange department with only a few gunny bills coming to hand. Remittance is moderate. Sterling continues to strengthen and the U.S. dollar is quoted at Rs. 47 1/2.

Bullion was quiet in the absence of support. The price of silver fell from the previous week's level of Rs. 168.8 to Rs. 166.4, quoted to-day. The forward rate was lower at Rs. 165.12. The price rose from 75.1d to 76d in London but it was unchanged at 87 cents in New York.

Gold also declined from Rs. 98.8 to Rs. 95.1. The sovereign at Rs. 61.8 showed a loss of 10 annas.

A rise of Rs. 18.49 crores in notes in circulation to Rs. 1329.26 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 6th May, 1955, while the total note issue fell by Rs. 2.19 crores to Rs. 1339.80 crores. Notes held in the Banking Department consequently declined by Rs. 20.68 crores to Rs. 10.54 crores. Deposits showed an all round decline. Deposits of the Government of India and other Government accounts fell by Rs. 93 lakhs and Rs. 11.79 crores to stand at Rs. 50.09 crores and Rs. 23.21 crores, respectively.

Balances of commercial banks at Rs. 47.24 crores showed a decrease of Rs. 1.42 crores. Balances held abroad rose by Rs. 57 lakhs to Rs. 53.76 crores. Investments dropped by Rs. 9 lakhs to Rs. 41.48 crores. Other loans and advances increased from Rs. 35.45 crores to Rs. 40.49 crores, of which advances to scheduled banks against usance bills totalled Rs. 29.94 crores against Rs. 24.84 crores. These advances amounted to Rs. 87.82 crores since 1st January, 1955. Ways and means advances were shown at Rs. 80 lakhs (Rs. 89 lakhs).

Tenders for Rs. 1 crore of three month Government of India Treasury Bills, which were opened on Tuesday, 10th May, 1955, totalled Rs. 1,56,00,000. The average rate of acceptance decreased from Rs. 2.9-3 to Rs. 2.9-0 percent per annum. Tenders at Rs. 99.5-9 percent were allotted approximately 99 percent. Tenders for a further Rs. 1 crore of three month Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 16th May, 1955. During the week ended 6th May, 1955 Government of India Treasury Bills for Rs. 13,26,50,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 29th April, 1955, discloses Demand and Time liabilities at Rs. 590.39 crores (Rs. 9.59 crores on account of borrowings from Banks) and Rs. 583.70 crores (Rs. 2.20 crores) compared with Rs. 591.06 crores (Rs. 9.13 crores) and Rs. 582.14 crores (Rs. 2.17 crores), respectively in the previous week. Cash has decreased by Rs. 42 lakhs to aggregate Rs. 34.13 crores, while balances with the Reserve Bank have increased by Rs. 48 lakhs to stand at Rs. 46.61 crores. There is a rise of Rs. 1.71 crores in investments to Rs. 344.40 crores. Advances and bills discounted at Rs. 623.90 crores reveal an increase of Rs. 36 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.3 percent and 64.0 percent against 8.3 percent and 64.1 percent.

The return of the Imperial Bank of India for the week ended 29th April, 1955, shows a fall of Rs. 1.87 crores in total deposits to Rs. 217.09 crores. Investments in Government Securities are down by Rs. 53 lakhs to Rs. 91.92 crores, while other authorised investments remain unchanged at Rs. 11.40 crores. Advances including loan, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 90 lakhs to aggregate Rs. 125.95 crores. Cash and balances are, in consequence, shown at Rs. 17.56 crores or Rs. 45 lakhs less.

Commodity Markets

WORLD TEXTILE MARKETS

USEFUL G.A.T.T. SURVEY

A PARTICULARLY useful study of the textile industry has recently been published by the Trade Intelligence Unit of the secretariat of G.A.T.T. Entitled *The World Market for Textiles, 1938-1953*, it approaches the subject from an angle sufficiently detached to offer a new interpretation of the recent textile crisis and of the major structural changes which have taken place in the industry with India's emergence as a major contributor to world exports. The report points out that as regards cotton the old dominant exporters have been joined by new ones, especially India, which has been forced to make a bid for foreign markets as a result of partition. The Indian sub-continent was a large net importer in 1938 (52,000 tons). After the partition, however, the Indian Union has become an important exporter, while Pakistan has imported large quantities of both yarn and tissues. But in 1952, while the net trade of the Indian Union and Pakistan together was roughly in balance, only 10 percent of India's exports went to Pakistan which in turn imported heavily from Japan. Hence, the report stresses, "the partition of India has had a substantial effect upon world trade and most of the Indian Union's exports are now genuinely competing with those of other large suppliers in the world market."

Unit Value of Textile Manufactures Exported from Nine Major Exporting Countries* to Industrial (I) and Non-Industrial (II) Destinations

	1938 and 1953					
	(Dollars per kilogramme)					
	1938			1953		
	Ratio			Ratio		
	I	II	II/I	I	II	II/I
Cotton yarn	0.7	0.7	1.00	2.2	2.6	1.18
Cotton fabrics	1.3	0.8	0.62	2.9	2.7	0.93

*The United Kingdom, France, Germany, Italy, Belgium, the Netherlands, Switzerland, the United States and Japan.

According to the report the composition of trade in textiles has changed substantially since pre-war, not only as regards its distribution as between the products made of the three main fibres, but also as regards each fibre, yarns, tissues and other manufactures. Similar tendencies could be observed in the composition of trade in respect of cotton and wool textiles. The volume of trade in yarns fell more than the trade in tissues, while trade in other manufactures had increased.

Structural Changes

Before the war, world exports of cotton goods were largely accounted for by six countries (Britain, Japan, the United States, Belgium, Italy and France). The production of these countries represented about half of the world total, while their export surplus of all cotton goods amounted to 638,000 tons, or 71 percent out of a world export volume of 890,000 tons. In 1953 the combined production of these countries still accounted for nearly half of the world output but their total net exports fell by 341,000 tons, that is 58 percent of the world total (739,000 tons). This decline was chiefly accounted for by Britain and Japan, both of whose exports in 1953 fell below one-half of their 1938 volume. But hand in hand with the fall in the combined net exports of the six countries, which amounted to 206,000 tons between 1938 and 1953, went exports nearly half as large (97,000 tons) from India (84,000 tons) and Germany (13,000 tons), two countries which in 1938 had net imports of 49,000 tons. "This situation", the report says, "may be described by saying that a relatively small number of countries supplied in 1953, as in 1938, about 71 percent of world exports. However, the emergence of two new major exporters has diminished the shares of the six pre-war exporters by 13 percent of the world total."

It is felt in the U.K. that another cause for this state of affairs can perhaps be found in the protective commercial policies based not only on tariffs but also on other protective devices, such as quotas and exchange controls, practised particularly in Latin America. Moreover, in addition to competition by domestic production developed in former importing areas and the emergence of significant new exporters there seems to be good reason to believe that the extraordinary growth of new capacity has seriously and permanently affected the outlook for the cotton industry in the old-established cotton producing countries. Latin America has increased its domestic production to such an extent that its net imports have declined by 60 percent. And it is Latin America, the report indicates, which accounts for the total decline in the net exports of the ten major exporting countries. While other countries have introduced textile production or expanded their industry, they have continued to import high-grade textile goods. What is said to have occurred is that while maintaining the volume of textile consumption most former net importers have started to produce the cheaper and simpler piecegoods at home.

PRODUCTION AND NET TRADE IN COTTON AND RAYON TEXTILES 1938-48 AND 53

	(in thousand metric tons)			
	Pro. Cotton	Net Trade Cotton	Pro. Rayon	Net Trade Rayon
Ten major exporters	1938 4.00	-0.60	0.82	-0.13
	1953 0.42	+0.04	1.39	-0.22
Rest of the World	1938 0.66	+0.60	0.02	+0.10
	1953 4.55	-0.54	0.21	+0.19
Of which Latin America	1938 0.25	+0.11	0.01	+0.01
	1953 1.19	+0.54	0.08	+0.02

Turning to the recent recession the G.A.T.T. report says that "the so-called 'textile crisis' of 1951-52 appears upon closer analysis to be nothing more than the perfectly plausible result of market responses, as far as production developments are concerned." Although international trade in textiles was affected far more heavily than production by the "crisis", the ratio of exports to production in 1952-53 was no smaller compared with pre-war, in respect of textiles, than it was for all commodities. It therefore appeared that 1953 could, in spite, or even because, of the textile "crisis" serve as a basis for comparison with pre-war as far as structural changes are concerned. Exports of wool textiles registered a relative stability. In 1938 the proportion of world production that was traded internationally represented 16 percent. Four countries (Britain, Belgium, France and Italy), representing about one-third of production, accounted for one-half of world exports. In 1953, when world production was higher by nearly a quarter, the same four countries still represented one-third of the total. But in trade their share rose from 49 to 67 percent of world exports. This increased concentration of exports upon the traditional supplying countries created a situation entirely different from that in the markets for cotton and rayon textiles. "In the international wool textile market," the report says, "there have been no new competitors."

Rayon Versus Cotton

As regards the cotton-rayon relationship, the report says that in 1953 the world consumption of raw cotton and hence the production of cotton goods exceeded the 1938 level by 15 percent, whereas the rayon output had risen to 114 percent. At the same time, however, world exports of raw cotton had fallen by 21 percent; exports of dissolving pulp (the main raw material in rayon production) had gone up by only 30 percent. This failure of trade in raw materials to rise in anything like the same proportion is, according to the report, due to the geographical distribution of the cotton and rayon textile industries. In both of these branches production had moved closer to the sources of the raw material as well as the markets for their respective product.

The increase in the world's cotton textile production between 1938-48 and 1953 had taken place entirely outside those areas (Western Europe and Japan) which had imported all of their raw cotton. In the remaining parts of the world cotton textile production rose by 36 percent during the corresponding period. But the raw cotton imports of the areas which had increased production in those two periods "were exactly the same in those two periods. Their net exports of raw cotton, on the other hand, fell in proportion of the same in those two periods by Western Europe and Japan. Hence the difference in the rates of growth as between rayon and cotton textiles had only a mitigated repercussion upon the volume of international trade in the corresponding raw materials. On the other hand, the volume had declined mainly because of the geographical redistribution of textile production. But that effect had been smaller upon trade in raw cotton than upon trade in dissolving pulp; the geographical distribution of cotton textile production—an old-established industry which had developed only slowly—had offered fewer opportunities than the young and fast growing rayon textile industry to move closer either to the market for its products or the sources for its raw material."

AGRICULTURAL OUTPUT AND TRADE IN COMMONWEALTH

RECOVERY IN INDIAN PRODUCTION

DESPITE the general advance in industrialisation in recent years, agriculture has continued to provide in each Commonwealth country a proportion of the national income about as large as, or even greater than, before the war. This is revealed in *Commonwealth Agriculture*, a summary of the main developments in agricultural production and trade just issued in London by the intelligence branch of the Commonwealth Economic Committee. Bringing up to date the statistics given in the Committee's thirty-fifth report (*Review of Commonwealth Agriculture: Production and Trade, 1952*), the memorandum says: "Commonwealth agricultural production of both food and raw materials rose appreciably between 1951 and 1953; the post-war expansion thus continued in most countries, while output rose in India, which had not shared in the earlier rising trend. By the end of the period, seasonal factors had checked the expansion in some cases, but over the period as a whole Commonwealth production had risen more rapidly than that of the rest of the world."

The position of the United Kingdom as the principal market for many agricultural products was strengthened. And even with the growth in consumption in the producing countries the increased output was, on the whole, enough to support increased exports. The memorandum recalls that in 1953 new records were established, among others, for cotton from Pakistan and tea from Ceylon. The output of fertilisers in the Commonwealth countries fluctuated widely, but still remained very much higher than before the war, the output of nitrogen in 1953-54 reaching record levels in the United Kingdom, India, and Australia. "Consumption of fertilisers reached record heights in recent years in all Commonwealth countries."

Recovery in Indian Output

In the three years 1951-53, the volume of Commonwealth agricultural output was well above the

pre-war level. "In some countries the post-war increase was continued, while in Australia and India striking recoveries were made from the previous declines. Indian agricultural output, after several interim years of being below the pre-war level, rose some 14 percent by 1953-54, reflecting both better climatic conditions and response to the Indian Government's plans for development of agriculture. Under India's first five year plan, more than 25 percent of the proposed outlay was allocated to agriculture and irrigation, apart from the multi-purpose projects from which agriculture should benefit directly or indirectly. Although no indices are available for Pakistan and Ceylon, it is perhaps pertinent to mention that in both countries—which, like India, are associated with the Colombo Plan—agriculture will claim a similarly large proportion of planned investment."

Summarising the recent indices for the volume of agricultural production in certain countries, the memorandum shows that the increase in 1953-54 over 1953 was greatest in Southern Rhodesia—178 percent. The other increases listed include: India, 14 percent; Britain, 56 percent; Canada, 55 percent; Australia, 22 percent; New Zealand, 33 percent.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.6 percent to 342.3 during the week ending 23rd April, 1955 as compared with 344.2 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.0 and 14.9 percent respectively. The Foodstuffs index witnessed a further fall of 1.0 percent to 279.7 due to the decline in the prices of wheat (—6%), gur at Ahmednagar and dal arhar (—6% each), tea for internal consumption (—5%), salt in Calcutta (—3%), gram at Hapur and bajra (—2% each) and sugar (—1%) despite an increase in the prices of rice at Patna (+4%) and in Calcutta (+3%), gur at Muzaffarnagar (+2%) and coffee (+1%). The index for Industrial Raw Materials declined by 1.1 percent to 392.5 as a result of a decrease in the prices of raw skins (—11%), cottonseed in Bombay and raw jute—Jat Middles (—10% each), gingellyseed at Jhansi (—7%), manganese ore (average export prices) and lac (—7% each), raw silk (—3%) and Jarilla raw cotton (—1%) although the prices of cottonseed at Amravati (+6%), Pun/Amr raw cotton and linseed (+4% each), groundnuts, castorseed and copra (+2% each) and Bengal raw cotton (+1%) showed advances. The Semi-Manufactures index also moved down by 0.2 percent to 327.0. Items which showed significant variations were: gingelly cake (—7%), mustard oil at Kanpur (—2%) and in Calcutta (+4%), coir yarn—anjengo superior—and castor oil (+3% each) and linseed oil and groundnut cake (+2% each). The index for Manufactures stood at 375.4 as compared with 375.3 for the previous week. A fall of 0.2 percent to 538.6 in the index for the Miscellaneous group was brought about by lower prices of chillies at Patna (—5%), betelnuts at Bangalore (—2%) and bricks and tiles (—1%); the prices of cashewnuts rose by 4 percent. INDEX NUMBERS BY GROUPS AND SUB-GROUPS.

(R) Revised.

In the financial year just ended B.O.A.C.'s fleet utilisation record. In their first full year of operations (1950-51) the 22 aircraft which comprise the fleet flew 42,175 hours. Last year the aircraft totalled 75,820 hours—an 80 percent increase compared with their first year. The previous highest was established in 1953-54 when the fleet flew 67,135 hours. The record figures for 1954-55 mean that each of the 22 Argonauts averaged almost 3,400 hours of flying every day of the year. Since B.O.A.C. first introduced Argonauts into service on 23rd August, 1949, the aircraft have amassed a total of 1,618,579,000 passenger miles.

Stocks and Shares

DULL CONDITIONS PERSIST IN STOCK MARKET

TEA SHARES SINK LOWER: GOVERNMENT SECURITIES

STRONG FEATURE

Wednesday Evening.

THE share market has been dull throughout the past week and at the close today there was little evidence of improvement in the near future. Prices have been fairly well maintained in most sections but speculators were adversely effected by the continued uncertain economic outlook and by the news of the large increase in jute goods stocks during April. Indian Irons have remained stagnant because many of the larger operators are still away from the city and uncertainty about the fixing of steel retention prices has persisted. Tea share prices have tended to drift lower with buyers hard to find.

Government securities have continued to find good support and prices have been creeping upwards throughout the week.

Details of the week's trading follow.

* * * *

The Gilt-edged market ruled steady throughout the week and there was a further improvement in prices. The Reserve Bank raised their selling prices for 3% 1965-68, 3% 1970-75 and 3½% 1964 by one anna in each case. Despite the good enquiry for most issues, business was limited owing to shortage of scrip. In contrast with the general trend 3% Conversion Loan 1966 eased to Rs. 80.13 and 4% 1955-60 at Rs. 100.14. In the short-dated group there were no price changes but there were buyers at around last week's prices. Amongst medium-dated Loans, 3% 1959-61 was a strong feature at Rs. 97.9; 3½% National Plan Bonds 1961 had buyers at Rs. 99.12 and 3½% National Plan Loan 1964 was taken higher to Rs. 98.10. Both 3% 1963-65 and 1964 hardened to Rs. 93.13 in each case; 2½% 1961 was better at Rs. 92 and 2½% 1962 met with good enquiry up to Rs. 92.12 due to the approach of the interest payment date (15th May). Four percent Loan 1960-70 was steady at Rs. 101.14 though little business was reported. As mentioned earlier, prices of long-dated issues were marked up in the case of 3% Loan 1966-68 to Rs. 90.11 and 3% Loan 1970-75 to Rs. 87.1.

* * * *

Provincial Loans were a strong market and some sizable gains were recorded in selected issues. Both 4% U.P. 1963 and 1964 had buyers at Rs. 100.64 while 4% Madras 1963 was taken higher at Rs. 100.10 and 4% 1964 was wanted at Rs. 100.9. Four percent Madhya Pradesh and Mysore issues 1963 were wanted at par and 4% Bihar Loan 1963 was asked for at Rs. 99.14. There was a good enquiry for 3% State Loans 1960 and 3½% 1962 but there were no sellers to meet the market.

Once again there was a scarcity of sellers of first class Preference shares despite the fact that buyers were willing to pay higher prices to obtain their requirements. Amongst jute, Bengal changed hands at Rs. 92, Gouropore at Rs. 104.8 and Hooghly at Rs. 15.6. In the Miscellaneous group, Calcutta Electric were done at Rs. 12.8. Burn & Co. 6% at Rs. 123 and the 7% at Rs. 144.8. Dalmia Cement were taken at Rs. 96 and Indian Irons were better at Rs. 108.8. Indo-Burma Petroleum were done lower at Rs. 101 and Jardine Henderson at Rs. 78. Ondal Coal were marked at Rs. 114 and Shaw Wallace were taken at Rs. 85.12. Associated Hotels were crossed at Rs. 64.12 and Birds Investments at Rs. 80.8.

In the banking section, Imperial Bank Fully-Paid were taken at Rs. 1687.8 and the Contributory at Rs. 412.4. Punjab National Bank changed hands at Rs. 42.8 and United Bank of India 'D' shares at Rs. 4.7. United Commercial were marked at Rs. 44.8.

In the railway section a parcel of Shadara (Delhi) Saharanpur changed hands at Rs. 158 and Dehri-Rohas recorded several deals at around Rs. 10.14.

In the Cotton section, Kesoram provided the outstanding feature improving from Rs. 26.8 to Rs. 27.4. Elgins were steady at Rs. 18.4. Cawnpore Textiles were done at Rs. 8.8, Dunbar at Rs. 200 and New Victoria at Rs. 1.7.

The only feature in the coal section was Central India which was taken up to Rs. 8; at this level, however, there was some profit-taking and as a result the price reacted to Rs. 7.10. Burrakur fluctuated narrowly to close at Rs. 12.12. East Indian were steady at Rs. 29. Equitable were done at Rs. 31.10, Katras Jherriah at Rs. 49.12, Pench Valley at Rs. 22.13, and Raneengunge at Rs. 11.12. Several transactions were recorded in South Karanpura at around Rs. 11.12, and Western Bengal were dealt in at Rs. 7.6.

The publication of the I.J.M.A. stock figures for April was received with disappointment by operators in the jute section. The sharp increase in Hessian stocks by 3,000 tons and sacking stocks by 3,800 tons provided ample testimony that mills were finding it difficult to dispose of their products in overseas markets. Howrah improved during the earlier part of the week under review from Rs. 29.15 to Rs. 30.14 but reacted at the close to Rs.

29.14. The following table illustrates the trend of prices in this section:—

	Opening	Closing
Anglo India	5.55	11.55
Bally	218	216
Budge-Budge	184	183
Chitavalsah	188	185
National	14 3	14 6
Nudea	33 8	33 12
Reliance	55 4	55
	14 7	14 8

Electric Supply shares continue to rule steady. Calcutta were done at Rs. 15.4. Benares at Rs. 19.6, and Sijua Jherriah at Rs. 12.10. United Provinces changed hands at Rs. 157 and Upper Ganges Valley at Rs. 14.12.

Sugar shares were dull and the volume of business was disappointing. Belsund came to hand at Rs. 10.3, Carew were subbed at Rs. 12.2, Champaran were steady at Rs. 31, Dunbar were quoted at Rs. 16.5 and New Savan were marked at Rs. 6.

In the engineering section Indian Iron & Steel shares fluctuated between Rs. 33.6 and Rs. 34 to close at Rs. 33.11. The feature once again was Indian Galvanizing which rose from Rs. 23.9 to Rs. 24. Braithwaite were steady at Rs. 24.2 and Bridge & Roof were crossed at Rs. 34. Buying enquiry lifted the price of Burn & Company from Rs. 263 to Rs. 268. Indian Standard Wagon were done at Rs. 129 and Indian Steel & Wire Products changed hands at Rs. 81.8. Jessops were marked at Rs. 36. Kumardhubi Engineering were slightly better at Rs. 12 as were Marshalls at Rs. 6.12. Richardson & Cruddas were wanted at Rs. 18.2.

The spotlight in the miscellaneous section was on Indian Cable shares which met with strong enquiry on favourable reports regarding the outlook for the Company and the price improved steadily from Rs. 25.7 to Rs. 27.8; tonight's closing

AOLLERITA
ACCOUNTING
SERVICE BUREAUX

If the size of your business does not justify the installation of a full HOLLERITH system you can still, at peak periods, have all the advantages of HOLLERITH services and methods.

Submit your accounting problem to a HOLLERITH Service Bureau and it will produce the results—tabulations, invoices, statements or other documents as may be required. Your original documents are returned to you and all the information, which is now on punched cards, is filed and treated with strict confidence, ready for you to call upon at any time.

Alternatively, you may hire or buy Punching and Verifying machines to record your information on Hollerith Cards in your own offices and then use the Bureau to produce the finished result.

Apply to us at any Office listed below and we will send a representative, who, with knowledge and foresight, can help you when you're really busy.

quotation is Rs. 26-14. Bengal Paper were enquired for at Rs. 66 and Orient Paper fluctuated between Rs. 27-1 and Rs. 27-14 to close at Rs. 44-2. Titashur Paper were well maintained at Rs. 44-2. Some Valley changed hands freely at around Rs. 7-11. Hercules had buyers at Rs. 24-12 and New Asiatic were quoted at Rs. 5-12. India Steamship were easier at Rs. 7-5. Angelo Brothers were lower at Rs. 19-2 and Assam Saws, on the publication of a disappointing report, slid back to Rs. 5-8. Balmer Lawrie were dealt in at Rs. 160. Bengal Flour were steady at Rs. 24 as were British Burma Petroleum at Rs. 30-2 and British India Corporation were steady at Rs. 8-4. Britannia Biscuits were taken at Rs. 19-8. Calcutta Trams were steady at Rs. 16-6 and Dunlop Rubber were marked at Rs. 35-10. Eastern Investments eased to Rs. 165. Fraser & Comvay changed hands at Rs. 14-7 and Hoare Miller at Rs. 11-6. Indo-Burma Petroleum were dealt in at Rs. 147-8 and were quoted today at Rs. 136 x d. (Rs. 10 a share). Jardine Henderson were unchanged at Rs. 116. Martin Burn changed hands at Rs. 23-8 and National Insulated Cables at Rs. 23-11. Imperial Tobacco changed hands freely at around Rs. 11-5 and Rohas Industries were steady at Rs. 24-3 x d.

In the mining section Orissa Minerals were unchanged at Rs. 25. Indian Copper at Rs. 3-8. Burma Mines at Rs. 1-11 and Western Stockholders Investment Trust at Rs. 1.

In the absence of any buying enquiry little business was recorded in the tea section and prices eased still further. Amongst Assam shares Baghmari were done down to Rs. 26-10. Borukhuria lost four points to be quoted at Rs. 38 whilst Dhela-khat after being taken at Rs. 20 found sellers at Rs. 18-12. Dufkashur were on offer at Rs. 48 as were East India at Rs. 27. Gohpur at Rs. 47-8 and Gosh 'A' an 'B' at Rs. 37 and Rs. 19 respectively. Hancoch had sellers at Rs. 67 whilst Jullibari were marked down over three points to close at Rs. 22-8. Methoni had sellers at Rs. 95 as did Telaitan at Rs. 32 and Tyroon at Rs. 48. Amongst Donors gardens a small lot of Birnara changed hands at Rs. 215 whilst Hantamara were unchanged at Rs. 338 and Hasimara were slightly better at Rs. 46. Ranicherra were done at Rs. 25-12 and Sarugaon at Rs. 44-8 x d.

Of the remaining shares Nagri Farm were on offer at Rs. 30 as were Tukwar at Rs. 15-19 and Puthukhat at Rs. 32. Rongacherra eased to Rs. 17-4 and Patrakola to Rs. 17-8. Hansqua were offered freely at Rs. 27-4.

The ASSAM SAW MILLS AND TIMBER COMPANY incurred a loss of Rs. 71,045 for the year ended September compared with Rs. 1,83 lakhs in the previous year. Providing Rs. 12,000, being commission foregone by the managing agents and arising in a debit balance of Rs. 97,203 there is a debit balance of Rs. 417,492 which is carried forward. There is again no distribution. The directors say that while the indigenous capacity exists to produce many more tea chests than are required by the tea trade and although in the year 1954-55 "we have sold virtually our whole production, the price obtainable is not such as to enable us to expect much, if any, profit".

There is a profit of Rs. 14,946 of the EASTERN MANUFACTURING COMPANY for the year ended December 1953. Brining in Rs. 8,368 there is a balance of Rs. 44,503. The ordinary dividend is the same at Rs. 3 a share leaving a carry-forward of Rs. 7,003. The directors say that with a reduction in prices and a marked improvement in quality, overseas demand for webbing improved considerably and a satisfactory turnover was recorded in spite of competition in some of the principal export markets.

Messrs. Tata Industries Limited, managing agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during April 1955 was: Pig iron 95,100 tons. Steel ingots 88,000 tons. Some finished steel for sale 18,500 tons; and Finished steel 47,700 tons.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the week—Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available.)

OPPOSITION TO NEW RAILWAY ALIGNMENT IN JALPAIGURI

Strong opposition was expressed to the proposed railway alignment from Ramshai to Binnaguri in Jalpaiguri district, West Bengal, by prominent tea interests at a meeting held to discuss the project under the chairmanship of the Deputy Commissioner, Jalpaiguri. Government engineers, concerned were also present. The representative of the D.B.I.T.A., expressed the apprehension that in the event of the proposed railway line between Ramshai and Binnaguri materialising, the existing section of the railway between Mal and Binnaguri via Nagrakata would not be properly maintained as a first class route, thereby affecting the tea producing areas around Chalsa and Nagrakata. The I.T.P.A. was totally opposed to the scheme on the two above grounds and also on the following grounds: (a) that this scheme would leave the existing section of the railway between Siliguri and Mal and between Binnaguri and Fakiragram vulnerable to floods as they had been before; (b) that this scheme was likely to jeopardise the

New Delhi

RETENTION PRICE DECISION
EXPECTED THIS WEEKINDIAN IRON TO LOSE MARGIN
OVER TATAS

(FROM OUR NEW DELHI CORRESPONDENT.)

PENDING a report by the Tariff Commission, it is expected that provisional steel retention prices will be announced this week. This provisional retention price will be Rs. 385 a ton and will be particularly applicable for Tatas and Indian Irons. The intention of the Government is to finance the development plans of Tatas through steel retention prices on the distinct understanding that profits accruing from such prices will not be doled out to Managing Agents or shareholders, but will be ploughed back into the industry. Reference to the Tariff Commission will also be made during this week.

The Commerce and Industry Ministry has asked the Planning Commission to make a survey of steel requirements for the second five year plan. India is planning to step up her present production of 1.2 million tons. It is suggested that efforts should be made from now to increase steel consumption in India so that increased production can be used up without dislocating the market. There is no plug on the availability of steel, provided funds to finance its import are available. It was, however, pointed out that existing Indian prices are uneconomic and far below world prices. It was further stated that the cost of production of steel per ton was bound to be higher for new units than, say, for Tatas.

Finance for the Second Plan

The sinews of development, namely, the finances for the second five year plan, were discussed by the National Development Council, which held its session here during last week. The lead was given by the Prime Minister, who presided. He said that the activities had now to be pitched in a higher key and that they had to prepare the ground for "the next jump—and not the next step". Thereafter it was futile for Dr. B. C. Roy to argue that the total strain involved in the "plan-frame" would be beyond the capacity of the country to bear at present and that the major heads under which this effort was envisaged in the plan-frame would lead to lop-sided development, thus seriously injuring the prospects of balanced growth. The Chief Minister of Uttar Pradesh, Dr. Sampurnanand, disputed the assumptions for additional resources to be found by the States, which he asserted were not co-related with facts. Their voices were however drowned in the chorus of approval by the other Chief Ministers. Mr. Subramaniam from Madras said that there was no going back and that the necessary resources would have to be found. Mr. Morarji Desai pleaded for a bolder plan.

One unpopular view, however, places governmental resources for the second five year plan at Rs. 3,000 crores. The States, as has been proved by the first five year plan, have little to spare for development expenditure. The utmost the States can scrape together is placed at Rs. 5 crores. The Centre will be able to spare Rs. 100 crores a year or Rs. 500 crores in five years. A target of Rs. 1,000 crores has been laid down for loans, including small savings. Another Rs. 1,000 crores is expected from foreign aid, additional taxation and deficit financing. The picture of revenue receipts of the

Central Government for the second plan period would be somewhat as follows:

Revenue Receipts of the Central Government. (Rs. crores)			
	Five Years 1955-56	Five Years 1956-57 to 1960-61	Five Years 1961-62 to 1965-66
1. Income tax	76.96	390.92	88.00
2. Corporation tax	38.77	240.93	53.00
3. Import and Excise duties	238.29	1,073.21	264.50
4. Exports	47.70	211.04	51.00
5. Estate duties	0.21*	0.29*	0.50
6. Other taxes and duties	3.70	19.51	3.70
7. Surplus profits of the R.B.L. Etc.	23.18	81.15	35.00
8. Others	42.49	196.70	40.00
Total	472.30	2,237.75	535.70

* Represents cost of collection and share of Part C States.

After meeting the unavoidable expenditure, the balance available from the revenue account for the second five year plan will be Rs. 300 crores. The railway contribution is placed at Rs. 200 crores. On the assumption that the proportion of Government revenues to national income would be maintained at the existing level, the total of internal resources is likely to increase to Rs. 2,000 crores. As pointed out earlier, this is an unpopular view. The preparations for the "next jump" have to be pushed through, even if it is required to exceed the target of Rs. 5,000 crores.

Budget Session Reviewed

The 12-week Budget session of the Union Parliament concluded last Saturday. It was a notable session in more than one sense. During this Session, the decade-old Bill for social reform for the Hindus was enacted into law, giving them the right to divorce. The much criticised Constitution Amendment Bill was enacted, to facilitate the creation of a socialist pattern of society. The Bill to amend the Criminal Procedure Code was also passed. The stage was set to modify the Managing Agency system by the presentation of the report of the Joint Select Committee on Company Law. The Government also made a gesture of goodwill to Lancashire by reducing the import duties on British textiles. The Imperial Bank was nationalised to create the State Bank of India. The Government also announced its decision to introduce the decimal system of currency for which purpose a Bill was introduced. It also announced its decision to introduce the metric system of weights and measures.

Gurgaon Canal Project

A project report on the Gurgaon canal has been sent by the Government of Punjab for inclusion in the second plan. The project consists of a canal of 1,000 acres discharge to take off from the Okhla weir by the side of the Agra canal. It will serve an area of 350,000 acres of Palwal, Gurgaon, Ferozepur, Jhirka and Nuh tehsils, about half of which will have flow irrigation and half lift irrigation. The project has been examined by the Central Water and Power Commission and its comments have been sent to the Chief Engineer, Punjab. The Punjab and Uttar Pradesh Governments are in correspondence with each other regarding the allocation of supplies at Okhla for the Gurgaon canal and for the extension of the Agra canal. The existing Agra canal belonging to Uttar Pradesh serves an area of about 150,000 acres of Palwal tehsil of Gurgaon district. The annual irrigation from this canal in Gurgaon district is about 62,000 acres.

Kosi, Chambal and Rihand Projects

There have been revisions in the estimates for the Kosi, Chambal and Rihand projects also. In Kosi, at the time the execution of the Project was approved in principle, the expenditure estimate amounted to Rs. 37.3 crores. As a result of further scrutiny by the Kosi Administration and discussions with the Central Water and Power Commission the figure was raised tentatively to Rs. 42.5 crores, mainly because of the fact that the protective works were worked out in greater detail and the height of the embankment was increased in the light of experience gained from similar works in China. Actually, this revised estimate is being reviewed by the whole-time Chief Engineer who has also been asked to prepare detailed estimates. In the case of Chambal, the financial estimate for stage I of the project prepared in 1952 was Rs. 33.75 crores. The estimate, as revised in 1954, was raised to Rs. 51.69 crores for this stage. The main reasons for the increase are the raising of the height of the Gandhisagar dam, increased provision for a canal system, the original estimate of which was based on incomplete data, and increase in the generating station capacity, transmission lines, etc. It was subsequently decided that one item, "Rana Pratap Sagar Dam", might be excluded from stage I. The revised estimate for stage I, therefore, now stands at approximately Rs. 48 crores. In the case of Rihand, the original project estimate was Rs. 35.26 crores. Recently, the Uttar Pradesh Government invited world tenders for the construction of the dam. Based on the rates quoted by the lowest tenderer, the State Government has revised the estimate of this project to about Rs. 45 crores.

Labour in Second Plan

Labour in the second five year plan is an item for discussion by the Indian Labour Conference, meeting at Bombay next week; the other items for discussion being merger of a portion of dearness allowance with the basic wage, desirability of extending the Employees' Provident Funds Act to certain additional well-established industries, problems of agricultural workers, conditions of child

labour and amendments to the Minimum Wages Act. At the instance of the All-India Manufacturers' Organisation, the Conference will discuss the desirability of introducing an unemployment insurance scheme in place of the present provisions for lay-off and retrenchment compensation. The Indian National Trade Union Congress has invited discussion on its scheme for a Wage Commission. It is suggested that the following should be included in the second five year plan, so far as labour is concerned:

- (i) Expansion of the Provident Fund Schemes to cover additional industries;
- (ii) Expansion of the Employees' State Insurance Scheme;
- (iii) Workers' Education: a scheme of scholarships to cover—(a) adult education; and (b) trade union education.
- (iv) A fresh agricultural labour enquiry to provide comparable data with reference to the Agricultural Labour Enquiry completed earlier.
- (v) Setting up of regional industrial museums at Calcutta, Kanpur and Madras.
- (vi) Welfare Centres.
- (vii) Training of welfare personnel.
- (viii) Housing for coal mine workers.
- (ix) Housing for plantation workers.
- (x) Development of Central Labour Institute, National Productivity Centre and T.W.I. Centre.
- (xi) Expansion of activities of employment exchanges in certain fields.
- (xii) Consideration of protection of contract labour as well as its progressive abolition.
- (xiii) Expansion of tripartite consultative machinery of the Ministry of Labour to cover additional industries, namely building.
- (xiv) Re-organisation and expansion of training schemes.

The Conference may wish to suggest:—(1) lines on which further action may be taken on the schemes and recommendations contained in the first plan, in the remaining period of the plan, and (2) recommend schemes which may be considered for inclusion in the second plan.

Labour organisations, and more particularly the Indian National Trade Union Congress, have been demanding that a substantial portion of dearness allowance paid to workers to neutralise the rise in the cost of living should be "integrated with the basic wages as there has been no sign of the cost of living index coming down to pre-war level." While accepting the recommendation of the Gadgil Committee that 50 percent of the dearness allowance admissible to the Central Government servants drawing a basic pay up to Rs. 750 a month should be amalgamated with their pay, the Planning Commission suggested that this recommendation of the Committee should be extended to workers in the private sector also. Normally an allowance should be only a small percentage of the basic pay. But this does not, however, apply to the dearness allowance, which, in some cases is even more than the basic pay of the workers. This, it is argued, is due to basic wages having remained in many cases stationary at pre-war levels and the living costs having risen more than three times that level. On account of this abnormal position and as the rise in the cost of living has come to stay, the issue of absorption of at least a part of the dearness allowance has assumed importance.

Revision of Pay Structure

The level at which the basic wage might be fixed has been examined by some committees. The Central Pay Commission recommended that the basic wages of the Central Government employees should be determined on the basis of a cost of living index of 160-175 points taking the year 1939 as 100. The scales of dearness allowance recommended by the Central Pay Commission were worked out on the slab system with the cost of living index number of 160 as the base. The Committee on Fair Wages also felt that the basis adopted by the Central Pay Commission should be followed and that the basic wages should be fixed relative to the cost of living index number of 160 to 175, on the assumption that the index in 1939 was 100. On the other hand, the Gadgil Commission felt that the cost of living was not likely to fall down to the level anticipated by the Central Pay Commission and as such, the Committee suggested that the cost of living index at the level of 265 to 284, taking the pre-war level to be 100, should be made the basis for fixing basic wages.

The Industrial Tribunals have not followed any uniform policy in fixing basic wages and dearness allowance. The Industrial Court in Bombay fixed the basic wage of cotton textile workers on the basis of the cost of living in pre-war years. The Industrial Tribunal (Bank Disputes) in 1950 fixed basic wages on the cost of living index number of 1944. The Minimum Wages Act, 1948, provides that minimum wages fixed under the Act might consist of a basic rate of wages and a special allowance variable with the cost of living index number and the cash value of concessions in respect of supplies of essential commodities or an all-inclusive rate allowing for the basic rate, the cost of living allowance and the cash value of concessions. The actual wage rates fixed by various State Governments for different categories of employees do not show any uniformity, since in some cases dearness allowance has been fixed separately while in others a consolidated wage has been fixed.

The question of the amalgamation of the dearness allowance with basic wages was discussed at the eleventh session of the Indian Labour Conference held in August, 1951. No definite conclusions were arrived at. While the workers' representative emphasised the need for amalgamating dearness

Bombay

INDIA'S PEPPER EXPORT
TO THE U.S.COSTLY IMPORT RESTRICTIONS
ENDANGER THE TRADE

(FROM OUR BOMBAY CORRESPONDENT.)

THE pepper export trade is considerably perturbed at the "wholesale detention of spices" shipped to the United States. This "wholesale detention" occurs at American ports on the authority of the Food and Drugs Administration Department of the United States Government which must certify every consignment fit for human consumption before it can be released for distribution through normal trade channels. Detention is ordered on grounds of infestation or if there are positive signs of mould. The consignment must then be cleaned before the Food and Drugs Administration will release it. The necessary cleaning process involves considerable time and expense. It is estimated that on an average detention charges amount to about Rs. 200 a ton. According to the terms of the contract between Indian exporters and the American Spice Traders Association, the leading spice trade body in the United States, all detention charges are on seller's account. Indian exporters complain that these charges are heavy and constitute an unreasonable drain on their profits the rate of which is low in any case because of the competitive nature of the pepper trade. Neither has it been possible thus far to prevent infestation and moulding. Pepper readily absorbs moisture and when this occurs, infestation and moulding inevitably follow. Shipments made during the monsoon are the worst affected.

With the rainy season now approaching and faced with the prospect of further losses in detention charges, the pepper exporters of Bombay, Malabar and Travancor-Cochin held a meeting recently in Bombay under the sponsorship of the Pepper and Ginger Merchants Association Ltd. to consider how this problem could best be tackled. Indian insurance companies, exporters say, refuse to issue cover against infestation and moulding. The Indian pepper trade has therefore put forward the somewhat naive proposal that an attempt be made to locate an insurance company in the United States which would be prepared to accept such risks, and that the premia payable under such policies be borne equally by the American Spice Traders Association and Indian exporting interests. A cable to this effect has been sent to the American Spice Traders Association and their reply is awaited with interest. Alternatively, it is maintained, the export price of pepper will have to be raised by about two American cents a pound to off-set the losses incurred in detention charges.

Employees' Provident Fund

The question of extension of the Employees' Provident Funds Act was considered at the fifth meeting of the Central Board of Trustees held on 28th March, 1955 and there was general agreement with the proposal that the following 16 industries, namely, (1) heavy and fine chemicals including artificial manure, (2) matches, (3) edible oils and fats, (4) printing press, including printing by letter press, lithography, photogravure or other similar work or book-binding which is carried on by way of trade or for purposes of gain or incidental to another business so carried on, (5) tea factories, (6) rice, flour and dal mills, (7) sugar factories and refineries, (8) glass and glass products, (9) leather products, (10) tanneries and leather finishing, (11) cotton ginning and baling, (12) rubber and rubber products, (13) electricity generating, transforming and distributing stations, (14) coil and rope works, (15) automobile repairing and servicing workshop and (16) pottery, china and earthenware, should be brought within the purview of the scheme and that the statistics which were being collected should be placed before the next meeting of the Board. The Board suggested that jute pressing and baling industries should also be included.

Retrenchment and Pay-off Compensation

The All India Manufacturers Organisation has brought repeatedly to the notice of the Government the difficulties experienced by industries particularly medium and small-scale, as a result of the heavy compensations prescribed for lay-off and retrenchment under the Industrial Disputes (Amendment) Act 1953. In the opinion of the organisation, these compensation levies are heavy in their incidence. The lay-off compensation is equal to 50 percent of the total of basic wages and dearness allowance and is payable for 45 days in a year. This period of compensation is liable to be extended without limit even if the lay-off continues for reasons beyond the control of the management, when there is no agreement to the contrary between an employer and his workers. In the case of retrenchment, compensation is payable at the rate of 15 days' average pay for every completed year of service or any part thereof in excess of six months. As this legislation was not anticipated many concerns have not made any financial provision for payment of these compensations. The retrenchment compensation law, in particular, is severely harsh as it requires payment for the entire period of the previous years' service of a retrenched worker. Further, no distinction has been made between large-scale units on the one hand and medium and small-scale units on the other. All the units covered by the Indian Factories Act irrespective of their resources and capacity have been put on the same footing. Also, the retrenchment of only a small number of workers consequent upon rationalisation of methods of production which is to the benefit of the factory concerned has not been differentiated from the case of substantial or wholesale retrenchment of workers due to the closure of the factory either partially or wholly, on account of the difficulties such as shortage of electric power, irregular supply of raw materials, lack of railway transport, competition from imports, etc., which are beyond the control of the management to overcome. Such units, for resuming their normal working, actually need monetary help and Government assistance. Any additional burden by way of retrenchment compensation will make it altogether impossible for them to run again, thereby defeating the very object of the Government to promote employment opportunities and encourage medium and small-scale industries. The Organisation is of the view that a burden of this type should be equally borne by workers, who are the sole beneficiaries, by employers and by the Government. It, therefore, advocates that a compulsory insurance scheme be instituted by the Government to cover the risk of lay-off and retrenchment compensations, the premium to be paid by the Government, employers and employees in the equal proportion of one-third each. By pooling the resources of medium and small-scale as well as of large-scale industries, and by distributing the financial burden equally among workers, employers and the State, such a system, in the opinion of the Organisation, will not inflict undue hardship on medium and small-scale industries.

Prospects of Price Increases

Indian shippers will need to exercise a great deal of caution in revising their export prices. As it is Indian pepper is quoted at a premium of about two cents a pound over the Indonesian product on grounds of superior flavour. It is highly problematical whether the American market, which absorbs approximately 60 percent of India's total pepper exports, would be prepared to pay a further premium of two cents which would make the Indian material four cents dearer than the Indonesian product. It may well be that a price increase would tip the scales in Indonesia's favour at the expense of the Indian trade. In fact, Indian exporting interests would have to well to examine the pepper trade in detail and to assess its future potential.

India is today the world's biggest producer and exporter of pepper, a position formerly occupied by Indonesia. Last year the pepper export trade earned Rs. 10.23 crores in terms of foreign exchange. But there is a likelihood that this high level will not be maintained and possibly India may lose a good deal of ground in foreign markets. The development of the Indian pepper trade is of recent origin and it has been conducted in a haphazard manner depending entirely upon the fortunes of

the moment. It was the war which gave India the opportunity to establish her export markets. With Indonesia and Sarawak, the other main pepper producing countries of the world under Japanese occupation India suddenly found herself as the sole pepper supplier of the world. This monopoly continued in the immediate post-war years and as conditions returned to normal Indian exports touched new high levels. Pepper exports jumped from 9,000 tons in 1946-1947 to the peak post-war figure of 16,600 tons in 1947-1948. Thereafter there was a period of comparative stability and exports averaged about 15,000 tons a year. Correspondingly, there was a steep price increase. From Rs. 971 per 84 cwt in 1940 the price shot up to Rs. 4,000 per 84 cwt in 1951-1952 when the full inflationary effects of the Korean War were in operation. That year India earned Rs. 24 crores from pepper exports, the record figure for any year. But this boom proved to be of a temporary nature and the trade entered a cycle of declining exports. In 1950-1951 the export figure was 15,100 tons. In 1951-1952 the figure dropped to 13,000 tons. There was a further fall in 1952-1953 when only 10,700 tons were exported, still however netting India Rs. 15 crores in foreign exchange earnings. There was a slight recovery last year when 14,760 tons were exported while the figure for the first quarter of this year is put around 4,965 tons.

Current Export Position

These violent fluctuations were largely caused by the abnormal conditions prevailing during the war and the immediate post-war years and it would now seem that the export situation has stabilised itself around the 15,000 tons a year mark. But there are a few uncertain elements in this trade which are likely to change at any moment and which would adversely affect India's export earnings. The recovery last year was partly because of Russian buying. The Soviet Union purchased 1,625 tons and thus accounted for 18 percent of the total Indian export trade. This made Russia India's second biggest customer after the United States. Communist China too showed signs of activity and last year purchased approximately 407 tons or 4 percent of the total exportable quantity. The fact emerges that last year 22½ percent of India's pepper export trade was accounted for by the Iron Curtain countries. This year Russia has already purchased 1,000 tons and it is likely that Red China will buy a further 500 tons in the near future.

But trade with the Communist countries is at best erratic and subject to so many unpredictable extraneous circumstances that it would be unwise to consider it as a permanent factor. Another relevant aspect is the re-emergence of Indonesia as a major producer. As Indonesia completes the rehabilitation of her pepper-growing areas, India will have to face severe competition. Pepper has been a traditional export of Indonesia and the Indonesian economy has depended on it to a large extent. With large-scale growing and a productive potential of 40,000 tons a year, pepper has been closely associated with Indonesian life. The Indonesians have urgent financial reasons as incentives to regaining their pepper trade. Although they have a long way to go yet in regaining their pre-war supremacy, the Indonesians are already active in the American market and are gradually rebuilding their export trade. They have the advantage of a lower price and large-scale growing facilities.

Indian Production Methods

In India, on the other hand, pepper growing is a haphazard affair and cultivators treat it as a subsidiary crop of no major importance. It is a curious fact that during the boom period when world supplies were short and the prices were abnormally high the Indian cultivator did not think it worth his while to increase his output by bringing additional areas under cultivation or by increasing his normal yield of seven pounds a vine in a season, which is considered low. Then there is the overall agricultural problem of India—small and fragmented holdings which lead to dear production. Some of the holdings are so small that their annual crop amounts to a mere 20 tons. A holding which gathers 200 tons in a season is considered to be a reasonably economic unit. Con-

scious of the important role which spices can play in the economic development of the country, the Government of India is now taking active steps to retain as much of this trade as possible. As a start, the export duty on pepper was initially reduced from 30 percent *ad valorem* with a maximum of Rs. 150 a cwt to 30 percent *ad valorem* with a maximum of Rs. 65 a cwt. This has been further reduced to a flat rate of 15 percent *ad valorem* and brought to a par with the Indonesian tariff.

Steps have also been taken to step up production. The area under pepper cultivation has been increased from 203,000 acres to 282,000 acres over a year and the output has risen from about 15,000 tons a year to the estimated crop of 25,800 tons this year. Other measures are also envisaged. The Spices Enquiry Committee appointed by the Government of India in 1951, has recommended that the Central Government should create a special fund of Rs. 1 crore for the development of pepper growing. It is intended to set up research establishments which would experiment with improved qualities of pepper and advise methods to increase the yield of the vine. It is also intended to experiment with the use of fertilisers and other manures. In addition, pepper exporters have accepted a Government proposal to set up an Export Promotion Council for pepper and the first preliminary meeting of this body is scheduled to be held in Bombay on 14th May 1955. The constituents of the Council will come from the country's leading pepper exporters and the first chairman will be the Chief Controller of Exports, Cochin. The first year's budget is set at Rs. 60,000 of which the Government of India will contribute Rs. 40,000 and the balance will be subscribed by the trade. It is proposed to send trade delegations abroad on a sales promotion campaign.

Demand Prospects

However commendable these various actions may be, it is surprising that no one has made any attempt to estimate what the world demand is likely to be within the predictable future. The emphasis has been on growing more pepper and the fact that both Indonesia and Sarawak are also stepping up their production has been ignored. Nor has any attempt been made to assess the effect of increased supplies on prices and whether or not this increased production will go into consumption even at lower prices. American purchases over a period of seven years are a significant pointer in this direction considering that the United States is the single largest buying market in the world and accounts for approximately 60 percent of the total pepper export trade. American imports from all the producing centres of the world have been as follows:

	Pounds.
1947	40,725,790
1948	29,735,182
1949	26,735,182
1950	33,122,532
1951	24,159,380
1952	23,692,798
1953	30,408,129

It is evident that 1947 was the peak year, when purchases touched an abnormal level, but this was because the American market was comparatively starved of supplies during the war years and as trade assumed a more normal pattern there was a general tendency to overimport in every country. The drop in the following year supports this view. Again there was a spurt in 1950 but this was because of the general policy of stockpiling following the Korean War. In other years American imports have followed more or less a consistent pattern despite the fluctuation in prices. It would seem therefore that there is a well-defined limit, which has yet to be computed accurately, to the quantities which the American market will consume. It would require an extremely high-pressed "eat more pepper" campaign to push sales beyond the normal limit.

Because of this relative inelasticity it may be that a cut-throat competition between India and Indonesia may have disastrous results on prices without appreciably increasing the sales turnover. It is freely admitted that the consumption of pepper in the growing areas has remained static, although reliable statistics are not available. The price fluctuations in the domestic market have been equally violent. For instance, pepper was sold in Bombay's retail market at Rs. 10 a pound in the scarcity year 1951. Today's retail price stands at Rs. 2-8 a pound. But in spite of this sharp drop, the local offtake has not appreciably increased, trade circles say. It would seem that the problem is not one of producing more but of consolidating existing markets and stabilising the present export level. Admittedly there was a time when increased production would have been justified but this would hardly appear to be the case now. Under these circumstances, the proposal of Indian shippers to increase their prices by two cents a pound is not without its dangers because it would give Indonesian exporters a greater advantage. A concentrated effort to improve qualities, to lower production costs and therefore to build up a reserve margin of competitive power together with excellent public relations with American importers is what is needed to preserve India's pepper trade and her position as the world's leading pepper supplier.

The Government of India has decided to raise the maximum limit of subscription to the National Plan Certificates with effect from 10th May, 1955. In the case of an individual the present limit of investment of Rs. 1,000 will be raised to Rs. 2,500 and in the case of two persons subscribing jointly the limit will be raised from Rs. 2,000 to Rs. 5,000.

London

ELECTIONEERING NOW IN FULL SWING

LANCASHIRE DISAPPOINTED WITH GOVERNMENT'S CONCESSIONS

(FROM OUR LONDON CORRESPONDENT)

IT has been an electioneering week in Parliament, and on the basis of the programme there was every prospect of Labour scoring quite a few points. The poor attendance was a small matter, for it was the reported rather than the spoken word which was important. The Government was by no means unaware of the situation, so resorted to a bit of electioneering on its own account—and not quite without effect as the latest Gallop Poll seems to suggest. These preliminary skirmishes in the battle which is now joined were hardly impressive. The Opposition's attempts to discredit Government policies were not very effective, while of the Government counter-measures the chief one was probably the announcement of its intention to press forward with the idea of securing four power talks at the highest level at the earliest opportunity. Much less effective—at least so far as Lancashire is concerned—was the Prime Minister's unexpected announcement regarding the complete removal of Purchase-tax from non-woollen textiles within a few days of the Chancellor of the Exchequer saying that this was impossible. The explanation that concession had been held back until agreement had been reached with India regarding the reduction of import duties on high quality exports from this country was not very convincing. The Opposition was taken by surprise, nevertheless, and could only reply that the Government was adopting Labour policies and take what credit it could by suggesting that this was the outcome of Labour pressure; and the warning of the Gallop Poll!

Lancashire Disappointed

After the emphasis which Lancashire has hitherto placed on the difference which the abolition of the Purchase-tax would make to business, and the fact that it has secured quite a substantial concession on its exports from the Indian Government—which might well lead to the expansion of exports to India of sarees, poplins, cambrics, velveteens and Italians to four or five times what they were last year or indeed have been for several recent years—it seems rather churlish that it should now express itself unsatisfied, simply because no restrictions have been placed on imports of Indian grey cloth and the Purchase-tax has not also been removed on all made-up articles of clothing. In some respects Lancashire's disappointment is understandable, for the concessions it has secured will not benefit all sections of the cotton industry. On the other hand, what it does not appear to appreciate is the repercussions which might take place if all its demands were met regardless of the consequences. The wool textile industry is already agitating that it should be accorded similar treatment in respect of Purchase-tax, while the glove industry and the leather industry are demanding protection from imports from Hongkong and India, respectively.

The most serious outcome of the complete satisfaction of all Lancashire's demands, however, would undoubtedly be the long-term effect it would have. There is a great deal the industry could do for itself to improve its competitive position in world markets—as it is frequently being reminded by the more objective of its own leaders among both manufacturers and trade unionists—but restrictive practices of one sort or another are still fairly common and rationalisation makes only slow progress. Spoon-feeding can only delay the time when Lancashire will have to face up to realities.

Improvement in Reserves

Further evidence in support of Mr. Butler's confidence in the economic outlook—and an effective answer to Labour's contention that the decision to go to the country was occasioned by an economic crisis—is available in the April gold and dollar figures. The reserves, after dropping \$82 million in February and a further \$14 million in March, showed a rise of \$19 million in April to carry the total to \$2,086 million. Allowing for American defence aid of \$17 million, and the \$13 million received from the European Payments Union in settlement of the March surplus, and deducting the \$2 million of debt payments to Continental countries, the actual balance of payments deficit of the sterling area works out at \$9 million. That compares very favourably indeed with the March deficit of \$28 million and the February one of \$101 million. That the situation has taken a turn for the better is further confirmed by the U.K. surplus of £11 million in European Payments Union transactions in April, from which the reserves will gain \$29 million in gold this month—a useful start.

In considering these figures, however, it must be kept in mind that this is normally the time of year when heavy exports of sterling area raw materials take place, and that financial movements given an impetus by the high interest rates now current here must have played their part. The Bank rate and credit restriction measures have achieved some results in improving the immediate outlook for the reserves, but in the long run everything depends on the current balance of payments. That, of course, can be affected by so many factors that it is impossible to anticipate the future, but the lower level of commodity prices is at least an encouraging feature.

More Tea Auctions Cancelled

The situation in the London tea market shows no signs of improvement. Cuts of between 4d. and

8d. a pound in retail prices have been announced by most distributors again this week, and are a reflection of the lower quotations at the auctions, where prices have fallen by as much as 2s. 6d. a pound for some of the common grades. Anticipations that the cancellation of auctions last week would help demand at those held this week failed to be realised, and once again there were heavy withdrawals from the Mincing Lane catalogue last Wednesday, and on Friday it was decided that two of the three auctions due next week should also be cancelled, only that on Tuesday, of Ceylon and South Indian teas, will be held.

The view in trade circles is that the tea boom is definitely over. Housewives have been using less tea and have therefore been buying less in the shops and keeping less in the house. For some months grocers also have been running smaller stocks. Finally, the higher prices prevailing a short while back at the auctions encouraged sales from Indonesia, Japan, and other countries, and this helped to increase the supply of tea.

Piecegoods for Pakistan

An agreement for the export of \$5 million worth of cotton yarn and piecegoods was signed on Thursday between the United Kingdom Government and the Government of Pakistan. By the agreement the Pakistan Government has undertaken to license the import of cotton yarn and piecegoods made in this country to a total value of \$5.2 million. It is expected that these will be sent to Pakistan in the next few months. For these goods the payment will not be made directly by return. Instead, an arrangement has been made for raw cotton to be supplied to this country from the United States up to the same value. Pakistan will be able to do this as part of a grant-in-aid to Pakistan by the United States, and the United Kingdom will also benefit.

Mr. Thorneycroft, in his short answer in the House of Commons disclosing this news, did not give any of the details of the agreement. He pointed out that arrangements for working "the somewhat complicated procedure involved" have been agreed on after discussions between the Board of Trade, the different sections of the cotton industry and the banks. The President thanked them for their ready co-operation in this.

Another Steel Offer

The Iron and Steel Holding and Realisation Agency are obviously less concerned by election portents than is the City generally. Next week they are making their first offer to the public of the fixed interest securities of a steel concern. They are the preference shares and debenture stocks in the English Steel Corporation—the remaining securities which were not bought back by the controlling companies, Vickers and Cammel Laird, when they bought the ordinary shares last year. Before nationalisation they owned all the capital.

The 5½ percent preference shares of £1 are to be offered at par, and so is the 4½ percent debenture stock, 1974-79. There is £5 million of each class. The full prospectus is to be advertised on Monday and lists open and close on Thursday, 12th May. Five shillings of the preference share price is payable on application, and £25 percent of the loan stock. In each case the remainder has to be paid on 8th June.

With six months' dividend and interest payable on 30th June, the net prices are in fact slightly below the par values, so the yields are slightly higher than the offer at par suggests. A well-covered preference share yielding about £4 10s. 9d. and a debenture stock yielding 45 11s. 3d. are both likely to go well, provided stock market prices as a whole do not sag. The offer is being arranged by Morgan Grenfell.

Nuclear Power Plant

There has been some criticism that the British Atomic Energy Authority is not matching the efforts of its American counterpart in the exhibition which will be held as an adjunct to the Geneva conference on the use of atomic energy for peaceful purposes. The British participation is to be on a comparatively small scale and will consist of models and photographs of various projects now in course of development, whereas the Americans apparently intend to show a reactor actually working and are spending a large sum on their stand. From the point of view of creating a world market for atomic plant and products it is open to doubt as to the value of the Geneva exhibition. In this respect the large part which private enterprise is playing in the plans of the British Atomic Energy Authority at least suggests that the export market will be tackled on purely commercial lines, and in all probability with greater success for that reason. The latest example of this participation is the announcement that C. A. Parsons and Co. Ltd., of Newcastle-upon-Tyne, have taken the initiative in the formation of a corporation with a capital of £1 million, for the construction of complete nuclear power plants in any part of the world. Seven specialist companies, of which only Head, Wrightson and Co., Thornaby-on-Tees, are named, have accepted Parsons' invitation to pool their knowledge, experience and financial resources to form the corporation. The plan is to establish it on land near Parsons' main works, at Heaton.

Sir Claude Gibb, Chairman of Parsons, reveals in his annual report that the Parolle Electrical Plant Co., jointly owned by Parsons and A. Reyrolle and Co., Huddersfield, has, with the research staffs of the two companies, been associated since 1948 with the atomic energy division of the Ministry of Supply and latterly the United Kingdom Atomic Energy Authority, in "a study of the industrial application of atomic energy." Security reasons have hitherto prevented the disclosure.

