THE PROSPECTS FOR PEACE IN 1955

REVIVAL OF A GERMAN ARMY: COMMUNISM AND COLONIALISM IN ASIA

THE New Year has opened with assurances from a variety of quarters that it will be a peaceful twelvemonth. There have even been forecasts that the year will see a fall in the tension between nations that has threatened to disrupt the peace since 1947. This would seem natural after a year in which it became quite clear that the two blocs that would be involved in a major war each had sufficient destructive power to reduce each other to ruin in a few weeks. But, as Mr. Nehru said here the other day, while it is logical to believe that atomic weapons have made war less likely, there is no guarantee that all the nations accept logic. The discordant note in the prophecies of a peaceful 1955 came from Moscow, whence Mr. Malenkov argued that the rearmament of West Germany would increase international tension, though even he did not go the length of recent Soviet declarations and insist that a rearmed West Germany would make further negotiation toward peace impossible. Perhaps Mr. Malenkov's pessimistic views about the consequences of West German rearmament were influenced by the freshness of the blow to Soviet hopes, for it was only in the closing hours of the old year that the French national assembly finally relieved Western anxieties by consenting to ratify the Paris agreements. But, recent or not, it is this development that will dominate Russian thinking about international affairs in the year ahead. And it is no secret that among many anti-Communist peoples the same course of events will be watched with almost as much apprehension as the unfolding of Russian policy.

Paradoxically, while European attention is concentrated on the resurgence of Germany as a military power, the year began with the announcement that American financial assistance (and hence, it was implied, American interest) was to be diverted increasingly toward Asia. It is to an Asian capital that the United Nations Secretary-General has flown this week. The U.S. President's State of the Union message which is to be read before the new Congress today will no doubt make accented reference to American preoccupation with affairs in this continent. A conference of democratic Asian leaders has just finished in Java and a much larger one (at which "democratic" will be given one of its sophisticated meanings) will be held in April. And one of the most famous of European dictators is now visiting several South Asian democracies. The young year seems pregnant with portent in Asia, while events have settled down in Europe to a course long planned for and foreseen. But it is not inconsistent with this to point out that the centre of gravity of the world's main problem, the question of war or peace, has shifted decisively back to Europe.

Asia is dominated by two problems: America's quarrel with Peking, and the final disappearance of colonialism. The United States and Communist China naturally see the first as one of the most dangerous of international tensions, while a few of the Asian democracies (India and Burma among them, but not Pakistan or Ceylon) find in the last-ditch struggles of imperialism material for exclusive engrossment. (The attempt to link these two problems as one, and depict American support of Nationalist China as a variant of colonialism is merely Communist propaganda that deceives few people even in Asia.) Neither of these problems has a right to the overwhelming importance given it by the protagonists, and neither of them is liable to become the cause of the one, last war that the world lives in fear of. To take the former problem first: the division of opinion on its importance does not follow the lines of division of the world power blocs. The more extreme American views on what should be "done about" Communist China (as though there were anything to do) have been localised to the activities of a China lobby, while the furor caused by Mr. Anthony Nutting's

recent statements about Britain's interest in Formosa's safety from Communist attack showed that America's allies do not unanimously share the opinion that Chiang Kai-shek's fate should ever become a cause of war. The United States' well considered national interests might indeed be involved in its quarrel with Peking, but not the whole of the Western alliance—and certainly not to the extent that would lead to the mutual exchange of atom bombs. As the responsible leader of a largely democratic alliance, the United States is not going to let this question, however dearly it involves national feeling, bring on global war.

The restraints are not all on one side. China similarly is under varying and less publicised pressure from its European ally to keep down the temperature in Asia. It is widely believed in the European chancelleries that Chinese aggression on Western aircraft last year and the incident of the imprisoned U.S. aviators both caused some irritation in Moscow, not of course on humanitarian grounds but because these draughts disturbed an atmosphere in which Russia was endeavouring to spread an aroma of friendliness and conciliation. There is no evidence in Russian history, as there is in German, of a reckless willingness to become involved in trouble on both its eastern and western approaches. If we take Russian anxiety about German rearmament to be genuine (and it is the basis of Western policy, that Russia should be genuinely impressed by it), then we may presume that there is an abated appetite for adventurism in the Far East of the sort the Tsars indulged in from time to time.

The question of colonialism is important no doubt, but it becomes less so each year. It was significant that at the conference at Bogor last month the supporters of the anti-imperialist crusade had to extend their attentions to Africa because there is so little left for them to complain of in Asia. Support was indeed given to Indonesia in her quarrel with Holland about the future of Western New Guinea but while this matter has perhaps a certain interest it is altogether too petty and dubious a cause to command the persistent attention of Asian statesmen who have valuable help to render in wider spheres. The conference of selected Asian and African leaders that is to be held in April will have interesting and important subjects to discuss if it can avoid the evident danger of becoming a forum of simple racialist diatribes; the hosts and convenors are sophisticated enough to have no concern with such simplicity but not all of their invitees are in the same position.

The fact is that the future is heavy with promise for Asia, and the events that are shaping themselves in this continent will dwarf in significance all that has happened in her previous history and perhaps even much that has happened in Europe. But there is not taking form here any drama that will place in the balance the

immediate peace of the world or that will decide the relative powers of the empires of freedom and subjection. That drama will unfold in Europe. Asia will continue to be the scene of conflicting national interests, and to judge from the past few years the chief agent of much of that conflict will be Communist China. Mr. Nehru is beyond doubt right when he urges that the real problem in Asia in 1955 and the years to follow is peaceful economic development and the perfecting of political freedom, not the military conflict of empires. But what we must add to this statement is that the possibility of development will depend on the adjustment of conflict in Europe, an adjustment to which Asian democracies cannot remain indifferent. And we must add too, that even if peaceful development is permitted to go forward, there will be left plenty of room for a clash of national interests that will keep the surface disturbed while deeper changes go on below. The Asian arena will never be as calmly peaceful as some people think it could be if "outsiders" would cease "interfering"; but it should be possible to ensure (granted all the time settlement or stalemate in Europe) sufficiently placid conditions to permit the Asian democracies to do their real job of economic advance.

Once we put aside the error of a false "global strategy" founded on cloudy theories about "the world struggle for power" and look to the really important points of friction between the eastern and western alliances, we can see that the overshadowing event at the beginning of 1955 is the rebirth of an independent German army. Opinion in Europe has at last struggled through to the stage where it is ready to accept, in full command, a German contribution to the defence of democracy. The crisis of conscience that preceded this decision was symbolised by the hesitations of a few hundred French deputies; that their behaviour has often been ludicrous in the past few years is no reason for the decision and its moral importance to be spoken of as a ploy outside Europe. Their reluctance to approve rearming their late conquerors should be regarded in the light of a report from *The Times* correspondent in Washington this week to the effect that American experts are now talking of the German army as "a frank gamble, and—a little late in the day, it seems—now ask whether a new German army in the last resort would be found securely on the side of the West or might not come to be used as a balance of strength". The long delay in the approval of the Paris substitute for the EDC, added to the years spent in discussing EDC itself, have only ensured that the plans for the formation of West German army are all the more ripe and ready at the beginning of 1955; they will begin to go into operation at once. The *Neue Zürcher Zeitung* says this month that "a period of at least 13 months will elapse from the date the treaties become effective until the first (German) recruit reports for duty" and that "before some units are, at least partly ready for war a minimum of three years will elapse". It is well known that many French deputies and perhaps even M. Mendès-France himself, intend that this waiting period be put to use by seeking a settlement with the Russians that will make a full revival of a German militarism unnecessary. This state of mind is spoken of, especially in the United States, as though it represented bad faith. In fact it is quite a reasonable extension of the notion of bargaining from positions of strength provided that until there is solid evidence of Russian willingness to reach a settlement the actual rearming of West Germany goes forward.

That a New Year should begin with the rearmament of German armed forces and with the prospect of enduring peace is paradoxical in view of the history of the past century. Indeed the Russians are only urging the apparently reasonable view that this is no paradox but a plain contradiction. Our fathers would have agreed with them. But that is to leave out of account what our fathers did not know and what the Russians will not acknowledge—that the Russian grip over half of Europe has altered all the data of world politics. All the data, that is, but one: that the decisive events of world politics still take place in Europe and that Asia's hopes for continued peace in which to pursue prosperity will depend to a large degree on the "equilibrium" value of German arms in disposing the Russians to discuss an equitable future for European democracies.

SLOWER PROGRESS TOWARDS CONVERTIBILITY

NO DRAMATIC ADVANCES TO BE EXPECTED IN 1955

THE big disappointment of 1954, for the liberal economists, was the failure to make the major non-dollar currencies convertible. Convertibility seems more remote at the beginning of 1955 than a year ago, although progress has been made in the preparations for it. The intention seems to have weakened, or at least to have become less urgent. The British proposal at Geneva that the participants in the General Agreement on Tariffs and Trade should remove all quota restrictions on imports was intended to prepare the way for convertibility. Once Britain had accepted the principle that convertibility of sterling implied removal of restrictions that had applied specifically to spending dollars, British policy was directed to breaking down the barriers that might be used to discriminate against sterling. The General Agreement, therefore, a cardinal element in the proposal to abolish quotas has been met sympathetically. It must be expected that the British Government expected even the sterling area was wholehearted on the idea. However, the British Government, if control of currencies is to be relaxed, or concurrently, British spokesmen have unequivocally stated that convertibility is not a principle which is generally accepted to accept it—especially in the case of convertibility. And the countries seem quite willing to let it move gradually.

There will evidently be no such progress in 1955 as was expected—and it is unlikely that she will be directed specifically to currency conversion. The General Agreement, even the freeing of trade will be in scope. The General Agreement, however, offer early opportunity must proceed within the Organisation for European Co-operation—which would have been by G.A.T.T. if the British plan had been independently, there will almost certainly further progress in removing restrictions against goods from the dollar area. There is, of course, more scope for action in the dollar trade; about one-half of Britain's imports from the dollar area is still restricted, whereas all but 17 per cent of her imports from western Europe are quota-free. There is, however, less incentive to free the dollar trade for the sake of freeing it than to free it as a preparation for convertibility.

This is not a particularly impressive prospect for the coming year where a return to normal in international economic relations is concerned, and some British economists are urging their Government to quicken the pace. What troubles them is the thought that opportunities are being missed while the Government waits and plans for the ideal moment—that the ideal moment will never occur and the opportunities will not be repeated. Manufacturers, on the other hand, are already complaining because they have built up their productive capacity behind the protection of import-quotas and have now to sell their output against foreign competition for which, it seems, they made insufficient allowance. Some of them are demanding that the liberalisation policy be "realistically" reviewed and that tariffs be raised if quotas must be abandoned.

This is a serious danger to the whole idea of free trade. If demands for tariff protection are arising now, when markets are so active that they should surely be able to absorb some additional supplies, what must we expect if buying weakens? A primary objective of O.E.E.C. has been the formation of a common quota-free market in Europe; but the restraints on import duties which only G.A.T.T. can effectively impose may be much more important in the freeing of international trade.

This problem bears on another, which the British and other Governments may tackle during 1955. An essential preparation for convertibility is a healthy internal economy, purged of inflationary demands. It requires some monetary discipline which would make trading conditions rather easy. But in such conditions the demands for protective duties would become more insistent. The basic predicament is that any move towards the objective freedom of currencies and trade—that most people desire in principle—involves in practice opposition from one quarter or another. It may be suspected that reluctance to offend particular interests, as much as the need to ensure that economic conditions in general are appropriate, has impeded progress towards the objective in the past year and will continue to impede in 1955 unless the Government, particularly, becomes more resolute. We can already perceive an inclination on the part of

various governments to let sleeping dogs lie and to proceed in the relative comfort of active trade and full employment. This inclination is, perhaps, especially strong in Britain, where a general election is in prospect (though it is not a certainty) in 1955 and where bolder international policies would probably require a little more austerity in the home market. It may be, therefore, that the British Government is not unduly distressed by the unenthusiastic reception accorded to its policy in Geneva. It can argue that it has taken a lead and that lead has not been followed; whereas it would not itself have proceeded all the way without some trepidation. But in the long run it will be Britain that suffers most if the plans for broadening and strengthening international economic intercourse do not mature. For Britain cannot fully restore her position as an economic power on the present restricted basis of international trade and payments.

DOUBTFUL MEMBER OF THE COAL AND STEEL COMMUNITY

BRITAIN MOVES SLOWLY IN EUROPEAN CO-OPERATION

A YEAR has elapsed between the invitation to Britain to associate with the European Coal and Steel Community and the signing of the pact between the Community and Britain, and the pact itself represents nothing like full membership. The principle of association has been established, but the degree of association in practice will be only gradually revealed. Some observers believe that this is the beginning of an important change in economic relations between Britain and the Continent; others—the majority—believe that development from this modest start will be slow and unspectacular. Britain watched with detached interest the formulation of the original ambitious plan to make a common market in Europe's coal and steel and has followed unemotionally the efforts and the partial failure of its sponsors to establish the supra-national sovereignty of the High Authority. There was a period, however, when support for the idea within the British Government was strong enough to arouse the vigorous and vocal opposition of the British Iron and Steel Federation and to cause serious misgivings on the part of the National Coal Board. It is significant that not even a tentative agreement was reached until the authority of the governing body had been somewhat whittled down.

Britain is now, apparently, committed to reduce her tariffs on coal and steel, and to consult with the Community before any new restrictions are imposed. This is not a very serious concession when Britain is importing only marginal supplies of these commodities, and when, on the other hand, those marginal supplies are important and there is no desire to restrict them. The question of dual pricing of British exports—whereby both coal and steel are sold abroad at higher prices than those ruling at home—is subject to discussion but not to any prior commitment. The National Coal Board and the Iron and Steel Federation are still convinced that it is necessary to subsidise consumers at home by reaping "surplus" profits on exports, and the consumers themselves, of course, are very reluctant to forgo this advantage. The fundamental objection on the British side to full membership of the Community was, however, the power which it might grant to the Community to interfere with the capital plans of these two basic British industries. Both of them are engaged on a series of long-term plans which are the least that the country needs to assure its industrial position, and the theoretical possibility that these plans might be curtailed from outside—even though in practice such interference was unlikely—was quite unacceptable.

Attention is focussed on the essentially domestic problems, whether or not the development plans are adequate. The shortage of coal has become a permanent feature of post-war Britain. No informed critic, understanding the problems of coalmining in the geological conditions of Britain can blame the National Coal Board if output is not rising as desired. More coal will be produced when old mines have been reconstructed and new ones have been opened and—within the limits that conditions impose—mining processes have been more extensively mechanised. The delays are distressing, but they are not surprising. What is surprising is the recent demonstration that the steel industry is unable to satisfy the nation's needs and that its known plans, when fulfilled, will still not be sufficient. It appears that Britain needs an annual production of about 250 million tons of coal (compared with less than 225 million tons currently produced) and of considerably more than 20 million tons of steel (compared with an estimated 18½ million tons produced this year). Oil is making good the deficiency of coal at present, and atomic energy will come to the nation's assistance later—but more coal will still be needed, because of the increase in consumption of energy. There are, of course, substitutes for

steel—es, steel can overcome, of British export prices.

The Iron and Steel Industry Statistical of steel will absorb about half of Britain's export of steel in 1954, and that form of motor-cars and other steel-based manufacture 20 percent of deliveries. The its made-up form is, of course, the value of the same weight of crude steel, and it is generally reckoned that in terms of value, about half of Britain's export trade depends on steel. (The weighted average value per ton of finished steel exported is estimated by the Federation to be as high as £3,400 in the case of aircraft.) In terms of volume, the motor and cycle and aircraft group is the principal consumer, using nearly a million tons of steel a year. The development plans of the motor companies indicate that their productive capacity will be doubled within a few years, and they will require correspondingly increased quantities of steel. Yet it is sheet steel, as used for motor bodies, that is particularly scarce and has to be imported in substantial amounts. And the steel industry's plans for expanding sheet-making capacity do not suggest that supplies are catching up with requirements. In general, the export drive may be impeded unless the industry (now substantially returned to private enterprise) accelerates its post-war expansion, impressive though that is. Such problems can be, and probably will be, discussed freely with the European Coal and Steel Community, which has its own problem of capacity—how far it is wise for Europe to expand its steel industry when American production is moving up again. Between January and October (that is, before the American revival began) the steel industry of the United States reduced its output by nearly 20 million tons, and the European steel pool increased its output by about 3 million tons, compared with the same period of 1953. Protective consolidation in Europe is a need, not only an ideal.

CURRENT COIN

Import Policy.—The import policy for the first half of 1955 shows a marked and welcome tendency towards greater liberalisation. This was to be expected in the case of imports from the dollar area because India's trade balance with dollar countries has been favourable for some time now. But restrictions on sterling goods are also being eased, and at a time when the country's sterling balances are declining, which shows an encouraging concession to the views of the domestic consumer who is already carrying a huge burden in the shape of high prices and poor quality. At the end of November India's sterling balances stood at Rs. 722 crores compared with Rs. 737 crores at the beginning of the year. Dollar imports between January and October 1954 amounted to Rs. 61.5 crores and exports Rs. 84.5 crores. The policy has been framed with object of assisting the developing economy protecting newly established industries. Liberalisation is to take place in four ways. The scheme of granting licences to new exporters has been expanded to include many more small licences. Where it has been possible to commit large imports of certain items, provision has now been made for granting supplementary licences to established exporters. Liberal licensing procedure is to be adopted in the case of some items which are either not manufactured in India, or for which detailed quantitative restrictions are not considered necessary.

The I.C.I.C.—The chairman of the steering committee of the Industrial Credit and Investment Corporation, Dr. A. Ramaswami Mudaliar, has stated that it is expected that the Corporation will be registered under the Indian Companies Act sometime this week. Dr. Mudaliar has reported to the steering committee that sanction has been received from the Government for the capital issues and that the prospectus of the Corporation would be ready by the end of the month. The first chairman of the Board of Directors is expected to be Dr. Mudaliar himself and Mr. Bhothalingam, Special Secretary to the Union Commerce and Industry Department, will be the Government nominee on the Board of Directors. Dr. Mudaliar explained the purpose of the Corporation in these words: "To assist the creation, expansion and modernisation of such industrial enterprises, to encourage and promote the participation of private capital, both internal and external, in these enterprises and to encourage and promote private ownership of industrial investments. It will furnish managerial, technical and administrative advice and assist in obtaining such managerial, technical and adminis-

trative service to Indian industry." British investors have taken up shares worth Rs. 1 crore in the new Corporation and American investors, Rs. 50 lakhs. Indian insurance companies and banks are expected to account for another Rs. 2 crores and the general public will be asked to subscribe Rs. 1.5 crores. The Government of India is to credit the Corporation with Rs. 7.5 crores free of interest for 15 years, returnable in equal annual instalments over the 15-year period commencing at the end of the first 15-year period. The International Bank has granted a loan of Rs. 5 crores. British investors include the eight leading exchange banks operating in India, the 30 leading British insurance companies with interest in India and the Commonwealth Development Finance Co. Ltd. A number of British industrial companies are to contribute a total of Rs. 1½ lakhs. These are: Associated Electrical Industries Ltd., English Electric Company Ltd., General Electric Company Ltd., Guest, Keen and Nettlefold Ltd., and Gray Dawes and Company. It will be recalled that the Bank of England announced recently that Mr. P. S. Beale, its chief cashier, was being released from service as from 15th January, 1955, to enable him to become the Corporation's first general manager.

Pakistan's Import Policy.—The import policy for January-June 1955 announced by the Pakistan Government recently promises a gradual easing of the serious shortages that country has suffered since the recessionary storms of a couple of years ago upset her economic balance. The liberalisation it proposes, however, owes much more to the fact of American economic aid than to an improvement in Pakistan's own balance of payments; to that extent, it might not be as reassuring a sign for the future as it may at first sight appear. The move is nonetheless to be welcomed as a step towards fulfilling pent-up consumer demands and towards promoting industrial expansion. In important respects, the basic principles underlying the Pakistani policy are similar to India's. The guiding factor is the need to conserve foreign exchange, and then to secure the requirements of a country that is industrialising without ignoring consumer needs. The fact that 70 per cent of the total allocation under the new policy is for industrial requirements (including the requirements of the Pakistan Industrial Development Corporation) indicates clearly on which of the two aspects greater emphasis has been placed. But the provision for consumer goods has also meanwhile been increased by about one-third; and there will be several crores of rupees worth of supplies arriving under barter arrangements. As a result, supply and prices are expected to ease considerably. Another feature of Pakistan's new policy is that all items have been made licensable for all countries of the world. Until now, licences had been issued for three currency areas—the dollar area, the non-dollar area and treaty countries—but importers can now get supplies from wherever they might be cheapest. This does not, of course, apply to items for which Pakistan has, under her trade agreements with France and Japan, undertaken to issue licences on a single country basis.

Indian Trades Union Congress.—The Indian Trades Union Congress held its seventh annual session in Nagpur on 1st and 2nd January. The session was inaugurated by the President, Mr. U.N. Dhebar, and was addressed by Mr. R. Vasavada, the present President. A message from Mr. Nehru was read before the Congress by the General Secretary, Mr. Tripathi. In his address, Mr. Vasavada maintained that the great problem facing the country today was that of unemployment, and that the first five-year plan had not been able to solve the problem. In the villages something could be done by providing occupations for which people could be trained and in which facilities could be provided for the supply of raw materials and stores, and the marketing of products. Mr. Vasavada added that protection would have to be provided for village products and markets for them would have to be created. Certainly such a scheme would require sacrifices on the part of consumers, but his contention that "city-workers are prepared to make adequate sacrifices to create employment for their brethren in the villages" appears to have been made without adequately consulting the city-workers themselves. Already the burden of supporting uneconomic small and village industries, often for sentimental reasons, is weighing heavily on the country, and a more reasonable approach to the problem would seem to be to encourage only industries which will pay their way, and which will therefore be assets rather than liabilities to the city-worker, and his standard of living. On the problem of raising capital for the industrialisation of the country Mr. Vasavada suggested that it was more desirable for the masses to provide the funds rather than a "few rich men". This seems an unnecessarily hard way of achieving the desirable object. When people are poor their ability to provide the surplus for investment is limited, and their capacity for exercising ownership of such

wealth, which would apparently not be extracted from them in the form of taxation, has not yet been developed. Commenting on the Managing Agency System Mr. Vasavada considered it necessary to amend the Companies Act immediately "in such a manner that only qualified persons can manage the concern". He further suggested that the remuneration of management should be in conformity with the average national income, and appealed to managing agents to reduce their remuneration to a reasonable amount consistent with the national income of the country. What Mr. Vasavada considered qualification for management he left undefined. Presumably the best qualification for managing a concern is the ability to do it properly on sound business lines, and that is probably something which can safely be left to shareholders whose money is intimately involved. The suggestion for reducing the remuneration of management might be practicable if such talent were readily available. In India, where the shortage of managerial ability is acute, it would scarcely be in the national interest that it be discouraged further.

I.C.I. in Pakistan.—The new Imperial Chemical Industries' building in Karachi was opened by Mr. Habib Ibrahim Rahimtoola, Minister for Commerce, Government of Pakistan, on 30th December. Mr. Rahimtoola described the building as symbolising the expansion of the I.C.I. in Pakistan and the expansion of the firm's activities as being the index of the progress made by the country in the industrial field. "As you know," said the Minister, "we inherited a purely agricultural economy at the time of partition. During the last seven years we have been trying to give it an industrial bias and have achieved considerable success in some sectors. Criticism is sometimes heard that the pace of industrialisation that we had set for ourselves has been too fast and that our present difficulties are the outcome of over-speedy industrialisation." Mr. Rahimtoola considered that such criticism stemmed from a superficial assessment of the country's economy and the developments that had already taken place during the last few years both in Pakistan and in the outside world. The Pakistan Government had made its choice between devoting its resources to the import of consumer goods, and intensifying its programme of development, in favour of the latter because it intended to reduce the country's dependence on foreign countries for the supply of essential requirements in the shortest possible time. The Minister continued: "It preferred that the people should put up with shortages in the short run so that they may enjoy plenty in the long run. This policy has no doubt entailed hardship on large groups of the population, but it must be remembered that nothing worth while was ever achieved without sacrifices." The Minister added that the development of a particular industry in the country might be of paramount importance, that considerations of economy might have to yield place to other compelling reasons, and that when Sui gas becomes available during the next few months it would provide the basis for the manufacture of a number of chemicals within the country, in the development of which Imperial Chemical Industries would not lag behind.

Indo-British Trade.—The U.K. Trade and Navigation Accounts provide encouraging evidence that a rise in both exports and imports has contributed to a substantial increase in Indo-British trade during the first ten months of 1954, compared with the corresponding period of the previous year. Britain's exports to this country were nearly £4 million higher at £98 million, while her imports totalled nearly £17 million more at over £106 million. The £4½ million trade surplus for Britain, as a result, was converted into an £8½ million trade surplus for India. Chiefly contributing to this change was a rise of £9 million to £47 million in India's tea exports (a reflection of the high prices paid for the commodity); and also an increase of nearly £4 million to £13½ million in exports of miscellaneous textile manufactures from this country (recently the subject of much comment in Lancashire). The value of Indian tobacco and tobacco manufactures was over £1 million higher at £6.3 million; but this was offset by an almost equivalent decline in metalliferous ores and metal scrap to £2½ million, which reflected the highly competitive conditions that have prevailed in this sector of international trade. India's exports of leather products declined by over £1 million to less than £11 million. Non-electrical machinery continued to head the list of Britain's exports to India, showing a slight increase at £23.2 million. Electrical machinery, etc. retained second place, despite a fall of £2½ million to nearly £12.9 million. Chemicals, however, became a very close third, rising by nearly £2 million to £12½ million. Other notable features of U.K. exports to India were a rise of £1 million to £4.4 million in petroleum products; an increase of £1 million to nearly £5 million in iron and steel; a fall of £2 million to £4½ million in metal manufactures; and a rise of nearly £1 million to £8 million in road vehicles and aircraft.

CHEERFUL SENTIMENT IN STOCK MARKETS
WIDESPREAD ADVANCE IN INDUSTRIALS

London, 5th January.

THE stock markets ended the old year and started the new one on a cheerful note, although business following the turn of the year was restricted by the threatened rail strike and the end of the long Christmas account on 4th January. The general firmness was helped by the strength of Wall Street, further good company and business news, the Exchequer return for the first nine months of the financial year, and the generally optimistic view of the economic outlook. Gilt-edged continued to lose ground for most of the week on interest rate uncertainties, but staged a late recovery to finish the period on a firm note on some new year investment buying. Foreign bonds were subdued, but the tone was firm, several issues attracting support from time to time. Ralls provided a number of good spots, and dollar stocks recorded an all-round advance in response to Wall Street. The industrial market recovered completely from the short-lived setback before Christmas, and under renewed buying made fresh headway, prices in many cases reaching new peaks. Almost all industrial groups participated in the advance, with the better class issues in the lead. End-of-account influences subdued the gold share market, which failed to follow up its advance immediately after Christmas. Prices inclined to ease, and were mostly lower on balance. After early firmness, copper lost some ground on the Rhodesian labour situation. Other base metals held firm. Oils were buoyant, with British Petroleum, Burmahs and Shells outstanding, all reaching new peaks. Rubbers were active and strong in response to the commodity price. Teas were also in demand, although the buying was somewhat selective, and numerous gains were established.

The Money Market

Year-end factors had a sharp impact on the money market last week. The position deteriorated daily with loan rates hardening, and on Friday the market experienced the worst session for many years. Exceptionally heavy calling forced the market to pay up to 3 percent for loans, and in addition to borrow a large amount from the

central institution on bank rate terms. The sum so borrowed is believed to be the largest since before the war. At last week's treasury bill tender, the average rate was raised to 3½ 3.82 percent, but the increase was insufficient to cause any further change in the rate for commercial bills. Applications for treasury bills totalled £373,545,000 of which £260 million were allotted at an average rate of 3½ 3.82 percent compared with 36s 11.59d in the previous week. This week, £230 million was offered. The Bank of England return for the week ended 29th December showed notes in circulation about £7 million lower at around £1,751 million, while bankers' deposits were about £6 million higher at around £276 million. Fine trade bills were unchanged.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 29th December showed gold stocks unchanged. Foreign deposits rose to \$127 million, while foreign investments fell by \$16 million. The Federal Reserve portfolio of Government securities increased by \$63 million as it bought that amount under repurchase agreements. Member banks' borrowings rose by \$301 million to \$565 million, while their excess reserves fell by \$96 million to \$630 million. The reserve ratio remained unchanged at 44.8 percent. Business loans of the New York City banks rose by \$21 million to \$7,568 million, compared with a rise of \$57 million to \$8,530 million a year ago.

U.K. Balance of Payments Trends

After paying \$191 million of debts, Britain lost \$163 million of reserves during December. Without the abnormal debt payments, her reserves would have gained \$28 million, of which \$8 million was U.S. aid and \$3 million came from the E.P.U. Ordinary dollar transactions thus brought a surplus of \$17 million, compared with a deficit of \$30 million in November. From August to December, there was a deficit of \$11 million, repaying only a small fraction of the surpluses totalling \$431 million in first seven months of 1954. The December E.P.U. deficit was unseasonal, reversing unseasonal surpluses in the previous three months. Thus Britain suffered from sterling's de facto convertibility in November, but gained from it in December as the E.P.U. deficit costs only half the sum in dollars.

U.K. Jute Industry's Prospects

Dundee jute spinners and manufacturers are all very busy, and well booked with orders for jute yarns and cloth to tide them over the next three months at least. Sales have been made as far forward as the end of June. Prices for raw jute have been tending to decline recently and Dundee spinners have been showing no interest, anticipating a further fall for replacement jute owing to the cancellation of Pakistan shippers' licences. But this difficulty is being smoothed out and there is little likelihood that additional buying will be done. Traders consider that raw jute values were unduly advanced on reports of flood damage both in India and Pakistan. The quality of the material arriving from upcountry areas has been more favourably reported upon than was expected, and shippers are still offering freely. With half the season gone, the former question of scarcity, even of good jute, seems to have disappeared. Considerable scepticism is expressed in trade circles over the Pakistan Jute Board's crop estimate of 2.7 million bales.

Hides and Skins Quiet

The East Indian hides and skins market was quiet last week. Tanned goatskins were nominally indicated at 13s 6d a lb. c. and f. New York 6s 11 to 12 pence for prime quality, and about 6s 6d for superior quality. Dried salted skins were offered at 900 cents a dozen, c. and f. New York, but buyers were only willing to 800 cents.

Vegetable Oil Market

Coconut oil gathered strength last week, and there was a sharp price rise on improved demand prompted by a strong contra market. Fair business was reported on European account with and Ceylon oil in bulk seeking around £106 and £108, both Jan.-Feb. shipment, c.i.f. Activity in linseed oil was not outstanding, but slightly higher rates were established with January oil, Jan.-Feb. shipment, sold at £93 c.i.f. with further tone and business was recently done to the quoting £110s Jan.-Feb. Although sellers were Indian castor oil retained a firm tone but favouring buying. American cottonseed oil and soyabean oil firmly maintained the recently advanced rates.

Rubber Prices Rise

The rubber market continued to strengthen last week and prices went to the highest levels for over two years past. Profit-taking pared daily gains but on balance, No. 1 RSS on spot was 2½d a lb. higher, while forward deliveries were 1½d to 2d higher. Eastern offers were scarce and increased orders from United Kingdom and Continental factories were difficult to place. The New York market gave support to the advancing trend. Offers of sole crepe were made sparingly, and the higher prices asked for by holders were paid in occasional trading. Latterly, 1/8 inch smooth No. 1 on spot was indicated at 33½d a lb. after business at 33d.

Synthetic Rubber Price Cut

The Du Pont Company has announced a reduction in its price for two major types of neoprene synthetic rubber from 41 to 39 cents a lb. Neoprene is used in mechanical goods, rubber hoses and belting. The CRS type synthetic rubber for tyres sells for 23 cents a lb.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

A QUIET BEGINNING TO THE NEW YEAR

Wednesday, 5th January.

THE demand for money has been somewhat easier since the end of the year, though the need for accommodation is still in general fair. Call money quotes 3 percent in the interbank market, the same rate as is ruling in Bombay. The exchange market has had a very dull time. Tea bills appear to be exhausted and will not be seen again in large quantity until the new season's tea is marketed in the middle of the year. Gunny bills are scarce; there has been a small amount of coal business passing. Remittance has been very small. The principal exchange rates are unchanged except for the U.S. dollar which now quotes Rs. 480½.

Bullion was steady and silver advanced from the previous week's level of Rs. 153-2-0 to Rs. 155-2-0 quoted today. The ready price was quoted at a premium of about 2 to 3 annas. The London silver market was steady and the price rose from 73½d. to 74d. The price of foreign silver in New York was unchanged at 85½ cents.

Gold also ruled steady in sympathy with silver and the price rose from Rs. 88 to Rs. 89-4. The sovereign at Rs. 58-6 showed a gain of 4 annas.

Tenders for the 4th January offer of Rs. 1 crore of three months' Government of India Treasury Bills totalled Rs. 1,61,50,000. The average rate of acceptance was unchanged at Rs. 2-8-0 percent per annum. Tenders for another Rs. 1 crore of Treasury Bills will be received at all the usual centres up to the close of business on Monday, 10th January, 1955. During the week ended 31st December 1954, Government of India Treasury Bills for Rs. 3,11,25,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 4.87 crores in notes in circulation to Rs. 1,200.49 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 31st December, 1954, while the total note issue at Rs. 1,226.50 crores showed little change. Notes held in the Banking Department consequently fell by Rs. 4.87 crores to Rs. 26.01 crores. Deposits of the Government of India declined by Rs. 7.64 crores to Rs. 54.89 crores but other Government accounts rose by Rs. 3.02 crores to Rs. 10.74 crores. Balances of commercial banks at Rs. 69.13 crores showed a rise of Rs. 2.21 crores. Balances held abroad increased by Rs. 63 lakhs to Rs. 67.64 crores. Investments dropped by Rs. 44 lakhs to total Rs. 75.34 crores. Other loans and advances rose from Rs. 13.17 crores to Rs. 21.29 crores, of which advances to scheduled banks against usance bills also increased from Rs. 89.50 lakhs to Rs. 2.90 crores. Ways and means advances were shown at Rs. 1.67 crores (Rs. 1.61 crores).

The statement of the position of Scheduled Banks for the week ended 25th December, 1954, discloses Demand and Time liabilities at Rs. 574.98 crores (Rs. 12.67 crores on account of borrowings from Banks) and Rs. 367.26 crores (Rs. 3.36 crores) compared with Rs. 572.22 crores (Rs. 11.22 crores) and Rs. 364.73 crores (Rs. 3.59 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.57 crores and Rs. 39 lakhs to aggregate Rs. 32.03 crores and Rs. 65.63 crores, respectively. There is a drop of Rs. 1.11 crores in investments to Rs. 348.98 crores. Advances and bills discounted at Rs. 537.14 crores reveal a rise of Rs. 2.89 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.4 percent and 57.0 percent against 10.7 percent and 57.0 percent.

The return of the Imperial Bank of India for the week ended 24th December, 1954, shows a drop of Rs. 1.19 crores in total deposits to Rs. 232.63 crores. Investments in Government Securities remain unchanged at Rs. 97.36 crores, while other authorised investments are down by Rs. 10 lakhs to Rs. 11.39 crores. Loans, cash credits and overdrafts have decreased by Rs. 13 lakhs to aggregate Rs. 93.50 crores, while bills discounted and purchased have increased by Rs. 7 lakhs to stand at Rs. 6.76 crores. Cash and balances are, in consequence, shown at Rs. 38.75 crores or Rs. 63 lakhs less.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade in India by land with Pakistan, Afghanistan, Iran and Burma during the month of November 1954, were as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	28	177
Western Pakistan	18	1
Other countries	7	71
	53	249

Total trade amounted to Rs. 302 lakhs. Re-exports were nil and trade in treasure negligible. There was an adverse balance of trade amounting to Rs. 196 lakhs.

The World Bank continued a high rate of lending during the final quarter of 1954 by making

loans totalling \$57,300,000 for key projects in Belgium, India, El Salvador, Peru and Colombia. At the same time, co-operation between the Bank and private investors in financing development projects was more marked than at any time in the Bank's history. For the first time, the Bank participated in a joint financing operation with private investors which included, along with a loan from the Bank, the flotation of a public bond issue in the United States market. This transaction involved the borrowing by Belgium, in mid-December, of \$50 million to help finance the improvement of her waterways and the port of Antwerp. It consisted of two parts: a \$20 million loan from the World Bank, and an offering of \$30 million of bonds by an underwriting group of 71 U.S. investment firms. The bond issue was the first new money offering of any European government in the U.S. since 1947. The President, Eugene R. Black, described the transaction as the most important single step the World Bank has been able to take so far in establishing effective working relations with private capital, and said the Bank looks forward to more operations of this kind. Apart from the joint loans to Belgium, private capital also participated to an increased extent in the Bank's own loans. There was some private participation in all other loans which the Bank made during the quarter. Of the \$37.3 million lent in these transactions, private U.S. banks agreed to provide about \$5.4 million.

One of these loans was a \$16.2 million credit to help finance a thermal electric power plant in the environs of Bombay, which is expected to be one of the most modern in India. Located on nearby Trombay Island, the plant will feed new power supplies into the Bombay area, where textile, chemical, automobile and other industries are expanding rapidly and where port improvements are under way. The loan was made to three private power companies forming part of the Tata group of enterprises in India. Three Bank loans will assist Latin American countries in increasing their agricultural production. A loan of \$11.1 million to El Salvador will help to complete an all-weather highway along that country's Pacific coast. This is expected to open up to cultivation El Salvador's only large area of fertile land still remaining to be developed. A \$5 million loan will finance the import of farm machinery, irrigation equipment and livestock into Peru. And the Bank lent \$5 million in Colombia to assist in providing farmers with tractors and other agricultural machinery. Lend-

Foreign Trade

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres, the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

a comprehensive
Telecommunication
Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth, Standard Telephones and Cables Limited is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving inter-dependent systems of various types.

Standard Products Include:

Systems:—
Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Railway Communication and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Street and Airfield Lighting Control
Signalling (Office and Factory)
Communication Cable

Equipment:—
SinterCel Selenium rectifier equipment
Power Factor Correction
Heat Treatment
Broadcast Studio equipment
Transmission Testing apparatus
Cable Testing equipment
Loading Coils

Components:—
Quartz Crystals
Transistors
Capacitors and Interference Suppressors
Germanium Rectifiers and Photo-electric Cells
Thermionic Valves

Magnetic Materials
Thermistors
SinterCel Selenium Rectifiers
Rubber, Plastic and Textile insulated cables and wires

Standard Telephones and Cables Limited

COKE OVEN RESEARCH

Know-how is born of two parents—experience and research. In the building of coke ovens Simon-Carves have over 70 years of world experience, and research is constantly in progress. At their headquarters Simon-Carves have one of the most modern and best-equipped establishments for research and development in coal carbonisation. Many important advances in coke oven design and construction have originated from the Simon-Carves laboratories and experimental plants—and many more will certainly follow in the years to come.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

Enquiries to: Simon-Carves Ltd, P.O. Box 33, Jamshedpur.

Coke ovens by Simon-Carves Ltd
STOCKPORT, ENGLAND

ing during the quarter brought the total of World Bank loans to date to approximately \$2,064 million.

Meanwhile two large new power plants, built with the help of previous Bank loans, were opened during the quarter in Brazil. One is a steam plant at Piratininga, near Sao Paulo; the other is the big Nilo hydro-electric station near Rio de Janeiro. Both are owned by the Brazilian Traction, Light and Power Company, and are furnishing substantial amounts of electric power to the Rio-Sao Paulo region, one of the fastest-growing industrial areas in the world.

Late in December the Bank approved a loan of \$10 million to the projected Industrial Credit and Investment Corporation of India, Ltd. This loan is expected to be completed early in 1955 when the Corporation is formally established. Formed by private investors in India, the United Kingdom and the United States, who are subscribing its initial share capital, the new corporation will stimulate the growth of Indian industry by helping to finance private industrial enterprises and to provide them with managerial and technical assistance. At the invitation of the Bank representatives of India and Pakistan met in Washington in December, together with representatives of the World Bank, to resume discussions of arrangements for the further use, for irrigation purposes, of the waters of the Indus system of rivers. The purpose of these talks is to work out a detailed engineering plan for consideration by the two Governments. A Bank proposal for dividing the waters has been taken as a starting point in the current discussions.

NEW year has not really begun until the last Christmas card has made a stand on the shelves, the first cheque inscribed 4-1-1954 has returned from the bank, the best calendar been chosen from the surfeit and all hope has been abandoned of receiving free the pocket diary really has everything. Most of these things by now have been done, and the new year is fair-anchored on its career. Once we settle down to it seems much the same as any other year and wonder what all the fuss was about last week. A glow of expectancy fades and the resolutions were so easily made have already been found to be as easily broken. The Calendar Reform Committee appointed by the Indian Government had scarcely been chosen a more unsuitable moment to let it be known that it has devised a chart of days that would oblige us to go through the same performance in the middle of April. The calendar is to be circulated for publication but I suggest that it be held with the inter for some weeks yet until all memory of last week's errors has passed. Perhaps by about arch many of us will have decided that the arch has got off to a bad start and will be ready to begin all over again on April 13. The intervening three and half months could then be written off as a false start, the Finance Minister could be sent back his budget and told to try harder next time, the Taxation Commission report could be sent back to its authors for re-drafting in a more cheerful spirit, and the bank could be told that we did not really mean to spend so much money in the first quarter. These adjustments made, 1955 could be launched a second time, a safer and under venture for the experience gained during the first marriage. Alas, none of these things will appear for time passes in a way that it is beyond the power of calendar-tinkers to repair. The inexorable passage of time has a fascination for us all, philosophers or not, but I once knew a man who after a life of crime turned to metaphysics and pondered the mystery of the flux of time. He began one of his metaphysical addresses in a popular lecture hall with the question, "What is time, my friends? Just think, what is it?" One of his unrepentant colleagues, who had come to inspect the ravages of mysticism on a good crook, asked out impatiently from the body of the hall, "Blimey, Bert, you ought to know what time is—you've done it."

We Calcutta assailants of socialist economics must tread warily this week, for we have one of the doughtiest defenders of the faith in our midst—Dr. Thomas Balogh, the well-known Oxford economist. What's more, he has been lecturing our students on the subject dearest to all leftist economists, from Vaga rightwards, to wit, the future of the American economy. Happily the United States is once more confounding its critics, for there are unmistakable signs of an upturn in progress. The Colin Clarks of the world have been proved wrong, though I am sure that nobody who seemed to fear the worst was Dr. Balogh himself whose article on the subject in the *New Statesman* and *Nation* some time ago was enough to make even the persistent optimist's flesh creep. If Dr. Balogh was not "at it again" in the speech he made last Tuesday in the Darbhanga Hall of the Calcutta University, it was only that he had shifted his ground from the near to the far distance. What the United States has just escaped, she is bound to run into in the long run if the problem of productive power outrunning actual demand is not solved, was the burden of his forecast. Although our Keynesian economics have been largely forgotten since the war, the performance of the United States economy during the last few years serves to remind us that Dr. Balogh and his ilk might be right after all, although as a socialist

A DITCHER'S DIARY

of the classical type Dr. Balogh might be right for the wrong reasons. The fact that last year's recession was due to the reduction in United States Government spending seems now to be established, and the reason it was not more severe was because the commitments of the previous Government made it impossible for that spending to be cut further. The new Congress is temperamentally suited to avoiding that mistake, and the lesson for the future, as Dr. Balogh pointed out, seems to be that the United States economy cannot prosper unless the Budget remains unbalanced, or a great deal of the country's production is exported, for the development of backward economies for example.

The Continental caricature of the Englishman—reserved, a martyr to colds, fonder of animals than of strangers, given to eating badly cooked food in draughty discomfort—I always took for a product of the Latin imagination reverently passed on from generation to generation who have never crossed the Channel. It is surprising, for that reason, to find it reproduced by a class of visitors who could never have been influenced by the myth, namely Negro students coming mainly from the remotenesses of Africa and the West Indies. What they think about the English is revealed, I should think for the first time, in a P.E.P. report published this month. Students from the Colonies. (Incidentally, these young people are entitled to express an opinion; the vast majority of them do not have scholarships but are supported by tribal groups, village societies, relatives, or their own efforts.) Their impressions of life in Britain are often unfavourable, and a fair reading of the P.E.P. report suggests that this is only partly their own fault. That some of their disappointment is their own fault comes out by comparison with the Asian students, who are more sophisticated and know better what to expect. The Africans often go to Britain with enormously high expectations and their subsequent experiences are rather sobering. For example a Nigerian medical student says: "I have been surprised to see white men doing manual labour. I had never really thought about this side of life here before and I suppose I half-consciously assumed that there were no labourers here. I realised that this was silly as soon as I thought about it". The source of such extravagant notions about life in Britain seems to be mainly older students who have gone back to Africa and who are reluctant to breathe a word of criticism for fear that this be taken as evidence that they personally were not brilliant successes in English life. An unfortunate feature of the reports made by Africans is that they immediately ascribe any display of "English reserve" to the colour bar; only the more thoughtful of them see that if their hosts suddenly began behaving in an effusive way with Africans, that would be racial discrimination. Some of the subjects discussed in the report are somewhat painful, but if you want to get a view of English society from a totally unfamiliar angle, the P.E.P. document is of rare interest.

Our list of visiting musicians has been rather thin so far this cold weather but recompense comes in the next two weeks. Raffi Petrossian, the French-Armenian pianist, will be giving two concerts in the New Empire next week, the first on Tuesday with the Calcutta Symphony Orchestra and the second a solo recital on Thursday, in each case at the very convenient hour of 6.15 in the evening. With the Orchestra he will be playing the Liszt Piano Concerto No. 1, which he first performed before the great public at the age of nine, with the Orchestre Symphonique de Paris.

He has been in Calcutta before of course, and in fact when I heard him last year I decided that he was the best pianist we have ever been favoured with. The following week, on Monday the 17th in the same theatre, there is to be a recital by the Negro bass, Kenneth Spencer, who apart from having a good voice stands six feet five inches and is altogether as fine a specimen of manhood as you could wish to see. Though he has not been here before, he has appeared in the movies. He sang the Paul Robeson part in *Showboat* for a year on Broadway but his voice is not particularly like Robeson's. One critic has compared him with Chaliapin, which seems a pretty safe thing to do because the number of people who now carry around with them any distinct recollection of Chaliapin's voice must be quite small. We do not get outstanding singers in Calcutta very often. (One very great singer who came here a few years ago did not ever get around to singing to the half-full of people that was waiting, for reasons that were never certainly established.) The more cause then to look forward to Kenneth Spencer's concert.

The deterioration in the working of Indian dock labour could scarcely be described in more vigorous language than Sir Ramaswami Mudaliar chose before the shareholders of the India Steamship Company last week, though the forcefulness of his words does no more than match the gravity of the situation. He said that the present go-slow movement "is nothing else than a direct attempt at sabotaging the efforts that the country is making towards economic progress", and added that "when one looks at the amount of unemployment that exists among the educated classes and even skilled workers, and compares it with the position, generally speaking, of dock labour, one will realise how totally unjustified and extremely unsocial the attitude of much of this labour is". Earlier in his speech he had said: "I must be frank and state that the crisis has been the result of reforms and regulations, in themselves probably good, which have been enforced by the Ministry of Labour without however being in a position to control or direct the labour situation in Indian ports". Sir Ramaswami is not one of your talk-first-think-later gentlemen, and when he finds it necessary to speak so plainly, and to lay the blame so squarely in one quarter, one hopes that his words will be carefully attended to in Delhi.

Commercial advertising is improving in Russia, says a correspondent in the *Financial Times*. Evidently the days are past when "Drink Beer Made by Glav-Beer" was considered an irresistible, high-powered, sales-boosting slogan. (The antique style of advertising seems to persist in Poland however, where a Warsaw daily breathlessly informs its readers: "One razor blade will do you the whole year if you buy a sharpener from the Metal Co-operative"). The Soviet beauty business has benefited from the gongoring up of sales promotion techniques and I take from the correspondent the styles and titles of a number of its preparations. Reflection upon this Russian appeal to feminine fancy will suggest, I think, how like us but how different the Russians really are. There are face cream hand creams called "White Nights", "Wild Strawberries", "Adolescent", "Moscow Lights" and "Red Poppy", while the choice in perfumes includes "Svetlana's Breath" (Svetlana is Stalin's daughter), "Spirit of Red Moscow", "Jubilee of the Red Army", "Kremlin" and "Friendship", the last named in 16 different wrappings symbolising the 16 Soviet Republics. On the whole not much worse than the "Mad Passion" variety offered on this side of the Curtain, but Soviet copy-writers have some way to go yet.

Company Meetings

INDIA STEAMSHIP COMPANY, LIMITED

EFFECT OF LABOUR'S ATTITUDE ON INDUSTRY

SIR A. RAMASWAMI MUDALIAR'S REVIEW OF EVENTS

Speaking at the Annual General Meeting of the shareholders of the India Steamship Co. Ltd., held on December 30, 1954, the Chairman, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon) said:

Gentlemen, The Audited Accounts and Directors' Report for the period ending March 31st, 1954, has been in your possession for some time. With your permission I shall take them as read.

Trading Experience

The Directors' Report shows that the freight earned during the year is Rs. 3,60,27,999-2-2, Rs. 33 lakhs less than the freight earned during the previous year. This drop in freight and its resultant effect on the profit and loss account of the Company has been attributed by the Directors to the 'go-slow' movement adopted by dock labour in various ports and the general attitude of dock labour in ports. The consequential delay in the turn round of the ships and the time taken by ships in port as a consequence of the intransigence of labour is reflected both in the earnings of your Company and in the expenditure which the Company has had to meet. To take one item, Port charges increased during the year by more than Rs. 8 lakhs.

In spite of the unforeseen loss due to these circumstances, the Company has made a gross profit of Rs. 27,80,081-8-2 before providing for Depreciation. It will easily be realized that the year under review has been a most anxious one and it is only by the careful management of all departments and of our Agents abroad that even this result has been possible.

Delay at Ports

I have frequently referred to the unnecessary and inordinate delays that are experienced at some of the ports both in India and abroad and have pointed out that the earning capacity of a shipping company is seriously crippled by such delays. The year under review has brought this problem to a critical stage. I must be frank and state that the crisis has been the result of reforms and regulations in themselves, probably good, which have been enforced by the Ministry of Labour, without, however, being in a position to control or direct the labour situation in Indian ports. The waterfront in almost every country presents special problems which do not arise in industrial units in the country. The de-casualisation scheme adopted two years back without adequate consultation with the interests concerned and in fact in spite of the serious apprehensions entertained by Indian ports, has led to results which have pointed out by them, has led to results which the Government did not contemplate and to situations which the Government so far has been unable to meet. It is unfortunate that sometimes proposals adopted in Great Britain in such matters are copied in India without any proper appreciation of the inherent difficulties involved in the application of such proposals. Even in Great Britain the results of such proposals, and with leaders of labour exercising greater authority over trade unions, dock labour has not proved as disciplined as the labour leaders would like them to be. In India with rival Trade Unions competing and with some leaders trying to get advantageous positions among the Unions it was a foregone conclusion that the reforms copied from England were bound to result in chaos, to the serious detriment of the economic position of the country itself and in particular of Shipping.

"Go-Slow Movement"

The most distressing aspect of the labour situation at some Indian ports is the 'go-slow' tactics adopted by various classes of dock labour in spite of the fact that attempts have been made by Government representatives to prescribe the normal work that may be turned out by a gang of workers and the promises held out by labour leaders that these reforms will be observed. The situation has deteriorated, indiscipline being rampant and authorities who can supervise or control such labour being incapable, owing to various reasons, to deal with the situation. Where one gang was in the recent past responsible for loading a certain quantity of cargo, more than two gangs, and not often even three gangs, are required to load the same amount of cargo.

Last year addressing you, I stated that your Company, along with others, desired to co-operate in providing all reasonable amenities and levels of wages to labour but wished to emphasize that the labourer must be worthy of his hire and that he should do that amount of work which may be reasonably expected of him. Unfortunately, conditions have steadily deteriorated. The Port Commissioners labour, the stevedores labour, the winchmen alternately adopt 'go-slow' tactics and ships are held up for weeks end in loading and unloading their cargo. This situation should not be allowed to last any longer and the public must clearly understand that the continuance of such a situation would mean to the economy of the country.

Economic Consequences

The Report of your Directors shows the economic consequences to your Company as a result of the labour situation, but there are wider consequences than those affecting your Company which result from labour's indiscipline and unreasonable attitude. The trade of the country will seriously be affected, and indeed has already been affected to some extent, by such an attitude on the part of labour. Shippers are unable to meet their contracts and deliver the goods to their importers in time. In an extremely competitive world, where countries with the same resources which India has got wish to establish that the economic consequences of delayed shipments and of shipments made at higher freight rates will be extremely serious to the normal trade of the country, it is a diversion of trade from one country to another. It will be an uphill task to recapture the original normal markets. Government and the public, therefore, have as serious a situation to face as the Shipping companies and I trust that the gravity of the

problem having been now realised effective steps will be taken to regulate the conduct of dock labour. The 'go-slow' movement is nothing else than a direct attempt at sabotaging the efforts that the country is making towards economic progress. The Prime Minister has aptly observed "Aram haram hai". If his attention is drawn to this situation at the major ports in this country he will be shocked at the extent to which this evil practice of idleness is prevalent. When one looks at the amount of unemployment that exists amongst the educated classes and even the skilled workers and compares it with the position generally speaking of dock labour, one will realise how totally unjustified and extremely antisocial the attitude of much of this labour is. It must be stated in fairness to some of the Trade Unions controlling part of the Dock Labour in these ports that both their leaders and the members of such Unions are willing to do their share of work properly but are often threatened with violence for such proper behaviour by the members of some other Unions.

Wages and Amenities

In all that has been stated before, speaking generally on behalf of Shipping companies, I should like to state that there is no suggestion that they are not willing to meet the legitimate and reasonable requirements of labour. Whether it is Port labour, Stevedore labour or any other kind of labour connected with the dock, the financial burden has ultimately to be borne by Shipping Companies and they are well aware of this fact, but they cannot afford to be put to enormous losses and by the result of factors beyond their control. It is time that the Government sets up a reasonable standard for all such labour and enforces such standard both in work and in wages and amenities on the employers and on the workers. If such a firm decision is taken by the Government the commendable progress which Indian Shipping has now made in spite of odds and difficulties, will be seriously jeopardised and further progress retarded.

The Second Five Year Plan envisages large industrial development in the country both in the public and in the private sector and consequently a much larger movement of freight between India and various countries of the West and Far East. Indian Shipping wants to play its part in this National effort to increase the economic strength of the country, to raise the standard of living of its people and to promote greater employment for all classes of the citizens of the country. It will put forward proposals for increasing the tonnage that is now owned by Indian Shipping companies and for their trade and better the existing routes which will be served by Indian Lines. All this contemplated progress can only be possible with the goodwill and active co-operation of all kinds of workers in the industrial and the Shipping world, while on the other hand employers must realise their obligations towards the legitimate requests of workers of all classes.

At a recent meeting of the Consultative Committee of Indian Ship-owners their views on the lines I have indicated above has been fully stated and the Shipping companies now look forward to the Ministry of Transport and the Ministry of Labour acting jointly not merely in the interest of Shipping companies but in the interest of the very economic progress of the country.

A Brighter Picture

Let me turn now from this gloomy and unethical situation that I have portrayed to a brighter picture which seems to emerge for your Company in the future. I mentioned last year that your Company was negotiating with the Government for a loan for the construction of vessels which may be added to your fleet. I am glad to inform you that a loan was granted by the Government for the construction of two ships of 10,000 d.w. approximately and the vessels were placed with a German Ship-building Yard—Messrs. Howaldtswerke for their construction. One of the ships will be delivered after the trial run by the end of this year and the next ship is expected to be delivered by the end of January 1955. These ships are of the most modern type equipped to carry cargo of all kinds from and to India and with a speed of over 17 knots an hour. In fact they are the fastest vessels that have been built for Indian Shipping and the fastest vessels that are in the freight trade between India and the U.K. It may be recalled that according to the agreement arrived at in 1950 with the INDIA/U.K./CONTINENT conference Lines your Company was allowed to trade with twelve ships on this route. Your Directors wish to attain this limit of twelve ships before the period of five years expires, i.e. by the end of 1955, and they are now considering the addition of two more vessels of the same type which have been recently built which in 1950. With these four fast going vessels of over 17 knots speed and with the six VICTORY ships whose speed is not less than 15 knots, the India Steamship Company will have a fleet of fast vessels shippers will have no reason to complain of delays. Their shipments to and from India will be transported as expeditiously as by any other Line. In fact more only reiterate that I trust that all this effort of your Company will be rendered infertile by labour troubles and by labour indiscipline.

Conference Membership

I have repeatedly referred to the fact that the membership of various Conferences from ports on the route between India and the U.K. and Continent. I mentioned the Colombo/U.K. Conference and the U.K./C/Continent Conference, the Colombo/Continent U.K./Aden Conference and the U.K./Port Sudan Conference and the Indian Shipping have not been admitted to membership. That such non-admission and consequential inability of Indian ships to carry freight to these ports

seriously affects their efficiency in earning capacity hardly leaves any room for doubt. Your Company has been pressing year after year that their applications should be favourably considered and accepted. I believe the time has now come for a decision to be taken by your Company. We propose, as we still intend to negotiate on a friendly basis, to apply once more for membership of these Conferences early in the New Year. I do not wish to put it forward either as a threat or a promise but if such membership is still denied, the India Steamship Company must, to preserve its own self respect, make its own decision on this vitally important matter. I only hope that the way of peaceful negotiation and satisfactory adjustments will be realised to be the best way by all the interests concerned.

Cross Trade

The geographical and historical association of India with neighbouring countries which enjoy today sovereign status must be clear to all and needs no elaboration. India, Burma, Ceylon and Pakistan have so many close connections, cultural, economic and historical that their interests not only coincide but occasionally merge into those of each other, and yet in the Shipping world attempts have been made recently to divide these interests and to create advantageous positions for certain of the Shipping interests by such division. An extreme form of such an advantage unnaturally maintained is where a Shipping Company which merely undertakes cross trade between ports in countries other than its own excludes an Indian Company from trading with countries so closely connected geographically and otherwise with India. To give a concrete example, India is a member of the Western Italy/India Conference but is not a member of the Western Italy/Pakistan, Colombo or Burma Conference while amazingly enough, Shipping companies, which are neither Italian nor of these countries, while denying Indian companies the right to this trade, are members of such Conferences. These and other glaring anomalies have to be removed and the sooner Indian Shipping decides to do so the better it will be for all concerned.

Indian Shipping and the Public

It has not yet been realised by a large section of the public that Indian Shipping of adequate strength and engaged in carrying freight to different parts of the world is an essential pre-requisite for the development of the trade and commerce of the country. Shipping plays a large part in channelling trade and commerce in right directions. It has been my experience that Shipping companies in many countries have been promoted and encouraged not purely for earning adequate returns but even more for the contribution they can make to the trade and commerce of the country. They form, therefore, a vital economic factor in the country's development. Instances of certain countries have been promoted and that of others has been almost extinguished in the manner in which Shipping companies have placed their trade. If the public were to realise this aspect they would be even more anxious to co-operate in encouraging, fostering and developing Indian Shipping.

I am thankful to many Indian shippers who have appreciated the importance of Indian Shipping and have regularly encouraged us. But I am bound to point out that there are some, at least who have failed to realise that they cannot be dependent completely on foreign shipping for their trade and business and that their indifference to getting their cargoes through Indian Shipping or their lack of interest will ultimately affect them adversely. I trust that the Federation of Indian Chambers of Commerce and the Industry and its affiliated commercial organisations will make it clear to their members that in their own interests a healthy development of Indian Shipping is essential.

Five Year Plan

The need for the progress of Indian Shipping has, I am glad to say, been adequately realised by the Government and proposals for the target which should be attained for Indian owned shipping tonnage during the next Five Year Plan have been invited to respond to this call and the only request that they have made to the Government is a continuance of loan arrangements on similar terms as exist at present. They have not asked for an operational subsidy nor any kind of discriminatory legislation such as has been proposed and is in operation in some other countries. Yet the cry has been raised against Indian Shipping that flag discrimination is resorted to. I have shown in what forms discrimination has been practised or at any rate 'restrictive business practices' have been adopted by the various Shipping concerns. In the political field a great deal has been heard of 'negotiating from strength'. There are serious differences about the wisdom of this policy. But I think it cannot be gainsaid that in the economic field 'negotiating from strength' seems to be the only armour which can adequately protect the interests of a country. I trust, therefore, that Government, the public and Shipping companies, with enlightened self interest policies, will create a situation where Indian Shipping companies can negotiate from strength and break down the discriminatory and 'restrictive business practices' which are so frequently adopted by vested interests in the Shipping world.

Tribute

Your Directors' Report has rightly paid tribute to the Minister of Transport and to the Secretary and other officers of the Ministry and to the Director General of Shipping and others connected with that office for the great interest that they have shown in the progress of Indian Shipping and the welfare of Indian Shipping. It is not due to any want of effort or willingness on their part that the critical situation regarding labour has arisen. Indeed but for the encouragement that this Ministry and its officers forward in the manner that it has done to serve the country and increase its usefulness and capacity.

I should also like to refer to shippers who have patronised us both here and overseas for whose co-operation we are extremely grateful.

Lastly I should like to reiterate that your Company has been well served by all its officers abroad and ashore of all ranks and on your behalf and on behalf of the Directors I wish to convey our thanks to the executive and supervisory staff and to all employees of the Company for their good and enthusiastic work throughout the year.

I shall be glad to answer any questions that the shareholders may wish to ask regarding the accounts.

THE ASSAM RAILWAYS AND TRADING COMPANY LIMITED

RESULTS WELL MAINTAINED

The seventy-fourth ordinary general meeting of The Assam Railways and Trading Company, Ltd., was held on December 17 at Winchester House, Old Broad Street, London, E.C., Col. C. F. Birney, D.S.O. (the chairman) presiding.

The Chairman said:

The Revenue Account shows a trading balance of £213,557 compared with £207,529, the proportion attributable to the collieries having fallen while the timber profits were greater.

Colliery production in 1954-55 was 340,433 tons compared with 343,935 tons, the drop being chiefly due to the failure of the main haulage at Baragolai Colliery, which put this mine out of action for 8 days; there was also a three days' strike due to alterations in the supply of flour, against which the Company had protested to the Government beforehand. At the same time, production costs rose by nearly Re. 1, a ton, the higher costs being in part due to coal being got in a more difficult area.

At your Margherita plywood factory, the sales of tea chest panels were well maintained, and the profits on the timber side as a whole increased by some £27,000.

In the General Revenue Account you will have noticed that the income from our subsidiary and trade investments has risen by some £4,700.

As regards taxation, the item "excess profits levy" disappears altogether from the General Revenue Account. Stockholders will also be glad to hear that good progress has been made in agreeing the correct assessments in respect of earlier years and in paying up the amounts due in respect of those years. Four years ago, the amount of tax provided for at 31st March, 1950, as shown in the balance sheet at that date, was some £227,000; whereas the correct amount, as shown in the balance sheet now before you, showing the amount of tax provided for at 31st March, 1954, was only £32,000. During the course of settling these old assessments, it has been found that £20,000 may now be released from our provision for outstanding taxation, and this has been brought back into the General Revenue Account this year.

In the balance sheet I may also draw your attention to the welcome drop in the amount locked up in stocks and stores. This was referred to in my speech a year ago, and it is satisfactory to note the reduction which has been achieved. Part of the improvement, however, is due to the fact that we were overstocked with tea chest panels and fittings at the close of 1952/53 following temporary setback in our sales towards the end of that year.

On the left hand side of the balance sheet, a further addition of £25,000 has been made to General Reserve and £30,000 to Reserve for Development and Replacement of Fixed Assets. So much for the year 1953-54.

The Current Year

Turning to the current year, which began on 1st April, 1954, I cannot feel very optimistic about the trading results on both the colliery and timber sides of the business.

In the collieries, production is running at a lower figure than last year and it is doubtful if the figure of 340,000 tons will be reached. This is due to a variety of causes—an abnormally high rainfall, a notable rise in sickness and absenteeism, and the working of more remote districts at Baragolai, with longer haulage. The development of Namdang Dip Mine is still the most troublesome problem, but it does appear that we are literally and figuratively turning the corner at the bottom of the dip and that conditions will improve and this mine be able to produce a reasonable output.

Price Control

We are still awaiting Government's decision about the controlled price of coal. The hard fact remains that under the limitation of Government control the amount we are allowed to earn is quite insufficient to provide an adequate return on the amount of capital employed after setting aside sufficient funds to replace Capital assets at current prices. And all the time labour expenses tend to rise and the cost of materials on the whole does not come down.

We are also involved in the extensive enquiry into wages and costs throughout the industry by the All India Industrial Tribunal (Colliery Disputes) appointed by the Government of India in February 1954. This Tribunal is now considering the lengthy reports and statistics submitted by the Indian Mining Association and by the various other parties concerned.

I am glad to say that negotiations which have been going on for some years in regard to the renewal of coal leases and changes in the royalty to be levied on coal have been further advanced. Though it is satisfactory to have reached agreement, your Company will now pay royalty on coal from certain areas which previously were royalty-free; we shall also have to pay an increased royalty on coal from the Lekhapani area, the draft lease of which is still awaited.

Timber

As regards the timber side of your business, it was unfortunate that just when the plywood factory had been equipped for greater production, there was a setback in orders at the end of 1952-53, due to the crisis in the tea industry at that time. This resulted in an increase in our stocks of tea chest panels and fittings and we were obliged to curtail production for some time. The effects of this, however, have passed.

What may be more serious are the consequences flowing from the Government's regulations for the inspection of the output of the entire plywood industry—inspection which the Government has introduced owing to the quantities of inferior panels that appeared on the market following the increase in the number of plywood mills set up in India in recent years. Whilst your Board fully endorse the Government's view as to the need for a satisfactory standard of tea-chest panels, and their desire that panels made in India should be the best possible, I may also say that so far as your factory at Margherita is concerned—our chests having enjoyed for over a quarter of a century a high reputation on the tea gardens in Assam and in the tea markets throughout

the world—we regard the Government inspection of our output as a work of supererogation.

The possible rejection of plywood for characteristics some of which do not in fact prejudice the strength or utility of the tea chests, may result in the use of more log timber to produce a given number of panels. This would increase the cost of production and also mean a more wasteful utilisation of the forest resources of Assam. It is unfortunate that at the same time the selling price of chests has had to be reduced to meet competition.

The problems which these difficulties pose are being closely studied and production methods adjusted accordingly. No doubt in the course of time reasonable solutions will be found.

This picture is not a very optimistic one. But although it is thought that our trading profits in 1954-55 may be somewhat lower than in 1953-54, there is also reason to expect that the company's income from its investments may benefit from the present boom in tea prices. On balance therefore, in the absence of unforeseen circumstances, it may be hoped that the final result for the current year may not be substantially different from those for 1953-54.

The Directors' Report contains a brief reference to the death of Mr. E. A. Joseph in February last. I should like to pay a tribute to the memory of an old friend and colleague.

The report and accounts were adopted and the dividend, as recommended, was approved.

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY, LIMITED

Speaking at the 47th Annual General Meeting of the Hindusthan Co-operative Insurance Society, Ltd., held in Calcutta on 29th December, 1954, the Chairman, Kumar Kartick Churn Mullick, said:—

The 47th Ordinary Annual General Meeting which was convened for Friday, the 9th July could not be held and was not held under circumstances which have already been explained to you in the Notice for this meeting sent to you along with the Balance Sheet and Accounts.

In considering the Society's operations in 1953, it would be of interest to take a brief survey of the general economic and business conditions of our country during the year as these exercise a very important influence on the business of insurance. The year started with a rather depressing outlook, being dominated by the fear of a recession, but as the year advanced, there were many signs of a steady improvement in business, as compared with preceding years, although the country could not yet claim to be out of the woods.

New Business

Despite such impediments to the promotion and expansion of insurance business, I am very glad to be able to say that during 1953 the Society has won fresh laurels by writing a completed new business of Rs. 18.90 crores in the year under review, which marked a record increase of over Rs. 2.50 crores over the corresponding figures of the previous year. Quite in keeping with our excellent traditions of the past the Society was able once again to take a big stride in its path of progress. An increase of Rs. 2.50 crores which, incidentally, was the highest for any Indian insurer in 1953, was no mean achievement and we can very well feel proud of it. Your Directors felt that the stake must be overcome and laid down that the last Annual General Meeting a policy of progressive business drive. The success of our policy was ensured by the bold planning and intensive drive initiated by the management as a result of which all our different offices worked with full enthusiasm and gave of their best in making a success of our programme.

Total Income

The total premium income during the year under review, in respect of life assurance business amounted to Rs. 4,34,30,720 which shows an increase of Rs. 40,26,212 over the 1952 figure as against a net increase of Rs. 21,96,233 in 1952 over the corresponding figures of 1951. These figures will indicate that while our new business increased by Rs. 2.50 crores, our premium income also showed an appreciable improvement and, in fact, the net increase in 1953 was about double the net increase effected in 1952. Income from Interest, Dividend and Rents, including profits on landed properties and refund of income tax in respect of Life Assurance business amounted to Rs. 76,51,637. The rate of interest earning worked out at 3.69 per cent. after deduction of income tax at source as against 3.37 per cent. of the year previous.

Life Fund and Investments

The Life Assurance Fund, at the end of the year, amounted to Rs. 22,46,44,830, recording an increase of Rs. 2,73,93,959 over 1952. The major heads of investments of the fund were:—(i) Government and Approved Securities—Rs. 13,71,98,173, (ii) Debentures, Stocks and Shares—Rs. 2,01,08,173, (iii) Loans to Policyholders—Rs. 1,72,45,339, (iv) Mortgages—Rs. 2,56,63,336, (v) Land & Houses—Rs. 2,63,09,477. Government and Approved Securities represent 64.26 per cent. of the adjusted liabilities.

Claims

During the year under review, claims by maturity, inclusive of bonus, amounted to Rs. 71,33,328 and death, inclusive of bonus, to Rs. 31,80,843, as against Rs. 57,01,138 and Rs. 30,71,708 respectively in 1952. The percentage of death claim to the total premium income worked out at 7.34 per cent. as against 7.80 per cent. of 1952.

Expenses

In view of the difficult conditions under which all insurers have been working even today, the ratio of the expense to the promotion and expansion of their business. Fortunately, however, so far as Hindusthan is concerned, we have been able to keep our expenses within the limits by planning ahead carefully and having due regard to the expense side. The renewal of the year under review worked out at 14.58 per cent. as against 14.71 per cent. of 1952 and 14.89 per cent. of 1951. The over-all expenses for the year have been 27.54 per cent. as against 27.60 per cent. of 1952 and 27.90 per cent. of 1951. The Board of the Society has observed that the expenditure of the Society has been showing a downward trend from year to year and this, we will agree bears ample testimony to the sound planning and efficient management of the Society's operations.

Reduction of Premium Rates

As you may be aware, the Society has taken a momentous decision a few months back, by reducing the rates of premium under all plans of assurance. I hope that the reduction in rates which has been effected in the larger interests of the insuring public will make our people more and more insurance-minded, and while conferring the benefits of insurance on a larger section of our countrymen, the insurers will also be in a position to offset the expenses incurred by them by a commensurate return in the shape of a progressive business and income.

Valuation Results & Shareholders' Position

As you are aware, 1953 was a Valuation year for the Society and the valuation work has also been completed. Out of the handsome surplus obtained even on a very stringent assessment of the assets and liabilities of the Society (the rate of interest assumed being 2½%), it has been possible for your Directors, to declare on the recommendation of the Society's Consulting Actuary, Mr. W. H. Clough, F.I.A., bonus at the rate of Rs. 15 per thousand of Sum Assured, on all participating Endowment Policies and Rs. 17½ per thousand on all participating Whole Life Policies, which, incidentally, are the highest among all rival Indian Insurers. The Valuation results, which were very satisfactory from all points of view, thus bear ample testimony to the intrinsic strength and soundness of the company.

The position of our shareholders continues to be satisfactory and this year, a dividend at an increased rate of 12½ per cent. free of income-tax is being recommended for payment to the holders of all shares of the Society on 31-12-53 in proportion to the capital paid.

THE CAUVERY SUGARS AND CHEMICALS LTD.

Speech delivered by Sir T. S. Venkatraman, Kt., C.I.E., D.Sc., Chairman, at the Third Annual General Meeting, held on 30th December, 1954 at 3.30 P.M.

The Cauvery Sugars and Chemicals Ltd. is today yet in the formative stage as it is hardly one year since its re-birth at Pettavaithalai in the Trichopoly district from Nakkal its first home in the Salem District. Your Directors may be said to be very busy in digging work around the foundations with the object of ensuring their being truly and properly laid.

When immediately after the grant of protection to the Indian Sugar Industry (1931-32) sugar factories came into being chiefly in sub-tropical India the link between the growers and the factories could not be suitably established. There was no time for it and, to some extent, there was also no need in those days of large and easily available areas of the sugarcane crop in those regions. The sub-tropical sugar industry is already feeling the disadvantages of the absence of a close link between the growers and the sugar factory dependent on its region of supply. The problem today associated with the sugar industry in the sub-tropical parts of India are the result of the non-existence of such a link. The sugar factory is a highly organised unit and hence easily vulnerable in certain respects—one such being the quantity and quality of sugarcane material available to the factory for its processing. Your Directors are now exerting to create the needed link and over 1800 acres have already been secured for the new venture at Pettavaithalai for the Company.

One very important feature in the organisation of sugarcane supply to the factory is the arrangement by which a Company assumes the title of "Kulitai" or "Kulitai" Ltd. has made itself responsible to the Cauvery Sugar & Chemicals Ltd. for an annual supply of not less than 60,000 tons of cane per season. As the cultivation time of planting and time of harvest are to be under the expert supervision of "Cauvery Sugars" and adequate supply of the right quality must be considered to be fully assured, this supply Company is to work under the Chairmanship of Mr. N. R. Sundararaja Iyer, the leading landlord in the tract.

Good Growing Conditions

A second heartening feature of our venture is the excellence of the land and the quantity and quality of water available for growing the cane crop in the new area. Though sugarcane does not need the large quantities of water that are required by paddy, for instance, yet the crop is susceptible to any serious defects in the irrigation waters and shows the effects of such deficiency in its growth and the subsequent recoveries in the factory. The area wherein the new factory is to be located is practically free from such major defects.

The present position of the Indian Sugar Industry—needing the import of large supplies of white sugar from outside to meet our home consumption requirements—imposes certain direct duties and responsibilities both on the Central and State Governments. In view of the greatly higher sugarcane yields in the tropical parts of the country, it is incumbent on the Central Government to provide for future developments in the tropical parts of India. It is only thus that sugar in sufficient quantity and at cheap prices could be produced to meet all our needs. The Government of our own State in Madras would also need to take particularly paternal and nurturing attitude towards sugar development in the State so as to enable the Province to take its rightful place in the white sugar map of India. Whereas the States of U.P. and Bihar have been offering special facilities to their sugar industry for developing and maintaining their present position in the sugar map of India, our State Government have not been sufficiently considerate to this industry in the past. We all know that the subsidised supply of Ammonium Sulphate to the sugarcane grower on the plea that the sugarcane is not a food-crop. I would ask why do sugarcane—if it is not food-crop. You cannot eat an article and yet call it "NON-FOOD". Sugar on the other hand, had been recognised as an important article of diet for energising oneself and we in Madras want such "Industrial Energising". If the Madras State is to be self-contained in white sugar the industry needs a more sympathetic and paternal attitude from the State Government. The present and projected sugar development in the Madras State aimed at producing all the white sugar needs of the State within its own confines and sufficiently cheaply also to avoid the temptation of importing this article from outside the State. But the real coping stone of all sugar ventures in the tropical parts of India is the cane when our country as a whole is becoming free from any need to import white sugar from outside.

THE FAILURE OF MONEY IN A MODERN WORLD NEW METHODS FOR ASSISTING TRADE AND PRODUCTION

By R. M. Mitra

THE British Press has for some time past been seriously discussing the problems of money and trade as they affect the needs of an expanding economy. The Economic Secretary to the British Treasury, Mr. Maudling, has brought these discussions into a new focus. He is reported to have said recently that "a policy of full employment and economic expansion" encounters "a constant danger of inflation". The Economic Secretary's thesis opens up a whole vista of economic thought relating to money, trade and employment, extending over the last twenty years. A young British economist, A. C. E. Day, in a recent book, *The Future of Money*, makes the point "the future of the economy depends much more on provincial workshops than on metropolitan counting houses". The main theme of the book is that the future of British prosperity is no longer bound up with the re-establishment of Britain as an international banker, or of sterling as a world currency. It is pointed out that the position of sterling as international money rested on the political and economic stability of the nineteenth century, which has ceased to exist. The importance of Mr. Day's book, however, seems to lie more in the indirect contribution it makes to the current pool of economic thought, than in its case about the future of sterling or of the sterling area. The book provokes thought on the future of the monetary system itself. The real nature and proper function of money have often been shrouded in veils of sentiment and prestige. A stage in the development of industry and commerce was reached in the past when exchange of wealth by barter became a wasteful process and when it became necessary to use some particularly convenient commodity as a standard measure of value.

Industrial Economy Needs

The paradox of industrial progress is the creation of a material abundance which involves too heavy a strain on the traditional monetary system. The capacity of money to flow in the channels of distribution and consumption in harmony with production has been disturbed and weakened. Special measures are being evolved in various countries to ensure the movement of goods in anticipation of the movement of money. The mechanism of consumer loans has been developed into a scientifically perfected tool of commerce in the U.S.A. The system of hire-purchase is also growing into an increasingly important method of sales in the U.K. It is reported that goods worth about 25,000 million are sold annually in the U.S.A. under

the "consumer instalment credit" system. This total represents about 10 percent of "disposable personal income". The magnitude of arrangements made for disposal of production through means other than available money may perhaps more fully be realised if it is also noted that these are additional provisions for long-term payment for family houses, commercial buildings, farm properties, and producers' goods and equipment. The amounts outstanding on account of consumer credit and real estate credit only aggregated \$134,000 million, which is about 120 percent of demand deposits with banks and about 500 percent of money in circulation outside banks, in the U.S.A. Again, credit insurance plans are being organised to eliminate risks of disturbances arising from the failure of expected repayments according to schedule.

A comparable, though somewhat different, development has been taking place in the field of international commerce since the first world war. The same weight of abundance of production in relation to available money has intensified competition among exporting countries. Expedients are being devised to lengthen periods of payment for the benefit of importers. These devices are an international counterpart of the internal consumer credit systems, and are equally exposed to the dangerous contingency of money not being forthcoming to meet credit at scheduled intervals. The international system also invites several additional risks. Fluctuations of exchange rates, changes in the national policy of the importing country on the remittances to foreign countries and severance of diplomatic relations between the exporting and importing countries are some of these additional risks. But the super-monetary expansion of international commerce has refused to be deterred by the threat of dangers. Export credit insurance schemes have taken the field. The Export Credits Guarantee Department of the Board of Trade in the U.K. is now not only a familiar but also a fairly active agency. The export business guaranteed by the E.C.G.D. has increased from 7.5 percent of the total export trade of the U.K. in 1945-1946 to 14.6 percent in 1951-52. Governmental or quasi-governmental institutions with similar objectives are also operating in such countries as France, Belgium, Germany and Holland.

Rationalising Income

The problem of the monetary convertibility of goods still obscures the future course of industrial advancement. The methods adopted in bypassing the immediate use of money for securing disposal of goods and ensuring a continuous process of production, remain highly vulnerable. It is yet to be learned whether anticipation of money, or the rationalisation of consumers' income corresponding to rising and diversified production, is the more effective method. Social security measures in the form of unemployment insurance, old-age pension schemes, compulsory medical benefits, etc. are

growing in favour as a means of rationalising income. Full employment is also being planned as a *coup de grace* in the fight for rationalisation of income. The events are still too obscure to allow a clear view to be taken of the ultimate fate of the battle with money as a necessary disposal point in the national market for mounting production.

As regards international markets, the problem of convertibility, as already indicated, is further complicated by the incidence of exchange disturbances and uncertainties of political and diplomatic relations between different countries. The International Monetary Conference of 1933 represents the first serious effort to deal with the problem on an international level. The conference failed apparently because the U.S.A. was then experimenting with economic nationalism. But even if the U.S.A. had participated without reservation, it was hardly likely that the conference would have succeeded. Stabilisation of currency on the basis of the international gold standard, with which the conference was mainly concerned, is a decrepit method, pitifully unfit to face the vigorous challenge of the new technological era.

International Concern

The next stage in the direction of international effort was the Tripartite Accord signed in 1936 by the Governments of Britain, France and the U.S.A. The signatories to the agreement undertook to "use appropriate available resources so as to avoid as far as possible any disturbance of the basis of international exchange". The agreement did not, however, go much beyond the scope of the abortive conference of 1933. The instruments of operation of the Accord were stabilisation funds, maintained separately by the acceding countries. Though foreign currencies were being purchased by these funds, it was the policy not to retain foreign currencies but to exchange them for gold as soon as practicable. The agreement could not, therefore, provide an enduring solution, however useful it might have been in dealing with short-term fluctuations in exchange rates. The outbreak of the second world war threw international relations into the melting pot. It was not until after the war ended that further constructive efforts could be made towards a solution of the problem of international exchange. Even before the war was finally ended, however, a conference was held at Bretton Woods in 1944 to formulate schemes for dealing with problems of international money and credit. This conference led to the establishment of the International Monetary Fund in 1946.

The I.M.F. comprises more than 50 nations. Its purposes are to establish par values of national monetary units in international exchange, to bring about international monetary co-operation, and to advise members in matters of international exchange besides offering necessary technical assistance. The operative part of its programme is an improvement on the Tripartite Accord of 1936, in that it has made reasonable arrangements for holding foreign currency through the use of the method of loans. But experience has so far shown that these short-term loans are not sufficient to deal with the yawning hiatus between the exporting and importing capacities of the different countries. Attempts to deal with the problem on the basis of restricted areas of operation, therefore, instead of being abandoned, are simultaneously being renewed and improved. The sterling area and the European Payments Union are two notable regional arrangements of this kind. But these arrangements seem also to show frequent signs of cracking under the burden of unliquidated payments. The accumulation of foreign currency to the credit of a member country, beyond its capacity to hold such a currency, constitutes a problem which defies solution. Meanwhile, the policy-making conferences of the sterling area have been declaring full convertibility of sterling as the objective of its policy, which in the words of Mr. Maudling, awaits "a balance of trade" based on factors that are not transient.

Revolution of Money

Although the difficulty of finding a dependable and smoothly-operating market, which will grow apace with expanding production, continues to baffle efforts, it is heartening that attempts have not been abandoned. It is true there are occasional moods of depression and pessimism, but the counsel of despair is not yet the dominant note. Yet the problem frequently fails to be placed in perspective. It is to be noted that the repulsion of consumers does not create the difficulty of the market. The heroic performances of the machines of production are in the danger of being frustrated, not because there is immediate or foreseeable future lack of consumers, but because consumers fail to find money acceptable to producers. Keynes contemplated a future when full employment would provide an intra-national market for production, and motive or a "desperate expedient" of "forcing sales on foreign markets", though it may still function to bring about a willing "exchange of goods and services in conditions of mutual advantage".

But the question remains how these desirable "conditions of mutual advantage" are to be fulfilled, or how Mr. Maudling's permanent factors for "balance of trade" are to be ensured. Meanwhile, as the expression of the present technological era, therefore, Keynes's recipe of full-employment is to be seriously tried, and Maudling's warning of inflation is to be heeded, it may be necessary to enlarge the scope of Mr. Day's investigations and not to rest with making the economy simply less fantastic, but may prove an exhilarating adventure to exploring the possibility of revising and even revolutionising the present relation between "workshops" and "counting houses".

Stocks and Shares

NEW YEAR BEGINS ON FIRM NOTE

Wednesday Evening.

THE share market began the New Year on a steady note with a fair volume of business passing. Prices have been maintained or improved upon since the end of 1954 and there is fair enquiry for investment scrip. Tea is of course still the leader of the market but here it is not always easy to discern a trend because cornering operations are in progress in a variety of shares. Jute shares have been steadier since the encouraging Bird group dividends were announced; cornering is in abeyance in this section of the market. Selected miscellaneous shares have been supported, and in the last few days the accent has been on tobacco shares. Engineering shares are fully steady, with sharp rises toward the close in Indian Irons and Jessops. Government securities are very steady but the amount of business passing is limited by shortage of scrip. Details of recent trading follow.

Government securities were steady and enquiries for most loans were maintained. Three percent Conversion Loan increased from Rs. 80.14 to Rs. 81. Three percent Non-terminable Loan fell to Rs. 80.2 after the payment of half-yearly interest. In the short-dated group, 3% 1957 was strong and rose by four annas to Rs. 99.4 with buyers over, and 3% 1958 also gained three annas at Rs. 99. Among medium-dated stock, 3% 1959-61 were four annas higher at Rs. 97; 3% National Plan Loan 1961 was in demand at Rs. 99.2, while 3% National Plan Loan 1964 was shaded at Rs. 99.7. Three percent 1963-65 and 1964 improved to Rs. 93.10; 2½% 1969 had buyers at Rs. 91.9 and 2½% 1960 was in request at Rs. 94.8. Long-dated loans were about unchanged; 3% 1966-68 were absorbed at Rs. 90.7 and 3% 1970-75 at Rs. 86.14.

Provincial Loans were a firm market with few declared sellers in evidence. Four percent West Bengal rose to Rs. 100.7 and 4% U.P. were better at Rs. 100.3; 4% Mysore 1963 rose to Rs. 99.12 with few declared sellers; 4% M.P. 1963 were better at Rs. 100. In spite of the generally good enquiry in short-dated Provincial Loans, no business was possible because of the scarcity of sellers.

Miscellaneous preference shares continued in short supply, though jute preferences were fairly readily available. Among the latter, Albion changed hands at Rs. 111, as did Auckland 5½ percent at Rs. 95. Barnagore was taken at Rs. 48 and Clive 6½ at Rs. 86. Naihati Second Preference came to hand at Rs. 69 and New Central at Rs. 111. In the miscellaneous section Burrakur Second improved to Rs. 8.4, while Calcutta Electric changed hands at Rs. 12.5. Dalmia fully paid were absorbed at Rs. 93 and small lots of Indian Iron and Steel were transacted at Rs. 109. Business was done in Jardine at Rs. 80.4, Karanpura Collieries at Rs. 67, National Tobacco Second at Rs. 64, New Victoria at Rs. 3.2 and Shaw Wallace at Rs. 85.8.

In the engineering section Indian Iron and Steel improved by more than Re. 1 to Rs. 33.2. Jessop were a strong feature and gained more than Rs. 1.8 at Rs. 34. Textile Machinery were transacted at Rs. 14.8 and Marshall at Rs. 7.7.

Jute shares were steady on satisfactory dividend announcements by the Bird and Heiglers group of jute mills. Auckland improved by Rs. 5 to Rs. 148. National were about eight annas better at Rs. 33 and Howrah rose to Rs. 31. There was little interest in the coal section and fluctuations were narrow. Burrakur were idle at Rs. 11.5 and Central India at Rs. 6.12.

Miscellaneous issues were selectively supported. Imperial Tobacco improved to Rs. 11.14, National Tobacco to Rs. 10.14 and India Steamship to Rs. 7.14. Carew were an outstanding feature among sugars and jumped to Rs. 10.7 from Rs. 8.9. In the paper section Titagurh rose by more than Rs. 1.8 to close at Rs. 41.10. Among electrics Calcutta changed hands around Rs. 15.4.

Tea shares continued firm and some smart rises were recorded. Dibrugah improved from Rs. 28.12 to Rs. 33.12 as did Sungma to Rs. 12.8. Sapoi were higher at Rs. 34 and Telojian at Rs. 37.12. Tezpor were in demand at Rs. 34.4 and Tyroon at Rs. 48.6. Birpara came to hand at Rs. 292 and Basmatia at Rs. 48.12. Baghmari hardened to Rs. 25.10 and Bhatkawa to Rs. 46.8.

The working of the ASSOCIATED CEMENT COMPANIES, LTD. for the year ended July, 1954, has produced satisfactory results. There is a profit of Rs. 2.09 crores. Bringing in Rs. 3,69,730 there is a balance of Rs. 2,12,73,715. Reserve for plant reinstatement is allocated Rs. 50 lakhs and reserve for gratuities Rs. 10 lakhs. The dividend has been declared at Rs. 8.8 per share, leaving a carry-forward of Rs. 6,93,281.

Both production and off-take were higher than last year. The company's policy of rehabilitation and modernisation has contributed in a large measure to the maintenance of production and efficiency of its older units. Coupled with this, the continued pursuit of the policy of effecting economies has produced results which may be considered satisfactory. In this connection, it may be noted that, following the recommendation of the Tariff Commission, Government has directed that, out of the price of Rs. 71 per ton for neat cement fixed by Government, an amount equal to Rs. 2 per ton of cement sold should be set aside for the purpose

of rehabilitation and expansion. As a matter of fact, the company has spent much more than Rs. 2 per ton on rehabilitation and expansion. This necessarily means that the company has ploughed back into the business a fair portion of its profits.

The modernisation and extension of the Shahabad cement works has made satisfactory progress and the work is scheduled for completion by the third quarter of 1955. The construction of the new cement works at Sindri has made good progress. The first unit of an annual capacity of 100,000 tons is expected to go into commission by the third quarter of 1955 and the second unit of similar capacity some months later. Work on the extension of the Kistna cement works and the quadruplication of the Bhupendra cement works of The Patiala Cement Company, Limited, as well as on the new firebrick factory at Katni is being carried out according to schedule. The installation of a flotation plant at the Khaliari works has been completed and the plant is now in commission. A similar flotation plant is being installed at the Sevalia works for enriching raw materials and this plant is expected to be put into commission in the latter half of 1955. The scheme of rehabilitating and modernising the company's older factories has also made satisfactory progress.

The directors report that the negotiations which were being carried on with the Pakistan Industrial Development Corporation for the formation of a new company in Pakistan have not proved successful. Nevertheless, they report that the company's factories in Pakistan have produced very satisfactory results.

In his speech before the 74th annual general meeting of the ASSAM RAILWAYS AND TRADING COMPANY LTD., reported elsewhere in this issue of Capital, the Chairman, Mr. C. F. Birney, was able to announce an increase in the trading balance from £207,529 to £213,557. A loss on the colliery side of the business has been offset by an increase in the timber profits. Colliery production declined during the year 1953-54 chiefly due to a technical failure in the working of the mine and a three-day strike by the workers. Production costs also rose, largely due to the working of more difficult seams. An improvement of £27,000 in the profits from the timber side of the business was recorded and an increase by £4,700 in the income from subsidiary and trade investments has appeared on the General Revenue Account. The improved profits from tea chests and pantries and fitments is due to an increase in demand and the liquidation of surplus stocks which had begun to accumulate towards the end of the year 1952-53. Mr. Birney was unable to extend much hope of improvement in the collieries during the current year. High rainfall, increased sickness and absenteeism and longer hauls were all contributing to the limitation of output. Improvement was, however, expected in the development of Namdang Dip Mine. The Chairman referred to the position as being not very optimistic, but although trading profits were expected to be somewhat lower in the current year, there was reason to hope that the company's income from investments from the present boom in tea prices, would benefit from the current year were therefore not expected to be significantly different from those of 1953-54.

Speaking at the 47th annual general meeting of the HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LIMITED, reported in full elsewhere in this issue of Capital, the chairman, Kumar Kartick Chutrn Mullick, was able to report that despite the lack of boom conditions in the economy during the past year, the Society has written completely new business to the value of Rs. 18.9 crores. This was a record increase of over Rs. 2.5 crores above the corresponding figure for the previous year. It was the highest performance of any Indian insurer in 1953 and was largely due to the policy of progressive business drive decided by the directors at the last annual general meeting. The total premium income amounted to Rs. 4,34,30,720 during the year under review, which shows an increase of Rs. 40,26,216 over that of the previous year. This is nearly double the increase of 1952 over 1951. The life assurance fund showed an increase of Rs. 2,73,93,956 over 1952. The chairman hoped that the decision to reduce rates of premium, which had been made during the past year, would make people more insurance-minded and would help to confer the benefits of insurance on the larger section of the population. Due to the handsome surplus obtained on a stringent assessment of assets and liabilities the directors had been able to declare a bonus of Rs. 15 per thousand of sum assured on all participating endowment policies and Rs. 17½ per thousand on all participating whole life policies. A dividend at an increased rate of 12½ percent, free of income-tax, has been recommended for payment to shareholders.

Speaking at the third annual general meeting of the CAUVERY SUGARS AND CHEMICALS LTD., the chairman, Sir T. S. Venkatraman, reported that work was going ahead in the company's efforts to establish itself firmly after one year of existence in its present state. The directors are at present attempting to create the necessary link between the growers and the sugar factory. A company called the Kulitala Cane Farms Ltd. has made itself responsible to the Cauvery Sugars and

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 100) has now been brought up to November, 1954. Compared with October the November Indices for Government Securities and Preference Shares show rises of 1.7 points and 0.2 points, respectively.

There were decreases in Bank (6.0 points), Cotton (9.9 points), Coal (13.7 points), Mining and Oil (22.5 points), Cement (11.7 points), Engineering (12.4 points), Tea (6.4 points), Paper (96.1 points), Sugar (3.7 points), and Miscellaneous

(24.7 points), while Jute Shares increased (12.3 points). Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 14.6 points during November, 1954.

	Index of Govt. Securities	Index of Preference Shares	Variable-Yield Securities											Combined Index

New Delhi

U.K. STEEL PLANT PROPOSAL

TECHNICAL MISSION EXPECTED TO ARRIVE NEXT MONTH

(FROM OUR NEW DELHI CORRESPONDENT.)

THE U.K. Secretary to the Board of Trade, Mr. Low, speaking at a Press conference here yesterday, disclosed that India would accept Britain's offer of facilities for the setting up of a one-million-ton steel plant.

As a great deal of preliminary work is needed to set up a steel plant it was suggested that, in case the Government of India is interested, a small technical mission under the Colombo Plan Technical Assistance Organisation could be sent out to India this winter to examine fully on the spot the scope for and potentialities of a steel plant, including a blueprint for the capacity best suited to the country's needs. Such a mission would investigate and report on matters relating to site, railway, water, road, housing and other facilities, the availability of material, equipment and trained personnel, thereby indicating to what extent foreign exchange could be saved. The Mission is expected to arrive next month.

The British offer to Birla Brothers was in the nature of a hire-purchase arrangement, under which India was to pay a certain proportion, say 25 percent, cash down, and the balance in equal yearly instalments. A similar offer by U.S. steel interests, it is believed, was made to Birla Brothers.

Mr. Dent, representative of the Metallurgical Equipment Export Company Ltd. of Great Britain, had been in New Delhi, sounding opinion and creating interest in the British offer. M.E.E.C.O. is a British combine of the Davy and United Engineering Company Ltd., Electric Furnace Company Ltd., Head, Wrightson and Company Ltd., Joseph Parks and Son Ltd., Simon-Carves Ltd., and the Wellman Smith Owen Engineering Corporation Ltd. The principal object of M.E.E.C.O. is to co-ordinate the export activities of the combine and thereby assist its foreign clients to buy complete metallurgical installations in Britain from leading manufacturers.

The Davy and United Engineering Company Ltd. is the largest manufacturer of rolling mills and forging presses in Great Britain, specialising also in hydraulic presses, hydraulic supply systems, steam hammers, auxiliary rolling mill equipment, steel and non-ferrous works plant.

The Electric Furnace Company Ltd. designs and builds all types of electric furnaces required for the metallurgical industry.

Head, Wrightson and Company Ltd. and its subsidiary companies manufacture a complete range of iron and steel works plant in some of the most modern machine fabricating shops in Britain at Thornaby-on-Tees, Stockton-on-Tees, and Middlesbrough.

The McKee Iron and Steel Division, in association with Arthur G. McKee and Company of Cleveland, Ohio, specialises in consulting, designing and contracting for complete iron and steel works, including ore preparation, blast furnace plant and all accessories.

Joseph Parks and Son Ltd. fabricates structural steel work of every description, including steel-framed buildings of all types for factories, engineering workshops, boiler and power houses, multi-storied office blocks, foundries, brick plant buildings, mill and weaving sheds, buildings for chemical plants, garages, bus depots, also conveyor gantries, crane gantries, road, rail and pipe bridges, rivetted and welded oil and water storage tanks, storage bunkers for coal and other material, heavy road and rail vehicle chassis.

Simon-Carves Ltd. specialises in complete coke oven plants, including coal and coke handling, by-product plants, and mechanical gas producers.

The Wellman Smith Owen Engineering Corporation Ltd. designs and builds complete open hearth steelworks installations.

The British offer thus not only carries with it the latest equipment and plant, but also the services of some of the best companies, with years of experience in steel making and in the designing of steel plant. According to preliminary estimates, the plant and machinery will cost £50 million, and freight, insurance and other ancillary charges another £25 million.

A similar offer, it is believed, was also made by U.S. steel manufacturers to Mr. B. M. Birla. It is, however, not yet known whether it will be extended to the Government of India. According to reports, it was the American banks and not the equipment manufacturing companies which offered to take the major risk involved in hire-purchase arrangements. The American banks were to finance the sale deal to the extent of 75 percent, leaving the balance of the risk to the companies themselves. Whether the companies would have enhanced their prices by 25 percent, thereby taking the risk to the extent of their profit, is however not known. There is also talk of a "Marshall Plan" for Asia, under which America might give economic assistance in the form of plant and equipment. But New Delhi's reaction is that the "news is too good to be true."

Meanwhile, the Russian technical mission, along with its Indian counterpart, has returned to

New Delhi and is busy writing its report. The Government of India has set up a high-powered committee, with the Governor-designate of the Reserve Bank, Sir Raghavan Pillai, as its chairman to negotiate an agreement with the Russian Government. The other members of the committee are the Production Secretary, Mr. S. S. Khara, the Industry Secretary, Mr. H. V. R. Iengar, the Managing Director of the National Development Council, Mr. S. Bhoothalingam, the Finance Secretary, Mr. M. V. Rangachari, the Financial Commissioner of Railways, Mr. P. C. Bhattacharyya, the Works Secretary, Mr. Sachdev, and the Joint Works Secretary, Mr. S. Ranganathan.

Lancashire's Complaint

Mr. Low also said that he had discussed the question of Lancashire's textile exports with the Government of India. The Minister maintained that, although India was not subsidising her exports, unlike Britain she had imposed high import duties ranging from 65 to 80 percent. Furthermore the Indian manufacturer was able to get cotton much cheaper than the Lancashire manufacturer. The free import of Indian textiles into Britain had been rapidly rising. When India abolished quantitative controls last October a promise was made to examine the situation in the light of experience. Neither orders booked nor exports however indicated any improvement in offtake of Lancashire textiles. Mr. Low had three hours discussion on Tuesday with the Commerce Minister, Mr. Krishnamachari, during which Lancashire's complaints were discussed. It is believed however that India refused to reconsider the position on "political grounds."

G.A.T.T. Conference and India

India's delegate, Mr. L. K. Jha, who has been here for consultations, leaves for Geneva on 9th January for the final meetings of G.A.T.T. Enquiries show that India's views on using quantitative controls for purposes other than balancing payments has been widely supported. The Geneva conference is now engaged in drafting a charter for regulating world trade, which will be much broader in scope than G.A.T.T. The Havana charter, for instance, recognises the principles of subsidising export trade; the issue facing the Geneva conference is when, and to what extent, such subsidies may be used. Commodity control is another item in which some member countries are interested. The Geneva conference will present a charter for a permanent world trade organisation. Its future will depend on the principal countries, such as the United States and Britain, ratifying the charter. The conference is expected to conclude by the end of this month.

Reorganisation of Ministries

On 10th January, the Ministry of States will cease to exist as an independent unit and will become a wing of the Ministry of Home Affairs. Another ministerial reorganisation scheme is also expected to take effect on the same day. The Production Ministry will cease to exist as an independent unit and will be merged with the Ministry of Commerce and Industry. According to unconfirmed reports, the Ministry of Transport will also be merged with the Ministry of Communications. Present indications are that the Production Minister, Mr. K. C. Reddy, on the abolition of his Ministry, will take over the Ministry of Irrigation and Power, relieving Mr. G. L. Nanda to devote his entire time to the Planning Commission. Another report states that the Prime Minister wishes to be relieved of the chairmanship of the Planning Commission and will nominate Pandit Pant to take his place. Dr. K. N. Katju has declined the offer of the Governorship of Bombay, and will take over the Defence portfolio after Pandit Pant relieves him in the Home Ministry.

Taxation Commission Report

According to present indications, the Taxation Enquiry Commission's report will be published on 28th February, along with the Budget or soon afterwards. It is called the "three feet report" because, in its present form, it is three feet in thickness. The Government of India is examining it and the Finance Minister is expected to incorporate as many of its recommendations in the Budget as he considers practicable and acceptable. In fact, its immediate impact on the Budget is the sole reason for delay in publication.

Indo-U.S. Air Agreement

If the present proposals are accepted, India will withdraw the 12 months' notice she has given terminating the Indo-U.S. Air Agreement. The main tussle between the two countries has been over India's demand for determining the frequency of air services. According to the latest proposals, her viewpoint will be met by an exchange of letters between the contracting parties retaining the existing agreement. The U. S. airlines will reduce the frequency of their services by one a week (from three to two) and agree to a yearly review. Frequencies will be altered by mutual consent and, in the event of deadlock, the U.S.A. will not be entitled to increase frequencies beyond the present figure of three weekly services by the two operators, Pan American and Trans World Airways. India is believed to have agreed to withdraw the notice on this basis.

Shipping and Oil Transport

Indian shipping companies are not anxious to enter the oil trade, it is stated here. If any of them submits proposals to carry oil cargo, the Government will examine these sympathetically.

New Feeder Air Services

The Communications Minister, Mr. Jagjiwan Ram, has stated that since 1st January, four new

feeder air services have been introduced in the country. They cover:

1. Madras - Trichinopoly - Madurai - Trivandrum - Cochin - Coimbatore - Bangalore - Madras.
2. Delhi - Agra - Gwalior - Bhopal - Ahmedabad - Bombay.
3. Delhi - Jodhpur - Bhopal - Ahmedabad - Rajkot.
4. Madras - Bangalore - Coimbatore - Cochin - Trivandrum - Madras.

The starting of other feeder services is also being considered. To begin with, these routes will be covered by Dakota aircraft. When the new Heron aircraft arrive, they will replace the Dakotas. Orders for eight Herons costing Rs. 74.25 lakhs have already been placed and they are expected to reach India early next year. The present network of the Indian Airlines Corporation is broad enough to meet the demands so far as the main centres of the country are concerned.

Small Industries Corporation

A small industries corporation is to be set up early

DEUTSCHER INNEN-UND AUSSENHANDEL GLAS-KERAMIK
BERLIN N 113, STOLPISCHE STR. 37.

ert of jute against revaluated licences, and also regards the ban on the export of raw jute in bales. In spite of this, however, prices have risen over the period under review by about 2 a maund. In common with all other areas, exports into the main baling centres have fallen considerably, and in Narayanangj arrivals only average about 8,000 to 10,000 maunds a day. Latest quotations in Narayanangj are as follows:

Local Bales :	Rs.(P)	Kutchha Bales :	Rs.(P)
Mill Firsts	154	Jat	26-8
Port Firsts	133	District	24-8
Local Tossa 4's	190	Northern	23
Indee Tossa 4's	152	Quotations for Tossa are	
Port Tossa 2/3	134	Rs. 5 higher than those	
Port Tossa 4's	113	for white jute.	

THE FOREIGN JUTE MARKETS

BUSINESS VERY QUIET

BUSINESS' conditions have been very quiet over the past fortnight and the reduction to the equivalent of a fall of 25 a ton in raw jute which was made by the Accountants to take effect on 21st December has provided no inducement to consumers of yarns and cloth to operate to any extent. Of course, the intervention of the holidays or Christmas has also had a quietening affect.

Common 8 lb. cops have been reduced from 18.92d to 17.43d a lb., and 3 ply 8 lb. twist from 18.58d to 18.99d, 24 lb. sacking wett from 13.31d to 12.71d and 8 lb. chains from 18.59d to 18.00d a lb. The fine qualities of yarns have been kept unchanged. Hessian cloth values have been reduced from 14.84d to 14.45d a yard for 40in. 10oz. Hessians and from 12.10d to 11.79d for 8oz.

The raw jute market has been steadier and no further reduction has been recorded in any grades. Indeed, some of these are advanced by 20s a ton. Mill Firsts being lowest at £115 and Mill Lightnings £103, with good marks of Daissee-2/3 from £115, grade Tossa-2/3 from £123 and grade fours from £113, all c.i.f. U.K. Some shippers are quoting a few pounds higher than those mentioned, but business has been done with them at less than their quotations on bids sent out to Pakistan. A number of sellers have been advised that the jute affected by the cancellation of trading licences has now been cleared, but there are others who are still very anxious about their shipments.

Calcutta goods have shown slight weakness at 9d for 40in 10oz. Hessians and 54s for 74 oz., with B Twills at 189s 6d for shipment all positions January to June, f.o.b. Calcutta.

Total imports of jute fabrics into the U.K. to 30th November, 1954, were 224,784,000 square yards, costing £8,471,521, compared with 134,629,000 square yards (£4,851,817) during the same months of 1953. Imports of jute sacks and bags were 410,381 cwt. (£2,428,047) and 375,852 cwt. (£2,155,381) for the respective periods. 'Practically all of these goods were received from India.

Exports of jute cloth from the U.K. totalled 23,710,000 square yards (£1,978,994) against 21,211,000 square yards (£1,511,262).

U.K. TEA CONSUMPTION LEVELS OFF

INTERNATIONAL COMMITTEE'S SUMMARY

THE levelling-out of the rise in Britain's tea consumption noted during September was more pronounced in October, according to the monthly statistical summary just issued by the International Tea Committee in London. This shows that U.K. tea imports (net) for consumption during October totalled 31,010,000 lbs, compared with 40,120,000 lbs in October 1953. Britain's net tea imports for consumption during the first ten months of this year amounted to 406,880,000 lbs, as against 394,200,000 lbs in the same period last year. This made the average monthly rate up to the end of October 40,688,000 lbs, compared with a monthly rate of 40,144,000 lbs in 1952 and 41,767,000 lbs during 1953. Sources of these tea imports (net) for consumption are listed in the summary, showing that, in October this year and the first 10 months of 1954, India sent 12,092,000 lbs and 226,743,000 lbs respectively; Pakistan 1,801,000 lbs and 11,565,000 lbs; and Ceylon 4,562,000 lbs and 110,088,000 lbs.

The International Tea Committee summary goes on to cite the average prices at London auction sales, where a new high level has been reached in recent weeks. In the week beginning 22nd November this year, the price quoted for Northern Indian tea was 6s 11.2d a lb, for Southern Indian tea 6s 7.2d, Pakistani tea 6s 5.8d, and Ceylonese tea 6s 11.4d a lb, against the background of an average price for all tea of 6s 10.4d a lb. These figures compare with average prices, in the week beginning 23rd November, 1953, of: Northern India 3s 9.9d, Southern India 3s 8.2d, Pakistan 3s 8.3d, Ceylon 4s 1.7d a lb; the average London auction price for all tea was then 3s 10.4d a lb.

LONDON TEA SALES

At the resumption of the London tea sales last Monday, 34,452 packages of North Indian and miscellaneous teas were offered. These met good competition, especially commons, which were fully firm to dealer. Common broken pekoe was quoted at 79 3/4 to 80d, against 79d previously. Better quality descriptions moved somewhat irregularly, according to quality, but prices on balance showed little quotable change. Some less desirable second-hand teas, including Indonesian types, sold distinctly lower.

COCHIN TEA SALES

At Sale No. 1, the 390,000 lbs of tea on offer encountered a good demand for Low Medium and Medium teas which were one and a half annas dearer. Good Medium teas were fully firm, but

liquoring teas met with less demand with prices quoted at about last rates for improved quality. Whole leaf grades were steady.

RUBBER CONSUMPTION RISING

The latest news of rubber production and consumption is encouraging and the excess of production which showed itself earlier in the year has stopped growing. The International Rubber Study Group puts production in the first ten months of the year at 1,460,000 tons and consumption of rubber at 1,415,000 tons. This gap of 45,000 tons is the same as that recorded for the first nine months of the year. It is true that seasonal factors partly account for the gap's failure to increase (production is lower at this time of year), but consumption is also rising. In the United States, the most important rubber-consuming nation, total consumption has increased by nearly 20 percent in the past three months. More rubber is needed now than the Detroit motor car manufacturers are getting into their stride again. Natural rubber is now holding its own against the synthetic product and forms just over 50 percent of United States consumption. This may seem surprising when natural rubber commands a premium over synthetic, but is explained by the higher proportion of natural rubber needed for the tubeless tyres now so fashionable in the United States. For the future the research director of B. F. Goodrich, an American tyre company, recently forecast a 4 percent rise in world consumption of rubber, with the United States enjoying a similar increase. The demand for rubber has increased as the motor car industry in Western Europe has expanded.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN NOVEMBER

Indian rubber output in November was 2,676 tons, according to the Indian Rubber Board. Exports during the month were 3 tons 480 lbs and imports 139 tons. Consumption by manufacturers was 2,106 tons. Stocks with estates and dealers on the last day of the month totalled 5,203 tons, including 1,345 tons in transit. Stocks with manufacturers on the same date amounted to 3,392 tons. Manufacturers also used 174 tons of reclaimed rubber, the month-end stock being 453 tons, and consumed 1 ton 1,232 lb. of synthetic rubber of which they held a total stock of 14 tons 1,980 lb. at the end of the month.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

Sheet :	Closing prices on 17-12-54 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.101	1.101
No. 2	1.071	1.071
No. 3	1.041	1.041
No. 4	.98	.941
No. 5	.94	.901
Sheet Cuttings 1	.90	
Sheet Cuttings 2	.85	
Crepe :

COTTON PIECEGOODS TRADE DECLINING

TEN PERCENT DROP FROM POST-RECESSION PEAK

THE outlook for cotton textiles, with yarn production and world trade in piecegoods on the decline and only rayon piecegoods continuing to make a good showing, is not exactly encouraging. The Cotton Board's third Quarterly Statistical Review, as usual, discusses the details generally as well as in relation to individual producing areas. Cotton yarn production, it discloses, in a group of the principal cotton manufacturing countries, including all the important exporting countries, in the third quarter of 1954 was about 3 percent less than in the second quarter. In the main this reduction was brought about by the incidence of holidays in most of the countries concerned, but the decline in Japanese production cannot be fully accounted for on these grounds. Compared with the third quarter of 1953, however, global yarn output was virtually unchanged. The United Kingdom, India and almost all the Western European countries were producing more than they were a year earlier, but output in the United States, Canada and Japan was less than in the third quarter of the previous year.

In the first nine months of 1954 world trade in cotton piecegoods was about 15 percent greater than in the same period of 1953. The volume of trade has, however, been falling since the post-recession peak was reached in the first quarter of the year, and in the third quarter it was no more than 90 percent of that peak level. Exports have almost all the principal supplying countries have declined since the early months of the year, the main exceptions being the United States, Portugal and, possibly, Spain. In contrast, world trade in the rayon piecegoods has been the rapid main factor in this expansion has been the rapid increase in exports from Japan, but exports of French and German rayon textiles have also increased since the beginning of the year. On the other hand, shipments from the United Kingdom and Italy have been steadily declining. In the first nine months of the year total world trade in rayon fabrics was about 23 percent greater than in the corresponding period of 1953, which was itself a record year for this trade.

U.K.'s Special Difficulties

In the United Kingdom September produced a brisk revival of buying activity, but since then interest has slackened and order books in most sections have been tending to decline. Home demand continues fairly strong, but the industry is squeezed between a poor demand for cloth for export on the one hand and the considerable and growing volume of imported cloth on the other hand. The expansion in the volume of production has been very slight this year, but by October both yarn and cloth output were at record post-recession levels, and about 3 percent greater than in October 1953 in the case of yarn and 1 1/2 percent greater in the case of cloth. It is significant that, whereas cotton cloth output has expanded by 2 percent in the course of the year, rayon and mixture cloth output has declined by 1 percent. In particular, output of spun rayon cloth has decreased by no less than 6 percent.

The steady decline in the export of cotton yarn, cotton piecegoods and rayon and mixture piecegoods, which has been apparent ever since the beginning of the year, continued and even accelerated during the third quarter. Exports of cotton piecegoods fell from 166 million square yards in the second quarter to 152 million in the third quarter, despite the maintenance of a high level of trade with Australia and New Zealand, and the stabilisation of shipments to British West Africa at the comparatively low level to which they had fallen in the second quarter. Exports to South Africa and British Africa suffered a sharp set-back, and among the large number of markets taking and less British cloth Southern Rhodesia, French West Africa and Equatorial Africa and Burma were also prominent. Almost the only bright spots were the increased shipments to the British West Indies and the Belgian Congo. Exports in October, at less than 50 million square yards, were at an even lower rate than in the third quarter. Both Australia and South Africa took considerably smaller quantities of British rayon and mixture cloth during the third quarter, as also to a lesser extent did Southern Rhodesia, New Zealand and the Irish Republic. The West Indies again provided one of the few examples of an increased volume of trade.

The spectacular increase in imports of cotton piecegoods continued in the third quarter, when 73 million square yards were brought in. The rate of import in October, 32 million square yards, was even higher. Most of these imports are of grey cloth, and the big increase during the third quarter was due to large shipments from Japan as a result of the Anglo-Japanese payments agreement. Imports from Hong Kong have also become an important factor. Almost all the Japanese cloth is destined for re-export after processing, but a large proportion of the Indian and Hong Kong cloth is known to be passing into the home market, which it enters duty-free at prices well below that of Lancashire cloth. In the case of India part, at least, of this price advantage is due to the Indian mills' access to raw cotton controlled at artificially low prices by the Indian Government.

Cotton consumption in the United States in the third quarter of 1954 was about 61 percent less than in the same quarter of 1953. Cloth output figures are not yet available later than the second quarter, when production was about 6 percent less than in the same quarter in the previous year. The decline in the output of rayon fabrics has been much more severe than that of cotton fabrics; in the second quarter production of rayon and nylon cloth was running at less than 80 percent of the second quarter 1953 level. The American economy has begun to pull out of the slight recession it experienced earlier in the year, and this improvement seems to be reflected in the cotton industry's activity. Since the summer there has been an upward trend in cotton consumption, and in October the daily rate of cotton consumption exceeded the rate of consumption in the corresponding month of the previous year for the first time since July, 1953.

Exports of both cotton and rayon piecegoods from the United States expanded substantially during the second quarter of 1954, but this recovery proved to be short-lived, and in July and August the rate of shipment was back to the comparatively low level of the first quarter. As regards the trade in cotton fabrics, exports to the Philippines and Cuba declined sharply from the relatively high level of the second quarter, and the formerly very important trade with Indonesia virtually ceased. Exports to Canada also continued to decline, but there was a sharp increase in shipments to Venezuela, which became the third largest market in the two months after Canada and the Philippines. Exports of cotton cloth to South Africa also were maintained at a high level. In contrast, shipments of rayon fabrics to South Africa in July and August were well below the high level reached in the second quarter, and exports to Cuba were also well down.

Low Prices in Japan

Production of cotton yarn in Japan fell sharply during the third quarter of 1954, and was even slightly below the production level reached in the same quarter of 1953. Holidays in August and a prolonged strike at one large company's works were contributory factors in this decline, but it is not clear whether they provide the whole answer. At any rate, September's output of 84 1/2 million lb. compares very unfavourably with the record post-war level of 92 million lb. achieved in December, 1953. The decline in cotton cloth output in the third quarter was much less severe than that of cotton yarn, although even here the post-war record, reached in April, has not yet been regained. On the other hand, production of continuous filament rayon fabrics was maintained at a high level, and spun rayon cloth output, after declining during the first half of the year, recovered to reach a new record level in September.

It is evident that the Japanese cotton industry experienced considerable difficulties during 1953, despite the high level at which the export trade has been maintained. The Government's tight money policy brought about a marked decline in the home market price of cotton goods, and the reduced domestic off-take led to uncomfortably large increases in stocks of yarn and cloth. At the same time the "link" system, by compelling spinners and manufacturers to export a certain proportion of their output in order to receive enough raw cotton to keep their machinery active, forced them to sell abroad at even less than the domestic price level. The spinning industry has, apparently, been discussing the possibility of a 15 percent voluntary curtailment of production with the object of reducing stocks and improving prices, but such an agreement is, nominally at least, ruled out by the country's anti-monopoly laws. It now appears that the same result may be achieved from another direction, viz., reduced allocations of raw cotton owing to shortage of foreign currency. At the same time the Government's stated intention of cutting exports of cotton textiles by 20 percent during the next three months may have been induced in the hope of allaying foreign criticisms of Japan's unduly low export prices. It is reported that prices of standard export lines have risen by about 10 percent since the announcement.

Exports of cotton piecegoods from Japan in the third quarter, at 296 million square yards, were slightly smaller than in the two preceding quarters. In October, however, the rate of export increased again to 122 million square yards. Mention was made in the last Review of the difficulties Japan was experiencing in trade with Indonesia; as a consequence exports to that market fell from 89 million square yards in the second quarter to 41 million in the third quarter. Another severe decline was experienced in shipments to Pakistan, which fell from 31 million to 5 million square yards, pending the conclusion of a new trade agreement. Other markets taking reduced quantities of Japanese cloth in the third quarter included Hong Kong, Turkey, Siam and the Belgian Congo, where imports from Japan have been prohibited. Exports to South Africa have also continued to decline. In compensation for these losses notable increases in shipments to the United Kingdom, British West Africa, Singapore, Burma and Ceylon were recorded, and exports to Australia also improved on their already high level. The very large deliveries to the U.S.A. and the Netherlands—mostly of grey cloth—are also worth noting.

Although the complete figures are not to hand, Japanese exports of rayon fabrics in the third quarter are believed to have improved considerably on the already high level of 150 million square yards shipped in the second quarter. Exports to South Africa, the largest market, were at a higher rate, and there were substantial increases in ship-

ments to British West Africa, Singapore, Ceylon, Afghanistan and Germany. On the other hand shipments to Hong Kong, Indonesia, Iraq and Iran were much below the second quarter level.