Madras

COMPANY LAW CHANGES CRITICISED

BUSINESS CONFIDENCE SHAKEN BY ALTERED POLICY

(FROM OUR MADRAS CORRESPONDENT)

MR. D. C. Kothari, president of the Hindustan Chamber of Commerce, in his address to its ninth annual meeting, spoke strongly against the forth amendment to the Constitution. He described it as a major blow to confidence. The fears of the business community had come true when the Select Committee abolished the distinction in the matter of payment of compensation in the case of industry. This shift in the Government's policy within such a short while, he said, was reason enough to awaken fears in the mind of private enterprise showing the instability of Government's ideas about compensation, and how precarious and uncertain was the prospect of securing it. Referring to the Company Law Amendment Bill, Mr. Kothari expressed the view that the changes proposed by the Select Committee were so drastic that they would in effect, accomplish the elimination of managing agents. The history of industrial development in India showed that the managing agents had successfully performed all the entrepreneurial functions of economically advanced countries.

The conclusions of the Matthal Commission also came in for criticism in Mr. Kothari's address. Although the Commission's suggested concessions in favour of joint stock enterprise were right, some of its recommendations were unduly harsh on individuals. One could not lose sight of the fact that from individuals alone flowed the necessary finance for investment. Once the saving of the individual was impaired and curtailed, where was the money to come from for fresh investment? Mr. Kothari also criticised the Commission's emphasis on the curtailment of consumption at all levels. In a country like India, where the standard of living was already low, any further austerity would not only be unjustified but might run counter to the objective of planning to raise the standard of living. The Commission's thesis, Mr. Kothari said, that development finance should and could be found by limiting consumption was not supported by the experience of this country, which showed that the rate of investment had been increasing when consumption was not restrained and when real income rose. He, however, concluded that business men could look to the future with sober optimism in the hope that the Government's policies would not be so severe in their operation and actual practice as sometimes men in authority wished them to be.

Cautious Optimism

At the seventh annual meeting of the Madras Stock Exchange Association, Mr. V. Rangachari touched on a number of controversial issues. Although the year 1954 was the best one for stock markets in this country since partition, there was one noteworthy equity issue for Rs. 1 crore and there were just a few debenture issues aggregating about Rs. 12 cores. The market sentiment today was less buoyant than a few months ago when these issues were made, nor were there signs that the sentiment would soon change radically. It was time, therefore, for the Government to realise that this chronic problem of finance for the private sector called for long-range relief, apart from the short-term expedients provided by the formation of the Industrial Credit and Investment Corporation and the Industrial Development Corporation. Mr. Rangachari suggested in this connection that it would be worthwhile for the Government to conduct immediately a survey of the investment habits and patterns of the various classes in the private sector with a view to devising ways and means for giving each class proper incentives for saving and investing. In this context he emphasised the need for relief in direct taxation to the investing class. He regretted to say that despite the representations of representative bodies, the trend of taxation had unfortunately been moving in the contrary direction. Although according to the Matthal Commission, bonus issues were not to suffer fresh taxation, doubts had been cast by the recent statement of the Finance Minister to the effect that his matter was still engaging his attention. Mr. Rangachari also referred to the Amendment of Section 23 (a) of the Indian Income-tax Act as a result of which even public companies in which 60 percent of the shares are held in six hands or less would attract the provisions of this section. This, he said, was bound to affect large concentrations of shareholdings, and its effects on future dividend distributions of several companies might be watched with interest. Deposite the cheerless picture of present conditions in the stock markets, equity investments in this country, Mr. Rangachari thought, "have a great and ever-expanding future for India is now on the threshold of an industrial revolution the like of which this country has not experienced before."

Opposition to Land Reform

With the recent publication of the full text of the T.N.C.C. Land Reforms Committee's Report, a bitter controversy on its proposals has started in the State. Some landlords in Tanjore and Trichy

districts have held emergency conferences and condemned these proposals. The proposals of land reform, according to them, are "revolutionary and conceived on Leftist, Communist lines." The conference of the Communist-sponsored Tamil Nad Kisan Sangh with its innumerable village, taluk and district branches has, on the other hand, described the Congress Committee's proposals as "falling far short of the Planning Commission's recommendations in the matter of land reform." Meanwhile, the State Government has announced that a comprehensive land reform bill will definitely be introduced in the August session of the Assembly. A Cabinet sub-committee has also begun to consider the recommendations of the non-official Congress report and of an official report published in 1951. With tense expectancy all-round, the agrarian situation is going from bad to worse in the wake of large-scale evictions of "existing tenants" (i.e. the tenants of the agricultural year 1954-55) whom the T.N.C.C. Land Reforms Committee wants to be confirmed in possession of their respective holdings up to a maximum of five acres of wet land apiece.

Criticism in the Press

As for the Madras Press, most leading papers have come out strongly in favour of the landlord interests. *The Hindu*, the premier English daily of Madras, which has always led the opposition to land reform of any kind has just given hope to the State's landlords in one of its most scathing editorials. The editorial says: "Even the influential minority that apparently regards land reform as a promising way of gaining political leverage is divided in its mind on the two alternative ways of imposing a ceiling—limiting the amount of land a man may own and limiting the amount which he may reserve for personal cultivation, while being required to let in tenants with regard to the balance of his holding. It has been suggested that there should be a pretty low ceiling on personal cultivation and that the right to resume land even within this limit should be cluttered up with various vexatious and unfair conditions. Even harsher in its effect would be the proposal that personal cultivation should be available only to 'resident landlords' that is, to men who live in the village where their lands are situated or in a neighbouring village, all others should be compulsorily reduced to the position of rentiers and rents sealed down so drastically that the value of land is bound to crash. It is envisaged that in the course of a few years, the tenants who are let in will wish to buy up the owners' interests and it is suggested that legislation should help them to do this. It is,

therefore, not surprising that these proposals have been received with alarm and dismay by the classes that will be hit."

The Committee has recommended a maximum holding of 25 acres (with a net income of Rs. 4,000 to Rs. 5,000) of first-class canal-irrigated wet lands for cultivation by an individual owner with the help of hired labour in tracts where the average owned holding itself is less than five acres and where this extent of five acres constitutes a near-economic unit. The rent recommended by the Committee is just 50 percent of the produce (with all expenses of cultivation being borne by the tenant) as against the prevailing average of 66½ percent and the Planning Commission's rent formula of 20 percent to 25 percent of the produce alone for the landlord. As for the "residence qualification", it is pointed out that land reform in post-war Japan (where pre-reform conditions were similar to present agrarian conditions in Madras) has strictly enforced the condition that an owner should give up his lands if he does not reside in the village in which his lands are situated. The Land Reforms Committee has, on the other hand, recommended that a landowner may be registered as a "resident landowner" in respect of lands in several villages if such villages happen to be contiguous to the village of his "permanent residence". In order not to affect the marketability of land adversely, the Committee appears to have deliberately refrained from proposing any ceiling limit to even future acquisition of land by any individual.

CALCUTTA TEA AUCTIONS
IN APRIL
IRREGULAR DEMAND AT OLD
SEASON'S LAST SALE

ONLY one Sale was held during April and this was the final clearing up sale consisting of approximately 21,600 chests. The bulk of the offerings was from Assam and although there were one or two quite bright liquoring invoices, in general quality and appearance were typically end-of-season, say Caritt Moran & Co. Ltd., in their monthly tea market review. In spite of the decrease of 2 annas a lbs. in Export Duty, there was a poor and rather irregular demand. A fair quantity of tea was withdrawn and it was noticeable that buyers paid more attention to leaf appearance than to cup quality, the few stylish B.O.P.s and whole leaf grades realising quite satisfactory prices. No quotations are given.

The first Sale of the new season will be held on 6th June, 1955.

Internal Sales

Approximately 20,000 packages of Leaf were offered in Sale Nos. 40 and 42 and the bulk of these teas consisted of rough, undesirable types with plain and old liquors. The few better types available both in cup and leaf appearance sold well at slightly easier rates but the poorer stalky types were much easier and difficult of sale except at

considerably below previous prices. The Dust market also declined in Sale No. 40, ordinary mediums being about two annas easier whilst residue types were a good 4 to 6 annas a lb. easier and withdrawals were fairly heavy. In Sale No. 41 inferior kinds again eased considerably whilst others were barely steady, but in Sale Nos. 42 and 43 there was little change in rates for the better kinds, those of reasonable leaf appearance being a little dearer. Residue types again declined in Sale No. 42 but there was a better demand for them in Sale No. 43 and prices in most cases appreciated.

		Rs. As. P.	Rs. As. P.	Rs. As. P.	Rs. As. P.
Sale No. 40	Clean Common Dust	2	2	0	2
Sale No. 41	"	2	1	6	2
Sale No. 42	"	2	1	6	2
Sale No. 43	"	2	2	3	2

Export sales up to the end of April, totalled 1,569,177 chests at an average price of Rs. 3-1-6 compared with 1,533,789 chests at an average price of Rs. 1-15-10 a year ago. Internal sales at 433,445 chests of Leaf and 697,325 chests of Dust (Rs. 2-3-7 and Rs. 2-6-9) compared with 97,559 and 722,104 chests (Rs. 1-12-5 and Rs. 1-13-5) in the corresponding period last year.

A few forward transactions in new season's export quota had been made at 5 annas a lb. at the end of March but business was done at 6½ annas at the beginning of April and the price rose sharply to 8½ annas a lb. by 18th April. This rise was due to a shortage of sellers and it is understood that only about 5 lakh lbs. changed hands during this period in North India. With the buying demand temporarily satisfied, the price declined sharply to 4 3/4 annas by 28th April, but renewed buying interest again increased the price to 5 3/4 annas on the last day of the month. Business in special licences was done at 5½ annas at the beginning of the month and the price rose to 6½ annas on 19th April. Thereafter the price declined to 3½ annas before hardening to 3 3/4 annas on the last day of the month.

Regulation of Exports

Lack of demand and rising stocks in Colombo and Djakarta, as well as in London, have dispelled any belief or hope that the sudden reverse to the rising prices of the past two years was merely

a desirable corrective to the unhealthy height to which prices had risen or that the present malaise of the industry might be shortlived. It is claimed that consumption in the U.K. has suffered no check. Nevertheless the consumption figures, as indicated by deliveries less re-exports, showed an increase in the first six months of 1954 of 54 million lbs. as compared with the previous year but recorded a total increase of only 26 million lbs. over the full year. This would seem to indicate that saturation point may well have been reached by the end of 1954. Stocks in the U.K. are now sufficient for more than four months' supply and are thus fully adequate to bridge the gap until the weight of the new season's North Indian crop reaches the London market. In addition, unsold stocks in Ceylon at the end of April were reported to amount to 45 million lbs. An indication of increasing stocks in Indonesia may be gained from the fact that production for the first two months of this year increased by 3½ million lbs., while shipments during the same period decreased by 3 million lbs. Since then off-take by exporters has been small. In both Ceylon and Indonesia a number of producers are not only not now covering their costs but are suffering severely as, with a lack of demand, they are unable to dispose of their crops and obtain the necessary finance to run the gardens.

In Calcutta the first sale of new season's tea is to be held rather later this year than last on 6th June and it is hoped by then that the steps being taken in London to regulate offerings to off-take will have produced steadier conditions. Internal demand and the offerings of quality teas should, in these circumstances, produce a fair measure of buying power until the size of sales becomes large towards the end of August. The main cause of the present lack of buying power is the financial difficulties in which a number of dealers and blenders in the U.K. now find themselves holding high priced stocks accumulated in previous months. This situation, combined with the improved stocks position throughout the world, seems bound to limit the demand in Calcutta for all but quality teas from August onwards. In addition, a number of Indian buyers who last season bought tea in Calcutta for re-sale in London will have suffered considerable losses and this will naturally restrict their operation in the coming season. While speculation in tea is undesirable, and has shown an unwelcome increase in the Calcutta market in the last two years, it is very desirable for the true dealer to be able to take a reasonable view and purchase on his own account for subsequent re-sale to customers for whom he may not at the time hold orders. Dealings of this nature contribute to the stability of the market and if dealers are for financial reasons to be restricted to buying solely against orders some of this stability will be lost. It is understood that as a result of the recommendations of the Auction Enquiry Committee, a considerably increased quantity of North Indian tea will have to be offered this year on the Calcutta market. It further seems unlikely that the quantity of tea disposed of under forward contracts will even nearly approach last year's figure and this must result in an increased weight of tea being sold through the Calcutta auctions. The main difficulty which we foresee is that warehouse accommodation is very limited. If an accumulation of tea in Calcutta develops through lack of demand, it is to be hoped that the Government will review its policy with regard to sales in India, as the Ceylon Government has been wise to do to meet the growing congestion in Colombo, and permit a greater weight of tea to be shipped to London to keep the port free of congestion until at least after the Pujā holidays.

Emphasis on Quality

The need to spread offerings to suit demand is however merely a palliative which will not reach the cause of the problem. Stocks in the U.K. have recorded a substantial increase as compared with April, 1954 as a result of exports from North and South India of approximately 450 million lbs. during the year from 1st April 1954 to 31st March, 1955. There seems no reason to suppose that India will not be in a position to export a similar, or nearly similar, quantity in the coming year and unless a substantial increase in consumption can be expected this alone must result in a further considerable increase in stocks. But on recent estimates and on the basis of production to the end of March, the Ceylon crop may exceed last year by 20 to 25 million lbs. and Indonesia may show an increase of more than 5 million lbs. resulting in a further 25 to 30 million lbs. to swell world crops still further. Some at least of this increase in Ceylon is apparently due to coarser plucking and it is understood that a number of producers are already taking steps to improve plucking standards. It is to be hoped that crop figures of coming months will indicate that the previously estimated increase in crop over the previous year will not materialise. If production in India is also restricted by more careful plucking and manufacture, buyers will obtain the confidence they require that stocks are not to be permitted to become unduly large. To this end it would seem that crops from India and Ceylon this year should be no larger and preferably rather smaller than last year. To some extent the situation of 1952 repeats itself. Then voluntary restriction by Indian producers in the latter part of the season saved the industry but on this occasion the fault would appear to lie more with Ceylon where, with very limited internal consumption, crops have shown a considerably greater proportionate increase in recent years than in India and the Indian producer may reasonably look to Ceylon to give a lead.

Jute

GOODS STOCKS INCREASE STARTS RUMOURS
OF WORKING HOURS REDUCTION

SOME OVERSEAS ENQUIRY AT PRESENT LOWER PRICES

THE announcement on Monday last of a further increase in the mills' stocks of jute goods in April brought forth a fresh crop of rumours regarding a reduction in working hours. Total stocks now held by mills amount to 103,300 tons which is an increase over the previous month of 8,700 tons. This is the highest stock figure since October 1953, before which time stocks had been running consistently over the 100,000-ton mark. The build-up then was due almost entirely to the fact that overseas buyers had not been taking up their commitments in the hope that the export duty on jute goods would be reduced. The reduction of the export duty on hessian actually took place in September 1953 and it brought an immediate revival of overseas demand with the consequent reduction of stocks. During the next twelve months these figures showed a steady decline culminating in October-November 1954 with a total holding by the mills of 69,000 tons which prompted the jute industry to increase working hours to 48 hours a week. Since then stocks have slowly increased, but the build-up this time has been due to entirely different causes. Over the past few months overseas buyers, in particular the Argentine, have considered the price of jute goods to be too high, and have held off making any purchases in the hope of prices falling. This has combined with heavy speculative activity over recent weeks to bring goods prices down to their lowest level this year. This has been another factor that speculators have used to anticipate a reduction in working hours, but should this become a reality it will immediately cause prices to harden, thus completing a vicious circle, as overseas buyers will again hold off for lower rates. As far as can be ascertained the IJMA have at present no intention of reducing working hours, but this decision does not rest entirely in their hands, as Government sanction would first have to be obtained and due notice given. Thus it may well be several weeks before any decision taken can be put into effect.

Overseas Business

Towards the end of the week under review a fair quantity of business was reported with overseas buyers who were attracted by the low prices prevailing. The depressed state of the market was the direct result of continued heavy speculative activity, and the increase in the lowest rates of the latter being the cause of the lowest rates of the year being recorded. The corollary of these events was the persistent rumour of shorter working hours, but those who confidently predicted that an announcement would be made after the Tuesday meeting of the IJMA Committee were disappointed. The market began to show signs of improvement however after earlier easiness on the strength of the rumours and towards the close the market was fully steady.

In spite of the fall in jute goods rates, the raw material showed very little change over the week. Upcountry markets are reported to be very steady due to the almost entire absence of any imports and local sellers have taken their cue from this and have been seeking higher rates. Mills have condoned this attitude to a certain extent by making daily sallies in the raw jute market, and this has been construed in many quarters as a sign of weakness on their part. New Crop jute appears to be the mills' main interest, but early delivery jute is at a premium. Old Crop jute is beginning to peter out, and with no imports sellers are inclined to hold on to their existing stocks to obtain the best possible price.

New Crop jute reports from both Indian and Pakistan indicate that this season's crop will be a bumper one. In Pakistan sowings have been completed and the yield is estimated to be about 5-6 annas greater than last year. There appears to be no further reports of the authorities destroying jute in excess of the licensable amount, and it is thought that if this were ever attempted it might lead to trouble. Weather conditions over the past week have been very favourable with alternate rain and sun and the plants are reported to be in excellent condition. In India sowings are much behind those in Pakistan, but well ahead of last year, and here also a bumper crop is predicted. Although more rain is required to encourage germination in some areas the overall report is satisfactory.

THE JUTE MARKETS

Manufactured Goods. At the beginning of the week under review, finished goods prices showed a definite upward tendency due to reports of enquiries received from the Argentine. B Twills opened on Thursday morning Rs. 1-2 higher in the ready position, which was quoted at Rs. 114-2 a 100 bags, and 8 annas higher for October-December shipment which stood at Rs. 102-8 a 100 bags. Hessians were also steady and 40 in. 10 oz. improved 4 annas in all deliveries to be quoted at Rs. 42-12 a 100 yards in the ready position and Rs. 41-8 for October-December shipment. Speculators sold freely on the rise in 'fatka' which caused rates to sag slightly and the following day sacking lost 6-8 annas, and Hessians 2 annas in the near deliveries. Under continued speculative influence ready B Twills lost a further 4 annas on Saturday, but the sacking forward positions showed signs of a reco-

very along with the hessian section where small overseas business was reported. After the weekend quotations in all sections of the market were virtually unchanged and the market opened on a confident note and rates were quietly steady. Almost from the opening however prices fluctuated erratically due to reports of a substantial increase of mill stocks in April, and at one stage ready B Twills fell to a new low for 1955 of Rs. 112. Towards the close on Monday however persistent rumours regarding a curtailment of production due to the increase in jute stocks, caused an improvement, and rates recovered the ground that had been lost during the day. Tuesday morning's quotations showed very little change from the previous day's closing and ready B Twills stood at Rs. 113-4 and October-December shipment at Rs. 103-8. The hessian section was slightly better and 40 in. 10 oz. opening 2 annas up at Rs. 42-14 for May delivery and Rs. 41-12 a 100 yards for October-December shipment. After mild fluctuations throughout the day on Tuesday, rates hardened towards evening in anticipation of a reduction in working hours, and steadier conditions prevailed. During the week real goods business has been done in larger quantities than in previous weeks, but the main influence on prices has come from speculative sources.

At the close the market is slightly steadier, both sacking and hessian having improved 2-4 annas. Opening quotations on Wednesday morning were as follows:

	May	June	July-Sept.	Oct.-Dec.
40" 8 oz.	Rs. 34-12	Rs. 34-10	Rs. 34-4	Rs. 33-14
40" 10 oz.	43	43	42-14	41-14
B Twills	113-6	112-12	110-4	103-8
Heavy Cees				
(Plain)	116	115-4	111-4	104-8
A. Twills	148-8	142-8	138	130
Liverpools	131	130	126	119-8
Cornsocks	120	118-4	113-12	106-8

Raw Jute. Calcutta mills have shown considerable interest in the raw jute market over the past week, and have indulged in almost daily buying, which has tended to keep prices steady. The daily fluctuations of the goods market had no effect on this market, but in most cases business was possible at below the quoted rates. The quantities involved in each transaction have not been very large, but have added up to about 1½ lakh maunds over the period. New Crop jute is still the main interest of the majority of buyers and sellers in general are keen for business, but the majority of offers are for the August-September-October positions and anything before August is very difficult to come by. Guaranteed delivery has been called for in many cases but sellers are reluctant to enter into contracts of this nature. There have been no reports of any business or offers in Pakistani New Crop jute. The market for Old Crop jute is steady and sellers, although keen for business, are not willing to sell at below their quoted rates. It is reported that only very small quantities are now left in sellers' hands, but as the assortments of these balances contain large quantities of middle quality jute, in which mills are showing no interest they are having difficulty in disposing of it. In spite of this the market continues to rule firm, mainly as a result of the strong upcountry markets where imports have virtually ceased, and prices are well above the parity of those quoted in Calcutta.

Raw jute quotations opened the week unchanged at Rs. 30-8 for Upper Assam Bottoms, and remained at this level until after the weekend when prices were increased by 8 annas a maund. Business was done during the week however at below these rates so quotations could be regarded as nominal. Towards the close a steadier feeling was apparent in sympathy with finished goods and the majority of sellers withdraw from the market.

New Crop quotations were on the basis of Rs. 26 a maund for Dhubri-Northern Bottoms for August-September shipment, with premiums of 8 annas to Re. 1 for earlier delivery. After the weekend quotations were increased but mills took little interest at the higher rates.

During the week business was done in Dhubri-Northern jute at Rs. 30-8 a maund basis Bottoms for May-June shipment and Ordinary Assam jute at Rs. 30-31 a maund for the same delivery ex-Agency. Small lots of local Northern were also done at Rs. 30-8 a maund. A fair amount of Mesta was bought over the week, and mills paid Rs. 27 to Rs. 28 a maund for Daissee Mesta, and Rs. 25 to Rs. 26 a maund for Jungli Mesta, both for one-month delivery. Business was also done in combined Old Crop and New Crop Assam jute at an average price of Rs. 28-4 a maund basis Bottoms, the deliveries being May-June for the Old Crop, and August-September for the New Crop.

Good business was done in Pakistani Northern jute ex-Agency at Rs. 31 to Rs. 31-8 for Bottom with a difference of Rs. 3-8 between Middles and Bottoms, for May-June shipment.

The main New Crop business was done in Dhubri-Northern jute and prices ranged between Rs. 26 to Rs. 26-8 a maund for August-October shipment. Upper Assam jute was also done at

Rs. 25-8 to Rs. 26 a maund basis Bottoms for the same shipment.

In the pucca bale section business was done in Pakistan Cuttings at Rs. 120 a bale for delivery ex-Local Godown, and small lots of half old half New Crop Cuttings were done at Rs. 105 a bale for delivery ex-Pakistan.

At the close the market is steady with buyers taking small interest in Old Crop jute. Opening quotations on Wednesday morning were as follows:—

Indian Jute:	Landed at Mills		Shipment.	
	Rs. a maund	Basis Bottoms.	Old Crop	New Crop
Lower Assam	31	26-8	May-June	Aug. Sep.

Northern	31-8	29	"	"

The local Cossipore markets have been extremely quiet over the week and imports have shown a considerable falling off. Waggon arrivals have averaged less than 20 a day all continuing low quality jute and jungli Mesta. The market has been steady and at the close Kishanganj jute is quoted at Rs. 31-4 a maund for garsat quality. There is nothing to report from the Daissee markets. Nominal quotations in Sheoraphuli are based on Rs. 31-8 to Rs. 32 a maund for garsat quality.

Mofussil. Indian upcountry markets have ruled very steady during the week due to the very poor imports, and only small business has been reported. Sellers are reserved and quotations in Dhubri are based on Rs. 27-8 a maund for Bottoms.

In Pakistan the market is easier, and the only business reported is for quick delivery jute against May shipment contracts. Imports into Narayan-ganj have fallen to 4,000-5,000 maunds a day, more than half of which is loose jute. No New Crop business has been reported with India, but there are reports of business having been done in the overseas export market. Weather conditions over the past week have been favourable and the crop prospects are good. In the absence of business quotations can be regarded as nominal and in Narayan-ganj are as follows:—

Pucca Bales	Rs. (P) a bale.		Rs. (P) a maund.

INDIAN JUTE CROP REPORT

In their eighth crop report for the current Indian season, covering the week ended 7th May, Messrs. Sinclair Murray & Co. Ltd., say that in most areas weather conditions have been mainly favourable although further rainfall would be beneficial particularly in Orissa and West Bengal in order to allow cultivators to push on with sowings and to assist the germination of seed and the growth of young plants. The condition of young plants is particularly satisfactory in Assam and Bihar but as yet not so satisfactory elsewhere. River levels generally are normal for this time of the year and are rising steadily.

DANPUR: Hot and dry weather has been experienced with the exception of a light shower and this has not been conducive to further crop routine although land preparation has however been almost completed; sowings to date amount to -1/6 as against -1/6 sowings at this time last year. Seed germination has been satisfactory so far and seedlings range in height up to 6in. Immediate rainfall is necessary to promote growth and further germination. The river level is normal for this time of the year.

JAIPUR ROAD: Moderate rainfall has been experienced and this has allowed cultivators to complete land preparation in the low and midlands and to continue preparation in the highlands. Further rainfall, however, is necessary for further sowings and these to date amount only to -1/1- as against -1/3- at this time last year. Seed germination is so far satisfactory. The river level is normal for this time of the year.

COSSIMBAZAR: Mainly hot and dry weather with one good shower in the early part of the week has been experienced; this has been favourable although further rainfall would be beneficial to enable cultivators to complete land preparation and to go ahead with sowings; sowings to date -3/6 as against no sowings at this time last year. Seed germination has been satisfactory and the condition of plants is healthy. The river level is normal for this time of the year.

RANAGHAT: Only one light shower was experienced and further rainfall is now necessary to allow cultivators to proceed freely with sowings and to assist germination and the growth of young plants. Sowings in this area are estimated to be -9/1- as against -5/1- at this time last year. First weeding operations are proceeding in early sown land. The

*A setter
with a
brand new jig...*

... merrily wagged his tail in time to the music and danced to the tune of 'Over the Lathes'.

"What," said the machine shop foreman, "is the reason for this ollickation?"

The setter, by now out of breath, replied, "I've just heard our machines are to be automatically lubricated by Tecalemit!"

A wistful look appeared in the foreman's eyes. "I wish sometimes," he said, "that I was a machine and could get well oiled at regular intervals!"

TECALEMIT (INDIA) LTD.
(INCORPORATED IN ENGLAND)

condition of seedlings and young plants is satisfactory and they range in height up to 1 ft. The river level is slightly higher than normal for this time of the year.

NOWGONG: Early in the week rainfall was experienced but latterly weather conditions turned hot and dry and this was very favourable after the continuous spell of heavy rainfall in the previous week. Land preparation has been completed in the low and midlands and is nearing completion in the highlands. Sowing operations have continued and they are estimated to be -15/6 as against the same amount sown at this time last year. Condition of both seedlings and young plants is satisfactory and they range in height up to 2 ft. Weeding operations are going on as required. The river level is normal for this time of the year.

PALASHBARI: Hot and dry weather has been experienced with the exception of light showers and this has enabled cultivators to complete land preparation in the low, mid and highlands. Sowings estimated to date amount to -15/- as against -12/6 as at this time last year. Weeding operations in the lowlands have again been resumed. Plant condition at present appears to be satisfactory and plants range in height up to 1 ft. The river level is rising and is 2 ft. 6 in. higher than last year at this time.

DHUBRI: Weather conditions have been favourable with alternate rain and sunshine. Sowings estimated to date amount to -16/6 as against -13/3 at this time last year. Low and midland sowings have been completed and are proceeding in the highlands. Weeding operations are being carried out as required. Plant condition is satisfactory and the plants range in height from seedlings to 2 ft. The river level is rising and stands at 3 ft. 3 in. lower than last year at this time.

FORBESGANJ: Good rainfall was experienced which has been beneficial for the standing crop and has allowed cultivators to re-commence sowings which are estimated at -8/- as against the same amount sown at this time last year. Seed germination continues to be successful and plants range in height up to 1 ft. 6 in. Weeding operations are going on where required.

DAISSEE DISTRICTS: The weather has been mainly hot and dry with slight rainfall in certain parts of the area. Sowings estimated amount to -7/- as against -4/- at this time last year. Further rainfall would be beneficial to allow cultivators to complete land preparation and to continue with sowings. The condition of young plants is not so satisfactory due to lack of rainfall but they range in height from seedlings to 1 ft. The river level is normal for this time of the year.

N.B. As a basis of comparison last season's sowings have been taken as -16/-.

PAKISTAN JUTE CROP REPORT

In their ninth crop report for the current Pakistan Season, covering the week ended 7th May Messrs. Sinclair Murray (Pakistan) Ltd., say that weather has continued favourable in all areas with heavy rainfall during the early part of the week. With the exception of the Western districts, sowings are now complete and plants are reported to be in very good condition. River levels are a little irregular.

NARAYANGANJ: Sowings completed at -21/- . Weather has been favourable with alternate rain and sunshine. Cultivators have been able to complete sowings and are now carrying on weeding operations where necessary. Sowings completed at -21/- as against -13/3 as at this time last year. Plant condition is satisfactory and the plants range in height up to 2 ft. 6 in. The river level is 1 ft. lower than at this time last year.

DACC: Sowings completed at -21/- . Heavy rainstorms were experienced early in the week but latterly weather has remained hot and dry which has been favourable for the crop. This week cultivators have completed sowings estimated at -21/- as against -16/- sown up to this time last year. The river level is the same as at this time last year.

CHANDPURA: Sowings completed at -21/- . Weather conditions have been favourable with a heavy shower of rain during the early part of the week followed later by bright sunshine. The condition of plants is good and they range in height up to 3 ft. 9 in. The river level is about 1 ft. 3 in. higher than at this time last year.

NIKILIDAMPARA: Sowings completed at -21/- . In the early part of the week, good rainfall was experienced but latterly the weather has been hot and dry which is very favourable for the standing crop. Cultivators have been able to complete sowings estimated at -21/- as against -16/- at this time last year. Plant condition is satisfactory and the plants range in height up to 2 ft. The river level is the same as at this time last year.

SARISHABARI: Sowings completed -20/- . Favourable weather has been experienced which has allowed cultivators to complete sowings estimated at -20/- as against -16/- sown at this time last year. Plant condition is satisfactory and the plants range in height up to 1 ft. 9 in. The river level is somewhat higher than at this time last year.

SIRAJGANJ: Sowings completed at -21/- . Favourable weather has been experienced with alternate rain and sunshine. Plant condition is satisfactory and the plants range in height up to 3 ft. 8 in. The river is normal for this time of the year.

NAKALA: Weather has been favourable with alternate rain and sunshine and the condition of the standing crop is reported to be satisfactory with plants ranging in height up to 3 ft. 6 in. Sowings estimated to date amount to -20/- as against -14/- at this time last year. The river level is normal for this time of the year.

BHANGORA: Favourable weather has been experienced with alternate rain and sunshine. Sow-

ings are nearing completion and are estimated to amount to -18/- as against -9/- at this time last year. Plants are making good progress and range in height up to 3 ft. 9 in. Weeding operations have been carried out in all areas. The river level is about 6 in. lower than at this time last year.

THE FOREIGN JUTE MARKETS

CONTINUED DECLINE IN PRICES (FROM OUR DUNDEE CORRESPONDENT)

It was no surprise to the jute industry when a reduction on the usual lines of about £5 a ton was notified from 4th May. This was expected on account of the steady decline in values of raw jute for shipment over the past fortnight. There are strong indications of an ample supply of the fibre from Pakistan to meet all requirements this season and no doubt there will be a good carry-over again at the end of this season. The Pakistan authorities have misled the trade too often now for the members to believe tales of shortage, and even the reports of great damage done by flooding have proved false. Certainly there has been some damage to the quality, but from the news of the flooding it was thought that there would be very little spinnable jute available. Old crop jute is of little or no interest now at £98 for Mill Firsts and Ispahani is offering at that figure, having reduced his price by £5 a ton last week. Consumers are more interested in new crop jute which has been sold at £90 a ton a number of times for Mill Firsts and there are still sellers. The London Jute Association has been very perturbed over these sales, as the delegation which recently visited Pakistan had been advised that sales which had been made at under the current ruling prices, or concluded more than three months before date of shipment, would not be passed for E.P.C. licences. I understand that the Association has appealed to the State Bank for an explanation and that the Bank has stated a thorough investigation would be undertaken if full particulars of the transactions were supplied.

Old crop Mill Lightnings are lowest at £98, good Daisee-2/3 at £98 and grade at £ 84. Grade Tossa-2/3 at £104 and grade fours £93. May-June, cif. U.K. Calcutta goods were firmer last week at 70s 3d for 10 oz 40 in. and 52s 3d for 7 1/2 oz. May and June. 70s 0d and 52s 0d July-September and 68s 9d and 51s 6d October-December, with "B" twills at 186s 0d, 185s, 181s and 173s respectively, all f.o.b. Calcutta.

Calcutta Markets

DEMAND FALLS IN INTERNAL TEA SALE

PRICE TREND EASIER

AT Sale No. 45, held on 10th May, Dust offerings consisted of 18,000 packages. There was less general demand and Doars and Medium Assams opened about 2 annas easier but eased further to close 2 to 3 annas below the last week's rates. There was a much larger weight of C.T.C. teas on the market and these were the weakest feature of the sale and mostly sold between 3 to 4 annas below valuations except for a few of the best teas which sold at valuations.

Quotations	1955	1954
Rs.	Rs.	Rs.
Medium Doars Dust	1 11 6	2 1 6
Assam Grand Dust	2 0 0 to 2 1 0	2 2 0
Best Assam C.T.C. Dust	2 7 0 (Nom.)	2 6 0 (Nom.)

There was no sale in this week for Internal leaf.

Sal. No. 46 to be held next week will be the last sale of the season.

STEADY TREND IN FREIGHT MARKETS

COAL AND GRAIN TONNAGE IN ACTIVE DEMAND

RATES were again well maintained over the week with emphasis on the North American coal trade where the National Coal Board conceded a further shilling to 59s to the U.K. There are active enquiries for tonnage to cover 250,000 tons coal to the Continent up till March next year. The demand for grain tonnage was also well maintained although business is slow to develop. Eastern and Far Eastern trades were quiet but there were rumours of rice being fixed from Bangkok to Japan. Enquiries were maintained for Indian ore to Japan and the Continent and it is reported that the latter has been fixed at over 100s f.i.o. from East Coast India. A vessel has been fixed for coals Calcutta to Hong Kong at a rate not yet disclosed.

The Time Charter section was again quiet but a Liberty ship was taken for 12 months' trading at (U.S.) \$3.35 with delivery the Continent.

The strike of Port labour at Vishakapatnam has been settled and work was resumed on 9th May. The terms of the settlement are not yet known.

SUGAR MARKET

During the week ended 11th May, sugar sales in the Calcutta market averaged 2,000 bags a day. Arrivals were 2,000 bags daily and stocks totalled 200,000 bags. Rates for ready sugar ex Kantonpur delivery were Rs. 30.4 for ordinary grain and Rs. 31.8 for big grain. Forward delivery sugar sold at Rs. 30.4 and Rs. 31.8 for big and ordinary grain respectively. Ex-mill delivery rates for standard grades of sugar ruled at Rs. 28-12. The market went dull.

LINSEED

The market was firm during the past week and scarcity of supplies was the main feature. Upcountry markets remained steady and despatches were made on a very limited scale. Local millers were enquiring for ready as well as forward positions but only a small daily turnover was reported. The oil section was rather more active and sellers were reserved despite keen enquiries for ready goods. Trading on the whole was small and it was confined mainly to shippers covering against previous commitments. Latest quotations were as follows: May-June Rs. 15-8, a maund.

HIDES AND SKINS

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 3rd May and 9th May, 1955)
Cowhides:—Wet salted (Ord.) 7,000 pcs. on the basis of Annas 10-6 to Annas 11-6; Wet salted (Ord.) 18,000 pcs. on the basis of Rs 9-8 to Rs 10-4; Wet Salted (Slaughterd) 16,000 pcs. on the basis of Rs. 13-8 to Rs. 25.
Goatskins:—Wet salted (Daisee, Killed) 41,225 pcs. on the basis of Rs. 265 to Rs. 400; Assam-Dinajpur-Murshidabad 60,500 pcs. on the basis of Rs. 212-8 to Rs. 307; Patna-Pakur 2,700 pcs. on the basis of Rs. 175 to Rs. 235; Muzaffernore-Patna 3,850 pcs. on the basis of Rs. 275 to Rs. 281-8.

Bazaar Stocks

(9th May, 1955)
Cowhides:—Wet salted 89,400 pcs.
Goatskins:—Wet salted (Daisee, Killed) 38,500 pcs.; Assam-Dinajpur-Murshidabad 74,000 pcs.; Muzaffernore-Patna-Pakur-Purneah-Kissenganj 3,19,000 pcs.

THE RAMESHWARA JUTE MILLS LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held at 8, Royal Exchange Place, Calcutta on the 30th May, 1955 at 11-30 a.m. to consider and, if thought fit, to pass with or without modification the following Ordinary and Special resolutions:—

Ordinary Resolution:

That the Draft Managing Agency Agreement proposed to be entered into between the Company of the one part and Messrs. Birla Brothers Ltd. of the other part approved at the Extraordinary General Meeting of the Company held on the 29th day of December, 1954 and as modified by the Directors in their meeting held on the 29th day of April, 1955 according to the requirements of the Government of India and which, for the purpose of identification, has been initialed by the Chairman, be and the same is hereby approved.

Special Resolution:

That subject to the approval of the Government of India, the Articles of Association of the Company be amended in the manner following:—

The existing Article 133 as modified be deleted and the following be substituted therefor:—

"133. Unless otherwise mutually agreed between the Managing Agents and the Directors (subject to the provision of Section 87B(f), 87C(2) and 87CC(b) (ii) of the Act) the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services a commission @ 10% on the net yearly profits of the Company as defined under Section 87C(3) of the Indian Companies Act, subject to a minimum payment of Rs. 36,000/- in the event of inadequacy or absence of profits of the Company in any year (which commission shall be payable yearly immediately after the audit of the Company's Accounts for the period have been completed). The Managing Agents shall provide at their own cost a suitable office and office establishment for the Company in Calcutta, but they shall be entitled to be reimbursed by the Company for all actual expenses for postage, telegrams, telephones, stationery and printing incurred by them on behalf of the Company.

For the purposes of this Article the "year" means a period of 12 months commencing on the First day of April of a particular year and ending on the 31st day of March of the following year.

The amount of the said net yearly profits of the Company for the year and the amount of commission payable to the Managing Agents as aforesaid shall be certified in writing by the Auditors of the Company for the time being and such certificate shall be conclusive and binding on the Company and on the Managing Agents. The said commission shall be payable after the audit of the Company's Accounts for the year has been completed and the Accounts have been passed and adopted by the Shareholders in the General Meeting and shall be paid to the Managing Agents within 21 days of the Accounts having been passed and adopted and the said commission shall be due to accrue from day to day and shall be, if necessary, apportioned accordingly. Provided, however, that the Managing Agents' commission for the period commencing on the 1st day of December, 1954 and ending on the 31st day of March, 1955 shall be apportioned out of the profits for the half year ending on the 31st day of March, 1955 only on the basis of the definition of "net profits" given in this Article."

The Share Transfer Books of the Company shall remain closed from 23rd May to 30th May, 1955 (both days inclusive).

An application under Section 87CC(1)(b) of the Indian Companies Act has been made to the Central Government. This Notice may, therefore, also be treated as required under Section 289B(4) of the Indian Companies Act, 1913.

By Order of the Board,
M. P. BIRLA,
Director.

29th April, 1955.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred, Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

DISCUSSION OF THE NEXT
FIVE YEAR PLANSTATISTICIANS AND POLITICIANS: CONFLICTING
ESTIMATES OF COSTS AND RESOURCES

It is said to be the Prime Minister's wish that the second five year plan should be the subject of the widest public discussion before it is cast into final shape next autumn. Last week, for instance, speaking at the Berhampur session of the AICC, he welcomed criticism of the draft plan. The Press and business organisations have attempted this with zest, although the scrappiness of the information so far publicly available and the vagueness of the estimates that are being bandied about have restricted the opportunity for intelligent criticism. To date, the main result has been confusion. This is bad, but not alarming. At least it disposes of a rather extraordinary theory that has gained some credit in otherwise responsible quarters: that the Prime Minister has become the victim of an ambitious statistician who is trying to kidnap India into Communism. India is in no danger of being kidnapped, into Communism or anything else. Her second five year plan has not been written and will not be yet for many months; meantime there are merely drafts, "drafts of drafts", "plan-frames", estimates, guesses and suggestions. All of these have been thrown open for discussion, and if the discussion is carried on freely and sincerely, the facts cannot fail to assert themselves. This is not to deny that some of the drafts and estimates now receiving serious attention are little short of fantastic, and if ever put into practice would be extremely dangerous.

If the discussion of the proposed plan is to be informed and profitable, it is firstly necessary that the documents the Government is now studying should be freely available. The revelation by the daily newspapers of tidbits of information is an unsuitable way to present a national plan. Astronomical figures ranging from Rs. 4,300 crores to Rs. 8,800 crores are being mentioned out of context, with the natural consequence of extreme confusion. Thus the *Amrita Bazar Patrika* wrote editorially this week: "The total size of the second plan, according to the draft plan-frame, is of the order of Rs. 8,800 crores"—without it being mentioned (perhaps without it being known) that this figure occurs in a paper by Professor Mahalanobis and refers not to expenditure on the second five year plan but to all Government outlays, including administrative and non-development expenditure, in the five years between 1956-57 and 1960-61. Even in this ambitious scheme, the total outlay on the plan would be only Rs. 4,300 crores.

We suggest that in studying the reports about the next plan, all figures running into hundreds or thousands of crores should be treated with great circumspection—certainly until it is clear whether they refer to plan outlays as distinct from ordinary Government expenditure, and whether they refer to investment in the public sector or to the total of public and private sectors. We would not have thought it necessary to add (had not a respected contemporary invited misunderstanding on this point) that one should also be clear whether these large sums refer to five-year totals or annual averages. Thus, it has been said that "the public sector's share of Rs. 4,300 crores includes Rs. 900 crores of non-development expenditure"—when in fact the situation is that Rs. 4,300 crores is proposed to be spent on the plan in five years while an additional Rs. 900 crores is to be spent every year on non-development work (thus making a total of Rs. 8,800 crores.) This sufficiently illustrates the point that the public discussion wished for by Mr. Nehru has so far been bedevilled by the leakage of isolated and unmanageable figures.

The second thing necessary for useful discussion of the next plan is that it must be realised that so far there is no second five year plan. There will be none until autumn, probably November. Any documents presented to the public in the meantime are drafts, some of them prepared by people who will have little or no say in the adoption of

the final plan. Thus, only misunderstanding can issue from a report such as the one published last week by *The Statesman* from its special representative in Delhi which began: "It is now possible to reveal the targets of production of the second five year plan." On the contrary, it is not now possible to reveal the targets of production for the next plan because they have not been decided upon. What followed this promising beginning was merely a set of wishful thoughts compiled by a group of advisers, many of which are quite unlikely to be accepted as hard and fast targets by responsible Ministers. To take two glaring examples: certain of these advisers, whose knowledge of India's economy must be curiously limited, have proposed targets for the jute and tea industries. The jute mills are admonished: "Immediate steps should be taken to ensure a fuller use of the existing capacity and to see that by 1960-61 the full rated capacity is utilised". This is nonsense. How much jute cloth the Calcutta mills are producing in 1960-61 will depend almost entirely on the demand for Indian jute goods from abroad. India's "economic advisers" are not in a position to write five year plans for the United States and Argentina (or Pakistan) and until they are, the output of the mills will be regulated in accordance with foreign demand by the working time agreement, in consultation with Government. Similarly, the decree that the tea industry must achieve an 11 percent increase in production during the next plan is idle. The production of tea is governed by the International Tea Agreement as to its upper limits, and within those limits by the industry's estimate of market demand (mostly foreign) from year to year.

These two examples are less important than certain other errors in the suggested plans, but they serve to show that firstly, what passes as

ECONOMIC ISSUES IN THE BRITISH ELECTION CONTROLLED INFLATION AS A BIPARTISAN POLICY

BRITISH business has been disturbed by the election campaign much less than was imagined when the election was expected but not announced. It was said that the value of sterling in the foreign exchange markets and of securities in the stock markets would relapse as soon as the Conservatives relinquished office and entrusted their fate to the electorate. Sterling has had periods of weakness, but only slight. There has been some buying of American and gold shares in London but no appreciable selling of steel shares, which would suffer more than most shares if a Labour Government pledged to renationalise the industry were returned to power. The sympathies of financiers and industrialists are, of course, solidly Conservative, and it is not indifference to the result of the polling on 26th May but confidence in a Conservative victory that enables the business community to present this unruffled appearance. The assumption is that the party that has guided the country from crisis to recovery, maintaining full employment and a rising standard of living during most of the time, has retained the electorate's favour. But the electorate is very evenly divided, and a slight twist of circumstances could change the Government. So the similarities and contrasts in the two big parties' policies have been studied with some care.

Both parties, in their manifestos and their speeches, present the same aims—broad peace, full employment, and prosperity. In more detail, the emphasis varies not only in respect of method but also in respect of priorities: and these differences are important. The Socialists affect more sympathy with the under-privileged and would not, apparently, be reluctant to impose more taxes on wealth—especially companies' wealth—in order to reduce taxes especially indirect taxes—on the general community. They would extend the welfare services, and control the cost of living, including rents. They would, evidently, make money cheaper (partly to reduce rents), restore some subsidies (to reduce prices), and, if necessary, re-impose price controls on essential goods. The Communists (who are contesting the election on a very small scale and will probably win no seats) are in the happy position of presenting an even more "progressive" policy without financial complications, for they would reduce military expenditure by one-half and so release about £800 million a year for other purposes. But both the big parties approve the present military plans, and the Labour Party has failed to convince economists that it can extend the welfare services, within the limits imposed by those plans, by any means that are not inflationary.

Controlled inflation has become, it seems, a permanent element in the British economy. It may be defended on the ground that it stimulates production more than it raises prices. It is the inflation of wages rather than the inflationary policy in general that has raised the cost of living in the period of Conservative government, for wages have risen more than output. But wages have risen unevenly, and the labour troubles that have worried both parties during the election campaign have been caused mainly by the efforts of particular groups to maintain their relative positions. There is also—though no more in Britain than in the United States or Germany—a feeling that labour has not got its full share of the big increase in profits. Relations between capital and labour will be one of the most serious of the next Government's problems; and it cannot be assumed unquestioningly that it would be easier for a Labour than for a Conservative administration. What troubles the business community especially, when it contemplates a socialist victory, is the reimposition of controls whose removal has allowed production and trade to expand with the growth of demand and to adapt themselves to changes in demand. It is fair to say that the Labour Party does not want controls for their own sake: late in its last term of office it was removing rapidly controls which it or the wartime coalition had imposed earlier. But the Labour Party's programme is, to the extent of some hundreds of millions of pounds a year, more inflationary than the Conservative Party's, and it would evidently be necessary to restrain by specific controls the effects of this inflation, because the Labour Party does not believe in the virtues of monetary discipline imposed by Bank rate.

Since neither party is fundamentally opposed to the capitalist system, nor willing to permit unlimited freedom to that system, the principal difference between them is how they would regulate it. Both have declared that they will take firm action against restrictive practices such as price-fixing among firms that are nominally competing and against monopolistic tendencies in general. Both have shown protective instincts towards "threatened" producers such as farmers and cotton-textile

manufacturers. But their methods of financial regulation are, or appear to be, profoundly different. The essential difference, so far as it is discernible, is in the use of, or rather the willingness to use, Bank rate. Traditionally, the Socialists do not like "dear money". Many of them see a rise in Bank rate as, simply, "putting money into the pockets of the bankers"; and, of course, this year's rises have materially increased the cost of the national debt. The attitude may seem irrational, for the effects of a rise in interest rates are felt directly by many businesses and wealthy people, only indirectly, if at all, by wage-earners. But the fact remains that it is the Conservative Party, not the Labour Party, that has this instrument at hand as a regulator. It has not yet proved its efficiency, but it is at least less clumsy than the alternatives. However, the responsibilities of office have usually a moderating effect on policies, and the Labour Government, if it came into being, would probably retain many of the policies that the Conservative Government applied successfully—perhaps even credit-control. Both parties are committed to policies intended to raise production, though how the Socialists would bring forth the needed savings is not clear; both have their eye on the balance of payments. But would international confidence survive a change of government?

THE CONDITIONS OF ECONOMIC PROGRESS

INDUSTRIALISATION is something more than figures on paper—it is an attitude of mind. It is fortunate that industrialists should appreciate this fact when the Government is attaching too little importance to it. In his address to the twenty-second annual session of the All-India Organisation of Industrial Employers in Bombay last Friday the Chairman, Mr. G. D. Somani, emphasised this process of change in mental attitudes and social forms which industrialisation requires. Constant change is inseparable from economic progress, and people are continually required to make adjustments in "their methods of work and manner of living." This is a feature of economic development which has been resisted wherever it has been encountered. In advanced countries adjustments have usually been left to the ruthless forces of free competition to accomplish, at least in the initial stages before change actually becomes a habit of mind. How the problem is to be solved in India where the worker is to be protected from the forces of competition by all the apparatus of the Welfare State is a question which should be troubling more official minds at the moment than in fact it is. And while it is being left to industrialists such as Mr. Somani to mention the problem, it appears to be of no intention of the Indian Government that they should solve it.

Adjustment to changing conditions is not only the worker's responsibility. As every progressive industrialist knows, the process of change is one which equally affects his attitude of mind and way of living. In advanced capitalist countries progress is ensured by the forces of competition. In Communist States the same purpose is achieved by means of the carrot of political power and the big stick of the forced labour camp. With none of these forms of incentive acceptable to India, the alternative chosen for doing the work of all three is simply "working for the common good." It is not the first time this method has been thought of; it is useful to recall Robert Owen's experiments in nineteenth century England and how miserably they failed in spite of the advantages of small scale. It may be premature to say that it will also fail in India, but there can be little doubt that it will prove costly and slow. Up to the present the interest shown by Indian industrialists in management problems has been due to the existence, or fear of competition. If the future of industrialisation in the country is to be left almost entirely in the hands of the public sector it is difficult to see how this interest can survive. The need to keep labour employed without interruption even in nationalised industries calls for some grasp of the principles of modern personnel management, just as large and complicated industries will necessitate modern cost control. But incentive is to industrial management what inspiration is to the artist; management techniques are better employed when there is something tangible and personal to be gained from their use.

Mr. Somani drew attention to another problem which is at present facing the Indian economy—that of keeping the prosperity of the agricultural and industrial sectors in step. The purchasing power in the hands of the agricultural population has a direct bearing on the prosperity of industry, but a fall in agricultural prices, especially in the present conditions of bumper harvest, does not necessarily mean a fall in farm incomes. Mr. Somani suggests that in order to make progress in both economic fields "the basic structure of the economy should be altered". This suggestion for a more balanced economy is certainly sound, but it would seem to be one for a complete reversal of the Government's present policy. By its con-

centration on large publically-owned concerns and the needs of outdated small and cottage industries, Government policy is clearly working against diversification. What Mr. Somani is in fact urging is a capitalist type of economy on modern lines. But if Mr. Somani and a number of other industrialists understand that this is the real answer to the problems of unemployment and poverty in India, and is furthermore nowadays equipped with all the safeguards which a poor country can afford, the Government certainly does not. It prefers in fact to pin its faith to an economic ideal that was out of date twenty years ago, and has already been proved impractical in operation.

CURRENT COIN

Progress of Land Reform.—The Prime Minister's statement some time ago that the ultimate aim of India's land reform programme is to leave agriculture to the private sector through the creation of a system of small-peasant proprietorship is significant both politically and economically. Its political significance is that such a system should be a great sustaining force for India's young and growing democracy: it was the traditionally landless peasant class of China that filled the ranks of Mao's victorious army. The economic importance is that it releases new rural productive energy. History abounds with examples. Collectivisation in Russia and in the East European satellites may have helped the ruthless Soviet industrialisation programme, but it has reduced the peasantry to the status of well-fed slaves. The attempt of the Malenkov regime to bring more of the peasants into the collective fold a few years ago met with disastrous failure and the total of agricultural income fell. Presumably deriving its lesson from that frustrated drive, the Communist regime in China promulgated a few years ago its agrarian reform law with the establishment of a system of individual peasant proprietorship as its ultimate aim. The fact that the ruthless Marxists in Peking recognise the economic advantages of individual peasant ownership in land speaks volumes for the merits of the system. So it is perhaps a wise thing that India is going to do, though the way she is proceeding towards the appointed goal leaves much to be desired. In the first place, the progress is painfully slow, and secondly, inertia in some places has been contrasted with an excessive zeal of reform elsewhere. Zamindari abolition alone took a long time to be accomplished in practice and in the states of Travancore-Cochin and Mysore the intermediary interests still remain. In some of the States, notably Bihar, Orissa and Assam the abolition is only partially complete. West Bengal, which at one time was lagging behind all other States, took recently a bold step in ending what was largely a system of proprietary zamindaries (otherwise called Permanent Settlement) all on the same day, and thus more than made up for the lost time. But its land reform legislation has still to be enacted. Pending the fixing of permanent ceilings to land holdings, in some States such as Orissa, harsh and drastic steps have been taken against the absentee landlord class in order to ameliorate the conditions of share-croppers by fixing statutorily the landlord's share at only one quarter of the gross produce, and in the case of resumption of personal cultivation, the maximum prescribed is only seven acres of wet land and 14 if dry. It is not known whether the State Government will translate this interim legislation into permanent law, but if it does, it is bound to destroy the landed middle class. This class can still play a useful rôle, not in the old parasitical way but as a class of active agriculturists, in providing enlightened leadership to the peasantry in the new set-up of things, such as its counterpart plays in Western countries. It is in a position readily to absorb the advanced ideas which are being applied to agriculture in this country and can help the process of technological changes that agriculture is bound to undergo sooner or later. It is to be hoped that the limits should be raised finally, particularly in those cases where land is the main source of income. The landlord's right to resume personal cultivation of his land has also been restricted in other States but nowhere else except perhaps Himachal Pradesh it is as drastic as in Orissa. For example, in Bombay, it is 50 acres. In Hyderabad three family holdings varying from 18 to 216 acres according to the class of soil, in PEPSU half the landowners' holding, subject to a maximum of 30 standard acres and a minimum of 10 standard acres and in Punjab, 30 standard acres or 60 ordinary acres. In Bombay and Hyderabad the landlord can resume land if he can prove that land is his main source of income. Simultaneously, also security of tenure for the tenant and his right to purchase land have been guaranteed by law. But the examples of these States show that social justice has been complicated by a spirit of vengeance. Taken all in all, it can be said that the twin objectives of social justice, the increased productivity of land and the ultimate aim of the system of peasant proprietorship in land are in themselves commendable. The important question is that the goal and objectives should be achieved

without making any class of the rural population suffer unduly for something which might not have been its fault after all. It must however be said that since the goal has already been set clearly, all possible steps should be taken to arrive there within the minimum time by completing the land reform measures as quickly as possible.

More Wagons for Coal.—The Coal Commissioner says that it is expected that additional transport capacity will become available this year also during the period July to October. Consumers (including new consumers) requiring coal or coke under all priority classes except under BRK class (for brick burning purposes) are advised to obtain special permits from recommending authorities and to build up stocks while the wagon position is easy. In the case of certain directions, like "above Moghalsarai", and quota routes via Mokamehghat, via Bhagalpur, via Waltair, all stations on N. E. Railway and also all stations served through junctions with light railways, the additional quantities, for which special permits will be issued, are limited to 25% of the normal quotas. In the case of brick-burning coal, consumers will be permitted to draw 100% in excess of the wagons sanctioned for the half-year, July to December, 1955, regardless of the daily limit, provided such quantities in excess of those sanctioned are drawn within the period of four months from July to October.

Japan and G.A.T.T.—Japanese hopes of admission to membership of the General Agreement on Tariffs and Trade seem to have experienced a setback. That is the only conclusion to be drawn from the unexpected difficulties into which the negotiations between the Japanese delegation and the delegations of 14 other countries at Geneva have run after being carried on for the best part of three months. When the negotiations started the United States offered limited tariff cuts to those countries which agreed to lower their duties on Japanese goods. Those countries which hoped to gain greater access to the American market by making some concessions to Tokyo are, therefore, sadly disappointed. Another difficulty is reported to be the growing competition in capital goods on the world market. It is understood that Germany and the United States are pressing Japan to decrease her duties on capital goods, which Japan, as an exporter of these goods, refuses to do. Japan is also being pressed by India, which is prepared to view more favourably a decrease in her tariff on machinery provided that Japan lowers her duties on cereals and rice. The talks are still at the bilateral stage, but Japanese sources in Geneva say that neither side is showing willingness to move from its position. Britain is not taking part in the negotiations.

Britain's Motor Industry.—Britain's rapidly expanding motor industry has set another all-time production record. With the rate of manufacture steadily rising each month, over 300,000 cars and commercial vehicles left British factories in the first three months of this year. Cars produced in the first quarter of the year totalled 234,000, an increase of 50,000 over the figure for the same period of 1954. Commercial vehicles output increased by 19,000 to 84,000. Towards the end of 1954, a year when the record number of over a million motor vehicles was made in Britain, cars were coming off the production lines at the rate of one every 10 seconds. Over the first quarter of this year, that rate has been stepped up to one every nine seconds. The number of cars actually consigned to world markets up to the end of March, totalled over 100,000—20,000 more than in the same period of last year. Commercial vehicles shipments totalled 41,000, an increase of 8,500. In addition to making its contribution to the world's road transport, the British motor industry is increasingly serving the needs of farm mechanisation abroad. From January to March nearly 31,000 tractors went to overseas buyers, 4,000 more than in the same period of last year. Rolls-Royce Ltd., have announced the production of two entirely new models. They are the Rolls-Royce "Silver Cloud" and the "S" series Bentley. Both the models have been produced after a long period of development and represent a major advance in the design of chassis and coachwork. They are silent, luxurious, and powerful, and are designed to corner surely and to hold a high average speed without fatigue to driver or passenger. It is said that their top speeds are more than 100 m.p.h. Some of the changes in design are obvious at a glance, for the new cars look—and are—faster. Comfort and safety, for which the firm has been famous for so long, have been improved upon. Embodied in the specification is a completely new chassis frame and suspension, an engine of increased power, steering gear which is light and certain, and brakes which are more sensitive and powerful. Interior fittings have the mark of craftsmanship. The seats are wider, and there is ample leg-room with no sense of crowding when five passengers are carried. The luggage compartment is not only larger, but of more convenient shape than before. A new light-weight boot lid that can be fitted to Morris Minor cars is said to

double the luggage-carrying capacity. Made by a Buckinghamshire firm, it is of resin-bonded fibre-glass, lighter than metal, virtually unbreakable, and is proof against rot, rust and corrosion. A marked bulge gives the extra space.

March Coal Output.—The output of coal in collieries in India increased to 3,303,154 tons in March from 3,251,682 tons in February, 1955, according to the official statistics released by the Chief Inspector of Mines in India. Despatches of coal during the month amounted to 2,764,412 tons as against 2,502,505 tons in the preceding month. Coal stocks at pit-heads thus increased from 3,879,459 tons at the beginning of the month to 3,945,961 tons at the close of the month. During the month under review, 841 collieries were reported to be working with an average daily employment of 3,51,061 workers. Output per man-shift was estimated at 1.08 tons for miners and loaders, 0.59 ton for all workers underground and in open workings and 0.83 ton for all persons employed, including surface workers. The percentage of absenteeism was 14.78. Coke plants at collieries and elsewhere produced 375,454 tons of hard, soft and other kinds of coke during the month and despatched 180,202 tons.

Steel Supplies.—The report of the Committee appointed by the Government of India some time ago to survey the idle capacity in the engineering industry is yet to be made public, but it is understood that the unutilised capacity in the industry was at the time of their enquiry anything between 57 and 75 percent. Conditions are certainly very different today and the report is by now out of date. But Mr. Sankalchand G. Shah said at the quarterly general meeting of the Engineering Association of India (Bombay region) last week that shortage of semi-finished goods such as steel and other important items of raw materials like cast iron scrap, at times critical, still restricts the working of all the rated capacity of the industry. "The irregular and inadequate supply of steel" said Mr. Shah "has been a matter of some concern to the engineering industry. No indication is given by the main producers as to when supplies would be effected after orders are placed and instances are not wanting where units have had to wait for months and in some cases for years before supplies could be had". He urged that import of steel be stepped up, though he appreciated the difficulties, such as shortage of foreign exchange and the higher price of foreign steel. Stepping up the import of steel, as Mr. Shah appreciates, would have upset the internal price structure. The Government will have to subsidise the sales price from the steel equalisation fund which must now be strained to the utmost and may even prove inadequate. The Government may have to impose an excise duty on steel to replenish the fund.

CORRESPONDENCE

THE SUGAR POSITION (TO THE EDITOR OF "CAPITAL")

Sir,

The figures quoted by your New Delhi correspondent in his despatch reported in your issue of 28th April, 1955, (page 637) give an erroneous impression of the sugar position in the country. Your correspondent has taken production during the current year as 14 lakh tons whereas by the end of April it has already exceeded that figure. Many of the factories are still working and according to present indications the total production during the current year will exceed 15 lakh tons. We would not be far wrong to say that production may reach nearer 16 lakh tons. Opening stock with the factories on 1st November, 1954, was 0.67 lakh tons. Imports account for another 7 lakh tons. The total available supply will, therefore,—taking production at a conservative figure of 15.25 lakh tons only—be not less than 22.92 lakh tons. Against this, consumption, even according to latest Government estimates, is not expected to be more than 16 lakh tons. It is here that your correspondent has missed the argument put forward by the industry, as he has taken consumption at the last year's level. This makes all the difference in the estimates of stocks to be carried forward to the next year. The above figures will show that the industry will be left with about 7 lakh tons against a normal carry-over of about 2 lakh tons only.

This makes the position serious as firstly factories have not enough godown space to keep the huge stocks and secondly, their finances will remain locked up, with the result that they will not be able to start crushing next season in time. This inability of theirs has to be viewed in the context of a still better cane crop expected next year necessitating an early start of crushing by factories. And if because of locked up finances factories are unable to start working in time, cane growers will have a difficult time as they will have to divert their cane to gur production, depressing further the gur prices. Such a position will affect adverse-

ly an important sector of rural economy, especially in the U. P. and Bihar.

It is also necessary that in order to maintain the increased tempo of sugar production in the country there is increased off-take from the factories also, whereas the present tendency is towards the contrary. Imports of sugar at the present time should, therefore, be viewed in this context of increasing production on the one hand and decreasing consumption on the other, leading to a glut in the market.

Your correspondent, it appears, has missed the remarks of Mr. P. A. Gopalakrishnan, Joint Secretary of the Ministry of Food and Agriculture, in his presidential speech at the Development Council for Sugar where he said that sugar prices ruling at present were rock-bottom prices and any further fall would be undesirable so long as the cost of production remains what it is.

In the light of the above remarks and the figures cited above, you will agree that the industry has only put forth facts before the Government and has not started any "mid-year campaign" as stated by your correspondent.

Yours faithfully,
J. S. MEHTA.

Calcutta, 10th May, 1955.

A NEW DESPOTISM

Sir,

I suppose it is too late to sound a dissenting note on the encroachment by the Executive on the obvious fields of the judiciary; the demand for separation of the executive from the judiciary has meant in practice endowment of the executive with many magisterial powers. It is no longer even a question of how far the tendency should prevail, for, "there, through the creeks and inlets, comes silent, flooding in, the Main".

The question therefore, now, resolves itself into the problem of educating the executive into a judicial frame of mind. Lest power be exercised in a spirit of dictatorship, the fundamental principles of jurisprudence should be taught to the officers of Government departments as an absolute necessity. Today, the executive has powers of inflicting fines, depriving men of livelihood and licensing companies. How formidable these powers can be! Under the State Bank of India Bill the pension accrued to former officials with 30 years' devoted service can be taken away; no one has considered how many minutes would occupy the Supreme Court to invalidate such a clause; and strangely, "perquisites" on which so much was said at the budget time are permissible to the Chairman using a word hitherto unknown to legislation.

Under the circumstances, some elementary laws of evidence, capacity to weigh facts and interpret them, a willingness to give the benefit of the doubt to the person arraigned, a courteous hearing, the enforcement on the executive that it must prove its case beyond reasonable doubt, that the letter of the law should be respected and not merely interpreted to suit the convenience or the moral behests of the State, these are things which should be an essential part of the training of officers. In the I.A.S. Training College and in departmental examinations for promotion, a course on jurisprudence should be made compulsory. "We must educate our masters" as Disraeli said about electors.

Punish the tax-dodgers and callous exploiters of legal lacunae, certainly; but what, after all, is the fundamental difference between the judicial system in democratic countries and in dictatorships of Moscow and Peking? It is laid down in the Soviet Constitution that the judiciary shall interpret the laws in accordance with the policy of the State. It is not the same thing as a directive general ethical policy in the Constitution but an enforcement of a Public Prosecutor's version of policy; this latter requires split second timing in thought reading of the minds of the Mandarins. Latin jurisprudence and the English judicial system have stood the test of time; anyone who thinks that the English law emphasises the letter of the law and not the spirit of progress does not know the magnificent part played by Equity in the Chancery Division. The real danger we Indians must face is the tendency among hitherto subject peoples to worship Power for its own sake; a slave does not rebel, he adjusts his nervous mechanism to the justification of Power, and what cannot be cured remains to be deified. A healthy scepticism towards the State and its encroachments is a part of the mind of liberalism. Long before Lenin was heard of, my college text-books pointed to the one danger of Socialism, namely, the danger of bureaucracy or the barracks and the answer has never been satisfactory. Those who aimed at a withering of the State by proletarian revolution have landed into a morass of bureaucracy plus barracks with no sign of withering and the only progress seems from liquidation to liquidation in rising crescendo.

Yours faithfully,
R. K. DESAI.

Patna, 11th May, 1955.

NEW COKING PLANT FOR INDIAN STEELWORKS

Two new batteries of 78 coke ovens each, together with coal and coke handling equipment and by-product plants, are to be built by Simon-Carves at the Burnpur Works of the Indian Iron & Steel Co. Ltd. The new ovens, which will carbonise 3500 tons of coal per day, will form an extension of the battery of 72 ovens completed by Simon-Carves in 1950. This is the fifth contract for coke oven construction undertaken by Simon-Carves for this great steelworks since 1922: with its completion there will be 308 Simon-Carves ovens in service, and their combined throughput of 6300 tons of coal per day will make Burnpur the biggest carbonising unit in the Commonwealth.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

Enquiries to: Simon-Carves Ltd., P.O. Box 33, Jamshedpur.

Coke ovens by Simon-Carves Ltd
STOCKPORT, ENGLAND

IN this over-sensitive age we are beginning to realise that there is a great deal more in a name than we once thought, and that the flower which we call a rose would not necessarily smell as sweet if it was known as something else. Thus, having most generously dispensed "foreign aid" to the rest of the world for the past ten years, the U.S. administration has recently begun a campaign to replace these words by others deemed to be less offensive in the ears of the recipient. Both the President and Mr. Dulles have come out strongly in support of nomenclature less wounding to the feelings of their poor relations in the free world. Personally, I have never heard anyone, inside or outside a government, object to the use of the term "foreign aid", or suggest that it should be called something else, however critical they might be of the aid itself. But presumably the giver knows best, and President Eisenhower has coined "defence alliance expenditures" as a substitute for aid. Thus, in a message to Congress the President said: "The necessary expenditures to enable other free nations associated with us to equip and maintain vital armed forces at these same strategic points beyond our borders should not be considered as aid. These, in fact, are defence alliance expenditures." And so another historic phrase has been born, to take its place with others, such as "cash and carry", which have been absorbed into the accepted jargon of international affairs. But by changing the label do we, in fact, change the nature of the thing itself? Experience suggests that we do not. Notwithstanding that it is now defence alliance expenditure, military aid to Pakistan remains what it always was. Problems of language and meaning have been the great preoccupation of twentieth century philosophers and it looks as if they have now begun to infect politics, though philosophers have been mainly concerned with linguistic correctness, whilst politicians use language for its effect upon the hearer. Defence alliance expenditure may be more acceptable than aid to the excitable lay mind, but it will remain aid just the same.

The social revolution proceeds apace, and the barriers of class distinction are toppling before our eyes. Len Hutton, captain of this summer's winning England team in Australia, has been elected an honorary member of the M.C.C. and is thus the first professional to be so honoured during his active playing career. It is true that Jack Hobbs and one or two other pros have also been elected to honorary membership of the famous club that is both privy council and parliament for the world of cricket, but none of them have attained this distinction during their working life. Election has had to wait until they have retired to a sports outfitter's shop or to be coach at a famous school, or to take up some other sideline appropriate to their departed glory. In being elected whilst he is still in the prime of his career Hutton, England's first professional captain who has led his country in no less than 23 test matches (without losing a series against either Australia or the West Indies), makes further cricketing history and another record has been established in the annals of the game. It is a far cry back to the 1920's when professionals going out to bat at Lords had to emerge from the small gate at the far end of the pavilion, whilst the gents made a leisurely journey down the long, central stairway. This applied to all pros—both Middlesex and visiting—and some of the latter did not take too eagerly to those class distinctions. For such as may have suffered, it will be balm to their injured pride to know that Hutton will henceforth mingle with the galaxy of talent that throngs the famous Long Room at Lords. For a professional cricketer the financial inducements are not so enormous that he is content to forgo the less tangible rewards. I doubt if any professional cricketer's earnings come anywhere near those of

A DITCHER'S DIARY

such professional golfers as Henry Cotton or Bobby Locke.

The faking or forgery of an *objet d'art*, or an archaeological treasure, somehow evokes reactions quite different from the emotions which a bank robbery, or some other orthodox piece of crime, stirs up in the public mind. The discovery a few months ago that the skull of the Piltdown Man, which seemed to link the civilisation of the Sussex Downs with the Ice Age, was a carefully prepared fraud may have shocked a few professional scholars, but the response of the general public was, on the whole, vast, undisguised and incredulous amusement. The immediate sequel was a first-class book by a young scientist which read like an Agatha Christie novel; the great majority of people were clearly much more interested in the story of the rather pedestrian amateur archaeologist (whose secret ambition was to find a niche in the scrolls of fame) who is alleged to have perpetrated the hoax, than in the hoax itself. Likewise, the announcement a few days ago that the picture "The Virgin and Child with Angel", which had hung in Britain's National Gallery for some 30 years, is not after all an authentic Francia, as its donor and all the experts believed it to be, is not likely to produce more than a phlegmatic shrug of the shoulders from the average man. How many of the thousands of men and women who, over the years, have stood in front of this famous picture will feel that they have been defrauded or the victims of a deliberate swindle? Very few, I guess. The elaborate techniques and the high degree of skill required to put over a fake of this kind are more likely to fire the public imagination than they are to stir public indignation. Deep down, all of us derive a certain amusement from seeing the experts fooled, which is part of the reason why brains trusts and panel games are so popular with British and American radio and television audiences.

Thousands of young men and women still leave the United Kingdom each year for "under-developed territories" overseas but little is done to prepare them for their new life with people of other races, or for the problems they will meet as representatives of a colonial Power which is adjusting itself to new conditions. An effort is now being made to prepare at least some of them for the tasks ahead, and the work is to be assisted by grants which the Nuffield Foundation and the Cadbury Trust are to give "Oversea Service", an experimental organisation sponsored by the British Council of Churches and the Conference of British Missionary Societies. This organisation is concerned with "the impact of Western and so-called Christian culture upon the peoples of Asia, Africa, Latin America and the Caribbean as they experience it through the lives of ordinary United Kingdom citizens living and working among them". For the last eighteen months "Oversea Service", under the direction of Dr. Harry Holland, has been holding conferences with business, professional and Governmental people going abroad at which they are invited to consider their personal responsibilities in the countries they propose to work in. Sixteen conferences have been held since January, 1954, attended by 200 people from 28 professions—two-thirds of them going to Africa and one-third to India, Pakistan, the Middle East and the Far East. U. K. Government departments and business houses are co-operating in the scheme and the proposed grants will help "Oversea Service" to establish headquarters at Moor Park College, Farnham, Surrey, and to add to its staff.

Those of us who live abroad know that the most important things are not to be taught at lectures, but some brief and judicious instruction might avoid the unnecessary misunderstandings that often spoil a first tour in Asia.

Some people say that Lady Megan Lloyd George's defection from the Liberal to the Labour Party is merely another move in the now historic antipathy between herself and Lady Violet Bonham Carter. One might almost say a case of Infra-Red and Ultra-Violet.

Commenting lately on the decision of one of our leading joint stock banks to interest itself in hire-purchase, I probably gave the impression that it was pioneering a completely new field in India. A correspondent informs me that quite a big hire-purchase business was developed in the late twenties by two finance companies, and indeed the first privately owned buses which appeared on the streets of Calcutta about that time were nearly all bought on the "never-never". (It is said that the reason why some of the original models are still with us is that the last instalment has not yet been paid!). Incidentally, it is interesting to note the effect on British hire-purchase business of the dearer money policy which was inaugurated in the U.K. at the end of February. When Mr. Butler applied the screw to both ends of a hire-purchase transaction, by raising the amount of initial deposit which has to be paid on certain articles and at the same time making it more expensive for the finance companies to borrow, it was said that the increases were so nominal that the total volume of h.p. business would hardly be affected at all. Well, that certainly is not the case in the furniture trade which, more than any other, relies on instalment purchases for a steady flow of orders. I saw in one of the English newspapers the other day that between 50 and 60 percent of all furniture in the U.K. is sold on hire-purchase contracts. In the ten weeks after Mr. Butler's new orders were issued, retail furniture sales are reported to have dropped by one-third over the whole country and factory production to have been slashed by one half, with the result that more than 100,000 furniture workers are on short time. Two morals may be drawn from this: one is that, given a reasonably free economy, bank rate can still do its job; and the other is that, even in an age when buying on tick is no longer considered slightly disreputable, hire-purchase is not just an unbroken sequence of up and up and on and on.

General Election dicta: "The differences between the two big parties fade into insignificance when we consider the likeness between them. Both, if for different reasons, want an overwhelmingly powerful State which tends steadily to increase its hold over the ordinary citizen, both of them—again for different reasons—regard with cool unconcern the struggle of the middle classes to survive"....J. B. Priestley.

"I hope I shall never be described as a floating voter"....Sir A. P. Herbert.

The lady golfer complacently tee'd up for the next green and with every show of confidence remarked, "Hmmm, this calls for one long drive and a putt." She swung mightily, and when the earth and grass subsided it was seen that the ball had rolled just a few inches from the tee. Stepping forward, her caddy handed her the putter and said, "All right, lady. Now for one hell of a putt".

INDIA'S RAYON INDUSTRY

RESTRICTED PRODUCTION AND LOSS OF EXPORT MARKETS

By Hitindra Malik

THE Indian rayon textile industry had its beginnings in 1937 and received its initial impetus during the war when the import of foreign textiles was banned. Today with a capital investment of Rs. 13 crores and an installed capacity of 25,000 powerlooms and 75,000 handlooms, together employing 60,000 workers, the industry has an annual potential output of approximately 400 million yards. But current production is far below the overall manufacturing capacity and amounted to approximately 256 million yards in 1954. India's export trade in rayon textiles, established in the immediate post war years, has declined at an alarming rate. From the peak figure of 24,479,977 yards valued at 51,911,637, in 1948-1949, exports in 1954 dropped to a mere 3,615,574 yards valued at Rs. 5,984,380.

Apart from the loss of the export trade, Japan has made serious encroachments into India's domestic market despite the 100 percent import duty, and now threatens the home industry on its own ground. This restricted production and the consequent diminishing of trade, both domestic and foreign, in Indian rayon textiles comes at a time when world production and trade in synthetic fibres and synthetic fibre fabrics is steadily increasing at the expense of the cotton textile industry. Britain, for example, increased her exports of synthetic fibres and woven fabrics in 1954 by £690,124 over the previous year and correspondingly increased her imports by £3,659,979 over the 1953 figure. In Japan, the production of rayon yarn and staple fibre reached the record level of 654,274,000 pounds in 1954 as compared with 503,604,000 pounds in 1953. The output of other synthetic fibres also jumped from 13,195,000 pounds in 1953 to 21,358,000 pounds in 1954. Similar trends are also markedly noticeable in Europe and the United States. It is only in India that the situation remains out of control.

Conditions in India

There are several factors which collectively account for the unsatisfactory development of the Indian industry. The most important of these, perhaps, is the problem of ensuring a steady supply of yarn at a reasonable price. Yarn is a major charge on the entire cost of production and accounts from 50 percent to 70 percent of the price of the woven fabric according to the variety of the cloth. On the basis of a normal working of two shifts a day, the annual consumption of yarn by the rayon textile industry is estimated at 60 million pounds. Since 1951 two Indian yarn factories with an aggregate capital of Rs. 8 crores have been in operation. A third factory came into production recently and the country's rated capacity is now estimated at 17 million pounds a year. But actual production in 1954 amounted to 11,690,000 pounds. A very considerable deficit has therefore to be met by foreign supplies, which makes India the world's biggest importer of rayon yarn.

It is not the fact of yarn imports itself that gives the textile industry its present instability. Conceivably, an industry can depend entirely on the import of a vital raw material and still function economically. Switzerland, for example, imports a major proportion of her yarn requirements and yet the Swiss rayon textile industry is among the most efficient and stable in the world. The circumstances of import, however, impose a grave burden on the industry. There is the incidence of the distribution of supplies which arises as a natural corollary of import trade control. Under the existing tariffs rayon yarn is subject to an import duty of 364 percent which, it is claimed, is the highest levied on yarn anywhere in the world. Prior to 1952, the industry was allowed a rebate of twelve annas on every pound of fabric exported as drawback of duty but this concession was withdrawn on 1st January, 1952. This led to a steep fall in exports and sales to foreign markets in 1952-1953 amounted to 3,497,000 yards as against 8,414,000 yards in the previous year when partial drawback of import duty on yarn was allowed.

Although this concession was re-introduced last year, it would appear that considerable damage has already been caused. Significantly, Indian rayon textiles find no outlet in South East Asia which is a traditional market for Indian cotton piecegoods. Indian business has had to look towards the Middle East and to those markets which are somewhat remote from Japanese interests. In any event, a rebate of twelve annas a pound of fabric exported does not represent the entire import duty paid on foreign yarn. The Indian industry will remain uncompetitive in foreign markets at least to the extent of the un-refunded duty. Meanwhile, the domestic market continues to bear the full impact of the 364 percent import duty.

Import trade control complicates the situation still further. In the past, import licences have been granted to manufacturing concerns and also to purely merchanting houses. Supplies, restricted to the overall import ceiling, have been divided between two distinct groups with divergent interests. At other times the import of rayon yarn has been freely allowed under Open General Licence. The basis of licensing has varied at frequent intervals. The uncertainty in addition to the operations of those frankly interested in the maximum possible trading profits has made the normal buying and selling of yarn a preposterously speculative affair. This speculative activity touched ridiculous heights in 1952 when the market price of a 200-pound case fluctuated between Rs. 600 and Rs. 2,300 within a short period of time. Obviously, no industry can possibly flourish if the price which it has to pay for its basic raw material bears no relation to the world price and is subject to such absurdly violent changes.

Effects of Duty

The fact that the import duty is calculated on the market value and not on the invoiced value makes the situation even more fantastic. This means the weaving mills can never accurately compute their cost of production in advance even on the basis of their own imports of yarn. Market value is a factor which varies beyond normal limits and there is no method of forecasting what it will be on the day the consignment arrives. It is impossible, therefore, to calculate beforehand the amount of duty that will have to be paid. If the market value stands at some extravagant figure, then the import duty payable will be correspondingly absurd. It has happened that weavers have had to pay duty on an artificially exaggerated market value which has worked out to an *ad valorem* rate of 50 percent to 60 percent. Manufacturing interests believe the only solution lies in stepping up the domestic production of yarn.

With this object in view the Silk and Art Silk Mills Association of Bombay, which claims a membership of 313 mills controlling 21,258 looms between them, has entered into negotiations with the Snia Viscosa group of Italy to set up a yarn manufacturing plant in India. The proposed company will have a subscribed capital of Rs. 6 crores of which the Italian contribution will be Rs. 1 crore. The Association will subscribe Rs. 2 crores and the balance will be raised by public subscription. The initial productive capacity will be 17 tons a day of which 7 tons will be rayon yarn and 10 tons staple fibre. This capacity will be increased eventually to 20 tons a day—10 tons rayon and 10 tons staple fibre. It is expected this plant will come into production in 1956-1957.

First Time in India

This is perhaps the first co-operative venture of its kind in India where manufacturers in direct competition with each other have combined together in a joint financial undertaking to safeguard their common basic interests. Admittedly there are a number of other problems which face the rayon textile industry. For instance most of the present plant was installed as far back as 1937 when the industry first came into existence. It was even then not new, and rapid technological strides have been made since. The obsolete processes now in use will have to be discarded. At present sizing is done on a single thread basis with the result the treatment of thread varies. In the latest manufacturing process, the entire warp is sized in one operation which ensures uniform tension on each thread. The finishing equipment is also not of the latest type and it is therefore difficult to obtain a standardised product.

There are no facilities in Indian mills for maintaining constant temperature and humidity to which rayon yarn is sensitive. Then there is the overall problem of productively dead labour. An Indian worker on the average handles no more than two looms, whereas his Japanese counterpart handles six. But it would be unfair to expect the mills to spend large amounts of money in rehabilitation unless adequate supplies of yarn are available at a reasonable price. The Silk and Art Silk Mills Association has taken a step in the right direction which will materially help the industry to the stability which it urgently needs.

Mr. Eugene R. Black, President of the World Bank, today announced the appointment of Mr. Joseph Rucinski as director of the Bank's Department of Operations for Asia and the Middle East. Mr. Rucinski succeeds Mr. Francois-Dider Green, who has resigned from the Bank to take up appointment in the North Atlantic Treaty Organisation as Deputy Secretary-General for economic and financial affairs. Mr. Rucinski is 47 years old, and is a naturalised citizen of the United States. Since September, 1952, he had been assistant director of the department he now heads in the Bank.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CREDIT STILL TIGHT

Wednesday, 18th May.

STRONG demand for finance persists, and there is no sign of an end to the busy season yet. Sugar advances are at a record level though jute advances have been falling over the last month; less finance is required against grains. In the interbank market money is tight and the call rate quotes 3 percent.

The exchange market has been quiet with only a few export bills reported. The demand for remittance has been moderate. The local dollar rate moved up half a point today and U.S. \$100 now quote Rs. 479 T.T. selling.

Bullion was quiet in the absence of demand. Silver declined from the previous week's level of Rs. 166-4 to Rs. 161-12, quoted to-day. The forward rate was lower at Rs. 160-12. The price was unchanged at 76d. in London and at 87 cents in New York.

Gold also decreased from Rs. 95-2 to Rs. 93-4. The sovereign at Rs. 61 showed a loss of 8 annas.

Tenders for Rs. 1 crore of three month Government of India Treasury Bills, which were opened on Tuesday, 17th May, 1955, totalled Rs. 1,38,75,000. The average rate of acceptance was unchanged at Rs. 2-9-0 percent per annum. Tenders at Rs. 99-5-9 percent and above were accepted in full and those at Rs. 99-5-6 percent were allotted approximately 23 percent. Tenders for a further Rs. 1 crore of three month Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 23rd May, 1955. During the week ended 13th May, 1955 Government of India Treasury Bills for Rs. 9,79,50,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 1.83 crores in notes in circulation to Rs. 1,331.09 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 13th May, 1955, but the total note issue fell by Rs. 19 lakhs to Rs. 1,339.61 crores. Notes held in the Banking Department declined by Rs. 2.02 crores to Rs. 8.52 crores. Deposits of the Government of India rose by Rs. 1.84 crores to Rs. 51.93 crores while other Government accounts fell by Rs. 3.97 crores to Rs. 19.24 crores. Balances of commercial banks at Rs. 47.97 crores showed an increase of Rs. 73 lakhs. Balances held abroad dropped by Rs. 1.69 crores to Rs. 52.07 crores. Other loans and advances rose from Rs. 40.49 crores to Rs. 44.52 crores, of which advances to scheduled banks against usance bills totalled Rs. 33.43 crores against Rs. 29.94 crores. These advances amounted to Rs. 99.08 crores since 1st January, 1955. Ways and means advances stood at Rs. 80 lakhs (same). Other features showed little change.

The statement of the position of Scheduled Banks for the week ended 6th May, 1955, discloses Demand and Time liabilities at Rs. 580.95 crores (Rs. 823 crores on account of borrowings from Banks) and Rs. 383.80 crores (Rs. 210 crores) compared with Rs. 590.39 crores (Rs. 959 crores) and Rs. 383.70 crores (Rs. 220 crores), respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1 lakh and Rs. 40 lakhs to aggregate Rs. 34.12 crores and Rs. 46.21 crores. There is a rise of Rs. 33 lakhs in investments to Rs. 344.73 crores. Advances and bills discounted at Rs. 626.49 crores reveal an increase of Rs. 2.59 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.3 percent and 64.9 percent against 8.3 percent and 64.0 percent.

The return of the Imperial Bank of India for the week ended 6th May, 1955, shows a fall of Rs. 1.91 crores in total deposits to Rs. 215.18 crores. Investments in Government Securities and other authorised investments are down by Rs. 31 lakhs and Rs. 20 lakhs to Rs. 91.61 crores and Rs. 11.20 crores. Advances including loans, cash credits, and overdrafts, and bills discounted and purchased have risen by Rs. 1.39 crores to aggregate Rs. 127.34 crores. Cash and balances are, in consequence, shown at Rs. 17.09 crores or Rs. 47 lakhs less.

THE BANK OF TOKYO, LTD. made a profit of Rs. 94,121 for the year ended 1st December. Deposits amounted to Rs. 32.79 lakhs. Investments totalled Rs. 22.49 lakhs and advances Rs. 1.94 crores. Cash was shown at Rs. 13.70 lakhs.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in the Indian Union during March 1955, amounted to Rs. 1,716 lakhs as compared with Rs. 1,457 lakhs in the corresponding month of the previous year. The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with those of the corresponding period of the preceding year.

Of the total customs revenue collections, import duties accounted for Rs. 1,302 lakhs as against Rs. 1,190 lakhs, export duties for Rs. 394 lakhs as against Rs. 249 lakhs and land customs and miscellaneous for Rs. 20 lakhs as against Rs. 18 lakhs.

The total gross collection of Union Excise duties amounted to Rs. 1,232 lakhs as compared with Rs. 902 lakhs. During the twelve months, April 1954 to March 1955, the grand total of gross Customs and Union Excise Revenue realised was Rs. 29,525 lakhs as compared with Rs. 25,623 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 14,459 lakhs as against Rs. 12,031 lakhs, export duties for Rs. 4,139 lakhs as against Rs. 3,851 lakhs, land customs and miscellaneous for Rs. 288 lakhs as against Rs. 254 lakhs and Union Excise duties for Rs. 10,662 lakhs as against Rs. 9,487 lakhs.

The Midland Bank announces that there has been a lively demand for the new gift cheques which it introduced a month ago—both from customers of the bank and from non-customers. Requests for the special cheques, which are available at a charge of one shilling each have come from Scotland and Northern Ireland and arrangements have been made for the Bank's affiliates—the Clydesdale and North of Scotland Bank and the Belfast Banking Company—to issue the cheques through their branches. The Bank states that the gift cheques have been used for weddings, birthdays and personal anniversaries and for many other uses.

FIRM RECOVERY IN THE STOCK MARKETS

GILTS REGAIN LOST GROUND INDUSTRIALS CHEERFUL

London, 17th May.

ELECTION optimism, coupled with further good company news and the improvement in the international situation, brought firm conditions to the stock markets during the past week. Business recorded some expansion but was rather selective. The outstanding feature of the week was the recovery in gilts after their recent weakness. The advance was sharp and virtually erased falls sustained earlier. The recovery in the Funds was stimulated by the improvement in sterling following its recent setback. The decreasing tension in the international situation and the signature of the Austrian Peace Treaty aided sentiment in the foreign bonds market. Germans and Japanese were again supported while Russian and "Iron Curtain" issues were marked up. Dollar stocks lost ground in sympathy with Wall Street.

Cheerful conditions prevailed in the industrial market. Buying was somewhat selective but this imparted a firm tone to industrials. Some sharp gains followed dividend statements but generally rises were of moderate proportions. Steel shares were prominent on election hopes. Kaffirs tended to ease on lack of support. Diamonds and coppers however met with some support. Oils recoded partly in sympathy with Wall Street. Rubbers and teas moved within narrow limits but the undertone was satisfactory. Teas were helped by the modest recovery in the commodity price when the auctions were resumed.

The Money Market

Whilst there was no expansion in the volume of clearing money, short loan conditions on the money market tended to ease in the latter part of the past week. Authorities had to lend on most days. With money scarce, borrowers had to pay four percent for loans during the worst periods but as funds came out on a fair basis from non-clearing banks, loan rates eased to 3-1/2 percent and at times down to 2-3/4 percent. Bill business remained restricted with July and August commanding 3-13/16 and 3-27/32 percent. The money market made no change in its bid for last week's offer of treasury bills but as a result of outside tenders the average increased by just over 1d. Applications for treasury bills totalled £382,355,000 of which £230 million were allotted at the average rate of 78s 4.69d compared with 78s 3.59d in the previous week. This week, £240 million are on offer. The Bank of England return for the week ended 11th May, showed notes in circulation about £2 million lower at around £1,740 million but bankers' deposits about £7 million higher at around £251 million. Fine trade bills were unchanged.

U.K. Investment Market on Election Eve

The Investor's Chronicle market newsletter writes: "Until the election, the markets will be under political influence. Industrials have remained remarkably firm. The stock exchange seems to expect a Conservative lead of around 30 seats. Labour's programme is frightening for investors but firmness of prices reflects the market's confidence that Labour will not win. A Conservative Government is likely to continue the recent policy including tight money, but a Conservative victory might bring in a considerable influx of foreign funds. Industrials should continue to strengthen on good company results, but apart from the buying of steel shares and similar stocks by those willing to speculate on the election result, business may slacken as the election approaches."

Activity on Wall Street

German issues featured with Governments, municipalities and corporates, all scoring substantial gains in active dealings and in some cases, touching new peaks for this year in the foreign bonds section of Wall Street. The firmness reflected demand, prompted by the return of German sovereignty, in a market short of stock. However, demand was eventually satisfied and prices, especially for Government issues, backed away slightly from the best levels. Japanese were also firm with occasional new highs reached. Chilean 3 percent of 1933 equalled the year's high of 441-1/2. Elsewhere, among foreigners business was rather slow with values fractionally mixed. Convertibles continued to dominate the domestic market losing ground in sympathy with easing stock values. Most rails also followed stocks to lower levels, while Governments and top-quality corporates moved intermittently in slow trading.

Fall in U. S. Stock Dealings

The late April rise in the U.S. stock market margins to 70 percent has been accompanied by a contraction in the trading volume. Up to 25th April when margin requirements increased daily, the average trading was about 3,118,000 shares. Since then it has averaged about 23 percent less.

U. S. Money Supply

The U.S. money supply, consisting of adjusted demand deposits and currency outside banks, fell by a further \$1,600 million to \$205,300 million in

March. In February, the supply fell by \$2,400 million. The fall was mainly due to collection by the Government of corporate taxes.

American Telephone and Telegraph

The recent heaviness in America Telephone and Telegraph Company shares has stirred interest as to when the Company may issue some, if not all, of the authorised \$650 million worth of convertible debentures. Guesses range from this month to next autumn.

Vegetable Oils Market

Demand for linseed oil was temporarily absent although sellers were unwilling to reduce value. Indian groundnut oil was in better request with June-July shipment reported to have been sold at £97½ c.i.f. and further sellers seeking up to £98. South African groundnut oil was quoted at the higher level of £99½ c.i.f. May-June. Other oils were generally featureless with coconut oil fractionally dearer on the Eastern market trends though buying interest was negligible.

Fresh U.S. Groundnut Imports

President Eisenhower has issued a proclamation permitting unlimited quantities of shelled groundnuts of all sizes to be imported into the United States or withdrawn from warehouses between now and end of July this year. Imports will be subject to a duty of 9 cents a lb. The proclamation covers shelled blanched salted prepared or preserved groundnuts (including roaster groundnuts but not including groundnut butter). On 9th March this year, the President allowed entry of 25,500 tons of foreign grown unshelled groundnuts between then and the end of June in addition to the regular import quota.

NOW is the time to protect your car against the wear and tear of heat, dust and sand with MARFAK LUBRITECTION. Old or new, your car will last longer, run better in any weather when it has regular MARFAK LUBRITECTION SERVICE—a "system" designed and developed to ensure that your car is lubricated at proper intervals with the correct Caltex lubricants. Lubricants specially manufactured to give maximum efficiency and long service are applied by chart—not by chance—by trained automotive mechanics. (The chart is a special diagram or plan of your car showing all lubrication points, grease nipples etc., as well as the correct Caltex lubricant to use and method of application.)

Make an appointment with your friendly CALTEX Dealer today for MARFAK LUBRITECTION SERVICE. You will get quieter operation, smoother riding comfort and longer vehicle life.

Stocks and Shares

DULL WEEK ENDS ON STEADIER NOTE

RALLY IN TEA SHARES: BRIEF SETBACK IN IRONS ON RETENTION PRICE ANNOUNCEMENT

Wednesday Evening.

THE market has had a quiet week, with little business passing but with rates generally steady. The undertone is well maintained and brokers expect an improvement in sentiment in the near future. Tea shares have continued to lose ground, and the apparent rally that took place today probably will do nothing to reverse that trend. Steel shares were temporarily weaker when it was officially confirmed that the retention price increases would bring no benefit to shareholders; this loss has been made up since and Irons this evening were quoted at Rs. 33-12-6.

Details of the week's trading follow.

The enquiry for Government securities was fully maintained, but once again very little business was reported owing to the acute shortage of scrip. Buying was centred on short and medium-dated loans and there was a further improvement in prices. The Reserve Bank today raised their selling prices for medium term loans. In contrast with the general trend of the market, 3% Conversion Loan was again a soft spot easing to Rs. 80-11 while 3% Non-terminable Paper continued on offer at around Rs. 80-3. In short-dated loans, 2½% was taken around Rs. 99-11 and both 3½ 1957 and 1958 improved by one anna in each case to Rs. 99-8 and Rs. 99-7 respectively. In the medium-dated group, 3½ 1959-61 was marked up further to Rs. 97-13 while 3½ National Plan Bonds 1961 were a strong feature with buyers over at Rs. 99-15; 3½ National Plan Loan 1964 firmed to Rs. 98-12, and 3½ 1963-65 improved to Rs. 94-1 while 3½ 1964 was also better at Rs. 94; 2½ Loan 1961 was quoted higher at Rs. 92-1 while 2½ 1962 had buyers at Rs. 92-12 cum-voucher and was later asked for at Rs. 92-10 ex-voucher. In long dated loans, 3½ 1966-68 was marked up to Rs. 90-14, but 3½ 1970-75 was unchanged at Rs. 87-1.

Provincial loans continued firm and a further marking up in prices failed to attract sellers. Four percent Madras Loans 1963 and 1964 improved to Rs. 100-11 and Rs. 100-10 respectively, while both 4% U.P. 1963 and 1964 continued in demand at Rs. 100-6-6; 4% West Bengal Loan 1963 was quoted at Rs. 100-5-6 and 4% West Bengal 1964 was taken at Rs. 100-6.

As usual there were many buyers of first class preference shares but no declared sellers. Amongst jutes, Dalhousie were done at Rs. 116, Bengal at Rs. 90 and a small lot of Budge-Budge at Rs. 118-8. Hooghly changed hands at Rs. 15-5, and Rameshwara around Rs. 9-10. In the miscellaneous group a small lot of Alkali & Chemicals came to hand at Rs. 106, British India Corporation were marked at Rs. 140, Calcutta Trams at Rs. 8-9 and Dishergharh Power at Rs. 104. Business was reported in Indian Iron & Steel at Rs. 109 and Jardine Henderson at Rs. 78. Martin Burn were reported at Rs. 104-8 and a small odd lot of New Victoria were done at Rs. 2-13. Associated Hotels were crossed at Rs. 64-12, New Beerboom at Rs. 13 and Orient Paper 1st at Rs. 105.

In the banking section Imperial Bank Fully-Paid and Contributory were maintained at Rs. 1690 and Rs. 414. A small lot of Hind Bank were sold at Rs. 22-12 and Hindustan Mercantile at Rs. 13. Punjab National were shaded at Rs. 41-12 and business was reported in United Commercial at Rs. 44-8.

Only one share was dealt in in the railway section namely, Dehri-Rohas at around Rs. 10-12.

Amongst cottons, Elgins were steady at Rs. 18-6 and Cawnpore Textiles met with small enquiry at around Rs. 8-8. Benares Cotton were crossed at Rs. -/10-. Bengal-Nagpur were quiet at Rs. 10 as were New Victoria at Rs. 1-7.

Coal shares were rather subdued with Burrakur receding steadily from Rs. 12-12 to Rs. 12-8; tonight's closing quotation however is slightly better at Rs. 12-10. Bokaro and Ramgur were dealt in at Rs. 12-14. Central India were fairly steady at Rs. 7-9 but Bengal were quiet at Rs. 495. East Indian continued to meet with enquiry at around Rs. 29. Pench Valley came to hand at Rs. 23, and Western Bengal at Rs. 7-5. A small lot of Karanpura Collieries changed hands at Rs. 100. Talcher rose today from Rs. 3-7 to Rs. 3-11.

Business in jute shares was once again on a very restricted scale and in the case of the majority of scrip, there were more sellers than buyers. Here is a chart showing price movements of a selected list of shares:—

	Opening (12-5-55)	Closing (18-5-55)
Agarpara	13 15	13 12
Barnagore	176 0	172 0
Birla	19 4	19 2
Chitavalah	14 12 C.D.	14 3 X.D.
Ganges	103 8	103 8
Howrah	30 0	30 2
National	33 10	33 6
Reliance	14 8	14 8

Electric supply shares were fairly steady but business completed was on a very small scale. Small lots of Agra Electric, Benares Electric and Dishergharh Power changed hands at Rs. 161-8, Rs. 19-4 and Rs. 104 respectively. Patna were done at Rs. 12-13 and Calcutta were dealt in freely between Rs. 15-6 and Rs. 15-3.

In the sugar section, Balrampur were steady at Rs. 9-12 as were Champaran at Rs. 31. Carew were marked at around Rs. 12 and Cawnpore at Rs. 20. Durbhanga changed hands at Rs. 16-6 and several transactions were reported in Dyer Meakin Breweries between Rs. 6-4 and Rs. 6-12. U.P. were crossed at Rs. 24-14.

The announcement regarding increases in the retention prices of steel produced by TISCO and ISCO failed to cheer market sentiment because of certain qualifications and in fact, the price of Indian Irons receded from Rs. 33-10 to Rs. 33-4; tonight's closing quotation is Rs. 33-10. Jessops were marked back from Rs. 35-10 to Rs. 35-3 and Richardson & Cruddas from Rs. 18 to Rs. 17-14. Indian Galvanizing continued to rule steady at Rs. 23-10 and Burn & Co from an opening price of Rs. 268 improved to Rs. 272, to close at Rs. 268. Indian Standard Wagon receded from Rs. 129 to Rs. 126. Textile Machinery were unchanged at Rs. 18. Kumardhubi Engineering on rumours that the par value of the shares may be written up to Rs. 5 met with enquiry at Rs. 12-2. Marshalls were neglected at Rs. 6-10.

The outstanding features in the miscellaneous section were Dunlop Rubber, British India Corporation and Sone Valley Portland Cement. Bengal Paper were taken at Rs. 67 and Indian Paper Pulp at Rs. 254. Orient Paper fluctuated between Rs. 27-9 and Rs. 26-14 to close at Rs. 27-2. A solitary transaction was reported in Shree Gopal Paper at Rs. 15-12 whilst Titagur were steady at

BRITISH OVERSEAS AIRWAYS CORPORATION

We publish below the results of the BIRD-HELGERS group of coal companies for the half-year ended last December. The ordinary dividend of Burrakur has been raised from 2½% to 3½%.

The directors of the Burrakur coal company say that the Loyabad ropeway continued to work satisfactorily and transported 4,81,558 tons of sand to the company's collieries and to other neighbouring collieries, against (3,46,186).

The directors say that the process of sand getting and sand stowing continues in the nation's best interests, but it must be stressed that the quantum of compensation by way of subsidy

allowed by Government is not and never has been adequate.

Regarding conservation the directors point out that while Government's plans for the expansion of the Indian steel industry go forward rapidly, the plans for providing these units with coal have not advanced at all in the last few years. The pegging of production continues in the company's coking coal collieries with resultant high costs.

The directors say that the seasonal increase in wagon supplies occurred during the half-year under review. Since then there has been the usual decline with stocks of coal accumulating at pit-heads. The locking up of capital is a serious matter in these days of narrow margins, if any, between selling prices and production costs.

Among insurance shares, Concord were done at Rs. 13. New Asiatic at Rs. 5-12 and Standard General at the same rate. India Steamship changed hands freely around Rs. 7-5 and Calcutta Land- ing & Shipping were crossed at Rs. 15-8. Alkali

& Chemical were transacted at Rs. 15-3. Aluminium Corporation around Rs. 6-2 and Assam Sars at Rs. 5-5. Britannia Biscuits were crossed at Rs. 12-8 and Bengal Flour were taken up at Rs. 24-6. British Burma Petroleum were one anna better at Rs. 9-13. British India Corporation on interest- ed buying improved from Rs. 8-6 to Rs. 9 as did Dun- lop Rubber from Rs. 35-10 to Rs. 36-2. Ganges

Rope came to hand at Rs. 188 and business was reported on several occasions in Imperial Tobacco at around Rs. 11-5. Indian Rubber Manufacturers changed hands at Rs. 12-15 and Indian Aluminium at Rs. 154. Indo-Burma lost a few points to close at Rs. 133-8 x.d. Jardine Henderson were done at Rs. 116 and Martin Burn at Rs. 23-8. Metal Box were unchanged at Rs. 20-6 as were Rallis at Rs. 39-8. Rohtas Industries fluctuated between Rs. 24-2 and Rs. 23-14. Shaw Wallace were crossed at Rs. 14-4.

In the mining section, Burma Mines were un- changed at Rs. 1-10. Western Stockholders Invest- ment Trust at Re. 1 and Indian Copper at Rs. 3-7. Orissa Minerals receded from Rs. 25 to Rs. 24-10, while Metal Corporation were a shade better at Rs. 8-4.

Once again tea shares have been a very dull market and in the absence of any enquiry prices have depreciated day by day. Today, however, buyers appeared and prices improved over a wide front. Amongst Assam scrip, Baghmari after be- ing sold down to Rs. 25 recovered today to Rs. 26. Bishnauth improved from Rs. 43-12 to Rs. 45 Dhe- lakhat from Rs. 18-4 to Rs. 18-8 and East India from Rs. 27-4 to Rs. 27-12. Tezpur after be- ing offered at Rs. 29-8 recovered to Rs. 30. Amongst Doonari scrip, Gairkhata shed 15 points to close at Rs. 310. Hantapara rose today from Rs. 324 to Rs. 335 as did Hasimara from Rs. 43-8 to Rs. 44-10. Of remaining shares, Gungaram were on offer at Rs. 405 without attraction any buyers whilst Teesta Valley were marked at Rs. 37-4 and Hatti- khira at Rs. 28.

The SOORAH JUTE MILLS made a profit of Rs. 2.02 lakhs for the year ended last December, compared with Rs. 5.58 lakhs in the previous year. Providing Rs. 7.06 lakhs (Rs. 1.94 lakhs) for depreciation, transferring Rs. 80,000 to contingency reserve and bringing in Rs. 2,54,934 there remains a balance of Rs. 3,76,758. The ordinary dividend has been doubled to 10 percent, leaving a carry-forward of Rs. 1,66,758.

The directors say that the modernisation of the spinning department has been completed, and the full benefit of this will be felt from the current year.

The profit of the CHITAVSAH JUTE MILLS COMPANY rose from Rs. 2.17 lakhs to Rs. 5.65 lakhs for half-year ended last December. Providing Rs. 1.16 lakhs (Rs. 1.02 lakhs) for depreciation, Rs. 2.43 lakhs (Rs. 87,000) for taxation and bringing in Rs. 86,056 there is Rs. 4,08,191. Machinery renewal reserve gets Rs. 50,000. The ordinary dividend has been raised two annas to ten annas a share, leaving a carry-forward of Rs. 1,52,253.

There is a profit of Rs. 4.87 lakhs for the PRESIDENCY JUTE MILLS COMPANY for the half-year

ended last December, against Rs. 28,825 in the previous half-year. Providing Rs. 1.18 lakhs (Rs. 36,350) for depreciation, Rs. 1.70 lakhs for taxation and bringing in Rs. 28,825, there is an available balance of Rs. 3,22,704. General reserve gets Rs. 25,000 and machinery renewal reserve Rs. 1 lakh. The dividend has been increased by an anna to 3 annas a share, leaving Rs. 1,03,954 to be carried forward.

The directors report that orders have been placed for the modernisation of the sacking web department of the mill with silver spinning machinery at a cost of Rs. 4½ lakhs and the installation is likely to be completed next year.

THE WEEK'S TRANSACTIONS

New Delhi

WIDE DISCREPANCIES IN SECOND FIVE YEAR PLAN ESTIMATES

MINISTRIES FORECAST HIGHER COSTS WHILE OFFICIALS DUBIOUS ABOUT RESOURCES

(FROM OUR NEW DELHI CORRESPONDENT.)

THE Union Finance Minister, Sir Chintaman Deshmukh, speaking at Hyderabad during the past week, indicated that the total outlay on the second five year plan was expected to be about Rs. 6,300 crores of which Rs. 2,000 crores would be in the private sector and the balance of Rs. 4,300 crores would be in the public sector. The Finance Minister, it must be added, has exceeded the estimated outlay by nearly Rs. 1,000 crores, because the figure so far dangled before the public has been Rs. 5,300 crores. The States' plans have not so far been received, but according to present indications, they should be of a very high magnitude. Delhi and Ajmer, for example, have formulated plans which are estimated to cost Rs. 100 crores each. The Union Ministries have submitted their plans to the Planning Commission the estimated cost of which is placed at Rs. 6,497 crores, as against the provision of Rs. 4,325 crores made for them in the "plan-frame". It may be added that Maulana Azad's Ministries of Natural Resources and Education have given a warning that their estimates were incomplete.

The following statement should indicate the overall difference in the financial position:—

Ministries' Estimates	Plan-frame
(Rs. crores)	(Rs. crores)
Food and agriculture	650
N.E.S. blocks	280
Irrigation and flood control	550
Electric power	650
Industries (public sector only)	793
Mineral development	42.5
Railways	1,365
Roads: road transport and tourist traffic	364
Shipping and inland water transport	72
Ports and harbours	65.8
Communications	100
Broadcasting	14.8
Education	1,080
Medical and public health	100
Rehabilitation	50
Social welfare and welfare of backward classes	125
Housing	125
	6,497.1
	4,325

A different but nearer-to-the-earth picture is presented by the Union Ministry of Finance, which has had the experience of the last four years in raising of resources for the first five year plan. It says:—

"The total gross revenue of the Centre, inclusive of the share transferred to the States under the Constitution, has varied during the last five years from Rs. 568 crores in 1951-52 to Rs. 473 crores in 1953-54. The revised estimates for the last year placed the revenue at Rs. 508 crores while the budget for the current year has taken credit for Rs. 541 crores. The high level of revenue in 1951-52 was due to exceptional reasons, some of which continued in the following year. It would be misleading to take the average of these years as giving an indication of the normal basic revenue. But the final estimates for the current year, which include the additional taxation finally accepted by Parliament, could be taken as a fair measure of the level at which Central revenue could be expected to be established at present levels of taxation and prices.

The Central Bank of India, Ltd.

(Incorporated in India, Liability of Members is Limited).

"Against this revenue of roughly Rs. 540 crores, the inescapable commitments of the Centre for non-developmental expenditure would be of the order of Rs. 330 crores a year made up as follows. (The figures have been taken from the current year's Budget.)

	Rs. crores.
Defence	203
Administrative Services	37
Cost of tax collection	17
Debt services	34
Miscellaneous expenditure (roughly)	40
Total	331

"With increased borrowing the sums required for the servicing of debt will show a progressive increase. Allowing a small margin for inevitable increases in the non-developmental expenditure, a figure of Rs. 340 crores may be taken, leaving a sum of Rs. 200 crores for development, transfer of resources, grants and other assistance to the States.

State Governments

"The revenue of all the State Governments, excluding the grant-in-aid from the Centre and their share of divisible taxes, amounted to Rs. 337 crores in 1951-52, Rs. 329 crores in 1952-53 and Rs. 325 crores in 1953-54. The revised estimates for 1954-55 placed the revenue at Rs. 364 crores while on the Budget for the current year the figure has been further raised by Rs. 19 crores to Rs. 383 crores. During the last four years, some States have augmented their resources by additional taxation and this is reflected in the progressive increase in the total revenue. Although the budget estimates for the current year appear to be somewhat optimistic, for purposes of this broad assessment it would not be unreasonable to assume that, on present levels of taxation and prices, the total revenues of all the States may run at or about this figure for the next five years. Against this revenue, the total essential commitments of the States, on the basis of the current year's budget, would be of the order of Rs. 360 crores, made up as follows:—

	Rs. Crores.
Tax collection	60
Irrigation	26
Debt services	20
Administrative services	117
Miscellaneous depts.	14
Civil works	78
Pensions	18
Other miscellaneous charges	20

"Here again, there is bound to be an increase in the commitments, particularly under debt services, so that a figure of the order of Rs. 375 crores for these commitments would not be unreasonable. On a basic revenue of Rs. 383 crores, this would leave the States practically nothing for meeting the expenditure on social services and development or to meet extraordinary items like famine relief, etc. For all this, the States have to depend on their share of divisible taxes and grants from the Centre.

"Taking the States and the Centre together and omitting the transfer of resources from the Centre to the States from both sides, the emerging position is as follows:—

Revenue	Rs. Crores.
Centre	540
States	380
	920 (A)
Inescapable Commitments	
Centre	340
States	375
	715 (B)
Total	715 (B)

Net resources available for development including the expenditure already met from the Central and State Budgets on this account (A minus B) 205

"This will give for a five-year period roughly Rs. 1,000 crores.

"As regards the resources from outside the revenue budget, the position is as follows:—

"Small Savings. The net collections amounted to Rs. 38.5 crores in 1951-52, Rs. 40 crores in 1952-53 and Rs. 38 crores in 1953-54. Last year's revised estimates placed the figure for that year at Rs. 49.5 crores while in the current year's budget Rs. 51.5 crores have been taken. On the whole, it would not be safe to assume more than an average of Rs. 50 crores a year for the next five years.

"Public Borrowing. Central loans falling due for discharge in the next five years amount to Rs. 407 crores and State loans for Rs. 34 crores. On

past experience, it would be reasonable to assume a gross borrowing of Rs. 30 crores a year on an average for all the States and Rs. 100 crores a year for the Centre. This would give for the five-year period a net receipt from borrowing for both the Centre and the States of Rs. 210 crores.

"The net accrual of resources from State Provident Funds and other purely banking transactions may run at about Rs. 20 crores a year. A total net receipt of Rs. 100 crores may be taken on this account for five years.

"In regard to foreign assistance, there are no data on which any firm assumption could be made. Foreign assistance in the five years covered by the first plan will amount to Rs. 230 crores. On this basis, it would be reasonable to assume a figure of Rs. 250 crores for the next five year period.

"The forecast of resources from revenue above has been made on the basis of the present levels of taxation. The Taxation Enquiry Commission's Report has indicated a number of directions in which the resources could be further augmented. In the past, most States have not shown any great enthusiasm for raising fresh or additional taxation. While a certain amount of planning for such augmentation of revenue is essential, it would be wrong to take an over-optimistic view of the possibilities of fresh taxation. At the Centre, any further increase of direct taxation is unlikely to yield very substantial additional revenue. The revenue from customs is likely if anything to go down not up and the scope for increase in Central Excises is somewhat limited because of the practical difficulties in the way of taxing commodities entering into the common man's consumption and the political resistance such measures evoke. Nevertheless, it would be equally unrealistic to assume that the limit of taxation has been reached. In the light of the experience of recent years, it would not be safe to assume more than a total of Rs. 150 crores from additional taxation for both the Centre and the States during the next five years.

"In considering the scope for deficit financing, account has to be taken of the available foreign exchange against the expanding note issue which would result from deficit financing. On 1st April, 1955, against a total note circulation of Rs. 1,303 crores, gold and foreign assets in the Issue Department amounted to Rs. 667 crores while foreign assets of the value of Rs. 98 crores were held in the Banking Department. Assuming that in the current year note expansion amounts to Rs. 200 crores and that in each of the next five years there is an expansion of the note issue of this order as a result of deficit financing, the gold and foreign exchange resources required to support this note issue, at the present ratio of 40 percent for gold and external amounts would amount to Rs. 1,000 crores with a small additional working balance of Rs. 50 crores or so. It is not ordinarily desirable to reduce this limit except in a grave emergency, but some downward adjustment may be inescapable. It has to be most carefully thought out but on the size of the resources now available, it will be unsafe to resort to deficit financing of more than Rs. 200 crores a year. There is a cushion available in the low price at which gold is held and a revaluation of the gold will provide additional cover to the extent of Rs. 80 crores. About Rs. 40 crores of the sterling held by the Reserve Bank may have to be handed over to Pakistan as the balance of cover due on the currency transferred to that Government on partition. Under the recent agreement with the United Kingdom Government about the transfer of sterling pensions the Government would get back Rs. 39-crores' worth of sterling during the next six years and this will roughly offset this liability.

"It would therefore seem that the available resources for development (including expenditure now incurred in the States and Centre) would be of the following order.

	Rs. Crores.
From current revenues (Centre and States)	1,000
Small savings	250
Net borrowing (Centre and States)	210
Other miscellaneous resources	100
Foreign assistance	250
Deficit financing	1,000
Additional taxation inclusive of betterment levy, etc.	150
Total	2,960

"The whole of this amount will not be available for new development expenditure or for continuing expenditure on development works carried to the new plan. As mentioned earlier, the surplus of Rs. 1,000 crores from the current revenue budgets in the build-up above includes the entire expenditure incurred on development and social services now, the bulk of which (such as expenditure on completed schemes, maintenance expenditure and so on) will not figure in the next plan but will have to be provided for mostly as maintenance costs or as increased recurring costs arising out of development in the Budgets of the States and the Centre. The amount involved can only be guessed very roughly as it is not separately recorded in the accounts or in the budgets. It may be of the order of Rs. 600 crores or so, so that, on above figures, only Rs. 2,400 crores or so may be available for the new plan.

"The estimate given above can be taken only as indicating the broad dimensions of the picture on the present basis. It moves or less projects the experience of recent years into the future. But if a more ambitious plan than that justified by the above figures has to be put through, it can be done

only with a much heavier taxation than at present, reduced to specific proposals and not expressed as a percentage of a vague sum of national income, and carried through at the Centre and in the States on a co-ordinated plan. There is no point in assuming unrealistic figures of revenue surpluses, loan receipts and foreign assistance just to support a plan of a pre-conceived dimension. For example, if recent experience has shown that receipts from small savings amount roughly to less than Rs. 50 crores a year with an all-out drive of intensive development such as has been in progress for some time, it will be wrong to take more than a sum of this order for the future. It may be that the actuals may be better both in yields of taxation and loans, with an expanding economy, but the margin of improvement cannot be more than 5 or 10 percent. Even after making optimistic forecasts, it is almost certain that total resources will not exceed Rs. 3,000 crores. The tendency for non-developmental expenditure to increase cannot at the same time be entirely disregarded. A larger plan would thus require sustained effort in raising resources and these resources cannot be raised if imposts on the common man are resisted at all points and new taxation proposals are whittled down both at the Centre and in the States as a result of popular agitation.

"There are definite limits to the extent to which deficit financing can be resorted to and a plan not matched by the maximum raising of current resources may, if implemented, lead to uncontrolled deficits both at the Centre and the States. It is preferable, even at the cost of a slight slowing down of the Plan, to ensure the maximisation of resources by an orderly programme of taxation going side by side with development rather than allow the resources to catch up with mounting expenditure."

It may be added that most of the plans of the Central Ministries had already been completed before the era of physical planning and "next jump" psychology was ushered in. Ultimately the facts shall assert themselves, and in the pruning process which must follow the recognition of realities, expenditure may be cut down, especially the frills added to the plan to please the Congress socialists.

The case of the Railways should illustrate the point. They came in for a great deal of criticism, because their first five year plan was confined to re-habilitation and not to expansion of carrying capacity. According to rough estimates, the freight load for the Railways will increase by about 50 percent at the end of the second five year plan. Six tons additional carrying capacity is needed, for example, for every additional ton of steel produced. India's production of steel in 1961 is placed at six million tons as against little more than one million tons at present. In other words, the railways will be called upon to carry an additional load of six million tons of raw materials and finished steel by 1961. It is on this basis that the Railways have provided a development budget of Rs. 1,500 crores for the second five year plan. This compares with the gross under-estimate of the Railways' requirements in the "plan-frame."

The Planning Commission will thus have to examine each case on its merits. So far as the States are concerned, the Planning Commission has the record of their performance: this is a measure of their capacity to implement the next five year plan.

Agriculture in Second Plan

The Food and Agriculture Ministry's second five year plan will cost Rs. 650 crores, Rs. 440 crores by the Centre and about Rs. 200 crores by the States. The targets for additional production are 10 million tons of foodgrains, 1.3 million bales of cotton, 1 million bales of jute, 1.5 million tons of oilseeds and 1 million tons of sugarcane.

Fertiliser Price

The Government has decided to reduce the all-India price of ammonium sulphate. Further official announcement is expected soon.

Development of Industries

The next meeting of the Central Advisory Council of Industries will be held here about the middle of June. About the same time, the Steering Committee for the development of industries will meet here. The Committee, it will be recalled, has divided industries into two major categories, (1) whose development is needed through Central planning and (2) whose planning can be left to private enterprise. As for essential industries, whose planning involves Central assistance, the Government has set up either Development Councils or panels to prepare blueprints of their development. These blueprints will be discussed by the Steering Committee, at its ensuing meeting. In regard to the industries in the second category, the Planning Adviser, Mr. K. C. Neogy, and the Planning Adviser, Mr. E. P. Moon, have been holding meetings with their representatives in order to assist them in planning, and also to know their difficulties, requirements and targets for production for the second five year plan. The industries, whose plans for development have so far been discussed include plastics and leather cloth, re-rollers, main producers of steel, refractories, sewing machines, soap, ball bearing, hurricane lanterns, biscuits, confectionery, steel fabricators, coking coal, agricultural implements, paper and paper board and plywood.

Coking Coal Output

The Planning Commission had a two-day meeting with the coal interests for planning coking coal production for the second five year plan,

which provides for six million tons of steel. The total production of all grades of coking coal during 1954 was of the order of 13 million tons of which a little more than seven million tons were of selected grades and the balance of grades I and II. On the basis of 1.4 tons of coking coal per ton of ingot steel, the steel target envisaged would indicate a demand of 8.4 million tons of coking coal. The coking coal requirements for the target fixed for foundry pig iron would roughly be of the order of one million tons. Thus the total demand for coking coal by 1960-61 of the primary producers of iron and steel will be of the order of 9.4 million tons. The requirements of foundries are estimated to be of the order of 1.2 million tons. The requirements of primary producers of steel and foundries will thus come to about 10.6 million tons or roughly to 11 million tons. (The view has also been expressed that the demand for metallurgical coal from the iron and steel industry might be slightly larger than the estimated 11 million tons.) Besides, the demands of other require sustained effort in raising resources and these resources cannot be raised if imposts on the common man are resisted at all points and new taxation proposals are whittled down both at the Centre and in the States as a result of popular agitation.