Indian Activity Continues

Activity in the Indian cotton mill industry continues to run at a very high level, and output of yarn and cloth in the first nine months of the year was about 3 percent greater than in the same period of 1953, which was itself a record year. The handloom industry has also benefited by the measures the Government has taken on its behalf, and the output of this sector in the first half of 1954 is estimated to have been about 7 percent greater than in the first half of the previous year. The report of the Cotton Textiles Enquiry Committee, which was submitted to the Government a few months ago, is of considerable interest. It recommends that the output of mill-made cloth should be pegged at 5,000 million yards per annum (the present level) and that the increased quantities required, estimated at 1,600 million yards annually by 1960, should be provided by the handloom sector. This would require an additional 360 million lbs. of yarn a year, and the Committee recommends the building of new spinning mills, to produce this quantity of yarn. As regards the mill industry, the Committee recommends the replacement of ordinary power looms by automatics at the rate of 5,000 a year. It is understood that the Government has accepted the principle of rationalisation in the cotton mills with certain safeguards for the workers. Exports of cotton piecegoods from India declined from 241 million yards in the first quarter to 197 million yards in the second. It is understood, however, that there was some improvement during the third quarter. The Sudan became the largest market in the second quarter, followed closely by the United Kingdom, with British West Africa, Burma and British East Africa in third, fourth and fifth places. The decline in the second quarter was largely due to greatly reduced shipments to Aden, Australia and Ethiopia.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.2 percent to 368.8 during the week ended 11th December, 1954, as compared with 369.4 for the previous week. The index was 2.5 percent and 4.7 percent lower than in the corresponding weeks of the previous month and the previous year. During the week under review, foodstuffs rose by 0.5 percent, to 318.4 as a result of an increase in the prices of gur (+7%), wheat at Hapur (+5%) and tea (+3%). There was a decline in the prices of gram (-7%), and rice at Vijayawada and dal arhar (-2%), each. Prices of copra (-3%), raw jute, raw silk and gingelly seed (-2% each) and linseed in Calcutta, cottonseed at Amravati, raw cotton, groundnuts, castorseed and lac (-1% each) declined, while manganese ore (average export prices) (+9%) and linseed and cottonseed in Bombay and rapeseed (+1% each) rose. As a result, the index for Industrial Raw Materials fell by 0.8 percent to 438.4 as compared with 442.0 (revised) for the previous week. The index for Semi-Manufactures also declined to 348.0 as compared with 348.3 for the previous week. Items which recorded significant variations were: mustard oil at Patna and gingelly oil (-3% each), groundnut oil (-2%), mustard oil at Kanpur and coconut cake (+3% each). Lower prices of jute manufactures (-4%) brought down the index for manufactures by 0.5 percent to 376.1. A fall of 0.3 percent to 563.4 in the index for the Miscellaneous group was caused by a decrease in the price of chillies (-6%). Betelnuts (+1%), however, showed an advance.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

* = Estimated

(R) = Revised

At present the Research Programme Committee of the Planning Commission, in collaboration with the Union Ministry of Food and Agriculture, has sponsored a co-ordinated scheme for studying the economics of farm management in six typical regions of the country. The latter has also taken the initiative to set up four regional research centres for carrying on continuing studies in agricultural economic problems at the Delhi School of Economics in the North at the Gokhale Institute of Economics and Politics in the West, at the University of Madras in the South, and at the Visva-Bharati University in the East. The I.C.A.R. has been making funds available to other universities and research institutions on an ad hoc basis. All these add up to an impressive beginning on a truly national scale and hold enough promise for quick progress in the field of agricultural research.

H indicates that Share capital is paid. O, C and Dd. indicate Ordinary, Contributed and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd, indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A WARNING ON "STABILISERS"

Further gains in these industries now, says the Bank, would likely be at the expense of reduced output later in 1955. However, the recovery has been spreading. Textiles are making the best showing in over a year, and building materials production has been stimulated by the unseasonably high rate of construction activity. Perhaps the danger now is in expecting too much. In the three months ending with November the increase in industrial output was 5 percent, equivalent to a 20 percent annual gain. Such a rate of improvement is not likely to continue very long. The fact that the drag of inventory liquidation has eased, and that new orders including defence contracts have picked up again, is sufficient reason for satisfaction.

The fact that the American market is harder to "saturate" than was thought, together with the "built-in stabilisers," warrant a hopeful view of the economic future but at this point the Bank adds a warning, which is worth quoting in its own words. "This showing of stabilising influences and recuperative powers has made 1954 a notable year, and one full of promise in the long effort to moderate business fluctuations. It would be a pity, however, if overly-strong conclusions should be drawn from the record. The year has shown that the stabilisers, both automatic and those made effective by policy, provide strong support; that money and fiscal policy can be greatly helpful; and that sound business management makes a contribution of immense value. It has demonstrated that a financially strong, liquid and dynamic economy can make necessary adjustments, without

BRITAIN STILL SHORT OF COAL

EFFORTS TO BRIDGE THE GAP TO THE ATOMIC AGE

IN the middle of January 1947 Britain's recovery was halted abruptly by the fuel crisis. An exceptionally bad winter hit the country when output of coal was insufficient and when the transport system was not adapted to severe weather. Neither of these problems has been solved in the past eight years, and every spell of bad weather revives the memory. After the fuel crisis (though not primarily because of it) the National Coal Board began active planning. In the past seven years it has spent about £300 million of capital in an endeavour to produce enough coal for the nation's requirements, with a moderate surplus for export. A year ago the miners' wages were increased, with the promise of increased output as a *quid pro quo*. On that occasion it was agreed between management and labour that with the existing labour-force it should be possible to increase output by at least 2½ percent—about 5 million tons—in a year. In 1954 output was, again, disappointing. Partly because opencast working was impeded by the weather, but also because deep-mined production failed to reach its target, the total output, at 22½ million tons, was only ½ million tons above that of 1953, and 1 million tons below that of 1952. Admittedly, the labour-force diminished: in a state of full employment there were too many attractive jobs outside of coalmining to allow the mines to get the needed recruits, even at relatively generous rates of pay.

Full employment and expanding industrial output meant also that consumption continued to increase. The promised increase in production by 5 million tons was absorbed, even though it was not produced. It was necessary, therefore, both to draw on stocks and to import more coal. Reduction of stocks is risky when the weather may play tricks with distribution; and much of the imported coal has had to be bought for dollars and has borne heavy charges for freight. It has been decided to import 4 million tons of coal this winter, and many people in Britain are resigned to the idea that the country that was formerly the leading supplier to the export markets must rely on imports to make good a "marginal" deficiency for many years—until the atomic-power industry is firmly on its feet and able to relieve the coalmines of an appreciable proportion of their burden. Alternatively, it is suggested, the substitution of oil for coal, which is already in progress, can be accelerated, if the price of fuel-oil can be reduced. Natural gas, of which there may be large unexploited reserves in Britain but which has been hitherto almost neglected, is another possible means of bridging the gap between the "coal era" and the "atomic era".

However, the Federation of British Industries, in the 1955 edition of its *Fuel Economy Review*, has warned that these alternatives to coal (including atomic energy itself) may create a false sense of security. It is unlikely, says the Review, that any of these potential sources of energy can replace coal to an appreciable extent for many years. Action is needed in regard to coal itself. The problems of coalmining capacity, says the National Coal Board's chairman, Sir Hubert Houldsworth, arise from "the inexorable facts of geology". There are many interesting developments in machinery and methods of mining—some indigenous, some imported from the Continent or from America. They can halt the natural tendency to a decline in production of coal, but it is unlikely that they can appreciably raise production. The solution of the problem lies, therefore, on the side of consumption. In 1953 the Ministry of Fuel and Power conducted a survey of 4,600 British firms to compare their efficiency in the use of fuel. The results of the investigation were disturbing in themselves but encouraging in their implications. It was revealed, for instance, that three-quarters of the boilers in use in the cotton-textile industry were more than 40 years old, and that the average efficiency of all the boilers in the sample of firms was only about 10 percent higher than the average efficiency of the hand-fired boilers of 1880. Equally significant is the vast difference in yields, per ton of fuel consumed, between one firm and another in the same industry; a ton of coal has been found to produce 44.7 tons of building bricks in one unit, but only 4.8 tons in another.

The Chief Scientist of the Ministry of Fuel and Power, Mr. K. T. Spencer, commenting recently on

these and other such facts, suggested that many millions of tons of coal could be saved each year if efficient methods of consumption were practised. On the railways alone, he said, about 13 million tons of large, good-quality, coking coal could be saved by electrification of the whole system, at a cost of only 5 million tons more low-grade coal burned in power-stations. It is encouraging to know that Britain's chronic "fuel problem" is capable of solution. It is, on the other hand, distressing to realise that, after the need for and the benefits of modern fuel-saving equipment have been so widely publicised, many British firms are still using antiquated wasteful equipment. Inevitably the question arises: if in this important respect the average efficiency of British industry is low, in how many other respects (mechanical handling, for instance, or standardisation of processes) is it equally inefficient? And how rapidly is it correcting its defects? Not very rapidly, to judge by the continuing excessive consumption of coal. Some people believe that the only way to enforce saving of coal is to raise its price. (Britain's domestic price is, indeed, lower than the export price.) This drastic remedy might be beneficial in the long run. But it needs courage, even foolhardy courage, to raise Britain's basic industrial costs, deliberately, at this time. Efficiency should yield its own financial reward. But the Government could, perhaps, make fuel-efficiency especially attractive by special tax-concessions for firms which installed efficient appliances. However it is tackled, the problem must be solved if Britain is not to be permanently hindered by insufficiency of fuel, or by the excessive cost of importing fuel.

India's Terms of Trade.—A survey of India's foreign trade during the first half of 1954 in the Reserve Bank of India Bulletin shows an improvement of 6 percent in the net terms of trade. The import price index recorded a fall of 3 percent during the period in question, keeping in line with the declining trend of world prices. The export price index rose to an identical extent, thus leading to the above improvement in the country's terms of trade. The balance of payments position, however showed no such improvement. Rather it recorded a decline at Rs. 10.6 crores compared with the last half of 1953 when the surplus amounted to Rs. 55 crores. But as the decline was caused by seasonal factors principally, it may be said that the position has remained more or less stable since the second half of 1952. This is the finding of the survey as well. There were certain notable changes in the composition of trade. Imports on Government account decreased substantially, as the volume of foodgrain imports dropped. Commercial imports however showed a large increase, which offset the fall in Government imports. Raw cotton accounted for more than half of this increase on private account, while the rise in the import of mineral oils, machinery and vehicles was moderate. This unsatisfactory position in machinery imports has been causing some concern, considering the fact that large arrears of replacement, not to speak of the creation of new capital assets, exist in the economy. A redeeming feature however was that there was a net investment of Rs. 8.2 crores on capital accounts. On the export side, there was a decrease of 13 points in the quantity index, with a corresponding monetary fall of Rs. 212 crores to Rs. 259.8 crores in value. The set-back however has been attributed to seasonal factors. A commodity-wise analysis reveals that almost the entire amount of this fall in aggregate exports was accounted for by tea. Jute manufactures also fell, but the decline was slight. Cotton textiles rose. The Government's export promotion drive is to be welcomed in this context. Another welcome feature of the position is that the surplus trend with the dollar area continued; the size of the surplus was about the same as during the first half of 1953. There was a surplus of Rs. 1.6 crores with the sterling area countries excluding Pakistan, as against a deficit of Rs. 0.1 crore during the corresponding half of the previous year. With Pakistan the surplus amounted to Rs. 1.5 crores (Rs. 0.2 crore). The payments balance was in surplus with the rest of the non-sterling area, though the surplus showed a comparative decline. The trend of the deficit with the O.E.E.C. countries continued.

Small Savings in India.—The trend of small savings in India has been upwards during the six-year period 1948-54, according to the December issue of the Reserve Bank of India Bulletin. Net receipts totalled about Rs. 206 crores over the period, or Rs. 34.3 crores a year on an average. This compares favourably with an annual average for undivided India of Rs. 7.1 crores during the six years preceding the war (1933-34 to 1938-39) and of Rs. 15.7 crores during the war and in the immediate post-war period (1939-40 to 1947-48). It is interesting that while currency in circulation had risen by Rs. 1,363 crores in the war and the immediate post-war years (1939-40 to 1947-48), it fell by Rs. 18 crores during the period under review. In the first three years (1946-49 to 1950-51), net receipts of small savings averaged Rs. 29.9

crores per annum, but in the remaining three years up to 1953-54, which coincided with the first three years of the five year plan, net receipts averaged substantially higher at Rs. 38.8 crores. Among the main items of small savings, the National Savings Certificates, it would appear, are more popular than the Post Office Savings Bank deposits and account for the largest percentage of aggregate small savings, probably owing to the higher yields and the higher maximum limits on holding compared with the Post Office Savings Bank deposits. Total net receipts in National Savings Certificates, during the period under review amounted to Rs. 105.3 crores, thus exceeding those under Post Office Savings Banks by Rs. 9.1 crores. During the period under review, total net receipts in Post Office Savings Banks in the Indian Union amounted to Rs. 96.2 crores, or on an average Rs. 16.0 crores per annum. During the same period, time deposits of scheduled banks moved up by only Rs. 8.3 crores, while their savings deposits actually declined by Rs. 7.6 crores. The gross turnover of deposits in the Post Office Savings Banks is fairly large and has been gradually rising during the period under review. While gross receipts aggregated Rs. 614.0 crores during the period, withdrawals amounted to Rs. 517.8 crores, averaging Rs. 102.3 crores and Rs. 86.3 crores, respectively, per annum; the corresponding averages for the war years (1939-40 to 1945-46) were Rs. 38.7 crores and Rs. 34.0 crores per annum. Treasury Savings Deposit Certificates, introduced in February 1951, were very popular initially and in the first two months of their issue, subscriptions amounted to as much as Rs. 5.3 crores. Subsequently, however, the rate of collections gradually slackened and in 1953-54 the total net receipts amounted only to Rs. 6.5 crores. The new series of National Plan Certificates and the Fifteen-Year Annuity Certificates, issued on 10th May, 1954 and 1st July, 1954, respectively, brought in Rs. 4.7 crores and Rs. 27 lakhs by the end of October 1954.

1954 Dollar Hedges.—In the fourteenth year of still continuing world inflation, the public maintained its search for means of hedging against monetary depreciation. The loss of purchasing power of the U.S. dollar, which ceased a year ago, has now become more visible to the man in the street. More and more money was poured into American common stocks in 1954, the only investment that did not adjust to the dollar loss of value. The January issue of *Pick's World Currency Report*, in reviewing fluctuations of internationally popular hedges against paper currencies, presented the following results for 1954. who increased in rich rewards for its followers. who increased in number all over the globe and "hoarded" American securities. Based on the Dow-Jones Index. Railroads rose 55 percent, Industrials 44 percent and Public Utilities 19 percent. Stocks were better than any currency, better than gold coins or bars, platinum, silver, all non-ferrous metals and better than diamonds. Currencies had a long casualty list; seven devaluations and at least two dozen death-bed candidates. The dollar rose in Korea by 280 percent; in Bolivia 180 percent; Mexico 45 percent; Chile 44 percent and Brazil 37 percent. Sterling dropped about 14 percent during the year. Among the rising currency values, Israel gained 7 percent; Egypt and Finland 9 percent; Iran 11 percent. The rouble rose 25 percent in free markets, but the best of all was the German Sperrmark which soared 27 percent in 1954. Gold continued to ease in most countries. Coins dropped 2 percent to 15 percent and bars eased $\frac{1}{2}$ percent to 4 percent in dollar value. Platinum, under pressure of Russian sales, dipped 15 percent during the year. Diamonds, again in demand in the U.S., gained between 3 percent and 7 percent above 1953-end prices. But the most unusual investment result, beating even the proud record of Wall Street, was the unexpected boom in French post-impressionist paintings. Pictures painted by Braque, Dufy, Gauguin, Matisse, Modigliani, Pascin, Rouault, Seurat, Soutine and others rose in dollar markets between 150 percent and 200 percent.

Employment Trends.—The latest report on the work of the Directorate-General of Resettlement and Employment indicates that during November the number of fresh registrations at employment exchanges returned to normal after the previous holiday month's decline. There was an increase in the number of employers using the exchanges, in vacancies notified, in submissions and in placements. At the end of the month, and however, there were 14,000 more names on the inactive register. Most States reported a mild improvement in the employment situation generally. The number of vacancies notified by the private sector was the largest since July; the public sector also notified more vacancies than in any other month since June 1953. There seemed to be a widespread shortage of stenographers, typists, trained teachers, draughtsmen, compounders, nurses and midwives. As against this, most exchanges reported a surplus of clerks, fresh matriculates and graduates, unskilled office workers, untrained teachers, motor drivers, carpenters and unskilled labourers. A special enquiry regarding engineering and medical graduates produced some

interesting results. It showed that of the 891 engineering graduates on the live registers of exchanges at the end of October, 75 per cent were concentrated in West Bengal, Bombay, Delhi, Mysore, and Madras. Ninety per cent had taken their degrees in mechanical, electrical or civil engineering. Just under half the total number had declared on registration that they were prepared to accept a pay of less than Rs. 200 a month; the rest wanted more. Eighty-three per cent had just got their degrees and had no experience, which was the main reason why they could not be found jobs; slightly more than that proportion were below 30 years of age. As for the medical graduates, about 66 per cent of the 162 on the live register were in West Bengal. One-third the total number had more than two years' experience, but 45 per cent had none at all. All except 21 wanted a salary of more than Rs. 200 a month. Reports from employment exchanges indicated that engineering and medical graduates could not find jobs mainly because their experience was inadequate, they were reluctant to move out of their own States or into the rural areas, and because there were not enough suitable jobs where they lived.

1955 Coking Coal Output Ceilings.—The Indian Coal Board in its monthly bulletin for January, 1955 makes the announcement that the level of individual ceilings of coking coal production during 1955 will be the same as for 1954. This is subject to the confirmation of the Government of India. The bulletin also contains an interesting elucidation of the official policy on opening and re-opening of mines in Bengal-Bihar fields. It contradicts the general idea that consideration of applications for such purposes is altogether banned and goes on to reproduce a relevant paragraph from the September, 1953 issue of the bulletin, which while affirming the Government's intention of not adding to the existing number of producing units for fear of over-production, makes significant reservations where special circumstances exist. To make the meaning clear, the January bulletin therefore says: "It has further been decided that applications for opening new collieries may be considered, taking into account the grade of coal, transport conditions and special circumstances of the area or colliery as the case may be." According to the same bulletin, the average cost of stowing has been rising appreciably since 1948, though during the years 1952-53 and 1953-54, there has been a slight fall from the high level of 1950-51. Of the 54 collieries carrying out stowing currently, the cost ranges from Rs. 1-1 to Rs. 1-12 a ton in 22 cases. It varies from Rs. 1-12 to Rs. 2-5 a ton in the case of another 22, while for the remaining ten, it is above Rs. 2-5. In the case of the last-mentioned group, the high cost of stowing is attributed to the fact that only small quantities of materials are dry packed by it.

*** Foreign Investment in Pakistan.**—Pakistan has this week named the industries in which foreign investors will obtain special repatriation facilities. On 3rd November, 1954, the Karachi Government announced that foreign capital seeking investment in approved industries in Pakistan would be eligible for certain concessions including repatriation facilities. It has now been decided that foreign investment made after 1st September, 1954, in any of the 27 industries mentioned in the schedule to the Development of Industries (Federal Control) Act, 1949, will qualify for repatriation facilities. These industries are: 1. Arms and munitions of war; 2. Cement and cement products; 3. Edible oil, hydrogenated or otherwise; 4. Electrical communications, and broadcasting equipment; 5. Electricity, including hydro-electric power; 6. Electrical equipment, appliances, and goods; 7. Glass and ceramics; 8. Heavy chemicals; 9. Iron and steel; 10. Machine-tools, precision-tools, gauges, and workshop equipment; 11. Manufactures of heavy engineering industry; 12. Minerals including salt and coal; 13. Non-ferrous metals and alloy manufactures; 14. Paper, cardboard and pulp; 15. Petroleum and mineral oils; 16. Pharmaceuticals, drugs, and light chemicals; 17. Power and industrial alcohol; 18. Preserved and prepared foods; 19. Products of carbonisation industry; 20. Rubber manufactures; 21. Scientific and mathematical instruments; 22. Sea fish and its products; 23. Ships, barges, river-boats, and lighters; 24. Sugar; 25. Tanned leather and leather goods; 26. Textiles-cotton, woollen, jute, silk and rayon; 27. Tobacco. The Government will in addition consider on merits applications for such facilities to foreign investment in other industrial concerns. Applications should be addressed to the Controller of Capital Issues if an industry other than the 27 industries referred to seeks this concession. Hitherto certain types of companies were permitted to issue capital not exceeding Rs. 1 lakh without the permission of the Controller of Capital Issues. To enable the Controller of Capital Issues to examine all cases of foreign companies it has been decided that all companies which have foreign investment as part of their capital structure will, in future, have to obtain his prior approval for issuing capital in Pakistan irrespective of the amount involved. A notification to this effect was issued on 5th January 1955.

SUBSTANTIAL GAINS IN OILS
AND INDUSTRIALS
GILT-EDGED WEAKER ON RISE IN
TREASURY BILL RATE

London, 12th January.

WITH the removal of the rail strike threat and the recovery on Wall Street after its short-lived but sharp setback, industrial and oil shares went strongly ahead in the stock markets last week, and prices in these two sections recorded substantial gains in extremely active trading. Elsewhere, conditions were not so cheerful, and on balance the market presented a mixed appearance. Gilt-edged securities staged a considerable recovery prior to the week-end, but a further increase in the treasury bill rate in the money market on Friday brought a swift reaction and completely unsettled the market. Sharp losses were sustained and the earlier gains were lost. Foreign bonds were subdued throughout. Germans and Japanese lost ground, but Chinese issues improved. Dollar stocks followed the fall and subsequently rally of Wall Street. The outstanding feature of the markets was the activity and strength of industrial equities, which recorded widespread and in many cases substantial gains. A shortage of stock contributed materially to the advance. The better class issues were particularly in demand but virtually all industrial groups went ahead. South African gold shares, notably the developers, were in demand prior to the week-end, but reacted sharply afterwards on fears of native troubles. Coppers were firm throughout while leads and zincs improved. Oils were in strong demand and recorded substantial gains. Rubbers and teas made a firm showing, although the buying of teas was somewhat selective.

The Money Market

The surprising feature in the money market last week was the ease with which discount houses were able to repay loans from the Bank of England. The turn of the year saw easy credit conditions, which continued throughout the week. To tide them over the market took money for periods extending to next Tuesday at 11 percent. Previous operations by banks in buying up maturities cushioned the effect of tax repayments. A number of bank houses also held an excess of bill

maturities. All these factors made for very comfortable conditions. The higher rates which the market had to pay for money recently, combined with continued inability of sterling to recover, resulted in a fresh rise in the treasury bill rate. Applications for treasury bills totalled £375,480,000, of which £230 million were allotted at an average rate of 38s 4.29d compared with 37s 3.82d in the previous week. This week, £230 million are offered. The Bank of England return for the week ended 5th January showed that notes in circulation were about £20 million lower at around £1,731 million, while bankers' deposits were about £5 million higher at around £281 million. Fine trade bills for three months were quoted at 24 to 3 percent, for four months at 24 to 31 percent and for six months at 3 to 4 percent.

Fluctuations in Rubber Prices

With the London rubber market vulnerable to influences either way, fluctuations last week were somewhat violent at times. Initially, the stringency of the supply position for nearly rubber was accentuated by the Suez Canal blockade, with the result that buying orders were difficult to place. Near and aloft parcels moved up to a premium of 1½d a lb. over January shipment. A sharp decline followed the reopening of the Suez Canal for traffic, and prices gave way further under lower New York and Singapore advices, together with the suggestion that the U.S. stockpile might be subject to review. Latterly, the market was erratic as outside buying and selling orders appeared. No. 1 RSS on spot lost the interim rise of 2d a lb and closed about unchanged on balance at 29½d asked. Sole crepe was a relatively quiet market, but prices hardened and business was done at around 35d a lb for 1 8th inch smooth No. 1 on the spot.

Price Outlook for Quicksilver

The price outlook for quicksilver is not too clearly defined at the moment, according to trade sources. The current impression held in some quarters is that rates might well ease during coming weeks. The London ex-warehouse price does not look particularly firm. Recently it was quoted at £109 to £110 a flask, compared with £110 previously. The present somewhat uncertain undertone is regarded as partly symptomatic of conditions which usually prevail at the end of one year and the beginning of the other, as well as though further easing would not be unexpected. Well limited. The view is that Spanish and Italian producers are reluctant to become too competitive. Moreover, it has been rumoured that the U.S. Government might seek further supplies from both countries during the early part of this year. It is suggested that it might have to buy in Europe because so far it has not acquired any metal at the guaranteed price of \$225 it offered to U.S. and Mexican producers some months ago.

Bullion Market Trends

Messrs. Samuel Montagu and Company's quarterly bullion review says the London gold turnover has again dwindled. Middle Eastern demand has increased and Far Eastern absorption has remained normal, but net private buying in Europe has virtually ceased. On the other hand, the absence of selling pressure implies an absence of any large in an increased demand for essential industries and in off-take for the Continent and for Maria Theresa dollars. As offering of sterling area silver and no further supplies came from Russia or Japan, the London market for the first time made December, 1953, to buy dollar silver for essential purposes.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 5th January shows gold stocks unchanged. Foreign deposits fell by \$13 million and foreign investments by \$28 million. The Federal Reserve portfolio of Government securities decreased by \$113 million, at it sold \$50 million of bills and \$63 million which it was holding under repurchase agreements. Member banks' borrowings fell by \$207 million to \$358 million, while their excess reserves rose by \$358 million to \$1,000 million. The business ratio remained unchanged at 44.8 percent. The business loans of the New York City banks fell by \$114 million to \$7,454 million, compared with a fall of \$231 million to \$8,299 million a year ago.

Reaction to Indian Duty Increase

London traders are not surprised by the Indian Government's decision to increase the tea export duty. In view of the considerable rise in prices over the past few months, they had in fact predicted such a move. However, at this early stage it is likely to have on the market. The increase in the export quota is not expected to have any important effect on the overall supply situation as the additional amount it makes available—7,000,000 lbs.—is roughly equivalent to only one week's consumption in the United Kingdom.

Hongkong Gold Firmer

Hongkong gold was firmer last week. After opening at \$(HK) 256 3/8, it edged initially to \$(HK) 256 3/4, after which it reacted to \$(HK) 255 1/4 at midweek. Later, the price advanced steadily to a high of \$(HK) 258 at the week-end. Official off-take was 2,610 tael and unofficial 13,900 tael. No forward contracts were reported. Arrivals in Macao were reported at 33,000 ounces. Bullion traders expect a steady firm market in the near future, with increased demand from Indo-China sources and greater difficulties in smuggling from Macao.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

BETTER DEMAND FOR FUNDS

Wednesday, 12th January.

THERE is a keener demand for funds in the Calcutta money market, though conditions are not yet actually tight. Strong demand has been reported from the sugar centres where cane-crushing is now in full swing; advances against food-grains have been maintained and the cotton and woollen mills have continued their demands for accommodation. Jute advances on the other hand have fallen. The interbank market has been livelier, with the call rate at 3 percent.

Very few export bills have been seen in the exchange department, and those few were tea. Gunny documents are scarce. Remittance has been fair. The principal exchange rates are steady with the U.S. dollar at Rs. 480-12.

Bullion was steady on good off-take. Silver rose from the previous week's level of Rs. 155-2 to Rs. 156-14, quoted today. The ready price was 3 annas higher. The price was unchanged at 74d. in London and at 85¢ in New York.

Gold also moved higher from Rs. 89-4 to Rs. 90-1 in sympathy with silver. The sovereign at Rs. 58-4 showed little change.

Rises of Rs. 18.80 crores and Rs. 8.59 crores in notes in circulation and the total note issue to Rs. 1219.29 crores and Rs. 1235.09 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 7th January, 1955. The expansion in currency was adjusted by raising rupee securities by Rs. 9.94 crores to Rs. 427.69 crores. Notes held in the Banking Department consequently fell by Rs. 10.21 crores to total Rs. 15.80 crores. Deposits showed an all-round decline. Deposits of the Government of India and other Government accounts fell by Rs. 1.93 crores and Rs. 5.64 crores, respectively. Balances of commercial banks at Rs. 63.83 crores showed a decline of Rs. 5.30 crores due to good demand for funds. Balances held abroad declined by Rs. 74 lakhs to Rs. 66.90 crores as did investments by Rs. 84 lakhs to Rs. 74.50 crores. Other loans and advances decreased from Rs. 21.29 crores to Rs. 18.33 crores, of which advances to scheduled banks against usance bills totalled Rs. 3.35 crores against Rs. 2.90 crores. Ways and means advances stood at Rs. 2.75 crores (Rs. 1.67 crores).

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills, opened on 11th January, amounted to Rs. 1,30,00,000. The average rate of acceptance remained unchanged on the previous week at Rs. 2-8-0 percent per annum. Tenders for Rs. 99-6-0 percent were accepted. Tenders for another Rs. 1 crore of Treasury Bills will be received at all the usual centres up to the close of business on Monday, 17th January, 1955. During the week ended 7th January, Government of India Treasury Bills for Rs. 52 lakhs were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 31st December, 1954, discloses Demand and Time liabilities at Rs. 573.36 crores (Rs. 6.19 crores on account of borrowings from Banks) and Rs. 368.71 crores (Rs. 3.57 crores) compared with Rs. 574.98 crores (Rs. 12.67 crores) and Rs. 367.26 crores (Rs. 3.36 crores) respectively in the previous week. Cash and balances with the Reserve Bank have advanced by Rs. 3.87 crores and Rs. 1.91 crores to aggregate Rs. 35.90 crores and Rs. 67.54 crores, respectively. There is a drop of Rs. 94 lakhs in investments to Rs. 348.04 crores. Advances and bills discounted at Rs. 538.41 crores reveal a rise of Rs. 1.27 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 11.0 percent and 57.2 percent against 10.4 percent and 57.0 percent.

The return of the Imperial Bank of India for the week ended 31st December, 1954, shows a drop of Rs. 1.44 crores in total deposits to Rs. 231.19 crores. Investments in Government Securities are up by Rs. 1 lakh to Rs. 97.37 lakhs, while other authorised investments remain unchanged at Rs. 11.39 crores. Loans, cash credits and overdrafts have risen by Rs. 75 lakhs to aggregate Rs. 94.65 crores, while bills discounted and purchased have fallen by Rs. 52 lakhs to stand at Rs. 6.24 crores. Cash and balances are, in consequence, shown at Rs. 32.94 crores or Rs. 5.81 crores less.

The following is a statement of the cash balances of the Central Government on the last day of September 1954:—

(1) At the Reserve Bank of India	1,42,93,37,000
in India	2,32,98,000
(2) At treasuries in India	
(3) In England (Sterling converted at 18d. the Rupee)	2,01,89,000
Total	1,47,28,24,000

The profit of the BANK OF INDIA LIMITED for the year ended 31st December, 1954, subject to audit, including the sum of Rs. 7,29,778-2-6 brought in

amounts to Rs. 84,30,851-5-5. Provision for income tax and super tax absorbs Rs. 29,00,000 and interim dividends at the rate of 6 percent absorbed Rs. 15,00,000. The balance available for distribution is therefore Rs. 40,30,851-5-5. The directors propose to pay a final dividend at the rate of 8 percent making 14 percent for the year. The carry forward, subject to the payment of a bonus to the staff, is Rs. 20,30,851-5-5.

The net profit of DEVKARAN NANJEE BANKING Co. Ltd. for the year ended 31st December, 1954, including Rs. 1,55,362-3-10 brought in, subject to audit, amounts to Rs. 9,49,911-7-9 (after allowing depreciation on furniture Rs. 65,035-7-11 and bank premises depreciation Rs. 25,000). Out of this, the directors have made the following appropriations: to reserve fund Rs. 1,60,000; to investment reserve Rs. 50,000; to provision for taxation Rs. 3,75,000; to pay dividend at Rs. 2 per share, Rs. 2,00,000 and to carry forward Rs. 1,64,911-7-9.

The net profit of the INDIAN OVERSEAS BANK Ltd. subject to audit, for the year ended 31st December, 1954, after providing for contingencies and expenses amounts to Rs. 15,60,391-1-5 including the sum of Rs. 2,25,270-12-6 brought in. The directors have made the following allocations: provision for taxation Rs. 7,00,000; transfer to reserve fund Rs. 3,50,000; to recommended dividend of 6 percent Rs. 2,94,552; and to carry forward Rs. 2,15,839-1-5.

MACKINNON, MACKENZIE & CO. LTD.
16, STRAND ROAD, CALCUTTA.

A setter
with a
brand new jig...

... merrily wagged his tail in time to the music and danced to the tune of 'Over the Lathes'.

"What," said the machine shop foreman, "is the reason for this ollickation?"

The setter, by now out of breath, replied, "I've just heard our machines are to be automatically lubricated by Tecalemit!"

A wistful look appeared in the foreman's eyes. "I wish sometimes," he said, "that I was a machine and could get well oiled at regular intervals!"

A DITCHER'S DIARY

"A high proportion of members are illiterate and cannot count money beyond Rs. 10 or Rs. 20". I find it a bit hard to believe that any large number of adults cannot count, but this is one of the findings of the Indian Institute of Economics in a survey it has carried out of the working of co-operatives in several districts of Hyderabad. The results have just been published by the State Government press; they are all pretty gloomy but this must surely be the gloomiest. That the co-operative movement has failed, we all knew—but what chance has it got of working if "a high proportion" of the people it is meant to benefit cannot count past twenty? The Institute found that over 83 percent of the active members could neither read nor write, which neither surprises nor dismays me. Literacy is not all that important when you have some native wit and friendly advice on how to grow your crops, but without the nous to count how can a man decide whether it is more lucrative to grow cotton or cane? While to teach simple birth control to men and women who cannot reckon the days of the month, is a lost cause. We can all imagine what it is like to be illiterate, because it is an experience we have every time we go to a foreign country, but it requires a considerable effort to put yourself in the place of a man who cannot count further than his fingers and toes. However, I believe that these elementary arithmetical skills are comparatively rare in Europe. Economic historians who have checked through the ledgers kept by the feudal abbots of England and France report that almost all the simple additions and subtractions are wrong. The medieval clergy, who functioned rather as our late Indian zamindars, were hopeless at arithmetic, and it was not until commerce arose in the Italian ports of Venice and Genoa that the ability to add and multiply accurately was spread at all widely among the populace. The State Bank, which on Mr. A. D. Gorwala's showing is going to work such wonders in rural credit, had best lay in a stock of abaci.

The innocent American mannerism of putting into the language of business, views and sentiments that have nothing to do with business has earned them, I am sure, a lot of misunderstanding. Last week brought an example in the statement of a member of the U.S. Cabinet—"I'm bull on the world"—which is probably a harmless way of saying that the international outlook is bright—except that many people might think it vulgar. Worse, some would take it as evidence that you wanted to run the world as though it were a big business with yourself as managing director, which is definitely not the American intention. I suppose Americans are so used to this extension of market jargon that they do not notice it. Fully sixty years ago it had already spread to the academics, and anyone who has read William James or John Dewey will know how much use they made of it—"ideas that pay cash", to take one of James's examples. Now it has spread to the churches and I have just seen an article in an American magazine by the Very Reverend Monsignor McManus where he makes the following remarks about education: "Catholic education is flourishing in a sellers' market. Our backlog of orders for Catholic education may be computed from the official record of infant baptisms since 1944.....The market is steady. For about nine or ten more years, the annual infant baptism rate will be about a million or more but then, God willing, the large number of Catholics born in the forties will marry and start another baby boom....." Carelessly read, this could inspire one to dash out and buy a few ordinary shares in the Church. Language that is suitable to the president of General Motors in

his annual report seems thoroughly unsuitable in speaking of international affairs or education. Bears, bulls and booms are all very well in their place (especially the two last-named) but that place is in the financial papers and the markets.

"Don't proceed on the amber; wait for the green". I am admonished three or four times between home and the office. But if you really want to stop motorists charging over a pedestrian crossing while the light is still only yellow, why have a yellow light at all? That is, why not go straight from red to green as they do in so many cities in other parts of the world? The yellow light serves a useful function in the transition from green to red, giving warning to vehicles in motion that they must stop, but in the reverse movement it seems to have no use at all except to give the impatient a chance to get off the mark before they should. The abrupt change from red to green will only inconvenience the canny ones, who save an anna a week by switching off their engines at traffic lights. The alteration to the signalling system cannot be difficult, since it has been made elsewhere. Anyhow, that's my contribution to the Safety First and Courtesy Fortnight, and it is no sillier than some of the "we love our children" notices.

The London newspapers seem to have found a lot wrong with the New Years Honours List. One of them said that it had degenerated into "a haven for ageing admirals and bureaucrats." I must confess that I did not find it very interesting reading and couldn't even think of anything to say about it here last week; the British community in India certainly made a poor showing. But, looking at it again, there are two honours, not specially related to India, which give special pleasure to a financial newspaper, the knighthoods which were conferred upon Mr. W. R. Cockburn, chief general manager of the Chartered Bank, and Mr. Oscar Hobson, city editor of the *News Chronicle*. Mr. Cockburn spent many years in the service of the Chartered Bank at home and abroad and his honour was a fitting recognition of his own outstanding place in exchange banking and of the Chartered's centenary which was celebrated last year. His eastern service was in China, Japan and the Straits and there are few men in the city of London who have a closer knowledge of the affairs of the Far East. Oscar Hobson is the doyen of British financial journalism. A member of a gifted family, a distinguished scholar, a Liberal in the best and widest sense of the word and a writer who has the gift of making the most abstruse "economic problems" appear simple, it is difficult properly to assess his impact upon the financial journalism of our day. As editor of the *Financial News*, city editor of the *Manchester Guardian* and for the past twenty years city editor of the *News Chronicle* he-trained a whole generation of financial commentators and his influence has spread far and wide throughout the profession. All over the English speaking and reading world lesser members of his craft are in one way or another indebted to Oscar Hobson, many of them for practical help in personal and professional problems. For them his knighthood was a matter of the keenest satisfaction.

Overheard in a London club: "The main result of the limited exchange allowance for business men is that, whereas in the good old days a man took his secretary to Paris for the weekend and said she was his wife, now he takes his wife and says she's his secretary. Decay of moral standards I call it".

THE DITCHER.

Announcement

A fully equipped PROCESS DEPT. is being set up staffed by FACTORY TECHNICIANS FOR USERS OF

Multilith

The "MULTILITH" is a completely automatic offset machine, specially designed for use in the office by non-technical operators. It produces the highest quality stationery and sales literature, in monochrome or multi-colour. Paper or metal masters, easily prepared by hand or typewriter, provide for the faithful reproduction of manuscript, typing, pencil, pen-and-ink and brush work, carbon-paper tracings, etc. Photographically-prepared metal masters are used for the production of half-tone and line illustrations text matter in standard type faces and all classes of work within the scope of offset lithography.

ing gap of Rs. 70 crores between the outlay and the available resources.

For 1953-54, as against the outlay on the plan of Rs. 356 crores according to the revised estimates, internal resources and the utilisation of external assistance were estimated at Rs. 208 crores. Thus, the gap between outlay and available resources, according to the revised estimates, was Rs. 148 crores—Rs. 136 crores at the Centre and Rs. 12 crores in the States. The gap at the Centre was to be covered by the issue of treasury bills, withdrawals from cash balances and the sale of securities held in reserves. The gap in the States was to be met by withdrawals from cash balances. The actual deficit in 1953-54 cannot be determined precisely at this stage, but from changes in the cash balances of the Centre and of State Governments over the year, and from figures of the net increase in outstanding treasury bills, it appears that the deficit has been smaller. This may be due partly to shortfall in expenditure and partly to improvement in receipts. The real position will be known when the actuals for 1953-54 become available. On very rough estimates, it appears that the divergence between the revised estimates of outlay on the out and the actuals may be of the order of Rs. 30 crores; the actual of expenditure may be Rs. 320 crores as compared to Rs. 356 crores according to the revised estimates.

For the fourth year, that is, in 1954-55, as against Rs. 572 crores, the estimate of internal resources works out to Rs. 289 crores. Utilisation of external assistance is estimated to be Rs. 48 crores, leaving a gap of Rs. 236 crores between the budget outlay on the plan and internal resources. Every attempt is being made to the target of developmental expenditure may in consequence be possible to bring up an expenditure this year to something like Rs. 2,000 crores.

order of expenditure over the first four years work out to Rs. 1,350 crores. If in the of the plan an expenditure of Rs. 650 crores is incurred, the total outlay on the five year-period would roughly be Rs. 2,000 crores. The table below summarises the position in regard to outlay and resources.

	1951-52	1952-53	1953-54	1954-55	1955-56	Five-year Total
Estimated Outlay	260	270	320	500	650	2,000
Domestic budgetary resources	205	148	182	289	276	1,100
External assistance	65	41	26	48	70	250
Total resources	270	189	208	337	346	1,350
Gap between Outlay and the available resources	10	81	112	163	304	650

Improving Rail Transport

The Railway Board has taken certain steps to improve the availability of transport with the existing facilities.

1. As difficulties are mainly experienced in the metre gauge sections of the Northern region, to improve wagon availability transshipment of traffic via the different junctions has been so rationalised that each junction serves a specified area. By this arrangement not only has the metre gauge lead been reduced but cross-movements have also been avoided. Wagons of any particular area remain circulating in the area itself, which ensures an even flow and tends to improve regulation of traffic and usage of wagons.

2. As a further step to improve the metre gauge wagon availability, several adjustments in the routing of traffic have been made:

- Piecegoods from Ahmedabad for North Bihar, which used to move by the all metre gauge route, are now moved by broad gauge up to Manduadih and transhipped into metre gauge wagons at Manduadih.
- Salt from Sambhar, which used to move by the all metre gauge rail route to North Bihar and Assam, is now transhipped at Agra East Bank into broad gauge wagons and retranshipped at Manduadih into metre gauge wagons for North Bihar and Assam and at Kanpur for U.P.
- Gypsum movements, which used to take place via Delhi Sarai Rohila, have been routed via Bhatinda. This has greatly relieved the metre gauge wagon availability on the Northern Railway and has helped make Delhi Sarai Rohila a free route, which for years had been a restricted junction.
- Proper balancing of traffic has been made via the various transshipment points.

3. To increase the capacity for the Saurashtra area, a coal dump has been opened for loco coal at Sabarmati and a similar dump will be opened for public coal at Viramgam. This will help avoid the detention of wagons at transshipment points and will also help form trains in marshalling order.

4. Transshipment capacity at Sawai Madhopur has been stepped up from 15 wagons to 30 wagons and will shortly be stepped up by another 15 wagons. This will relieve Agra East Bank transshipment and will enable the withdrawal of limitations in booking via this junction.

5. In connection with traffic moving for destinations south of Bezwada, heavier engines are now being used, which can haul bigger loads and will enable the movement capacity to be stepped up between Bezwada and Madras from 350 to 420

wagons a day. Likewise via Raichur, the capacity will shortly be stepped up from 135 to 160 wagons daily.

6. On the Ratlam-Godhra section where, again owing to limitation of capacity, more traffic could not be moved, it has been arranged by certain adjustments to move 50 wagons a day more. It is hoped that by lengthening the crossing loops on the section and posting heavier engines, this capacity will further improve by 60 to 70 wagons by the middle of this year.

Express Goods Trains

To speed up long-distance goods movement, express goods trains have been introduced on all the main trunk routes, namely, Bombay-Shalimar, Bombay-Madras, Bombay-Delhi, Madras-Shalimar and Delhi-Howrah. These trains will run according to fixed schedules.

Calcutta Railway Electrification

The team appointed by the Railway Board for railway electrification in the Calcutta area has completed its preliminary survey of the sections and is engaged in preparing detailed estimates, phase by phase. The electrification of the Calcutta suburban services is given high priority. The first sub-phase will include the section between Howrah and Burdwan via the main line, and the Tarakeswar branch of Howrah division. An abstract estimate amounting to Rs. 11.84 crores has been sanctioned by the Railway Board. The work is expected to be completed by June 1957. Civil engineering work on this section is in hand. Global tenders for overhead equipment, sub-station equipment and rolling stock, etc. have been called for. Negotiations for electric power are proceeding with the D.V.C. and the West Bengal Government. The sanctioned scheme covers 38 route miles. Steam services have reached saturation point in respect of Calcutta suburban traffic and the only way for the railways to cater adequately for traffic is to electrify. The Government is committed to a policy of eventually electrifying all the suburban areas of Calcutta. After electrification, the capacity will be adequate to handle approximately double the existing traffic. Twelve feet wide stock, similar to that in the Bombay area, will be used so as to provide adequate capacity with the minimum of stock.

Integral Coach Factory

The construction of the Integral Coach Factory at Perambur is progressing satisfactorily and production of the first coaches is expected to start during the course of this year. The factory is designed for the manufacture of 350 all-steel B.G. coaches, and it is planned that this rate of production will be achieved by 1960. India is already self-sufficient in the manufacture of ordinary types of coaching stock and with the establishment of this factory another step will have been taken towards complete self-sufficiency.

Indo-U.S. Air Agreement

The Indo-U.S.A. air agreement, it is officially announced, will terminate on 14th January due to irreconcilable differences between the two Governments over the right to predetermine frequencies. At the request of the U.S. Government the Government of India is issuing temporary permits authorising the continued operation of two round-trip flights weekly to and through India by Pan American and T.W.A. airlines, which are at present operating three weekly services each. Pan American will serve either New Delhi or Calcutta on each flight while T.W.A. will serve only Bombay. Negotiations for a fresh agreement are expected.

Tea Prices

The Government of India is doing everything possible to assist Britain to reduce tea prices. Due to the efforts of Mr. Low the exportable quota has already been enhanced by 61.7 million lbs. As a long-term measure, international restrictions on both the production and export of tea are being removed. A new international agreement may shortly be signed.

First Class Accommodation

First class has come back on the Indian Railways. The classification in future will be first, second, third and air-conditioned. It is the second and intermediate classes which are being upgraded. The travelling public, for the time being, will have the spiritual comfort that, by paying second class fares, it can travel in first class. A warning that railway fares are subject to adjustments has, however, been given. The freight structure, in relation to inland and coastal steamer rates, is also being examined.

Central Government's Revenues

The Central Government expects its revenue anticipations to be comfortably realised. The Finance Minister had budgeted for Rs. 175 crores from customs and Rs. 76,31,00,000 from Central excises. During the seven months ended October, for which figures are available, revenue import duties earned Rs. 66,86,00,000, compared to Rs. 63,02,00,000 in 1953 and Rs. 127,85,00,000 budgeted for. Protective duties yielded Rs. 4,31,00,000, compared to Rs. 3,48,00,000 in 1953 and Rs. 6,35,00,000 budgeted for. The total of import duties was Rs. 71,26,00,000, or Rs. 4,65,00,000 more than in 1953. With the liberalisation of imports, it is confidently expected that the balance of nearly Rs. 63 crores will be made up in the remaining five months. While realisations from land customs were on the 1953 pattern, export duties have shown a steady decline, the figures for the last three years being Rs. 16,43,00,000 for 1954, Rs. 22,73,00,000 for 1953 and Rs. 34,19,00,000 for 1952, against the budget estimates of Rs. 40,50,00,000 for 1954-55. It is hoped, however, that the enhanced duty on tea will assist in making up the gap of Rs. 24,07,00,000 during the remainder of the financial year.

London

BRITISH RAILWAY STRIKE AVERTED

BUDGET REVENUE BUOYANT

(FROM OUR LONDON CORRESPONDENT)

THE City, which has hitherto refused to allow itself to be upset by the railwaymen's threat of a strike this week-end and has maintained a high state of activity in most markets, especially on the Stock Exchange, has been justified by events. For the time being, at least, the threat has been suspended while the union leaders and the British Transport Commission get down to the task of discussing an immediate wage increase and a reorganisation of the wage structure "in the spirit and letter" of the recommendations of the Court of Inquiry appointed by the Minister of Labour. The latter, in his handling of this explosive situation, has further enhanced his reputation as a negotiator, but the implication in the Court of Inquiry's interim report that nationalised industries need not necessarily pay their way—though the Transport Act definitely states that one must, by balancing one year with the next—but must pay fair and adequate wages to their employees, gives rise to dangerous possibilities for the future to which the present Government and the country as a whole will need to give careful attention. The real crisis on the railways is still far from being settled, and already the managements of other nationalised industries, and indeed of all industries, are looking over their shoulders in an effort to visualise what the repercussions are likely to be elsewhere.

In defence of the City's continued optimism it must be admitted that the economic outlook, in many respects, is bullish. For instance, the Treasury returns for the first nine months of the current financial year show a deficit of no more than £355 million, which is nearly £200 million less than at the time a year ago. In the final quarter, moreover, revenue usually outstrips expenditure. It exceeded it by £639 million last year, and all that is needed to meet estimates for the current year it need do no more than exceed it by £361 million. Under almost every head this year revenue is up, and the aggregate quite substantially so, whereas expenditure so far shows a slight fall. It is now fairly confidently anticipated that the Chancellor of the Exchequer will find himself something like £300 million better off than he expected to be next April when he was framing his Budget estimates last April. An improvement in the national finances of that magnitude would certainly furnish him with considerable room for manoeuvre, even within the limitations which he has imposed upon himself in all his public statements during the course of the year. These, it is felt, might well be relaxed if 1955 should, in fact, see a General Election.

1954 Gold and Dollar Reserves

Again, although the gold and dollar reserves of the sterling area fell by \$163 million in December, at the end of the year 1954 they stood at \$2,762 million, or some \$244 million higher than they did on 31st December in the previous year. Compared with the improvement over the whole of 1953 of £672 million, the 1954 figure does not appear too impressive but in point of fact the comparison is unfair. United States aid in 1953 totalled \$307 million, against only \$152 million last year, and in the second half of 1954 debts were paid off, amounting to \$112 million, to the International Monetary Fund and a good start was made with the repayment of debts to other European countries. With the year-end payment of \$189 million to the United States and Canada against outstanding loans, and the usual \$2 million to European creditors, it came as a pleasant surprise that the reserves in December fell by no more than \$163 million. United States defence aid totalled \$8 million and the E.P.U. November surplus provided a further \$3 million, which meant that our "real" dollar surplus in December worked out at \$17 million to compare quite favourably with the November deficit of \$30 million and the surplus of \$12 million in October. There are no large debt payments in sight in the immediate future, but recent surpluses with the E.P.U. will decline or vanish over the next few months—for December's £7 million deficit we will be making a \$10 million gold payment this month—for seasonal reasons. The reserves, therefore, will move in close relation to our overseas payments pattern, which is usually in an upward direction in the first half of the year.

There are, however, some sobering factors. The coal situation is far from encouraging. According to the 1954 figures, revealed by the Chairman of the National Coal Board in his annual survey, inland consumption rose by 6 million tons, against a net increase of only 270,000 tons in production. Stocks had to be drawn upon, and to meet the deficit 2,900,000 tons had to be imported from the United States and Europe at a loss to the Board of £51 million while exports and bunkers—on which the Board makes a profit—were cut by about one million tons. Deep-mined coal output increased during the year by 1,630,000 tons as miners reaching record levels of output per man-shift both at the face and overall, but the weekly average manpower declined from 712,900 in 1953 to 707,200 last year, and at the close there were only 704,700 men in the industry. The deep-mined output rise was virtually offset by opencast production falling by 1,460,000 tons due to delay in obtaining site clearances, and the bad weather.

In the matter of steel supplies also, despite the new production records being set up by the in-

dustry each month, some shortages are beginning to make themselves felt in the face of "a sudden upsurge of demand" which the Federation believes arises from the desire to replace stocks. While confident of its ability to expand production to meet real demand—and large-scale plans for expansion are in hand or in prospect—it is significant that imports are being increased.

Lancashire and Cloth Imports

The labour side of the Lancashire cotton industry made an abortive attempt on Wednesday to persuade the President of the Board of Trade to take some action to restrict imports of cheap cloth from India and Japan. A delegation of union leaders waited on Mr. Thornycroft and had a long discussion with him, during which one of them produced a sample of Indian cloth which cost less in its finished state than Lancashire cloth cost to the weavers. Such cloth, he told the President, cost Lancashire weavers 11.57d. a yard as yarn and, when finished, cost 14.35d. a yard. The cost of Indian cloth finished was 11.25d. The delegation later expressed the opinion that it had created "some impression", but it is obvious that Mr. Thornycroft takes a less gloomy view of the situation than the Lancashire industry—or perhaps he is expecting some easing of the position as a result of Mr. Low's discussions during his visit to India. A statement issued after the meeting by the Board of Trade said that in reply the President thanked the deputation for its expression of views "which he had noted and would bear carefully in mind, and which had given him a clear appreciation of the issues involved." The Government, the statement went on, "were watching the position and if a serious situation developed they would certainly consider what action could be taken."

Meantime, the issues, on both sides, are being fully ventilated in the columns of "The Manchester Guardian", which for some weeks now has devoted a considerable amount of space to the subject. Its own editorial comment is typically restrained. There would seem to be no doubt that Lancashire's fears are not without some foundation, but it holds that past co-operation between the British and Indian industries offers a better line for approaching this fresh problem than would any official measures of restriction.

Madras

CLAIMS FOR STEEL PLANT IN SOUTH INDIA

MR. T. T. KRISHNAMACHARI
EXPLAINS DIFFICULTIES

(FROM OUR MADRAS CORRESPONDENT)

THE Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari said at a Press conference here that the Government's policy on the nationalisation of banks would emerge only when considering legislation for taking control of the Imperial Bank for the purpose of a State Bank. The Government, he said, was thinking in terms of a production target of six million tons of steel in the second five year plan period. But it was also thinking in terms of bigger imports. Incidentally, he explained the difficulties in starting a steel plant in the South. The lack of coal would make it uneconomic; even if the lignite project, which was still on a tentative basis, proved a complete success, the Government would have to consider the economics of steel production with

Referring to foreign assistance, Mr. Krishnamachari said that India was not getting very much from abroad—it was only Rs. 220 crore Little was coming except by way of Go-to-Government aid. As far as private was concerned, India was unlikely to a true capital. But, he added, the authorities were open minded and when money came, strings attached, whether from private or Government sources, they were prepared to accept.

Lignite Mining Project

At a conference of representatives of the Madras Governments it was decided to set up an eight-man high-level authority to be in charge of the future investigation and execution of lignite mining project at Neiveli. The Government also decided to sink 50 bore-holes for the depth of lignite. It was disclosed in connection that the schemes prepared by the consultants envisaged the production of 700,000 tons of lignite a year, development of K.W. power plant, setting up of factories, manufacture of 700,000 tons of lignite bri-

350,000 tons of carbonised briquettes and 200,000 tons of ammonium sulphate. The experts had also suggested schemes for the manufacture of various synthetic products from lignite which could be taken up later on. The schemes broadly approved by the conference would involve an outlay of Rs. 58 crores. The Union Minister for Commerce and Industry indicated that if the detailed project was finalised in time, it would be included in the second five year plan. He added that finance would not be a serious problem.

Claim for a Steel Plant

The Salem District Planning Board, at its recent quarterly meeting, passed a resolution requesting the Madras Government to urge the Union Government fully to examine the suitability of Salem as a site for one of the proposed iron and steel plants in view of the abundance of iron ore there and the proximity of Neiveli, where fuel and power would be available. It was stated that the magnetite iron ores found in the district were suitable. Incidentally, the Mysore Government had also requested the Centre to consider the claims of Bellary for an iron and steel plant utilising the iron ores of Sandur in the area. The Russian experts who were recently here did not, however, appear to have favoured the location of such a plant in Salem District.

Commercial Views on Import Policy

The Andhra Chamber of Commerce has welcomed the Government's announcement on the import policy for the first half-year of 1955. According to a statement issued by the president of the Chamber, the announcement is welcome not only to all categories of importers, but also to certain sections of consumers. The scheme of canalisation of certain imported raw materials and of control over the profit margin in the case of some items, should, however, be carefully implemented as it could affect genuine importers and create hardship for industries depending on those raw materials. The statement adds that though the need to ensure uniformity in the basic period has been accepted by the Government of India, there are still different basic periods for different commodities. It has been suggested in this connection that the basic period may be extended till March 1954, in respect of all items, as far as the year 1955 is concerned. The Government would have to consider the question of helping small importers while fixing the turnover qualification for newcomers. The minimum turnover qualification for newcomers ought to have been fixed at a much lower figure so as to enable more newcomers to benefit from the scheme. It is finally contended that there is no justification for any increase in the licence fee, at least in the case of applications for a value not exceeding Rs. 10,000.

Road Development in Andhra

The Andhra Government has drawn up a Rs. 21-crore road development programme for the second five year plan. Out of this sum Rs. 12 crores are intended for the State highways and the balance for the national highways. The road programme, when implemented, will find 75 percent of the roads in the State tarred, at the end of the plan period. The Government expects to complete the work of tarring all the five national highways passing through the State by 1955.

Sir K. Mealing on Indian Problems

Sir Kenneth Mealing, chairman of the Mercantile Bank of India, said here that it would be better if the Government of India took business men along with it and gave them positive encouragement to co-operate and work for the development of the country in the next 10 or 12 years. To talk about increasing the standard of living and abolishing unemployment might seem simple if the population was static. There should be big thinking, big planning, large expenditure, increased production and a broad outlook, otherwise, instead of going forward, the country would meet with disaster as the food supply would be inadequate and unemployment would increase.

Congress Session at Avadi

The stage is now set for the 60th Session of the Indian National Congress at Avadi near Madras in the third week of this month. The Session will involve an expenditure of more than Rs. 10 lakhs. A mammoth exhibition covering an area of 30 acres is being organised at Madras as an annex to the Avadi Congress. Most of the departments of the Government of India and most State Governments are participating in this exhibition, besides a few industrial concerns of all-India importance.

Uttar Pradesh

U.P. CANEGROWERS' MEETING CALLS FOR STRIKE

RISE IN CANE PRICE DEMANDED

(FROM OUR LUCKNOW CORRESPONDENT)

A CANEGROWERS' conference held in Lucknow under the presidency of Mr. Shibbanlal Saxena has called for a strike of the State's cane-growers from 1st February next, if by that time no agreement is reached on their demand for raising the cane price to Re. 1 as 12 a maund. The conference has demanded, among other things, the pegging of the price of gur at Rs. 15 a maund, of sugar at Rs. 27 a maund and for a 55 percent share of the excess profits earned by factories during the last three years. The Government of India has already ordered 18 sugar factories in U.P. and Bihar to pay the growers a share of the excess profits made by them in 1952-53. The share to be paid in the eastern districts of U.P. will be 53 percent, and that in western U.P. 60 percent of the excess profits. Sugar factory workers will receive over Rs. 35 lakhs as bonus for 1953-54, according to the unanimous recommendation of the Bonus Subcommittee of the tripartite conference on the sugar industry. These gestures, generous as they are, will not materially affect the proposed strike inasmuch as it is an outright demand for an increase in cane prices that provides the inspiration, not to mention the political backing of the Praja-Socialists who find in cane prices a fresh field for agitation after the failure of the campaign against the enhanced irrigation rates.

The failure of the sugar policy pursued by the Government so far is emphasised by the fall in sugar production in the fourth year of the five year plan, the increase in sugar imports and the high prices ruling in spite of imports. The grant of licences for new sugar factories with an installed capacity of 300,000 tons a year cannot in itself step up sugar production unless there is also an appreciable increase in the production of sugarcane. The position at present seems to be that while in some States the average yield has gone up slightly, in others it has gone down in the same ratio, leaving things as they were. The growers' demand for pegging the cane price at Re. 1 as 12 a maund is in line with the recommendation of the Central Sugarcane Committee which has recommended this price, bearing in mind the widening gap between sugar production and the plan target. Besides, in the context of the Government's proposal for devising a measure of price support for agricultural commodities, it looks as though the growers have a fighting chance to win. The State Government, for their part, have not yet worked out any policy of price support, but their view seems to be that if cane prices have to be reduced in order to bring down sugar prices, then such reduction should follow and not precede an increase in cane production, and that in the meantime the minimum cane price for 1954-55 and 1955-56 must be suitably increased.

Campaign Against Co-operatives

The politics of sugarcane do not end with securing an economic price for the growers. Though the Union Minister for Agriculture, Mr. Punjabrao Deshmukh, has held up the U.P. cane-growers' organisations as models for developing commodity-wise organisations, Mr. Shibbanlal Saxena has launched a State-wide campaign for the dismemberment of the cane co-operatives. This seems rather strange because Mr. Saxena was once the staunchest advocate of co-operatives for cane growers. As a member of the Khetan Committee of 1938, Mr. Saxena is on record that co-operatives alone can ameliorate the lot of the growers and free them from the clutches of the factories. The formation of cane-growers' co-operative societies, of which more than 75 percent of the growers are members, should automatically have eliminated the grievances. Under the Sugarcane Supply (Regulation) Act, when a grower becomes a member of a society he is entitled to get financial aid, improvement of seed and technical advice. The discussed threadbare during the passage of the Bill last year and the Government also accepted that the cane development councils to be formed under the Act should train growers in better cultivation methods.

The societies get nine paise for every maund of cane supplied to the factories but of which three paise are given for development councils. The Government has ruled that wherever 75 percent of the growers are members of a society, the factory should buy only through that society. The idea behind this provision was to prevent the factories from playing the growers against the society. However, it is clear that the present move to dismember the co-operatives derives from political considerations, its being alleged that the political party which has captured control of the societies is making use of them to dominate others who have not become members of the societies.

Zamindari Bonds

The possibility of utilising the Zamindari Abolition bonds for investment purposes has lately been engaging some attention here. It may be recalled that the first five year plan threw out some tentative suggestions in this regard. "One suggestion which has been made," the Commission reported, "is that the bonds issued to zamindars, while they remain non-negotiable for periods to be indicated, might be made convertible into shares in projects undertaken by the State Government concerned or even by the Central Government. The arrangements may have certain advantages both from the side of the Government, and from the side of the person who converts his compensation bonds into shares in public enterprises." The suggestion, however, the Commission said, needs to be further examined with reference to conditions in the principal States. In the U.P. the estimate of compensation payable under the Zamindari Act is placed at Rs. 155 crores. So far bonds worth only Rs. 7.11 crores have been issued, but already the current market value of the bonds is anything between 42 percent and 571 percent. For the purchase of these bonds, at least three agencies have been started in Lucknow alone. In addition, private bankers have also been actively operating. The main reason for lack of interest in the bonds is, of course, their low rate of interest, namely 21 percent, taxable, the maturity period being 40 years. Secondly, the restriction regarding the payment of interest and principal in Uttar Pradesh only discourages many buyers. There is also the fear that when bonds to the tune of Rs. 150 crores are eventually issued, and if the whole weight of sellers is exerted on the market, it would become difficult to absorb the sale.

Although this problem seems urgent at the moment in Uttar Pradesh alone, it has country-wide interest because the amount of compensation payable by the six States which have enacted or are enacting legislation for zamindari abolition runs to Rs. 419 crores. As compared with U.P.'s figure of Rs. 155 crores, Bihar has Rs. 150 crores, Madhya Pradesh Rs. 68.5 crores, West Bengal Rs. 25 crores, Madras Rs. 15 crores, Orissa Rs. 10.5 crores and Assam Rs. 5 crores. Only the Central Government can take appropriate measures for preventing the wasteful fall in the value of these bonds. This it could do either by listing the bonds in the stock exchanges or by evolving some suitable machinery for converting them into instruments for financing development projects, on the lines suggested by the Planning Commission.

Pharmaceutical Research

Lucknow was chosen for a number of all-India conferences towards the close of December last, the Indian Conference of Social Work, the All-India Medical Conference, the All-India Bengali Literary Conference and the All-India Family Planning Conference. All of them were no doubt important in their own way, but of particular interest to the business community is a suggestion made by the State's Health Minister, Mr. C. B. Gupta for a compulsory levy of a research cess on indigenous as well as foreign manufacturers towards financing pharmacological research. Though indigenous manufacturers have made appreciable progress in certain directions, they have not reduced India's dependence on imports, as may be seen from the fact that imports in 1952 were valued at Rs. 15.5 crores as against Rs. 10 crores in 1951 and Rs. 8 crores in 1950. At present there are in India 75 big and 1,570 small manufacturing concerns, out of which 7 and 11 respectively are managed by the State. The total value of their output is estimated at Rs. 34.5 crores per annum. They consume raw material worth Rs. 12.6 crores out of which nearly half is derived from imports.

Jute

GOODS MARKETS ENCOURAGED BY MILLS' STOCK FIGURES FOR DECEMBER

FIRM TREND IN RAW JUTE CONTINUES

THE past week has seen a fair amount of activity in both the finished goods and the raw jute markets, and rates have shown a steady advance in both sections. As far as the goods markets are concerned, activity has been confined to small enquiries from the U.S.A. for hessians for forward delivery, which were not really large enough to have very much effect on prices. The hessian section reacted more to the publication of the mills' stock figures for December, which revealed a decrease of hessian stocks with a compensating increase in heavy goods stocks. This resulted in a fair amount of covering business in hessians, which tended to push up quotations. The heavy goods section has been comparatively neglected over the week as far as overseas business is concerned, but in spite of this rates have advanced. Speculative manipulations have been one of the causes of this steadiness, but the main reason would appear to be the very steady raw jute markets that have been ruling throughout the week, which have carried gunnies to new high levels as far as the forward positions are concerned. The gap between near delivery and forward delivery in the heavy goods section has closed rapidly over the past few weeks, and has now almost disappeared, on occasions even being at a premium over intermediary deliveries. Mills have not been able to take very much advantage of the higher prices ruling due to the fact that the advance of finished goods and raw material rates has been on par; the margin has, if anything, widened. Heavy goods have advanced by about Rs. 30 to Rs. 40 a ton over the week, whilst raw jute during the same period has gone up by approximately Rs. 54 a ton. Buyers have been reluctant to follow the rise, and have adopted a waiting attitude.

There are many diverging opinions regarding the outlook for the supply of raw jute. Not unnaturally, all talk of shortages appears to come from the sellers' side. The key to the whole problem undoubtedly rests with the supply position from Pakistan. With the recent tightening of regulations there, and the ban on the export of kutchi baled jute, Calcutta mills who wish to buy Pakistani jute might have to pay prices far in excess of those paid hitherto, and out of all proportion to the Indian rates and the gunny market. The quantity purchased at these higher rates will be much lower than originally calculated when crop availability was being estimated, and the balance therefore will have to be found from jute grown in the Indian Union. It is on these facts that the sellers are basing their ideas, and with this in mind they are buying jute for stocking rather than offering to mills. This is causing an artificial shortage at the present time, which is being considerably helped by the very poor imports into all the raw jute centres. These are extremely small for the time of the year, and prices upcountry are well in advance of their Calcutta counterparts.

Extension of Pakistani Licences

The situation in Pakistan has shown no change over the week, and business with India, with the exception of pucca bales and cuttings, is at a standstill. Here also imports have dropped to a very low level and prices in all areas are on the rise. It is reported that those export licences that were cancelled have been further revaluated up to the end of January 1955 to enable shippers to complete their outstanding contracts. This has caused a spurt in buying, but sellers are finding difficulty in getting jute of the required standard due to the very poor imports.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market on Thursday, prices were slightly steadier due to reports of moderate business in forward hessians with the U.S.A. No business was reported in the heavy goods section, and in resuscitated in sympathy with hessians, and in response to speculation. Opening quotations in heavy goods were 12 annas up in the near deliveries and 8 annas up in the forward positions, B Twills being quoted at Rs. 119.8 for January shipment and Rs. 119.4 for April-June shipment. Hessian prices advanced rapidly. January shipment 40in 100z was advanced up, being quoted at Rs. 44-10, and April-June shipment showed an increase of 8 annas to Rs. 44-12 per 100 yards. On the publication of the mills' stock figures on Friday, hessians again firmed up, and rates advanced 2 to 4 annas. The immediate reaction in the heavy goods section was downwards, B Twills losing Rs. 1-8 in the near positions and Re. 1 in the forward positions, but this section eventually followed hessians, and by the evening the losses had been made up. The firm conditions prevailing in the raw jute markets began to make themselves felt at this stage, and substantial increases immediately before and during the week-end caused new high levels to be reached in nearly all fabrics and positions by the time the markets reopened on Monday morning. B Twills were quoted at Rs. 122 for both January and April-June shipments, whilst 40in 100z hessians had advanced to Rs. 45-12 for January shipment and Rs. 45-40 for the April-June period. These rates continued to be

maintained by the steady raw jute markets and by speculation, but prices dropped slightly after the opening due to profit-taking at higher levels. Towards evening, rates again recovered in the heavy goods section to Rs. 124 for January B Twills, April-June shipment being unchanged at Rs. 122 whilst hessians showed a slight recession of 2 to 4 annas, near shipment standing at Rs. 45-10 and forward shipment at 2 annas less. These prices were fully maintained throughout the day, and markets closed on Tuesday evening on a very steady note.

At the close, goods prices are slightly lower than the closing rates on Tuesday but the market continues to be steady. Opening quotations on Wednesday morning are as follows:

	Jan.	Feb.	March	April-June	July-Sept.
Rs. Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
40in 80z.	37-8	37-6	37-2	36-14	36-4
40in 100z.	45-6	45-6	45-6	45-4	44-12
B Twills	122	122-4	122	122	118
Heavy Cees (Plain)	121-4	121-8	121-8	121-8	118
A Twills	132	131	149	146	141-8
Liverpools	141	139	138	137	131-8
Cornsocks	125-4	125-4	125-8	125-8	119

Raw Jute: During the week, the raw jute markets have gone from strength to strength, and from an opening of Rs. 32 for Ordinary Assam Bottoms, rates rose to Rs. 34 before the close. At the beginning of the week, mills showed very little interest and only scattered business was reported at advancing rates. As the price increased, they began to take more interest. Late on Friday and during the week-end about 14 lakh maunds of business was reported. Immediately after the week-end, following further price increases, mills withdrew from the market completely as the margin between goods prices and that for raw jute widened, and no business was reported. Sellers were very reserved on account of the very steady upcountry markets and the paucity of imports in all areas, and were only offering small lots at high rates. Prices then were Re. 1 higher than at the beginning of the period, and advanced another 8 annas at the opening on Tuesday morning. Mills appeared reluctant to follow the rise, but in the afternoon a large mill group purchased a large quantity at good prices and the market continued to rule firm.

It is estimated that during the week mills purchased not less than 5 lakh maunds of jute, which is the most for several weeks. Business was reported in Dhubri and Northern jute at Rs. 32 to Rs. 34 a maund basis Bottoms for January-February delivery, and for ordinary Assam jute at 8 annas less, the higher prices being for supervised marks. Small business was done in local packing jute at Rs. 30-8 to Rs. 31-8 a maund for one month's delivery. Mills continued to take an interest in Daissee Middles, only were done at Rs. 35 to Rs. 35-8 a maund. Towards the end of the week, with prices rising rapidly, Daissee was done at Rs. 34 to Rs. 34-8 a maund basis Bottoms for January-February shipment. Daissee Mesta was done at prices ranging between Rs. 27-12 and Rs. 30 a maund basis Bottoms. Small lots of bimli were also done at Rs. 28 to Rs. 30 a maund for fair average quality.

The only business reported in the pucca bale section was for Pakistani Cuttings at Rs. 120 to Rs. 130 a bale for ready delivery.

At the close the market is very firm following the purchase of about 3 lakh maunds on Tuesday. Prices have advanced a further 8 annas and opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. a maund Basis Bottoms.	Shipment.
Lower Assam	34-8	January-February.
Upper Assam	34	"
Northern	34	"
Purnea	34	"
Murshidabad Tossa	34	"
Daissee ex Sheoraphuli	34-8	"
Daissee ex Calcutta	34-8	"
Northern ex Local	33-8	"
Local Packing	31	"
Bimbi	31	"

Tossa is quoted at Rs. 2 to Rs. 2-8 a maund over the rates for white jute.

Pucca Bales:	Rs. a bale.	Shipment.
Mill Firsts	215	January-February.
Mill Lightnings	200	"
Dundee Daissee 2/3 S.G.	210	"
Dundee Daissee 2/3 L.G.	195	"

Pakistan Jute (ex-Pakistan):	Rs. a maund.	Shipment.
Jat	37-8	January-February.
District	36	"
Northern	34-8	"

Pakistan quotations are nominal in the absence of business.

The local Cossipore markets have been ruling very steady during the week. Rail imports, which were about 70 waggons a day at the beginning, have shown a steady decline to about 30 a day at the close. There is very little good quality jute included in this, the majority of it being low class

mesta. The normal procedure has been reversed, and the Calcutta goods market has more or less followed the fortunes of the Cossipore and other upcountry markets. Prices have steadily increased, and all jute available has found ready buyers at advancing rates. A large number of sellers are still purchasing for stock, and there is very little jute on offer. At the close Kishanganj jute is quoted at Rs. 33 a maund for garsat quality which is Rs. 1-8 a maund over last week's price. The Daissee markets continue to rule firm with imports falling off in all centres to only a few hundred maunds a day. There is still a fairly steady demand from mills and rates are tending to increase rapidly. At the close, quotations in Sheoraphuli are based on Rs. 33-8 a maund for garsat quality which is 8 annas higher than last week.

Mofussil: There is very little to report from the Indian upcountry markets, as imports are too small for any business to be going on. There is still a fair amount of covering business to be done against 15th January contracts, and this, coupled with the efforts of sellers to build stocks, has caused the price of the little jute available to rise rapidly. Rates have advanced by about Rs. 2 to Rs. 3 in all areas, and at the close Dhubri jute is quoted at Rs. 29-8 a maund basis Bottoms.

In Pakistan, the markets are very steady due to an increase in the activity of balers, but there only small quantities are available due to imports again falling off. In Narayanganj, it is reported that daily arrivals only average 5,000 to 6,000 maunds a day, with a further 3,000 maunds a day coming in from outside agencies. This is not nearly enough to satisfy the current demand and rates have increased by about Re. 1 over the week. Latest quotations in Narayanganj are as follows:

Pucca Bales:	Rs. (P)	Kutchi Bales:	Rs. (P)
Mill Firsts	159	Jat	27
Export Firsts	139	District	26
Dacca Tossa 4's	195	Northern	24-8
Dundee Tossa 4's	172	Quotations for Tossa are	
Output Tossa 2/3	138	Rs. 5 to Rs. 6 higher than	
Output Tossa 4's	118	those for white jute.	

U.K. FIBRE SPECIALIST VISITING CEYLON AND INDIA

Dr. Richard Henry Kirby, an expert employed in the Colonial Products Laboratory of the Imperial Institute, London, is visiting Ceylon in the third week of January to consult with the authorities there on the problems involved in the development of the fibre industry. He expects to stay in Ceylon for about a fortnight. Before returning to the United Kingdom, Dr. Kirby will visit Calcutta, where he will discuss the problems of the fibre industry with the Indian Central Jute Committee. Dr. Kirby was educated at Lewisham and London University, and is well known in specialist circles. He has had wide experience with commercial firms interested in fibre manu-

TEA BOARD

EXPORT QUOTA 1955-56

TEA producers in India are hereby reminded that in terms of rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April, 1955 to 31st March, 1956 are required to submit an application therefor which must be filed with the Tea Board not later than the 1st February, 1955. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of Estates situated in North India to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta, and in the case of Estates situated in South India to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin 1, South India.

S. K. DUTTA,
Controller of Licensing.

HULDIBARI TEA ASSOCIATION, LTD.

NOTICE is hereby given that the Directors have declared an interim dividend of 5% for Season 1954 payable on the 25th January, 1955, to Shareholders registered in the books of the Association on that date.

The Share Transfer Books and Register of Members of the Association will be closed from the 19th January to the 25th January, 1955, both days inclusive.

By Order of the Directors,

COAL COMPANIES

O, Po, F and Dd. indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PRIVATE INDUSTRY AND THE NEW ECONOMIC POLICY

SOCIALISM AT THE CONGRESS SESSION: THE OPPORTUNITIES FOR ENTERPRISE

THE session of the Congress Party that opens today in Avadi has special interest in that it follows close on a shift in the party's economic policy, a shift moreover which is described as having been forced on the leadership by demands from the Congress rank and file. In some quarters it is said that the Congress meets today with the feeling that it has yet to finish a job that it merely began in 1947. Thus, a daily newspaper recalls that it was in Madras 27 years ago that the party unanimously approved the "total political independence" resolution, and goes on to assert that this week Congressmen will formally demand "total economic independence". What such a demand would mean, we cannot say—except perhaps that the Congress had decided to borrow a senseless slogan from the Communists. Congressmen presumably take an interest in the deliberations of the Lok Sabha, which they will know has been providing so unsullied an example of "total economic independence" as to disturb a large section of nationalist Indians—especially when it seeks to liberate itself from the judiciary in taking over private economic property. The present Congress Government has plainly established the Central parliament as untrammelled sovereign of the nation's economic affairs. It would be absurd anti-Congress propaganda to claim that the Government has further powers to seek, implying that it had let seven years slip by since the settlement of 1947 without arming itself with all the powers it needs to control the country's development. The fact is that the Congress has assumed such enormous powers that its problem today is how to use them. Or not to use them.

But if the claim for further "economic independence" is senseless, there is some truth in the view that work begun in 1947 is not yet done. This is of course in the sense that the social revolution, to which political independence was the first stage, is still far from complete. The country is not yet free of feudal privilege, nor are many of its citizens free of the disabilities imposed by caste, sex, religion and province of birth. These things remain the great enemies of Indian democracy, and it required the removal of foreign tutelage to demonstrate that they are in fact the most invincible and entrenched enemies of liberalism in Asia. It would be in the liberal tradition of the Congress to devote itself, on the occasion of its sixtieth session, to their further extirpation from Indian society. Indeed it is to that goal that the outgoing Congress President, Mr. Nehru, has once again called his party.

These matters might seem far removed from the economic preoccupations that have been uppermost in party discussions for some time. On the contrary, the experience of all other democracies is that the most powerful corrosive of vested privilege and irrational discrimination is economic advance. Once the more blatant feudal strangleholds have been loosened—as has been done in India by the taming of the princes and the dispossession of the zamindars—a society that is economically on the move will dissolve the other crusts of privilege quickly enough, given only the recognised democratic facilities for education, criticism and free movement of persons. The essential thing is that there be vigorous and visible economic progress with a real rise in incomes and a greater diversity in occupations and purchasable commodities. There is in the Congress a lingering fear that under these circumstances the privileged would get richer and the dispossessed poorer but in an expanding economy that has armed itself with progressive taxation and death duties the hereditary enemies of liberalism soon enough lose their power. It is this fear, which we believe to be without foundation that has produced the belief that the first task of the country's only liberal political party is to ensure economic equality.

The view seems to be that only by securing first of all that wealth will be equally spread can the advance toward prosperity be prevented from bringing new injustices and confirming old ones. This, we are arguing, is the reverse of the truth. Attempts to promote equality before wealth is generated will, on the one hand, prevent an increase in the national income and, on the other, will introduce into India the new and monstrous privileges of a rigid bureaucracy. It is the rapid expansion of the economy that will henceforth best serve the cause of freedom in this country. It is true that the dissolution of privilege will in turn contribute to and hasten that expansion, but the propelling force will be economic expansion, not political attempts to equalise rich and poor. There was a French Premier 120 years ago whose advice to the nation just after it had overthrown the Bourbons was *Enrichissez-vous*. Get rich! No better advice could be given to India today, to safeguard present independence and to win new social freedoms.

This advice is as relevant in India today as it was in France a century ago and for the same reason—namely, that an industrial revolution is already under way. It is no use preaching the benefits of economic expansion in a country that is stagnating, the political assault on privilege is then the readiest weapon. But once economic capital has begun to accumulate year by year, and once the necessary precautions have been taken to safeguard the working classes from exploitation and the public interest from spoliation, then the part of wisdom is to let enterprise and initiative have their way. This stage has now quite certainly been reached in India. The country has within its grasp such an increase in the national patrimony as will complete the social revolution to which the Congress is dedicated. The very process of increasing wealth will attend to the much debated question of redistribution, because an expanding economy necessarily redistributes wealth by placing a premium on new skills and the satisfaction of new wants. The Congress should now have the courage of its convictions and declare that the work it has done since independence sets the stage for an economic revolution which will benefit the poor, the peasants, the consumers, the workers much more than it will benefit a handful of rich industrialists most of whose gains will be taxed away.

In thus laying the emphasis on initiative, expansion and enterprise no reference has been made to the distinction between the "public" and the "private" forms, because none is needed. The simple truth is that the distinction does not matter. It does not matter where the impetus comes from as long as it is forthcoming now and in the immediate future. The important thing is to continue and to amplify the upsurge that has

got under way in the economy, without doctrinaire cavilling about who should take the lead. Private industrialists in this country today, who are imagined to be so terrified at the mention of socialism, in reality would not care what was the ultimate balance between the public and private sectors as long as they had the certainty that whenever they set out to increase the nation's productive capacity they would be allowed to do so. Anxiety and hesitation do not arise from what Government proposes to do on its own a but from what it will not let industrialists do. Private industry would find no quarrel with the new economic policy. Congress provided only that it was accepted by a recognition of the fact that if it is to do its share (and even the socialists allow that it has a share) it must be permitted to work under certain conditions. Those conditions do most definitely include a passive and unenterprising more the State accomplishes in the field, the more quickly will private enterprise be able to expand. But they do include a measure of assurance and freedom of action than has so far been vouchsafed.

As is usual when Congress leads, their words carefully instead of speaking *tempore*, the report that the outgoing party president wrote this week contains a quite realistic acceptance of these facts. All that private industry asks while the Congress is formulating its new economic policy is that Ministers and officials should honestly accept the implications of what Mr. Nehru said in that report about private enterprise. His words were: "In our present state, to limit resources to the public sector means restriction of our opportunities of production and growth. The main purpose of a socialised pattern of society is to remove the fetters to production and distribution. If, however, we adopt a policy in the name of socialism which actually maintains some fetters or encourages them, then we are moving away from our objective and preventing the growth of full dynamism. It becomes necessary therefore to have a private sector also and to give it full play within its field, provided always that it is co-ordinated with our planned approach. Many of us because of past fears, or comparisons with some other countries, are afraid of a private sector functioning. There need be no such fear if we are vigilant and keep our objective in view." If this statement of Congress policy finds reflection in governmental action, in the years ahead, private enterprise will have little to worry about.

But can it be claimed that private enterprise is now being given "full play within its field"? Are not the proposed limitations on managing agency a perfect example of "fetters" that prevent the "growth of full dynamism"? Is Mr. Nehru's acceptance of a definite field for private enterprise consistent with an amendment to the Constitution that would leave in the hands of officials power to snuff out private enterprise from one day to the next? There will be heard in Avadi this week some eloquent declarations of the new socialist policy, but will there be realisation that industry does not quarrel with that policy as declared—but that it is worried about the gulf between general descriptions of policy and particular applications of it? The restrictions and fetters hampering industry are all the more deplorable because private enterprise is now in a position to make a significant contribution to the expansion of the economy. It is not so many years since we heard Indian capital described as "shy" and the unions even claimed that "capital was on strike". Now, evidently, the complaint is that private capital wants to do too much and has to be restrained from trespassing into the public sector. What is true is that private business is now better placed to contemplate expansion provided it is guaranteed in practice what Mr. Nehru has said it needs in theory, full play within its field. Sayings have increased, prices have fallen, much industrial experience has been gained, plans for the future have been recast in more practical form and valuable connections have been established with foreign industries. For all these reasons, private Indian industry is now set to go ahead in partnership with

INDIAN INSURANCE IN 1953

CONTROLLER'S YEAR BOOK ISSUED

IN the latest issue of the Insurance Year Book, for 1954, the Controller of Insurance to the Government of India points out that 1953 was another prosperous year for insurers transacting life business, considering the volume of new business underwritten. The figures for the period are incomplete, as usual; particulars (accounts and/or latest valuations) of 15 insurers and eight provident societies had not been received even as late as 15th November, 1954. Even so, the statistics show that new life insurance business touched a new high of Rs. 154.5 crores, as against Rs. 146.7 crores in the previous year and Rs. 147.9 crores in 1951. The increase is attributed to the habit of thrift formed during and after the war, and what the Controller of Insurance lyrically describes, as the "activities relating to the 'mighty adventure of building up new India.'" He feels that in view of the several measures taken by the State to improve the economic condition of the country, a steady increase in life insurance business can be confidently expected.

Compared with the previous year, 1953 showed an increase of about 19,000 in the number of policies, 1.5 crores in the sum assured and Rs. 33 lakhs in the yearly renewal premium income under new business transacted in India by Indian insurers. There was also a small rise in the life business of insurers in India. The net amount of business effected by Indian insurers which was in force at the end of 1953, to about 38,33,000 policies assuring a sum of Rs. 829.98 crores with a premium income of Rs. 829.98 crores. Compared with 1952, these figures show an increase of about 122,000 policies, 1.5 crores in sum assured and Rs. 1.43 crores in premium income. The corresponding statistics for non-Indian insurers were about 246,000 policies assuring a sum of Rs. 131.91 crores and having a premium income of Rs. 7.72 crores; there was an increase of about 1,000 in the number of policies, out increases of Rs. 5.89 crores in the sum assured and Rs. 79 lakhs in the renewal premium income. The net amount of life insurance business effected outside India by Indian insurers was about 30,000 policies involving a sum of Rs. 14.66 crores; about 272,000 policies involving a sum of Rs. 77.03 crores remained in force at the end of the year. The total revenue income of Indian insurers from their entire life business was Rs. 54.27 crores, and the revenue income of non-Indian insurers from their life business in India was Rs. 9.6 crores. Since the outgo, including the amounts disbursed as claims and surrenders, was Rs. 29.48 crores and Rs. 6.98 crores respectively, the balances of Rs. 24.79 crores and Rs. 2.62 crores represented the increase in the life funds of these companies.

The report contains a table giving the combined experience of all Indian insurers in the matter of lapses. The disappointing conclusion emerges that a very large part of the new business is lost by lapses, particularly by early lapses. The Controller of Insurance remarks that the lapses occurring in any particular year could be a useful index of the economic condition in that year. The ratio of the total amount of lapses in 1953 to the mean gross direct business in force worked out to 8.9 percent. While this ratio, which depends upon the distribution of the business in force according to duration, may not be a very reliable index, it is not entirely without statistical significance. The average net rate of interest earned on mean life funds of insurance companies has increased slightly in the case of Indian insurers, and works out to 3.50 percent. The total expenses of management work out to 27.3 percent and 20.7 percent of the premium income in case of Indian and non-Indian insurers respectively. The corresponding figures for the previous year were 27.2 percent and 22.4 percent respectively. Of the 52 valuations of Indian insurers published in the Year Book, 39 disclosed a surplus. In the case of 30, the surplus was allocated to policyholders and/or shareholders, and in the case of the others, the surplus was carried forward unappropriated. Thirteen companies disclosed a deficit. In the case of ten, the deficit was covered by free paid-up capital.

The total net premium income of Indian insurers from non-life business was Rs. 15.06 crores, which included Rs. 7.87 crores from fire business, Rs. 2.73 crores from marine business and Rs. 4.46 crores from miscellaneous insurance business. The corresponding figures for non-Indian insurers were Rs. 2.72 crores from fire business, Rs. 1.66 crores from marine business and Rs. 1.91 crores from miscellaneous insurance business. The ratio of claims to the net premium income of Indian and non-Indian insurers combined was 35 percent for fire insurance, 56 percent for marine insurance and 50 percent for miscellaneous insurance. The corresponding percentages for 1952 were 32, 57 and 49. The ratio of commission to the net premium income was 15 percent in fire insurance, and 15 percent in miscellaneous insurance—the same as for 1952. It was 8 percent in marine insurance as against 9 percent for 1952. The ratio of expenses of management to the net premium income was (i) fire insurance: 33 percent, the same as for 1952; (ii),

marine insurance: 28 percent, as against 27 percent; (iii) and miscellaneous insurance 29 percent, the same as for 1952. Some Indian insurers who transacted fire, marine or miscellaneous class of insurance business outside India earned from such business a net premium income of Rs. 829 lakhs in 1953, showing an increase of Rs. 67 lakhs over the previous year. Out of their total net premium income in different classes of non-life business, 69.1 percent was received on account of business outside India in respect of fire insurance. The corresponding percentages for marine, miscellaneous and all non-life classes combined were 53.9, 31.0 and 55.1 respectively.

CURRENT COIN

British Investment.—Industry and trade in India reacted favourably to the visit of the Rt. Hon. A. R. W. Low, British Minister of State at the Board of Trade. Following closely on the Board of Trade's refusal to be stampeded on the problem of cotton textile imports from India in response to the representation of the Manchester textile interests, and his own categorical admission that the charge of Lancashire millowners regarding the concealed subsidy to cloth exports to the U.K. was unfounded, Mr. Low's efforts to clear several misunderstandings about the economic relations between this country and the U.K., and his assurance that "British industry will continue to participate where India wishes it in India's industrialisation, provided always that the economic climate here is right" have gone a long way towards creating a more friendly atmosphere than has existed since the agitation started against the free entry of Indian cloth to Britain. Mr. Low was able to put forward a volume of evidence against the absurd charge that the U.K. was not really interested in assisting India's industrial development. In refuting this charge and claiming that Britain, particularly British industry, is eager to help this country, Mr. Low mentioned technical services, equipment and training provided by Britain under the Colombo Plan, besides the arrangements for assistance in a number of technical surveys, including the latest offer to send a survey team for the proposed steel project. He answered another complaint—that British firms were unwilling to make available their know-how and experience—by pointing to the telephone cable, locomotive, aircraft and explosives industries on which agreement had been reached with British firms, and recalled that Sindri Fertilisers and Chemicals Ltd. was a joint venture in which a British firm had played a large part. Pointing out that Britain's growing economic strength and her traditional and continuing interest in India and India's great development plans provided a splendid field for mutual co-operation, Mr. Low gave an assurance that, given the right conditions in this country, British industry would continue to do in the future what it had done in the past seven years and earlier. Mr. Low was equally reassuring on the subject of trade relations. He conceded that the increasing pace and range of this country's industrialisation might well alter the pattern of British trade in India. He believed however that this need not check it. Elaborating the thesis Mr. Low added: "Trade between two countries is a two-way operation and British-Indian trade depends as much on India as on Britain. But for Britain's part, I can say that it will be Britain's objective—Government and industry alike—to see that this great opportunity of mutual co-operation between real friends is used to the common advantage of our two peoples." Mr. Low stressed the point that the U.K. was both India's largest supplier and her largest customer. Britain was also by far the largest source of all non-Indian capital invested in India. Mr. Low therefore claimed that this was reason enough for India to be interested in the economic health of Britain, her trading policy, her industry's progressiveness, adaptability and competitive power. With her future development India would play an important and increasing part in the expansion of world trade and British industry was eager to help in this process. Speaking to the Press in Calcutta last Sunday, Mr. Low emphasised that the most important factors which would determine the decision of manufacturers to invest more in India were the economic and investment climate in the country and the experience of British firms already operating here.

Bhowra Kankanee Collieries.—On another page of this issue of Capital an offer is made of shares in the Bhowra Kankanee Collieries Limited. The shares involved consist of 10,000 Preference at Rs. 100 each, and 250,000 Ordinary at Rs. 10 each. Debentures to the value of Rs. 5 lakhs are also offered. All scrip are at par, payable in full on application. The Issued Capital of the company stands at a figure of Rs. 70 lakhs, divided into 10,000 5½ percent income-tax free Cumulative Redeemable Preference shares, and 600,000 Ordinary shares. The Loan Capital is divided into 1,500 6 percent Registered Debentures of Rs. 1,000 each. Of the above issue, the Directors, Managing Agents and their friends have promised to take up 350,000 Ordinary shares (including 153,510 Ordinaries already subscribed) and Rs. 10 lakhs of Debentures.

The Debentures will be secured by a Trust Deed, the security being a mortgage of the Company's immovable properties and plant and machinery, and floating charge on all other assets excepting stock and stores. Interest will be payable in equal half-yearly instalments, the first payment to be made on 16th July, 1955. The principal amount of the Debentures will be repayable on 16th January, 1970, with option to the company to pay off on or after 16th January, 1965. Preference shares will be redeemable at the option of the company at any time on or after 31st December, 1965, at a premium of Rs. 5 a share. The Managing Agents will be Messrs K. C. Thapar & Bros. Ltd. entered into agreement with Messrs Macneill & Barry Ltd., managing agents of Eastern Coal Company Ltd., for the purchase of four collieries of Eastern Coal Company Ltd., namely, Bhowra, Pootkee, Amlabad and Kankanee Collieries, together with all equipment and stores for Rs. 62 lakhs, and paid Rs. 15 lakhs as earnest money. The balance of Rs. 35 lakhs has also been paid to Eastern Coal Company Ltd. and the possession of the collieries has since been taken. The managing agents have agreed to pass on to the company under review all the benefits for the purchase as its nominee without any profits. The four collieries are situated in the Jharia coalfield area. The mines are fully electrified and completely mechanised with latest coal mining machinery and equipment. The present raisings are 6½ to 6½ lakh tons per year. A sum of Rs. 63.25 lakhs is the estimated purchase price of the four collieries and further Rs. 15 lakhs will be required for the purchase of machinery and equipment for improvement and additions, according to the prospectus.

Railway Delegation Report.—The three-member Indian Railway delegation which visited Russia, Italy, Austria, Sweden, Denmark, Western Germany, France, Switzerland and Britain last year naturally concentrated on what lessons the Indian Railways could learn from their Western counterparts. It has made a number of interesting recommendations. The report points out that on the Indian Railways planning has been implicit for a long time in the preparation of rolling stock, machinery and plant and civil engineering works programmes each year. The preparation of an integrated programme for the railways started with the five year plan, which has been devoted primarily to rehabilitation needs. The scope for expansion of railway facilities has therefore been necessarily limited. There will be greater emphasis on expansion in the second plan, and more detailed planning will be necessary. In order to undertake planning on this large scale, the delegation considers it necessary to create separate planning organisations at various levels, such as in the Board's office, at railway headquarters, and at each divisional, regional or district headquarters. These organisations should process and integrate the entire plan on behalf of all departments within their jurisdiction, so that parallel departmental planning is eliminated. The delegation feels that the emphasis on providing passenger amenities must continue "until all stations have attained certain minimum standards in the matter of waiting room facilities, lighting, protection against the weather, provision of drinking water, sanitation, etc." Any amenity for which a charge is levied should be available to all passengers willing to pay the charge; and no distinction should be made on the basis of their class of travel. The delegation thinks that for comfortable travel over long distances involving night journeys, there is little to compare with the air-conditioned coaches on the Indian Railways. In regard to third class travel, the standards which have been adopted for the new third class coaches in India "compare favourably with the accommodation provided on European railways and the sitting accommodation on the Soviet railways." As overcrowding diminishes and more of the newly designed coaches are put into service, the disparity is likely to disappear.

Philips' Silver Jubilee.—Philips Electrical Co. (India) Ltd. is celebrating its silver jubilee and the occasion is being marked in Calcutta by an exhibition which is now in progress at the Company's Park Street showrooms. The exhibition was opened last Monday morning by Mrs. van Rhijn, wife of the company's managing director, in the presence of the Governor of West Bengal, Dr. H. Mukherjee. In an address of welcome Mr. van Rhijn emphasised the important part which is being played by the electrical engineering industry in the development of the country. In his reply Dr. Mukherjee said that it was the Government's intention to encourage private enterprise as an indispensable part in its industrialisation plans. The exhibition included Calcutta's first demonstration of television; the addresses of both Dr. Mukherjee and Mr. van Rhijn were televised on the closed circuit apparatus. Although the picture lacked complete clarity, the experiment shows to Calcutta viewers, for the first time, some of the potentialities of the medium. The other varied facets of Philips' activities are demonstrated by the various exhibits which range from scientifically-planned house lighting to the uses of radar equipment in

defence against air attack. One of the most interesting exhibits is the robot named Philip which speaks in three languages and is employed in distributing pamphlets. Congratulations are in order on the company's achievement in having attained its jubilee, and if the advance of the next 25 years can continue in the way illustrated by this exhibition, the future should be one of satisfaction not only for Philips but for India.

The Indian Fiscal Year.—The Planning Commission's proposal for changing the financial year raises a number of important points. That some change is required might be accepted in theory; the reason for choosing the present period seems to have been that it conformed with the practice in the United Kingdom. Now that such convenience is no longer required, a change could be made, but the serious question would then be what new period should be chosen? The Commission's proposal of August to July or October to September would be more suitable for Indian conditions. The saying that India's budget is "a gamble on the monsoon" suggests that budget-time could best be fixed when the possible results of the monsoon would be judged with some accuracy. The present system, disregarding as it does India's peculiar climatic and crop conditions, has been found, according to the Government, to involve considerable delays in the implementation of development schemes, and the collection of revenue and cess from agricultural communities. Two months are lost between a budget being passed at about the end of March, and work being started on the various schemes sanctioned. One month usually elapses before the information can be passed to the various authorities who are to carry out the recommendations. Another month is needed for inviting and scrutinising tenders, and by then the monsoon may have commenced and work cannot be started until another four months have elapsed. Although some time might be economised by a little more haste in Government departments, the situation could be eased by a change in the budget year. If August were chosen for the budget, and by then the monsoon should be sufficiently advanced for judgments to be made, the financial year could begin in October and eight months of favourable weather conditions would lie ahead.

British Industries Fair.—The B.I.F., which has now entered its 41st year, will be held at Olympia, London, and Castle Bromwich, Birmingham, from 2nd to 13th May. The "nation's shop window" is this year under new management. Sir Ernest Goodale, who presided over the Committee which recommended this change now heads the six directors of a private company formed to run the Fair. The Birmingham section remains under the management of the city's Chamber of Commerce. The ever-increasing effort to maintain the B.I.F. as the world's leading national trade fair will now be the responsibility of business on behalf of businessmen. The B.I.F. started modestly enough in 1915. In the winter of 1914 the Board of Trade had held a series of small exhibitions throughout Britain to show manufacturers samples of what was formerly bought in Germany and other Continental countries. The high quality of the home-made article prompted the Board to organise a national fair at the Royal Agricultural Hall, London, from 10th to 21st May, 1915. At the last B.I.F. before World War II the exhibition space occupied had grown to more than 800,000 square feet; exhibitors numbered 2,339. But by this time the whole purpose of the Fair had changed. The aim was no longer to show that United Kingdom manufacturers could make the goods that were formerly imported, but to show the world that they could meet every new demand of the expanding world markets. When the B.I.F. restarted in 1947 both the London and Birmingham sections continued to grow. In 1951 more than 1,000,000 square feet of space was taken at Olympia, Earls Court, and Castle Bromwich. Through the years the split personality of the Fair has in no way impaired its vigour. Both sections, working apart but in collaboration, have proved that Britain means business—at its best.

Leipzig Fair.—The Indian Council of Foreign Trade has announced that it intends to participate in this year's Spring Fair in Leipzig to be held between 27th February and 9th March, 1955. Leipzig is in East Germany and its fair is regarded as one of the most important in Europe, especially at the present time when it offers one of the few opportunities for contact between business men of communist countries and those of the free world. In order to organise better participation, the Council has appointed a sub-committee with Mr. P. B. Advani as chairman, and Messrs D. M. Desai, Umanantrao Puthli, M. B. Rao and D. K. Tejura as members.

British Colonial Development.—The British Government is expected to place before Parliament shortly a new Colonial Development and Welfare Bill which will provide for an extra £75 million of development expenditure. The Bill is seeking to extend the provisions of the 1945 and

1950 five year plan Acts. These have provided £145 million towards Colonial development. Of this sum about £90 million has already been spent and the remaining £50 million has been earmarked for penultimate projects. The Colonial Secretary, Mr. Lennox-Boyd, has indicated that the total sum involved in Colonial development is about £500 million. This figure includes a number of major projects such as £50 million for the proposed expansion of the East African harbours and railways. Colonial Governments have already submitted their plans and financial statements of requirements for the next five years, and it is this information on which the proposed Bill is to be founded. In choosing projects suitable for expenditure, the capacity and willingness of the community itself to participate will be taken into account. The principle of self-help now seems to be as firmly entrenched in Colonial development expenditure as it has become in international aid practice. The development will be facilitated by the British Government's determination to encourage investment. Last year the public loans of Colonial countries raised over £20 million from the London money market, and the future will see other examples of this particular method. In the meantime, the Chancellor of the Exchequer is being pressed to grant taxation concessions to British investors who put their money into Colonial industries. The point that there should be no dual taxation is one which will not doubt be readily accepted, but it is also being suggested that the inevitably greater risks taken should be suitably rewarded by taxation reliefs, a principle which has as yet found no favour in the British taxation system.

African Railways.—A scheme is now under consideration for linking the railway systems of South, Central and East Africa. Such a project would obviously have far-reaching effects on the economic and social life of the Continent. Many years ago it was realised that in time it would be desirable if not absolutely essential to make the change, which, however, will only be of value if rolling stock can easily be interchanged between systems. The major difficulties are the differences in the rail gauge, braking and coupling systems. In 1926, a committee of Crown Agents for the Colonies and the railways concerned investigated the problems involved in a future link-up. Realising that alterations would have to be made in East Africa, which has considerably less railway line laid than any other territory, they decided that the South and Central African systems should become the standard for the future. The committee recommended that all new stock bought by the East African Administration should be designed to be easily adaptable to the standards. All the East African rolling stock bought since 1932 conforms to those recommendations. The primary problem is the conversion of the East African gauge from one metre to the three feet six inches gauge used in South Africa, the Rhodesias, and the Belgian and Portuguese territories. To expand the wheelbase on rolling stock a 100-ton press will be required, as the wheels were pressed on the axles by a 60-ton hydraulic press. The wheels of locomotives would be moved on the axles as further modifications would be necessary. But post-1932 locomotives have been built with rims wider than usual so that wider steel tyres can be fitted.

The Size of a Car.—The size of the average American motor-car has always been one of its most distinguishing features, but if eventual notice is taken of the increasing anxiety which is being shown in the United States about the tendency to make motor-cars longer and wider, a limit may soon have to be put on their dimensions. There is no doubt about it that the problem now is an acute one chiefly because every American city and a great many of the towns have almost insuperable parking problems. There is a physical limit to the number of cars which can be accommodated in any city and, if the number per head of the population has now reached saturation point, the growing size of the vehicles can still create many difficulties. Probably eighty percent of the motor-cars on American roads are included in the "smaller" group. These are usually Fords, Chevrolets, or Plymouths, and it is these very types which have been showing most marked tendency to grow larger. In the last 25 years each of the three models has increased its length by about one-quarter. The expense this is causing is beginning to worry the American public. Garages which were built for the average-sized motor-car 25 years ago are now only just large enough to accommodate one of the smaller models. When the usual result of an increased standard of living is to buy a larger car, it now means that a larger garage is required as well. Car-park owners are finding that their parking space is shrinking and with it their living. This has been going on at the rate of fifteen percent over the last five years. The width of the average car has also expanded and additional traffic problems are being created. The New York traffic commissioner, Mr. T. T. Wiley, is reported as having said recently that any further increase in the size of motor-cars would be "sheer madness".

INDUSTRIALS STRONG IN IRREGULAR MARKET FALL ON WALL STREET AFFECTS SENTIMENT

London, 19th January.

THE activity and strength of industrial equities provided the main feature of stock markets, which otherwise made a somewhat irregular showing on the week. The best prices among industrials were not always held as end-of-account profit-taking after the week-end made itself felt while demand slackened in face of the Colvilles Steel share offer, which is expected to attract heavy support in view of its favourable issue terms. Nevertheless, almost all sectors of industrials recorded widespread gains on the week and the Financial Times Industrial Ordinary Index reached a new all-time peak. The continuous fall on Wall Street affected sentiment after the week-end and dollar stocks declined in sympathy. Gilt-edged securities made a mixed showing, in the early part of the week ground continued to be lost but a sharp recovery was made immediately before the week-end only to turn dull again later. Business in gilt-edged was small throughout. Foreign Bonds were subdued and not greatly changed, although Chinese and Japanese attracted a little support. Rails also were quiet. Absence of support unsettled the South African gold share market which however rallied at the end of the week on the return of buyers. The rally proved short-lived however and the market again declined after the week-end. Interest centred largely on developing, and more particularly on newer mines, such as Hartebeestfontein. Coppers were in demand but reacted following the fall on Wall Street. Other base metals generally held steady to firm. Oils also reacted in sympathy with Wall Street after earlier firmness. Rubbers were subdued and tended easier. Tea shares continued to attract buyers who were encouraged by the fresh peak in the tea price.

The Money Market

After remaining easy during the earlier part of the week, credit conditions became distinctly tighter as the main tax gathering season began. On Thursday, when the bulk of the weekly tax transfers were made, short loan conditions were very difficult. Because of the slow return of Christmas currency, bankers' cash balances had been run down to such an extent that they had to call heavily from the market to meet tax pay-

ments. The authorities, however, lent a hand and the market was able to keep out of the central institution. Loan rates hardened and up to 2 percent was paid for overnight money. Treasury bill applications were £344,140,000, of which £230 million were allotted at the average rate of 38s 11.97d, compared with 38s 4.29d in the previous week. This week, £220 million will be offered. The Bank of England return for the week ended 12th January disclosed that there was a sharp drop in notes in circulation to around £1,710 million, which was about £21 million lower. Bankers' deposits also dropped quite sharply to £262 million, which was about £10 million lower.

Activity on Wall Street

Trading in foreign bonds remained slow on Wall Street last week. Costa Ricans were soft as a result of the dispute between Costa Rica and Nicaragua. Some of the other Latin Americans, including a few Colombians and El Salvadorans, also eased. Chile 3 percents of 1953 fluctuated irregularly but finished with a minor gain. Among Europeans, Germans were mostly higher, particularly Municipal issues. Serbs were a fraction to one point down, with Greeks easing following early firmness. Italians were mixed. Denmark 4-1/2 percents were slightly higher, but Norwegians were unchanged to fractions lower. Japan 6-1/2 percents were higher, with 1954 up nearly 4-1/2 points. Elsewhere, fractional changes predominated. U.S. Government obligations registered further widespread declines. The long end of the list showed the biggest losses and continued to reflect the possibility that the Treasury will include a new long-term issue in its refinancing operations next month. Another factor mentioned on the downturn was the tightening of money market conditions. Top quality corporates eased fractionally in light dealings in sympathy with the action of the Federals. Most investors held off, awaiting a clearer picture of Government's financing plans. Industrial and utility convertibles and the more speculative rail lines followed the stock market fluctuations. World Bank 3 percents of 1976 dropped half a point under small offerings.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 12th January shows gold stocks up by \$1 million. Foreign deposits fell by \$61 million, while foreign investments rose by \$41 million. The Federal Reserve portfolio of Government securities fell by \$314 million as it sold \$341 million of bills and bought \$27 million under repurchase agreements. Member banks' borrowings rose by \$179 million to \$537 million, while their excess reserves fell by \$220 million to \$780 million. The reserve ratio increased by 0.4 percent to 45.2 percent. Business loans of the New York City banks fell by \$32 million to \$7,422 million, compared with a fall of \$32 million to \$8,267 million a year ago.

Prospects for Silver

Messrs. Handy and Harman in their annual review forecast continued stability for silver in 1955. Trade demand is expected to improve along with the widely expected increase in general economic activity. But there is no reason to believe that supplies will fall short of requirements. The review notes that Mexico is the key to stability and the Bank of Mexico did not find it necessary to accumulate silver last year. Canada is approaching the United States and Mexico in importance as a source of supply. The London market has assumed increasing significance but Bombay's isolation remains virtually complete. The Netherlands' return of 11,000,000 ounces of lend-lease silver was significant. It has been confirmed that the Indian Government has 300,000,000 ounces, which is more than sufficient to meet her lend-lease obligations.

Hongkong Gold Prices

Hongkong gold fluctuated narrowly during the past week. Opening at \$(HK) 257-7/8, prices initially advanced to \$(HK) 258-1/4, which was the highest of the week. Thereafter, they slid back to \$(HK) 257-1/8, but rallied slightly at the close. Carryover charges continued in favour of buyers, which prevented values from declining, while another sustaining factor was the failure of scheduled arrivals of gold at Macao. Official off-take was 2,760 taels and unofficial 10,500 taels. No forward contracts of arrivals were reported.

Fluctuations in Rubber

The London rubber market was very sensitive last week and wide fluctuations occurred. With demand for near landed positions less active than of late and more interest shown in forward deliveries, the premium of near over distant deliveries narrowed. Afloat and early shipment rubber was more freely offered at reduced premiums. Shipments to U.K. ports were occasionally obtainable at slightly below the offers for basis ports. No. 1 RSS for spot and near delivery lost 1 1/4 lb, but forward positions were little changed on balance. Sole crepe maintained the recent improvement in values, with demand only moderate but enough to prevent stock accumulation. Business was done in 1/8th inch smooth No. 1 at upto 36d. a lb.

Vegetable Oil Market

There was good business in Indian linseed oil. Some loading parcels to Liverpool sold at £93 and later £93 1/2 was paid c.i.f. in bulk for January-February and March-April shipment. At the close, it was difficult to obtain offers even at £94. The announcement that the Indian Government had cut the export duty on castor oil brought considerable weakness to the market and prices slipped back by £3 a ton on the week. Shipment business was spasmodic and January clearance BSS was dealt in at £91, while as low as £82 was accepted for commercial grade to Liverpool. In London, BSS was offered at £108 on spot and commercial at £101 in drums. Pakistan cotton expellers 44 percent ended the week at a nominal rate of £39 for January-February.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET SEASONAL MOVEMENT OF FUNDS

Wednesday, 19th January.

THE money market has been active but the total demand for funds is not much above last week's level. There is a seasonal rise in outgoings on account of sugar, cotton and wool, together with an increase in advances to jute mills probably because of fears that raw jute will be tighter next month. In the interbank market, conditions are easier although the call rate has not yet varied from 3 percent.

There has been a fair supply of bills in the exchange department, mostly in connection with exports of tea. Gunny bills are scarce. Remittance has been moderate. The principal exchange rates are steady, with the U.S. dollar at Rs. 480-12.

Tenders for Rs. 1 crore of three months' Government of India Treasury Bills, which opened on 18th January, totalled Rs. 1,25,50,000. The average rate of acceptance increased to Rs. 2-8-3 percent per annum. Tenders at Rs. 99-6-0 were accepted in full and those at Rs. 99-5-9 percent were allotted 49 percent. Tenders for another Rs. 1 crore of bills will be received at all the usual centres up to the close of business on 24th January 1955. During the week ended 14th January Government of India Treasury Bills for Rs. 17,57,50,000 were sold in favour of the Reserve Bank of India.

Bullion ruled firm on strong demand, following marriage ceremonies in particular. Silver rose from the previous week's level of Rs. 156-14 to Rs. 159-2, quoted today. The ready price was 4 annas higher. The price was, however, unchanged at 74d. in London and at 85 1/2 cents in New York. Gold also moved higher to Rs. 92-8 from Rs. 90-1. The sovereign at Rs. 58-12 showed a gain of 8 annas.

A further rise of Rs. 5.22 crores in notes in circulation to Rs. 124.51 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 14th January, 1955, while the total note issue at Rs. 123.95 crores showed a small decline of Rs. 14 lakhs. Notes held in the Banking Department consequently fell by Rs. 5.36 crores to total Rs. 10.44 crores. Deposits of the Government of India and other Government accounts rose by Rs. 2.51 crores and Rs. 2.84 crores to stand at Rs. 55.47 crores and Rs. 13.94 crores, respectively, while balances of commercial banks at Rs. 60.32 crores revealed a decrease of Rs. 3.51 crores. Balances held abroad improved sharply by Rs. 9.66 crores to Rs. 76.56 crores but investments dropped by Rs. 2.57 crores to aggregate Rs. 71.93 crores. Other loans and advances rose from Rs. 18.33 crores to Rs. 20 crores of which advances to scheduled banks against usance bills totalled Rs. 3.54 crores (Rs. 3.35 crores). Ways and means advances were Rs. 2.73 crores (Rs. 2.75 crores).

The statement of the position of Scheduled Banks for the week ended 7th January, 1955, discloses Demand and Time liabilities at Rs. 571.81 crores (Rs. 10.75 crores on account of borrowings from Banks) and Rs. 367.34 crores (Rs. 3.17 crores) compared with Rs. 573.36 crores (Rs. 6.19 crores) and Rs. 368.71 crores (Rs. 3.57 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 3.11 crores and Rs. 4.13 crores to aggregate Rs. 32.79 crores and Rs. 63.41 crores, respectively. There is a rise of Rs. 1 crore in investments to Rs. 349.04 crores. Advances and bills discounted at Rs. 551.52 crores reveal an increase of Rs. 13.11 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 10.2 percent and 58.7 percent against 11.0 percent and 57.2 percent.

The return of the Imperial Bank of India for the week ended 7th January, 1955, shows a fall of Rs. 65 lakhs in total deposits to Rs. 230.54 crores. Investments in Government Securities and other authorised investments are up by Rs. 39 lakhs and Rs. 12 lakhs to Rs. 97.76 crores and Rs. 11.51 crores, respectively. Loans, cash credit and overdrafts and bills discounted and purchased have increased by Rs. 1.79 crores and Rs. 1.05 crores to stand at Rs. 96.44 crores and Rs. 7.29 crores. Cash and balances are, in consequence, shown at Rs. 35.03 crores or Rs. 2.09 crores higher.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during the month of November 1954 amounted to Rs. 18.70 lakhs as compared with Rs. 13.36 lakhs in the corresponding month of the previous year. The comparison in the subsequent paragraphs should be taken to refer to that of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 13.21 lakhs as against Rs. 9.99 lakhs, export duties for Rs. 5.20 lakhs as against Rs. 3.12 lakhs and land customs and miscellaneous

for Rs. 29 lakhs as against Rs. 25 lakhs. The total gross collection of Union Excise duties amounted to Rs. 8.73 lakhs as compared with Rs. 7.67 lakhs. During the eight months, April to November 1954, the grand total of gross Customs and Union Excise revenue realised was Rs. 1,75,67 lakhs as compared with Rs. 1,65,99 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 84.50 lakhs as against Rs. 76.60 lakhs, export duties for Rs. 22.26 lakhs as against Rs. 26.60 lakhs, land customs and miscellaneous for Rs. 1.99 lakhs as against Rs. 1.71 lakhs and Union Excise duties for Rs. 66.92 lakhs as against Rs. 61.08 lakhs.

The net profit of the INDIAN OVERSEAS BANK LTD., subject to audit, for the year ended 31st December, 1954, after providing for contingencies and expenses, amounts to Rs. 15,60,391-1-5 including the sum of Rs. 2,25,270-12-6 brought in. The directors have made the following allocations: Provision for taxation Rs. 7,00,000; transfer to reserve fund Rs. 3,50,000 and it is proposed to recommend a dividend of 6 percent, leaving a carry-forward of Rs. 2,15,839-1-5.

The profit of the PUNJAB NATIONAL BANK LTD., including Rs. 3.10 lakhs brought in, amounts to Rs. 56.85 lakhs for the year ended last December, against Rs. 41.78 lakhs in 1953.

The directors of the IMPERIAL BANK OF INDIA at the meeting of the Central Board held at Calcutta on 7th January, 1955, declared a dividend for the half-year ended 31st December, 1954 at 8 percent, payable on and after 24th January, 1955. The profit, including Rs. 33,65,700 brought in, amounted approximately to Rs. 1,02,20,500. This sum was disposed of as follows: Payment of a dividend of 8 percent Rs. 45,00,000; transfer to pension funds Rs. 3,01,900; bonus to staff Rs. 20,00,000 and carry-forward Rs. 34,18,600. The rate for demand loans during the half-year was 4 percent per year.

The HONGKONG AND SHANGHAI BANKING CORPORATION's profit for the year 1954, after providing for taxation, etc., is H.K. \$19,280,451. Bank premises written off absorbs H.K. \$6,000,000 and the final

dividend is £3 a share free of Hong Kong Corporation tax, leaving a balance of H.K. \$10,215,256 to be carried forward. Transfer from inner reserves to published reserve fund is H.K. \$3,000,000 or equal to £2,000,000.

Subject to consent of H.E. the Governor of Hong Kong to the relative increase in capital as required by the Hongkong and Shanghai Banking Corporation Ordinance it is proposed to recommend to shareholders at an extraordinary general meeting to be held immediately following the annual general meeting on 11th March that a bonus issue be made in the proportion of one share for every four shares held, by the capitalisation of H.K. \$5,000,000 from the reserve fund. Such new shares will rank for dividend from 1st January, 1955.

The profit of the UNITED COMMERCIAL BANK LIMITED for the year 1954, subject to audit, including the amount brought in is Rs. 30,58,724-8-9. Out of this sum, the directors have made the following appropriations: Provision for taxes Rs. 10,50,000; transfer to reserve fund Rs. 6,50,000 and bonus to staff Rs. 2,50,000. Out of the balance it is proposed to recommend the payment of a dividend at Rs. per share, free of income tax, which will be Rs. 10 lakhs leaving Rs. 1,08,724-8-9 to be carried forward.

Invest in Caterpillar EQUIPMENT

CATERPILLAR tillage results in sound soil conservation yielding better and bigger crops. CATERPILLAR D2 and D4 Tractors with TOOL BAR Attachments lead the way to new and greater efficiency in your tillage work.

Fighting the waste of land by floods and soil erosion and bringing virgin lands into production are urgent tasks. CATERPILLAR D4 with bulldozer frame, Root Rakes and other attachments performs such tasks at lowest cost.

An answer to costly soil erosion is Terracing and the CATERPILLAR Motor Grader is the best terracer available today. When the crops are growing the Motor Grader will build or improve the roads for fast and cheap marketing of the crops.

We are helping to develop the country's agricultural resources and in this task we are backed by the world famous CATERPILLAR Organization. Your CATERPILLAR Dealer has the Equipment, genuine Spare Parts and Service facilities to keep CATERPILLAR equipment making profit for CATERPILLAR Owners.

ONE wonders if the resolution before the Congress session this week about an enquiry into the general effects of atomic explosions has anything to do with Earl Russell's New Year message. After saying (what presumably the Congress leaders cannot say) "I am personally of course not neutral in my feelings and would not like to see the danger of war averted by an abject submission of the West", Earl Russell went on to make an appeal that was fairly obviously directed at India. He said, "I should like to see one or more neutral powers appoint a commission of experts who should all be neutrals to draw up a report on the destructive effects to be expected in a war with H-bombs, not only among the belligerents but also among the neutrals. I should wish this report to be presented to the governments of all the great powers with an invitation to express their agreement or disagreement with its findings. I think it is possible that in this way all the great powers would be led to agree that a world war can no longer serve the purposes of any of them since it is likely to exterminate friend and foe equally, and neutrals likewise". The suggestion is a good one and it is a pity that the Congress has chosen not to take the lead itself but to refer the matter to the U.N., whose usefulness here might be much less than India's. Bertrand Russell is not so optimistic as to suppose that the mere publication of an alarming document by, say, India's atomic physicists would lead to general and overnight atomic disarmament. But the point is that there is a great need for more genuine information than we have so far been vouchsafed by the security-minded governments that now possess nuclear weapons. Many Westerners who are anything but neutral, and who do not support visionary projects for disarmament, feel that they are not being fairly dealt with by their governments on this matter. One day a politician smiles off the danger of widespread damage from bomb tests, and yet the next day one reads such a statement as the following by Professor Adrian, a leading English physiologist speaking as president of the British Association: "We must face the possibility that repeated atomic explosions will lead to a degree of general radio-activity which no one can tolerate or escape". None of us knows what the truth is and perhaps only a neutral State, equipped with the powers of government and a research department of its own, could find out from both sides and tell the world. For once no one could say that Mr. Nehru was minding other people's business, because if our worst suspicions are warranted India, and every other neutral, is as much concerned as anybody.