The present pegged production of coking coal is 7.40 million tons in the case of selected grades and 7 million tons in the case of grades I and II making a total of about 14 million tons. The entire production of grades I and II coking coal now raised will not be suitable for use without washing and the same will apply to selected B also. The quality of coking coal has deteriorated during the last 10 years and it is likely that the ash content will increase further by 1960 because of: (a) the gradual depletion of better quality coal and (b) the fact that the majority of mines have reached a stage of development at which production can be expected only from depillaring operations. Thus, even though the total production of coking coal at its present pegged level would appear to meet the anticipated demand of essential consumers by 1960-61, since most of it will have to be washed, in which process a certain proportion is lost as middlings and tailings, the benefited quantity available may fall short of the quality required. The percentage of recovery

by washing may be roughly 80 percent in the case of selected B and about 65 percent in the case of grades I and II, but this will vary according to the ash content aimed at in the washed coal. Thus, the benefited quantity that can be expected from the present level of production will be about four million tons in the case of selected B and about five million tons in the case of grades I and II, and taken together with selected A grade coking coal produced now, these will amount to about 11 million tons as against an estimated demand of about 12 million tons.

The problem, therefore, is how to raise the additional quantity of coking coal. The theory of physical planning apart, finance is needed for the development of coal mines and for setting up washeries which alone would cost Rs. 30 crores. In view of the policy decision that the question of nationalisation of the coal industry would be determined in 1958 and the uncertainties of compensation created by the Fourth Amendment of the Constitution, private enterprise may not be prepared to lay out extra money in the coal industry. In fact, on an enquiry, the Chief Inspector of Mines, Mr. S. S. Grewal, has told the Planning Commission that no development works are being undertaken in coal mines and according to present anticipations, coal production may decline by 1958.

Managing Agency in State Concerns

The Select Committee on the Company Law Bill has recommended the abolition of the managing agency system in State undertakings. If accepted, it would mean that managing agencies functioning at present, say in Vizagapatam Shipyard of Eastern Shipping Corporation, would cease to operate after their existing contracts expire. It also follows that the Government's scheme to float a second shipping corporation would be revised and would be without a managing agent.

Transport Ministry's Bills

Four bills are being drafted in the Ministry of Transport for introduction in Parliament during its next session. The bills are: (1) National Highway Bill, (2) Motor Vehicles Amendment Bill, (3) Motor Taxation (Principles) Bill and (4) Indian Shipping Bill.

... a definitely attractive finish...

... positively reliable...

... tough and lasting...

...for interior and exterior use...

...IN FACT, UNBEATEN IN THE MARKET, THIS MULTI-PURPOSE SYNTHETIC ENAMEL OF IMPECCABLE TASTE...

SHALIMAR SUPERLAC

SYNTHETIC ENAMEL

Can be brush, spray or dip applied; will stand repeated cleaning; is available in a full gloss range of 38 rich shades.

BIG FALL IN U.K. IMPORTS DURING APRIL

EXPORTS AT ABOUT SAME AVERAGE LEVEL

(FROM OUR LONDON CORRESPONDENT)

THE trade figures for April have been awaited with more than usual interest as a guide to whether the improvement in the gold and dollar reserves—and in the economic outlook—recorded in last week's despatch was merely a flash in the pan or represented a real turning of the tide. On the whole they justify a measure of optimism, though they do not in themselves provide a complete answer to the main question. The most significant feature of the provisional figures is the drop, as compared with March, of £47 million in the cost of imports to the total value of £318.1 million. Total exports at £253.1 million were also below the March figure of £273 million. Allowing, however, for the 24 working days in April against the 27 in March, the daily averages show a slight fall of some £300,000 in imports whereas exports are at about the same level or even slightly higher. These two movements, both in the right directions, have led to the narrowing of the trade gap to £69 million for April, against £92 million in March and an average of £77.1 million in the first quarter of this year. So far this year exports are 10 percent higher than in 1954, but over the same four months the value of imports is as much as 20 percent up. Mr. Butler has given credit for the April improvement to his recent "corrective measures", but the improvement in the terms of trade has also played a part, and it is therefore evident that the former are actually working very slowly.

The most encouraging feature of the April figures is that shipments to the dollar markets are being kept at a high rate. Total sales to North America at £26.2 million were nearly 11 percent higher than the average monthly total for the first quarter and 4 percent above the April, 1954 level. Exports to the United States were about £1 million up on the first quarter average at £14.8 million. The £11.4 million sales to Canada were as much as £1.5 million up on the first quarter average, but this is a seasonal increase and there is room for further improvement here. Over the first four months of this year exports to Canada have run at a level of 8 percent below that of the corresponding period of last year.

Pre-election doldrums are a regular feature of all markets everywhere, but apart from introducing an understandable measure of caution, the election campaign, now in full swing, does not as yet seem to have had any very considerable impact on the City. It had no effect, for example, on the I.S.H.R.A. offer of the Preference shares and Debenture stock in the English Steel Corporation. The application lists remained open for only the conventional five minutes, and it was officially announced that both offers had been "largely oversubscribed." Dealings are expected to open on Monday at a small premium in both cases. On the other hand, sterling has moved uncertainly, first stronger and later weaker, though the influence of the election on these movements is difficult to gauge. Earlier easiness on the Stock Exchange was reversed when the April trade figures were announced, though a contributory factor may have been the *News Chronicle* publication of the latest Gallup Poll finding of a swing in favour of the Conservatives.

The campaign itself has proceeded quietly enough so far—only Mr. Aneurin Bevan has indulged in personalities—but these are early days. Labour has made a last-minute bid for Lancashire support with a special announcement about its proposals for the cotton textile industry. That the party's election manifesto neglected to make any reference to this has been adversely criticised. The broad lines of this policy were outlined by the Secretary of the United Textile Factory Workers' Association a month ago and referred to here at the time.

Commonwealth Development

The high hopes which were held that the Commonwealth Development Finance Company would result in a speeding up of the provision of funds for this purpose are not being realised. In its second financial year, ended 31st March last, the annual report records new investment in the Commonwealth totalling £4.8 million, or about £200,000 less than in the first year. Some forty applications or inquiries were received during the period. A number of these were turned down and two were passed over to the normal market institutions. Others are still being considered. The largest investment was a £3-million stake in the New Zealand pulp and paper enterprise. Others were £1 1/4 million in Canadian uranium mines, £350,000 in Rhodesian sugar estates, and £149,496 in the Industrial Credit and Investment Corporation of India.

The report makes the point that since the company's funds are obtained by borrowing—of total authorised capital of £15 million only £2,850,000

has been called so far—the recent increase in interest rates here has reduced net revenue and also the "ability to lend at rates acceptable to Commonwealth borrowers." Advances will, of course, be funded in time. The slow progress will be a disappointment to many quarters, but does not imply that there is not considerable scope for the C.D.F.C. to play an increasingly important part in Commonwealth development once it really gets into its stride and general conditions are more favourable. The assistance to the Industrial Credit and Investment Corporation of India is particularly interesting, more especially if the latter works as effectively as its counterpart in this country, the Industrial and Commercial Finance Corporation, which was set up some ten years ago to help in the financing of small and medium-sized firms.

Financing Small Firms

The I.C.F.C. report, covering the same period, has also just been released and records the fact that it has made considerable progress, some details of which might be of value to those directing the Indian Corporation. For instance, the Corporation has established branch offices in Birmingham, Manchester and Edinburgh, while new offices are soon to be opened in Leicester and Leeds. It has built up its own accounts and technical services, which are at the disposal of its customers—a form of continuous assistance which the ordinary bank cannot provide. About one quarter of the £29 million outstanding has been lent in amounts below £50,000, another quarter in units of between £50,000 and £100,000, and nearly one-half in larger amounts. Two years ago it looked as if the demand for the Corporation's services was declining as small firms were accumulating their own finance and access to the capital market was becoming easy. But last year, although these facts did not change, the volume of new business recovered strongly. So far the Corporation has investigated more than 5,000 propositions and is at present financing over 500 firms in a great variety of industries.

At the annual meeting, Lord Piercy, the Chairman, disclosed that among the smaller industrial companies there was a growing interest in new buildings and equipment. The Corporation had so far seen no sign that investment plans were being hampered by a shortage of bank credit or by the cost of capital. In the industrial areas the confidence of industry was quite unaffected by the change in credit conditions. The smaller firms were doing their part in the re-equipment of industry although they did not attract as much attention as large-scale industry. In the year to 31st March the Corporation made a net profit after tax of £718,855, compared with £466,492. The sum of £500,000 was put to reserve and a dividend of 5 percent was again paid to shareholders, which are mainly the joint stock banks.

More Factories Planned

The I.C.F.C. expansion is explained by figures published in the latest Digest of Statistics, which show that the amount of new factory space put in hand during 1954 was the largest on record. Almost every main industry has had its share of the approvals given. The motor industry was particularly prominent. The building of new premises for general manufacturing industry had been retarded for some years while power stations, oil refineries, and some sections of the chemical and other industries enjoyed priority. For a time important parts of the engineering, vehicle, and aircraft industries did not need factory space because they had inherited brand new works, often lavishly equipped, from the war period. The general industrial expansion now seems to have overtaken the earlier post-war pattern.

This development has continued into the present year, in the first quarter of which the Board of Trade approved 933 projects covering nearly 24 million square feet. On past experience about three-quarters of plans approved are subsequently implemented, so 700 new factories are likely to rise. Applications for "industrial development certificates", which are still required for any new factory of over 5,000 square feet, have been rising since the last quarter of 1952.

Tea Sales at Lower Prices

Although auctions of all teas other than Ceylon have been postponed until next week it is understood that quite a brisk business is nevertheless going on for out lots (teas withdrawn from previous sales) at the lower levels recently established. Trade sources report that common teas are selling at around 3s. 4d. a pound with Upper Assam better liquoring broken Pekoes and Peko fannings realising about 4s. 1d. to 4s. 2d.

Brevities

Experts of the Organisation for European Economic Co-operation are now in session in Paris to consider problems arising if European currencies are declared convertible. They are discussing the future of the European Payments Union and whether convertibility should be launched at fixed or floating exchange rates. In the end they will report to their Ministers, who are expected to meet in Paris at the end of June.

Statistics issued by the Ministry of Fuel and Power show that 1,213,500 tons of deep-mined coal were lost through disputes in the first 18 weeks of this year. So far 76,002,600 tons have been produced compared with 77,367,000 tons in the same period last year. In the first 17 weeks this year 3,676,000 tons were imported against 232,800 tons in the corresponding period last year.

Britain's production last month was higher than in any previous April. It was at a weekly average of 393,400 tons and an annual rate of 20,455,000 tons. This year's target is 19 1/2 million tons.

Bombay

DHRANGADHRA CHEMICAL'S FRESH CAPITAL ISSUE

EXPANSION PROBLEMS OF INDIA'S CHEMICAL INDUSTRY

(FROM OUR BOMBAY CORRESPONDENT)

THE Dhrangadhra Chemical Works Ltd. is reported, is contemplating the issue of additional capital to the extent of Rs. 1,03,00,000 to finance their new soda ash and caustic soda plant which they propose to set up in Tuticorin. This plant is expected to have a daily production capacity of 100 tons of soda ash and 65 tons of caustic soda. Doubtless this project is one of the three new soda ash plants envisaged under the second five-year plan. The Federation of Indian Chambers of Commerce and Industry has recommended that the country's production capacity for soda ash should be increased to 300,000 tons a year by 1960-61. Although the actual figure is not mentioned, it is vaguely suggested that the production of caustic soda should be increased by four times the present level. On this basis, the production of caustic soda should amount to a little over 100,000 tons a year by 1960-61.

The present consumption of soda ash averages 115,000 tons a year. As against this, the annual domestic production will amount to 86,000 tons by the end of this year when the modification plans of the two existing units—Dhrangadhra Chemicals and Tata Chemicals—are completed. Similarly, the present output of caustic soda is estimated at around 60,000 tons a year whereas the annual production capacity will come up to a little more than 37,000 tons if the expansion schemes envisaged under the first five-year plan are completed according to schedule. Clearly, there is a case for an increase in production of these basic heavy chemicals; but whether the consuming industries will develop over the next five or six years at a rate which will enable them to increase their offtake of soda ash by more than double the present figure, as envisaged by the Federation of Indian Chambers of Commerce and Industry, is not so certain. Similarly, the target for caustic soda seems excessive. It also ignores the fact that a production of 100,000 tons of caustic soda will give rise to 90,000 tons of chlorine because for every one ton of caustic soda manufactured by the electrolytic process 9/10th of a ton of chlorine is simultaneously produced. The total demand for chlorine in the form of gas, bleaching powder and hydrochloric acid is estimated at only 9,000 tons a year. This would leave a balance of 81,000 tons of unwanted chlorine every year and its disposal would be no easy matter.

Lack of Consuming Industries

It is obvious that unless the consuming industries are developed simultaneously, any accelerated expansion of the basic industries would be futile and, indeed, detrimental to the basic industries themselves. It is probably true that the degree of industrial development in a country can be measured by the quantum of its heavy chemicals output, but it is equally true that the dependent industries must be developed before the heavy chemicals industry can be put on an economic footing. A stage has been reached in the development of the chemicals and the allied industries when any further expansion in various directions must be carefully co-ordinated if balance is to be preserved and if the growth of the overall industry is to be along orderly and economic lines.

Some dependent industries exist already which can be expanded still further. For instance, the manufacture of insecticides like D.D.T., benzene hexachloride and paradi-chlorobenzene is a major industry in itself. The production of these insecticides would absorb large quantities of chlorine and help caustic soda manufacturers to sell their somewhat troublesome by-product on a remunerative basis. Moreover, there is a growing demand for insecticides because of the Government's extensive programme of plant protection, malaria control and locust control. Then there is the whole field of solvents like carbon tetrachloride and ethylene dichloride and the synthetic rubber industry and chlorinated rubber and a large range of organic chemical products which all depend upon the basic industry. Of these dependent industries, perhaps the organic chemicals industry is the most important for on it depends India's new dyestuffs industry, the country's Rs. 7 crore plastics industry and the growing pharmaceutical industry.

Dyestuff Manufacture

The manufacture of dyestuffs is based on a whole range of organic chemicals, known as intermediates, which are the immediate starting point from which all colours are made. Under the existing set-up, India depends entirely on imported intermediates. Here is a field of industry which can profitably be developed. Although all estimates must necessarily be provisional until all the contemplated units of the dyestuffs industry come into full production by 1957, the annual output of all types of colours is expected to be in the region of 15 million lbs. On this basis it is computed that the dyestuffs industry alone will consume approximately 22,500,000 lbs. of over 50 different intermediates each year. Neither is the importance of intermediates confined to the dyestuffs industry alone. A great many of them are also used in other industries. For example, aniline and its derivatives are important intermediates used in the manufacture of colours. Provisional estimates indicate that the dyestuffs industry will annually require approximately 340,000 lbs. of aniline. But aniline in the form of acetanilide,

which is obtained by processing aniline with acetic acid, is also used in the manufacture of sulphadiazine. The annual demand for sulphadiazine, which are at present manufactured in this country from imported intermediates, is computed at 665,000 lbs. On this basis, sulphadiazine manufacturers will consume over 745,000 lbs. of acetanilide each year. Phenol is yet another illustration of those several products which play a multiple role. A primary intermediate and used in the manufacture of other dyestuffs intermediates, phenol is the source of salicylates. Apart from other important compounds, aspirin and acetyl salicylic acid, are made from phenol. The annual demand for aspirin is estimated at 1,500,000 lbs. and the entire quantity is imported because the necessary intermediates have not been available for it to be manufactured within the country. Phenol is also required to make phenol formaldehyde which is a basic raw material for the plastics industry and of this it needs 1,000 tons annually. These are but two examples from the imposing list of intermediates which India's industries need.

The manufacture of intermediates forms the vital connecting link between the consuming industries and the heavy chemicals industry and by that fact gives coherence and continuity to the massive chemicals industry as a whole. The development of the intermediates industry means an ever-increasing offtake of soda ash and caustic soda which alone will make heavy chemicals industry economic. It also means stimulating the production of at least 15 other chemicals which are not manufactured in the country because there has been no demand for them. It also means reviving the coal tar industry because dyestuffs intermediates are derived from benzene, toluene, naphthalene, anthracene and phenol which are coal products. The spectacular progress of modern organic chemistry is closely linked with the increasing use of coal tar and its constituents.

Coal Tar By-Products

The main sources of coal tar supply are the steel plants, the coke oven batteries at the Jharia coalfields and to a lesser extent the gas works of Bombay and Calcutta. When coal is carbonised to obtain coke, gas and coal tar are the resultant by-products. The gas is cooled and crude benzol obtained which on refining yields benzene and toluene. The distillation of crude tar leads to the recovery of anthracene, naphthalene and phenol at various fractions of phases of distillation. This industry has remained stagnant in India because there has been no outlet for its products. Although the production of crude tar amounted to 87,600 tons in 1953, only 50,450 tons were distilled and the remainder used as fuel. A large proportion of the country's distilling and refining capacity remains idle. But the manufacture of intermediates would require full use of this capacity. It is estimated that the total annual requirement of coal tar chemicals will be 444,400 gallons of benzene; 54,830

gallons of toluene; 819 tons of naphthalene and 495 tons of anthracene. But it is believed that when the dyestuffs units come into full operation, these figures will increase. This means that the new steel plants and the newly installed coke ovens at Sindri are assured of a market for their crude tar.

Quite apart from other considerations, the fact also emerges that unless intermediates are produced within the country, a whole string of industries must continue to depend on foreign sources for their essential starting materials and thus remain vulnerable, while in other cases manufacture will amount to no more than the final processing of semi-finished products imported from abroad.

It would seem that the manufacture of intermediates is a vital piece in the complicated puzzle of the entire chemicals industry and India's planners and industrial circles would do well to give it their earnest consideration. Some of the overwhelming and somewhat enthusiastic emphasis laid on heavy industry could usefully be shifted to a less spectacular but an equally important field on the development of which depends the future of the heavy industry.

German Example

In Germany, for instance, development has been gradual and in stages beginning from the base upward to the apex. A start was made from heavy chemicals which gradually led to intermediates and then to dyestuffs and pharmaceuticals. By a process of amalgamation and co-ordination the vast industrial empire of I. G. Farben emerged which combined and controlled the manufacture of heavy chemicals, intermediates and the finished products of the organic chemicals industry in well-knit and consolidated units. The British and the American industries followed a similar pattern. But this is obviously impossible in India because a similar evolution would take considerable time. The reverse process has to be followed here. A start has been made with establishing the dyestuffs industry based on imported intermediates. There are at least four projects which are now in varying degrees of completion and when they are completed, the total investment will amount to approximately Rs. 10 crores.

The heavy chemicals industry already exists. Now the problem is which section of the industry is to manufacture the large range of intermediates which are urgently required. Under these peculiar circumstances, it would seem pointless for the dyestuffs manufacturers to produce their own individual requirements of intermediates. It would involve a duplication of effort and diseconomies of small-scale production. Either the production of intermediates would have to be integrated with the existing basic chemicals industry or altogether separate units would have to be formed which would collectively act as a feeder industry for the dyestuffs, plastics and the pharmaceutical industries.

LABOUR TROUBLE CONTINUES IN U.P.

GOVERNMENT TAKES OVER
ENTIRE MILL AREA

(FROM OUR LUCKNOW CORRESPONDENT)

Ten out of Kanpur's 12 textile mills, labour has been on strike from 2nd May. While the Government and the employers hope that the strike will be short-lived, labour leaders claim that it will "resound throughout U.P. like the monsoon thunder." There is almost a daily war of statements, the employers and the State Labour Commissioner claiming that the daily attendance in the strike-bound mills is improving and the other side denying it. The figures of attendance, according to labour, are inflated. On an average the total number of workers attending has been well over 10,000, and it is possible that attendance might have been higher but for the picketing and other tactics resorted to by the strikers. Threats of sympathetic strikes in other industries have been held out also in defiance of the prohibitory order under Section 144 Cr.P.C. The Government has taken elaborate measures to prevent a breach of the peace and the constabulary has practically taken over the entire mill area.

The loss in production is estimated at about 500,000 yards a day. Although Kanpur's mills account for only 6 percent of India's total textile output, the effect of the strike is already perceptible in Northern India's cloth markets. The strike began as a protest against the employers' scheme of rationalisation, but the employers have more or less faded out of the picture by now. The labour's grievance is now mainly against the Government which is accused of fighting the employers' battles. A last-minute peace move was, no doubt, made by the Suti Mill Mazdoor Sabha but, in view of their past experience, the Government felt that there was no use negotiating with the strike leaders who were in the habit of going back on their word. The Labour Minister, Acharya Jugal Kishore, has reiterated the Government stand that the Naini Tal agreement

on rationalisation must be implemented; but it is the labour's contention that what is being evolved by the Kanpur mills is not rationalisation but intensification of work. Sample, for instance, this outburst by a prominent labour spokesman: "Not textile technologists but medical experts are needed to pronounce judgment. If the millowners impose intensification schemes misnamed rationalisation, they will be guilty of genocide, manslaughter on a large scale."

Mill Machinery

Not only the millowners but the machinery in the mills has also come in for its share of criticism. In most of the mills, it is contended, the machinery is antiquated and difficult to work with. A typical comment is: "Unko thokar ke chalani parta hai." (They have to be kicked hard to move them.) Such and other allegations have produced a rejoinder from Sir Padampat Singhania on behalf of the employers. After inviting attention to the report of the Textile Working Party, particularly the reports of the technical sub-committees, Sir Padampat maintains: "The equipment, machinery and set-up of the cotton textile mills in Ahmedabad, Bombay and other centres are no better than those of the Kanpur mills and the health and physical standards of cotton-mill operatives in Kanpur will stand impaired no more than they stand impaired at present in Ahmedabad, Bombay and other centres where for a number of years the process of rationalisation has been at work in the form sought to be introduced in Kanpur." The rationalisation scheme in Kanpur as reported upon by the State's Assistant Commissioner of Labour and an expert has both good and bad points. The Government is committed to a ban on the replacement of obsolete machinery on the ground that it will aggravate unemployment. It follows, therefore, that rationalisation in this context must concern itself primarily with getting a fair day's work from the worker for a fair day's wage. And this is all that is actually proposed.

Advantages for Workers

Schemes for increasing the workload are also, in fairness to the employers, linked with a number of advantages to the worker. It is proposed, for instance, that wages should increase in keeping with the rise in workload and that a system of incentive wages should be instituted to reward efficiency. Dr. Sampurnanand, the present Chief Minister who was previously in charge of the Labour portfolio commended the advantages of the scheme in the following words: "In the previous five years, Kanpur mills had retrenched 15,000 workers. If rationalisation is not effected, between 5,000 and 9,000 more workers would be sacked. On the other hand, the present scheme would mean an increase of 55 percent in the basic wages of workers." It is admitted by labour spokesmen that the scheme would mean a little increase in the wages of the average worker, and there is also a disposition to admit in private that if all the mills began to work three shifts and if Sundays also were working days the problem of surplus labour could be solved. But for sentimental reasons, the workers are in no mood to give up their hard-won right of observing Sundays as holidays.

It is not easy to forecast the probable course of events, but certain peculiar features of the situation may be noted. The Government is encouraged in its firmness by the upward trend of attendance in the mills. Because the strike was launched on 2nd May, before the workers could collect their pay, their staying power is likely to be impaired. This does not, of course, apply to the workers who have left the city for the villages where it is the season of harvests and marriages. Some of the mills have chosen this precise moment to announce bonuses in an effort to lure the truants back to work. No assessment of the situation could be complete without a reference to the political elements entering into it. In one view, more than a trade union struggle, it is a political struggle. The Labour Minister has repeatedly charged that interested political parties are behind the strike while the Suti Mill Mazdoor Sabha has alleged that the Government is out to break up the newly-found unity of the Communists, the Praja Socialists and the seceders from the INTUC. They say that the Government is out to "punish" the workers whose vote largely tilted the balance in favour of Mr. Raja Ram Shastri, the P.S.P. candidate and against the Congress in the recent by-election.

Five Extension Blocks

The U.P. Government has decided to go slow with the opening of more National Extension Service Blocks and has revised its earlier programme of covering the entire State with N.E.S. blocks by 1959. Under the new schedule of work prepared by the Planning Department, instead of opening about 210 blocks next year, only 135 will now be opened. The scaling down of the targets has been necessitated by the emphasis on quality instead of quantity. The strictures of the Programme Evaluation Commission against the lowering of standards of performance have a concrete example in Etawah, a district in U.P. which has gained international prominence by being the birth place of the pilot community project in this country. Some time ago the project officials claimed that the entire area had been saturated with improved seeds and similar reports were made not only to the Centre, but also to the Technical Co-operation Mission from the U.S.A. A departmental probe has revealed that the seed saturation programme has been successful only to the extent of 50 percent. Whereas agricultural experts insist on a 100 percent purity of seed in the project area, it was lowered in order to

Jute

ARGENTINE ORDER BOOSTS JUTE GOODS MARKET

HESSIAN SECTION NOW HEALTHY BUT SOME BUSINESS TO BE DONE IN SACKING

ON Friday of last week the long awaited Argentine order was confirmed for about 60,000 tons of hessian goods. The delivery period is stated to be June to December, but it is understood that the bulk of the shipments will take place in the July-September quarter. The local markets and bazaar operators have been anticipating this order since the beginning of April, and on various occasions the sentiment has been swayed by rumours of the transaction having been completed. The Argentine Government however, employed dilatory tactics in the hope of bringing prices down to lower levels, and in this they were successful up to a point. The forward section of the hessian market however has had a very firm undertone, and procrastination during the past few weeks has, in actual fact, only gained the Argentine an advantage of a few annas. On 1st April 1955, 11-porter hessians stood at Rs. 44 a 100 yards for July-September shipment and on 13th May, nearly six weeks later, the price was Rs. 43-10 for the same shipment, a drop of only six annas. The 9-porter 7½ oz. and 8 oz. hessians follow a similar pattern with 7½ oz. being quoted at Rs. 32-8 as against Rs. 32-12, and 8 oz. dropping only two annas from Rs. 35-2 to Rs. 35 a 100 yards. The only advantage gained over this period has been by buyers of heavy goods, which have dropped nearly Rs. 8 a 100 bags in the near positions, and about Rs. 2 for July-September shipment.

The market received the news of the hessian order with confidence, and prices showed an immediate improvement. The majority of sellers withdrew from the market, as it was thought that shippers would not be fully covered for this amount and would be keen buyers. The orders coincided with the bi-monthly squeeze for settling day, and prices began to soar under their influence. Speculative profit-taking at the higher levels however soon put a stop to the rise, and prices slowly declined, although the undertone of the market remained steady. The general opinion appears to be that the hessian section is now in a very healthy position with sales complete up to the end of the year, but that there is still a fair amount of business to be done in sacking.

Following hard upon the heels of the Argentine order came the announcement that the consumption of hessian in America during April had dropped eight million yards to 63 million yards. This fall is seasonal and compares favourably with the corresponding position in April 1954, when consumption dropped nine million yards to exactly the same figure. With the drop in consumption, it is only natural that stocks should show an increase, and these were up by four million yards to the extremely high figure of 258 million yards, made up of 127 million yards spot, and 131 million yards afloat. This latter figure is 11 million yards better than the previous month, which is surprising considering the increase in Calcutta stocks, but the improved afloat figures are offset by a fall of seven million yards, from 134 to 127 million yards in the spot stocks. These very high stock figures do not augur well for America's early entry into the Calcutta market, as based on last year's average monthly consumption of 65 million yards, the U.S.A. now has approximately two months stock on hand with a further two months in transit plus fairly large quantities on call in Calcutta.

Good Business in Raw Jute

Over the past week mills have bought fairly large quantities of raw jute. The majority of transactions have been for Old Crop jute for quick delivery or May-June shipment, which prompts one to suppose that some mills are according to the view that a squeeze may develop for supplies about the end of June or the beginning of July. This is further borne out by contracts which have been done for guaranteed May or June shipment, and in some cases New Crop business that has been guaranteed for shipment in July with the "unavoidable delay" clauses deleted. Business in this category has naturally been done at fairly good premiums over the normal rates, and this has tended to force up the price of raw jute, and with mills keen buyers, sellers have been inclined to hold on to any stocks they may be holding. The weather over the past week has also had a steadying influence on the market, as with hot, dry conditions prevailing, the lack of rain may cause a delay before the new crop is ready for harvesting.

THE JUTE MARKETS

Manufactured Goods: The market opened on a very steady note last Thursday due to heavy shipping covering against higher priced contracts. Sellers, realising how short the shippers were, withdrew from the market and prices were forced up. B. Twills jumping Rs. 1-8 in the near position and Rs. 1-4 for forward shipment. Opening quotations were Rs. 114-14 for May delivery and Rs. 104-12 for October-December shipment. The hessian section also firmed up on covering business and May delivery 40" 10 oz. rose six annas to Rs. 43-4 and the October-December position by a

similar amount to Rs. 42-4 a 100 yards. On Friday the hessian market received a considerable boost when business for nearly 60,000 tons of hessian goods was confirmed with the Argentine and a further six annas was added on to all deliveries. The sacking section followed in sympathy and B. Twills improved 12 annas to Re. 1. Throughout Friday heavy covering activity, both real and speculative, was apparent in both sections of the market, and 40" 10 oz. hessians showed an improvement of 10 annas in all positions during the day, being quoted at Rs. 44-6 and Rs. 44-3 a 100 yards for the May and October-December positions respectively. Sacking prices also ruled very firm and B. Twills jumped Rs. 1-8 to be quoted at Rs. 117-4 for near delivery and Rs. 107 a 100 bags for delivery up to the end of the year. Over the weekend activity slackened off slightly and hessians advanced only two annas for near delivery. Speculation continued in the sacking section however and B. Twills opened on Monday morning at Rs. 118-2 a 100 bags. At these levels speculators indulged in profit-taking, and this combined with the drop in burlap consumption in the United States caused a steady decline throughout the day in both sections, and on Tuesday morning B. Twills had lost Rs. 1-12 to rule at Rs. 116-6 for May delivery and Rs. 106 for October-December shipment. The hessian section followed suit and 40" 10 oz. lost six annas overall and quotations were Rs. 44-2 and Rs. 42-14 for the near and forward positions respectively. Prices continued to fall throughout the day as the market once again came under the influence of speculators, but by the time the market closed on Tuesday prices were again on the rise.

At the close there is very little change in either the sacking or the hessian rates, and no business is reported. Opening quotations on Wednesday morning are as follows:—

	May	June	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40" 8oz.	35-10	35-8	35-4	34-8
40" 10 oz.	44-0	43-14	43-12	42-12
B. Twills	116-4	114-14	112-4	105-4
Heavy Cees (Plain)	116-0	116-0	112-12	105-12
A. Twills	148-8	145-8	139-0	131-8
Liverpools	132-0	131-0	128-8	122-0
Cornsacks	121-8	120-4	115-12	107-0

Raw Jute: Once again there has been a fair amount of business in the raw jute markets, but business was more or less confined to Thursday Friday and Saturday, the market opening and closing on a quiet note. The rise in the goods market on Thursday brought mills out to buy jute, and business was fairly evenly spread between two or three large groups. Quick delivery jute was the main interest at this stage, but buyers were having difficulty in getting sellers at their rates and indications were frequently altered to meet the fluctuations of the market. On Friday prices were again stepped up, but mills continued to take an interest, and a large amount of business was concluded for both Old and New Crop jute at the enhanced rates. Another Re. 1 a maund was added to the price of the raw material on Saturday, but in spite of this business was again done, but on a much reduced scale compared with the previous days. Over the weekend there was a considerable drop in the goods market, but the price of raw jute was unaltered and sellers were inclined to be reserved and looking for higher prices. On Tuesday the gunny market again recorded a substantial drop but sellers only took eight annas off the price of jute and with the attraction of the higher goods rates gone buyers withdrew completely from the jute market.

At the beginning of the week, raw jute rates were unchanged from last week's closing, and Upper Assam Bottoms were quoted at Rs. 30-8 a maund for May-June shipment. Mills were taking no interest at this stage, but with the improvement in the goods market, sellers added Re. 1 to the opening quotations and good business was done at the higher rates. Another Re. 1 increase on Saturday brought Assam Bottoms to Rs. 32-8 and again business was done on the rise. The market ruled steady over the weekend but mills withdrew from the market, and at the close nominal quotations were down eight annas to Re. 1 a maund.

New Crop quotations opened the week at Rs. 26 a maund for Upper Assam Bottoms for August-September shipment, but during the week rose to Rs. 28-8 a maund for the same shipment, but fell back about eight annas in the absence of business towards the close.

Business was done at varying rates over the week and Old Crop Dhubri-Northern was reported at Rs. 32 to Rs. 33 a maund basis Bottoms for May-June shipment, and Upper Assam at Rs. 31 to Rs. 32-8 a maund basis Bottoms for the same shipment. Local Northern was done at Rs. 32-8 a maund and Local Packing at Rs. 31-8 for Bottoms and Rs. 28 for X-Bottoms for 15 days' delivery. Daisee Mesta was in good demand and passed at Rs. 29 to Rs. 29-8 a maund basis Bottoms for May and May-June shipment, with Dhubri Mesta at Rs. 28 for the same shipment. Small lots of Binli

were also done at Rs. 29 to Rs. 29-8 a maund for A.Q. for one month's shipment.

Once again Pakistani Northern jute was in good demand and a fair amount of business was done at Rs. 31-8 to Rs. 33 a maund basis Bottoms for May-June shipment.

The only business reported in the pucca bale section was for Pakistani Cuttings at Rs. 125 to Rs. 130 a bale for N.C.'s for one month's delivery ex-Calcutta, and also Pakistani Ropes at Rs. 130 to Rs. 132-8 a bale for shipment ex-Pakistan.

In the New Crop section business was done for guaranteed July shipment in Dhubri-Northern jute at Rs. 31 and Rs. 31-8 a maund basis Bottoms, and from Rs. 27-8 to Rs. 29 a maund basis Bottoms for August-October shipment. Small lots of Upper Assam Middles and Bottoms were also done at Rs. 27-8 to Rs. 28 a maund basis Bottoms for August-September shipment.

At the close raw jute is unchanged with mills taking no interest and sellers still inclined to be reserved. Opening quotations on Wednesday morning were as follows:—

Indian Jute.	Landed at Mills	Shipment.
	Rs. a maund basis Bots.	
	Old Crop	New Crop
Lower Assam	33-0	28-8
Upper Assam	32-8	28-0
Northern	33-0	28-8
Daisee (Ex Sheoraphuli)	33-8	"
Daisee Mesta	30-8	"
Local Northern	32-8	"
Local Packing	32-0	"
Binli	30-0	"

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rates for White Jute.

Pucca Bales	Rs. a bale.	Shipment.
		May-June
Mill Firsts	195	"
Mill Lightnings	180	"
Dundee Daisee 2/3 S.G.	195	"
Dundee Daisee 2/3 L.G.	180	"

Pakistani Jute, Rs. a maund.			Shipment.	
	Old Crop	New Crop	Old Crop	New Crop
Jat	34-0	31-8	May-June	Aug.-Sept.
District	33-8	30-8	"	"
Northern	32-8	30-8	"	"

The Cossipore markets have ruled very steady over the week as the result of good demand from mills for quick delivery jute ex-Local Godown. Imports have continued to be very irregular and the majority of wagon arrivals have contained low quality jute. Quotations are based on Kishanganj jute at Rs. 32-8 a maund for garat quality. There is very little business going on in the Daisee markets and quotations are based on Rs. 32 a maund for garat quality. Cultivators are getting perturbed about the lack of rain which has prevented them from going ahead with sowings, and it is anticipated that the New Crop will be much later than last year in coming forward.

Mofussil: The upcountry markets in India continue to rule steady due to the very small imports and the recent demand for jute from Calcutta mills. Sellers are very reserved and latest quotations in Dhuri are based on Rs. 29 a maund for Bottoms.

In Pakistan the markets are ruling quietly steady, with the only enquiries being for low quality jute. There are still no reports of any New Crop business being done with India. Imports are still very small and in Narayanganj have averaged about 2,000 maund a day loose jute from outside agencies, and about 3,000 maunds a day baled jute. Quotations are again nominal in the absence of business and in Narayanganj are as follows:—

Pucca Bales	Rs. (P) a bale.	Kutchia Bales	Rs. (P) a maund.
Mill Firsts	118	Jat	20
Export Firsts	110	District	18
Dacca Tossa 4's	154	Northern	17
Dundee Tossa 4's	114	Quotations for Tossa	
Output Tossa 2/3	108	are Rs. 1-8 to Rs. 2-8 a	
" 4's	94	maund higher than that	
Narayanganj Cuttings	75	that for White Jute.	

INDIAN JUTE CROP REPORT

In their ninth crop report for the current Indian season, covering the week ended 14th May, Messrs. Sinclair Murray & Co., Ltd., say that very hot and dry weather conditions have prevailed in Orissa and West Bengal and this has not been favourable for the growth of young plants, or to allow cultivators to proceed freely with sowings. On the other hand, favourable weather conditions have been experienced in Bihar and Assam although excessive rainfall in some areas has curtailed weeding operations. The condition of young plants is not very satisfactory in Orissa and West Bengal but in Bihar and Assam young plants are healthy and are progressing satisfactorily. River levels in Upper Assam are rising steadily but elsewhere are normal for this time of the year.

DANPUR: Hot and dry weather has again been experienced which is not favourable and rain is urgently required to allow cultivators to proceed with sowings and to improve the condition of young plants which range in height from seedlings to 9in. Sowing to date are estimated at -1/4- as against -1/19 on the corresponding date last year. The river level is normal.

JAIPUR ROAD: Weather conditions have been very hot and dry and rainfall is required to allow cultivators to proceed freely with sowings and assist germination. This year's sowings amount to -1/3- as against -1/6- at this date last year. Condition of young plants is still satisfactory and the range in height up to 6in. The river level is normal for this time of the year.

COSSIMBAZAR: Weather has been very hot and dry. This has been unfavourable since cultivators have had to suspend sowings and land

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

BRITISH TEXTILE REVIEW

LANCASHIRE STILL DISSATISFIED

LANCASHIRE had been persuaded with some difficulty to withhold judgment on the Government's policy until the Chancellor of the Exchequer had shown his hand, and its reaction to the Budget was prompt. "Utterly inadequate" was its verdict on the reduction of purchase-tax on various non-wool textiles from 50 percent to 25 percent. The proposal was received with such hostility that the Premier had soon after to announce that the duties on the same goods had been removed altogether. Lancashire felt that it had achieved something; yet on further consideration it has found only modest benefit in the cession, for finished goods of high quality still bear tax (the lower qualities have been exempt for some time), and the distortion of home demand that prevents the industry from producing a full range for export still persists. India's big concession on import duties has weakened the argument for restriction of imports from India into this country, but its practical benefits to Lancashire are problematical. As seen here, it is not a question of competing better with Indians in India, for the goods that Britain can hope to sell in large quantities are such as are not made in India. What remains to be proved is that the lower prices at which they can now be sold will much increase sales. Add, since the concession is evidently an alternative to control of imports from India, Lancashire feels that the essential problem remains.

Mr. Cyril Lord, a Lancashire textile manufacturer who consistently advocates protection, stated after the Budget that materials should be imported only for re-export. But Sir Raymond Street, chairman of the Cotton Board, accepted in principle the idea that the cotton industry must be reduced. The export markets would never again admit British cloth in quantities of several thousand million yards, as in 1913, and an industry of "the right size", he argued, was one "which can produce the great bulk of the requirements of the home market (without, of course, excluding some imports which reciprocity in trading policies the same time cater for an export trade of several hundred millions of yards)". "I think it wrong and mischievous", Sir Raymond said, "to talk of between nations may render desirable), and can at any further contraction of the size of the cotton industry in terms of output, but I think it wise and prudent to think in terms of consolidation of productive capacity." It has not passed unnoticed that the "textile crisis" of Lancashire has its counterpart in Japan—the country which, until the ascendance of India, was regarded as the most serious "menace". Some observers believe that each big exporting nation in turn will experience a crisis of surplus capacity, because the whole international trade in cotton textiles is diminishing. But others' troubles are poor consolation. They imply still keener competition.

Uncertain Prices

It has been admitted in Lancashire that uncertainty on American raw price policy has been more damaging to business than the Indian sales of cloth that have caused so much shouting. Any time, without warning, some new rumour or suggestion has emanated from the United States, and the outlook was only partly clarified by the announcement of the US Secretary of Agriculture early in April that he would formulate a sales policy for surplus cotton, for the next marketing year, about two months from then. Business in yarn and cloth has been so restricted by the idea that America's "cotton problem" will be solved by an export subsidy that the British Government has (it appeared recently from replies to questions in Parliament) joined the textile interests in pressing the United States Government for a statement. The British Government is interested also on the broader plane, for it bears some responsibility for the cotton-cultivation programmes of the colonies. The 50th annual report of the British Cotton Growing Association, issued some weeks ago,

showed production in the Commonwealth and the Sudan at a new annual peak of 1,226,000 bales—exceeding the previous peak by 172,600 bales. Thus a five-year average for the areas exceeds for the first time 1 million bales. These gradually-increasing supplies, supplementing other "outside" growths, have diminished Lancashire's dependence on American supplies, but on the other hand, all "outside" growers can be upset by a sharp fall in American prices. However, the colonial marketing boards have substantial sums of money available (from high prices received earlier) for cushioning farmers in the event of a general fall in values.

Scientific Testing

A year ago—in May 1954—Courtaulds restored in limited form the Tested-Quality Plan that it introduced in 1937 and operated with good results until the war. But the revived plan covered only knitted goods; now it has been extended to include woven textiles. Any textiles—for apparel, furnishing, or domestic use made wholly or partly with Courtaulds' yarns and fibres can be tested against the company's specifications by the Testing House of the Retail-Trading-Standards Association (an independent body), to qualify for the "Tested-Quality" mark. Sampling and assessing fibres by scientific methods is an objective to which the textile trades have aspired for many years. The Linen Industry Research Association has lately published a book, "Quality in Flax", that detailed investigations undertaken with the Government's financial help. Mr. A. J. Turner, the Association's director of research, has told the story. The researchers tested 88 samples of flaxes to discover how different properties in the fibres affected the yarns and fabrics made from them. They investigated 22 properties of the fibre—and found that most of them had no appreciable effect on the strength of yarn. They concluded that the strength of yarn in long lengths could be assessed from only three factors of hackled flax: the average length of the fibre-strands, the average area of their cross-section, and the breaking load per unit area of cross-section. The old human method of "sizing" qualities of fibre is not, it seems, so faulty after all.

BRITAIN'S TRADE WITH THE STERLING AREA

THREAT FROM ASIAN COUNTRIES

WITH statistical information relating to 1954 approximately complete, we can confirm that the weakening of sterling was due primarily to the deterioration of the United Kingdom's payments position. But the deterioration was in quality as much as in quantity. Because the first half of 1954 was favourable, the U.K. was able to show a current-account surplus of £160 million for the whole of 1954 (compared with £217 million for 1953), although the result of the second half of the year was a deficit of £12 million. But, because the surplus was attributable over more than previously to transactions with the sterling area, while the deficit with the rest of the world increased, the underlying position of the currency became weaker. In 1953 the sterling area as a whole earned a surplus of £325 million in current transactions with the outside world, but in 1954 the corresponding surplus was only £7 million, because most of the surplus of the first half-year was lost in the second. The U.K.'s surplus with the rest of the sterling area was £96 million larger last year than in 1953, while her deficit with non-sterling countries increased by £101 million. That geographical shift was the principal cause of the deterioration of the whole sterling area's payments; although, of course, such factors as the weakening of wool prices played their part.

The concentration of Britain's export efforts on the relatively easy sterling markets has repeatedly aroused anxious comment, for just this reason—that it is not helping to strengthen the currency. Correspondingly, when Britain buys from the sterling area rather than outside it she eases the pressure on sterling normally exerted by her imports. Recently, however, this import trade with the sterling area has aroused interest of another

kind. Especially because of the big increase of imports of Indian cotton cloth into Britain it has been suggested—and not only in Lancashire—that the British market is no longer sufficiently protected against competition from other Commonwealth suppliers. People have been investigating the reasons why this competition has become so noticeable, and they have found a permanent change in the relation between "the mother country" and the other Commonwealth countries—which, excepting Canada, are sterling countries.

Ottawa Agreement's Aftermath

A new generation has grown up since the Ottawa Agreement was negotiated, and the Commonwealth has likewise developed so that it is no longer recognisable as its former self. That Agreement, and others related to it, took account of the desire of the "overseas" countries of the Commonwealth to develop their own industries, but it did not clearly envisage what would happen to the U.K.'s trade after those industries had been developed. The U.K. was satisfied to ensure preferential treatment for her goods in the Commonwealth markets, although those goods would be subject to protective import duties. On her side, she was willing to allow duty-free entry to the products of the Commonwealth. This arrangement was based on the assumption that the other Commonwealth countries, though they might make an increasing variety of manufactured goods for their own consumption, would not develop a substantial export trade in manufactured goods. Britain knew that she would always need to import foodstuffs and materials, and she was confident that the other Commonwealth countries would continue to need her manufactures. She did not foresee that some of those countries would develop such large-scale manufacture, with some advantages in respect of costs, that they would be able to compete with her own goods in her own territory.

So far the range of such competition has been limited. It is causing most trouble in the cotton-textile trade, where duty-free import of Indian cloth is resented particularly because U.K. cotton goods entering India are subject to heavy duties. That distinction seemed fair enough in the early 1930s, but it seems—in Britain—unjust in the middle-1950s, because in the meantime India's productive capacity in this industry has been transformed. "The cotton problem" has grown this year almost to the dimensions of a crisis. It may be many years before any other British trade of such importance is similarly "threatened", but the number of trades affected by this kind of competition is already increasing. For instance, the British Glove Manufacturers' Association has declared that Hongkong is selling gloves at prices with which Britain cannot possibly compete. (If some of them are made in China, that is farther evidence that the Commonwealth's gateway to China is becoming China's gateway to the Commonwealth.) Similar complaints have been heard from British makers of lower-grade sports goods (Pakistan is named as the principal "offender" in that trade). Toys, household goods, even bicycles, are affected.

It has been noted that the "threat" comes mainly from the Asian members of the Commonwealth; which is not surprising unless one assumes that Japan is the only country in Asia capable of large and varied manufacture. In fact, of course, a country such as India, much more populous than Japan, can compete with Japan in many trades as she is competing now—very effectively—in the cotton-textile trade. The countries with cheap labour have an initial advantage as compared with, say, Australia. Yet there is no logical limit to this development of the Commonwealth's manufactured exports to "the mother country" as the whole Commonwealth becomes industrialised. It begins with relatively simple products requiring no special skills, but it does not necessarily end there. Britain's policy towards this import trade will profoundly affect the balance of payments, not only of Britain herself but also—in ways that are more difficult to foresee—of the whole sterling area. Britain's trade with Europe has proved that manufacturing countries can do substantial mutual trade, and such trade will still be possible within the Commonwealth when most of the countries are industrialised. The policy for Britain is, surely, to continue to import freely, while exporting more widely outside of the Commonwealth.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined, by 0.5 percent to 340.6 during the week ended 30th April, 1955 as compared with 342.4 (revised) for the previous week. The index was lower by 2.9 percent as compared with that of a month back and by 15.1 percent as compared with the corresponding week of last year. The average for the month of April, 1955 worked out to 344.8 as compared with 353.8 for March, 1955 and 402.6 for April, 1954. The Foodstuffs index declined by 1.7 percent to 274.9 due to the decrease in the prices of wheat (-1.1%), rice at Patna and bajra (-4%), gram at Hapur and tea for internal consumption (-2.2%) each and sugar (-1.1%) despite an increase in the prices of gur at Muzaffarnagar (+5%), dal arhar (+4%), rice in Calcutta and coffee (+1.2%) each. The index for Industrial Raw Materials stood at 393.1 as compared with 392.9 (revised) for the previous week, the prices of manganese ore (average export prices) (+1.4%), groundnuts and gingelly seed (+1.4% each), castorseed in Bombay and cottonseed (+2.2% each), raw cotton and copra (+1.1% each) moved up while lac

(-6%), raw jute (-4%), castorseed in Madras and linseed (-3% each) and raw silk (-1%) showed declines. The index for Semi-Manufactures also advanced by 0.5 percent to 328.5. Items which witnessed significant variations were: gingelly cake (+14%), coconut cake (-10%), castor oil in Madras (+6%), coconut oil at Cochinnut cake (+2% each), zinc (-4%) and coconut oil in Calcutta (-2%). Lower prices of jute manufactures (-3%) brought down the index for Manufactures by 0.3 percent to 374.4 as compared with 375.5 (revised) for the previous week. A fall in the prices of cummin (Jeera) (-5%), chillies and turmeric (-2% each) was responsible for a decrease of 0.1 percent to 537.9 in the index for the Miscellaneous group. The prices of cashew-nuts (+5%) and pepper black (+2%) were, however, marked up.

BRITISH EXPORTS OF WOOL TEXTILES

THE NEW POST-WAR POSITION

SOME of the influences which have operated recently on the British wool export trade are discussed in *Export of Wool Textiles*, the report for 1954-55 of the Executive of the National Wool Export Corporation. This appears to agree with the view expressed before the recent Canadian tariff inquiry that every year is abnormal in the industry, but adds that in the tenth year since the war it may be accepted that abnormal war and post-war demands have disappeared, leaving the industry to experience the full impact of the abnormal increase in wool textile plant all over the world to which the war gave rise. Exports of wool tops fell from 70 million pounds in 1953 to 67 million pounds 1954, those of yarns from 26.9 million pounds to 25.5 million pounds, and those of cloth from 105 million square yards to 99 million square yards, the decreases being 4 percent, 12 percent, and 6 percent respectively. The industry, however, does not consider that it is not competitive nor that it cannot supply foreign consumers with what they would like to buy. In cloth the decrease last year

was caused mainly by a fall in consumption in the two largest markets—the United States and Canada—and by high duties and restrictive quotas and embargoes in some other countries.

There is more competition, especially from Italy and Japan, with British wool textiles and, the report says, "in some markets it is devastating." Italy in particular has gained much ground in trade in cloth with Western Germany, Switzerland and India, and its share of world trade in wool tissues has risen from 19 percent in 1950-53 to 27 percent in 1954, while that of the United Kingdom fell from 47 percent to 39 percent. France and Belgium caused some loss of trade last year in yarns, mainly with Continental countries, but in tops France has not yet offered strong competition in the markets which take most of the British exports. Reference is made in the report to tariff increases on wool textiles, or applications for them, in Canada, Australia, Pakistan, India and Peru, and there is also mention of discussions about import quotas and regulations in some other important markets.

 Insist on Genuine
CATERPILLAR
 Spare Parts

Every part in your machine was built with a precision that few manufacturers can equal... materials were the finest available... workmanship was that which comes with long experience and training. These features paid off in long-life, low-cost performance, efficient operation. When any part needs replacement, make sure the new part has this same background... order only genuine Caterpillar parts!

Call us in for fast, efficient on-the-job service—or for complete rebuilding of your CATERPILLAR equipment. Rely on us for quick supply of genuine CAT-built replacement parts from our ample stocks—and get your CATERPILLAR equipment back at work with the minimum "down time".

CALL FOR IMPROVED QUALITY TEAS

IT is understood that the Indian Tea Association, the Indian Tea Planters Association, Jalpaiguri, and other tea producing associations in North East India are issuing a special request to all their members to maintain and, where possible, improve the quality of the tea they produce. While in general brokers' reports have shown that standards of North Indian tea have been even better in 1954 than in 1953, the producing associations consider that it is now even more essential, in view of the lower prices that have recently prevailed in world markets, that particular attention to quality should be paid in the 1955 season, even if it results in some diminution of the total crop produced.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN MARCH

Indian Rubber output in March, 1955 was 1,329 tons, according to the Indian Rubber Board. Exports and imports were nil. Consumption by manufacturers was 2,443 tons, of which 230 tons were imported. Stocks with estates and dealers on the last day of the month were 2,828 tons including 1,453 tons in transit. Stocks with manufacturers at the end of March were 2,537 tons, of which 323 were imported. Manufacturers also used 240 tons of reclaimed rubber, the month-end stock being 366 tons, and consumed 2 tons 123 lbs. of synthetic rubber, of which manufacturers held a total stock of 12 tons 765 lbs.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 5-5-1955 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.12	1.12
No. 2	1.10	1.10
No. 3	1.08	1.08
No. 4	1.04	1.04
No. 5	.98	.98
Sheet Cutts. 1	.97	.97
Sheet Cutts. 2	.92	.92
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.16/17	1.17½
R.M.A. No. 1	1.15/16	1.16
Crepe No. 2	1.14	1.14
Crepe No. 3	1.13	1.13
Scrap Crepe:		
Sc. Crepe No. 1	1.05 Nom	1.04½
Sc. Crepe No. 2	98/1.02	.99½
Flat Bark	.92/97	.94½
Sc. Crepe 3X	.97	.97

To arrive at f.o.b. Colombo prices add 34½ cents lb. in respect of rubber other than scrap crepe and 25.4 cents in respect of scrap crepe to the above market prices.

COCHIN TEA SALES

At Dust Sale No. 1, the 4,20,000 lbs. of tea on offer met with a better demand. Well-made and better liquoring sorts sold well at last rates. Others were irregularly 4 annas easier.

NORTH-INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of April, 1955:

Upper Assam: Weather generally seasonable but abnormally wet in Doom Dooma; severe hailstorms causing considerable damage to crops are reported

from Tingri; Red spider blight prevalent in some districts of Dibrugarh; outturn last month about normal; immediate prospects fair.

Central Assam: Weather favourable; crop prospects good.

Lower Assam: Weather generally seasonable; good rain has fallen generally in Bishnath and Tezpur and prospects are now brighter; immediate prospects fair to good.

North Cachar: Excessive rainfall in Lakhimpur and North Cachar; hailstorms causing little damage; are reported from Lakhimpur; red spider blight prevalent in some districts of North Cachar; outturn last month good but poor in Lakhimpur; immediate prospects fair to good.

South Cachar: Weather generally favourable; rainfall in Chargola is excessive for the season to date; severe storms without hail are reported from Longai; red spider blight prevalent; outturn last month about normal to good but poor in Chargola; immediate prospects fair to good.

Eastern Doars: Dry weather is interfering with outturn but rain end of month greatly improved prospects; the outturn to date is slightly over last year; red spider blight prevalent, some looper.

Western Doars: Outturn last month about normal; good rain has fallen generally and prospects are now brighter; the outturn to date is slightly over last year; immediate prospects fair.

Darjeeling: Outturn last month about normal; immediate prospects fair, weather conditions in most districts are normal for the time of the year; hailstorms are reported but little damage has resulted; red spider blight severe in some districts.

Terai: Severe drought conditions prevail; crop prospects bad; hailstorms reported with some damage; red spider blight prevalent; helioptis prevalent.

Calcutta Markets

BETTER GENERAL DEMAND AT INTERNAL TEA SALE

NEW SEASON'S TEAS IN GOOD DEMAND

AT Sale No. 46, held on 17th May. Dust offerings consisted of 10,756 chests of which 443 chests were of new season's tea. There was more general demand than in the previous sale and clean well-made Dusts were fully firm to occasionally dearer. There were only a few good C.T.C. Dusts and these sold at dearer rates whilst the poorer C.T.C. sorts were also in more demand and sold at or above valuations. There was a fair demand for residue Dusts. The few new season's Dusts offered sold well, smaller types realising more than valuations.

Quotations	1955 Rs.	1954 Rs.
Medium Doars Dust	1 14 6 to 1 15 0	Not quotable
Medium Assam Grainy	2 0 0 to 2 1 0	Not quotable
Dust	2 0 0 to 2 1 0	Not quotable
Best Assam C.T.C. Dust	2 7 0 to 2 9 0	Not quotable

Offerings of other grades consisted of 459 chests which included 174 chests of new season's tea. The new season's teas met with a fair demand and realised satisfactory prices. There was a fair demand for the other teas, but they were irregular in prices.

FREIGHT RATES RISE

THE American grain and coal trades again provided most of the interest over the past week and rates again moved higher. This was exemplified in the Pacific market by the fixture of a homeward lumber and general cargo to the U.K. at 147s 6d a ton f.i.o. which compares with 130s paid for similar business at the end of April. American coal rates show no sign of recession and the demand for tonnage is maintained. There is

no particular change in the Australian grain trades but there was a resumption of chartering from India where charterers have at last met owners' ideas of rates with the fixture of a British vessel from Calcutta to the Continent at 102s 6d a ton with completion at Vizagapatnam. Marmugao and Bombay to Calais was fixed at 105s 6d. Small business was reported in the Time Charter section with a good class motor vessel being taken at 39s 6d for a South African round trip. An oilburner was fixed for a voyage Japan-U.K. via North Pacific at \$ (U.S.) 4.35.

SUGAR MARKET EASY

During the week ended 18th May, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were 2,000 bags a day and stocks totalled 200,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 30-4 for ordinary grain and Rs. 31-4 for big grain. Forward delivery sugar sold at Rs. 30-4 for ordinary grain and Rs. 31-4 for big grain. Ex-mill delivery rates for standard grades of sugar were Rs. 28-7 to Rs. 28-8. The market tendency was easy.

LINSEED

The market remained steady; despite a good demand trading was limited owing to shortage of supplies. Crushers showed a keen interest but owing to a shortage of ready goods the undertone was very steady; the daily turnover was rather limited. The oil section was fairly active and prices improved. Shippers were covering against previous commitments, and there was a fair demand from overseas. Latest quotations were as follows: May-June Rs. 15-12 a maund; July-August Rs. 15-14 a maund.

HIDES AND SKINS

The market ruled dull and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 10th May and 16th May, 1955)

Cowhides—Wet salted (Ord.) 7,000 pcs. on the basis of Annas 9-6 to Annas 10-6; Wet salted (Ord.) 30,000 pcs. on the basis of Rs. 10-8 to Rs. 12-8; Wet salted (Slaughtered) 15,000 pcs. on the basis of Rs. 13-8 to Rs. 25-8.

Goatskins—Wet salted (Daissee, Killed) 38,170 pcs on the basis of Rs. 225 to Rs. 400; Rajshahi-Dinajpur-Assam 29,800 pcs. on the basis of Rs. 265 to Rs. 375; Patna-Pakur (Ord.) 9,400 pcs. on the basis of Rs. 200 to Rs. 225; Muzafferpore-Patna 13,800 pcs. on the basis of Rs. 250 to Rs. 275.

Bazaar Stocks

(16th May, 1955)

Cowhides—Wet salted 70,200 pcs.

Goatskins—Wet salted (Daissee, Killed) 19,500 pcs; Assam-Dinajpur-Murshidabad 81,000 pcs Muzafferpore - Patna - Pakur - Purneah - Kissen ganj 3,03,500 pcs.

SHELLAC MARKET QUIET

During the week ended 17th May, the market was steady at the beginning of the week and quiet at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 145-8 to 140-8 buyers.
Lemon No. 1 Shellac	Rs. 146 done and buyers; 146 to 141 buyers.
Lemon No. 2 Shellac	Rs. 141 done and buyers; 141-8 to 137 buyers.
P. O. Std. 1 Shellac	Rs. 138 done and buyers; 138 to 134-8 buyers.
Pure TN Shellac	Rs. 135 basis done and buyers; 135 buyers; 134 to 132 done and buyers.
4½ I. T. N. Shellac	Rs. 128 to 125-8 buyers.
No. 1 Kusmi Seedlac	Rs. 133 done and buyers; 136-8 to 133-8 value.
No. 2 Kusmi Seedlac	Rs. 128 done and buyers; 130 done; 128 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 128 done and buyers; 128 to 126-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 125 done and buyers; 124 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 120 buyers; 119-8 done and buyers; 118-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 115 to 113-8 buyers.
Kirelac	Rs. 53-8 to 53 buyers.

Shipments during May until the 14th were 16,061 packages.

Accountants tell me -

"You're welcome on all accounts"

Here is the

Powers-Samas punched-card, part of the system

that makes all other accounting methods out of date, keeps figures really up to date. Powers-Samas speed and efficiency keeps pace with figures and events as they occur; indicates trends as they start to develop. For large combines and small concerns Powers-Samas methods handle invoicing, statements, stock-records, payroll, costing and statistics of all kinds with unequalled speed, neatness, accuracy and economy.

There is a range of Powers-Samas punched-card equipment for every type of application.