The visit we were to have had this week from Lord Brand will not take place, for this stalwart traveller, who had essayed an arduous journey to Australia at the age of 77, has fallen ill and has had to return to England. It is our loss. Lord Brand began his odyssey after the Boer War, if I may speak thus of a small but devoted group of men whose influence over the fortunes of the British Commonwealth has been so immense. It is an influence that is not spent yet, and it still has its nodal points, that is not spent yet, and it still has its nodal points, that is not spent yet, and it still has its nodal points. Just because it is still active, its full history has not yet been written but when it is the political development of modern India will find a prominent place in it. So will Lord Brand, whose present interests include directorship of *The Times* and terests include directorship of *The Times* and terests include directorship of *The Times*. We are, however, to have a visit this week from the Earl of Balfour, who is making a world tour that will take him from Egypt to Newfoundland by way of Australia. This most eminent of Scotsmen—he was the chairman of the Royal Commission on Scottish Affairs which published its report last year—is managing director of Bruntons (Musselburgh) Limited, the wire rope manufac-

A DITCHER'S DIARY

turers, whose very extensive business is carried on in almost all the countries Lord Balfour will be visiting on his tour.

Some men's capacity for getting plain fact twisted and distorted until it throws discredit on someone they do not like is quite extraordinary. When the twister is a Briton who has a great newspaper at his disposal, and the someone he does not like is Mr. Nehru, the result is more than ordinarily painful—not because criticism of Mr. Nehru is or ought to be avoided, but because wilful aspersion just does not represent the way most British people feel about India's leader. The Archbishop of Canterbury was the innocent stimulant for the latest of a series of attacks. He preached a sermon on Christmas Day in which he quite properly deplored racialism in South Africa. This brought forth the following piece of rancour from the noble columnist of the world's best financial newspaper: "If the Archbishop thinks it his duty to intervene in the affairs of countries with which he has no official connection, it is odd that he finds no time to deal with a tyranny, in comparison with which the South African Government's activities seem a model of moderation. Has anyone heard the Archbishop of Canterbury criticising Mr. Nehru for the appalling treatment meted out to the Untouchables of India, who number some 50 million? Of course, Mr. Nehru has in theory abolished untouchability; in fact, he has changed its name, but not fulfilled his promise. If one compares the conditions in which the natives of South Africa live with the moral and physical boycott endured by the so-called Scheduled Castes of India, one cannot help concluding that in Mr. Nehru's Republic lies a subject well worthy of the Archbishop's humanitarian attention." There is just enough truth in this broadside to make it stick with the unthinking. As Mr. Nehru would be the first to admit, the proscription of untouchability by the Constitution has not wiped out the evil, and the silent suffering of the harijans at petty discrimination is still very great. But to imply that a man who has given much of his life to combatting it, is the author of this "tyranny" is foolish and mischievous.

I wouldn't know a good dam from a bad one, unless of course the latter fell down in front of my eyes. So I like to meet journalists who go looking at dams. The party of eleven Delhi newspapermen who passed through Calcutta at the week-end will have travelled many thousands of miles before they get back to their papers in the capital and they will have seen most of India's major development works. They seemed to me when I met them to have the required measure of reluctance-to-be-impressed which is mistaken for cynicism but which is essential to the discharge of a reporter's functions in such unfamiliar fields. Nevertheless, they had been impressed by what they had seen so far, so presumably Mr. Nehru's intention will have been realised. For I understand that the idea came from the Prime Minister himself after he returned from China. Politicians, like journalists, when they are away from home are usually taken around to see "nation-building activities", and though politicians, again like journalists, are quite unable to judge engineering projects they can form an impression of the extent of a nation's achievement. Well, Mr. Nehru formed the impression that India had done better than China and he thought that if Indian newspapermen were sent out to look closely at what India had done, we might hear less about the more dazzling achievements of some of our neighbours. I hope he is right. I also hope that some of the same journalists

can be shown what private enterprise has done in India since the war, because in that case we might hear less about the much greater efficacy of socialist forms of development.

The leonine head, silver goat, black cheroot and bright bow tie of Mackertich John were probably a familiar sight in many Calcutta offices besides this one. Lately his visits became less frequent as his strength failed, but he still relished the opportunity to tell new chums whose recollections of Calcutta did not go back as far as his what a grand city this had been once upon a time. His interest in and knowledge of wider political concerns was limited; he counted himself a citizen of Calcutta first and last. He lamented that the city was much worse run than it used to be, in which he was absolutely right, and although that is nobody's fault in particular, the decay would not have been so bad if we had had more men like himself to give it thought. He did a great deal during the war to help entertain troops and, although the Continental suffered much the same deterioration as the other Calcutta hotels during those years, the amusement offered to the forces would have been even worse without Mackertich John's efforts, which brought him the co-operation and commendation of the Governor of Bengal. He was a formidable competitor at the book auctions and must have accumulated an extensive library, though perhaps his most striking connection with literature was the close resemblance he bore to Joseph Conrad. In a metropolis that has become so ugly and so humdrum, we will miss this dapper, colourful old man.

Wilson Harris was much better known as Janus, the author of the Notebook in each week's Spectator for several decades, and in that capacity he died almost two years ago. His real death this week comes for the public as something of an anti-climax, though it is true that he had continued as long as he could to write for newer and less august journals. It is typical of him—for as well as being a brilliant and lovable man he was also wilful and crochety—that he had to be retired from the editorship at the age of 69 against his inclination. The idea that at the end of a mere seven decades he should be too old for an exacting task was, he thought, ridiculous; and moreover, he intimated to friends, it was an unsuitable argument to come from his old friend, Sir Evelyn Wrench, the chairman of the Spectator, who was then aged 70. (Sir Harold Nicolson who retired from the columns of the magazine shortly afterwards was a youngster of 68.) But, if the parting when it came was to that extent clouded, Janus knew that there was a need to make way for younger blood before the journal (of which he wrote a history from 1828 under the title *Ninety-Nine Gower Street*) became an old men's paper. Few journalists in our day knew more about diplomacy, for Harris covered the postwar years for the old *Daily News*, in the days when diplomacy was still discreet and newspapers did not simply re-write hand-outs from officials, as they so largely do today.

Obiter Dicta: "A monstrously inequitable tax system penalises professional men and technicians for working hard, but allows every type of gambler and all the cheats to spend money like water. The old middle class which had its faults but some uncommon virtues too, is squeezed almost out of existence. A new middle class arrives without any sense of social responsibility at all. Hardly anybody tells the lazy-minded and the half-wits a few home truths, because most people in a position to tell them want either their votes or their money or both". J. B. Priestley in his "Testimony for 1955"

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

The subscription list will open on the 19th January, 1955, and will close on the 31st January, 1955, or earlier or later at the discretion of the Directors.

PROSPECTUS OF

BHOWRA KANKANEE COLLIERIES LIMITED

(Incorporated under the Indian Companies Act, 1913-36).

AUTHORISED CAPITAL **Rs. 70,00,000**

Divided into:

10,000 5% (Income Tax Free) Cumulative redeemable Preference Shares of Rs. 100/- each **Rs. 10,00,000**

6,00,000 Ordinary Shares of Rs. 10/- each **Rs. 60,00,000**

ISSUED CAPITAL **Rs. 70,00,000**

Divided into:

10,000 5% (Income Tax Free) Cumulative redeemable Preference Shares of Rs. 100/- each, payable in full on application **Rs. 10,00,000**

6,00,000 Ordinary Shares of Rs. 10/- each, payable in full on application **Rs. 60,00,000**

ALREADY SUBSCRIBED & PAID UP **Rs. 70,00,000**

1,53,510 Ordinary Shares of Rs. 10/- each **Rs. 15,35,100**

LOAN CAPITAL **Rs. 15,35,100**

Divided into:—

1,500 6% Registered Debentures of Rs. 1,000/- each, payable in full on application **Rs. 15,00,000**

Of the above issue, the Directors, Managing Agents and their friends have promised to take up 3,50,000 Ordinary Shares (including 1,53,510 Ordinary Shares already subscribed) and Rs. 10 Lakhs of Debentures. The 10,000 Preference Shares of Rs. 100/- each and the balance 2,50,000 Ordinary Shares of Rs. 10/- each, and Rs. 5 lakhs of Debentures are offered for subscription by the public at par. Payable in full on application.

Debentures will be registered debentures and constituted and secured by a Trust Deed. The security will be constituted of mortgage of the Company's immovable properties and plant and machinery (both present and future), and floating charge on all other assets for the time being, both present and future (excepting stocks and stores both present and future), such floating charge not in any way hindering or preventing the Company from carrying on the same, and any mortgage or charge so created may be specific or floating and may be made to rank in priority to or *pari passu* with or after the floating charge in favour of the holders of these debentures.

The interest will be payable in equal half-yearly instalments on every 16th of January and 16th of July in each year in respect of the half-yearly payment of interest will be made on the 16th of July, 1955, in respect of the period beginning from the date of receipt of the monies from the respective holders of Debentures up to the 15th of July, 1955.

The principal amount of Debentures will be repayable on the 16th of January, 1970, with option to the Company to pay off on or after the 16th of January, 1965, by giving six months' previous notice of its intention so to do.

RIGHTS IN RESPECT OF PREFERENCE AND ORDINARY SHARES

The said Preference Shares shall confer on the holders thereof the right to a fixed Cumulative Preferential dividend at 5% (Income Tax free) per annum on the Capital for the time being paid on the said Shares. In winding up also, the Preference Shares shall rank in priority both as to the return of Capital and the payment of arrears of the said preferential dividend whether declared or not up to the commencement of the winding up, but shall have no further right to participate in the profits or surplus assets. Any surplus assets remaining after repayment of the total paid-up Capital shall be distributed among the Ordinary Shareholders. The Preference Shares shall be redeemable at the option of the Company at any time on or after the 31st of December, 1965, on giving six months' previous notice of its intention so to do, at a premium of Rs. 5/- per share, subject to the provisions of the Indian Companies Act.

PROSPECTUS

Objects of the Company

The Company has been formed for the purpose of carrying on all or any of the objects set out in the Memorandum of Association and in particular to purchase, take on lease or otherwise acquire mines, mining lands and interests therein and to explore and exercise, develop and turn to account the same, to extract mineral substance to manufacture Coke, and to buy, sell and deal in Coal, Coke and other mines products.

Messrs. Karam Chand Thapar & Bros. Ltd., through its Managing Director, Lala Karam Chand Thapar, one of the Promoters and Directors of the Company, entered into agreement with Messrs. Macneil & Barry Ltd., Managing Agents of Eastern Coal Co. Ltd., for the purchase of four Collieries of Eastern Coal Co. Ltd., viz., Bhowra, Pootkee, Amlabad and Kankanee Collieries, together with all the plants, machinery, pits, shafts, furniture and fittings, buildings, dhowras, quarters and surface and structures, stores and stocks, all other rights attached therewith, together with all pertaining to these collieries on the basis of position of stores and stocks as on 31st July, 1954, free of all encumbrances, for Rs. 62,00,000/- (Rupees Sixty-two lacs) and paid Rs. 15,00,000/- (Rupees Fifteen lacs) as earnest money. The whole of the lacs has further been paid to Eastern Coal Company Ltd., and possession of the collieries has also been taken. The Managing Agents have also passed on to the Company all the benefits under the said agreement for purchase as their nominee with the monies paid by them to the vendors and out-of-pocket expenses.

All these four collieries are situated in District Manbhum, Dhanbad Sub-Division (Bihar) in Jharia Coal Fields. The total area of these properties is about 11,170 bighas (out of which 1,447 in 750 bighas in Mauza Kankanee and 10 and 11 seams let. Messrs. Eastern Coal Co. Ltd., have since arranged for surrender of the sub-lease of Mauza Mohabani property. Further, Rs. 1,25,000/- has been paid to them for this). The mines are fully electrified, having their own power plants, completely mechanized with latest coal mining machinery and equipments, shafts, erections and assisted Railway Sidings, and served by respective for these four Sidings being 313 wagons. The plant, Railway Sidings, at present installed and the existing buildings, quarters and structures, etc. at these mines should at the present level of prices cost nothing less than a Crore and a quarter rupees.

The above properties contain various seams ranging from Selected A & B Grade to Grade II of low

volatile Metallurgical coals. The coal seams that are at present being worked are Selected A & B. The present raisings are of the order of 64 to 61 lac tons per annum. The raisings may be expected to be further increased considerably by further developments and with the sand-stowing in the existing working seams, with the approval of the Coal Board. Royalties payable under various leases of Bhowra, Pootkee and Kankanee Collieries, and of course, to annual minimum royalties. For the ton will be receivable by the Company. The total latest survey report of a Mining Engineer of repute and experience, including seams that are lying virgin are of the order of 184 crore tons, of which 72.5% are estimated Selected Grade coals, 9.53% Grade I, 13.5% Grade II and 4.5% Grade III coals.

The total reserves of Metallurgical coals (Selected A & B) in the Jharia Coalfields as per report of the Committee on Conservation of Metallurgical coals being 1,200 million tons these collieries contain over 11% of the same.

Due to the enormous industrial expansions that are being carried out under the 1st & 2nd 5-Year Plans of the Government of India, the present scale of demand for industrial coals may be expected not only to remain unaffected but to materially increase. In 1950 the Committee on Conservation of Metallurgical Coals estimated the consumption of Metallurgical coals in India at 3.7 million tons rising to about 4.9 million tons with the completion of the programme of their expansion. The Government of India has estimated the consumption of Metallurgical coals in India at 3.7 million tons rising to about 4.9 million tons with the completion of the programme of their expansion. The Government of India has estimated the consumption of Metallurgical coals in India at 3.7 million tons rising to about 4.9 million tons with the completion of the programme of their expansion.

Considering all the above factors the Ordinary Shareholders may expect to get a good return on their capital from the very inception.

Estimated Capital Expenditure

Rs. 63,25,000/- is the purchase price of the four collieries, viz., Bhowra, Pootkee, Amlabad and Kankanee Collieries, together with all the fittings, buildings, pits, shafts, furniture and all surface mining rights, quarters, structures, etc., from Eastern Coal Co. Ltd., on the basis of position of stores and stocks as on 31st July, 1954.

Books and Publications

WELFARE ECONOMICS AND A NEW THEORETICAL DEFINITION

Economic Essays. Edited by J. K. Mehta (Chief Editor), M. K. Ghosh, P. D. Hajela and B. N. Asthna. Published by Ram Narain Lal, Allahabad. (Price Rs. 6. Pages 295.)

This book consists of 21 economic essays written by the teachers of the Faculty of Commerce of the Allahabad University in honour of their late colleague, Professor S. K. Rudra. The essays cover a wide range of subjects, from the concept of welfare economics, the Keynesian General Theory, the technique of indifference curve, as refined by Dr. Hicks and Dr. Allen, collective bargaining and the application of Gandhian economics to population, industries, food problem, taxation, foreign trade and national income. Most of the essays are addressed to the current Indian problems in the respective subjects covered; as such they belong to the sphere of "applied" economics as Alfred Marshall has defined it. The rest belong to the "pure" side. When so many academic economists write on their subject, the dichotomy of the science is naturally to be maintained. That is just as well, because the publication is intended as much for the interested laymen as for the advanced student of the subject.

The opening essay is a contribution from Professor J. K. Mehta, the well-known theoretical economist, who heads the Allahabad University's Faculty of Commerce. It raises a sophisticated discussion as to the nature and significance of welfare economics. Social welfare, like many other normative economic concepts, has been hard to define—though only from the theoretical economist's point of view. Pigou, Hobson, Robbins, Hicks and Samuelson are among the many learned professors in the field who have dealt with the problem, and as economists rarely agree with one another, a widely

acceptable definition has therefore not yet been evolved. Professor Mehta's own definition however does little to help the matter. He writes: "The problem still remains as to what precisely is meant by social welfare. Since social welfare is a kind of welfare, and since welfare must be located in mind, it follows that social welfare is a kind of welfare located or felt in the mind of a particular man. It cannot be located in several minds in the sense that it is spread over a number of different minds. Even if social welfare is somehow understood as the summation of the welfare of all the individuals in a society, such a sum total must reside in some one mind. It is possible, however, that there may be a number of minds in each of which social welfare, thus understood, resides. In the final analysis, social welfare, by virtue of the fact that it is welfare, must be found to dwell undivided and unfragmented in one particular mind (or in each one of many minds). Maximising social welfare then is the problem of maximising the welfare in the mind of a certain individual. Theoretically it may best be that it is the individual who identifies himself with the society as a whole, whose mind registers, as it were, all the pleasures and pains felt by all the persons in the society to which he belongs. If social welfare is the sum total of the welfares of all the individuals, it is that sum total which is recorded in somebody's mind. In theory, as also in matters of policy, there is no other way in which social welfare can, with reasonable justification, be conceived."

If such a definition is accepted, what will it mean in practical terms? This is Professor Mehta's own answer: "We have said that social welfare is the welfare of the man who has the desire to know the welfare of society. For the statesman, social welfare is the welfare that he enjoys as a representative of the society. Whatever he feels to be the welfare is the welfare. No detailed calculations need be made. After all, welfares cannot be added up; and so no arithmetical calculations are needed. He need not know how to define social

welfare—he need not know what is a society—all that he needs to know is that he has some welfare." If this is what it should mean in practice, then the concept would appear to be illusory. But is it really so? In spite of the many hair-splitting arguments that the learned economists have raised, social welfare, in terms of practical politics, has come to mean only one thing—the material welfare of the people, that is unemployment, old age, and sickness benefits, compulsory education up to a certain stage, larger medical facilities, child and maternity welfare and so on. No doubt it has meant less welfare for those who have got more and more welfare for those who have got less in the process of redistribution that has to take place, no doubt the theories of interpersonal comparison of utility and the scale of consumer preference have a certain degree of validity, no doubt that the concept does not lend itself to any precise mathematical measurement, yet a working definition is possible if the concept is applied to material wellbeing of the people. At any rate, that is what it should be for the poor and under-developed countries like India, where the vast majority of its people have not known anything like a good standard of living.

Professor Mehta disagrees. He says: "Tangible goods produced would be some criterion of welfare. If all goods increase in amount, it should be taken to be an indication of the possibility of increased welfare. But here also a difficulty is encountered. All goods do not increase as a result of any economic re-organisation. Some goods increase and some always decrease. It would be easy to see the truth of this assertion by considering leisure and rest as commodities. Increased production of commodities (even if all material goods were included therein) would naturally entail a greater amount of work for at least some categories of people. And more work means less leisure and rest." But does not increased mechanisation reduce the working hours while increasing production at the same time? Of that, need there be any doubt in the present atomic age?

BHOWRA KANKANEE COLLIERIES LIMITED—Cont'd.

Further Rs. 15,00,000/- will be needed for the purchase of machinery and equipment for sand-stowing and for other additions and improvements. Some machinery is already on order by the sellers.

Preliminary Expenses
The preliminary expenses including expenses of survey of properties, registration fee and printing and other incidental expenses, but exclusive of underwriting commission and brokerage on sale of shares, if any, are estimated to be not more than Rs. 30,000/-.

Voting Right
Every member who is entered in the Register of Members of the Company as holder of Ordinary Shares, irrespective of the number of shares he holds, is entitled to vote or take part in the proceedings. Preference Shares carry no voting right.

On a show of hands, every member entitled to vote and present in person shall have one vote and upon poll, every member entitled to vote and present in person or by proxy, shall have one vote for every Ordinary Share held by him. No member shall be entitled to be present at the General Meeting or to vote either personally or by proxy or to be reckoned as quorum whilst any Call or other sum will be due or payable to the Company in respect of any Share by such member. No one shall be appointed a proxy who is not a member of the Company and who is not entitled to vote at the General Meeting save that a corporation may appoint as its proxy any of its officers though not a member of the Company.

Restrictions on Transfer of Shares
The Directors may at their discretion decline to register the transfer of any shares other than fully paid-up shares or on which the Company has got a lien. No transfer shall also be made to an infant or a person of unsound mind.

Directors' Qualifications
The qualifications of a Director shall be the holding of Ordinary Shares of the Company of the nominal value of Rs. 5,000/- in his own name. The remuneration of every Director shall be Rs. 200/- for every meeting of the Board attended by him, unless otherwise determined by the Company in General Meeting. He will further be entitled to his actual travelling charges not exceeding First Class for self and Third Class for servant and an allowance of Rs. 40/- per day for the days he is actually away from his place of residence for attending Board Meeting or otherwise in execution of his duty as a Director. When journey is undertaken by a Director by Air, actual Airway fare will be paid.

The Articles of Association provide that the Managing Agents will be entitled to nominate upto one-third of the total number of Directors who will not be subject to retirement by rotation. A Nominee Director of the Managing Agents shall be the Chairman of the Board.

Managing Agents
The first Managing Agents of the Company shall be Messrs. Karam Chand Thapar & Bros. Ltd. The said Messrs. Karam Chand Thapar & Bros. Ltd. or their assigns or successors in business, whether under or from them, in the first instance be entitled to remain and continue to be the Managing Agents of the Company for 15 years, unless and until the said office of the Managing Agents of the Company before the expiration of such period of 15 years shall be resigned by them.

The remuneration of the Managing Agents shall be a Commission of 12½% of the net annual profits of the Company, subject to a minimum of Rs. 25,000/- (Rupees twenty-five thousand) in case of no profit or inadequacy of profit. For the purposes of this clause the "net profits" shall mean the profits of the Company calculated after allowing for all the usual working charges, interest on loans and advances, repairs and outgoings, depreciation, bounties of subsidies received from any Government or from a public body, profits by way of premium on shares sold, profits on sale of proceeds of forfeited shares or profits from the sale of the whole or part of the undertaking of the Company but without any deduction in respect of income-tax, or super-tax, or any other tax, duty, income or revenue or for expenditure incurred by way of interest on debentures or otherwise on capital account or on account of any sum which may be set aside in each year out of the profits for reserve or any other special fund. The amount of depreciation to be deducted for purposes of determining the net annual profits shall only be the normal depreciation allowable under the Indian Income Tax Act, 1922, and shall not include any special, initial or other depreciation whether allowable under the said Act or otherwise and shall not include any arrears of depreciation.

The Managing Agents shall be entitled to charge and be paid all the actual postage, telegrams, printing, stationery, telephones, rents, taxes and all other out-of-pocket expenses incurred on Company's behalf whether at Calcutta or elsewhere, and the Company shall pay the salaries, wages, bonuses, allowances, provident fund contributions and commissions, etc. which shall become payable to the Managers, Secretaries, Agents, Clerks, Servants, Workmen, Brokers, Bankers, Solicitors, Auditors, Engineers, Experts, Technicians and other officers and employees whether employed in Calcutta Office or elsewhere and all the expenses of manufacture, and shall also bear and pay such expenses of salaries, wages, bonuses, allowances, provident fund contribution, etc., if any, of any staff employed partly in connection with the business of the Company and partly in connection with businesses of other companies as the Directors of the Company may from time to time determine.

In consideration of the said remuneration the Managing Agents shall conduct and manage the whole affairs of the Company, subject to the control and supervision of the Board of Directors.

Application under Section 87 cc of the Indian Companies Act for approval of appointment of Messrs. Karam Chand Thapar & Bros. Ltd. as Managing Agents of the Company, has already been made to the Central Government.

AMOUNT OFFERED FOR SUBSCRIPTION WITHIN TWO PREVIOUS YEARS.
Nil.

NUMBER AND AMOUNT OF SHARES AND DEBENTURES ISSUED OR AGREED TO BE ISSUED AS FULLY OR PARTLY PAID UP OTHERWISE THAN IN CASH WITHIN TWO PREVIOUS YEARS.
Nil.

AMOUNT PAID WITHIN LAST TWO YEARS OR INTENDED TO BE PAID TO PROMOTERS.
Nil.

NAMES AND ADDRESSES OF VENDORS OF ANY PROPERTY PURCHASED OR ACQUIRED BY THE COMPANY OR PROPOSED TO BE PURCHASED OR ACQUIRED WHICH IS TO BE PAID FOR WHOLLY OR PARTLY OUT OF THE PROCEEDS ISSUED AND THE AMOUNT IF ANY PAID OR PAYABLE FOR SUCH PROPERTY.
Eastern Coal Company Ltd.—
Managing Agents—Macneil & Barry Ltd.,
2, Fairlie Place, CALCUTTA.

Powers of Directors

No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of the powers of Management save and except such restrictions as are imposed upon them by law.

Underwriting Arrangements and Commission

The Articles provide for an underwriting Commission of 2½% in addition to brokerage. No underwriting arrangements have so far been made.

Nature and Extent of Directors' Interest

Lala Karam Chand Thapar is the Managing Director and Mr. Inder Mohan Thapar is another Director of Messrs. Karam Chand Thapar & Bros. Ltd., Managing Agents of the Company and are interested accordingly.

Contracts

The following Agreement will be entered into:—
Agreement between the Company of the one part and Messrs. Karam Chand Thapar & Bros. Ltd. of the other part for the appointment of the latter as the Managing Agents of the Company the terms of which are referred to in the Prospectus under the heading "Managing Agents' Remuneration" and under Articles 160-166 of the Articles of Association of the Company.

Documents

Copies of the Memorandum and Articles of Association of the Company, the draft of the contract referred to above, draft debenture trust-deed, letters of offers and acceptance for purchase of the aforesaid Collieries passed between Messrs. Karam Chand Thapar & Bros. Ltd. and Messrs. Macneil & Barry Ltd., Managing Agents—Eastern Coal Co. Ltd., and the various leases and sub-leases pertaining to the properties may be inspected at any time during business hours at the Registered Office of the Company.

Brokerage

Brokerage will be paid at the rate of Re. 1/- per Preference Share, -/4/- per Ordinary Share and Re. 1/- on Debentures, on shares and debentures allotted on application received through the recognised brokers and bankers and bearing their stamps.

Application for Shares

Application for Shares should be made on the form accompanying the Prospectus or it may be obtained at the Registered Office of the Company or from the Head Office and Branches of Messrs. Karam Chand Thapar & Bros. Ltd., Managing Agents of the Company, or from Head Office and Branches of the Allahabad Bank Ltd., Calcutta or from Head Office and Branches of Central Bank of India Ltd. or from the Head Office and Branches of the Oriental Bank of Commerce Ltd. Applications may be sent to the Registered Office of the Company or deposited with the above-stated offices of Company's Bankers or the Managing Agents of the Company, together with a remittance of the amount payable on application. In case where no allotment is made, or where the number of shares allotted is less than the number of shares applied for, the full deposit or the balance of deposit, as the case may be, will be returned. The Directors reserve to themselves the right to make allotments of share in any manner they deem proper.

The shares will be issued subject to the Memorandum and Articles of Association of the Company.

Signed:
Directors.

Dated 12th January, 1955.

Engineering and Transport

WORK ON GANGA BRIDGE TO START SOON

PROJECT TO LINK BROAD AND METRE GAUGE SYSTEMS

ACTIVE preparations to start actual construction work on the Ganga bridge in Bihar are now afoot. The project which involves an estimated expenditure of Rs. 16 crores is designed to link North Bihar with South Bihar by linking the broad gauge system of the Eastern Railway and the metre gauge system of the North Eastern Railway across the Ganga with Bihar. It will thus ensure speedier movement of supplies to North Bihar by removing transport bottlenecks. Special material trains have been pressed into service to transport pitching stone extracted from Jamalpur quarries to Hathidah, the bridge site. It is estimated that 18,000,000 cubic feet of stone will be required to build a guide bund, in addition to 400 lakh cubic feet of earth work. The 2,000 feet wide north channel with a winter discharge of over 1,500 cuses will also have to be blocked. The possibility of securing pitch stones from other quarries are therefore being investigated. River crafts have been arranged to transport part of the pitching stone to the other bank during the current working season, as it will not be possible to transport the entire quantity of stone across the river during one working season. The stone carried to the north bank in crafts will be fed by metre gauge trains over a pile bridge. The working of the metre gauge wagon ferry for this purpose is expected to start in the next few days.

As nearly 7 crore cubic feet of earth work will have to be carried out in the next working season, orders have been placed for the supply of earth moving plant required for carrying out the huge earth work. The earth work for building of the guide bank, blocking of the north channel of the river and the construction of the north approach bank in the river area will have to be done by departmental labour to complete the work within the scheduled time.

Contract for the construction of the main bridge, namely, the construction of well foundations 160 to 170 feet below low water level and the supply, fabrication and erection of steel girders, has been given to the Ganga Bridge Construction Company Ltd. The company is going ahead with preliminary arrangements and with preparing working drawings for the steel work. Steel for the steel curbs is being received at the site and fabrication will start soon. Temporary accommodation has been provided for the staff near the bridge site and quarters are being constructed on the north bank of the river where a permanent broad-gauge metre gauge transhipment and marshalling yard is to be built at a cost of over Rs. 2 crores.

ENQUIRY INTO EMPLOYMENT CONDITIONS OF DOCK WORKERS

A ten-member committee to enquire into the working of Dock Workers' Employment Regulation schemes at the ports of Calcutta, Bombay and Madras has been appointed by the Government of India. The schemes formulated after the enactment of the Dock Workers' (Regulation of Employment) Act 1948, at present cover only certain categories of stevedore workers in the ports. These schemes were intended to ensure greater regularity of employment for workers and to secure an adequate supply of them for the efficient performance of dock work. The Committee, which is headed by Mr. S. S. Vaisist, lately Adviser, Railway Board, has been asked to examine all difficulties encountered by the parties interested in the working of the schemes and to recommend necessary modifications. The Committee will also conduct enquiry into the necessity and feasibility of decasualising other categories of labour covered under the Dock Workers' (Regulation of Employment) Act, 1948, at the three ports. The Committee has also been asked to prepare amendments to existing schemes, if they so desire, or to frame new schemes for decasualising further categories of labour employed at the ports. The schemes, at present, are administered by dock labour boards which are tripartite bodies set up by the Government for each port. The Committee has also been empowered to co-opt members at ports where it conducts its enquiry. The co-opted members shall, however, not have the right to take part in the final deliberations of the Committee or in the writing of its report. Such members will function only in respect of the port for which they have been co-opted.

Besides Mr. S. S. Vaisist, chairman, the Committee includes Mr. Vincent Vaz, docks manager, Calcutta Port Trust; Mr. K. Mitter, traffic manager, Calcutta Port Commissioners; Mr. V. A. Jaywant, traffic manager, Madras Port Trust; Mr. S. C. Sheth, representative of the Bombay Stevedores' Association; Mr. A. N. Chowdhury, representative of the Mudaliar Master Stevedores' Association; Sir A. Ramaswami Mr. G. S. Dhara Singh, president, Indian National Dock Workers' Federation; Mr. Adhir Banerjee, Mr. Biswanath Dubey, general secretary, Dock and Mazdoor Union.

New Delhi

AIMS OF BILL TO AMEND CONSTITUTION

CONDITIONS FOR ACQUISITION OF PRIVATE PROPERTY

(FROM OUR NEW DELHI CORRESPONDENT.)

OFFICIAL elucidation of the Constitution Amendment Bill, which is pending before Parliament, is now available. It is contended that the Bill is in no way intended to curb private enterprise or hinder investment. On the contrary, its main object is to encourage both by regulating unhealthy practices in industrial management. The well known case of the Sholapur Mills is cited to illustrate the point. This once highly prosperous undertaking was on the verge of collapse when the Government stepped in to take over and have its management overhauled. This has now been done. The Supreme Court, to which the case was referred, held that even the temporary taking over of the mills was tantamount to deprivation of property and therefore required compensation. Here deprivation of property was construed in the widest sense and included any curtailment of the right to property. Even where it was caused by a purely regulating provision of law, and was not accompanied by any acquisition or taking possession of that or any other property right by the State, the law, in order to be valid according to the Supreme Court decision, had to provide for compensation. The Bill re-states more precisely the State's power of compulsory acquisition and requisitioning of private property, and distinguishes it from cases where the operation of regulatory or prohibitory laws result in "deprivation of property".

The zamindari abolition laws which came first on the Congress programme of social welfare were attacked in courts of law by the interests affected. In order to put an end to the dilatory and wasteful litigation and place these laws above challenge in the courts, certain amendments to the Constitution were made. Subsequent judicial decisions interpreting the Constitution have raised serious difficulties in the way of the Union and State Governments processing other equally important social welfare legislation such as the following. While the abolition of zamindari and the numerous intermediaries between the State and the tiller of the soil had been achieved for the most part, the next objectives in land reform were the fixing of limits to the extent of agricultural land that may be owned or occupied by any person, the disposal of any land held in excess of the prescribed maximum and the further modification of the rights of landowners and tenants in agricultural holdings. The proper planning of urban and rural areas required the beneficial utilisation of vacant and waste lands and the clearance of slum areas.

In the interests of the economy, the State should have full control over the mineral and oil resources of the country, including, in particular, the power to cancel or modify the terms of prospecting licences, mining leases and similar agreements. This is also necessary in relation to public utility undertakings which supply power, light or water to the public under licences granted by the State. It is often necessary to take over, under State management, for a temporary period, a commercial enterprise, for instance, or other property in the or industrial undertaking or other property in the public interest or in order to secure better management of the undertaking or property. Laws providing for such temporary transfer to State management should be permissible under the Constitution. The reforms in the elimination of the abuses of the managing agency system, provision for compulsory amalgamation of two or more companies in the national interest, the transfer of an undertaking from one company to another, etc., require to be placed above challenge. It is therefore proposed in the Bill to extend the scope of these categories of essential welfare legislation.

A recent judgment of the Supreme Court has raised the question whether an Act providing for a State monopoly in a particular trade or business conflicts with the freedom of trade and commerce guaranteed by the Constitution. It appears from the judgment of the Supreme Court that despite the clear authority of Parliament or of a State Legislature to introduce State monopoly in a particular sphere of trade or commerce, the law might have to be justified before the courts as being "in the public interest". It is considered that any such question ought to be left to the final decision of the Legislature. The Bill, accordingly, proposes to make this clear.

The main amendments sought to be made by the Bill are in Articles 31 and 31A of the Constitution. The official view is that the amendment of Article 31 merely re-states the constitutional right of property owners to be compensated for any property which may be compulsorily acquired or requisitioned by the State for a public purpose and therefore this amendment does not have the effect of preventing the courts from pronouncing on the constitutionality of provisions of a particular law. The proposed amendment of Article 31A is really an extension of that Article, specifying seven or eight types of welfare legislation which the Government has recently had enacted or now has in view. The effect of listing them in Article 31A is said to be that the interests affected by such laws cannot challenge the validity of those laws in the courts on the ground that they encroach on an unjustifiable extent on their fundamental rights under the Constitution.

A Washington report states that the United States and India are expected to reopen long-stalled negotiations soon for a treaty of friendship with modified commercial and navigational provisions. It is the policy of the U.S. Government to encourage a greater flow of private investment capital abroad to help strengthen the economies of non-Communist nations and promote world trade. The absence of a treaty with India has been regarded here as making that country less attractive than others for dollar investment by American business men.

The latest report on private U.S. investment in Europe and elsewhere, issued by the Organisation for European Economic Co-operation, was published last week. Since the war, the report says, private American long-term capital invested abroad has accounted for only about six percent of the total dollar receipts of the rest of the world, whereas in 1927-28 the proportion was about 20 percent. The statistics showed that the average net outflow of private capital from the United States to the member countries of O.E.C. was \$98 million a year between 1947 and 1953. Net exports of capital have been decreasing steadily since 1950 and in 1953 there was even a net repatriation of capital to the United States. Two-thirds of U.S. private investment abroad since the war has been in Canada and Latin America, ten percent in the O.E.C. countries and less than three percent in other overseas countries. As reported last week, this is precisely the view of the Government of India, but it has still agreed in principle to reopen negotiations.

Fertiliser Plant at Nangal

A Punjab Minister disclosed last week that a decision to locate a fertiliser plant at Nangal had been taken by the Government of India. "The State Government had been informed that it could go ahead with its plan of installing four generating sets of 90,000 kw each," he added. In planning the dam, provision was made for ten generators with a maximum capacity of 90,000 kw each and a minimum firm power of 53,000 kw each. Provision was also made for three power plants of 48,000 kw each on operation last month and the second is expected to do so by the end of 1955. These two power stations are intended to feed Delhi and intervening towns in the Punjab. It is proposed to set up a plant capable of producing 70,000 tons of nitrogen a year. The electrical energy it will require is about 160,000 kw. Tenders will shortly be invited for the plant and equipment. A Cabinet Committee consisting of the Ministers for Finance, Commerce and Industry, Production, Food and Agriculture, and Works, Housing and Supply has been set up to process the plan.

Steel Plant Projects

A Cabinet Committee consisting of the Ministers for Finance, Commerce and Industry, Production, and Works, Housing and Supply has been set up to plan steel production and finalise negotiations with the British and Russian Governments.

Dyestuff Manufacture in India

The Industrial Adviser on Chemicals, Dr. A. Nagaraja Rao, is shortly proceeding to Europe to study dyestuff manufacture. He will also recruit an Italian expert to assist the setting up of a dyestuff plant in this country.

The Government of India has removed Messrs. Simpson and Company from the list of engine manufacturers. It is learned here. The company was authorised to manufacture Parkinson's engines on the basis of a phased programme, but has, in the opinion of the Government, failed to fulfil its undertaking.

Manufacture of Jute Mill Machinery

Considerable progress is reported in negotiations to set up a plant for the manufacture of jute mill machinery. The proposed undertaking, which will be in the private sector, will have the collaboration of a British manufacturer.

Ferro-Manganese Production

The manufacture of ferro-manganese has been left to the private sector. World demand is placed at 150,000 tons a year, and it is proposed to process 100,000 tons of ferro-manganese a year, for which purpose licences have been issued to about six companies. Care has been taken that the selected applicants have contacts for marketing the product.

Slab System in Tea Export Duties

An explanation is available of the slab system proposed to be introduced in tea export duties. It is stated that tea prices are subject to fluctuations, and it is not conducive to trade to vary duties every time. The American importer, buys tea on a forward basis and runs the risk of paying enhanced duties if they are raised after his contract. The Government of India will, therefore, fix export duties on a slab basis, which will be correlated to prices, so that an importer will know in advance the quantum of duty he will have to pay at certain given price levels.

Income-Tax Investigation Commission

The Income-Tax Investigation Commission has been practically liquidated and its work has been entrusted to a special three-man directorate set up in the Central Board of Revenue. The three directors are a former member of the Investigation Commission, Mr. H. P. Singh, Mr. S. P. Lahiri and Mr. Bagardi. The report of the work so far done by the Directorate will be presented to Parliament in the early stages of its Budget Session. At the time of the Supreme Court judgment affecting the

Commission there was a Chairman and one member, as against two members provided in the Act. The member has since been withdrawn and the Chairman is on leave preparatory to retirement.

Study of Tax Commission's Recommendations

The Central Board of Revenue is examining the recommendations of the Taxation Enquiry Commission. One major recommendation relates to the custody of the assessee's account books, the provision relating to which was opposed by the pre-independence Central Legislature. Meanwhile, the Central Board of Revenue is using the good offices of the Sales Commissioner to track down tax evaders.

Income-Tax and Death Duty Revenue

Income-tax receipts for the eight months ended November amounted to Rs. 61 crores, as against Rs. 69 crores for the corresponding period of 1953-54. The Budget estimates were placed at Rs. 165 crores. The yield from death duties has so far been disappointing, being Rs. 70 lakhs for the nine months ended December as against Rs. 4 crores provided in the Budget.

Committee on Port Labour Grievances

The Government of India has set up a committee to enquire into the grievances of port labour. Its personnel and terms of reference have also been announced.

Transfer of Employment Exchanges

The Government of India has accepted the recommendations of the Shiva Rao Committee relating to training and employment exchanges; both will be transferred to the States. Central liability for training will continue on the existing basis for the time being. Under the employment exchanges transfer plan, the exchanges will be made permanent, the States taking the present employees in their service. Two proposals are in the field for adjusting their scales of salaries. Under one, an all-India scale will be introduced, which will be confined to the present personnel and will be half-way between the Central and States scales. The second plan will reduce salaries to the State level, but give a fixed personal allowance to existing personnel. A phased programme for the transfer of the exchanges is being drawn up, beginning with their transfer to Part A States.

Future of Co-operative Movement

Senior officers of the Food and Agriculture Ministry, the Finance Ministry, the Planning Commission and the Reserve Bank of India met representatives of co-operative societies at Bombay last week to discuss the report of the All-India Rural Credit Survey Report with special reference to agricultural credit. There is a strong opposition from the leaders of the co-operative movement against the officialisation of credit societies. On the other side, it is contended that the societies have been given a full trial of over 50 years, yet the movement has not made much headway; it is time the Government stepped in, as recommended by the Committee. The Bombay meeting gave fuller opportunity for non-officials to have their say.

Cabinet Reshuffle Postponed

Ministerial re-organisation has been postponed till the Prime Minister returns from Britain, it is learned. Before he left for Indonesia, Mr. Nehru wrote a letter to his Cabinet colleagues stating that the present allocation of subjects amongst various Ministries was not conducive to efficiency or speedy disposal of work. It was also felt that the Planning Commission needed the full-time attention of one Minister, so the present system of having three Minister members required re-examination. The view points of the various Ministries were discussed last week but needed fuller consideration, so the decisions have been postponed till February. The whole position, therefore, still remains fluid and it is not clear whether the amalgamation of the Production Ministry with the Commerce and Industry Ministry will take place before 28th January, when the Prime Minister leaves for London, or will await the general reorganisation after the Prime Minister's return from Britain in February.

Nandikonda Project

The Nandikonda project will be included in the second five year plan and a provision for preliminary expenses is expected to be made in the 1955-56 Budget, it is learned here. As there is no popular Ministry in Andhra, the final shape remains undecided, but indications are that a scheme combining the best features of the Krishna Punar project and the Nandikonda project will be finally adopted. The expensive canal system through the rocky surface of the Eastern Ghats, which is the much criticised feature of the Nandikonda project, may have to be given up, particularly in view of the revival of interest in the Rampadsagar project, which is designed to tap the so far uncontrolled waters of the Godavari. Indications are also not wanting that the Nandikonda project will be included in the second five year plan.

Meanwhile, the controversy between Andhra and Mysore over the Tungabhadra project remains unsolved. The project, as is well known, has two canal systems—one low-level canal in which water flows but has not yet been used, and a high-level canal which still remains to be constructed. Mysore State through which the first stages of the high level canal are to be dug, has been insisting on the proper utilisation of the other canal prior to starting this work. This view does not find favour with Andhra. The Tungabhadra Control Board, consisting of two Chief Engineers each from Andhra, Mysore and Hyderabad, has become inoperative because of the deadlock. The Centre has not yet found a way out.

768,000 SKF ROLLER BEARING AXLEBOXES

supplied to railways throughout the world!

In 1911 — 42 years ago — SKF axleboxes were first fitted to railway rolling stock. In 1919 the first SKF spherical roller bearing axleboxes were introduced — axleboxes that have since gained a world-wide reputation for reliability and efficiency. Up to the present a total of 768,000 roller bearing axleboxes have been supplied to the railways of the world for locomotives, passenger coaches and goods wagons of all types — a total far in excess of that of any other rolling bearing manufacturer. That is why no other rolling bearing manufacturer can offer such long and varied experience in the railway field as SKF. SKF spherical roller bearings are designed to carry heavy, rapidly fluctuating loads accompanied by shock loading, i. e., just those conditions encountered in railway service.

THE SKF BALL BEARING COMPANY LTD.
BOMBAY, P. O. Box 71 CALCUTTA, P. O. Box 508 MADRAS, P. O. Box 44

Sri P. M. Chinal (Babubhai) has been elected (without contest) President of the Indian Merchants' Chamber for the year 1955.

Bombay

CROSSWORDS AND THE CONSTITUTION

WIDER IMPLICATIONS OF AN INTERESTING JUDGMENT
(FROM OUR BOMBAY CORRESPONDENT)

THE business community may not have much direct interest in the Bombay High Court's judgment dismissing the four appeals filed by the State Government in respect of tax on prize competitions conducted from outside the State and the restrictions imposed on them under the Bombay Lotteries and Prize Competitions (Control and Tax) Act, but certain features of the judgment will be of some importance from the point of view of the constitutional provisions affecting inter-State trade. One of the most important rulings given by the Chief Justice, Mr. M. C. Chagla, and Mr. Justice Dixit was that a corporation would be entitled to claim protection under the fundamental rights guarantee of the Constitution. Their Lordships held that there was a lacuna in the Constitution as no provision existed to show who were citizens; but as in the present case all the shareholders and directors were citizens of India, the corporation was entitled to such protection. An equally important ruling was that the tax levied on prize competitions conducted from outside the State could not be regarded as extra-territorial as it sought to tax only the amount collected in the State.

With regard to the tax itself, it was held that the levy was not on the gambling of those who participated in competitions but on the business of the promoters. If the legislature had provided that each competitor should pay a certain amount of his entry fee as tax, that would be a tax on gambling and the promoters in that case would have been collecting the amount for the Government; but what was now taxed was what the promoters realised in the course of their business and they were, therefore, entitled to claim protection under the relevant provisions of the Constitution. The business was permitted under the law and could not, therefore, be regarded as opposed to public policy. The legislature having legalised it and permitted it to be run for profit, the promoters could claim the right of freedom of trade between States. Article 304 of the Constitution dealing with restrictions on inter-State trade and commerce required that any Bill or amendment which placed restrictions on inter-State trade should have the previous sanction of the President. As such sanction had not been obtained, their Lordships held it to be bad in law. Further, Article 276(2) provided that no tax in excess of Rs. 250 should be levied on professions, trades and callings. Their Lordships stated that as the State had admitted that the tax under the Act was on gross receipts, it became a violation of the provisions of this Article also. All the four appeals, therefore, involving four different concerns were dismissed, though the competitions were held to be really lotteries, as the State had legalised them by issuing licences and collecting revenue. As for the restrictions on prize amounts, the number of competitions and on entries, though these were held by the Court to be reasonable in the public interest, they too were pronounced void as previous sanction of the President had not been obtained for amending the Bill, as required under Article 304(b) of the Constitution.

Rural Credit and Co-operation

The Executive Director of the Reserve Bank of India and a Member of the Committee of Direction on the All-India Rural Credit Survey, Mr. B. Venkatappaiah, gave a talk to the Co-operative Circle on "Rural Credit and Co-operatives", in which he explained some important implications of the rural credit survey report. He stated that there was a great deal of misunderstanding as regards the proposed creation of the State Bank of India. This had received much wider attention than the other proposals which were equally significant for the

promotion of rural development. The essence of the recommendations is the concept of partnership between the State and the Co-operative movement. Mr. Venkatappaiah claimed that such partnership had been in operation in Bombay for several years and had shown the way how further steps could be taken for promoting the movement. After explaining in broad terms the proposals contained in the survey, he said that the dominant purpose of the Committee's report was to create conditions for the co-operative movement in the villages to be a success. The data obtained from various sources had led the Committee to the conclusion that co-operative credit in the rural sector was of negligible proportions, though there was a noticeable progress in this direction in some States like Bombay, Madras and U.P. The Committee believed that the rural problem was an integrated one and did not admit of piecemeal solution. Having decided that the State could not allow laissez faire in rural development, it became imperative for it to step in with active assistance. So a sort of partnership between the State and the co-operatives for rural uplift had to be recommended. This proposal was not designed to supplant the co-operative movement but to further its development in the rural sector.

According to Mr. Venkatappaiah, the link between the State and the co-operative movement was not accidental but organic. Besides indicating the nature of credit facilities to be provided, the Committee had also stressed the importance of co-ordination in the field of agricultural marketing and warehousing. There is a lot of misgiving among orthodox co-operative circles here on the question of participation, as the 51 percent holding suggested for the State in co-operatives would kill the spirit of co-operation. It is suggested by some veteran co-operators that, even as it is, the co-operative movement has failed to take root because of the grip which the Government exercises over the movement. Any widening of the scope and powers of the State machinery would transform the movement into an official department of rural development; that would be detrimental to the spirit of self-reliance and voluntary participation without which the movement cannot grow. What the movement requires, they suggest, is to build it from the bottom upwards by enabling primary societies to work better and widen the scope of their operations, rather than pump so much credit into provincial and district banks.

Oilseeds Slump

The oilseeds market has come under a strong wave of bear selling, and prices have slumped badly. For instance, groundnut ready has fallen to about Rs. 20.6, as against Rs. 22.5 a week ago. The decline, despite the announcement of export quota in H. P. S. groundnuts and groundnut oil, is due to a number of factors. Firstly, the new crop, which is estimated at about 1½ times the previous crop, has started arriving in substantial quantities. Secondly, the increase in the export duty on H. P. S. groundnuts from Rs. 150 a ton to Rs. 300 a ton was completely unexpected, and helped demoralise market sentiment. Thirdly, the decision of the Centre to give bonus quotas in groundnut oil to established shippers only for quantities equal to actual exports made by them between 4th November, 1954 (the date on which the duty on groundnut oil was reduced) and 20th January has induced shippers to press sales abroad to entitle themselves to a good quantum of the quota. Taking advantage of this opportunity, Continental buyers have revised their prices for groundnut oil from £109 a ton to £105 a ton c.i.f. The kardi and niger seed sections have been ruling easy in sympathy with the weakness in groundnuts. The performance of even the castorseed section has been discouraging. May delivery quotations being as low as Rs. 80, as against Rs. 86-8 a week ago. This state of affairs, despite the reduction in the export duty on castor oil from Rs. 300 a ton to Rs. 125 a ton, is due to extremely bearish advices from the Continent and the U.S.A. It is said that nothing short of complete abolition of the export duty will be able to arrest the downward trend. In the existing situation, the waiving of the maximum limit of 600 tons for export per established shipper up to 31st March this year, and

the increase in the ceiling for non-established shippers from 50 tons to 200 tons, is said to be of very little use.

All-India Bullion Traders' Convention

The decision of the Bombay Bullion Association to call a convention of all-India bullion and allied traders, with a view to finding ways and means of organising the bullion trade into a single all-India organisation, has received good response. Bullion traders in India are very poorly organised considering the volume of trade and the large amounts involved in the business. The annual business in bullion is computed at about Rs. 200 crores. According to Government statistics, the country has imported, during the past 50 years, bullion worth as much as Rs. 1,500 crores. The main objects of the convention, as revealed by Mr. Jwalaprasad Tiwari, president of the Bombay Bullion Association, at a Press conference, are as follows: (1). To build up an influential organisation giving country-wide representation to all the trading bodies and associations facilitating better and smoother regulation of ready and forward trade in bullion and all the individuals concerned thereto, with a view to active participation in the formulation of policies that affect the trade, and establishment of a community of interests to ensure speedier development of trade and enterprise in an atmosphere of freedom and progress. (2). To obviate the difficulties, practical and procedural, in the way of the trade and to remove the handicaps and restraints arising out of the prevalent policy, arresting the healthy growth of trade in general and bullion trade in particular in the national and international spheres with a view to ensuring better and smoother regulation of trade and protecting the interests of the mercantile community at large. (3). To review the evolution of utilisation, of bullion for ornamental, industrial, electrical, electronic, chemical, monetary and various other purposes by organising an unprecedented divisional exhibition with each different division of a highly instructive order set up, with a view to apprising the general public of the all-pervading influence of bullion in the social and economic life of the Indian people. (4). To take steps to see that the body set up by the convention will become the effective organ of the entire trade and also function as a liaison between the bullion trade and the Government. The convention is the first of its kind to be held in the country. About 200 representatives of the bullion trade from all over India are expected to attend the convention to be held from 12th to 14th February at Bombay. Simultaneously with the convention, the Bullion Association of Bombay has decided to hold a unique exhibition of the products of the various types of precious metals and other allied industries.

Art Silk Industry's Raw Materials

Relief in excise duty and liberal import of art silk yarn were the two important pleas which Mr. D. N. Shroff, president of the Silk and Art Silk Association Ltd., made addressing the Association's recent annual meeting. On excise duty, Mr. Shroff stressed the fact that it was most unfair and unjust to put a tax on a losing industry which was already paying a very high import duty on its raw materials, the incidence working out to 50 percent. The art silk industry stood in need of relief. Speaking on the import policy, Mr. Shroff said that import quotas of art silk yarn given to silk and art silk mills in the past year and a half were not adequate, with the result that mills had found it difficult to get yarn at reasonable prices. The industry's demand was satisfied to the extent of only 37 percent by the present quotas of import licences. This had created an artificial scarcity of yarn. The total production of factories which were members of the Association, Mr. Shroff said, amounted to 157 million yards in 1953-54, whereas the rated production capacity for the whole industry had been estimated at 350 million yards by the Planning Commission. This target could be reached only if the requirements of raw materials were fully met. Speaking on the disturbing features of the new import policy, Mr. Shroff criticised the policy of licensing import quotas of artificial silk fabrics and licensing for interchangeability of silk fabrics with art silk fabrics. He remarked that the imports policy would mean a doubling of the quantity of art silk fabrics and, would adversely affect the indigenous industry. A complete ban on the import of acetate yarn of 150 and 120 deniers was not justifiable. He pleaded for the removal of the ban, but suggested that, if necessary, restrictions might be imposed on unduly large imports.

Czechoslovak Trade Exhibition

The Czechoslovak Chamber of Commerce has decided to hold a trade exhibition in Bombay, from 4th February for three weeks. Disclosing this at a Press conference, Mr. Jan Buda, Director of the Czechoslovak Chamber of Commerce, stated that 12 export companies would display their goods which would cover almost all the products of the country's major industries. The products include heavy machinery, machine tools, scientific and industrial instruments, ceramic and glassware, agricultural machinery, aeroplanes, automobiles and motor cycles.

Indian Merchants' Chamber

Mr. P. M. Chinnai, the present vice-president of the Indian Merchants' Chamber, Bombay, has been unanimously elected president for 1955-56. He is connected with various business and industrial institutions, is vice-president of the Rayon Manufacturers' Association and a member of the Central Silk Board. He is also a member of the Committee of the Federation of Indian Chambers of Commerce and Industry, which he represents on the National Harbour Board. He represents the Indian Merchants' Chamber on the Bombay Port Trust and is a member of the Bombay Legislative Council.

London

A GOOD YEAR FOR BRITAIN'S TRADE

INVESTMENT IMPROVED WITH INCREASED OUTPUT

(FROM OUR LONDON CORRESPONDENT)

BOARD of Trade figures issued this week make it possible to survey Britain's achievement during 1954 in the sphere of trade, and to reach the conclusion that it was a good year in spite of recent setbacks. December figures set up new records. Exports jumped by £60 million and totalled £255.7 million, a new peak, and that applies also to shipments to the United States at £15.7 million. The Board of Trade points out, however, that the October dock strike continued to influence the export figures last month, and this is confirmed by the fact that the last quarter's average, at £222.2 million, is 3½ percent below the similar period in 1953, whereas earlier quarters had shown increases of from 5 percent to 8 percent on the comparable 1953 figures. Imports in December, on the other hand, were £19.3 million down to total £314.5 million. Allowing for re-exports of £8.5 million, the adverse balance on the month was £80 million smaller at £50.5 million. For the year 1954 as a whole Britain's exports reached a new high record, both for value and quantity, with a total of £2,674 million. This was £92 million more than in the previous year. Imports increased by £40 million to £3,382.5 million. Re-exports declined £5 million to £100.5 million. The adverse trade balance was the lowest for any year since 1950. The excess of imports over exports and re-exports fell by about £47 million to £608 million. Judged from the balance of payments viewpoint the trade figures suggest an improvement. Visible trade was certainly better and in the light of official estimates for the first half of the year the payments balance seems to have improved correspondingly.

Other details of Britain's prosperity in 1954 were given by Mr. Henry Brooke, Financial Secretary to the Treasury. Summing up, he said that industrial output was 5 percent to 6 percent higher than in 1953; that on the basis of the first nine months, roughly 3 percent more goods went into personal consumption; and that, as far as the Treasury could tell at present, investment last year was higher than in 1953. He added that, by November, retail prices were no more than 3.5 percent higher than a year earlier, a much smaller increase than in most post-war years. He pointed out, however, that there were two dangers ahead: the first that prices might rise; and the second, that Britain might lose part of her share in world markets. Despite the uncertainty in official quarters as to whether the effects of the dock strike might have masked a flattening-out of the rising curve of exports, spokesmen of industrial and commercial organisations are cautiously optimistic about the chances of even bigger exports in 1955. Much is expected from the export drives being fostered by the visits of trade missions to various markets, and particularly to the Middle East and to Latin America. Mr. Peter Tennant, Overseas Director of the Federation of British Industries, put it that: "If terms and conditions of trade remain their drive, there is a reasonable chance of bettering last year's increase and perhaps even reaching the £2,800 million mark in 1955." There were, however, many "imponderables" which could upset calculations. Much depended on United States economic developments, which were showing a more liberal tendency.

Internal Consumption Rising

That exports are being maintained despite a steady rise in domestic consumption of consumers' goods is probably the most encouraging feature of all, but the long-term implications of the latter development cannot be ignored. Personal expenditure on consumers' goods and services rose by £150 million in the third quarter of last year compared with the corresponding period in 1953, to £2,976 million. The increased spending was accounted for partly by higher prices. It covered every item except beer. Money spent on other goods and services went up from £535 million to £570 million. This process is likely to continue as trade restrictions are progressively removed, and with the latest developments on the labour front, with railwaymen, miners, building operatives and other workers all well on the way to receiving substantial increases in wages, the threat of inflation—though it is being held at bay for the present—is undoubtedly very real. It will be kept in mind by Mr. Butler, despite the lead he gave the O.E.E.C. in favour of trade liberalisation in Paris last Friday and will influence his disposal of the large surplus he is expected to have at his disposal when framing his next Budget. Remembering that what importance he will attach to the advice he is now being given in this respect is anyone's guess.

Both Mr. A. Harold Bibby, in his speech to the shareholders of Martins Bank, and the Association of British Chambers of Commerce in their customary letter to the Chancellor outlining their Budget recommendations, encourage the hope of "substantial" reliefs. The standard rate of income tax and urges: That the standard rate of income tax be reduced with corresponding adjustments of the lower rates; that purchase tax rates should be cut by one-fifth; that the profits tax be amended by converting it to a flat rate on profits of companies whether distributed or not; that duty on petrol and related oils be cut from 2s. 6d to 2s.; and that self-employed persons be allowed to provide for retirement annuities out of their income before taxation. It also calls for a continued drive to reduce Govern-

ment expenditure substantially, stating that there would be more to "invest in success" if a reduction in taxation reduced the odds a little to make it worthwhile.

Trade Restrictions Eased

The easing of trade restrictions is a continuing process, and a further batch of announcements has been made this week. Most important is that most exports to Hongkong will be freed from control under a Board of Trade order on export licensing which comes into force on Monday. Controls over exports to China remain unchanged, and no relaxations have been made in the embargo list operated by the United Kingdom and Hongkong. A wide range of goods for destinations other than China, Macao and Tibet will be freed, and certain items of strategic importance brought under control. The Board of Trade states: "In the main, these changes stem from the revision of strategic controls announced in the House of Commons in July last, but a few alterations are consequent upon the removal of licensing controls no longer needed on goods which were in short supply." The Board has issued a revised transhipment open general licence to operate from Monday, superseding that of 5th May, 1954. Apart from the release from transhipment licensing control of wool, this revised licence reflects changes in the controls over strategic goods embargoed for the Soviet bloc. Only some strategic goods have previously been controlled on transhipment; now all items are brought under this control to prevent them from being diverted through the United Kingdom.

The Board of Trade also announces that as soon as administrative arrangements can be made a quota at an annual rate of £3 million f.o.b. will be established for the import, for general purposes, of hardwood from the dollar area. This will be in addition to expenditure on dollar hardwood imported for special purposes under the existing arrangements. The quota will be allocated in two half-yearly instalments to hardwood-using firms and hardwood importers and will be based on usage and imports in a specified period.

From 17th January, wool and animal hair, raw, curled or dressed, may be imported from any country under Open General Licence. From that date also, edible nuts (except peanuts) and grapes may be imported from Spain under Open General Licence, that is, without separate licences. From the same date, animal oils, fats, and greases, other than butter, lard and pig fats (unrendered) may be imported from any source without separate licences. Arrangements have also been made for the import under specific licence of a limited quantity of cottonseed oil from the United States.

Some time ago stockholders of the Peninsular and Oriental Steam Navigation Company expressed criticism of what they regarded as an inadequate return on the basis of the real capital employed, and represented the matter to the Board. A series of discussions ensued, and as these were not receiving adequate consideration it has now been decided to form a P. & O. Stockholders' Association Ltd. (Sir Harold Gillett, the City accountant, who represents a substantial stockholding, heads the Executive Committee of the Association. The other members are Mr. Oliver Smedley, also a chartered accountant, Mr. James Walters, a director of Investment and General Management Services who act as secretaries to the Association, and two Deferred stockholders, Mr. R. D. Poore and Sir Gerald Wight, who has important interests in Trinidad. The Committee feels that steps should be taken for Deferred stockholders to get a fair return on the capital representing their interest in the business. At 30th September, 1953, this amounted to book values of over £95 million and "which at present-day values must greatly exceed this figure." Based on these book values the dividend for the year ended 30th September, 1953, represented only 1½ percent gross. This figure "would be only a fraction of that rate if based on current values." As a result, the Committee says, the Deferred stock is "grossly" undervalued on the Stock Exchange.

At the meeting last May, it will be remembered, Mr. Smedley estimated the net asset value of the group at well over £200 million. This is equivalent to about £15 per Deferred stock unit. Now the Committee says that the P. & O. capital structure—there is £3 million in the 5 percent Cumulative Preferred and £13,777,554 in Deferred stock—does not take into consideration the inflationary period through which we have been and are still passing. It leads to misconception in the minds of stockholders and the general public. While the Committee is in no way critical of Sir William Currie and his Board's management, it is felt that with such widespread and diverse commercial and trading interests more information should be made available. The accounts do not differentiate between the purely shipping activities and other interests. Membership of the new Association involves no financial obligation. As, however, expenses are involved, a company limited by guarantee has been incorporated, the members of which have each undertaken a liability of £250 and have initially provided £2,500 for expenses. It is understood that the Committee's policy is backed by substantial institutional support.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevely, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

PALAI CENTRAL BANK LTD.

HCC 20

PAN AMERICAN

This report confirms the rosier economic picture in Ceylon. Import price indices may fall with the lowering of textile prices. A further decrease may be recorded with rice prices if Burma's rice offer is accepted. This will mean the same prices for rubber and lower rates for rice. A threatened general strike of all tea estates has been called off on the intervention of the Prime Minister. The employers on their part have consented to negotiate on all questions submitted by the Unions and to send up topics under dispute for arbitration if such demands are not contrary to present Government policy.

Manufactured Goods: Prices were slightly easier at the opening of the goods market on Thursday, due to profit-taking at higher levels and absence of overseas enquiries. Speculators continued their activities and heavy goods rates dropped 4 to 8 annas, opening in the January position at Rs. 122-8 and in the April-June position at Rs. 121-12 per 100 bags. New delivery hessians showed a slight improvement due to rumours of an increase in U.S. hessian consumption, but forward positions were unchanged. Opening quotations were Rs. 45-8 for January and Rs. 45-4 for April-June. Prices in both sections fluctuated within narrow limits throughout the day, mainly due to speculative activities, although some small enquiries were received from North America for odd-sized constructions, and for woolpacks from Australia. The confirmation of the American consumption figures on Saturday caused a jump of 6 annas in the hessian market and January 40in. 100z. reached Rs. 46 with April-June shipment at a 2-anna discount. Heavy speculation in the sacking market, coupled with very steady conditions in the other goods section, caused heavy goods prices to soar throughout Friday. By the time the market opened on Saturday morning, which was the middle of the month settling day, ready B twills were quoted at Rs. 124-14, which was Rs. 2-4 higher than the previous day. The forward positions also responded to this speculative prompting and April-June shipment increased by Rs. 1-12 per 100 bags to Rs. 124. After settling day the reaction set in and with no interest shown by overseas buyers rates in the heavy goods section fell by Rs. 1 to Rs. 1-8. Mills withdrew from the market completely at this stage because raw jute rates continued to rule firm, making simultaneous business impossible. Hessian rates were unaffected and ruled steady. During

Tossa is quoted at Rs. 2 a maund over the rates for white jute.		
Pucca Bales:	Rs. a bale.	Shipment.
Mill Firsts	225	January-February.
Mill Lightnings	210	"

Outport Tossa 4's	120	white iute.	

BECAUSE of the advance in raw jute prices over the New Year period, values of medium yarns and rove, and also of jute cloth and bags were increased in the U.K. from 7th January. Most rates were reverted to those prevailing between 5th and 21st December, bringing the price for common 8lb. cops and 8lb. spoons back to 18.02d a lb., sacking 24 lb. left to 13.31d and 3-ply 8lb. twist to 19.58d a lb. Rove had not been reduced when the previous change was made but on this date was advanced from £98 5s to £104 for 48lbs. and from £78 to £83 15s. The values of hessian cloth were advanced from 14.45d to 14.84d for 40in. 10oz. and from 11.79d to 12.10d a yard.

The raw jute market went firmer over last weekend and prices for all grades are up by £2 a ton. The position at the moment is quieter though, and there is not much faith in the dearer tendency of late. Mill Firsts have become lowest at £120 and Mill Lightnings at £109, with sellers asking up to £125 and £112 respectively, while crack Daissee-2/3 is from £120 and grade from £110, grade Tossa-2/3

of course I'm a busy man, but...

... I always find time to see
Burmah-Shell's representative.
He's a very useful chap. And my
Factory Manager knows that
a short chat on lubrication can
well save time and money,
and even avoid a breakdown in
the plant. His is really sound
advice—freely given; that's
the beauty of it!

of course

I'm a busy man
but...

There may be weak spots in your
plant. Why not take advantage
of the technical service offered by
Burmah-Shell? Not only do they
ensure that the correct lubricants
are used for each job, but also
they often recommend economies
by reducing the number of
different grades.

They look for likely trouble spots
and they also look for ways to
economise on the amount of
oil you use.

BURMAH-SHELL... IN INDIA'S

from £128 and grade Tossa-4 from £117, all c.i.f. U.K. Spinners are showing little or no interest, apart from buying some parcels afloat offered at £1 to £2 less than those quoted for shipment.

Calcutta goods have been dearer, but have developed slight weakness again lately. Quotations are 73s 9d for 40in. 10oz. and 56s for 73oz. January, and 73s 6d and 55s 9d February to June, while B-Twills are at 199s 6d and 198s 3d for the respective positions of shipment.

Jute Industries, the largest jute manufacturing company here, announces that it is to build a new yarn spinning mill on ground that it has rented from Dundee Corporation in the City's Douglas and Angus housing estate. Some capital commitments have already been entered into and preparation of the ground will begin in the Spring of this year. It is anticipated that the mill will be in production before the autumn of 1956. This move to take the work to the workers was foreshadowed in the chairman's statement to stockholders in March, 1953. He then intimated that the company had been forced to take notice of the extensive new housing development which was moving the population further and further away from the present manufacturing premises situated throughout Dundee. The company, he added, had recently acquired from the Dundee Corporation a leasehold situated in the centre of these new housing areas on the north-east perimeter of the City. He further stated that "considerable" capital expenditure "must necessarily be incurred." Production from the new mill will supplement that coming from the eight spinning establishments already owned by the company and will not, so far as the directors can envisage, mean closing down any of the establishments already operating.

LIFE AND EVERY MOVING PART OF IT

I. J. M. A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total production of manufactured goods during the month of December, exclusive of all Government orders.

Description	Quantity.
1. Twist and Yarn	
(a) For sale	1,863 tons
(b) All other including that used in sewing bags	1,971 tons
2. Canvas	78 tons
3. Gunny Bags (Tonnage) excluding sewing twist	1.6 lakh yds.
(a) Hessian	2,990 tons
(b) Sacking	110.5 lakh yds.
4. Gunny Cloth	78.8 lakh Nos.
(a) Hessian	51,417 tons
(b) Sacking	11,993 lakh yds.
5. Other manufactures (including ropes)	4,893 lakh Nos.
6. Total production (above figures combined)	195 tons
(a) All kinds	93,820 tons
(b) Hessian (both bags and cloth)	14,392 lakh yds.
(c) Sacking (do.)	12,675 lakh yds.
(d) Canvas (do.)	1.6 lakh yds.

(B) Total reported production of goods manufactured on Government account

Description	Quantity.
7. Sandbags	Nil
8. Serim Cloth	18 tons
9. Hessian Bags and cloth and canvas	0.6 lakh yds.
10. Sacking bags and cloth	67 tons
11. Rope, Rope, Twine etc.	2.4 lakh yds.
	45 tons
	1.0 lakh yds.
	Nil

Summary		(00,000 yds.)		(000 tons)

1st to 10th November 1954	19,252.9	220.0	19,472.9

* 9th January was a Sunday.

WOOLPACKS DECONTROLLED

Decontrol of woolpacks operated in Australia from 1st January, 1955. Woolgrowers were urged to stock sufficient packs to meet their needs for 1955 and for part, at least, of 1956. The Australian Woolgrowers' Council has pledged its membership to a voluntary reserve stockpile. The need for stockpiling of woolpacks on farms is felt because the uncertain world situation and domestic industrial troubles had, at times, caused irregularity in jute supplies in Australia.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.2 percent to 366.3 during the week ended 1st January, 1955 as compared with 367.1 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.8 and 7.3 percent respectively. Lower prices of bajra (-4%), sugar and jowar (-3% each), and wheat at Hapur (-1%) brought down the index for Foodstuffs by 0.3 percent to 318.4, despite an increase in the prices of dal arhar (+6%), rice in Calcutta (+3%) and gur (+1%). The index for Industrial Raw Materials fell by 0.6 percent to 429.7 due to a decline in the prices of manganese ore (average export prices) (-11%), Rapeseed at Kanpur and raw cotton (-2% each) although the prices of rapeseed in Bombay (+4%) lac (+2%) and raw silk, ginglyseed and raw hides (+1% each) advanced. The index for Semi-Manufactures also fell by 0.1 percent to 346.0. Items which recorded significant variations were: gingly cake (-16%), coconut cake (-11%), castor oil (-3%) and brass (-2%), gingly oil (+11%) and cow hides and buffalo hides (+3% each). An increase in the price of jute manufactures (+1%) raised the index for Manufactures to 374.4 as compared with 374.2 for the previous week. Prices of black pepper in Calcutta and vanaspati (-7% each) and tobacco leaf (-1%) declined while black pepper at Cochin and chillies (+3% each) and cashewnuts (+1%) were marked up, and as a result, the index for Miscellaneous fell by 0.6 percent to 370.5.

NEW INSECTICIDE INCREASES SUGARCANE YIELDS

Carefully planned field trials conducted by the Central Sugarcane Research Station in Pusa, Bihar, have established that the new insecticides aldrin and dieldrin can successfully prevent termites, the so-called white-ants, from attacking sugarcane crops throughout the period of growth. The Director of the Pusa Research Station, Mr. K. L. Khanna, first introduced the new insecticides to sugarcane growers in Bihar during the 1954 to 1955 planting season. The new technique has won rapid acceptance and increasing usage of aldrin throughout U.P. and Bihar is expected to lead to substantial increases in the 1955 sugarcane yields. Termites attack crops all over India and flourish particularly in light sandy loams. Tea plantations in the Tezpur area of Assam, chillies and cotton in Gujarat, maize, wheat and sugarcane in Uttar Pradesh and Bihar are all heavily infested causing severe reductions in crop yields. The Central Sugarcane Research Station in Pusa, Bihar has been testing soil insecticides for termite control for over ten years. In 1951 the new insecticides aldrin and dieldrin were included in the research programme for the first time and it was found that both insecticides could prevent termite attack on sugarcane for well over one year. Aldrin being somewhat cheaper than dieldrin was chosen for further development work and field trials have shown that as little as one pound of aldrin per acre applied to the furrows at planting time can result in yield increases of over 120 maunds per acre.

Trans World Airlines has announced that it will operate two weekly round trip flights between the United States and India, effective immediately. A tourist flight will arrive in Bombay each Thursday evening and proceed to Colombo, returning on Friday through Bombay. A First Class service with sleeper berths will arrive in Bombay from New York on Tuesday and return from Colombo on its westbound flight every Wednesday. TWA's new schedules adhere to provisions of the permit granted by the Government of India following expiration of the air agreement between India and the United States.

U.K. Tea Stocks Higher

Stocks of tea in the U.K. bonded warehouses on 7th January rose to 95,818,800 lbs. from 91,261,170 lb. a week earlier. During the week ended 7th January 16,131,170 lbs. were landed and 11,573,540 lbs. were delivered.

COCHIN TEA SALES

At Sale No. 2, 94 lakh lbs were on offer. There was a good demand. Commons and low mediums were half an anna easier and mediums a half to one anna easier. Best liquoring types met less demand generally and were three annas easier. Whole leaf grades were weak.

EXPORT OF COFFEE

The Government of India has approved a release of 2,000 tons of coffee for export comprising 1,750 tons Plantation and 250 tons Arabica Cherry out of the 1954-55 crop during the months of January and February, 1955. Tender notices for these quantities will be issued in due course by the Indian Coffee Board.

COLOMBO RUBBER PRICES

The following prices were issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

Closing Prices on 7-1-1955 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:	
No. 1	1.23
No. 2	1.22
No. 3	1.21
No. 4	1.15
No. 5	1.12
	Sheet Cuttings 1.12
	Sheet Cuttings 2.107
Crape:	
R.M.A. No. 1X	1.32 35
R.M.A. No. 1	1.28 31
	Sheet Cuttings 4.134
	Crape No. 2 1.301
	Crape No. 3 1.261
Scrap Crape:	
Sc. Crape No. 1	1.12 14
Sc. Crape No. 2	1.05 10
Flat Bark	Crape No. 6 1.05
	Sc. Crape 3X 1.08

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crape and 31.4 cents in respect of scrap crape to the above market prices.

Calcutta Markets

PRICES RISE IN TEA EXPORT AUCTION

VERY STRONG DEMAND IN INTERNAL SALE

AT Sale No. 30, held on 17th and 18th January, offerings in the Export auction consisted of 30,493 packages representing a useful selection from all districts, with better quality particularly noticeable in the case of Doonars teas. The sale opened strong and became dearer as it progressed. Whole Leaf grades were 1 to 1 anna dearer, while 3 annas dearer. Better liquoring Assam BOP's, best CTC's and Doonars with improved quality were even up to 4 annas dearer. Fannings grades were the strongest feature. Tippy teas also sold well, while Darjeelings met with good support.

Quotations	1955	1954
Clean Black Pekoe	3 11 0	2 9 6
Clean Common B.P.	3 11 0	2 6 6
Medium Assam B.P.	3 12 6	2 6 6 to 2 7 0
Best CTC Assam B.P.	4 0 0 to 4 2 0	2 8 0 (Nom.)

At the Internal Sale, offerings of Dusts consisted of 20,824 packages. There was again a very strong general demand. Clean Black leafy exportable types were the strongest feature of the sale and were 3 to 5 annas dearer. Clean Commons and Medium Assams were 1/2 anna to 1 anna above last week's rates, while the best liquoring CTC Assams showed advances of 1 to 2 annas, especially those with improved quality. Darjeelings with autumnal quality were several annas above last week's rates and those with ordinary character in cup received fair support. The weakest feature of the sale were the poorer fibrous and artificial types, which were barely steady.

Quotations	1955	1954
Medium Doonars Dust	2 9 0 to 2 9 6	2 1 0
Medium Assam Grainy Dust	2 9 6 to 2 10 0	1 6
Best Assam CTC Dust	2 4 0	2 4 6

Offerings of Other Grades consisted of 9,776 packages. This market also received a very strong and excited demand. Exporters were operating freely and prices for all descriptions advanced by 4 to 8 annas. The strongest feature of the sale were the Fgs. grades from all Districts while the poorer stinky kinds showed the least advance in price and were hardly supported by buyers.

Quotations	2 15 8	3 1 0 to 3 2 0
Clean Common B.P.		
Medium Assam B.P.		

FREIGHT MARKETS FIRM

THE markets have maintained a firm tone and fixtures have been made for very forward positions, particularly in the grain trades. India has recommenced imports from U.S.N.H. and Pacific Coast paying \$16.50 for the former and 145s for the latter, whilst Eastern States Australia to Bombay put on 5s a ton at 95s for March shipment. Five steamers were taken for grain from Churchill to U.K. at 72s 6d for August-October positions.

Considerable interest was shown in the Time Charter section, with fixtures covering a wide variety of trades. A 7,000 d.w. oilburner was taken at 35s for the trip home via Burma with delivery Calcutta in February and a 9,600 d.w. motorship secured 37s 6d for a round trip to Madagascar delivery and redelivery Continent. Three Liberties were taken at 24s for four months' trading delivery and redelivery Continent probably for the America-U.K. coal trade.

One rate remained firm with Kollthottam-U.S.N.H. paying \$13.50 and Mormugao-Continent 89s. In the absence of tonnage, the India coal trade was quiet although there were a number of orders unfilled.

SUGAR MARKET

During the week ended 18th January, sugar sales in the Calcutta market averaged 3,000 bags daily. Arrivals were 2,000 bags a day and stocks totalled 60,000 bags. Rates for ready sugar were Rs. 30-8 for ordinary grain and Rs. 33-8 for big grain. Coming big grain (foreign sugar) sold at rates ranging between Rs. 30-4 and Rs. 30-8. D-28 grade sugar of better quality was quoted at Rs. 29-10 basis ex-mill delivery, while the inferior grades sold at Rs. 28-12. But business at these rates was done on a small scale.

HIDES AND SKINS

The market in skins ruled firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 11th January and 17th January, 1955)
Cowhides: Wet Salted (Ord.) 7,000 pcs. on the basis of Annas 12-3 to Annas 13-6; Wet Salted (Ord.) 10,000 pcs. on the basis of Rs. 10 to Rs. 11-8; Wet Salted (Slaughtered) Rs. 13-8 to Rs. 25.

Goatskins: Wet Salted (Daissee, Killed) 50,000 pcs. on the basis of Rs. 325 to Rs. 450; Assam Dinajpur-Murshidabad 60,700 pcs. on the basis of Rs. 295 to Rs. 340; Purneah-Kissenganj 12,640 pcs. on the basis of Rs. 315 to Rs. 335; Patna (Ord.) 7,000 pcs. on the basis of Rs. 265; Muzafferpore-Patna-Pakur 5,700 pcs. on the basis of Rs. 325 to Rs. 345.

Bazar Stocks

(17th January, 1955)

Cowhides: Wet Salted 1,03,100 pcs.
Goatskins: Wet Salted (Daissee, Killed) 67,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 2,32,000 pcs.; Assam-Dinajpur-Murshidabad 1,78,000 pcs.

SHELLAC MARKET STEADY

During the week ended 18th January, the market opened quietly but ruled steady for the rest of the week. The range of quotations was as follows:

Pure Buttonlac	Rs. 192 buyers, 190 buyers.
Lemon No. 1 Shellac	Rs. 192-8 to 197-8 buyers.
Lemon No. 2 Shellac	Rs. 188 buyers; 190 done; 190-8 to 193 buyers.
F. O. Std. 1 Shellac	Rs. 183 done and buyers; 183-8 to 186-8 buyers.
Pure T. N. Shellac	Rs. 174 basis done and buyers; 175-8 buyers; 180 done and buyers.
4% I. T. N. Shellac	Rs. 160 buyers; 162 done; 162 to 165 buyers.
No. 1 Kusmi Seedlac	Rs. 177 buyers; 180 done; 180 to 181-8 buyers.
No. 2 Kusmi Seedlac	Rs. 172 buyers; 173-8 value; 174 to 175-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 168 buyers; 170 done and buyers; 171 done and buyers; 172 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 163 buyers; 167 done and buyers; 165-8 to 167 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 155-8 buyers; 156 done and buyers; 159 buyers; 160 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 150 to 153-8 buyers.
Kireelac	Rs. 76-8 value; 76 buyers; 76-8 value.

Shipments during January until the 15th were 15,262 packages.

LINSEED

Firm conditions were maintained during the week and owing to good enquiries ready goods were sold at a premium activity was rather limited as supplies from the centres were scarce. In the oil market a firmer undertone was noted and steady levels were maintained; there were good enquiries from shippers and local parties, and trading was fair. Latest quotations were as follows: January, February Rs. 17-2 per maund; April-May Rs. 16-10 per maund.

CALCUTTA LANDING & SHIPPING CO. LTD. NOTICE

THE Hundred and Eighty-second Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Fairlie Place, Calcutta on Friday the 4th February, 1955, at 3 p.m., for the purpose of receiving the Directors' Report, passing the Accounts for the half-year ended 30th April, 1954, declaring a Dividend and transacting any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 25th January to the 4th February, 1955, both days inclusive.

GLADSTONE LYALL & CO., LTD.,

Managing Agents.

Calcutta,
The 14th January, 1955.

THE UNITED COMMERCIAL BANK LIMITED.

THE profit of the Bank for the year 1954, subject to audit, including the amount brought forward from last year's accounts is Rs. 30,58,724-8-9. Out of this sum, the Directors have made the following appropriations:—

1. Provision made for taxes	Rs. 10,50,000-0-0
2. Transferred to Reserve Fund	Rs. 6,50,000-0-0
3. Provision for Bonus to staff	Rs. 2,50,000-0-0
	Rs. 19,50,000-0-0
leaving a balance of	Rs. 11,08,724-8-9

Out of the above balance, the Directors propose to recommend to Shareholders at the next General Meeting the payment of a dividend at Rs. 2-8-0 per share, free of income-tax, which will absorb Rs. 10 lakhs, leaving Rs. 1,08,724-8-9 to be carried forward to the next year's accounts.

The securities and investments of the Bank appear in the accounts on 31st December, 1954 at or below the market rate ruling on that date.

THE BRITISH INDIA CORPORATION LIMITED.

'ALKATHENE' Film

(the revolutionary protective packaging material)

is now reduced in price

Here's good news for all 'Alkathene' Film users in India. Owing to a reduction in the price of Polyethylene the world over, the cost of producing 'Alkathene' Film has been correspondingly reduced. So, from 1st January 1955, 'Alkathene' Film has been available at a lower price. For details of revised prices for various gauges, please contact your nearest I.C.I. Sales Office.

COAL COMPANIES

O, P, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE GOVERNMENT'S RECORD IN COAL MINING

DISABILITIES OF PRIVATE COLLIERIES: PLANS FOR FUTURE DEVELOPMENT

THE report that the Commerce and Industry Ministry has asked the Planning Commission to look into the question of socialising future coal mining development has increased the doubts which prevail in the industry about the Government's long-run intentions. Since the Industrial Policy Resolution of 1948 it has been understood that future development in coal would be reserved for public enterprise. This is a fact which had come to be more or less accepted, and on which the industry has been able to base its plans. The place of coal as a strategic industry cannot be questioned; if the Government considers it necessary itself to undertake all further operations in a field where skilled and experienced private managements are finding it difficult to survive, then without doubt it must have very good reasons. What is troubling the industry at the moment is not that the State intends to become a competitor so much as the fact that its present performance, circumscribed as it is by controls, regulations, and legislative labour enactments, should be used as evidence against it in the nationalisation debate. The industry can perhaps be excused the feeling that the best contribution to the country's coal position would be the removal of some of the present barriers to the efficient operation of private firms, not the multiplication of public ones.

The industry's difficulties are at present due to the narrow margin which exists between costs, as determined largely by the uneconomic price it has to pay for its labour force, and its prices as regulated by Government order. Action to remedy this state of affairs—a general increase in coal sales—is prevented by inadequate transport facilities. With pithead stocks still increasing because of the shortage of wagons, with exports languishing for reasons in which the quality and price of the coal feature prominently, and with the possibility of costs being more than doubled in the near future by the decisions of a Labour Tribunal, there would seem to be many excellent ways in which the health and output of the industry could be improved. If the State is to enter the field on an increasing scale it will no doubt be faced with these same difficulties, and its own efficient working will therefore be impeded. If this has the effect of injecting a measure of sympathy into the attitude of the State towards the private collieries a most useful purpose will have been served. The danger which will arise is that the special position of the public colliery will serve to shelter it from the necessity to operate on strict commercial lines. This is the difficulty which is at present being encountered in the working of the nationalised British Railways where after years of uneconomic running, a straightforward choice must now be made between contracting the industry severely, or charging all past and future deficits to public revenue. While public concerns are able to do this they have no need to fear the sort of regulation and control which make life impossible for the private industrialists. It is small wonder then that the industry's acceptance of, and co-operation in, the new order, is being impaired by anxiety about the future, or that the Government's moves are eagerly scanned for some clear indication of what is really in store.

While Government is considering the future of this vital industry, the results now being obtained by the State-owned collieries (ten out of eleven of which are said to be working at a loss) will no doubt also receive attention. If the State cannot at present run economically the relatively compact unit of a few State-owned collieries, what guarantee is there that it could run more efficiently than private industry the whole of the vast assortment of about 850 collieries scattered through West

Bengal, Bihar, Assam, Madhya Pradesh, Vindhya Pradesh, Hyderabad and Rajasthan? It might be argued that the State collieries have been handicapped by an inefficient past, but the State has had many years in which to re-organise and improve the efficiency of its collieries, as well as the benefit of the Report of the Special Commission of Enquiry set up to recommend improvements in the administration and efficiency of State collieries. One may even doubt whether the one and only State colliery which is said to be running at a profit is indeed in that happy position, despite the extremely favourable factors which should make it one of the best-paying coal mining propositions in India. (It is a huge open quarry with a coal seam about 80 feet thick which is blasted with explosives and loaded direct into an ample supply of railway wagons brought right into the quarry.) These doubts are based on the assumption that the entire cost of removing the overburden and exposing millions of tons of coal, incurred several years ago, is not being taken into account for the purpose of arriving at present-day costs.

In view of these serious misgivings about Government's ability to run efficiently even a small sector of the industry, it is to be hoped that the Government and the exponents of nationalisation will endeavour to re-organise and work efficiently the existing State-owned collieries before making any further venture in socialised coalmining. An important contributing factor to the losses sustained by the State-owned collieries, as also the losses sustained by a number of coal companies, including the collieries of the largest and most highly organised national industrial undertaking in India, is undoubtedly the inadequate controlled selling price of coal which bears no proper relation to production costs. The labour policy of the Government and the All-India Industrial Tribunal (Colliery Disputes) now adjudicating on demands made by self-appointed colliery labour leaders, threaten to decrease further the already insufficient margin between costs and selling prices, not to speak of the burdens imposed by the Industrial Disputes (Amendment) Act, the new Mines Act and Regulations thereunder and the probability of State Governments enhancing rates of royalties under existing leases through the medium of the Mineral Concessions Rules. The effects of all these new burdens have yet to make themselves felt on the costs of the coal industry; so have the effects of the Coal Mines Conservation and Safety Rules which give the Government wide controlling powers without the responsibility of ownership.

In the face of these facts and the relatively poor results obtained by the State collieries, it would appear that Government should put to the test its capacity to run efficiently the few collieries it now owns and to sink, develop, equip and run new

modern coal mines more efficiently than private enterprise, before it moves toward nationalisation. From the results of these proposed new collieries Government would be better able to judge its capacity to run collieries more efficiently than the private sector, the effect on costs of its labour policy and the contentions of the private sector in regard to costs and selling prices. Even in highly organised countries like the U.K., nationalisation has failed to yield the desired results and has, on the contrary, resulted in increases in the price of coal without restoring production to pre-war levels, even to the level required to meet internal consumption. The result is that, whereas Britain, the largest exporter of coal under private enterprise, it has been reduced since the war nationalisation to the humiliating position of porting coal at heavy cost to the nation. Our per manshit in Britain has also shown little improvement as compared with pre-war years, de heavy and sustained mechanisation at great f cial cost, including the cost of much labour i ed in the manufacture of the new machinery i led in mines for the purpose of increasing ou and output per manshit. This last point in r tion to labour employed on the manufactu machinery—or in India's case, the cost in fo exchange of importing such machinery—and the cost of depreciation and maintenance of machinery, is only too often completely overlooked when considering output per manshit figures.

The poor prospects and uncertain future of private enterprise in the coal industry of India has resulted, with a few exceptions, in no large scale development of virgin properties since the war years. It is possible that this lack of development over a period of years will result in a cumulative decline in coal production just when increased output will be most needed in an economy rapidly developing at all levels. This is a question which may vitally affect the second five year plan and India's ambitious industrialisation schemes. It should therefore now receive the most serious and urgent consideration of Government, since a decline in production because of the absence of development will take many years to arrest and many more years to reverse.

If future development and increased production are to be assured, the Government has the following clear and urgent alternatives before it, on which an early decision should be taken. Government may take the extreme course, nationalise the coal industry and spend much effort and vast sums of money on development and re-organisation at a time when resources are more than strained by many vast State-controlled development schemes. Or it may take the middle course, to give the private sector the necessary incentives and re-assurances in the form of fair selling prices and a guarantee of no nationalisation of any properties being worked now or hereafter by private enterprise, as well as an assurance that nationalisation, if it is ever decided upon, will be confined to a State monopoly of all new development of virgin coal properties, thus gradually eliminating the private sector. Or, finally, Government could take the most liberal course and give private industry the required incentives and an unqualified assurance of no nationalisation and no amendment to Article 31 of the Constitution.

Any delay on the part of Government in clearing the atmosphere and taking positive action in regard to the future of the coal industry can only increase the

A THREAT TO THE FREE MARKETS THE MOVE TO STABILISE PRICE OF COPPER

NEGOTIATIONS which have been in progress for some months between leading producers of copper in the British Commonwealth and leading consumers of the metal in the United Kingdom are relevant not only to the London Metal Exchange but to the whole principle of free marketing. They deserve careful investigation. The subject was brought into prominence in mid-January when Mr. R. L. Prain, president of the Rhodesian Selection Trust, confirmed that negotiations to stabilise the price of copper had taken place. At that time the price on the London Metal Exchange had jumped well above £300 a ton and was nearly £50 a ton higher than the corresponding American price. Consumers were disturbed by this wide difference. And producers were apprehensive lest the high price of copper should promote substitution of other metals and thereby permanently diminish their outlets. The value of copper, moreover, was not only high but also fluctuating; whereas in America, fixed on a long-term basis, it varied only rarely. Mr. Prain mentioned that most of the world's major producers adhered to the American price, while the London Metal Exchange presented an alternative price. This is not at all the situation envisaged when the London Metal Exchange resumed dealing in copper in August 1953. Copper was largely a "dollar commodity", but the dollar price was not a free market price, and it was expected that the free London price would soon be accepted as the international price. In practice, European consumers generally follow London (though Belgium is an important exception), but they feel that the London price, although free, is not a true reflection of supply and demand.

The position is, indeed, anomalous. Most of the copper consumed in the United Kingdom itself is delivered directly from Commonwealth producers under contract and does not, therefore, pass through the Metal Exchange. Metal Exchange prices are the basis of these contracts. Yet the Metal Exchange negotiates only residual supplies and demands; so its price easily exaggerates an appearance of surplus or scarcity. The recent high premium in London, compared with New York, is due to scarcity of these residual supplies, while residual demands, fortified by industrial activity, have been relatively large. Labour troubles in the major supplying countries have interrupted deliveries or stimulated buying as a precaution against such interruption. But the supply position had already been tightened by the transfer last year of 100,000 tons of Chilean copper to the American stockpile, when Chile had reduced output to check the accumulation of copper. Chile is the main supplier of "residual" copper to London, and its recent actions have disproportionately affected the London price. Yet the rise in the London price is counteracting on Chilean policy. The high premium in London is calling Chilean supplies eastward; and already, in their turn, these supplies are tending to reduce the London price.

This is an important point for the advocates of the free market. They assert that if it is genuinely free it will establish an economic price, which will be in the long run, even if it is not at all times, competitive with a price deliberately fixed. Yet the negotiations for stabilising the price of copper are based on the idea that more, not less, of the European turnover should be negotiated outside of the Metal Exchange, and that the Metal Exchange price should no longer be the arbiter in these outside negotiations. The advocates of stability point to the present relatively favourable position of the American copper business. They should, however, be reminded that the big American copper producers control (through subsidiary companies) much of the copper-fabricating industry in America; so these producers have a close financial interest in the competitive ability of the fabricators. The major consumers in the United Kingdom, on the other hand, are financially independent of the suppliers of their raw material; and in this situation it is doubtful if prices could be fixed in long-term contracts, without reference to the market price, unless the producers agreed among themselves an arbitrary basis of values.

The interlocking of producers and consumers in the United States restrains the producers' demands on the consumers, and it can be assumed that their arranged price will always be more or less competitive—though not so competitive as it would be if there were no restriction on imports from lower-cost producers. But if British consumers bound themselves more closely to the producers—thereby using the facilities of the London Metal Exchange even less than now—they might find it very difficult to force down their primary costs in a period of declining values. Unless all other major consumers were equally bound by an agreed world price, British consumers might find themselves awkwardly placed in a recession. The essential question is whether the "blind forces of the free market work better than deliberate arrangements between producers and consumers. If

so the free markets ought surely to be used more broadly. If not attempts to re-establish the free markets in Britain—after the years of wartime control when they were virtually unable to function—are surely doomed to fail. This is a profoundly important question for Britain, whose international income from commercial services is traditionally a big element in the balance of payments and is making again, after the long lapse, a satisfactory contribution. Yet that contribution is not as large as many people hoped. For some commodities competing markets have been established in the producing areas; for others the alternative of contractual buying has largely replaced the market. The principle of the free market is not yet firmly restored, and these moves to by-pass the copper market must weaken that principle.

CURRENT COIN

Forward Markets Commission.—The Forward Markets Commission was set up in September, 1953, and the first annual report has just been published. The duties and functions of the Commission were laid down in the Forward Contracts (Regulation) Act of 1952. These include the investigation work necessary for deciding whether a particular commodity market should be brought within the regulatory provisions of the Act, enquiry into the claims of associations for recognition to conduct forward trading practices, supervision and inspection of recognised associations and the collection of factual data and maintenance of general observation of forward markets. The Commission's first year of working has been chiefly concerned with examining the various claims for markets to be reopened; the present position being a product of Government bans on forward trading imposed during the early years of the war. The aim at the time was to stop speculation and the rise in prices, and the bans were continued, and in some cases extended during the inflationary phase of the post-war period. The procedure followed by the Commission was outlined in a report submitted to the Government soon after its establishment. The first step has been to issue questionnaires to the various interested associations and the State Governments concerned. The area involved is then visited and discussions are held with the different interests. A report is later submitted to the Government on the application of Section 15 of the Act in a particular area which is then considered before any notification is made applying Section 15. Invitations are then issued inviting applications from associations wishing to be granted recognition for conducting forward trading in the commodity. After examining these applications the Commission submits a second report to the Government with its recommendations. The final step is the Government's notification of its grant of recognition to an association, which would then be governed by the regulation of the Forward Markets Commission under the provision of the Act. Up to the end of December, 1954 the Commission has submitted reports on the application of the Forward Contracts (Regulation) Act, 1952, to six commodities. These are cotton, castor-seed and castor oil, groundnut and groundnut oil, shellac, linseed and linseed oil and raw jute and jute goods. The Commission has received 30 applications for recognition from associations concerned all over India and its recommendations are shortly being forwarded to the Government. The Commission's report on cotton was accepted by the Government and a notification was issued on 30th July, 1954 applying Section 15 of the Act. The Commission has since been regulating the cotton market in Bombay through the East India Cotton Association Ltd. The report on shellac was also accepted and forward trading in seedlac and shellac was prohibited by a notification with effect from 28th December, 1954, until it could be re-organised and started again under regulation. The action of the Government on the other four reports is still awaited. The Commission has in hand the study of the forward markets in seven other commodities. The task of regulating forward trading, which has been entrusted to the Commission, is not an easy one. As the Commission observes: "Regulation of forward trading on all-India scale is being attempted for the first time, and the Commission has to break new ground, create its own procedure of work and train its staff. The Commission has necessarily to proceed with caution."

Oil and Indian Shipping.—The first shipment of gasoline and diesel oil from Bombay's new Stanvac Refinery to Cochin, Madras and Calcutta, marked a new field of shipping activity on the Indian coast. The significance of the occasion has not been missed, and the question of Indian shipping companies providing the tankers required for this service is now being debated in Bombay. Last week Mr. C. H. Bhabha, Chairman of the Government-sponsored Eastern Shipping Corporation, speaking at a Press conference, emphasised this aspect when he advised shipowners in the country to build up a privately-owned tanker fleet, not only for the coastal trade of India but, if these tankers were found suitable, for the overseas trade for transporting the crude oil imported

by the refineries. Mr. Bhabha said that tankers were necessary both for building up a balanced merchant navy and for preserving the safety of the country in times of stress. Mr. Bhabha pointed out that petrol and petroleum products amounting to more than 14 million tons, which would be put forth by the refineries soon, would have to be carried to various points on the vast sea-board of the country. This would provide great scope for Indian shipping to build up a nucleus tanker fleet as an integral part of the country's merchant navy. Mr. Bhabha admitted that the Government had given assurances to the oil refineries that they would be allowed to carry their products from the refineries in tankers belonging to any country to any port in India. While deploring these assurances, which he regarded as a negation of the policy of reservation of coastal trade for Indian bottoms declared in 1950, Mr. Bhabha hoped that it would not be difficult for the Government to persuade the refineries to utilise Indian tankers despite the assurances given to them, as these assurances did provide for the use of Indian tankers when available for the carriage of refinery products with the concurrence of the refineries. In this connection, Mr. Bhabha revealed that recently the Ministry of Transport and the Ministry of Production had generally given an assurance that the Government would try to use its good offices for finding full employment for any private-owned tankers for the coastal trade of India, as also for the import of crude oil, and welcomed this attitude on the part of the authorities. Mr. Bhabha said it was now for the shipping companies to take the initiative and acquire tankers for the import of crude oil and for moving the refined products on the coast.

Iron and Steel.—A special review of the iron and steel trades in 1954, issued by William Jacks and Co. Ltd., London, states that most of the capital goods industries have done well and none better than iron and steel, which provides the raw material for such a wide range of other industries. The underlying purpose of the British steel industry's development plans is the steady advance towards the concentration of production in integrated plants which carry out the whole of the processes of manufacture from iron ore to the finished steel products. Flexibility as well as rationalisation has been the aim. In sum, British steel has, by jumping off to a quick start, stolen a march on all its competitors. It has been able to resist the fall in production which, although most pronounced in the United States, has been a common factor in all the member States of the European community and also in Japan. Above all, by effecting substantial economies in production costs, it has held in check the inflationary pressures which have raised prices of other commodities to record heights. Discussing the European Coal and Steel Community, the review says that among its more notable achievements have been the increased trade in coal and iron between the six countries, and the removal of tariffs and the abolition of discriminating transport charges. On the other hand, the attempt to impose on all steel producers a common price in the domestic and also in the export markets has not been wholly successful. Some producers have, in fact, adopted a defiant attitude in response to the first crack of the supra-national whip, and it has become evident that the Schuman plan has still a long way to go before fulfilment of the primary objective—the creation of a trading community in coal and steel in which national frontiers have no commercial significance—is attained.

Antipodean Economy.—The economic position of Australia is at present overshadowed by the sharp drain on overseas currency resources due to mounting inflation, reports the Australia and New Zealand Bank's Quarterly Survey. "The economy is running at a high level of activity," says the Survey, "and pressure points are appearing at which inflation could become dangerous." The chances of relieving the situation without drastic cuts in imports depend on the prospects for Australia's goods on world markets. These unfortunately are not as good as they have been; over the last few years a trend against primary producers appears to have set in. The position has been made even worse by the rise in imports which has taken place since the relaxation of restrictions. This rise is due to a continuing buoyant state of Australia's internal economy and the rising standard of living. Overseas currency resources are expected to fall by A£150 million during the financial year unless present trends are reversed; this figure represents almost a quarter of overseas currency resources. The loss in export income would produce serious deflationary effects. The banking system is expected to contract credit facilities as the impact of the adverse balance of payments comes to be felt. In New Zealand, the Survey reports, a more restrictive monetary policy is now beginning to show effect. Expenditure on imports increased sharply in 1954 when trade and demand have both been high. Some continued fall in overseas reserves is expected but "the restraint in bank lending may be expected to discourage further untoward extension of demand for imports." The internal economy

remains in a buoyant state and the increased basic wages ordered by the New Zealand Arbitration Court, which came into effect in November, 1954, will tend to raise income levels even further.

Indian Quality Control.—In his presidential address to the Indian Society for Quality Control in Calcutta last Friday, Mr. B. K. Rohatgi outlined the development of this comparatively new technique in India. The Second World War saw the first large-scale applications to industries in western countries, but the first progress was not made here until 1948, in spite of the efforts of enthusiasts which date from as far back as 1934. Mr. Rohatgi was able to report that the technique is gaining ground in India, and among recent developments he mentioned the establishment of the Policy Advisory Committee at Cabinet level with the Finance Minister, Mr. Deshmukh, as chairman. Under the guidance of this Committee, Mr. Rohatgi stated, full-time Statistical Quality Control Units are being established through the Indian Statistical Institute in order to instal the system in different industries. Following the visit of a U.N.O. team in 1951 other independent S.Q.C. agencies have also sprung up at several places in India, and efforts are being made to co-ordinate these activities under the Society. Close attention is now being paid to progress of the statistical units at present functioning under the Indian Statistical Institute. Mr. Rohatgi explained that the experience of the Society during the last seven years had been that "a number of Indian industries require education in the most non-technical language" and to this end he recommended conferences, conventions, group discussions, non-technical literature and propaganda through the Press and from public platforms. He suggested the use of S.Q.C. technique phlets explaining the usefulness of S.Q.C. technique to industries such as paper, tea, mica, shellac, paint, varnish, cement, jute, cotton, rubber and engineering so as to stimulate the interest of managers. Inaugurating the conference earlier, Mr. G. D. Birla mentioned specifically the application of quality control to the problems of the cotton textile industry, and particularly that of shrinking exports. Mr. Birla affirmed that "quality will be an overriding consideration even in countries importing coarse and medium varieties of cloth."

Bombay's Transport.—Presenting the Budget Estimate "C" of the B. E. S. & T. undertaking for the year 1955-56, to the Standing Committee of the Bombay Corporation last week, the Chairman of the B. E. S. & T. Committee, Mr. A. K. Hafizka, made special reference to the difficulties which have had to be faced since the municipality assumed responsibility for the undertaking. Mr. Hafizka referred critically to such items as the current high rates of dearness allowance which had to be met, the increases in prices of materials, the additional taxes on motor fuel and vehicles, and the surcharge which has been levied on the electricity which the undertaking purchases. On the basis of these difficulties Mr. Hafizka concluded that "municipalisation has been an unqualified success." The need for economies in establishment costs is not being overlooked, and as an example of saving already achieved the number of ample of each bus and tram unit has been reduced from 3.73 and 4.06 respectively in 1948 to 2.65 and 3.47 respectively today. Mr. Hafizka was able to state that apart from the public loan of Rs. 1.25 state all the capital works, totalling in all crores, 11.51 crores, have been entirely financed from internal funds. In addition, contributions to the extent of Rs. 2.20 crores had been made to the municipal exchequer, while internal funds amounting to Rs. 7.53 have been built up. The prosperity of the electricity supply section has been impaired by the restrictions on the expansion of load which have been imposed by the Government due to generating capacity being unable to meet the full demands upon it. Efforts to establish new generating plants and also to increase the capacity of existing stations are expected to relieve the situation. The "Power Pool" scheme has also been expanding. Attention was given to the improvement of the distribution system and to the provision of better supplies to consumers, and a long-term expansion programme has been drawn up to meet probable load requirements up to 1970. Concern is being shown at the recurring annual deficit of the Tramway section largely due to the one-anna flat rate, which has remained unchanged since 1907, but which the company still charges for fare. If it is intended the trams should survive, Mr. Hafizka said, "the Committee and this House will have to take a bold decision as to how to minimise the losses." The problem of traffic congestion in the city of Bombay is another factor which will affect the future of the tramway. Mr. Hafizka added: "The whole aspect of the tramway working is at present receiving the serious attention of the Committee and it is hoped that before long concrete proposals will be submitted to this House for their approval." The undertaking's fleet of buses has increased since

1947 from 89 single deck and 153 double deck to 197 and 373 respectively, and seating capacity has expanded from 11,582 to 31,500. Provision for another 50 vehicles has been made in next year's Budget estimates, and if necessary further increases will be made early in the next official year. Proposals for revising the fare structure so as to rule out the present disparity in rates between the city and the suburban services are now being worked out, and are shortly to be placed before the B.E.S. & T. Committee and the Corporation. Referring to the problem of peak-hour traffic Mr. Hafizka was able to report that the introduction of standing accommodation in buses had greatly helped the situation. But a real solution was not easy to find and Mr. Hafizka suggested that it might have to wait for the introduction of some scheme for staggering the working hours of offices and industrial establishments, or the movement of some of the administrative offices out of the Fort area to suitable sites in the suburbs.

Tourist Trade Earnings.—The growing importance of the tourist industry to British foreign exchange earnings has been emphasised by some interesting figures given by the new Chairman of the British Travel and Holidays Association, Sir Arthur Morse, to the London branch of the Sales Managers' Association in the course of a speech on the subject "Trade Follows the Tourist." He said that Britain had earned £630 million from overseas visitors in the past six years, and of this total about £180 million was in United States dollars. During the past year nearly 900,000 tourists had come to Britain. One million overseas visitors were expected in 1955. These tourists were ardent shoppers who spent more money when on holiday than when they were at home. In the first nine months of 1954 the tourists had spent £3,107,000 under the personal export scheme. When they returned to their homes, they quite naturally showed their foreign purchases to their friends. Often the friends so admired these purchases that they ordered the same products themselves. In this way, tourism advertised Britain's products in foreign markets. The motor-car industry was a good example of this process. Each year the British motor-car industry sold between fifteen and twenty thousand cars to foreign visitors who first toured Britain in them and then took them home. The value of these sales was not included in tourist earnings. But Sir Arthur was sure that many of these cars would not have been sold if visitors had not first been induced to come to Britain. Britain's earnings from tourists last year exceeded £130 million. Sir Arthur claimed that this made the tourist industry not only the biggest United States dollar earner but also one of the leading industries in terms of foreign currency earning power. Since the tourist industry was so important to the economic life of the country, Sir Arthur appealed to the Government to give hoteliers every encouragement to increase their amenities. One way to do this would be to give them some relief from the burden of the purchase tax.

Rubber Manufacturers Meet.—Mr. Cecil Stack, chairman, told the annual general meeting of the Association of Rubber Manufacturers in India at Calcutta on Monday that the past year had been a record one for rubber manufacturers in this country. The industry would register a consumption figure of well over 25,000 tons for 1954 which was unprecedented in its history. Some new projects were in operation and, as a result, conveyor belting, long braided hose and rubber flooring were in production. In addition, there was a list of smaller items under the classification of general rubber goods too long to enumerate. According to Mr. Stack, all this was evidence of the healthy state in which the industry found itself today. No insurmountable difficulties had been encountered in securing raw materials for manufacturing purposes and, in general, relations with labour were satisfactory. The increasing expansion of India's economy, the implementation of the first five year plan and the emphasis upon industry in the second five year plan, had accentuated the importance of the rubber manufacturing industry. Agriculture and industry alike were making and would continue to make demands which manufacturers would have to meet by increased output and by the production of a wider range of articles. The word "co-operation", Mr. Stack said, "should sound the keynote of our endeavour. By co-operation I do not mean the end of competition. Keen competition is needed above all to raise standards throughout the industry, but such competition should, in the interests of the industry and the country, be based mainly upon quality. Quality must not be sacrificed for the production of cheap articles giving poor service to the purchaser." Praising the work of the Indian Standards Institution, Mr. Stack pointed out that the introduction of worthwhile and workable standards would go a long way towards helping the industry with its problems, provided that the standards were applied and, where necessary, enforced.

GILT-EDGED FALL ON INTEREST RATE UNCERTAINTIES

INDUSTRIALS IMPROVE: SUCCESS OF COLVILLES STEEL ISSUE

London, 25th January.

EXCEPT for gilt-edged securities, the stock market made a very good showing during the past week under the lead of industrial shares. Gilt-edged lost further ground under renewed and persistent small selling induced by interest rate uncertainties. Falls were widespread and substantial, with losses in undated stocks extending to over one point. The event of the week was the great success of the Colvilles steel issue, which attracted applications totalling 130 million shares for the 10 million shares offered. The issue diverted substantial funds from the market, but the fact that the latter still made fresh headway was a significant tribute to the underlying confidence in the outlook. The pace of the advance in industrials was somewhat slower than of late, but many good features developed and widespread gains were recorded. The leading issues improved, while shipping shares were active and strong on hopes that the shipping companies might pursue more liberal dividend policies. Tins also showed good gains. After the week-end, the continuing downward trend in gilt-edged stocks began to have an unsettling effect on the market. Although some sections, notably electricals and chemicals, advanced further, profit-taking was noted and some dull spots developed, mostly in shippings, stores and oils. The latter moved irregularly during the week and finished mostly lower on balance. Rubbers tended firmer, while renewed strength was displayed by tea shares, with Assam Company recording a substantial advance. The foreign bond market was subdued, and small losses were noted in German Reich issues, but polish bonds were in demand. Dollar stocks moved mostly lower in sympathy with Wall Street. Gold shares tended irregularly higher on balance, helped by the quarterly reports and the Governor-General's speech at the opening of the South African Parliament. Coppers reflect-

ed the uncertainty of Wall Street but other base metals held steady to firm.

The Money Market

Credit conditions were again tight during the past week. Tax payments remained heavy, while the make-up of monthly balance sheets and new issues drained funds from the market. Consequently, dearer money rates were obtained, with 12 percent not infrequent. The market even had to pay the penal rate of 3 percent for small amounts from the central institution. Sterling remained weak, and with the news, that the U.S. treasury bill rate had been raised by about 1/16th, the market bid a higher rate for last week's offer of treasury bills. The average was a fraction short of the rate ruling prior to the bank rate change of 13th May, 1954; as a result, discount houses marked up their buying rates for line bills by 1/16th. Treasury bill applications totalled £351,145,000, of which £200 million were allotted at an average rate of 40s 3/4d compared with 38s 11 7/8d in the previous week. This week, £210 million will be allotted. The Bank of England return for the week ended 19th January shows that notes in circulation eased substantially to around £1,677 million, which was about £33 million lower. Bankers' deposits were about £6 million higher at around £268 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 19th January shows gold stocks up by \$1 million. Foreign deposits fell by \$28 million, while foreign investments rose to \$16 million. The Federal Reserve portfolio of Government securities fell by \$615 million, the amount it was holding under repurchase agreements. Member banks' borrowings fell by \$239 million to \$298 million and their excess reserves fell by \$147 million to \$633 million. The reserve ratio increased by 0.7 percent to 45.9 percent. Business loans of the New York City banks fell by \$41 million to \$7,381 million, compared with a fall of \$86 million to \$8,181 million a year ago.

Activity on Wall Street

Bonds were mixed during the past week in continued slow dealings. Germans generally showed fractional changes either way, although a number of firm spots were noted. These included Good Hope Steel 7 percents and Westphalia Electric 7 percents, where sharp gains were registered

and new highs posted. Greeks and Italians held steady, while Serbs were marked down a point or so. Denmarks were off fractionally and Norwegians unchanged to slightly higher. Issues of countries behind the Iron and Bamboo Curtains scored substantial gains. Estonia 7 percents were up nearly four points. Chinese Government railways 5 percents rose by about two points and Poland 1 1/2 percents by more than one point. Japanese fluctuated irregularly. In the Latin American list, the recently depressed Costa Ricans attracted support and were fractionally higher. Several of the Brazilians 3 1/2 percents rose by fractions to two points, while Chilean 3 percents of 1953 continued in demand at around the \$89 level. U.S. Government obligations extended their recent declines during the early part of the week under the leadership of long-termers. The 3 1/2 percents of 1978-83 dropped to their lowest level since 25th February, 1954. The same unsettling factors were mentioned on the sell-off, namely tightening of monetary conditions and the possibility of a new long-term Government bond issue. The market eventually reversed its course and staged a fair-sized rally with the recovery described as technical following the sharp falls in recent weeks. Top quality corporates developed a firmer tendency following an early spell of softness in sympathy with the recovery in the Treasury list. Convertible industrials and utilities and the more speculative rail lines fluctuated irregularly, being dominated by the security market, although dealings were limited. World Bonds remained unchanged to a shade lower in very small turnover.

General Motors Stock Issue

The General Motors Corporation last Thursday registered its new common stock issue with the Securities and Exchange Commission in Washington, paying fees on the basis of \$435 million, making this the biggest industrial capital-raising venture ever recorded by the Commission. The price of the new issue of 4,385,000 shares is not expected to be known before it is put on the market, following completion of the registration process. That should take at least 20 days.

French Trade with Sterling Area

A special committee to promote French trade with the sterling area is to be set up on the lines of the already existing committee for franc-dollars, the President of the French Manufacturers' Federation has announced. The latter committee is supported by both the Federation and the Government, and has had some success in improving the franc-dollar trade. The President said that exports of manufactured goods to the British Dominions, especially Australia where a big French exhibition is scheduled to be held in the spring of 1956, must be improved. Manufacturers favour the removal of import restrictions, but in many cases too great a disequilibrium exists between French and foreign prices; the past two years' efforts at franc stabilisation and lower French prices must be continued. Concerning the liberalisation of invisible trade, the President hoped that it would be accompanied by the relaxation of foreign exchange controls, and for certain types of payments by partial convertibility.

Vegetable Oil Market

Moderate demand was noted for linseed oil and prices fluctuated within modest limits. The prevailing trend was easier, but although there was recovery at the close on improved U.K. interest, quotations of dutiable oil showed a net loss of 20s a ton. Indian oil, on the other hand, was offered with more reserve and established a gain of 10s a ton. For February to April arrivals of American oil £83 was asked, while £94 c.i.f. in bulk was sought for Indian. An easy trend continued in the case of Indian castor oil and business was slow. Offers were made almost daily at lower prices and eventually there was a reduction on the week of around £5 a ton. BSS for January-February was offered at £87, and sometimes even lower. Commercial had sellers at £80 a ton, c.i.f. in drums. There was considerable pressure to sell Indian groundnut oil and after business in February-March in bulk at down to £106, there were sellers in the vicinity of £104, with the final tendency inclined to be steadier. South African January-February in bulk was offered at £108 c.i.f.

Rubber Prices Harden

Political tension in the Far East brought about a general hardening of rubber prices, with London following Singapore. Business was thin, and at times prices fluctuated with demand insufficient to sustain values. After a long absence, Ceylon sheets were on offer at a small discount below Malayan. Forward landed deliveries were finally 1d or more higher on balance. In view of the modest supplies of sole crepe available and the rising trend of sheet prices, buyers were beginning to realise that sole crepe was not dear. Business was done at 35d to 36d a lb for 1 1/2 inch smooth No. 1 spot.

World Sulphur Supplies

Prospects for world sulphur supplies are discussed in the Sulphur Exploration Syndicate's latest quarterly bulletin. Developments in Mexican sulphur are considered likely to exert their main impact early this year. Broadly speaking, they should ensure that for at least 18 months, but possibly for up to three years, supplies of cheap sulphur will be adequate to meet demand. Market conditions in this period will tend to be competitive. It is thought unlikely that Mexican producers will be able, even if they wished, to undercut U.S. prices appreciably in view of their considerable royalty commitments and tax obligations. Between 1956 and 1965, world sulphur requirements are expected to rise by about 4,200,000 tons.

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

STRONG DEMAND FOR SUGAR FINANCE

Wednesday, 26th January.

THE money markets were closed today for Republic Day. Banks reported yesterday that there had been strong demand for accommodation against sugar, for the crushing season is now at a peak. Advances to cotton and woollen mills have also slightly improved, but recent demand for jute finance has petered out. Conditions are unchanged in the interbank market, and the call rate quotes 3 percent.

A fair number of bills has been seen again this week, mostly against tea exports. Remittance has been in somewhat better demand. The dollar rate was changed during the week but is now back to last week's quotation of Rs. 480-12 per 100 U.S. dollars.

Bullion was firm on strong demand in ready goods. Silver rose from the previous week's level of Rs. 159-2 to Rs. 159-13, quoted today. The ready price was 4 annas higher. The price was, however, unchanged at 74d in London and at 85 1/2 cents in New York.

After ruling steady early in the week gold eased from Rs. 92-8 to Rs. 91-14 at the close because of profit-taking. The sovereign at Rs. 58-9 showed a loss of 3 annas.

Applications for the offer of Rs. 1 crore of three-month Government of India treasury bills totalled Rs. 1,21,00,000 last week. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent were allotted 70 percent, the average rate of acceptance being Rs. 2-8-6 percent per annum. Tenders for another Rs. 1 crore of treasury bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to Monday, 31st January.

During the week ended 21st January, Government of India treasury bills for Rs. 13,07,75,000 were sold in favour of the Reserve Bank.

A decline of Rs. 5.04 crores in notes in circulation to Rs. 1,219.47 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 21st January, 1955, but the total note issue was about Rs. 21 lakhs higher at Rs. 1,235.16 crores. Notes held in the Banking Department consequently rose by Rs. 5.25 crores to Rs. 15.69 crores. Deposits of the Government of India fell by Rs. 2.11 crores to Rs. 53.36 crores while other Government accounts improved by Rs. 2.24 crores to stand at Rs. 16.18 crores. Balances of commercial banks at Rs. 63.64 crores showed a gain of Rs. 3.32 crores. Balances held abroad increased by Rs. 3.52 crores to Rs. 80.08 crores but investments dropped by Rs. 1.30 crores to Rs. 70.63 crores. Other loans and advances declined from Rs. 20 crores to Rs. 18.64 crores, of which advances to scheduled banks against usance bills totalled Rs. 3.14 crores (Rs. 3.54 crores). Ways and means advances were shown at Rs. 1.77 crores against Rs. 2.73 crores.

The statement of the position of Scheduled Banks for the week ended 14th January, 1955, discloses Demand and Time liabilities at Rs. 572.56 crores (Rs. 9.32 crores on account of borrowings from Banks) and Rs. 367.14 crores (Rs. 2.97 crores) compared with Rs. 571.81 crores (Rs. 10.75 crores) and Rs. 367.34 crores (Rs. 3.17 crores) respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 54 lakhs and Rs. 5.25 crores to aggregate Rs. 32.25 crores and Rs. 58.16 crores, respectively. There is a rise of Rs. 2.09 crores in investments to Rs. 351.13 crores. Advances and bills discounted at Rs. 552.79 crores reveal an increase of Rs. 1.18 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.6 percent and 58.8 percent against 10.2 percent and 58.7 percent.

The return of the Imperial Bank of India for the week ended 14th January, 1955, shows a fall of Rs. 4 lakhs in total deposits to Rs. 230.50 crores. Investments in Government Securities and other authorised investments are up by Rs. 72 lakhs and Rs. 20 lakhs to Rs. 98.48 crores and Rs. 11.71 crores, respectively. Loans, cash credits and overdrafts have increased by Rs. 86 lakhs to aggregate Rs. 97.30 crores, while bills discounted and purchased have decreased by Rs. 40 lakhs to stand at Rs. 6.89 crores. Cash and balances are in consequence, shown at Rs. 31.12 crores, or Rs. 3.91 crores less.

According to a report in *The Hindu*, a meeting of the shareholders of the Imperial Bank of India has been summoned for Thursday, 31st March, to consider Government proposals to control the Bank. Some of the shareholders take the view that a particular bank could not be singled out for State control, as it would amount to discrimination, which has been forbidden by the Constitution of India. A former Advocate-General of Bombay holds the view that the proposal to control the Imperial Bank leaving the other banks untouched violates the Constitution. It is held that the Government will have to suspend its proposal pending a revision of the Constitution. In the meanwhile, the Board of Directors of the Reserve Bank of India met on Monday, 24th

January to consider the Government proposal to control the Imperial Bank. The outcome of the Reserve Bank Board meeting is awaited with interest by the shareholders of the Imperial Bank, a section of which appears to have made up its mind to challenge the Government's decision in the Supreme Court.

The net profits of the CENTRAL BANK OF INDIA LTD. for the year ended 31st December, 1954, subject to audit, including the sum of Rs. 16,49,868-5-2 brought in, amounted to Rs. 94,38,408-9-2 which the directors have disposed of as follows: an interim dividend for the half-year ended 30th June, 1954, at the rate of 6 percent free of income-tax Rs. 18,87,255; transfer to investments Rs. 15,00,000; taxation Rs. 5,75,000; transfer to staff gratuity fund Rs. 5,00,000 and amount provided for bonus to staff Rs. 13,00,000. The directors propose to recommend a final dividend at the rate of 6 percent, free of income-tax, making 12 percent for the year, leaving a carry-forward of Rs. 17,88,898-9-2.

The profit of the BANK OF BARODA LTD. for the year 1954, subject to audit, including the sum of Rs. 2,32,383-10-0 brought in amounts to Rs. 30,35,301-15-5 which the directors have disposed of as follows: an interim dividend was paid for the half-year ended 30th June, 1954 at the rate of 10 percent per annum free of income tax which absorbed Rs. 5,00,000; provision for taxation Rs. 8,00,000 and bonus to staff Rs. 7,65,000. The directors now propose to pay a final dividend at the rate of 10 percent per annum free of income tax amounting to Rs. 5,00,000 and a bonus of Rs. 1 per share free of income tax amounting to Rs. 2,00,000, leaving a carry-forward of Rs. 2,70,301-15-5.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 29-1-55:

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
29-1-55	29-4-55	1,00,00	Rs. 2-8-6%
21-1-55	21-4-55	1,00,00	Rs. 2-8-3%
14-1-55	14-4-55	1,00,00	Rs. 2-8-0%
7-1-55	7-4-55	1,00,00	Rs. 2-8-0%
17-12-54	17-3-55	1,00,00	Rs. 2-8-0%
10-12-54	10-3-55	1,50,00	Rs. 2-8-0%
3-12-54	3-3-55	1,50,00	Rs. 2-8-0%
26-11-54	26-2-55	1,50,00	Rs. 2-7-8%
19-11-54	19-2-55	1,50,00	Rs. 2-7-7%
12-11-54	12-2-55	1,50,00	Rs. 2-7-5%

Monthly Maturities

(000's omitted)	
February 1955	4,50,00
March 1955	4,00,00
April 1955	4,00,00
Total	12,50,00

WHILE the Congress Party has been announcing the discovery that it has always been a socialist movement, one of the best known of British socialists has been frankly confessing the decline and death of the socialist ideal in Europe. That the European working classes (where they have the chance to express an opinion) have as good as abandoned socialism is of course no argument against India's biggest political party taking up the tattered banner, but just in case anyone thinks that the Congress has been doing something "progressive" I shall quote what Professor G. D. H. Cole said last week in the *New Statesman and Nation*. "How much of socialism survives in Western Europe? In France, in Belgium and in Holland, hardly anything; for socialist parties which are supported by only a fraction of the working class and show no sign of increasing their influence are clearly helpless in the matter of changing the basis of the social order. Social democracy is stronger in Western Germany; but even there it does not seem likely to win a majority of the electors to its side. The Scandinavians are better placed; but even when they win elections they show but little sign of a desire to use their success as a means of establishing socialism, or even to narrowing down the scope of capitalist enterprise. As for Great Britain, the contents of recent Labour programmes furnish enough evidence that the Labour Party has very little notion of what it wants to do next and is basing its hopes of electoral victory much more on its opponents' mistakes, or on the mere swing of the pendulum, than on any constructive projects of its own. All this is clearly no accident. It is not that the socialist leaders have wantonly and without cause abandoned their socialist aspirations, or at any rate postponed them to an indefinite future. They have realised that not enough of the electors want socialism to return a really socialist government to power; and, with this, many of them have ceased themselves to want socialism. They cannot escape a growing recognition by electors that they have but little to offer and that socialism forms no part of their immediate plans. In terms of immediate electoral prospects, no doubt, the present policy of 'No Socialism' probably pays better than a socialist policy would pay". I repeat that it is open to the newly baptised socialists from Avadi to say that things are different in India. But the intelligent part of the electorate would no doubt like to reflect on the fact that the Congress is taking up a threadbare creed and an outworn jargon that have been decisively discarded by their previous users.

Our Calcutta speculators have evidently raised their sights when they go cornering shares on the London stock exchange. The energetic party that has been buying the shares of the Assam Company, as reported today by *Capital's* London correspondent, may have met his match in the resourceful board of directors who are essaying various stratagems to outwit him. A bonus issue and a higher dividend are fair enough counter-measures, though I always wonder in these cases why the board had to wait until an outsider came threatening their peace before they gave shareholders their due. But the third stratagem, the issue of voting powers by means of 1s shares to the trustees of the pension fund, seems much more dubious. Some of the minority shareholders might think that this is like sentencing a man to prison in case he gets kidnapped. The directors are no doubt acting in what they see as the shareholders' interests, and indeed during discussion of this case in London there has been reference to "at least one previous case where control of a tea company has passed to India and minority shareholders in this country have since fared extremely badly". But permanent limitation of shareholders' powers

A DITCHER'S DIARY

over the board seems a drastic step to meet a perhaps temporary threat.

Lex dura est sed certa, the Roman lawyers used to say: the law might be tough but at least you know what it is. With the proliferation of laws under the welfare state, the rules of the game as they affect business are just as tough but one cannot hope to know all of them. So there is need for digestion and wider promulgation of the mass of legislation that pours out each year from our Central and State parliaments, especially that large part of it that concerns commerce. The Commercial Law Institute in Delhi has volunteered to fill the breach, in launching this month a new monthly journal called *The Commercial Law Review*. The first issue is slim, clearly printed and plainly written, which are all important points if the magazine is to find a readership among the busy people who most need its guidance—that is, if it is to be read by anyone but lawyers. The notes deal with income tax, estate duty, the Companies Bill, interstate trade, the retirement of directors and (no connection) forged cheques. The Institute has succeeded in enrolling among the members of its advisory board no less an authority than Roscoe Pound, who as Dean of Harvard's Law School won a great reputation, firstly as an eminent liberal, and secondly as interpreter of a constitution that has as many ambiguities as India's. The Review has a big job to do, for as Blackstone is quoted in it as saying, "A bare resolution confined in the breast of a legislator can never properly be law; it is requisite that this resolution be notified to the people who are to obey it".

There seems to be a constant demand for books on commercial correspondence—or at least the publishing trade thinks there is, and I suppose they are well placed to know. (Looking back over the sentence I have just written I realise that maybe should read one myself: they would forbid me to talk about commercial correspondence when I mean business letters.) We see quite a lot of these books in India, where there is naturally a large number of people anxious to master the elementary English needed to write a plain letter, but there is a steady flow of them in Britain and the States too. A rather good one is now being distributed by Orient Longmans under the title *English and American Business Letters*. (It costs four and threepence and is by Eckersley and Kaufman.) The contrast between the two national styles of business letters is only incidental to the main line of instruction, but it provides a light thread throughout. Thus, there are two samples of debt collection (final notice) letters, the first English and the second American.

(1) Dear Sirs,

As our previous letters of 3rd July, 12th August and 14th September, requesting payment of the outstanding account of £15-13-9, have been ignored by you, we must now inform you that unless your cheque for the amount reaches us by the end of the month, we shall be reluctantly compelled to put the matter in the hands of our solicitors.

Yours faithfully,

(2) Gentlemen,
Will you please send us the name of a good lawyer in your district. We may want to sue you.

Sincerely,

The second example certainly achieves a graphic terseness, though it is not the more businesslike for

that. All the letters reproduced, even the American ones, are real letters which actually got posted. There is a section on "unsolicited offers", which is a mine of advertising copy; one on applications for jobs, which probably has a certain topical interest; and a section on an American institution called "the goodwill letter", which makes you hope never to receive one.

A London correspondent writes that the news from Delhi that missionaries from Commonwealth countries will henceforth have to have a special visa before entering India caused little surprise among British missionary societies. The societies have for some time been concerned at the increasing number of refusals of the Indian Government to grant applications for visas of entry and for residential purposes. The basis of refusal is not, according to Mr. Nehru, a religious one, but the question of the admission of foreigners into India for any purpose. Mr. Nehru told a deputation recently that he recognised the good missionaries had done in many parts of India, but that "some of them have not functioned to the advantage of India". There are considerable numbers of Australian, New Zealand and Canadian missionaries at work in India, but they are not so numerous as missionaries from the United States. The tendency of foreign missionaries to live in remote frontier areas particularly troubles the Indian Government. The present strength of British missionaries in India is 1,223, a reduction of some five hundred on the total for 1937. It is pointed out in London that British missions are steadily replacing British leadership by Indian in all important posts, but that churches in India are still asking for the co-operation of staff from Britain.

Those readers of this Diary who are keen on *Shikaris*, and I know that many are, will be interested to learn that new proof marks for shotguns showing that the guns have been tested, are to come into force on 1st February as a result of regulations re-drafted by the two organisations concerned—the Worshipful Company of Gunmakers, of London, and the Guardians of the Birmingham Proof House. The proof authorities announce that under the new rules the so-called "view mark" will disappear—a capital letter V under a crown in the case of guns tested in London, and a capital BV under a crown on guns tested in Birmingham. The London mark will retain a stamped replica of a bent arm, flourishing a short sword of broad blade, together with a crown over the linked letters GP; the Birmingham mark will be a crown over the capital letters BNP. There are various other markings, all of which will be simplified, together with figures giving the service pressure in tons per square inch. By arrangement with cartridge makers and loaders in Britain, most cartons or inner packages containing cartridges will carry additional markings to relate the contents to the new pressure marking on the gun in which they are intended to be used. The words "Not English make" on arms of foreign manufacture will no longer be used, as it is felt that such a marking is not part of the proofing process. *Shikar* is obviously a very technical form of relaxation.

From the sporting pages of a firm's house magazine: "We congratulate our office cricket club on their second victory of the season. Special credit is due to A. Hemmings and C. Francis who performed the duties of umpire and scorer throughout the matches".

Air Facts with Japan and U.S.A.

The Indo-Japanese air agreement is expected to be finalised this month. The main point of disagreement concerns the termini for the Japanese services. Japan has been demanding two—Calcutta and Delhi—while India has offered only one. After the termination of the Indo-U.S. air agreement and the reduction of termini to one for American operators, the Japanese Government should have known India's attitude on this issue. In any case, Japan has been informed that it is not possible for India to agree to two termini.

As for the Indo-U.S. air agreement, the initiative now lies with the U.S.A. and it is for her to re-open negotiations. India has made it clear that the temporary licences are on an *ad hoc* basis for a limited period of twelve months, during which a fresh agreement will have to be reached. Unlike the Indo-British agreement, under which India can regulate both frequencies and the carriage of passengers, India has reduced the frequencies of American services by only one a week, leaving regulation of passenger traffic to be determined by negotiations or unilaterally by India after 12 months.

I.M.F. Mission in New Delhi

International Monetary Fund Mission is on a judicial visit to New Delhi. It is led by the Deputy Director of Exchange Restrictions, G. Ferras. The other members are Dr. B. J. Chatterjee, Chief of the South-East Asia Division, and W. Spingaras, Member Governments are required to keep the Fund posted with all information in regard to regulations and restrictions on foreign exchange. Periodically the officials of the Fund visit member countries to make a spot survey of such restrictions.

Commonwealth Finance Ministers' Talks

The Finance Minister, Mr. Deshmukh, will represent India at the Commonwealth Finance Ministers' Conference scheduled to be held at London in May, it is learned.

New Move to Amend Constitution

Proposals for another amendment to the Constitution are being examined here. It is suggested that primary education be included in the concurrent list, thereby enabling the Central Government to subsidise it. The Education Ministry, it will be recalled, attempted to subsidise primary teachers' salaries at a cost of Rs. 50 crores a year. The proposal was ruled out on constitutional grounds. It has now been revived because of the Taxation Enquiry Commission's report which, it is believed, suggests amendment of the Constitution in regard to sales tax, entertainment tax and motor vehicles tax.

Export Guarantee Plan

The Government of India has formulated an export guarantee plan which has been circulated to various interests for eliciting opinions. Under the scheme, certain exportable commodities will be insured against risks arising from trade disputes. A foreign importer, for example, will be compensated for proven cases of inferior quality of goods supplied to him or for other similar trade disputes. The exporter, similarly, will be compensated if the foreign importer defaults in payments. Such a plan, it is argued, will assist newcomers in the export market. Side by side, there will be export Promotion Councils for Pepper, Cashew-nuts, Sports Goods and Light Engineering Products. Export Promotion Councils for Textiles and Art Silk have already been set up. In their initial stages, the activities of these Councils will be financed by the Government, but in due course the burden will be taken over by the industry concerned. The Government has contributed Rs. 2 lakhs to the Textiles Export Promotion Council and Rs. 50,000 to that for Art Silk.

Distribution of Soda Ash and Caustic Soda

The Government of India has been consulting principal manufacturers and importers of soda ash and caustic soda about a scheme for the distribution of these two chemicals at prices which are reasonable for the consumer, the importer and the manufacturer. The difficulties of distribution are already well known. If the Government liberalises imports to bring down prices, the Indian industry is adversely affected. If imports are curtailed, there is a tendency to hoard stocks and raise prices, which in turn adversely affects the consuming industries. The Government's intention, therefore, is to plan distribution on a monopoly basis in order to stabilise prices at a reasonable level. It has made it clear that there is no prejudice against any country and imports will be from the cheapest source. Imperial Chemical Industries, Tatas and Dharangadhara Chemicals, who were consulted, generally supported these aims and are now examining the Government's scheme. Their replies are expected very shortly.

Shipping Expansion Plans

The special committee set up to prepare the second five year plan for the development of Indian shipping has submitted its report to the Government of India. Its target of additional tonnage is a little over two million tons. The report is now

being examined by the Government. Meanwhile, the Ministry of Transport has submitted to the Planning Commission its second five year plan for port development. The report of the special officer for the development of Tuticorin harbour is before the Government, and similar reports for Mangalore and Paradeep in Orissa are expected shortly. An Indian Shipping Bill is being prepared and will be brought before Parliament soon.

As for the second Indian shipping corporation, the India Steamship Company of Calcutta and the Great Eastern Shipping Corporation of Bombay have submitted their proposals to participate in the scheme. These proposals are being examined by the Government.

Manufacture of Ferro-Manganese

The Government of India has granted licences to manufacture ferro-manganese to six firms. They are:

1. Tata Iron and Steel Co. Ltd., Jamshedpur.
2. Mysore Iron and Steel Works, Bhadravati, Mysore.
3. Jeypore Mining Syndicate, Madras, for works at Rayagada, Orissa.
4. Indian Ferro Alloy Ltd., Gombarria, Bihar.
5. Kambara Industries Ltd., Tumsar, Madhya Pradesh.
6. Electric Metallurgical Works, Bombay.

The combined capacity of the six undertakings will be 105,000 tons a year.

Synthetic Oil Project

The Government has accepted in principle the report of the Synthetic Oil Committee recommending the establishment of a synthetic oil plant in India. The Committee states that as a first step a plant to produce 300,000 tons of synthetic fuel a year should be set up. It estimates that the plant will cost Rs. 52 to 57 crores. The Government has decided that a project report for the proposed plant should be prepared before decisions on capital investment and other matters can be taken. The question of appointing consultants to prepare a project report is now being considered and a decision is expected shortly. In its report, the Committee says that the plant should have a capacity of 300,000 tons of synthetic oil, made up of 25,000 tons of aviation spirit and 215,000 tons of motor spirit, diesel oil and Lubricants.

Essential Commodities Ordinance

The Essential Supplies (Temporary Powers) Act, 1946, expired on 25th January, 1955, as the legislative power given to the Centre under Article 369 of the Constitution in respect of some commodities ended that day. The essential commodities to which the Act applied fell into two broad groups: (a) coal, textiles, iron and steel, and paper, all of which were products of industries under Central control; and (b) foodstuffs, cattle fodder, which were not products of such industries. It was felt that in the public interest the Centre should continue to have the same powers as it had under Article 369 of the Constitution, so a Bill providing for the amendment of the Constitution was passed by both Houses of Parliament in September last year. Before the President's assent could be sought, at least nine State Legislatures had to ratify the Bill. So far, only eight State Legislatures have done so. The Constitutional Amendment could not become effective before January, 1955.

Under Entry 33 of the Concurrent List and Entry 58 of the Union List, as they stand at present, Parliament even now has the power to make laws for regulating trade and commerce in and the production, supply and distribution of, the first group of commodities. Under Entry 42, it also has the power to regulate inter-State trade and commerce in all commodities. As Parliament will not meet before 21st February, 1955, and as it is essential to continue the provisions of the Essential Supplies (Temporary Powers) Act to the maximum extent possible, with the existing powers, the President has promulgated an Ordinance called the Essential Commodities Ordinance, 1955. This empowers the Central Government to regulate or prohibit the production, supply and distribution of, and trade and commerce in, the following commodities:

1. Coal, including coke and other derivatives.
2. Component parts and accessories of automobiles.
3. Cotton and woollen textiles.
4. Iron and steel, including manufactured products of iron and steel.
5. Paper, including newsprint, paper board and straw board.
6. Petroleum and petroleum products.
7. Sugar.
8. Vanaspati.
9. Vegetable oils.
10. Salt.

The Ordinance also empowers the control of inter-State trade and commerce in wheat, raw cotton, and sugarcane. Orders, licences, permits and directions issued under the Essential Supplies (Temporary Powers) Act will continue to be in force in respect of the commodities to which the Ordinance applies. Certain Part A and Part B State Governments are understood to be arranging the issue of Ordinances to continue the controls instituted under the Essential Supplies (Temporary Powers) Act in respect of some of the commodities which will be within the States' jurisdiction on the expiry of that Act. The Essential Supplies Act also covered forward trading in such commodities as oils and oilseeds. Since then, the Forward Markets Regulation Act has been enforced and the Forward Markets Commission has been functioning. Notifications are being issued under the Forward Markets Regulation Act to maintain the status quo in respect of commodities in which forward markets are at present controlled by the Essential Supplies Act.

London

STAGE SET FOR PREMIERS' COMING CONFERENCE

TERMS OF TRADE WORSEN IN DECEMBER

(FROM OUR LONDON CORRESPONDENT)

THE meeting of Commonwealth Prime Ministers which is to open at No. 10 Downing Street on Monday week is to last nine or ten days. All the Commonwealth Prime Ministers, except Mr. Stridom of South Africa, will attend, and he is to be represented by Mr. C. R. Swart, Minister of Justice, who reached London on Tuesday. Mr. Menzies (Australia) and Mr. Holland (New Zealand) will arrive on Thursday, Sir Godfrey Huggins (Federation of Rhodesia and Nyasaland) on Friday, and Mr. St. Laurent (Canada), Mr. Nehru (India) and Sir John Kotelawala (Ceylon) next Saturday. Mr. Mohammed Ali (Pakistan), who is at present in Canada, will return to London on 30th January. He was here on Thursday by the *Constellation* aircraft which inaugurated Pakistan International's regular service to this country. Sir Winston Churchill will preside at the opening meeting, and other British Ministers who are to take part in the conference are Sir Anthony Eden, Foreign Secretary, Lord Swinton, Secretary for Commonwealth Relations, Mr. Macmillan, the Minister of Defence, Mr. Butler, the Chancellor of the Exchequer, and Mr. Lennox-Boyd, Colonial Secretary. If an agenda has been prepared it has not been made public as yet, but the interests represented by the British Ministers who are to participate suggests that political as well as economic subjects will be discussed, with emphasis on defence strategy, the position in South-East Asia and relations with Communist China. A full social programme has been arranged for the visitors and their staffs, who are assured of a busy time.

Government's Economic Policy

Again this year Mr. Butler has departed from the normal procedure of Chancellors of the Exchequer to isolate themselves from public appearances between the start of the year and the presentation of the Budget. On Thursday, accompanied by Mr. Maund and other advisers from the Treasury, he attended the headquarters of the Federation of British Industries for a meeting with leading industrialists. The Treasury announcement later was hardly informative, but that does not mean that the meeting was merely a formality. Mr. Butler apparently explained the Government's economic policy, especially in relation to his visit to Washington in the autumn and to Paris last week, stressed once again the importance of continued economic growth, and spoke of the need for adequate industrial investment and for investment overseas. His hosts, for their part, told the Chancellor what they thought of the present state of trade, deliveries, prices, competition and so on.

Meanwhile, the F.B.I. has sent to the Chancellor a memorandum urging the suspension of the capital issues control. The statement argues that the consent of the Capital Issues Committee has become in most cases a formality, yet it involves the circulation of confidential facts and may cause damaging delays. It is recommended that the Committee should be kept in being for occasional consultations with the Chancellor, so that it could quickly assume control again if conditions changed. In support it points out that in the first nine months of last year only 51 applications were turned down out of a total of 1,582. At the same time it is frankly recognised that issues involving remittances outside the sterling area and thus affecting the balance of payments should continue to be regulated by the Exchange Control.

What the "Indicators" Say

The economic "indicators" have warnings to offer against too much optimism. For the second month running Britain's terms of trade, in the ratio of import to export prices, worsened in December. The Board of Trade reports that import prices again rose 1 percent, reaching 101 percent of the 1953 average, but export prices at 99 percent were unchanged for the third successive month. Thus the terms of trade index rose another point to 102, a peak not touched since April, 1953. Furthermore, following a reaction in November, prices of the basic materials used by British industry moved up quite sharply last month. At 146.4, against 144.1 in November the index number for December prepared by the Board of Trade (June 30, 1949 = 100) swung upward by 1.6 percent. The main influence was a 4.3 percent rise in the average price of raw wool.

Among other items which rose in price in December were home-produced heavy steel scrap (up 17.7 percent), copper (up 1.7 percent), raw rubber (up 2.7 percent) and imported soft-wood (up 0.7 percent), partly offset by lower prices for lead (3.6 down), tin ingots (down 2.6 percent), sisal (down 2.3 percent) and raw cotton, which fell 0.1 percent. The rise in the basic material index between December, 1953, and the end of last year was 3.3 percent. In the circumstances, it is encouraging that the Ministry of Labour official index figure of retail prices (taking 17th June, 1947, as 100) was 145 on 14th December, 1954—the same as on 16th November. Last year the figure rose from 140 in January to 145 in July; then fell to 144 in August and 143 in September; and rose again to 133 in October. A rise cannot be long delayed.

On the other hand, the current trend of the revenue returns is most heartening. In the first fortnight of the new year income-tax alone produced no less than £20 million a day. Total revenue

in the week to 15th January amounted to £277 million, compared with £186.2 million in the previous eight days and £266.1 million in the corresponding week a year ago. The "above the line" deficit gets smaller each week and the latest return shows it at £61.8 million, against £257.9 million at the same period a year earlier. The "below the line" deficit is slightly larger, but the overall deficit is £179.4 million less at £397.4 million than in the previous year.

Another Steel Success

The Iron and Steel Holding and Realisation Agency has scored its most resounding success with its sixth denationalisation offer, the ten million ordinary shares of £1 each in the Scottish firm of Colvilles, at 26s per share. More than 120,000 applications were put in, against the 52,400 for the last offer of the shares in Dorman Long and Co., and it is estimated that about £40 million will be taken off the market for a few days on the basis of the first payment of only 5s. After privileged applicants have been dealt with and Colvilles are offering their 17,000 employees interest-free loans, recoverable at the rate of threepence a share per week from salary or wages for 104 weeks to enable them to become shareholders, very little will be left over for the "stags", who nevertheless anticipate a premium of 9d to 1s per share when dealings start. The Colvilles offer compares favourably with the present yield on other denationalised steel shares, which have all moved upward lately in the face of steady demand.

Assam Company Developments

Recent heavy purchases of stock in the Assam Co., which owns 11,000 planted acres of tea, have aroused in the directors a realisation of the danger of control being transferred to India. In an attempt to avert this, or else to compel a would-be owner to make a bid for all the capital, they have devised a scheme that may well give rise to controversy, for it is very much on the same lines as the Savoy Hotel board's action of December, 1953. Members are to be asked to resolve, by a simple majority, that 750,000 new Ordinary 1s shares be issued at par to the Trustees of the company's Pension Fund. Each such share is to have one vote and, after a one-for-two free issue to existing stock-holders, the Trustees will enjoy a third of the total voting power. To avoid repelling a take-over bid, it is provided that if any such offer is accepted by holders of 75 percent of the capital the Trustees will be bound to sell. The board now forecasts a final dividend for 1954 of not less than 12 percent tax free on the increased capital. This will make the equivalent of 14 percent tax free, against 4.4 percent for 1953.

Mr. Low Returns

Mr. Low, Minister of State, Board of Trade, returned from his three weeks' goodwill visit to Pakistan and India on Wednesday, and it is doubtful whether Lancashire textile interests will be satisfied at the outcome unless the Minister has in fact achieved rather more than he was prepared to disclose to the press on arrival. Mr. Low said he had discussed the question of the import of Indian cotton textiles into Britain, and the import of Lancashire textiles into India. Each country now fully understood the other's problems, but the talks he had were only a discussion of the question—there was no question of any negotiation. On the import of Lancashire textiles into India, Mr. Low said that the Indian Government had reaffirmed its willingness to consider the high tariffs (up to 80 percent) at present imposed, in the light of its own decision to liberalise the quota of textiles imported in October. Since that decision the Indian Government had found a substantial increase in applications for licences to import Lancashire textiles.

P. & O. Reply to Stockholders

Sir William Currie, Chairman of the Peninsular and Oriental Steam Navigation Co., has disclosed that for some months the directors have been reviewing the structure and organisation of the group with Lazard Brothers and Co. and Deloitte, Plender, Griffiths and Co., the auditors. His statement is in reply to the "opposition" group's circular to stockholders seeking support for the newly formed P. & O. Stockholders' Association. Owing to the scale and complexity of the subject, it would not be possible for Lazard's and Deloitte's report to be incorporated in the accounts for the year ended 30th September, but Sir William indicated that he will make a further statement at the annual meeting in May. The Board is not complacent and does not deny that "continual inflation has presented novel problems to all industry and shipping in particular." These problems have not been dismissed as insuperable, "nor have we turned our backs on them." Whether this will meet the stockholders' opposition to the Board's past policy remains to be seen. The fact that the latter are now having the "structure and organisation" investigated is a step in the right direction. The P. & O. development has led to a somewhat similar move being made against the Furness Withy line. With the freight outlook as good as it is at present, it may be expected that the conservative policies of the shipping companies will have to give way to the more reasonable requests on the part of stockholders. Cunard, it will be remembered, were under pressure earlier.

Brevities

The United Kingdom-Aden Conference announces that outward rates of freight to Aden are to be increased by approximately 10 percent.

Sir Edward Benthall, leader of the Government trade mission which is to visit Egypt, the Sudan and Ethiopia at the end of the month, spent a day this week in Manchester learning the views of the Chamber of Commerce and textile organisations on trade with these countries.

Bombay

PRIVATE ENTERPRISE AND SOCIALISM

A.C.C. CHAIRMAN DISCUSSES NEW ECONOMIC POLICY

(FROM OUR BOMBAY CORRESPONDENT)

THE first formal reaction to the Prime Minister's objective of a socialistic pattern of society through democratic means, in Bombay came from Mr. Dharamsey N. Khatau, Chairman of the Associated Cement Companies Ltd., at its annual general meeting last Friday. According to Mr. Khatau, whether the creation of increased wealth and, through its equitable distribution, the raising of the standard of life of the people of the country, could be more effectively realised through a socialist rather than a free enterprise approach was a point which required closer examination. Pleading for what he called a voluntary approach, Mr. Khatau pointed to the phenomenal resurgence of Western Germany and the remarkable progress which had taken place in the United Kingdom since industry was freed from bureaucratic controls and political uncertainties. At the same time, he admitted that industrial problems in India were very different from those in the highly industrialised Western countries; in the context of the country's underdevelopment, the method of economic development now approved by Parliament might prove more effective.

As far as private enterprise is concerned, Mr. Khatau observed that the only way in which it could justify its right to exist and could strengthen public opinion in its favour was by producing results. "If we are able to fulfil the target now laid down for us and convince the work people, our consumers and shareholders that by pinning their faith on free enterprise they ensure their own security, progress and well-being, then it may well be that in due course the national emphasis will be laid on individual initiative rather than, as is the case at present, on State enterprise." To create this awareness and to educate public opinion on the achievements of Indian industry, Mr. Khatau advocated the creation of suitable and vigorous machinery.

Referring to the aspirations of the private sector within the framework of the national economy, the A.C.C. chairman observed: "Now that the

function of the private sector has been accepted as being essential for the development of the country, joint stock companies and other forms of private enterprise have a right to expect that the integrity of this sector will be respected and that no further attempts will be made to encroach upon it. In the same way as we are bound to accept the scheme for development of the public sector and the overall strategic control by the State of the private sector, so we can legitimately expect that there will be an end to the multitude of contradictory and conflicting statements which have served in the past to undermine the confidence of free enterprise. We must be allowed to work unhampered, and, indeed, we hope that we shall be provided with every encouragement to assist us in bringing to fruition the ambitious targets of production which the second five year plan holds in store."

Deploring the current fashion of denouncing the profit motive in industry, Mr. Khatau pointed out the all-important rôle of the profit-making capacity of industry in economic development. It helped increase employment and formed the very basis of the credit structure. It enabled the payment of loan capital and made possible auto-financing for rapid industrialisation. It provided more revenue for the Government and speeded plant rehabilitation by enabling the management to plough back profits into industry. "In these circumstances, one cannot over-emphasise the fact that risk capital, the life-blood of industrialisation through free endeavour, is based on faith in the success of the endeavour and on the incentive of profit. The profit, when it materialises, is the result of diligence, foresight, hard work and determination—the attributes on which great nations are built. The development of your own Company, the A.C.C., stands as testimony to the inherent rightness of the profit motive honestly applied."

Speaking of the growth in unemployment and the Government's aim of ensuring full employment within ten years by creating 24 million new jobs, Mr. Khatau expressed his satisfaction that attention was being directed towards this problem. On the question of rationalisation in industry, which affected employment, Mr. Khatau urged that any substantial and beneficial increase in the volume of gainful employment could only come through an expanding economy based on efficiency of operation. "It would be at the peril of industry and indeed of the nation if it were sought to reduce the degree of unemployment by insisting upon major industries maintaining re-

dundant and unnecessary employees at the expense of mechanisation, efficiency and progress." At the same time, he expressed his anxiety about the gravity of the problem and made the following suggestions: (i) A clear definition of targets, both in the private and public sectors, as to the number of jobs which they were expected to create in the context of the second five year plan; this was to be arrived at separately for each industry in the private sector after discussion between the industries and the Planning Commission. (ii) Active collaboration between large-scale industrial units in both sectors with the proposed All-India Board for the development of Cottage and Small-Scale Industries, so as to explore all new avenues of employment and activity to assist the development of small-scale industrial units, the major factories playing the rôle of "big brother".

Turning to the cement industry in relation to the second five year plan, Mr. Khatau observed that it was a matter of pride that the industry had been able to achieve the target set for it in the first plan. Pointing to the magnitude of the task before the industry in achieving the target of 10 million tons of cement by 1962, Mr. Khatau mentioned the A.C.C.'s determination to achieve the production expected of it. But he sounded a note of caution since limestone, the basic raw material in cement manufacture, was not available in unlimited quantities in India. He suggested an investigation into the sources of other usable materials, such as slag and calcium carbonate sludge, and the utilisation of these by-products of industry in cement manufacture. He emphasised the need for consultation in this connection between representatives of the cement industry and the Government prior to the establishment of steel plants and fertiliser factories. Referring to the Central excise duty of Rs. 5 a ton on cement, Mr. Khatau said that it was most unfortunate that this basic building material should have been

selected for the imposition of excise duty. He hoped that the levy would be removed by the Government at the earliest opportunity.

Award on Textile Labour Dispute

Several uncertainties affecting the textile industry in Bombay have been removed by the Full Bench of the Labour Appellate Tribunal. It delivered three separate judgments on three separate sets of appeals and cross-appeals filed by the Millowners' Association and the Rashtriya Mill Mazdoor Sangh (representative union for the textile industry) against the Industrial Court's Awards on revision of the wage structure, bonus for the year 1952 and compensation to textile workers for the loss of working days following the power cut imposed by the Government in 1951-52. The judgments have failed to satisfy either side. While the representative union as well as the Millowners' Association, which went in appeal over these issues, have so far remained silent, possibly because they are still studying the implications, the Socialist-controlled Mill Mazdoor Sabha and the Communist Mill Mazdoor Union have not hesitated to express their complete dissatisfaction with the final awards. The Communist union has even gone so far as to observe that "the decisions taken as a whole represent the anti-labour policy of the Government as already seen in the advocacy of the wage freeze and the ceiling on bonus in the five year plan, modification of the bank award and several other decisions". Even the Mill Mazdoor Sangh, affiliated to the I.N.T.U.C., is believed thinking of filing an appeal in the Supreme Court against these judgments.

As regards compensation for the lay-off period during 1951 and 1952, the Industrial Court had in the first instance awarded 50 percent of the wages and dearness allowance. This caused a good deal of heart-burning amongst millowners because the

cut in employment was imposed really by the Government and not by them. In fact, as a result of this cut the mills themselves had suffered heavily. The Appellate Tribunal rejected the award but conceded that the workers would be entitled to compensation at 50 percent of their earnings provided two other considerations did not bar or limit this claim. The first consideration was the immunity provided by the provisions of the Bombay Electricity Act against any award of compensation for stoppage of power supplies. The second arose from the fact that such payment of compensation should come out of the profits of that particular year so that the labour force of another year may have a claim on the profits of that year. The Tribunal, therefore, without going into the merits of the first point held that the demand for compensation was really one for an additional bonus; as the surplus available for the particular year did not support the payment of both bonus and compensation, it rejected the claim of the workers for compensation. As regards 1951, the Tribunal observed that the number of working days lost because of the power cut averaged only eight while the workers in that year had received a bonus equivalent to three months' earnings.

With regard to bonus, apart from the quantum, the most important question before the Tribunal was the request of the union for a revision of what is known as the "Full Bench Formula" laid down by the Tribunal in 1950 for allocating the gross annual profits of the industry towards depreciation, reserves for rehabilitation, return on capital and bonus. The counsel for the workers pointed out that under this formula an amount of Rs. 72 crores which had been set aside annually from 1947 as expected expenditure on rehabilitation, renewal and modernisation of machinery spread over 15 years was excessive; that the 6 percent dividend after payment of income-tax was unjustified; and that the quantum of bonus should be increased by re-examining the allocations under this formula. The Tribunal decided that the formula would have to continue; it had received the approval of the Supreme Court as embodying the principles of social justice and had been applied to cases throughout India. In this connection, the Tribunal observed that in view of the Full Bench decision, we were consciously providing a stable basis for future years so that this question of rehabilitation reserves may not be the subject of contest from year to year and that a suitable basis must stand.

At the same time, the Tribunal directed that the amount of bonus to be paid to workmen of textile mills be raised from 15 percent to 20 percent of the basic earnings of 1952, excluding the dearness allowance and bonus paid during the year. While granting this request, the Tribunal rejected the plea made by the Millowners' Association that the allocation to rehabilitation reserves in respect of the 38 profitable mills should be enlarged to include the losing mills also and, therefore, the quantum of bonus granted by the Industrial Court to the workmen of profitable mills should be reduced to that extent. At the same time, the Tribunal also rejected a plea made by the Rashtriya Mill Mazdoor Sangh that the amount of bonus to be paid by the profitable mills should be distributed amongst all the workers in the industry, including workmen of the losing mills, and if necessary a pool of the amount of bonus should be created by way of a trust for the purpose of wider distribution. On this issue, the Tribunal observed: "We do not know of any provision by which the representative union (which need not comprise more than 15 percent of the entire workmen of the industry) can agree that the bonus must be divided amongst all the workmen and secondly, if at all, the trust, could be created by legislation alone".

The most important point at issue was the demand for revision of the wage structure in the textile industry as enunciated in the Standardisation Scheme of 1947. The Industrial Court had declined to alter the existing structure by consolidating the basic wage with dearness allowance. The workers had contended that the present minimum wage of a textile worker of Rs. 30 a month should be raised to Rs. 46 to meet his requirements of additional amenities and comforts, "essential to a workman's well-being". It had also been asked that the wage for all workmen should be a fair wage irrespective of the capacity of the industry to pay and that instead of distributing Rs. 15 crores as dearness allowance, at enhanced rates to meet the cost of living, the total emoluments should be consolidated at an index of 280, re-fixing dearness allowance thereafter. The ruling of the Tribunal was that for all practical purposes of such benefits under the Central and State legislation, the total pay packet of the workman was taken into consideration. The Tribunal said: "We have no particular predilection towards a basic wage of Rs. 30 or towards the Standardisation Award but we must attach importance to the fact that Rs. 30 as the basic minimum has been confirmed by other calculations and is generally adopted as the basic minimum. As the same time, Tribunal also took into consideration the cost incurred by the industry on additional amenities for workmen like education, medical relief and miscellaneous welfare programmes, contribution to the provident fund and State Insurance Fund. The Tribunal observed that if these benefits were added to the basic wage, fixed under the Standardisation Scheme in 1947 when these amenities were not provided, the total figure would come to something near the figure of Rs. 46 demanded by the union.

Uttar Pradesh

PROPOSALS FOR A NEW INDUSTRIAL POLICY

MAJOR SHARE OF BUDGET SET ASIDE FOR COTTAGE UNITS

(FROM OUR LUCKNOW CORRESPONDENT)

THE Government of U.P., it is understood, is contemplating a new industrial policy for the next financial year to attract greater private investment and thereby increase the volume of employment. The rate and extent of private investment in U.P. during the post-war years have been very little compared to other major States. Much of the private capital was lured away to adjoining princely states before their merger, but the position has not improved even after their merger. The new industrial policy is yet to be defined, but it has been stated that the inducements offered to private investors will in no way compromise the "socialistic pattern of society" to which the Government is committed. One of the main features of the plan for the development of industries during the coming financial year will be the establishment of five industrial estates. These estates will be about 100 to 200 acres in area and will be located at Kanpur, Agra, Lucknow and Ghaziabad. The Government will determine the particular industry to be set up in each estate and may also purchase and install machinery at their own cost. All the five industrial estates, which will be ready by March 1957, will be handed over on a long-term lease to co-operative societies which will run them under the Government's general direction. Industrial sites at these estates will also be rented out to prospective industrialists; the idea is to reduce the initial cost to the entrepreneur.

For financing these estates, as well as other schemes in connection with reducing unemployment in the State, the State may receive Rs. 50 crores out of the Rs. 150 crores which, according to the Planning Commission, should be spent in the industrial sector during the next two years to raise the volume of employment in the country. The State Government will utilise only a part of the Central aid for establishing its own industries, and the rest will be used for encouraging private enterprise. A detailed scheme is being worked out and hopes are entertained that the coming budget is likely to contain some taxation reliefs to private industry in the State. A geological adviser is being appointed to advise the Government on prospecting for coal and iron ore in the sub-Himalayan region. The new policy will also lay emphasis on optimum utilisation of forest products. Further, the Government intends to set up a mill for the supply of yarn to handloom workers and a decision will be taken after receipt of the report of a two-man delegation deputed to Madras to study a similar venture undertaken there. Over 65 percent of the industries budget in the coming year is, in fact, expected to be devoted to resurrecting and financing cottage industries in the State.

Jute Mill Closures

Two jute mills in the State, one in Gorakhpore and the other in Kanpur, had to be closed recently because of labour trouble. One of them has since resumed work. The management of the Sahjanwa Jute Mills, Gorakhpore, declared a lock-out for an indefinite period on 14th January following a ten-day stay-in strike by nearly 1,000 workmen. The J. K. Jute Mills in Kanpur closed temporarily because of go-slow tactics adopted by workers in the middle of November last, especially in the sewing section. The management promised an incentive bonus if the workmen brought the production to normal and then there was a temporary abatement of go-slow. But in January the workers of the roll winding section started a slow-down strike, and production dropped from 53,000 lbs to 32,000 lbs when the management decided that the mill could not be run economically and announced their decision to close it for the time being.

The Case for Protection

The case for protection for the indigenous soap industry was stated by Mr. Naval H. Tata at a press conference at Lucknow during his visit to the city early this month. For some time past, the Indian Soap and Toiletries Makers' Association had been appealing to the Government of India to institute an independent inquiry into the structure of the industry. The 'foreign' sector of the industry has a rated capacity of about 60,000 tons. On the other side, there are some 65 indigenous factories with an aggregate rated capacity of 134,000 tons. But, according to Mr. Tata, the actual production of these factories in 1953 was not more than 24,000 tons. In other words, he argued, the entire idle capacity of 110,000 tons was borne by the indigenous factories. In his view, the indifference to Indian interests was the more surprising because, in the case of an industry like steel, the Government had instituted a system of variable retention prices for each unit depending on its economic position. The main drawbacks of the indigenous manufacturers were the absence of multi-venue establishments without which the problem of high freight charges could not be solved and the lack of adequate financial resources. Questioned whether it was feasible to continue with the uneconomic units, Mr. Tata countered with the inquiry how in that case the handloom industry had any place vis-à-vis the organised textile industry. Uneconomic or not, he went on, these units gave employment to thousands of people and they had to be kept going. He took his stand where the soap industry was concerned on the dictum fashioned by the Govern-

ment of India in the interests of social justice—"the smaller the man the greater the protection."

Working of Sales Tax Laws

An 11-man committee with the Finance Minister as Chairman has been set up by the State Government to study the working of the sales tax laws in force in State and suggest suitable amendments where necessary. Specifically, the Committee will seek an answer to the following nine questions: Does the list of exempted goods call for a change? Should the present tax rates be revised and, if so, how? Should the existing flat limit of annual taxable turnover be modified? Should different limits be set for different classes of goods and dealers on the same line as in Bombay and West Bengal? How should the present procedure of voluntary registration of dealers be modified? What changes are necessary in the existing machinery for the hearing of sales tax appeals and revisions? What steps should be taken to reduce the chances of evasion? What changes should be made in the rules so that the least possible inconvenience is caused to dealers, with special reference to refunds and grants of exemption certificates? Is it feasible to set up a consultative committee on matters connected with the sales tax? And, should the Sales Tax Commissioner's powers be put on a par with those of the Income Tax Commissioner? No time limit has been set for the completion of the inquiry, but the Finance Minister, Hafiz Ibrahim, hopes that if all the loopholes are plugged the treasury may be the gainer by Rs. 1 crore.

Too Much Food

The hope of a big bumper rabi crop this year, the biggest in recent years, is posing a problem for both the Government and the cultivator. The Government is committed to a policy of price sup-

port and the decision has toned up the grain market, but the renewed expectations of a bumper crop have again had adverse reactions. The Food Ministry has on hand sizable stocks of both wheat and rice, besides coarse grains and gram, and in an effort to get rid of them before the next harvest the price of wheat has been reduced from Rs. 14 to Rs. 10 per maund, of gram from Rs. 10 to Rs. 8 and barley from Rs. 12 to Rs. 5 per maund. The 5,000 tons of high-priced rice left with the Government was purchased some three years ago at the instance of the Centre for diversion to deficit areas, which did not however take place. The purchase price was Rs. 19 per maund but now the price is Rs. 13. The Ministry claims that since the purchase was made at the request of the Centre the loss should also be borne by the Centre. Before the financial year is out, the Food Ministry is expected to be finally wound up, save for a skeleton staff to look after the records in 15,000 bulging bags covering the State's marketing operations for the last 12 years.

Housing for Old Cattle

The State Government proposes to establish five *gosadans* in the coming financial year for housing lame, old and decrepit cattle at an estimated cost of Rs. 7 lakhs. Seventy-five percent of the cost is to be borne by the Centre. These *gosadans*, which are in addition to the two already maintained by the State, are in pursuance of the Gosamardhan Inquiry Committee's report which recommended 91 such institutions for Uttar Pradesh. It is estimated that Rs. 78,000 will be needed for an average-sized *gosadan* for accommodating 2,000 cattle. The Committee has rejected a bill circulated by the Union Government prohibiting cow slaughter, on the ground that it does not go far enough.

Trusted around the world

Around the globe, General Electric people are working to make life better with the finest of electrical products and services. In India, the G. E. equipment, research and engineering experience have been employed in many power, industrial and educational projects... planned for the progress and prosperity of the country. Look for the G. E. monogram... a sign backed by 76 years of electrical skill and experience... a sign you can trust.

CALTEX RPM

the only
motor oil
that gives
ENGINE

Lubritaction

Development of new motor oils has kept abreast of the rapid advance in automobile engine design. The modern internal combustion engine with its high power output and high compression ratio for greater operating speeds and efficiency demands an oil capable of controlling these requirements. Fifty years of intensive research by Caltex have produced R. P. M. The Premium Heavy Duty Motor Oil that exceeds the requirements of the modern I.C. engine. Because it has been developed with an eye to the more severe operating conditions anticipated in I.C. engines of the future, R.P.M. is "tomorrow's oil today"—it is the only motor oil that gives engine lubritaction.

Ask your friendly Caltex Dealer about **RPM** this wonder motor oil. He knows how good it is because it **LUBRICATES and PROTECTS.**

SPECTACULAR SHOW AT AVADI

SIGNIFICANCE OF ECONOMIC RESOLUTIONS

(FROM OUR MADRAS CORRESPONDENT).

THE Diamond Jubilee Session of the Indian National Congress at Avadi could well have formed the theme of one of Cecil B. De Mille's films. It was a magnificent show with colossal sets such as could be put up only by film producers. And it was not entirely fortuitous that a leading Madras film magnate made his services available for the purpose. The show has just ended and the demolition squads have gone into action. The Avadi site will soon be as barren as when construction of the short-lived structures began, and there will be no relic of those fantastic towers, columns and arches that constituted the three-day wonder for the surging crowds, save in a full-length documentary film. From the standpoint of showmanship and big publicity, the Avadi Congress was a personal triumph for Mr. Kamaraj, the Madras Chief Minister, whose powerful hand directed the operations of the Reception Committee; from the point of view of tactical manoeuvring and the consolidation of ranks, it was a personal triumph for Mr. Nehru.

It is thought that Mr. Nehru was moved by no idealistic fervour when he got the Congress to put its seal of approval on the main resolution suggesting a socialistic pattern of society for India. The need to give a new battle-cry well in advance of the 1956-57 General Elections, and to rally the wobbling middle third behind the Congress in the name of socialism and secure employment, was recognised by Mr. Nehru and his associates; and the time was also considered opportune for a coup de grace on the Praja Socialists who swore by the socialistic traditions of the Congress. Another shrewd tactical move of Mr. Nehru's was to have chosen Mr. U. N. Dhebar of Saurashtra for the presidency of the organisation. The new President struck one as an eminently suitable person through whom Mr. Nehru could continue to direct the party affairs and also win the confidence of the thousands of Gandhian constructive workers disillusioned by the Government's policies. Such devout Gandhians, it may be noted here, are still numerous in organisations such as the All-India Spinners' Association, All-India Village Industries' Association, Sarva Seva Sangh, Vinoba Bhave's Bhodan Movement, Harijan Sevak Sangh, etc. These elements who swear by Socialism of the decentralised Sarvodaya brand appear to have great confidence in Mr. Dhebar who, significantly, visited only the Sarvodaya sector of the Congress Exhibition and saw nothing else of that huge, sprawling show organised by the Reception Committee in the city proper.

Effect on Elections

All these moves, taken together, might it is stated, isolate the Communists and effect a situation of polarisation of forces—a situation in which the Reds cannot win a parliamentary majority in any State. But the proceedings of the Avadi Congress are not likely to have any immediate effect on the impending elections in Andhra where the Communist Party is demonstrably in a position to win more seats than in the 1951-52 General Elections. Only the publication of the second five year plan might help the Congress propaganda machine along.

As regards the main resolution itself, knowledgeable circles are not inclined to attach any very great importance to the directive for a socialistic pattern of society. No redistribution of accumulated wealth is contemplated save through the operation of the Estates Duty Act. There will be no sweeping nationalisation of any existing large-scale industry. There might, however, be some limitation of dividends for the purpose of ploughing the profits back into industry. In the realm of income-taxation, India, it is stated, is already socialistic. What might emerge from a combination of socialistic measures can only be a sort of directed economy, as the main resolution visualises either social ownership or control of the principal means of production. Even in the sphere of land reforms it is not confidently expected that the States will expedite the limitation of existing landholdings in the next few years. Some observers are of the view that the Avadi resolutions are all so much "old wine in old rather than new bottles".

NEW MAGNESITE DEPOSITS

Five new areas of magnesite deposits have been discovered by the Geological Survey of India in the Almora District of U.P. These deposits, occurring as narrow bands of big crystals, are located at Agar, Chahana, Dewaldhar, Channi and Nail. Magnesite is used in the manufacture of refractory bricks for metallurgical furnaces. The demand of magnesite bricks is likely to increase in India with the proposed expansion of the iron and steel industry. The Almora magnesite contains iron-ore which gives greater density and power of coherence to the individual grains of the mineral after it is burnt. Magnesite is burnt at 1450°C before it is used for the manufacture of refractory bricks.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

HIGHER WAGES NO SOLUTION OF RAILWAYS' PROBLEM

(FROM A SPECIAL CORRESPONDENT)

BY the simple test of comparing the wages of railway workers with those of workers engaged in other industries, there was no doubt that the railway operatives emerged as underpaid. Therefore, the British Government was left with no alternative to granting the higher remuneration which the railway unions asked, and which they backed with the threat of a national strike. For whilst public opinion upon the future of the railways and its workers is of many shades of criticism, there is no general conviction that the basic problems would be solved by keeping the wage packets as they were. So the disclosure that the British Railways have a deficit of at least £20 millions for 1954, which will rise to £30 millions or more for 1955, has been received with merely a shrug of the shoulders. Everybody outside the unions, and many within, is convinced that something drastic will have to be done if the railways are to be put on a sound footing. The most obvious step is to reduce the number of employees. It is common knowledge that many of the railway workers at country stations, and not a few at the big depots, have frequent periods of idleness during the course of the day, and that, although it is difficult to find a standard to measure by, the work output per man can be only from a half to a third of that of workers in other important industries. This fact means that the recent wage awards have really no economic justification. Previous wage awards since the war have been nominally related to the taking of various steps recommended for increasing efficiency. Few, if any, of these proposals have been rendered effective, and all of them have been opposed by the rank and file of the unions. It is said that a number of the union leaders have been willing to initiate reforms; but they have not done so, and it must be assumed that they were not willing to run the risk of falling into disfavour with the men who have elected them to their positions.

As is evident from the rising deficits, the efforts of British Railways to offset wage increases by means of higher travelling and freight rates have failed so far. They will certainly do so again, if another attempt is made. Competition by independent road transport, that is transport concerns whose capital is not owned by British Railways, steadily increases. It must continue to do so, in view of the advantages it offers in nearly all directions, excepting for very heavy or awkward traffic. The Labour Party is well aware of this, and left wing members are declaring that road transport enterprise must be compelled to help save the railways. This should be done, so they contend, by more road transport undertaking being brought under the state-owned British Railways' control. It is further proclaimed that the distributable profits of the independent road transport undertakings should be limited, and the surplus profits thus made free transferred in order to reduce the railways' deficits. The claim is made that these undertakings are benefiting not so much from their superior management, or the special facilities they offer, as from changes in the mode of life of the nation—changes not of their making. On the other hand, so it is alleged, the railways are the victims of economic advances, to which, by reason of the fixity of their tracks, they could not possibly fully adapt themselves. The argument has plausibility; but it avoids the fundamentals. No industry is likely to remain progressive if, say, half its yearly profits are to be taken to finance another industry. Whether that other industry is inefficient or merely unfortunate does not enter. Clearly, too, the state of the railways would not be altered in the slightest by such transfers and there would, in fact, be more of an inducement than there is at present to let things remain much as they are.

Independent examiners of the railways' plight are strongly of the opinion that, whatever else may have to follow, a beginning must be made with a reduction of workers employed. The excess staff has been put as high as 100,000, or about one-fifth to one-sixth of the total. It is pointed out that various industries have vacancies for semi-skilled labour of the kind which is represented by the lower grades of railway workers and that the whole of this estimated surplus of 100,000 could be readily absorbed elsewhere. There is something to be said for this proposition, since there is no prospect whatever of the railways providing an economic justification for a staff of the present size. Indeed, the indications are that the extent of the disparity will increase. But compulsory transfer of labour in peace-time is out of the question. Nor are railway workers likely to go voluntarily to other kinds of work, even if the employers felt able to offer special rewards. The railway worker knows that the probability of permanency is greater where he is than it would be in most of the industries seeking additional labour; for these have no guarantee of State backing in time of trouble. Some feel that only the technicians can deliver the railways from their present impasse. But they concede that they are thinking in ambitious terms, with a reconstruction and widening of tracks, more powerful rolling stock and bold technical relationships with other forms of transport. All of which would require ingenious brains and the expenditure of vast sums of capital. That may come; but at the moment the outlook is that there will be a few minor adjustments to placate the taxpayer for having to foot yet another bill; and little more.

An international spirit, of which some signs were to be seen two years ago, does not seem to be developing very rapidly in the British textile industry. We hear a great deal about textile industries in other countries copying British designs and of those other countries also indulging in unfair competition. The Japanese are given most prominence in the first named category; but they are not alone. Some consolation is derived from assurances given by the Japanese Government. Nevertheless, concern is still expressed. Bad business morality is to be condemned wherever it takes place and in whatever form. The British textile industry during its history since the Industrial Revolution has copied a great many textile designs of the Oriental nations, and it may be recalled that the Paisley Shawl industry was built upon the imitation of something far lovelier—the genuine Kashmir Shawl. European civilisation is indebted to the old Eastern civilisations for very much—but it all too seldom remembers the fact. Indians who resent what they, with some reason, regard as an ungenerous attitude towards their efforts at renaissance should bear in mind that, as far as Great Britain is concerned, hardly any of the old Free Trade school of thinking remains. Not that this was as disinterested as it was often represented to be; but to its members international trade was more a matter of principle than of expediency. That is not so with either of the great political parties in Britain today, and it is to these parties—chiefly to one of them—that members of the executives of textile concerns belong. Indian industrialists should therefore not be surprised at the tone of many of their utterances; for these executives at heart as the Indian industrialists or their Government. And, one feels, with less excuse; for the British textile industry has great advantages and has enjoyed remarkable prosperity of late.

Difficulties in Sisal

The fact that sisal producers, after having enjoyed phenomenal prices and record profits, are now once more producing at a loss, has caused the question of price stabilisation to be raised. This was very prominent before the war when, at one time, sisal could hardly be given away. Demands

for war purposes saved the situation, but now that comparatively normal conditions are returning, sisal is revealed as in as precarious a state as ever. Depending largely upon demands for string for tying up parcels and for the manufacture of binder twine for harvest purposes, sisal is destined for a humble future, unless something quite unforeseen occurs. The cry is now that more attention must be given to the discovery of fresh 'end uses.' But, unfortunately, the research record of sisal is too unimpressive for anything to be expected immediately in that direction.

Certainly, where there is considerable research activity to be drawn upon, and plenty of informative data available there is much to be said for the creation of a body for the purpose of concentrating upon the development of end-uses. The large synthetic fibre companies in Great Britain (as in the United States) take this task upon themselves, by the establishment of special departments, thus giving a more practical turn to problems of widening the range of consumption than is possible in the often academic atmosphere of the research institutes. Which is not to deprecate the value of the work of these last. It is really a policy of bringing into existence a liaison between research inquiries and sales departments. The directors of the end-use organisations are all experienced research workers who have been brought nearer to the world wherein lies demand, and potential demand, for manufactures. Notably, the movement has proved justified in the rayon industry. Here the provision of more various semi-finished materials has had the outcome of the manufacturer of the final product being able to discern new uses for himself. The inference to be drawn is that problems of additional end-uses of fibres are more likely to be solved indirectly than directly, and outside of research institutions, rather than within them, although, as stated, research activity is the necessary preliminary. Jute manufacturers, companies can hardly be expected to emulate the powerful synthetic fibre companies, but some modification of their policy in this respect might be devised. Jute Industries Limited, in Britain, continues to publicise announcements urging people to use more jute. That is desirable; but it can probably do no more than help to maintain consumption within known applications.

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

Mofussil: Upcountry markets in India continue to rule firm in spite of the limited business transacted over the week, and sellers are still asking high prices. Imports are still very small but are expected to improve slightly now that the strike in the Joint Steamer Companies is settled. The jute arriving is reported to be of very low quality and cultivators appear to be holding on to their better quality jute in the hope of getting higher prices.

prices. At the close quotations are based on Rs. 32 a maund for bottoms.

In Pakistan, the jute markets have registered a steady rise over the past week. There has been an increase in business and more enquiries have been received for the lower grades of jute of kutchha bale standards. The market is firm with a rising tendency. Imports are the same as last week, arrivals in Narayanganj barely averaging 8,000 maunds a day. Latest quotations in Narayanganj are as follows:

Pucca Bales	Rs. (P)	Kutchha Bales:	Rs. (P)
Mill Firsts	163	Jat	28-8
Export Firsts	144	District	27-8
Dacca Tossa 4's	200	Northern	25-8
Dundee Tossa 4's	158	Quotations for Tossa are	
Outport Tossa 2/3	140	Rs. 5 higher than those for	
Outport Tossa 4's	120	white jute.	

Arrivals of Raw Jute

During December 1954, arrivals of raw jute in Calcutta and mill stations amounted to 751,492 bales compared with the revised figure of 787,080 bales in November. Of December's total, 628,060 bales were of Indian origin and 123,432 bales came from Pakistan. Total arrivals for the period July-December 1954, now amount to 30,24,892 bales of which 24,69,245 bales are Indian jute and 555,647 bales are from Pakistan. In the same period of last season, total arrivals were 29,11,747 bales, of which 20,41,968 bales were from India and 869,779 bales from Pakistan. Thus arrivals are now ahead of last year's figure by 113,145 bales. Arrivals from India are up on last year's figures by 427,277 bales, but arrivals from Pakistan fall short of last year's figures by 314,132 bales.

PAKISTAN'S JUTE EXPORT POLICIES CRITICISED

MR. A. D. BOLDY'S ADDRESS TO P.J.A.

ADDRESSING the annual general meeting of the Pakistan Jute Association in Narayanganj on Monday, the President, Mr. A. D. Boldy, said: "In December 1953, when our last annual general meeting took place, Mr. M. M. Ispahani, the then President, expressed the view that we should just about have sufficient jute to satisfy world demand and the carryover into 1954-55 would probably be negligible. Prices were between £95 and £105 per ton for Export Firsts c.i.f. U. K.

Continent and exports up to that date were about 24 lakh bales. Prices had been satisfactorily steady all the year at a level which enabled the cultivator to purchase about two maunds of rice for every maund of jute. The 1953-54 crop forecast issued by the Provincial Government put the carry over at 22 lakh bales and the crop at 25 lakh bales, a total of 47 lakh bales. The general view of the trade, however, was that the carryover was about 28 lakh bales and our crop estimate was 40 lakh bales. By March last year it became apparent that the Government forecast was inaccurate and that the jute available was possibly a little more than forecast by the trade. In all, by the end of June, 52 lakh bales were exported, about 5 lakh bales locally consumed and the estimated carryover was in the region of 13 lakh bales.

"It had also become clear by March that, despite the Government's declaration of licensing a sufficient area to grow only 42 lakh bales, little attempt was being made properly to regulate the crop and cultivators were sowing in excess. The trade feared then that the crop might have been 55 lakh bales and prices therefore commenced to recede. Even though late rains in most areas caused the trade to bring their forecast down to 50 lakh bales, it appeared to consumers that there would be a sufficient quantity of jute available to satisfy their requirements. In July the low level of prices caused some anxiety and the Jute Board, in consultation with our Association, agreed to instruct the State Bank not to pass E. P. C. forms below the minimum of £80 per ton for Export Firsts. Prices remained at minimum levels during July and August until it became clear that the floods, which arrived in August, were to be serious and of long duration, and by the end of September, prices increased to about £90 per ton.

Inadequate Arrivals

"Once the floods had subsided the market paused in the expectation that there would be considerable increase in raw jute imports into the marketing centres, especially taking into view the reported economic distress caused to cultivators by the flooding. The large increase in imports did not, however, come about as, presumably due to the plentiful supply of rice at low cost, the cultivator did not need ready cash sufficiently urgently to sell jute at sacrificial prices. Since the end of September, therefore, due to steady demand from overseas and slow import of supplies to marketing centres prices have strengthened to make Ex-

port Firsts at date £105 per ton. At these levels the cultivator receives about Rs. 20 per maund for his produce and with present rice prices he is in the happy position of being able to purchase about 3 maunds of rice for every maund of jute sold. As the recent floods were unprecedented it is still not apparent whether there will be sufficient jute available to satisfy world demand. It has now become certain, however, that there will be little carry-over, if any, into season 1955-56 and plans for future sowings should be based on that assumption.

Talk of Nationalisation

"There is much loose talk about nationalisation, or semi-nationalisation through an export corporation, and many plans have been drawn up by theorists which are, without question, impracticable. Action has been taken by the Government against certain traders; there has been a sudden announcement banning without notice export of all kutchha bales. The procedure for obtaining State Bank permission to export through E. P. C. forms, and obtaining export licences from the Jute Board has become lengthy and unwieldy; it is still difficult to get the State Bank to allow remittances to buyers of their legitimate claims. The Customs Department who had evolved an efficient and expeditious system of checking documents and passing jute are delaying consignments where there is the slightest reason. All these difficulties are known and are having effect on consumers of jute causing confusion and uncertainty not only within Pakistan but also in the trade and industry all over the world.

"The theorists in favour of nationalisation appear to believe that with Government control all cultivators would be guaranteed a good price for any quantity of jute they like to produce, ignoring such factors as the price of jute goods, raw material prices throughout the world, competition from substitutes and, most important, the laws of supply and demand. They seem to overlook that there have been a number of attempts since partition to maintain artificial price levels by subsidy through support purchase schemes and by notification of statutory minimum prices, all of which failed.

"We have always maintained that there is only one way in which cultivators can be assured of a reasonable price in relation to the price of substitutes, or world raw material prices and that is by proper regulation of production. The feeling amongst a large section of the population in East Pakistan appears to be that those engaged in the jute trade are solely concerned with trying to depress prices to the disadvantage of the cultivator. We trust that the Government will try to contradict that impression and I feel it my duty to reiterate that the question of obtaining reasonable prices is in the hands of the cultivators themselves. It must be realised that without proper crop regulation it is impossible to maintain jute prices at economic levels and it is only with self-control by the cultivators that our objects will be achieved. In this connection I would appeal to all public-spirited enlightened persons to spread propaganda amongst our cultivators, which will convince them that it is in their own interests not to sow an inch of ground more than is sanctioned by the Government.

Cancellation of Licences

"I come now to the question of the Government's recent action in cancelling the licences of a number of jute merchants alleged to have been indulging in under-invoicing, undergrading, registration of bogus contracts and other malpractices. The written charges received by the traders concerned refer merely to petty offences under the East Bengal Jute Registration Act. We understand that all of the affected firms have lodged appeals and we trust that the Government will expedite investigation and consideration. The cancellation of licences took the trade by surprise as the Government did not take the Association into their confidence. Immediately the announcement was made we hastened to inform the Government of its probable repercussions on local banks, local buyers and sellers, inland water transport companies, ports, foreign buyers and jute manufacturers. We made our recommendations to the Government and we are pleased that they were eventually accepted but we are afraid that the delay in arriving at a decision did cause a lot of anxiety in the jute world, particularly on the part of our overseas friends.

"The recent action taken by the Government in banning export of kutchha bales and reducing pressing charges was known by my Association to be under the consideration of the Government. The Association expressed its views in partial support of these measures some time ago and we were under the impression that if the ban was to come into operation it would be after due notice at the beginning of this season. The announcement came, however, in mid-season when there were lakhs of kutchha bales in stock and these had to be opened out, transported in some cases to pucca baling centres, and repacked, causing losses of lakhs of rupees.

"The export control procedure for jute which has been allowed to just grow since partition without a systematic overhaul, has now become so unwieldy as to render it almost unworkable. Shippers have to obtain permission from the State Bank to export at a certain price during which time documents are thoroughly checked, they then have to approach the Jute Board for an export licence when the identical documents are checked again. It often happens that shipments are delayed for reasons beyond the control of the trader and a further approach has to be made to the Jute

Board and sometimes the State Bank for further revalidation and rechecking.

Procedural Delays

"Where it was possible at one time for an exporter to make a sale of jute and ship it within a week, we now dare not contract for delivery less than one month ahead as it is almost impossible to complete the necessary formalities in less than that time. Even when the buyers have the jute in their possession they are still not clear of the uncertainties which exist, as it is often a very difficult task to convince the State Bank to accept that they may have a legitimate claim for short weight or for bad quality.

"We appreciate that the Customs Department have a most difficult and responsible duty to perform. Customs had evolved in consultation with the trade a reasonably efficient system of passing consignments bound for export, but they too often require to check the same documents, which have already been checked between three and four times for the same reasons by the State Bank or the Jute Board. The Customs Department suffers from a lack of personnel with knowledge of the trade and detentions often occur unnecessarily due to doubts over qualities. Our member firms have offered to train Customs officers free of charge in their own godowns for one-year periods and we trust that Government will take advantage of this training scheme.

"We realise that the cancelling of licences, precautions taken by the Jute Board, the State Bank and the Customs are all genuine efforts employed by Government to discourage malpractices. My Association do not condone malpractices and in fact we support and subscribe to the principles motivating the Government's actions. Early last year my Association addressed the Government at length detailing the malpractices which were possible and were prevalent in the jute trade, suggesting ways and means by which such malpractices could be effectively combated. We submitted our recommendations in the form of a Memorandum to be considered by the Government while formulating its jute policy for this season. We presume that our views were considered, but in the final statement of policy announced by the Honourable Minister we found that the Government had only partly accepted some of our recommendations.

P.J.A.'s Recommendations

"The recommendations we put forward were that only members of my Association, who are already responsible for the greater volume of jute exports from Pakistan, should be allowed to export. We had suggested a number of carefully considered rules and regulations under which our members would be forced to conduct their business. These Rules would lay down that all contracts had to be approved by the Association; no export would be allowed unless the grade was properly registered and defined; all transactions would be registered with the Association; all claims for weights, quality etc., would be routed through the Association; there was provision for warning offenders and disqualifying them for membership. All the bye-laws we suggested to be drawn up were designed to assist in reduction and detection of malpractices. Boiled down, the scheme we put forward, and which we recommend for further earnest consideration by the Government, is a plan for control of the trade by the trade themselves through our organisation associated with and backed by the Government.

"Under our plan we offer to put the whole of our experience and, if necessary, our staff and organisation, at the disposal of the Government. If, however, the Government is unable to use this Association in the manner suggested, I would dwell again upon the importance of having at least someone high-powered who is constantly in touch with the trade to liaison between us and the Government and to advise and assist the Government in formulating its policy."

THE FOREIGN JUTE MARKETS

RAW JUTE PRICES FIRMER

(FROM OUR DUNDEE CORRESPONDENT)

WITH raw jute prices displaying a firmer tendency again, members of the industry here believe that a further rise in values of jute yarns and cloth in the U.K. is not far off. It will be unfortunate if prices do go up again, as consumers are becoming very reluctant to pay even present rates. At the moment, these are at the highest level they have been for many months. At the back of most people's minds is the thought that, in the course of the next few months, new crop sowing reports will be circulating, and the high prices now ruling will be an incentive for growers to increase their sowings, in spite of the injunction that is usually stipulated that these should not exceed the official allocation of area. Offers have not been so readily made recently and the value of Mill Firsts has become lowest at £122 and of Mill Lightnings at £111, while good Daisies-2/3 is from £122 and grade from £111, crack Tossa-2/3 at £143 and grade from £129 and grade fours from £113, all c.i.f. U.K. Spinners are picking up a few lots aloft at £1 or £2 less than these rates, quoted for shipment, sellers being rather anxious to dispose of the parcels before they arrive. The quality of the jute coming here is still quite favourably reported upon.

Calcutta goods are firmer again at 77s 0d for 19oz. 40in. January, 76s 6d February-March and 76s-3d April-June, with 74oz. at 57s 0d January-June. "B" twills are up to 204s 0d January, 203s

6d February-March and 202s 6d April-June, all f.o.b. Calcutta. Jute yarns are in some request and prices rule very firm at 18.02d per lb. for common 8 lb. cops and 8 lb. spools, while there is some business in cloth and bags on the basis of 14.84d per yard for 100z. 40 in. and 12.10d for 8 oz. Jute Industries, Ltd., are to build a new jute mill near new housing schemes on the outskirts of Dundee. They expect to employ at least 250 workers and the establishment will be running before the autumn of 1956. This firm made a gross profit of £538,507 for the year to 30th September last year, compared with £408,352 the year before, after providing for depreciation and obsolescence £200,000 (£120,000) and taxation £592,854 (£545,910); available for distribution £776,071 (£592,307); to general reserve £398,734 (£352,500), stock reserve £100,000 (nil); Preference dividend paid and accrued £63,000; Ordinary dividend recommended 20 percent £115,000. (15 percent plus bonus 5 percent). Ordinary shares rose 3s 0d to 22s 0d the day after results were declared.

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption during December was a little better than for November and excluding deliveries to the armed forces was 1 million yds. more than for December a year ago. Total estimated consumption for 1954, excluding deliveries to the armed forces, at 779 compared with 809 million yds. for 1953, a decline of about 4 percent. Estimated bag consumption alone, however, showed a greater decline for the year due principally to the decrease in the use of burlap feed and potato bags. Most of this decline was brought about by the inroad of multiwall paper bags, window bags for potatoes, and the accelerated use of bulk shipments for feed and ingredients. U.S. burlap stocks continued to increase during December. At an estimated 240 million yds., 112 million yds. were spots and 128 million yds. were afloats. Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers Association and

the Burlap and Jute Association, and (2) projected to represent the estimated Consumption and Stocks for the entire industry:

self-sufficient

MARTIN BURN LTD

12 MISSION ROW, CALCUTTA 1

Branches at: NEW DELHI BOMBAY KANPUR

a comprehensive Telecommunication Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving interdependent systems of various types.

Standard Products Include:

Systems:—

Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Railway Communication and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Street and Airfield Lighting Control
Signalling (Office and Factory)
Communication Cable

Equipment:—

SenTerCel Selenium rectifier equipment
Power Factor Correction
Heat Treatment
Broadcast Studio equipment
Transmission Testing apparatus
Cable Testing equipment
Loading Coils

Components:—

Quartz Crystals
Transistors
Capacitors and Interference Suppressors
Germanium Rectifiers and Photoelectric Cells
Thermionic Valves

Magnetic Materials
Thermistors
Relays
SenTerCel Selenium Rectifiers
Rubber, Plastic and Textile insulated cables and wires

PAA-2B

Calcutta Markets

GOOD DEMAND FOR EXPORT TEAS

DUSTS A STRONG FEATURE

AT export sale No. 31 the offerings consisted of 36,054 packages. Buyers followed very closely the useful selection of teas with autumnal quality which were on offer this week. There was a strong and general demand for all grades. Stylish Leaf grades showed an advance of one anna a pound while Clean Common and Medium BP's were $\frac{1}{2}$ to 1 anna dearer on last week's rates. The better BOP's and OFgs. received a very good market and were 1 to 3 annas dearer, depending on quality. The CTC's with improved quality also met with good support and sold at enhanced rates. The weakest feature of the sale were the commonest stalkier types which advanced by only $\frac{1}{2}$ an anna a lb.

The few Darjeeling teas on offer were fairly well supported by the buyers and fetched prices above their valuations.

Quotations			
	1955		1954
Clean Black Pekoe	Rs. 3-12 0		Rs. 2 8 6
Clean Common B.P.	3 11 6 to 3 12 0 (Nom.)		2 4 6
Medium Assam B.P.	3 13 6 to 3 14 0		2 5 6
Best CTC Assam B.P.	4 2 0		2 2 6

Offerings of Dusts consisted of 20,588 packages. There was a very strong and general demand in B's week's Dust Sale, the strongest feature of the sale. Again the Black leafy exportable types, the 3 to 6 annas a lb. dearer in price. Clean Common and Medium Assams were about 1 anna to 1½ annas dearer whilst those with good cup quality sold fully at 2 annas above valuations. The poorer CTC's only rose $\frac{1}{2}$ to 1 anna, but the better

liquoring and browner types were 2 annas dearer in price. The weakest feature of the sale this week were the residue fibrous sorts which were irregular and barely steady on last week's rates. Darjeelings with flavour were well supported and sold well but the ordinary liquoring types sold only at valuations.

Quotations			
	1955		1954
Medium Doars Dust	2 10 0 to 2 10 6		1 15 3
Medium Assam Grainy Dust	2 11 0 to 2 11 6		1 15 9
Best Assam CTC Dust	2 15 6 to 3 0 0		2 2 6

Offerings of other grades consisted of 10,565 packages. This market did not receive the same attention as the Dust, and there were only a fair demand and only teas with improved cup quality from all districts were dearer, whilst those with ordinary appearance and poor liquors were easier by $\frac{1}{2}$ to 1 anna. The stalky residue types were very difficult of sale.

Quotations			
	Rs.		
Clean Common B.P.	2 15 6 (Nom.)		
Medium Assam B.P.	3 1 0 to 3 2 0		

FREIGHT MARKETS FIRM

INCREASED booking of coal and scrap from America have kept the markets firm, and a sustained demand for time charter tonnage has caused an increase in rates in some cases. A large number of fixtures have been concluded for coal from Hampton Roads to the U.K. on the basis of 60s to the West Coast whilst Antwerp-Rotterdam discharge paid 49s 9d for four consecutive. Six Liberties were taken for scrap at \$122,500 f.i.o. to the U.K. and \$107,500 to the Continent. Calcutta-Genoa was fixed at £24,500 for a 4,700-tonner and ore rates from India continued to improve with the payment of 90s for April loading from Mormugao to Continent and 66s f.i.o. Kakinada to Japan. A Liberty secured 26s 3d for an Indian round voyage delivery/redelivery France and the

higher rate of 23s 3d was paid for a similar vessel for 12 months' trading.

SUGAR MARKET

During the week ended 25th January, sugar sales in the Calcutta market averaged 2,000 bags a day. Arrivals were 4,000 tons and stocks totalling 100,000 tons. Rates for ready sugar ex-Kantapur delivery were Rs. 30-6 for ordinary grain and Rs. 33-8 for big grain. Coming ordinary grain and big grain sold at Rs. 30-6 and Rs. 33-4 respectively. Ex-mill delivery rates for the following grades of sugar were: D-28 Rs. 30, D-29 Rs. 29-8, A29 Rs. 32 and AA-29 Rs. 32-8. The volume of business done however continues to be small.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazar Sales

(Between 18th and 24th January, 1955)
Cowhides: Wet Salted (Ord.) 5,500 pcs. on the basis of Annas 13 to Annas 14-6; Wet Salted (Slaughtered) 15,600 pcs. on the basis of Rs. 13-8 to Rs. 25-8.

Goatskins: Wet Salted (Daissee, Killed) 46,400 pcs. on the basis of Rs. 315 to Rs. 450; Assam-Dinaj-pore-Murshidabad 38,800 pcs. on the basis of Rs. 285 to Rs. 340; Purneah-Kissenganj 11,500 pcs. on the basis of Rs. 325 to Rs. 335; Muzafferpore-Patna-Pakur 11,100 pcs. on the basis of Rs. 300 to Rs. 337-8.

Bazar Stocks

(24th January, 1955)

Cowhides: Wet Salted 1,05,000 pcs.
Goatskins: Wet Salted (Daissee, Killed) 66,000 pcs.; Assam-Dinajpore 2,28,600 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 2,68,000 pcs.

LINSEED

The undertone of the market was fairly steady; trading was rather limited despite a good demand for ready goods as supplies from the centres were scarce. Firm conditions were maintained in the oil market, and there was a fair demand from both shippers and local consumers. Latest quotations were as follows: January/February Rs. 17 per maund; April/May Rs. 16-8 per maund.

SHELLAC MARKET QUIETLY STEADY

During the week ended 24th January, the market was steady at the beginning and steady but dull at the end. The range of quotations was as follows:

Pure Buttonlac	Rs. 196-8 to 196 buyers.
Lemon No. 1 Shellac	Rs. 200 done and buyers; 200 value.
Lemon No. 2 Shellac	Rs. 194-8 buyers; 197 done and buyers; 196 buyers.
F. O. Std. 1 Shellac	Rs. 188 to 190 buyers.
Pure TN Shellac	Rs. 182 basis done and buyers; 181-8 to 182-8 buyers.
4% I. T. N. Shellac	Rs. 166-8 to 167 buyers.
No. 1 Kusmi Seedlac	Rs. 183 buyers; 183-8 value.
No. 2 Kusmi Seedlac	Rs. 175-8 to 176-8 buyers; Rs. 177 value.
Fine Bysaky Seedlac (Manbhumi)	Rs. 174; 174-8 buyers; 174-8 value.
Fine Bysaky Seedlac (C.P.)	Rs. 169-8 buyers; 169-8 value.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 161 done and buyers; 163 done, 162-8 buyers; 162-8 value.
Ordinary Bysaky Seedlac (C.P.)	Rs. 155-8; 156; 155 buyers.
Kireelac	Rs. 76-8 value; 77 to 75 buyers.

Shipments during January until the 21st were 21,017 packages.

DEVELOPMENT OF AIR TRANSPORT

In the first half of the twentieth century, the passenger traffic carried by all forms of transportation—expressed in passenger-kilometres—increased twenty-five-fold. This represents an average rise of 6 percent or 7 percent each year. Equally concrete figures are not available for world freight traffic, but from the existing data it may be concluded that the growth of this category of transport has kept almost equal pace with that of passenger transport, according to Mr. I. A. Aler, President of KLM. Compared with this uniform general trend, the development of world air transport since 1926 is simply astounding. On the basis of revenue ton-kilometres it has increased a thousandfold in the last 25 years. This is an average growth of 30 percent per year. Prior to World War II the rate of increase showed an upward trend. In the post-war period the average annual rate of increase was almost 20 percent, with a noticeable downward tendency during the last few years. The growth from 1951 to 1952 was only 12.9 percent, and from 1952 to 1953 it increased to 14.2 percent.

In the period 1928-1952, KLM recorded an average annual increase of 25 percent. From 1931 to 1938 this increase was between 30 percent and 40 percent per year, and from 1946 to 1953 the annual percentage was fully 20 percent. The percentage for 1954 was about 17 percent. Needless to say, this rate of growth of world air transport will not continue indefinitely. It will gradually diminish until—perhaps 15-20 years hence, a saturation point is reached, after which the expansion of world air traffic will mainly be influenced by the growth of population and increasing prosperity.

COMPANY AND PUBLIC NOTICES

ANGELO BROS., LIMITED.

NOTICE is hereby given that the Forty-eighth Ordinary General Meeting of Shareholders of Angelo Bros., Limited, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on 16th February, 1955, at 3-45 P.M.

1. To receive and consider the Profit and Loss Account and Balance Sheet, the Reports of the Directors and of the Auditors.

2. To consider the declaration of the Dividend as recommended by the Directors.

3. To elect Directors.

4. To appoint Auditors and to fix their remuneration.

5. To transact any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from the 3rd February, 1955 to 16th February, 1955, both days inclusive.

Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,

TURNER, MORRISON & CO., LIMITED,
Managing Agents.

Calcutta, 19th January, 1955.

THE SOUTH KARANPURA COAL CO. LIMITED

AT a meeting of the Board of Directors held on 18th January, 1955, a Dividend at the rate of 2½ per annum was recommended to be paid for the half-year ended 31st August, 1954, without any deduction for Income Tax paid by the Company.

By Order of the Board,

BIRD & CO. LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.

Calcutta, 25th January, 1955.

What does TROMBAY mean to her?

A village woman lights her lamp. The shadows of the evening are pushed back to the far corners of the hut. The kerosine lamp becomes the focal point of her home. A trivial enough incident in the day's routine... yet multiply this 300 million times to see how important it really is.

For India lives in villages... villages which rely on kerosine for light and fuel.

"The aim should be" to quote from a statement on the Community Development Programme, "to create in the rural population a burning desire for a higher standard of living—a will to live better." It is true that a higher standard of living implies something much more than the satisfaction of basic needs. Yet those needs must be met before further development is possible,—in this respect alone the Burmah-Shell Refinery is laying part of the foundations on which the structure of planning rests.

The demand for kerosine in India continues to expand. India is today the world's second biggest market for kerosine. In our new refinery at Trombay our annual production of kerosine (72 million gallons) will be sufficient to keep nearly 730 million lamps burning all day and all night. Not enough by any means, but a very useful contribution. The manufacture of liquid light and liquid power is completely in India's life and part of it.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in cases marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds Premiums & Forfeited Shares If any	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent.	Paid-up per Share	Latest Market Quotations as available until

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A LANDMARK IN INDIAN FINANCIAL HISTORY

SIGNIFICANCE OF THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION'S OFFER

PRIVATE investors in India this week have an opportunity to demonstrate their belief in the foundations of the Government's economic policy. The opportunity is provided by a new institution which epitomises in every lineament of its structure all the best features not only of the present Government's policy but of any rational policy designed to promote economic progress in India. Those features are, and must be under any dispensation, the following: the fostering of private productive initiative, the spread of technical and managerial skills, the close co-operation of private business men and Government officials, and the full support of the two leading countries of the democratic world, the United States and Great Britain. No one familiar with conditions and prospects in this country will deny that each and all of these things is needful for progress toward industrial prosperity and for the preservation of freedom. That one institution should succeed in incorporating all of them in its constitution is no miracle; once an honest effort was undertaken to infuse new vigour into the economic scene, it was inevitable that sooner or later all these desiderata should be recognised as important. But it remains a tribute to the draughtsmen's vision that the prospectus of the Industrial Development and Investment Corporation should lay before the public all the elements of a sound economic policy for India. After all, it is not every offer-for-sale of shares that contains all the facts of life for a growing industrial economy.

Not the least important feature of this issue is that the facts should have been laid before the public at all, even granted that they were recognised by Government and business leaders and by India's friends abroad. That is to say, it is significant that the Corporation should have reserved a share in its ownership to members of the general public, even part from the extent of their indirect contribution through their banks and insurance houses. The Corporation is seeking from the public only Rs. 1 1/2 crores and to judge from the success it had in raising larger sums from institutions in India and elsewhere, it could have managed without the direct assistance of the public. But it was rightly deemed an essential feature of so signal a case of co-operation between Indian business men, the Indian Government and foreign democrats, that the private Indian investor should be associated with it—and not just in the metaphorical way that every elector is supposed to be "associated with" the national plan, but tangibly, by subscribing his cash and retaining an interest in the Corporation's fortunes. It is this unique opportunity that is offered to everybody with one hundred rupees' worth of faith in India, in the form of the prospectus we publish on another page.

*

The language of co-operation, especially as applied to India's economic development, is now so tarnished that one hesitates to describe in it the true importance of the Corporation's offer. The propaganda necessities of the five year plan have often entailed overstatement of the "co-operative" aspect of what were really large Government projects or international loans in a new context. The Industrial Development and Investment Corporation is in fact the first institution that brings together the money and the talent of the Indian public, business and industry, Government, the World Bank, and the investment houses of Britain and the United States. And, let it not be forgotten, these funds and these talents are brought together to serve just that sector of the economy that claims that it has not had sufficient consideration hitherto in economic policy-making. It is not the last word in such co-operation; it is in fact only a beginning. It is not by itself going to solve all or even a large part of private enterprise's problems. But as an earnest of industry's willingness to work in harmony with Government,

as a sign of Government's readiness to entrust to largely unofficial hands the lending of public money to private enterprise, and as a testimony of American and British faith in India's economic future—in all these respects, it is the most encouraging development of recent years. It rests now with the small investor to make it also a symbol of his disposition to put his savings into private industry under the highest auspices.

It is only frank to admit that "the highest auspices" are necessary to attract private savings to Indian industry. Small shareholders have lost considerable sums of money in investment in the last fifteen years. If their recollection of misplaced trust had not been so lively, many medium-sized Indian industries would not have to seek their funds indirectly through the Corporation but could have approached the share markets. But it is not only that the domestic investor demands guarantees against faulty or fraudulent management. It is also that the foreign investor, even in the form of the large and enlightened financial houses, seeks guarantees against misguided Government policy. If there had been certainty and security for the private foreign investor, he would not channel his capital through the Corporation. The institution is so obviously intended to supplement the meagre flow of private savings that one can overlook the equally important fact that it is required to supplement the inadequacies of domestic management and Government policy. Like

FLEXIBILITY OF BRITISH BANKING

LACK OF COMPETITION CRITICISED

UNTIL Mr. E. Browaldh and Mr. L. E. Thunholm, authorities on international banking, investigated the changes in European banking since the prewar era, and their findings were published by the International Institute of Banking Studies, it was not fully realised that the banking trends of different countries had been running more or less parallel. Their study, based on the balance-sheets of the banks of 11 West-European countries between 1938 and 1952, showed, for instance, that the proportion of Government securities to total assets generally increased, while, therefore, the proportion of commercial loans and discounts diminished. It showed also that, with the notable exception of the British banks, the ratio between cash and deposits, while varying widely, generally declined: the British banks have consistently maintained their cash ratios near to 8 percent. Banking is a conservative business, and the British banks are rather more conservative than their counterparts in other countries. Yet they have recently been subjected to some criticism. Not everyone in the City of London is entirely happy about the rise in the banks' dividends which, after decades of stability, for a year or two ago and has been strongly affirmed this year. More serious is the accusation that, by maintaining a rigid structure of one rates, the banks have not fully assisted the authorities in the attempt to restore a free and flexible money market on the prewar pattern.

The published net profits of the "Big Five" British banks rose more in 1954 than in any other post-war year—by 8½ percent to just over £103 million. The published figures are not necessarily a true guide to earnings, as the banks are permitted to make unrevealed appropriations to inner reserves before arriving at their profits; but there is no reason to doubt that current monetary conditions are profitable. Advances to industry and trade, to persons, and, especially, to public bodies, increased last year (although businesses have been able to provide internally much of the finance needed for increasing turnover); financing of external trade expanded; at home the aggregate turnover of cheques was substantially increased—the rate of circulation of money, as well as the amount of it, was raised. But the critics could not say that official policy was "pouring money into the coffers of the banks", for bank rate, which had been at 3½ percent or 4 percent in 1953, was at 3 percent or 3½ percent in 1954, and the average return on the banks' short-term and long-term loans was thus reduced. The purists criticise the banks for their rigidly uncompetitive practices, especially in the money market. In their relations with the general public the banks are competitive in the services that they offer, if not in the rates that they charge for those services. In the money market they have established artificial ratios between one rate and another, so diminishing the effectiveness of the central control of money—an instrument that will have an important function to perform in the present phase of incipient inflation.

Both *The Banker* and *The Economist* have lately examined these relations between rates, and they have left no doubt as to the importance of the subject. Emphasising the function of the money market as "the central point upon which cash deficiencies or surpluses arising anywhere within the banking system are quickly concentrated, and towards which, therefore, the authorities' own operations in supplying or withdrawing marginal amounts of cash are directed", *The Economist* says that if the money market is free and flexible "it will faithfully reflect the sum of all the credit influences playing upon the economy, and will respond quickly and sensitively to any actions upon it by the authorities." During the war the market was ossified, and it remained in that condition until November, 1951, when "flexible money" was restored. But in the past three years and more the prewar pattern has not been restored. As *The Banker* has pointed out, the Treasury bill rate was formerly less than ½ percent below bank rate—sometimes less than ¼ percent below; but the margin has been until recently nearly 1½ percent and it is still well over 1 percent, although bill rates have moved up appreciably since mid-November. The banks are not alone responsible for Treasury bill rates—though tendering for the weekly issues is not entirely free. The banks are responsible for the fixity of the rates at which they make short loans to the money market (against the security of Treasury bills), at 1½ percent less than bank rate—whereas in former periods of flexible money the margin was 1 percent. The rate paid on time deposits is also 1½ percent below bank rate, whereas it was traditionally 2 percent below.

There are two main reasons why the banks have lately discussed changes in the structure of short-term interest-rates. In the first place, they are not content with a position where there is no margin at all between the rate charged to the money market and the rate paid to depositors. Secondly, they have observed with some resentment the big profits which the discount market

has been able to earn on bills, on the basis of a low rate for loans, in the weeks since bill rates turned upward. It is believed, moreover, that the narrowing of the margin between bill rates and bank rate may be permanent. It is important to the authorities, for the purposes of their control of money, that the market's structure shall be closely knit. The Treasury has, of course, an interest in low discount rates, as it likes to finance a very large floating debt economically. Moreover, the central bank's rate for lending to the market—when the market has no other recourse—is now the same as bank rate, whereas in former years it was ½ percent above bank rate, a fairly wide margin between market rates and the Bank's lending rate is appropriate. However, the general spread between bank rate and other rates is at present, probably, too wide to allow bank rate, and therefore the control of credit, to be fully effective. The recent rise in discount rates has attracted some foreign money to London and has also acted as a warning signal: inflation implies dearer money. But it is probably more significant as the initiator of a new phase in London's monetary mechanism, towards the complete restoration of the system of flexible money.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, *Capital's* Index of Indian Industrial Activity reveals a drop of 2.8 points during July and August, 1954. Contributing chiefly to the drop were falls in cotton consumption, jute manufactures, cement, paper and coal. Cheque clearances and notes in circulation also fell.

Indo-British Trade.—The United Kingdom's Trade and Navigational Accounts for December published recently in London show that India was sixth on the U.K.'s list of customers and her fifth biggest supplier in 1954. India's imports from the U.K. in 1954 were to the value of £115 million, the same as in the previous year. Britain's imports from India totalled £149 million compared with £113 million in 1953. During the first 11 months of 1954 India was by far the largest supplier of Britain's imports of tea—2,392,755 cwt. out of a total of 4,154,186 cwt. Britain paid about £60,000,000 for Indian tea during this period—almost sufficient to pay for the products of British heavy industry imported by India during the same period. Only 268,428 cwt. of Britain's tea imports come from sources outside the Commonwealth. More than a quarter of Britain's bill with India during the period was accounted for by textile fibres and manufactures. The products of British heavy industry accounted for about 60 percent of India's imports from the U.K., totalling over £61 million. India also took £13,543,000 worth of electric machinery, apparatus and appliances from the U.K. British-made vehicles imported into India totalled in value £11,334,000. Among these are included railway vehicles and locomotives, road vehicles and aircraft. Other products of British heavy industry taken by India during the period under review were 84,300 tons of iron and steel. The next largest group of India's imports was chemicals, worth £13,517,000 in all. India also took petroleum and petroleum products worth £4,548,000. Textiles formed another important group of imports, the largest item under this head being wool valued at £4,491,000; the next, cotton yarns and fabrics at £1,505,000.

Shortfalls in Central Revenue.—The trend of receipts from major items of the Central revenue may be causing worries to the Union Finance Minister. According to a reliable source, the revenue yield from customs, which accounts for nearly 40 percent of the total Central income, or the single largest item of the Union revenue, has fallen disappointingly short of the 1954-55 Budget estimates. During the nine-month April-December period of the current financial year customs revenue receipts totalled only Rs. 112.26 crores as against the Budget estimates of Rs. 175 crores. The receipts are Rs. 7.23 crores less than the figures of the corresponding period of the preceding financial year. Whether the collections during the remaining four months will make up for these disturbing shortfalls it is highly problematical; the extra revenue from the enhanced export duty on tea may help to a certain extent if the present favourable trend in tea exports continues, but the actual position at the end of the financial year is unlikely to reach the Budget estimate level. The receipts from income-tax other than corporation tax, another major revenue item, have been equally disappointing. The yield during the same period came to only Rs. 84 crores, that is, roughly two thirds of the estimates in the Union Budget. Excise revenue trends are a bright spot, thanks to higher industrial production, and these receipts at Rs. 76.22 crores compare favourably with those of the April-December period of 1953-54, exceeding the latter by nearly Rs. 7 crores, but the possible increase in excise income can hardly offset the large deficits which the current trend of

receipts in the first two major revenue items fore-shadow. Apart from their embarrassing implications for the next Budget, the customs receipts also point to a very significant fact—that is the competition in international trade to which India's exports are being increasingly exposed. The shortfalls in question are not due to any lack of effective demand in India's export markets, or drastic curtailment of imports, but largely because of the price disadvantages of Indian export goods which had to be removed by the reduction of customs levies. In other words, the competitive strength of India's chief export goods industries must be stepped up by higher productive efficiency.

Industrial Disputes in November.—A substantial decline in the number of industrial disputes and workers involved, as compared with the previous month, is revealed by the provisional statistics for the month of November 1954. The total number of disputes during the month was 49. Of these, 47 involved 23,320 workers. In 45 cases there was a time-loss of 219,722 man-days. There were 38 cases of fresh disputes during the month. Although the number of workers involved was smaller compared with the previous month, the average duration of disputes (19.6 as against 7.3 days in October) was longer. Six of the disputes during the month were lockouts involving 7,483 workers and accounting for a time-loss of 138,812 man-days. Four of the lockouts were in West Bengal and one each in Bombay and Madras. Thirty-two disputes terminated during the month under review. Of these, 25 lasted for less than five days each. The main causes of disputes in 19 cases were grievances relating to personnel. Wages and allowances and other causes accounted for 12 and 13 disputes respectively. Bombay recorded the highest number of disputes and workers involved. The figures, however, indicate a fall from the previous month. West Bengal recorded the highest loss of man-days, a slight rise in the number of disputes and the number of workers involved, but a fall in time-loss. In all other States, except Madras, the time-loss declined.

Agricultural Labour Survey.—The Agricultural Labour Enquiry Report issued by the Labour Ministry this week contains much useful information on manpower and occupational structure in the rural areas. The survey covered 810 villages in 27 States, selected on the basis of stratified random sampling. It shows that in 1951 30.4 percent of the rural families were of agricultural workers, 22.2 percent of landowners, 27.2 percent of tenants, and the remaining 20.2 percent of non-agriculturists. About 52 percent of the total rural population were males. Approximately 54 percent were in the working age group (15 to 55 years). Eight percent were over 55 years and 38 percent below 15 years old. The average size of the rural family was 5.01, consisting of 1.64 men, 1.48 women and 1.91 children. Families were larger among owners (5.5) and tenants (5.4) than among agricultural workers (4.7). The size of the family was largest in north-west India (5.2) and smallest in north and south India (4.9). Of the 5.01 persons in an average rural family, 1.57 were earners, 0.96 helpers and 2.48 independents. In the average agricultural labour family of 4.70 persons, 2.42 were earners. Only 26 percent of the total earners in rural families had subsidiary occupations, which were mainly non-agricultural pursuits. Only 21 percent of the agricultural labourers had subsidiary occupations, half in agriculture and half outside agriculture. Details regarding the average size of cultivators' holding are among the more interesting features of the report. It is stated that the average size of the holding was 7.5 acres, of which 6.6 acres were cultivated and the rest uncultivated. The area actually owned accounted for about 4.3 acres (or 56.8 percent), while land taken on rent worked out to 3.1 acres (or 41.3 percent). The average size of the holding was 11.4 acres for families of agricultural owners, 7.7 acres for tenants and 2.9 acres for agricultural workers. About 59 percent of the total holdings were of less than five acres, indicating that the scope for employing hired labour was limited. Livestock and implements per family averaged 0.7 ploughs, 2.2 heads of cattle, 1.3 sheep and goats and 0.9 poultry. Housing facilities were poor, about 84 percent of houses being made of thatched roofs and mud walls. Most of the houses were single-room tenements, and the average number of persons per room was 2.6.

Czech Industries on Show.—The Czech Industrial Exhibition opens in Bombay on 4th February. This exhibition, which will last for 22 days, will have on show £200,000 worth of goods ranging from modern aeroplanes and capital equipment to cut glass and ceramics. Twelve export organisations will display such wares as heavy engineering products; tractors; textile machinery; precision engineering products, etc. Of particular interest to India, a major exporter of cotton textiles, will be the novel Czech shuttle-less jet loom. These looms have a performance of 400 revolutions a minute

which is almost double the speed of shuttle looms today. Sugar refining plant will also be on display. The exhibition should afford an opportunity for intending Indian importers to inspect various Czech industrial products. In 1948-49 imports into India from Czechoslovakia were valued at Rs. 2.08 crores. There was a decline in 1952-53 to Rs. 1.35 crores and Rs. 1.14 crores in the next year. During the first six months of 1954 the value of imports stood at Rs. 50.43 lakhs. During 1948-49 exports from India totalled Rs. 2.20 crores. Rs. 1.18 crores in 1952-53 and Rs. 3.06 crores in 1953-54. During the first six months of 1954 the figure was Rs. 8.27 lakhs.

Motor Exhibitions in the U.K.—Three important exhibitions connected with the British motor-car industry are to be held in the United Kingdom during 1955. These are: the annual Motor Show, from 19th October to 29th October, the 30th International Cycle and Motor Cycle Show from 12th November to 19th November, and the Smithfield Show and agricultural machinery exhibition from 5th December to 9th December. The London motor show, will this year be the 40th in the series. Exhibits displayed will include nearly 300 of the world's latest cars. Other sections will again cater for motor boats and marine engines, caravans and light trailers, accessories and components, tyres, and transport services equipment. Those who will visit the show from abroad will, on production of their passports at the special Overseas Visitors' Reception Bureau, receive the customary free admission facilities. Overseas visitors connected with the motor industry will also be provided with a catalogue, buyers' guide, and a badge commanding the special attention of exhibitors, together with the exclusive use of a comfortably furnished lounge, staffed by members of the Society's overseas department, and a corps of interpreters. Complimentary season tickets will be sent to all overseas traders and buyers who forward their names and addresses to the Society. The British Cycle and Motor Cycle Manufacturers' and Traders' Union Limited, Coventry, whose membership embraces practically all U.K. manufacturers of bicycle and motor cycle products, is responsible for the organisation of the 30th International Cycle and Motor Cycle Show. The various sections of the cycle and motor cycle exhibition will include bicycles, tricycles, motor cycles, sidecars, three-wheeled motor vehicles, components and accessories, and tyres and equipment for sports and pastimes. Over 2,000 different models of bicycles will be on exhibition and some 200 firms will be showing every conceivable type of bicycle and motor cycle component specialty and accessory. A display of Great Britain's meat animals and agricultural machinery is again scheduled for Earls Court, London. Entries per head of animals—cattle, sheep and pigs numbered over 1,300 in 1954 (apart from carcass entries), occupying about one-third of more than 4 million square feet of display space; the remaining two-thirds housed some 380 stands in the trades section for the products of British and foreign manufacturers. On the latter were to be seen agricultural and horticultural tractors, implements, tools, fertilizers and seeds, and equipment for the meat trade. The exhibition will be staged on similar lines this year.

Textile Progress.—So rapid are developments in the textile sphere these days that keeping up with progress calls for great application to studying available literature. That process is simplified by the comprehensive volumes published by the Textile Institute and the Society of Dyers and Colourists under the title *Review of Textile Progress*, which is priced at 35s., but is good value for the range it covers and the detailed attention the various authors give to the subjects they deal with so informatively. Mr. G. S. J. White, the Chairman of the Joint Committee of the two bodies responsible for this work—the fifth volume—contributes the introduction. In the period 1953-54 which it covers, he says, two tendencies were important among the technical achievements. In the normal stream of development, there were steady expansion of synthetic fibre production and continued research for better products. The urge and centre of this activity remained principally in the United States and Western Europe, but there were signs that this position would be challenged within the next decade. The other field of significant progress was in cotton textiles, where it is very evident that the chemist has been called in most successfully to recover markets for cotton lost because of the skills of other chemists providing synthetic fibres. This cotton progress was particularly apparent in the growth of resin treatment and embossed finishes where considerable engineering ability had also been involved in providing the finished material. Chemical treatment of the cotton fibre exemplified by "cyanethylation" suggested a wide range of new possibilities.

Cotton Mills' Expansion.—The annual mill statement for the cotton year ended August 1954,

issued by the Bombay Millowners' Association, shows minor expansion in India's cotton textile industry. Compared with the previous year, the total number of mills increased by four to 461, and the paid-up capital by about Rs. 3.28 crores to Rs. 112.9 crores. There was a rise of 167,026 to 11,888,165 in spindles installed, and of 210,720 to 10,502,332 in spindles working. Looms installed increased from 207,250 to 207,763, and looms working from 188,606 to 189,648. Over 2.34 million can-dies of cotton were consumed, which was 85,000 candies more than in the previous year, and the number of hands employed (first shift only) was about 300 higher at 435,421. The growth of the Pakistani industry has been much more rapid. The number of mills increased from 39 to 58; spindles installed from 683,808 to 930,318; and spindles working from 575,884 to 832,305. Looms installed rose from 10,537 to 14,847, and looms working from 3,460 to 13,918.

CORRESPONDENCE

IMPROVING QUALITY OF TEA

TO THE EDITOR OF "CAPITAL"

Sir,

I understand that the scientists of the tea industry admit that the essential oil of tea is the source of the quality, bouquet and flavour, but no one has attempted to prevent the loss that occurs every time the tea leaf is fired during the process of manufacture. During the many years I spent in Assam it was always a joy to me to smell that wonderful aroma that one got when approaching a factory when tea was being fired (sometimes from over one mile away) and I always thought what a terrible waste of essential oils was taking place, and on many occasions suggested a vacuum type of dryer might save a substantial proportion.

If it is admitted that the essential oil of tea is the source of the quality, bouquet and flavour, it stands to reason that if it could be retained, or recovered and put back into the leaf, the infusion value of tea so treated, would be increased substantially, and while not increasing the total weight of production, would be the solution to the possible shortage, due to increasing consumption, as instead of obtaining 160 cups of good tea from a pound of leaf, we might obtain up to 50 percent more. The majority of dryers used in the manufacture of tea are of the blast, or forced hot-air type, and in removing the moisture from the leaf being dried, this process also removes a large percentage of essential oil, and hence the aroma I spoke of.

While it is admitted that the moisture has to be removed, there is no necessity to effect this by hot-air blast, and although my original suggestion of a vacuum dryer may not be feasible I see no reason why an electric dryer should not produce satisfactory results, and with the induction process now used extensively, when metals have to be heated at varying and different temperatures, it would appear to be almost ideal for the purpose. In our issue of the 30th September last there was a very interesting article on tea making equipment for restaurants in the U. S. A. and which suggested that the use of a concentrate of tea was the only method by which hot and iced tea of equally good quality could be served at all times.

Many years ago a relation of mine tried to produce an essence of tea, similar to the coffee essences that were then on the market, but it proved a failure as it would not keep for any length of time and I understand this has been the experience of all those who have tried to produce a tea essence.

Should America be successful in producing a satisfactory concentrate of tea for use in their restaurants and cafes, it will be at once apparent how important the possible increase in the infusion value of tea would be, both from the increased consumption point of view in America and the continued prosperity of the industry and the revenues of the countries from which it is obtained. In the industry's efforts to improve quality and increase infusion value of tea I would suggest that if the tea leaf could be kept free from contact with metal during the process of manufacture and afterwards stored in wooden lined bins it would improve the quality and at the same time make the production of a reliable concentrate easier to make, as I believe the slight metal contamination that takes place causes the concentrate to go black if kept for any time.

Yours Faithfully,

FLUFF & SWEEPINGS

PROSPECTUS

Object

1. The Company has been incorporated on the 5th day of January, 1955 for the objects mentioned in the Memorandum of Association and particularly for the purpose of carrying on the business of assisting industrial enterprises within the private sector of industry in India.

In general by

- assisting in the creation, expansion and modernization of such enterprises;
- encouraging and promoting the participation of private capital, both internal and external, in such enterprises;
- encouraging and promoting private ownership of industrial investments and the expansion of investment markets;

and in particular by

- providing finance in the form of long- or medium-term loans or equity participations;
- sponsoring and underwriting new issues of shares and securities;
- guaranteeing loans from other private investment sources;

- making funds available for re-investment by revolving investments as rapidly as prudent;
- furnishing managerial, technical and administrative advice and assisting in obtaining managerial, technical and administrative services to Indian industry.

Government Agreement

2. Under Articles of Agreement hereinafter referred to and to be entered into between the President of India of the one part and the Company of the other part, the Government of India have agreed to advance to the Company a sum of Rs. 7,50,00,000/- (Rupees Seven Crores and Fifty Lacs) free of interest repayable in fifteen equal annual instalments commencing from and after the expiry of fifteen years from the date of receipt of the advance by the Company. The said advance of Rs. 7,50,00,000/- (Rupees Seven Crores and Fifty Lacs) shall rank for payment and shall be payable only after payment of all outstanding debts and liabilities of the Company and the amount of the paid-up share capital of the Company together with any premiums payable thereon: provided, however, that each annual instalment as it falls due (and the entire advance if it should fall due) pursuant to the provisions of the said Agreement will be treated as a debt of the Company and will cease to be treated as part of the advance outstanding for purposes of the said Agreement. In the event of the Company being wound up voluntarily or by or subject to the supervision of a Court, any surplus assets shall be divided between the holders of the Ordinary Shares of the Company and the Government of India in proportion to the amount paid-up on the Ordinary Shares and the amount of the advance or part thereof outstanding at the commencement of the winding up. By the said Agreement it is further provided that if, as a result of the report of the Accountants it is found that the capital of the Company (including the said advance of Rs. 7,50,00,000/- (Rupees Seven Crores and Fifty Lacs) or part thereof then outstanding) has been impaired and—

- if liabilities exceed assets by twenty per cent of the aggregate of the paid-up share capital of the Company and the amount of the said advance then outstanding, a consultation will take place between the Government of India, the Company and The International Bank for Reconstruction and Development (hereinafter called "the Bank") to examine the situation of the Company and its prospects and to determine what remedial action may be recommended to the Board of Directors of the Company;
- if the capital of the Company is further impaired and such impairment reaches thirty per cent, the Government of India in consultation with the Bank and the Company will have the right to apply to the Court for an Order for the winding up of the Company in accordance with and subject to the provisions of the Indian Companies Act, 1913 (hereinafter called "the Act").

By the said Agreement it is also provided that so long as the said advance or any part thereof shall be outstanding, the Government of India shall have the right to appoint maintain in office and remove from time to time one Director on the Board of Directors of the Company to represent the Government of India and the Director so appointed shall not be liable to retire by rotation nor be required to hold any share qualification.

Agreement with The International Bank for Reconstruction and Development

3. Under Article of Agreement hereinafter referred to and to be entered into between the Bank of the one part and the Company of the other part, the Bank has agreed to lend and advance to the Company from time to time an amount in various currencies equivalent to \$10,000,000/- (that is Dollars One Crore) upon the terms and conditions therein contained.

Guarantee Agreement

4. Under Articles of Agreement hereinafter referred to and to be entered into between India Bank of the one part and the Government of India of the other part the Government of India have stood guarantee for repayment of the principal, interest and other charges on the loan to be made by the Bank to the Company upon the terms and conditions therein contained.

Minimum Subscription

5. In the opinion of the Directors the amount to be provided (exclusive of any amounts payable, if any, otherwise than for cash) for the following, namely:—

- Preliminary expenses (inclusive of brokerage)
- Working capital,

is Rs. 5,00,00,000/- (Rupees Five Crores), which will be provided from the proceeds of the present issue.

Brokerage

6. Brokerage at the rate of Re. 1/- per Ordinary Share in respect of Shares offered for public subscription will be paid by the Company on allotment made in respect of applications bearing the stamp of any Bank or any registered Broker or Brokers of a recognised Stock-Exchange.

Preliminary Expenses

7. The estimated amount of preliminary expenses (excluding brokerage) is Rs. 3,00,000/- (Rupees Three Lacs).

Contracts

8. The following contracts (terms whereof have been negotiated) will be entered into:—

- Agreement between the Bank of the one part and the Company of the other part;
- Agreement between India acting by its President of the one part and the Bank of the other part;
- Agreement between the President of India of the one part and the Company of the other part.

Drafts of the Agreements referred to above may be inspected at the Registered Office of the Company at Fort House, 221, Dadabhai Naoroji Road (Hornby Road), Bombay 1, at any time during usual business hours (except on Sundays and holidays).

Interest of Directors

9A. No director is interested in the promotion of the Company except to the extent of the remuneration payable to him as hereinafter specified.

PROVISIONS IN THE ARTICLES OF ASSOCIATION

Director's Qualification and Remuneration

9. The Articles of Association provide as follows:—

- Article 118. The qualification of a Director of the Company (other than the Government Director or any Debenture Director) shall be the holding of shares in the Company of the aggregate nominal value of Rs. 5,000. A Director may not before acquiring his qualification, but shall in any case acquire the same within two months from his appointment.
- Article 119. The ordinary remuneration of a Director for his services shall be at the rate of Rs. 250/- per month irrespective of the number of meetings of the Board attended by him. No Director who is a Government servant shall be entitled to receive any remuneration under this Article or under any other provisions of these presents except as authorised by his Government.

Article 120. Subject to the provisions of the Article 119 in the case of a Government servant the Directors may allow and pay to any Director who is not a bona fide resident of the place where a meeting is held and who shall come to such place for the purpose of attending a meeting such sum as the Directors may consider fair compensation for travelling expenses in addition to his remuneration as above specified and the Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee appointed by the Directors in terms of these presents and may pay the same.

Article 121. Subject to the provisions of the Article 119 in the case of a Government servant if any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going out or residing at a particular place or otherwise for any of the purposes of the Company, the Company may

THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED—Cont'd.

remunerate such Director either by a fixed sum or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his remuneration above provided.

- The Directors may fix the remuneration of local boards appointed by them.

Voting Rights and Restrictions on Transfer

10. (A) The Articles of Association provide as under:—

Article 100. (i) Upon a show of hands every member entitled to vote and present in person or (in the case of a corporation) by attorney or proxy shall have one vote.

- Upon a poll every member entitled to vote and present in person or by attorney or by proxy shall have one vote for every share held by him.

Article 101. Any member who is a corporation present by a representative duly authorised by a resolution of the Directors of such corporation in accordance with the provisions of Section 80 of the Act may vote on a show of hands as if he was a member of the Company. The production at the meeting of a copy of such resolution duly signed by one Director of such corporation and certified by him as being a true copy of the resolution shall on production at the meeting be accepted by the Company as sufficient evidence of the validity of his appointment.

Article 102. Subject to the provisions of the Act no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or attorney or as a proxy or attorney for any other member or be reckoned in a quorum whilst any call or other sum shall be overdue and payable to the Company in respect of any of the shares of such member for more than one month.

Article 48. Subject to the provisions of Agreement recited in Article 4 (1) (a) of these presents the Directors may at their absolute and uncontrolled discretion decline to register or acknowledge any transfer of shares or shall not be bound to give any reason for such refusal and in particular may so decline in respect of shares upon which the Company has a lien or whilst any member executing the transfer is either alone or jointly with any other person or persons indebted to the Company on any account whatsoever or whilst any moneys in respect of the shares desired to be transferred or any of them remain unpaid or unless the transferee is approved by the Directors and such refusal shall not be affected by the fact that the proposed transferee is already a member. The registration of a transfer shall be conclusive evidence of the approval by the Directors of the transferee.

(B) The said provisions of the said Agreement are inter-alia as follows:—

"It is the mutual intention of the Government of India and the Corporation that the management of the Corporation shall, so far as practicable, be broadly distributed and that there shall be no undue concentration of control. To that end, the Corporation agrees that:

- The Board of Directors shall at all times exercise their rights under the Articles of Association of the Corporation with respect to registration of transfer of shares

so as to prevent any one person or company or group of affiliated persons or companies from acquiring effective control of the Corporation.

- Any dispute between the Government of India and the Corporation as to whether effective control of the Corporation shall have been acquired by any one person or company or group of affiliated persons or companies may be referred to arbitration under Clause 15 of this Agreement and in such event the arbitrator, if he shall determine that such control shall have been so acquired, shall order the outstanding balance of the Government advance to be repaid by the Corporation forthwith upon the expiration of a reasonable period fixed by the arbitrator unless prior thereto appropriate remedial measures prescribed by or satisfactory to the arbitrator shall have been taken or the winding up of the Corporation shall have commenced. Any such order shall be binding on the Corporation."

(C) No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of their powers of management save and except such restrictions as are imposed upon them by law as also save and except the restrictions imposed upon them by Articles 13, 69 and 151 which run as follows:—

Article 13. Any unclassified shares (whether forming part of the original capital or of any increased capital of the Company) may be issued except such restrictions as are imposed upon them by law as also save and except the restrictions imposed upon them by Articles 13, 69 and 151 which run as follows:—

Article 69. Subject to the provisions of these presents the Directors may from time to time at their discretion borrow any sum or sums of money for the purposes of the Company: Provided that the Directors shall not subject to any restrictions imposed by the terms of the Agreements mentioned in Article 4 (1) (a) and (b) borrow or guarantee any sum of money which after such borrowing or guarantee will make the amount borrowed and guaranteed by the Company and at that date outstanding exceed an amount equal to three times the aggregate of (1) the unimpaired capital of the Company, (2) the amount at the time outstanding of the special advance from the Government of India referred to in the Agreement mentioned in Article 4 (1) (a) and (3) the surplus and reserves of the Company: Provided however that no lender or other person dealing with the Company shall be concerned to see or inquire whether any of these limits are observed or be bound by such limits. For the purpose of this Article, the amounts of the

unimpaired capital and of the surplus and reserves of the Company shall be those ascertained and certified by the Company's Auditors at the time of such certification or if the Company so desires at the time of the last annual audits of the Company's books (not being more than eighteen months prior to the certification as aforesaid) as an evaluation of the Company's assets and liabilities in accordance with sound accounting practices on the basis that the Company is a going concern.

Article 151. The Directors shall every year after the expiry of five years from the incorporation of the Company before recommending any dividend, set aside out of the profits of the Company for that year, which would be otherwise available for dividend a minimum of twenty-five per cent thereof towards a Reserve Fund to meet contingencies and for such other purposes other than the payment of dividends as the Directors shall in their absolute discretion think conducive to the interests of the Company until the total sum standing to the credit of such Reserve Fund shall amount to a sum equal to the amount at the time being remaining unpaid of the Government advance referred to in the Agreement recited in article 4 (1) (a) of these presents.

APPLICATION

11. Application for shares should be made on the form accompanying this Prospectus or on this form which may be obtained at the Registered Office of the Company and sent in accordance with the directions contained therein with a remittance of the amount payable on application. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be returned. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company during office hours.

12. The Company shall, within nine months after the allotment of shares of the present issue, complete and have ready for delivery the certificates in respect of such shares.

No shares are under option or agreed to be put under option and no payment has been made or agreed to be made to any promoter except reimbursement of travelling expenses.

Application will be made to recognised Stock-Exchanges in India in due course for the quotation of the shares.

* Attached to this Prospectus and forming part of it is a copy of the Memorandum of Association of the Company.

BRITISH BANK CHAIRMEN'S INFLATION WARNING

HIGHER BANK RATE TO HELP SLOW DOWN BOOM

(FROM OUR LONDON CORRESPONDENT)

At least two of the Chairmen of the "Big Five" Banks, Lord Harlech of the Midland and Lord Aldenham of the Westminster, have laid emphasis in their annual statements on the dangers of inflation to this country's continued economic recovery. The danger appears especially great when such decisive factors are considered as the tailing-off of American aid, an end to the favourable terms of trade we have lately enjoyed, the possibility of rising costs leading to a loss of exports and a depreciation of the pound in the foreign exchange markets, and the growing anxiety in Australia, India and New Zealand concerning their overseas payment position which might lead them to reduce their imports from this country. The Chairmen of Martins and the National Provincial tempered their caution with a measure of optimism, seeing no real danger in gently rising prices, while Sir Oliver Franks departed from tradition by devoting his remarks almost exclusively to the affairs of Lloyds Bank without surveying the economic outlook as a whole.

An even more potent warning against inflation has come from last Thursday's raising of the bank rate from 3 percent to 3½ percent, which was described by a Bank of England spokesman as "the flashing of an amber light" or, in other words, a mild corrective to undue optimism. The smallness of the rise (bank rate traditionally goes up by a full 1 percent) is taken as a warning that the current industrial boom, and particularly that in hire purchase business, needs slowing down rather than halting. The rise will also lend support to sterling in the foreign exchange market. As a result of the change, banks are raising their deposit rates from 1½ percent to 1½ percent and lowering their period of notice from 21 days to seven days. Charges on bank loans will depend on individual arrangements between bankers and their customers, but it is expected that some borrowers may be asked to pay an extra ½ percent. On the whole borrowers who did not benefit from the drop in bank rate last May are unlikely to be asked to pay more now. As for people borrowing money from building societies, no changes are expected. It is also hoped, no doubt, that there will be a psychological reaction on the Stock Exchange, where prices are now regarded as being too high, though hitherto the announcement has done little more than give rise to a pause.

Production and the Budget

Though there may not be any need for a serious damper, there certainly is need to call a halt to the over-optimism which seems to pervade most sectors of the economy. Wage demands are following one another in quick succession following upon the settlement of the railway dispute, and the anticipations of widespread and substantial reliefs in the Budget are still rife. The Treasury report that industrial production fell last month from its all-time peak in November will not achieve this. The December index is provisionally put at 126-127, compared with 137 for November and 136 for October, both the latter figures having been revised upwards slightly. When the seasonal element is taken away, it seems that production at the moment is barely holding steady. With these figures, a preliminary estimate of the index for 1954 is now possible: the statisticians put it at 128, compared with 121 for 1953 and 114 for 1952. The increase in production last year was thus nearly 5.8 percent over 1953, which in turn was 6.1 percent more than 1952.