PUTTING THE CART BEFORE THE UNICORN

PROFESSOR MAHALANOBIS'S PLANNED INFLATION

EVIDENTLY the suggestion we made last week that documents relating to the next five year plan be released to the public was unnecessary, for the papers in question reached Calcutta last Friday. The papers we had in mind were Professor P. C. Mahalanobis's Draft Recommendations for the Formulation of the Second Five Year Plan; the Working Paper prepared jointly by the Government, Planning Commission and two statistical organisations; the Panel of Economists' comments on these documents; and finally the Note of Dissent submitted by Professor B. R. Shenoy along with the last-named. All four of these are now freely available, and informed discussion of the next plan can proceed. Such discussion has meantime received stimulation from an unexpected quarter—Dr. B. C. Roy's excellent analysis of the draft plan, which he offered before a recent meeting of the National Development Council, is published in full on later pages of *Capital*. Dr. Roy has spoken candidly and wisely. West Bengal can take pride in the contrast between his level-headed comments and the fatuous remarks of certain other State Premiers—Mr. Morarji Desai, for example, who, when shown the over-ambitious schemes of Professor Mahalanobis, calmly called for "a bolder plan". Oliver Twist, after all, only asked for more soup, but Bombay's asthmatic Chief Minister asks for more of the intoxicating liquor of inflation.

Dr. Roy has set out most of the objections to the Mahalanobis plan, but those who would like to see the opposition case put in more technical economic language will find it in Professor Shenoy's Note of Dissent. Thus the warnings against the dangers of the Mahalanobis scheme come not only from the financial press but from politicians and economists; the Central Government, if it were so ill-advised as to take the draft-plan-frame seriously, would not have the excuse that the risks had not been fully exposed. The fundamental criticism of the Mahalanobis plan is this: that instead of asking what resources the country has, and then seeking the best way to use them, it asks what we would like to happen and then seeks (or invents) methods that supposedly will lead to this airy goal. Dr. Roy calls this "putting the cart before the horse". We would only add that the horse is a unicorn.

Professor Shenoy also takes up this basic weakness first. He points out that the plan-frame begins by prescribing the increase in national income which the plan would set out to achieve, and then goes on to look for "the real resources necessary for the corresponding rate of investment". This procedure, he argues, is all very well for drawing up a Government budget, where expenditure can be determined first and revenue looked for next. That is possible only because Government revenues are part of the total national income, and the Government can always decide to annex more of the national income. But a total plan embraces the whole economy; there is nothing outside it to be drawn on if expenditure is pitched too high—unless of course the planners adopt Communist, totalitarian methods and determine how much every individual shall consume and how much he shall save. Do the planners—Professor Mahalanobis and the "experts" who endorse his scheme—propose that India should adopt totalitarian methods? We think not: we hope not. But it is quite clear that they are not satisfied with Indian democracy as it stands today. This is what Professor Mahalanobis says: "Administrative difficulties inherent in the existing Government machinery are likely to prove the greatest obstacle to efficient planning. To overcome such difficulties, large organisational and even constitutional changes may become necessary. The problem is urgent and requires immediate and serious attention." The Panel of Economists use similarly ominous language on several occasions. They speak of the urgent need for "decisions on the policy and institutional implications of a bolder

plan", and again later of the "importance of facing up boldly and without hesitation to the legislative and administrative implications of a bigger and bolder plan."

It requires little imagination to guess what are these great changes the Mahalanobis plan would entail. They would be changes in India's democratic and federal Constitution. The "obstacles" that the statisticians and economists find so galling are the rights guaranteed to the Indian States to develop in their own way within the Union, and the rights guaranteed to individual Indians to decide how much they will spend and how much they will save. Let it not be forgotten that these urgent calls for the removal of "obstacles" are being addressed to a Government that has already armed itself with the widest and vaguest economic powers, a Government that has (a) its Ministers never tire of saying the power of life and death over every form of business organisation, a Government which has just removed from the Constitution the "obstacle" of a clause requiring payment of reasonable compensation for nationalised property. Any further constitutional changes could only be designed to abridge democratic rights in favour of "efficient" planning. The first casualty would undoubtedly be States' rights, because the sort of planning Professor Mahalanobis has in view can only proceed where there is an omniscient, central planning authority, which does not have to bother with troublesome politicians in the States who know, being nearer the people, the limits to the sacrifices they can offer.

The consequence of setting the goal first (instead of assessing resources first) is that there is considerable vagueness about the means to attain it. Professor Mahalanobis's plan contains some extraordinary examples of this vagueness, not to say evasiveness, but what is more extraordinary is that the Panel of Economists to whom his plan was shown have not exposed these gaps in his programme. Mr. Deshmukh has of course spotted them at once, but he is apparently quite willing to push ahead with this over-ambitious plan without knowing where the resources are to come from. This week in Bangalore he admitted that there is a gap of a mere Rs. 900 crores on the revenue side of the Mahalanobis plan, but his reference to this subject, according to the agency report, ended with the comment: "He could not say where they could find this amount". This gap of Rs. 900 crores, it should be emphasised, is left even after taking credit for a very hopeful savings and borrowing target, and after proposing a dangerously high level of deficit finance.

To make the calculations (or rather the pretence at calculation) clear, we quote the table from Professor Mahalanobis's paper:

ELECTIONEERING ON THE ETHER

POLITICIANS AND T. V.

By Geoffrey Tyson

I CAN well believe the people who tell me this has been the dulllest general election within living memory. Certainly by comparison with the elections of 1910 and 1912, which I remember as a youth, and the 1919 Coupon election (which I recall because it is the only occasion on which I have exercised my franchise in England), one has hardly been aware that a new House of Commons is in the making. In reference to their vaunted liberty Rousseau said of the British people that they are only free at election time. If so, they take their freedom very sadly.

The fact is, of course, that electioneering today is dominated by what the social scientists are pleased to call the means of mass communication—television and sound radio. In a situation in which the adult population of Great Britain is irrevocably divided into roughly equal proportions of Conservative and Labour supporters, and small Parliamentary majorities have come to be regarded as quite normal, only the leading personalities and the broadest and simplest statements of policy count for very much. "The Election that won't wake up" was the streamer headline of my morning paper ten days before polling day, and immediately below was shown a photo of a candidate addressing a handful of people in a nearly empty hall. "Preaching to the converted" would have been an equally appropriate caption.

For both parties the biggest danger has been the apathy of their own supporters, so that in each camp tremendous efforts have been made to see that, on the day, they can get their people to the poll. Efficient organisation and plenty of transport have been given priority over electoral fervour or platform eloquence. Withal, two or three million uncommitted voters have had to be wooed and, if possible, won. The floating vote is an elusive but very real thing, particularly in the new constituencies that have been created by a recent redistribution of old parliamentary divisions. These, and the marginal seats, of which both parties have a few, have been the areas where battle has really been joined. Charles Lawson, a former president of the U.K.C.A. and a member of the old Indian Central Legislative Assembly, is fighting such an one—the Eccles division of Manchester, where his Labour opponent had a majority of no more than 164 at the last general election.

Paddington and Andhra

The street corner hustings have been no more exciting than the set indoor meetings. I went the rounds of my own constituency last week. A depressing experience for those who have always assumed that man is a political animal. At a thinly attended candidate's adoption meeting I sat next to a melancholy Sikh who agreed that the recent contest in Andhra probably had more "fire in the belly" than the politicians could induce in us on a wet Thursday night in Paddington. I have listened at a few listless open-air meetings and the audiences in which I have mingled could not have numbered more than fifty or sixty a piece. Not even that new electioneering phenomenon, the hoarse-voiced and horny-handed Conservative working man orator or candidate, has been able to arouse our latent political passions.

This has been an election by long distance communication, directed either from the television studios at Lime Grove or the sound radio microphones at Broadcasting House. In consequence there has been a tremendous saving of time and energy in the constituencies, leaving local party committees free to concentrate on their organisational problems. But electioneering by such exiguous means has its snags. Is Mr. Attlee, like the Aga Khan, what the professionals call "a natural" when he appears on T.V., or is he gauche and clumsy as some people think? How many votes were won or lost by Mr. Harold Macmillan's rather grand manner in front of the cameras? These are the sort of questions which have haunted the party managers in the long, silent hours of the night. The latest statistics show that there were 4.5 million T.V. licences in force on 31st March which means that at least 12 million voters regularly watch television out of a total electorate of approximately 35 million. It therefore becomes a serious matter for party prospects if Mr. Attlee's hands look like hands on the screen, or Mr. Macmillan (one of the readiest wits in Britain today) seems to personify a ruling class that is no more. Alas, for practical purposes the Liberals do not count today. But what about Sir Anthony Eden and Herbert Morrison? Sir Anthony is certainly photogenic, but his broadcasts tend to be stiff and formal whilst Mr. Morrison would indubitably starve if fate compelled him to earn his living on television.

The measure of their fears and hesitations about this new electioneering technique is that both the principal political parties agreed in advance that each would take no more than two and a half hours' television time in a campaign which, from the dissolution of Parliament to polling day, has lasted three weeks. The conclusion must be that neither

the Conservative nor Labour leaders have really come to grips with the problems posed by this new form of mass communication. That it has wrought a fundamental change in the whole business of electioneering is clear enough. It is also painfully obvious that the parties are still experimenting with something they do not really understand. Though some day it might, political leadership has not yet passed into the hands of those who come nearest to emulating the T.V. techniques of Bob Hope or Billy Graham and I suspect most people regard that as a good thing for democracy and public life generally. Perhaps it is not entirely accidental that the politicians of an older generation—a Churchill or a Roosevelt—seem to fit most naturally into this new and revolutionary medium for reaching the masses.

CURRENT COIN

Export-Import Policy.—The meetings of the Export and Import Advisory Councils this year have revealed a reasonable balance in India's foreign trade. Addressing the Import Advisory Council last Sunday, Mr. N. Kanungo, Deputy Minister for Commerce and Industry, was able to report that "progressive and controlled" liberalisation had been continued during the last year, but remarked that further progress would depend upon the success of measures to increase earnings. The Import Advisory Council has inevitably become the forum for pressing on the Government the claims for protection from various manufacturers. It is to the credit of the Ministry that so many of the spurious claims have been resisted and that, on the whole, protection has been offered only in deserving cases. But that imports, on which the country may have to rely to mop up some of the inflationary pressure which might well be generated by deficit financing in the next few years, should have to depend on the performance of exports remains a principle which is hard to defend. At this stage in the country's development the balance of foreign trade is of less importance than the level at which balance is approximately achieved. Commenting that this balance had been satisfactory during the past year, Mr. Kanungo remarked: "A close scrutiny will reveal that there is no room for complacency, as the favourable balance is principally due to the unprecedented rise in the price of tea." A large surplus of imports is usually a principle which a developing country aims at, but apparently a rigid adherence to balanced trade is still India's target. Mr. Kanungo stated that as industrialisation and development proceeded "the pattern of import trade would be characterised by a higher level of imports of industrial raw materials." If this is true, does the Government intend that the size of these essential imports should be determined by variations in the international demand for tea and jute goods? Mr. Kanungo called for a diversification of exports to relieve the dependence on the old staples and pointed to the increase in light engineering and chemicals output. If India is to send these much-needed commodities abroad in exchange for the satisfaction of seeing foreign trade in balance the country is going to be deprived of a fair proportion of the goods which are urgently needed for development.

Agriculture in the Second Plan.—The Union Food and Agriculture Ministry's development schemes for the agricultural sector in the second five year plan are an ambitious programme of work. The financial expenditure proposed is Rs. 650 crores on food and industrial raw materials production, which together with the estimated outlay on necessary projects of agricultural capital improvement, such as irrigation, flood control and national extension services, rises to the high figure of Rs. 1,400 crores. The physical targets of production at the end of the plan period, with the figures in parentheses representing the production level in 1955-56, i.e. the final year of the first plan, are: 65.5 (56) million tons of cereals, 11.5 (10) million tons of pulses, 2.25 (1.4) million tons of sugar, 7 (5.6) million tons of oilseeds, 5.5 (4.2) million bales of cotton and 5 (5) million bales of raw jute. These more or less agree with those set out in the Mahalanobis plan-frame. But there is a great difference in the calculation of overall cost. The plan-frame expenditure in this sector has been put down at an aggregate figure of Rs. 950 crores. The difference between this and the figure given above of Rs. 1,400 crores does not seem to be due to the manner of calculation alone, but perhaps represents a difference of approach. The lines of development in the agricultural sector serve three objects. First, they lay down the very necessary target of increasing per capita consumption of food from the present level of 1,800 calories a day to 2,250 calories a day by the end of the second plan, and of domestic cloth consumption to 20 yards per capita from 15 yards at present. Second, they raise the production of industrial raw materials for the major export industries and also of primary export commodities which will enable India to earn a higher quantity of foreign exchange to pay for her machinery imports. Third, the increased production of foodgrains will provide a very effective cushion, as it has done during the last two years of the first plan, against the inflationary impact of deficit

financing, which may have to be raised very much above the assumed safe limit of Rs. 1,000 crores.

Rehabilitating Bank Rate.—Through the fog of polite election clamour which has surrounded Britain's affairs in the last few months it has been difficult to distinguish the fact that an important economic experiment is being carried out. The Conservative economic policy has been openly declared as a return to the more liberal habits of pre-war years, with all the apparatus of the Welfare State retained intact, of course, and Bank rate has been brought back to replace the wartime and post-war controls. The move has involved more than a straightforward exchange of two equally effective regulators; it has in fact meant taking a risk with a type of control that was partly discredited in the economic conditions of the late 'twenties and early 'thirties. There is no reason to condemn the experiment on that score; circumstances have changed radically in the last 15 years, and at least in the short period, there is no reason to believe that a higher rate of interest will have anything more than a salutary effect on the volume of employment. In the long run that risk has probably been well taken care of by the "demand floor" which large welfare commitments and the ever-increasing need for exports, to say nothing of the general public's greater propensity to consume, has given to the British economy. The fact that Bank rate was first taken down and dusted in 1951 does not mean that the new control methods were really introduced then. An article in the April issue of the *Lloyds Bank Review* entitled "The Effectiveness of Bank Rate" sets out to emphasise what is often forgotten, that for a given national income the quantity of money in the economy, together with its velocity of circulation, has an important bearing on the state of inflation or deflation. Although the Bank rate was first used again in 1951 it was not allowed to have any effect on the money supply or on the long-term rate of interest. Since it was increased in February money has been allowed to become considerably tighter. This has been done by pushing treasury bills on the market at higher interest rates, thus making the market go "into the Bank" for its funds, which it can then only obtain at the higher Bank rate, instead of letting the "special buyer" support the market at the prevailing rate as soon as the first signs of stringency appear. The attractiveness of treasury bills has increased the demand for them from private holders, and banks themselves have had to go without. The resulting decline in the banks' liquidity ratio has restricted their willingness to grant credit to all borrowers. A tendency to lend more willingly to secure foundations such as nationalised industries has probably offset this tendency partly, but it remains true that under the present methods money is tighter as well as dearer, and that is something it has not been since the cheap money days of the early 1930's. The stringency is also reacting on the price of gilt-edged, so driving up the long-term rate of interest. If Britain is now entering on a period of tight money and high interest rates this would seem to be more in line with the Conservatives' traditional thinking on economic matters, the sort of thinking which was rightly discredited by the teaching of J. M. Keynes. It may very well be that this policy is the answer to Britain's post-war ills, but it will not be without its political dangers, especially if the new stringency does act on the level of employment. The lesson of the period since 1951 is that Bank rate, to be effective, must be backed by the determination to allow it to do its full work. With such determination the new policy should launch the pound sterling on a period of new-found strength which should soon bring convertibility within easy reach. Then the problem may be transformed from an economic to a political one.

P. and O. Financial Structure. Sir William Currie and his co-directors of the P. and O. Steam Navigation Company have done well in publishing in their annual report a closely-reasoned statement on the financial structure and organisation of the company. There has been so much ill-informed criticism of shipping companies' dividend policies in the last year or so that a statement such as this is welcome. It begins by mentioning that those who have held P. and O. stock for a time will know that for some years past the company's dividend policy has been adjusted to the economic conditions of the day, and it then proceeds to show by means of the following table the effective dividend paid each year on the basis of the stock as issued in 1949:

For financial year ended	Actual Dividend	Effective dividend on 1949 capital
30th September	(percent)	(percent)
1949	12	12
1950	16	16
In September, 1951, an issue of £1 stock for each £2 held was made by capitalising reserves.		
1951	18-2/3	24
1952	20	30
1953	22	33
In May, 1954, an issue of £1 stock for each £1 held was made by capitalising reserves.		
1954	16	48

This effective payment of 48 percent contrasts with 61 percent paid for the year 1939. The directors add that while it was thought proper to take these steps, it was not possible to make any definitive review of the company's resources and requirements until three points had been substantially clarified. The first was the completion of the post-war rebuilding programme dictated both by the sinking of ships and by the trade adjustments which after the war called for corresponding alterations in the operations of the various liner companies. The rebuilding involved not only vast commitments which had to be made for years ahead because shipyards were full, but also an unknown cost at the end of it because prices were not fixed. For most of the companies this period is now over, and rebuilding is in the main the replacement of over-age or obsolete tonnage. Secondly, since prices have continued to rise since the end of the war and at present show no signs of falling, it is much less likely that, as a result of falling prices, it will be necessary to write down new ships sharply. Thirdly, now that the probable future share of the liner trades to be won back by Germany, Japan and Italy is fairly clear, it is possible to gauge more closely what share the P. and O. can hope to secure and the resources necessary in order to secure it. It was against this background that, in view of the complexities of the problem and in order to have the best possible outside advice, the board of the P. and O. Company called upon Lazard Bros. and Co., Limited, and Deloitte, Plender, Griffiths and Co. last year, not to make a "plan" but to work with them on a comprehensive survey which would assist the board in coming to a decision on its future policy. In the course of this survey all the suggestions and comments and criticisms that had been made by stockholders or others were, of course, taken into consideration. This survey has been virtually completed, and at the annual meeting on 25th May the Chairman will explain the decisions the board may then have taken as well as any recommendations they may propose to make to stockholders.

Bank Deposit Insurance.—Relevant to the suggestions put forward in India for the introduction of bank deposit insurance is the recent Federal Deposit Insurance Corporation's annual report for 1954, submitted to the United States Congress. Figures from the report, published in the last newsletter of the National City Bank of New York, show that with banking conditions in America in their present state, the security represented by deposit insurance is negligible. The deposit insurance reserve fund reached the all-time record of \$1,543 million in 1954. During that year it rose by about \$92 million from the income received on assessments and the interest on the reserve fund investments. Operating expenses totalled \$7.8 million while the deposit insurance losses themselves amounted to only \$400,000. Discussion in American banking circles is now naturally turning on whether the insurance assessments on deposits should not be reduced. The newsletter remarks that this is not the first time this question has arisen. In 1950, when the reserve fund had reached \$1,200 million, Congress enacted that three-fifths of the net assessment income, after deduction of insurance and deposit insurance losses, be returned to the banks against the credit for the following year. Even on this new basis the fund has continued to pile up. During the entire 21 years the scheme has been in existence, insurance losses have totalled only \$28 million. In every year since 1940 the interest income alone from the reserve fund has been more than enough to cover deposit insurance losses and operating expenses as well. The reasons for this improvement in security of bank deposits are to be found in a number of factors. During the last 21 years American banking has followed sounder practices. The work of the Federal Deposit Insurance Corporation and other supervisory agencies has served to reveal and correct more glaring instances of weakness in assets and lending structures. The FDIC has used to good effect its powers to reorganise banks in difficulties, and many failures have been avoided. Bankers themselves have taken more care about choice of assets and the principle of amortisation has been applied widely to real estate and other forms of lending. The result of this has been an increase in the liquidity of the Banks, which have also taken advantage of the recent U.S. Treasury Department rulings which permit tax-free additions to their own bad debt reserves. Capital resources of banks have increased, and lastly, the FDIC now has authority to borrow up to \$3,000 million from the U.S. Treasury for temporary deposit insurance needs. It is becoming clear that the FDIC scheme for deposit insurance could run efficiently without collection of assessment on deposits and it is also clear that, provided the Government keeps a watchful eye on bank trends and on the economy generally, and if bankers themselves follow sound methods, the contribution which a deposit insurance makes to sound banking is remarkably small. This is not to say that it would not help in a country such as India where security is much less.

The Oil Industry's Prices.—The recent report of the United Nations Economic Commission for Europe, dealing with oil prices in Western Europe, is vigorously attacked by Sir Frederick Godber,

Chairman of the "Shell" Transport and Trading Co. Ltd., in his statement circulated to shareholders prior to the annual general meeting of the company, which is to be held in London on 1st June. The report acknowledged a lack of data, and Sir Frederick deplored the erroneous conclusions which it arrived at and doubted the wisdom of publishing it at all. The Press, he pointed out, had given much publicity to distorted versions which alleged that the oil industry is charging extortionate prices through the machinery of an international cartel. The limitations of the report were now more widely accepted, but Sir Frederick considered it was still worth refuting with examples from the experience of the group. On one particular distorted conclusion from the report—that oil product prices in Western Europe, although this area is supplied from the low-cost middle East oil fields, were maintained artificially high in line with those in the high-cost producing United States, Sir Frederick pointed out that the products were in fact sold in Western Europe on the basis of market prices. These market prices did not necessarily respect costs and there is no criterion available by which to judge whether market prices at any given moment are too high. The total profits of the major oil companies were, Sir Frederick admitted, very high in terms of money, but the scale on which they operated was extremely large and the return on what is in fact a very risky venture was a mere 14 percent last year. The profit margin on each imperial gallon sold was only 1½d. Only a small proportion of profits was ever distributed in the form of dividend. By far the larger proportion was ploughed back into the industry to finance further capital development. This was necessary especially in Western Europe, where capital was not in so great abundance as in the United States. Sir Frederick admitted that oil prices were too high for the economic health of the consumer, but this was due to the fact that "oil products are probably the main victims of taxation all over the world". In his statement, which is to be presented at the 46th annual general meeting of the British Petroleum Company in London on 9th June, the Chairman, Lord Strathallmond, was able to report that the group's outlets in India, Pakistan, Middle East, South-East Africa and other markets bordering the Indian Ocean have continued to expand satisfactorily.

CORRESPONDENCE

CUSTOMS HARASSMENT

(TO THE EDITOR OF "CAPITAL")

Sir,

Exporters generally will welcome the announcement that the Government will devote more attention to the promotion of exports. I would suggest that as a first step the entire Customs organisation should be carefully overhauled with a view to removing some of the unnecessary harassments which at present confront exporters. Unrealistic methods of control do much harm to the smooth running of any export business.

As an example of what I mean I quote below a standard form of letter received by gunny exporters in respect of every shipping bill presented to cover goods destined for East or West Africa. In point of fact I have even seen it used in regard to shipments to the west coast of South America.

"Your attention is invited to the notification of the Government of India, late Ministry of Commerce No. 2-C(6)-46(1), dated 17th July, 1946, under which it is an offence to export goods to and import them from South Africa. This office has reason to suspect that the consignment of bales of hessian/sacking covered by your Shipping Bill No.

dated _____ is intended for diversion to South Africa. You are, therefore, advised not to export these goods without further scrutiny. If notwithstanding this warning, you ship the goods and the consignment is ultimately diverted to South Africa, you will be dealt with departmentally apart from any penalty which may be inflicted upon you under the Sea Customs Act, 1878, the Indian Penal Code etc.,

Assistant Controller of Exports." The modus operandi would appear to be that any vessel which rounds the Cape or calls at a South African port to re-fuel must, of necessity, be suspected of carrying illicit cargo; all exporters, despite their past record, come within the stigma of smugglers, and worst of all several of India's long standing customers are categorised as potential receivers. All regular shippers are aware of the penalties attaching to delivery of goods to South Africa, and in their case the circular letters referred to leads to nothing but further delays in effecting shipment, and must increase unnecessarily the overhead costs of the Customs Department.

Yours etc.,
D. W. L. Pool.

GRAMMAR AS AN AID TO UNDERSTANDING

THE PRACTICE OF TWISTING EVERYDAY MEANINGS

(FROM OUR LEGAL CORRESPONDENT)

*.....The life of law is neither logic nor grammar.....(and) perhaps no one will ever succeed with his point by mere reference to grammar. Many in this country are familiar with the grammar of the English language, but that learning ought not to stand in the way of their understanding any provision contained in any section of an Act. But grammar has been too much abused. Sometimes it enlivens dullness and eliminates fads in writers. Some acquaintance with it is thus necessary." Thus wrote the learned editors of *Calcutta Weekly Notes* in a recent article. Perhaps the observations are written ironically. But if they are meant to be taken seriously and to suggest that a knowledge of the principles that govern the correct use of language, while not actually detrimental to a proper understanding of the wording of Acts of the legislature, is mainly useful as a relief from boredom and as a source of innocent merriment, they may strike the reader as somewhat remarkable. The reader, but not this deponent who accepts them as literally true and, in fact, as an understatement. The writer, who was nurtured on Dr. Fowler's *Modern English Usage* and in the belief that to write in a vague or ungrammatical style was to expose a stupid and confused mind, has changed his opinion in recent years. To be precise since the year 1947, when the Industrial Disputes Act received the imprimatur of the legislature. A knowledge of the grammatical meaning of words does now stand definitely in the way of understanding the meaning of the phraseology of industrial enactments. It does not help. It hinders. These rueful reflections are occasioned by a perusal of the recently published judgment of the Supreme Court dealing with the industrial dis-

putes in the Kanpur Mills. We are concerned in this note with a word and an expression. The word is "bonus" and the expression is "natural justice". Now every business executive is aware at this time of day that to suggest that the word "bonus" means just that and nothing more is simply flogging a dead horse. It does not connote its everyday colloquial meaning, nor its dictionary meaning, it does not connote something voluntarily given as an act of grace and not of right, it need not contain the element of bounty nor is it a gratuity. In fact its meaning in industrial legislation is the precise opposite of the grammatical meaning of the word "bonus". It means not a gift or a gesture of goodwill but a payment legally due and enforceable at law.

But there are strings attached which prevent it being regarded as a simple contract debt or as indistinguishable from wages or salary. It is, as defined by the Textile Labour Inquiry Committee, "a cash payment made in addition to wages. It generally represents the cash incentive given conditionally on certain standards of attendance and efficiency being attained." An excellent theoretical definition no doubt; and the business executive will be able to judge for himself how far the definition is divorced from reality and how often successful claims or rather demands for bonus or cash incentive to loyal and co-operative work are made where the only "standards of attendance and efficiency attained", are based on abstention from attendance altogether, go-slow tactics, indiscipline and actual strikes. If one may respectfully say so, it is satisfactory to observe that in this case the Supreme Court, rather sharply, called a halt to this latter tendency.

Their lordships, after quoting the essential *sine qua non* as to standards of attendance and efficiency, added that there were moreover "two conditions which have to be satisfied before a demand for bonus can be justified and they are (1) when wages fall short of the living standard and (2) the industry makes huge profits, part of which are due to the contribution which the workmen make in increasing production. The demand for bonus becomes an industrial claim when either or both of these conditions are satisfied."

There is a further limitation on the right to a bonus. It was enunciated thus by the Full Bench of the Labour Appellate Tribunal in 1950 and was referred to with approval by the Supreme Court in this case: "As both labour and capital contribute to the earnings of the industrial concern, it is fair that labour should derive some benefit, if there is a surplus after meeting prior or necessary charges". The following were prescribed as the first charges on gross profits: (1) provision for depreciation; (2) reserves for rehabilitation; (3) a return at 6 percent on the paid-up capital; and (4) a return on the working capital at a lesser rate than the return on paid-up capital.

The surplus that remained after meeting the above deductions would be available for distribution as bonus.

"It is therefore clear," said Bhagwati J., "that the claim for bonus can be made by the employees only, if as a result of the joint contribution of capital and labour the industrial concern has earned profits. If in any particular year the working of the industrial concern has resulted in loss there is no basis nor justification for a demand for bonus. Bonus is not a deferred wage."

The workmen in this case did actually claim that the mills had made a profit during the year in question. This claim was rejected by both the Industrial Court and the Labour Appellate Tribunal each of which held that the working during the year had resulted in a loss. Wherefore the Industrial Court threw out the claim for bonus. But it is astounding that in spite of its concurrence with the finding of the Industrial Court on the question of fact, namely, loss, the Labour Appellate Tribunal, in the word of Bhagwati J., later, "made a special case" for the workmen and, reversing the Industrial Court's decision, allowed the bonus. And it did so after accepting the principle above enunciated.

"As at present advised," said the Labour Appellate Tribunal, "a claim for bonus which had been rated on profits should ordinarily be determined on the basis of the profits earned in the year under claim and the scale of bonus should be determined on the quantum of profits earned in the year. So it would follow that if there is trading loss in the year under claim, bonus should not ordinarily be awarded."

Having with exemplary correctitude enunciated these principles and having found that the employers had sustained a trading loss for the year under claim, the Appellate Tribunal nevertheless allowed the bonus. It managed to perform this volte-face by the invocation of that vague, elusive, dangerous expression "natural justice". No one can define exactly what the phrase means. A great American judge, Mr. Justice Frankfurter called it "fundamentals of fair play". But law is not a game of baseball. Its essence is clearness, precision and consistency. The citizen is entitled to expect those qualities when he goes to law. "What is social justice?" said Bhagwati J., later. "It is not the fancy of any individual adjudicator; if it were so then ideas of social justice might vary from adjudicator to adjudicator over all parts of India."

Regarding the principle it had accepted that where there has been a trading loss, bonus cannot be claimed, the Labour Appellate Tribunal went on: "But in our opinion that should not be a universal rule. Considerations of social justice cannot be disregarded altogether in relations between capital and labour." No one in his senses would deny the truth of the last sentence. But, with great respect, it is just one of those vague ambiguous platitudes which lead us nowhere.

The Supreme Court disposed of it decisively. Said Bhagwati J.: "The considerations of social justice imported by the Labour Appellate Tribunal in arriving at the decision in favour of the respondent (workmen) were not only irrelevant but untenable. Social justice is a very vague and indeterminate expression and no clear-cut definition can be laid down which will cover all situations.... Without embarking upon a discussion as to the exact connotation of the expression 'social justice' we may only observe that the concept of social justice does not emanate from the fanciful notions of any particular adjudicator but must be founded on a more solid foundation.... The Labour Appellate Tribunal did not apply its own formula to the facts of the present case. It is significant to note that even while importing considerations of social justice the Labour Appellate Tribunal was oblivious of the fact that it was by their own acts of indiscipline and strike that the workers of the Appellant company themselves contributed to the trading losses incurred by the Appellant and it hardly lay in their mouth to contend that they were nonetheless entitled to a payment of bonus commensurate with the dividend paid to the shareholders out of the undistributed profits of the previous years." The award of bonus was set aside and the appeal was allowed with costs.

A DITCHER'S DIARY

conflict and tension. The report frankly admits that this is true but says, what I do not doubt is equally true, that one of the achievements of the college is precisely to help trade union leaders outgrow their prejudices and anguities. Men living together in such circumstances often educate each other as much as they are educated by their teachers. For example, I have heard it said that Indian trade unionists at the New Alipore College have learnt a great deal from their colleagues from Malaya who regard Indian trade unionism as rather backward. That condescension should thus be shown by "mere colonials" to free citizens at first caused some astonishment, but the truth is that when trade unions have as little to do with politics as they should, there can be wide discrepancy between a nation's political status and the progress of its trade unions.

An advertising campaign in the daily press has attracted some attention to an attempt to break the record for the overland car journey from Calcutta to London. Less notice has been taken of the establishment of a record the day before the present party left Calcutta. Brereton Greenhouse, a planter on one of Dunlop's rubber estates in Malaya, and John Woodcock, a civil engineer from Malaya, arrived in London on 11th May, 17 days 17½ hours after leaving Calcutta in a 1952 Land Rover. It is just 7,800 miles from Chowringhee to Leicester Square, and these two young men covered the distance in about the same time as it would take by more conventional surface transport. Jerry Jowett and Colin Wardle had hoped to do it in ten days, but since they have taken seven full days to reach Baghdad, they will scarcely manage it. This route was very little travelled before the war but in the last three or four years it has become increasingly popular, especially with English migrants to Australia and with Australians coming home from the Grand Tour of Europe in a London taxi cab. The automobile associations will now supply programmes for the trip as readily as they provide an itinerary for a journey from London to Bath. It sets the communications of Eastern India in perspective to recall that adventurous spirits can speed from Calais to Calcutta with never a care—and then find it next to impossible to drive to Dacca, the capital of the neighbouring state.

I was still chuckling at "Merlin's" account in the *Statesman* of competitors for public office who promise to live off next to nothing, when I read in the *Times of India* that a prominent gentleman is likely to be appointed Deputy Chairman of the new State Bank of India who will not draw any pay from that institution. "Merlin" had written of an aspirant to the Chief Ministership who undertook to live in the branches of a tree on the maidan, eating nothing but curried golf balls, and of another who promised, if appointed, not to live at all. This banker who is reputedly going to exercise one of the most onerous functions in the land for no remuneration must belong, I thought, to the same class of ascetics. Imagine my disappointment, therefore, when the news reached me the next day that the same banker is to accept a concurrent appointment as Deputy Governor of the Reserve Bank on a quite suitable salary. These matters are still at the stage of mere rumour, no definite announcement having been made by Government. All that the *Times of India* has got hold of is the report that the Deputy Chairman will send back his pay-check each month. I do hope, for the sake of my faith in the unselfishness of Well Known Socialists, that the other canard about the Deputy Governorship

of the Reserve Bank is quite untrue. Otherwise the general effect of nobility will be somewhat tarnished.

In view of the fact that the membership of the Institute of Chartered Accountants in England and Wales includes Indians, Pakistanis, Egyptians, Burmese, Malays, Singhalese, West Africans, men from the British Dominions and foreigners from Europe, it comes as rather a surprise to find the Institute being criticised in some quarters as maintaining a barrier against non-British applicants seeking to serve articles and pass the Institute's examinations. Nevertheless, the criticism has been such that the President refuted it quite categorically at a recent function, quoting as an example the case of the present President of the Institute of Chartered Accountants of India. Not all applicants to serve under articles are successful, of course, and since the criticism probably arises among the unfortunates, the situation certainly needs the clarification which it receives in the Institute's annual report in the form of an extract from the President's speech referred to above. He explained that the Institute does not itself have any vacancies to offer. The vacancies are in the offices of practising members and it is not every one of these who is able or willing to take an articulated clerk from overseas. In the first place there is a limitation on the number of articulated clerks a member may take at any one time. The number is limited in order to ensure, as far as practicable, in the interests of the clerks themselves, that the member gives adequate attention to their training. In the second place a member has many considerations to take into account in deciding whether he can spare a vacancy for an overseas candidate. He may have requests for places from the sons of friends or clients and this may well result in his list being full for some years ahead. He may be regarding his articulated clerks as the source from which his future partners and successors will be drawn, whereas an overseas candidate is likely to wish to return to his own country after qualification.

A member must also be able to assess the character and probable abilities of the prospective articulated clerk before he engages him. When he takes an articulated clerk a member becomes responsible for securing the future of the profession both as regards ability and quality and he therefore has a duty to the Institute and a responsibility to the public. He also has a responsibility to the clerk and he must consider carefully whether the clerk is likely to succeed in qualifying, however much the candidate may imagine that accountancy is really what he wants to do. These matters are difficult enough with young men whose educational background is known. They present an infinitely more difficult task in relation to young men from overseas about whom, of necessity, the member can know little.

One of the youthful entrants in an essay competition on a religious topic sent the editor of a British weekly the following brilliant summary of the ethic of modern Catholic intellectuals, like Graham Greene and François Mauriac: "Let us go and sin and not enjoy it. Then God will punish us, and we shall be happy". This competes, as the wittiest remark of the week, with a letter Sir Beverley Baxter wrote to the *News Chronicle* when Malcolm Muggeridge said he was not going to vote in the elections today: this declaration, said Baxter, is the most impressive thing "since the sad fate of the Vicomte de Beaumonts who, on hearing that the French Revolution had broken out, decided to ignore it".

HEAVY CAPITAL EXPENDITURE INESCAPABLE
SUBSTANTIALLY ENLARGED WORLD CONSUMPTION
SIR FREDERICK GODBER'S VIEWS ON OIL PRICES

Higher activity in all phases of the group's operations resulted in an increase in the volume of sales in 1954 of nearly 10 per cent, in world outside North America, and of 4 per cent, in North America. This improvement was reflected in an increase in group net income before taxation of £23 million. The

Stocks of materials have continued to fall—from £102 million to £92 million—despite the higher level of activities and some rising prices. This is due to the development in group companies of the most modern methods of material indenting and stock control, by means of which they have taken full

Nevertheless, these distorted "leakages," and the sensational criticism indulged in on the strength of them, engendered a good deal of interest in the subject generally, whereas probably the report itself

Total world oil consumption in 1954 showed a substantial increase over the 1953 level, for which

The wide range of these activities includes the considerable developments in marine exploration areas, of which drilling in the off-shore Texas and Louisiana concessions, in Qatar (Persian Gulf) and the Gulf of Paria (Trinidad) are examples. In the Gulf of Paria, where we operate with partners, oil

In February of this year an offer was made by Shell Chemicals Ltd. of £5 million for the acquisition of the entire issued share capital of Petrochemicals Ltd., and in full settlement of the claims upon the company. The terms of the offer were accepted, and Petrochemicals Ltd. has consequently become a group company. This acquisition of this interest gives the group an immediate entry into the chemical field in the United Kingdom which is considered a valuable addition to its present interests; it will also provide rights in certain new and important fields of chemical research.

Company Meeting

THE BRITISH PETROLEUM COMPANY LIMITED

RECORD SALES IN 1954

LORD STRATHALMOND'S STATEMENT

The Forty-sixth Annual General Meeting of the British Petroleum Company Limited will be held on June 9 in London, England.

The following is an extract from the circulated statement by the Chairman, the Rt. Hon. Lord Strathalmond, C.B.E., LL.D.:-

In accordance with the resolutions approved at the Extraordinary General Meeting of December 16, 1954, this is your company's first annual report and accounts to appear under its new name, The British Petroleum Company Limited.

The consolidated trading profit and other income for 1954 before providing for depreciation was £75,348,941 compared with £63,883,828 for 1953. From this figure provision has been made of £30,466,091 for depreciation, the corresponding figure for 1953 being £20,056,243.

After providing for debenture interest and £19,592,977 for taxation on profits, the amount available for reserves and dividends is £23,962,764 compared with £24,382,850 for 1953.

Your directors have placed £5,550,000 to general reserves, and have recommended a final dividend on the Ordinary Stock of 14 per cent., making a total for the year of 15 per cent. on the capital as increased by the capitalization last December of part of the general reserve.

Total capital expenditure during 1954 was approximately £55,000,000 including the following main items: Refineries £32,500,000, Tankers £9,000,000, Oil Exploration Interests £4,500,000, Marketing Interests £8,000,000.

Production

Crude oil production in Kuwait, Iraq, and Qatar was again increased in 1954, when our output from those sources totalled some 36,000,000 tons, compared with 32,000,000 in 1953. As from October 29, when the agreement between Iran and the Consortium companies took effect, to the end of 1954 our liftings from Iran were 440,000 tons, about one-third in crude oil and the balance in refined products. Our current liftings from Iran are at the rate of 5,000,000 tons per annum, including 2,000,000 tons of crude oil.

In the United Kingdom our crude oil production was 59,000 tons compared with 54,600 tons in 1953.

Exploration operations were increased during the year in the various overseas territories in which we have interests.

Refining

Our total refinery throughput in 1954, at 24,000,000 tons, was 4,000,000 tons greater than in 1953. Principal contributors to this increase were the new Aden refinery, which came into operation in July, 1954, and the Kent and Hamburg refineries. On February 1 last our new Kwinana Refinery in Western Australia was commissioned; that addition, together with the development of our other refining installations and interests, should achieve the figure of 30,000,000 tons which I mentioned last year as our expected total refining capacity by the end of this year.

In Great Britain, throughput in 1954 of our four refineries totalled 10,563,000 tons, against 9,327,000 tons in 1953.

The British Tanker Company's fleet now consists of 148 ships totalling 2,063,000 deadweight tons, as against 142 ships of 1,917,000 deadweight tons at this time last year.

Distribution and Sales

World demand for petroleum products, excluding Russia and her satellites, increased by about 5 per cent. in 1954, following the same trend as in the previous two years. This world figure would have been greater but for the slight business recession in the United States where the increase was limited to 2 per cent. In the eastern hemisphere, wherein lies the bulk of your company's interests, the increase in oil consumption in a year of generally high business activity was 11 per cent. above the 1953 level, compared with increases of about 8 per cent. in each of the two preceding years. This gain in eastern hemisphere trade, representing some 18 million tons, was matched by increased output of Middle East crude oil—particularly in Kuwait and Saudi Arabia.

The growth in refinery capacity in the eastern hemisphere last year of 24 million tons was more than adequate to cover the increased demand. About half of this increased capacity, including our new refinery at Aden, was situated east of Suez. With the commissioning of Kwinana refinery in Western Australia we have now reached the position where the output of our new refineries east of Suez together with our share of products from Iran has eliminated the long back haul from European refineries that was such an abnormal feature of our operations over the previous two years.

The group's sales of crude oil and refined products in 1954 were at a record level of 41 million tons, about one million tons greater than the previous peak figure achieved in 1950, the last year in which we were fully operating in Iran. Sales in 1954 represented an increase of nearly four million tons, or 10½ per cent. over 1953.

Marketing Outlets Increased

During the year the Group acquired the marketing interests in Europe and Africa of the Atlantic Refining Company of Philadelphia. This acquisition in addition to increasing our outlets in certain markets in which we are already established, provided us with an entry to areas new to the B.P. Group including West Africa and Portugal.

In India, Pakistan, the Middle East, South and East Africa and other markets bordering the Indian Ocean our outlet has continued to expand satisfactorily.

Our sales of aviation spirit have continued to expand, and the B.P. Aviation Service has again been entrusted with the task of providing in whole or part for the fuelling of many of the major international air lines, the armed services, and other flight operations in the countries covered by its growing network.

The B.P. International Oil Bunkering service continues to provide an important part of world bunker supplies.

Sales of our branded lubricants show a very satisfactory increase compared with 1953, both in this country and overseas, and our largely increased production is all being disposed of through our own marketing outlets.

In the United Kingdom the continued upward trend in industrial activity was reflected in a strong demand for petroleum products in 1954. Sales of fuel oil showed a marked expansion, and we are being called upon to contribute in an increasing degree to the country's industrial energy requirements.

Research

The work of our research and development establishments continues to maintain and enhance the company's reputation for products of the highest quality and performance as well as to keep the B.P. Group abreast of its competitors in the continually evolving techniques of finding, producing, transporting and refining crude oils.

Finance in India and Abroad

FINANCE FOR "THE SECOND INDUSTRIAL REVOLUTION"

BANKS AND "RISK CAPITAL"

SIR George Erskine, managing director of the world-famous finance house Morgan Grenfell and Company, is the first merchant-banker to become president of Britain's Institute of Bankers. In this year's presidential address he offered suggestions on banking practice that, probably, no head of an orthodox joint-stock bank would have dared to utter. (His suggestions were, indeed, promptly disputed.) What Sir George proposed for Britain was what has been practised for a long time on the Continent of Europe, in America, and elsewhere: more finance from the banks for industry. The problem is, of course, long-term, thus in no way related to the present monetary stringency which is causing difficulty to some industrial firms. It is a question whether, permanently, industry has enough finance for its development. There has been much talk in recent years of a shortage of "risk capital" in Britain, but the growth of saving has subdued anxiety on the subject. Sir George Erskine has said, however, that "we should regard the present circumstances as providing us with temporary respite in which to prepare to deal with the emerging shortage, and not be misled into imagining that no problem exists."

The British banks' admirable tradition of "liquidity" stands between them and their customers who need long-term finance. It can therefore be argued (though Sir George Erskine did not go so far) that the banks themselves impede the flow of savings to industry, because savings deposited with the banks are not freely distributed. The banks do, of course, advance money for indefinite periods, which may run into many years; but an advance of that character is not a proper basis for financing capital plans. Sir George Erskine suggested that loans might be granted for specific periods up to five years; and on such a basis, it would be possible to plan. Sir George suggested, also, that the banks might assist new capital issues, both by making advances to brokers and by taking up new shares as Government Departments absorb issues of Government stocks, releasing them gradually to permanent holders by judicious sales through the stock market. By this procedure the banks would merely oil the wheels of the capital mechanism. But Sir George believes that they should also provide permanent finance through the capital market, by broadening their investment policies to include debenture stocks and preference and even ordinary shares.

Banks' Reactions

Orthodox British bankers are horrified by the idea of providing permanent industrial capital in any form: their depositors' money is held on trust and must never, they believe, be exposed to any risk. But insurance companies (admittedly, they are not quite comparable, but the underlying principle is the same) are willing to invest a proportion—in recent years an increasing proportion—of their policyholders' money in ordinary shares, with the risk inherent in any industrial enterprise. One reason why attention turns now to the banks is that the insurance companies, though they may continue to increase the total of their investment in ordinary shares, cannot increase much further the proportion of their funds so invested; and it is the increase in the proportion (restoring, more or less, the prewar ratio between ordinary shares and Government stocks) that has provided relative abundance of money for new industrial issues in the postwar years.

Even, however, if the banks accept the principle of "risk capital", the problem of scarcity will not be solved merely by their change of policy. Nobody suggests that they can exchange into industrial shares a large proportion of their holdings of Government securities, which aggregate more than £2,000 million, or that they can transfer money from liquid assets such as Treasury bills. What Sir George Erskine pointed out, as a guide to the possibilities, was that if the banks diverted to industry only 1 per cent of deposits they would be making about £65 million available, and that, even if deposits did not increase, the banks could invest a net sum of £30 million a year in this way for 20 years and still tie up less than 10 per cent of their assets in industry in a permanent form. But even these figures are not very large in relation to a total of industrial and commercial securities on the London Stock Exchange valued well above £10,000 million. The fundamental problem is not how to direct savings into industry but how to provide enough savings in the first place. The accumulation of wealth in a few hands may have been socially undesirable (and it would certainly be politically impossible in present circumstances), but it did provide large surpluses for risk-bearing investment. Much larger savings may be required in the future than were sufficient in the past, and they can be provided only by aggregating large numbers of individually small amounts.

The Pursuit of Security

The difficulty is partly that most individuals have only a little left after the requirements of their standard of living are satisfied, but also that these small amounts are necessarily, for the most part, invested safely. They may be channelled into such institutions as banks and insurance companies, which can satisfy the needs of security by spreading risks, but, even so, only a relatively small part of total savings can be exposed to the risk of venture. This financial problem is common to many developing countries, and they will not all solve

it in the same way. It can be argued that Britain is peculiarly handicapped by the strictness of the banks in separating their resources from the requirements of industry—though they have modified their principles in recent years to allow themselves to provide long-term finance through such bodies as the Industrial and Commercial Finance Corporation and the Finance Corporation for Industry. There is no single simple solution of the problem, and any reasonable suggestion deserves careful study. For it is generally agreed that atomic energy and electronic processes have put countries such as Britain on the threshold of "the second industrial revolution", which must not be impeded by lack of capital.

LONDON FINANCIAL LETTER

POSSIBILITY OF A SECOND BUDGET

By Air Mail.

IN the course of the election campaign Mr. R. A. Butler made a remark that clarified his policy in the last weeks of office in the outgoing Government. "The last Budget", he said, "was short and pure. The next one may be long and complicated." Then he added: "When it will be I cannot tell you." On the rare occasions when an extra Budget is inserted in the autumn it is called an interim Budget, but in the peculiar circumstances before a general election it was the normal Budget that was the interim Budget this year. It was thought probable that if Labour won it would present a Budget in the autumn to implement its new policies, and Mr. Butler's remark was interpreted as meaning that his Conservative Party had the same idea in mind. That would account for the unenterprising character of the Budget in April and for the, nonetheless, risky character of its one important change, the reduction of income-tax. No attempt was made, at that stage, to assess and to perform what was needed.

The earlier impression, that the main task of monetary adjustment has been left until later in the year, is confirmed. It may be however, that fiscal

policy will play a more important part in it than was imagined. The idea that Bank rate will have to be raised again has certainly receded. Indeed, Mr. Butler's hint on the Budget gave rise to a belief that more tax concessions were in prospect—though a "long and complicated" Budget did not necessarily carry that implication. The problem itself remains. The overseas trade figures for April were interpreted at first sight as evidence that the stricter policy was working: the figure for imports, at £318 million, was £47 million less than March's. But April was a short month, and the daily rate was almost unchanged. More encouraging was the export figure, reduced only £20 million, to £253 million. But it is the high rate of imports that has to be watched; and it must still be doubted whether the latest monetary measures would be sufficient to check it if the commodity markets became firmer and importers were thereby encouraged to accelerate their buying.

Strain on the Banks

There is, however, as much evidence that the policy is working as could be expected at this stage. There is also evidence, as *The Financial Times* has pointed out in connection with one of its valuable surveys of banking and insurance, that new techniques of monetary control are developing. The growth of advances has not been checked; the clearing bank figure published in May, relating to the five weeks to 20th April, showed an increase of £44 million, compared with an increase of £12 million in the corresponding period of last year. But the banks are maintaining their liquidity ratios only with increasing difficulty around the conventional minimum of 30 per cent; and this convention is now officially recognised, so that the banks may not depart far from it even if they wish. It was said when Bank rate was raised that the authorities would have to supplement the rise by tightening credit. In 1951 it was the funding of Treasury bills rather than the rise in Bank rate that restrained advances, because the abundance of Treasury bills in the banking system had provided a comfortable liquidity basis for lending. This year, however, the banks have been starved of Treasury bills not by a funding operation but by diversion of bills from the banking system to ordinary companies—even individuals. And *The Financial Times* suggests that this diversion has become a

deliberate technique in the hands of the authorities.

The Bank of England has held the Treasury bill rate much closer to Bank rate than is customary, by maintaining such stringency in the bill market that the discount houses have frequently to borrow at Bank rate. When Treasury bills offered 3½ percent they were obviously attractive to firms that had never previously been interested in this kind of investment; and the rate was forced even higher, despite the demand for bills, which would normally have reduced it. There has been, therefore, a substantial transfer of deposits from the banks. Both for that reason and because fewer Treasury bills have been available to them, the banks' liquid resources have tended to diminish. The only course open to the banks was to sell gilt-edged investments, and the last statement showed that they had sold investments to a net total of £64 million during the period. Over three months they unloaded more than twice that amount. The effect on the gilt-edged market has been very evident. So the rise in short-term interest-rates has been transferred directly to the long-term capital market; where, however, its effects have been almost confined to the gilt-edged section.

Strength of Equities

The Banks have so far, apparently, sold mainly the early "dates", whose depreciation has been limited. (Not even "shorts" are liquid assets for the purpose of the liquidity ratio.) Discount houses have borrowed from the banks to buy these bonds from the banks, and (because loans to the discount market qualify as liquid assets) the banks have thereby become more liquid, although the discount houses offer "short" bonds as collateral for such loans. Though this procedure has left the main body of gilt-edged investments intact, the effects have spread through the markets, and it would not be easy for the banks to sell longer-dated securities in substantial quantities, even if they were willing to convert book losses into actual losses. It must be assumed, therefore, that their attitude towards applicants for loans will become still more resistant. Yet in the trend of ordinary share values there has been no hint that investors expect deflationary conditions in business as a whole. On the contrary, trade continues apparently unchecked in its advance; and it has not escaped notice that the programmes of both the big political parties have inflationary implications. The contrast is significant. It appears that something must give way this year: either the boom in trade or the balance of payments; and the investment market has assumed that it will not be the boom in trade. The solution is to make trade boom abroad rather than at home. But can exports be further stimulated while demand at home is so active?

THE CALCUTTA MONEY MARKET

ACTIVE CONDITIONS CONTINUE

Wednesday, 25th May.

A PROLONGED busy season seems to be in prospect. The demand for money remains strong and there are rumours of Government borrowing in the near future. The outstandings of the sugar mills are still rising and are now substantially higher than at this time last year. Many factories have stopped crushing, though mills in western U.P. are still busy. Despatches have been poor, probably because imports on Government account enjoy preferential access to the market. Advances against seeds, grains and cotton textiles are rising; accommodation against raw cotton is continuing and there is lack of demand from the jute mills. In the Calcutta inter-bank market the call rate quotes 3%.

Very few export bills have been sighted in the exchange department. The demand for remittance is average. Sterling weakened to Monday, when the local rate was adjusted to Rs. 480, but since then it has strengthened against the dollar and the local rate has been changed today to Rs. 479-8 T.T. selling per \$100.

Bullion was steady on good support. Silver advanced from the previous week's level of Rs. 161-12 to Rs. 162-14, quoted to-day. The rate for forward delivery was quoted at Rs. 161-15. The price in London advanced from 76d. to 78½d. The price of foreign silver in New York also firmed up from 87 to 90 cents.

Gold ruled steady in sympathy with silver and the price increased from Rs. 93-4 to Rs. 94-12. The sovereign at Rs. 61-1 showed a gain of 3 annas.

Tenders for Rs. 1 crore of three month Government of India Treasury Bills, which were opened on Wednesday, 25th May, 1955, totalled Rs.

1,55,00,000. The average rate of acceptance increased from Rs. 2-9-0 to Rs. 2-9-1 percent per annum. Tenders at Rs. 99-5-9 percent were accepted in full and those at Rs. 99-5-6 were allotted approximately 67 percent. Tenders for a further Rs. 1 crore of three month Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 30th May, 1955. During the week ended 20th May Government of India Treasury Bills for Rs. 14,81,75,000 were sold in favour of the Reserve Bank of India.

A fall of Rs. 8.68 crores in notes in circulation to Rs. 1,322.41 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 20th May, 1955. The total note issue was Rs. 26 lakhs higher at Rs. 1,339.97 crores. Notes held in the Banking Department consequently rose by Rs. 8.94 crores to Rs. 17.46 crores. Deposits of the Government of India increased by Rs. 3.30 crores to Rs. 55.23 crores but other Government accounts fell by Rs. 4.25 crores to Rs. 14.99 crores. Balances of commercial banks at Rs. 50.87 crores showed a rise of Rs. 2.90 crores. Balances held abroad were up by Rs. 1.51 crores to Rs. 53.58 crores and investments dropped by Rs. 19 lakhs to stand at Rs. 41.28 crores. Other loans and advances declined from Rs. 44.52 crores to Rs. 40.47 crores, of which advances to scheduled banks against usance bills fell from Rs. 33.43 crores to Rs. 30.05 crores. These advances have amounted to Rs. 104.58 crores since 1st January, 1955. Ways and means advances stood at Rs. 80 lakhs (same).

The statement of the position of scheduled banks for the week ended 13th May, 1955, discloses Demand and Time liabilities at Rs. 561.37 crores (Rs. 7.55 crores on account borrowings from banks) and Rs. 385.89 crores (Rs. 1.90 crores) compared with Rs. 580.95 crores (Rs. 8.23 crores) and Rs. 383.80 crores (Rs. 2.10 crores), respectively in the previous week. Cash has increased by Rs. 71 lakhs to aggregate Rs. 34.83 crores, while balances with the Reserve Bank have decreased by Rs. 24 lakhs to stand at Rs. 45.97 crores. There is a drop of Rs. 45 lakhs in investments to Rs. 344.28 crores. Advances and bills discounted at Rs. 626.24 crores reveal a decrease of Rs. 25 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.4 percent and 64.7 percent against 8.3 percent and 64.9 percent.

The return of the Imperial Bank of India for the week ended 13th May, 1955, shows a drop of Rs. 2.92 crores in total deposits to Rs. 212.26 crores. Investments in Government securities are down by Rs. 67 lakhs to Rs. 90.94 crores, while other authorised investments remain unchanged at Rs. 11.30 crores. Advances, including loans, cash and overdrafts, and bills discounted and purchased have fallen by Rs. 1.09 crores to aggregate Rs. 126.25 crores. Cash and balances are, in consequence, shown at Rs. 17.68 crores or Rs. 59 lakhs higher.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during April, 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise* excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 38,65 lakhs; re-exports (transit trade—Rs. 3 lakhs) Rs. 42 lakhs; imports (transit trade—Rs. 1 lakh) Rs. 49.73 lakhs; total trade Rs. 88.80 lakhs. *Treasure*: Export of currency notes Rs. 44 lakhs; export of others nil or negligible; import of gold Rs. 1 lakh; import of currency notes Rs. 1.27 lakhs; import of others nil. *Balance of Trade*: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 10,69 lakhs.

The following is a statement of the cash balances of the Central Government on the last day of February, 1955:

	Rs.
(1) At the Reserve Bank of India	53,60,76,000
(2) At treasuries in India	1,92,43,000
(3) In England (sterling converted at 18d. the Rupee)	2,88,65,000
Total Rs.	58,41,84,000

Our City Cable

STOCK MARKETS CHEERFUL INDUSTRIALS AND OIL SHARES IN THE LEAD

London, 24th May.

CHEERFUL conditions prevailed on the London stock markets over the past week under the leadership of industrial equities and oil shares. Although a note of caution was produced by the recurrent labour troubles election hopes more than offset their adverse effects. Further good company news and improvement in the international situation contributed to the improved sentiment. The outstanding feature of the market was the strength of industrial equities where business was reflected in sharp rises in prices of shares concerned, with Rolls Royce particularly responding to their good results. Gilt-edged stocks became quiet and tended easier with weakness of sterling rates but later rallied on the improved rates of the latter. Foreign bonds were mainly quiet.

Rails were in selective demand but dollar stocks fluctuated with Wall Street. Kaffirs were subdued although Free State issues attracted some attention. Diamonds tended higher while coppers were firmer on balance. Oils were strong under the lead of British Petroleum and Burmah. Rubbers and teas were subdued.

The Money Market

There was no sign of any easing in the tight short loan position during the past week. Banks were still operating at the minimum level and to cover commitments market houses at times had to obtain assistance from the central institution on Bank rate terms. While it was evident that the authorities were maintaining a tight rein, it was made clear on Thursday when an acute shortage arose that they did not want short term rates to go higher than the present level and they came forward with considerable help: the general level of day-to-day money was on the basis of 3-3/4 to 4 percent. Applications for treasury bills totalling £375,595,000 of which £240 million was allotted at an average rate of 7½s 4½d compared with 7½s 4½d in the previous week. This week £250 million is on offer. The Bank of England return for the week ended 18th May showed notes in circulation about £5 million lower at around £1,735 million, but bankers' deposits about £6 million higher at around £257 million.

City Confident of Tory Victory

The Investor's Chronicle Market Newsletter writes: "Great confidence in a Conservative win explains the remarkable firmness of the London stock exchange. Economic consequences of a Socialist Government would be very drastic for shares, yet there are buyers about. Accordingly, prices should hold steady until the election. Those who believe that the Conservatives are safe winners could buy almost any of the blue chips with prospects of modest profit during the week's account starting from 18th May.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 18th May showed gold stocks higher at \$21,673 million. Foreign deposits rose by \$19 million and investments by \$39 million. The Federal Reserve bought \$1,687 million of notes but sold \$1,686 million of certificates, \$90 million of bills and its remaining \$56 million of Government securities previously held under the repurchase agreements. Total discounts and advances to member banks fell by \$41 million to \$324 million, while their excess reserves rose by \$72 million to \$592 million. Their daily average of excess reserves fell by \$103 million to \$660 million, while their daily average borrowing fell by \$53 million to \$226 million. Business loans of the New York City banks fell by \$7 million to \$7,637 million compared with a fall of \$23 million to \$7,841 million a year ago.

New U.S. Security Issues

A large and varied list of new corporate security issues will come to the U.S. stock market this week, with eight debt offerings worth more than \$137 million, two preferred stock issues worth \$31 million and a number of new common stock issues offering. Last week's new issues totalled \$73,100,000. Biggest of this week's offerings will be \$60 million worth of Detroit Edison Company general mortgage bonds due on 15th May 1980. Lockheed Aircraft will offer \$30 million worth of convertible debentures.

Hongkong Gold Recovery

Values on the Hongkong gold market eased earlier in the week but rallied towards the end. The main factor of improvement was the weakness of the sterling exchange rate against the U.S. dollar. Values at the close of the week were slightly higher on balance. Carryover charges remained in sellers' favour totalling 155 cents. Official offtake was 5,170 and unofficial 10,230 ounces. Arrivals at Macao were reported to be 25,000 ounces, while forward contracts were fixed at \$(U.S.)37.75 c.i.f. Macao.