As regards the Budget, though the revenue returns continue to make a very good showing, it is worth taking account of the financial commitments which the Government has accepted recently. What, if any, part the Treasury will play in helping the British Transport Commission to meet its increased wage bill there is no knowing, but Mr. Butler has at last taken the plunge with regard to equal pay for most of the non-industrial women civil servants in a series of seven annual instalments at a cost of about £2 million per annum, and the move will undoubtedly spread to other sectors, such as teachers and employees of the Health Service. He has also agreed to a special review of farm prices next month, at the same time as annual review, which would take account of the recent 7s wage increase to farm workers. The anti-smog proposals recommended by the Beaver Committee—which will cost millions—have also been accepted "in principle" and some action will have to be taken soon to prepare the way for this revolution. Then there is the report covering the rehabilitation and modernisation of the railways, at a total cost of £1,200 million spread over a 15-year period. Finally, a new road plan has been promised by the Minister of Transport, and some idea of its cost is available from the scheme drawn up by the County Councils' Association, which estimates the spending of £64 million over the next five years. One way and another, Mr. Butler may find himself needing an even bigger windfall than now promises. The optimists, however, will no doubt take comfort from the oft-repeated assertion that this is "election year".

Cotton Cloth from Pakistan

Lancashire's anxiety about cloth imports was revived by the December trade figures, which showed that larger supplies had come in than in

November from Japan, India and particularly Hong Kong. The main agitation is against the duty-free imports from within the Commonwealth, and it is likely to be intensified by recent indications—at all events they are so interpreted by those who look ahead—that Pakistan will not be very long in joining this list of competitors. At present her productive capacity falls short of the country's potential demand and textile exports have therefore been very small. During the last six weeks or so, however, there have been two or three reports of shipments made from Karachi, the destination in each instance being the United Kingdom, where the goods have no quotas or tariff barriers to surmount. Under existing arrangements, this country must be an attractive market for textile producers in any Commonwealth country who wish to try their hand at export trade, and it is not surprising if Pakistan has hastened to take advantage of the opportunity thus provided. As is the case in India, British exporters to Pakistan are faced with heavy duties, even allowing for Imperial Preference margins, and the value of cotton yarns and woven fabrics to that market, which stood at £6,604,000 in 1952, fell to £2,935,000 in 1953 and £2,939,000 in 1954. By contrast, Britain consumed £6,807,000 worth of raw cotton from Pakistan in 1952, £7,035,000 worth in 1953 and £4,496,000 worth in 1954 at rates higher than those charged to Pakistan mills. The positions of India and Pakistan as competitors is so similar that the pressure for action against Indian imports will be intensified to prevent any further spread of what is regarded as a serious threat.

Tea Prices

The Government this week has resisted all attempts by Opposition members in Parliament to take action on the steady rise in the price of tea or to institute an inquiry into the profits of tea companies. The reasons Ministers have advanced in support of this attitude are reasonable enough and are well known—increased demand for inadequate supplies, the export duties imposed by the Governments of producing countries for revenue purposes, the fact that there has been no significant increase in profits from blending, packing and distribution in this country—but the present retail price of around 7s. 6d. a lb., or nearly double what it was only three years ago, is a point which the Opposition can hardly help utilising for its maximum political value.

In this respect the Government's troubles are apparently not over. Mr. L. E. Gray, Chairman of a panel of members of a tea trade committee, has told a Press conference in London that a further rise is inevitable and that there could not possibly be any move in the opposite direction before the autumn. The committee defended rising tea prices and issued a statement saying it was primarily a question of world supply and demand. The statement assumed that there were about two hundred cups of tea to the pound, which cost 7s. 6d., and it recorded that one cigarette equalled in price four and a half cups of tea. The average rise in the retail price of tea since the end of rationing was about 3s. 6d. a lb., roughly 8d. a week to the average tea-drinker, and if those who smoked were to cut out a few cigarettes each week their tea would cost them nothing. Recent talk of large profits for the tea growers should be viewed against a background of good years and bad years. In 1951 and 1952 tea-growers had bad times and many companies incurred heavy losses. "Now they are having a good year and jolly good luck to them," said Mr. Gray.

Mawchi Mines Developments

To finance the reopening of their property in Burma, Mawchi Mines are shortly to issue £450,000 6 percent 10-year Secured Convertible Notes. These will be offered for subscription at par to the existing shareholders and Note holders in the company. The conversion option will be into the 4s. Ordinary shares at par at any time up to 31st March 1957. The directors remind shareholders that although they have been advised that the Burmese Government is not prepared at this stage to participate in the reopening of the mine as a joint venture, it has indicated that the company should resume operations as soon as possible to comply with the terms of its lease. It has also promised to provide security measures as well as freedom to import the necessary labour and supplies.

Sir Donald Anderson Hits Back

Sir Donald F. Anderson, Deputy Chairman of the P & O., has hit back hard at the shareholders who are criticising the policy of shipping companies and calling for higher dividends. Speaking at the annual dinner of the Liverpool Shipping Staffs Association he referred to "business parasites...who are trying to suck the lifeblood of the shipping industry." They preferred to portray themselves "as Robin Hood rather than a leech, but they could not pass the Robin Hood test at all," said Sir Donald. "They tell us that the shipping bosses are more interested in their shareholders' ships than they are in the shareholders. Well, that does depend on the shareholder. They tell us the shipping companies have amassed large reserves. Of course they have: they regard it as prudent to save up and to pay cash for new ships and not to borrow and mortgage the future to maintain their fleet. It seems that to-day, to create the lifeblood of industry is less praiseworthy than to distribute it, and this at a time when everyone should be encouraged to create new wealth and earn more for the country." But these irritations would pass, he concluded, and British shipping would remain. Meantime, Mr. Lionel Childs, acting as spokesman of the small shareholders of Furness, Withy, has had a discussion with the Chairman, Sir Ernest Murrant, and agreed to await the group report, expected next week, before offering any further opposition to the Board's policy.

New Delhi

THE BACKGROUND TO MR. T. T. KRISHNAMACHARI'S RESIGNATION

DIFFERENCES WITH CABINET OVER INDUSTRIAL POLICY

(FROM OUR NEW DELHI CORRESPONDENT.)

THE decision of the Commerce and Industry Minister, Mr. T. T. Krishnamachari, to resign from the Union Cabinet has been the major event of the week. For some time there have been differences in viewpoints between him and his colleagues. These differences came to a head last November, when Mr. Krishnamachari's proposals embodying Birla Brothers' schemes for a steel plant at Bilhail in Madhya Pradesh and a pig iron plant at Durgapur in West Bengal were turned down by the Union Cabinet. In an interpretation of the Industrial Policy Statement of 1948, the latter stated that the further expansion of the steel industry would take place through the public sector or through undertakings in which the State had most of the capital and control. After he was outvoted in the Cabinet, Mr. Krishnamachari requested the Prime Minister to release him from office as he felt that he could not make any useful contribution to industrial development. A series of meetings between him and the Prime Minister followed, which created the impression that ministerial control over both sectors of industry would be vested in one Minister and that Minister would be Mr. Krishnamachari. The question whether the Commerce wing of the Ministry of Commerce and Industry would continue to be a part of the new set-up was left vague and undecided. It was at this stage that the Prime Minister invited suggestions from his Cabinet colleagues for the re-allocation of subjects amongst various Ministries. One suggestion was that shipping and the locomotive workshops at Chittaranjan, which are at present under the Ministries of Transport and Railways respectively, should also be part of the new industrial set-up. Indications were available that the Stores Purchase Committee, whose report is expected shortly, held the view that the Government's purchase organisation should be attached to the Industry Ministry.

The Madras resolution of the Congress, defining the party's aim as the establishment of a socialistic pattern of society, altered the situation. The Prime Minister, before leaving for London last Friday, told Mr. T. T. Krishnamachari and Mr. K. C. Reddy, that any re-organisation should be within the framework of that resolution, and should be capable of promoting its basic objectives. He thought it might create misunderstanding if the Ministry of Production, which was in charge of the public sector, was abolished. With regard to iron and steel, it was pointed out that a Special Committee of the Cabinet had already been set up, not only to promote and commission new undertakings and the expansion of existing ones but also to secure the closest co-operation between the public and private sectors. Mr. Krishnamachari felt that he had lost the battle. He has, therefore, put in his resignation, telling the Prime Minister that he proposes to leave for Madras before the latter returns from London. New Delhi is already speculating about who will be his successor.

Although in a parliamentary democracy no one is indispensable, the dynamic personality of Mr. Krishnamachari will be greatly missed here. During the brief period that he has been associated with the Central Government, he has streamlined the Ministry of Commerce and Industry, and done much to stimulate industrial production. The National Industrial Development Corporation, Export Promotion Councils, a separate organisation for small-scale industries, re-organisation of the Tea, Coffee and Rubber Boards, a new deal for the tea industry by breaking away from the international marketing organisation and by setting up separate marketing bodies in the U.S.A., the U.K. and elsewhere, and an automobile policy to make India self-supporting in motor vehicles are some of his achievements.

Licensing Committee's Work

Further details are now available of the Licensing Committee's work, reported last week. Of the total of 502 applications received by the Committee, 136 were for new undertakings, all of which were accepted. Twenty-six were rejected and 13 referred back; 206 applications for substantial expansion were sanctioned, 21 rejected and 11 referred back. Fourteen applications for shifting were approved, one was rejected and one referred back. Thirty-three applications for the manufacture of new articles were approved, six were rejected and one was referred back. There were 33 applications for carrying on the existing business, all of which were sanctioned. Following are the details:

Aircraft.	One application for substantial expansion was approved.
Iron and Steel.	Ten applications for new units were approved, and three were rejected. Eighteen applications for substantial expansion were sanctioned and five were rejected. Two applications for shifting, four for new lines and one for carrying on the existing business were considered and approved.
Motor and Aviation fuel.	One application for a new unit was received and sanctioned.

Ships and Other Vessels.	One application for substantial expansion was received and approved.
Telephone and Telegraph Apparatus.	One application each for a new unit and for shifting were received and approved.
Sugar.	Twenty-eight applications from new units were approved, 12 were rejected and three were referred back. Twenty-nine applications for expansion were approved and one was rejected. One application for shifting was rejected, while three were approved, as also was one for carrying on the existing business.
Cotton Textiles.	Nineteen applications for new units, eight for carrying on the existing business and two for shifting were sanctioned. Five for expansion and two for new lines were rejected and one for expansion referred back. Six applications for the manufacture of new articles were approved.
Woollen Textiles.	One application for a new undertaking and 12 for expansion were received and approved.
Silk Textiles.	One application for a new undertaking, one for a new article, one for carrying on the existing business and five for expansion were received and approved.
Artificial Silk Textiles.	Five applications for new undertakings, two for new lines and three for carrying on the existing business were received and approved. Eleven applications for expansion were also approved and one was referred back.
Automobiles.	Four applications for expansion and one for new lines were approved. Four applications for new undertakings were accepted and two were rejected.
Tractors.	One application for expansion was approved.
Cement.	Seven applications for new undertakings were approved and two were referred back. Seven applications for expansion were also approved.
Electric Lamps and Fans.	One application for a new undertaking and six for expansion were approved.
Electric Motors.	One application for shifting was sanctioned.
Heavy Chemicals.	Thirty-one applications were received. Of these, nine were for new undertakings, eight for expansion, two each for new lines and for carrying on the existing business. They were all approved. Four applications for expansion and five for new units were referred back and one for a new unit was rejected.
Machinery used in Industries.	Two applications each for new undertakings, expansions and new lines were received and approved.
Locomotives.	One application for expansion was received and approved.
Machine Tools.	One application for expansion was sanctioned.
Machinery and Equipment for Generation, etc.	Four applications for new undertakings, two for new lines and three for expansion were sanctioned, while one for new undertaking was rejected. One application each for a new undertaking and expansion were referred back.
Non-Ferrous Metals.	One application each for a new undertaking and expansion were sanctioned.
Paper.	Four applications each for new undertakings and expansion were sanctioned.
Pharmaceuticals and Drugs.	Three applications for new undertakings, 17 for expansion, six for new lines and two for carrying on the existing undertakings were sanctioned. One for a new undertaking and two for new lines were rejected, and one each for expansion and new lines were referred back.
Power and Industrial Alcohol.	One application for a new undertaking, three for expansion and one for carrying on the existing business were sanctioned.

Rubber Goods.	Two applications for new undertakings, three for expansion and one for shifting were sanctioned.
Leather Goods.	One application each for a new undertaking and one for carrying on the existing business were approved.
Vanaspati.	Three applications for expansion were approved, two were rejected and one each for expansion and shifting were referred back. Two applications for carrying on the existing business were also approved.
Vegetable Oils.	Four applications for new undertakings, two for shifting, three for expansion and four for carrying on the existing business were approved, while three applications for expansion and one for a new undertaking were rejected.
Agricultural Implements.	One application each for a new undertaking and shifting were approved.
Cycles.	Seven applications for new undertakings, five for expansion and two for carrying on the existing business were approved, while one each for a new undertaking, expansion and new lines were rejected.
Hurricane Lanterns.	One application for expansion was accepted.
Internal Combustion Engines.	One application for a new unit was accepted and another was rejected.
Power-driven Pumps.	One application for a new unit was accepted, another was rejected and one for expansion was approved.
Radio Receivers.	One application each for an additional unit, expansion and new lines were accepted and one for new lines was rejected.
Sewing Machines.	One application for a new unit was sanctioned, one for a new unit was rejected and another for expansion was referred back.
Small Tools.	One application for a new unit, four for expansion, one for new lines were approved.
Glass and Ceramics.	Six applications for new undertakings, 12 for expansion, one for shifting and three for carrying on the existing business were approved.
Dyestuffs.	Three applications for new units, six for expansion and one for new lines were accepted, while two for new units were rejected and one each for new undertakings and expansion were referred back.
Soap.	One application for expansion and two for new lines were sanctioned.
Other Toilet Requisites.	One application for new lines was approved.
Plywood.	One application for new units and two for carrying on the existing business were accepted.

British Steel Team Expected Next Month

The Ministry of Production has asked the British High Commission at New Delhi and the representative of M.E.E.C.O., Mr. A. M. Dent, in London to send a combined technical team to India to prepare a blueprint for the third State-owned one million ton steel plant at Durgapur in West Bengal or at Bokaro in the Damodar valley. The British offer to set up a steel plant, it will be recalled, had suggested this procedure. A combined team is expected to arrive here by the first week of March.

Russian Steel Report Approved

The Government of India has also approved the Russian project report for a steel plant at Bilhail in Madhya Pradesh and has decided to enter into an agreement with the Russian Government for the processing and commissioning of the plant. The agreement will be signed this week. The plant will have an installed capacity of one million tons of ingots or 750,000 tons of end-products, but will be capable of expansion to one million tons of end-products in addition to 100,000 to 300,000 tons of foundry pig iron. In the initial stages, the plant will produce 100,000 tons of rails, 175,000 tons of heavy structurals, 90,000 tons of sleeper bars and crossing sleepers, 235,000 tons of merchant bars and 150,000 tons of billets. The works will consist of the following:

1. A coke oven plant.
2. A blast furnace plant and auxiliary equipment to produce pig iron.
3. A steel plant to produce one million tons of steel ingots.
4. Facilities for casting, handling, and stripping ingots.
5. Soaking pits with sufficient capacity.
6. Mills and plants of sufficient capacity, including a continuous billet mill if it is decided to install such a mill.
7. A sintering plant of sufficient capacity.
8. Plants for the production, supply and transmission of water, power and gas for the works and the township.
9. Plants for the recovery of by-products.
10. Repair and other auxiliary shops.

TN 1734

Commodity Markets

BRITISH TEXTILE REVIEW
THE PROBLEMS OF INDIAN
COMPETITION

THE cotton textile industry has now become obsessed with its grievance against "unfair" competition from India. Until recently the quota and tariff restrictions on the entry of British cloth into India, while Indian cloth was admitted freely into Britain without duty, were the particular cause of Lancashire's complaints. Control by quota has been removed, but the high tariffs remain. It is now admitted, however, that the essential problem would remain even if the duties were removed as well: for in the ordinary lines Lancashire's products are not competitive with India's. Indian cloth can be sold here at approximately 3d a yard less than the prices of comparable Lancashire goods—and 3d a yard is approximately the whole cost of weaving. Lancashire's contention is that this difference is due to the deliberate underpricing of raw cotton in India, which may be intended merely to stimulate production of food but has the effect of subsidising cotton textiles.

No-one has a very clear idea what action should be taken. The British Government is adamant against quotas, and to impose tariffs, against the letter and the spirit of the Ottawa agreement, would be a difficult and delicate procedure. There is not much that the British Government can do by way of "counter-subsidy"; though it may be possible for Lancashire in another way by abolishing purchase-tax on cotton textiles—thereby demands for the abolition of purchase-tax on textiles, to avoid discrimination. It is suggested that the best way out of the difficulty is to link discussions with the Indian Government cotton textile interests, with a view to equalising prices, approximately, or to substituting some other goods for cotton cloth in the import trade in India. But the outcome of such discussions is problematical.

Meantime, the problem is growing, and growing fast. It is the one major disturbance in an industry which has so far accommodated itself with reasonable success to the restricted conditions of the postwar era. Much of its former export trade has been lost, and by far the greater part of its output is for the home market. The greater importance of the home market, said the chairman of Lancashire Cotton Corporation, Sir Frank Platt, in his statement with the accounts at the end of December, makes the industry less vulnerable to foreign competition—with the notable exception of Indian competition. If even the home market is threatened—and the threat, big enough actually, is potentially immense—the industry's whole plan for survival may collapse.

Prospect Before the Industry

Advocates of free and unprotected enterprise cannot congratulate the Government for its inaction in this situation, for it has had no scruples in protecting jute goods against a comparable threat—by monopolising imports and selling the imported goods at approximately the prices charged by the domestic industry. But there is a body of economic opinion strongly opposed to any action to protect the cotton textile industry, on the ground that this industry, however efficient technically, is no longer a sound proposition economically.

Sir Frank Platt said that to build, equip, and bring into production, a mill comparable with the 52 at present in the group would cost as much as £1,200,000—representing more than £60 million for the 52 mills. The plan fact is that prospective profits are not such as to justify such expenditure on replacement in Lancashire today. The industry is troubled also about its labour force. Lancashire is one of the main industrial areas of Britain, with a strong concentration of engineering firms, and in a state of full, or overfull, employment, cotton textile workers can easily find

other jobs. Some cotton mills extended their "Christmas holiday" well into January, because they were short of orders; others continued working only in order to retain their labour force intact. Whatever the policy, further contraction of productive capacity and labour seems inevitable.

Finance for Wool Stocks

The wool textile industry, not subject to such competition from overseas suppliers, has no such fundamental problem. Nonetheless, it has entered 1955 with some financial problems brought forward from 1954. Wool behaved awkwardly in 1954, with the trend of prices mainly downward, tops running into surplus supply, and final demand in Europe confused by the weather. There was little incentive to hold stocks in excess of foreseeable needs, but supplies which could not be readily sold were performed added to stocks. The result of this situation was mixed: for some firms an easing of the financial burden, for others an extra burden.

During the boom, finance presented special problems: how to find enough of it, how to service debts at reasonable cost, how to avoid uneconomic taxation of the profits that accrued automatically from the appreciation of stocks. More stable conditions in the past year or two have been less profitable but, on the whole, less strenuous financially. More of the needed finance has been provided from internal resources, but it has still been necessary to lean heavily on the banks.

There was a significant reduction last year in the volume of stocks of raw wool, and, with prices also lower, these stocks did not absorb as much capital as in 1953. On the other hand, the volume of output remained very high, though with some variation between different categories—production of tops diminished, deliveries of worsted yarns and of woven worsted fabrics increased. Consumption of wool was reduced to some extent. In these generally stable conditions there was no relief from the industry's dependence on bank loans. In 1953 the industry's bank indebtedness increased from £20.5 million in February to £27.3 million in November (the bankers' quarterly analyses relate to February, May, August, November). In February, 1954 the figure was still at £27.4 million but by August it had risen to £30.4 million and it had eased only slightly, to £29.1 million in November. However, this moderate reduction in the final quarter contrasts with an exceptionally large increase in aggregate advances to privately-owned industry as a whole.

All through the financing of wool runs the problem of values. Are they approximately stable? If not, which way will they move? There have been occasions—especially during the London dock strike, which occurred just when the new season's deliveries were due—when some consumers' stocks were so low that continuity of their operations was threatened. Past accumulations have been digested, and some people in the trade believe that current stocks are, on the whole, too low in relation to machinery activity. But is it safe to build up stocks, risking a recurrence of losses if values recede? On the other hand, is it safe not to do so? Since 1954-55 is not 1950-51, there is no uniform policy on this matter.

WHOLESALE PRICES INDEX
RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.2 percent to 365.8 during the week ended 15th January, 1955, as compared with 365.0 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was, however, lower by 0.2 and 8.4 percent respectively. Higher prices of gram (+1.0%) and rice (+0.9%) at Patna, tea for internal consumption (+0.6%), wheat at Amritsar and dal arhar (+0.2% each) and coffee (+1.1%) raised the index for Foodstuffs by 0.5 percent to 313.6, despite a fall in the prices of gur at Ahmednagar (-1.4%), tea for exports (-5%), bajra (-4.4%) and gram at Hapur and sugar (-1.7% each). A rise in the prices of mica (+33%), lin-

seed (+4.4%), raw jute and gingellyseed (+3% each) and raw silk (+1.1%) was neutralized by a fall in the prices of groundnuts and rapeseed (-4% each), lac (-3%), castorseed and cottonseed (-2% each) and raw cotton (-1%) and the index for Industrial Raw Materials stood at 437.4—the same as the revised index for the previous week. The index for Semi-Manufactures also remained stationary at 345.3. Items, which recorded significant variations were: Gingelly cake (-8%), coconut cake (-7%), groundnut oil, castor oil and gingelly oil (-2% each) and mustard oil, linseed oil, coir yarn and zinc (+2% each). An advance of 0.2 percent to 375.4 in the index for Manufactures was brought about by an increase in the prices of jute manufactures (+2%). Higher prices of black pepper (+15%), cashewnuts (+3%) and chillies (+1%) raised the index for Miscellaneous by 0.7 percent to 566.9 as compared with 563.1 (revised) for the previous week. The price of turmeric, however, declined by 4 percent.

OILSEEDS AND OILS UNDER FORWARD
CONTRACTS (REGULATION) ACT

The question of regulating forward trading in oilseeds and oils under the Forward Contracts (Regulation) Act, 1952, has been under the consideration of the Government of India. After a careful study, and on the recommendation of the Forward Markets Commission, it has been decided to bring oilseeds and oils under the purview of the Forward Contracts (Regulation) Act, 1952 with immediate effect. Necessary notifications have been issued in a Gazette of India extraordinary dated 25th January 1955. Broadly speaking, these notifications, with one or two exceptions, seek to maintain the existing position in regard to the ban on forward trading. Briefly, forward contracts including non-transferable specific delivery contracts, in respect of castor seed, kardi seed, niger seed and mowra seed will, within the limits of Greater Bombay, continue to be regulated through the ring of the Bombay Oilseeds Exchange Limited. Outside Greater Bombay, forward trading in these items will not be regulated.

With regard to groundnut and linseed, the present ban on forward contracts other than non-transferable specific delivery contracts will continue in Greater Bombay. As for the rest of India, forward contracts in these two oilseeds will be permitted only through recognised associations. No association has yet been recognised in the rest of India. All forward contracts for mustard seed, sesamum, rape seed, copra, and cotton seed, including nontransferable specific delivery contracts within the limits of Greater Bombay, will be illegal. In the rest of India, forward contracts other than non-transferable specific delivery contracts for the above seeds will be permitted only through recognised associations. No association has yet been recognised for this purpose. The present ban on forward contracts in respect of groundnut oil, linseed oil, mustard seed oil, rape seed oil, coconut oil, sesamum oil, cotton seed oil and castor oil will continue in the whole of India except in the case of coconut oil where forward contracts will continue to be permitted in the State of Travancore Cochin. On the expiry of the Essential Supplies (Temporary Powers) Act, 1946, on 25th January 1955, the Government of India has decided to issue orders to control or prohibit forward trading, as the case may be, in such of the commodities in respect of which such forward trading was controlled or banned under the Essential Supplies (Temporary Powers) Act, 1946. The existing position in respect of cotton yarn and cloth, spices, wheat and gram will thus be maintained. The exemption from the ban on forward trading in spices in the area of Travancore-Cochin State will nevertheless continue.

Jute

LITTLE ACTIVITY IN GUNNY MARKET

PRICES FAIRLY STEADY ON HOPES OF FOREIGN ORDERS

FOR the second week running, there has been very little activity in finished goods, although an air of expectancy pervades the market. This has been brought about mainly by rumours that Australia will soon make enquiries for heavy goods (mostly cornsacks and woolpacks); rates for these fabrics have therefore hardened. Bazaar operators have also been busy covering recent sales of Liverpools and Sugar Twills and fairly good business has been done. Very little overseas business has been transacted, but in spite of this the market has been quietly steady and prices have fluctuated only within narrow limits. In the hessian section, reports of small business with the U.S.A. have helped to keep rates steady, but all enquiries appear to be confined to the forward positions up to September, with the nearer positions completely neglected. It is reported that shipments of hessian goods have again been good last month, and with the possibility of a further drop in mills' hessian stocks in January rates have remained fairly steady. The continued steadiness of the raw jute markets has lent considerable support to finished goods, and in all their operations speculators have had the former in mind. There is still no news of any improvement in the supply of jute from Pakistan, and the only category that seems to be moving freely from that area is cuttings, of which Pakistan more or less has a monopoly. Until loose jute begins to appear on the market, there seems to be little likelihood of any substantial drop in the price of Indian jute.

THE JUTE MARKETS

Manufactured Goods: At the opening of the finished goods markets on Thursday, quiet conditions prevailed following the previous day's holiday. Prices in both heavy goods and hessian were marked down. In the sacking section, following some profit-taking at the higher levels ruling before and during the holiday, rates sagged considerably, especially in the near speculative positions. B Twills dropped Rs. 1-8 for ready delivery to be quoted at Rs. 122-10 per 100 bags. April-June delivery B Twills also eased by Re. 1 to Rs. 122-12. The hessian section fell by 4 annas in ready 40in. 10oz. which opened at Rs. 47 per 100 yards, and 2 annas in the April-June position which stood at Rs. 46-8. During the day, some small overseas enquiries were received for both sacking and hessian, and rates improved slowly. Towards evening, shippers covered their sales in cornsacks and other heavy goods constructions, prices rose and the market closed steady. Friday being a holiday, the market was officially closed, but Saturday morning brought about a further advance and the markets opened 2 to 4 annas up on the previous day's prices in hessians, whilst heavy goods rose 12 annas to Re. 1 in all fabrics. Over the week-end, the improvement was maintained. B Twills on Monday morning opened at Rs. 123-10 in the ready position and Rs. 123-14 for April-June shipment which was 4 annas up in both cases. The hessian section advanced 2 annas for ready and forward delivery and 40in. 10oz. was quoted at Rs. 47-2 and Rs. 46-10 respectively. At these higher levels, speculators indulged in profit-taking and prices eased slightly, only to be brought back again by rumours of Australian interest in cornsacks and woolpacks. Covering business was also done in Sugar Twills. Liverpools, and heavy Cees, and the market ruled fairly steady. There was very little interest in the hessian section but reports of good shipping during the month had a steadying influence, which eased towards the close following speculative manipulations on account of settling day. On Tuesday morning, the heavy goods section was unchanged except in Sugar Twills, which advanced Re. 1 due to some last-minute shipper covering. The hessian section recorded a pronounced drop due to lack of overseas enquiries. The near position of 40in. 10oz. fell 6 annas and the forward positions 4 annas per 100 yards. During the day prices fluctuated narrowly and tended to firm up towards evening due to speculative activity and reports of fresh business from Australia.

At the close the market is much steadier with hessians up 4 to 8 annas and heavy goods showing an increase of 8 annas. Cornsacks have jumped Rs. 1-8 in the near position as a result of covering against the Australian enquiry. Opening quotations on Wednesday morning are as follows:

	Ready	Feb.	Mar.	Apr.-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	37-10	37-10	37-10	37-8	36-12
40in. 10oz.	46-14	46-14	46-14	46-14	45-8
B Twills	124-4	124-8	124-10	124-12	119
Heavy Cees					
(Plain)	123-4	123-8	123-8	124	119
A Twills	159	157	155-8	152-8	146
Liverpools	147	146	145-8	143-8	136
Cornsacks	126-8	126-8	126-12	127-4	121

Raw Jute: During the week, Calcutta mills have shown very little interest in raw jute and it is estimated that less than 50,000 maunds were purchased. Even so, rates were maintained, quotations being on the basis of Rs. 35 for ordinary Assam Bottoms throughout. These quotations bore little relation to the price at which jute could be bought, as in the majority of cases sellers' ideas were well above these levels due to the continued

Tossa is quoted Re. 1 to Rs. 2 a maund above the rates for white jute.

Pucca Bales:	Rs. a bale.	Shipment
Mill Firsts	220	February-March
Mill Lightnings	205	"
Dundee Daissee 2/3 S.G.	220	"
2/3 L.G.	205	"

Pakistani Jute (ex Pakistan):	Rs. a maund.	Shipment.
Jat	38	February-March
District	37	"
Northern	36	"

Pakistani quotations are nominal in the absence of business.

In Cossipore this week, arrivals of raw jute have shown a slight improvement, and have averaged about 50 wagons a day. Most of this, however, is of low quality, and has done little to relieve the temporary shortage. General quotations in Cossipore have been slightly easier, but sellers are still inclined to be reserved and are showing very little interest at the quoted rates. At the close Kishengani jute is quoted at Rs. 34-4 to Rs. 34-8 a maund for garsat quality. Imports into the Sheoraphuli Daissee markets have also shown a slight improvement, but in other agencies such as Barduria, Chakdaha, Bongaon, etc. imports have almost stopped and there is no jute on offer. Quotations at the close in Sheoraphuli are on the basis of Rs. 34 a maund for garsat quality. Imports of Daissee Mesta in all areas have improved, while demand has slackened. But prices have been well maintained.

Mofussil: There has been very little change over the week in the Indian upcountry market, and rates have remained steady. Imports in areas are still very small and business is more or less at a standstill, except for some small inter-seller transactions. There is still no sign of prices easing and at the close quotations in Dhubri are on the basis of Rs. 31-8 to Rs. 32 a maund for Bottoms.

The Pakistan markets continued to show improvement at the beginning of the week, eased slightly later due to lack of business or enquiries. At the beginning of the period a small demand for low quality jute developed—cuttings and X Bottoms—but this soon petered out as buyers withdrew, and prices eased. Imports into the main baling centres have shown a marked improvement, and in Narayanganj are nearly double what they were at this time last week, arrivals averaging 12,000 to 15,000 maunds daily.

As a result, prices have fallen about 8 annas from the opening levels, and latest quotations in Narayanagar are based on Rs. 28 (P) a maund for Bottoms with tossa at a premium of Rs. 5 (P).

CANADA'S JUTE FABRICS IMPORTS

Although Indian gunny prices have remained fairly stable, Canadian offtake of jute fabrics has not been satisfactory during the first six months of 1954, states a report received from the Indian High Commissioner in Ottawa. During Jan-June 1954, Canadian importers received jute fabrics worth \$3,591,941 from India, compared with \$4,058,076 in the corresponding period of the previous year. Hungarian mills placed moderate supplies of cloth in the Canadian market for the first time since the war. The quantities were not large, only 860,000 yds., but this intrusion needs to be watched, the report says. Other suppliers did not fare well. Imports from the U.S.A. were slashed from \$340,000 to \$145,000; from the U.K. the drop is from \$116,000 to \$60,000; and from Belgium from \$350,000 to \$100,000. By this token Indian mills may be said to have held their own quite well. Imports of narrow 12" fabrics used mainly by market gardeners' rose from approximately \$12,000 to \$35,000. Pakistan doubled her exports of jute butts to Canada, the value rising to \$226,000 from \$108,000 in the corresponding period of 1953.

THE FIXING OF JUTE ACREAGE

The Government of East Bengal, as announced in an East Bengal Government Press Note, have decided that areas to be licensed under the Jute Regulation Act for jute year 1955-56 should be As. 4 of the basic acreage of 1940 in the Sub-Divisions of Satkhira, Meherpur, Chuadanga, Kushtia, Nawabganj, Rajshahi, Dinajpur, Feni, Cox's Bazar, Chittagong, Bhola, Pirojpur and Patuakhali, and As. 7/5/3 of the basic acreage of 1940 in the rest of the province. The growing of the variety of jute botanically known as Hibiscus Carnabius and commonly known as "mesta" is totally prohibited for the year.

Under the acreage fixed, next crop will not exceed 55,00,000 bales so that economic price is ensured to growers without making jute scarce.

U.P. JUTE IMPROVES IN QUALITY

The quality of U. P. grown jute in the current season has improved as a result of intensive official efforts to concentrate cultivation in suitable areas and to teach growers the scientific methods of retting and extraction, according to Indian Central Jute Committee.

The price of jute in U. P. markets has firmed up at a level where it bears a direct relation to the cost of production. It is now selling at between Rs. 16 and Rs. 27 a md. according to quality. With prices up, jute is being disposed of with speed. Disposal up to the end of November, 1954, amounted to 1,07,602 mds. compared with only 69,594 mds. in the same period last season. Of the current crop about 48,969 mds. were purchased by U. P. mills, 34,440 mds. by Calcutta mills and 18,193 mds. by retailers and U. P. jais.

PRICES DECLINE IN TEA EXPORT SALE

DUSTS IMPROVE AFTER EASIER OPENING

At Sale No. 32, held on 31st January and 1st February, offerings in the Export auction consisted of 26,929 packages. Quality showed a decline. On the whole these teas suffered a weaker tone, as very little demand was forthcoming from outmarket buyers. Common and Low Mediums were 2 to 3 annas easier though the Fannings grades showed a smaller drop as compared with broken grades. There was a keen enquiry for black leafed BOP's, and OFG's, as well as stylish Leaf grades, which were sometimes dearer. The better liquoring broken teas met with fair demand at 2 annas below last rates. Darjeelings, especially the more flavoury ones, sold well. Poorer types were the weakest feature and were withdrawn in considerable quantities.

Quotations	1955	1954
Clean Black Pickle	3 11 0	2 8 0
Clean Common B.P.	3 9 8 to 3 10 0 (Nominal)	2 2 0
Medium Assam B.P.	3 11 0 to 3 12 0	2 3 0
Best CTC Assam B.P.	Not Quotable	

At the Internal auction, offerings of Dusts consisted of 19,406 packages. Opening with an easier tendency, rates hardened as the sale progressed and closed 1/4 to 1/2 anna dearer above last week. Black exportable and leafy types were again the strongest feature, and advanced by 1 to 3 annas a lb. The best liquoring CTC's with cup quality were from 1 to 2 annas dearer. The few Darjeelings on offer with flavour sold well.

Quotations	1955	1954
Medium Darjeeling Dust	2 11 0	1 12 0
Medium Assam CTC Dust	2 12 0	1 13 0
Best Assam CTC Dust	3 0 0 to 3 1 0	2 9 0

Offerings of other grades consisted of 8,745 packages. There was good demand at lower rates and all teas with Black appearance and fair liquors were 1/4 to 1/2 anna easier. The strongest feature of the sale were the stalky residue types, which were about 1 anna to 2 annas dearer.

Quotations	1955	1954
Clean Common B.P.	2 14 0 (Nominal)	
Medium Assam B.P.	3 0 0	

FREIGHT MARKETS FEATURED BY COAL & GRAIN FIXTURES

COAL and grain movements were the feature of last week's session and owners are showing increased reserve. Many of the fixtures were for positions up to the middle of 1955. At least 13 ships were taken from Hampton Roads to Japan at rates ranging from \$11.95 to \$12.45 over May to December and 55s 9d was paid to Rotterdam for prompt shipment. Grain moved from the Gulf to the U.K. at 82s 6d a ton, North China-Continent 135s f.o., St. Lawrence-U.K. at 64s 3d and W. Australia-India 85s. Ore fixtures from India included Vizagapatam-Japan 68s f.o. for March-April, Bombay-Northern Range \$13.65 and Mormugao-Continent 88s 6d gross terms.

Time Charter rates continued firm with Liberties obtaining 24s for four to six months' trading and 25s for 8 months' ore trading. A 9,000-ton oil-burner secured 28s for a West Indian round voyage and a similar sized motorship 39s for the trip home from Australia. Congestion in the Port of Calcutta is growing again due to the slow work of stevedoring and Port Commissioners' labour. Tramp owners are showing an increased unwillingness to trade at this Port except at very high rates of freight.

SUGAR MARKET

During the week ended 2nd February, sugar sales in the Calcutta market averaged 3,000 bags a day. Arrivals were 40,000 bags and stocks totalled 125,000 bags. Rates for ready sugar, ex-Kantapur delivery were Rs. 30.8 for ordinary grain, and Rs. 33 for big grain. Coming ordinary grain and big grain were quoted at Rs. 30.8 and Rs. 33 respectively. Ex-mill delivery rates for some grades of sugar were as follows: D-28 Rs. 29.8; D-29 Rs. 29.10; C-28 Rs. 29.12. The tone of the market remained dull.

LINSEED

The market remained firm last week and scarcity of supplies was the main feature. Upcountry markets were steady and despatches were made on a very limited scale. Local millers were enquiring for ready goods but a small turnover was reported. The oil section was rather dull. Although firm prices were maintained there was very little interest from shippers as overseas advices were not encouraging at these levels; enquiries from local consumers were small. Latest quotations were as follows: February Rs. 17 per maund; April-May Rs. 16.8 per maund.

HIDES AND SKINS

Bazar Sales

(Between 25th January and 31st January, 1955)
Cowhides: Wet salted (Ord.) 7,000 pcs. on the basis of Annas 13.6 to Annas 14.9. Wet salted (Ord.) 2,000 pcs. on the basis of Rs. 10.8 to Rs. 11. Wet salted (Slaughtered) 15,000 pcs. on the basis of Rs. 13.8 to Rs. 25.8.

Goatskins: Wet salted (Dassoe, Killed) 18,850 pcs. on the basis of Rs. 325 to Rs. 425; Assam-Dinajpur-Murshidabad 19,300 pcs. on the basis of Rs. 285 to Rs. 380; Muzaffarpore-Patna-Pakur 1,50,080 pcs. on the basis of Rs. 310 to Rs. 340.

Bazar Stocks

(31st January, 1955)

Cowhides: Wet salted 1,31,500 pcs.
Goatskins: Wet salted (Dassoe, Killed) 93,000 pcs.; Assam-Dinajpur-Murshidabad 2,24,000 pcs.

SHELLAC MARKET DULL

During the week ended 1st February, the market was dull. The range of quotations was as follows:

Pure Buttonlac	Rs. 195.8, 193.8 value, 192 buyers
Lemon No. 1 Shellac	Rs. 199.8 value, 196 buyers; 198 done, 183 buyers
Lemon No. 2 Shellac	Rs. 195.8 value, 192 buyers; 193 done, 190 buyers
F. O. Std. 1 Shellac	Rs. 189.8 to 182.8 buyers
Pure TN Shellac	Rs. 182, 180.8 buyers; 177.8; 175 basis done and buyers
4 1/2 T. N. Shellac	Rs. 166.8 value, 164, 163 buyers
No. 1 Kusmi Seedlac	Rs. 182.8 value, 180, 178 buyers
No. 2 Kusmi Seedlac	Rs. 175.8, 174.8 value; 175 done, 171 buyers
Fine Bysaky Seedlac (Manbhumi)	Rs. 173.8 value, 170 to 167.8 buyers
Fine Bysaky Seedlac (C.P.)	Rs. 169.8 value, 163, 163.8 buyers
Ordinary Bysaky Seedlac (C.P.) Under 50	Rs. 163 done, 158 to 155.8 buyers
Ordinary Bysaky Seedlac (C.P.)	Rs. 155 value, 149 buyers
Kireelac	Rs. 75, 73 buyers, 65 done

Shipments during January, until the 29th were 30,189 packages.

DISTRIBUTION OF IMPORTED SUGAR

The Government of India has decided that the existing system of distribution of imported sugar for destination stations will discontinue and that from 1st February, 1955 onwards, imported sugar will be sold on ex-docks godown basis at different ports at the reduced prices of Rs. 29.8 a maund in the case of British refined, East German, Polish and French qualities and at Rs. 29 a maund in the case of Cuban sugar. The minimum limit of the quantity to be released to any party has been raised to 60 tons. The earnest money to be deposited with the tender will be Rs. 2.8 a maund, the balance price to be paid before delivery. Revised tender forms may be obtained from the Regional Directors (Food), Bombay, Calcutta and Madras. The special scheme of distribution of sugar in Calcutta through depots will be terminated with effect from 1st February, 1955. The Government of India has also decided to lift the ban on the movement of sugar from Calcutta to mofussil areas with effect from the same date. Intending purchasers of sugar in Calcutta should submit tenders to the Regional Director (Food) on the revised tender form to be obtained from him.

Engineering and Transport

STANDARDS FOR AFTER-SALES TRACTOR SERVICE

COMMITTEE'S RECOMMENDATIONS TO THE GOVERNMENT

STANDARDS to regulate the after-sales service of tractors in India have been prescribed by the Committee on Servicing of Tractors in its report to the Government of India. This has been considered very necessary by the Committee due to the increasing import of diesel and vapourising oil type tractors used for agricultural purposes. It observes that a high percentage of such tractors are rendered idle, after giving satisfactory service for a short time, for want of proper maintenance and servicing facilities expected from the importers. This results in a growing number of dissatisfied customers and the consequent slowing down of the progress of mechanisation of agriculture in the country.

The Committee was asked to examine and report to the Central Government about (1) the standard of after-sales service which tractor importers and dealers should be required to possess and the standard charges for such service, (2) the minimum stocks of spare parts required to be kept by tractor importers and dealers and the facilities to be provided by tractor importers and dealers for the training of tractor operators, and (4) the possibility of starting the manufacture of tractor and implement parts in India.

Internal Manufacture

The Committee recommends that active steps should be taken to develop the internal production of tractors, tractor-drawn and similar agricultural implements and spare parts so as to achieve self-sufficiency in respect of these items within the minimum possible time. It wants this "very important matter" to be examined at the appropriate level by the concerned Ministries of the Government of India at an early date. Every importer of diesel and other type of tractors, the report says, will have to make arrangements for maintaining an adequate stock of spare parts with the dealer, distributor or sub-distributor in the district, taluq or mofussil headquarters to be made available to customers at fair prices within a reasonable period from the time of receipt of an order. The Committee suggests that three services (i.e. 100, 200 and 500 hours bi-monthly interval) at the customers' premises should be rendered by the dealer free of charge. The service mechanics deputed by the dealer should make entries regarding the services rendered in a log book to be supplied along with a tractor when it is sold.

It wants the importers to maintain properly equipped service stations for repairs at convenient centres for the needs of their customers and suggests the location of a service station in a district or taluq headquarters where at least 50 units have been sold. The service station should be properly equipped and staffed with trained mechanics who should be able to carry out the work satisfactorily within a reasonable time.

Servicing Arrangements

The report points out that a guarantee covering the servicing arrangements should be given by the dealers or the importers to their customers when effecting sale of the machinery. Similarly, a guarantee should be given by the trade to replace defective parts noticed within the first six months and to undertake three free servicings in the first six months. Copies of maintenance and operational instruction books, preferably in the regional languages, it says, should also be supplied free of cost for the use of owners at the time the

sale is made with a view to placing in the hands of the buyer full information so that he may use his talent in case he fails to secure timely assistance from the importer or the dealer.

As in the case of pricing of spare parts, the servicing charges vary and depend on so many factors, and the Committee feels that it should be possible to prepare an estimate of charges for standard items of work required in the repairing and servicing of tractors, while special items can be covered by separate charges. The standard charges should cover only labour and supervision, the cost of spares used being charged for separately. The charges should be displayed at the workshop or be carried out in or near the area of operation, the importers of tractors and spare parts should be willing to make available to the farmers the services of an experienced travelling mechanic in an emergency.

The Committee stresses the need of proper training facilities being made available. Arrangements for the training of drivers on the particular type of machine should be made by the importers at frequent intervals for the benefit of the customers, such training being the primary responsibility of the importers or the dealers. Although the ideal arrangement, it says, would be to train the farmer himself in the art of driving and servicing of tractors, it would perhaps be too much to expect it at this stage. It may, however, be possible for the dealers to give further training to the drivers in the servicing of tractors specially during the off-season. If individual firms find it inconvenient to do so, they may form themselves into small groups and have a combined training programme. The Committee suggests that similar training may be undertaken by the technical training centres of the Union Ministry of Labour or such other institutions as may be available in the country. It feels that the training of engine, tractor or automobile mechanics requires more than the resources that can normally be made available by most of the individual importers and recommends that efforts may be made to induce the Labour Ministry to institute short-term courses for tractor mechanics and servicemen in their training centres.

Import of Spare Parts

While the Committee leaves the question of importing and holding a properly balanced stock of spare parts to be decided by the trade in the light of their individual experience, it recommends that the minimum import of properly balanced spare parts, which may be classified into two categories, i.e. slow-moving and fast-moving, should be on a sliding scale related to the number of tractors imported and suggests the following percentages: (1) 100 tractors and below—20 percent of the value of tractors, (2) 101 to 300 tractors—15 percent, (3) 301 to 500 tractors—10 percent, and (4) 501 and above—7 percent.

As many as 25 different makes of tractors of varying horse-power at the draw bar are now being imported into India, and requests are being received for the import of new makes. The import of a small number of new makes is being permitted with a view to finding out their suitability under Indian conditions.

For new makes of tractors, the Committee recommends that a small number—not more than 10—may be allowed to be imported in the first instance for purposes of demonstration, without having to create a complete service organisation. If the results of the trial are found satisfactory, larger imports may be allowed on an ad hoc basis and subject to adequate servicing arrangements. The Committee points out that the proposal for setting up a tractor testing station should be finalised and the station opened as soon as possible. It feels that such an organisation is essential for exercising proper control over the various types and makes of tractors being brought into use.

BRITAIN'S MOTOR-CAR INDUSTRY

MILLION MARK TOPPED FOR FIRST TIME

BRITAIN'S car, bus and truck production has hit and topped the million mark in 1954 for the first time. The final figures put the total at 1,038,834 made up of nearly 770,000 cars and 270,000 commercial vehicles, each the highest annual figure yet, and together over 200,000 more than the 1952 output. Cars alone have recently been made at the rate of one every ten seconds of the working day. So it is that the best post-war production year so far has more than doubled the peak pre-war effort of 1937. But the "million-mark" is both a milestone and a stepping stone in the industry's programme; as the vehicles were coming off the assembly lines, vast expansion plans were being put in hand to boost the output level further to meet growing home and overseas demand.

The year's production was divided almost equally between the home and export markets. Car sales in this country increased by about 70,000 as against 1953. Becoming even more "British car conscious," world markets increased their purchases by nearly 64,000 models in 1954, bringing the total shipments to 366,000, a rate of about 1,000 a day every day of the year, despite the recent dock strike. Commercial vehicle manufacturers also raised their exports by over 15,000 trucks and buses to more than 126,700. More than two-thirds of the increase in car exports went to Australia and New Zealand as a result of relaxed import controls in those Dominions. Sweden bought 17,000 more models, bringing her total for the year to nearly 40,000 and making that country the best British car market in Europe. Other major continental markets—Belgium, Denmark and Holland—also took more cars than the previous year. Sales to the U.S.A. rose by about 1,000. Among other markets, our car exports to Eire were nearly 7,000 up in 1953.

Sales to Australia and New Zealand also contributed largely to the new level of commercial vehicle exports in 1954. Other major markets, where significantly greater purchases were recorded were the Union of South Africa, Eire, and Portugal. Makers of agricultural tractors shipped 110,500 machines abroad in 1954, 15,000 above their 1953 total. Startling headway was made in dollar exports to the U.S.A. where the value of British agricultural tractor shipments at over £34 millions, was four times greater than in the previous twelve months. Exports of all the products of the British motor industry amounted to the immense figure of £340 millions, an all-time record, £16 millions greater than the previous peak in 1952.

Calcutta, 27th January, 1955.

SUGAR STOCKS

The production of crystal sugar amounted to 4.76 lakh tons and arrivals of imported sugar to 1.84 lakh tons up to 15th January, 1955 in the current season. The figures for the corresponding period of the last season (1953-54) were 3.82 lakh tons and 1.24 lakh tons respectively. Dispatches of sugar from factories during the period were 1.09 lakh tons as compared to 2.29 lakh tons in the corresponding period of the last season. The stock with the factories on 15th January, 1955 stood at 4.24 lakh tons as compared with 3.48 lakh tons in year.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to August, 1954. Compared with the preceding month there were decreases in Cotton Consumption (2.0 points), Jute Manufacture (2.1 points), Cement (17.5

points), Paper (9.5 points), and Coal (0.8 points), while increases occurred in Steel Ingots (5.3 points), Pig Iron (4.7 points), and Electricity (3.3 points).

The Indices for Cheque Clearances and Notes

in Circulation also decreased by 4.3 points and 5.4 points, respectively. Combining all the factors the Capital Index of Indian Industrial Activity declined by 2.8 points during August, 1954.

Option of Repayment :

(I) months notice (v) 1 month's notice, (w) Any Int. day, 6 months' notice (y) 3 months' notice (z) 12 months notice

(A) Repayable at par between the years 1924 and 1945 in instalment of not less than Rs 1,00,000 per annum by drawings to be held in June of each year

(B) But before 21st December 1946 Also redeemable out of a cumulative sinking fund of 1% per cent per annum by purchase at any price less than par or by annual drawings at par

(C) Redeemable at par if the Company is purchased by the Government of West Bengal in exercise of its right of purchase in or after 1972 or at any time at 105 per cent. In whole or in part at the option of the Company (on six or six months' notice) or in the event of the security becoming enforceable

(D) These Bonds are deposited with Imperial Bank of India as security against overdraft

(E) The holders of these Debentures have the right to convert them into shares of Rs 10 each between 1st January 1936 and 31st December 1949 on giving 6 months' notice one bond being exchangeable for 50 Ordinary Shares

(F) Redeemable (a) at 102 per cent on 1st October, 1974, or in the event of voluntary liquidation of the undertaking being purchased or in the event of the security being enforceable or (b) out of a sinking fund by drawings at 102 per cent or by purchase at or under 102 per cent

(G) The holder of each Debenture has the option to apply for Ordinary Shares to the nominal value of Rs 90 payable in cash and this option expires at the end of 3 months' from the date of notice of repayment by the Company

(xx) To be redeemed at a premium of 10 per cent Rs 70,000 to be redeemed annually by drawing on 3 months notice with option to redeem all after from date of issue on 6 months notice. Option not exercised repayment to be made after full term

(Y) These debentures are registered and are transferable by transfer deeds.

(H) Up to and including the year 1943 holders may at any time convert into fully paid Ordinary Shares at the rate of 1 Share of Rs 10 per equity share of the stock

(I) Ordinary Shares thus converted will rank for dividend *pari passu* in all respects from the financial year following that in which the option is exercised and the holder will receive interest on the stock converted in respect of the financial year in which the option is exercised

(J) Holders of the fully paid up convertible Debentures may on any interest date up to 1st January 1947 convert into fully paid up Ordinary Shares each £50 debenture for 10 Ordinary Shares of Rs 10 each on 1 month's notice

(K) If this option is not exercised before 30th September, 1942, the Company will not be entitled to exercise the option before 30th September, 1946

(L) Repayable at par by 1986 by annual drawings on 1st July each year

(M) Option of repayment in part out of gross profits every year to a maximum of Rs 50,000. Notified to be redeemed at par on 1st November 1943

(N) At par by 12 annual drawings

(O) Option of repayment on 6 months' notice after 31st July 1955 at Rs 2-8 per cent Prem

(P) At par all or any of this Debenture on 31st December, 1960 or on any subsequent interest date

(Q) May be redeemed on 30th June 1960 or any subsequent half-yearly date for payment of interest up to 30th June 1964 at a premium of 1% on giving 6 Calendar months notice

(R) Option of repayment within 5 years from the date of issue on one month's notice

(S) The Company has the option to repay all or and part by drawing on 3 months' expiring on any interest date after 30th September 1955 Any time on or after 1st October 1947 holders may convert each notice of Rs 300 into 25 Ordinary Shares to take effect on 1st October of each year on giving 15 days notice prior to such day

(T) May be redeemed at depreciation of Rs 20 per Debenture if redeemed earlier than 31st December 1955 or three months' notice

(U) May be redeemed on 30th June 1952 at 2 per cent Premium 30th June 1957 at a premium of 1 per cent or on 30th June 1961 at a premium of 1 per cent

(V) Redeemable at a premium of 3 per cent on 31-12-64 with option to redeem on 3 months notice on any interest date after 30-6-59 at same premium These Debentures are registered and are transferable by Transfer Deeds

(W) At 1 per cent premium between 1-1-60 and 31-12-64

(X) Any time on six months notice

(XX) At par on or after 1-12-59

(XXZ) Repayable at par on 31-12-64 with the option of repayment on 31-12-54 or any subsequent interest date at a premium of 2 per cent

(WZ) Repayable at the end of 10 years at a premium of 50 per cent per Debenture with the option of repayment earlier at any time after expiration of 5 years.

N-Nominal.

BANKS

H indicates that Share capital is half paid, O, C and Dd, indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SCIENTIFIC MANAGEMENT IN INDIAN INDUSTRY

PROGRESS OF NEW BUSINESS TECHNIQUES: SOME OBSTACLES TO EFFICIENCY

ONE of the few advantages of making a late start in the industrial race is being able to benefit by the techniques developed by others through long years of experience. This is especially true with the techniques of business management which, although adapted to the requirements of individual industries, have a common application, are protected by no patents, and are designed to pay for themselves handsomely in the long run. They represent the application of scientific thinking to the problems of industrial efficiency and incorporate advances in economics, statistics, technology, and most important of all, psychology. Business management is itself being raised to the status of a science, working as it does through the various stages of observation, experiment, hypothesis and finally application. Its goal is the pursuit of the economic concept of the optimum, and its discipline is becoming a full-time occupation replacing completely the rule-of-thumb techniques and intuitive applications of a more leisurely age. The speedy adoption of new methods throughout the world is largely the result of competitive and other pressures on price margins; in Government establishments the need to keep cost to the minimum may serve the same end. Everywhere that there is advantage to be gained from reducing costs, there is scope for scientific industrial management, and the country which neglects its application will fall behind in the competitive struggle just as surely as would an individual firm or a whole industry.

Interest in the new science has been gaining ground here in India ever since the urgency of the country's industrialisation was recognised. While the efficient running of the economy is placed second in importance to the pursuit of full employment, the new techniques may seem to have only limited application, at least in their pure form. But optimum are different under each individual set of conditions, and if that for India must start from the premise of the maximum possible employment, scientific industrial management will remain a powerful aid in attaining it. Such bodies as the Indian Institute of Management, the Indian Standards Institution, the various professional accounting associations, the Indian Society for Quality Control, and several private firms are directing their efforts to this end. A contribution to more detailed knowledge on scientific management as it exists in India today has just appeared in the form of a book entitled *Industrial Management in India*, by Dr. D. K. Dutt. It is a factual survey of the present state of the technique, and is derived from a comprehensive investigation of conditions. Dr. Dutt does not outline schemes for application to suit Indian conditions. His task has been to map out the field, and in completing it he has revealed the extent of the scope which at present exists in Indian industry for a more scientific approach to its production problems, and the efforts which are being made to exploit that scope.

Modern progress is taking place chiefly along two lines—the more general and intensive application of statistical techniques to the planning and control of production, and the use of the latest advances of psychological science in the handling of labour problems. The integration of cost and financial accounts is now a reality in most modern firms, and the installation of new mechanical accounting equipment has speeded the process. The costing system requires control at every stage of manufacture and each stage is now required to answer for its costs against some standard budget. The need for a smooth flow of materials, components, tools and labour requires elaborately planned factory lay-out, efficient store-keeping, and a carefully worked out programme. Dr. Dutt studies the extent to which these techniques have been adopted in the industries roughly grouped under

the headings of iron and steel, cotton textiles, jute, and consumer goods. In general, excellent progress has been made in keeping these industries up to the level of the most modern techniques. But local circumstances remain the limiting factor. The decision whether to make use of a modern technique is rarely a straightforward one, especially under the unique industrial conditions which exist in this country. Theoretically it can be made at the margin; in practice it must often involve considerable new investment, expensive re-organisation, and an outright gamble against odds which are impossible to calculate accurately.

The future of scientific management in India will be determined by a number of imponderables. Statistical control requires a great deal of administrative work which has to be handled briskly and intelligently if production is to be facilitated rather than hindered. The talent for this sort of work is probably, at the moment, limited in this country, and the high standard of literacy which is demanded of the ordinary operative, whose part is a considerable one, is simply not to be had. The progress of cost, production and quality control systems will be limited in India on this count alone, at least for the time being. Another serious drawback is the burden which these systems place on the supervisory staff which is already in pitifully short supply. In Western countries the cry has long been heard that the all-important foreman has now become a desk-bound administrator. The loss is serious enough there; it simply cannot be sustained in India. A high degree of planning requires firm delivery dates, and guaranteed quantities; these are not yet outstanding features of Indian industry. Large material stocks must be kept, and this involves a good deal of financial outlay and a buying policy which must be able to start with some assurance against a too-wide fluctuation of prices. Clearly the obstacles to efficient scientific management are immense in this country today; the wonder is that in fact its practices are becoming so widespread.

Perhaps the most revolutionary changes which have taken place in the techniques of business efficiency during the last twenty years have been in personnel management. Labour scarcity, the increasing strength of trade unions, the increase in specialised skills, and the growing understanding of the importance of good employee morale in the pursuit of higher productivity, are all reasons why greater attention is now being paid to the worker's state of mind and attitude to his work. But the theory behind personnel management goes deeper than this. That is why even in a country such as India, where labour is abundant, and standards of comfort and convenience are low, personnel management is not being neglected. Dr. Dutt devotes a large section of his book to dealing with the problems which the application of the new techniques are facing in this country. The need to maintain a well-regulated labour department is obvious enough; the importance of facilities for the expression of grievances is also clear, and no modern employer can afford to ignore the views of the trade unions. But the real justification for personnel management lies in the fact that labour is the most important, and the least predictable, of the various factors of production. Under the older industrial regime the personal contact between the employer and worker was close enough to establish valuable bonds of mutual understanding; under modern conditions the contact is already remote and is steadily becoming more so. The need for efficiency dictates that a worker must fit into the general plan and behave in as predictable and as reliable a

ECONOMIC DIFFICULTIES IN EAST PAKISTAN

EMPHASIS ON FOREIGN TRADE

THE movement towards industrial self-sufficiency that is evident in many parts of the world has of course been very apparent in Pakistan, and the pains of transition are especially sharp in its eastern wing. Few areas of the subcontinent started in 1947 with greater disadvantages. East Pakistan is without doubt potentially a very rich area, where unusual density of population is possible only because of the exceptional fertility of the soil. But its prosperity—such as it is—is narrowly based. A few crops, such as rice, jute and tea, and that is about all. Against this, it possesses formidable deficiencies in relation to current high industrial ambitions. The scarcity of raw materials is acute, except for the jute and paper industries. Transport in the interior, over both land and water, is inadequate and inefficient. Two major industries, jute and tea, lean heavily on foreign markets, but suffer considerably from the shortage of port facilities. Energy resources are scarce, and time alone will show whether Eastern Pakistan can produce enough petroleum for her needs, or whether she can find enough money to build herself big hydro-electric projects. The smooth flow of economic activity is periodically disturbed by a deterioration in Indo-Pakistani relations—a deterioration that takes place for reasons much less accepted in Dacca than they are in Karachi. Domestic politics also are often a source of friction and misunderstanding, as the eastern and western segments exchange accusations of favouritism and neglect. In addition to all this, there was last year a sharp worsening of labour relations, and many were killed in riots at the industrial centres, Chittagong, Narayanguange and Khulna. Fortunately, the situation has greatly improved since.

The evidence suggests that the process of industrialising Eastern Pakistan will be long and hard, and the fact is indeed widely recognised even in more optimistic circles at Dacca and Karachi. One aspect of the process of industrialisation is to diversify the range of products; another, notable particularly in the case of jute, is to shift the emphasis from raw materials to manufactured goods in the export trade. Both aspects are common to many other underdeveloped economies of south and south-east Asia, but that does not alter the fact that the scope for progress in each case is limited. The range of products is limited primarily by the availability of raw materials, and the scope for increasing manufacturing capacity is restricted mainly by the shortage of capital. But within these overall limitations—in fact, to ease them—it would seem that one of the major conditions of industrialisation in Eastern Pakistan is a steady growth in its foreign trade, especially as internal demand for most of its leading products is inadequate. Official policies on this aspect are not always realistic.

Take jute, for example. Eastern Pakistan is using more and more of the fibre she grows as her jute industry is expanding, but consumption is still only a small fraction of the total output. Yet the export of raw jute is frequently disturbed for reasons that are not always convincing. Many shippers' trading licences were cancelled about three months ago on the ground that they had indulged in under-invoicing and various other malpractices. That may or may not have been true of all the shippers involved; but what is certain is that, as Mr. H. P. Carse told the Chittagong Chamber of Commerce in his presidential address yesterday, "the removal of many licences at the height of the jute season on a rising market has had wide repercussions on innocent parties." A few weeks later, this was followed by a ban on the export of raw jute in kutchha bales to India—a ban that might well cause nearly as much dislocation in Eastern Pakistan itself as in this country. The record of the other major export, tea, is much happier, thanks to the spectacular recovery in world demand; but important problems here are the difficulty in getting good tea chests and fertilisers, and taxation anomalies which lead to "needless, protracted and unremunerative work."

The emphasis on exports is understandable in a country which has still not fully recovered from the effects of a heavy payments deficit which developed after the post-Korean war recession. Yet, as Mr. Carse suggested, many imports are essential and it is important that they be allowed without the creation of unnecessary obstacles. Foremost are the requirements of industry; in many cases, raw materials, packing materials and other commodities which form part of the final product cannot be imported in adequate quantities. The official import policy also often betrays a lack of foresight. Mr. Carse pointed out that foreign manufacturers plan their output according to the orders they expect; "Time after time it is found that although a licence may ultimately be obtained, the overseas manufacturer's output has already been taken up and the industrialist or importer in this

country is unable to obtain the goods he requires within the validity period of the licence." Licences to import machinery for extensions, replacements, etc., are issued only for periods of about six months, and this does not allow enough time for the machinery to be manufactured. A reasonable solution would seem to be that the Government introduce a system whereby licences cover periods of up to one year, or at least that it agree to revalidation on an automatic basis.

A rising level of trade and industrial production will underline the need for better facilities to move goods in the interior and at the ports. These remain very inadequate, although some improvement has been noted. The railways have been able to provide more wagons, and the inland water transport continues to give invaluable service in the face of many handicaps. Among the latter are the high cost of coal, the lack of dredgers for maintaining key river routes, and the poor facilities at Chalna. These deficiencies affect internal as well as foreign trade, and the latter in addition suffers from high port charges. As Mr. Carse pointed out, it is understandable that a new and expanding major port should perforce charge more than a major port which has been established for many decades, "but there is something wrong if costs are so out of line with other competitive ports of the world." The trend of India's coal and mineral ore exports in recent years could provide Eastern Pakistan with a useful background against which to study the immeasurable harm that can be done to foreign trade when port facilities are short and expensive. In the process, she would also appreciate more fully that transport shortages can be a real bottleneck in industrial development.

INDIA'S RURAL PROLETARIAT

A WEALTH of data on the rural manpower of India is now available from recent Government reports. They provide a basis for a more accurate appraisal of the effects of the rural population's growth on the agricultural economy in particular and on the economy of the country in general. A significant fact is the growth of a vast rural proletariat consisting of landless agricultural labour, the agricultural wage-earners. As the statistics contained in Government publications show, this class is likely to go on growing with the passage of time, because of the preponderance within it of the younger age-groups. This huge army of landless workers includes 17.6 million families of the total of 58 million rural families in India, and 38.2 percent of its members are below 15 years of age, 53.7 percent between 15 and 55 years and only 8.1 above 55. Their employment conditions will worsen with the increase in their numbers—working life for them starts as early as 10 years. As matters stand today the average number of workdays available to "casual" or "unattached" agricultural workers, who are 85 percent of the total, hardly exceeds 165 days in a year. This number may well fall, as the agricultural prices are falling. The West Bengal Government has just announced test relief measures to provide employment in the rural areas to meet this danger.

The case for enforcing minimum agricultural wages may seem strong, because the economic conditions of this class are, to say the least, tragic. Despite the high proportion of earners in each family, most agricultural labour is heavily steeped in debt. But the difficulties of enforcing a uniform all-India minimum would be immense. Productivity of land varies not only from State to State but also from area to area within the States and if wages were not linked to this varying yield from the land, there would be a decrease in employment. It is not easy to foresee a time when the development of industrialisation will siphon off the surplus population from the land. There has been an enormous expansion of industry in India during the last 50 years but the proportion of industrial workers to the total working population of the country remains insignificant.

The essence of the problem may seem to lie in the reorganisation of the land system. It is not reasonable to suggest that each landless labour family should be given a parcel of land; there is simply not enough land to go around. The man-land ratio is already precarious, and with the birth-rate what it is, the ratio is going to become progressively worse no matter how much land is reclaimed for cultivation each year. The Bhoo-dan movement is perhaps bringing about a "psychological revolution", and claims have been advanced for "a non-violent economic revolution" in the countryside. But its economic value is extremely limited. The movement has yielded seemingly impressive results, in that more than three million acres of land are said to have been collected as free gifts, but how much land can it collect for nearly a hundred million landless? Social justice is important no doubt; but so is land productivity. At present the latter has an over-riding importance. By giving tiny plots of land to the landless agricultural labourers, land productivity will suffer.

Even in Communist China, where the application of Marxist principles should have led to the wholesale expropriation of the landowning class, astounding compromises have been made because

land productivity has been given the first priority. India's rural problems are similar to China's, and although for the right reasons India has chosen the democratic path, she must give the same priority to higher land productivity. The problem of a living wage for the rural proletariat will then come nearer solution.

RECOVERY IN U.S.A. EXCEEDS EXPECTATIONS

REVIEWING U.S. business conditions in January, the National City Bank says in its *Monthly Letter* that the new year is off to a good start, with business in some quarters showing more strength than even the optimists had expected. The most striking report made during January comes from the Department of Commerce, which estimates that December retail sales totalled \$18,000 million—more than \$1,000 million greater than any previous month on record. Post-Christmas volume also has been exceptionally good. In the first three weeks of January, department store sales averaged 10 percent above a year ago, and reports from other retailers including automobile dealers leave little doubt that total consumer purchases during the month have broken all January records. Passenger automobile sales, estimated at 570,000 cars in December, have contributed heavily to the good showing. Seldom if ever have new automobile models been met with such a rush of buying. The big business is attributed not only to new designs and improvements, and to high consumer buying power, but to an unprecedented sales effort, including widespread price discounts given by dealers to keep abreast of competition and stimulate volume. Optimistic forecasts for 1955 were the rule at the year-end, and the forecasters placed their chief reliance upon expanding consumer demand rather than upon business spending.

As far as they go, the figures of recent weeks suggest that this reliance is not misplaced. In the end the controlling influences upon consumer purchases will be found in the figures of employment, hours worked, and consumer income; and indications are that jobs and wage payments will continue to increase in the next few months, except where the seasonally low level of outdoor work is a factor. In the months just ahead, seasonal improvement in industrial output is expected. The steel and automobile industries have been consistently accounting for the lion's share of production gains. In mid-January steel ingot output was exceeding 2 million tons a week, and automobile assembly lines were turning out a near record of 163,000 passenger cars a week. By all signs these industries will be running strongly during the next three months at least. The purchasing power created, directly and indirectly, by their demands for labour, materials, and services will flow around the circle.

In other lines the improvement already realised is being held or moderately extended. Construction activity is giving greater support to general business than ever before. The textiles and many of the other non-durable goods industries, which had a good upturn in the fourth quarter of 1954, entered 1955 in a good position. Activity in consumers' durable goods other than automobiles, after a marked recovery, seems to have stabilised at the higher level. Output of producers' equipment and military goods has been stable since early fall when the decline levelled off. Even the machine tool industry, which is expected to be one of the laggards in 1955, reported increased sales in December and January. Business sentiment clearly is good. Business leadership continues to show a willingness to back its optimism with capital investment, and scattered indications of upward revision of earlier plans are observed. To some extent rebuilding of inventories seems to have begun in November, when seasonally adjusted inventory figures showed a moderate rise. This ended a continuous decline that had lasted thirteen months and had reduced stocks by \$44,000 million, or 5½ percent. Little disposition to anticipate scarcities or higher prices is seen, but as business improves many lines find larger stocks necessary, and as delivery dates lengthen commitments must be extended.

With reports of this kind, the predictions that 1955 will be a better year than 1954 now seem to have a secure basis, and are accepted almost everywhere. In judging how much further the rise has to go, two reasons for moderation appear. One is that the improvement has already been substantial; the 1955 upswing, instead of being wholly in the future, has already occurred to a considerable extent. The recovery, within about four months, of one-half of the ground lost during the recession, is an impressive performance. The second reason for moderation is that the recovery has been so heavily influenced by the automobile and steel industries, and must be expected to slow down unless operations expand further in a wider variety of industries. Automobile output eventually must slacken. It may be curtailed by strikes, if the union demands for a guaranteed annual wage are pushed that far; otherwise, it will be curtailed by

overstocking of dealers, since no one expects that a production equivalent to 8,000,000 passenger cars a year can be absorbed. Steel operating rates will be influenced by automobile requirements. These two industries account directly for almost 10 percent of the industrial output of the country. A summer let-up, exceeding the usual seasonal dimensions, is a reasonable expectation.

CURRENT COIN

Russia's Steel Plant Offer.—The conclusion of the agreement with Russia for a one-million ton steel plant to be erected at Bhilai, Madhya Pradesh, and designed to accommodate future expansion, appears to be a most useful contribution to solving India's steel problems. A good deal of care has obviously been taken to meet some of the criticism which the initial proposal incurred, at least on technical questions. This is the first time that the Soviet Union has made a practical gesture towards the needs of underdeveloped countries, and with the sad record which the Russians have gained for themselves of interference in the internal affairs of other countries through the Communist Parties, the world is bound to watch this experiment closely. Misgivings had come to be centred round three main points. The first was that the plant and machinery might be obsolete. This was a legitimate fear; Russian production is little troubled by considerations of cost, and this fact, together with insularity of Soviet technical progress, suggested that the need to keep machinery design up-to-date might have been ignored. The Russians appear to have acknowledged this possibility, and the agreement contains provision to guard against it. Also contained is an adequate safeguard against the further criticism that the machinery is being manufactured in contravention of world patents. It is well known that Soviet manufacturers are themselves no respecters of these patents in the products they turn out, and if these products are to be used in India legal disputes could arise. Great care will have to be exercised by the Indian technical missions for which the new agreement provides, that these dangers are avoided. On the final point of criticism the indications are anything but reassuring. Briefly this is the fear that the Russian technical personnel will become the nucleus of subversive activities in India. The fact that the operation of the agreement will place a great deal of local currency in Russian hands does not improve the prospect. By making a gesture such as this, the Russians stand to gain a great deal in good will and international standing if it proves a success, and nobody with any consideration for world peace will begrudge them that. Unfortunately Russia is now depending on a generation which knows nothing of the outside world and its ways, and has been brought up on a diet of Communist indoctrination.

International Commodity Trade.—The first session of the newly-established Commission on International Commodity Trade has just ended at U. N. Headquarters. The Commission's main task, as defined by the U. N. Economic and Social Council, is to find ways of solving various problems which affect world trade in primary goods, and is therefore of particularly vital interest to all primary producers. For instance, the Commission will seek ways of avoiding serious fluctuations in the prices of primary products and in the volume of world trade in those goods. It will also consider measures to maintain a fair relationship between the prices of primary products and the prices of manufactured goods in international trade. And it will make a constant review of various trends in world primary commodity markets. In addition, the Commission will submit periodic reports to the Economic and Social Council and publish studies and statistical reports on prices, terms of trade and other matters relating to world trade in primary commodities. The members of the Commission, who were elected by the Economic and Social Council last November, are: Brazil, Canada, Poland, United Kingdom, United States, Venezuela (all for two years); Egypt, France, India, Pakistan, Turkey, U. S. S. R. (three years); and Argentina, Australia, Belgium, Chile, China, Denmark (four years). After this initial period, the terms of all members will be for three years. The United States, for the time being, is participating only as an observer. Twelve items were listed on the agenda for the Commission's session, including election of its officers and dealing with questions relating to its work programme and, more generally, to the organisation of its activities. It then surveyed the situation in international commodity trade, for which the U. N. Secretariat had compiled basic information. Specific proposals which may be submitted by governments were also considered. The Commission will report to the Economic and Social Council's summer session in Geneva, so for the time being further details must be awaited. As to the future, the Commission is to meet as frequently as it considers necessary, but only when specific items have been proposed for discussion. It is free to hold private meetings as well as meetings away from Headquarters should it consider this to be in the best interests of its work.

Currencies and Formosa.—The Far Eastern crisis has had noticeable effects on world currency markets. During the last month, the New Taiwan Dollar has lost 14 percent in free markets; the Chinese Communist Dollar dropped 6 percent; and the Indonesian Rupiah, already weak in December, eased a further 3 percent in recent weeks. Gold prices strengthened slightly in Western Europe, soared to a four-year high of \$53.50 per ounce in Bombay, and gained 10 percent in local currency in Shanghai and Djakarta and 15 percent in Taipei. Prices of coins, influenced by new hoarding purchases in Europe and the Near East, strengthened internationally. The February issue of *Pick's World Currency Report*, reviewing these events, also analyses the new trends in metal and steel markets. According to the publication, copper prices rose in free markets between 12 percent and 15 percent in January. Aluminium gained about 7 percent. But the most remarkable price rise took place in free market nickel which gained 75 percent in a few weeks. Platinum, also stronger, rose 1 percent. Iron and steel products, actively bought by speculators and traders, have not yet reached real grey market stages. Hoarding of dollar banknotes, declining abroad since 1953, has again been resumed. South-East and East Asia were the principal buyers and the dollar rose in the free markets of 34 countries during recent

weeks. Freight rates, very firm, especially for Asiatic destinations, were another illustration of the Formosa crisis.

Slow Progress to Convertibility.—Last year's most discussed economic topic—convertibility—was bound to feature on the agenda of the Commonwealth Prime Ministers' Conference, and some clarification of the situation is welcome after the unsatisfactory state in which it was left after the review of the G.A.T.T. at the end of last year. Mr. Butler has now made it clear that convertibility would not be a practical policy for some time yet. The British case is based on the present efficiency of the G.A.T.T. and the progress of the United States towards greater economic liberalism. On the former question the signs are reasonably reassuring. Good progress has been made, and apart from the various loopholes which have had to be devised in the framework through which the trading policies of the under-developed countries can crawl, and the rather reluctant adherence of such a large trading country as Australia, the Agreement is being shaped into an efficient code for the conduct of more civilised trading practices. The position of the United States is less reassuring. There is some promise that progress will be made now that the Democrats have regained control of Congress, but it will be slow and no doubt lack much of the enthusiasm which would result from the United States identifying her own long-term interests more closely with liberal trading practices. The position of the sterling area continues to improve, and if present trends are maintained there seems no particular reason why, in a few years' time, Britain should not be able to declare sterling convertible without having to demand too much adjustment on the part of the United States. From Mr. Butler's statements it would seem that Lord Beaverbrook's dream of an economically self-sufficient Commonwealth has been going quietly forward towards reality. Certainly the Commonwealth is more of a trading unit than it was immediately after the war; dollar shortage has helped to develop sources of supply which might have been slower in their growth if pre-war conditions had prevailed. In the long run of course it is only slightly more desirable to have a completely self-contained Commonwealth than it is for each country to practice autarky, but in practice this development has made a great contribution to closing the world's dollar gap and lessening dependence on American aid. The size of the sterling area's gold and dollar reserves must still be numbered among the obstacles to convertibility. At \$2,763 million they are still far below the \$5,000 million which it is estimated would be required. Although loans from such institutions as the I.M.F. would help to supplement the reserves it is unlikely that the United States would be prepared to sanction these without some guarantees against dollar discrimination should convertibility be introduced; and without such discrimination on which to fall

back should the pressure on sterling become too heavy it is difficult to see how the experiment could be made at all.

French Foreign Investment.—In a recent issue of the *Investors Chronicle*, M. Didier Lambert, editor of France's leading financial newspaper, *La Vie Française*, gives some interesting details of French investments overseas and in particular of French holdings of United Kingdom stocks and shares. In modern times the French have always regarded the possession of some foreign securities as a useful hedge against the depreciation of the franc, which has been going on almost continuously since 1914. Before then the franc was, of course, one of the stablest European currencies and (though the point is not mentioned by M. Lambert) the French people were strong supporters of loans issued by foreign governments rather than investors in foreign trade and industry. Thus the French *petit rentier* held a by no means insignificant portion of the Imperial Russian Government's foreign bonds when the revolution came in 1917. According to unofficial inquiries made by the French foreign exchange control, French investors had £129 million of sterling stocks deposited in French banks in 1939 but M. Lambert regards this as an underestimate and today the figure is given as between £200 million and £300 million which is obviously much more in line with £12 million received in dividends in 1953 which would give an average return of about 4½ percent on £122.5 million. What is the French investors' preference in sterling stocks? Apparently oil and mining shares top the list. Officially, ten percent of Shell capital is in French hands, whilst the proportion of Royal Dutch (regarded as a Netherlands equity) is even higher—probably 20 percent. The French were substantial investors in the older sterling Rand gold mines, but more recently have switched to the new West Rand and Orange Free State concerns, which are quoted in both London and Paris. Diamond and copper shares also find favour and the French holdings in Roan Antelope are estimated at nearly one-third of the whole. Commercial and industrial enterprises working in the U. K. and U. K. rubber companies make up most of the rest with a sprinkling of sterling public loans. Inevitably, the restrictions on the full convertibility of sterling have affected French investment sentiment and M. Didier Lambert considers it possible that "the financial authorities will now make a further effort to introduce in France American shares quoted on the New York Stock Exchange." Such shares have been almost entirely absent from the Paris Bourse. At the moment India is very foreign-capital conscious and the point to note is that, even in a country

Accountants tell me —

"You're welcome on all accounts"

Here is the Fowers-Samas punched-card, part of the system

that makes all other accounting methods out of date, keeps figures really up to date.

Fowers-Samas speed and efficiency keeps pace with figures and events as they occur; indicates trends as they start to develop. For large combines and small concerns Fowers-Samas methods handle invoicing, statements, stock-records, payroll, costing and statistics of all kinds with unequalled speed, neatness, accuracy and economy.

There is a range of Fowers-Samas punched-card equipment for every type of application.

such as the U. K. which for all practical purposes is supposed to be self-sufficient in investment capital, there is pretty full freedom for the foreign shareholder to back his fancy.

Foreign Investments in Australia.—Total income payable to Canada and to the United States of America from companies in Australia totalled £A15,600,000 for the financial year 1952-53, according to the Australian Commonwealth Bureau of Census and Statistics. Of this sum only £A3,000,000 was remitted or credited, the balance being retained by the companies in Australia as net undistributed profits. In addition to company investment the figures include earnings by private trading banks and mutual life insurance companies, and cover all overseas investment in Commonwealth Government, local authority, and semi-Government securities domiciled in Australia. Total investment income paid to the United Kingdom was £A22,600,000, of which £A16,300,000 was remitted or credited. The figures show that there have been wide fluctuations in the level of new overseas investment in Australia. At 30th June, 1953, more than three-quarters of the United Kingdom holdings of the paid-up capital and debentures of Australian companies, and nearly all of United States holdings were directly invested. There has been a considerable amount of investment in Australian public authority securities. Investment by Australian companies overseas has steadily increased although these holdings are small compared with overseas shareholders in Australian companies. New Zealand has the major share of the capital invested overseas.

Shree Gopal Paper.—On another page of this issue of *Capital* an offer of debentures is made in the Shree Gopal Mills Ltd. The offer consists of 3,000 6 percent registered mortgage debentures of Rs. 1,000 each, issued at par. The subscription list will open on 10th February and will close on 17th February, or earlier or later at the discretion of the directors. The issued capital of the company totals Rs. 1,33,06,250, divided into 7,500 6 percent cumulative preference shares of Rs. 100 each and 12,55,625 ordinary shares of Rs. 10 each. The company has already a debenture of Rs. 10 lakhs carrying interest at 5½ percent. Six hundred debentures of this new series will be redeemed by the company at par on 16th February 1961, and on each succeeding 16th February on the years following until the whole has been redeemed or paid off. The managing agents of the company are M/s. Karam Chand Thapar & Bros. Ltd. The present capacity of the company's mills is 14,500 tons a year of finished paper including wrapper. In addition to the manufacture of paper the company owns a hydrogenation factory, a tin can manufacturing and printing plant and a fully mechanised department for the manufacture of stationery. The present value of the block, i.e. plant and machinery, equipment, buildings, land etc., should be over Rs. 2½ crores. The purpose of the issue is to finance a part of the company's expansion and modernisation scheme which, it is estimated, will cost Rs. 1½ crores. A sum of Rs. 95 lakhs is to be provided from present and prospective resources during the three-year period, and Rs. 25 lakhs is expected to become available by the issue of new ordinary shares. The present issue of debentures represents the balance.

Spencers Off the Rails.—The chairman of Spencer and Company, Ltd., Mr. S. W. Edwards, speaking at the 57th ordinary general meeting of the company in Madras recently, recalled an announcement which brought disappointment to many railway travellers. After fifty years of railway catering in some 75 restaurants throughout India, the firm has terminated its contracts. The reason is that the demand for Western style catering has declined in the last few years, so that the firm is now no longer able to carry out profitably this part of its activities. The loss will be regretted by the traveller who became accustomed to standards of cleanliness and good cooking. Mr. Edwards also announced that the cessation of the lesseeship of the Malabar Hotel had reduced the firm's trading activities in the past year, as also had the liabilities incurred through retrenchment of personnel in the Malabar Hotel, in the railway catering section, and at the company's Kanpur factory. But the prospects for this year are better and Mr. Edwards was able to report that, provided trading in the second six months of the current accounting year continued in the same manner as it had during the first six months, shareholders could expect a more encouraging position at the close.

Record Output of Coal in December.—The output of coal in collieries in India reached the peak figure of 3,503,459 tons in December, 1954, according to statistics released by the Chief Inspector of Mines. The output in the previous month was 3,321,715 tons. Despatches of coal amounted to 2,746,588 tons in December, 1954, as against 2,728,291 tons in November. Coal stocks at pitheads rose to 3,467,898 tons from 3,161,153 tons. The number of workers employed on an average in 830 collieries, working during the period, was 349,271. The output per man-shift was estimated to be about

1.09 tons for miners and loaders, 0.60 ton for all workers underground and in open-workings, and 0.38 ton for all persons employed including surface workers. The percentage of absenteeism was 12.38. Coke plants at collieries and elsewhere produced 369,320 tons of hard, soft and other kinds of coke during the month and despatched 169,049 tons.

West Africa Looks to India. The West African Governments are making major efforts to start large-scale industries in their territories and from all indications the present attitude of encouraging foreign aid is helping greatly to ensure the success of these efforts. Like India, the West African Colonial Territories are agricultural and depend mainly on agricultural resources, and some mineral deposits, for their prosperity. But unlike India, these territories are not only years behind modern world standards of industrialisation but are strictly *sensu* virtually un-industrialised. Consequently many of their agricultural products, which would have been of immense value in stepping up the economic stability of these territories, and for avoiding the need for imports, were only being conserved for export in their raw conditions. This has caused a serious set-back in the territories' economy. In pursuit of their objectives, the West African Governments have been striving to attract industry into their territories. They have been welcoming approaches made by foreign Governments, within or outside the British Commonwealth, to help them. The Gold Coast Government has taken a step in the right direction. As a result of an exhibition organised by an Austrian corporation, the Gold Coast Government has invited the Dominion Cement Company, incorporating many firms, to operate a giant cement industry in Kumasi but with headquarters at Accra, the capital of the Gold Coast. Dr. Kurt Wallerstein, Austrian industrial chemist and vice-president of the International Economic Research Council is making an extensive survey for this first cement manufacturing company. Meanwhile, a chartered 5,000-ton German merchant ship "Edda Dorst" is on its way with plant, spare parts and the necessary chemicals. An all-out effort for an in-service training scheme is being carried out for the employment of African labour. Mr. Ako Adjei, Minister of Trade and Labour in the Gold Coast Government, has considered "this as Austria's contribution towards Gold Coast development, economically, and any other foreign country making similar approaches will be welcomed by the Government." What is more, the Minister has expressed the view that the Indian Government and other Asian Governments are much required to "help us in the different industries." Four representatives of the Association of Cocoa and Chocolate Manufacturers in the United States of America are now in the Gold Coast, studying local conditions. They will shortly visit Sierra Leone, Gambia and Nigeria. Nigeria is not behind in this race for industrialisation; rather she is a step ahead of her sister colonial territories in the cement industry. A Belgian firm F. L. Smidth—with Mr. A. B. Jorgensen as director—is working in co-operation with the Tunnel Portland Cement Company, and has already started work in Nkalagu, in the Eastern Region of Nigeria. The Smidth Company supplies the special cement-making machinery required for the factory and acts as consulting engineer for its construction, whilst the Tunnel Portland Cement Company acts as managing agents for the new undertaking. The Nkalagu factory which is being equipped with the most modern type of machinery is expected to have a capacity of 100,000 tons annually, about one-third of the country's present annual imports, and is being supported by the Federal Government of Nigeria to the tune of £2 million. All this has been the result of a tour of Dr. Naamdi Azikiwe, Premier of the Eastern Nigeria, to Europe and America, inviting foreign aid on reasonable terms for the industrialisation of the country. Incidentally, the main raw materials—limestone and coal—are available in ample supplies in Enugu and near the site. However, attention is being diverted to India and its industrial developments. The Federal Minister of Trade and Industries has said he hopes to undertake a tour of India soon.

Gold-Coast Farmers Tour India.—Arrangements are being made by the Agricultural Produce Marketing Board of the Gold Coast to send a number of Gold Coast farmers to overseas countries this year to study how up-to-date small farms in those countries are run. The farmers who will be accompanied by the Board's representatives will visit the Kenya Coffee Industry and the Tanganyika Copra industry. Other places to be visited include India and Ceylon and some other pacific island. The tour of India and Ceylon is particularly desired by the Board in view of the fact that India is an ex-colonial territory. They wish particularly to learn from India, how its progress which is current news in West Africa in recent years has been made. They also wish to visit tea plantations in Ceylon. A representative of the Board has said that they are "looking forward, fervently, for the time when we shall understand the mechanics of modern farming in India."

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

SUGAR FINANCE INCREASES

Wednesday, 10th February.

THERE has been stronger demand for money from upcountry centres this week, largely on account of sugar. Advances to mills are increasing in the crushing centres in Bihar and Uttar Pradesh and it appears that this season's crush will be a big one. Finance for jute, grains and seeds has increased slightly. In the Calcutta interbank market money is easier. The call rate quotes 3 percent with lenders over.

The bill market has seen rather more activity, with a small number of gunny bills reported. Tea export documents have been rarer; it was a small auction this week and the end of the season is approaching. No substantial amount of remittance has been reported. The principal exchange rates are unchanged.

Bullion ruled firm on strong buying because of political developments in the Far East. Silver rose from the previous week's level of Rs. 161-2 to Rs. 164-3, quoted today. The ready price was 4 annas higher. The price rose from 73½d to 73½d in London but it was unchanged at 85½ cents in New York.

Gold increased from Rs. 93-2 to Rs. 95-4. The sovereign at Rs. 61-1 showed a gain of Rs. 1-9.

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 8th February totalled Rs. 1,59,25,000. The average rate of acceptance increased to Rs. 2-8-6 percent per annum. Tenders, at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent were allotted 84 percent. Tenders for another Rs. 1 crore of treasury bills will be received at all the usual centres up to the close of business on Monday 14th February 1955. During the week ended 4th February 1955 Government of India treasury bills for Rs. 9,94,00,000 were sold in favour of the Reserve Bank of India.

Rises of Rs. 14.10 crores and Rs. 9.29 crores in notes in circulation and the total note issue to Rs. 1231.82 crores and Rs. 1244.61 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 4th February, 1955. The expansion in currency was duly adjusted by raising foreign securities by Rs. 9.94 crores to Rs. 663.15 crores. This was done partly by a transfer of securities from the Banking Department in which balances held abroad declined by Rs. 4.68 crores to Rs. 71.72 crores. Notes held in the Banking Department were, consequently, lower by Rs. 4.61 crores to Rs. 12.79 crores. Deposits showed an all round decline. Deposits of the Government of India and other Government accounts fell by Rs. 5.19 crores and Rs. 1.41 crores to stand at Rs. 48.84 crores and Rs. 19.36 crores. Balances of commercial banks at Rs. 54.89 crores disclosed a drop of Rs. 3.25 crores due to better demand in funds. Investments declined by Rs. 48 lakhs to total Rs. 69.59 crores. Other loans and advances rose from Rs. 19.96 crores to Rs. 21.26 crores, of which advances to scheduled banks against usance bills were Rs. 4.59 crores (Rs. 3.57 crores). The total amount of such advances was Rs. 4.39 crores since 1st January, 1955.

The return of the Imperial Bank of India for the week ended 28th January, 1955, shows a fall of Rs. 2.37 crores in total deposits to Rs. 231.93 crores. Investments in Government Securities are up by Rs. 5 lakhs to Rs. 99.26 crores, while other authorised investments remain unchanged at Rs. 11.45 crores. Loans, cash credits and overdrafts have increased by Rs. 3.02 crores to aggregate Rs. 98.76 crores, while bills discounted and purchased have decreased by Rs. 20 lakhs to stand at Rs. 6.99 crores. Cash and balances are, in consequence, shown at Rs. 29.22 crores or Rs. 5.56 crores less.

The statement of the position of Scheduled Banks for the week ended 28th January, 1955, discloses Demand and Time liabilities at Rs. 579.97 crores (Rs. 10.24 crores on account of borrowings from Banks) and Rs. 370.43 crores (Rs. 2.91 crores) compared with Rs. 582.91 crores (Rs. 10.79 crores) and Rs. 368.61 crores (Rs. 2.83 crores) respectively in the previous week. Cash has increased by Rs. 99 lakhs to aggregate Rs. 33.94 crores, while balances with the Reserve Bank have decreased by Rs. 3.89 crores to stand at Rs. 57.88 crores. There is a rise of Rs. 43 lakhs in investments to Rs. 352.79

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 11-2-55

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
11-2-55	11-5-55	1,00.00	Rs. 2-8-6%
4-2-55	4-5-55	1,00.00	Rs. 2-8-3%
29-1-55	29-4-55	1,00.00	Rs. 2-8-3%
21-1-55	21-4-55	1,00.00	Rs. 2-8-3%
14-1-55	14-4-55	1,00.00	Rs. 2-8-0%
7-1-55	7-4-55	1,00.00	Rs. 2-8-0%
17-12-54	17-3-55	1,00.00	Rs. 2-8-0%
10-12-54	10-3-55	1,00.00	Rs. 2-8-0%
3-12-54	3-3-55	1,50.00	Rs. 2-8-0%
26-11-54	26-2-55	1,50.00	Rs. 2-7-8%
19-11-54	19-2-55	1,50.00	Rs. 2-7-7%
12-11-54	12-2-55	1,50.00	Rs. 2-7-8%

Monthly Maturities (000's omitted)

February, 1955	4,50.00
March, 1955	4,00.00
April, 1955	4,00.00
May, 1955	2,00.00
Total	14,50.00

crores. Advances and bills discounted at Rs. 559.97 crores reveal an increase of Rs. 4.52 crores. The ratios to total liabilities of cash and balances and of advances and discounts, are, in consequence, shown at 9.7 percent and 58.9 percent against 10.0 percent and 58.3 percent.

Government Promissory Notes of the following loans interest on which falls due for payment during the months of March and April 1955 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for payment of interest from the 16th February and 16th March, 1955 respectively.

Central Govt. Loans due for payment:

March	April
2½% 1976.	3½% 1966-68.
4% 1960-70.	2½% 1955.
4½% 1955-60.	3% 1970-75.
3% Con. Loan 1946.	3½% N.P. Loan 1964.
3% V.L. 1957.	

State Govt. Loans due for payment:

March	April
3% U.P. 1961-66.	4% Hyderabad State Devl. 1963.
3% U.P. 1960.	
3% Bombay 1955.	
3% Madras 1955 & 1956.	
3% Madhya Pradesh 1955.	
3% Bombay 1956.	
3% Madhya Pradesh 1956 & 1964.	
3% Madras 1960.	
3% West Bengal 1962.	
3½% U.P. 1962.	
3½% Madras 1962.	
3½% Bombay State Devl. 1962.	
3½% Madhya Pradesh 1962.	
2½% U.P. 1961.	
2½% Madras 1961.	

Holders of the loans are advised to lodge their holdings well in advance of the due dates to facilitate delivery of their securities and interest warrant on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of December 1954, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	25	184
Western Pakistan	7	2
Other Countries	11	45
	53	231

Total trade amounted to Rs. 284 lakhs. Re-exports and trade in treasure were nil. There was an adverse balance amounting to Rs. 17 lakhs.

THE NEW PHASE IN BRITAIN'S FINANCIAL POLICY

USE OF BANK RATE TO CURB INFLATION

WHILE observers analyse the probable effects of last month's rise in the London bank rate, and disagree on their findings, one simple fact

FOR FRIENDLY SERVICE on the ground and in the air

To Colombo. To Europe. To and across the U.S.A.

TWA offers friendly courteous service aboard the world's largest fleet of Constellations—pressurised and air-conditioned for your comfort.

- One-class services throughout TWA's system, serving over 80 cities in four continents.
- Million-mile crews... specially trained cabin attendants... provide unvaryingly high standards of efficient courtesy.
- Fine meals, generous free baggage allowance, luxurious stretch-out comfort... and many other features at low, low fares!

stands out. A phase of British monetary policy has ended, another begun. We are now in Phase Three of the "new monetary policy" initiated by the present Chancellor of the Exchequer, Mr. R. A. Butler, in November 1951: dearer money, then cheaper money, now dearer money again. Mr. Butler's first act was to raise bank rate from 2 percent to 2½ percent, thereby signalling an end to the cheap-money era of his socialist predecessors, Dr. Dalton, Sir Stafford Cripps, Mr. Gaitskell. Of more practical importance than this rise in bank rate was his curtailment of the basis of credit to make bank rate effective and to tighten the economy. Both moves were parts of a permanent flexible-money policy, which is not related specifically to "dear money" or to "cheap money" but can give effect to either. A few months later, in March 1952, the process of monetary restriction was carried a stage further with a sharp rise in bank rate to 4 percent. That act, significantly related to the Budget, was the culmination of the new Government's drastic moves to overcome the crises—reflected especially in the balance of payments—that had afflicted the country intermittently since the end of the war.

The cure worked (there were, of course, other factors assisting it), and the period of stringency was symbolically ended by a reduction of Bank rate to 3½ percent in September 1953—nicely timed to commemorate the crisis that devalued sterling just four years earlier. But this change was more than a symbol: it was also a demonstration of the flexible-money policy working the other way. Some people had said that the cure was too effective. The stringent monetary policy (again, with other factors assisting) had converted inflation into deflation, albeit mild, and a gentle stimulant was needed. Perhaps the most controversial act of the present Chancellor's monetary management was the next reduction of bank rate, to 3 percent, in May 1954. By then the recovery of business was confirmed, and a further stimulant seemed not merely unnecessary but positively risky. In some quarters, indeed, the Chancellor has been blamed ever since for disturbing the delicate equilibrium and so renewing, some months later, the old anxiety about inflation and the balance of payments. But it must be said in extenuation of this act that it was forced upon the authorities by the lowering of market rates: for in the flexible-money policy the difference between bank rate and market rates must not vary widely. It is paradoxical that this reduction of bank rate, which may have done harm internally, resulted partly from the world's confidence in sterling, which brought foreign money into London and forced down market rates.

Waning Confidence

That confidence, unfortunately, has been much less apparent in the past few months, and there have been various danger-signals in Britain to justify the world's caution. On an expanding credit-base, with money circulating much more actively than in recent years, industry and internal trade have expanded to the point where import and export trends are clearly diverging—the former upward, the latter static. There was no suggestion of a new crisis in the near future, but the balance of payments could have run into difficulties during 1955 if no action had been taken. It has been said that the authorities have, again, only followed the market, and in a technical sense they have, indeed, done little more than bring bank rate into line with market rates that had been rising for many weeks. It can, however, be argued that bank rate was operating in advance of itself: the market, seeing the warning signs, had anticipated a rise in bank rate. The purpose of a flexible policy is to adapt credit to the present and immediately foreseeable circumstances. It is therefore, perhaps, illogical to blame the authorities for having done no more than the immediate circumstances required, and a ½ point rise in bank rate is certainly the minimum required. The situation is delicate, for it cannot be helpful in the long run to check industry when it is raising its output to new heights. The task is to divert production—a small proportion of total production—from the home market to the export markets, and to exercise a little restraint on imports without perceptibly narrowing the basis of international trade.

There is no reason to assume that the authorities themselves believe that January's gentle warning will be enough. They are content to move gradually, for there is obviously no crisis and therefore no need to repeat the drastic actions of 1951-2. But the trends are somewhat ominous, and it is necessary to adjust them before serious consequences develop from them. In the first phase of the "new monetary policy" bank rate was raised twice: in the second phase it was lowered twice. Experience of the flexible policy may therefore suggest that bank rate will be raised a second time in the third phase. However, as in 1951, the authorities may be equally concerned with restricting the basis of credit. Technical operations in the money market could have the desired effect, or—as in 1951—the liquid resources which are the basis of the banks' lending could be curtailed by issuing bonds to replace some of the Treasury bills outstanding. Alternatively, the Chancellor of the Exchequer may be relying on the Budget as a corrective. The budgetary position in this last quarter of the fiscal year is much more favourable than Mr. Butler estimated last April, and it appears (though forecasts are precarious) that an ordinary surplus of some hundreds of millions of pounds will be realised, instead of the nominal £10 million which the Chancellor estimated. Months ago Mr. Butler was uttering warnings that expectations of appreciable relief from taxation were premature, and it is possible that he will present an austere Budget a few weeks hence. Anyway we shall not know the shape of his financial policy until the Budget is presented.

A CERTAIN eminent gentleman has been mentioned as a possible successor to Mr. T. T. Krishnamachari at the Commerce and Industry Ministry. The mention surprised me: so did the favourable terms in which the possibility was discussed at an industrialist's lunch table over the week-end. However, I am less interested in guessing and tipping than I am in the following description of the eminent gentleman; readers might take pleasure in seeking to identify him, regardless of whether he eventually does become Commerce and Industry Minister: "He is handsome in a diabolical sort of way. When he smiles—and it is an irresistible smile—he conjures up visions of Mephistopheles gloating over a phosphorescent crystal ball. His face is never at rest. His eyes have a fanatical gleam. His eyebrows, his aquiline nose and his hands are almost as voluble as his lips. His profile is the sculptors' dream; his restlessness their despair. He loses something of the arresting quality of his looks when he begins to walk. Then, hampered by a disability, he becomes hunched and a little round-shouldered. When his foot is not troubling him he moves with quick, short steps, his walking stick dangling from his arm in front. He never stays unnoticed. His voice, his appearance, his views, all conspire to make him the centre of attention. At banquets, when everybody else is eating he will sit in morose silence without touching a morsel of food. He has no small talk and will snub any attempt at frivolity or familiarity."

Sometimes a politician will betray in an incidental remark the whole ideological foundation of his movement, and there is then more to be learned by reflecting on that one remark than by studying volumes of theory. I suggest that Comrade Krishnamachari did this on Tuesday when after sacking Malenkov and appointing Bulganin he said: "We are confident that the Government headed by Comrade Bulganin will secure the development of heavy industry and on this basis the development of light and food industries and agriculture..." The notion that a country must first build heavy industries without worrying, "for the time being," about consumer industries and agriculture is not only the essence of Stalinist economic policy but also the characteristic approach of all officials and bureaucrats in so far as they are in disagreement with private industrialists. It is the favourite error of doctrinaires and dogmatists because it is founded on a typical intellectualist fallacy: consumption is the end of economic activity, consumer industries depend on heavy industries, therefore we must make a start with the heavy stuff and worry about consumers in the five year plan after next. Against this, what private industrialists urge (not in Russia of course where they don't exist, but in a country like India) is that heavy industry must develop not only in phase with, but on the basis of, an expanding consumer demand. And since it is the thousands of small and medium private firms that serve consumer demand, it is they that must have the leadership in economic development. To stifle the scattered activities of private enterprise and give the lead to bureaucratic heavy industries always produces the costly mistakes (and subsequent oppression) of Stalinism. Russia seems now to be reverting to this mistaken policy, after a timid change of emphasis by Malenkov. In India of course we have avoided the extremes of the bureaucratic fallacy, thanks to the agricultural bias of the first plan and to the relative freedom of private enterprise in the mixed economy. But would it be wrong to see some influence of this fallacy in the recent passionate interest in ten million tons of steel? Or in Mr. Krishnamachari's defeat? I am naturally not

A DITCHER'S DIARY

suggesting that we have a budding Krushchev somewhere in Delhi, but we do at the present moment see more interest in Government-run heavy industry than in the security and freedom of the private firms that serve the consumer directly.

It was reported in connection with the proposed legislation about lifts that there are 500 of them in West Bengal. This does not seem to be very many, and indeed it is very few when you consider that probably almost half of them are not in use at any one time. There are numerous office buildings and blocks of flats in Calcutta that have two lifts of which one is always idle, and the one that is working is intended, we are informed in impolite notices, for upward travel only. Some ingenious landlords have carried this meanness to the extent of making it impossible to summon a lift to an upper floor, lest a tenant or visitor be spared the exertion of walking down several flights. And it frequently requires a display of bullying and cajolery to get a liftman to accept a passenger for the first floor. This stinginess is a relic of the war years for which there is no longer any justification at all. There has never been a shortage of electric power for lifts, and the scarcity of steel cables that was felt during and just after the war has long since disappeared. Surely it is undignified for a big office to confront a visitor with penny-pinching rudeness the moment he sets foot on its premises.

"Should I take an umbrella to Hong Kong in July?" "Is evening dress usually worn at a week-day party in Dar-es-Salaam?" "How long does it take to get a shirt washed in Montego Bay, Jamaica?" Petty questions all—but they take on an awesome importance when one is about to leave for those places. They can now be authoritatively answered by travel agents throughout the world with the aid of a booklet called *Clothing Hints for B. O. A. C. World Travellers*. Its 40 pages include not only advice on what clothes to take to some 60 cities in various parts of the globe, but comprehensive information on their climate and, shopping, laundry and dry-cleaning facilities, and in many cases, on local clothing customs and the availability of toilet goods and cosmetics. Design-availability by travel agents, though not for issue to the general public, the booklet adds to the standard information some useful words of warning here and there. It advises, in some sections, that certain hotels do not supply soap and, in the Tokyo section, that "while cosmetics are fairly plentiful, entry, that is used in Europe are difficult to obtain." The number of places where the wearing of shorts is frowned upon is considerable, apparently. In-tending travellers, particularly women, are cautioned on this point in regard to widely separated points, among them Basra, Damascus, Bermuda, Lisbon, Madrid and Tokyo. In Delhi "silk shirts are definitely not recommended as they become transparent when wet"; unless a bush-jacket is worn, "it is usual to wear a tie when making business calls"; and "if the call is to be made on a senior official, it is usual to wear a light washable coat also." The booklet offers some comfort to armchair travellers confined to Britain for the winter, for while it does not omit to recommend an umbrella "in all seasons" for visitors to London, it mentions the desirability of raincoats and umbrellas for several other places too, including Colombo, Auckland, Accra and Sydney.

Of the making of forgeries there is no end. As long as the market is willing to pay fantastically

high premia for the handwork of this or that particular individual, there will always be people ready to fake an imitation that is so good that they then cannot resist adding the master's signature and claiming the extra reward. And while the fraudulent intention of course remains reprehensible, one is often tempted to wonder whether it makes much difference. I am led to this highly immoral opinion by reading of the criminal cases now going on in Switzerland about the faking of old master violins. The Italian Chamber of Commerce in Zürich has set up a body with the curious title of "Committee of Experts for the Examination of Old String Instruments" and in co-operation with the scientific service of the Swiss police it is studying fake violins (fiddled fiddles, I suppose you call them) with the aid of fluorescent photography, ultra-violet rays and micro-chemical analysis. I can only assume that someone has already tested them by playing them, and has found that they are as good as their models. Since concert audiences do not normally equip themselves with ultra-violet ray guns and microscopes, these exertions can scarcely be for their benefit. The fact seems to be that the forgers were sometimes as good as Stradivarius, just as the Dutch forger who hoodwinked Goering was as good a painter as Vermeer. The violin market has been full of fakes for hundreds of years. The cleverest copyists were at work in the 18th and 19th centuries and they produced instruments of excellent tone quality that are still doing service (often as genuine Stainers or Strads), so it cannot be said that they suffer by comparison with the real articles by having a shorter life. I daresay I would take a more puritanical view of the case if I were one of those who had paid three lakhs of rupees for a fiddle that later turned out to be spurious—as many of the instruments examined in Zürich have turned out. But then even a real Stradivarius used to be sold when brand new for about four pounds. The violin collectors should emulate the philosophic calm of the art critic who remarked that Vermeer painted forty pictures of which three hundred were in the United States.

I think the Bank of America have actually had a representative in Delhi for quite a few months though they are just this month drawing public attention to their arrival on the Indian scene. This colossal institution compressed into one man's lifetime a story of expansion that has taken other banks in the old world centuries to write. One could say, without paradox, that it was a typically American achievement—indeed a typically Californian achievement—especially because it was to so great an extent the work of an Italian migrant, who accomplished with his own energies a success story that must have been dreamed of by millions who crossed the Atlantic and then headed West. Romance apart, the Bank of America now has combined resources of well over nine thousand million dollars—which is romance enough in its way. It is represented in Delhi by Mr. M. R. Ahuja whose last assignment in a distinguished diplomatic career was to the Indian Government outpost in San Francisco, where the Giannini bank has its head office.

Mr. Leslie Hale, M.P., has written the following witty and sensible letter to the editor of the N. S. & N.: "Sir,—It may have escaped the attention of many of your readers that this year will mark the 81st anniversary of the birth of the Rt. Hon. Sir Winston Churchill, K.G., M.P. Would it not be possible appropriately and economically to celebrate this notable occasion by offering to take The Portrait back?"

THE DITCHER.

Announcement

A fully equipped PROCESS DEPT. is being set up staffed by FACTORY TECHNICIANS FOR USERS OF

Multilith

The "MULTILITH" is a completely automatic offset machine, specially designed for use in the office by non-technical operators. It produces the highest quality stationery and sales literature. In monochrome or multi-colour. Paper or metal masters easily prepared by hand or typewriter, provide for the faithful reproduction of manuscript, typing, pencil pen-and-ink and brush work, carbon-paper tracings etc. Photographically-prepared metal masters are used for the production of half-tone and line illustrations, text matter in standard type faces and all classes of work within the scope of offset lithography.

The Managing Agents are entitled to charge and be paid all the actual expenses of the staff employed for the Company's business and other office incidentals such as rent, stationery, conveyance, telephones, postage, telegrams, electricity, etc. The Directors may from time to time agree with the Managing Agents to pay to them fixed amount for all or any portion of establishment in Calcutta

* In the Chairman's address at the last Annual General Meeting he referred to the heavy burden of Establishment Expenses, a problem to which your Directors have given their close attention for a very long time. Notable reductions in the expenses of each of the three branches have been made but it is vital that expenses should be reduced further and to a very great extent. This can only be achieved if the company has a useful day's work for all the men it employs. There is no longer any possibility of retaining an unprofitable department simply to provide employment. Moreover, the generous scales of basic salaries and service conditions established in the past for clerical and subordinate staff adds to the present problem particularly in respect of the Calcutta branch and this too in spite of a substantial and progressive reduction of staff in the last two years.

"The closing of the Calcutta branch is not the only step which will have to be taken to surmount the difficulties of the Company. The Board has under consideration the strengthening of the business of Bombay and Madras branches and, while plans will necessarily take time to develop and yield satisfactory results, it is hoped that those remaining branches will be able to bring back prosperity to the Company. A proposal will also be made to you at the appropriate time for a capital reconstruction with a view to writing off the losses incurred, so as to bring the Company back on to the dividend-paying list as soon as profits are available."

RELIA NCE showed a profit of Rs. 2.64 lakhs against the previous half-year's loss of Rs. 1.31 lakhs. The ordinary dividend has again been passed. Preference dividends for two half years ended March and September, 1954, have been paid. Depreciation absorbs Rs. 50,000 (same). A balance of Rs. 18,872 is carried forward, compared with a debit balance of Rs. 1,05,123 brought in.

PLANNING FOR STEEL WITHOUT PLANNING FOR COAL

SERIOUS WEAKNESS OF PRESENT CONSERVATION POLICY: CRITICAL SITUATION IN SIGHT

By A. Farquhar, A.R.T.C., A.I.M.M.E., M.G.M.I. (Ind.)

Will India be able to produce enough metallurgical coal to support her ambitious plans for steel making? Or is steel being planned for while the basic industry is left sink toward exhaustion by a misguided policy of restriction? Mr. Farquhar argues here that unless coal policy is revolutionised a critical situation lies ahead.

THE demands for coal, ferrous and non-ferrous minerals during the Second World War led to the extensive exploration and exploitation of all accessible sources of supply. If events had taken the same course as after the First World War, a decline in these activities could have been expected after destruction had been made good and stocks replenished. Destruction, however, was on a much greater scale, which carried post-war activities over a longer period. Just as the world was reaching the stage of normal requirements once more and a decline in demands was evident the unfortunate incident in Korea commenced in 1950, and continued the pressure and forced prices up to unprecedented levels. This gave a fresh impetus to the search and production of minerals of all descriptions. Wars and preparation for wars have to be paid for and this can only be done by extending economies, austerity and hard labour in between war years. The great industrial countries therefore have largely developed their own resources and made greater demands on external sources. Other free and independent countries, in an effort to achieve self-sufficiency, have been compelled to industrialise and develop their own. Consequently, a great strain has been placed on the available world supplies resulting in an ever increasing tempo in the search and production of all kinds of minerals. This has been accompanied by able depauperation in prospecting, development and more methods on an unprecedented scale.

With the exception of the West Bokaro colliery project, few, if any, new collieries in India have been opened up for the production of coking coal. Fewer still have been mechanised to the same extent to give an output of over 100 percent more per man shift than any of the other collieries now working. Even this outstanding exception is not up to the standards of more progressive countries, and it would appear that we are still in the days of the pick and shovel, and becoming more and more dependent on inferior coals from outcrop and shallow workings where capital requirements are negligible. If we compare the capital invested in this primary industry during the last 20 years or so with that invested in the new secondary industries it is apparent that something is wrong somewhere. If may also be compared with the thousands of millions of pounds being spent by the National Coal Board of Great Britain to mechanise and improve the coal. It is the purpose of this article to draw attention to some of the adverse factors which will prevent the supply of adequate quantities of good coking coal to the new steel plants and also to the existing ones. It has been said that this revolution in the great industrial countries has been made possible by the following:—(a) Developments in geophysical and other means in the search for minerals. (b) Tungsten carbide steel which has greatly accelerated development and production methods. (c) Roof and side bolting for support of roof and sides which has made mechanisation possible and more economical. (d) Mechanisation on a multifarious and intensified scale.

India, having only achieved independence in 1947, has not followed the course of events in other countries to the same extent, but nevertheless has made marked progress in the geophysical search for minerals and in the introduction of tungsten carbide tools. Roof and side bolting is largely unnecessary in view of the good conditions prevailing in our mines and hence we cannot claim any advancement in mine support. As far as mechanisation is concerned we have the best conditions in the world but have failed to take advantage of the experience of other countries. This has been due to the inability of the railways to meet the requirements of the coal industry, the labour policy pursued by the Government and the restrictions imposed by the Coal Board. Also, if I may say so, the disinterestedness of mining engineers and officials who are complacent in their attitude to modern methods. I do not wish at this stage to discuss all these restraints on mechanisation but attention in passing is merely drawn to a few of them and to the failure to achieve successful results from older collieries and any new developments, which have taken place and where modern methods have been introduced. Nevertheless, since the above have been the main factors in preventing the success of mechanisation of our mines, it is suggested that Government should institute an enquiry into the conditions and take the necessary remedial measures in order to facilitate the successful application of modern mining methods to the production of coal, particularly coking coal. In the event of failure to do so, it is doubtful if the second five year plan of national development will be successful as far as steel production is concerned.

Fears for Coking Coals

The revolution in India has been mainly due to causes not so apparent in other industrial countries, namely, the great danger prevalent of the

exhaustion of our resources of coking coal, and too much and belated importance has been given to it. This was apparent many decades before Independence was achieved and demands had been made from time to time for conservation. It had been estimated that only about 2,000 million tons were available, out of which only 800 million tons were usable for making satisfactory metallurgical coke with ash below 21 percent. The amount is actually much less than this, since the larger proportion of the latter figure is also too high in ash as produced in indiscriminate mining and rejections must be allowed for. Moreover what is more important is the rate of production to meet the increased requirements of the five year plan. The implication of this is that, if we should aspire to produce steel on a comparative basis with the U.S.A., and which the reserves of other raw materials warrant, the coking coals would last only for 5 years or so. On a corresponding scale with Great Britain, the period would be 25 years, provided the rate of production was expanded. With commendable foresight, the Tata Iron & Steel Co. undertook research programmes in coal blending and beneficiation in 1938 which led to the ordering of two washing plants in 1946 and which have now been in operation for a few years of successful results. This research work was continued under the Fuel Research Committee and resulted in the issue of a report in 1947, which proved conclusively that the ash in all the Jharia and West Bokaro coking coals could be reduced in such a manner as to make them usable for metallurgical coke making. Research at Jamshedpur had also shown that from 20 percent to 40 percent of non-coking and semi-coking coal, mixed in a suitable blending plant with good coking coal, could yield a satisfactory metallurgical coke. Research in other countries, particularly in the far west of the U.S.A., where good coking coals had to be transported 2,000 miles by rail, had shown that large proportions of non-coking and semi-coking coal from local sources could be mixed in the blend and produce hard coke by special processes.

A satisfactory coke has been produced in Mexico using 40 percent coking coal with 60 percent non-coking coal. Tests carried out by Koppers of Germany on similar coals have shown that good blast furnace coke was produced from 20 percent non-coking and 80 percent poorly coking coal. (See the reference to the exploration of the Oaxico Coal Fields in Southern Mexico, World Mining, November 1954). Similar results have been obtained in many other countries, and in some cases coke suitable under certain conditions has been made from non-coking coal. No finality has yet been arrived at regarding the possibilities of washing and blending, but it is safe to presume that with further research and the development of new coking processes, larger percentages of semi-coking and non-coking coals will be utilised for making metallurgical coke. Whatever future research may lead to, however, the low-ash highly caking constituent will be necessary in some degree, as long as the present blast furnace operational methods continue. Adequate reserves for this purpose may no longer be available unless washing is adopted on a general scale and this is where the next five year development plan will fail unless immediate steps are taken to instal more plants.

Shortage of Plant

The seriousness of the position may be more clearly evident when it is stated that even with the implementation of blending and washing the total quantities may still be lamentably short. Out of the 2,000 million tons of selected grades and Grade I coking coals stated to be available, 10 percent to 15 percent must be deducted for rejections, and an equal quantity for steam millings on processing on a washing plant. There will also be the heavy slurry losses and the total loss of middling steam coal to rejections unless the right types of plants are selected. It is safe to reckon on only 70 percent of the reserves being made available for coking purposes or a total of 1,400 million tons from these seams. Moreover, the figures have been assessed on inaccurate mine plans and very rough estimation which may eventually prove misleading. There is also the contingency of large parts of the reserves being impossible of recovery through damage caused by former exploitation and adverse geological conditions.

Even if we ignore these considerations the maximum that may be expected from selected and Grade I seams is 1,400 million tons. If we assume that, eventually, research and improved coking practices will lead to the blending of equal quantities of semi-coking and non-caking coals, then a maximum total of 2,800 million tons may be available which, in my opinion, is an optimistic view of things. This is a dangerous position for a country planning an expansion of its economy on

a long-term scale, since all these reserves will only be usable provided there is a marked change in coking and blast furnace practice or washing adopted on a general scale. Fortunately, there is an adequate reserve of potential first class coking coals in the Jharia seams, from Grade II to Grade III-B inclusive, which may amount to many times more than is now available in the other seams. It is only by coal beneficiation on the lines established by the Tata Iron & Steel Co. Ltd., however, which will make these reserves available for the future needs of the country.

Whereas the better grades of seams may yield 70 percent of good coking coal, the yield from the more inferior grades may only be 40 percent to 60 percent with a corresponding amount of middlings and rejections. This, no doubt, will alarm colliery owners who may have to produce under these conditions, but it should give an assurance to Government that this great reserve exists and may be utilised as and when economic conditions permit. Meantime, it may be stated that other countries with more impurities in their seams have been compelled already to meet these conditions and 30 percent rejections are common and in rare cases amount to 50 percent of the total coal as in that of the Allied Chemical & Dye Corporation at Tralee, West Virginia, U.S.A.

Blending and Beneficiation

From the above it will be seen that research into coal blending and beneficiation, instituted in the first instance by a private concern and later continued by the Fuel Research Committee, and still later by the Fuel Research Institute, has revolutionised the whole of the coking-coal industry and the processes only await more general application. In fact this revolution will eventually apply to all classes of coal production. That this will materialise in due course is evident, and is causing no small concern to the production side of the industry. Before this can prove a success however, there must be rationalisation in the methods of production. Capital must be attracted to the industry or made available by the Government on attractive terms. Specifications must be drawn up for sizes and quality. Labour policy and the wages structure must be placed on a rational basis. Railways must be able to cope with the specialised needs of the collieries and above all a reasonable return on the capital invested must be assured. When all these have been accomplished the prospects for the expansion of the steel industry will materially improve, particularly with the developments of low-shaft furnaces, which will enable more inferior types of coke to be used.

In fact, it may be said that with washing, blending, new carbonisation methods, and the development of low-shaft blast furnaces, it is unnecessary to worry about our future coking coal supplies. Sir J. C. Ghosh in his speech at the annual dinner of the Mining, Geological and Metallurgical Institute of India, in December last year very opportunely drew attention to the march of science and its effects on the present and the future. In the light of what has been accomplished already in the last decade it is now necessary for the Government to re-assess the potential resources of all raw materials for expanding the economy of the country. I have, on former occasions, drawn attention to the necessity of designing and operating our future plants on the conditions existing here, and not on those prevalent in any particular country, where the nature of the raw materials may be different.

Effect of Conservation Legislation

In view of the late action taken for the conservation of the good coking coals and also in view of rapidly developing the steel industry, we must now consider if recent legislation for conservation is not too rigorous and may prove uneconomic, dislocate the industry, force the closure of collieries and result in the loss of more reserves. A Coal Board has been formed which has imposed restriction on the production of selected and Grade I coking coals, compulsory stowing, and is also likely to impose compulsory washing. All this has been done in an age when, as Sir J. C. Ghosh points out, the march of science has enabled mankind to make better use of raw materials and in certain cases, replace them by others. He further points out that the present generation should not conserve for the future but let further scientific progress take care of this. These advice should be carefully noted by the Government, but let us also consider the probable effects of the measures already enforced and those impending.