London Dock Strike Effect

London freight market operators consider that unless the dock strike is prolonged it will have little or no effect on the tramp shipping market. Shipowners were unusually reluctant to fix their vessels for cargoes to the U.K. due to a lack of bulk cargoes available for outward voyages and even when fixtures are made they usually include

North European options so that vessels can be diverted. Cargo liner companies would be badly affected by delays in loading and unloading and by having either only par cargo or no cargo at all. Tramp shipping, however, might eventually benefit if export cargoes pile up during the strike forcing liner companies to charter tramps on time charter basis to clear warehouses.

Rise in Rubber

A fair general enquiry and increased interest in nearby rubber, prompted by fears of dock strikes in the U.K., caused London prices to harden sharply early in the period to 19th May. Eastern offers were made sparingly at higher prices due to labour disturbances at Singapore. When the more urgent business had been arranged and opinion strengthened that the dock strike was less likely, values moved irregularly downwards. Near positions lost part of the interim premium but on the strike issue being still uncertain, closed about 7/8ths of a penny higher on balance, while distant deliveries were about unchanged on the period. It is understood, that tightness in the spot positions was also accentuated by the reported offtake in connection with the recent Soviet purchases. In the sole crepe market, moderate home and Continental factory orders stiffened holders' attitude and business was done at a small advance. No 1 smooth ½ in. on the spot was quoted 1d a lb. dearer at 4-1/2d.

Civilian Use of Titanium in U.S.A.

The U.S. General Services Administration announced the award of two experimental contracts to produce and process titanium. One con-

tract with the National Research Corporation and Monsanto Chemical Company would test a new fused salt process for production of a pilot factory with a capacity of 1,000 lbs. of titanium daily. Under the second contract with Hercules Incorporated of Cleveland, Ohio the company would regenerate titanium from impure metal using its own patented process. Almost all titanium produced in the United States is allocated to defence needs but with the output increasing the Administration and Commerce Department are sponsoring the use of the metal in civilian products. The two contracts are awarded to see how difficulties of "contamination" with other elements during production can be overcome.

New Titanium Production Process

A British company is testing a new process for producing titanium metal, according to the National Physical Laboratory of the Department of Scientific and Industrial Research in its report for 1954. The new process is an electrolytic one and involves the use of different principles from the orthodox Kroll process which utilises magnesium or the process adopted in the new Imperial Chemical Industries' titanium production plant, where sodium is used in extraction of the metal. During the year, the report states, assistance was given to a firm "in assessing the quality of titanium metal" produced by the new method. Moreover, the report says, some very satisfactory samples of titanium produced by electrolytic method were examined. This method of extracting pure titanium from its ores has also been investigated in America.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to March, 1955. Compared with February the March index for Government Securities remains unchanged at 97.8 points, while that for preference shares reveals an increase of 0.7 points.

There were increases in cottons 4.5 points, coals 4.1 points, jutes 7.1 points, cement 5.0 points, engineering 12.1 points, tea 15.3 points, papers 56.3 points, sugar 10.0 points, and miscellaneous 6.7 points, while banks, and minings and oils decreased by 1.8 points and 0.3 points respectively.

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 8.4 points during March, 1955.

Stocks and Shares

DULL CONDITIONS RETURN

SELLERS DOMINATE IN TEA: BONDS FIRM

Wednesday Evening.
THE stock exchange has had a dull week, with very little business passing and with prices easier where changed. The only features were Indian Copper which have improved to Rs. 3-11-6, and British India Corporation shares which now quote Rs. 9-1 because of continuing support from one interested quarter. The leading gambling counter, Indian Irons, was quieter today at Rs. 33-7. Mr. Deshmukh's forecast that during the second five year plan the Government would have to collect Rs. 100 crores in extra taxation has dampened speculative enthusiasm.

Details of the week's trading follow.

The gilt-edged market ruled firm throughout and there was a further marking up of prices though buyers were somewhat hesitant at the higher levels. Three percent Loan 1986 after easing to Rs. 80-10, recovered at the close to Rs. 80-11 white 3% Non-terminable Paper was stagnant at around Rs. 80-3. In the short-dated group the enquiry for 3% 1957 and 1958 was maintained at Rs. 99-8 and Rs. 99-7, with few declared sellers. Among medium-dated loans, 3% National Plan Loan improve to par while 3% 1963-65 and 1964 were both better by one anna at Rs. 94-2 and Rs. 94-1; 2½% 1961 was taken higher to Rs. 92-2 while 2½% 1960 was asked for at Rs. 92-10. Long-dated loans remained unchanged with the Reserve Bank still selling 3% 1966-68 at Rs. 90-14 and 3% 1970-75 at Rs. 87-1. Provincial loans ruled steady but once again little business was reported and the further rise in prices failed to attract sellers. Both 4% Madras 1963 and 1964 were marked up to Rs. 100-12 and 4% U.P. 1963-64 were also better at Rs. 100-7; 4% West Bengal issues were in demand at around Rs. 100-6. Other State loans were unchanged.

There was a strong demand for selected jute and miscellaneous preference shares and buyers were willing to pay Re. 1 above previous quotations. In jutes, Auckland 4½% changed hands at Rs. 74 and Belvedere were taken at the higher rate of Rs. 120-8 and Kinnison at Rs. 119. Amongst miscellaneous issues a small lot of Alkali & Chemical was crossed at Rs. 107, Calcutta Electric was wanted at Rs. 12-8 and Indian Iron and Steel at Rs. 109. Jardine Henderson changed hands at Rs. 78-8. Karanpura Collieries were done at Rs. 69 and Martin Burn were crossed at Rs. 104-12. Metal Box were taken at Rs. 96-8, New Victoria Cotton at Rs. 3-2 and Richardson & Cruddas at Rs. 84. Rohtas Industries 7½% and 'P' Preference changed hands at Rs. 125 and Rs. 66-8. Shaw Wallace were taken at Rs. 86.

In the Banking section Imperial Bank Fully-Paid were quoted at Rs. 1695 and the Partly-Paid between Rs. 414 and Rs. 418. Punjab National Bank were done at Rs. 42. United Bank of India 'D' shares at Rs. 4-7 and United Commercial were marked at around Rs. 44-4.

In the railway section Howrah-Amta changed ownership at Rs. 72-4 and Shahdara-Delhi at Rs. 151-8. X.D. Dehri-Rohas moved between Rs. 10-10 and Rs. 10-12.

The only feature in the cotton section was Elgins which met with some enquiry at Rs. 18-12. Cawnpore Textiles were marked at Rs. 8-8, Dunbar were quoted at Rs. 208 and Kesoram Cotton were dealt in on an ex-rights basis at Rs. 13-4. New Victoria changed hands at Rs. 1-7 and Swadeshi Cotton preferred Ordinary at Rs. 9-3.

In the coal section Katras Jheriah improved to Rs. 51 while Burrakur fluctuated narrowly around Rs. 12-10. Bengal came to hand at Rs. 49-7 and Bokaro & Ramgur on interested buying improved from Rs. 13 to Rs. 14-12. Central India were marked at Rs. 7-8 and Western Bengal were subordinated at Rs. 7-4. Business was reported in Equitable at Rs. 30-4 and New Beerbhoom at Rs. 19. New Manbhoom were easier at Rs. 8-8. Pench Valley changed hands at Rs. 22-14 and Rewa were lower at Rs. 19.

The depressed condition of the jute goods market was responsible for the dullness in the jute section for yet another week. Howrah fluctuated narrowly around Rs. 30 to close at Rs. 29-12. Here is a chart showing the more important price movements:-

	Opening 18-5-55.	Closing 25-5-55.
Anglo-India	215	210
Barnagore	178	172
Budge-Budge	182	175
Chitavalsah	14 3	14
Ganges	103 8	102
National	33 7	33 2
Nuddea	54 12	55 4

Electric supply shares were steady throughout the session although little business was reported. Agra Electric improved to Rs. 163. Calcutta were done at Rs. 15-4 and U.P. at Rs. 159.

There were no features in the sugar section and prices idled around last week's levels. Carew were quoted at Rs. 12 and Cawnpore at Rs. 20-2, Champaran at Rs. 30-12 and Durbhanga at

Rs. 15-12. Dyer Meakin Breweries changed hands at Rs. 6-6. Belsund at Rs. 9-15 and Ramnugger Cane at Rs. 23-2.

In the engineering section Indian Iron & Steel shares at one time improved from Rs. 33-9 to Rs. 33-14 to close lower at Rs. 33-7. Britannia Building were taken at Rs. 8-8. Burn & Company at Rs. 271 and Bhartia Electric Steel at Rs. 15-3. There were sellers of Indian Galvanizing at Rs. 23-12. Marshalls were unchanged at Rs. 6-8 as were Richardson & Cruddas at Rs. 18-2. Indian Standard Wagon were taken at Rs. 129. Jessop & Company were steady at Rs. 37 and Kumar-dhubi Engineering at Rs. 12-2.

In the miscellaneous section Bengal Paper changed hands at Rs. 65 x.d. while Orient Paper fluctuated narrowly around Rs. 27 to close at Rs. 27-2. Shree Gopal Paper was steady at Rs. 16-12 as were Titagur at Rs. 44. Sone Valley were done at Rs. 7-14. New Asiatic at Rs. 5-13 and a small lot of Triton was put through at Rs. 160. India General Navigation were fairly steady at Rs. 93. India Steamship changed hands freely around Rs. 7-5 while Port Shipping was offered at Rs. 12-9. Alkali & Chemical were quoted at Rs. 15-12 and there were sellers of Angelo Brothers at Rs. 17-12. Assam Saws were quiet at Rs. 5-4. Britannia Biscuits were marked at Rs. 12-8 and Bararee Coke at Rs. 20. British India Corporation continued to meet with interested buying and improved further to Rs. 9-1. There were small buyers of Birds Investments at Rs. 17-13. Clive Row Investment were done at Rs. 9-13 and Eastern Investment at Rs. 160. Imperial Tobacco changed hands at Rs. 11-4. Indo-Burma Petroleum at Rs. 133-8. Jardine Henderson at Rs. 115. Indian Cables were a strong feature rising further to Rs. 27-4. Martin Burn were

yes, it is my plan?

REVIVAL OF AN OLD PROBLEM

Britain has been reminded of this problem again recently by the International Bank's loan to Australia, in consequence of which large quantities of capital goods (mainly for agriculture and transport) are being purchased in America, though most of those goods could have been obtained in Britain. British exporters have often complained that the Bank's dollar loans give a big advantage to American trade. When Britain herself exported capital on a large scale her trade was stimulated likewise. It is admittedly difficult to advocate

SIGNIFICANT DEVELOPMENTS

SOON

(FROM A SPECIAL CORRESPONDENT)

Numerous Organisations

Under the impact of the current drive for rural welfare, it is but natural that simultaneously with the economic development of the villages, schemes for social and community welfare in the rural area should receive attention. In response to this need, the Central Social Welfare Board has formulated a rural welfare extension scheme as a valuable supplement to the community development projects and the national extension services, to bring some essential welfare services to the rural population, particularly for specified groups like women, children, the handicapped and the delinquent. An amount of Rs. 100 lakhs has been budgeted to be spent over the next five years for the purpose of the rural welfare schemes, through the establishment of 350 welfare extension projects, one in each district in the country, and each project covering

Close Liaison

At the higher levels of social welfare administration too, significant developments are in the offing. At present, while Social Welfare Advisory Boards exist in all the 28 States, three States—Madhya Pradesh, Uttar Pradesh and Hyderabad—have social welfare departments under qualified Directors. In some other States, there are departments which look after some aspects of welfare work, like women's welfare or tribal welfare. The expanding interest in social welfare is expected to result in the formation in the near future of full-fledged departments of social welfare in other State also and, in consequence, greater co-ordination between the activities of the State's Social Welfare Advisory Boards and the State social welfare departments should result.

DR. B. C. ROY URGES RADICAL CHANGES

(FROM OUR NEW DELHI CORRESPONDENT.)

Amplifying his views, Dr. Roy said:—

Finding the Resources

work in already installed capacity of plant and utilise equipment to the full without fresh investment. This can be done by working more shifts or taking over idle factories. Similarly, in the vast sector of small-scale and petty production, semi-skilled or even unskilled labour, now unemployed or under-employed, can be put to work available land and existing handtools and craft implements more intensively than such land or equipment is being used now. Then, in both sectors, more wealth can be immediately produced without first making an encroachment on current consumption.

"We have no calculation of this amount, but it must be small. In practice, it will not be possible to appropriate the whole of even this amount for new saving, because the demand for some enlargement of immediate consumption, such as of food, will be irresistible. It would also be expedient to concede this demand in the interest of balanced growth.

Plans too Large

"All three papers are agreed on the manner in which the total proposed investment of Rs. 5,600 crores is to be allocated: Rs. 1,400 crores will go to industry, including Rs. 100 crores to factory consumer goods and Rs. 200 crores to household and hand industries. The balance of the industrial allocation will be for the manufacture of producer goods, namely iron and steel, heavy machinery, cement, chemicals, fertilisers, synthetic petrol, minerals and prospecting, aluminium and the expansion of existing state enterprises.

"The next largest allocation out of the total investment will be to what is called construction, namely, residential houses, schools, hospitals and public buildings; Rs. 1,350 crores are provided under this head, of which as much as Rs. 1,150 crores will be the responsibility of the private sector. Electricity will take Rs. 500 crores, transport and communication Rs. 900 crores, agriculture and irrigation Rs. 950 crores. Buffer stocks will be built up to moderate price fluctuations and will require an investment of Rs. 500 crores.

"What do these doubts signify? Work worth Rs. 5,600 crores will be taken up, but consumable results may not be expected during the five-year period, except from a part of the outlay of Rs. 950 crores on agriculture and irrigation and from the investment worth Rs. 300 crores on consumer goods. What is disbursed to workers in the non-consumer goods undertakings will need to be spent on consumer goods and will create a high demand for them. How is this to be met without a steep rise in their prices, leading to a clamour for a further rise in wages and thus to a vicious spiral of inflation? Are we to clamp down a Draconian regime of rationing and control in every sphere?

“The strategy recommended to overcome this problem is to take the surplus away from agriculture and small-scale consumer-goods enterprises to meet the consumption requirements which will arise in the producer-goods industries. This is referred to in a vague way as a ‘Common Production Programme’ in one paper, but the other papers are more explicit. This would ultimately mean forced saving through State bonds.

"It will be impossible to apply this strategy for two reasons. The surplus which can be raised

"On the other hand, there is a way in which both agriculture and small-scale industry can expand their output with very little call on new capital outlay at the start. The existing capacity of land and craft equipment can be worked more fully to produce extra goods to satisfy many simple but pressing needs. Such extra output will not come up to the standards of city customers, but will fulfill many unsatisfied local needs. Local producers in different lines can be brought together to meet mutual requirements and be ascertained whether their extra outputs can be set off against one another.

West Bengal's Scheme

"This is a scheme which has already been put into practice during the last three months in West Bengal and has made rapid headway. The extra wealth which has been created in this way has meant saving of cash previously spent on purchasing similar commodities from outside. The new saving is necessarily very small and very local at the outset. But the way has now been found and the process has started. And this cash saving is now being offered as security for loans to finance technical improvement in rural industry and agriculture leading to increased efficiency and still larger, better and more diversified output.

"The increasing financial requirement arising from such expanding village enterprise can be translated in terms of raw materials, processed, stored, finished production, ingredients, improved tool and equipment and cheap power. Co-operatives in a process of back calculation, we can then estimate the supplies which will be needed of coal, iron and steel, yarn, machines for making tools, irrigation water, electricity and so on. Such supplies will have an assured market, because the surplus wealth coming from villages and workshops will be willingly offered in exchange for them. We can then deduce our targets for heavy industries also by working further back.

"The demand filtering down from increased production in agriculture and small-scale enterprises will be the major determinant of targets in different lines of investment. The wage rate, however, will be the only determinant. Labour will not, gaged in making capital goods, in construction works, in transport, electricity undertakings, commerce and professions will also need to satisfy their consumption requirements. These can be mostly met from the output of factory-made consumer goods. The output of the small-scale hand-made consumer goods will be largely absorbed in the local areas themselves. Hence, the output of consumer goods in organised industry will also need expansion. Here too, the beginning will be in fuller use of installed capacity. But continued expansion will demand new installations also, which will call for new capital in different lines. The different demands arising in this sphere will also have to be taken into account in drawing up our overall pattern of investment outlay.

"It is only increased production which creates increased demand, and increased supplies can be planned only on the basis of such demand. In the beginning, increased production will have to depend mainly upon fuller use of existing capacity and only to a small extent upon investment in new capacity, because our investible surplus is meagre. Our ambitions should be stated in the light of these facts. The approach made in these papers will have to be radically altered and the pattern of targets set in them drastically recast for this reason."

INDUSTRIAL RAW MATERIAL IMPORTS
EXPECTED TO INCREASE

MORE CONSUMER-GOODS IMPORT CONTROLS

(FROM OUR NEW DELHI CORRESPONDENT)

THE six-monthly meetings of the Import and Export Advisory Councils were held here last week, the Commerce Minister, Mr. T. T. Krishnamachari presiding. From its very inception, the Import Advisory Council has tended to become an import-controlling body thereby highlighting the point of view of industry as opposed to that of the consumer or of the import trade. The Deputy Minister, Mr. Nityanand Kanungo, who opened the proceedings, disclosed that while the import of industrial raw materials was stepped up from Rs. 288 crores in 1953 to Rs. 329 crores in 1954, the import of the essential goods declined from Rs. 188 in 1953 to Rs. 153 crores in 1954. He added, "as our economy develops and industrialisation progresses, the pattern of our import trade will be characterised by a higher level of imports of industrial raw materials." The suggestions made by the members of the Council fitted into this pattern. Generally speaking, there was a demand for the liberalisation of imports of industrial raw materials and for the curtailing or banning of imports of consumer goods. There were 162 suggestions for the liberalisation of imports from the representatives of the import trade. Against this the Federation of Indian Chambers of Commerce mostly advocated the restriction or banning of imports in order to encourage indigenous production. In the field of consumer goods, the items for which the Federation asked for further control were toilet soap, writing and printing paper, hand-knitting wool, cotton sewing thread, socks and stockings made wholly of silk or artificial silk, woollen hosiery and woollen knitted apparel, safety razor blades, domestic refrigerators, air conditioners and smokers' requisites made of aluminium.

The federation also demanded that the import of trade catalogues and advertisement circulars for goods manufactured within the country should be banned. It also urged that trade interests should be fully consulted before the Government decided to import large quantities of ghee at cheap prices from the United States of America, the possible repercussions of which would be to reduce the price of locally produced ghee. On the other hand, the Federation urged the liberalising of imports of diesel engines of up to four horsepower, of thirty horse-power and above and of marine types. Mr. A. R. Bhat demanded the liberalisation of imports of vegetable and flower seeds on the ground that their present prices are 100 percent higher than the pre-war prices. He said he would not mind, if import duty were raised, provided their import quotas were doubled. The extent of the export trade during the 14 months ended February 1955, will be evident from the following.

The total quantity of mill-made cotton piece-goods passed for shipment during 1954 was 920 million yards as against 700 million yards during 1953; an increase of 220 million yards. Items of cloth which are not allowed freely for export are olive green cloth, mineral khaki cloth, flannelette pull-through cloth, mosquito netting, lungi cloth and umbrella cloth of coarse and medium counts. The views of the Government are as follows:—

Olive-green cloth: For various reasons it has been necessary to prohibit the export of olive green cloth of any shade. It is not possible to relax the restrictions.

Mineral khaki cloth and apparel made thereof: The licensing procedure and other terms of allocation of export quotas remain the same as existed during July-December 1954. A quantity of one million yards each of grey drill and cellular shirting processed into mineral khaki shawl by factories other than mills has also been earmarked for export during the current licensing period. It is not advisable to allow free exports of mineral khaki cloth as it is likely to affect supplies in the internal market.

Flannelette pull-through cloth: This variety of cloth is in short supply and is required for defence purposes. It has, therefore, been decided to ban the export of this material outside India since November 1954.

Mosquito nettings-nets: A quota of 750,000 yards has been fixed for export of square-mesh mosquito nettings for the period January-June 1955. Licences are issued to mills or other nominees on a "first-come-first-served" basis subject to a maximum of 30,000 yards. A quantity of 170,000 yards has been licensed so far. The production still being limited, it is not possible to allow free exports. As regards round-mesh mosquito nettings or nets, licences are issued freely within a ceiling of 364,000 yards fixed for the current licensing period subject to a maximum of 50,000 yards to each exporter. A quantity of 100,500 yards has been licensed so far. The demand for round-mesh mosquito nettings and nets and square-mesh mosquito nettings and nets is not appreciable.

Cotton Piecegoods Exports

Exports of cotton piecegoods are mainly effected to Aden, Australia, British East Africa,

British West Africa, Hongkong, Indonesia, Malaya, Persian Gulf ports, the Sudan and the United Kingdom. The actual exports of cotton piece-goods to foreign countries have risen by 245 million yards during 1954 as compared with the exports during 1953. The rise was particularly noticeable in the case of the United Kingdom, Australia, British East Africa, British West Africa, Ethiopia, Rhodesia and the Sudan. The corresponding figures of exports for these destinations during the calendar years 1953 and 1954 are as follows:—

Exports from India during
(in million yards)

	1953	1954
United Kingdom	20.35	125.19
Australia	32.50	55.53
British East Africa	63.93	96.93
British West Africa	54.07	70.39
Ethiopia	7.21	31.23
Rhodesia	9.91	17.24
Sudan	46.13	79.72

Handloom Cloth: Handloom cloth continues to be under Open General Licence for export purposes. The main destinations to which exports have been made are Ceylon, British, West Africa, Aden, Persian Gulf ports, Malaya, Saudi Arabia and the Sudan. The quotas of raw cotton from 1954-55 crops and old crops announced for export during the cotton season September 1954 to August 1955 are as follows:—

1. Bengal Deshi	100,000 bales.
2. Mathias, Kalagins, Dholeras, Central India Deshi, C.P.I C.P. II and Oomra Deshi.	75,000 "
3. All varieties of Indian cotton of 1953-54 and earlier crops of 3/4 inch in staple and below.	25,000 "
4. All varieties of Indian cotton of a staple length 3/4 inch and below of any crop (old or new)	100,000 "

The quantities licensed and passed for shipment up to 31st March, 1955, against the ceilings fixed, are as follows:—

Variety.	Quantity Licensed	Quantity passed for shipment.
1. Bengal Deshi	96,203	52,262
2. Mathias, Kalagins, Dholeras, Central India Deshi, C.P. I C.P. II and Oomra Deshi	72,343	28,195
3. All varieties of cotton of 1953-54 and earlier years	23,940	1,671

Raw Wool: Export of Indian raw wool is regulated under the quota system. The exportable surplus for the year 1954-55 (October-September) is estimated at 25 million lbs. A quantity of 14 million lbs. was released for export during the period 1st October, 1954 to 31st March, 1955.

For the current half year (April-September 1955) a quantity of 11 million lbs. of raw wool has been released and licensed. Actual exports of Indian raw wool in the last few years have been as under:—

Year.	Hessian	Sacking	Others	Total
1951-52	325.1	317.7	34.4	677.2
1952-53	388.1	328.0	40.8	810.9
1953-54	289.8	332.6	25.7	648.1

Jute: It is pointed out that there does not appear to be any particularly great demand for Pakistani jute at present, partly because there is enough supply of Indian jute available and partly because of the difference in prices. The level at which prices have been maintaining themselves for some time is considered on the high side. At the same time, there has been sufficient incentive to grow more jute and there are expectations of a good crop next year. The reports available so far show that the condition of new crop is satisfactory.

The picture of jute goods is gratifying. Both exports and production have improved. Sacking exports, which at one time were causing anxiety to jute mills, have greatly improved. The following statement shows the upward trend in exports:—

Year.	Hessian	Sacking	Others	Total
1952-53	325.1	317.7	34.4	677.2
1953-54	388.1	328.0	40.8	810.9
1954-55 (July-March)	289.8	332.6	25.7	648.1

The following statement shows the average monthly export.

Year.	Hessian	Sacking	Others	Total
1952-53	56.4	67.6	7.2	131.2
1953-54	64.0	77.3	8.3	149.6
1954-55 (July-March)	48.3	55.4	5.1	108.8

This shows distinct improvement in exports. As will be seen from the following figures, export to the U.S.A. has been well maintained:

Year	Total	Average monthly exports.
	(in '000 tons)	
1952-53	185.8	15.5
1953-54	181.6	15.1
1954-55	87.4	14.6
July-December		
January-March	51.6	17.2

Argentina has been showing steady interest in hessian, and the offtake of many sacking-consuming countries has also increased. With higher production and improved exports the jute goods industry is now in a fairly satisfactory position. The competition from European manufacturers as well as the new industry in Pakistan continues. At the same time, the Indian Jute Mills Association, with the assistance of the Government, is carrying on a successful campaign for increasing the consumption of jute goods not only in traditional lines but also by finding out new uses for the jute products. In the present context of keen competition, not only from the jute industries in other countries but also from substitutes, it is only through cheapness and a sustained sales campaign that export can be maintained at a satisfactory level. The modernisation of jute mills is progressing. During the first three months of 1955 alone 22 mills have received import licences for modern high-speed jute mill machinery, etc. for about Rs. 4 crores. An important event in this connection is the development of manufacture of modern high-speed machinery in India. Messrs. Britannia Engineering Works, Calcutta, have already started the manufacture of high-speed spinning frames (other than sacking web) and two other schemes sponsored by the Irish firm, James Mackie and the British Company Fairbairn Lawson, which is in a tie-up with Birla's Textile Machinery Corporation are expected to go into operation in the near future.

Vegetable Oil Trade

Groundnut oil: An annual ceiling of 80,000 tons of groundnut oil was determined in 1950 for export outside the country. The quota was, however, released each year after review of the crop position, domestic requirements, price trends, etc. During 1952-53, a quota of only 60,000 tons of groundnut oil was fixed export. The calculations were based on the expectation that the crop would be normal. The crop, however, turned out to be abnormal, with the result that due to scarcity, prices shot up. Internal prices of groundnut oil rose from Rs. 1,187 a ton in June 1952 to Rs. 2,173 a ton in June 1953, causing acute distress among consumers. From June 1953, therefore, further sales for export were banned. The 1953-54 crop was again a normal crop, but as there was no carry-over from the previous year prices continued to rule high. No quotas for export could therefore be released till prices stabilised at a reasonable level.

In the month of July 1954, prices began to decline in expectation of a good crop during 1954-55. They moved in the region of Rs. 1,120 to Rs. 1,150 a ton. The Government, therefore, immediately released the following quotas at different stages:—

1st release ... 2nd August, 1954	14,000 tons
2nd release ... 12th October, 1954	14,000 "

As soon as estimates of the new crop became available, the following further release were made:—

3rd release ... 28th November, 1954	26,000 tons
4th release ... 8th January, 1955	31,000 "
5th release ... 4th February, 1955	15,000 "
6th release ... 19th March, 1955	15,000 "
Total	137,000 "

In addition, a total quantity of about 37,000 tons of H.P.S. groundnuts was also released for export to established shippers between November 1954 and the end of July 1955. As has been pointed out earlier, quotas were released at different stages to watch the effect of each release in internal prices. The caution was necessary in order to ensure that internal prices were not allowed to rise unduly as a result of large exports. Finally, it will be seen that as against the normal quota of about 60,000 to 80,000 tons released each year, the Government has so far released approximately 152,000 tons which includes the H.P.S. quota in terms of oil.

Castor Oil: In order to promote the exports of castor oil, the duty was reduced from Rs. 300 a ton to Rs. 200 a ton with effect from 12th May 1954. By the end of the year 1954, free licensing was introduced through established shippers of 1951, 1952 and 1953. In addition, non-established shippers who were dealers in the internal trade of vegetable oils and oilseeds and having a minimum turnover of over Rs. 25,000 in any of the years 1951, 1952 or 1953, were also eligible to receive allotments subject to a maximum of 50 tons. As exports were not moving satisfactorily the duty on castor oil was reduced from Rs. 200 a ton to Rs. 125 a ton with effect from 9th January 1955 and exports of castor

oil are now licenced freely by established and non-established shippers. Figures of exports of castor oil during the last three years are given below:

Year	Castor seed	Castor oil
	(Figures in tons)	
1952-53	4,311	37,770
1953-54	nil	19,013
1954-55	nil	28,460

Cottonseed Oil: Exports were resumed from August-September 1954 and a limited quota of about 5,000 tons was released for export. As a review of the internal and external price position early this year showed that there was disparity between these prices, a duty of Rs. 60 a ton was imposed with effect from 25th February, 1955 and a further quota of 5,000 tons was released for export by crushers subject to a maximum of 300 tons a crusher. Exports of cottonseed oil are now being licensed freely and restrictions on maximum shipments by any one individual have been removed.

Sesamum Seed and Oil: Exports have also been permitted. The duty on sesamum oil was reduced from Rs. 300 a ton to Rs. 75 a ton and simultaneously free licensing was introduced. Export of kardi seed and niger seed was also allowed very liberally and a quota of 27,500 tons was actually released for export in 1954-55.

Oil Cakes: Oil cakes are greatly required in the country as cattle food. Exports of oil-cakes from a country where cattle suffer from considerable under-nourishment cannot, therefore, be allowed freely. Nevertheless, in order to assist in stabilising the prices of oils a quantity of 25,000 tons of groundnut oil cake (expeller variety) was released for export on 14th February 1955 by all shippers, subject to an individual ceiling of 1,000 tons. Export of de-oiled groundnut meal was licensed freely subject to an individual ceiling of 1,000 tons. Shipments of these cakes will be permitted up to the end of June, and when the initial ceiling of 25,000 tons originally released is exhausted, a small additional quota will be made available. On 14th February 1955 the following further quotas of oil-cakes were released for shipment till the end of April 1955:

	(Tons)
Linseed cake	5,000
Niger and kardi seed cakes	5,000
Cotton seed cakes	10,000
Oil-cakes other than tobacco, oilcake and copra oilcake	5,000
Total	25,000

Export was allowed by crushers and exporters of oils, subject to a maximum of 200 tons a shipper in the case of cottonseed oilcakes and 100 tons in the case of other oil cakes. The quota of linseed oil cake has been exhausted and a further quota of 5,000 tons has been recently released. In addition, a quota of 5,000 tons of copra cake has also been released. Since exports of the other oil-cakes were not moving satisfactorily, restrictions have been relaxed and exports are now licensed freely within the ceilings. The duty on groundnut oil cake has been retained at Rs. 230 a ton, on groundnut meal at Rs. 175 a ton, and on linseed cake, sesamum seed cake and mustard cake at Rs. 50 a ton. The duty on cottonseed cakes has been reduced to Rs. 30 a ton. The duties on kardi seed cake, niger seed cake and castor seed cake have been removed. Actual exports of these oil cakes till the end of March have been as under:

Year	Quantity in tons.
1952-53	1,789
1953-54	899
1954-55 (up to February)	7,990

Motor-car and Parts Prices

The Commerce Minister Mr. T. T. Krishnamachari gave a bit of his mind to automobile manufacturers at a meeting of their Advisory Council during the week. He is reported to have expressed his displeasure at the price policy followed by them. It was made clear that automobile manufacturers could not increase their prices in the future without securing the Government's approval. A system of cost accounting is being introduced in order to ascertain whether any of them is profiteering under the system of monopoly granted. The manufacturers, furthermore, were to maintain adequate stocks of motor vehicles to prevent their creating scarcity conditions and thereby inflating prices. A ceiling retail price for fast-moving spare parts has been fixed. Price lists will have to be circulated to retail dealers. Emphasis was laid on servicing facilities. Each manufacturer has been called upon to furnish the Government with details of its existing servicing organisations and its plans of its future expansion. The Government, it has been made clear, will interfere if there are complaints of lack of or defective servicing organisa-

tion in any area. Periodical road tests by organising long-distance rallies or races were suggested.

Expanding Steel Capacity

The Managing Director of Hindustan Steel Limited, Mr. S. N. Mozumdar has returned to headquarters after a fortnight's stay at Rourkela in Orissa, the site of the one-million ton steel plant which is being commissioned in association with German Consultants. The best news he had was that their geologists had struck very good iron ore in the Taldih Range, which has an average of 65 percent iron content. The Railway Board has already been asked to construct a line between Rourkela and Patasia for the carriage of iron ore. A firm of mining engineers is also being appointed. Tenders for coal washing plant have been invited. The Managing Director's visit to the plant site has also highlighted the problem of water supply. Two proposals are in the field, namely to have a partnership with the Bihar Government in its Karo River power project, which includes a reservoir, ensuring regular water supply for the Rourkela plant, or to build a reservoir on one of the tributaries of the Koel River. An early decision is expected. The Rourkela Plant will manufacture plates, sheets and strips, none of which is called "bread and butter" end products.

Mr. S. N. Mehta, I.C.S., until recently Development Commissioner, Madhya Pradesh, has assumed charge of the office of the General Manager, Bhilai Steel Project Division under the Ministry of Production. It has been decided to shift the headquarters of the Project Division to Bhilai (Drug) with immediate effect. Mr. N. G. Korotenko, who has been designated Chief Engineer of the project by the Soviet Government, is arriving in India later this month for work with the Bhilai Steel Project. Under the Soviet Steel Agreement, the Soviet authorities have to appoint a suitably-qualified expert as the Chief Engineer of the project for the technical supervision of the construction of the steelworks, erection, installation and commissioning of the plant, machinery and equipment. The Chief Engineer will be assisted by a number of Indian and Soviet engineers. Mr. Mikolovitch, representative of the Soviet Ministry of Iron and Steel Metallurgy, is also arriving this month in connection with the supply of plant and equipment for the steel project. In the meantime, Soviet survey experts have completed mapping work at the project site.

China Buys Tobacco

Communist China entered the Indian tobacco market last week and purchased its requirements at competitive prices. Last year it did a barter deal, exchanging its raw silk for Indian tobacco. As reported earlier negotiations for a similar deal were started earlier this month. The Chinese, however, were offered the Indian tobacco at cheaper prices and bought it in preference to dealing with the Government.

Trade Contracts

The Commerce Ministry is evolving plans further to facilitate India's foreign trade. At present, the arbitration procedure in trade disputes is cumbersome and its award is enforceable in accordance with the laws of a country. The Government of India, on the one hand has been working out a scheme under which contracts with foreign companies will always have provision for arbitration. On the international plane on the other side, a set arbitration formula has been evolved, which subject to certain basic conditions flowing from the sovereignty of a country will be enforceable in every country.

Dyestuffs Manufacture

The Italian firm of Montecatini will shortly be sending a team to India to prepare a project report for a dyestuff industry. German and British dye manufacturers are also expected to send out their teams with a similar object.

Development and Warehousing Board

Legislation is being drafted and, according to present plans, will be brought before Parliament during its summer session, commencing here on 5th July, for setting up the National Co-operative Development and Warehousing Board and all-India Warehousing Corporation, as suggested by the All-India Rural Credit Survey Committee. The scheme was recently approved by the States' representatives at a Conference held here.

NEWLY REGISTERED COMPANIES

Shri Ramanau Das Cotton (Sg.) Mills Ltd.—Director, Mr. Hariam Bagrodia, 33, Netaji Subhas Road, Business of spinning, weaving, etc. Capital Rs. 10 lakhs.

Bharat Overseas Ltd.—Director, Mr. R. P. Jain. To buy, sell, import export and to deal in steel, steel products. Capital Rs. 1 crore.

The Bengal Line Ltd.—Director, Mr. P. C. Ray. 4, Lyons Range. To purchase, charter, etc. of ships. Capital Rs. 5 crores.

Far Eastern Agency Ltd.—Director, Mr. S. K. Dutta, P-14, Mission Row Extension. Import and export business. Capital Rs. 10 lakhs.

Nirmal Trading Co., Ltd.—Director, Mr. Prahladas Mundhra, 9, Jagmohan Mullick Lane. Dealers in paddy, rice, etc. Capital Rs. 10 lakhs.

Liza Hill Tea Estate Ltd.—Director, Reba Bhawmick, East Road, Jadavpur. Planting and cultivation of tea. Capital Rs. 5 lakhs.

Kankartola Collieries Ltd.—Director, Mr. Satkari Banerjee, Nandi, P. O. Nandi, Burdwan. Colliery owners. Capital Rs. 5 lakhs.

Good Luck Ltd. Director, Mr. M. L. Jhunjhunwala, 12, Syed Sally Lane. General merchants. Capital Rs. 20 lakhs.

London

STRIKE PROSPECTS OUST U.K.
ELECTION INTERESTCONSERVATIVES LEAD IN GALLUP
POLL RESULTS

(FROM OUR LONDON CORRESPONDENT)

EFFORTS to live up the election campaign this week have been surprisingly ineffective, and unless something startling emerges within the next four days—apart, that is, from threats of a strike of dockers next Monday and of railway locomotive drivers and firemen later on, for the possibility of these are very much with us now that the negotiations to resolve the difficulties have broken down—there is likely to be little outward display of the "election fever" which readers of this despatch may be imagining is sweeping the country. The stock market, though it has witnessed some diminution in the volume of business, has marked up prices all round, reflecting the confidence of the "City" in a Conservative victory. The City could be wrong, of course, but it does not normally risk hard cash on a "hunch" unless it is well founded, and the *News Chronicle's* Gallup Poll records the fact that the swing in favour of the Conservatives has increased slightly.

The truth or falsehood in the politicians' complaints of apathy on the part of the electorate will only be established when the votes are counted. In support of the latter, however, it should be remembered that the weather—snow, sleet, rain and a blustering, biting north wind, followed ultimately by floods—has hardly been encouraging; nor has the majority of the speech-making been inspiring enough to overcome these handicaps. There have been exceptions, but they have been few and far between. The radio and television appearances of the "stars" have undoubtedly reached a wider public, but whether they have influenced many votes is open to considerable doubt.

Industrial Disputes

The question of the moment, and it is one which no candidate would be likely to answer without equivocation, is whether he would be prepared to support firm action to put an end to the rush of strikes, both unofficial as well as official, in direct defiance of the established machinery for the purpose of avoiding such stoppages. The recent coal strike in the Yorkshire pits cost some one million tons of coal, with the result that for the first time the latest returns of the industry show this country as a net importer of coal. It took several months to recover from the effects of the dock strike last October and the impact of another one now might well be even more disastrous. That fact, however, has had little influence on the National Amalgamated Stevedores and Dockers' decision to go on strike at all ports where it has members unless it is given recognition and representation in the local joint committees in the Northern ports. The dispute here is between the N.A.S.D. and the Transport and General Workers' Union, which represents the majority of dockers. Although the T.U.C. suspended the N.A.S.D. last year for poaching members from the T.G.W.U., at the request of the Minister of Labour it made an effort to find a solution of the problem and so avert a strike, but the N.A.S.D. has turned this solution down and incurred condemnation from all quarters.

The renewed threat of a rail stoppage on 28th May (whit-Saturday) is even more serious, for it now looks as if the locomotive staff belonging to the National Union of Railwaymen, who had previously accepted the Transport Commission's offer, will support the Associated Society of Locomotive Engineers and Firemen in their rejection of the latest offer by the Commission to meet the latter's claim for the maintenance of differentials. This combination would bring British Railways to a standstill. It is hardly surprising in these circumstances that the election has taken second place in the minds of the electors.

Atoms for Peace

Encouraged by the Government's ten-year plan to spend £300 million on the development of atomic power for commercial use, British industry is displaying considerable interest and activity in the sphere, and it is believed that more than 150 firms are now engaged in the manufacture of nuclear equipment. This fillip looks like making the British exhibit at the Geneva exhibition in August the dominating feature, whereas only a short while back there was criticism that it would be negligible. The formation of a fourth industrial group has been registered this week under the name of the Nuclear Power Plant Company for the production of atomic power plant for industry, with an initial capital of £1 million. It is a consortium of seven large engineering companies including C. A. Parsons and Company, A. Reyrolle and Co., and Head, Wrightson and Co., with total resources of some £75 million. The object of the consortium is to devise atomic power plant and build it. The other groups which have already made plans for co-operation are the Associated Electrical Industries with John Thompson; the General Electric Company with Simon-Carves; and English Electric with Babcock and Wilcox. In each case it is an electrical engineering group associating with firms making turbines and steam-raising equipment. All these firms have already started

work for the United Kingdom Atomic Energy Authority or are carrying out research on atomic plant.

Burmah Oil Does Well

Holders of oil shares have lately been heartened by a succession of encouraging reports. The 1954 results of the Burmah Oil Company, just released, compare very favourably with the earlier reports and will be even more widely welcomed. With a final dividend of 13½ percent the directors are bringing up the total distribution for the year to 21 percent, against the 17½ percent paid in 1953. Group profit, after all charges including tax, rose last year from £3,252,324 to £3,728,869. Provision for U.K. and overseas tax showed little change at £4,354,184, against £4,424,792. As a year ago, the board allocates £1,100,000 to general reserve and the carry-forward is raised from £596,411 to £610,888.

If that were all, there would be no great cause for rejoicing, but the Burmah Oil board, who are nothing if not cautious, also propose a one-for-one free scrip issue involving the capitalisation of £20,604,770 of reserves. They have decided to write up Burmah's direct and indirect holdings of £26,714,925 in British Petroleum Ordinary stock from its present value in their books of 4s. a £1 unit to 20s. The aggregate increment of £21,371,940, which derives from this revaluation, is put to capital reserve. With British Petroleum £1 Ordinary units now quoted in the market not far short of 90s. Burmah still has about £100 million of hidden reserves in this important asset.

Railway Efficiency Council

Though the fresh threat of a stoppage on the railways renders it somewhat unreal, it is good to learn from an announcement by the British Transport Commission that agreement has been reached for the setting up of a productivity council to increase efficiency on British Railways. The Commission has been negotiating for some time with the three railway unions and the Confederation of Shipbuilding and Engineering Unions on the constitution and aims of the new body. It will consist of 18 members: nine from the Commission, three from the National Union of Railwaymen, and two each from the Associated Society of Locomotive Engineers and Firemen, Confederation of Shipbuilding and Engineering Unions and the Transport Salaried Staffs Association. The council will, among other duties consider the £1,200 million modernisation plan, review joint consultation machinery and submit half-yearly reports of progress throughout the industry for the information of unions. The functions of the council will not extend to the negotiation of wages and conditions. Its work is not intended to prejudice existing arrangements at lower levels. The first meeting will be held early in June.

Tea Prices and the Future

Prices rose for the first time for some weeks when sales of North Indian teas were resumed at the London auctions last Tuesday. Keener interest was shown. Auctions of these teas were suspended last week because of heavy withdrawals. Brokers said it was too early yet to state that the downward trend has been halted. But it is thought that the firmer tone, following the higher prices for Ceylon tea last week, may cause hesitation among blenders in making a third price cut.

Meantime, Typhoo Tea (Holdings) Ltd., whose trading profit was down by nearly £300,000, has set aside £200,000 from it to meet the consequences of the fall in the world prices of tea. The chairman, Mr. J. R. Sumner, told shareholders at the company's annual meeting in Birmingham that: "The tea trade is in a state of flux brought about by circumstances over which the people who pack tea have no control. It would be an extremely unwise man who tried to say what he thought the tea trade was going to do in the next twelve months."

Brevities

The official index figure which measures changes in the average level of retail prices (the cost of living index) was 147 on 19th April, compared with 146 on 15th March. This is the highest figure recorded since the present system was introduced in June, 1947. It had been stable at 146, for the first three months of this year, after increasing one point from 145 in November and December, 1954.

Prices of basic materials used by British industry were on an average lower in April than in March. Following the drop in March from 152.2 to 150.9, the price index number compiled by the Board of Trade (30th June, 1949=100) fell last month to 149.2. It was thus practically back to the level of January this year but 4 percent higher than in April, 1954. A 6.6 percent fall in copper prices was mainly responsible. Among other materials which fell in price in April were raw wool, down 1.1 percent, raw cotton, down 2.1 percent, raw jute, which fell 5.2 percent, and tungsten ore, down 10.6 percent.

Hopes that the Stock Exchange report included in the B.B.C. news service towards the end of the newspaper strike might be restored as a permanent feature have been expressed by Sir John Braithwaite, Chairman of the Stock Exchange. He told the annual general meeting of proprietors that the possibilities of radio and television were constantly under review.

Bombay

INDIA'S SHARE IN WORLD RUBBER PRODUCTION PRODUCTION CAPACITY LIMITS SELF-SUFFICIENCY

(FROM OUR BOMBAY CORRESPONDENT)

THE world production of natural rubber last year amounted to 1,802,000 tons and the total world consumption was computed at 1,767,000 tons. The production figure for January this year was 162,500 tons as compared with 152,500 tons in the corresponding month of last year. World consumption also increased from 152,500 tons in January, 1954 to 160,000 tons in January this year, the highest monthly figure ever except for October 1950. Most of this consumption was in the free world. The offtake of natural rubber in the Soviet Union and Communist China remained static. According to a report issued by the United States Department of Commerce, these two countries consumed 7,750 tons of natural rubber during the month under review, showing no change from the figures for January, 1954. It seems that the present increase in production and consumption will be maintained. Provisional estimates made by the International Rubber Study Group indicate that world production of natural rubber in 1955 will amount to 1,845,000 tons while world consumption is put at 1,830,000 tons. This would leave a small surplus of 15,000 tons. It is further calculated that the production of synthetic rubber would be approximately 965,000 tons and the consumption figure is tentatively estimated at 955,000 tons.

The balance of estimated production over estimated consumption of natural and synthetic rubber together is computed at 45,000 tons at the end of this year which would be available for absorption into government and commercial stocks. India too has shares in this general increase in production and consumption. Production increased from 21,136 tons in 1953 to 21,493 tons in 1954. Correspondingly, consumption increased from 22,375 tons in 1953 to 25,487 tons in 1954. But the similarity between India and world conditions ends here and India's rubber economy assumes a singular aspect because India is the only country in the world which is both a producer of raw natural rubber and a large scale manufacturer of finished rubber goods.

India's Opportunity

Rubber plants and trees were first imported from Ceylon in 1878 on an experimental basis and in 1902 India had two fully-fledged plantations which marked the beginning of the country's rubber plantation industry. At the end of 1910 the area under rubber cultivation amounted to 29,500 acres. Progress continued steadily if slowly but it was during the second World War when Indonesia and Malaya, the major rubber-producing countries of the world, were under Japanese occupation, that the Indian rubber plantation industry received its first substantial stimulus. During 1946 an additional area of 23,964 acres was brought under rubber cultivation to meet the wartime requirements of the allied forces. By the end of 1953 the area under cultivation was 173,364 acres—about 1.8 percent of the world's total rubber area estimated at 9,625,000 acres placing India seventh on the list in the order of the total area under rubber—producing 21,136 tons. Despite this gradual increase, and the Indian production of natural rubber for 1955 estimated at 22,700 tons, the highest ever, the rubber position is causing concern. It seems there is an ever-widening gap between production and consumption. Last year there was a deficit of 3,500 tons which had to be met by imported supplies from Malaya. Consumption in 1955 is estimated at 28,000 tons which will increase the deficit to 5,300 tons. Based on present development plans, the Indian manufacturing industry is expected to consume about 40,000 tons a year by 1960. As against this it is believed that the domestic production of raw rubber will not exceed 26,000 tons in 1960. This means that under present circumstances 14,000 tons would have to be imported to meet the demand from the local manufacturing industry. Based on current prices of rubber this would cost about Rs. 5 crores.

The estimated consumption figure for 1960 does not seem to be unduly optimistic in view of the remarkable progress which the manufacturing industry has made in recent years. It had its beginnings in 1920 when the first rubber manufacturing factory was established in this country. Today there are over 250 units in operation with an aggregate capital of Rs. 13 crores employing a labour force of 18,000 workers. In 1939-1940 India imported rubber goods valued at Rs. 14,842,454 and exported manufactured goods valued at Rs. 953,085. In 1952-1953 the position materially changed and India exported manufactured goods, after meeting the home demand, worth Rs. 14,224,870 while her imports consisted of specialised products only valued at Rs. 5,339,441. If this progress is maintained, as it seems likely that it will, an estimated consumption figure of 40,000 tons in 1960 seems reasonable.

India's Limited Growing Capacity

On the other hand, it is extremely unlikely that the domestic production of natural rubber will ever catch up with the internal demand. The main limiting factor is the area which can be brought under rubber cultivation. The rubber tree thrives best in warm and humid tropical regions with a temperature ranging between 70 and 90 degrees and an annual rainfall of about 90 inches a year, well distributed throughout the twelve months. While the

climate in the planting districts of Indonesia and Malaya more or less approximates to these conditions, it is not so in India. The only region in India which approaches nearest to these climatic conditions is Travancore-Cochin, but here too there is a long hot and dry season followed by a heavy monsoon during which most of the annual rainfall occurs. This adversely affects the growth of the rubber tree. In India the rubber tree comes into production from the seventh or eighth year of planting while in Indonesia and Malaya the growth of the tree is faster and tapping begins from the sixth year of planting. The yield is also affected. The average yield obtained in India in a season is about 300 pounds an acre while for the same type of planting material it is over 450 pounds in Malaya. The fact of small holdings, an essential feature of Indian agriculture, must also be taken into account. Approximately 41 percent of the total area under rubber in India is accounted for by small holdings of 100 acres and less.

Under these circumstances the increase in rubber production in India has been very slow. Production during the last five years has been as follows: 1950, 15,599 tons; 1951, 17,148 tons; 1952, 19,863 tons; 1953, 21,136 tons; 1954, 21,493 tons; Although the increase in production has been maintained, it has been very gradual.

Satisfying Internal Demand

It is clear that the production of natural rubber cannot be increased to keep pace with expanding demand. It would seem therefore that the only satisfactory alternative is synthetic rubber. In view of the rapidly expanding manufacturing industry which apart from making the country self-sufficient in rubber goods, has now emerged as a sizeable foreign exchange earner, it is surprising that the synthetic rubber industry finds no place in India's five year plans. The Indian Rubber Industries Association, Bombay, has rightly pointed out to the Government of India that the production of synthetic rubber is now vitally necessary for India's economy. The Association has suggested that in the first instance a plant with a rated capacity of about 5,000 tons to 10,000 tons should be installed. Such a plant is expected to cost about Rs. 4 crores and the Association feels that its members would not be able to finance such a project themselves. It is therefore recommended that synthetic rubber manufacturing should be included in the development plans of the public sector.

The Association, however, agrees to set up a plant for reclaiming rubber from old tyres and tubes. Their proposed plant would have a productive capacity of 1,500 tons a year and would cost approximately Rs. 1,800,000. The views of the Indian Government on both these proposals are awaited with interest. Among the raw materials required for the manufacture of synthetic rubber alcohol is the most important. India has a tremendous potential for the manufacture of ethyl alcohol because molasses, which is the starting material for the production of alcohol, is available as a by-product of the sugar industry. It is estimated that about 400,000 tons of molasses are available every year which would yield 24 million gallons of alcohol annually. This productive potential which could profitably be used to develop a major industry is at present lying idle.

Co-ordination of Natural and Synthetic

A careful co-ordination between the synthetic rubber industry and the natural rubber plantation industry is clearly indicated. This would put the manufacturing industry on a sound economic footing and at the same time make India self-sufficient in all respects of the overall rubber industry. The two products do not compete, but supplement each other. Each has its own advantages and the simultaneous production of both would be a great national asset. Apart from purely industrial considerations, the value of rubber as a strategic material must also be taken into account. Despite the increasing world production of natural rubber and the productive potential which still remains untapped, it is known that the American Government is keenly interested in developing the synthetic rubber industry. The world production of synthetic rubber in 1954 amounted to 716,388 tons of which the United States produced 622,852 tons. The American industry is steadily expanding under Government patronage.

Germany, which began the manufacture of synthetic rubber on a commercial basis just before the outbreak of the second world war, is taking steps to revive the industry. The West German consumption of rubber rose sharply from 72,316 tons to 125,660 tons within a short space of four years after the war. France too is considering the possibility of developing the synthetic industry. With the present political uncertainty in Indo-China, it may no longer be possible to depend on supplies of natural rubber from Viet Nam and Cambodia. Canada already has a synthetic rubber industry, while reports from South Africa indicate that the Union Government is planning to install a synthetic rubber plant which would be capable of producing South Africa's entire requirements of rubber.

Madras

DEVELOPING FORESTS FOR INDUSTRIAL NEEDS

CENTRAL BOARD OF FORESTRY'S RECOMMENDATIONS

(FROM OUR MADRAS CORRESPONDENT)

AT the third meeting of the Central Board of Forestry at Ootacamund, Dr. P. S. Deshmukh, Union Minister for Forests and Agriculture, said that comprehensive planning of forestry was necessary in the second five year plan. The Government of India, he announced, was contemplating a Central Forestry Commission which would undertake the technical scrutiny of major working plans, the collection of forest statistics, the pooling of technical information and extension work to popularise forestry. The Union Minister recalled what the Central Board of Forestry had accomplished in the last three or four years. It had guided the States in the implementation of its recommendations regarding a land survey and classification in order to set apart a minimum proportion of all land under "forests" separately in the hills and in the plains, development of co-operative working of forest produce especially by tribal and backward classes, elimination of shifting cultivation and protection of trees on all sites in spite of any changes in land tenure systems.

The Board has been advocating the extension of commercial plantations in the State as an aid to industry. It has also been instrumental in rousing public consciousness to the serious threat of advancing desert conditions. A separate Soil Conservation Board has also been helping in the working of anti-erosion measures all over the country. Similarly, a Board for Wild Life is now engaged in developing, by means of national parks and sanctuaries, wild life management along modern lines. Dr. Deshmukh was of the view that extension of planting should be insisted upon because the demand for timbers like teak always exceeds available resources. There was also the urgent need for gearing forest development to the raw material requirements of expanding industries like paper and rayon-making. The more important raw materials were matchwood, plywood and fibre materials. Another urgent need was to extend cashewnut plantations so that the cashew kernel and cashew shell oil industries need not depend on raw nut imports.

The points emerging from the proceedings of the Board are: The country has and can still develop adequate raw materials for paper, matches and plywood industries. But the development of these industries is lopsided, particularly in the location of paper mills. This often leads to demands from industries for price concessions as a protection against increased extraction and transport costs. Secondly, some States are anxious to develop industries within their own limits, without taking into account the overall requirements of units in the other regions. In view of the fact that reliable data on the resources of bamboo and other raw materials and the demand for them for alternative use, if any, are not available the Board suggests that specific forest areas be reserved for the paper industry and long-term lease be granted for working such areas, that a rational method of pricing be adopted and that roads be developed in such forest areas to facilitate transport. Thirdly, the Board recommends that States might be requested to devise measures for the continuous supply of raw materials to sustain the development of industries based on forest produce.

The Union Government is also requested to see that in future mills are set up with due regard to the sustained supply of raw materials. Fourthly, having taken note of the information furnished by the Fuel Research Institute on the utilisation of soft coke for domestic purposes and the availability of large deposits of lignite and coal in Jammu and Kashmir State, the Board recommends that the Union Government be requested to set up plant units for production of soft coke for domestic purposes and also to take steps to develop alternative fuels for domestic purposes in order to relieve the existing pressure on forests. Fifthly, the Board welcomes the idea of surveys to assess by systematic sampling methods the resources of forests, as it is recognised that such surveys could lead to systematic development of industries based on forest produce, with special emphasis on both quality and quantity of the resources.

Madras Quinine Factory

The Madras Government has just opened a new quinine factory, constructed at a cost of about Rs. 30 lakhs, on the Anamallai Hills. This is in addition to the Government Quinine Factory at Nadvattam in the Nilgiris. It is stated that the annual production of these factories, added to the production of the factory in West Bengal, will meet all the quinine requirements of India and that there will hereafter be no need for importing any quinine from abroad. For the present, the new factory will work for the first three or four years on the Government of India's account, extracting the bark from the "Javanese-method" areas cultivated as a joint enterprise by Madras State and the Government of India.

The quinine industry has an interesting history behind it. Originally the Government was to restrict itself to pioneering work for the establishment of cinchona cultivation and leave the expansion of the industry to private enterprise. But cinchona did not thrive in the private sector in spite of every encouragement. It has thus deve-

loped almost entirely as a State enterprise in India. So far the Government has invested about Rs. 24 crores in the cinchona industry. The industry worked profitably till 1948-49. For the last four years it has been working at a loss due to the competition from synthetic anti-malarials and the heavy and indiscriminate imports of foreign quinine after world war II. The Government is, however, continuing to maintain the industry on account of the importance of the manufactured product in fighting malaria and the need for quinine self-sufficiency. The State Government has approached the Government of India for a guarantee for the off-take and price of quinine and, pending a decision, has stopped expanding the area under plantations since 1950. The Government of India, which has also practically banned the import of quinine products, is expected to come to a firm decision on the future policy regarding the quinine industry on the basis of the Report of the Special Cinchona Committee.

New Aluminium Plant

A new mill of the Aluminium Industries, Ltd., Kundera, has just been opened in T.C. State for the continuous casting and rolling of electrolytic, conductor-grade aluminium rods. This mill is stated to be the first of its kind in Asia. The aluminium rod is an essential raw material for aluminium conductor manufacture. The mill gets its supplies of conductor-grade ingots from the Alwaye (T.C. State) reduction works of the Indian Aluminium Company, whose ingot capacity has recently been stepped up to 5,000 tons a year from an original 2,000 tons, following increases in the supply of electric power. Eliminating conventional pre-heating and billet-casting, the new rod mill continuously casts and rolls aluminium rods directly from molten metal in less than two minutes. The capacity is about one ton an hour. The bundle of rods is then converted into wire and finally into aluminium cables. The significance of the new installation is stated to be that it makes for semi-integration for a cable-making plant, establishing for it a measure of self-sufficiency in its raw material requirements. Another advantage claimed is that it will enable production of a semi-finished material, geared to final consumption, making "down-time" far less of a financial burden to a manufacturing unit than it otherwise would be.

With the completion of the rod mill, it will be a completely Indian product from bauxite to the finished conductor—Indian aluminium, Indian ingot, Indian rod and Indian conductor. The Aluminium Industries, Ltd., Kundera, now making A.C.S.R. conductors, is also planning to install a plant for manufacturing insulated aluminium conductor known as H.S.O.S. (House Service Overhead System) popularly called "weather-proof conductors".

Industrialisation and Politics

An agitation outside the Congress ranks in Madras State has been going on for some time to persuade the Union Government to devote greater attention to backward areas in the South in the matter of planning and industrial development. The Dravidian Parliamentary Party in the State Legislature is also connected with this agitation. The argument in this connection is that the planners have so far confined their vision to Bengal, Bihar and Orissa on the ground that natural resources are in abundance there. This, it is considered here, is a wrong approach to planning. It is argued that Japan, which has neither iron ore nor coal in abundance, was able to specialise in the manufacture of fabricated steel and was in a position to compete with the U.K. and the U.S.A. in respect of this product in world markets. It may be recalled here that the Madras Government too is urging the Centre to start a steel plant in Salem and also locate the heavy electrical industry here. Incidentally, it should be noted that the agitation is also intended to evolve a plank on which four minority political groups (the Dravidian Federation, the Dravidian Progressive Federation, the Tamil Rule Federation and the Dravidian Parliamentary Party) might come together in time for the next general election.

EIGHT U.K. FIRMS COMBINE TO MAKE NUCLEAR POWER PLANT

A new corporation for the design and construction of nuclear power plant is to be formed by eight British companies headed by C. A. Parsons and Co. Ltd., of Newcastle-on-Tyne. It is hoped that the base for the new project will be on Tyne-side. Parsons is now at work on a plant for an atomic power station at Calder Hall, Cumberland, and it is now discussing the Parole Electrica Plant Co. formed jointly by Parsons and A. Reyrolle and Co. Ltd. has since 1948 been associated with the Atomic Energy Division of the Ministry of Supply and has taken part in the design of the Calder Hall plant. Of the seven other firms taking part, the only one so far named is Head, Wrightson and Co., of Thornaby, which has outstanding experience in the manufacture of heat transfer equipment and chemical engineering of a type likely to be increasingly required in the nuclear field. Meanwhile, it is forecast by Sir Charles Godeve, Director of the British Iron and Steel Research Association, that within 10 years steel will be produced in Britain from electric furnaces the current for which will have come from atomic-energy furnaces.

The annual number of 'Indian Sugar' published by the Indian Sugar Mills Association contains the usual interesting features. The journal has placed before the readers the problems and prospects of the industry. The technical aspect of increasing and improving the yield of cane has been discussed by sugar and sugarcane technologists.

ROLE OF FOREIGN CAPITAL IN ECONOMIC DEVELOPMENT

INDIA'S NEEDS FOR BUILDING PROSPERITY

By C. G. Balakrishnan

ANY large-scale development programme in a backward country must compromise between drastic restriction of internal consumption and the import of large amounts of capital from abroad. By itself the first, apart from its effects on the already low standard of living, would mean a serious decline in the physical efficiency of works, and it might be politically difficult to enforce sustained curtailment of consumption. In spite of a lot of loose talk about a programme of heavy industrialisation, there is little readiness to bear the necessary costs or to adopt the political and administrative centralisation appropriate to a large internally-financed programme. Consequently, recent discussions have turned towards the prospects and effects of using foreign capital as a supplement to domestic saving. Policy with regard to foreign capital has been vacillating in many underdeveloped countries. The need for foreign capital is generally recognised, but emphasis tends to be concentrated on the political problem of vested interests and on the fact that such capital has in the past led to lopsided industrialisation and that it has at times obstructed the development of domestic enterprise. In spite of the service rendered by foreign capital in bearing pioneering losses, in opening up inaccessible areas, in developing new resources of trade, etc., the sentiment against it grew strong in the inter-war period. Stringent laws and discriminatory taxation were imposed on foreign capital. In many Latin American countries, manufacturing concessions were sometimes limited to nationals and there were special taxes on foreigners' profits, or on goods produced by foreign concerns. In China, periods of recognised need for foreign capital alternated with periods of fear; rules were made in 1930-32 enforcing a 51 percent Chinese ownership of all new firms.

The post-war years have, however, seen a complete reversal of such policies. The Latin American countries have borrowed largely from the American Export-Import Bank and are eager to receive foreign capital. And the Chinese attitude towards foreign capital has changed completely.

Opinion in India in the inter-war period was strongly against foreign capital, but the open-door policy was maintained. The question of imposing restrictions was sometimes raised. The Fiscal Commission of 1921, after analysing the effects of foreign capital and the causes of distrust, approved the newly-adopted Government policy that no special concession or financial subsidy should be given to a firm unless it was incorporated and registered in India with rupee capital, with a reasonable proportion of Indian directors on the Board and reasonable facilities for the training of Indian personnel. The minority report of the Commission urged the enforcement of these conditions in the case of all new firms. The views of Indian economists were generally in line with those of the minority report. The External Capital Committee of 1924-25 recorded no objection to the entry of foreign capital as pure rentier investment. With regard to the restrictions and conditions applicable to concessionaires, the Committee supported the Fiscal Commission's recommendations and emphasised the need for quick industrialisation aided by foreign capital.

Changed Attitude

The critical attitude of Indian economists towards foreign capital has largely changed in recent years. This change has been brought about, firstly, by the realisation that progress would require resources that domestic savings alone could not provide; secondly by the expectation that international loan contracts would in future be more flexible from the borrowers' standpoint than they had been in the past and that there would be a better international solution of the cyclical balance of payments problems of debtor countries. Thirdly, establishment of the I.B.R.D. and the work of the U.N. have given foreign capital a super-national character. Lastly, the achievement of self-government brought confidence in the ability of the Government to protect the country against any undesirable effects of foreign enterprise. Official statements in India in recent years, from the Industrial Policy statement of 1948 up to the five year plan, left the door open for foreign enterprise, and assurances have been given against discriminatory restrictions.

Until recently there was no official estimate of the amount of foreign capital in India, and private enquiries produced varying results. The Reserve Bank census of 1948 found that the official long-term foreign liabilities (including I.B.R.D. loans) were about Rs. 293 crores while the non-official position was about Rs. 144 crores in portfolio obligations and Rs. 254 crores in direct obligations. This total is not large for an industrialising country—it works out to about \$4 per head of population. Compare this with a per capita foreign capital liability of \$89 in British Malaya (1937), \$37 in Formosa (1939), \$34 in Indonesia (1937), \$27.6 in the Philippines (1935), \$16.5 in French Indo-China (1938) and \$14.1 in Burma (1939). In India, before the war, the amount of foreign capital would not work out at more than \$5.7 a head.

The need for foreign capital arises mainly from the relative smallness of domestic savings. To this one can add the fact that to the extent that capital equipment and food have to be imported, their

financing would be easier if capital imports are taking place simultaneously. Besides, a developing country is likely to face an initial balance of payments problem arising not only from the import of capital goods, but also from the possibility that consumption from increased incomes is likely to be directed towards imported goods; foreign capital inflows may be necessitated by these initial balance of payments problems unless import control can be made effective.

The consideration of the problems arising in the capital-importing phase and in the serving and repayment phase is often mixed up with the more practical one whether or not it would be possible to get foreign capital on terms acceptable to both sides and the question what are the conditions that would facilitate international investment. We note first that if the "excess capital countries" are willing to supply funds on terms acceptable to capital importers, such imports can be beneficial if the capital-exporting country is able to supply capital goods or such consumption goods as are necessary to sustain the development process or to release resources in the developing country. If foreign financing results simply in a domestic inflation in the capital-importing country, there is evidently no special advantage in getting foreign loans. If capital fund imports have to be linked with capital goods imports, one of the greatest difficulties of the immediate future will arise from the world's shortage of capital goods relative to the large competing demands. Countries like Sweden, Belgium and Switzerland can perhaps supply small amounts of capital goods. However, in the main the pressure of world demand is likely to fall on the U.S.A. and the U.K.—and, so far as China and the East European countries are concerned, on the U.S.S.R. The shortage of capital goods may also be an important factor in the choice between different forms of foreign investment. There is thus the problem of getting financial resources from the countries which are in a position to supply real capital resources unless loans are "united," and spendable everywhere.

The payments position with regard to capital equipment for countries like India or Egypt, by the existence of sterling balances. But as regards American lending policy in the inter-war period it was very erratic. Expert opinion in 1937 expressed pessimism regarding the future of international investments; the scope for new investment in underdeveloped countries appeared to be shrinking; political risks seemed to be increasing, and trade barriers appeared to have become permanent. However, it was about this time that a plea for international investment was strongly made in the U.S.A.: this gathered momentum during the war and all discussions in recent years from Bretton Woods to "Point Four" have stressed the need for American lending.

Forms of Foreign Investment

Foreign capital can enter a country as direct entrepreneurial investment of risk capital or venture capital, or as portfolio or rentier investment. Direct investments can take various forms—chartered companies in colonies with *de facto* sovereign rights; corporations organised in the investment country specifically for operating in the capital-importing country, or direct subsidiaries, branches and affiliates of a parent concern of the investing country, financed from internal funds without recourse to the capital market. Direct investment through branches has been a common form of American investment in neighbouring countries and the purpose has varied from the avoidance of tariffs to the securing of assured supplies of materials for the parent concern. In India, foreign investment has taken the form of companies organised in Britain specially for operation in India and through resident managing agents, but there has been recently an increase in the number of "(India) Limited" companies which are affiliates or branches of foreign firms. Generally speaking, foreign capital has shown a preference for rentier investment when a public body is available as a borrower, but within rentier investment, the entrepreneurial investments preponderate over bonds. In India, direct investment by foreigners has been about 60 percent higher than portfolio investment; the disparity is greater if the equity investments included in the portfolio group in the Reserve Bank census are transferred to the direct group.

The same tendency has also been noticed in Latin America, S.E. Asia and S.E. Europe. The general opinion in the debtor countries has, however, been more favourable to rentier foreign capital than to direct investments. To the capital-exporting country, direct investment means control over management and such control may be an essential pre-condition for undertaking risks. When foreign lending had seriously declined in the thirties, there was still confidence in capital combined with industrial ownership and fairly substantial amounts of American direct investment flowed out after the worst years of the depression. Political objections apart, such direct investments are advantageous for capital-importing countries also. They are likely to obtain in this way a larger amount of foreign capital than they otherwise would; they get the benefits of superior plant, technical skill and managerial capacity. The profit motive behind direct investments ensures a sound choice of investment and a continuous interest in development. The most important advantage of direct foreign investment to the capital-importing country is the flexibility of the pressure on the balance of payments, because reinvestment of profits is likely to be considerable and also be-

cause it may be possible to introduce some measure of time-lag in the remittance of profits. It is also important that direct investments are most likely to flow into industries which produce exports or reduce imports and thus help directly in improving the balance of payments position.

The opposition to entrepreneurial foreign capital comes mainly from the fear of financial imperialism or economic domination. A compromise has been sought in joint participation of foreign and domestic capital. Such participation on a quota basis may create difficulties about the transferability of shares, but with the exception of those industries where the Government desires to have control, facilities for joint participation should be offered without prescribing quotas. Joint participation provides fuller opportunities for developing local skill, provided in each case foreign as well as domestic resources, avoids the friction due to absentee ownership and gives the foreign investors the advantage of a "national" status in case of discriminatory taxation.

Joint participation by American capital has yielded good results in the U.K. and Canada, and also in China. In India there has been joint participation in some new assembly plants, and state policy has been moving towards an active encouragement of such partnership. It may be argued that much future international investment will be inter-governmental or between institutions like the I.B.R.D. and Governments, and that consequently the field for direct investment will shrink. There is indeed a tendency toward expansion of direct inter-Governmental lending and grants. Though foreign Government loans may themselves arouse suspicion, one has to accept the fact that if rentier capital from abroad is desired by all, it is best to accept it from an institution like the I.B.R.D. and the next best thing is to accept it from a foreign Government rather than from a large number of private creditors. Loans from the I.B.R.D. can provide some degree of flexibility through low interest long-term repayment and perhaps trade agreements linking the debt service with the import of debtor's goods by the creditors.

Sources of External Capital

The United Kingdom was the most important capital-exporting country of the world up till 1938. But it is not likely that Britain will re-emerge soon as an international investor on a large scale. Besides, the major part of the funds available in the U.K. is likely to go to the colonies and to those countries where she can expect a quick relief of the pressure on her balance of payments. Canada has emerged as an exporter of capital; she lent \$1,250 million to the U.K. in 1946 and smaller amounts to China, the Netherlands East Indies and the U.S.S.R. and has also authorised the I.B.R.D. to use a part of her subscription. But the only country which can supply both capital funds and capital goods to the underdeveloped world generally is the U.S.A. The combined foreign capital requirements of Asia, S.E. Europe and Latin America would not exceed, according to one estimate, \$3,000 million a year and this is about one-sixth of the gross capital formation in the U.S.A. Before the Point Four Programme, American investment did not move significantly towards Asian countries. In 1930, after the peak of the American inter-war lending had been reached 31.4 percent of American investment was in Europe, 25.2 percent in Canada, 19.4 percent in South America, 6.20 percent in Mexico and Central America, 7.9 percent in the West Indies, 2.8 percent in Japan, 1.3 percent in Indonesia, 1.1 percent in Philippines, 0.2 percent in India. Between July 1945 and June 1949 the total of U.S. Government loans and grants was \$19,531 million. Of this, India's share was \$15 million and Pakistan's \$10 million. But after the formulation of the Point Four Programme in 1949 there was a great change: the U.S. administration for example is seeking to provide \$50 million for technical assistance to India, and grants have been made to enable the Export-Import Bank to guarantee private investors against transfer risks. Direct lending to foreign Governments for reconstruction and development was small before the passage of the Foreign Assistance Act of 1948. Loans are generally granted to Governments or development corporations for specific projects to finance purchases of materials or technical services in the U.S.A. These loans do not compete with private investment; the total amount received by Asian countries from the Export-Import Bank out of its loan resources of \$4,500 million is small, but the extension of its functions to include guaranteeing private investments is promising.

Taking the I.B.R.D. as a source of external capital, we find that there is little chance that under the present arrangements the Bank will be able to play a very important part in providing external finance on a large scale to underdeveloped countries. The Bank has repeatedly emphasised that the major burden of international investment will have to be borne by private investors. I.B.R.D. loans are granted when, first, the finance cannot be secured privately on reasonable terms though there are reasonable prospects of repayment and, secondly, when the object of the loan is of sufficient importance for the borrowing country to warrant a foreign exchange liability. Some idea of the way in which the Bank views its problems can be had from the details given by the President of the Bank about India's applications for loans. An I.B.R.D. Mission visited India in 1949 and on its recommendations two loans of \$44 million were granted for financing the purpose of locomotives and agricultural machinery. An application for a loan for financing a locomotive factory was refused on the ground that it would take a long time to make such a factory operative and that there would be in the meantime a large

diversion of skilled labour from industries providing immediate necessities, and of iron and steel from urgent replacement requirements. In cases relating to the clearing of grasslands, and to a tube-well irrigation scheme, loans were refused because the cost estimates were not regarded as adequate. While one can argue that the Bank has been unduly cautious in its lending policy, one has also to realise that even a large relaxation of caution would not make the Bank a very important source of external finance. The major part of foreign capital that the newly developing countries like India would require in the near future will therefore have to come from sources other than the I.B.R.D., and for this, direct investment while securing investors will have to be encouraged by foreign under the mediation of the Export-Import Bank or the I.B.R.D. in regularising the flow. The Bank can also perform a useful service by providing technical assistance for preparation of plans by providing information and by compensatory policies with a view to preventing lending booms alternating with panicky contraction and repatriation.

The position of foreign capital with regard to India may be summed up in the remark that Indians should utilise foreign capital in the development of the country and pay the necessary price for it: the question of economic domination by foreign interest does not exist today, especially since we have attained independence. The importance of foreign capital in accelerating the economic development of the country cannot be denied. As our Prime Minister announced in April, 1949, no restriction would be placed on the withdrawal of capital and interest on capital in India and no discrimination would be made against foreign investors. This definite statement by Pandit Nehru should dispel doubt and uncertainty and attract foreign funds in adequate amounts. Before the second World War the amount of foreign capital investment in India was estimated at about Rs. 1,200 crores. Some portion of this capital has since been repatriated. It is difficult to estimate exactly the total amount in India today.

Indigenous Resources

While the most strenuous efforts should be made to mobilise the indigenous capital of India, encouragement should be given to foreign capital under reasonable conditions. This is essential, for though indigenous capital has almost got over its proverbial shyness, even now the total amount of capital available in this country falls short of actual requirements for industrial development. It would be a short-sighted policy to reject foreign capital on sentimental grounds, especially when we take into account the services it has rendered. At a time when India could not provide even a small part of the capital required for her development, it was foreign capital which helped in the process of development, took all sorts of initial risks and thus paved smooth the path of future progress. If in those days foreign capital had not come forward, India today would have remained without railways and without many of her important industries. It has also to be admitted that the entry of foreign capital into the country brought in its train the latest methods and techniques from Europe. Thus the educative value of the investment of foreign resources has been considerable. If it is once admitted that a speedy development of industries is absolutely essential for India, and if it is found that Indian capital is insufficient for securing this end, it is inevitable that foreign capital should play some part in the industrial advancement of the country. India's demand for capital consists of two components, the capital necessary for the maintenance of the existing enterprises of the community and the capital required for new investment. The limits of industrialisation, particularly in an underdeveloped economy like India, are almost rigidly set by the volume of internal savings that can be mobilised for industrial development unless foreign capital is available on a scale that will ease the strain on domestic resources. By judicious imports of foreign capital India can gain many secondary advantages. In so far as foreign capital is accompanied by technical knowledge including industrial research facilities or the training of technicians, managers and administrators in modern methods, the financial arguments in favour of import of foreign capital are further strengthened.

The policy of the Indian Government towards foreign capital, as outlined by Pandit Nehru is sound and realistic. Strict regulation of foreign capital was needed when India was a subject country. But now the object of regulation should be the utilisation of foreign capital in a manner most advantageous to the country. As the Government has stated, as a rule the major interest in ownership and effective control should be in the Indian hands. Obviously, there can be no hard and fast rule in this matter. The Government will not object to foreign capital having control of a concern for some period if it is found to be in the national interest and each individual case should be dealt with on its merits. In the matter of employment of personnel, the Government must not object to the employment of non-Indians in posts requiring technical skill and experience, when Indians are not available or when their qualifications are not available, but vital importance should be attached to the training and employment of Indians for such posts in the quickest possible manner. Although it is official policy to encourage the growth of Indian industry and commerce, including banking, shipping and insurance, there is and there should be considerable scope for the investment of British and other capital in India. We must always in any way gladly welcome the contribution of the non-Indian interests in a constructive and co-operative rôle in the development of India's economy.

Jute

LITTLE BUSINESS IN THE GOODS MARKET

NEW LOW PRICE LEVELS QUOTED

THERE has been practically no legitimate business in the goods market since the Argentine hessian order last week. Overseas buyers have been apathetic in spite of prices having fallen considerably over the week, at least as far as the heavy goods section is concerned. In view of the low prices, Calcutta mills have not been very keen to do much business, as at the present price ratio between jute and gunnies it is still impossible for manufacturers to do simultaneous business and show a profit. One of the main reasons for the slump in the heavy goods market this week was the cancellation of a steamer that was due to be loading, until some time next month. It is understood that this vessel was taking on 20,000 bales of B Twills, of which about half had still to be covered, and this brought heavy pressure to bear on the B Twills ready position. With the cancellation of the steamer this pressure was released and sacking prices fell rapidly. The squeeze on B Twills however has only been delayed, as the balance for this steamer has still to be covered, but operators hope that prices will have dropped by the time loading commences. The only business therefore has been of a speculative nature, and heavy selling pressure in "fatka" by a few large operators kept the market depressed for most of the week and new low levels were quoted.

The hessian section this week has tended to be steady, but under strong pressure from the heavy goods section prices have shown a small decline. Steady covering business has been going on throughout the week for all deliveries against the Argentine order, and in some cases speculators are attempting to corner certain fabrics with the idea of causing a shortage at the time of shipment. No fresh business has been received from overseas and over the week rates have only dropped eight annas a 100 yards, and this has been mainly in sympathy with the depressed sacking section. The majority of fabrics in the heavy goods section have fallen Rs. 3 to Rs. 4 a 100 bags and the tendency is still downwards.

Raw Jute Follows Goods

For the first time for a considerable period, the drop in the price of raw jute has been commensurate with that of the goods market, rates having fallen about Rs. 1-8 or Rs. 40 a ton over the past week. However this has done nothing to alleviate mills' difficulties in doing double business, as the gap between jute and gunnies is still considerable. At the beginning of last week it did not appear as if the price of jute was going to fall at all, as sellers were most reluctant to entertain any indications at below the quoted rates. Towards the end of the week however, when it became apparent that mills would not buy jute at the present price ratio, they began to change their ideas, and large quantities of jute came out on offer at lower rates. Mills, however, are not particularly keen buyers of Old Crop jute, and this section had its quietest period for some weeks. Mills have been guided in their policy to a certain extent by the very favourable crop reports from both India and Pakistan, and it is confidently anticipated that in some areas New Crop jute will be coming forward much earlier than expected. The only districts that are not returning good reports are the Daissee-growing areas, and in many places ploughing and sowing has not even commenced due to the lack of rain. As a result of this the bulk of the Daissee crop will be about six weeks later than last season, and it is very likely that farmers will put down an increased amount of mesta, which is a quicker growing plant, to try and compensate for the late crop.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Thursday heavy goods were in a tumble because the pressure taken off the B Twills section by the cancellation of a steamer. Near and forward deliveries of B Twills dropped Rs. 1-12 a 100 bags to be quoted at Rs. 114-8 and Rs. 103-8 respectively, and the hessian section ruled easier in sympathy, 40" 10oz losing six annas in all deliveries to be quoted at Rs. 43-10 a 100 yards for May shipment and Rs. 42-6 for October-December shipment. In the absence of fresh business the markets ruled easier throughout the day, but towards the close speculative activity in heavy goods "fatka" caused a further fall and the market was depressed. On Friday B Twills again lost way and four annas was taken off all deliveries. The hessian section however showed no change and ruled firm. On Saturday a weaker sentiment again prevailed, when prices, under the influence of heavy speculative pressure, yielded ground and B Twills lost Rs. 2-4 in the near positions and Rs. 1-12 for Oct-Dec shipment. Opening quotations were Rs. 112 for May shipment and Rs. 102 for the October-December position. This is the lowest price recorded for ready B Twills since October 1954. Once again the hessian section remained steady, only dropping two annas in sympathy with sacking. Towards the close on Saturday some bear covering took place in the "fatka" market and rates recovered slightly. The improvement continued during the weekend and Monday morning's quotations opened at Rs. 113-2 a 100 bags for

ready B Twills, which was Rs. 1-2 up from Saturday, and the forward position was eight annas better being quoted at Rs. 102-8. The only change in the hessian section was a two anna rise in October-December shipment, and opening quotations on Monday morning for 40" 10oz were Rs. 43-8 ready and Rs. 42 forward. In the absence of any fresh business, rates declined from the steady opening and by the close most of the gains made over the weekend had been lost. Tuesday was a holiday when the markets were officially closed and no quotations are available.

At the close the market is weak with no overseas buyers taking any interest. Opening quotations on Wednesday morning are as follows:

	May	June	July-Sept.	Oct.-Dec.
40" 8 oz.	34-6	34-4	34-2	33-6
40" 10 oz.	43-4	42-14	42-10	41-10
B. Twills	111-12	110-4	108	101
Heavy Ceess (Plain)	112-8	111-4	108-12	101-12
A. Twills	144-8	142-8	134-8	127
Liverpools	126-8	126	123-8	116-8
Cornacks	116-4	115-4	111-4	103

Raw Jute: There has been very little business passing in the raw jute markets over the past week, as mills have been reluctant to put any purchases on their books which immediately show a loss against the goods market. At the opening, sellers were inclined to be very reserved and although they were offering fairly large quantities of both Old and New Crop jute, their idea of price was well above anything the mills would pay. However, they persisted with this attitude, but when they saw that mills were adamant in their policy they revised their ideas, and a gradual decline in prices resulted. Mills took some interest in the lower rates before the weekend, but the volume of business transacted was very small compared with previous weeks. Mills appeared to be in no hurry to buy jute, and interest in Old Crop jute was waning in the light of the very promising New Crop reports. Large quantities of New Crop jute were on offer, and rates for forward delivery were attractive. But near delivery jute still commanded a high premium, and for early shipment was on a par with Old Crop jute.

Raw jute rates opened the week on Thursday last at Rs. 32 a maund for Upper Assam Bottoms for May-June shipment, which was eight annas less than last week's closing rates. Sellers were still reserved however, and in spite of the continual decline in the goods market over the next two days, they did not alter their rates. Towards the end of the week, in the absence of any business, they at last revised their ideas, and on Saturday rates dropped Rs. 1 a maund. Some sellers were keen for business at this stage and quotations could be regarded as nominal, as they were prepared to do business at below the quoted rates. Only very small business was done however, and after the weekend quotations remained at Rs. 31 a maund for Upper Assam Bottoms.

New Crop quotations opened the week at Rs. 27 a maund for Upper Assam Bottoms for August-September shipment, this being Rs. 1 a maund below last week's closing quotations. Rates were more flexible in this section due to the wider delivery periods, but on the whole prices followed the pattern of Old Crop jute and over the week lost about Rs. 1 a maund. Near-delivery jute still commanded a premium and quotations for July shipment jute stood as high as Rs. 30 a maund, but there were very few buyers at these rates. For delivery about October and later, quotations fell to as low as Rs. 25 a maund, but the only interest here was of a speculative inter-seller nature.

Only very small business was done during the week, Old Crop Dhubri-Northern changing hands at Rs. 31 to Rs. 32-8 a maund for Bottoms for May-June shipment, and Upper Assam Bottoms at Rs. 31-8 a maund for the same shipment. A small lot of Upper Assam was also done at Rs. 32 a maund basis Bottoms. There were no reports of any Daissee business, but Daissee Mesta was done at Rs. 28-8 to Rs. 29 a maund basis Bottoms for one month's delivery.

Business was again done in Pakistani Northern jute at Rs. 31 a maund, but on this occasion the difference between Middles and Bottoms was reduced to Rs. 3. The delivery period was May-June.

The only business in the pucca bale section was Pakistan N C's at Rs. 123 to Rs. 125 a bale for May-June shipment ex-Pakistan. Pakistani Cut Ropes were also done at Rs. 125 a bale.

A fair quantity of New Crop jute was contracted for over the week ranging from Rs. 29 to Rs. 30 a maund for Dhubri-Northern Bottoms for July shipment to Rs. 26-8 a maund for August-September-October shipment. August-September shipment from the same districts was done at Rs. 27 to Rs. 27-8 a maund basis Bottoms. Upper Assam jute was done at Rs. 26-8 a maund basis Bottoms for August-September shipment, and at Rs. 25 a maund for October-December shipment, the latter being inter-seller transactions.

At the close raw jute prices have been reduced about eight annas a maund in sympathy with the

falling goods market, and opening quotations on Wednesday morning are as follows:-

Indian Jute.	Landed at Mills Rs. a maund.	Shipment Basis Bottoms.	Old Crop	New Crop	Old Crop	New Crop
Lower Assam	30	26-8	May-June	Aug.-Sept.		
Upper Assam	29-8	26				
Northern	30	26-8				
Daissee (Ex Sheoraphuli)	31					
Daissee Mesta	28					
Local	28-8					
Northern	28					
Local Packing	29					
Bimbi	28					

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rates for White Jute.

Pucca Bales.	Rs. a bale.	Shipment
Mill Firsts	175	May-June
Mill Lightnings	160	
Dundee Daissee 2-3 S.G.	175	
Dundee Daissee 2-3 L.G.	160	

Pakistani Jute.	Rs. a maund.	Old Crop	Shipment.
	Old Crop	Old Crop	New Crop

Jat	32	30	May-June	Aug.-Sept.
District	31-8	29-8		
Northern	30-8	29		

There is very little to report from the Cossipore markets this week, but imports have improved slightly over the week with more arrivals coming in from the Assam and Northern Bengal districts. In the absence of business, or any demand from mills for quick delivery, jute prices have fallen by about Rs. 2 over the week and at the close Kishanganj jute is quoted at Rs. 30 a maund for graskat quality. The Daissee markets are quiet but a strong undertone is prevailing due to the adverse crop reports from many of the Daissee growing areas. Latest quotations is Sheoraphuli are based on Rs. 30-8 a maund for graskat quality.

Mofussil: Reports from upcountry indicate that the market is easier. The favourable New Crop reports have brought out more sellers of Old Crop jute at lower rates, and sellers are keen for business. Only small business is reported however as buyers are expecting still lower prices. Latest quotations in Dhubri are based on Rs. 27 a maund for Bottoms.

The Pakistan markets are weak with prices dropping Re. 1 over the period under review. Very little business has been reported as the outcome of trading licences is awaited. It is understood that the Government of Pakistan press notes have announced the names of seven firms to whom licences will be issued, and a further list of about 20 firms to whom licences will not be issued. Another announcement is expected in the near future. Imports into Narayanganj are still small and average about 5,000 maunds a day. In the absence of business quotations are nominal and in Narayanganj are based on Rs. (P) 19 a maund for Jat Bottoms and Rs. (P) 19-8 to Rs. (P) 20 a maund for Jat Tossa Bottoms.

INDIAN JUTE CROP REPORT

In their tenth crop report for the current Indian season covering the week ended 21st May, Messrs. Sincin Murray & Co. Ltd. say that very hot and dry weather conditions have prevailed although over the week-end moderate rainfall was experienced in most districts in Orissa and West Bengal. Sowings have been suspended in some areas but in Bihar and Assam sowings have continued and are now completed in most areas. Plant condition is very satisfactory in Assam but not too satisfactory in other provinces. Further rainfall is required to promote growth and to assist seed germination. River levels in Assam are rising steadily and elsewhere are normal for this time of the year.

DANPUR: With the exception of one light shower towards the latter part of the week, weather has been hot and dry and sowings have been virtually suspended. Estimated sowings to date amount to -1/4/8 as against -1/3/- on the corresponding date last year. Seed germination has not been good but the

condition of standing plants remains satisfactory although immediate heavy rainfall is required. Plants range in height from seedlings to 1 ft. The river level is normal for this time of the year.

JAJPUR ROAD: With the exception of moderate rainfall at the latter end of the week, weather conditions have been hot and dry. Estimated sowings to date amount to $-\frac{3}{8}$ as against $-\frac{11}{16}$ at this time last year. Weeding operations are being carried on where required and plant condition is satisfactory. Plants ranging in height from seedlings to 1 ft. The river level is slightly higher than at the same time last year.

COSSIMBAZAR: Very hot and dry weather has been experienced and sowings have been suspended. Heavy rainfall is urgently required for the benefit of the standing crop as well as to allow cultivators to proceed with sowings. Estimated sowings to date amount to $-\frac{3}{8}$ as against $-\frac{1}{4}$ at this time last year. Plant condition is not very satisfactory but they range in height from 3 in. to 1 ft. The river level is normal for this time of the year.

RANAGHAT: Mainly hot and dry weather was experienced but good rainfall was experienced during the latter end and this has proved very favourable to the standing crop. Estimated sowings to date amount to $-\frac{15}{16}$ as against $-\frac{13}{16}$ at this time last year. Plant condition is satisfactory and they range in height up to 1 ft. 9 in. Weeding operations are going on slowly but due to heavy week-end rainfall, certain areas are heavily water-logged. The river level is normal for this time of the year.

NOWGONG: Sowings completed $-\frac{22}{26}$. Weather was hot and dry but this has been favourable for the standing crop and cultivators have been able to complete sowings which are estimated at $-\frac{22}{26}$ as against $-\frac{16}{16}$ at this date last year. Weeding operations are going on as required; plants are reported as healthy and range in height from seedlings to 3 ft. The river is rising steadily and is at the same level as last year at this time.

PALASHBARI: Hot and dry weather conditions have been experienced and this has been favourable for the growth of young plants and has enabled cultivators to carry on sowing and weeding operations. Estimated sowings to date amount to $-\frac{22}{26}$ as against $-\frac{16}{16}$ at this date last year. The condition of young plants is reported to be very satisfactory. The river level is rising steadily and is 2 ft. higher than last year at this time.

DHUBRI: Sowings completed $-\frac{20}{26}$. Alternate rain and sunshine has been experienced during the week which is beneficial for the standing crop. Cultivators have been carrying out weeding operations freely and have also completed sowings which are estimated at $-\frac{20}{26}$ as against $-\frac{16}{16}$ at this time last year. Plants are reported to be very healthy and growing well, ranging in height from seedlings to 2 ft. 9 in. The river level is rising steadily and now stands at 6 in. lower than at the corresponding date last year.

FORBESGANJ: Hot and dry weather conditions have been experienced and further rainfall is urgently required to assist growth and allow cultivators to complete sowing operations. Estimated sowings to date amount to $-\frac{20}{26}$ as against $-\frac{13}{16}$ at the same time last year. Seed germination of recent sowings is not very satisfactory but young plants are healthy and range in height up to 2 ft. 6 in. Weeding operations are going on where required.

DAISSEE DISTRICTS: Hot and dry weather conditions have prevailed but in the latter end of the week moderate rainfall was experienced which proved beneficial for the standing crop and to allow cultivators to continue sowings. Estimated sowings to date amount to $-\frac{6}{16}$ annas as against $-\frac{13}{16}$ annas at this time last year. Plant condition is improving and they range in height up to 1 ft. 6 in. The river level is normal for this time of the year.

N.B. As a basis of comparison last season's sowings have been taken as $-\frac{16}{16}$.

PAKISTAN JUTE CROP REPORT

In their eleventh crop report for the current Pakistani season, covering the week ended 21st May, Messrs. Sinclair Murray (Pakistan) Ltd. say that during the early part of the week, weather has been hot and dry but most areas have had rain towards the end of the week which has been favourable. Sowings are now complete and the condition of plants is satisfactory. River levels are reported to be irregular.

NARAYANGANJ: Sowings completed $-\frac{21}{26}$. The weather has been favourable with sufficient rain during the latter half of the week. Condition of plants is satisfactory and they range in height up to 3 ft. 6 in. Weeding is going on in mid and highlands as required, lowland weeding has been completed. The river level is 5 in. higher than at this time last year.

DACCA: Sowings completed $-\frac{21}{26}$. During the first part of the week the weather has been very hot and dry but rain in the latter part has been favourable for the crop. Condition of plants is satisfactory but alternate rain and sunshine would be beneficial. Weeding is going on where required. The river level is lower than at this time last year.

CHANDPUR: Sowings completed $-\frac{21}{26}$. The weather has been hot and dry and more rainfall is required. Condition of plants is satisfactory and they range in height up to 4 ft. 6 in. Weeding continues where required. The river level is 8 in. higher than at this time last year.

NIKILIDAMPARA: Sowings completed $-\frac{21}{26}$. The weather has been hot and dry but week-end rainfall has been beneficial. Plants range in height up to 3 ft. and more rain is required to promote growth. Weeding operations have been completed in mid and lowlands and is being carried on as required in the highlands. River level is normal for the time of the year.

SARISHABARI: Sowings completed $-\frac{20}{26}$. The weather in general has been hot and dry locally but it is reported that surrounding areas have received fair rainfall. Plants are reported to be healthy and range in height up to 2 ft. 9 in. Weeding has been suspended meantime. The river level is approximately 1 ft. lower than at this time last year.

SIRAJGANJ: Sowings completed $-\frac{21}{26}$. The weather has been mainly hot and dry during the week under review. Condition of plants is satisfactory but more rain is required. Plants range in height up to 4 ft. 6 in. Weeding is being carried on as required. The river level is lower than at this time last year.

NAKALIA: Sowings completed $-\frac{21}{26}$. Weather has been hot and dry but rainfall in the latter part has done much to improve the condition of plants. Plants are reported to be healthy and range in height up to 4 ft. 3 in. The river level is a little lower than at this time last year.

BHANGGOORA: Sowings completed $-\frac{20}{26}$. The weather has been hot and dry with a little scattered rain. More rain would be beneficial for the standing crop. Condition of plants is reported to be good and they range in height up to 4 ft. 6 in. Weeding is going on as required. The river level is the same as at this time last year.

N.B. As a basis of comparison, last season's sowings have been taken $-\frac{16}{16}$.

GUNNY SHIPMENT STATISTICS DURING MAY

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th May, 1955	1,118.7	19,261.6	20,380.3
1st to 20th April, 1955	550.9	17,421.1	17,972.0
	Sacking		
1st to 20th May, 1955	34,229.1	823.2	35,052.3
1st to 20th April, 1955	17,789.1	732.7	18,521.8

SOLID FLANGE BOBBINS FOR JUTE ROVING FRAMES

The Indian Standards Institution has published an Indian standard specification for solid flange bobbins for jute roving frames. Bobbins are used to retain the partly fabricated material during different stages of manufacture and during transport from one type of machine to the next. Bobbins used in jute roving frames are made of wood and usually consist of a hollow shank and two flanges. The shank and the flanges are glued, pressed and pinned together. The imported bobbins usually have solid flanges while the manufacturers in this country are increasingly using plywood to make flanges. This standard deals only with solid flange bobbins.

The standard prescribes general and specific requirements of three types of 10 in. wetted solid flange bobbins for jute roving frames. Other clauses in the standard relate to the terminology, sampling atmospheric conditions for testing, conditioning of test sample, and species of timber used for making solid flange bobbins. Five appendices to the standard give respectively the code of practice for the manufacture of bobbins, a list of approved species of timber, a description of such species of timber, characteristics of approved species of timber as compared with birch and beech and methods of soaking bobbins in oils and specifications of the oils recommended for the purpose. The standard has been formulated to help the manufacturers, especially those operating on cottage-industry basis, in making solid flange bobbins for jute roving frames of acceptable quality and the purchasers in acquiring dependable supplies. The standard can be had from the Indian Standards Institution, 19, University Road, Delhi-8.

U. S. BURLAP CONSUMPTION AND STOCKS

U. S. burlap consumption for April, estimated for the industry at 63 million yards was 8 million yards less than the previous month and exactly the same as for April last year. U. S. burlap stocks at the end of April increased slightly. At an estimated 258 million yards, 127 million yards were spots and 131 million yards were floats. Appearing below are two tables which include the April figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association, and (2) projected

to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

LITTLE IMPROVEMENT IN VIEW

(FROM OUR DUNDEE CORRESPONDENT)

THE second reduction in prices this month, which took place here on last Thursday, has led to rather more business in yarns and cloth, but buyers are still rather reluctant to go any distance ahead. Orders are mainly confined to small quantities. With raw jute displaying signs of weakness again after opening the week under an advance, there is a tendency on the part of consumers to hold off in the hope of another change. Much will depend upon the attitude of the Pakistan Jute Board should raw jute values show further weakness to £90 a ton for Mill Firsts and shippers appear anxious to get on at below that figure. Latest news from Pakistan is that there is expected to be a bumper crop, probably in the vicinity of six million bales. India, too, is believed to have had an increase in the area sown this year compared with last. The manner in which shippers are anxious to sell old crop jute indicates that there will indeed be no scarcity now until the new crop becomes available from Pakistan. The threat of Pakistan that no E.P.C.'s will be granted for jute sold cheaply is preventing shippers from offering new crop fibre at less than £90 for Mill Firsts, but, if business continues as slow as it has been over the past month or two, we may see sellers offering less. It is believed here that Pakistan will not be able to hold the market over the next few months and that, even if minimum prices are stabilised at the same level as they now stand, viz. £90 for Mill Firsts, cif. U.K., they may be forced to seek a new lower level, as has been done before.

Offers are freely made now at £93 for Mill Firsts, £85 for Mill Lightnings, £81 for Mill Hearts, £95 for good Daisce-2/3 and £84 for grade. £102 for grade Tossa-2/3 and £91 for grade fours, all cif. U.K. New crop is obtainable at £90 for Mill Firsts, cif.

Calcutta goods have gone markedly easier, closing late last week at 71s for 10 oz. 40 in. and 52s 9d for 7½ oz. May and June, 70s 3d and 52s 3d July-September and 69s 6d and 51s 6d October-December, with "B" twills at 186s 6d, 185s, 180s and 171s respectively, all f.o.b. Calcutta. There are cheaper sellers, but little business. Jute yarns and cloth are of some interest here and the new lower terms are firmly maintained.

STANDARD CAR ENGINES TO BE PRODUCED IN AUSTRALIA

Australian-produced engines in August are scheduled to come off a new production line at the Standard Motor Co.'s plant at Fishermen's Bend, Melbourne. Production rate is to rise to 100 a day. The company's chief engineer, Mr. R. H. Nairn, has left for England to have technical discussions with the executives of the Standard Motor Co., Ltd., Coventry.

While in England, Mr. Nairn will also discuss technical aspects of plans further to increase the Australian content of Standard and Triumph vehicles. Other discussions will centre on plans to increase vehicle output at the Fishermen's Bend plant by more than 16 percent.

THE RETURN OF THE CONSUMER

HIS ROLE IN THE MODERN ECONOMY

By N. Das, I.C.S.

THE most conspicuous event in the field of industry and trade, since the beginning of 1954, has been the return of the consumer in his pristine glory—after an absence of more than a decade and a half. The important part the consumer plays in the field of production was completely masked for the duration of World War II. Even when the war ended, shortages continued, in a world devastated by such a holocaust, the consumer had little effective say, either in the domestic market or in the sphere of international trade. He was almost entirely at the mercy of the manufacturer and trader on the one hand and the comparatively well-organised labour unions on the other. Yet the consumer has been the fountain-head, so to speak, of all economic activities. As every student of economics knows, it is the balance between value and cost which determines production. The cost aspect is the prerogative of the producer, the value aspect, that of the consumer. The things which we value highly but cost little to produce are provided first and in large quantities; what costs a great deal and is of comparatively little value is generally not produced at all. It is the consumer who ultimately decides what commodities should be produced and in what quantities. Even the cost aspect must ultimately conform to the estimate of value which the consumer places on the commodity offered to him. The dictum of Adam Smith that consumption is the sole end of production holds as good today as it did in the eighteenth century.

It is true that the choice or preference expressed by the consumer is not always rational. Sometimes, choice is dictated by the producer, as when a monopolist offers a non-competitive commodity or service at a price which he considers reasonable. Not infrequently, even in a competitive market, consumption standards may be determined by the peculiar selling methods of producers; advertisements, slogans and the very variety of goods often impose a strain on the helpless consumer and prevents him from exercising his choice rationally.

Changed Role of the Consumer

In the earlier stages of commercial economy, when most manufactures were carried on in small local units and both the range and variety of goods produced were limited, the consumer's position was fairly simple. He had merely to exercise his shrewdness (this was of course influenced by his minimum needs of life, the nature of his occupation and social pressure) and the producer would perforce have to take due notice. With the introduction of more efficient production methods and with the widening of markets, however, the range of choice available to the consumer increased, but paradoxical as it may seem, his position as an individual consumer weakened. He neither had the time nor the opportunity to compare prices or quality, and more often he was bewildered rather than helped by the extraordinary variety of goods he had to select from, each accompanied by its own slogan and its own name-brand. The widening of choice thus appears to have increased the margin of the consumer's incapacity to employ the best available techniques of choice.

Does this mean that the consumer has ceased to be effective in the arena of large-scale production and trade as we find in the world today? The answer is that while the consumer has ceased to be effective as an individual, he still dominates—in a free economy—as a class. Production is now no longer for individuals—it is for a market, for a body of consumers. It is in this sense that the significance of the return of the consumer is to be viewed. In the buyers' market which has ensued since the beginning of 1954, not merely in India, but in particularly all countries of the world, the consuming public has come to realise its inherent strength. Today, the consumer of food grains would not accept rice or wheat of indifferent quality; the consumer of cloth would like to compare the qualities and prices of various kinds of cloth available in the market. The housewife would tolerate excessive prices of tea only up to a limit, and when that limit has been crossed she would start a kind of non-violent resistance. In the sphere of other consumer goods, and even in that of capital goods, the range of choice is so wide that the consumer is now able to dictate his terms.

Producers' Dilemma

This has placed our industrialists and businessmen, used these past 15 or 16 years to the complacency of a sellers' market, in an extremely uncomfortable position. They are crying out for "protection" against unfair competition, for "safeguards" against the rigidity of the cost structure imposed by class-conscious labour, for "guarantees" against the dumping of foreign products. A little circumspection would, however, show that, in most cases, the outcry is the result of the inability of manufacturers or distributors to adjust themselves in the new conditions which have arisen—conditions which were in existence prior to 1939, but which had been almost forgotten in the interregnum.

Our business men would do well to recognise that the return of the consumer is a cold, incapable fact. Barring a third world war, or a calamity of a similar magnitude, the consumer is bound to grow from strength to strength in the years to come. This need not, however, spell disaster for industry. Instead, the preferences expressed by consumers as a class should have a judicious effect on production—making it more varied, less expensive and more adaptable to the needs of those for whom production is intended. Let it not be for-

gotten that consumption is the end, of which the other stages in the economic process, viz., production, exchange and distribution, are the means. And if consumption is viewed not only economically but also ethically and psychologically, as the end of human activity, it becomes practically synonymous with man's way of life. When production adjusts itself to consumption, as it ought to, it helps to make this way of life richer and more varied.

The Ethics of Consumption

Although the theory of consumption is of comparatively recent origin, the history of sumptuary laws is evidence that standards of consumption have had a perennial public interest. In the closing days of the Roman Empire, there were elaborate rules regulating the increase of luxury in dress, ornaments and food. During the later Middle Ages and in early modern times, sumptuary legislation reached its most extensive development. Governments considered it their duty, in the public interest, to control expenditure and consumption. With the overthrow of the Mercantilist doctrine, however, freedom to consume reached its highest apothosis. Later, developments in the science of psychology and an elaboration of the value theory gave new prominence to consumption in economic analysis, and a scientific interest in the dynamic or evolutionary aspects of economic life reinforced a philosophy which had already entrenched itself in nineteenth century England. Although the validity of the utility theory was widely questioned by later economists on the ground that it relied on a hedonistic psychology (the choice of the individual, it was argued, depends not so much on a rational consideration of alternatives, but on social habits or modes, or is either intuitive or simply emulative), even those who enunciated the new philosophy of social welfare had to take note of the "disturbances" which could be caused to the economic system by the free play of consumption.

From this followed attempts to measure consumption or consumer's behaviour. Empirical and historico-sociological investigations were commenced, calling for information about the consumption of commodities by single families or by wide areas. Not infrequently, statistics of consumption and family budgets have been used to test the abstract hypotheses of economic theory, especially the concepts of the demand curve and elasticity of demand. The pioneers in this field were Bowley and Robertson in England and H. L. Moore and Henry Schultz in the U.S.A. Even in India, where primary data are often meagre and inadequate, empirical studies of the pattern of consumption by different groups of consumers and in different markets have been started—often with quite interesting results.

The important rôle of consumption in the determination of economic policy also needs to be emphasised. Consumption standards are essential to the determination of real incomes and changes in the cost of living. They also offer valuable material for the development of a national policy for capital formation. The recent debates in and outside Parliament, on the effects on consumption of Mr. Deshmukh's budget, and its ultimate repercussions on industrial development and the national income are too well known to need recapitulation. The Report of the Taxation Enquiry Commission is replete with hints on the relationship between taxation and consumption on the one hand, and public expenditure and consumption on the other.

Consumption and Planning

To the planners, consumption presents a dilemma. On the one hand, consumption must be stimulated in order to maintain production and employment on the other, consumption, in the sense of indiscriminate spending, must be regulated with a view to ensuring that production proceeds along certain desired channels. From this standpoint, capital formation requires that a brake be placed on unregulated consumption, as it is felt that if consumers are given a free hand, the real wealth of the country may be frittered away. Then there are the moralists and purists who would like to curb the consumption of certain articles such as alcohol or cigarettes or even films in the hope of strengthening the moral basis of society.

The question is often asked whether consumers should organise themselves into some sort of an association or league so as to be able to stand up to the superior forces of Government, industry and labour. The only country where such associations have, up to now, had success is the U.S.A. where a Consumers' League was founded in 1890 by Mrs. Charles Russell Lowell. It is interesting to note, however, that the main objective of this League was not to protect the interests of consumers as such, but to improve the working conditions of labour by selective patronage of establishments which paid their workers minimum wages and enforced reasonable hours and decent sanitary conditions. Consumers' leagues formed with the sole object of further strengthening the serried phalanx of persons with diverse tastes, prejudices and preferences have, however, had practically no success in the few countries where they have been attempted.

This need not, however, fill consumers as a class with despair. Notwithstanding the socialistic and welfare pattern of life to which India stands committed, the consumer is going to have a big say in the actual determination of economic policies. No doubt conflicts will occasionally arise between the competing claims of private values and social values, but consumption is bound to make its influence felt, even though it may sometimes have to be regulated for a social purpose. In so far as the economist and administrator are concerned, in spite of changes in viewpoint and method, the

pattern of consumption remains a picture sufficiently well-oriented to be useful for analysis and prediction. Secondly, its very imperfection seeks to provide both purpose and *raison d'être* for its continued study, elaboration and refinement.

BIG FALL IN KANPUR WORKING CLASS COST OF LIVING

THE Kanpur Working Class Cost of Living Index Number (Base, August, 1939-100) for the month of April, 1955 has shown a significant fall of 25 points to 352 as against the previous month and is also lower by 74 points as compared with the index in the corresponding month of the last year. The table given below shows the comparative group indices for the months of March and April, 1955.

Sl. No.	Group	March, 1955	April, 1955
i.	Food	374	337
ii.	Fuel & Light	364	335
iii.	Clothing	465	481
iv.	House Rent	235	235
v.	Miscellaneous	442	444
	Cost of Living Index No.	377	352

The index for "Food" group despite a slight rise in the prices of rice and ghee registered a fall of 37 points to 337 on account of a fall in the price of wheat, birra, gram, arhar, meat, mutton, sugar, mustard oil, potatoes and salt. A fall in the price of firewood has been responsible for a fall of 19 points to 335 in the index for "Fuel & Light" group. The index for "Clothing" group went down by four points to 481 as a decrease in the price of sarees predominated over an increase in the price of dhotees. The index for the "Miscellaneous" group rose by two points to 444 as increase in the price of supari predominated over decrease in the price of soap. The index for house rent remained stationary.

COMMONWEALTH DEVELOPMENT FINANCE COMPANY REPORT

SATISFACTORY PROGRESS IN SECOND YEAR

THE Commonwealth Development Finance Company (CDFC), in its annual report just published in London, records that during its second financial year ended 31st March, it made satisfactory progress and negotiated new investments to a total of approximately £4,800,000. Some 40 applications or inquiries were received. The chairman's statement observes that although the past year was a prosperous one for most members of the Commonwealth, experience proved that there was a financial gap when it came to launching many of the new development projects. It is this gap that CDFC aims to fill, under the main objective of promoting Commonwealth development.

The company provides the required capital by sterling loans where, because there is no return in the way of interest, it would be difficult for promoters to obtain funds through normal channels. It has not been the practice of the company to make indirect investment through the medium of other finance corporations.

Investment in India

An exception to this rule was, however, made last year in regard to India. Here CDFC acceded to a request to take part in the scheme for promoting development in the field of private enterprise by contributing to the capital of the Industrial Credit and Investment Corporation of India Ltd. Other new projects in 1954 included the construction of pulp, paper and saw mills in New Zealand (£3 million), assistance in financing development of the Algom uranium mines near Sudbury, Ontario, Canada—the biggest known uranium mine in North America (£1,284,153)—and a sugar estate in the Federation of Rhodesia and Nyasaland (£350,000).

Recalling previous projects, the report refers to that of the Sui Gas Transmission Co. Ltd., in whose equity capital of about £4 million CDFC invested £1 million in June last year. The project, the report says, has made "admirable progress" in the laying of the pipeline to transmit gas from the Sui fields (in eastern Baluchistan) 350 miles down the Indus valley as far as Karachi.

Commodity Markets

OVERALL INCREASE IN TRADE
BETWEEN INDIA AND U.K.LARGE RISE IN FIRST
QUARTER OF 1955

TRADE between India and the United Kingdom in the first quarter of 1955 showed an overall increase of more than 23 percent compared with the same quarter last year. Up to the end of March this year, India exported to the U.K. goods worth £55,157,000, taking in return British goods worth £32,861,000. These figures compare with £41,239,000 and £30,092,000, respectively, in the first quarter of 1954 and, with a small amount of British re-exports, bring the two-way total to £88,176,000, compared with £71,425,000. Some 65 percent of India's export trade with the U.K. was accounted for by tea, of which she sent 1,025,000 cwt. valued at £35,570,000, compared with 1,097,129 cwt. at £22,083,000 in the same three months of 1954. This, in turn, accounted for nearly two-thirds, by weight, of Britain's total tea imports for the quarter, which amounted to 1,577,975 cwt.

Textile Manufactures

The second largest category of Indian exports to Britain up to the end of March was £4,479,000 worth of miscellaneous textile manufactures (jute piecegoods, etc.). This was followed by £3,195,000 worth of leather, leather manufactures and dressed furs cotton yarns and woven fabrics to the value of £2,255,000 (including £2,135,000 for 43,677,000 sq. yds. of standard grey fabrics, compared with 25,468,000 sq. yds. in the same period last year). Then came £1,423,000 worth of "wool and other animal hair" made up mainly of 6,173,000 lb. of raw sheep's and lambs' wool; £1,369,000 worth of "miscellaneous animal and vegetable crude materials"; and 242,921 cwt. (£1,197,000) of "animal and vegetable oils, fats, greases, and derivatives". During the quarter, India sent 11,404,900 lb. of cotton valued at £912,000 and including 2,473,900 lb. of raw cotton of $\frac{7}{8}$ -inch staple and under (£225,000); 78,593 cwt. of fruits and vegetables (£269,000) compared with 22,325 cwt. in the same period last year; and 66,533 tons of metaliferous ores and scrap, at £759,000.

Machinery Imports

The most important group of India's imports from the U.K. during the first quarter of 1955 consisted of heavy-engineering goods, accounting for about 60 percent of Britain's export trade with India. The leading item in this field was non-electrical machinery, of which the U.K. sent 410,091 cwt. (£8,094,000) compared with 379,196 cwt. in the first quarter of 1954. It included 72,058 cwt. of textile machinery (£1,695,000) 60,411 cwt. of power-generating boilers, steam engines, and internal combustion engines (£957,000); 26,131 cwt. of metal-working machine tools (£580,000); and 31,609 cwt. of mechanical-handling equipment (£473,000) compared with 25,734 cwt. Electrical machinery, apparatus, and appliances sent by Britain during the quarter totalled £4,270,000, of which £665,000 was accounted for by 20,060 cwt. of generating plant (compared with 17,374 cwt. in the first quarter of 1954); £1,183,000 by 43,718 cwt. of converting and switching gear; £479,000 by electronic valves and broadcasting equipment; and £809,000 by 3,027 tons of insulated cables and strips.

Next came vehicles—£2,456,000 worth of road vehicles and aircraft, and railway vehicles to the value of £954,000. These were followed by 39,466 tons of iron and steel (£2,313,000) compared with 24,311 tons in the same period last year, and including 5,475 tons of bars, sections, and girders (£236,000); 14,485 tons of plate and sheet (£808,000); and 11,217 tons of tubes, pipes and fittings (£793,000). Britain sent £1,200,000 worth of the wide range of products listed as manufactures

of metals, and £580,000 worth of non-ferrous base metals, the largest item being 34,471 cwt. of aluminium and alloys (£397,000).

Chemical Products

Chemicals formed another important group of India's imports from the U.K., totalling £4,223,000 in the quarter. This included £1,366,000 for elements and compounds; £455,000 for synthetic organic dyestuffs and £748,000 for drugs and medicines.

Leading items in Britain's textiles exports to India were wool and cotton. Under the former heading the U.K. sent £1,405,000 of "wool and other animal hair", including 2,846,000 lb. of wool tops (£1,315,000) and £134,000 worth of woollen and worsted yarns and woven fabrics. British cotton manufactures taken by India included £469,000 worth of yarns and woven fabrics, the largest item being 566,837 lb. of cotton yarns (£279,000). Other leading British exports to India included scientific instruments, photographic and optical goods, watches and clocks to the value of £799,000; £555,000 worth of petroleum and petroleum products, largely accounted for by 3,966,000 gallons of lubricating oils (£506,000); and 41,596 cwt. of paper, paperboard, and their manufactures (£489,000) compared with 27,042 cwt.

WORLD SUPPLIES OF TEXTILES

RATE OF CONSUMPTION INCREASE
DECLINING

PRELIMINARY estimates by the Food and Agriculture Organisation of the United Nations show that during 1954 the industrial consumption of raw cotton and rayon throughout the world continued to grow, while that of clean wool was again reduced. These estimates further indicate that the consumption of these apparel fibres as a whole continued to expand faster than the world's population. Thus the rate of consumption per head in 1954 was at a record high level.

The simple basis on which these estimates are made—the industrial consumption or raw fibre by each country plus or minus its foreign trading balance in products composed of these fibres—has the considerable disadvantage that it does not allow for changes in stocks. Such fluctuations may be very considerable and, in fact, they seriously distort the statistics in the period covered by the F.A.O.'s latest summary. The accumulation of stocks during 1951 and their violent liquidation in the following year have since given place to more gentle movements. In 1954 it would appear that the rate of accumulation was reduced by events in the United States and Japan particularly, though the change was not on the whole very considerable. On the other hand, research has suggested a three-year cycle in stocking and destocking in the United States and the United Kingdom. To minimise the effects on the consumption figures of stock changes, the F.A.O. bulletin includes figures based on a three-year moving average, and on this basis also total consumption rose each year between 1949 and 1953.

This is also true of consumption per head, but here an important qualification emerges. The three-year centred moving averages for the years 1949 to 1953 (in kilograms per head of population) were as follows: 3.68, 3.83, 3.97, 4.08, 4.11, and thus in each year the rate of increase was falling. Three causes may be mentioned, though there are others: first, the development of fibres of high durability which reduces the frequency of buying; the large weight of consumption—about one-half of the total—in the highly developed areas of North America and Western Europe, where expenditure on textiles generally rises less than proportionately with higher incomes and where the emphasis is increasingly placed on better quality fabrics rather than a greater quantity; and thirdly, the rise in prices in much of the period which had not been lost even by 1953.

In this period the new synthetic fibres had not had a significant effect on consumption trends (their supply was no more than 0.07 kilograms a head in 1953), yet it is worth noting that recent

reports from the United States have emphasised their influence, particularly in the clothing industry, in the 25 percent reduction in the consumption of wool last year. American wool interests are said to be hopeful that they have now entered a good year. Nevertheless, the average use of wool in the clothing industry there is reported to have fallen during the six years to the end of 1954 by 10 percent compared with the period before the war.

Perhaps the most striking things about the F.A.O.'s statistics of consumption remain the huge disparity between individual countries and the small area to which high levels of consumption are confined. In the United States the annual amounts per head available for home consumption of cotton and wool in 1952-53 were, respectively, 12.3 kilograms and 1.5 kilograms, and in the United Kingdom 5.3 and 2.5 kilograms. The average amount of cotton available for each of the 1,300 million Asian consumers in these years was only 1.7 kilograms and that of wool 0.10 kilograms. It is apparent that great scope exists for raising standards of consumption in vast areas of the world, though whether producers will be able to take advantage of it is another matter.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.1 percent to 340.7 during the week ended 7th May, 1955, as compared with 341.0 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 1.8 and 14.6 percent respectively. Prices of rice at Vijayawada (−6%), and at Calcutta (−1%), wheat at Jabalpur (−4%), gur (−2%) and sugar (−1%) declined while the prices of wheat at Hapur (+7%) and at Amritsar (+5%), and tea for internal consumption (+4%) advanced and in the result, the index for Foodstuffs declined by 0.9 percent to 272.4. The index for Industrial Raw Materials advanced by 0.7 percent to 385.9 due to an increase in the prices of cottonseed (+14%), gingellyseed (+10%), groundnuts and rapeseed (+4% each) and raw cotton (+3%) although the prices of manganese ore (average export prices) (−7%), raw jute (−5%), lac (−4%) and linseed, castorseed and copra (−1% each) showed declines. In the case of Semi-Manufactures, items which witnessed noticeable changes were: gingelly cake (−12%), groundnut cake (−9%), linseed oil (in Bombay) and mustard oil (−2% each), gingelly oil (+9%), coconut cake (+7%), castor oil (+4%), groundnut oil (+3%) and zinc (+2%). On the whole, the group index declined from 328.5 to 328.2. Higher prices of rayon and silk manufactures (+5%) and machinery (+3%) raised the index for Manufactures by 0.2 percent to 376.9 as compared with 376.0 (revised) for the previous week. The prices of jute manufactures, however, fell by 3 percent. An advance of 0.4 percent to 540.0 in the index for the Miscellaneous group was caused by an increase in the prices of cashewnuts at Mangalore (+5%) and turmeric in Calcutta (+4%).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

Groups and Sub-groups	7-5-55	30-4-55	5-4-55	8-5-55

All Commodities:	340.7	341.0 (R)	346.9 (R)	399.1

* = Estimated (R) = Revised

COTTONSEED OILCAKES

The Government of India has reviewed the export policy of cottonseed oilcakes and has decided to release a further quota of 10,000 tons of cottonseed oilcakes, decorticated and undecorticated, for export by all shippers up to the end of August, 1955. Export of decorticated cottonseed oilcakes will, in addition, be licensed freely by manufacturers of this variety of cake up to the end of August, 1955. Detailed licensing procedure is being notified by the Export Trade Control authorities at the ports.

Engineering and Transport

BURMA TO BUY VISCOUNTS

THREE AIRLINERS ORDERED

UNION of Burma Airways has placed an order for three Vickers Viscount 700-D turbo-prop air liners for delivery in the first half of 1957. Announcing this, Vickers-Armstrongs said in London on 13th May that, including the initial provision for spares, the order was worth just over £900,000. It brings the total of Viscounts ordered so far to 189, with options on a further eight. The 700-D Viscount ordered by Union of Burma Airways is powered by four Rolls-Royce Dart propeller-turbine engines of the new RDA-6 type, which not only develops some 200 h.p. more than the RDA-3 type already in operation, but also has a lower specific fuel consumption. Maximum all-up weight for take-off is 60,000 lb., and with a maximum payload the airliner cruises at an average of 230 m.p.h. over stages up to 1,450 statute miles. Its maximum still-air range is 2,400 miles.