Conservation of the coal reserves was essential provided action had been taken several decades ago. Throughout the long period of public agitation the best seams were being destructively exploited. The peculiar geological conditions under which they occurred and the low prices which prevailed in India made destructive operation an economic necessity. There was no margin in the system of price fixing by the Railway Board (the principal consumers) to enable conservative measures to be adopted. This is old history and need not be discussed. The fact remains that, with the exception of a few outstanding cases where voluntary conservation had been embarked on, the major portion of the good coking seams in Jharia had been so badly damaged that the position was reached where conservative measures could not be applied in a practical or in an economic manner. Consequently, when legislation was eventually enacted, many collieries could not comply with it in spite of the inducement of subsidies from the Sand Stowing Board and latterly from the Coal Board.

For conservation in coal production to prove economically successful it must be applied right

from the beginning of a venture. To apply it at a later stage, particularly the exceedingly late stage in the case of the Jharia Coalfield, is neither a practicable nor an economic proposition. These aspects of the case do not seem to have had any consideration from Government since I am not aware of any detailed survey having been made into the conditions pertaining to the older collieries. Of course, the maintenance of mine plans are compulsory under the regulations but there are no rules to compel strict accuracy unless specifically called for by the Chief Inspector of Mines. Moreover, there does not appear to be any provision under the Mining Regulations to maintain sectional drawings in order to ensure that the regulation heights of galleries have been complied with. I venture to say that if offset plans and sectional drawings were made compulsory the estimated total reserves in the selected and Grade I seams would be found to be very much less than hitherto shown. Cases have been known where the estimated stowing requirements for conservation were 14 to 2 tons of sand per ton of coal to be produced. After commitment to the capital expenditure and a few years of experience of practical operation, it was ascertained that the requirements were nearer 4 tons of sand and even more per ton of coal produced.

Expense of Conservation

The schemes obviously, had been drawn up on a "rule of thumb" basis and no allowance had been made for the replacement of the coal extracted in previous years or for consolidation of excessively robbed areas. There are many such cases under which stowing for conservation is being considered or already being implemented on the understanding that the Coal Board subsidy will balance the additional costs of production. Others are aware of the risks attached to such schemes and are reluctant to undertake them even with the prospect of the Coal Board's assistance and prefer to close down their collieries or dispose of them. The necessary conditions for economic operation were shown in my paper published in the Transactions of the Mining, Geological & Metallurgical Institute of India in 1928 and even with the low labour rates and material costs of that period the scope of conservation under the conditions referred to above was extremely limited. It is much more limited now in view of the excessive coal extraction from these seams since that time, and also on account of increased material and labour costs. Indeed it is a matter for official enquiry as to how far the Coal Board is justified in subsidising such uneconomic schemes at the expense of the coal consuming community. In fact, it amounts to the subsidising of future generations at the expense of the present and appears to be in opposition to the well-reasoned remarks of Sir J. C. Ghosh. Why make the present generation of consumers suffer for the sins of the past or subsidise the future at the expense of the present?

It would appear that those in control of policy have been inadequately briefed about the real implications of conservation. It is not conservation to recover the ultimate 20 percent or 40 percent of coal from a "slaughtered" colliery at a prohibitive cost and subsidise the producer at the public expense, for this is what it amounts to. It is real conservation, however, to apply stowing measures in new ventures and prevent the damage which was done in the older ones. In this manner stowing will be comparatively inexpensive and bear less harshly on the build-up of existing and also new industries. There may also still be suitable areas in the older collieries where such measures may be adopted at reasonable costs but no final decisions should be taken or orders issued unless based on offset surveys and gallery sections which would give a reasonable indication of past coal extraction and the balance which could reasonably be recovered. Another aspect of ill-considered schemes of stowing is the demands which may be made on the limited resources of stowing material and transport. These should be reserved for schemes which will provide maximum returns. The sand resources for Jharia Coalfield was a most controversial question long before D.V.C. schemes were thought of. No one can predict, with any degree of certainty, what effects the river dams may have on sand replacement.

The consensus of opinion appears to be that these will be adverse and sound reasoning warns that in addition to coal conservation there should be sand conservation as well. It is doubtful if there is sufficient sand already available to consolidate all the existing galleries in the Jharia Coalfield without the production of an additional ton of coal. Let it not be overlooked that a long-term of stowing may be necessary for consolidation purposes in many collieries before a single ton of coal can be produced from depillaring operations (see the paper above referred to). This supports the contention that sand should not be dissipated in the older collieries where prevalent methods of operation are giving reasonable recovery of coal. This brings us to conditions which the Coal Board has failed to clarify. What is reasonable recovery from a coal seam? Is it 50 percent or 80 percent? It is known that under similar conditions in the U.S.A. and in England, without stowing 50 percent to 60 percent recovery may be good practice. Even with stowing not more than 90 percent may be recovered. Under the former methods in India, without stowing, up to 60 percent has already been recovered in the gallery-driving stages and a considerable further quantity has been extracted by robbing during depillaring stages, and the total amount recovered may be comparative with bad systems of stowing. In such a case would the additional recovery of coal by sand stowing during the

depillaring stages justify the vast expenditure necessary or the depletion of the sand resources?

All this leads to the conclusion that stowing should not be enforced except in practicable and economic conditions. Again the limiting heights of seams for sand stowing have not been specified although it is well known to practical men that reasonable recovery can be obtained in seams up to 12 feet in thickness provided the statutory measures other than stowing are complied with. These limiting heights, no doubt, depend on the geological conditions and other factors but, to avoid discrimination, should be clearly defined. In view of all these circumstances it is a question as to whether the restrictions on outputs of the coking coal collieries is justified. In many cases it amounts (to use an old expression) to "locking the stable door after the horse has been stolen" and just as we are entering a period when plenty of other "horses" may be available, as pointed out by Sir J. C. Ghosh.

Limited Benefit of Conservation

From other important aspects such restrictions are inadvisable at this stage apart from the question of economics. This belated attempt at conservation will not halt or extinguish collapses and fires and loss of reserves in thick seams unless production of coal is decreased to a small fraction of the stowing material put in. Where stowing is practically possible in an efficient manner, this alone compels restrictions in outputs and no statutory compulsion was necessary to impose them. All that was necessary was to make stowing compulsory only in those cases where it would be economic and subject them to the rigorous supervision of the Coal Board and the Department of Mines. Other collieries where exhaustion was imminent or robbing had been too great in former times should be allowed to die a natural death, after recovery of the maximum possible without stowing or by voluntary improvised methods. Another aspect is the manner in which declining production, either caused by natural decline or by compulsory restriction, is being replaced. This is chiefly from the hitherto virgin but inferior coal seams. To all intents and purposes the methods

employed are merely a perpetuation of those which were the cause of the destruction of the original good seams. In the course of 20 or 30 years or so, similar difficulties will arise but may not become particularly evident until all outcrops and virgin areas have been fully exploited.

It may be pointed out that the mining regulations now control the permissible width and height of pillars and methods of depillaring but these cannot be enforced in the absence of compulsory provision for accurate mine plans and sections. Indeed the exploitation of these more inferior seams appears to be continuing on the same line which resulted in the disastrous loss of reserves in the good seams and will lead in the future to further damage to the Jharia Coalfield. Here also a revolution is necessary in order to devise new methods for the ultimate extraction of the maximum amount of coal from each seam. Due to the primitive methods of production the producers contend that the operations are not economic since the units are too small to adapt to modern mining methods. This can only lead to the same disastrous results which overwhelmed the original seams. In spite of all this production from primitive and small mines the increase barely keeps pace with the decline from better grade collieries. It has been said that the average ash in coal despatched has increased by 6 percent in the last decade and continues to increase with the rising proportion of inferior coal. The total increases noted in the post-war years have been greatly offset by the fall in the calorific value and increase in ash in the coal and it would appear that a vicious circle has been achieved and unwarrantable burdens placed on railways and industries. This will continue until modern methods of coal production and preparation are enforced or at least encouraged by Government, guaranteeing the necessary facilities.

Scope for Enquiry

It would appear that there is urgent scope for an official enquiry at a high level into the trend of developments in the coal industry in order to compare the achievements with the revolution effected in other countries. Meantime what effects are the Coal Board's restrictions going to have on the second five year national development plan? The quantity of coking coal available is gradually declining as a result of these restrictions but, a more serious decline is due to natural exhaustion, uneconomic conditions and threats of further collapses and fires in collieries. In spite of what has been alleged of the excess production of coking coal and its use or misuse by the railways for loco purposes, the major portion of it is too high in ash to make metallurgical coke which demands an ash content of less than 21 percent for prevalent blast furnace practice. Indeed the existing steel industry has the greatest difficulty in obtaining its requirements now and the position will become critical when the Rourkela plant comes into operation. Even if coking coal is diverted from the railways and washed, it will take a long time to obtain and install the necessary plants. Even if this is possible, it will give rise to other problems such as the disposal of the middlings steam coal from the washing plants. This will not replace the coal diverted from the railways and alternative supplies of loco coal will have to be developed. It has long been recommended that these developments should be on a regional basis in order to avoid unnecessary transport.

Doubtless, Government has all this in view and have taken it into consideration in the second five year plan. If they have, their apparent reluctance to assist the pioneers in coal washing in the disposal of their steam middlings is extremely disconcerting. This is particularly so since it has been clearly stated that the intention of Government is to encourage coal washing. It is trusted however that the requirements of the steel development plan will ensure more careful consideration being given to our coal reserves, their more economical and practical exploitation, transport and their preparation in the best interests of the country.

SCHEMES TO BOOST STEEL OUTPUT OUTLINED

PACT WITH RUSSIA SIGNED
(FROM OUR NEW DELHI CORRESPONDENT.)

THE Indo-Russian agreement on establishing an integrated iron and steel plant in this country was signed last week. As already reported, the project is intended to produce one million tons of ingots or 750,000 tons of end-products. Under the agreement, the Russians will submit a detailed project report. On the basis of this, separate contracts for prices and other conditions regarding the supply of equipment, as well as matters not covered by the agreement, will be negotiated. The Government of India will reserve the right to accept or not to accept the scheme outlined in the final report. In reaching its decisions, the Government will be assisted by the report of a team of Indian experts, who are due to visit Russia to study the working of the steel industry there.

The Production Minister, Mr. K. C. Reddy, explaining the agreement at a Press conference, unfolded the Government's steel development plans. He said that the target for production at the end of the second five year plan was six million tons of ingots as against the present total of 1.2 million tons and the post-expansion output of 2.2 million tons. The Government has already decided to double the capacity of the Rourkela project to one million tons. The Russian plant will manufacture one million tons and the proposed British plant another one million tons, which makes a total of three million tons for the three State-owned projects. Tata's plan further to expand their production by 500,000 tons has already been approved, while the Government is thinking in terms of a 500,000-ton plant in South India in conjunction with the lignite project. Mr. Reddy placed the target at the end of the third plan at ten million tons.

Meanwhile, satisfactory progress is reported on the Rourkela project. The Germans have submitted their detailed project report, which is being examined by the Government and Hindustan Steel Ltd. The project will consist of a coke oven, a blast furnace, steel works, time burning plant and a rolling mill. The rolled products in the first phase will include 115,000 tons of heavy gauge plates, 72,000 tons of medium gauge plates, 72,000 tons of strips, and 110,000 tons of cold rolled iron ore deposits of Talidh, which the German experts consider as the best available in the vicinity. Approximately 60,000 tons a year of manganese will also be required in the first stage, besides much lime stone and dolomite. The water required for the works will be obtained from the Brahmani river, while electric power, amounting to 40,000 k.w., will be available from the Hirakud hydro-electric power plant.

The project report recommends the development of various railway lines into double track routes, and the construction of new cross-connections between the deposits and the works to shorten transport distances. These plans need to be carried out simultaneously with the erection of the works, in order to guarantee efficient delivery of raw materials as soon as operations start. The project report also visualises the building of an airfield in the vicinity of Rourkela.

The layout of the town has been determined by the existence of two passes in the range of hills which provide convenient traffic connections between the township and the works, as well as by the need to divide the town into small sectors. The population of each sector will not exceed 6,000. Efforts have been made so to arrange each sector that it stands away from the main stream of traffic and is connected to the ring road by special cross-roads. Thus, the population will not be disturbed by traffic. Each sector will possess a dispensary, a branch post office, one or two schools with playing fields, a large public hall where cinema shows can be held, as well as a number of shops and handicraft workshops. Most of the buildings and installations of public interest have been concentrated in a civic centre located in the middle of the town. Public and private administration buildings, stores and shops stand in the central part, while higher schools, a museum, theatres, as well as the central hospital are grouped together separately. There will be an artificial lake in the middle of the recreation park. A sports ground is provided. The project report also deals with the problem of traffic, water supply, drainage and the small trades and handicrafts which are likely to grow up.

One thing appears to be clear—that the plan to double the capacity of the plant will not be made an excuse for delay in executing the project. The main point for decision is whether the additional production of 500,000 tons will be in flat products, for which some auxiliary machinery will be needed, or whether it will be in different products, such as axles, wheels and forgings. The capacity of blast furnaces, which are of 750 tons each, will have to be increased to 1,000 tons each. It is also proposed to have a small thermal power station of 15,000 k.w. as a standby. Half a million tons of steel will be manufactured by the open hearth process. It is proposed to produce the other 500,000 tons by the L.D. process. The second detailed project report for expanding the capacity to one million tons is expected in three months' time.

Some emphasis is laid on the training of personnel. Two hundred Indians, including 24 key personnel, are already under training in Germany.

A Director of Training has been appointed, and arrangements for training have been completed with Tatas, the railways and other private workshops. Foreigners may have to be brought on a short-term basis to expedite the training of Indian personnel. Meanwhile, a Krupp-Demag team is visiting the Bihar Institute of Technology, the Chittaranjan Locomotive Workshops and the Khargpur Technical Institute to survey training facilities and make recommendations on adapting them to the needs of the steel industry.

The Mysore Iron and Steel Works at Bhadravati might increase the production of specialised types of steel such as stainless steel.

Other Expansion Plans

The most important feature of the Production Ministry's second five year plan are the three one-million ton steel projects, estimated to cost Rs. 300 crores, at least Rs. 200 crores of which will be needed during the second plan period. Three fertiliser plants at an estimated cost of Rs. 75 crores, in addition to the expansion of the Sindri plant at an estimated cost of Rs. 8 crores, are also planned.

The expert committee set up to recommend whether a heavy electrical plant project should be started has in its report unanimously urged that in the interests of rapid industrialisation the project is necessary and that it should be in the public sector. Two project reports were recently submitted to the Government, one by Associated Electrical Industries and the other by Siemens, Associated Electrical Industries think that an investment of Rs. 10 crores on the project might yield a return of 5 percent after nine years. Siemens have placed their estimates at Rs. 13.6 crores for a plant to manufacture all ranges of equipment, starting from the lower ones. The Government will shortly finalise its decision and invite one of the firms to submit a detailed project report.

The lignite project in South India is due to be executed at an estimated cost of Rs. 60 crores. It has been decided to double the capacity of the existing DDT plant and to set up another one. A suitable site for the latter is to be selected from amongst four places in Bombay and one in Travancore. The installed capacity of the penicillin factory is also being increased. A project for the development of the Mandi salt mines to provide rock salt will be included in the second five year plan. It has been agreed in principle to build a dry dock at Vizagapatnam Shipyard at an estimated cost of Rs. 2 crores. It has also been decided to develop a coal mine at Korba in Madhya Pradesh.

Ministries Prepare for Second Plan

Some Central Ministries are preparing projects for the second five year plan. A Joint Secretary, Mr. D. C. Das, has been appointed in the Communications Ministry for planning. In the Posts and Telegraphs Department, he is being assisted by Mr. Thadani, who has been appointed Chief Engineer for planning.

A special officer is in charge of a planning cell in the Ministry of Railways and he will be assisted by the Directors of Engineering, Transportation and Mechanical Engineering. Side by side, General Managers of Railways have been asked to submit their schemes. It is stated that these should be necessary and practicable considering the money and human effort available. For 1956-57, orders for 400 locomotives and 8,000 wagons are being placed. As already reported, plans to increase shipping tonnage by one million and to develop port facilities have already been sent to the Planning Commission.

The Minister for Natural Resources, Pandit K. D. Malaviya has a four-fold programme for his Ministry—the quantitative and qualitative assessment of mineral wealth, revision of rules and regulations relating to mines and minerals, training of Indian personnel and exploitation of oil by Indians. A series of conferences are being arranged to plan the development programme of organisations for botanical, zoological and geological surveys and for scientific research. A committee with Dr. J. C. Ghose as chairman and Professor Bhabha and Mr. D. C. Sharma as members, has been set up to appraise the work of the National Laboratories and to make recommendations to increase their usefulness. A petroleum division has been set up primarily to undertake prospecting for mineral oil, particularly in Rajasthan and the Kangra hills.

Indian Participation

The Government of India is urging certain non-Indian undertakings to throw open part of their capital to Indians. One large British firm, which at the Government's suggestion was willing to offer Rs. 3 million worth of scrip to Indians, has been asked to increase the Indians' holding to Rs. 10 million. Similar moves are expected in the case of other non-Indian companies.

Budget Dates

The Railway Budget will be presented in Parliament on Tuesday, 22nd February and the General Budget at 5 p.m. on Monday, 28th February.

Railway Earnings Rise

Railway earnings have risen during the latter part of 1954. So also has expenditure. The total approximate gross earnings from 1st April, 1954 to 30th November, 1954, amounted to Rs. 180.06 crores. This represents an increase of Rs. 527 lakhs as compared with the actuals of Rs. 174.79 crores for the corresponding period of the previous year. As compared to 1953-54, during the eight months ended November earnings from coaching traffic increased by Rs. 231 lakhs to Rs. 80.04 crores (or 2.97 percent); from goods by Rs. 268 lakhs to Rs. 97.11 crores (or 2.84 percent); and from other traffic

by Rs. 18 lakhs to Rs. 2.91 crores (or 10.6 percent). During the same period, the number of wagons loaded increased by 5.50 percent on the broad gauge and 1.96 percent on the metre gauge.

Underground Telecommunications

A proposal to lay underground telecommunications cables between Delhi and Calcutta and Delhi and Bombay is now before the Government of India. The estimated cost of the project is Rs. 10 crores. The Government has already decided to lay underground cables between Calcutta and Asansol. Work is also proceeding on laying cables between Bombay and Thana. Another proposal is to lay underground cables between Delhi and Amritsar. The advantages of underground cables are obvious. They provide a more stable circuit free from atmospheric disturbances and human tampering. The Government invited a team of experts under the Colombo Plan to survey Indian conditions and make recommendations on the feasibility of replacing overhead wires by underground cables. Its report is now being examined.

Indo-Japanese Air Service

The Indo-Japanese air agreement has been finalised. Under it Japanese airlines will be permitted two termini, Calcutta and Delhi, as long as they operate one weekly service. If the service is increased to twice weekly, only one terminus will be allowed.

Survey of Railways' Working

An American railway expert, Mr. Richardson, is arriving here in about two weeks' time to undertake a rapid and preliminary survey of the performance of the Indian railways. On the basis of his report, it will be decided whether a more detailed survey should be made and, if so, whether foreign experts dealing with various aspects of railway working should be associated with it.

The operational agreement with the U.S. Technical Co-operation Mission for the rehabilitation of the Indian railways states that the total number of locomotives of all gauges in March 1951 was 8,209. A number of these locomotives are uneconomical in operation either because of deterioration or advanced age. By March 1956, approximately 3,600 or more will be over-aged (over 40 years old). Many were brought before World War I, and some are in actual service only for about 100 days in a year, resulting in an economic loss to the railways. It is expected that once the accumulated arrears of repairs and replacements are overtaken, the present level of traffic can be moved by about 7,800 locomotives with an average age of 20 years, as against the present age of about 30 years. When the average age is brought down to 20 years, annual replacement needs will be approximately 200 locomotives, which will be well within the productive capacity of India's two locomotive factories. But in order to rehabilitate the locomotive stock of the railways it will be necessary to acquire as early as possible about 2,800 new locomotives, after allowing for the retention of about 10 percent of the total locomotives as over-aged stock used for shunting and other purposes.

Against the first three years' programme of the five year plan, India has placed orders for 769 locomotives. She is placing orders for approximately 500 more against the programme for the last two years of the plan, within the resources available to the railways for such purposes. This will still leave a balance of about 1,500 over-aged locomotives needing urgent replacement on the line at the end of the plan period, unless other resources are available.

Wagons of all types on the Indian railways numbered 199,094 in March 1951, of which 73,371 are or will be over-aged during the five year plan period. Against the first three years' programme of the plan, orders were placed for 32,293 new wagons; orders for approximately 29,000 additional wagons are being placed against the programme for the last two years of the plan, within the resources available for this purpose. This will leave a balance of some 12,000 over-aged wagons, not including those required for servicing substantially expanded traffic still in service at the end of the five year plan, unless other arrangements can be made to replace them earlier. Once the arrears are cleared, the normal annual requirement is likely to be about 6,000 wagons and this can be met from the present manufacturing capacity of the country.

The Indian economy depends more on railway transportation than is the case in many other countries. Foodgrains and other agricultural products such as cotton, jute and tea as well as mineral products including coal, manganese and other ores, constitute approximately 60 percent of the freight tonnage carried by the railways. The efficient transport of these commodities is necessary not only for domestic economic development but also for increasing exports. Schemes for economic development under the five year plan will depend largely on an efficient railway transport system.

The shortage of basic transportation facilities has grown more serious recently and has caused delays in the construction of important projects, and in essential movements of food and other agricultural products. It is therefore proposed to acquire from abroad 100 type "WG" broad gauge locomotives, 2,500 broad gauge freight wagons, and 2,500 metre gauge freight wagons.

A survey will also be made under this project of the needs of the railway system in order that it may facilitate economic development. The foreign specialists required for this survey will be furnished by the Technical Co-operation Mission. Richardson is thus undertaking his second

an operational agreement which also provides for additional experts, if required by India.

Imperial Bank Legislation

Legislation to take over control of the Imperial Bank and establish "one strong and integrated commercial institution" to provide rural banking facilities will be amongst the new Bills which Mr. Chintaman Deshmukh, Finance Minister, will sponsor during the forthcoming budget session of Parliament. A Bill embodying consequential amendments to the Reserve Bank Act will also be introduced during the session.

Soda Ash, Caustic Soda and Raw Silk Imports

The import policy for soda ash, caustic soda and raw silk was officially announced last week. While announcing the import policy for January-June 1955, the Government of India, it will be recalled, indicated its intention of changing the basis of importing soda ash, caustic soda, sodium bicarbonate and raw silk. Accordingly, after considering the procedure to be employed in the light of the views expressed and the representations made by industry and trade, it has been decided to continue to give a small quota of 7½ percent to established importers of caustic soda. Licences will also be issued to actual users of caustic soda to meet half their requirements. In regard to sodium bicarbonate, a quota of 10 percent has already been announced for established importers. In addition, a certain quantity of caustic soda and sodium bicarbonate has been reserved for licensing on an *ad hoc* basis. Applications should reach the Chief Controller of Imports by 15th February, giving the name of the supplier, source of supply and c.i.f. price, etc. Licences, when issued, will be subject to such conditions as may be imposed regarding distribution, sale price and profit margin. In regard to light soda ash the Government has decided that imports should be canalised through importer-stockists who will be required to keep buffer stocks and effect sales in such a manner as to eliminate fluctuations in prices and supplies. The two selling organisations of Messrs. Tata Oil Mills Company Limited and Messrs. Imperial Chemical Industries (India) Ltd. have been selected for this purpose. These two selling organisations have agreed to procure soda ash from suppliers selected by the Government on the basis of offers invited by means of a public notice. The soda ash so imported will be stocked at convenient centres and sold according to the general directions of the Government from time to time. The sale price will be fixed by the Government on an f.o.r. port basis and the importer-stockists will be paid for their services at the rate of 12½ percent of the landed cost. Additional profits, if any, on the transaction will be taken over by the Government. In regard to raw silk, the Government has decided to canalise imports through the Central Silk Board.

Khadi and Village Industries Board

The Government of India will sponsor legislation during the forthcoming Budget session converting the present Khadi and Village Industries Board into a statutory body. Its personnel will be nominated by the Government.

Foreign Missions to Visit India

A World Bank mission is due here shortly to survey sites recommended by Pakistan in finding alternative sources of water supply, as provided by the previous mission's award. An Indian team will be associated with the mission.

A Canadian mission is also due here to finalise the details of Canada's financial assistance to India under the Colombo Plan.

Rehabilitation of Cotton Textile Mills

The Government of India has set up two teams of economists and technical experts to assess the rehabilitation needs of the cotton textile industry. The teams will be attached to the Textile Commissioner's organisation at Bombay. In the initial stages, they will take up the investigation of marginal units in order to ascertain whether low production and high costs are due to old machinery, lack of finance or defective management. They will then suggest the type and manner of assistance the Government should give for rehabilitation. The appointment of more teams is expected. The task of rehabilitation may be entrusted to the National Industrial Development Corporation.

Small Industries Corporation

The National Small Industries Corporation has been registered as a private limited liability company. Its authorised capital is Rs. 10 lakhs, divided into 10,000 shares of Rs. 100 each. The number of directors, all to be appointed by the Government, will not be less than five or more than nine. The head office of the Corporation will be in Delhi. It has been established "to aid, counsel, assist, finance, protect and promote" the interests of small industries in India, whether owned or run by a Government statutory body, company, firm or individuals, and to provide them with capital, credit, and technical and managerial assistance for the development of their methods of manufacture, management, marketing and techniques of production.

Abolition of Visas Suggested

The Prime Minister wishes to abolish the visa system with certain European countries and thereby to restore pre-war conditions of travel between India and the outside world. His suggestion is being examined by the Ministries concerned.

Complimentary season tickets for the London Motor Show for overseas traders and buyers can be obtained by forwarding name and address to the Society of Motor Manufacturers and Traders Ltd., 148, Piccadilly, London, W.1.

London

NEW ROAD PLAN FOR BRITAIN

REVENUE RETURNS AT SATISFACTORY LEVEL

(FROM OUR LONDON CORRESPONDENT)

RAILWAYS and roads are very much in the public eye at the moment, for the new plan for modernising the former has been followed by publication of the Government's plans for road reconstruction. These visualise the expenditure of some £120 million over a period of four years—against the £1,200 million for the railways plan over a much longer period—and indeed have been criticised in some quarters as being quite inadequate to the needs of the situation. It should be remembered, however, that these two schemes represent the first real effort to tackle the transport muddle into which this country has got by several years of virtual neglect of these lifelines. Mr. Butler must of necessity play an important rôle in all discussions of these problems, as he did in Thursday's railway debate in the House of Commons when the Government secured approval of its attitude to the recent wage settlement and its acceptance of the modernisation plan by 302 votes to 265, for the Treasury is concerned with the large financial obligations involved. In view of this, he must be glad that the revenue returns continue to be encouraging, showing an above-the-line surplus of just over £200 million so far this year against just over £2 million at the same time last year.

None of these long-term plans is likely to impose any immediate strain on Treasury resources, so it is not surprising that the Federation of British Industries has made its usual comprehensive representation to the Chancellor of the Exchequer. It considers that the most valuable concessions which could be given from industry's point of view would be a reduction in the standard rate and in the lower rates of income tax and a substantial reduction in all rates of purchase tax. Other principal recommendations are for a reduction in the overall burden of profits tax; an increase of the investment allowance on industrial buildings to 20 percent; a reduction of the estate duty on private limited companies; and a reduction of the duty on fuel for the road transport industry.

Pressure on Payments Balance

It is becoming increasingly important to keep an eye on the balance of payments position, which these days appears to react to the slightest influences, though hitherto not particularly alarmingly. One of these is the rise in raw material prices which, in the absence of a compensatory rise in export prices, is having an adverse effect on our terms of trade. The index for December was 102, the highest since April, 1953. The Cabinet's reported decision that coal exports must be cut by about 2½ million tons this year and that fresh imports are to be authorised to meet rising home demand will almost certainly worsen the position.

The prolonged weakness of sterling has not as yet reacted to the slight Bank Rate increase though there are hopes that it will. On the other hand, the City's fears that the authorities were utilising dollars to maintain the situation are not borne out by the end-January figures of the gold reserves. There would have been little surprise if these had recorded a fall. In point of fact, they increased by \$1 million. U.S. defence aid brought in \$13 million, which was offset by the \$10 million payment due to E.P.U. against our December deficit and a further \$2 million to cover the monthly repayment of the debt to Continental creditors. The residual account, therefore, finished up at a square for the month. The after-effects of the dock strike may still be playing some part, but it is good news that European pressure has been relieved and that the £4 million surplus in transactions with E.P.U. during January will bring in \$5.6 million in gold this month.

Another Steel Issue

The Whitehead Iron and Steel Company's 1,250,000 ordinary shares of £1 each are being offered to the public at 55s. as the seventh denationalisation effort by the Iron and Steel Holding and Realisation Agency. There are one or two interesting departures from previous practice. Baring Bros. and Company, not the usual consortium of City houses, makes the offer, and as much as 20s. has to be sent with the application to deter "staggering" and reduce the work of the issuing house. The smallness of the issue and the facts that Whiteheads process rather than manufacture steel and that the price and prospects are closely related to the present position of Colville's shares virtually ensure that the new offer will receive a good reception.

American Aid Repercussions

The ramifications of American defence and economic aid to various countries on the development of international trade are difficult to sort out. One aspect has recently been disclosed to British producers and exporters of cotton textiles, and seeing that it holds out some prospect of increasing their business the disclosure has been by no means unwelcome. The position appears to be that under American aid Pakistan is to receive some United States cotton but that, as its immediate need is for cotton textiles, not for raw material, it proposes to use the cotton as a means of paying for foreign yarn and cloth.

The Pakistan Textile Commissioner has invited all textile-supplying countries to submit quotations within seven days for specified types of yarn and cloth, which are to be shipped by 15th Jan. No exact quantities have yet been stipulated, but it is understood, according to the Manchester Guardian, that approximately equal amounts will be spent on cloth and yarn. British traders are asked to state the exact specifications and quantities to which the prices relate. In Pakistan the imports will be handled through normal trade channels under special licensing arrangements. Further information is being sought about the methods of payment and the supplies of cotton concerned in the scheme, and efforts are being made by the Manchester Chamber of Commerce to secure an extension of the time limit for the submission of offers.

Developing Chittagong's Port

India's irrigation and waterways research station must be fully occupied dealing with the many problems of that country, for otherwise, seeing that one of the basic ideas of the Colombo plan is that recipient members should help each other, it would surely have been entrusted with the task of finding a solution to the rather complex problems which were expected to arise in the full implementation of Pakistan's plans for developing the port of Chittagong. This task, it is interesting to learn, has been taken over by the British Department of Scientific and Industrial Research as part of an investigation which it is hoped will help in making Chittagong the main port of East Pakistan.

A scale model of the harbour and the Karnafuli River, 200 feet long, will be built in a tank of water at the Department's hydraulics research station at Wallingford, and the conditions of tide and coastal currents will be reproduced by a complex system of plungers and water jets. Variations in the deposits of sand and gravel on the bottom of the model can be measured and in a few months, for example, it will be possible to forecast how the channel and bars in the river and estuary will shift during the next hundred years.

The Department's engineers can then tell the Pakistan Government where to place jetties and breakwaters so that the depth of water over the outer bar in the estuary can be increased, and the position of the river channel brought to rest alongside the shipping wharves. At the moment the channel is shifting continuously due to movements of the tides and currents. The investigation is being carried out under the technical co-operation scheme of the Colombo plan.

Future Price of Tea

After the recent warning by the Tea Trade Committee that a further rise in the retail price may be expected shortly and that there is little prospect of any easing in the situation until next autumn, at the earliest, housewives will probably derive some satisfaction from a fresh assessment of the outlook—this time by a prominent London tea grower who has just returned from inspecting his company's estates in Ceylon. Because he has yet to report his observations to the International Tea Committee, of which he is a member, he has asked for his name to be kept quiet for the present, and his absence from this country for the past two months explains why nothing has been said earlier.

His view, anyhow, after explaining that he is in close touch with the situation, is that tea here would be cheaper in May. He added: "I will go further and say that by the end of the summer it will be down to 4s. a lb."

"My firm ships more than £10 million worth of tea into Britain annually. The British housewife probably does not realise that in this country alone 50 million lbs. more tea is being drunk every year and world consumption has grown beyond supply. That caused prices to rise and the increase was followed by panic buying by British housewives. This has put the price up, but we shall soon be having supplies of Indian tea." There might be a slight rise in price shortly, but an appreciable fall in May.

Patent Renewals to Cost More

For the first time since 1892, the Board of Trade has raised the cost of renewing ageing patents. The Patent Office will charge higher fees for the annual renewal of patents and design registrations that are more than six years old, though the initial application fee will still be £1. A spokesman of the Patent Office explained that the increase was necessary to cover the increased salaries of the office's thousand-odd employees. Apart from other business, most of it connected with foreign patents and designs, they examine about 37,000 patent applications a year.

It will now cost the holders of patents £8 instead of £7 to renew their rights after six years' tenure. After seven years they will have to pay £10 instead of £8. For the sixteenth and last year of a patent's life they will have to pay £20 instead of £16. The renewal fees payable at the end of the fourth and fifth years will still be £5 and £6 respectively. Other changes have been introduced to make British patents rules conform with the European Patents Convention of December, 1953. The Board of Trade announced that the new fees would apply to all patents and design registrations due to expire after 30th April.

Another Tea Estate Sold

Chargola Tea Association has sold its estates in India for £199,500, exclusive of stocks and stores. It is now estimated that net profits for the year ended 30th November, 1954, will not only liquidate the debit balance on profit and loss account but also leave a sum at least equal to the full seven years' arrears of Preference dividend. The remainder of the liquid assets and the sale proceeds are estimated to be at least sufficient to repay both the Preference and Ordinary capital in full.

Bombay

RETRENCHMENT COMPENSATION FOR WORKMEN

BOMBAY HIGH COURT'S RULING IN BARS LIGHT RAILWAY CASE

(FROM OUR BOMBAY CORRESPONDENT)

THE Chief Justice and Mr. Justice Dixit of the Bombay High Court delivered an important judgment last week on the question of compensation for retrenchment workmen as required by the Industrial Disputes Act. The facts of the case are that the Government of India took over the business of the Barsi Light Railway Company Ltd. in January 1954, whereupon the Company terminated the services of all its workmen by giving them notice. The employees filed an application before the Authority under the Payment of Wages Act, claiming compensation on the ground that they had been retrenched by the Company. According to the council for the workmen, the amount of compensation came to about Rs. 30 lakhs, while the Company calculated it at Rs. 14 lakhs. The Authority under the Payment of Wages Act decided on merits in favour of the employees, but dismissed the application on the ground that he had no jurisdiction to entertain it. The decision was challenged by the Barsi Light Railwaymen's Union before the High Court. The question of jurisdiction, however, became immaterial as, at the hearing, the counsel for the Railway Company gave up his contention in this respect and both parties agreed that the High Court should review the original decision on merits.

On behalf of the Company it was stated that the Legislature could never have intended that if the owner of a business which was being run at a loss wanted to close it down, he should be penalised by having to pay compensation. The Lordships rejected this contention on the ground that the Legislature had given the expression "retrenchment" a meaning which was "termination by the employer of the services of a workman for any reason whatsoever other than as a punishment inflicted by way of disciplinary action". Their Lordships held that the whole object of Chapter VA of this Act was to standardise the compensation to be paid on termination of services and not to leave it to various tribunals giving awards on different bases. It was further held that the same contractual liability on an employer to pay wages, whether the business was running at a loss or not and whether he intended to close the business, applied to him with regard to paying his employees the amount fixed under the section over and above other dues to them. Another contention—that the Court should not put such a construction on "retrenchment" as would seriously interfere with the freedom of contract or freedom to close down a business—was rejected on the ground that the Court must be inclined to give a construction to a piece of social legislation which helped the Legislature to satisfy the social needs, and that this did not in any way involve any interference with the sanctity of contract. Similarly, their Lordships also rejected the argument that the provision relating to the payment of compensation on retrenchment imposed unreasonable restrictions on freedom of trade. It was held that "labour legislation had gradually proceeded to standardise several rights of workmen" and while doing so, it did not consider whether an employer made a profit or loss, but put the law on the statute book from the workman's point of view. Their Lordships further observed: "What exactly should be the rights, where the line must be drawn, are all matters of policy with which the Court is not concerned."

The last and the most important argument advanced by the Railway Company was that the restriction was unreasonable when the termination of service was not likely to result in any detriment to the worker as his service was to be continued by the successor to the business. This was brushed aside by their Lordships as a wrong approach, on the ground that the Legislature had not provided for such cases as it involved certain human factors about which it was impossible to legislate. Their Lordships, therefore, held that "it cannot possibly be said that if the Legislature passes a law in order to improve the status and position of labour, to confer upon it certain rights and to standardise those rights, the restriction imposed thereby upon the employer to carry on his business is not a reasonable restriction, or not in the public interest". Their Lordships granted leave to the Railway Company to appeal to the Supreme Court.

Crisis in Cotton Market

Cotton was much in the news during last week. Apart from a heavy fall of about Rs. 40 a candy in the preceding month, the forward cotton market was so demoralised that last week it fell by another Rs. 45, in spite of the fact that not a single bale had been tendered for delivery against the February contract on tendering days. This is the first time in the history of the East India Cotton Association that no cotton has been tendered against the standing sales during the first week of the tendering month. Even the increasing pressure of arrivals in the production centres cannot account for this pronounced fall. Operators are generally inclined to blame the Government, and particularly the Forward Markets Commission, for insisting upon the inclusion of terms and conditions in the contract which made for a bearish market. The shrinkage in money supply, especially in up-country centres, has also been put forward as a reason for the fall. The market is trying to steady

around the present level of Rs. 570 to Rs. 575 a candy, which is more than Rs. 100 below the price last year.

The Central Government's announcement during the preceding week of fresh quotas to mills enabling spinners to buy domestic cotton to the extent of 115 percent of the official allocation made to them in 1952-53, was expected to stop the fall, but did not. In fact, the market slumped very heavily after this announcement. Prices now are only about Rs. 75 higher than the floor level and, considering that arrivals will be heavy this month and next as the higher staple areas, it is feared that the prices might touch the floor and the Government might be required to buy cotton at Rs. 495 a candy, which is the minimum rate. A section of the market expects that before then the Government might allow some export of cotton below the 12 annas staple and revise the hedge contract to make it less bearish. Others suggest that mill purchases should be free from all controls, the mills being allowed to buy freely in the open market any quantity they desire. The East India Cotton Association has invited suggestions from its members for modifying the contract, asking them to bear in mind the fact that prices of cotton are still subject to officially-fixed floor and ceiling levels and that the effective demand for cotton is limited by the export quota as well as restrictions on mill buying. That there will be some drastic revision of the contract is expected on all sides, because the authorities themselves are seriously perturbed by the recent fall in prices; but no revision can come into operation in the middle of the season and it will, therefore, offer little relief to the cultivators.

Greater Consumption of Indian Cotton

The Indian Central Cotton Committee met here under the Presidency of Mr. R. S. Krishnaswamy, vice-president of the Indian Council of Agricultural Research. The president did not deal with the present market crisis. He expressed gratification that the Planning Commission's targets for area and production of cotton for the current season could be taken as fully realised and pointed out that following the success achieved in stepping up cotton production, there was a welcome change in the pattern of mill consumption. More Indian cotton was being consumed now. Imports of foreign cotton, which in 1951-52 amounted to 12.4 lakh bales valued at Rs. 124 crores, declined in 1953-54 to 6.9 lakh bales valued at Rs. 56 crores. Exports of cotton textiles rose by Rs. 70 crores during the same period.

Sudanese Cotton Sales to India

Mr. Hammad Tewfik, Sudanese Finance Minister, who is leading a goodwill mission to India, has made no secret of the fact that the main aim of the mission is to sell more Sudanese cotton. He said that India was the second best customer of Sudanese cotton till 1952, but in the last two years had drastically reduced its purchases. Addressing the Millowners' Association last week, Mr. Tewfik gave an assurance that the Government would try to solve all the difficulties faced by Indian buyers and traders. Local millowners suggested that if Sudanese cotton was more correctly graded and a more consistent selling policy followed, purchases might increase. It was also suggested that samples of each season's crop, according to grade, should be freely circulated, and all information regarding sales should be made known to buyers here in advance. Another suggestion made to the delegation was that the Sudanese Cotton Board should fix its basic prices on the basis of equivalent Egyptian types.

Modernisation of Bombay Port

Now that the Bombay Port Trust is no longer preoccupied with the Butcher Island marine oil terminal project, it is understood that the authorities are turning their attention to the urgent

problem of re-modelling and modernising two important docks—Prince's and the Victoria. This scheme is likely to cost Rs. 4.5 crores. Sanction was received several months ago, but no beginning could be made as priority was given to the marine oil terminal project. The conversion of these docks from tidal to perennial docks and linking them with each other by the installation of sliding caissons will be taken in hand as soon as the preliminary work is done. The scheme also includes the siting of a drydock. As the work will have to be carried on without hampering the movement of ships at any stage, it is likely to last three years. At present, ships have to suit the tides for entry and exit. After the re-modelling, which includes provision of lock-gates and impounding of sufficient water in the docks for larger-drafted vessels, it will be possible for them to enter the docks at any time irrespective of tides.

Response to I.C.I.C. Share Offer

The prospectus of the Industrial Credit and Investment Corporation of India Ltd., inviting subscriptions from the public for Rs. 1.5 crores of ordinary capital has been well received. In the first place, the fact that this project could materialise within so short a time under private enterprise in marked contrast to the Government-sponsored National Industrial Development Corporation, which has hardly made any progress beyond nominal registration, is taken as a practical proof of the ability of private enterprise to aid economic development efficiently and swiftly. It is understood that there has been good response from institutional investors to the invitation for subscription, especially due to the Government's declaration that its shares are an approved investment for insurance companies. Market expectations here are that the Corporation will be in a position to declare a dividend of at least 4 percent at the end of its first year of working. There is also much satisfaction in business circles over the composition of the Board.

Plain-Speaking on Village Industries

The inaugural speech of Mr. Morarji R. Desai at the Bombay Village Industries Board was notable for its frankness. Mr. Desai advised, the organisation not to place too much reliance on Government subsidy and stated that hard work based on self-reliance could alone promote village industries. He told a large and representative gathering of those mainly interested in such industries that if the country was to prosper and the standard of living of the people was to rise, bigger industries had an important part to play. He would not mind if the mills closed down of their own accord, but he would not like to close them to support khadi. With regard to subsidy, Mr. Desai said that the financial aid received by the Board would certainly help the growth of village industries, but they should not depend too much upon spoon-feeding. They should rather try to pay their way. Inviting the Chief Minister to inaugurate the new organisation, Mr. R. S. Hukerikar, Chairman of the Bombay Legislative Council and head of the Village Industries Board, said that the Board was receiving a subsidy of Rs. 7 lakhs from the State Government and Rs. 2 lakhs from the All-India Khadi and Village Industries Board.

Penicillin Bottling Plant

The Government-sponsored penicillin bottling plant run by the Indian Penicillin Committee was transferred last week to the control of Hindustan Antibiotics Ltd., belonging to the Government of India. This plant cost a little over Rs. 35 lakhs and has a capacity of filling 20,000 vials a day. It will be shifted to the penicillin factory of the Government of India at Pimpri near Poona soon. The installation of this plant by the Indian Penicillin Committee has helped reduce the cost of imported penicillin considerably.

Setting a new standard...

Split-second performance requires not only the correct size but the right type of bearings... that is why RIV bearings are specially constructed to meet the most exacting requirements in aviation.

Equip your aircraft with 'RIV' which is setting a new standard in carefree operation, lighter weight, mightier lift and longer service life.

Uttar Pradesh

FINANCE CORPORATION
FOR U.P.PUBLIC ISSUE OF SHARES
(FROM OUR LUCKNOW CORRESPONDENT)

THE Uttar Pradesh Finance Corporation for development of small industries was inaugurated in Kanpur last week by the Industries Minister, Mr. C. B. Gupta. The Corporation, he said, would "take risks within reasonable bounds." The object of the Corporation is to provide financial assistance to small and medium industries in the State for their efficient functioning, including purchase, renovation or expansion of plant or other fixed assets. Facilities will also be provided for working capital. These benefits would of course be confined to those industries not covered by the Industrial Finance Corporation at the Centre. The list of industries to be assisted by the Corporation is long and impressive but as the Chairman of the Corporation, Mr. B. G. Rau, until recently Finance Secretary to the State Government, observed, the task of stimulation and growth of even small industries in what is primarily an agricultural State is not an easy one.

The Corporation, which will be a non-profit making organisation, has an authorised capital of Rs. 3 crores, divided into 3 lakh fully paid shares of Rs. 100 each. Of these, only 50,000 shares of the total value of Rs. 50 lakhs are being issued. The remainder is proposed to be issued at such time and such manner as the Government may determine. Out of the 50,000 shares issued now, 18,000 will be held by the U. P. Government, 7,500 by the Reserve Bank of India, 19,500 by the sche-

duled banks, insurance companies, investment trusts, co-operative societies etc. and the rest by other parties. As part of the drive to make the people industry-minded and informed of the progress being made by the State, a permanent Industrial Exhibition has been opened by the Government in Lucknow. The exhibition is a competent performance as far as it goes, but complaints have been voiced that the propagandist rather than the educative element looms large in the grounds and the stalls. Governmental activities need to be shown in the context of the total needs of the State in order to enable the visitor to understand the enormous development work that has to be done.

Flood Control

The Ganga River Commission appointed by the Government of India met in Banaras on 3rd and 4th February when the progress of flood protection schemes was reviewed. The Commission, in particular, examined some urgent schemes submitted by the U. P. Government. These are the Rs. 60-lakh scheme for raising the level of some 300 villages in Eastern U. P., the Ram Ganga project estimated to cost Rs. 27 crores and some other test works. The site of the Ram Ganga project was inspected by the Chief Engineer, Central Waterways and Power Commission, and at his instance the estimate was reduced a little by omitting two spurs. But the necessity for these spurs is still canvassed by other experts and a final decision has to be taken by the Commission. The Commission's discussions were in the main devoted to forwarding definite problems to the Government of India on the type of co-operation or assistance that may be obtained from the bordering Himalayan States—Tibet, Sikkim, Nepal and Bhutan. This is thought to be the better course instead of having to approach foreign Governments every now and then. If consolidated proposals are submitted, then the External Affairs Ministry could take up the matter with the Government concerned.

The Commission also considered certain specific schemes on inter-State rivers which in the opinion of other States in the river basin are likely to prejudice their interests. During the last meeting of the Commission, for instance, U.P. objected to the proposal of the Bihar Government to build embankments on the Gogra on the ground that it was likely to transfer the trouble to Uttar Pradesh. The Ganga Basin Circle with a sanctioned strength of three Executive Engineers acting as Liaison Officers in the States of U.P., Bihar and West Bengal has been opened since December. The Commission placed orders for some automatic flood-warning sets and automatic rain-gauges for trial. The equipment is expected to arrive by the end of 1955.

Saving Benaras Ghats

Meanwhile, the State Government have taken in hand a scheme of extensive repairs to the ghats of Banaras which have saved the city for centuries from the eroding currents of the river Ganga. The stone pavements and steps which were constructed in the last few centuries have the flimsiest of foundations. In the words of the Chief Minister, Mr. Sampurnanand, unless the urgent repairs are attended to the ancient city would entirely vanish under water. The Ganga at Banaras is confined to a narrow channel and flows deep and high. Its discharge during high floods is of the order of 7 to 8 lakh cusecs, the rise and fall about 50 to 60 feet and the velocity 12 feet per second. Erosion has been most evident on the ghats which lie on the concave side of the bend. The first step towards improvement of these ghats was taken in 1926 when the Viceroy, Lord Irwin, himself headed the list of public subscribers to the cause. But the gravity of the danger was not realised fully until 1948 when the floods brought untold devastation to the buildings on either side of the river. Certain model studies were carried out by the Research Institute at Roorkee in connection with repelling the attacks of the river, but they do not seem to have yielded any hopeful results. The experiments were to fan out the river by providing repelling spurs on one bank and attracting spurs on the other. Another set of experiments provided pitched islands on the right bank to deflect the flow. Not much reliance, however, is placed on this method either, and the engineers have finally fallen back on the conservative line of affording local protection to the ghats. The scheme which is divided into three parts is estimated to cost Rs. 1 crore.

Budget Date

The budget for the financial year 1955-56 will be presented to the U.P. Legislative Assembly on 19th February. The second instalment of the supplementary demands for the current financial year will be presented on 14th February.

Mr. F. P. Neill, B.A., B.C.L. (Oxon), has been appointed to the first Lectureship in Air Law in the United Kingdom. This Lectureship has been established by the London School of Economics, at the invitation of Mr. John Boyd-Carpenter, M.P., the Minister of Transport and Civil Aviation. The Lectureship reflects the growing importance of the legal aspects of aviation in both national and international affairs. Financial support has been given by the London School of Economics, the British Airways Corporation, the British Independent Air Transport Association, and the Society of British Aircraft Constructors.

The Government of India has decided to release for free sale about 90,000 tons of sugar. This brings up the total release so far made to 50 percent of the production up to 22nd January, 1955, of all the sugar factories in the country.

"Gentlemen! we are all agreed..."

... that the advice and technical service rendered by Burmah-Shell during the past financial year, has been instrumental in reducing our operating costs and has, in some specific instances, actually cut our lubrication overheads..." (loud and prolonged cheers!)

The fact is that Burmah-Shell have the experience and the trained technical staff to deal with any lubrication problem of any size. We can detect weak spots in your plant before they become trouble spots.

So if you have any lubrication problems on your mind, ring up your nearest Burmah-Shell office. They will send one of their technical representatives round to see you without delay. Their advice is freely given (which will draw murmurs of approval from your Chairman!) and you'll find that they are very sound people to deal with.

CONGRESS PARTY'S SOCIALIST
POLICY EXPLAINEDMORE LARGE-SCALE PROJECTS FOR
POWER AND IRRIGATION

(FROM OUR MADRAS CORRESPONDENT).

THE Union Minister for Planning, Mr. G. Z. Nanda, presided over the inter-State seminar on the five year plan for the Southern Region at Coimbatore last week. He said that the rate at which investment had been made during the first three years of the first plan fell short of what was envisaged, and it was therefore necessary to step up the rate of investment considerably during the remaining years. Referring to the Congress Party's decision to adopt a socialistic pattern of society, Mr. Nanda disclosed that it would have a decisive influence on the approach and tone of the second five year plan. Such a society, he said, presupposed a socialist way of life, of which the essential features were a sense of social discipline and social responsibility. He emphasised that a socialist democratic society demanded higher standards of efficiency, of competence and execution and of integrity than those which prevailed in a capitalist society. He continued saying that the basic condition for bringing about the socialistic pattern was the ability to create conditions of rapid development in which the nation as a whole made a determined effort to consume less today so that tomorrow there would be plenty. Mr. Nanda also stressed the need for decentralised planning. The Minister finally affirmed that the pattern of society aimed at was Sarvodaya, in which equality did not mean the physical redistribution of wealth but the creating of effort in those who were now in a position of disadvantage. The Minister's "expositions", however, have not helped public understanding of the kind of socialistic society aimed at.

More Irrigation and Power

The Madras Government have submitted to the Planning Commission a number of irrigation and power schemes for inclusion in the second five year plan. Eight irrigation schemes in different districts, estimated to irrigate about 100,000 acres and to cost about Rs. 11 crores, have been proposed. Power projects proposed include the Kundah Project, estimated to cost Rs. 26 crores initially to develop 145,000 K.Ws, and ultimately Rs. 30 crores in 10 years; the Kumbhar-Amaravathi Project with a power potential of 45,000 K.Ws and an estimated cost of Rs. 8 crores; the Mettur low-level sluice hydro-electric scheme to develop 75,000 K.Ws and estimated to cost Rs. 12 crores. It may be recalled here that power generation in the State had doubled in the last six years. Schemes for distribution are being drawn up so as to electrify 1,000 villages and connect 10,000 agricultural pump sets every year, as against the present annual target of 250 villages and 3,000 pump sets.

The Andhra Government is considering schemes estimated to cost in all about Rs. 325 crores for inclusion in the second five year plan. Of this amount, irrigation projects are to account for Rs. 204 crores, power projects Rs. 32 crores, education Rs. 36 crores, and public health Rs. 15 crores. It is also reported from Kurnool that the Central Government has sanctioned Rs. 1 crore by way of loan to the Andhra Government for undertaking urban water supply and drainage schemes during the first five year plan period. The Central Government has also sanctioned a scheme for improving water supply to Visakhapatnam town, primarily to meet the demands of the new oil refineries of the Caltex company that are being put up there. This scheme is expected to cost Rs. 1.2 crores; the apportionment of the cost between the Centre, the Caltex company and the Visakhapatnam Municipality will be settled later.

Imperial Bank Case

A leading stock broker in Madras, Mr. S. Narayanaswami, has analysed the implications of the proposed nationalisation of the Imperial Bank of India. If the object of nationalisation is to make the Bank serve the cause of rural credit, it is not likely to be realised, he says, for the simple reason that the Imperial's resources cannot be utilised for the purpose unless it is converted into an apex co-operative bank. At present, over one half of the Bank's resources is employed in the financing of trade and industry; the balance is in the form of cash and Government securities. Any diversion of funds which are currently in use in the economy will certainly hamper urban commercial credit to a disconcerting degree. Mr. Narayanaswami continued, saying that by altering the constitution of the Imperial Bank and spreading out its branches to the villages, we may well be securing a serious deduction from its prestige and good name. Apart from this, a branch of the Imperial is likely to prove the most uneconomic banking unit for our villages. Its employees are not going to work for lesser wages in village branches.

There is also the consideration that the depositor, who is invariably a shy and circumspect individual, may feel that if the Bank comes under Government control, the confidential character of his transactions would be impaired. He may even suspect that Central and State taxation agencies may find it handy to dip into the State Bank's till for realising assessed taxes. A fugitive movement of funds to exchange banks or other private banks may then result. It is wrong to compare Imperial Bank nationalisation with the nationalisation of the Bank of England, because the latter is a central banking institution. We have already in

Telecommunication
Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth Standard Telephones and Cables Limited is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunications engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving interdependent systems of various types.

Standard Products Include:

Systems:—
Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Railway Communication and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Street and Aerial Lighting Control
Signalling (Office and Factory)
Communication Cable

BOOM CONDITIONS IN JUTE MARKETS

AUSTRALIAN ORDERS LIFT SACKING PRICES

THE Calcutta raw jute and goods markets are at present experiencing one of the biggest booms in recent years. The reasons for these conditions can, in the main, be pinpointed to the rumours and counter-rumours regarding raw jute supplies. Since the New Year, raw jute sellers and their allied associations have, on the one hand, been pressing their ideas of a serious shortage of raw jute towards the end of the current season on a receptive market, by talking in terms of a carryover into the new season of only 3½ lakh bales—less than one month's consumption. On the other hand, manufacturers and their associations have been strenuously resisting suggestions of a shortage, and are continuing the 48-hour working week. A spokesman of the Indian Jute Mills Association is reported to have said that the jute import figures have been misrepresented, and that references to a jute shortage are unwarranted. He added that if a more realistic trade estimate of the jute crops in both India and Pakistan were taken, the carry-forward from the two countries at the end of the season would be about 18 lakh bales. The Calcutta markets have reacted to this tug-of-war, and prices of both raw jute and finished goods have soared to new high levels. The mills themselves have contributed in no small measure to the rise over the past five weeks by continually buying. It is reported that some have been laying in stocks of raw jute against possible shortages, and this demand for the very limited supplies available has forced up raw jute rates to a figure that would price jute goods out of the market completely. If mills are to make a profit at the present level of raw jute, then the prices of gunnies would have to be very much higher than they are now. The industry considers the present prices to be too high and fears that consumers might again turn to substitute forms of packaging.

The relationship between jute and gunnies since the beginning of the year is interesting:

	3rd Jan.	3rd Feb.	5th Feb.	In-crease	In-percentage
Raw Jute (Assam Bottoms per md.)	30-8	35-8	39	8-8	229.5
40in. 10oz. hessians (per 100 yds.)	44	47-2	48	4	143.2
B Twills (per 100 bags)	117-12	125-14	131	13-4	132.0
Cornsacks (per 100 bags)	120	128	134-12	14-12	146.9

From this comparative statement it will be seen that in the first five weeks of the year the cost of raw jute has risen half as much again as the rise in the price of finished goods. Furthermore, it is interesting to note that in the last week rates in both sections of the market have advanced nearly as much as they did in the first month, which gives some idea of the boom conditions that have prevailed. From the figures shown, it will be seen that manufacturers are facing a serious problem regarding their costs, and that at the present levels they no longer hold very much price advantage over the U.K. and the Continent.

Excited Goods Markets

There has been considerable excitement in the finished goods market following last week's comparatively quiet session, and rates in both the hessian and sacking sections have reached new high levels. The main interest has been centred on the heavy goods side, where expectations of fairly large orders from Australia caused brisk business in the fabrics in which that country is normally interested. At the beginning of the week, speculators dominated proceedings by buying up cornsacks and woolpacks for all positions, but there were not enough real goods to satisfy their demand as mills were reluctant to meet them to any great extent. This caused a large bear account to be operated in "fatka" and bulls took advantage and pushed up prices of both sacking and hessian before taking their profits. Mills continued to hold very reserved ideas and only released small lots at the higher levels. Enquiries were again received for heavy goods from Africa, Egypt and China, and this, coupled with the very steady raw jute markets, gave the market a rising tendency. The hessian section during this time was completely neglected, but rates in this section, as will be seen from the table above, advanced in parity with sacking goods to rule firm. Over the week-end speculators were again active, but following more profit-taking prices reacted slightly, to recover soon after the opening. Mills continued to hold off, waiting for some indication as to the size and strength of the Australian order from the Controller, but when this was not forthcoming they released small lots to private enquiries and shipper interests at enhanced rates. The hessian section showed signs of a recovery on its own account after the week-end, on the strength of some small enquiries from the U.S.A., but although very little actual business was put through, prices hardened in anticipation of increased interest from the Americas.

THE JUTE MARKETS

Manufactured Goods: On Thursday morning the finished goods market opened on a very steady note due to heavy speculative buying during the night and the previous day in anticipation of foreign orders. B Twills opened at Rs. 125-14 for

February delivery and Rs. 126 for April-June shipment, this being a rise of Rs. 1-4 in both cases. The hessian section was firm in sympathy with sacking and recorded a 4-anna advance for February delivery to Rs. 47-2, and 2 annas in the forward positions to Rs. 47. The advance was maintained throughout the day with heavy fatka activity which continued into the night causing B Twill rates to jump Rs. 2-12 by Friday morning for both near and forward delivery.

Cornsacks, for which there was most demand, rose Rs. 3 in the ready position and Rs. 2-8 for April-June shipment whilst hessians increased by 4 to 6 annas. A further advance of 12 annas to Re. 1 on Saturday, on the strength of overseas enquiries, brought B Twills to Rs. 131-8 and Rs. 132 for whilst cornsacks reached Rs. 131-8 and Rs. 132 for February and April-June shipment respectively. Heavy speculation over the week-end caused a slight setback at the opening on Monday when rates, with the exception of cornsacks, dropped 6 to 8 annas in both sacking and hessian. But with the raw jute market showing an increase of Rs. 1-8 a maund over the week-end, the goods market soon recovered and rates began to shoot up again. By Tuesday morning new high levels were recorded in all sections of the market. B Twills showed an increase of Rs. 2 to open at Rs. 131 for February and Rs. 131-4 for April-June shipment, whilst cornsacks recorded an advance of Rs. 2-12 to Rs. 134-12 and Rs. 135 for the same deliveries. The gap between B Twills and cornsacks had now widened to Rs. 3-12 from about Rs. 2 at the beginning of the period, and the forward positions were still being consistently quoted at a premium over the near positions. The hessian section recorded its biggest advance for some time at the opening on Tuesday on account of some overseas enquiries, and 40in. 10oz. hessians opened at Rs. 48 for February delivery and Rs. 47-14 for April-June shipment, this being up 10 annas and 8 annas respectively from the previous day's quotations. During the day rates continued to rise as the demand for heavy goods increased, and very steady conditions prevailed.

At the close the market is again very firm due to heavy shipper covering in heavy goods, and fresh enquiries from the U.S.A. for hessians. Sacking quotations are about Rs. 2 up and hessians 12 annas up from Tuesday's opening quotations. Opening quotations on Wednesday morning are as follows:

	Feb.	March	April-June	July-Sept.
40 in. 8 oz.	Rs. 39-2	Rs. 39-2	39-2	38-0
40 in. 10 oz.	48-12	48-12	48-12	47-10
B Twills	133-8	133-8	133-8	125-0
Heavy Cees (Plain)	131-0	131-4	131-8	125-0
A Twills	164-0	163-0	161-0	154-0
Liverpools	151-0	150-8	150-0	143-0
Cornsacks	137-0	137-0	137-0	128-0

Raw Jute: Following the comparative lull in business last week Calcutta mills showed an insatiable demand for raw jute at the opening of the current period and heavy business was transacted. Quotations for raw jute opened at Rs. 35-8 a md. for Ordinary Assam Bottoms, but rates increased rapidly with each transaction and by the week-end had reached Rs. 37-8 a md. Upcountry markets in India were showing no increase in their import figures, so with the increased demand from mills very steady conditions ruled. Raw jute sellers were very reserved at this stage and were seeking higher prices. Over the week-end, heavy speculation in the goods markets caused prices to fluctuate rapidly, and firm upcountry and local markets gave the incentive to sellers to add a further Rs. 1-8 a maund on to the already inflated price of the raw material. Business was again reported at the enhanced rates, but the quantities involved were very much smaller than at the beginning of the period. As the price of Indian jute increased and the gap between it and Pakistani jute narrowed, mills showed an increasing interest in the latter, considering Pakistan jute at Rs. 40 to Rs. 42 a maund a considerably better buy than Indian Northern or Dhubri jute at Rs. 39 to Rs. 40 a maund. Fair business was done in Pakistan jute with buyers showing a preference for ready bills of lading. Over the week, raw jute rates have increased by about Rs. 4 a maund, and prices are still showing an upward tendency.

Business done during the week covered a wide range in price, and in all cases the lower prices quoted were done at the beginning of the period. Good business was done in Dhubri and Northern jute at Rs. 35-8 to Rs. 40 a maund basis Bottoms for February-March shipment, and also for Assam jute at Rs. 35 to Rs. 39-8 a maund for the same

A worm with
worm teeth...

... said, "I think I've bitten off a bit more than I can chew with all this extra production!" The machine shop foreman examined the worm's molars. "Mmmm," he murmured, "I'll admit that your teeth are not very engaging!" At this point the Tecalemit man intervened. "Don't look down in the mouth," he said, "I've come to fit you with Automatic Lubrication—

that'll stop you over-eating!" "Oils well that ends well," sighed the worm happily.

Tecalemit lubrication systems—fully automatic, semi-automatic or manually operated—feed every bearing with the correct amount of oil or grease at the correct intervals of time, regularly... unfailingly... efficiently. A Tecalemit engineer will gladly call to discuss your particular lubricating problems with you.

shipment. Small lots of Karimpore Tossa were done at Rs. 39-8 basis Bottoms, but the demand for Murshidabad Tossa was keener, and fairly good business was done at between Rs. 35-8 to Rs. 38-8 a maund basis Bottoms for February-March delivery. Daissee business was small due to the scarcity of this fibre, and prices ranged between Rs. 37-8 and Rs. 39 a maund basis Bottoms. Once again a fair demand developed for Daissee Mesta and business was done at from Rs. 32-8 to Rs. 36 a maund basis Bottoms for February-March shipment. Bimbi was done at Rs. 32-8 to Rs. 36-8 a maund for F.A.Q. and also at Rs. 37 to Rs. 37-8 a maund for Middle's only.

In Pakistan jute, good business was done in Jat jute at Rs. 37-8 to Rs. 40 a maund for February-March shipment and ready bills of lading, in District jute at Rs. 37 to Rs. 39 and in Pakistan Northern jute at Rs. 36 a maund basis Bottoms for the same deliveries.

In the pucca bale section, fair quantities of Cuttings were done at rates varying between Rs. 135 at the beginning of the week to Rs. 152-8 on Tuesday, mainly for ready bills of lading and February-March shipment.

At the close, rates increased a further Re. 1 on the strength of business done overnight, and the rising goods market. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills.	Rs. a maund.	Shipment.
Lower Assam	41-0		February-March.
Upper Assam	40-8		"
Northern	40-8		"
Purnea	40-8		"
Murshidabad Tossa	40-0		"
Daissee ex Sheora-			"
phuli	42-0		"
Daissee ex Calcutta	41-8		"
Northern ex Local	41-0		"
Local Packing	40-8		"
Bimbi			"

Tossa is quoted Re. 1 to Rs. 2 a maund above the rates of white jute.

Pucca Bales:	Rs. a bale.	Shipment.
Mills Firsts	250	February-March.
Mills Lightnings	235	"
Dundee Daissee	2/3 S.G. 250	"
	2/3 L.G. 235	"

Pakistani Jute	Rs. a maund.	Shipment.
(ex Pakistan):		
Jat	43	February-March.
District	42	"
Northern	41	"

The Cossipore markets have ruled very steady over the week, although imports have shown no improvement, remaining at last week's figure of 50 wagons a day. Sellers have been very reserved and have been reluctant to give out closing offers due to the rapidly changing market. Quotations have followed the rising Calcutta markets and at the close Kishanganj jute is quoted at Rs. 39-8 a maund for garsat quality. The Daissee markets have been ruling very firm over the week and prices have risen sharply. Imports have again been negligible in all agencies, and the good demand for all available supplies has caused sellers to hold reserved ideas. At the close quotations in the Sheoraphuli Agencies are based on Rs. 38 a maund for garsat quality. The Daissee Mesta markets have advanced in accordance with other markets, but only small business has been transacted although imports have been fairly good.

Mofussil: There is very little to report from the upcountry agencies in India as imports are still negligible. Rates have shown an advance of up to Rs. 5 a maund over the week on good demand from Calcutta mills, but sellers have been unable to cover their sales due to the scarcity. The upward trend of prices eased towards the end of the period as the price gap between Indian Union jute and Pakistani jute narrowed, and at the close quotations for Dhurbi jute were based on Rs. 37-8 a maund for Bottoms. This is Rs. 5-8 a maund higher than last week.

In Pakistan the markets have gained strength due to increased enquiries for lower quality jute suitable for shipment to India. There has been a marked increase in enquiries from Calcutta mills

as the price of Indian jute gets nearer that of Pakistan jute. Cuttings are in good demand for Calcutta and the price has jumped up by Rs. 10 in the last two days. Higher quality jute of export standard has been neglected but rates have advanced. Imports into the main baling centres have fallen off slightly from last week, and in Narayan-ganj have averaged about 12,000 maunds a day. Latest quotations in Narayan-ganj are as follows:

Pucca Bales:	Rs. (P)	Kutchia Bales:	Rs. (P)
Mill Firsts	167	Jat	29

ASSAM TAX ON JUTE IN TRANSIT

In a communication to the Finance Minister of Assam, the Bengal Jute Dealers' Association states that the Assam tax should not be levied on jute coming from the Cooch Behar and Dinhat areas to Calcutta via Dhurbrighat. Formerly such jute was booked to Calcutta via Maniharighat and this was the route normally used for transporting it to Calcutta. But on account of the complete dislocation of railway lines caused by the floods, the railways made adjustments with the steamer companies and diverted the jute via Dhurbrighat so that the trade may not be affected in any way. Traders are therefore surprised to find that the Superintendent of Taxes, Dhurbi, has now served notices on several jute merchants asking them to pay the Assam tax of eight annas a maund on fibre coming to Calcutta via Dhurbrighat. This does not appear to be justifiable in view of the circumstances, because the jute is not booked from any station in Assam nor does its destination fall in Assam. As such, the Association has urged the Assam Government to cancel these notices. It is stated that jute is already overburdened with many taxes, which adversely affect the trade and industry. Because of the policy of the Government, a huge quantity of jute is at present lying accumulated in the Cooch Behar and Dinhat areas. This is causing serious financial loss to dealers and hampering the free and regular flow of jute to the mills.

I.J.M.A. STOCK FIGURES FOR JANUARY

The Indian Jute Mills' Association announces the total reported stocks of manufactured goods, exclusive of Government orders, at the end of January, as follows:

Description.	(Lakh Yds.)	(Tons)	(Lakh Yds.)	(Tons)
Hessian Cloth and Bags	8.69	23,137	8.96	23,767
Standard Hessian (included in above)	6.41	16,987	6.41	16,975
Sacking Cloth and Bags	9.79	44,813	11.52	51,213
Standard Sacking (included in above)	8.11	36,377	9.76	42,807
Rope, Twine, etc.		1,318		1,157

Total reported stocks of manufactured goods held on Government Account.

U.S. TRENDS IN BURLAP CONSUMPTION

RE-USE OF BAGS: COMPETITION FROM BULK HANDLING

ADDRESSING a recent meeting in New York of the National Burlap Bag Dealers Association, Mr. W. D. McLean, of the Bemis Bag Company said: "Last year, the consumption of burlap made into bags declined approximately 2.7 percent from 1953, despite quite stable burlap prices, with plentiful supplies. The major uses of new burlap bags are for feed and potatoes. The sharpest decline in the use of burlap bags last year was, of course, the loss of Government sandbag business which amounted to about 16,000,000 yds., which almost equalled the decline in the consumption of burlap bags for civilian purposes. Most of the latter decline was brought about by the continued inroads

of multiwall paper bags, window bags for potatoes, and the accelerated use of bulk shipments for feed ingredients.

"The large feed companies are continuously looking for ways and means to reduce their cost of bagging feed. In many instances, these companies have found it is cheaper to ship feeds in multiwall bags and in bulk than to use textile bags. It is difficult to say how much lower in price burlap, for instance, would have to sell in order to regain some of this lost burlap bag business; but undoubtedly, lower priced burlap would, at least to some extent, increase its consumption for many types of bags. The returnable burlap bag programme has reduced the cost per trip to such an extent that several large national feed companies have adopted this plan, and it is reported that under it, six to eight trips per bag are obtained.

"The potato industry seems to have swung rapidly to 50 lb. window bags and of late a substantial quantity of potatoes are being packed in 25 lb. window bags. Most of the modern super markets do not want to handle 100 lb. bags, and it looks as if there is a very definite trend in the potato industry to 50 lb. and 25 lb. consumer-size bags. It is in the 50 lb. potato bag that burlap appears to have a promising outlook, and already large quantities of these bags have been sold.

Extension of Bulk Handling

"Bag manufacturers are using every means possible to combat the extension of bulk handling; but in certain large operations, the economies and advantages of shipping in bulk are such as to offer little hope of success. However, bulk handling has its limitations and the objective from the standpoint of the bag manufacturer is to supply bags that can economically carry products to the vast number of consumers where bulk handling is not feasible.

"What must be done to maintain, and, if possible, increase the use of burlap bags?

"1. Burlap must be made better; provided in constructions that best serve a particular purpose and at a competitive price.

"2. Continue to develop and bring to the attention of prospective burlap bag users new ideas in merchandising, packaging, and handling.

"3. Push the sale of 50 lb. burlap potato bags, an excellent market for which seems to be developing.

"Today's problems in the burlap bag industry offer a challenge which should and can be met. With proper merchandising, competitive prices, educating new salesmen and re-educating some of the older ones to the many advantages of burlap bags, some of the business which has been lost can and will be re-captured and new uses can and will be found."

THE FOREIGN JUTE MARKETS

OPTIMISM ABOUT SUPPLIES

(FROM OUR DUNDIE CORRESPONDENT)

AFTER an easy tendency in raw jute prices recently, the market has taken a steadier turn again. Most spinners, however, are showing little or no interest. The prevalence of a considerable quantity of fibre offered afloat at some pounds per ton under shipment quotations makes for a quiet situation, and most people are looking for lower prices. There is still nothing in particular to indicate that there will be a scarcity of raw jute during the current season and many of the fears that there would be much damaged material from the crop are fast diminishing. We are now in the second half of the season and the bulk of the jute coming forward is reported to be very good quality and there are few arbitrations being done. Occasionally there is a parcel or two arbitrated upon and sometimes the allowances are quite heavy, mainly in the native markets.

Mill Firsts are offered quite freely for February-March shipment at £119 to £123, but fairly decent quality can be got at the lowest figure, and the same applies to Mill Lightnings at from £109 to £112, c.i.f. U.K. These grades are obtainable very easily afloat at £116 and £106 respectively and good quality too. Other grades are also offered afloat at £2 to £3 per ton less than the shipment rates. It is generally believed that U. K. spinners are pretty comfortably placed with the jute now for the remainder of the season, and there is little likelihood of much more business being done with this centre before the new crop comes to be offered. It has been stated here that ploughing for the new crop will be commencing in the course of the next week or two. The high prices ruling will be an incentive for growers to cultivate a large area for the next crop. More jute is now being required in any case, what with the Indian jute continuing this for the season, and the steady increase in consumption of the fibre by the new mills in Pakistan.

Calcutta goods are being well maintained in price at 76s 3d for 10 oz 40in Hessians and 57s 0d for 7 1/2 oz. shipment February to June. B Twills are firmer today and quoted at 203s 0d for February-March and at 201s 6d for April-June, all f.o.b. Calcutta. A price of 186s 6d is mentioned for July-September "B" Twills. Dundee yarns and cloth are dull but prices remain firm and unchanged.

For the year ended 31st March, 1954, the Ministry of Materials made a net profit of £3,175,600 in its purchases and sales of raw jute and jute goods. This includes £1,800,336 previously provided against possible losses on the sale of stocks. In the previous year, the loss made was about £14,000,000. The trading and profit and loss account shows that stocks on hand at 31st March 1954 amounted to £10,682,344.

Commodity Markets

INCREASING EXPORTS OF INDIAN GROUNDNUT OIL

POLICY LIBERALISED FOR OTHER SEEDS AND HUSKED RICE

THE Government of India has taken measures to increase the export of husked rice, groundnut oil and oilcake, kerdiseed and nigerseed. Husked rice, which hitherto could be exported only from Bombay and Calcutta, is now permitted for export from all ports. The export duty has also been reduced from 20 percent *ad valorem* to 2 annas 3 pies a maund. An additional quantity of groundnut oil has been released for export through established exporters and crushers by 31st March, 1955. A quota of 10 percent of the best year's exports during any one of the four years ending March, 1952, subject to a minimum allotment of 5 tons has been announced for established shippers of groundnut and groundnut oil. No individual ceiling is being prescribed for this quota with the result that shippers will be given the maximum allotment to which they would be eligible on the percentage basis. In addition, it has also been decided to give facilities to crushers to participate in the export trade. Exports by crushers will be licensed freely on shipping bills subject to a maximum allotment of 250 tons per shipper from all ports provided the crusher is able to produce a certificate from the excise authorities showing that cess has been paid by the applicant during any one of the three years 1952, 1953 or 1954 on groundnut oil crushed by him.

Free Licensing of Oilcake

It has also been decided to release for the time being a quota of 25,000 tons for export of groundnut oilcake (expeller variety). Licences will be issued freely on shipping bills for shipment by the end of March, 1955, provided the applicant is able to produce satisfactory evidence of a firm contract and of freight having been booked and subject to a maximum allotment of 1,000 tons per shipper for shipment from all ports. The shipping bills will be valid for one week only. Exports of de-oiled groundnut meal (solvent extracted variety) will also be licensed freely on the same basis, till the end of March, 1955, as groundnut oilcake (expeller variety). This will be in addition to the ceiling of 25,000 tons fixed for groundnut oilcake. By a separate notification issued simultaneously the Government has imposed an export duty of Rs. 230 a ton on groundnut oilcake and Rs. 175 a ton on de-oiled groundnut meal (solvent extracted variety) having less than 1 percent oil content.)

Kardiseed and Nigerseed

A further quota of kardiseed and nigerseed for export has been released. Licensing will be done on shipping bills from the ports of Bombay, Calcutta and Madras within a ceiling, subject to a maximum allotment of 500 tons to any one shipper from all the ports and on the evidence of having booked freight space. The shipping bills will be valid for seven days only.

Cane Jaggery

The Government of India, as a result of a further review, has decided to license export of cane jaggery and cane jaggery powder (gur) freely on shipping bills for shipment up to the end of March, 1955.

COTTON IMPORTS TO BE SMALLER

With the availability of larger quotas of Indian cotton to textile mills in the country ensuring better consumption of the domestic styles, India is likely to import this season a smaller quantity of cotton. Several mills in Bombay and Ahmedabad which used to specialise in the use of foreign styles are more and more switching over to Indian styles available in abundance and cheaper by nearly a third. The sluggishness in the cotton trade and the growing demand for coarse and medium cloth for domestic and export orders are mentioned as the two main attractions for the mills to confine to Indian cottons. While spinners in Bombay have shown very little interest in foreign styles, a few mills in Ahmedabad have contracted for Egyptian and East African cottons. Although the interest in foreign cottons has broadened generally since the beginning of the year, indentors report that they have not been able to book indents even to a fourth of the normal during the period. Indications are that imports this year may not exceed 450,000 bales against 650,000 bales imported last year, and 1,000,000 bales in 1951-52. Nothing can be mentioned about Sudanese cotton till auction begins there on 9th February. Pending official ratification of the U.S. cotton aid pact no import licence has been issued by New Delhi for American cotton. Although imports from the sterling area are allowed freely, business put through during the past two months has been very small.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined by 0.7 percent to 363.4 during the week ended 22nd January, 1955 as compared with 365.9 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 1.0 and 9.4 percent respectively. The index for Foodstuffs declined by 1.6 percent to 308.7 due to a fall in the prices of jowar

FREIGHT MARKETS FIRM

THE markets continue firm and in the Indian section the absence of tonnage is reflected in the higher rates offered by charterers in this and in the Far Eastern market. Vizagapatam-USNH paid \$13.50 f.i.o. for ore and North China-Poland 147s 6d for cereals. Bangkok-Colombo was done at 70s liner terms for rice. North Pacific-Bombay was fixed at \$25, with free discharge, for American tonnage bringing heavy grain and Australia-India repeated 85s from Fremantle.

Considerable interest was still displayed in the time charter section and some high rates were conceded. An 11,683-ton motorship secured 47s for the voyage out delivery Germany, re-delivery Red Sea via North America, and a Liberty obtained \$4 for the trip to South Africa via North Pacific with delivery Japan.

The continued slow work in Calcutta is creating congestion in the Port and it is doubtful whether the recent freight increases will compensate for the time lost. No action is apparently being taken to expedite work and the imposition of a surcharge is considered necessary by some. Tramp owners in many cases ask for an additional rate of freight for Calcutta discharge.

SUGAR MARKET

During the week ended 9th February, sugar sales in the Calcutta market averaged 3,000 bags a day. Average arrivals were 1,000 bags a day and stocks totalled 700,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30 for ordinary grain and Rs. 32-8 for big grain Grade B-29. Coming ordinary grain and big grain sugar sold at Rs. 30 and Rs. 32-8 to Rs. 31-12 respectively. Ex-mill delivery rates for the following grades of sugar were: Grade D-28 Rs. 28-8 to Rs. 29-10; Pothas C-29 Rs. 30-12. The market remained inactive.

LINSEED

Somewhat easier conditions prevailed last week and prices were marked down owing to poor enquiries. There were lower advices from upcountry for new crop supplies, but despatches of ready goods were still small. Crushers were rather reserved and the volume of trading was very limited. The oil market was quiet; activity was small with keen sellers for ready goods but buyers adopted a cautious attitude in anticipation of lower levels. Latest quotations were as follows: February Rs. 16-11 per maund; April-May Rs. 15-14 per maund.

HIDES AND SKINS

The market in skins ruled easy and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazar Sales

(Between 1st February and 7th February, 1955)

Cowhides: Wet salted (Slaughtered) 11,600 pcs. on the basis of Rs. 13-8 to Rs. 25-8.

Goatskins: Wet salted (Daissee, Killed) 57,400 pcs. on the basis of Rs. 300 to Rs. 440; Assam-Dinajpur-Murshidabad 39,900 pcs. on the basis of Rs. 320 to Rs. 355; Patna (Ord.) 16,200 pcs. on the basis of Rs. 240 to Rs. 255; Muzaffarpore-Patna-Pakur 7,750 pcs. on the basis of Rs. 275 to Rs. 335.

Bazar Stocks

(7th February, 1955)

Cowhides: Wet salted 1,500,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 92,200 pcs.; Assam-Dinajpur-Murshidabad 1,43,000 pcs.; Muzaffarpore-Patna - Pakur-Purneah - Kishanganj 3,46,000 pcs.

STEADY RISE IN SHELLAC MARKET

During the week ended 8th February, market showed a steadily rising trend. The range of quotations was as follows:

Pure Buttonlac	Rs. 188 buyers; 185 buyers; 193 buyers.
Lemon No. 1 Shellac	Rs. 191 buyers; 190 buyers; 200 done and buyers.
Lemon No. 2 Shellac	Rs. 187 buyers; 185 buyers; 191-8 done and buyers.
F. O. Std. 1 Shellac	Rs. 180 buyers; 180 done; 184-8 buyers.
Pure TN Shellac	Rs. 170 basis done and buyers; 168-8 buyers; 170 basis done and buyers; 175 basis done and buyers.
4% I. T. N. Shellac	Rs. 158-8 value; 155 buyers; 159 buyers.
No. 1 Kusmi Seedlac	Rs. 178 buyers; 175 buyers; 178 buyers; 176-8 Value; 180 done.
No. 2 Kusmi Seedlac	Rs. 167-8 buyers; 172 buyers; 170 buyers; 175 done and buyers.
Fine Bysasky Seedlac (Manbhumi)	Rs. 165 buyers; 172 buyers.
Fine Bysasky Seedlac (C.P.)	Rs. 161-8 buyers; 160 buyers; 168 buyers.
Ordinary Bysasky Seedlac (C.P.) Under 5%	Rs. 153-8 buyers; 158 buyers.
Ordinary Bysasky Seedlac (C.P.)	Rs. 148 buyers; 153 buyers.
Kireelac	Rs. 63 done; 62 buyers; 67 buyers.

Shipments during February until the 8th were 5,357 packages.

(-10%), rice at Vijayawada (-5%), bajra and dal arhar (-4% each), gur (-3%), wheat at Amritsar (-2%) and wheat at Hapur and sugar (-1% each) although the prices of tea (+9%) and gram (+3%) were marked up. A fall of 1.5 percent to 430.9 in the index for Industrial Raw Materials was brought about by a decline in the prices of cottonseed (-15%), copra (-6%), gingellyseed (-4%), groundnuts (-2%) and raw cotton (-1%). The prices of raw jute (+4%), linseed, raw hides and lac (+3% each) and raw silk and rapeseed (+1% each), however, recorded increases. The index for Semi-manufactures also increased. The index for 0.2 percent to 344.6. Items, which showed a fall of 0.2 percent to 344.6. Items, which witnessed significant variations were: groundnut oil in Bombay (-4%), castor oil (-3%), mustard oil in Calcutta, coconut oil and brass (-2% each), and mustard oil at Patna (+5%) and linseed oil and coir yarn (+2% each). Higher prices of jute manufactures and cement (+1% each) raised the index for Manufactures by 0.2 percent to 376.8 as compared with 376.1 (revised) for the previous week. An increase in the prices of chillies at Patna (+4%) and black pepper (+2%) was almost neutralised by a fall in the price of chillies in Calcutta (-9%) and the index for Miscellaneous stood at 567.1 as compared with 566.9 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base Year ended August, 1939=100)

Without Prejudice

CONTEMPT OF COURT

DAMNING JUDGES WITH FAINT PRAISE

(FROM OUR LEGAL CORRESPONDENT).

CONTEMPT of court is one of the oldest offences known to the law. Its origin based on ancient usage is lost in antiquity and no subject is exempt from its consequences. Writing without the book, and therefore subject to correction, one recalls that Henry V. when Prince of Wales, in his riotous youth was committed for insult to the Court of King's Bench and that Shakespeare is historically correct in portraying the King's subsequent promotion of the Chief Justice for so doing, to the discomfiture of his former cronies such as Sir John Falstaff; and that some three hundred years later, in 1701 or thereabouts, Lord Chief Justice Holt committed the Speaker of the House of Commons for attempting, in his official capacity and on behalf of the House, to interfere in a civil suit before the judge. The term contempt of court is an extremely comprehensive one, and under it the Court is enabled to inflict punishment by jail or fine for offences which otherwise would not be offences at all. A couple of out of the ordinary examples will illustrate the point. The scene of the first was a County Court in the West of England, the case a civil suit before a jury brought by an old lady of the working class who sought damages against the owner-driver of a motor-car for serious injuries caused by his alleged negligence in knocking her down. The case had been part heard on a previous day and had been adjourned at a point where the defendant had given his evidence in chief, but had not been cross-examined. He was therefore technically still in the witness box and he was, moreover, on subpoena to attend the adjourned hearing. He had put up a poor show in the box and it was pretty obvious which way the case was going to end, namely, in heavy damages.

At the second hearing at 10 a.m. there was no sign of the defendant in court. Instead came a telegram from him addressed to the judge, from his home town twelve miles away to the effect that he was detained unavoidably but would arrive at two o'clock in the afternoon. The day had been specially appointed for the hearing, there was no other business and judge, jury and advocates were left kicking their heels till the afternoon, the exasperated judge having with a bad grace agreed to wait. Eventually the defendant turned up, was sharply reprimanded and the case proceeded. The jury without leaving the box found for the old lady with substantial damages. And there, if the defendant had been as cautious as he was cunning, would have been the end of the matter and the decree would have been valueless. But he said audibly as he was leaving the court that the plaintiff would not see a penny of her damages. The judge (Gwynne-James J.) ordered him back into the witness box and sternly asked him what he meant by his remark to which he replied truculently that he had that day sold the car, his only asset, and had spent the morning paying his creditors out of the proceeds, in token whereof he triumphantly flourished a bundle of new receipts.

The judge went through these and then after ascertaining the amount of the purchase price demanded to know what he had done with the balance, nearly £200, and ordered him to turn his pockets out and put it on the table, which he did. Then came the judicial ultimatum. The man was told that he had committed contempt of court by deliberate defiance of its authority, disobedience of its orders and interruption of its proceedings, as also conduct tending to bring its authority into disrespect by not duly attending on subpoena at a time fixed for his convenience at his own solicitor's request and by wilfully deceiving the court by his telegram in giving a false reason for his non-attendance at the appointed time. Wherefore His Honour gave him the choice of being then and there committed to prison for contempt for an indeterminate period, or then and there paying the old lady her damages in full and her costs out of the money on the table. The man paid. That is the sort of episode one remembers. Probably the judge was stretching his authority to its extreme limit; nevertheless one thinks he was in the right, and anyway he was seeing that justice was done, which was what he was there for.

It was a High Court Judge in Calcutta who was concerned in the second episode.

Sir C. C. Ghose concealed under rather a stern and inflexible appearance one of the kindest and gentlest natures. The occasion was the trial of a gentleman at the High Court Sessions on criminal charges involving grave allegations of personal violence to a fellow citizen, on which let us hasten to say, he was eventually honourably acquitted. The case was part heard when the court adjourned for the day and since the facts had aroused considerable public interest the judge went out of his way to order the members of the jury with more than the customary emphasis not to discuss the case with anyone whomsoever. One of the members of the jury was of a young and impressionable age and in the evening he betook himself to a well-known restaurant where there was a dance; and there he was introduced to a charming though melancholy young lady who, innocent no doubt of the fact that her partner was a juror, confided in him that she had come to the dance only with great reluctance being oppressed at the dismal outlook for her father on the morrow; and on her father's noble and essentially peaceable character and of his total innocence she expatiated with becoming and filial fervour.

The juror made little or no comment compromising his oath to "a true verdict given according to the evidence." But he did not, as he should have done, break off the dance and incontinently depart hence. On the contrary as the late Sir George Robey used to sing "he stopped; and he looked; and he listened," and left the dance and his charming partner with his ears if not his mind full of a detailed recital of the doubtless real virtues of a most exemplary and law-abiding man—the accused. Unhappily the encounter did not pass unobserved and it was reported the next morning to the judge. Now there you have a clear case of contempt of court and it shows how easy it is to slip into it. Contempt that is, by the juror not by the young lady who, one must and does assume was unaware of his status. Well, a lot turns on the judge. One knows of judges like Sir Horace

Avory or Sir Henry Hawkins who would have sent that juror to jail or at least heavily fined him. But Sir C. C. Ghose was not made that way. He saw the funny side of it; and after a little homily which was a masterpiece in that it kept the discomfited young gentleman in doubt as to his fate up to the last sentence, he was discharged unpunished from the jury and by the consent of all parties the case proceeded without him, resulting, as has been stated, in the honourable acquittal of the accused.

And that brings us to the latest Indian decision on the subject, which involves an interesting and rather novel point. Can you commit contempt by damning a judge with faint praise? This sort of thing written or spoken: "X is an excellent fellow and I have the highest opinion of him. He is, doubtless, honest BUT....." You have to distinguish between the man and the judge. Subject to the ordinary laws of defamation I can say with impunity of Sir Marmaduke Haddock, that he is a brainless incompetent ass, but if I say the same thing of him as the Hon'ble Mr. Justice Haddock in his judicial capacity that is a very different matter; for the discipline of contempt of court exists not to vindicate the personal dignity of the judges as individuals but to vindicate the dignity of the court itself and to preserve public confidence in it.

What Mr. Hira Lal Dixit had done was this. He and other petitioners were engaged in the business as carriers of passengers and goods by motor buses and lorries on various routes in Uttar Pradesh State; and the State in pursuance of its policy of nationalisation of road transport had been gun to serve notices on the licensees to stop plying buses on specified routes. The petitioners by mandamus proceedings sought to secure that their rights under their licences should not be interfered with and their applications in the Allahabad High Court having been dismissed they appealed, as to some of the licensees, to the Supreme Court. The appeal was on the cause list for 14th September, 1954. It was part heard on that day and its hearing continued on 16th and 17th September when the court took time to consider its decision. A large number of persons interested in the petitions attended the court on all those dates. On 15th September an 18-page leaflet printed in Hindi and purporting to be written by the appellant Mr. Hira Lal Dixit was distributed in the court premises.

This is an English translation of a passage in it: "The public has full and firm faith in the Supreme Court but sources that are in the know say that the Government acts with partiality in the matter of appointment of those Hon'ble Judges as Ambassadors, Governors, High Commissioners, etc. who give judgments against Government but this has so far not made any difference in the firmness and justice of the Hon'ble Judges." The leaflet having been brought to its notice the Supreme Court issued a Rule of which it notified the Attorney-General for India, who at the hearing attended to assist the court in deciding whether the passage in the leaflet and its distribution constituted contempt of court. The reader will note the words 'but' and 'so far' and also the time and place of publication. The time; while the appeal including that of Mr. Dixit himself were being actually heard and the place; in the very premises of the court.

What was the object of this? "Quite clearly," said Das J., "to affect the minds of the judges and to deflect them from the strict performance of their duties." Counsel for Mr. Dixit maintained that the passage was perfectly innocuous and only expressed a laudatory sentiment towards the court and that such flattery could not possibly have the slightest effect on the minds of the judges of an august tribunal such as the Supreme Court.

But said Das J.: "The words 'so far' are significant" linked up by the conjunction 'but'..... The passage as a whole clearly amounts to this: Government disfavours Judges who give decisions against it but favours those Judges with high appointments who decide in its favour; that is, though this is calculated to tempt Judges to give judgments in favour of the Government it has 'so far' not made any difference in the firmness and justice of the Judges..... Such insinuations as are implicit in the passage...are derogatory to the dignity of the Court and are calculated to undermine the confidence of the people in the integrity of the Judges."

Mr. Dixit was committed to simple imprisonment for a fortnight and ordered to pay the costs incurred if any, by the Union of India.

[Hira Lal Dixit v State of U.P. 41. A.I.R. (1954), Supreme Court. 743.]

Mr. G. H. J. Richmond, Managing Director, Burmah-Shell arrived in Bombay from London on 26th January on a tour of the Company's organisation in India. He will also visit Burmah-Shell refineries Ltd. Born in October 1898, Mr. Richmond joined Shaw Wallace & Co. Ltd., and came out to India in 1919. He came over to Burmah-Shell on formation of the Company in 1928 and served in the Burmah-Shell Branch Office in Delhi, Bombay and in the General Manager's Office which at the time functioned in Calcutta. He was subsequently moved to Bombay where he became Branch Manager. In 1944 he was appointed General Manager, Burmah-Shell in India for a short period and proceeded to London to take up his present appointment of Managing Director, Burmah-Shell, now on a visit to Calcutta.

COMPANY AND PUBLIC NOTICES

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE is hereby given that the One Hundred and Forty-fourth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3-00 P.M., on Wednesday, 9th March, 1955, for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1954.
2. To declare Dividends.
3. To transact any other ordinary business that may be brought before the Meeting.

The Share Transfer Registers of the Company will be closed from the 24th February, 1955 to the 9th March, 1955 both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. LTD.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 2nd February, 1955.

Printed copies of the Report and Accounts will be despatched to Shareholders on or about 15th February, 1955.

Dividends will be paid to Registered Shareholders only.

THE TITAGHUR PAPER MILLS CO. LTD.

AT a Meeting of the Board of Directors held on the 2nd February, 1955, the following Dividends were recommended to be paid for the half-year ended 30th September, 1954, without any deduction for Income-Tax paid by the Company:—

- On First Preference Shares—8% per annum.
- On Second Preference Shares—4½% per annum.
- On Preferred Ordinary Shares—10% per annum.
- On 'A' and 'B' Ordinary Shares—Annas -12/- per share.

By Order of the Board,
F. W. HEILGERS & CO. LTD.,
Managing Agents.

Share Transfer Books of the Company will remain closed from 25th February, 1955 to 4th March, 1955, both days inclusive.

By Order of the Board of Directors,
For BHARAT COLLIERIES LTD.,
For SAHU JAIN LTD.,
A. K. JAIN,
Director,
Managing Agents.

Dalmanagar,
4th February 1955.

Company Meeting

SPENCER & COMPANY, LIMITED

Addressing the Ordinary Shareholders of Spencer & Co. Ltd. at their Fifty-seventh Ordinary General Meeting, which was held on 21st January, 1955, at the Registered Office of the Company at Madras, Mr. S. W. Edwards, Chairman of the Company, said:—

It gives me great pleasure in welcoming you here this morning, and it is particularly gratifying to see Mr. A. E. Thompson with us again.

Mr. Thompson retired from the Board at the end of last year and I take this opportunity of wishing him good health, long life, and happiness in his retirement. His wide knowledge of our many ramifications and his wise counsel will be greatly missed.

It is not as yet intended to fill the vacancy so caused.

And now to the Accounts.—To get a true comparison with 1954 it has been necessary to adjust figures to the same method that is now applied by our Auditors. The figures against Sales, Selling Expenses, and unclaimed Credit Balances have been adjusted in the Profit and Loss Account and the figures against Book Debts and Liabilities for Taxation have been adjusted in the Balance Sheet.

You will see that Sales show a drop of some Rs. 11 lakhs and a drop in gross profit of approximately 2% as compared with the 1953 results. This I forecast at our last Meeting and I think we are entitled to be pleased that repercussions have not been worse. During year our Trading Activities have been reduced by the cessation of our Lessee-ship of the Malabar Hotel, which we had held from its inception in 1935. Later in the year we were forced through continued adverse Trading to terminate our contracts for Railway Catering of some 75 Restaurants throughout India. This after over fifty years of service in that capacity. The effect will be to the advantage of your Company—the demand for Western Style Catering over the past few years had declined to such an extent that it was no longer possible to carry on profitably, but it is sad that contacts such as these should have to lapse after pleasant and co-operative relations of over half a century.

The effect of Legislation which involves liabilities carrying retrospective application has been felt during the year in respect of retrenchment of personnel at the Malabar Hotel, in the Railway Catering Section and at our Kanpur Factory. This is an example of what I had in mind when I referred to this point last year. It has hit us during the year of Account, and will also be felt in the current year.

For the future, I will not forecast except to say that if Trading continues as it has begun in the first six months of our current year, our position at the close in so far as Trading goes, will be encouraging.

In conclusion, I would like to register my appreciation of the loyal and willing support extended to my Board and myself to all those who have helped so indefatigably in the results attained.

The Accounts and Balance Sheet as at 30th June, 1954 were unanimously approved and adopted. A further and final dividend of 10 per cent free of income-tax on the Ordinary Shares as recommended by the Directors, was declared, making in all a total dividend of 15 per cent free of income-tax for the year.

THE BANK OF INDIA LIMITED BOMBAY.

NOTICE is hereby given that the Forty-ninth Annual Ordinary General Meeting of the Shareholders of THE BANK OF INDIA LIMITED will be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 3rd March, 1955 at 4 o'clock in the afternoon (Standard Time):—

- (1) To receive the Report of the Directors and the Audited Accounts for the year ended 31st December, 1954,
- (2) To declare a dividend,
- (3) To elect Mr. Madanmohan Mangaldas who vacates his seat as a Director under Article 85 of the Articles of Association and who is eligible and offers himself for re-election,
- (4) To elect Directors in place of those retiring by rotation, and
- (5) To appoint Auditors and fix their remuneration.

NOTICE is also given that the Transfer Books of the Bank will be closed from Monday, the 21st February, 1955 to Tuesday, the 8th March, 1955, both days inclusive.

D. R. THOM,
General Manager.

Bombay, 3rd February, 1955.

THE GOKAK MILLS, LIMITED

NOTICE

NOTICE is hereby given that the Transfer Books of the Company will be closed from the 4th March, 1955 to 24th March, 1955, both days inclusive.

The Dividend, if sanctioned, will be paid to those Shareholders whose names stand on the Register of the Company on the 24th March, 1955.

By Order of the Board,
FORBES FORBES CAMPBELL & CO. LTD.,
Agents.

Bombay, 7th February, 1955.

NEW ICJC TRAINING SCHEME FOR GROWERS

Progress of quality improvement of the Indian grown jute will be speeded up by the new scheme launched this season by the Indian Central Jute Committee to educate growers in jute grading, states an ICJC handout. The scheme, already in operation in the five jute growing States of West Bengal, Bihar, Assam, Orissa and Uttar Pradesh, has dual objectives. It is intended to teach cultivators the know-how of grading and at the same time equip them with a sound technical knowledge of the preparation of clean good fibre. Both the Central and State Governments have been expending considerable funds and efforts to create conditions necessary for the increase of internal supply of high grade jute by excavating new retting tanks and renovating old ones, by multiplying seeds of high yielding strains and by popularising improved cultivation and cultural practices with seed-drills, wheel-hoes, etc. The ICJC scheme, which is being worked in close collaboration with the jute development personnel of the States, aims at expediting the Centre's plan by getting growers to realize the economic benefits of quality improvement. On the one hand, it will enable them to prepare good fibre and on the other, to assess progressive improvement of the crop quality from year to year. Above all, the object of the grading scheme is to place growers in a better bargaining position than at present to settle a fair selling price for their produce.

In current transactions, the universal practice is lump sale of the fibre unsorted. Most of the price benefit accruing from superior quality goes to the middlemen and kutcha bales. There are, therefore, good reasons for laying stress in the scheme on making the masses of jute growers conscious of quality. A large percentage of Indian jute suffers from the effects of unsatisfactory growing conditions and faulty methods of preparation in the post-harvest stages. The trade has coined its own set of terms to describe the various faults that lower the general standard of quality. It is imperative that the growers recognize these faults and what they are due to, for the presence of one or two defects is enough to depress the value of their fibre. The grading parties will teach them how it is possible to prepare faultless fibre by the exercise of a little more caution during the important processes of retting, stripping and washing. All the five jute growing States have been allotted itinerant grading parties consisting of expert assessors. Already thousands of propaganda leaflets in different regional languages explaining the direction and purpose of the scheme have been distributed among growers and several meetings and demonstrations held. The modus operandi of the scheme is simple. The grading parties are to select some central villages as their temporary headquarters from which to cover other neighbouring villages. Assortment will be taught on the basis of existing mill standards. Each grower's jute will be handled at a time and graded separately. The principal factors that go to constitute different mill grades as also the common faults found in jute, their causes and the means of avoiding them will be demonstrated. He will also be told the difference in price between the various grades and to sell jute, so graded, on grade basis. The propaganda pamphlets under the jute growers to take advantage of the grading parties and learn the assortment technique at their own interest as well as in the broader interest of the jute trade.

BANKS

H indicates that Share capital is half paid. O, C and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Manganese Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE TRUTH ABOUT TEA PRICES

CEYLON PREMIER CONFUSES THE ISSUE: CONSUMER RESISTANCE APPEARING

BY an odd coincidence, last week's sudden quickening of interest in tea prices occurred simultaneously with the first major break in the London auction quotations that has taken place in the last two years. Responsibility for giving the latest twist to the problem must be borne by Ceylon's Prime Minister, Sir John Kotelawala, whose castigation of the London price of tea, as being "damned ridiculous" has caused a storm of protest from representatives of the trade in Britain and an invitation from their association to Sir John to prove it. If tea prices just missed being a political issue before, this statement should ensure that they will be in future. If it is true that three shillings is added to the cost of each pound of tea between its leaving Colombo and arriving on Britain's kitchen shelves, here is a scandal which Her Majesty's Government would not dare leave uncontrolled in what might turn out to be an election year. Unfortunately for Sir John he does not seem to have got his facts right, and unless he is able to meet the challenge of the British Tea Trade Committee and produce the tea he says can be bought in Colombo at "three and four shillings a pound," he might find that he has only succeeded in giving some unwelcome publicity to the amount which his own country's export duty is taking out of Britain's household budgets.

The facts about prices seem to be that 4s 7d is approximately the correct figure for a pound of common tea in Colombo, and not "three and four shillings a pound" as Sir John states. What is more, the 4s 7d does not include export duty and cesses, whereas Sir John's figure allegedly did. When these are added, and freight and handling charges make their contribution, the total cost is brought up to the region of seven shillings a pound, which, *The Financial Times* has pointed out, is a few pence higher than the price at which that same pound of tea was being sold on the London market last week. The lower level of export duty in India means that the Calcutta auction price of common tea is about 5s 5d at the moment. When all the usual charges, including export duty, have been added the cost comes to about 6s 10d a pound, which incidentally is sixpence more than the price charged by the London market for this tea last week. With auction prices at that level it is difficult to see how Sir John arrives at a figure of three shillings as the saving which could be made if some organisation, presumably the British Government, were to buy its tea directly from the Colombo market. If Sir John intended his remarks as an indictment of the London tea trade it was a pity he did not get his figures right first. At best, it looks as if he will have to find firmer ground on which to further Colombo's interests; at worst, he has fixed the anxious eye of the British housewife on that figure of almost two shillings a pound which is the Ceylon Government's stake in the present price level.

The trouble with Sir John's statement was not only that it appears to have been wrong in fact, but also that it has opened the way to a completely false impression of the price problem. At the moment what determines the price of tea is not the cost of production, whether this is high or low or bears an export duty or not, but the prevailing state of supply and demand. The Ceylon Premier was much nearer the mark when he suggested that a fall might soon take place because Ceylon has had a good crop this season, although if demand continues to grow as it has been doing in spite of increasing prices, the result of better crops might simply be to slow down the rise. It may now be true that demand will remain permanently higher than it was before the United Kingdom ended rationing and the United States began to resist the soaring prices of coffee. Even with the current level of prices, tea could expect demand to increase because of the difficulties of its competitors and the improvements in the standard of living which are at present taking place in its various

markets. Until the middle of last year tea prices had barely caught up with the general rise in wholesale prices since the war. This fact was brought out in graphic form by Mr. Anthony Hyde, Executive Director of the Tea Council of the U. S. A., speaking at the annual convention of the American Tea Association. Without suggesting that the trend of the last six months has not been anything but serious for the tea trade in the U. S., he does show that since 1930 tea has an excellent record for maintaining price stability. Related to the American Index of Wholesale Prices tea is seen to have been consistently under-priced up to 1942 and to have risen above the average level only twice since then. At the moment it is still well below its two closest rivals, cocoa and coffee. Mr. Hyde attributes much of this remarkable stability to the working of the International Tea Agreement.

It is this tendency to remain low in price that has probably accounted for the recent improvement in tea's popularity in the United States, aided of course by an energetic promotion policy. With rising demand before them, the American tea interests are now watching the progress of prices anxiously and are taking some heart from the improvement shown by last year's crop figures over those for 1953. The output of tea is increasing; already a cry has been raised by Mr. J. A. D. Wilkins, Chairman of the Doonars Branch of the Indian Tea Association, that the margin between supply and demand is not now such as could stand any marked decrease in consumption. Mr. Wilkins might be right: at any rate there should be about 33 million pounds more tea forthcoming from the whole of India for last year, and a corresponding increase from Ceylon. The present fall in prices on the London market—amounting to over five pence a pound from the peak reached during January—is probably the result of resistance to high prices on the part of the trade, but it might be a sign that supply and demand are now just about in balance.

Considering the present statistical position and recent trends in demand, there would seem to be little chance of tea prices coming down sharply. If the relation between price and demand was as automatic as elementary economics textbooks suggest, this would certainly be the correct conclusion. But in practice there are complications, and it is true to say that a price level can be considerably affected by what buyers consider it ought to be. There is no doubt at present that the price of tea is higher than the average consumer is content to pay, and whereas in theory the adjustment between supply and demand should take place at the margin, in fact tea might now be facing that sudden fall in demand which has earned the popular name of "consumer resistance." The recent announcement from Belfast that the Northern Ireland Housewives' League is organising a campaign for one ounce of tea less a week for each household is an example of this. Significantly the

announcement is accompanied by a statement that the League feels prices could be reduced to between five shillings and 5s 6d; if that feeling spreads there is no doubt that the price will come down to that level. Another example of sudden refusal to pay current prices comes from Saurashtra where, together with villages in the neighbouring area of North Gujarat, a campaign is being set on foot to close village tea shops altogether. If this habit of regarding a pound of tea as worth a certain sum and no more has come to stay the result will be that tea may be in short supply up to that price, but that demand will shelve steeply once it has been passed. The effect is similar to that of rationing and might mean the establishment of a permanent distrust of the free market price of tea—a state of affairs which could be damaging for the whole of the trade and industry.

PRIVATE HOARDING DEMAND ON THE INCREASE

The February "Review" of the Midland Bank, London, has put the whole gold trade in perspective. It has demonstrated that gold has maintained its status as the final monetary reserve for international purposes, and as the basic measure with which exchange rates conform, despite the arbitrary fixing of its "official" value at the prewar price of \$35 an ounce when virtually every other material asset has greatly increased in value. It is, indeed, partly because the statutory value of gold is fixed that the metal is wanted in times of uncertainty in countries where banking systems are not fully developed or where currencies are precarious. The gold producers' costs have not, of course, remained at prewar levels, and on the basis of an unchanging price for their product their output has tended to decline. However, this tendency has been mitigated by two factors: the free markets, where premium prices have been obtainable, and the transformation of the value of uranium—geologically associated with gold especially in South Africa—as a result of the technical advances in nuclear fission. A subsidiary factor—it has not been permanent—was the widespread devaluation of non-dollar currencies in 1949, which raised the official prices of gold in terms of local currencies and thereby offset some of the increase in local costs. The International Monetary Fund did not approve the free markets, but it had ultimately to recognise them as an alternative outlet for newly-mined gold in September 1951. It seemed at that time that official reserves could not continue to attract a fair proportion of new output, and that the increase in the official price which the leading producers had been demanding for years past could not be delayed much longer. But the premium brought forth more supplies in 1951 and large quantities of French-held gold were converted into an official gold loan in 1952, and by late-1953 the premiums over the official price of \$35 an ounce had almost disappeared. Meantime, the good prices obtainable for uranium had begun to justify the mining of gold-bearing ore that would not previously have been economic, and new output continued to flow in reasonable quantities.

The Midland Bank has collated figures showing that the world total of monetary gold, as a proportion of new production, has increased in recent years. The statistics are not, unfortunately, complete, and they vary according to the source, be it the International Monetary Fund, the Bank for International Settlements, the US Federal Reserve Board, or some independent authority. They agree, however, that the increase in monetary reserves amounted to about one-quarter of new production in each postwar year until 1950; that it declined below one-quarter, perhaps as low as one-sixth, in 1951; that there was a substantial recovery in 1952, rising to the former proportion of one-half in 1953; and that there was some further advance in 1954. In fact, the anticipated dearth of gold for official monetary purposes has not materialised. At the same time—and this is a major factor in the stabilisation of the non-dollar countries' finances—the proportion of reserves held by the various countries has been changing. At the outbreak of the war the United States held nearly 60 percent of the monetary gold reserves of the non-communist world; in 1948 the proportion was more than 70 percent; but the latest figures show a proportion back again to the region of 60 percent. The nominal values of the gold reserves of the sterling area and of Western Europe have been approximately restored to their prewar levels, though they have not yet regained the prewar proportions of the total, nor are they—and this is another major factor—anywhere near the prewar levels in terms of

The current year's trends are not easy to foresee. In the middle of last year the rise in the sterling area's gold and dollar reserve was reversed and the performance so far in 1955 does not suggest that it will be easy to accumulate in the first half of 1955 the increase which is apparently needed to offset a loss in the seasonally unfavourable second half-year. At the same time there are signs that, as international politics become more turbulent, the private demand for gold to hoard as the ultimate precaution against adversity is reviving. Variations in private demands for hoarding, and in inducements to release gold from private hoards, are mainly responsible for changes in the supply of gold for monetary stocks. These stocks may be unable to increase much, and the American proportion of them may rise somewhat, this year. Yet the freedom of supplies through London will evidently restrain premiums in the free gold markets, and the metal's basic price will remain, it seems, indefinitely at \$35 an ounce, while the "trade" in gold continues its gradual return to normal.

South Africa's decision to suspend exclusive sales of gold to Britain and allow further freedom for the trade to function normally is not expected to have any adverse effect on the British economy. This may sound paradoxical, but the annual review of S. Japhet and Co., bullion dealers, furnishes the reason when it says "the hub of the world's gold market is gradually moving back to London." To emphasise the efficiency of the London gold market, despite the inactivity of 15 years, it is stated, that the central gold service of the International Monetary Fund has not always been able to get all the gold it needed. Japhets comment: "No doubt London is now fully able to step into the breach." One of the reasons London has been able to quote smaller margins than most other markets, apart from the efficiency of the dealers, is because of the big turnover. A further expansion is expected. South Africa is still selling all her output of newly mined gold in London, and it is estimated that in three years' time South African output will be 40 per cent higher than at present. Since the war little Canadian gold has been seen in Britain, but it is expected that bars refined in Canada will soon be accepted as "good delivery" in London. The supply is not likely to be large, since Canada keeps most of her current production. In the past few months, Russia has sold virtually no gold in the free markets of the world, but not, it seems, because supplies are short: in fact, Russian sales "may well be resumed in 1955." In spite of these favourable trends, Japhet and Co. say, dealing in gold is not particularly profitable, "a situation which will presumably right itself as the volume of transactions expands." This expansion is not likely to take place until restrictions, particularly on the sales of gold to sterling area countries and the Middle and Far East, are lifted. The review also throws some light on the less reputable side of the international gold market. Describing the market in Hong Kong and Macao, where a large part of the world's gold is handled, Japhets say: "The trade and its various channels are said to be controlled by a small but powerful ring of operators, well placed to appreciate and take advantage of local facilities." Irregularities also appear to take place in France, for while private imports of gold are still forbidden "substantial quantities of bullion and coin continue to reach Paris from outside." Finally, it is estimated that no fewer than 20,000,000 gold coins, including sovereigns, have been minted since 1952 in various places from Milan to Beirut.

Lancashire Mills' Results.—A possible explanation of the Board of Trade's reluctance to take any immediate action to protect Lancashire against imports of cheap cloth may well be provided by the trading results of the industry during the past years. For some sections 1954 turned out to be the best in the matter of earnings and average dividends paid in any year since 1920, a year that experienced a sharp recovery following the first world war. According to an analysis prepared by Frederick W. Tattersall, of Manchester, earnings announced by 12 leading spinning and weaving combines and their subsidiaries amounted last year to £5,183,133, against £3,187,641 in 1953. The average dividend was 13.58 per cent, against 11.94 per cent. On the spinning side the average profit announced by 67 mills during 1954 was £313,226, compared with an average of £27,546 in 1953. The average dividend paid was 24.31 per cent against 20.14 per cent. Cloth manufacturers showed a fall in profits. The results of 28 weaving concerns showed average earnings of £38,120, compared with £45,401 in 1953. Average dividends were down from 18.36 per cent to 15.98 per cent, but this is a small section of the whole. In addition there was quite substantial capital re-adjustment. Share bonus issues and capital repayments amounting to £25,168,922 were made by cotton companies compared with only £1,386,216

I. C. I. C. Issue Success.—The public issue of Rs. 1½ crores of ordinary shares in the Industrial Credit and Investment Corporation of India Ltd., which closed last Tuesday, is reported to have been instantly over-subscribed. The issue was for 1,50,000 ordinary shares at Rs. 100 each, and the security and terms offered ensured that it would be most attractive to investors. The result is therefore not surprising. Along with the success of several notable I. C. I. C. loans last year, the achievement of the I. C. I. C. points to the fact that there is still an excellent market for first-class equities in India. In addition to the above issue the capital of the Corporation now consists of a credit of Rs. 7.5 crores from the Government of India, interest-free for 15 years; a loan of Rs. 5 crores from the International Bank; shares held by British investors amounting to Rs. 1 crore; and Rs. 50 lakhs shareholding held by American investors. Indian insurance companies and banks have agreed to put up another Rs. 2 crores. The Corporation has already received several applications for assistance and these are to be considered in the near future.

Indo-Malayan Trade.—The report on the work of Indian Government's Trade Representative in Malaya for the year 1952, only just published, is clearly two years out of date; yet it is interesting for certain observations made in the report about the trend of Indo-Malayan trade. The year 1952 was a bad year for Indian exports to the Federation; they slumped in value to M\$132.6 million from M\$206.1 million in the previous year. This heavy fall was entirely due to a severe decline in cotton textile exports (by far the largest item in the Indian export trade with Malaya) which were less than half in value than in 1951. The re-emergence of Japan in the export field was in all probability the factor responsible for the Indian loss of business. The Trade Representative lays little stress on this fact, but he has issued a warning to Indian business interests to watch their market and maintain it by making personal studies of consumer requirements in Malaya. This positive approach to the problem of competition is not often appreciated in commercial quarters here. Some leading spokesmen of the Indian textile industry have spoken repeatedly of growing competition in the textile export trade, but few have put forward any concrete suggestions as to how present markets can be maintained or expanded. According to the Trade Representative's report, Malaya is also a growing market for certain lines of Indian manufactures, such as electric lamps, bulbs and fans, power pumps, toilet soaps, plastic materials, sheet glass, and confectionery. But here also, exploration of the market has been neglected by Indian manufacturers and exporters.

Two More Development Councils.—The establishment of two more Development Councils under the Industries (Development and Regulation) Act, 1951, for the heavy and light electrical industries will be useful—if greater emphasis is placed on development than on regulation. The purpose for which they have been called into being is wholly laudable, but the industries concerned need the assurance that no undue restraint will be placed on their activities in the name of development. The primary function of the Councils as defined in the Act is to recommend targets of production, co-ordinate production programmes, review the progress of work from time to time, suggest norms of efficiency to maximise production and measures to reduce costs and improve quality. The electrical industries need plenty of assistance from the Government in some of these matters. The gap between rated and utilised capacities in most units is very large, particularly in the light electrical engineering industry. This state of affairs neces-

219

Employment Trends.—The Directorate-General of Resettlement and Employment's report for the month of December shows that the vacancies notified were fewer than in November, when an encouraging improvement had been noticed. The number of placements slightly increased in the country as a whole, West Bengal claiming most of the placements, but there was also an increase of 26,000 persons on the live registers bringing the total to well over 6 lakhs. In West Bengal, Madras and Bombay the live register figures reached the highest levels ever. Most States reported an unsatisfactory situation. The number of vacancies notified by the private sector was 3,565; the public sector notified 10,599 vacancies. The shortage of stenographers, typists, qualified draughtsmen, overseers, surveyors, compounders, midwives and nurses persisted; a shortage of doctors, engineers and skilled workers of certain categories was also widespread. As against this, the difficulty of finding jobs for clerical hands, fresh graduates and matriculates, untrained teachers, unskilled office workers, carpenters and motor drivers continued to be felt. Applicants possessing high technical, scientific, professional or administrative qualifications and experience registering for employment assistance decreased to 893 from 967 of the previous month, but their placements improved to 161 from 123. At the end of the month there was 5,048 such applicants on the live register. Of the total number of placements by far the largest proportion was for jobs carrying a monthly salary of less than Rs. 101.

Showing Indian Goods in U.S.A.—It is encouraging that there is a genuine desire on the part of the private sector in America to help its counterpart in this country by rendering services tending to increase industrial development here and improve trade relations between the two countries. Providing investment finance is not the only way in which business men in America are trying to help the Indian economy. Mr. Arthur S. Kleeman, President of the Colonial Trust Company, New York, who are domestic and international bankers in Bombay last week gave an outline of a plan aimed at popularising Indian products in American markets, with which Mr. Robert R. Young, Chairman of the New York Central Railroad and Mr. William C. MacMillen, President of the Chesapeake Industries Inc., had also promised to associate themselves. Mr. Kleeman proposes under his plan to exhibit Indian products at the Rockefeller Centre in New York and also to prepare and circulate to the American Press and leading banks in that country, monographs detailing import potentialities in India, with a view to educating the American public on Indian goods. For this purpose, Mr. Kleeman hoped to make the Colonial Trust Company the headquarters for developing American trade relations with this country. Popularising Indian products and finding a dollar market for them is a useful method of helping in the development of this country. While Trade Commissioners and other bodies could do a great deal, this effort on a purely private basis by an American concern may produce better results because of its greater and more intimate domestic contacts. It seems that Mr. Kleeman has discussed this plan with several bankers and business men in this country and registered a good response from them all.