Orders for the Vickers Viscount turbo-prop airliner reached 200 this week-end with a joint announcement by British European Airways (BEA) and Vickers-Armstrongs that BEA had placed further orders for 11 Viscounts. Ten of these are to be Viscount Majors (the BEA name for the Viscount 802) and the other, an additional Viscount 701, is to replace an Elizabethan in the corporation's fleet. The new aircraft are due for delivery in 1957.

BEA now has 49 Viscounts on order—22 Viscount Majors and 27 Viscount 701s, of which 24 have been delivered to date. The popularity of these record-breaking turbo-prop liners is shown by the 200 mark being reached in Vickers-Armstrongs order book so soon after BEA placed its first contract in July, 1950—an example that has been followed by 17 other airlines and three Governments.

World-wide Orders

Hunting-Clan Air Transport Ltd.—the world's first independent line to operate turbine-engined airliners—received the first of its fleet of five Viscounts on 12th May at London Airport. This aircraft, which left almost immediately for tropical and altitude tests in Africa, is fitted out as a high-density 53-seater. It is equipped with four Rolls-Royce Dart 35s. Two more Viscounts of this type are to be delivered to Hunting-Clan in June and July, and a further two next year. The first three incorporate special modifications that will enable them to convert to the 700-D version as soon as Dart 6 engines become available. Details of the 189 Viscounts ordered so far are: British European Airways, 38 (plus option on a further eight); Air France, 12; Aer Lingus (Irish Air Lines), four; Trans-Australia Airlines, 10 (including one replacement); Trans-Canada Air Lines, 25; British West Indian Airways, four; Iraqi Airways, three; Hunting-Clan Air Transport (of the U.K.), five; Indian Air Force, two; Fred Olsen Airtransport (of Norway), two; Misair (Egyptian Air Lines), three; Canadian Department of Transport, one; Braathens SAFE Airtransport (of Norway), one; Capital Airlines (of the U.S.A.), 60; Butler Air Transport (of Australia), two; Central African Airways, five; Linea Aeropostal Venezolana (of Venezuela), three; Airwork (of the U.K.), three; Hong Kong Airways, two; Pakistani Government, one; and Union of Burma Airways, three.

The total value of Viscounts sold, with spares, is in the region of £56,000,000. Export trade already obtained by the Viscount is worth some £40,000,000. Of overseas sales, 86 aircraft and spares, of a total value of \$91,500,000, have been sold to Canada and the United States.

Orders may Reach 600

The possibility of world orders for the Vickers Viscount airliner rising to 600 from the present total of 200 is foreshadowed by Mr. J. H. Carmichael, President of Capital Airlines (of the United States). Mr. Carmichael, who is in Britain to take over the first of 60 Viscount airliners ordered by his company, said that they would probably require more. He saw no possibility of a comparable American airliner being available before 1960. Mr. Carmichael said that all 60 of the aircraft ordered by Capital Airlines would be delivered by February, 1957. They proposed to start using Viscounts on the Washington-Chicago route, the third most important in the United States, by July or August this year.

NEW METHOD OF WELDING
STEEL

NO NEED FOR FLUXES

A NEW method of welding steel was demonstrated publicly for the first time recently at the Worsley works of the British Oxygen Company. By using the inert gas argon, it does away with the need for fluxes, and makes welding a much faster process. This new answer to an old problem has sprung from research into the welding of difficult metals such as aluminium and stainless steel. Research into the welding of aluminium was begun during the war to overcome the difficulty that when aluminium is heated to the temperatures required for fusion welding it readily forms an unwanted oxide. To prevent the formation of this oxide a flux had to be used which was highly corrosive. This in turn meant that, after welding, every trace of the flux had to be removed, which in itself was one of the main difficulties encountered in the welding of light alloys.

Towards the end of the war the British Oxygen Company invented a way of welding aluminium without using flux. Instead, the welding zone was surrounded by a shield of the inert gas argon which, so to speak, prevented any infection from getting into the wound while the weld was being made.

After the war the growth of the atomic energy and jet aircraft industries called for a new method of welding complicated structures of stainless steel. This again was solved by the use of argon, without which many developments in both industries would have been impossible. A similar process has now been evolved for the welding of ordinary steel. By doing away with the use of flux and the need for removing the flux afterwards, it enables welding to be done more quickly than before. The new process seems likely to have important applications in the shipbuilding industry and steel construction generally.

CONFERENCE OF STANDARDS
ENGINEERSGENERAL PROBLEMS IN
INDUSTRY

WELL over 100 engineers concerned with the application of standards in some of the most important industrial organisations in British met recently at British Standards House in London, under the joint auspices of the B.S.I. and the Institution of Production Engineers. Similar conferences have frequently been held in the United States and have long proved their worth in providing a forum for the exchange of views and discussion of the best ways of applying standards to increase production and secure the economic benefits which they are designed to give. The main themes of the London conference were the general problems of standards engineers in industry, the method of presentation of British Standards, and the ways in which this might be improved to be of greater service to those who use them. The conference agreed that the status of the standards engineer should never be in doubt, nor need he have to "sell" standards to his company. The economic importance of standardisation and simplification in industry had been stressed by the Lemon Committee for standardisation of engineering products, which was set up shortly after the war to investigate means of aiding productivity. The Board of Trade, when issuing recommendations based on the report of this Committee, had stated that the task of implementing these recommendations should be in the hands of senior and responsible company officials. The standards engineer should be free of departmental and sectional interests and should be concerned with the product at every stage of its development.

It was the opinion of the majority at the conference that data sheets would greatly facilitate the dissemination of the information in British Standards. Many large organisations would continue to prepare their own sheets, but the availability of loose sheets giving all the essential information required for a particular item would obviate such duplication of effort and encourage many more small concerns to use them. Sub-contractors and others dealing with orders from many sources would also benefit from the rationalisation which should result. The conference approved the proposals that B.S.I. should issue data sheets as supplementary to standards which were suitable for such treatment. The subject of a part-number coding system was naturally somewhat controversial, most large organisations having formulated such systems to suit their own needs. There was a general feeling, however, that the propagation of a standard code of part-numbers, applicable to such items as screwed fasteners, for example, would have considerable advantages. It would be welcomed by many who had not yet devised their own systems and would help to prevent the introduction of a still greater variety of codes. It was also agreed that there need be no real difficulty in applying cross-references which would enable existing codes to continue in use where required. The prepared coding system might well be linked with the data sheets, on the lines of the specimens submitted to the conference, and once again aircraft standards, used and understood throughout the aircraft industry, were quoted as evidence of the success of this method. The conference concluded with resolutions to appoint a committee of standards engineers to discuss matters of general policy relating to the application of standards in industry and to hold regular conferences in future.

ROADS INSTEAD OF RAILWAYS

What advantages would there be if the 20,000 miles of railway track in Britain were torn up and replaced by modern road surfaces? This intriguing question was examined by Brigadier Lloyd, Deputy Engineer-in-Chief at the War Office, in a paper read to the Institution of Civil Engineers. Brigadier Lloyd assumed that the system of roads obtained by surfacing the permanent way would remain separate from the present road system. The use of recently developed road surfaces of great smoothness would lead to much more comfortable riding and a saving of wear and tear on both vehicles and roads. Railway tracks built without appreciable gradients (the steepest, and this is exceptional, is only one in 377) would imply faster travel than is possible on present roads and also economies in running costs. The advantages of travel along straight routes with few intersections would be considerable, and there

would also be economies in manpower and potential reductions of accident rates. Brigadier Lloyd argued that double railway tracks would always be wide enough to carry an adequate road surface. He accepted the Ministry of Transport's standard width of 22 feet for a double carriageway and pointed out that the narrowest double-track railways in Britain are at least 24 feet wide. In suburbs and on certain main lines much wider tracks are available. The British railway system could provide 2,000 miles of roads with several traffic lanes, 10,000 miles of double carriageways and 7,000 miles of narrower roads.

The new system would be most efficient, he said, if a high standard of performance were required of each vehicle and if uniform speeds of 60 miles an hour were accepted as standard. At least a thousand vehicles an hour could travel on each lane. The number of passengers at present using Waterloo station in London (200,000 a day) could be carried by 840 vehicles an hour, even at the busiest parts of the day. Brigadier Lloyd went on to estimate the cost of transport on his road system. He concluded that it would be possible to transport each passenger for a half penny a mile and each ton of freight for 14d a mile. (These estimates do not include the amortisation of the capital cost of the conversion.) No estimate was made of the cost of converting railways to roads, but it was remarked that the cost of modern trunk roads is often £200,000 a mile and that the cost of converting the permanent way would be less than this because of the small amount of preparatory work necessary.

TANK TO TEST SHIPS

On the site of a former orchard at Feltham, Middlesex, the first stage began recently in the construction of a £2 million tank for ship research in which scientists will create waves to simulate conditions at sea. The first piece of turf on the site was cut by Sir William Stanier, Chairman of the Froude Ship Research Sub-committee of the National Physical Laboratory, which has sponsored the project. "When this tank is completed, we shall have the means of putting the British shipbuilding industry once again in the picture in the sphere of modern development," Sir William said. The tank, which is expected to be working fully by the autumn of 1958, will be more than a quarter of a mile long, 45 ft. wide, and 25 ft. deep. Near it will be a workshop where wax models of ships will be constructed. In another building will be a pond in which steering and manoeuvring experiments will be carried out with radio-controlled models. A separate building will house a water tunnel for testing propellers. In the tank itself wax models of ships weighing up to ten tons will be towed at speeds of up to 50 ft. a second.

NEW TUG FOR MADRAS PORT

The Finland-built tug *Lenadil* is the newest addition to the equipment at the Madras harbour. Costing about Rs. 3.26 lakhs and with a gross tonnage of 549, *Lenadil* will be used for towing the un-propelled 1000-ton hopper barges now used in this port for dredging sand. The tug will also be used for berthing and unberthing vessels. The tug was supplied to the Madras Port Trust by a Madras firm which had purchased it from an Irish firm. Built in 1942 in Finland, *Lenadil* is well equipped for deep-sea salvaging work, and had been with the Royal Navy in Portsmouth, engaged in towing big ocean-going vessels between Africa and Europe on salvage work. She has a speed of eight to 10 knots and 900 h.p. The mechanical engineer of the port, Mr. P. C. Martin, inspected the tug while she was dry-docked in Cadiz Port (Spain), and brought her to Madras.

AUTOMOBILE SPARE PARTS PRICES TO BE
REDUCED FROM JUNE

The Government of India has decided that with effect from 1st June, 1955, the "mark up" on the landed cost of fast moving automobile spare parts should not exceed 70 percent in fixing retail list prices. This means that fast-moving parts, that is parts in which the turn-over is quick, will be sold to consumers at a margin not exceeding 70 percent of the landed cost. So far the retail prices have been 100 percent or even more above the landed cost. A list of spare parts which Government consider as fast moving ones has been prepared and circulated to the interests concerned. These include hardware items, rubber components, assemblies including components and repair kits of a number of parts and a number of fittings and accessories. The manufacturers and importers have been asked to bring other fast-moving parts, which have not been included in the list, within the scope of the new retail prices.

No maximum limit is being imposed for the present for other parts which are mainly slow-moving. But retail price lists will have to be published by manufacturers and importers for these parts also. Government has also decided that retail price lists, for both fast and slow-moving parts, should be published by all manufacturers and importers. At present several firms publish only net dealer prices while some others publish also the retail price lists. An Advisory Committee was appointed by the Ministry of Commerce and Industry in January this year to make recommendations regarding the maximum "mark-up" that could be allowed in the case of imported automobile spare parts. The Committee consisted of representatives of manufacturers, importers, dealers and consumers.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups have now been brought up to April, 1955. As compared with March, the April Index for Clothing reveals a drop of 2 points, while those for Food, Miscellaneous and Fuel and Lighting

remain unchanged at 430, 282 and 239 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living remained unchanged at 386 points during April, 1955.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

DOWNTREND IN U.K. TEA CONSUMPTION

INTERNATIONAL COMMITTEE'S STATISTICAL SUMMARY

U.K. tea imports (net) for consumption during the first quarter of 1955 were about one-eighth less than in the same period of last year. At the end of April, stocks in warehouses stood some 40 percent higher than in the previous 12 months, according to the May 1955 statistical summary just issued by the International Tea Committee in London. Its tea imports (net) for consumption for the first three months of this year totalled 119,650,000 lbs., compared with 134,880,000 lbs. in the corresponding period of 1954, the figure for March 1955 being 37,840,000 lbs., compared with 47,300,000 lbs.

The summary quotes the following figures supplied to the International Tea Committee by the Tea Clearing House for stocks in London and provincial warehouses at the close of work on the last Friday in each month:

		Stocks in warehouse	Stocks entered for Customs but not received in warehouse
February	1954	131,483,000 lbs.	7,200,000 lbs.
March		24,500,000 lbs.	115,928,000 lbs.
April		132,886,000 lbs.	8,800,000 lbs.
February	1955	127,445,000 lbs.	21,010,000 lbs.
March		22,354,000 lbs.	163,851,000 lbs.
April		149,968,000 lbs.	11,848,000 lbs.

Average Prices

Tabulating the average price fetched in the London auctions, the summary leaves several blank columns for weeks when no auctions were held. The last week of April is recorded as a blank, the last week quoted being that beginning on 18th April. Since the week beginning on 19th April, 1954, is also recorded as a blank, the figures given below are for the average buying bids for the weeks beginning 12th April, 1954; 26th April, 1954; and 18th April, 1955.

	12th April 1954	26th April 1954	18th April 1955
Northern India	4s 8.6d	4s 8.6d	4s 10.2d
Pakistan India	4s 10.3d	4s 9.2d	4s 10.3d
Pakistan	4s 7.1d	4s 6.9d	4s 7.2d
Ceylon	4s 11.6d	4s 11.8d	5s 2.2d

BETTER TONE IN LONDON TEA SALES

UNDER more general bidding a distinctly better tone prevailed in the sale held on 23rd May in which 13,044 packages of North Indian and other miscellaneous teas were offered. Good descriptions were well competed for and recorded an irregular 2 to 4d a lb. advance, especially flavoury sorts. Lower qualities were often 1 to 2d a lb. dearer. Inferior and stinky type, however, met little support and tended at 40d a lb. against 38d nominal in the previous week. British East African teas on offer comprising 180 packages of Nyalaland and 84 Kenya showed no marked price change though better kinds were firmer to dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 13-5-55	Average for the period
Sheet:	(Rs. a lb.)	(Rs. a lb.)
No. 1	1.12	1.12
No. 2	1.10	1.093
No. 3	1.07	1.073
No. 4	1.04	1.043
No. 5	Cts 98	Cts 973
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.19/20	1.19
R.M.A. No. 1	1.18	1.173
Crepe No. 2	1.16	1.16
Crepe No. 3	1.144	1.144
Scrap Crepe:		
Sc. Crepe No. 1	1.06 Nom	1.05
Sc. Crepe No. 2	1.04/04	1.02
Flat Bark	94/99	.96
Sc. Crepe 3X	.99	.99

To arrive at f.o.b. Colombo prices add 314 cents a lb. in respect of rubber other than scrap crepe and 254 cents in respect of scrap crepe to the above market prices.

Calcutta Markets

FREIGHT MARKETS QUIET, BUT UNDERTONE FIRM

ALTHOUGH business was quiet over the last week the undertone remained firm. The coal trade from the U.S.A. was well maintained with 57s being paid for two consecutive voyages to the Continent which rather dispelled the hopes of American grain charters arresting the upward trend of the market. There were numerous enquiries for sugar from Cuba and South America to the Continent, India and Japan but tonnage was scarce. Fixtures were made for sugar cargoes from Fiji to Vancouver at 62s 6d and Santos to Karachi at \$(U.S.)1650 FIOS. The other trades including the Far East were quiet again mainly due to lack of tonnage. Very little business was done on the Time Charter market but there was a good demand for tonnage and rates remained very steady. One Liberty type vessel was taken for two years' trading at \$(U.S.)310.

SUGAR MARKET

During the week ended 25th May, sugar sales in the Calcutta market averaged 2,500 bags daily. Arrivals were 2,000 bags a day and stocks totalled 200,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-4 for ordinary grain and Rs. 31-6 for big grain. Forward delivery sugar sold at the same rates for identical varieties. Ex-mill delivery rates for standard grades of sugar varied between Rs. 288 and Rs. 30. Markets conditions were normal.

LINSEED

There was little change during the past week and the undertone remained firm; prices were fairly well maintained. Enquiries were received for ready goods which were still in short supply owing to booking restrictions. There was fair activity in the oil section, with shippers covering against previous commitments; sellers were, however, rather reserved owing to shortage of ready goods. Latest quotations were as follows: May-June Rs. 15-10 a maund; July-August Rs. 15-12 a maund.

HIDES AND SKINS

The market continued dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 17th May and 21st May, 1955)
Cowhides:—Wet salted 10,000 pcs. on the basis of Rs. 9-8 to Rs. 12-8; Wet salted (Slaughtered) 11,400 pcs. on the basis of Rs. 13-8 to Rs. 25.

Goatskins:—Wet salted (Daissee, Killed) 42,200 pcs. on the basis of Rs. 225 to Rs. 400; Assam-Dinajpur-Murshidabad 22,700 pcs. on the basis of Rs. 270 to Rs. 330; Purneah-Kissenganj 49,000 pcs. on the basis of Rs. 250 to Rs. 260; Patna-Pakur 3,200 pcs. on the basis of Rs. 220 to Rs. 235.

Bazaar Stocks

(21st May, 1955)

Cowhides: Wet salted 85,400 pcs.
Goatskins:—Wet salted (Daissee, Killed) 19,000 pcs.; Assam-Dinajpur-Murshidabad 72,500 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 2,64,000 pcs.

SHELLAC MARKET STEADY

During the week ended 23rd May, the market was quiet at the beginning of the week and steady at the end.

The range of quotations was as follows:

Pure Buttonlac	Rs. 141 to 142 buyers.
Lemon No. 1 Shellac	Rs. 140-8 to 143-8 buyers.
Lemon No. 2 Shellac	Rs. 137 buyers; 137 done and buyers; 138-8 buyers.
F. O. Std. 1 Shellac	Rs. 135 buyers; 136 done and buyers.
Pure TN Shellac	Rs. 131 buyers; 131 to 133 basis done and buyers.
4% I. T. N. Shellac	Rs. 125-8 buyers; 128 done and buyers.
No. 1 Kusmi Seedlac	Rs. 134 value; 135 to 137 buyers.
No. 2 Kusmi Seedlac	Rs. 128 done; 130 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 126-8 buyers; 128 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 123-8 to 125-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Under 5%
Ordinary Bysaky Seedlac (C.P.)	Rs. 118-8 buyers; 121-119 done and buyers.
Kireelac	Rs. 113 to 114 buyers.
	Rs. 53 to 53-8 buyers.

Shipments during May until the 20th were 25,664 packages.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN APRIL

Indian rubber output in April was 2,277 tons, according to the Indian Rubber Board. Exports were nil while imports during the month totalled 485 tons. Consumption by manufacturers was 2,140 tons. Stocks with estates and dealers on the last day of April amounted to 3,088 tons including 601 tons in transit. Stocks with manufacturers at the end of the month totalled 2,901 tons. Manufacturers also consumed 185 tons of reclaimed rubber, the month-end stock being 343 tons and used 2 tons and 2,107 lbs. of synthetic rubber of which they held a month-end stock of 11 tons and 714 lbs.

HIGH LEVEL OF U.S. TRADE MAINTAINED IN 1954

SLIGHT FALL DUE TO DROP IN MILITARY ASSISTANCE

THE United States trade with the rest of the world in 1954 compared favourably with the high levels of the preceding years, despite such setbacks as the slight U.S. recession and serious dock strikers in the previous year and importers bought only a little less. The total value of U.S. international trade in 1954 is estimated at \$25,400 million, about \$1,240 million less than in 1953. But this decline is accounted for almost entirely by the drop in United States military assistance, which decreased by some \$1,200 million during the year to a total of \$2,300 million. Excluding arms shipments, commercial exports showed a moderate but nonetheless significant gain of near 4 percent, reaching a total of \$12,700 million. Imports declined some \$475 million, but still reached the sturdy sum of \$10,400 million—the fourth consecutive year in which U.S. purchases from other countries exceeded \$10,000 million.

Despite the U.S. surplus of commercial exports over imports, amounting to \$2,300 million compared with 1953's \$1,485 million other free nations achieved a net gain of about \$1,700 million in their 1954 transactions with the United States. American travel, military procurements, private investments and miscellaneous services combined with the high level of United States imports to sustain earnings abroad. This rise in gold and dollar reserves enabled other free nations to strengthen their currencies. As a result, they were able to relax some of their trade and exchange restrictions against dollar goods. More than 25 nations took action along these lines in 1954. With the United States currency in the midst of a strong economic upsurge and other free nations continuing to ride the crest of 1954's economic improvement, most experts look for a moderate increase in U.S. trade in the current year.

The 1954 experience shows that there is room for constructive competition in world trade. While the free world's economic improvement, particularly in Western Europe, provided new competition for U.S. goods, it also opened up new markets and new opportunities. The U.S. import picture also presents encouraging aspects. First and foremost, U.S. economic expansion will tend to stimulate purchases from other countries. American business men have gone through a period of inventory liquidation and are again producing for current demand and, in many cases, replenishing their depleted stocks. Although this increased economic activity will be reflected in greater demand for all kinds of goods, it should have its most immediate and significant effect on raw material imports. The import decline in 1954 centred primarily on raw materials. The inventory reduction in the first part of the year led to reduced demand for imports such as metals, rubber, wool and oil—a reduction that was offset in large measure by the higher prices of coffee, the largest single U.S. import. But when coffee prices broke at mid-year, the overall value of U.S. imports was depressed, despite signs of improving demand for a number of other commodities, including copper, iron ore and petroleum products. It is noteworthy that letters of credit authorisation by New York banks, a reliable indicator of the import trend, have risen substantially in the past few months. Interest is reported more active in a wide range of products including coffee, rubber and tobacco.

Increased Imports Expected

If past experience is any criterion, this rise in letter of credit activity can be expected to show up in increased imports within two or three months. Also encouraging to American traders is the Eisenhower Administration's avowed intention to obtain a strong trade liberalisation programme in the current year. Present Congressional leadership is known to favour such a programme. The liberalisation machinery was set in motion officially in January when the President submitted his specific trade recommendations to Congress.

The International Bank for reconstruction and development reported early in January this year that great progress was made in 1954 both in increasing its earning and in interesting re-investors in its facilities and investments. A statement reviewing last year's development said that increasing interest in the World Bank's bonds was shown particularly by private investors outside the United States during the year. Also the international lending organisation, which was established after World War II made sixteen loans totalling \$282,700,000 to fifteen different countries. The loans, which went to Austria, Australia, Belgium, Brazil, Ceylon, Colombo, Ecuador, El Salvador, France, India, Mexico, Norway, Pakistan, Peru (two loans) and Turkey, brought the total Bank lending to 112 loans in 36 countries, totalling \$2,058,858,464. The Bank also reported that over half the bonds floated during the year were sold outside the United States and that a total of \$55,500,000 were bought by private investors. Previously investments had come mostly from the United States and had been made by Governments, rather than by private investors. During the year the Bank's earnings amounted to approximately \$22,500,000. The organisation finished last year with 56 member nations—one more than twelve months previously. Indonesia and Israel were admitted and Czechoslovakia was expelled. Also terms under which Afghanistan and Korea may join were approved during the past year.

COMPANY AND PUBLIC NOTICES

IMPERIAL BANK OF INDIA NOTICE

NOTICE is hereby given that the Principal Register and the Branch Registers of the Imperial Bank of India will be closed for transfer of shares from Thursday, the 16th June, 1955 to Thursday, the 30th June, 1955, both days inclusive.

In terms of Section 6 (1) (a) of the State Bank of India Act, 1955 all shares in the capital of the Imperial Bank of India shall be transferred to, and shall vest in, the Reserve Bank of India, free of all trusts, liabilities and encumbrances on the "appointed day" which has been fixed for the 1st July, 1955 by the Government of India Notification No. F. 8 (8)-F. 1, 55 dated the 14th May, 1955. Section 9 (1) ibid provides that every person who immediately before the 1st July, 1955 is registered as a holder of shares in the Imperial Bank of India shall be entitled to compensation in accordance with the provisions contained in the First Schedule.

All purchasers of Imperial Bank of India shares are therefore advised to lodge with the Bank for registration the instruments of transfer in their favour along with the relative share certificates, **not later than the 15th June, 1955.**

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred, Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & Other Funds	Accrue under Tea	Outturn and Average Price per lb. realised for crop.			Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including Taxation	Dividends per cent.			Paid-up per Share	Latest Market Quotations as available until.

SUPPLIERS OF A WIDE RANGE OF INSULATION MATERIALS AND REFRACTORIES

THE LIMITATIONS OF STATE FINANCE CORPORATIONS

SUBSIDIES FOR MEDIUM INDUSTRIES THAT ARE BEING PLANNED OUT OF EXISTENCE

THE results of the first year's work of several of the State Finance Corporations are now available, and one can attempt a preliminary assessment of the utility of these organisations. It will of course be only a preliminary assessment, for firm conclusions can never be drawn from a first year's working in any line of business, least of all in a line of business that is totally novel. And the State Finance Corporations are intended to fill a novel function. It is their duty to do something that has not been done before. They are not just more banks. So there would be no point in applying to them the standards of success devised by more conventional institutions, whose work they are meant to supplement. But if their purpose is different, they do still have a purpose, and their working should be constantly examined to see whether they are achieving it. Their function is to stimulate small and medium industries which are suffering from a want of capital with which to acquire productive assets. They are to do this by making long-term loans (longer than the commercial banks can afford to make) to firms that are too small to approach the more usual source of such capital, the stock markets. They are also meant to pay a guaranteed dividend to their own shareholders. This commitment might prove in practice to be inconsistent with the first objective: that is, there may be too little profit in lending long to small firms to meet the guaranteed dividend. But since half the shareholding is owned by public authorities (the State Government concerned and the Reserve Bank) and since it is the State Government that guarantees payment of the dividend, this proviso is not as important as for a purely private institution.

To judge from the published results of the West Bengal and Bombay State Financial Corporations, and from what we know of the working of several others, they are not achieving either of their objectives. They are not so far providing significant help to small and medium industries, and they are not able to pay their dividend without State subsidy. But we do not conclude from this that they have failed; the West Bengal body had been at work only 13 months when it made its report, and the Bombay body for 17 months; others have been in existence for even shorter periods. Obviously they have much to learn yet, and prospective borrowers have much to learn about them. It is not only borrowers that are regarded with suspicion in this world. Lenders too have to establish their good faith. Especially in dealing with the unsophisticated class of small and not very successful business men, a State organisation has to demonstrate over a period of years that its help is worth taking, and that the business man will be rewarded for taking the trouble to re-organise his affairs in order to make himself a better risk. This all takes time, and sufficient time has not yet elapsed.

Some facts are already quite clear, however. One is that the Corporations are going to have different experiences, and prove to be of differing degrees of usefulness, in various parts of India. Big business might be much the same throughout the country, for that matter throughout the world. But little business varies immensely from one State to another. To take a small but important point: the system of accounting and book-keeping varies. The first thing a lender asks to see is his client's accounts, and in India most small business men keep single entry books (double entry and the rational capital accounting it makes possible are unfamiliar in the vernacular) in widely different ways. It is generally said that the Marwari system of accounts is the best of these local variations, and that the Gujarati is better than the Bengali, and so forth. All of them are inferior to double entry, but their efficiency differs enough to be a factor in this new field of small industrial banking. For example, the West Bengal Corporation says in its report: "An organised system of

industrial banking must demand a minimum standard of working efficiency and book-keeping system on the part of the borrowers, and it is unfortunate that the Corporation's experience in this regard has been very disappointing. Most of the applicants were proprietary or partnership firms and it has been impossible in many instances to ascertain the exact financial position of the applicants from the accounts kept by them. Moreover considerable reluctance is shown by a majority of them to disclose the full facts of their affairs or to take the Corporation into their confidence. Only a few well managed concerns were able to produce satisfactory records in respect of land, buildings and machinery offered as security".

We think it very likely that this was a difficulty no one had thought of when the Corporations were set up with such large expectations. It was imagined that there was a host of small and credit-worthy borrowers who would flock to the Corporations with clearly thought out plans requiring only money to bring them to fruition. Experience already suggests otherwise. The International Planning Team which reported on small industries for the Indian Government indeed mentioned the lack of credit facilities as one cause of "deterioration and slow rate of progress" but only as one. Others, which the Corporations can do little or nothing to mend, were outdated production and marketing methods and the lack of a systematic approach to improvement. The Team concluded: "The basic causes of present deficiencies in small industry are methods of management and production which fall far short of meeting modern demands for efficiency, plus reluctance or failure to adopt improved rationalised methods. The natural talents of Indian workers and craftsmen are thus being wasted in a hopeless race against modern technology". Though improvement in these respects is no part of the Corporations' business, it is plain that the hope of credit facilities from the Corporations should act as an incentive to small business men to set their affairs on a more rational footing.

Little more than one year's working is enough, therefore, to show that easy money is not the remedy for the ills of the smaller section of Indian private enterprise. This is not a startling conclusion, and in fact many critics, including this newspaper, have been saying as much for some years past, during the heated debate about finance for private enterprise. Having perceived this, some people now want to lay the whole blame on the Central Government's taxation policy. That is rather hasty. There are many other reasons for the disappointing reaction of small industry to the much vaunted stimulation of easy money. One of the most obvious is the embarrassing position of small and medium industry squeezed between more efficient large-scale industry on the one side and Government-pampered handicrafts on the other side. This position, it appears, will become much more

uncomfortable in the years ahead. Some drafts of the next five year plan draw a picture of an economy that will consist solely of huge, ultra-modern factories (million-ton steel plants and the like) and millions of primitive handloom weavers—with nothing in between. To hear some of our planners talk, one would think that to survive in socialistic India you will have to be very, very big (in which event you will probably be nationalised anyhow), or very, very small (in which event you will be permitted to batten on the consumer). If you are betwixt and between, the State Finance Corporations will lend you money, but you will never be able to repay it because you will not be allowed to gain a market. This is a fantasy, of course, but already the drift of Government policy in that general direction is making profitable working almost impossible for medium industry.

A concrete example will demonstrate how this happens. One of the State Finance Corporations (not one we have named so far) receives applications from oilseed millers for long-term loans. As security they can offer their machinery and buildings. But the State Government has ruled that further development in oil milling must be reserved to hand-operated village ghanis; no further licences will be given to medium-sized machine mills. As a result, the market value of the machinery, from the lenders' point of view, is nil. No loan can be made

loan. These are not the principles a commercial bank can work on, but then the Corporations, as we have said, are not commercial banks. They are, if the truth be told, an instrument for subsidising a sector of industry which meantime is being planned out of existence by the "steel-mill-plus-handloom" economists who now advise the Government.

WEST GERMANY LEADS U.K. IN STEEL PRODUCTION BRITAIN'S INFLATION FED BY ITS AGRICULTURAL PRICE POLICY

THE latest quarterly bulletin of steel statistics of the United Nations Economic Commission for Europe confirmed that in the first quarter of 1955 West Germany took from Britain the position of premier steel producer in Europe after Russia. The major producers of the world (including, of course, the biggest of them all, the United States) have increased their outputs considerably this year. Yet demands are still unsatisfied. There are signs, however, that the markets for steel are, fundamentally, softening. Many steel-using industries, increasing their outputs with the aid of increased quantities of steel, are fulfilling old orders more rapidly than they are receiving new ones. If this tendency proceeds much further, competition among the big engineering countries will increase perceptibly. And in that situation the problem of relative costs will become more acute. The report of the British Iron and Steel Board, lately published, has emphasised one of the most important factors in the British economy, that of all the big steel-producing countries of the world Britain produces steel most cheaply and takes it into her industries at the lowest prices. For ordinary quantities of open-hearth steel British internal prices are about 20 percent below those of the United States, Germany, or France. This fact is some compensation for the release into third place among the steel-producers of Europe, and in more competitive conditions it may be more important than Germany's quantitative superiority.

Mr. Colin Clark, now specialising in agricultural economics at the University of Oxford, has written in "The Manchester Guardian" that the gross proceeds of British agriculture (estimated at £1,336 million a year) would fall by about 30 percent if all produce had to be sold at present world prices, and that, in addition to favourable prices, farmers receive about £65 million a year in the form of subsidies. Thus, while industry benefits from cheap steel (and even cheap coal, because the National Coal Board keeps its prices for industrial consumption relatively low), the cost of living is inflated by a price policy designed to support agriculture. It is a big problem for Britain how to reconcile this support of agriculture with the need to keep the whole basis of costs as low as possible. Other countries have the same problem, but it is not so serious for them, because they are not so dependent on exports of manufactured goods; nor, in general, are their relative agricultural costs as high as Britain's. Britain's agriculture is more mechanised than any other country's. Comparison with the intensive agriculture of the Netherlands is instructive. Mr. Clark (working on figures for end-1953) shows that for every 100 acres of arable land Britain has twice as many tractors as the Netherlands, only one-fifth as many horses, little more than one-fifth as many units of male labour. The Netherlands' figures of animals and men per acre are exceptionally high; yet the Netherlands produces crops and dairy produce much more cheaply than Britain, whose figure of tractors is exceptionally high. The United States and Australia use much less labour, but also much fewer tractors, than Britain, per acre.

These facts mean that British agriculture is unable to make full use of its equipment. Many of the tractors and other implements wastefully employed on the land in Britain could have been more profitably exported. Agriculture, though sufficient enough in terms of yield, still produces at high cost; and, directly by high prices or indirectly by high taxes to provide agricultural subsidies, the rest of the community has to pay these costs. It is, perhaps, academic to consider how much the cost of living might be reduced, and how much the insistent wage-claims might be consequently modified, if cheap food could be imported freely; for there is nothing in the new Government's policy to suggest a major change in the protective attitude towards agriculture. But it is important to recognise the possible effect on Britain's balance of payments of this particular form of inflation. As a proportion of total trade, external trade is so much smaller in America than in Britain that the notorious American price-supports can be maintained without seriously disturbing the American economy, whereas Britain is peculiarly vulnerable to such uneconomic practices. Yet in academic circles some voices have been raised in criticism of the British export campaign. Mr. Harry Johnson, a Canadian economist at the University of Cambridge, had suggested in a radio talk that the cost of imports, in terms of the exports that must be exchanged for them, has

become so high that it would be cheaper to produce more foods and materials at home than to buy more of them abroad—more economic to invest in import-saving production than in production for export.

Most economists are still orthodox enough to believe that if trade is free it can form its own pattern better than any shaped by policy. It is not impossible that as primary-producing countries develop their industries, requiring less of the older industrial countries' manufactures at the same time as they devote less of their own resources to agriculture, the relative costs of British agriculture and industry will change in favour of agriculture. It may be that agriculture should be deliberately sustained in manufacturing countries in anticipation of such a development. But it is undeniable that at present a country as delicately placed as Britain is taking serious risks in maintaining a high cost of living. Mr. Johnson may argue that British import prices have always risen when British exports have been expanding, but it is a simple matter of observation that Britain could buy food abroad more cheaply than she is producing it at home—and still satisfying only about half her need. Finally, the controversy resolves itself into the familiar question whether we should aim at the highest practicable level of trade and payments or attempt to become more self-sufficient. Producing the world's cheapest steel, Britain can afford to be expansive.

CURRENT COIN

Smaller Rice Crop.—Indications are that the 1954-55 rice crop has not reached the record figure of the previous season. Imports of rice in 1954 into the main importing countries were somewhat larger than in 1953, heavier supplies for Japan and India more than offsetting a reduction elsewhere. Exports from South-East Asia continued to increase during the first two months of 1955, but those from the U.S. and Italy fell. Export prices in Thailand showed some decline in April, but quotations continued to rise in the U.S., states the Commonwealth Economic Committee's Rice Bulletin. Shipments of rice from the three major exporting countries of South-East Asia continued to recover during the first two months of 1955, totalling 440,000 tons, as against 381,000 tons in the corresponding period of 1954 and 317,000 tons a year earlier. Consignments from Burma increased from 197,500 tons in 1954 to 256,400 tons, and those from Thailand recovered from 117,000 tons to 155,600 tons; commercial estimates for Indo-China, however, give shipments of only 27,900 tons as compared with recorded exports of 66,700 tons in 1954. Japanese imports reached a post-war peak of 1,490,000 tons in 1954, exceeding the high level of 1953 by 429,400 tons. Supplies were again drawn from many sources, but an increased proportion of consignments in 1954 came from the U.S.A. and Burma, shipments from the former rising from 174,900 tons to 340,300 tons and those from the latter from 196,600 tons to 321,800 tons; on the other hand, arrivals from Thailand, the largest single source of supply, at 373,700 tons, were 43,500 tons less than in the previous year. Imports of rice into the U.K. during the first quarter of 1955 amounted to 25,400 tons, compared with 16,300 tons in the corresponding period of the previous year. Consignments from Burma, which had been small in January-March, 1954, recovered to 7,000 tons, but were still less than in the first quarter of 1953.

I.C.I.'s Indian Sales.—A more liberal import policy improved the opportunities of trade with India and, in spite of intense competition, sales of Imperial Chemical Industries' products showed an increase over those for 1953, states the company's annual report for the year 1954, just issued in London. The total turnover of Imperial Chemical Industries (India) Ltd. was only a little below the record figures for 1952, and there were particularly satisfactory increases in sales of alkalis, dyestuffs, pharmaceuticals, and plastic products. The report says that the company has always taken a keen interest in the industrial development of India, and through frequent visits of technical staff it keeps under constant review the possibilities of economic local manufacture. Apart from the operations of Imperial Chemical Industries (India) Ltd. in the mixing and processing of dyestuffs and in the manufacture of "Alkathene" film from imported granules, the company's subsidiary—the Alkali and Chemical Corporation of India Ltd.—has, for some years, operated successfully near Calcutta, and its products now include chlorine, caustic soda, benzene hexachloride and "Gammexane" formulations, and paints. According to the report, mention was made last year of the agreement reached in 1953 with the Government of India for the formation of a new company, Indian Explosives Ltd., to manufacture commercial blasting explosives in India. "Much progress was made in the preparatory work for this project, and it is hoped that negotiations over the site with the Government of Bihar will shortly be concluded, so that building can begin," says the report. Proceeding, the report says: "Agreement was reached between the company and Atul Products Ltd., an Indian company already

engaged in the manufacture of certain dyestuffs, for the establishment of a joint company to manufacture jade greens on a portion of the Atul factory site at Bulsar, Bombay State. The company will provide technical information and advice, and the factory is expected to be in production by the end of 1955". Turning to Pakistan, the report notes that the continuing restrictions on imports imposed by the Pakistani Government made it a rather difficult year for traders. In the circumstances, it is particularly satisfactory that I.C.I. (Pakistan) Ltd. increased its sales turnover to a figure which almost equalled the record sales of 1952. The Khewra Soda Company Ltd., in which I.C.I. holds a 70 percent interest, had another successful year and achieved a record level of production of soda ash, which met the entire requirements of West Pakistan and part of those of East Pakistan. The question of extending this plant in order to meet the growing demand is under consideration.

Cotton Textile Export Promotion. The Cotton Textiles Export Promotion Council has completed the first six months of its life, and it appears that it was unfortunate enough to choose a period in which India's cotton textile exports declined heavily. The feature was not peculiar to India. Other large exporting nations experienced it as well. The United Kingdom's exports in the first quarter of 1955 were 7 percent below those in the first quarter of 1954. The corresponding figure for Japan was 25 percent; India's decline was 18 percent. Speaking at the first annual general meeting of the Council in Bombay on 26th May, the Chairman, Mr. Neville N. Wadia, maintained that the fall in exports was a seasonal feature and that it had been arrested in April. The figures for that month were back to the level of the monthly averages of 1954. Mr. Wadia attributed the decline to the general weakening of demand in the overseas markets. But the Council, he said, could not sit back complacently. "The work that this Council can do becomes all the more important and all of us must strive to stem the tide and to do everything possible to reach the target of 1,000 million yards." The duty of the members of the Council, he pointed out, was "to maintain the highest business principles and ethics in all their dealings to ensure that our customers overseas are supplied with good quality cloth, at reasonable prices, according to contract". Mr. Wadia outlined some of the plans which the Council had for the future. It is planned to send delegations to Burma, Siam, Indonesia, Malaya and Ceylon because indigenous textile industries are not yet sufficiently developed in these areas to supply their needs. The programme for establishing offices overseas has been drawn up and these are to be established immediately in the United Kingdom, Indonesia and West Africa, and later in the Persian Gulf area, Iran, Iraq, Burma, East Africa, Rhodesia, Aden, Abyssinia, Sudan, Saudi Arabia, Singapore, Malaya, Hong Kong, Ceylon, Australia, New Zealand, Canada and Pakistan. It is proposed to take part in some exhibitions abroad and to plan a publicity campaign in foreign countries. The work of the Council has inevitably been restricted in this initial period. But its plans for the future have obviously been drawn up on an ambitious basis. If these are carried out in full, Indian cotton textile exports cannot fail to benefit. But publicity and salesmanship cannot produce unlimited results. India has to establish a reputation abroad for delivering the right quality of goods at the right price and at the right time.

U.S. Capital in Pakistan.—Another step towards the rapid industrialisation of Pakistan was marked the other day by the signing of an agreement between that country and the United States providing U.S. Government guarantees for American private investments in business enterprises in Pakistan. On the broad view this is yet another example of the growing realisation in the new sovereign countries of Asia that the burdens of development can be eased by foreign capital; in the narrower sense it is a recognition of the fact that foreign enterprise must have guarantees for its safety if it is to play its part in the industrialisation of under-developed countries. Pakistan thus becomes the first Asian country between Turkey and Thailand to sign such an agreement with the United States and the twenty-fifth country to co-operate in a programme first established in 1948. The agreement provides for guarantees to American investors against loss from convertibility of foreign currency earnings into dollars or from expropriation. All guaranteed investments must be approved by both the U.S. and Pakistan Governments and there will be no interference in the operation of the businesses. There is no doubt that this agreement represents a commendable victory over the prejudices of the more usual narrowly-conceived nationalism. Pakistan is showing herself determined to make use of her friendship with the United States to make up the gaps in her economy. The advantages of this move will be out of all proportion to the capital which is actually forthcoming; the benefits of first-hand knowledge of the efficiency and the ideas of American business will also accrue. The training which young Pakistanis are bound to acquire will save a great deal in sending them to study abroad.

Guarantees against expropriation will encourage foreign capital to take up large-scale oil-drilling, mining and other forms of extraction industry which absorb so much capital, and are so urgently required by Pakistan. What amount of political sovereignty will be forfeited is not easy to judge, but there is no doubt that it will be vastly over-rated in countries outside Pakistan, and in fact it may prove to be nothing at all. If Pakistan has grasped the truth which eludes so many Asian countries, that the best guarantee of freedom and independence is to build the nation's wealth as rapidly as possible, she will have given herself an excellent start in the competitive road to economic power.

U.S. Cotton Stocks.—Among the problems facing the agricultural economy of the U.S.A. is the disposal of its raw cotton supplies which have accumulated to an alarming extent during the past few years. One of the reasons why supplies have increased so markedly is recent competition from cotton producers in other countries who in the past have barely grown enough cotton to satisfy the requirements of their own mills. In this new era, which follows a period when American cotton supplies were regarded as supreme, there is increasing evidence that the predominance of the U.S.A. as a producer of high-quality cotton is being seriously challenged. So far as British spinners are concerned, the situation altered very substantially during the war when for various reasons it was necessary to import supplies from other sources. Subsequently exchange difficulties hampered the use of purely American cotton and the mills found that suitable substitutes were available in many other parts of the world. For fully 15 years, therefore, Lancashire spinners have been using outside growths and considerable experience was gained in blending different types of cotton to secure the appropriate quality of yarn. According to Mr. Frederick Napper, chairman of the cotton committee of the Master Cotton Spinners' Federation, many of the cotton growers outside America have made great strides in cultivation and expanding their yield. There has been widespread concentration on improved modern packing methods, some of which have not been adopted to the same extent by American shippers. In addition, the artificially high prices ruling for U.S. cotton as a result of the price support system have enabled competitive growers to under-sell shippers from the U.S. and this has been a determining factor in stimulating sales of cotton grown in other parts of the world. Users of American cotton have lately been asked by the Spinners' Federation to give their views on supplies of the raw material from the U.S. Serious complaints were raised about bad bale covers while adverse comment was recorded about additional trash being found in the bales as a result of mechanical harvesting.

Demag in Egypt.—A contract valued at about £17 million for a steel works near Helwan, Egypt, with a capacity of 264,000 tons of crude steel, and a rolling mill for 200,000 tons a year, has been secured by Demag civil engineering works. Preparatory construction work has already started. The company has announced that it will accept shares for 20 percent of the f.o.b. value of machinery and installations, and that the disposal of these shares "within a few years after the plant has started production" has been guaranteed.

Competition in Cable Products.—In his statement, printed elsewhere in this issue of Capital, to the 10th annual general meeting of the British Insulated Callender's Cables Ltd., which is to be held in London on 14th June, Mr. W. H. McFadzean, Chairman and Managing Director, explained that one of the chief reasons for the fall in the group's profit on trading during the past year has been intensified competition. The decline in demand in the early part of 1954 was mostly attributable to business in the United Kingdom, but throughout the whole year competition in export markets was an even more important factor. The turnover of the group was maintained, but profit on trading fell by £981,494 to £7,362,580, "almost wholly due to lower profit rates". The group is intensifying its efforts to expand exports which are all too often restricted because of shortage of finance and the development of local manufacture. The group's interest in overseas markets is not confined to exports. It has many substantial investments in manufacturing companies outside the U.K. Its Indian subsidiary, the Indian Cable Company, had another successful year, although, as Mr. McFadzean explained, "profits were lower mainly due to difficulties regarding copper supplies and lower profit rates". He went on to explain that more and more products, which were previously made in Britain, are now being manufactured overseas, and it was the policy of the Board to take substantial financial and other interests in these companies and to operate in growing partnership with the nationals of the countries concerned. This, Mr. McFadzean maintained, "is essentially a long-term policy, the full benefits of which will only accrue gradually." One interesting order, which the group has received from India, is for the supply

and installation of some 9½ miles of 3-core 110,000-volt I. P. cable for the Tata Power Company in Bombay. This is the first pressure cable and highest voltage cable ever to be installed underground in India. As one of the greatest fabricators of copper in the world, the BICC Group is vitally concerned with the supply and price of that metal, Mr. McFadzean stated. The price of copper during 1954 increased substantially and the day to day fluctuations were high. The group has an interest in greater stability in the copper market, and Mr. McFadzean expressed the hope that in the interests of the industry an early solution to the copper price problem would be found.

CORRESPONDENCE

THE SUGAR POSITION

(TO THE EDITOR OF "CAPITAL")

Sir,

In your publication of 29th April, 1955 you have stated the carry over of sugar in November, 1955 to be three lakh tons only. This is misleading because in the first place you have assumed the so-called "consumption" to be the same as in 1953-54 and secondly the production in 1954-55 to be only 14 lakh tons when it is to exceed this figure. Another important factor that has not been taken into account is the stock of sugar in the hands of the trade and the retailers. It is a fact that when the price of any commodity is rising its stocks will accumulate with the trade and that the process is reversed in a falling market.

Therefore, it is quite possible that two lakh tons or so of sugar will be dumped for consumption on the market on this account and the figure of stocks to be carried over in November, 1955, may be a surprise to all.

Yours etc.,
GENERAL MANAGER.

WASTING COAL TAR

(TO THE EDITOR OF "CAPITAL")

Sir,

The remarks of your Bombay correspondent in your issue of 19th May, 1955, on the subject of coal tar by-products call for comment. It is correct, as he stated, that the coal tar distillation industry in India has remained stagnant—in fact the quantity of coal tar distilled annually for the last few years has been dwindling, but it is not correct to ascribe this unfortunate trend to a lack of outlet for the products of coal tar distillation. The products singled out for reference by your Bombay correspondent were Anthracene, naphthalene and phenol, but these together account for less than 10 percent of the total yield on distillation of India's coke oven tars, and would not *per se* justify the distillation of coal tar on economic grounds. The main products of Indian coal tar distillation are road tar, creosote and pitch, and there exists a very heavy and unsatisfied demand for all three in India at the present time. Road tar is required in large quantities to assist in implementing the country's extensive road construction programme. Creosote is essential for the preservation of timber at the gradually increasing number of treating units, of which the Indian Railways' sleeper-treating plants are the most important. Pitch has a number of important uses, not the least of which is in the manufacture of electrodes in the aluminium industry.

There is no lack of demand to justify a flourishing and expanding coal tar distillation industry in India, which could produce certain chemicals required for the manufacture of dyestuffs intermediates, along with the main products to which I have referred. The reason why no such expansion can occur is simply the fact that year by year an increasing proportion of the coal tar produced in steel works is being consumed as a fuel in the steel furnaces. At the present time, out of an annual production of 85,000 tons of coke oven coal tar in the steel works 40,000 tons are being consumed as fuel and in 1956 the indications are that the proportionate consumption of coal tar as a fuel may show a substantial rise as the plans for increased steel production at the existing steel works are implemented, unless provision is made for the use of an alternative fuel.

Government of India departments are the major consumers of coal tar products and there is clearly a case for an overall appreciation of the rival claims for coal tar. Is it in the best interests of the country's economy that coal tar be distilled for its by-products or consumed as fuel? There is urgent need for a ruling decision on this—literally and metaphorically—"burning problem".

Yours etc.,
SECRETARY,

THE COAL TAR DISTILLERS' ASSOCIATION.

Without Prejudice

A CASE OF NEGLECT OF DUTY

THE RIGHT TO PUNISH (FROM OUR LEGAL CORRESPONDENT)

IN early October the nights in the neighbourhood of Ahmedabad are still sultry. Mr. Pratapsing Hajarasing, a workman employed by the Rohit Mills Ltd., found this to be so in the small hours of the 9th of that month; wherefore, being weary, he composed himself to seek "tired nature's sweet rest over, balmy sleep". He was successful in his search; and, discovered slumbering, was subsequently served with what, in the hideous jargon of today, is termed a show-cause-notice and after an inquiry was summarily dismissed. For Hajarasing was a night-watchman. Now, it is the duty of a night-watchman to watch by night. That is a platitude and a truism but, as one has had occasion to remark before, a truism has at least the merit of being true and it is sometimes necessary to emphasise the obvious. And in a welter of later legal argument about what is and what is not negligence and what constitutes and what does not constitute conduct subversive of discipline, it is just as well to bear in mind the obvious fact that there is no reason for a watchman, as such, to exist and have his being at all unless he keeps watch. This particular night-watchman, aggrieved by his summary dismissal appealed to the First Labour Court, Ahmedabad, against it; and the Court held that the charge of sleeping on duty was proved but that any such single act did not amount to neglect of work under the standing orders or to an act subversive of discipline thereunder. Therefore the Court set aside the order of dismissal, but, rather inconsistently, you may

think, conceded that the "act of sleeping while on duty is something serious on the part of a watchman", and converted the dismissal into discharge with compensation in lieu of notice. The employers appealed.

It may be useful to the non-legal reader to consider the general principles of the law of Master and Servant involved. They are really quite simple. Apart from night or day watchmen, it is the duty of any and every workman to take proper care of his employer's property; and of a watchman, that is a man especially employed and with one sole duty to look after that property, we may say that the standard required of him is higher and that he must take at least as much care of the property in his charge as a reasonably prudent man would take of his own belongings. That is the common law and amid all the changes and chances brought about by the Industrial Disputes Act, as far as one knows, that is still the standard of care required by the tribunals. Where the common law and the tribunals part company very often is in the nature and extent of the punishment to be imposed for breach of that standard. Where the law roundly supports dismissal, the tribunals on equitable grounds may reject it in favour of a lesser punishment or no punishment at all.

And even the common law is not inflexible either. It will recognise degrees of culpability and degrees of punishment to a certain extent. But it leans towards the harder view. This night-watchman was asleep on duty. Let us assume, though it was not actually a fact, that it was an isolated offence. Here are some words by that great judge Lord Darling. They relate to the dismissal of a workman who had been negligent in forgetting a particular detail of his work and by so forgetting had caused damage

to valuable and complicated machinery, a printing press on which he had been working. If you substitute "sleeping" for "forgetfulness", the words are very apposite. "It was argued," said Lord Darling, ".....that mere forgetfulness could not amount to neglect; but I think that to forget to do a thing, which it is of great importance you should remember, may well show such a careless regard to your master's interest as amounts to neglect. Neglect, as often arises from forgetfulness as from anything else; and, if the forgetfulness is with respect to an important thing, it may well, in my view, be good ground for dismissal of the servant without notice. I do not say it would be a good ground for dismissal in every case. Some trivial acts of forgetfulness might not even justify a complaint or remark; but to forget to do a thing which, if not done may cause considerable damage to the master or to his property, or to fellow servants, may be a serious neglect of duty. Take the case of a signalman on a railway who does not put the signal at danger when he ought to do so. Nobody would suggest that his omission was the result of anything but forgetfulness; but could it be said, in view of what might be the consequences, that it was not a serious neglect of his duty? It was argued that forgetfulness is not neglect unless it is habitual; but how can any rule be laid down as to how many times—once, twice or more—a man may forget before his conduct amounts to neglect justifying dismissal? The line cannot be drawn; the question must depend upon the particular circumstances of each case."

So we may take it that the forgetful signalman would have been liable to instant dismissal; and rightly so, you may think, since he might have endangered the lives of hundreds of his fellow beings and you cannot risk that sort of thing happening again. But though the punishment would have been dismissal at common law, it is by no means certain or even likely that it would have been so under the principles of the new equity as administered by the Industrial Tribunals. There was a case two or three years ago where a workman was caught smoking in a place where smoking was dangerous to the public and his fellow workmen and where notices specifically prohibiting the practice were, to the knowledge of the workman, displayed. Now the misconduct of the forgetful railway signalman was involuntary whereas that of the smoking workman was deliberate and intentional. Nevertheless, the dismissal of the smoker was set aside by the Tribunal on the ground that the punishment was too severe, since, so far as was known, it was a case of a first and isolated offence. A remarkable decision that was, and while the popular prejudice is all in favour of the quality of mercy being not strained, of its being encouraged to continue to drop as the gentle rain from heaven upon the place beneath, yet surely there must be a limit to the dripping process and the tap should be firmly turned off as against a gentleman whose disobedient habits are likely to blow his colleagues into eternity. Equity is one thing and lachrymose sentimentality quite another.

To return to our slumbering night-watchman, the Bombay Industrial Court at the appeal did not specifically decide the point as to whether a single occasion of sleeping on duty would justify dismissal, though a careful perusal of the judgment leaves one with the opinion that it would not. It turned out that this was not the first time that when ostensibly engaged in his employment he had sought and found the soft dews of kindly sleep; and he had previously been roused therefrom and warned. The Court held that the Labour Judge had erred in converting the dismissal order into one of discharge with compensation and confirmed the dismissal.

(Pratap Silk Mills, Bombay, v. M. Mazdoor Sabha, Bombay, Industrial Court Reporter, March 1955, P. 266.)

COMMONWEALTH'S INCREASED OIL-REFINING CAPACITY

The growing importance of Commonwealth oil refineries is shown in the figures issued in London on 25th May by the Petroleum Information Bureau. Total refining capacity for the area as a whole last year was 77 million tons—12 million tons more than in 1953. By far the most important individual countries within the Commonwealth oil refining area are the United Kingdom and Canada, each with just over 29 million tons capacity last year. The Bureau's announcement says other new refineries are now being constructed in India, Australia, and elsewhere. The Bureau adds that outside the U.S.A. Western Europe has become the leading area and now has a capacity of 100 million tons if U.K. plant is included.

SINGAPORE LIVING STANDARD HIGHEST IN S. E. ASIA

The 1954 report on Singapore, which has just been published, says that the standard of living enjoyed by the people in this British colony is higher than in any territory in South-East Asia. This covers the annual per capita income, schools, hospitals and welfare services. Some 25,000 people were rehoused in Singapore in the period under review, and, the report says, trade shows a slight increase over 1953. Nearly three-quarters of the population are now local-born, and when the next elections are held in about four years' time the electorate will be doubled.

A DITCHER'S DIARY

the Constitution. For those like ourselves, who are already established in India, the proof of the pudding must be in the eating. The frame of mind of a class of men important to India's future could not be more succinctly stated.

Some of the foreign experts the Government of India have brought out recently to advise on one thing or another have been criticised as unnecessary or unsuitable by politicians who think that *swadeshi* should even extend to scientific and intellectual matters. But two of them who have lately come to India, and who will be in Calcutta next week, are so able—and specialise in fields where this country is so backward—that they will be uniformly welcome. They are Dr. Eugene Staley, the Senior International Economist at the Stanford Research Institute, and Dr. Lincoln Clark, Professor of Marketing at the New York University School of Business Administration. Dr. Staley will advise on the organisation of small-scale industries and Dr. Clark on marketing problems. They have been recruited in accordance with the recommendations of the Ford Foundation's International Planning Team, which wrote so illuminating (and so discouraging) a report on Indian cottage crafts a few years ago. After the inevitable whirlwind tour of the country (which has become the patent of the modern economist) these two gentlemen will settle down here for some months. Dr. Staley will have the important task of helping decide in which fields small industries can be developed to the maximum extent at the minimum cost, particularly those that promise to increase employment.

For terms of government let fools contest
Who'er is best administered is best.

"It is in fact," said Mr. Jain, "immaterial to what particular type of socio-political pattern an independent country subscribes, so long as it retains its initiative and lets the technical efficiency and organising abilities possessed by its leaders in the economic field to have their full play for the greater and greater good of a larger and larger number of persons. Romantic platitudes do not constitute practical politics". Mr. Nehru used to say that he didn't care twopenny what name we gave the economic system, as long as it delivered the goods. Most men would be disposed to agree, if the Government would act up to that sensible theory.

The same question of the relation between the public and private sectors in India was uppermost in the mind of Sir Kenneth Harper when he wrote the address he will deliver to the meeting of the Burmah Oil Company later this month. Sir Kenneth's remarks on this subject, which appear on another page, I commend to any Indian who wants to know what foreign business men think of the new trend in economic policy in this country. Quite frankly they are not sure what to think. Most of them have great faith in the good intentions and fairness of Mr. Nehru's Government, but at the same time most of them cannot help feeling apprehensive about the future. Speaking of the recent amendment to the Constitution, Sir Kenneth says: "The powers taken are permissive, and we are assured that the present Government of India have no intention of using them to expropriate foreign capital and so damage their international relations and credit in the world. I must state in all fairness that in our past experience they have always been as good as their word, but Governments change and this wide power and the removal of the protection of the courts are now written into

A correspondent in Lucknow tells me there is a gold rush going on up there, with citizens "prodding" their backyards and even occasionally digging them up. The central figure in this story is Nawab Asghar Husain, the man who went into a 50-50 partnership with the State Government last year and dug up almost the entire foundations of an ancient palace. Now he claims to be on the track of the whole buried wealth of the Nawabs of Oudh which the treasurer of the last Nawab, Wajid Ali Shah, successfully prevented from falling into the hands of the British. By convention, each royal palace had an underground deposit of Rs. 50 lakhs in gold mohurs. Wajid Ali Shah had 52 such palaces and 56 gardens, which means that the total deposits must have been about Rs. 54 crores. He had, besides, 322 elephant-loads of emeralds, estimated to value Rs. 2,000 crores. To prevent this enormous treasure from falling into the hands of the British, the treasurer, Mahmood Ali, is said to have roved himself out to the river and flung the keys into the water. The immediate cause of the present excitement is the reported discovery of the diary of the treasurer, which is filled with queer signs and marks, believed to indicate the locations where the treasure is buried. The increased urbanisation of the city of Lucknow since the days of Wajid Ali Shah has made the charts next to useless, but hope springs eternal in the human breast. Failing to interest the present Chief Minister, Dr. Sampurnanand, in the proposition, Nawab Asghar Husain said last week that he has plans to move the Government of India for permission to excavate a site near the Qutub Minar in Delhi to get at the treasure of Alauddin Khilji.