West Bengal Budget.—The succession of deficit Budgets for West Bengal has continued with the announcement by Dr. B. C. Roy on Tuesday that for the year 1955-56 expenditure is expected to exceed receipts by Rs. 17.12 crores. This is the third consecutive deficit Budget. Revised figures for the current Budget year indicate a shortfall of Rs. 13.29 crores; that for the previous year was Rs. 6.14 crores. The reasons for this continuing trend, as stated by Dr. Roy, are much the same as existed last year. The Chief Minister referred

to West Bengal's "basic malady" as being its lack of land from which State taxes would be raised. The chief wealth of the State, its industries, can be taxed only by the Central Government. Tuesday's Budget proposals included no new taxation measures, nor any suggestion for the revision of existing rates of taxes and duties. The State Government expects to raise a Rs. 4-crore loan next year which will increase its public debt to Rs. 11.35 crores. Its debt to the Central Government at the end of 1954-55 is expected to stand at Rs. 104.6 crores, and at the end of the coming Budget year at Rs. 140.9 crores. An air of complete defeatism pervaded the whole Budget document. West Bengal's difficulties are certainly great and their chances of solution are no better for being unique in India at the moment. But that does not seem to be adequate justification for such a fatalistic acceptance of the present inability to balance revenue and expenditure. Dr. Roy maintained that a great volume of investment is needed if the State's economy was not to disintegrate completely. There are already about 1,01,00,000 unemployed and employment will have to be found not only for them but for an additional 120,000 a year which the increase in population is forcing on to the labour market. In the next five years the State can expect an increase in the number of job-seekers by 600,000. A proportion of 21 percent of the total number of agricultural families, amounting to about 700,000 families in all, are landless labourers. Cottage industry is decaying and an increasing burden is being placed on industry for creating employment opportunities.

Second-hand Ship Purchases.—In a recent reference to the second-hand ship market, based on the report of a well-known firm of brokers, it was mentioned that India and Pakistan, anxious to increase their fleets, had not been very active over a period when prices were depressed by the fall in freight rates. The New Year special number of *The Survey* and *Shipping*, with its valuable statistical tables on all aspects of the industry's working in 1954, helps to confirm as well as to correct this picture. The Indian Government's encouragement to national shipowners to add to their fleets caused the latter to take a more active interest in the market, but on the whole the actual business transacted was comparatively small. India bought nine vessels having a total tonnage of 35,827 tons, but three of these aggregating 9,895 tons gross were for breaking up. In addition, two ships of 9,203 tons gross were sold for breaking up, so that India in fact added only four second-hand vessels to her merchant fleet to increase its total tonnage by 16,728 tons. Apart from one small ship from Sweden, which was built in 1927, the other five ships going into service are between six and fourteen years old. Pakistan figures in only five transactions during the year, and three of these were between Pakistan companies. Only one ship of 9,200 tons was bought from the U.K., and another vessel of 6,638 gross tons was sold for breaking up to Japan. As one of the internal deals also involved the scrapping of a 5,185 tons gross ship, the net result was a decrease in total tonnage of some 2,500 tons. Ceylon appears in the list for what is probably the first time acquiring a vessel for breaking up.

INFUSION VALUE OF TEA
TO THE EDITOR OF "CAPITAL".

In continuation of my letter (see *Capital, 30 February*) regarding the future of the tea industry and the possibility of increasing the infusion value of tea, I have been trying to devise a rough and ready process, that would prove the correctness of my theory that the retention of the essential oils in the tea leaf would result in the infusion value being increased substantially. I would now therefore suggest that the Tooklasi Station and any tea estate interested should try the hand-rolling of a small quantity of green leaf taken from one day's plucking, and after it has been rolled and fermented, it should be dried over a charcoal fire (chula) on a brass tray (on no account use iron) and the resultant tea compared with that manufactured from the balance of that day's plucking, in the ordinary manner. The one serious defect in this method is that I do not think a hand roll will be hard enough, but no doubt those who try this experiment may be able to overcome this, possibly by a longer roll than is usual at present. By using the chula-type of drying the moisture should be removed from the leaf without effecting the essential oils, and I feel confident this will show if my theory is correct. I shall welcome copies of any comments made by your readers in case I can help with further suggestions.

Yours faithfully,

Now for heavy duty or pleasure driving

NEW *Double Protection* **Mobiloil**

Double Protection
for Your Engine!

1

TWICE THE CLEANING ACTION!

- Double-strength cleaning agent keeps valves, rings and pistons far freer of harmful sludge and varnish than formerly possible.
- New engines operate longer at top power—old engines take on new life!
- YOU get smoother engine performance—more power—improved mileage.

2

TWICE THE PROTECTION AGAINST WEAR!

- Increased ability to cut friction—by reaching and protecting tight-fitting engine parts more quickly and completely than ever before.
- New compound in Mobiloil effectively reduces corrosive wear in stop-and-go driving.
- YOU add years to engine life—reduce overhauls and repairs—assure top economy!

Finance in India & Abroad

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR CREDIT CONTINUES

Wednesday, 16th February.

THERE continues to be good demand for funds, with most of the pressure still coming from upcountry centres in connection with sugar crushing. Jute purchases have not been large, no doubt because present prices are so high; finance against grains has declined with the distribution of the last harvest. In the Calcutta interbank market the call rate quotes 3 percent.

It has been a dull week for bills of exchange. Remittance has been about average. The principal exchange rates are unchanged.

Bullion ruled steady but closing prices were fractionally shaded on profit-taking. Silver fell from the previous week's level of Rs. 164-3 to Rs. 163-15, quoted to-day. The ready price was 4 annas higher. The price increased from 73½d. to 74d. in London but it was unchanged at 85½ cents in New York.

Gold also declined from Rs. 95-4 to Rs. 94-15. The sovereign at Rs. 60-15 showed a loss of 2 annas.

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 15th February totalled Rs. 2,20,50,000. The average rate of acceptance fell to Rs. 2-8-5 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent were allotted 41 percent. Tenders for another Rs. 1 crore of treasury bills will be received at all the usual centres up to the close of business on Monday 21st February. During the week ended 11th February, 1955 Government of India treasury bills for Rs. 7,94,50,000 were sold in favour of the Reserve Bank of India.

Further rises of Rs. 10.75 crores and Rs. 9.40 crores in notes in circulation and the total note issue to Rs. 1,242.37 crores and Rs. 1,254.01 crores were outstanding features of the return of the Reserve Bank of India for the week ended 11th February, 1955. The expansion in currency was duly covered by raising rupee securities by Rs. 10.11 crores to Rs. 447.74 crores. Notes held in the Banking Department consequently fell by Rs. 1.35 crores to Rs. 11.44 crores. Deposits of the Government of India rose by Rs. 3.74 crores to Rs. 52.58 crores but other Government accounts fell by Rs. 8.28 crores to Rs. 11.08 crores. Balances of commercial banks at Rs. 48.78 crores showed a fall of Rs. 6.11 crores. Balances held abroad investments Rs. 2.42 crores to Rs. 69.30 crores as did investments Rs. 21.81 crores, of which advances to scheduled banks against usance bills totalled Rs. 4.92 crores (Rs. 4.59 crores). Such advances have aggregated Rs. 5.59 crores since 1st January, 1955. Ways and means advances stood at Rs. 1.24 crores against Rs. 95 lakhs.

The statement of the position of Scheduled Banks for the week ended 4th February, 1955, discloses Demand and Time liabilities of Rs. 581.99 crores (Rs. 10.22 crores on account of borrowings from Banks) and Rs. 369.17 crores (Rs. 2.56 crores) compared with Rs. 579.97 crores (Rs. 10.24 crores) and Rs. 370.43 crores (Rs. 2.91 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.17 crores and Rs. 2.91 crores to aggregate Rs. 32.77 crores and Rs. 54.97 crores respectively. There is a rise of Rs. 1.68 crores in investments to Rs. 354.47 crores. Advances and bills discounted at Rs. 569.92 crores reveal an increase of Rs. 9.95 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.2 percent and 59.9 percent against 9.7 percent and 58.9 percent.

The return of the Imperial Bank of India for the week ended 4th February, 1955, shows a rise of Rs. 17 lakhs in deposits to Rs. 232.10 crores. Investments in Government Securities and other authorised investments are up by Rs. 1.75 crores and Rs. 5 lakhs to Rs. 101.01 crores and Rs. 11.50 crores, respectively. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 3.28 crores and Rs. 63 lakhs to aggregate Rs. 102.04 crores and Rs. 7.62 crores, respectively. Cash and balances are, in consequence, shown at Rs. 25.85 crores or Rs. 3.37 crores less.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during the month of December, 1954, amounted to Rs. 1,636 lakhs as compared with Rs. 1,416 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,141 lakhs as against Rs. 1,075 lakhs, export duties for Rs. 470 lakhs as against Rs. 319 lakhs and land customs and miscellaneous for Rs. 25 lakhs as against Rs. 22 lakhs. The total gross collection

of Union excise duties amounted to Rs. 902 lakhs as compared with Rs. 829 lakhs. During the nine months, April to December 1954, the grand total of gross customs and Union excise revenue realised was Rs. 20,144 lakhs as compared with Rs. 18,886 lakhs during the same period of the preceding year. Of this amount, import duties accounted for Rs. 9,590 lakhs as against Rs. 8,735 lakhs, export duties for Rs. 2,743 lakhs as against Rs. 3,021 lakhs, land customs and miscellaneous for Rs. 224 lakhs as against Rs. 193 lakhs and Union excise duties for Rs. 7,587 lakhs as against Rs. 6,937 lakhs.

The following is a statement of the cash balances of the Central Government on the last day of October, 1954:—

	Rs.
(1) At the Reserve Bank of India in India	1,01,24,09,000
(2) At treasuries in India	2,48,82,000
(3) In England (Sterling converted at 18d. the Rupee)	1,01,60,000
Total	1,04,74,51,000

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STOCK MARKETS IN AN UNCERTAIN MOOD
SHARP FALL IN GILT-EDGED:
INDUSTRIALS EASE

London, 15th February.

INFLUENCED by the international situation and later by the Chancellor of the Exchequer's further warning on the economic situation, the Stock Markets here charted an irregular course in the past week. Early uncertainty caused by the Far Eastern situation increased on the latest political developments in the Soviet Union but the markets recovered prior to the week-end. Towards the end of the period, however, fears of dearer money produced renewed caution and the account closed today on a dull note. Gilt-edged securities were subdued throughout and receded sharply on bank rate fears and due to the weakness of sterling. But the decline reflected a lack of support rather than actual selling. Far Eastern trends were fairly well maintained while Europeans showed erratic movements. Dollar stocks reflected movements on Wall Street and mostly declined on balance. Industrials moved uncertainly and although recovering before the week-end after an earlier setback, turned easier at the end of the period. Little selling was noted throughout but losses predominated on balance. Gold shares made the best showing of the market on selective buying of Free Staters and Far West Rands, but business contracted after the week-end. Coppers gained ground and other base metals were mostly well maintained. Oils, however, suffered profit-taking and rubbers were subdued. Tea shares eased on the decline of tea prices in the London auctions.

The Money Market

The seasonal tightness of money continued during the past week and loan rates were generally 1 percent above the basic level, with 2 1/2 percent paid under duress. In view of the credit stringency, bill business was small. There were a number of enquiries for bills from American and Continental banks, but only a few were translated into actual business. The market made no change in its tender bid for last week's treasury bill offer and the average rate of 4 1/2 percent was about the same as the previous week's 4 1/2 percent. Treasury bill applications totalled £362,950,000 of which an amount of £230,000,000 was allotted. This week £250 million are on offer. The Bank of England return for the week ended 9th February shows net increase in circulation unchanged at around £1,659 million, while bankers' deposits were about £6 million higher at around £267 million.

London Rubber Prices

The smooth evacuation of the Tachen Islands contributed temporarily to a quieter market, with rubber prices easing and traders marking time. Against the background of the Formosa tension and the reshuffle of the Soviet political command, the market however strengthened in the absence of large offers from Singapore. Values resumed advance on the stimulus of higher advices and good demand from New York, especially for lower grades of sheet. The closing values were about

1 1/2d higher on balance. Offerings of sole crepe were small and thus moderate buying orders met with resistance. Occasional business was done on the basis of 36 1/2d a lb. for No. 1 smooth 1/2 inch on spot.

W. Germany to Liberalise Imports

The West German Government intends to apply a free list to imports from some countries which are members of the G.A.T.T. but belong neither to the dollar area nor to the O.E.E.C. countries, authoritative sources say. The countries expected to be included are Brazil, Chile, Finland, Uruguay, Japan and Czechoslovakia. The reason given for the intended measure was that West Germany as a G.A.T.T. member wanted to offer to these countries better opportunities for export to West Germany. Meanwhile, discussions of the extension of the West German dollar free list are being continued. The West German Economics Ministry and the West German coffee trade would soon discuss whether coffee should be added to goods on the West German dollar free list. An extension of the free list for imports from the O.E.E.C. countries would only become necessary after France has extended her liberalisation to 75 percent of her imports, the sources said. West Germany is expected to increase her liberalisation rate by one percent then.

U.S. Bank Loan for Brazil

The United States Export-Import Bank has granted Brazil a loan of \$75 million for procurement within the next six months of capital goods manufactured in the United States. The Bank officials said that Brazil now had outstanding dollar loans totalling about \$1,000 million and that country is scheduled to pay back about \$200 million this year. She also has outstanding a number of short-term dollar obligations.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 9th February shows gold stock up by \$1 million. Foreign deposits rose by \$52 million, while foreign investments declined by \$18 million. The Federal Reserve's portfolio of Government securities increased by \$90 million as it bought \$90 million under the re-purchase agreements. Member banks' borrowings fell by \$34 million to \$335 million, while excess reserves declined by \$146 million to \$544 million. The reserve ratio rose by \$25 million to \$7,347 million compared with a fall of \$59 million to \$8,067 million a year ago.

Vegetable Oil Market

The feature of the vegetable oil market has been the recovery in Indian groundnut oil which was touched off by expanded demand and selling reserve in view of the tight freight position. Sellers latterly were seeking £103 for March-April shipment after the recent business at £102. Despite this recovery, coconut oil failed to register any improvement and the bulk of the Ceylon oil for April shipment to the Continent was traded down to £102 1/2, although closing ideas held at £104. Straits oil was quoted at £100 1/2 for Feb.-March shipment after business at £100. Linseed oil retained a firm background, mainly on a prospective expansion in demand, aided by useful U. K. support. Indian linseed oil made £95 for March-April with further buyers in the market at this level, but closing sellers were not below £95 1/2. Castor oil moved higher on selling reserve but most other oils lacked feature with limited trading.

Stocks and Shares

DULL TRADING IN SHARES

NO SELLING PRESSURE: CORNERING DOMINATES
TEA SECTION

Wednesday Evening.

THE share market is dull, with very little business passing. To judge from the extreme caution displayed by investors and market operators alike, this condition will last until after the budget. Although buyers are scarce, there has been no nervous selling and the worst that can be said is that prices are drifting a shade lower.

Energetic cornering persists in tea, and little notice appears to be taken of the signs that the tea boom is entering its last phase. A longish list of tea shares are involved in interested buying, either from cornerers or managing agents or both. Price movements are sharp and unpredictable and the investor is well advised to stay out of this section.

Securities are mostly unchanged except for a quieter trend in long dated stock. Scrip is scarce save what is being offered by the authorities.

Details of the week's trading follow.

The gilt-edged market ruled dull throughout and the volume of business was again on a small scale. Prices on the whole, however, improved slightly; 3% Conversion Loan 1986 was marked at about Rs. 81, while 3% Non-terminable Paper was quoted at Rs. 80.4. In the short-dated group 3% 1957 was better at Rs. 99.5 while 3% 1958 was quoted at Rs. 99.4 cum-voucher and later at Rs. 99.2 ex-voucher. Among medium-dated Loans, 3% 1959-61 changed hands at Rs. 97.7 cum-voucher and again at Rs. 97.5 ex-voucher. While 3 1/2% 1961 was a shade better today at Rs. 99.9, 3 1/2% 1964 was easier at Rs. 98.8; 4% 1960-70 was taken at Rs. 101.13. Two and three-quarter percent 1960 was marked As. 1 higher at Rs. 94.13 as was 2 1/2% at Rs. 92.10. In the long-dated group, prices showed no variation and little business was reported. 3% 1966-68 was quoted at Rs. 90.9 and 3% 1970-75 at Rs. 86.15.

In State Loans, 4% West Bengal 1964 was quoted at around Rs. 100.6 while 4% Madras 1953 and 1964 was asked for at the same price. There was an enquiry for 4% Saurashtra Loan 1964 at Rs. 99.1.

Selected miscellaneous preference shares continued to be sought after by investors but were not forthcoming. The only transaction reported in jute was in Hooghly at Rs. 15.4. Among miscellaneous preference shares, Associated Hotels changed hands at Rs. 65.4 and a small lot of Borra at Rs. 116. Burn 6% were placed at Rs. 124.12, Calcutta Electric were done at Rs. 126, Dalmia Cement fully-paid at Rs. 93 and Chrestien Mica were crossed at Rs. 62.12. Small lots of Indian Iron & Steel changed hands at Rs. 81 and New Victoria Cotton were dealt in at around Rs. 3. Rohtas Industries 'B' were taken at Rs. 64 and Titagur Paper Second at Rs. 95.

In the banking section Imperial Bank fully-paid and contributory sagged further to Rs. 1,568.12 and Rs. 386. Hind. I. Bank were marked between Rs. 25 and Rs. 26.8 while Punjab National were steady at Rs. 40 and United Bank of India 'D' shares at Rs. 41.0.

A solitary transaction was reported in the railway section in Katakhal-Lala Bazar at Rs. 75 though there were buyers of Government guaranteed railway shares, but no sellers.

Very little business was reported in cotton shares. Basanti changed hands at Rs. 4.14, Cawnpore Textiles at Rs. 8.4 and Elgin Mills at Rs. 16.12. New Victoria were done at Rs. 1.6 and Swadeshi Preferred ordinary were steady at Rs. 8.12.

Coal shares continued to be a neglected market with the exception of Katras Jheriah which had buyers at Rs. 48.2. Burrakur were quiet at Rs. 12 as were Bharat Collieries at Rs. 8.4. Central India were done at Rs. 6.13 and East Indian at Rs. 27.5. Seepore were crossed at Rs. 25.12 while Talcher and Western Bengal were dealt in at Rs. 3.3 and Rs. 6.10 respectively. Standard were marked back to Rs. 18.8.

There was no enquiry for jute shares and prices tended to lower levels as the following chart will show:—

	Opening 10.2.55	Closing 16.2.55
Barnagore	172	171
Birla	176	174
Budge-Budge	183	180
Ganges	89.8	89
India	220	206
National	32.15	32.10
Reliance	15	14.10

With the exception of Calcutta Electric which were lower, because of stray sales on London account, at Rs. 14.11 other issues were steady. Cuttack were marked at Rs. 8.3, Jubbulpore were wanted at Rs. 15.8 and Patna at Rs. 12.10. U.P. changed hands at Rs. 16.8.

Sugar snares were a dull market and prices receded in most cases. Belund were lower at Rs. 10.8, Carew were easier at Rs. 9.8 ex-dividend, Ryan were shaded at Rs. 19.12 and Samastipur at

Rs. 14.3. Ramnugger were fairly steady at Rs. 28.8.

Adverse budget rumours were responsible for the steady decline in the quotation of Indian Iron & Steel shares from Rs. 33.12 to Rs. 32.8; tonight's closing quotation is Rs. 32.10. Britannia Building were done at Rs. 7.8 and Britannia Engineering after touching Rs. 42.4 turned sellers at the close at Rs. 39. Burn were quoted at Rs. 246, Indian Galvanizing was steady at Rs. 21.4, but Indian Standard Wagon were quiet at Rs. 116, as were Jessops at Rs. 33.4. Kumardhubi Engineering changed hands at Rs. 11.8 and Marshalls at Rs. 6.14.

In the miscellaneous section, Titagur Paper on bonus rumours improved at one time to Rs. 44.4, but closed lower at Rs. 42.4. Similarly, Orient Paper receded from Rs. 25.12 to Rs. 25. India Paper Pulp were steady at Rs. 245, and Shree Gopal changed hands freely around Rs. 15.8. Dalmia Cement were lower at Rs. 12 as were Sone Valley at Rs. 7.8 and India Steamship at Rs. 7.8. Several deals were reported in New Asiatic Insurance at around Rs. 5.14. India General Navigation were depressed at Rs. 98 and Port Shipping were marked at Rs. 12. Anglo Brothers fluctuated between Rs. 19.4 and Rs. 19.8, while Assam Saws and British-Burmah Petroleum were freely offered at Rs. 6.1 and Rs. 3.11. British India Corporation after recovering for a brief spell to Rs. 8 reacted at the close to Rs. 7.11. Dunlops were done at Rs. 35.1 and Ganges Rope at Rs. 207. Godfrey Phillips after a long lapse recorded a deal at Rs. 17.12. Hoare Millers were extremely quiet at Rs. 7. Indian Cables were steady at Rs. 23.12 as were Imperial Tobacco at Rs. 11.8. Indo-Burma Petroleum were crossed at Rs. 35.13. Jardine Henderson changed hands at Rs. 117, Metal Box were crossed at Rs. 20.4 and National Insulated Cables were steady at Rs. 21.14. National Tobacco were easier at Rs. 10, Rallis were offered at Rs. 39.8, as were Rohtas Industries at Rs. 22.6. Shaw Wallace met with investment enquiry at Rs. 14.12.

In the mining section, there were ready buyers of Burma Mines at Rs. 1.15 and Non-Ferrous Metals at As. 15. Indian Copper were quietly steady at Rs. 3.6 as were Metal Corporation at Rs. 8.14.

Except in two or three isolated cases, the Tea Section ruled quiet with prices tending to lower levels. Among Assam scrip Basmatia showed a sharp decline to close at Rs. 43.12. Brooke Bond were easier at Rs. 16.8 as were East India at Rs. 31.8, Hoograjuli at Rs. 51.4 and Jutibari at Rs. 22.8. Namburnadi on interested buying were at one time taken up to Rs. 21 but when cornering ceased they dropped to Rs. 19. Similarly Tezpur after being taken up to Rs. 39.4 closed lower at 37.12. Dooars scrip, with the exception of Huldibari which appreciated to Rs. 46.12, were easier and in some cases heavy losses were sustained. Banarhat fell from Rs. 600 to Rs. 585 as did Hantapara from Rs. 402 to Rs. 366 and Carron from Rs. 314 to Rs. 285. Ethelbary were easier at Rs. 29.8 as were Ranicherra at Rs. 29.12. Oodlabari were marked at Rs. 42 x.d. Of the remaining shares Darjeeling Tea had buyers at Rs. 238, Kornafuli were better at Rs. 18.2 as were Belgachi at Rs. 42.4 and New Chumta at Rs. 50.6. Eastern Cachar dropped sharply from Rs. 14.10 to Rs. 13 as did Sonai River from Rs. 20.6 to Rs. 18.12. Hansqua had sellers at Rs. 28.6 and Jayshree were on offer at Rs. 12.12.

Providing Rs. 50,000 (same) for depreciation, the BALLY JUTE COMPANY made a profit of Rs. 10,264 for the half-year ended September, 1954, against a loss of Rs. 2.80 lakhs in the previous half-year. Transferring Rs. 50,000 from general reserve, bringing in Rs. 28,494 and making other adjustments there is Rs. 88,759. The usual preference dividends have been paid but there is again no ordinary dividend. A balance of Rs. 18,759 is carried forward. There has been some improvement in efficiency at the mill in recent months, as the directors say, to re-start the looms which had to be closed down for the lack of yarn supplies.

The BENGAL ASSAM STEAMSHIP COMPANY made a profit of Rs. 5.58 lakhs for the year ended 31st October, 1954, compared with Rs. 11.55 lakhs in the previous year. Providing Rs. 2.87 lakhs (Rs. 2.84 lakhs) for depreciation, Rs. 3.55 lakhs (Rs. 9 lakhs) for taxation, bringing in Rs. 1,23,405 and making other adjustments there is Rs. 2,70,698. The ordinary dividend has been reduced to Rs. 7 1/2 from Rs. 10 per share to absorb Rs. 1 1/2 lakhs, leaving a carry-forward of Rs. 99,698. "The prospects for the current year are uncertain", according to the directors.

The revenue profit of the BHARAT COLLIERIES, LTD. totalled Rs. 12,60 lakhs for the year ended last June, compared with Rs. 14,71 lakhs in the previous year. Allowing Rs. 5.58 lakhs (Rs. 6.41 lakhs) for depreciation, there is Rs. 7,10,331, including Rs. 6,280 brought in. The ordinary dividend has been maintained at 6 1/2 percent. Taxation absorbs Rs.

As head of his village panchayat, this man knows the importance of oil—in all its forms—to the rural communities up and down the country. Oil for transport and agriculture... kerosene for the home... fuel for the chakkiwalla's mill. This flow of petroleum products must be constant and unfailing to maintain the even flow of Indian village life. Without oil, it would be impossible to achieve the basic objectives of the Community Development Programme. This aims at raising the standard of living in India's villages, where 80 per cent of the total population is to be found.

What does TROMBAY

The Prime Minister has described these projects as a 'silent revolution' which will change the whole pattern of village life. The Burmah-Shell Refinery at Trombay—the largest in India—plays an important part in changing this pattern. The oil industry as a whole has planned three new refineries which, together with the Assam Oil Company's refinery at Digboi, will ensure that India will no longer be entirely dependent on imported finished petroleum products... products which are so vital to her future development and prosperity.

**BURMAH-SHELL

AN EXPORT CREDIT GUARANTEE SCHEME FOR INDIA

NOVEL FEATURE OF INSURING FOREIGN IMPORTER AGAINST EXPORTER'S DEFAULT

THE Government of India's export credit guarantee scheme has been circulated to export trade interests for comments. A final decision will be taken when trade reactions are received. The proposal for an Export Credit Guarantee Scheme to stimulate exports was discussed at the Export Advisory Council meeting in November 1953. It was considered that the scheme should be designed also to insure the foreign buyer against default by an Indian exporter. The opinion of the trade was divided but it was decided to examine the proposals in detail.

The objects of the scheme would be twofold: (i) to remove the exporter's fear in regard to losses resulting from circumstances which are beyond his control and which are not ordinarily accepted as insurable risks by insurance companies; and (ii) to remove the importer's fear in regard to the fulfilment of the contractual obligation by the Indian exporter.

Export Credit Guarantee Schemes are in operation in various foreign countries, including the U.K. and France. The U.K. scheme is intended to safeguard the exporter against the following contingencies:

- insolvency of the foreign buyer;
- the failure of the buyer to pay for delivered goods within 12 months of due date;
- exchange restrictions or shortage of exchange in the buyer's country;
- the occurrence of war between the buying and the selling country;
- the occurrence of war, hostility; rebellion, revolution, etc. in the buyers' country;
- the incurring of irrevocable extra delivery charges occasioned by a diversion of voyage;
- any other cause of loss outside the selling country which is beyond the control of the exporter or the buyer.

The risks referred to above are guaranteed under what is known as the "shipments policy". In the case of a "contracts policy" as additional risks are also covered, for example the cancellation or non-renewal of an export licence or the imposition of restrictions on the export of goods, not previously

subject to license. In the United Kingdom the guarantee scheme is operated by a department of Government. It issues policies of insurance which provide cover or guarantees against the major risks of overseas trading, charging a moderate premium for the service. The department does not seek to make profits. Its object is to obtain a premium income sufficient only to cover its expenses and the cost of claims and to provide a reserve for contingencies. The department has always adhered to the principle that exporters must retain an interest in their export obligations and policy-holders are, therefore, required to take at least 10 to 15 per cent of the risk, according to the nature of the cause of loss.

In France the working of the insurance scheme has been entrusted to the Compagnie Française pour le Commerce Extérieur and subscriptions can be made against the following risks:

- political, catastrophic and monetary risks, as well as export-import risks and, in a general way, risks resulting from credit transactions with foreign countries.
- ordinary trade risks (bankruptcy in connection with the external trade transactions); in this case the firm works under the control of the State and in some cases with the Government's financial help.

There are also separate schemes to guarantee the exporter up to a certain percentage of the loss resulting from market surveys, advertisement, stock holdings and increase in production for purposes of export.

As far as exports from India are concerned, instances are not infrequent of non-fulfilment of contracts, failure to supply the goods according to sample, short delivery, non-conformity with specifications, inadequate packing, etc. It may therefore be necessary, the Government thinks, to extend the scope of the Guarantee Scheme and provide for insuring foreign importers against failure on the part of Indian exporters to fulfil the terms of the contract.

It is therefore suggested that in the scheme to be adopted in India, provision be made for guarantees to be issued: (1) to compensate any foreign importer, where he has been able to establish a

legitimate claim against an Indian exporter; (2) to compensate the exporter under a "shipments policy" against (a) the insolvency of the buyer; (b) failure of the buyer to pay for the goods within 12 months; (c) exchange restrictions or changes in the value of the currency in the buyer's country; (d) the occurrence of war, rebellion, etc. in the buyer's country; (e) the incurring, in respect of goods shipped from India, of any additional handling, transport or insurance charges which are occasioned by interruption or diversion of voyage outside India and which is not recoverable from the buyer; (f) any other cause not within the control of the buyer or the seller which arises outside India.

Provision, it is suggested should also be made for issuing guarantees to the exporter under a "contracts policy" against all the risks mentioned in item (2) of the previous paragraph, as well as the following: (a) risks due to sudden changes in the import policy of foreign countries resulting in non-shipment from India (b) risks due to non-transport; (c) risks due to enhancement of export duties subsequent to entering into a contract; (d) risks due to cancellation without notice of a fulfilment of contracts for reasons beyond the control of the exporter, e.g. non-availability of drawback scheme under Section 43 B of the Sea Customs Act, subsequent to entering into a contract; (e) cancellation of export licences, except when such action is taken by way of imposing a penalty on the licence holder; (f) imposition of restrictions on the export of any commodity not originally subject to such restrictions.

The insurance cover proposed above would apply only to those exporters who have registered themselves with the insurance organisation by giving an undertaking that all their consignments will be offered for insurance cover before shipment. It will, however, be open to the insurance organisation to refuse to guarantee any particular consignment, or to accept only part of the risk and thereupon the exporter would be free to export them without an insurance guarantee.

The U.K. and French schemes contemplate the guarantee being given by a department or agency of the Government directly to exporters. In the circumstances obtaining in India it may not be possible for a Government department to undertake insurance. A Central Insurance Organisation, it is suggested, may be set up for this purpose. A special law may have to be enacted so that the new organisation would not come within the ambit of the Insurance Act. The Insurance Organisation could utilise the services of the various Export Promotion Councils or other commercial bodies interested in the export trade to carry on its functions. In other words, the Export Promotion Councils or commercial bodies would be acting as the agents of the Central Insurance Organisation in the matter of daily contracts with the exporters.

In the case of a guarantee to a foreign importer the Insurance Organisation would, on receipt of a premium from the exporter (who will act on behalf of the importer for this purpose), issue a policy in the name of the importer guaranteeing to compensate the foreign buyer when he establishes a legitimate claim against the Indian exporter. It will be deemed that such a claim has been established when the matter has been settled by arbitration by a recognised association or an Export Promotion Council for the commodity in question, provided such arbitration has been conducted in accordance with the rules and regulations drawn up by these bodies. In the event of the importer thus establishing a claim against the exporter, he will be paid by the Insurance Organisation. Such payment will be made by the Organisation direct to the foreign importer provided that the latter makes over his right against the exporter to the Insurance Organisation, which will in turn endeavour to recover the amount from the exporter by all means at its disposal. The Export Promotion Councils or commercial organisations which act as the agencies of the Insurance Organisation would also assist in recovering the amount. It will be observed that the Insurance Organisation will have to bear the loss only if the exporter is unable to pay on account of his bankruptcy, etc.

As regards the guarantee to the exporter, the Insurance Organisation acting through the agency of the Export Promotion Councils or commercial bodies will issue guarantees to the extent of 80 per cent of the goods shipped or contracted for, as the case may be. The balance of 20 per cent of the risk will have to be borne by the exporter.

Although the guarantees would be issued by the Central Insurance Organisation, it has been provided in the scheme that the Export Promotion Councils or other commercial bodies will act as the agencies of the Insurance Organisation for the purpose of keeping in close touch with the exporters. This is likely to be advantageous not only from the point of view of the exporters, because they would be in close touch with these agencies, but also from the point of view of the Insurance Organisation because the Export Promotion Councils and the commercial bodies could be expected to have full "status information" regarding individual importers in the foreign countries, as well as exporters in India.

The Insurance Organisation after it has been set up could consider whether it could embark upon other guarantee schemes, such as, (i) a guarantee, in lieu of a bank guarantee, provided for under the Central Excise Rules at present in respect of goods on which an excise duty is levied (e.g. cotton textiles); (ii) guarantees to cover the loss, if any, resulting from: (a) market surveys, (b) advertisement and propaganda in foreign countries, (c) stock-holding in commodities where quick delivery is essential and (d) increase in production for the purpose of export.

TARGETS FOR SHIPPING IN SECOND PLAN

RECOMMENDATIONS OF INDIAN SHIPOWNERS' STUDY GROUP

(FROM OUR NEW DELHI CORRESPONDENT.)

THE report of the Study Group of the Consultative Committee of Shipowners, which had been set up to recommend targets for the second five-year plan, has made a number of recommendations. Firstly, it would like the ships to be constructed at the ship-building yard at Vizagapatnam "in the national interests". But the present high cost of construction in the yard makes it very difficult for shipowners to maintain their competitive efficiency in international waters. Therefore, it is urged that the parity price for the ships should be based not on the cost of construction in Great Britain but on the lowest cost of construction in the Continent. The principle of parity price based on the lowest cost is intended to increase the competitive efficiency of Indian-owned ships. (This principle, incidentally, is not extended to the Indian trader, who on patriotic grounds is urged to sacrifice his competitive strength by paying higher freights to Indian-owned ships.) The Study Group has recommended that all Government cargo should be carried in Indian bottoms. The Study Group objects to the railways taking over planning to take some of the cargo which should go to Indian ships, because "after all it is Indian capital that is invested in railways as well as in shipping." It is fully aware of the keen desire of Indian shipowners to participate in the carriage of oil both in the coastal and overseas traffic. The Study Group feels that the Government should effectively help Indian shipping in creating conditions which will enable them, in due course, to carry all refined products on the coast and also to participate, in a fair measure, in the carriage of crude oil imported from abroad.

Additional Tonnage

Coming to the details, the Study Group recommends an additional tonnage of 50,000 GRT for the adjacent trade, a new cargo-cum-passenger service in the Bay of Bengal and a cargo-cum-passenger service for Tuticorin-Colombo. A tonnage of 250,000 GRT is recommended on the India-United Kingdom cargo service in addition to three modern passenger vessels of 15,000 GRT each with a service speed of 20 knots and with a cargo capacity of 5,000 tons. The cargo-cum-passenger services between India and Malaya and India and Africa have been maintained only by one passenger ship on each run. At least one more ship on each service is recommended for the second five-year plan. Three ships of 4,000 GRT each on the India-Indonesia service, an additional passenger-cum-cargo ship on the India-Persian Gulf service, two cargo ships aggregating 9,000 GRT and two passenger-cum-cargo ships for pilgrim trade on the India-Red Sea service are also recommended; so also the revival of India-America service. The Study Group understands that the Government is contemplating the setting up of a Tramp Corporation. It is opposed to giving the monopoly of tramp trade to any one company or corporation and has suggested that 16 ships aggregating 120,000 GRT should be acquired for the tramp service not only on the India-U.S.A. route but also on the India-South Africa run.

The additional tonnage to be acquired in the second five year plan, it will be seen, will be 445,000 GRT; 90,000 GRT are meant for replacing old and obsolete tonnage. As for finance, out of Rs. 80 crores estimated for the programme, the Government has been asked to provide Rs. 21 crores for its own acquisitions and Rs. 49 crores in loans to shipping companies on "further liberalised terms." The industry has volunteered to provide the balance of Rs. 10 crores. It is not known whether such large sums of money running into Rs. 71 crores will be granted by the Government. The Government is examining the report. Meanwhile, two developments are envisaged. The Government, being committed to co-ordination among various forms of transport, is working on a five year plan under which Indian shipping will be assured of a specified and definite quantum of cargo. Secondly, the Government is in consultation with the oil interests to build a fleet of tankers, such a fleet being owned jointly by the Government and the oil companies at the beginning, the ultimate aim being to acquire complete ownership of the fleet by the Government.

Hydraulic Survey of Indian Rivers

The Power Wing of the Central Water and Power Commission has made a hydraulic survey of the rivers of South India flowing east into the Bay of Bengal and west into the Arabian Sea. A similar survey of the rivers of North India is now under way. These surveys are being examined by the Government of India with a view to selecting schemes for inclusion in the second five year plan. The inclusion of the Barapole river hydro-electric development project is now regarded as a certainty. This is the only major river in the State of Coorg. Its power potential is placed at 140,000 kw. As the survey says: "Located within easy reach of load centres of both Madras and Mysore, the project offers a geographically well placed solution to the problem of augmenting the generating facilities for the benefit of the entire southern region."

Industrial expansion has a direct bearing on port facilities. During the war, capacity and resources of the major ports were found to be inadequate and some emergency improvements had to be undertaken. The present capacity of five major ports—Calcutta, Bombay, Madras, Cochin and Visakhapatnam—is placed at about 20 million tons of export trade cargo, excluding petroleum products. Here are some details of improvements planned in the port facilities of India.

Calcutta: The programme provides for making a beginning with the river training works for which a sum slightly less than Rs. 2 crores has been allocated. It is also proposed to construct two additional general cargo berths at an estimated cost of Rs. 2 crores with a view to supplementing the berthing capacity reduced as a result of the increase in the lengths of ships which occupy space beyond the existing berths. The replacement of old wagons and locomotives, construction of new pontoons for replacing the old ones, the provision of a heavy lift yard with a 200-ton crane, improvement of facilities for the handling of coal and ores and the provision of quarters for lower categories of staff are some of the other schemes included in the plan. The overall expenditure on these schemes is estimated to be of the order of Rs. 10 crores during the present plan period.

Bombay: Consequent on the decision to install two oil refineries in the Bombay area, it has become necessary to provide facilities for the oil trade on a scale altogether new to India. An expenditure of about Rs. 8.5 crores is being incurred on the provision of a marine oil terminal which consists of three berths capable of accommodating at any tide the largest tankers likely to be employed by the mainland by submarine pipelines. The project is due for completion in 1955. Of the other schemes, which are estimated to cost over Rs. 8 crores in the plan period, the main one relates to the modernisation of the Princess and Victoria docks, are with a view to making these docks suitable for use both day and night instead of during a short period of about five hours by modern ships having a deeper draft and larger beam. When the scheme is completed, modern ships of large size would be able to use these docks without having to wait for berths in the Alexandra dock. The project is one calling for careful and detailed planning. Technical studies in this con-

nection have been completed and it is expected that the work will commence before the end of the plan period. As a necessary consequence of the scheme for the modernisation of the docks, facilities for the handling of cargo to and from large-sized ships have to be improved at these docks. The electrical system in the docks has also to be correspondingly re-organised. The re-construction of transit sheds which were completely destroyed in the disastrous explosions of 1944 is another essential item in the plan of Bombay. Some 12 transit sheds are included in the plan of which eight providing an area of 750,000 sq. ft. have been completed.

Madras: The development schemes of Madras included in the first five year plan are estimated to cost about Rs. 8.39 crores of which an expenditure of about Rs. 3.11 crores would be incurred during the plan period. A sand screen has been constructed to protect the entrance from the effects of the sand drift. The plan provides for the necessary works at an estimated cost of Rs. 34 lakhs. The most important scheme of development in the Port's plan is the West Dock Scheme estimated to cost about Rs. 5.75 crores. Purchase of locomotives and wagons, acquisition of new barges and cranes and replacement of a launch are also provided for.

Cochin: The development schemes included in the approved programme for the plan period are estimated to cost about Rs. 3.30 crores. The main item in the programme is the construction of four general cargo berths at an estimated cost of Rs. 2.40 crores. The additional berths with all the ancillary facilities are intended to enable the port to handle the traffic now dealt with in the stream berths at the main wharves on the Willingdon Island. The provision of additional facilities for the discharge and bunkering of oil, the acquisition of a second tug, the provision of metre-gauge facilities on the Willingdon Island consequent on the construction of the Quilon-Ernakulam link and the purchase of four more wharf cranes for the existing wharf berths are some of the other items included in the plan.

Visakhapatnam: As a result of the decision to locate an oil refinery at Visakhapatnam, it has become essential to improve the approach channel and to expand the facilities for handling oil traffic. The desirability of routing the ore export trade through the nearest major port calls for the improvement of railway facilities to that port. In

These measures were two-fold. The Government decided to suspend with immediate effect the quota system of allocation of Indian cotton to the textile mills in the country as anticipated in these columns last week. While welcoming this, the textile mills both in Bombay and Ahmedabad have so far not entered the market in such a manner as to have any effect on prices. On the contrary, the mill managements have slowed down their purchases as they are now assured that adequate quantities would be available to them as and when required possibly at cheaper rates. The Government has also released for export an additional quantity of 50,000 bales of short staple cotton of 11/16 inch and below from the new crop and another 25,000 bales of old crop of a staple length of 3/4 inches. The effect of these measures, if any, was only temporary and the market suffered a sharp fall on the following day, as those who had been supporting the market in the hope that about one lakh bales of inferior Jarilla would be released for export, were disappointed. This unexpected reaction has also gone to confirm the view further that the terms of the cotton hedge contract are such as would bring about bearish conditions and unless the contract is structurally revised, there is little hope of imparting strength to sentiment. There is also a growing demand both from the producers and the trade for a more positive price support policy for cotton. It is being suggested that the Government should buy cotton at the level of Rs. 550 a candy for the standard Jarilla variety and announce its readiness to do so now. As the whole of the cotton crop excepting the short staple varieties is bound to be ultimately consumed by the mills, Indian cotton being the cheapest in the world, the Government would in no case be a loser and the investment would be only for a very limited period. It is argued that an announcement of this nature would induce the textile mills to buy more cotton at this stage instead of waiting for prices to slump further.

Teething Trouble for State Insurance

The Employees' State Insurance Scheme which was launched by the Prime Minister in the Greater Bombay area about four months ago has failed to fulfil the optimistic expectations entertained by the workers as well as those in administrative charge. This has become evident from the fact that the extension of the scheme to the workers in Ahmedabad, the second largest industrial city in the State, which was announced for inauguration on the Republic Day, has been indefinitely postponed. It is significant that the reason for this postponement is the active opposition of the workers themselves and their organisations in Ahmedabad. They insist that the benefits under the scheme should be

extended not merely to the workers as laid down in the scheme but should cover their families also. The same demand is being persistently made in Bombay. On the other hand, the Employees' State Insurance Corporation has doubts about meeting this demand from the resources available. It is now definitely understood that till this question is finally settled, the Bombay Government will not extend the scheme to any other centre in the State. The workers covered by the scheme in Greater Bombay alone number 450,000. If it is extended to a population of about 3 million. In Ahmedabad, the labour force is about 2.5 lakhs and including their families would come to about 8 lakh people. At the same time, the authorities are very keen on implementing the scheme in the whole State and the Corporation has, therefore, instituted an actuarial inquiry to ascertain the financial liability likely to be incurred if the scheme is extended to the workers' families. Even apart from resources, other administrative difficulties are also anticipated. The panel of medical practitioners to meet the requirements of this large number would have to be extensively enlarged and it is doubtful if there would be enough medical men forthcoming to offer their services as panel doctors. The question of the capitation fee will also have to be re-examined if millions of people are brought under the scheme. It is believed that this examination will take more than a year and it is, therefore, now certain that there will be no extension of the scheme till the middle of 1956 in this State. In a sense, this delay is welcome, because the scheme has still not got over its teething troubles and a number of adjustments both professional and administrative will have to be made before it can run in a smooth manner and satisfy the workers covered. It is understood that this question will be examined by the Regional Board of the Corporation for the States of Bombay, Saurashtra and Cutch, which meets here at the end of this month.

The Loss of Mr. Rajadhyaksha

The death of Mr. Justice G. S. Rajadhyaksha was widely mourned. The Chief Justice, Mr. M. C. Chagla, observed in the course of a reference to Mr. Rajadhyaksha's death at the High Court: "Apart from being a pre-eminent jurist and a great judge, Mr. Rajadhyaksha had served the country in many other capacities." The Chief Justice said that whenever the Government was faced with a difficult problem—whether it related to the railways, post offices, banks, air services or the Press, it looked to him for guidance and assistance in solving it. It did this because of its confidence that his decision would always be fair and unbiased.

LONDON INSURANCE LETTER

ANALYSIS OF A RECORD YEAR

ENOUGH information is now available to confirm that the premium income of British insurance business rose substantially in 1954—probably by about £50 million over the preceding year's level of £1,200 million. Lloyd's business could play no great part in this expansion, as most of it was in life assurance—both "ordinary" and "home service", but particularly "ordinary". Other types of insurance will make a mixed showing when the full figures appear. Fire premiums were evidently maintained last year around the 1953 level of £210 million, and there was evidently some increase in accident premiums over the 1953 level of £220 million, but both fire and accident departments had to meet heavy claims. The North American hurricanes came within the orbit of the fire departments; and total claims on London of "Carol", "Edna", and "Hazel" will evidently exceed \$100 million. Fire damage in the U.K. has probably involved claims in excess of the £200 million recorded for 1953. Accident business is clouded by the persistently unfavourable results of motor insurance.

The marine market, which seems to be permanently oversupplied, has suffered from depression of rates, while the rising cost of ship repairs has continued to increase claims. The chairman of the Institute of London Underwriters, Mr. L. K. Sweet, made some forthright statements on the marine market at the Institute's annual meeting in January. His theme was that the outlook was "far from bright." The essential fact is that the market is overlarge. This situation, said Mr. Sweet, is not due merely to "the natural tendency to try and maintain premium incomes at the level to which they have been inflated by war risks and by wartime and post-war conditions", it is due also "to the values of a few target hull insurances where underwriters have accepted lines which are considerably higher in proportion to premium incomes than those previously considered as prudent to run on one vessel." This policy has had important consequences. Some underwriters have run larger lines on lesser-valued risks in order to even out their book, and "many risks which a few years ago would have been spread well round the market can now be placed in a fraction of it". The result is unhealthy competition, forcing rates downward until many accounts show an obvious loss—probably after several years "in the red". Mr. Sweet made the serious, but certainly well considered, accusation that some sections of the market had departed from the sound underwriting principles on which marine business had been conducted for centuries, and worked on the assumption that marine insurance was an easy source of profit—that, given sufficient capital, the business would just flow in. For years, indeed, there may appear to be a profit, "until the time lag in presentation of claims eventually proves otherwise". For Mr. Sweet does not believe that modern aids to navigation and modern design and construction of ships will diminish claims as much as some people in the market imagine. Recent casualty experience certainly confirms the more pessimistic view.

Hedge against Inflation

Mr. Harold Wincott, as editor of "The Investors' Chronicle" and a regular contributor to "The Financial Times", can be regarded as an authority on investment. When he addressed the Insurance Institute of London on "Inflation and the Investor" he upheld the case for institutional investment in equity shares. Mr. Wincott said that over the last 40 years—a period comprising most of the inflationary stresses of at least a century—the value of ordinary shares had just about kept pace with the rise in the cost of living, and that it could at most certainly be assumed that income had risen in the same proportion as capital. Ordinary shares must inevitably suffer setbacks from time to time, but they need not worry unduly the long-term institutional holder. For Mr. Wincott, though he persists in believing that a freely competitive capitalist society is "inherently and essentially deflationary", recognises that a background of continuing inflation "for quite some time yet" is the only reasonable assumption on which to plan investment policy. However, even if it is agreed that an increasing proportion of insurance funds should be invested in equities, as a matter of long-term policy, the investment managers have still a difficult problem respecting the immediate future. Lord Harlech, the chairman of another "institution", the Midland Bank, suggests in his annual statement that the reduction of Bank rate last May may have caused "an undue rise in prices of equity investments to a level at which they heavily discount the prospects of continued high activity in industry and trade".

The insurance market was startled by the news (which leaked out, apparently, without the intention of either party to the transaction) that a certain Captain Newton, at the age of 70, had insured his life for £100,000 with the Prudential Assurance Company, the policy to run for 6 years. Everyone knows that life assurance at middle age and over is not cheap, but when a "Sunday Dispatch" reporter suggested that it was only the second time that the "Prudential" had accepted such a risk on a man of his age the captain replied: "Nonsense—all my friends do it." The significance of the fact that almost any life risk can be reduced to actuarial terms. The Prudential's experts calculated that the cover was a business proposition on an annual premium of £18,000 for the first 2 years and diminishing amounts thereafter. And the captain was willing to pay so much because, his wife explained to the reporter, "the more capital you get rid of the less the death duties will be."

ELECTRICITY SUPPLIERS ANXIOUS ABOUT AMENDMENT TO ARTICLE 31

FEDERATION'S MEMORANDUM TO GOVERNMENT

The amendment proposed to Article 31 of the Constitution is of particular concern to the electric supply industry, and the Federation of Electricity Undertakings has submitted a memorandum to the Central Government in which its views are set out. We publish below the full text of the memorandum.

THE Constitution (Fourth Amendment) Bill introduced by the Prime Minister in the Lok Sabha in December, 1954, proposes primarily to amend Articles 31 and 31A of the Constitution which deal with the citizen's fundamental right to property. Under the proposed amendment, while compensation would presumably continue to be payable for a property compulsorily acquired, the quantum of compensation is to be a matter entirely within the discretion of the Legislature and no Court shall have any jurisdiction to go into the adequacy or reasonableness of the compensation; in short, the issue of compensation in such cases will become non-judicial.

This new clause enunciates a proposition quite foreign to, and at variance with, the hitherto accepted principles governing relations between electric supply licensees and the State—principles which have the sanction of statutes passed by the Central Government and which accord moreover with the customs and traditions of the electric supply industry elsewhere in the world.

A licence for supply of electricity is a charter granted by the State to an entrepreneur to effect electric development in a given area. For this purpose the licensee, subject to the regulations laid down in the license, in the Indian Electricity Act, 1910, and in the more recently enacted Electricity (Supply) Act, 1948—which latter limits the return allowed to the investor and institutes control by the State Electricity Board—free to operate in his area, and the license itself provides for the manner and method of taking over of the undertaking by the public authority, the compensation payable for such acquisition being by the 1910 Statute "fair market value"—which, from its plain meaning, cannot be other than fair to all concerned.

If the proposed amendment to the Constitution is enacted it would presumably be quite possible for any State Government to repeal the very salutary provision for fair compensation contained in the Indian Electricity Act, 1910, mentioned above. Without any protection of this nature, the prospects of licensees continuing to embark on costly ventures such as the building of new power stations, or the expansion of existing ones, must be seriously imperilled.

It is appreciated that the intentions of the framers of Article 31A are laudable and there can be no two opinions that some assistance may be necessary to those engaged in improving agricultural land and removing slums etc. The electricity supply industry is alive to the needs of the hour with regard to such matters. It is, however, incomprehensible to it that organised industries and in particular that one as important as the electricity supply industry would be classed in the same category as the exploiters of slum property.

The electricity supply industry is particularly concerned with sub-clause (i) of the Bill which reads:

"(i) Notwithstanding anything contained in Article 19 no law providing for—
(i) the extinguishment or modification of any rights accruing by virtue of any—
Licensee shall be deemed to be void on the ground that it is inconsistent with, or takes away or abridges any of the rights conferred by Article 14, Article 19 or Article 31;

Provided that where such law is a law made by the Legislature of a State, the provisions of this Article shall not apply thereto unless such law having been reserved for the consideration of the President, has received his assent."

This clause, although permissive, will give any Government, Central or State (with the President's assent) the power to cancel or modify an electric license granted under the Indian Electricity Act, 1910, whether such cancellation or modification is merited by the circumstances contemplated by the Act or not. The Bill in the Statement of Objects and Reasons puts forward the "interests of national economy" as the justification for making this innovation but one cannot but conclude that the electric supply industry has been included in the proposed Article 31A without proper appreciation of the surveillance that the State, fortified by two very comprehensive statutes, has always exercised over the industry.

Reference has already been made to the Indian Electricity Act, 1910. This Act has been constantly amended to bring it into accord with changing conditions, and is ever now receiving further amendment, and it and its complementary Act, the Electricity (Supply) Act, 1948, codify the law and practice governing the operation of the private sector of the electricity supply industry and co-ordinate its integration with public utility services run by the State or State Electricity Boards. As mentioned above, the "license" referred to in the proposed Article 31A is a concession given by the State Government to the electric licensee on terms and conditions meticulously laid down in the Indian Electricity Act, 1910. In return for

this right to supply electricity in a given area the licensee assumes long term responsibilities, financial and technical, which no prudent entrepreneur would accept if his tenure was to be insecure. The discharge of these responsibilities entails investment of capital in the installation of costly plant, machinery, cables, etc. the value of which would be reduced to little more than scrap if the license under which they operated were suddenly withdrawn without recourse. If this were to happen through its own misfeasance (and the Indian Electricity Act, 1910, contains ample provisions to meet such cases both by way of amendment and revocation of the license) there would be no injustice. This is one thing, but it is quite another for the Constitution to include a provision empowering the State, on a nebulous and undefined ground of national economy, unilaterally and without any guarantee of "fair" compensation to repudiate a contract that it has voluntarily, and with adequate and statutory safeguards, entered into with a licensee. Perhaps some confusion exists as a result of the employment of the word "license" but in the case of the electricity supply industry the license is an agreement, no more and no less. An agreement between private citizens is binding upon them but if one fails in carrying out his part of the agreement, the other has recourse to the Courts where he can obtain an order for specific performance or alternatively obtain damages in lieu. Surety the licensee is entitled to these reasonable safeguards.

The more recent Electricity (Supply) Act, 1948, has reaffirmed the principle of compensation for acquisition of electric supply undertakings at the expiry of the license periods on the basis of fair market value. It may also be mentioned that the Government of India's Industrial Policy Resolution of 6th April, 1948, has definitely stated that the electric supply industry "will continue to be regulated" in terms of the Electricity (Supply) Act, 1948, which was then on the anvil.

The Planning Commission has assigned an important rôle to the private sector in the development of the electricity supply industry during the current and ensuing five year plans, but it can be said without fear of contradiction that this rôle must go largely unfulfilled if the protection under

position and in Sheoraphuli quotations are based on Rs. 36 a maund for garut quality containing a considerable amount of moisture.

Mofussil. There is very little to report from the upcountry markets in India where imports are negligible. Prices have been maintained due to the steady demand for all available jute, and in Dhubbri quotations are based on Rs. 36 a maund for Bottoms, and at the moment there are no signs of the market weakening.

The Pakistan markets have shown increased activity this week, with the interest being centred on lower grade kutcha baled jute, suitable for shipment to Calcutta. Cuttings, X Bottoms, Habi Jabi and Ropes have all been in good demand and over the week rates have risen about 8 annas to Re. 1. There has not been very much demand for the higher grades of jute, but these rates have also advanced in sympathy with the kutcha bale prices. Imports have improved slightly and in Narayanganj the total 13-15,000 maunds a day. Latest quotations in Narayanganj are based on Rs. (P) 29-8 a maund for Jat Bottoms with Tossa at a premium of Rs. (P) 5 over white jute.

Raw Jute Consumption: During January, 1955 mills reporting to the L.J.M.A. consumed 489,000 bales of raw jute as compared with 392,000 bales in January, 1954. The total for July, 1954-January, 1955 is now 3,378,000 bales as compared with 2,918,000 bales in the same period last year.

THE FOREIGN JUTE MARKETS

RAW MATERIAL FIRMER

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices last week recovered any loss they had sustained in the previous week and once again there appeared to be an imminent change pending in values of jute yarns and cloth here. Had another pound been added to the quotations last week, there would in all likelihood have been an advance equivalent to about £5 per

ton on shipment raw jute. There has been considerably more movement in the yarn and cloth sections of the trade and a large business has been done for delivery up to the end of June. A number of jute spinners in Dundee and district have increased their production recently by installing the latest and most up-to-date machinery and they are having no difficulty in disposing of the additional yarn.

Dundee spinners have bought a very good proportion of their requirements in raw jute for the current season and it is computed that they do not have much more to buy for the period, perhaps something less than 200,000 bales. There is still a good proportion of jute being offered afloat and on the quay, and an occasional parcel or two changes hands at prices £3 to £4 per ton under the quotations for shipment material. It was rumoured that as low as £112 had been taken for Mill Firsts, but the buyer could not be located. Spinners bidding £110 against the quotation of £122 for shipment were unsuccessful. Mill Lightnings were last quoted at £111, and good Daisies-2/3 at £121, with grade at £111, and grade Tossa-2/3 from £130 and grade fours from £120, all c.i.f. U.K. While it is felt that bids at less than these lowest quotations might be accepted, there are also sellers asking up to £5 more per ton.

The quality of the jute arriving in Dundee is still well reported upon and there are extremely few claims being made for arbitration.

Calcutta goods have advanced in sympathy with raw jute but values are 6d to 9d lower for Hessians and 2s 6d less for "B" twills from the top. Latest rates from Calcutta, f.o.b., are 77s 6d for 10oz, 40in. and 58s 0d for 7oz., February-March, and 3d less for April-June, while "B" twills are at 21s 9d February-June.

Values of jute yarns and cloth are very firmly maintained.

Mr. W. H. Valentine, C.B.E., and Mr. Wm. Scott, Jute Controller and chief Assistant Controller respectively, are retiring from the Jute Control at the end of March. Mr. Valentine has been Controller since 1946 and Mr. Scott has held his position since 1939. They have both given valued service to the jute industry.

I. J. M. A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports figures for the production of Jute Goods during January, 1955 as follows:

Description.	Quantity.
1. Twist and Yarn	1,719 tons
(a) For sale	987 tons
(b) All other including that used in sewing bags	144 tons
2. Canvas	3.2 lakh yds.
3. Gunny Bags (Tonnage excluding sewing twist)	2,834 tons
(a) Hessian	2,834 tons
	1,091 lakh yds.
	79.5 lakh Nos.
(b) Sacking	45,632 tons
	10,805 lakh yds.
	4,59.9 lakh Nos.
4. Gunny Cloth	29,402 tons
(a) Hessian	11,68.9 lakh yds.
(b) Sacking	2,690 tons
	60.8 lakh yds.
5. Other manufactures (including ropes)	172 tons
6. Total production (above figures combined)	83,660 tons
(a) All kinds	12,78.0 lakh yds.
(b) Hessian (both bags and cloth)	11,41.3 lakh yds.
(c) Sacking (—do—)	3.2 lakh yds.
(d) Canvas (—do—)	3.2 lakh yds.
(B) Total reported production of goods manufactured on Government account.	
Description.	Quantity.
7. Sandbags	Nil.
8. Serim Cloth	16 tons
9. Hessian Bags and cloth and canvas	0.5 lakh yds.
	68 tons
	2.3 lakh yds.
10. Sacking Bags and Cloth	106 tons
	2.6 lakh yds.
	Nil.
11. Rove, Rope, Twine, etc.	Nil.

	Summary		(000 tons)	
	January	Average	January	Average
Hessian				
Civil	12.81	13.40	32.4	34.3
Government	3	1.71	0.1	4.6
	12.84	15.11	32.5	38.9
Sacking				
Civil	11.41	10.92	48.4	45.7
Government	3	44	0.1	1.8
	11.44	11.36	48.5	47.5
Other Manufactures				
Civil	2.9		2.4	
Government	0.0		0.0	
Grand Total	83.9		88.8	

*Based on production figures from July, 1948 to April, 1949 (full working months excepting March with full complement working 48 hours a week).

N.B.—These statistics are based on replies received and represent all members of the Association and Gajabhai.

Engineering and Transport

NEW METHODS OF BLASTING COAL

USE OF MILLISECOND-DELAY AND WATER INFUSION TECHNIQUES

THE purpose of blasting coal is to exploit the weaknesses in its structure. The harder the seam the more necessary to soften or break it to simplify extraction. But the wrong methods can be dangerous, or can damage the coal. The following comments are concerned with two new techniques—or old techniques newly applied: short-delay detonation, and firing explosives in a system of water-infusion.

The essential advantages of firing shots in a round instead of singly are economy of time and economy of risky labour. Testing for gas, for instance, can be done once. A single shot may release fire-damp which—apart from the labour involved—will be a danger for future shots if conditions created by the first make detection of gas difficult. Simultaneous firing avoids such defects, but it is not applicable to all conditions. Thick rippings, for instance, have usually to be fired in a series of rounds (simultaneously on each horizon). Delay firing can be practised as a near-simultaneous operation at faces where firing on two or more levels is necessary. And it causes more effective fragmentation than simultaneous firing.

The main difference between long-delay and millisecond-delay detonators is in the rate of burning of the delay composition. The delay composition itself involves some hazard, as it throws out incandescent particles, which are absent from an instantaneous detonator; but in practice these particles are not difficult to control, and they are, indeed, almost ineffective in big charges. The risk has been further reduced in 50 millisecond-delay detonators with incendiary no higher than that of instantaneous detonators (a delay of 50 milliseconds being needed because with this type the explosions might overlap at 25 milliseconds intervals). The delay period is approximate, in the sense that a variation, or "spread", on either side of nominal may occur in firing; but even this small spread of a few milliseconds makes for efficient fragmentation.

The question in delay firing is what effect an early shot may have on the conditions in which the other shots are fired. The most serious risk is the release of fire-damp, which a later shot may ignite. There is also the possibility that an early shot will damage one of the remaining charges. Such problems have been subjected to intensive tests in various countries, to assess the specific effects of delays over the practicable range, and they tend to the encouraging conclusion that, if the code of practice that should relate to all short-firing is strictly observed, millisecond-delay firing introduces few new hazards and can mitigate existing ones.

Increase in Hazards

In some formations the commonest cause of ignition is an undetected open break across the charge at the time of firing. In that condition delay firing can widen the break and increase the hazard. But if the delay period is very short the gases emitted by the early charges can protect the later charges from fire-damp and so reduce the hazard.

A cut-off—impedance or disturbance of a shot by a previous shot—may be caused by the normal movement of rock when disturbed, or result from the placing of short holes in relation to a fault. It is, of course, a phenomenon peculiar to delay detonation, and it can be dangerous if, for instance, it dislodges a detonator from its charge or blasts away a part of a short hole. In practice, however, in respect of cut-offs as of other problems of short-delay detonation, the risk is usually conditional on the formation of a mixture of fire-damp and air in a very short time; which is generally a matter of local strata conditions.

Experiments have not established a relation between delay intervals and cut-offs, but they have—as might be expected—established a relation between delay intervals and ignitions. The evidence suggests that an interval of 150 milliseconds, or at the least 100 milliseconds, between the first and the last shots provides an adequate safeguard.

Technical development is proceeding in the direction of a 25 millisecond-delay detonator that is proof against ignition in the explosive range; whereby it should be possible to increase the number of shots fired in one round. The extension of delay firing from stone drifting (where 1 sec. and 1 sec.-delay detonators are, of course, familiar) to coal headings is already well advanced, and its further extension to rippings is in progress. It is worth quoting the conclusion of two British technicians, Mr. R. F. McCormick and Mr. J. Hancock, after a thorough investigation of millisecond-delay blasting in rippings: "We consider that the technique even up to a maximum of six shots offers considerable advantages over all other known methods of blasting in rippings and, further, that it is a much safer method of blasting rippings requiring more than six shots."

Short-delay firing breaks more effectively, requires less explosive than conventional firing, and (according to the evidence of experiments) causes less fumes and dust. But all of these advantages are claimed also for another significant development in blasting: the combination of blasting with

water-infusion. And this system itself, in some of its applications, presents possibilities of revolutionary change.

Water-infusion Blasting

The practical essential of blasting with water-infusion is the addition of an infusion tube into the borehole containing the explosive charge. Through this tube water is pumped into the surrounding coal, and while it is still under pressure the charge is fired. Thus, whereas conventional blasting operates by shock-waves (causing cracking) and gas-pressure (causing bursting through the cracks), this water-infusion/blasting operates by high-pressure impulses in water—the direct medium for attacking the coal is, mainly, the water.

Water-infusion was first introduced into coal for the suppression of dust; so it follows that blasting with water-infusion is relatively free from dust. As breaks are filled with water before firing, and as the infusion can wash out gases, the system is inherently safe against ignition. A much smaller charge than would be needed for the same effect by dry-blasting suffices when transmitted through the pressurised water (yet a heavy charge per hole is permissible if required, by reason of the added safety); and the action is much more evenly spread through the water than by the shock and pressure of dry-blasting, so that a larger proportion of round coal results.

The simple application of this system is orthodox, by short holes bored in series into the face. If the charge is not well removed from the gland from the hole when the shot is fired; but a deeper hole, at an angle of, say 45 degrees, allows the charge to be far enough removed. (Thus, for example, holes 7½ ft. long would be bored in a 5 ft. web.)

Long Shot Holes

An alternative method—likewise not confined to the water-infusion system—is the boring of long holes parallel to the face, with explosive charges placed in them at intervals. The idea of these long shot holes was originally associated with steep seams, and they may still be most advantageous in steep or thin seams which are difficult to work by other methods. But the technique has

possibilities of wide application on longwall faces—especially when combined with water-infusion. Its obvious advantage is that only one hole is required in place of many. This advantage could equally obviously be nullified by the technical difficulties of boring accurately holes 100 ft. and more in length; but in fact it is envisaged that the required accuracy will be attainable over lengths of 150 ft. or more, and already straight holes of approximately half that length have been bored consistently in heterogeneous conditions and occasional achievements have been much in excess of 100 ft.

The water-infusion borehole, whether long or short, is generally of 1-1½ in. diameter. For charging a long hole the cartridges are threaded on to a detonating fuse (which can be done at the surface), and the complete charges are pulled through the borehole, which is then stemmed and plugged.

Various technical developments were needed to make the water-infusion technique effective. An explosive capable of withstanding water-infusion pressures of hundreds of pounds per square inch had to be evolved. Submarine-type electric detonators with the required resistance were already available, and existing detonating fuse needed only minor modification. More complex was the modification of the drilling machine for longhole boring, mainly to line it up to ensure accuracy of direction. A particularly significant idea is that the drilling machine can be mounted, at the required flanking angle, on an armoured conveyor, so that when the short-hole method is used softening of the coal can be effected speedily without undue interruption of the continuous-mining process.

It is mainly as a preparation for mechanical cutting of hard coal from the solid face that water-infusion/blasting is likely to be widely applied. Its primary function is not to burst but to soften the seam, by forcing water into its fissures—so reducing it to a condition in which it is amenable to such machines as ploughs. But the method can also be used to blast undercut coal for hand-filling on to conveyors. A possibility of uncommon interest is suggested by the longhole method. Preparation for the firing can be done from the roadways or headings, without any approach to the face, and it is at least theoretically possible that the coal can then be blasted directly on to an armoured conveyor, suitably adapted to receive it. One of the aspirations of the mining engineer is to get coal from a manless face, and this is a possible method of attaining it.

Used in more conventional ways, these new blasting techniques, wet or dry, do not altogether overcome the objection to blasting as such, that it impedes the operation of continuous mining. They

PURIFY TRANSFORMER OIL

in safest and easiest way by
Centrifugal Separation with

DE LAVAL
OPEN
PORTABLE UNIT

DE LAVAL
B 1529 C Portable unit
as used by Railways in
this country.

FEATURES:

1. Centrifugal force removes both water and dirt, therefore:
1. No vacuum required for boiling off water, and no dependency on maintenance of vacuum pump.
2. Separation can take place at a comparatively low temperature as high oil temperature is not essential for removal of water.
3. Always constant separating efficiency.
4. Filter material not required.

De Laval Separators also available for lubricating oil, diesel fuel oil, vanaspathi factories, power alcohol distilleries, starch and a number of other industries.

THE SKF BALL BEARING CO., LTD.

De Laval Industrial Separator Section, P. O. Box 71, Bombay

50 YEARS OF PROVED Caterpillar PERFORMANCE

In 1904 Benjamin Holt introduced his 'Caterpillar' track type tractor, the first commercially successful machine of its kind ever built..... 1931 heralded the entry of the 'Caterpillar' Diesel Tractor, a distinctive mile post on the long trail of agricultural history..... In 1954 the latest model of 'Caterpillar' track-type tractor is bigger and better than ever before, a dynamic symbol of industrial progress.

TODAY in addition to five sizes of track type tractors, Caterpillar Tractor Co. manufactures Wheel-type tractors, Diesel Engines, Motor Graders and Earthmoving Equipment. 'Caterpillar' products can be found in all parts of the world working on deserts and forests and ice-lands, on private and government projects laying vital concrete roads, building bridges and dams, filling and terracing out farms, etc.

IN INDIA 'Caterpillar' equipment is being largely used in major land reclamation and irrigation projects and is contributing to the country's industrial progress.

4, Fairlie Place,
CALCUTTA.do, however, open up new fields for mechanisation
in conditions where continuous mining would not
in any case be suited. Preparation of hard coal is
essential if machines are to be fully employed (un-
less the machines themselves can be adapted to the
coal in ways which are not at present envisaged),
and these new methods may improve both the effi-
ciency and the safety of preparation.**PROGRESS OF VIZAGAPATAM
PORT**MORE CARGO HANDLED
LAST YEARA TOTAL of 1,390,839 tons of traffic, represent-
ing an increase of 190,544 tons over the previous
year's tonnage, was handled at the Vizagapatam
port during 1953-54. Of the total tonnage handled,
the export trade accounted for 1,205,015 tons and
the import traffic the remaining 185,824 tons. The
main items of export were mineral ores, rice
(coastal), bunker coal, cargo coal, scrap, tobacco,
myrabolans, gunnies and oilseeds. And amongst
imports foodgrains (on Central Government account),
iron and steel, heavy machinery, petro-
leum, fuel oil and kerosene figured prominently.The working of the port in 1953-54 showed a
surplus of Rs. 12.75 lakhs as against Rs. 11.78 lakhs
in 1952-53. The gross revenue receipts in the year
under review amounted to Rs. 78,31,915 and the
percentage of working expenses (excluding debt
charges and special expenditure) to the receipts
under general account, was 58.5 as compared to 61.5
during 1952-53. An expenditure of Rs. 1,542,233
was incurred on capital works at the Port during
1953-54 and the total capital outlay on the Harbour
stood at Rs. 439.78 lakhs on 31st March, 1954.The expansion programme of the Vizagapatam
port has been worked out keeping in view the pos-
sible increased demands on its services when de-
velopment schemes under the five-year plan work
up to fruition. Accordingly, new works taken in
hand during 1953-54 included the construction of
quay berth No. 4 and a concrete jetty berth for oil,
the rebuilding of transit shed No. 1 and the con-
struction of a signal station over the Ross Hill.Particular attention was paid during the year
under review towards providing amenities for the
staff employed in the Port. 'B' type quarters num-
bering 40—all electrified—and 48 'A' type quarters
were built for the workmen and made over for
occupation during 1953-54. Besides promoting, as
usual, from the Staff Benefit Fund, sports, recrea-
tion and entertainment activities among the staff,
the Fund was also utilised for extending financial
relief to those unfortunate employees who had,
during the year under review, sustained loss of
properties or who had suffered from prolonged
sickness, etc. On the eastern sea-coast of India,
known as the Circars Coast, the port of Vizaga-
patam lies half-way along the thousand-mile
length of the Calcutta-Madras rail route. This
artificial land-locked harbour is in the State of
Andhra, but its vast and rich hinterland out-
stretches that State on to Madhya Pradesh and
Orissa. The completion of the Machkund and the
Hirakud dams is expected to lead to further
development of that sprawling hinterland. The
Port is well served by the east coast section of the
Eastern Railway, and the port area itself is amply
equipped with marshalling yards, sidings and
internal roads.**STANVAC INTRODUCES NEW MOTOR OIL**A highly detergent motor oil that keeps deposits
to a minimum, and ensures top power in old and
new car engines, has been introduced in India
by Standard-Vacuum Oil Company. It is called
New Double-Protection Mobiloil, and is claim-
ed to provide twice the cleaning action, as well as
twice the protection against wear. Mr. R. T.
Burton, General Manager of Standard-Vacuum
Oil Company, said that in tests carried out with
the co-operation of the U.S. Atomic Energy Com-
mission, New Double-Protection Mobiloil was
shown to provide twice as much engine protection
as other high quality detergent oils. Standard
piston rings were made radio-active at the Oak
Ridge atomic plant, then subjected to normal run-
ning conditions. As tiny particles of each piston
ring wore off, they were washed away by the
engine oil. Sensitive instruments measured the
radio-activity of the used oil, and found the rate
of wear. Compared with other high-quality deter-
gent oils, new Mobiloil resulted in less than half
as much wear.**REVISED STANDARD FOR UNIFIED
SCREW THREADS**The Indian standard specification for unified
screw threads originally published in 1953 has just
been revised by the Indian Standards Institution.
It was decided in 1953 to adopt the unified screw
thread system of the ABC countries as the inch
series of threads for India. Consequently, its first
edition (IS-448-1953) which was an endorsement
of BS-1580-1949 was brought out. It was also
decided at that time to take note of the studies
which were then under way among the ABC coun-
tries for further alterations. These studies result-
ed in revision of the provisional British Standard
on the subject and its supersession by BS-1580-
1953. This revised British Standard which can
also be considered to represent an agreement
between the ABC countries on this subject, has
now been endorsed as Indian Standard (IS-448-
1954).**Plantation Topics****CALCUTTA TEA AUCTIONS
IN JANUARY**DEMAND STRONG AND ACTIVE:
TIPPY TEAS DEARERTHE first sale of the new year opened to a strong
and active demand and prices advanced by 1 to
2 annas with the better C.T.C. descriptions and
tippy sorts a strong feature, say Carritt Moran &
Co., Ltd. in their monthly tea market review. Due
to a further increase in export duty of 3 annas a lb.,
which was announced on 8th January, the sale on
10th January was easier by 2 to 3 annas while thin
liquoring stalky kinds were up to 4 annas easier.
Demand continued to be strong and active in the
subsequent sale with prices generally dearer by
about 2 to 3 annas except for the best C.T.C. teas
and improved Doars which showed advances of 3
to 4 annas. Sale No. 31 also received strong sup-
port, with commons and low mediums 1 to 1 anna
dearer, and good liquoring B.O.P.s and O.F.s. 1 to 5
annas dearer. The last sale of the month met with
only a fair demand and prices were generally lower
2 to 3 annas easier. Fannings grades however
declined by only 1 to 1½ annas whilst stylish black
leaf B.O.P.s were about steady. Tippy teas sold
well at dearer rates and the strongest feature of
the sale was black leaf fannings which were often
4 annas dearer.A considerable improvement was seen in
Darjeeling cup quality, and during the month a
number of invoices with attractive autumnal flavour
were catalogued for sale. A useful selection was
on offer from Assam district which included a fair
proportion of bright liquoring teas with autumnal
characteristics. Offerings from Doars district
showed a big improvement in cup quality, and
there were a number of bright liquoring autumnals
available. The appearance of the dry leaf grade
Cachar teas continued to be of a satisfactory
standard while liquors were generally of a sweet
character and about average for the time of year.

Internal MarketLeaf offerings amounted to approximately 58,212
packages. The first sale of the year came to a
strong and excited market, with best C.T.C. Assams
and clean black teas often 4 to 6 annas dearer.
The poorer stalky types opened 3 to 4 and closed at
1 to 2 annas dearer. Sales No. 29 and 30 were also
characterised by a very strong demand and prices
hardened by 2 to 3 annas, and 4 to 8 annas respec-
tively. In the last sale of the month thin liquoring
stalky descriptions were from 1 to 1 anna easier,
but teas with improved liquors were well support-
ed at dearer rates. Approximately 75,952 chests
of Dust were offered. Sale No. 28 met with a very
keen enquiry and prices were 5 to 8 annas dearer
except for the poorer sorts which were 3 to 4 annas
dearer. In the three subsequent sales black leafy
exportable types were an outstanding feature and
prices rose by approximately 3 to 5 annas each
week. Values for other descriptions also hardened
by about a half to 2½ annas each sale.

A further release of 2 percent of the Standard
Export figure, which is equal to approximately 7
million lbs., was announced on 7th January. This
brings the total percentage released to 133.5 percent
which is equivalent to about 465 million lbs. The
price of Export Quota, which on 7th January stood
at 225 pies a lb., fell sharply on 8th January to 156
pies. The rate continued to decline and on 18th
January was quoted at 102 pies. Thereafter the
market hardened, and on 24th January was quoted
at 141 pies since when the price has again declined
and on 31st January business was done at 108 pies
a lb.Export sales up to the end of January totalled
1,403,926 chests at an average price of Rs. 3-1-8,
compared with 1,453,233 at an average price of
Rs. 1-15-5 a year ago. Internal sales at 347,11-7
chests of leaf and 482,635 chests of dust (Rs. 2-4-2
and Rs. 2-6-5) compared with 43,862 and 485,802
chests (Rs. 1-13-3 and Rs. 1-11-1) in the correspond-
ing period last year.The estimated North Indian crop to the end of
December, 1954 was 507,968,849 lbs. as compared
with 484,886,376 lbs. to the same date last year.
The average figure at this date for the three years
1951-1953 was 500,544,764 lbs.Arrivals (in chests) in Calcutta warehouses
during the period 24th December, 1954 to 23rd
January, 1955 with the corresponding figures of the
previous year in parentheses, were as follows: by
steamer 194,214 (271,074), by rail 124,259 (103,402)
and by air 15,397 (21,845) making a total of 333,870
(396,119). Since the beginning of the season, 1st
April, 1954 to 23rd January, 1955, arrivals have
been: 3,152,519 (3,173,684) by steamer, 786,516
(929,802) by rail and 164,591 (98,764) by air, making
a total of 4,103,626 (4,202,250) chests.**LONDON TEA SALES**At last week's London tea sales the 61,622
packages on offer realised an average price of 6s
8.95d a lb., against 6s 11.05d in the previous week
and 4s 2.73d a year ago. Plain broken pekoe was
quoted at 6s 3½d to 6s 4d; previous week 6s 8½d.
Prices obtained by some of the companies are given
below:

	No. of packages	Avg. per lb.

U. K. Tea StocksTea stocks in London and provincial bonded
warehouses on 2nd February at 113,176,800 lbs.
compared with 108,195,450 lbs. in the previous
week. Deliveries for the week ended 4th February
amounted to 11,574,750 lbs. and landings during the
same period were 16,556,100 lbs.**PRICE OF RAW RUBBER INCREASED**
The Government of India has decided that the
price of raw rubber, which was last fixed in Octo-
ber 1952, should be raised with immediate effect
on the basis that the price of Group I rubber for
100 lbs. f.o.b. Cochin will be Rs. 150 in place of
Rs. 138, with suitable adjustments for othergrades. This decision has been taken partly to
meet the increase in the cost of production and
partly to enable producers to put by adequate
funds for the replanting of rubber which has to
be undertaken on a considerable scale and for new
plantings, if necessary. The Government has
under consideration a scheme for assisting grow-
ers in the matter of replanting and new planting
and the assistance to be given will take into con-
sideration the resources that will be made avail-
able by the present increase in prices as well as
the increase made in October 1952.**NORTH INDIAN TEA CROP REPORTS**The following summary of crop and weather
telegrams has been received for the month of
January, 1955:Upper Assam: Weather reasonable; crop pro-
spects generally favourable.

Central Assam: Weather conditions normal.

Lower Assam: Weather cold and dry; rain badly
wanted in Bishnath.

North Cachar: Weather reasonable.

South Cachar: Weather generally cold and dry;
rain badly wanted in Chargola.Eastern Doars: Weather reasonable; rain badly
wanted; immediate prospects fair; blight is not so
severe.

Western Doars: Weather reasonable.

Darjeeling: Weather reasonable.

Terai: Weather reasonable.

an aircraft is never old

Every component of an aircraft
has a service life of its own,
calculated at so many flying
hours. Before one of them
reaches the limit—that is,
while it is functioning perfectly
—it is replaced by an entirely
new part. And after 12
months' flying an IAC aircraft
is grounded for complete
renovation, when it is taken
apart section by section and
reassembled with new
components. With every part
always as good as new, an
aircraft is never old.**INDIAN AIRLINES

Calcutta Markets

INSUFFICIENT DEMAND IN
TEA EXPORT SALEGOOD GENERAL DEMAND FOR
DUSTS

AT Sale No. 34, held on 14th February, offerings in the Export auction consisted of 23,727 packages including a considerable number of poor end-of-season teas. There was a much quieter tone in the sale room and prices of the majority of descriptions showed a drop from 2 to 6 annas a lb. Very few tippy teas on offer suitable for Iran were in strong demand and sold at higher rates. Whole Leaf grades and black-leaved clean teas also received better support than the rest of the sale and were only from 1 to 2 annas easier. The remainder consisting of Commons and Mediums were irregular and 2 to 6 annas easier. Ordinary Fannings and stalky descriptions were the weakest feature of the market.

No quotations have been given as there was not sufficient quantity of quotable tea on offer.

Internal Market

At the Internal Sale, Dust offerings consisted of 18,069 packages. There was a good general demand. Black leafy exportable types opened 1 to 2 annas easier but strengthened as the sale progressed and closed fully firm on last week's rates. The strongest feature of the sale were the better CTC Assam Teas which were 1 to 2 annas dearer to buy, but the ordinary CTC types were about steady. Clean Common Doars and Medium Assams opened 1/2 anna easier but closed 1/2 anna dearer. The few Darjeelings on offer encountered rather irregular demand, but those with flavour sold well.

Quotations	1955	1954
	Rs.	Rs.
Medium Doars Dust	2 10 6 to 2 11 0	1 12 0
Medium Assam Grainy Dust	2 11 6 to 2 12 0	1 13 0
Best Assam CTC Dust	3 2 0 to 3 3 0	1 15 0

Offerings of other grades consisted of 10,544 packages. The majority of teas offered in this catalogue were stalky and end-of-season in quality. There was much less demand than last week and the market generally declined by 3 to 6 annas.

Black leafy BOP's and the OF's were again the strongest feature, and those containing tip sold at dearer rates. No quotations are given due to there being an insufficient quantity of quotable tea on offer.

FIRM TREND IN FREIGHT
MARKETS

ALTHOUGH fewer fixtures have been concluded in the past week, markets remain firm and recent political developments in Russia do not appear to have affected them. In local markets are fixtures again featured with Kollthottam-USNH paying \$(U.S.)13.75 for March-April shipment, Bombay-Northern Range \$(U.S.)13.55 and Mormugao-Antwerp-Emden 86s 6d, gross terms. A small vessel has been taken for coal for three consecutive voyages Calcutta-Singapore at 60s. Further cargoes have been arranged from Hampton Roads to Italy at \$(U.S.)7.25, Antwerp-Rotterdam at 49s and to Japan at \$(U.S.)12.60. A further cargo of grain was arranged from North Pacific to East Coast India at \$(U.S.)24.50 and sugar was fixed from Cuba to Colombo at \$(U.S.)15.15 f.i.o.

The Time Charter market continued firm with a 9,835-ton motorship obtaining 36s 3d for the voyage out delivery Liverpool, re-delivery Burma and a similar sized vessel 35s 6d for the voyage out delivery Glasgow, re-delivery Australia. A Liberty was fixed at \$(U.S.)3.45 for eight months trading and a similar ship obtained 27s 6d for a round voyage to the West Indies. Other fixtures of interest were a Pakistan flag vessel at 33s for a voyage home delivery Karachi, re-delivery Continent via Mormugao and a Liberty vessel secured a high rate of 34s 9d for similar business with delivery Colombo.

LINSEED

Firm conditions prevailed during the past week and activity was scarce. Sellers were very reserved owing to poor arrivals and scanty new crop offerings from the centres. There were keen enquiries from crushers for both ready and forward delivery but the daily turnover was small. The oil market was firm and activity was fairly brisk with good enquiries from shippers; sellers were rather reserved. Latest quotations were as follows: February-March Rs. 16-12 a maund; April-May Rs. 16-6 a maund.

Commodity Markets

WHOLESALE PRICE INDEX
FALLS

THE official wholesale price index (base: year ended August, 1939=100) declined further by 0.6 percent to 360.0 during the week ended 29th January, 1955 as compared with 362.1 (revised) for the previous week. The index was lower by 1.7 percent as compared with that of a month ago and by 9.9 percent than that of the corresponding week of last year. The average for the month of January, 1955 worked out to 363.9 as compared with 367.8 for December, 1954 and 398.5 for January, 1954. The index for Foodstuffs declined by 1.0 percent to 302.5 as compared with 305.6 (revised) for the previous week due to a fall in the prices of rice at Vijayawada (-6%), jowar (-4%), gur (-8%) and rice in Calcutta (-1%), despite an increase in the prices of gram (+3%), wheat at Amritsar and Hapur, tea and coffee (+1% each). A fall of 0.7 percent to 427.8 in the index for Industrial Raw Materials was brought about by a decline in the prices of manganese ore (average export prices) (-24%), copra (-4%), rapeseed (-3%), castorseed in Madras, raw cotton, linseed and gingellyseed (-2% each) and groundnuts (-3%). The prices of castorseed in Bombay and raw jute (+2% each) and raw silk (+1%) were, however, marked up. The index for Semi-Manufactures also registered a decline of 0.8 percent to 341.7 as compared with 344.3 (revised) for the previous week. Items which recorded significant variations were: mustard oil in Calcutta (-10%) and coconut oil, and mustard oil at Kanpur (-2% each). The index for Manufactures remained almost unchanged at 376.5 as compared with 376.4 (revised) for the previous week. Higher prices of chillies (+7%), turmeric (+6%), black pepper (+3%) and cashewnuts (+2%) raised the index for Miscellaneous by 0.8 percent to 571.8. The prices of betelnuts, however, moved down by one percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August, 1939=100)

IRON ORE OUTPUT IN DECEMBER

The estimated total output of the iron ore mines in India increased to 367,812 tons in December, 1954, from 331,893 tons in the previous month, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 66 mines for the month show despatches totalling 267,832 tons to the iron and steel plants, and 40,947 tons to the export market. Reported stocks at the end of the month amounted to 848,803 tons.

VAITARNA DAM

BOMBAY

When completed in 1955, the project will have consumed more than 1,40,000 tons of A.C.C. cement.

Actg. Agent.

P.4, Mission Row Extension,
Calcutta.
The 14th February, 1955.

THE MANGALORE ELECTRIC SUPPLY
COMPANY LIMITED.

Debiture Trust Deed, dated the 13th March, 1935.

NOTICE is hereby given that a General Meeting of the holders of 5% Debentures of the Mangalore Electric Supply Company Limited, issued under the provisions of the Trust Deed, dated the 13th March, 1935, will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 4th day of March, 1955, at 3 p.m., for the purpose of considering and, if thought fit, passing an Extraordinary Resolution assenting to certain proposed modification of the rights of the debenture holders against the Company and its property, namely, a postponement of the date for the redemption of the 275 outstanding Debentures amounting to Rs. 1,37,500 out of the principal monies secured by the said Debentures and the said Trust Deed from the 31st March, 1955 to the 31st day of March, 1960, with liberty to the Company to redeem at par the said outstanding Debentures or any part thereof by giving three months' previous notice in a leading daily paper published in Calcutta and empowering the Trustee of the said Trust Deed with a view to effectuating such modification to concur with the Company in executing a Supplement Trust Deed and also for the purpose of transaction of such other business as may be brought forward.

This notice is issued subject to the provisions contained in the Third Schedule to the said Trust Deed and accordingly the respective rights of the Debentures will be recognised and treated as the legal holders thereof and entitled to vote in respect thereof provided that the production of a certificate signed by or on behalf of the Agent or Manager of any Exchange Bank having a branch in Calcutta or by an Officer authorised to sign on behalf of the Imperial Bank of India that the Bank holds for the safe custody to the account of the Debenture holders Debentures to a specified number as on a date not more than 7 days before the meeting shall entitle the bearer of such certificate to be reckoned in a quorum and to vote and demand a poll in the same manner as he could have done if he had produced at the meeting of the Debentures specified in such certificates.

Any person who claims to vote must produce at the meeting either his debentures or a certificate as aforesaid.

By Order of the Board,

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.
Dated the 12th day of February, 1955.

BANKS

H indicates that Share capital is half paid, O, C and Dd, indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

COAL COMPANIES

O, P, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in 'accounts closed' column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CORNERING AND ITS CAUSES

SHAREHOLDERS' CRITICISM OF AUTO-FINANCING: DIRECTORS AND DIVIDEND POLICY

"Boards of directors and managers exercise their ever-growing authority without much regard to the views and interests of the shareholders to whom they are, in theory, responsible," said Julius Baer and Co., the Zürich bankers, in a recent bulletin. The problem is international; shareholders' resentment has become not only more vocal but also more organised recently. It might be casually assumed that the shareholders' criticisms would be directed primarily against mismanagement of their companies; and, of course, such criticisms occur from time to time. Yet it is more often in successful companies that directors' policies are opposed. Shareholders feel that success is not fully reflected in dividends or in the capital value of their share. There are two main lines of criticism: the one against directors' caution in recommending payments, the other against their secrecy in concealing facts.

Sometimes—and these occasions have become very common—what the board of directors meets with is not criticism but cornering, which is very different but has the same origins. Obviously, if many shareholders feel that the dividends they are paid and consequently the stock exchange value of their shares are not in relation to the assets and earning capacity of their company, then they are open to an offer from an outside party who hopes, by getting enough shares, to change the management and reap the profits. If there is a difference of several lakhs of rupees between, on the one hand, the total purchase price in the stock exchange of a controlling block of shares, and, on the other hand, the market value of the company's assets, then the profit to be reaped is assured as well as substantial. Very often, the incumbent directors realise after a time what this outside party is up to, and in order to retain control over the assets, they will buy back from him the shares he has acquired on the cheap in the stock market. In these cases, the profit reaped by the cornerer is not only substantial and assured, but so easy that most people see something rather immoral in it. The unfavourable public reaction to the easy gains made by one party in the Savoy Hotel case illustrates this. And indeed there is something immoral about a situation where genuine shareholders wait years for their full reward and then part with their holding at what seems a reasonable price—then to see the purchaser receive the full value of the shares, a value that they as unorganised individuals could never obtain from their own directors. It should be observed that we are assuming that the shareholders know that their stock is undervalued in the exchanges. But this is not always the case. In a case referred to below, this information was deliberately withheld from shareholders, and there are many others where the cornerer gets his profit because he knows more than the shareholders about the true value of their property. This is carrying conservatism in company management too far.

No one quarrels with conservative financial traditions as such, but it is sometimes suspected that they are observed not for the benefit of the company but for the benefit of the company's directors. When a cornerer discovers that the assets are worth much more than the market value of the shares represents, and that much higher dividends could be paid, the directors usually hasten to give more information about assets, and to promise higher dividends, so that shareholders will refrain from passing the control of their company into other hands. It is—or was—the Government view that it is not in the public interest to distribute profits liberally. The average proportion of profits distributed has, indeed, been increasing in the United Kingdom; and the effect is inflationary, unless shareholders save all the increase. But many companies still retain the greater part of their net profits, and not all of these companies can use the money thus saved for useful development. Some directors invoke "the national interest" when in fact their principal reason for with-

holding profits from shareholders is that they themselves are already receiving so high an income that any more will be very highly taxed and they are therefore more concerned to "keep the money in the business" than to pay out more on their shares.

There is sometimes the same motive for concealing assets: if shareholders knew the true value of the business they might clamour for larger dividends. In many cases there is a worthy motive: to reveal as little as possible to the prying eyes of competitors. But what is concealed from competitors is concealed also from shareholders. Are the owners not entitled to know the value of what they own? The problems arising from this policy of concealment were brought into prominence earlier this year when a group of American interests made a seemingly generous offer for the shares of Borax Consolidated, a big British company with important American assets. It was thereupon disclosed that the shares, whose apparent asset value, on information provided not many weeks previously, was of the order of 40s., were really worth, on a true valuation of assets, nearly 100s. Among other startling facts it was revealed that Borax's interest in U.S. Potash was worth more than ten times the value at which it was shown in the balance sheet. Investors would, of course, be extremely resentful if a balance sheet exaggerated the value of a company's assets. But if an investor sells his shares at a price much below their "true" value, because the true facts have been concealed from the nominal owners of the company, has he not also a legitimate grievance?

Where the facts are revealed in balance sheets that are spoken of as "very strong", the shareholder sometimes knows for certain he has a grievance. It is that his directors are borrowing capital from him free of interest to expand the business, when they would have to pay interest if they were to raise this money from the capital market. If we accept the proposition that money held in company reserves belongs to the shareholders, then it is capital borrowed by the directors free of charge. This the shareholder does not normally object to, if he feels that the market value of his share is thereby increased or if he hopes one day to receive a bonus share; indeed, he might prefer this procedure because it means receiving tax-free capital gains rather than taxable dividends. But if he has no such expectation, it gives him no pleasure to receive a very strong balance sheet that has no effect on the return from his investment. Further, he is entitled to feel definitely apprehensive if he knows that labour tribunals and trade unions are watching the growth of reserves with as much interest as himself. The consolation that a share thereby acquires a high "break-up" value has been greatly diminished by the experience that, when a company is broken up, it sometimes happens that the reserves are distributed in part to the workers.

On the old liberal theory of investment, before the days of "auto-financing", the proper procedure for directors was thought to be to distribute most of the profits to shareholders except when they had a

specific plan for expansion which was to be implemented in the near future. Such generous distributions raised the value of the share, and thus made it easier for the directors to raise new money from the capital market when they later formulated expansion plans that were not foreseen at the time of distribution. That practice, which we still think is the ideal one for a growing economy such as India's has been made outdated by dividend limitation enforced by Government, by heavy taxation of distributed profits and by the death of the new capital market. Even in the United States today, most company expansion is financed from accumulated reserves and no

the special tasks of management. Directors could surely reveal to shareholders all the relevant information that it is not particularly expedient to conceal (the Borax directors concealed more than is customary). The divergence of interests between shareholders and directors (and the consequent opportunities offered to cornerers) cause damaging stresses in the system of private industrial enterprise.

THE SQUALL IN THE LONDON TEA MARKET

CALCUTTA'S FUTURE AS AN AUCTION CENTRE

THE part which Ceylon's Prime Minister, Sir John Kotelawala, has played in the recent lapse of tea prices on the London market cannot be ignored. Prices had already begun to waken when Sir John described them as "amped ridiculous", but it is unlikely that they could have slumped so far had he not created an impression that something could be done about them if only the London market interests were prepared to forgo some of their profits. In fact these interests have lately been operating at a loss; a week ago a small amount of common tea could be bought in London for 3s 6d a pound, compared with the price of about 6s 10d which it was able to command during the January peak. At this level the sale of tea was actually taking place below prevailing costs of production and must have involved a considerable loss for all sections of the trade. With demand at its present overall level such a state of affairs could not be expected to last, and the market began to regain its balance within an hour or two of the "panic" selling having subsided. Tea prices are now back on more realistic levels, but still as much as one shilling below January's record quotations. The reason for the sudden and temporary collapse is said to be the loss of confidence which has been caused by all the publicity recently given to the price of tea, and especially the interest roused by the words of Sir John Kotelawala. Even when it is realised that the capacity of retailers and merchants to go on selling tea below the price they themselves have to pay is limited, it is true that "consumer resistance" has made itself felt in a way which should influence the price level for some time yet; it now seems doubtful whether the contemplated increase in retail prices, for which elaborate preparations have already been made, will take place at all.

A rise in the retail price of tea now after so much concern has been expressed about the present level might invite another display of consumer resistance. Unlike the normal marginal adjustments of supply and demand, this particular phenomenon can cause violent and damaging fluctuations in prices. There is no doubt that a good deal of harm would be done to the trade and ultimately of course to the industry. It will be in the interests of all who grow tea, deal in it, or ultimately drink it, if the proposed retail price increase is in fact avoided. Representatives of the trade in London are hopeful that this can be done, but the spokesman of one leading firm of retailers has already warned that it might be inevitable, in spite of the present auction quotations, unless the general level of these quotations comes down even lower.

What the permanent effect on prices will be if the recommendation, made by the special Government Committee, that the amount of Indian tea auctioned in this country be increased to 75 percent of the total exported, is carried out, is difficult to judge at this time. The increase in trading activity would certainly be beneficial to Calcutta interests, but if this change is found to encourage the type of gambling which has done so much to damage the reputation and competitive position of jute goods, it is difficult to see what overall benefit will accrue. If speculation is allowed to become a big factor in the price of tea the new recommendations might prove to be a gift to the producers of coffee. This fear may be one of the considerations which has prompted the further recommendation which the committee is reported to have made; that the remaining 25 percent of export sales be permitted to find a market through the London auctions. But in the short run the factor which is limiting a large-scale growth of the Calcutta market is the shortage of warehouse accommodation.

One of the most desirable and less obvious effects of weakening the London market may be to cut out some of the rather unbusinesslike customs which are at present being used there. Attention was recently drawn to these in a letter to the Editor of *The Financial Times*; they include the obligation on the part of the buyer to provide credit for three months from the date of the sale, the automatic charging of rent whether or not the goods are in fact in the warehouse, and the practice by the seller of one pound of tea in each sack. These practices certainly disrupt the

auction prices, and although they cannot greatly affect the price of tea to the consumer they create irregularities in the market which represent an unnecessary windfall for the London trading interests.

THE PRESIDENT ON PRICES

REFERRING to the falling agricultural prices in India today, the President's Opening Address to Parliament on Monday announced the Government's policy in this matter, that is, to support the prices through official purchases. It is not clear whether the policy is to come into effect immediately, or whether its implementation will wait till further falls in prices take place. Speaking at Bhopal two days before the President's Address, the Union Food and Agriculture Minister, Mr. A. P. Jain, stated that "if prices of foodgrains go down below a normal level, the Government will certainly take immediate measures to set things in order." He did not think that the fall in prices had yet reached alarming proportions nor did he say that floor prices would be fixed. The President's address did not envisage the latter course, and there would indeed be immense difficulties in enforcing a set of minimum farm prices. The policy of stabilising prices through Government purchases in the areas where the pressure of supplies is the heaviest, is therefore the correct one. But the point is still not clear what level of prices the Government would consider "below normal."

The current fall in agricultural prices has many welcome features. In the first place, it is easing the cost of living burden for the vast majority of agricultural labourers, 80 to 82 percent of whose expenditure is spent on food alone. In the second place, it is having a wholesome effect on industrial production by lessening the cost of raw materials and thereby paving the way for reducing the price of manufactures. Thirdly, it is influencing the downward course of retail prices. All these add up to a rise in real incomes.

But there is the other side as well. Of all agricultural products, the prices of cereals and pulses have been falling steadily since 1950-51, the fall being particularly marked in the year 1953-54 when production reached unexpected heights. Fibre and oilseeds prices indices, on the other hand, rose appreciably in 1953-54 after falling continuously during the three previous years. The rise took place although production had also gone up. The latest trend of industrial raw material prices and food prices is downward, but the degree and the character of the declines vary. The reason is that while for oilseeds and fibres there is an overseas market, foodgrain prices have been absolutely dependent upon the home market, where the vast majority of buyers are not able to increase their consumption beyond a certain point—a low point, at that—for lack of purchasing power. In the circumstances, the problem of stabilising foodgrain prices becomes extremely difficult. While it is important to make food available at cheaper prices for the benefit of consumers, the risk of disincentive to the agriculturist cannot be ignored. Food self-sufficiency or near self-sufficiency has still to remain among the prime economic objectives of the country. It should not be thought that the whole of the rise in agricultural production was due to the kind weather alone; the price incentive made a positive contribution. The same incentive has to be offered to induce agriculturists to increase their efforts now or at any time. A violent and sudden fall in farm prices will reduce agricultural income and that will mean lower net aggregate demand for industrial goods. A judicious balance between these two conflicting aims has therefore to be struck.

CURRENT COIN

Pakistan's National Income.—Pakistan's national income in 1952-53 stood at Rs. (P) 16,068 million, according to the recently-released estimates of the country's Central Statistical Office. The estimates cover four financial years—1949-53. In the 1949-50 period, the total national income of Pakistan was Rs. (P) 16,804 million; it rose to Rs. (P) 17,080 million in the 1950-51 period, an increase of 1.6 percent; it increased further to Rs. (P) 18,338 million, or by 7.3 percent in 1951-52, but in 1952-53 it dropped 1.5 percent to Rs. (P) 18,068 million. These estimates represent the money value computed at prices current during these years, and therefore no accurate assessment of the changes in the people's real income is possible. The Statistical Office however thinks that because of lower prices in 1952-53, as compared with 1951-52, real income during the former year might have been higher than during the latter year. Reflecting the changes in national income figures, the per capita income also shows a drop to Rs. 233 in 1952-53 from Rs. 239 in 1951-52; in the year 1949-50 and 1950-51 these were Rs. 225 and Rs. 226 respectively. Increase in population and influx of refugees have been cited as the other important cause of the fall in the per capita income in 1952-53. Income from agriculture naturally is the largest single item in the dividend structure,

accounting for 60 percent of the total; wholesale and retail trade come next with 10 percent, services, manufacturing and rental income follow in that order with contributions of about 9 percent, 6.5 percent and 6 percent respectively. Income from the public sector amounts to 5.7 percent. The Central Statistical Office, after making a detailed classification of income by industrial origin, comes to the conclusion that "efforts in the direction of economic development in the past few years have borne fruit"; there has been a steady expansion in income arising in some of the important economic sectors like mining, manufacturing, banking and insurance, and utility services. Estimated income originating in large-scale manufacturing (other than Government factories), increased by more than one-third between 1949-50 and 1952-53. Income from mining, banking and insurance and utility services rose by 73 percent, 16 percent and 20 percent respectively. Statistically impressive, these increases in effect are not very great, but they point to the trend and level of economic activity in Pakistan. A comparison with Indian figures would perhaps be interesting, though structurally there are significant differences. Industry in India contributes 15.3 percent to the total national income as against Pakistan's 6.5 percent. Agriculture in India is no doubt the biggest source of income as it is in Pakistan, yet in terms of proportions it is appreciably less at 51.3 percent (61 percent). These explain the differences in the character of the economies of the two countries. Where similarity exists it is in the sectors of commerce, house property and services. There is however one more important difference. In India the method of computing incomes is much more refined than it is in Pakistan, because of India's better statistical organisation. The first issue of the annual paper on national income of India issued recently by this country's Central Statistical Office, gives the figures of national income and related aggregates for the financial years 1948-49 to 1951-52. According to this paper, the per capita income in 1951-52 was Rs. 274.5 or a rise of 3.5 percent over 1950-51 in money terms or 2.2 percent in real terms. In Pakistan, no estimate of the real income is yet available.

Taxation Anxieties.—An example of the anxiety felt by many industrialists that the coming Budget, containing as it will many of the recommendations of the Taxation Enquiry Commission, may have far-reaching effects on the ability of the economy to achieve the progress desired of it, appeared in the Presidential address of Mr. Chimanlal B. Parikh, at the 47th annual general meeting of the Indian Merchants' Chamber in Bombay last week. Mr. Parikh expressed the hope that "while the resulting changes may bear the impress of the Government's efforts to achieve the social objective underlying the scheme of planned economy", the Government would "at the same time safeguard the incentive to work, save and invest." The present slow progress of the private sector Mr. Parikh attributed to the "cumulative effect of the high level of direct taxation in the post-war period." A taxation policy designed with an eye to the importance of incentive would, Mr. Parikh considered, contribute to the speedy increase in production required to raise the country's standard of living. Apart from the general question of taxation policy a request was also made by Mr. Parikh for solutions to a number of industry's more specific tax problems which are more of an administrative nature. The first is the tendency on the part of income tax officers to over-assess in their anxiety to augment collections, and the enforcement of the tax demand while the dispute over the assessment is still in course of appeal. Mr. Parikh recommended that as a general rule a demand for the disputed portion of a tax should not be enforced unless there is reason to believe that the assessee might fritter away or conceal the assets. Another common cause of complaint mentioned is the practice of rejecting the accounts submitted by an assessee for technical reasons, and making the assessment on the basis of assumed profit margins. This procedure obviously lends itself all too readily to abuse, depending as it does on the personal opinion of the examining officer. If the books contain irregularities or are inadequate the remedy can be found more equitably by invoking company statute law, but until an assessee is found guilty of fraud it is his right to be regarded as an honest man and have his books treated accordingly. There is no doubt that the assessee himself is his own worst enemy in this matter, and proper care in keeping the required books would contribute towards eradicating this evil. Mr. Parikh urged that the recommendations of the Income-tax Investigation Commission, which were beneficial from the point of view of the assessee, should be acted upon without further delay. He mentioned especially the suggestion that the Appellate Assistant Commissioners should be placed under the administrative jurisdiction of the Income-tax Appellate Tribunal.

Lancashire and Dundee.—The concern which is at present being felt in Lancashire about imports

of Indian grey cloth threatens to increase, and cotton textile interests are already pressing the British Government for protective measures. These are being resisted for a number of reasons, the chief being that the official policy of the Conservative Government is to promote greater liberalisation rather than to re-establish restrictive trading policies. A certain amount of protection for Dundee jute mills against Indian manufactured jute textiles is already provided by an official scheme which continues the old postwar measures of control without doing too much obvious violence to the spirit of the new policies. It is almost a year now since the then Minister of State, Board of Trade, Mr. Heathcoat Amory, announced that the purchase and import of raw jute were to be transferred back to private traders. At the time he stated that "public trading in imported jute goods must continue until appropriate measures to safeguard the United Kingdom jute manufacturing industry under conditions conducive to efficiency can be worked out and introduced." No such measures have yet been devised, and if they should be they will no doubt go against current trends towards liberalisation. But in the meantime the Jute Control continues to market imported jute goods at prices not below those ruling for goods manufactured in Dundee. The margin between the imported and selling prices of U.K. and Indian producers is now so wide that some form of protection for the domestic industry is still considered to be indispensable, present liberal tendencies notwithstanding. The arrangement is an interesting one because it is evidence of the fact that precedents already exist for giving the cotton textile industry some protection, and because Lancashire's injured attitude is taking no account of the fact that India is herself suffering from Britain's import control schemes.

Bombay's New Oil Terminal.—The Bombay Port Trust has every reason to feel satisfied that a major part of its scheme for the construction of a marine oil terminal at Butcher Island for the use of the two oil refineries has been completed one year ahead of schedule. The first phase of this Rs. 9-crore project, novel for this country, was inaugurated last week with the berthing of the Stanvac tanker "Charles F. Meyer" near the first of the three ocean terminal berths at Butcher Island, situated about 3 miles from the harbour proper. When fully completed, this ocean terminal will be equipped with 3 berths with deep draft, capable of accommodating largesized tankers, including the new fleet of super-tankers built recently in the West. Besides accommodating heavy oil tankers, the new terminal is already linked to Trombay, the site of the new refineries, by three-and-a-half mile long submarine oil pipes, laid under the sea bed. Before the new ocean terminal berth came into operation, crude oil shipments for the refineries used to be pumped to the storage tanks on Trombay mainland from Pir Pau island's temporary jetty, while some of the oil tankers used to be anchored at the buoy mooring berths near the Butcher Island. The second of the three berths of the marine oil terminal is expected to be ready to be commissioned into service by the end of next month while the third berth, marking the completion of one of the biggest oil terminals of its kind in the East, will be ready early next year.

Personnel Management Conference.—This year the Indian Institute of Personnel Management is holding its fifth annual conference at Sindri on 26th and 27th February, 1955. The Institute was set up in 1948 as a professional organisation for those engaged in personnel management and labour welfare, and has been recognised by both Central and State Governments, employers and trade unions. At present it has about 650 members on its rolls. There are branches in Bombay, Jamshedpur and Dhanbad, and groups in the industrial areas of Calcutta and Howrah. There are corresponding members in other industrial centres such as Ahmedabad and Madras. The annual conference has become an event of interest for all concerned with industrial relations and labour welfare. This year the Railway Board has agreed to grant railway concessions and delegates attending the conference will have to pay only a single fare for the journey to and from. A team of experts in the field of human relations in industry from India and abroad are expected to participate in the discussions. A feature of this year's conference will be group discussions in which there will be an opportunity for personnel officers from different areas to exchange ideas.

State Electricity Boards.—The equanimity with which many State Governments continue to ignore their legal obligation to set up Electricity Boards has often called for comment, not only from the industry but also from the Centre. A further addition to the long list of pleas which have so far had little tangible effect was made by Mr. Gulzari Lal Nanda, Central Minister for Irrigation and Power and Planning, in New Delhi last week, when he addressed a conference of State Ministers assembled to discuss the formation of these boards. After reviewing the history of the problem (which

must already have been familiar to all his audience), he concluded with a gentle hint that the offending States had been rather lethargic. Some of the latter might have wondered whether the Centre itself has always been very prompt in dealing with the industry's difficulties: the standard rate of return remains where it was, and little has been done to remove anomalies between the income tax law and the electric supply law. The entire proceedings, in fact, might have struck some as resembling the proverbial exchange between the pot and the kettle. Mr. Nanda did, however, make a few useful points. According to him, experience has shown that departmental management is unsuited to the requirements of a large-scale industry. The pattern of management of industries in the public sector, through organisations outside the departmental set-up, has been found to yield the best results. He therefore attaches great importance to the development of electricity being entrusted to autonomous boards, as envisaged in the Electricity (Supply) Act, 1948. The degree of urgency in this matter, according to him, is much greater now than when the law was enacted. He stated that the comments some State Governments have made on the Act have been carefully examined, but bring out no new points; in his view, the provisions of the Act would serve the interests of the States and the industry better than any other arrangement.

CORRESPONDENCE

INCREASE OF RAW RUBBER PRICES To THE EDITOR OF "CAPITAL".

Sir,
The most welcome part in the announcement of increased rubber prices is the Government's determination to assist the replanting of old areas and also new planting, if necessary. However, the margin provided in the revised price structure is enough to make only a beginning in the direction of planned rehabilitation, as the cost of new planting and replanting works out to nearly Rs. 3,000 an acre. Evidently, the margin now available will not bring the desired result. It is heartening that with even the little incentive so far, the producers (especially the small ones) have opened out over 2,000 nurseries to get high-yielding strains. Increased prices have provided the greatest incentive to growers and every increase in rubber price, granted from the time controls were instituted in 1942, actually resulted in the voluntary expansion of planting. More and more old trees are now being felled and replaced with high-yielding plants. In spite of this, the quantum of output is maintained and substantially enhanced, on account of replantings done earlier. If Government will provide adequate increase in the price, there will be better response to undertake rehabilitation and in the minimum span of time the country will achieve that self-sufficiency of indigenous supply which has been the cry for some years.

Yours faithfully,
A. V. GEORGE,
Honorary Secretary.

The Rubber Growers' Assoc. of India
Calcutta,
19th February, 1955.

Sir,
The Association of Rubber Manufacturers in India has addressed the following protest to the Government of India against the increase in raw rubber prices announced last week. "This Association strongly protests against the 14th February increase in prices of raw rubber from Rs. 138 to Rs. 150 f.o.b. Cochin on basis RMA 1. The Government resolution No. 3-T(2)/52 dated 27th October 1952 accepted the Tariff Commission's recommendation that the price of Rs. 138, which represented an increase of Rs. 10 per 100 pounds, should remain in force for three years from 28th October 1952, subject to revision in the event of the cost of production varying by 10 percent or more on either side. The reasons given for this latest increase are partly increased cost of production and partly the provision of adequate funds for replanting and new planting. This Association is unaware of the circumstances which have brought about a cost increase, or a justification for increasing the amount of Rs. 6.82 per 100 pounds already included for rehabilitation in the price of Rs. 138. If circumstances do in fact exist this Association considers that in the light of the Government resolution dated 27th October, 1952 the correct procedure should have been for a proper cost investigation before any action is taken, and urges immediate withdrawal of this price increase pending such cost investigation, in view of the serious consequences the increase will have on the business of many manufacturers.

A. T. MATTHEWS,
Secretary.

The Assoc. of Rubber Manufacturers of India,
Calcutta,
18th February.

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR FUNDS

Wednesday, 23rd February.

MONEY continues to be in good demand and, taking the economy as a whole, credit conditions are tight. There has been strong offtake of funds by the sugar industry, more money has gone out on account of raw cotton and cotton textiles, and the jute mills have been borrowing to a small extent. Business is thus very active. However, in Calcutta funds are more plentiful and there has been a slightly easier tendency. In the interbank market the call rate quotes 3 percent with lenders over.

This is a dull season of the year in the bill of exchange department. Very few export documents are passing, and they are small. Remittance has been moderate. Sterling continues to be weak in relation to the dollar. Ready exchange rates are unchanged.

Bullion ruled easier on long liquidation. Silver declined from the previous week's level of Rs. 163-15 to Rs. 163-1, quoted to-day. The ready price was 5 annas higher. The price was unchanged at 74d. in London and at 85½ cents in New York.

Gold also fell, in sympathy, from Rs. 94-14 to Rs. 93-2. The sovereign at Rs. 59-12 showed a loss of Re. 1-3.

The return of the Reserve Bank of India for the week ended 18th February, 1955, showed a decline of Rs. 1.41 crores in notes in circulation to Rs. 1241.16 crores but the total note issue rose fractionally by Rs. 18 lakhs to Rs. 1254.19 crores. Notes held in the Banking Department consequently rose by Rs. 1.60 crores to total Rs. 13.04 crores. Deposits of the Government of India declined by Rs. 84 lakhs to Rs. 51.74 crores, while other Government accounts rose by Rs. 3.04 crores to Rs. 14.12 crores. Balances of commercial banks at Rs. 51.08 crores showed an increase of Rs. 2.30 crores. Balances held abroad fell by Rs. 71 lakhs to Rs. 68.59 crores, but investments increased by Rs. 4.20 crores to Rs. 68.25 crores. Other loans and advances declined from Rs. 21.81 crores to Rs. 20.47 crores, of which advances to Scheduled Banks against usance bills rose to Rs. 4.97 crores from Rs. 4.92 crores. These advances totalled Rs. 6.54 crores since 1st January, 1955. Ways and means advances stood at Rs. 1.20 crores (Rs. 1.24 crores).

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 22nd February, totalled Rs. 3,72,00,000. The average rate of acceptance was lower at Rs. 2-6-0 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full, and those at Rs. 99-6-0 percent were allotted approximately 68 percent. Tenders for another Rs. 1 crore of treasury bills will be received at all the usual centres up to the close of business on 28th February, 1955. During the week ended 18th February, 1955 Government of India treasury bills for Rs. 8,97,50,000 were sold in favour of the Reserve Bank of India.

The statement of the position of Scheduled Banks for the week ended 11th February, 1955, discloses Demand and Time liabilities at Rs. 580.91 crores (Rs. 9.77 crores on account of borrowings from Banks) and Rs. 370.95 crores (Rs. 2.50 crores) compared with Rs. 581.99 crores (Rs. 10.22 crores) and Rs. 369.17 crores (Rs. 2.56 crores) respectively in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 77 lakhs and Rs. 7.38 crores to aggregate Rs. 32 crores and Rs. 47.59 crores, respectively. There is a rise of Rs. 77 lakhs in investments to Rs. 355.24 crores. Advances and bills discounted at Rs. 575.16 crores reveal an increase of Rs. 5.24 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.4 percent and 60.5 percent against 9.2 percent and 59.9 percent.

The return of the Imperial Bank of India for the week ended 11th February, 1955, shows a fall of Rs. 2.76 crores in total deposits to Rs. 229.34 crores. Investments in Government Securities are up by Rs. 44 lakhs to Rs. 101.45 crores, while other authorised investments remain unchanged at Rs. 11.50 crores. Loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 3.18 crores and Rs. 4 lakhs to aggregate Rs. 105.22 crores and Rs. 7.06 crores, respectively. Cash and balances are, in consequence, shown at Rs. 19.20 crores or Rs. 6.65 crores less.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during January 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 5,359 lakhs, re-exports Rs. 45 lakhs (transit trade Rs. 2 lakhs); Imports Rs. 5,103 lakhs (transit trade nil). Total trade Rs. 10,507 lakhs. Treasure: Exports of currency notes Rs. 37 lakhs, other negligible. Imports of gold and silver Rs. 1 lakh, of currency notes Rs. 212 lakhs, others negligible. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit

trade the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 298 lakhs.

The BANK OF INDIA has produced the usual satisfactory result for the year ended December, 1954. The profit is up by Rs. 98,000 to Rs. 77.01 lakhs, compared with the previous year. Bringing in Rs. 7,29,778 there is Rs. 84,30,855. Interim dividends at 6 percent (same) were paid. The final distribution has been maintained at 8 percent, making provision absorbs Rs. 29 lakhs (same) and bonus to staff Rs. 11.20 lakhs (Rs. 11.10 lakhs). A balance of Rs. 9,10,851 is carried forward. Deposits increased by Rs. 5.49 crores to Rs. 60.38 crores. Loans and advances increased by Rs. 6.17 crores to Rs. 39.75 crores as did investments by Rs. 52 lakhs to Rs. 19.87 crores. Cash at Rs. 1.10 crores discloses a fall of Rs. 32 lakhs.

The net profit of the HABIB BANK LTD. increased from Rs. 28.66 lakhs in 1953 to Rs. 46.16 lakhs for the year ended December, 1954. This, together with Rs. 26,77,148 brought in leaves a balance of Rs. 72,93,394. Transfer to capital account absorbs Rs. 50 lakhs. Interim dividends amounted to Rs. 16.25 lakhs (Rs. 15 lakhs). The final dividend has been declared at 12 annas per share (Re. 1 per share), leaving a carry-forward of Rs. 1,05,894. Deposits rose to Rs. 43.19 crores from Rs. 37.27 crores. Cash was higher at Rs. 8.62 crores after Rs. 8 crores. Investments declined to Rs. 22.82 crores from Rs. 24.93 crores but loans and advances including bills discounted and bought increased to Rs. 11.71 crores from Rs. 7.74 crores. (Rupees given here are in Pakistani currency).

The working of the PUNJAB NATIONAL BANK LTD., for the year ended last December resulted in a profit of Rs. 56,86,180, including Rs. 3,10,289 brought in and the following appropriations have been made: provision for income-tax Rs. 16,00,000; transfer to contingency reserve Rs. 12,50,000; transfer to reserve fund Rs. 2,47,140; transfer to bonus to staff Rs. 9,50,000; transfer to charity account Rs. 40,000; transfer to gratuity to staff account Rs. 50,000 and interim dividends at Re. 1 per share, Rs. 3,50,000. The directors have recommended

LONDON FINANCIAL LETTER

A TEST FOR BANK RATE

By Air Mail.

THE expectation of a higher bank rate arose in the last months of 1954, from symptoms of inflation at home and the weakness of sterling internationally, and from official comments on these developments. When the rate was raised late in January from 3 percent to 3½ percent it appeared as a formal realignment with market rates in an act of deflation to strengthen sterling; the short-term interest-rate (on bills) and the long-term interest-rate (on gilt-edged stocks) had an appreciable rise early in November. Yet after a rise in bank rate both short-term and long-term interest-rates continued to rise; almost immediately the markets began to anticipate a further rise in bank rate. The authorities had again demonstrated their faith in a flexible bank rate, but they had not revealed how they would under inflationary tendencies. The ½-point rise in bank rate did not at the time appear sufficient, and subsequent information on the economic scene showed that much more might be needed. Sterling remained obstinately weak, while the balance of payments appeared to be deteriorating. The bank chairmen, in their annual statements, did not regard the economic scene complacent. They acknowledged, of course, that it showed marked improvement, and the position 10 years after the second world war was compared very favourably with the position 10 years after the first world war. What troubled the bankers was inflation, with its effects on exports and the balance of payments.

Information subsequently available shows that exports are, in fact, increasing. What causes anxiety is the rapid growth of imports. British industry, which increased its output by nearly 6 percent last year, and exported a due proportion of that increase, is still able to satisfy most of the home market's needs, but only by using more materials—and more coal than the British mines can make available, as well as more oil, which in its crude form is entirely imported. At the same time the world prices of materials are rising. Larger quantities of imports, at higher prices per unit, are raising the import bill much more than the moderate increase in shipments abroad can raise the proceeds of exports. Official spokesmen, including the Chancellor of the Exchequer himself, continue to insist that there is no cause for anxiety, that all that is needed is a gentle pull on the reins to keep the economy on the right path. But if it is allowed to deviate far from that path it may get on to very rough ground, from which it can be extricated only by drastic action. Some observers say that the first gentle pull was applied too late, and that, thus belated, it should not have been so gentle.

Lines of Action

Various lines of action have been discussed, and it is likely that in due course the authorities will

follow more than one of them. Money can, of course, be made dearer still. But it has not escaped recollection that in the much more serious conditions of 1951 the Treasury relied on restriction of the quantity of money rather than on raising the "price" of money; it funded a massive volume of treasury bills, thereby reducing the basis of liquid assets on which the banks could build their credit structure. The principal alternative method is "manipulation" of the Budget, to restrain particular demands and to "syphon off" some of the excess purchasing-power which is swelling the flow of imports and restricting the increase in exports. A bold policy might budget for a surplus. What the Government has done so far does not clearly indicate whether it intends to use the indirect instrument of the money market or the direct instrument of the Budget; nor, indeed, whether it has decided on a firm line of action at all. First it has to analyse the inflation to find out where it is generated. This task is not so simple as it may appear. After all, industry, is supplying increasing quantities of goods to absorb the increase in spending, and the effects of the rise in incomes are mitigated by a gratifying increase in saving.

If the authorities conclude that the "marginal" excess of imports is due mainly to stockbuilding of materials on the part of industry—there is some evidence that stocks have increased more than industrial production in the past few months—they may feel that control of credit will be the most effective deterrent. But most people see more danger in the persistent rise in wages; which is, admittedly, a result, as well as a cause, of the rise in the cost of living which was decisively resumed last year. Can credit-control get to grips with that problem? The purists answer that if credit is restricted enough it will deflate both industry's demand for materials and industry's demand for labour and so solve both problems at once. The realists retort that ending inflation by ending the boom is like tipping out the baby with the bath-water. Indeed—despite the national plans for railways, roads, coalmines, and atomic power, additional to industry's big investment plans—not everyone is convinced that the boom can last much longer anyway.

TREASURY BILL MATURITIES

Details of 3 months bills outstanding with the public on 25-2-55.

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
25-2-55	25-5-55	1,00,00	Rs. 2-8-0%
18-2-55	18-5-55	1,00,00	Rs. 2-8-5%

MARSHAL PIBUL SONGGRAM's discovery that Thailand is menaced by invasion from China was conveniently timed to coincide with the departure for Bangkok of the representatives of just those countries that might give him military aid. Without suggesting that the Marshal was falsifying the facts, one must recognise that he has been a dictator too long to miss the chance of making the S.E.A.D.O. conference appear a rallying of Western military might to the defence of embattled Siam. On Monday the Prime Minister of Siam says there are 20,000 Communist troops waiting to march from Southern China—and by Friday Messrs. Eden, Dulles and other diplomats are in conclave in Bangkok. This sequence of events could well serve the purpose of emphasising the military significance of the new alliance and minimising the importance of social reform as a protection against Communist infiltration. Old PIBUL is no doubt much more interested in military support than he is in reforming Siamese society along democratic lines. He had good reason to fear that some of the delegates to the conference would be stressing the limited value of arms to combat Communism in Asia, although recognising that ultimately military power is necessary to check open aggression; certainly this would be the British and Australian view. One does not have to share all Mr. Nehru's ideas about alliances such as S.E.A.D.O. to doubt, firstly, whether China is now contemplating open attack anywhere in Asia, nor to doubt, secondly, whether foreign guns can forever prop up Right-wing despots. In the latest issue of the *Far Eastern Survey* I find both American and Australian experts arguing along this tack. The Australian Macmahon Ball writes: "Even if it be conceded that the risk of Chinese territorial aggression cannot be excluded, it seems doubtful whether the West could put up a more effective localised military resistance to Communist advance in, say, Thailand, than it was able to do in Indo-China.... This is not to argue that if Thailand should be attacked, the West should stand idly by. It is simply to remind ourselves that for eight awful years the West grossly miscalculated the political, racial and military realities in Indo-China, and to suggest that we should be able to calculate more carefully now...." The American John Kerry King says: "The contribution which the United States can make to Thailand's preparations to meet intensified Communist efforts of infiltration and subversion can be at most marginal. The initiative and substantive measures must come from the Thai people and Government." India may not be represented at this week's Bangkok conference, but thanks to her influence over other members of the Commonwealth, the more realistic part of her ideas will be.

The editor of that ever-so-much livelier weekly *Current*, my friend D. F. Karaka, is advertising for someone to write him "six sparkling articles" on "What's Wrong With Calcutta?" I suppose I could think readily enough of the other five things wrong with Calcutta—apart, I mean, from the fact that Mr. Karaka lives in Bombay and not here. But having thought of them, I surely would not send them to be published in that rather melancholy metropolis on the other side of the country. I would prefer to linger over the six sparkling (and still) things that you cannot get in Bombay but can get, at a price, in Calcutta. My Ditcher patriotism aside, I admit there are many things wrong with Calcutta but I don't believe that Bombay is resplendent with all the virtues we lack. The subject is, I confess, an old and well-worn one, but then all patrons of the Calcutta cocktail ritual know that the best topics of conversation are the oldest and weariest, like the weather and the habits of domesticated animals. Certainly, on a

A DITCHER'S DIARY

recent visit to Bombay I found that the comparative merits of India's two biggest cities formed a staple of discussion which never failed to elicit robustly phrased opinions on the value of sea air, evening breezes, neighbouring hill stations and prohibition. I was told (several times) all about the decline of Calcutta's share market and the growth of Bombay as the country's principal investment centre, and one oracular old gentleman even prophesied the day when Capital would do what Commerce did when it got into financial difficulties (under its old management) in the slump of the 'thirties—pack up in Calcutta and go to Bombay. Heaven preserve us, both from the slump and the transfer. Bombay as a business centre does for the moment (as moments go in the life of cities) have some slight precedence over Calcutta but I firmly believe that Job Charnock will eventually prove to have been surer of vision than the Portuguese. It must be nice to have hill stations just behind you, but nicer still in the not-so-long run to have the Damodar Valley. In the meantime I hope no self-respecting Ditcher will rise to Mr. Karaka's bait, and I think he is very brazen to have flaunted it thus before our noses.

An art critic talking sense about economics constitutes a phenomenon worth commenting on. That the *Statesman's* critic was talking sense about the Art in Industry exhibition last week one can confirm by visiting the show at Artistry House—or rather one could if the exhibition did not shut down tomorrow after a ridiculously short stand. He said, and I agree, that the industrial section, showing goods that are produced in quantity and readily marketed, is pretty boring; while the handicraft section, displaying some exquisite peasant work, consists of stuff that one cannot buy for love or money because production is not organised and sales arrangements do not exist. Mr. Ajit Mookerjee, the Director of the Institute, is said to be looking for a business man to link India's peasant art to the world market and, says our critic, "it is about time that some entrepreneur came along and took him up on it". Well, as a matter of fact several business men have to my knowledge already tried finding markets for Indian handicrafts of superior quality, and all met with resounding failure. One tried to get the figurine carvers of Northern India to make statures of athletes which were wanted in Scandinavia to adorn trophies. The experiment failed because all the athletes had a surfeit of arms and looked less at home in a Nordic arena than in an Indian pantheon. That was a difficult one perhaps, because it required traditionalist craftsmen to do something different. Another business man thought that Muslim prayer mats made much smaller would be excellent place mats for American dining tables, and the U.S. department stores agreed with him when they found that they sold as many as they could get. But when the demand increased, the price rocketed out of all reason because the craftsmen paid no attention to the economies of a bigger turnover. They thought that this was a good thing that should be exploited because it surely would not last. It didn't last. Then there was an American Gift of the Month Club which was willing to order large numbers of cottage artifacts for export to the States, each separately wrapped and mailed to an individual subscriber. The point of the scheme was that although orders were placed in bulk, the items had to be delivered separately so that they could benefit from cheap postal rates and from the import duty exemption allowed in America on parcels declared at under one dollar in value. This

brilliant idea was knocked on the head by someone in Delhi who discovered that India, for reasons that no one could explain, had not signed some international postal convention that would entitle the packages to cheaper carriage. So there. We are left with a delightful display of Indian crafts in Artistry House, and with department stores the world over that would be willing to sell them—but no one can bring the two together.

The Hamlet-esque inability of official bodies to take a decision is sometimes carried to the most extraordinary lengths. The wobbling and wavering of the Central Government over whether to choose Viscounts or Convoys as the new transport plane for India's internal routes is a typical example of this paralysis of the will, which would be quite disastrous for a private business. I know nothing about aeroplanes and there may be involved in this case a host of intricacies and complications that in fact make a decision difficult. But it seems fairly obvious that if after long consideration one cannot decide which of two things is better, then there cannot be much to choose between them and one choice is likely to be as good as another. At least that is the principle most men work on, in choosing anything from a motor car to a wife. One can of course make mistakes by this method, and later have to pay for them. But the point is that one will have to pay just as dearly for not taking a decision at all—and the Government's dilemma about aeroplanes seems to be approaching that stage already. One of the planes has become obsolescent and the other is so heavily booked that deliveries will be delayed. Both of them are no doubt perfectly good machines and if one or the other had been plumped for two years ago the outlook now would be much more satisfactory. I am not trying to score a cheap point off a nationalised industry, but it is hard to resist comparing this dithering with the bold decision taken by Mr. J. R. D. Tata, before Air India International was taken over, to book one of the latest long-distance transport planes years in advance, a decision that the Corporation will benefit from now. Something similar appears to be happening in regard to heavy electrical equipment, where there are two world-famous firms in the field, one German and one British, but both capable of doing the job to everybody's satisfaction. After years of fiddling and footling, no decision has been taken and of course no heavy electrical plant is being built. Surely it is about time someone made up his mind.

I have two very reliable tips about the Taxation Commission's report and the Finance Minister's Budget speech. They are that the report, in its shorter version and apart from the submissions by witnesses, will run to 500,000 words; and that the Finance Minister's speech will contain—30,000 words. I do not know what any of those words are, but in any case each one of us is probably only interested in eight or nine of them, that deal with our particular income tax group. This leakage of figures about the Budget has, I should think, been discreetly arranged, for the newsagencies and the newspapers will need to have their decks cleared next Monday evening to cope with so large a spate of vital verbiage. Evidently, Tuesday morning's papers are going to fall on our breakfast tables with a dull sickening thud, even supposing that for one day of the year the dailies are not publishing A Special Industrial Supplement on the Mother of Pearl Button Industry in Travancore-Cochin And Its Place in the Five Year Plan.

THIRTEENTH REPORT OF DIRECTORS for the year ended 31st December, 1954.

To the shareholders,

The Directors have pleasure in submitting herewith the Thirteenth Balance Sheet and Profit & Loss Account of the Bank for the year ended 31st December, 1954 together with the Auditors' Report.

Net profit for the year 1954 ...	Pak Rs. 46,16,246 1 2
Amount brought forward from last year's account ...	Pak Rs. 26,77,148 7 8
Total ...	Pak Rs. 72,93,394 8 10

Appropriations made during the year:—

Amount transferred to share capital account during the year ...	Pak Rs. 50,00,000 0 0
Interim dividend paid during the year ...	Pak Rs. 16,25,000 0 0

The Directors now propose:—

Payment of final dividend for the year ended 31st December, 1954 at Rs. 12/- per share on 7,50,000 shares ...	Pak Rs. 5,62,500 0 0
To carry forward to next year's account ...	Pak Rs. 1,05,894 8 10
Total ...	Pak Rs. 72,93,394 8 10

By the Grace of God, the Bank has shown good progress during the year.

In accordance with Article 83 of the Articles of Association, Mr. Hamid D. Habib and Mr. Hyder Mahomedali, Directors of the Bank retire and, being eligible, offer themselves for re-election.

In accordance with Article 91 of the Articles of Association, Mr. Ahmed Habib, Mr. Dawood Ebrahim Parekh and Mr. Mahomedali Habib, Directors of the Bank retire by rotation and being eligible, offer themselves for re-election.

You are requested to appoint Auditors for the year 1955 and fix their remuneration.

The Directors place on record their appreciation of the enthusiasm, loyalty and devotion to duty of the officers and other members of the staff.

By Order of the Board,
AHMED HABIB,
Chairman.

Karachi dated the 24th January 1955.

THE RAILWAY BUDGET

HIGHER CHARGES FOR TRAFFIC OVER SMALL DISTANCES

THE feature of the Railway Budget for 1955-56, presented in the Lok Sabha on Tuesday, is a re-adjustment of second, inter and third class passenger fares so that long-distance travel be more expensive. Fares for the air-conditioned class will be raised. No substantial increase in passenger receipts is expected as a result of these readjustments. But with the ever-increasing commitments of the railways, the Railway Minister could hardly overlook the need for improving financial resources. So he has announced certain adjustments in freight rates, the main features of which are a reduction in the charges for food-grains and fertilisers, a revision of the existing telescopic scales in regard to other goods traffic, and an increase in rates for traffic moving in "small" distances.

Mr. L. B. Shastri said that the net revenue surplus for the year 1955-56 would amount to Rs. 7.14 crores, as against the revised estimates of Rs. 6.57 crores for the current year. "We have no doubt that the railways will be able to spend the total amount of Rs. 400 crores allotted to them by the end of the first five year plan." If the deliveries of rolling stock ordered from abroad are maintained according to schedule, railway expenditure during the plan period may even go up to Rs. 418 crores.

RAILWAY BUDGET AT A GLANCE

	Actuals 1953-54	Budget 1954-55	Revised Estimate 1954-55	Budget 1955-56
Gross Traffic Receipts	274.29	273.25	282.80	292.50
Working Expenses	201.75	194.53	202.95	206.80
Net Miscellaneous Expenditure	5.62	8.08	8.32	7.49
Appropriation to Reserve Fund	30.00	30.00	30.00	35.00
Total	237.37	232.61	241.27	249.29
Net Railway Revenues	36.92	40.64	41.53	43.21
Dividend to General Revenues	34.36	35.50	34.96	36.07
Net Surplus	2.56	5.14	6.57	7.14

Working During 1954-55

The decline in passenger traffic noticed since 1950-51 has been arrested and the current year has shown an upward trend. There has been a significant improvement in goods traffic. There has also been an increase in other earnings. The higher level of traffic has been reflected in increased expenditure, the revised estimate of ordinary working expenses being Rs. 8.45 crores higher than the original estimate. The surplus for the current year is now estimated at Rs. 6.57 crores, against the budget estimate of Rs. 5.14 crores. The Railway Minister referred at some length to the revised Convention for the separation of railway finance from general finance during the next five years, and said that the budget estimates for 1955-56 had been prepared in accordance with the provisions of the revised Convention.

Fare Re-Adjustments

The Railway Minister announced a re-adjustment of fares on the basis of a telescopic structure

of three legs: the first leg covering distances up to 150 miles, the second between 151 and 300 miles and the third covering distances of 301 miles and over. For the second, inter and third classes, there will be no change in fares on journeys covering distances from 151 to 300 miles. For distances of 301 miles and over, fares will be reduced. For journeys up to 150 miles, fares will be slightly enhanced. As regards air-conditioned travel, the present rate of 30 pies a mile will be increased to 34 pies a mile for the first 300 miles and to 32 pies a mile thereafter. The existing extra charge of Rs. 5 a night for bedding will be discontinued. These changes will come into effect from 1st April, 1955, from which date the present second and inter classes will be known as first and second classes respectively.

Freight Rate Adjustments

After trying to balance the needs of the economy as a whole and the needs of the railways with their ever-increasing commitments, the Railway Minister said that he had decided to make certain modifications in freight rates. The steady drop in the prices of foodgrains, he said, increased proportionately the incidence of freight, particularly as it affected the selling price of grain in deficit areas situated at considerable distances from the surplus regions. He proposed, therefore, to reduce the wagon-load scale of grains and pulses by 0.02 pie a mile or 7 percent for distances ranging from 301 to 600 miles and by 0.01 pie a mile or about 5.5 percent for distances beyond 600 miles. The maximum freight has been fixed at Rs. 1-13 a maund, the freight charged for 1,500 miles, so haulage beyond that distance will bear no charge. For example, the movement of grains and pulses from Bhatinda in P.E.P.S.U. to Tuticorin in the South will, under this proposal, be subject to a freight of only Rs. 1-13 a maund against the present rate of Rs. 2-5 a maund. This proposal will reduce earnings by about Rs. 1.25 crores a year. The same special treatment will be extended to fertilisers.

Other Traffic

In order to stimulate long-distance traffic, it is proposed to reduce the freight for distances beyond 600 miles by 15 percent and to increase the rate for the first 300 miles by 10 percent, leaving the distances from 301 to 600 miles unaltered. The increase on most commodities in common use will not exceed about half a pie a seer in the case of distances up to 850 miles, while for distances beyond 850 miles there will be a progressive and substantial reduction.

As the cost of movement of "small" is substantially more on account of the greater wagon utilisation, relatively larger number of handlings, and greater incidence of compensation claims, it is proposed to levy a surcharge of 12½ percent on the freight for all consignments weighing less than 20 maunds and to increase the minimum freight for such consignments from Rs. 1 to Rs. 1-8 a consignment.

Estimates for 1955-56

The overall gross receipts for 1955-56 are estimated at Rs. 292.50 crores, against the revised estimate of Rs. 282.80 crores for the current year. Passenger earnings have been estimated at Rs. 104.50 crores, an increase of Rs. 2.7 crores over the revised estimates. Goods earnings for 1955-56 have been estimated at Rs. 163.90 crores, an improvement of about Rs. 7.90 crores over the revised estimate. These earnings are expected to

be counter-balanced by a reduction of about Rs. 1 crore under other coaching earnings.

The estimate of ordinary working expenses for 1955-56 has been placed at Rs. 206.59 crores, that is, Rs. 3.83 crores more than the revised estimate for the current year. Factors contributing to the increase are the annual increments to staff, additional staff required with the anticipated increase in traffic, increased charges on maintenance and repairs for additional stock and absence of credit on account of the restoration of dismantled lines during the current year. The net surplus expected to accrue in 1955-56 is Rs. 7.14 crores, as against the revised estimate of Rs. 6.57 crores. As against the revised estimate of Rs. 95.60 crores for works, machinery, rolling stock, etc., during the current financial year, the estimate for the new year has been placed at Rs. 126.98 crores, representing an increase of Rs. 31.08 crores. This provision includes Rs. 76.54 crores for rolling stock alone.

Rail-Shipping Co-ordination

Mr. Sastri said that he intended setting up shortly a committee to examine certain specific suggestions bearing on co-ordination between the railways and coastal shipping in order to promote the development of the latter on sound lines. The committee would also undertake a comprehensive examination of the comparative costs of operation on competitive routes by rail and by sea, and advise on the steps to be taken to promote transportation by coastal shipping of commodities which were specially suited to this type of transport.

Rolling Stock Self-Sufficiency

Satisfactory progress has been made in implementing the policy of self-sufficiency in the matter of rolling stock. The Railway Minister said, Wagon-building was mostly confined to the private sector. Some time ago, wagon-builders were assured of the railways' willingness to purchase 12,000 wagons a year in five years. "The railways would be prepared to increase the orders placed with them if they show evidence of capacity to produce more," the Minister said. With regard to special types of wagons required in the country, he expressed the hope that the firms would consider the manufacture of such stock also. As regards the manufacture of parts and components now being imported, some progress has been made but much still remains to be done. A committee has recently been appointed with Mr. G. B. Kotak as chairman to examine this problem and submit its recommendations soon.

Regrouping

Referring to railway regrouping, the Railway Minister observed: "The policy decision of my distinguished predecessor, the late Sri Gopalaswami in the matter of regrouping of the railways was a step in the right direction. The integration of a motley group of railways of varying sizes was inevitable, not only in the best interests of railway administration but also in the larger and much wider interests of the country as well. I think it is time that we accepted that as a settled fact."

Review of Freight Structure

There had been a persistent demand for a review and re-examination of the present freight structure. In the present budget proposals, the Minister said, he had confined himself to making certain limited adjustments in rates and fares. In order to examine the problem in its various aspects, he was considering the advisability of appointing a committee to go into it.

SUBSTANTIAL FALLS IN STOCK MARKET

GILT-EDGED AND INDUSTRIALS DOWN: TEAS DROP HEAVILY

London, 23rd February.

THE largest shake-out for some months was recorded on the stock market here during the past week and substantial falls were sustained in virtually all sections. There was a sharp fall prior to the week-end, which was followed by a further wave of selling, and prices were marked down in initial dealings on Monday. A substantial recovery in gilt-edged stocks helped steady the market later in the day but only reduced the falls suffered by industrials and oils. The break prior to the week-end was touched off by money rate considerations, various adverse developments in the overseas trading situation and the continued weakness of sterling. In spite of the recovery on Monday, the gilt-edged market shows substantial losses on balance. Foreign bonds were subdued throughout. Dollar stocks moved irregularly in sympathy with Wall Street. Industrials generally suffered a severe setback and substantial losses were sustained. Gold shares moved against the trend prior to the week-end, but turned easier later in sympathy with the rest of the market. Rubbers reflected the fall in the commodity price and were substantially lower, while tea shares were marked down heavily following the publicity given to the price of tea at the London auctions.

The Money Market

The receipt of some £40 to £50 million in the banking system following the repayment of the outstanding balance of 21 percent Exchequer Bonds, plus the Ministry of Education's disbursement, brought easy conditions in the money market during the past week. Whilst funds at one stage cheapened to 1½ percent, by the end of the week they had returned to normal level. Good business was effected in April and May bills at 2½ percent. With easy conditions being but a temporary phase and sterling still not improving, the money market decided to keep its bid for treasury bills at

around 2½ percent with the average rate for last week's offer scarcely unchanged at 46s 3/4d. Treasury bill applications amounted to £366,870,000, of which the amount allotted was £250 million. This week, £260 million are on offer. The Bank of England return for the week ended 16th February showed that notes in circulation were about £3 million lower at £1,656 million, while bankers' deposits were about £15 million higher at £282 million.

U.S. Federal Reserve Return

The Federal Reserve Return for the week ended 16th February shows the gold stock unchanged. Foreign deposits fell by \$43 million, while foreign investments rose by \$112 million. The Federal Reserve's portfolio of Government securities fell by \$284 million as it sold \$170 million of bills and another \$114 million which it was holding under re-purchase agreements. The Federal Reserve also switched \$3,922 million of maturing certificates into \$2,922 million of the Treasury's new notes. Member banks' borrowings increased by \$200 million to \$535 million, while their excess reserves increased by \$104 million to \$648 million. The reserve ratio fell by 0.1 percent to 45.9 percent. Business loans of the New York City banks rose by \$73 million to \$7,420 million compared with a fall of \$4 million to \$8,063 million a year ago.

Hongkong Gold Dull

The Hongkong gold market was dull and featureless during the past week with the trend downwards. After opening at \$(HK) 257, values reached the highest level of \$(HK) 258-7/8 and thereafter fluctuated narrowly. The carryover charges paid were 5 cents in sellers' favour towards the end of the week. Dealers attributed the dullness to the cost factor and the lack of incentive provided by political events. The official offer was 8,880 taels and unofficial 26,700 taels. Arrivals at Macao amounted to 35,000 ounces and an unspecified quantity of forward contracts were reported at \$(U.S.) 37.73.

U.S. Steel Consumption

Estimates of the actual use of finished steel in the U.S.A. in 1954 disclose a bigger consumption by 4½ million tons, than did the mill shipments, which indicated that a large tonnage of ingot steel was drawn from the stock. There are few reliable current statistics on consumers' inventories of finished steel. Therefore, it is difficult to determine exactly how much users may be laying aside of the current steel receipts. Various fabricators are said to be laying down some stock of standard plates in anticipation of good spring business. Meantime, prospects for the first half of 1955 continue to brighten with incoming steel business still on the increase. Mills this week are scheduled to advance their operations further. In pig iron, better shipments and consumption are believed to be impending in connection with the New England foundries, particularly some divisions of machinery industry. Foreign pig iron competition is a negligible factor. A firm undertone was evident in the past week in most scrap trading centres.

Canada Bans Scrap Copper Exports

Canada has imposed a temporary ban on scrap copper exports due to a general shortage of the metal. Trade department officials have disclosed that, since 7th February, the Canadian Government has refused to grant further export licences for scrap copper. There is no embargo on exports of new copper, but most of the current production of copper refineries in the country is already committed under the control.

U.S. Industrial Production

The Federal Reserve Board's seasonally adjusted index of the U.S. industrial production in January was 131 percent of the 1947-49 average. This compared with 130 percent in December, 1954 and 125 percent in January, 1954.

Good Business in Dundee

Business in Dundee jute yarns and cloth is proceeding on a satisfactory scale and both spinners and manufacturers are comfortably placed for orders for delivery over the next three or four months at least. Inquiries are coming in for jute cloth and bags for despatch even months ahead. Spinners are reported well satisfied with their purchases of raw jute for this season and they have only a small percentage of their requirements to buy of the old crop. Regarding the raw commodity, opinion of many in the industry in Dundee is that Pakistan is making a big mistake in restricting supplies of the fibre in order to maintain the high level of prices. Offers of the fibre continue to be made in Dundee on a large scale despite buyers' lack of interest. The quantity of jute afloat is not so large, as much of it has been warehoused.

American Telephone and Telegraph
American Telephone and Telegraph's net income for the year ended 31st December, 1954 amounted to \$549,931,000, or equal to 11.92 cents a share, compared with \$478,512,000 and 11.71 cents for 1953.

Vegetable Oil Market

Linseed oil has been active, with further price gains recorded. The rise in Indian oil has been more pronounced, being 40s to 60s a ton. American oil lagged behind and showed a modest increase on balance of 5s a ton. March-April moved up to £85½, with £86½ c.i.f. in bulk wanted for June. For Indian oil, a general rate of £97 a ton in bulk was quoted for March-June. Enquiries for castor oil were more numerous, with the accent on better shipping marks of Indian BSS. The offers varied widely and ranged from £94 to £99 depending on package and colour test. Groundnut oil failed to maintain the recent improvement and Indian for shipment sagged by 30s a ton, with business in March-April at £101 and further sellers at that level. South African was priced down to £103 for Feb-March shipment.

Stocks and Shares

TRADING CAUTIOUS AND LIMITED ON EVE OF BUDGET

Wednesday Evening.

THE share market has sunk into its pre-budget slumber. It showed a flicker of life when the Railway Budget was found to contain no substantial additional burden but sank back again when rumours were set about that the general budget would contain excise duties on a variety of manufactures.

The reaction to the Railway Budget was slight, but for the better. Indian Irons looked up from Rs. 32-12 to Rs. 32-15 and Howrah from Rs. 28-11 to Rs. 28-14. The candidates mentioned for the new excise duties were paper, cement, steel and tea. Paper and cement shares reacted unfavourably, while the tea section took another step in the retreat from boom levels that has been in progress now for ten days. The jute and coal sections are torpid. More Government securities have been on offer.

Details of the week's trading follow.

* * * * *
During the earlier part of the week there was an improvement in the gilt-edged section followed by an expansion in the volume of business. Prices were marked up fractionally but towards the close a few sellers appeared. Three percent Conversion Loan 1986 was marked up from Rs. 81 to Rs. 81-2 but 3½ Non-terminable Paper was unchanged at Rs. 80-4. In the short-dated group, 2½ 1955 was taken higher at Rs. 99-11 while 3½ 1957 was asked for at Rs. 99-5 and 3½ 1958 improved to Rs. 99-3. Among medium-dated loans, 3½ 1959-61 was initially marked up to Rs. 97-6 but closed easier at Rs. 97-5; 3½ National Plan Bonds 1961 were fractionally better at Rs. 99-9 and 3½ National Plan Loan was traded at Rs. 99-8. Three percent 1963-65 was on offer at Rs. 93-10-6 as was 3½ 1964 at Rs. 93-10; 2½ 1960 was once again the outstanding feature and improved further to Rs. 94-15 with buyers over; 2½ 1961 was steady at Rs. 91-12 while 2½ 1962 was shaded at Rs. 92-9. Four percent 1960-70 was readily absorbed around Rs. 91-13. Long-dated loans were unchanged. Rather more interest was shown in State Loans, the features being 4½ Madras issues which were marked up to Rs. 100-8; 4½ Saurashtra State Loan was also better at Rs. 100-3 with buyers over. In contrast, West Bengal issues were easier with sellers at around Rs. 100-6. There was a small enquiry for 4½ U.P. 1963 at around Rs. 100-3, while 4½ U.P. 1964 had sellers at this rate.

Although little business was written in preference shares, there continued to be strong demand for selected issues. Among jutes, Anglo-India changed hands at a slightly higher rate of Rs. 117-4. Agarpara were crossed at Rs. 120, Hooghly were done at Rs. 15-5 and a small lot of Khardah were crossed at Rs. 103-12. In the miscellaneous group, Alkali & Chemical changed hands at Rs. 109, Boreas were marked at Rs. 117, Calcutta Electric changed hands at Rs. 12-6 and a small lot of Chrestien Mica was done at Rs. 62-12. Duncan Brothers were crossed at Rs. 72-8 and Godfrey Phillips at Rs. 67-8. There were buyers of Karanpura Collieries at Rs. 68 and a small lot of Martin Burn was taken at Rs. 105. New Victoria changed hands at Rs. 3 and Titagur Paper 1st were placed Rs. 156-8 C. D. Rallis recorded a steep fall from Rs. 68 to Rs. 55 with further sellers at this rate.

In the banking section, Imperial Bank Fully-Paid and Contributory were quoted at Rs. 1573-12 and Rs. 387-12. Hindustan Commercial were done at Rs. 10-4 and Hindustan Mercantile at Rs. 14-4. Punjab National were marked between Rs. 39-8 and Rs. 40 and United Bank of India 'D' shares were steady at Rs. 4-10. United Commercial were easier at Rs. 45-8.

In the railway section, Chapermukh-Silghat were crossed at Rs. 51 and Delhi-Rohatas were sub-duced at Rs. 7-15. Howrah-Sheakhala were marked at Rs. 57 and Katakhal-Lala Bazar were done at Rs. 74-8.

Cotton shares were easier all round. Cawnpore Textiles reported business at Rs. 8-4. Kesoram at Rs. 23 and New Victoria at Rs. 1-5. Swadeshi Preferred Ordinary were crossed at Rs. 9 and Elgin were quoted at Rs. 16-11.

In the coal section, Bengal were steady at Rs. 503, East Indian at Rs. 27-12 and there were buyers of Katras Jheriah at Rs. 48 and Talcher at Rs. 3-10. Burrakur fluctuated narrowly around Rs. 12, Amalgamated were easier at Rs. 21-8 and Central India at Rs. 6-12. Samla were transacted at Rs. 9-8. Churuli at Rs. 3 and Standard at Rs. 19-8. Western Bengal came to hand at Rs. 6-9.

Jute shares continued to be a neglected market and selling orders were once again difficult to put through. Howrah fluctuated narrowly between Rs. 28-12 and Rs. 29-2 to close at Rs. 28-13. Anglo-India were done at Rs. 213, Bally at Rs. 192, Barnagore at Rs. 171 and Beldere at Rs. 206. India fluctuated between Rs. 206 and Rs. 218 to close at Rs. 212. National moved narrowly around Rs. 32, Chitavalah were done at Rs. 14-1. Presidency at Rs. 7-2 and Reliance were easier at Rs. 14-12.

Electric supply shares were fairly steady. A large parcel of Calcutta Electric was reported to have changed hands during the week at Rs. 14-14. Agra were wanted at Rs. 162, Jubbulpore at Rs. 15-8, Bareilly at Rs. 17 and Benares at Rs. 19-13.

A NEW CAR FOR YOUR LEAVE... SALE & RE-PURCHASE

The unique advantage of our Sale and Re-purchase scheme for overseas visitors is that the owner remains free to dispose of the car as he pleases, notwithstanding the guaranteed repurchase price given by ourselves.

In this way visitors are protected against any downward trend in the used car values, whilst able to take advantage of any upward trend.

Allied Motors Ltd.
SCINDIA HOUSE NEW DELHI-1.

annas a share, leaving a sum of Rs. 3,59,432 to be carried forward. The stoppages of work during the second half-year in succession again affected production adversely, the tonnage of paper produced being only about 80 percent, of the production for the half-year ended 30th September, 1953, according to the Directors. In view of the fact that the stoppage of work at No. 1 mill lasted for approximately three months, the above production is about 5 percent, higher than it would have been if the rate of production whilst the mills were operating had been on the same level as for the half-year ended 30th September, 1953, thus indicating that satisfactory results from that portion of the renovation programme which has been completed are still being maintained. Progress in the seventh stage of the renovation programme was not so adversely affected as it was in the previous half-year, owing to the fact that new equipment which was being installed at No. 1 mill by the suppliers concerned was not seriously interrupted, as there was no attempt to interfere with their workmen. The benefit of this is being experienced during the current half-year.

The profit of Rs. 8.37 lakhs of the ALKALI & CHEMICAL CORPORATION OF INDIA for the year ended last September compares favourably with the previous year's profit of Rs. 8.15 lakhs. Bringing in Rs. 1,03,311 there is a distributable balance of Rs. 9,40,627. The ordinary dividend is unchanged at 6 percent. Reserve for tax liabilities absorbs Rs. 3 lakhs (same). There is a carry-forward of Rs. 1,13,627.

The results reflect the working of the Rishra Factory exclusively. The Khewra factory in Pakistan was sold in the previous year, and this explains the lower turnover this year. Sales of caustic soda and chlorine continued to be reasonably satisfactory, though due to strong competition the off-take of chlorine was insufficient to allow the newly-extended plant to work at full capacity. Good progress was made in the operation of the crude BHC plant, and production to full rated capacity has been achieved. In spite of competition in paints, the production and sales of "Dulux" products showed an increase. During the year a complete range of metal pretreatment products was put on the market.

RALLIS INDIA LTD. incurred a loss of Rs. 52.45 lakhs for the year ended August, 1954, compared with the previous year's loss of Rs. 12.87 lakhs. Dividends have again been passed. A debit balance of Rs. 42,97,067 has been carried forward after transferring Rs. 9 lakhs from general reserve, bringing in Rs. 17,649 and making other adjustments. The directors propose to reconstruct the capital of the company.

THE WEEK'S TRANSACTIONS

Bombay

DEBATE ON THE GOVERNOR'S ADDRESS

NO REFERENCE TO FALL IN AGRICULTURAL PRICES
(FROM OUR BOMBAY CORRESPONDENT)

BOTH Houses of the State Legislature were jointly addressed by Mr. Mangaldas Pakvasa, the Governor, last week. The address was disappointing because it dealt mainly with the past achievements of the State Government and gave no clear indication of the lines for future development. There was nothing new in the review because the whole field had been covered on Republic Day in a comprehensive broadcast by the Chief Minister. From the point of view of the business community and economic development, the statement of the Governor that 290 proposals from private enterprise, involving an investment of Rs. 35 crores, to start new industries and expand existing ones in the State had been submitted and scrutinised by the Industries Department, was of some interest. The Governor said that there had been a significant advance in industrial development and, as an instance, pointed to the increased interest in mineral development, particularly manganese ore. In spite of the setback in prices, about 200,000 tons of manganese ore was extracted last year of which 150,000 tons was exported. The Government-assisted cement factory at Bagalkot was about to start production. The State Financial Corporation, which was constituted at the end of 1953, had also shown substantial progress and had begun sanctioning loans to medium and small-scale industries. The main attack of the Opposition in the Assembly was concentrated on the failure of the State Government to arrest the fall in prices of agricultural commodities and the absence of any reference to this important problem in the address of the Governor. Several amendments sought to draw attention to the Government's failure to deal adequately with the housing and electric power shortage.

The State Government came in for strong criticism in both Houses when the Chief Minister moved a resolution approving an amendment of the Constitution empowering the Centre to have control over certain essential commodities by transferring this from the State List to the Concurrent List. Originally the Government had opposed this amendment on the ground that "the powers of the State are to be maintained and even enhanced in some directions." The Chief Minister, Mr. Desai, explained that after reading the debate in Parliament on the Bill to amend the Constitution, the Government found it necessary to change its earlier view. The resolution was passed by a big majority. With the Bombay Legislature now having approved this amendment of the Constitution, the condition with regard to the minimum number of States supporting such amendment to bring it into operation will be fulfilled.

Second Five Year Plan

Some important hints regarding the second five year plan, which is under preparation, were given by Mr. Gulzarilal N. Nanda, Union Planning Minister, during his visit to Ahmedabad last week. He declared that it would be bad planning to allow unemployment to continue, despite the increase in production obtained through development schemes. He hoped that the country would be able to tackle the four important problems of unemployment, housing, clothing and food in the next 15 years, at the end of which period, Mr. Nanda asserted, the national income would be doubled. He laid down two important conditions for the realisation of this aim: (1) that the population be kept within reasonable bounds and (2) that 8 percent of the national income be regularly reinvested. This suggests that the second five year plan may devote greater attention to measures for population control. Mr. Nanda said that it was not the aim to try to raise per capita income in India to the level of the United Kingdom or the

United States. All the planners would strive for was to secure a national minimum by which the largest number of people obtained decent employment, a living wage, food and accommodation.

Expansion of State Enterprise

Mr. K. C. Reddy, Union Production Minister, during a visit to Bombay last week gave a detailed review of the achievements and aspirations of the public sector, which is now being referred to officially as the national sector. At a Press conference, he covered a wide field as far as the achievements and targets for industries in this sector were concerned. Paying considerable attention to steel, he confirmed that the target in the second five year plan was 6 million tons to be shared equally by the public and the private sectors. The total production of iron and steel by the end of the third plan would be in the neighbourhood of 10 million tons. He was not worried about the disposal of this vast increase in production, because he believed that expansion during the next decade on the railways and in the automobile, shipbuilding and another industries would absorb it easily. Even if there was a small surplus, there would be a ready export market. Mr. Reddy stated that the steel plant which was being built by the German firm of Krupp-Demag at Rourkela would now have a capacity of 1 million tons instead of 500,000 tons as originally intended. At the same time, he gave assurance that this change in the initial capacity would not involve any delay in the completion of the project which was set at the end of three years from now. The Russian and the British projects would each provide 1 million tons. The latter is still in the stage of negotiations, but Mr. Reddy disclosed that it would be located either at Bokaro, Sindri or Durgapur. In addition, Mr. Reddy said that the Government of India intended to establish a pilot project for the exploitation of iron ore in conjunction with the lignite found in Madras State, for which a committee had been set up with representatives of the Central and the State Government.

The Production Minister envisaged a much more active search for sources of oil in the country. Apart from continuing efforts in the Bengal basin, the Central Government was considering the question of setting up a unit for exploratory purposes in Rajasthan and Cutch. This search would be undertaken by the Government itself, if necessary, by obtaining the services of foreign technicians, instead of depending upon foreign help exclusively. Mr. Reddy confirmed that new sources of oil had been tapped in recent weeks in Assam. When exploited, these would raise production, which now amounts, to 25 percent of the country's requirements, to 25 percent. He was not prepared to indicate how this additional Assam oil would be refined, and suggested that it might go to the Calcutta refinery at Visakhapatnam or the Government might set up a new refinery in the Calcutta area.

Mr. Reddy foresaw considerable increase in the production of fertilisers. In this connection, an Italian firm had already been given a contract for expanding the production capacity at Sindri by 60 percent. The additional production would be available after three years. The proposed factory at Nangal was expected to yield 3.5 million tons of ammonium sulphate and nitrate. Apart from these two major projects, a Fertiliser Committee appointed by the Government was already engaged in selecting suitable sites for new factories. An important announcement made by Mr. Reddy in this connection was that near the new fertiliser factory at Nangal there would be a supplementary plant for the production of heavy water amounting to between five and seven tons annually, which is necessary for the development of atomic energy.

Earlier, on his way to Bombay from Bangalore, Mr. Reddy broke journey at Poona and inspected the penicillin factory at Pimpri. At the end of this inspection, he expressed gratification at the progress made so far and said that the plant which was originally estimated to produce 9 million mega units of penicillin was now expected to yield 20 million mega units as a result of introducing improved manufacturing techniques. He took this

occasion to announce the Government's decision that there would be no more plants of this nature for the production of antibiotics as the Pimpri plant would be expanded in the second five year plan period and would also include the production of other goods such as streptomycin and chloromycetin and vitamin B-12.

The Private Sector

The investment market, especially the stock exchange here, has derived some consolation from the assurances given by Mr. Reddy during an informal discussion with the Central Committee of the All-India Manufacturers' Association with regard to the fears of discrimination against the private sector in encouraging the public sector. Dismissing these fears as unjustified, Mr. Reddy said that as long as the private sector did not conflict with the ideal of a socialistic pattern of society, it would have a vast scope in industrial development. He repudiated the charge that industries under the public sector had been given favourable treatment by the Government and stated that these units were subjected to all the obligations obtaining in the private sector. Foreign companies participating in plans for the public sector were also not given any concession that could be regarded as objectionable. In some cases, the Government had insisted on foreign enterprise sharing the equity capital in order to ensure success, the share in management given to them being only in proportion to their stake. Referring to the recent Government announcement regarding the proposed factory for manufacturing heavy electrical equipment, Mr. Reddy gave an assurance that the private sector in this industry would not be affected as the new venture would produce only non-standard items to supplement the output of the established industry. The scheme for training personnel would cater for the requirements of private enterprise in this field also. This assurance came in response to the request of Mr. Morarji J. Vaidya, Chairman of the Organisation, that the policy of a controlled economy should envisage equality for both sectors in the development of industries and in matters regarding taxation, labour welfare, financial help and store purchase policies. Mr. Vaidya argued that the Government should allow indigenous enterprise the same freedom of participation with similar concessions as those given to foreign private enterprise in the development of industries reserved for the public sector. He also pointed out that when the Government was launching out more and more purely commercial enterprises, it was necessary to evolve a special policy governing the constitutional set-up of such concerns; all such purely industrial and commercial concerns in the public sector should be run in the form of joint stock companies with representatives of commerce and industry on their boards.

Nationalisation Fears Among Bankers

Mr. B. D. Garware, President of the Maharashtra Chamber of Commerce, at its first quarterly meeting here last week asked for a clear declaration of official policy towards the banking industry. He said that it was essential to know the future relationship between commercial and exchange banks on the one hand, and the proposed State Bank on the other. Bankers were naturally anxious to learn the intentions of the Government regarding nationalisation. He asked for an assurance against nationalisation and suggested that the Government should provide ample scope for big and small commercial banks to co-operate among themselves or even integrate with one another when the State Bank was established. He also asked for the formation of an advisory committee for joint-stock commercial banks, in association with the Department of Banking Development, so that official directions to commercial banks for setting right defects could be made more systematic and useful.

On the following day, Mr. Chimanlal B. Parikh, retiring President of the Indian Merchants' Chamber made a reference to the acute anxiety among bankers at the annual general meeting of the Chamber. The reply of Mr. M. C. Shah, Union Minister for Revenue and Civil Expenditure, at the meeting was reassuring to a certain extent. Mr. Shah explained that the decision of the Government to take over the Imperial Bank did not arise from ideological considerations but was designed specifically to set up an "effective banking machinery with branches over the whole country in order that remittance facilities, and along with them rural banking facilities, especially for the under-developed areas in the country, may be vastly increased."

Central Budget Rumours

With the approach of the Central budget day, various rumours, especially on the prospective increase in the levy of excise duty, are current in the markets. The sugar market is jittery because it is feared that the excise duty on sugar will be raised. The rayon yarn and rayon textile industry feels that the excise duty on art silk textiles which was levied in the 1954-55 Budget will be shifted from art silk textiles to art silk and rayon yarn. Mr. D. N. Shroff, President of the Silk and Art Silk Mills Association, told a Press conference that his Association had asked the Central Government to abolish the excise duty on rayon textiles. The imposition of excise duty on an industry which was running at a loss and which was already paying the high import duty of 50 percent on its main raw material, caused the industry a heavy burden of double taxation. The industry was passing through a crisis, as production costs had increased due to an abnormal rise in the wage bill during the last six years and due to the limited offtake of cloth. It had not been able to take advantage of the offer of the draw-back refund because export markets had practically vanished.

London

U.K. BUDGET SURPLUS TAKES SHAPE

CHANCELLOR OPTIMISTIC IN SPITE OF INFLATIONARY SIGNS
(FROM OUR LONDON CORRESPONDENT)

WITH six weeks of the financial year yet to run, the Chancellor found himself in the enviable position of having a Budget surplus of £467 million, for contrary to normal trends and to expectations, last week's revenue returns totalled £187.8 million and exceeded expenditure by £97.2 million, whereas in the previous year expenditure was fast catching up on revenue and the comparable week's surplus was only £58.9 million. The total surplus then stood at £210.8 million, but by the end of the year it had been reduced to only £93.6 million. Even allowing for a similar development this year, though it is only too evident that expenditure over a wide field is lagging well behind estimates, particularly on defence, it looks as though Mr. Butler ought to have a surplus of over £350 million by 5th April against the £10 million for which he budgeted.

In these circumstances, he would hardly have been human if he had not displayed a certain optimism when he addressed the Merseyside Chamber of Commerce in Liverpool earlier in the week. But for the fact that he was aware of the foreign trade figures for January he might have been less cautious. He repeated his warnings about world competition and his appeal to industry to spend more on plant and equipment, but said also, "It was signals certainly do not stand at danger." "It was just for that reason, he went on, that there was need for caution and intensified effort in order to avoid trouble. The Chancellor did not seem to agree with those who have been calling for a curb on activity in the home market to stop the reviving pressure of inflation. While he accepted the need for the Government to "keep a hand on the reins" he thought that no more than "a gentle tug now and then" was needed. It is significant, however, that he has since disclosed that it was agreed at the Prime Ministers' conference that all Commonwealth countries would keep a close watch on inflationary dangers, and it would come as no surprise if some further steps to restrict credit and strengthen sterling were to be taken here in the not too distant future, either through the bank rate or by other means. Much will depend on how the markets react to the "gentle tugs."

Trade Gap Widens

Point is given to Mr. Butler's warning that imports are tending to run ahead of exports by the overseas trade figures for January. These show that although exports are being maintained at the high level established last autumn, they are not expanding further. Meantime, imports are rising fast with a consequent adverse effect on Britain's balance of payments. For January exports totalled £248.7 million, while £105.5 million was re-exported. The October dock strike was still affecting trade but by averaging exports for the last four months to get a clearer picture the gain in exports over the similar period a year ago is shown to be £700,000 a month. Against these relatively stable export figures, imports on a similar comparison have risen £23 million on the average, aided by the January total of £332.6 million.

In January, exports to North America amounted to £22.8 million, a little better than the January, 1954 figure of £22.5 million. Sales to the United States at £13.7 million compare with the average of the previous three months of £13.3 million and a year ago of only £12 million. The improvement, slight though it is, is again the usual seasonal trend, but might be expected since American business activity is now expanding. To Canada exports of £9 million were exceptionally low. They compare with average sales of £11.3 million in the December quarter and £10.5 million in January, 1954. They do, however, follow the normal movement at this time of year.

Lancashire Gets Some Advice

Lancashire cotton interests have been the recipients of some good advice from Mr. Butler, Mr. Low and from Mr. Pardoe, the President of the Manchester Chamber of Commerce, this week, but this has not prevented the spinners, manufacturers and unions appealing directly to the Prime Minister in a communication which "expressed profound dissatisfaction at the Government's unwillingness to safeguard the vital interests of workpeople and employers in the Lancashire cotton industry." Mr. Butler warned them of the dangers of imposing discriminatory tariffs or quotas, which would undoubtedly result in retaliation and an ultimate contraction of world trade. Mr. Low emphasised, quite rightly, that the amount of imported Indian cloth that went into domestic consumption represented only 4 percent of the total consumption; while Mr. Pardoe, after pointing out that other sections of the industry would be adversely affected by such measures, asked searchingly: "Have we followed a policy which seeks success by working the most up-to-date labour-saving machinery on a shift system where desirable, or meets competition with keener prices and looks to expanding sales to produce an overall profit to make each venture worth while?"

The general attitude here is probably summed up by *The Manchester Guardian* which, in an editorial reference to the subject, says: "Before the Government makes any rash promises—under

Ceylon

A PROSPEROUS YEAR FOR CEYLON

BUDGET BALANCED: MONEY SUPPLY INCREASED
(FROM OUR COLOMBO CORRESPONDENT)

THE latest available figures confirm in detail a rosier economic picture for Ceylon and this applies to the public as well as to the private sector. The money supply for November and December 1953 rose by Rs. 100 million and Rs. 25.3 million respectively, bringing the total money supply to Rs. 957.1 million in December—the highest since April 1952. The net expansion for the year was Rs. 130.3 million as against a net contraction of Rs. 69.0 million for the previous year. The following figures indicate how the money supply was affected, during the last two months of 1954.

	November Rs. Million	December Rs. Million
Foreign Banking Assets ...	+ 29.2	+ 10.2
Private Sector Total ...	+ 15.3	+ 16.7
Total Contraction in Government Sector ...	- 29.7	- 6.2

The rise in the money supply was mainly due to an increase in the International Reserve of the Central Bank and to the credits extended to private borrowers to finance exports. There was also the seasonal rise in the money supply due to domestic demand. Only time and demand deposits declined; savings held firm, indicating a better economic position for the middle income groups. The expansion in the private sector was due to the increased financing required for exports (owing to greater volume and higher prices) and a smaller volume of imports. In November the excess reserves of the banking system fell by Rs. 4.4 million, but in December they rose by Rs. 13.3 million to Rs. 33.2 million. The total money supply continues to rise in spite of contractions in the public sector. Although the Government reduced its liabilities with the Central Bank substantially, the commercial banks' holding of treasury bills increased from Rs. 80.6 million in November to Rs. 88.0 million in December, marking the highest level reached in any single month in recent years. This trend indicates the availability of surplus funds of a time nature. After a slight fall in October and November the total volume of liquid funds rose by Rs. 27.6 million to Rs. 375.5 million in December. In November external assets went up by Rs. 19.4 million reaching Rs. 882.8 million, and in December rose by a further Rs. 12.9 million.

A Balanced Budget

The serious thing so far as Ceylon's prosperity is concerned is that although external assets for 1954 rose by Rs. 341.0 million the money supply increased by only Rs. 130.3 million. This was due to the sizable contraction of Rs. 311.6 million for the public sector as its finances improved. Evidence of this is that the year ended with the Budget balanced. In 1953 the Government had a deficit of Rs. 177.0 million, but ended 1954 with a net cash operating surplus of Rs. 79.6 million. Although external banking assets did not increase so much as in the previous three months—the International Reserve of the Central Bank went up by Rs. 23.1 million. Taking 1954 as a whole the influence of the private sector on the total money supply was negligible, Rs. 1.4 million. Thus the T.M.S. has been increased by the expansion of foreign banking assets. The trade surplus earnings came mainly from tea, as up to 80 percent of this sector is owned by outside interests the full benefits did not seep in to the economy, especially to the lower income sectors. The results of the present economic trend led to changes in the balance sheets of the commercial banks. Thus—December 1953, total assets and liabilities—Rs. 711.0 million; December 1954, total assets and liabilities—Rs. 866.0 million.

This increase can be contrasted with the net fall incurred during the previous year. Total deposits rose by Rs. 145.8 million to Rs. 795.6 million. The percentage increase in time and savings deposits was 43.3 percent and was greater than that of demand deposits, which totalled only 18.5 percent. This rise is due to the increased income from the export sectors. Surplus cash from export deposits is held over as time deposits. Again, treasury bills were not sufficient in supply and yield and this factor helped to increase time deposits, which gave a better yield. Local inter bank borrowing was steady throughout the year and there was little borrowing from foreign sources. The excess reserves of the commercial banks fluctuated moderately but disclosed no particular trend. Between February and December 1954 the monthly average treasury bill rate declined from 2.48 percent to 87 percent. On 11th June 1954 the Central Bank reduced the bank rate by 1 percent to 2 1/2 percent.

The external trade surplus estimated for December is Rs. 27.0 million making a total of Rs. 409.0 million for 1954. This is Rs. 130.3 million higher than the previous annual record in 1950, and can be contrasted with a trade deficit in 1953. The November F.O.B. price of tea was Rs. 3.84 a lb. compared with the average for the first 10 months of the year of Rs. 2.98 a lb. This trend in the tea market was reflected in the indices of share prices of tea companies operating in Ceylon both sterling and rupee. The index figure for the third quarter for sterling companies was 218 which is only 5 points less than the highest ever; 223 in the second quarter of 1954. The share index of rupee companies dealing in tea was 242, equalling the highest ever reached in the first quarter of 1951. Prices for the latter quarter of 1954 were stable. The

increased quantity of rice consumed was balanced by lower prices for flour. The overall index was up by 7 percent only in comparison with the average for the previous year 1953.

Improvement in Wages

Real wages of workers in the tea and rubber industries rose by 1.4 percent matched by an equal rise in the real wages of cocoa, coconut and cardamom workers. Compared with November 1953 the real wages of other workers fell a between 1.5 percent and 2.29 percent. Generally speaking, prices and wages were steady and no important fluctuations occurred. (Colombo consumers' price index recorded 101.8 percent for December 1954 compared with 101.0 in December 1953). The beginning of 1955 has seen another 25 cts. awarded to the tea workers in response to their demand for Rs. 1.00. The Wages Board's decision has to be confirmed by the Government. If this is done the male worker in the tea industry will receive a daily rate of Rs. 2.50, and the wages bill for tea will increase by Rs. 75,000 daily. The cost of living index varied between 235 for January 1954 and 286 for December 1954, making a mean of 264. Although imported goods were "dearer" (larger quantities of rice) coconut prices fell; this fall was more than for the rise in tea. In the field of industrial production, electricity increased in price sharply by 40 percent, but gas declined while matches, soft drinks and tobacco remained steady. Soap and cement were erratic, although the tendency was upwards.

During the eleven months ending December the Co-operative Fish Sales Union handled 250,000 lb. of fish. The Canadian Colombo Plan trawler brings in 200-300 tons monthly, which is encouraging if compared with an English trawler of the same capacity. The coasts off Ceylon are very profitable for deep-sea fishing and the Japanese in particular have shown a great interest in setting up production over here. They have proposed a corporation, with 55 percent shares for Ceylonese and 45 percent for Japanese, with a capital of Rs. 600,000. They would contribute their shares in equipment, technicians, and by a loan. A curing plant, a dry fish section and a refrigeration plant would be set up. It would be able to handle a daily total of 10,000 lb. of fish. The Co-operative Fish Sales Union will handle the sales. The Japanese have suggested that they take over the State glass factory, and run it in partnership with local capital as a public corporation. The concern interested is the Nippon Kishi Kaisha Ltd. A Japanese and an American concern have now negotiated with the Government for the setting up companies to manufacture motor cars and bus tyres and tubes. They plan to satisfy existing home market demand fully and also to manufacture for export.

Colombo Port Benefits

The increasing economic activity has left its mark on the port of Colombo. A record export cargo amounting to 947,613 tons has been handled compared with 865,441 tons in 1953. There was an increase of 1 percent in the volume as well as in value of imports. An increase of transhipment and re-shipment cargo, amounting to 78 percent over the previous year, was recorded. There was a favourable trade balance of Rs. 412 million in 1954 whereas in 1953 it was adverse. The landing firms in the port were allowed an increased surcharge on imports and exports but this is not expected to increase the prices of goods handled.

In the field of employment more than 23,000 man-days were lost in the first three-quarters of 1954. Apart from the Spinning and Weaving Mill's strike none was long drawn out and the tendency has been for employers to concede most demands. The total work force in Ceylon has been calculated at 34 million and the unemployed at 1 million. Average income per head totalled Rs. 35.40 and surplus labour on the land was estimated at 3 million. The problem of integrating this surplus labour into the economy can be settled only by increasing the size of the agricultural sector and by industrialisation. With this in mind the Government increased the export duty on tea by 30 cents. The proceeds of this are intended for use in extending the area of cultivation under tea, rubber and coconut. General budgetary policy favours the development of the agricultural sector, devoting 37 percent to it; transport is allocated 30 percent and industry 3 percent. This policy is being closely followed in the spending of the World Bank Loan fund for the period 1953-59. The agricultural sector is being allocated 29 percent, transport 26 percent and industry 9 percent. In the development of the agricultural and industrial sectors the Ceylon Government welcomes the participation of Indian capital. For instance, in the field of sugar production Indian capital already has a start on other competitors, and given adequate guarantees for the repatriation of profits, and a period of exclusive control, a grand opportunity is offered for the export of capital. Indian interests already in Ceylon have urged, through their Chamber of Commerce that the Government try to curb waste and uneconomic public spending. In their view tax policy must help investment and economic development and tax concessions must be allowed, so that profits may be ploughed back into the concerns for further development. This should be encouraged even for a limited period. Considered from the angle of amenities, or the lack of them, for the taxpayer, Ceylon is one of the most heavily taxed countries in the world. (Income and profits taxes 31 percent. Import and export duties 58 percent).

The Committee of the Indian Merchants' Chamber have co-opted the following persons on the Committee of the Chamber for the year 1955. Mr. Naval H. T. Manu Subedar, Mr. Mangaldas B. Mehta, Mr. Krishnaraj M. D. Thackersey, Mr. G. P. Kapadia.

Madras

DEBATE ON PLANTATIONS INCOME-TAX BILL

RELIEF OF AGRICULTURAL INDEBTEDNESS

(FROM OUR MADRAS CORRESPONDENT).

THE legislative output of the Madras Assembly in the last ten months since Rajaji laid down office has been practically negligible. It has taken more than six months for the Assembly to put on the statute book a Bill providing for the levy of betterment contribution on any land which is benefited by the construction, expansion or alteration of any irrigation work undertaken by the Government, the cost of which exceeds Rs. 25,000, after 1st January, 1947. Communist amendments seeking exemption from this levy for holdings of five acres and less were defeated.

The Assembly is just passing, clause by clause, the Madras Plantations Agricultural Income-Tax Bill as amended by the Select Committee set up last year. The Committee has recommended a uniform rate of tax, subject to a maximum of five annas and six pies in the rupee without any super-tax. The rates proposed are: on the first Rs. 1,500 of total agricultural income nil; on the next Rs. 3,500—nine pies in the rupee; on the next Rs. 5,000—one anna and six pies; on the next Rs. 5,000—two annas and six pies; on the next Rs. 5,000—three annas and six pies; on the next Rs. 5,000—four annas; on the balance—five annas and six pies. An assessee will have the option to submit the return and have the assessment fixed. An alternative proposed by the Committee is to exempt five acres in respect of tea and 15 acres in respect of rubber, coffee, cardamom and cinchona from the payment of any income-tax and enable compounding of income-tax on an acreage basis for the different plantation crops on the following basis: Tea—5 to 10 acres, Rs. 10 per acre; 10 to 20 acres, Rs. 15 per acre. Rubber, coffee, cardamom and cinchona—15 to 30 acres, Rs. 3 per acre; 30 to 60 acres, Rs. 5 per acre. The Committee has treated the joint family as one unit for purposes of taxation. The dividend received by an individual from a plantation company cannot be treated as plantation income and, therefore, cannot be made liable for agricultural income-tax under the Bill. It is only on a company collectively that the State can levy a tax under the Bill.

A Bill for affording relief to the indebted agriculturists of the State has just been introduced in the Legislature. This Bill is intended to replace the Madras Indebted Agriculturists (Temporary Relief) Act of 1951 which provided for the postponement of the recovery of debts for a period of one year. It is proposed in the Bill, now introduced, not to afford protection to agriculturists who are comparatively better off. It is also considered necessary to provide for agriculturists who are debtors to repay their debts in instalments, partly with the object of assisting them to liquidate their debts gradually, and partly with the object of avoiding suits being filed against them when they have paid a part of the debt. A creditor would have to make a demand in writing before filing a suit and if the debtor pays interest accumulated up to the date of demand and one-eighth of the principal within three months, no costs will be allowed to the creditor in such a suit.

When even comparatively minor legislation of the kind referred to above has taken so much time to be put through, it is doubtful if a comprehensive land reform bill, which the State government is committed to bring forward, will have been placed on the statute book at least before the close of the agricultural year 1955-56. Landlord interests in Madras are extremely powerful in the influence they wield both in the Congress organisation and in the administration. Their resourcefulness in delaying or sabotaging land reform is present enigmatic. Chief Minister, Mr. Kamaraj, who is willing to strike but afraid to wound and is, therefore, riding two horses at the same time. Relying mainly as he does on the power of money (which in Tamil Nad has to come mostly from landlords) and the doubtful mass appeal of the anti-Brahmin and Fascist Dravidian movement for winning elections, the Madras Chief Minister appears to be in no hurry to fulfil the hopes roused in the minds of the peasantry by his own Party and to satisfy, even in part, their vital basic needs and aspirations. It has not occurred to the leadership here that the Avadi socialist refrain, just being given a typically vague Nazi twist and slowly rising to a crescendo, might have the effect of a boomerang. That peasant hopes, once roused, cannot be frustrated with impunity is a lesson which the vacillating Congress leadership in this State is yet to learn fully. It is, therefore, not surprising that even the moderate land reform programme proposed by the Land Reforms Committee of the Tamil Nad Congress Committee has caused embarrassment to most Congress leaders in the districts and in the Legislature.

Land Reform Proposals

The constructive land reform proposals outlined by the Committee after months of democratic discussion with the landowners, tenants and labourers throughout Tamil Nad bears the liberal-democratic impress of its Conventor and leading enquirer. These proposals, according to the Conventor of the Land Reforms Committee, are based on the opinions and facts elicited from landowners on the one hand and tenants and labourers on the other at its enquiry in about 100 centres in Tamil

Nad. It is recalled that the landowners were sounded on the maximum concessions they were willing to allow, in the interests of agrarian peace, in the matter of rights in land, security of tenure, rents and crop-shares and wages of agricultural labour; the kisans were likewise sounded on the minimum concessions they required in the interests of their standard of living. Thanks to the helpful attitude displayed by an enlightened section of landowners and a balanced section of tenants and labourers, the Committee, it is stated, has succeeded in evolving what it believes to be a generally acceptable and just programme of land reforms representing the greatest common measure of agreement.

Although the Committee's brief questionnaire did not cover the issue of ceiling on landownership and although no discussion on the subject was initiated by it at any sitting, representations, both for and against, were in fact heard by it. The Committee, it is emphasised, has given them due consideration by meeting both landowners and tenants half-way in the land reform programme it has finally proposed.

Permanent Security of Tenure

The Committee's inter-related proposals, numbering about 70 in all, constitute a brief document. Among the announced proposals the chief ones are as follows:

(1) All lands in respect of which a landowner is not a "resident landowner", as defined, to be cultivated only by tenants if they are not already so cultivated.

(2) Only "resident landowners" can have lands under their "personal cultivation" up to a certain maximum extent, such personal cultivation being defined to include cultivation by labour, hired for daily or monthly wages, according to the schedule of minimum wages fixed but not for any crop share, under the resident owner's personal direction and/or supervision.

(3) Well-knit, compact and integrated farms, involving large capital investment and most efficiently cultivated by their owners, to be exempted from the application of the ceiling limit on the recommendation of a specially constituted Board. Grazing lands reserved for cattle farms and topes to be similarly exempted.

(4) On lands in excess of the ceiling limit proposed, wherever such lands are now personally cultivated, tenants evicted since 1st July, 1947 (the date of publication of the Subramaniam Committee Report) to be fixed up if they are not already in possession of other lands for cultivation. Next in the order of eligibility for tenancy on the personally-cultivated excess lands are the permanent farm labourers, if any, who have been working on those lands.

(5) A "resident landowner" who has all or part of his lands cultivated by tenants now is to have the right to resume land for personal cultivation up to the ceiling limit prescribed subject to the conditions that he does not exercise this right during the period 1955-58 and "that, if after 30th April, 1958, he wishes to resume land from his tenants, he should do so within a period of three years, the end of which his right of resumption will lapse automatically if it has not been exercised, such resumption being authorised by the Government in such areas as it may notify".

(6) All existing tenants, whether cultivating for a fixed rent or for a crop share, to be confirmed in their possession of the respective holdings subject to the maximum area proposed for tenant-cultivation. An "existing tenant" is defined as a tenant who has cultivated a holding for all the crops in the agricultural year 1954-55 or for the first or the main crop in the agricultural year 1954-55.

(7) All existing tenants, all new tenants fixed up under the reform legislation and all tenants fixed up in future, to have permanent security of tenure subject to (i) payment of fair rents according to the schedule of fair rents proposed; (ii) posing to the schedule of land by eligible landowners in suitable resumption of land by eligible landowners for notified areas; and (iii) some simple ground for eviction. "Permanent security of tenure" is defined as "a permanent cultivation right which cannot be sub-let, partitioned, alienated, mortgaged, except to a Government credit agency, or attached". Such a right could, however, be inherited by a major son, widow, or brother, or brother's son, if he or she has not any other holding already under cultivation.

(11) Failure to pay the rent in full before 30th April every year, sub-letting in any form except in the case of betel vine cultivation, wherever necessary, and partitioning or alienating his cultivation right or mortgaging it except to a Government credit agency—these three to be the chief grounds for eviction of a tenant.

(12) No future transaction in land by its owner to be allowed to result in the eviction of a tenant from the concerned holding.

(13) A tenant to have the right to purchase the landowner's interest in the concerned holding whenever he decides to sell it, at prices agreed upon between the parties concerned and within six months of the owner's notice.

(14) The possibilities of transferring the landowner's interests in his holdings to the concerned tenants under a suitably evolved tenant purchase programme financed by a tenant-purchase fund, to be explored.

(15) Lands belonging to religious institutions to be brought under the management of a autonomous public corporation called the "Land Management Corporation". The Corporation, existing or new, of those lands having all the prescribed tenant rights except the right to purchase their holdings. Model co-operative societies to be organised wherever the lands taken over cover an entire village or a major portion thereof.

Jute

DULL CONDITIONS IN JUTE GOODS MARKETS

BUYERS APPARENTLY WAITING FOR LOWER PRICES

THE finished goods market has experienced mixed fortunes over the past week, but conditions generally have been rather dull. Speculation has again played a prominent part and although price fluctuations were not as wide as in former weeks, reaction to even the faintest rumour was very rapid. Some small business was done with Australia in cornsacks and woolpacks, but it was a source of great disappointment to the market that she did not continue to cover her outstanding balances. It would appear that with the easier conditions prevailing buyers there are expecting lower prices, and this sentiment appears to be shared by others also. There has been a dearth of foreign enquiries. Prices see-sawed with each rumour but the general tendency always appeared to be in a downward direction.

The decline in U.S. burlap consumption continued into January of this year, when it was reported to have dropped to 60 million yards. This was 10 million yards down on the previous month and 3 million yards less than in January 1954. It is reported that the Italian jute industry is facing a crisis due to the dwindling consumption of jute goods and the keen competition it has to face. A cut in production is expected.

THE JUTE MARKETS

Manufactured Goods: The weaker tendency apparent at the close last week continued, and prices fell. Holders in fatka were keen sellers and fairly heavy transactions took place in the speculative markets which caused a drop of Re 1 to Rs. 1-8 in heavy goods, and 6 to 8 annas in hessians. Opening quotations on Thursday morning stood at Rs. 130-10 for February B Twills with the forward positions at a 2-anna discount, and Rs. 47-6 for February 40in 100z hessians with a similar discount for forward shipment. Prices declined throughout the day due to speculation and the complete lack of overseas enquiries. By Friday morning, heavy goods had lost a further Rs. 1-3 to Rs. 1-12 per 100 bags whilst hessians dropped 4 to 6 annas. Special fabrics such as A Twills and Liverpool Twills, which until then had been commanding very high premia, were particularly hard hit; both constructions recorded a drop of Rs. 2-8 per 100 bags. Towards evening on Friday a partial recovery was staged due to reports of small overseas enquiries. On Saturday morning ready and forward B Twills had gained Rs. 2 of the Rs. 3 lost in the previous two days to open at Rs. 131-4 for February delivery and Rs. 130-12 for April-June shipment. Hessians received similar treatment and gained 6 to 8 annas to open at Rs. 47-8 for near deliveries and Rs. 47-6 for April-June shipment. The rise was short-lived, as over the week-end speculation and profit-taking at the higher levels pushed prices back 12 to 14 annas in sacking and 4 annas in hessian. Overseas buyers once again appeared to have withdrawn from the market completely, and an easier tendency developed with rates fluctuating within narrow limits. Prices showed a fall on Tuesday morning with February B Twills quoted at Rs. 129-14 and February 40in 100z hessians at Rs. 47-6. These prices declined still further during the day, and mills showed no interest at these levels. During the week, the highest level touched by B Twills was Rs. 131-12 and the lowest Rs. 129 per 100 bags. Hessian 40in 100z varied between Rs. 47-8 and Rs. 47 per 100 yards.

At the close the market is steadier due to speculative activities in the fatka market. Overseas buyers continue to sit out and no real goods business is being transacted. Opening quotations on Wednesday morning are as follows:

	Feb.	March	April-June	July-Sept.
	Rs.	Rs.	Rs.	Rs.
40in 80z.	38	38	37-12	36-12
40in 100z.	47-8	47-6	47-4	46-4
B Twills	131-2	130-10	130	123-8
Heavy Ceas (Plain)	131	130-8	130	123-8
A Twills	159-8	159	157	149-8
Liverpools	149	149	147-8	140-8
Cornsacks	134	133-12	133-8	127

Raw Jute: Calcutta mills have shown very little interest in jute, and the amount of business done has consequently been on the small side. Buyers' entries into the market have been more in the nature of test purchases to sound sentiment, and in all transactions business was concluded at a discount on the then current rates. It is doubtful if any large offers could be procured at the cut rates, as sellers in general were inclined to be reserved due to the poor imports in the upcountry markets. Their offers to mills have been very small indeed, as they have been experiencing great difficulty in covering even the smallest sales. A feature of the market has been the rapid increase in the amounts of Pakistani jute on offer to mills, and buyers in many cases have expressed preference for this type of jute. Owing to the increase in the price of Indian jute, the difference between it and Pakistani jute now stands at only Rs. 1-8 a maund as against a difference of Rs. 4 a

market. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. a maund Basis Bottoms.	Shipment.
Lower Assam	39	February-March.
Upper Assam	38	"
Northern	39	"
Purnea	38	"
Murshidabad Tossa	38-8	"
Daissee ex Sheoraphuli	39	"
Daissee ex Calcutta	38-8	"
Northern ex Local	38-8	"
Local Packing	38	"
Bimili	35 for F.A.Q.	"

Pucca Bales:	Rs. a bale.	Shipment.
Mill Firsts	230	February-March
Mill Lightnings	215	"
Dundee Daissee 2/3 S.G.	225	"
Dundee Daissee 2/3 L.G.	210	"

Pakistan Jute (ex Pakistan):	Rs. a maund.	Shipment.
Jat	45-8	February-March.
District	40	"
Northern	39	"

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rates of white jute. There has been very little change in the state of the Cossipore markets over the week, and imports continue to be well below average, only about 50 wagons arriving daily. Quotations have tended to follow the Calcutta goods market, and after opening steady at the beginning of the period, an easier tendency developed and rates dropped. Sellers are inclined to be reserved and at the close Kishanganj jute is quoted at Rs. 37-12 a maund for garsat quality. In the Daissee markets imports continue to be small, having dropped off slightly from last week. All imports are reported to be in a very wet condition and the quality has fallen considerably. At the close quotations in Sheoraphuli are based on Rs. 35-8 a maund for garsat quality in a fairly wet condition.

Mofussil: Markets in India again tend to be steady due to the very small imports and the steady demand for all available jute. Sellers have still a fair amount of covering to do against higher priced contracts which is keeping the market firm. Quotations are about Re. 1 to Rs. 2 above the parity of those quoted to Calcutta mills, which is causing a reluctance on their part to cut prices. At the close quotations in Dhubri are on the basis of Rs. 35 a maund basis Bottoms.

In Pakistan the markets are slightly easier compared with last week, although fair business is still being done in jute suitable for shipment to Calcutta. For this reason sellers are resisting the decline and are not keen to sell at the lower rates.

The three-mile long Hirakud Dam will rise to a height of nearly 200 ft. Estimated to cost Rs. 92 crores, this project will bring

adequate supplies of water to 1.09 million acres of parched farm lands.

WEALTH FROM THE WASTES

The hydro-electric power plants at

the dam site will have an installed capacity of 123-00 k. w.

with some 400 miles of transmission lines which

will accelerate development in the northern area of the Orissa State.

Thousands of tons of steel have been used so far in Hirakud for reinforcing concrete and earthwork, and for super-structures. Here, as in other River Valley Projects, STEEL is of basic importance

Inserted by
ISCO
STEEL CORPORATION

Managing Agents: **MARTIN BURN LTD.**
12, Mission Row, Calcutta 1
Branches: New Delhi Bombay Kanpur

Imports have fallen off slightly and in Narayanganj are down to about 10,000 to 12,000 maunds a day. Quotations in Narayanganj are on the basis of Rs. (P) 28-8 a maund for Jat Bottoms, with tossa at a premium of Rs. (P) 4-8 a maund.

Arrivals of Raw Jute

During January 1955, arrivals of raw jute in Calcutta and mill stations amounted to 576,219 bales compared with the revised figure of 754,783 bales in December 1954. Of January's total, 470,685 bales were of Indian origin and 105,534 bales came from Pakistan. Total arrivals for the period July 1954-January 1955 now amount to 36,06,865 bales of which 29,39,930 bales are Indian jute and 6,66,735 bales are from Pakistan. In the same period last season, total arrivals were 34,23,370 bales, of which 24,27,485 bales came from India and 995,885 bales from Pakistan. Total arrivals are now ahead of last season's figure by 183,295 bales. Out of this, arrivals from India are 512,446 bales higher than last year, but this is offset by a drop of 329,150 bales from Pakistan.

BULK CARGO HANDLING AT PORT OF MELBOURNE

An increase in the ratio of bulk to general cargo passing through the Port of Melbourne has been a feature of the Port's trade in recent years. The Port serves the capital of Victoria, and this State, already the most highly industrialised in the Australian Commonwealth, will be compelled to extend further the bulk handling system at the wharves as the demand of Victorian factories for raw materials expands. In the year 1952 bulk cargo comprised 49 percent of all the cargo handled. Prewar (1938) it was 33 percent. Principal factor in the rise is the great volume of oils and derivatives now being imported into Victoria. With provision of new tanker berths at Williams-

town and establishment of a £A15,000,000 refinery by Standard Vacuum Refining Company in the State, the quantity will further increase in the next few years.

The principal cargoes handled in bulk through the Port comprise oils and derivatives, phosphatic rock, sulphur, coal, gypsum, sugar and molasses. The Harbour Trust is building two of its new berths at Appleton Dock specifically to handle industrial coal. Construction works, which are taking place at Williamstown, for tanker berthage will assist the oil refining industry. Recently experimental bulk discharge has been effected between ship and bulk road tanker, of latex, raw oil, and linseed oil.

GUNNY SHIPMENT STATISTICS DURING JANUARY, 1955

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of January, 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,532.5	27,937.5	30,470.0
Short shipped	115.5	1,158.4	1,273.9
January, 1955 (Nett)	2,417.0	26,779.1	29,196.1
December, 1954 (Nett)	1,730.6	30,647.0	32,377.6
November, 1954 (Nett)	2,187.2	36,132.8	38,320.0

	Sacking Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	28,724.6	699.3	29,423.9
Short shipped	2,252.4	29.5	2,281.9
January, 1955 (Nett)	26,472.2	669.8	27,142.0
December, 1954 (Nett)	34,310.3	649.5	34,959.8
November, 1954 (Nett)	42,524.9	742.0	43,266.9

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption during January was 62 million yards, as compared with 69 million yards for December, a reduction of 7 million yards. Consumption, although lower, taken on an industry-wide basis, showed an increase of 1 million yards over January of last year, excluding deliveries to the armed forces. U.S. burlap stocks showed a further increase of 5 million yards. Stocks estimated for the industry at 245 million yards include 124 million yards spots and 121 million yards afloat. Appearing below are two tables which include the January figures—(1) based on members' reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry:

INCREASED JUTE SOWINGS IN U.P. LIKELY NEXT SEASON

A large expansion of jute cultivation in Uttar Pradesh is forecast for the next season by the State's Jute Development Department. The swing in favour of jute, states the Department, has been helped by current attractive prices, improved marketing facilities and speedy disposal of the 1954-55 crop at secondary markets. Jute to the farmer has been the second best cash-earner of the season, the first being sugarcane. Seeing the profitability of jute growing relative to other crops

a comprehensive Telecommunication Engineering Enterprise

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in the research, development, manufacture and installation of all types of communication and control systems.

Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving interdependent systems of various types.

Standard Products Include:

Systems:—
Telecommunications Line Transmission
Radio Broadcasting, Communication and Navigation
Railway Communication and Control
Telephone and Telegraph
Supervisory and Remote Indication and Control
Sound Reproduction
Municipal and Industrial Fire Alarms
Street and Airfield Lighting Control
Signalling (Office and Factory)
Communication Cable

Equipment:—
Selenium Rectifier equipment
Power Factor Correction
Heat Treatment
Broadcast Studio equipment
Transmission Testing apparatus
Cable Testing equipment
Loading Coils

Components:—
Quartz Crystals
Transistors
Capacitors and Interference Suppressors
Germanium Rectifiers and Photo-electric Cells
Thermionic Valves

Magnetic Materials
Thermistors
Relays
Selenium Rectifiers
Rubber, Plastic and Textile insulated cables and wires

What does TROMBAY mean to him?

It is difficult for us to imagine life to-day without oil. For him it will be impossible...because he belongs to the next generation in the Oil Age. Burmah-Shell's refinery at Trombay—the largest in the country—has an annual capacity of 2,000,000 tons of crude oil. The total output of the new refineries, together with that of the A.O.C. Refinery at Digboi, Assam, will be capable of supplying all India's internal requirements of petrol, fuel oil and bitumen for some time ahead. That's why a tiny dot on the map is of such importance to every man, woman and child in India. Oil and Trombay are, already, very much in his life...and part of it.

LONDON TEA SALES

At last week's London tea sales the 64,077 packages on offer realised an average price of 6s 15.6d a lb., against 6s 8.9d in the previous week and 4s 4.6d a year ago. Plain broken pekoe was quoted at 5s 8d; in the previous sale 6s 3d to 6s 4d. Results obtained by some of the companies are given below:

	No. of Packages	Average per lb.
Amalgamated	661	5/9
Anglo Ceylon and Genl.	184	6/9
Assam Co.	2,730	5/11
Assam Frontier	1,726	5/1
Bagracote	480	5/5
Budla Bota	1,638	6/2
Buxa Dooars	252	5/8
Central Province	359	6/6
Consolidated Estates	228	6/7
Cons. Tea and Lands	2,146	5/6
Darjeeling Co.	420	5/11
Deamoolie	408	6/5
Dekhari	391	5/11
Doom Dooma	1,044	6/8
Eastern Assam	712	6/3
Eastern Produce	1,062	6/8
Jhanzie	540	5/11
Jokai	1,979	6/4
Jorehaut	488	6/4
Longai Valley	240	6/14
Lunuva	1,139	6/5
Majuli	576	5/9
Nedem	300	6/
New Dimbula	348	6/11
Pabbajan	330	6/6
Rajawalla	652	6/8
Scottish Assam	354	5/11
Scottish Ceylon	442	6/4
Scottish Tea and Lands	882	6/10
Southern India	685	5/11
Standard Tea	456	7/1
United Planters	414	6/8
Upper Assam	870	6/5

U. K. Tea Stocks

U.K. stocks of tea on 11th February amounted to 13.8 million lbs. against 131.0 million lbs. a year ago.

COCHIN TEA SALES

At Dust Sale D. 300,000 lbs were on offer. There was a good demand at rates which were 1 to 1½ annas easier. Milled dusts were difficult to sell.

Without Prejudice

INSURER'S RIGHT TO FIGHT UNDEFENDED SUIT

A LACUNA IN THE MOTOR VEHICLES ACT

(FROM OUR LEGAL CORRESPONDENT)

HERE is a point of considerable importance to insurance companies engaged in motor vehicle insurance business, decided by a ruling just reported of the Bombay High Court. It is surprising that the point has not been raised and decided before in the 15 years or so that the Motor Vehicles Act has been in operation; and if the original decision of the High Court had been upheld on appeal it would have revealed a lacuna in the Act which would have operated to cause grave injustice to companies insuring against third party risks where a defendant, so protected by insurance and alleged to have caused injuries by rash and negligent driving, either cannot defend or decides not to defend the suit for damages instituted against him by the person said to have been injured.

And even as it is, the decision eventually arrived at is not altogether satisfactory from the insurer's viewpoint. One would have thought that ordinary principles of justice would require that where, let us say, the insured driver knows nothing about the proceedings against him, being for example out of the country, or where he is so seriously injured himself by the accident as to be incapable of applying his mind to the defence of the suit or where, say, he has by collusion with the plaintiff or for any other reason elected not to defend the suit, then the insuring company would have the absolute right to defend the action on its own in the name of the insured person. It will be news to some that there is no such absolute right.

What rights there are are comprised in (a) the policy, (b) the four corners of Sec 96(2) Motor Vehicles Act and (c) the inherent power of the Court under Sec 151 of the Code of Civil Procedure. It is with (c) that this note is concerned; and the reason that one has just referred to the invocation of the inherent power of the Court as not altogether a satisfactory remedy from the insurer's viewpoint is that it is necessarily a vague and uncertain one dependent on the discretion of the judge who in his turn decides on the facts and circumstances of each particular case, whereas the insurer's rights should be clear-cut, definitely ascertainable and plainly defined. In other words there is still, notwithstanding this remedial decision of the Bombay High Court, which may or may not be followed by other High Courts, a hiatus, a gap in Sec 96(2) Motor Vehicles Act, which should be filled up. Let us emphasise one other point before we come to the facts. This case illustrates the great value of every insurance policy covering third party risk containing a specific clause entitling the company to defend legal proceedings in the name of the insured. Many policies contain such a clause. But many do not; and it was the absence of it in this particular policy which caused all the trouble.

Now for the facts. A gentleman was knocked down by a motor cycle belonging to another gentleman and suffered personal injuries, and, in respect of these injuries he filed a suit against the owner-driver claiming Rs. 30,000 as damages. The owner-driver was insured against third party risk with an insurance company. The accident occurred on 14th March, 1950 and on 26th August, 1953 a notice was issued to the insurance company under Sec 96(2) Motor Vehicles Act; that is to say the company was informed through the Court of the bringing of the proceedings and was then entitled to be made a party to the suit and defend it, if it could bring itself within any of the grounds specified in the section. It may be said at once that it could not bring itself within any of the grounds. These grounds are too lengthy to enumerate here; they are the grounds on which the company has to base its defence to the suit and are concerned with various defences based on the policy and its conditions; none of them enables the company to stand completely in the insured person's shoes and to defend the suit on every ground on which he could himself have defended it.

The actual defendant in the suit was not in India. He had left the country and had to be served with the summons in the suit by substituted service and the possibilities were that at the actual hearing of the suit he would not trouble to appear to defend it. Whether he eventually did so or will do so or not is not known at this present, so the report of the case is concerned only with the claim of the company to intervene in the proceedings in which at that time the driver-owner had taken no interest at all and, of the very existence of which, being by then out of the country, he may have been totally ignorant. But the insurance company was not ignorant and would be liable for any damages awarded, under the policy.

So the question the High Court had to decide was whether, where an insurance company has been served with the statutory notice it is entitled to defend the suit on the merits but in its own name and not in its own rights but in the name of the defendant. In short, is it entitled to stand completely in the defendant's shoes?

"Yes," said the insurance company and took out a chamber summons to be added as a party to the suit. This summons was dismissed. The company then took out a notice of motion to be

allowed to defend the action in the name of the defendant. This application was also dismissed by Coyajee J., and against his lordship's decision the company appealed and it is with this appeal heard by the learned Chief Justice of Bombay and Dixit J., that we are now concerned.

Now you may think, as the writer certainly does, that the decision appealed against implied a pretty astounding state of affairs. It implies nothing less than that a party may be liable to satisfy a claim without being given any opportunity whatsoever to resist it or to prove that the claim is untenable or excessive. Without casting any reflection on the insured owner in this case, one can easily visualise a profitable racket in bogus accidents by collusion between insured drivers and imaginary victims of negligence as well as the liability to satisfy claims which, though honest, are untenable in law or on the facts.

"We should have thought," said Chagla C. J., "that it is a principle of elementary justice that a liability cannot be cast upon a party without that party being given an opportunity to resist the claim." To which the answer of the plaintiff was, in effect, simply: "That's just too bad, but that's how it goes." The Chief Justice proceeded: "What we are told by Mr. Desai on behalf of the plaintiff is that, however elementary this notion of justice might be, the Motor Vehicles Act does not permit us to give effect to this well established principle." Coyajee J., accepted this contention and his lordship did so largely because of the absence in the policy of any clause empowering the insurance company to take over the conduct of the defence of the suit. His view was that "in the absence of any specific provision in the insurance policy entitling the insurance company to defend the action in the name of the defendant, the Court would not be entitled under its inherent powers to allow the insurance company to defend in the name of the defendant," a view which though on appeal it was dissented from, shows the wisdom of inserting such a provision in policies covering third party risks. Coyajee J., further took the view that the difficulty in granting the company's application would be that if that were done it would be adding a further ground to S. 96(2) Motor Vehicles Act. And for the Court to do that would mean that it was usurping the functions and powers of Parliament.

The Appellate Court took, if one may respectfully say so, a broader and more equitable view.

Said Chagla C. J., (Dixit J., concurring):—"Now it is perfectly true that a Court should never avail itself of its inherent powers under S. 151 in order to do something which is contrary to what a statute lays down. Sec. 151 does not exist in the Code of Civil Procedure in order to arm the Court in doing something contrary to the policy of the Legislature; but the very object of S. 151 is to empower the Court to deal with those various situations which arise from time to time and which could not possibly have been contemplated by the Legislature.... The Legislature has not dealt at all with a case where the defendant does not wish to resist the plaintiff's claim.... He may submit to a consent decree which may be prejudicial to the interests of the insurance company.... Mr. Desai says that, as the present insurance policy does not contain any such term it is not open to the insurance company to step into the shoes of the defendant.... (But) if a contract between the parties can permit the Court to act in a manner not contemplated by the statute and to permit the insurance company to defend in the name of the defendant, why cannot the interests of justice equally permit the Court to allow the insurance company to defend in the name of the defendant? Surely the interests of justice should stand on a higher pedestal than the mere sanctity of a contract.... (In) the interests of justice the insurance company may be allowed to defend the action in the name of the defendant although the company was not allowed to defend it in its own name and in its own right under S. 96(2)."

Accordingly the order of Coyajee J. was set aside and the company was allowed to defend the suit in the name of the defendant.

[Royal Insurance Company Ltd., Appellants, v. Abdul Mahomed. A.I.R. 42 (January 1955) Bombay, 39.]

STATE-OWNED D.D.T. FACTORY OPENS NEXT MONTH

Trials for production of D.D.T. have commenced at the State-owned factory, situated in the industrial area, on the outskirts of New Delhi. Installation and tests of equipment and piping in two of the three sections have been completed. The distillation of benzene has been completed and the process of chlorination is being taken up. The first quantity of D.D.T. technical is expected to be produced some time next month. The building work of the factory is almost complete except for the extension of one of the sections. Construction work for the extension has already begun. All essential staff required for starting production have joined. The programme of training to acquaint the operating staff with the plant and process has also been completed. The D.D.T. factory which is controlled and managed by the Hindustan Insecticides Limited, a private limited company, under the Union Ministry of Production, will have a capacity of 700 tons of D.D.T. a year, which would be doubled shortly after the plant goes into production. The entire production will be utilised for the National Anti-Malaria Campaign.

Engineering and Transport

BRITISH LOCOMOTIVES FOR WORLD'S RAILWAYS

OVER 400 EXPORTED TO INDIA IN FIVE YEARS

SINCE the war, Britain's locomotive industry has exported to all parts of the world locomotives and component parts to the value of no less than £100 million, says an article in a special trade and transport issue of the *British Trade Journal and Export World*, just published. Today Britain can offer deliveries of locomotives as speedily as any other country. During the last five years the industry has exported no fewer than 405 locomotives to India, 468 to Africa, 395 to Australasia, and 356 to other parts of the world. These were all main-line locos, some of the largest ever to leave Britain. There have also been numerous orders for diesel locomotives: these include 30 for Brazil, 25 for Ceylon, 94 for Ireland, and 75 for the Netherlands. Electric locomotives have also been produced in increasing numbers, and these include very large main-line locomotives for South Africa, Spain and Brazil. In 1953, no less than 93 per cent of the total production of the industry went overseas.

One of the largest contracts ever placed for railway equipment was awarded last year to a British firm (Metropolitan-Vickers). The Central Railway of Brazil ordered 200 complete railway coaches, to be built and equipped in Britain, and 100 sets of electrical equipment to fit into coaches being manufactured in Brazil. The contract, financed in part by an International Bank loan of \$12,500,000, was worth about £7 million.

Referring to the new 15-year plan to re-equip and reorganise Britain's State-owned railways, the article observes that overseas buyers interested in this field will watch with interest implementation of various aspects of what has been called the master plan for British Railways. The £1,200 million programme, which will include extensive schemes for electrification, more diesel locomotives, re-planning of stations, and improvement of rolling stock and the permanent way, may, by the time it is completed, set new standards of modern railway practice which will serve as a model for the world. The potentialities of gas turbine and atomic power for propulsion are not being overlooked.

INDIA NOW READY TO EXPORT TRAINERS

LATEST MODELS PRODUCED UNDER LICENCE

AN Indian-designed two-seat training aircraft can now be exported to countries overseas. The plane is the Hindustan Aircraft HT-2, a basic trainer which has been selected for service with the Indian Air Force. Hindustan Aircraft Ltd. is an Ordinary (Overseas) Member of the Society of British Aircraft Constructors. The HT-2 has a British engine, the Blackburn "Cirrus Major," and is fully aerobatic. It has been in quantity production for twelve months, and numerous deliveries to the Indian Air Force have already been made. The HT-2 is a low-wing monoplane of sturdy construction, with an excellent view from the cockpit. It is the first Indian-designed aircraft to be built by Hindustan Aircraft Ltd. But the manufacturers have some fifteen years' experience of building aircraft under licence, and during World War II they designed and made the first all-Indian glider.

Recent British aircraft which the firm has built under licence include more than sixty Percival "Prentice" trainers and a number of de Havilland "Vampire" jet fighters for the Indian Air Force. The HT-2 trainer is of up-to-date construction, with an all-metal stressed skin, so that deterioration in extreme climates is reduced to the minimum. It is fitted with hydraulic toe-operated brakes, like the heavier aircraft which students who train on the HT-2 will ultimately fly. Other members of the British Commonwealth which design and produce their own aircraft are Canada and Australia. In Canada the de Havilland "Beaver" and "Otter," and the Avro "CF-100" and "CF-105" are all-Canadian designs. More than seven hundred "Beavers" have been built, and the United States Army has recently placed an order for over eighty "Otters." The "CF-100" is the standard all-weather fighter of the Royal Canadian Air Force, and the "CF-105," an ultra-fast supersonic delta-wing fighter, is under active development. In Australia, a basic trainer aircraft, the Commonwealth "Winjeel," has been produced for the Royal Australian Air Force.

(Continued on page 282.)

The 9th annual general meeting of the Indian Confectionery Manufacturers' Association, Calcutta, is scheduled to be held on Sunday, the 20th March, 1955, at Hotel Imperial, Queensway, New Delhi. Mr. Brahma Swarup, the President of the Association, will preside over the meeting.

AUSTRALIA WORLD'S BIGGEST IMPORTER OF MOTOR VEHICLES

With imports of 92,500 units last year, Australia was the world's largest single importer of motor vehicles, and became once more the biggest single export market for Great Britain, which was the world's leading exporter in the period, states the *Australian Financial Review* in a survey made in November, 1954 of the motor industry. This industry, by employment standards, is the largest of Australia's secondary industries. It will be the subject of an exhaustive analysis when the Tariff Board hears a review of tariffs affecting it. Although new vehicle sales are not yet back to the record levels of 1950-51, the latest boom is more soundly based than the previous one. The *Financial Review* draws attention to the large number of new plans recently announced for the expansion of local manufacturing facilities. Apart from the overall potential of the Australian market, there were a number of reasons for the expansion projects. They included the success of the Holden car, import restrictions which limited the share of the market which British and other overseas makers might have held, the relative stability of building costs, and the Australian Government's move for a revision of the tariff. Australia's output of motor bodies has grown at an extremely rapid pace in the last three years.

Perhaps the clearest indications of the industry's renewed prosperity were the profit announcements made recently by General Motors Holden's Ltd. and the Standard Motor Company. The first made a net profit of £A7,287,325 for the year ended 31st December, 1953, which eclipsed by far its net for the previous year of £A4,010,635—itsself the largest profit ever made by an Australian company. Standard Motor Products Ltd. announced a rise in accumulated net profit from £A408,967 to £A660,185 for the year to June last.

Calcutta Markets

MIXED PRICE TREND IN TEA EXPORT SALE

DUSTS MOSTLY EASIER

AT Sale No. 35, held on 21st and 22nd February, offerings in the Export auction consisted of 25,298 packages. There was a fair general demand with the market showing a further decline of 4 annas for the end-of-season offerings. There was a strong enquiry for clean, black teas which were fully firm. A few tippy teas on offer came in for strong competition and sold several annas above valuations. The majority of common and medium offerings were from 2 to 5 annas easier. C.T.C. teas shared this decline in the market. It is again not possible to give quotations this week.

At the Internal Sale, offerings of Dusts consisted of 17,131 packages. There was a fair demand and only the Internal Dust blenders were operating. There was little or no enquiry from exporters, so the Black leafy types suitable for export were the weakest feature of the sale and sold 3 to 5 annas below last week's rates. The ordinary clean Common Doars and Medium Assams were 2 to 3 annas cheaper, whilst the Commonest fibrous types were up to 5 annas easier. Good attention and support was given to the better Assam CTC's with quality liquors, and these were fully firm and occasionally dearer but the ordinary CTC's with average cup quality were about 1 anna to 2 annas easier.

	1955	1954
Quotations	Rs.	Rs.
Medium Doars Dust	2 8 0 to 2 8 6	1 14 3
Medium Assam Grains	2 9 0 to 2 9 6	1 14 9
Dust	2 9 0 to 2 9 6	1 14 9
Best Assam CTC Dust	3 1 0 to 3 2 0	2 1 0

Offerings of other grades consisted of 10,089 packages. There was a fair demand, the strongest feature being the Black Clean teas which were steady and sometimes dearer. Those containing stalk and fibre were 1 anna to 2 annas easier, whilst the Commonest stalkiest types were up to 4 annas easier. No quotations are given as there was an insufficient quantity of quotable tea.

ORE AND GRAIN FIXTURES IN FREIGHT MARKETS

RECENT developments in the Far East have had an immediate effect on freight rates in that area and some interesting fixtures have been concluded. In addition, time charter rates have continued steady and there has been a good volume of business in the American coal trade. A further built feature for owners has been the information that 200,000 tons of Cuban sugar have been sold to Russia.

Whampoa-Colombo was fixed at 80s, which shows an increase of 25s a ton on the last fixture reported in January. North China-Antwerp-Hamburg Range paid 160s for May loading early in the week and a further increase of 2s 6d a ton has been reported at the end but no confirmation is yet forthcoming. An 11,000-tonner has been fixed at 40s per d.w. ton for time charter with delivery off Colombo and redelivery Continent or Poland via North China; it is understood this vessel will load rice in Burma for Shanghai and thereafter load cereals on the homeward run.

Various fixtures were concluded in the American coal trade, including consecutive voyages from April until January 1956 to Antwerp or Rotterdam at 49s 6d for a Liberty and six consecutive at the same rate commencing May for two Liberties. Three vessels covered 10 consecutive voyages to Italy at rates varying from \$7.25 to \$7.60.

The Indian ore market was active, \$12.25 being conceded for a Liberty Calcutta-Vizagapatnam-Japan in March and 85s for an 8,500-tonner in May. Mormugao-Continent took four ships between March and May at the equivalent of 84s f.i.o.

Grain fixtures from various ports of shipment to India were made at the unchanged rates of 85s from West Australia and \$19.50 from the Pacific Coast.

SUGAR MARKET

During the week ended 23rd February, sugar sales in the Calcutta market averaged 2,000 bags a day. Arrivals were 1,000 bags and stocks totalled 75,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-8 for ordinary grain and Rs. 32-8 for big grain. Coming ordinary grain and big grain sold at Rs. 31-8 and Rs. 31-8 respectively. Ex-mill delivery price of Gaya C-29 grade sugar was quoted at Rs. 30-8 and that of Gaya D-29 at Rs. 30-6. The market remained quietly steady.

LINSEED

The undertone of the market ruled firm and trading was on a small scale. Owing to firm advances from the producing centres sellers were very reserved, and arrivals were scarce. There were fairly keen enquiries from crushers for ready and forward delivery, but actual business was very small. Activity in the oil market was fair, with a good demand from shippers and local consumers.

Sellers were rather reserved. Latest quotations were as follows: February-March Rs. 17-9 a maund; April-May Rs. 16-12 a maund.

HIDES AND SKINS

The market was steady. Stocks were less than in the previous week.

Bazar Sales

Between 15th February and 21st February, 1955) **Cowhides**:—Wet salted (Ord.) 4,500 pcs. on the basis of Annas 11-6 to Annas 12-6; Wet salted (Slaughtered) 11,700 pcs. on the basis of Rs. 13 to Rs. 25-8.

Goatskins:—Wet salted (Daisee, Killed) 1,15,000 pcs. on the basis of Rs. 265 to Rs. 400; Assam-Dinajpur 5,650 pcs. on the basis of Rs. 290 to Rs. 352; Furreah-Kissenganj 6,100 pcs. on the basis of Rs. 335 to Rs. 350; Patna-Pakur (Ord.) 12,000 pcs. on the basis of Rs. 260; Muzafferpore-Patna 91,300 pcs. on the basis of Rs. 300 to Rs. 340.

Bazar Stocks

(21st February, 1955)

Cowhides:—Wet salted 1,23,000 pcs.
Goatskins: Wet salted (Daisee, Killed) 56,500 pcs.; Assam-Dinajpur-Murshidabad 1,39,000 pcs.; Muzafferpore - Patna - Pakur - Furreah - Kissenganj 1,99,000 pcs.

SHELLAC MARKET INACTIVE

During the week ended 22nd February, the market remained inactive. The range of quotations was as follows:

Pure Buttonlac	Rs. 190 to 192-8 buyers.
Lemon No. 1 Shellac	Rs. 192 done; 193-8; 194-8 buyers; 191 done.
Lemon No. 2 Shellac	Rs. 188; 189; 187 buyers.
F. O. Std. 1 Shellac	Rs. 180 done; 182 done and buyers; 180 done.
Pure TN Shellac	Rs. 170 buyers; 170 done and buyers; 169 basis done and buyers.
4% I.T.N. Shellac	Rs. 157-8 value; 153; 150 buyers.
No. 1 Kusmi Seedlac	Rs. 175 buyers; 175 done.
No. 2 Kusmi Seedlac	Rs. 170 buyers; 168 done.
Fine Bysaky Seedlac (Manbhum)	Rs. 164 buyers; 166 done; 163 buyers; 164-8 value.
Fine Bysaky Seedlac (C.P.)	Rs. 160 to 161 buyers; 160 done.

Kireelac	Rs. 63-8 to 63 buyers.

Shipments during February until the 19th were 18,132 packages.

CAPACITY OF CALTEX REFINERY TO BE INCREASED

The Government of India have approved the proposal of Caltex (India) Ltd., to increase the capacity of their proposed oil refinery at Visakhapatnam from 500,000 tons to 675,000 tons crude oil a year. In terms of daily production this will mean an increase from 10,000 barrels to 13,000 barrels. With this increase in the capacity of the Caltex refinery, the total capital outlay will now be Rs. 12.5 crores instead of Rs. 7.5 crores as envisaged in the original plan. The effect of the new proposal will be to raise the production of kerosene by 6 percent and of motor spirit by about 20 percent. Preliminary work on the construction of the Caltex refinery has begun. The refinery is expected to go into production early in 1957. The Burmah Shell refinery now under construction at Trombay, near Bombay, is expected to begin operations towards the middle of this year and will go into full production shortly after. The Stanvac refinery, the first of the three modern oil refineries in India, went into production last year.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to December, 1954. Compared with November the December indices for Government Securities and Preference Shares reveal drops of 0.8 points and 0.4 points, respectively.

There were rises in Coal (6.1 points), Jute (5.9 points), Mining and Oil (8.6 points), Engineering (5.7 points), Paper (19.9 points), Sugar (5.4 points), and Miscellaneous (4.1 points), while decreases occurred in Cotton (15.8 points), Cement

(1.5 points), and Tea (5.9 points).

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares increased by 3.9 points during December, 1954.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and the shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds	Average under Tea	Outturn and Average Price per lb realised for crop.				Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including Taxation	Dividends per cent.			Paid-up Capital Share	Latest Market Quotations as available until		A year ago

A LESSON FOR THE MIDDLE CLASS ON THE MEANING OF SOCIALISM

FISCAL PRUDENCE AND PSYCHOLOGICAL ERROR IN MR. DESHMUKH'S BUDGET

THE increased rate of personal tax on middle-income groups and the extension of supertax to a lower grade of earners, that are proposed in the Finance Bill now before the Lok Sabha, will impinge directly on that small section of the Indian people that take an interest in fiscal policy. They are the educated middle and upper-middle classes who buy English-language newspapers where such questions are intelligently discussed. They are also the people who, being educated to a sense of equity, will search hardest (despite the fact that their pockets are hit) for the merits, and the general will to do justice, of Mr. Deshmukh's fifth budget, and of the taxation report on which it is based. The Government has (Mr. Deshmukh made this point in his radio broadcast and will make it again during the debate) for the most part simply implemented recommendations from a commission that had given fiscal policy much deeper thought than a Finance Minister can do in his ordinary work. Most of the unpopular innovations in this Budget stem from the report of Dr. Matthai and his colleagues. These gentlemen took evidence from thousands of people about the country and accepted written submissions from every organised economic interest in the land; they included in their number business men fully aware of the needs of private industry and of the middle classes. It would be very difficult to accuse Mr. Deshmukh of thoughtlessness or ignorance in budgeting, for perhaps no previous budget in India's history has proceeded so surely from careful thought and full study. It might nevertheless contain profound errors of judgment, political and psychological more than fiscal.

admitted that direct taxpayers are now, under the new Finance Bill, required to contribute as heavily as they humanly can and that future increases in income tax rates are unthinkable, while further extension of indirect taxation is not only possible but desirable.

The Taxation Commission is quoted by the Finance Minister as having said that "the disincentive effect of higher taxation on the will to work of the higher income groups is generally exaggerated." It may indeed have been exaggerated in submissions to the Commission, as even genuine grievances commonly are, but it is a real factor nonetheless. It will be much more obvious now, not only because of withdrawal of the earned income allowance, but because of the decision to tax each and every form of allowance. The incentive effect of allowances, especially on a class of commercial servants whose value to the economy is beyond easy measure, appears to have been grossly under-estimated. We feel that the Finance Minister is making a serious mistake here, not so much a mistake in fiscal policy as in human psychology. The payment of allowances to senior staff is not a trick to evade taxation. It is a well-based social system of rewarding superior talent and recognising more onerous responsibility—a reward which is actually much cheaper to the economy than any attempt to find exact monetary equivalents for different grades of work. The terms "benefits and allowances" are necessarily vague because this is a system of psychological and social rewards for talent, and precisely for that reason this decision will open up large fields for official arbitrariness, and will beyond all doubt have serious disincentive effects.

One of the views most strongly and most frequently urged on the Matthai Commission, especially from business organisations, was that there should be more indirect taxation. This is reflected in the budget, where about four-fifths of the new taxation is indirect. Of the Rs. 21.7 crores that the tax proposals add to the Central revenues, Rs. 18 crores is contributed by new and heavier excise duties. This suggests acceptance of the thesis of business men, that the common man for whose benefit the country is planning welfare development should put more into the pool of resources than he has done in the past. This is in principle rational and equitable policy, though one could urge the serious criticism that the new excises are too steep for a beginning. It would have been better to take a wider range of commodities and tax them at a lower rate than 10 percent, though there were probably administrative arguments against that. But, while approving the shift of emphasis to indirect taxation, the advocates of the change must regret that it has been accompanied by an increase in direct taxation. Their argument was that direct taxation was already as heavy as taxpayers could bear, and they did not mean that both forms of taxation should be increased, even if indirect increased more than direct. Perhaps in that they were asking a political impossibility: a clear and decisive shift to indirect taxation at this moment, with a lightening of the burden of direct taxpayers, might have had bad effects on the popularity of the Congress, and it may have been felt that if the consumer of moderate means was to be taxed more he should receive at the same time an assurance that those with disposable monetary incomes were paying to the fullest extent. Taxpayers will argue that they were already doing that before this budget, but the Taxation Commission does not appear to have agreed. Its reasons for disagreement will be studied with attention when the Report is made available. It will surely be

Though this is the feature of the new income tax proposals that we find most gravely objectionable, it must not pass notice either that Mr. Deshmukh has produced a budget that does not contain one single incentive for any class or grade of wage-earner. The only incentive offered anybody by the new taxes is to bachelors to get married. This is a piece of advice that might be held of dubious merit in any age or place, but certainly in overpopulated India today. There are other aspects of the personal tax proposals with which we might find fault, but we desist from criticism at this stage lest we appear to identify ourselves with that irresponsible body of opinion that has already been heard to suggest that since Mr. Deshmukh was faced with so large a deficit, he should not have attempted to cover any part of it by causing anyone hurt. This is reckless counsel. It was anticipated by Mr. Deshmukh, when he said on Monday evening: "The fact that

the various economic indicators suggest that deficit financing could be resorted to without undue risk does not mean that the attempts to mobilise domestic resources to the maximum extent should be given up and prudent finance replaced by the printing press." In any event, the desire to recast the tax structure on more rational lines, even if it has issued in proposals that are open to cogent criticism, should not have been neglected just to give the inflationists a bigger and worse deficit."

The profound political error of the budget, for which the Matthai Commission is evidently responsible, is its harsh treatment of the Indian middle class. It is their incomes that are more heavily taxed and it is they who ultimately will bear the cost of the excise duty on sugar, the important duties on a variety of products and the 10 per cent imposts on "consumer durables" such as fans, light bulbs, paints and batteries. The much more numerous agricultural classes are left carefully alone. Not that anyone has ever suggested that they can pay large taxes, but by reason of their number an extremely small duty on their consumption, such as the salt tax, would have produced a useful yield. This the Government has again shrunk from. The Matthai Commission has even produced a theory to account for this reluctance to tax lightly the mass of the people—a theory that is as specious a sophistry as we could hope to encounter. "The Commission," says the official summary, "is of the opinion that a tax on salt cannot be justified merely on the ground that its incidence by itself is relatively light, in view of the increase that has occurred and may occur hereafter in commodity taxation." In other words one cannot justify a tiny levy on salt just because it is tiny, but evidently one can justify very stiff levies on cloth, sugar and paper—just because they are not tiny! Perhaps what is meant to be understood is that one can tax the middle class heavily because they do not have many votes, but one cannot touch the masses even lightly because they do have a lot of votes.

This, of course, is good old-fashioned socialism. That is why it is amusing to read the indignant comments in the lobbies on Monday evening—"this isn't socialism because it bears heavily on the middle class." As though socialism was ever meant to care for the fortunes—or even the existence—of the middle class! The Congress has taught its most active and intelligent supporters a lesson in class-conscious socialism, which is written out plainly enough in the Matthaai report. The Commission says: "The large area of the non-monetised sector in the rural economy is at once the index of the limits of taxation and the pointer to the possibilities of extending taxation to the field of comparative essentials with the knowledge that the great mass of the rural population will remain outside its bounds." That is to say, the Government can cheerfully proceed to tax the "comparative essentials" of life (which are the bare essentials of middle-class life) because such taxes will only be borne by people who handle money, however little; they will not be borne by "the great mass" of the population.

It is time the modestly placed middle class, who take the most sustained interest in politics, realised that socialism is not aimed at bettering their situation, or espousing their cause against the rich. On the contrary, the socialists put them in the same class as the rich, by opposition with the vast masses who must forever remain immune from any taxation, however infinitesimal. The senior clerk on a few hundred rupees a month plus dearness allowance and a bonus, is lumped in with the wealthiest merchant, in socialist eyes—because he has a money income, prefers white sugar to gur, buys electric light bulbs and can so easily get at by the tax-gatherer. Of course, there is no other consistent conception of socialism; if the Congress is to take its socialism seriously, it must put first the interests of the poorest of the poor and shield them from any charge for welfare development. But the politically conscious part of the population should realise clearly that an man who is educated enough to know what socialism is and who has leisure enough to support it has nothing to gain and nothing to hope for from the socialists except discriminatory taxation *see also* the substance of the 1955-56 Budget.

THE LOAN PROGRAMME FOR 1955-56

VALUE OF NEW DEVELOPMENT REBATE

OTHER features of the Budget of interest to industry include the Government's loan programme and some minor change in the taxation of corporations. The Government proposes in the next financial year to raise a loan of Rs. 125 crores but the Finance Minister did not say in his speech whether this would include, or be in addition to, borrowing by the State Governments. During the coming year one loan, the 24 percent, loan 1955, with an outstanding balance of Rs. 60 crores falls due for repayment, and the Government have the option to repay another, the 44 percent loan 1955-56, with an outstanding balance of Rs. 9 crores. Mr. Deshmukh said, rather enigmatically, "It has been assumed that both of these loans will be discharged next year". If the Government does indeed repay these two debts at the same time as it borrows Rs. 125 crores, it will only be taking off the market Rs. 60 crores of new money. This is very little, even allowing that the small savings drive is to be intensified and will aim at a target of Rs. 52 crores, and even allowing that the income-tax and excise duty changes made in the Budget will inevitably restrict the flow of savings. Such a modest loan programme will leave plenty of room for the large flotations that private enterprise is planning for the next twelve months.

The 25 percent development rebate introduced in the Finance Bill is the most interesting and most welcome feature of the Budget from the point of view of industry. It will provide a fairly substantial tax concession to any enterprise installing new equipment and plant. Thus it will obviously benefit the steel companies and the jute mills which have in hand expensive re-equipment and expansion programmes. The concession will apply to any machinery installed since the beginning of the current financial year, that is since 1st April, 1954. So its beneficial effects on industry's tax liabilities will be felt immediately. The decision to allow companies to carry forward losses for more than six years is of minor importance since most firms have wiped out losses within that period. The amendment to Section 23A appears to be a severe blow to private companies which will now be under the obligation of distributing 60 percent of their profits. This decision comes as a disappointment, for it had been hoped that the Government would respond to requests for more reasonable treatment of private companies in this respect.

LAND AND POPULATION IN WEST BENGAL

ASPECTS OF THE STATE'S AGRARIAN REFORM PROGRAMME

THE long-awaited Land Reforms Bill in the West Bengal Legislature has aroused the usual controversy for not being so revolutionary a measure as some Opposition parties would have liked it to be, but it undoubtedly is a programme of agrarian reform that is based on hard realities and stubborn facts. West Bengal shares with the rest of India the common feature of acute land scarcity; the density of agricultural population per 100 standard acres of cultivated land is even among the highest in the Indian sub-continent. That this should be the case in a State so highly industrialised and with the largest proportion of urban population is an anomaly which only the immobility of its rural working force can explain. Among its industrial population, the majority must be immigrants from the neighbouring States. The 1951 census papers show that the immigrant population in the State numbers 4,500,672, or a little less than one-fifth of the total population, and the bulk of the immigrants surely find their livelihood in the industrialised parts of the State. Half of West Bengal has thus remained overwhelmingly rural, the population density coming next only to Travancore-Cochin, which is the highest in India. No wonder, land utilisation in West Bengal has gone to the extreme limit, as the Revenue Minister, Mr. Basu's statistical analysis reveals.

This density of rural population within the framework of a feudal economy has had its inevitable repercussions on the system of land-ownership—the creation of a huge army of landless labourers and the growth of a very large number of petty land-owners with its corollary of progressive fragmentation of land. To quote the Revenue Minister again, 70.7 percent of the cultivating families live below a subsistence level as they do not have sufficient land to maintain themselves. In the State as at present, the total cultivated area amounts to 12.8 million acres, of which the total area cultivated is 11.7 million acres; the balance is cultivated waste. According to the census of land distribution in 1951, 34.5 percent of total agricultural families hold land less than two acres in extent, 36.2 percent hold between two and five acres, 23.2 percent hold between five and 10 acres, 3.4 percent hold between 10 and 25 acres, 4 percent hold be-

tween 25 and 33 acres and only .9 percent also above 33 acres.

It is clearly a very difficult situation for a State Government to tackle, especially when the conflicting claims of higher productivity and social justice have to be balanced in its programme of reforms. The State Government has fixed 33 acres as the ceiling for land holdings and that seems disproportionately high in the face of an acute land scarcity, but judging from the fact that only .9 percent hold above 33 acres, and taking the excess land away from this category of owners, would give only about 400,000 acres for re-distribution, the question of a ceiling to land holding becomes relatively unimportant. Fixing the ceiling at a lower level, say at 25 acres (assuming that is possible on economic grounds) would definitely make more land available for re-distribution, but that also will not increase the quantity to an extent that will make re-distribution on an economic basis possible. Because some 33 lakh families depend upon agriculture, and if each is to be given five acres (assuming that five acres will be the minimum economic unit) clearly there is not sufficient land available for distribution on that basis.

In the circumstances, the State Government has no other alternative but to propose what it has done. It does not foresee any possible means of diverting the agricultural population away from land to industrial occupations—that will involve investment of a magnitude that the State, even with generous aid from the Centre, cannot afford for many years to come. It has therefore proposed measures that will increase the productivity of land and at the same time strengthen the economic position of real cultivators of the soil—the bargadars or the share-croppers and the landless labourers. Distribution of land will follow, but that has not been given as important a place as co-operative farming, laws prohibiting sub-letting (as distinguished from share-cropping because this is considered to be a kind of partnership in agriculture which it can be with due statutory safeguards for share-croppers) and the revision of the rent structure on a more rational basis. Under the Bill, rent on land has been fixed on the principle of one-fifth of the gross yield, but the scale of rent is proposed to be so graduated that above a certain income level, the incidence of rent will be higher. Power is sought to be given to the State to enforce minimum standards of efficiency in agriculture. These measures no doubt will find support in quarters where sound economic considerations and realism are valued.

CURRENT COIN

Capitalism's New Look.—The President of the Bengal Chamber of Commerce and Industry, Mr. G. M. Mackinlay, speaking at the annual general meeting last Friday, stressed the change which has recently taken place in capitalistic thought in accordance with modern political and economic requirements. The explanation was a timely one; the fact that capitalism has brought itself up-to-date is not always realised in India, although it has already been accepted in many Western countries which themselves once saw their only salvation in a resort to socialism. The very size of India's problems has led to the hunt for panaceas of which the latest Government trend towards socialism is merely an expression. If private industry is now to follow a parallel path with State development, Mr. Mackinlay pointed out, it was prepared to play its part to the utmost, but proper facilities for its working would have to be provided. Mr. Mackinlay outlined three difficulties at present standing in the way of proper co-operation. The attitude of labour in demanding higher wages without providing higher productivity, and the policy of the Government in the matter of labour force adjustments were both contributing to higher costs and inflexibility. The taxation policy of the Government was not correctly designed to encourage incentive for hard work and expansion in industry. Thirdly, the forthcoming company legislation embodying recent official thinking on the managing agency problem presented a threat that the basis of private enterprise in the country would be changed from the modern economic and efficient managing agency system to one based chiefly on individual and family control. Mr. Mackinlay emphasised the present tendency which existed to favour the interests of the individual worker already in employment at the expense of industrial efficiency and the growing body of unemployed. In his concluding remarks Mr. Mackinlay expressed the anxiety felt by all organised private industry and by all who appreciate that the welfare of the country depends upon a healthy and progressive private sector, when he asked for "full play within our field". He expressed the hope that nothing radical would be done to disturb the foundations on which capital formation and industrial expansion are built. Progress can be assured, Mr. Mackinlay maintained, provided the impediments to private enterprise in India are removed and nothing new is done to damage it;

and he added "let us quietly work out our employment problems with understanding and patience on all sides."

Upper India Chamber.—The President of the Upper India Chamber of Commerce, Mr. H. Hill, speaking at the 67th annual general meeting in Kanpur last week, stated that, if it was realised that the aims of both the private and the public sector were the welfare of the Indian people, there would be less room for enmity between them. The private sector asks only that it should receive from the Government "sympathetic understanding of its needs". This, Mr. Hill remarked, many supporters of the public sector seem so little disposed to accord it. Recent events were threatening the very existence of the private sector and the public must not be misled into believing that State enterprise would be able to carry on what private industry might be forced to abandon. "It would be folly," Mr. Hill said, "to think that the private sector's woe is the public sector's woe...." The public sector available to it such a surplus of men with technical knowledge, industrial experience and commercial wisdom that scope for their talents in the service of the nation can be found only by ousting the present managers of industry." Commenting on the employment situation, Mr. Hill mentioned that the statutory provision for payment of retrenchment compensation, will tend to discourage expansion unless amended in certain respects. The solution to unemployment and underemployment which at present exist in industry was more capital formation and expansion of industrial activity. This, Mr. Hill maintained, would involve, as a first step, an adjustment of work loads and modernisation of plants and methods. Mr. Hill expressed doubts that the nationalisation of the Imperial Bank would produce an organisation able to render to the public, to trade, and to commerce and industry, the same efficient, willing and satisfactory banking service which joint stock banks have hitherto rendered. Increased competition could be expected among commercial banks in 1955, but the increased opportunities for bankers to employ their funds profitably would help to absorb higher costs of operating funds and the increase in management expenses, and would enable the banking system of the country as a whole to maintain its position. Mr. Hill remarked with approval on the establishment of a Cotton Textiles Export Promotion Council and the assistance this would give in maintaining exports in a buyers' market. Mills in the U. P. were however not in as good an export position as those of Bombay, Ahmedabad and Madras, and an effort would be required to improve quality and maintain improved standards. With the present impositions on the mills it was necessary, Mr. Hill stated, that they be allowed to reduce operating costs if the public is to get its cloth cheaper. Turning to sugar, Mr. Hill regretted the decision of the Government to erect new factories in South and Western India. He expressed doubts that this would solve the problem of cheap and plentiful sugar "since a reduction in the price of cane and the movement of industry from its present concentration in U. P. and Bihar would, under existing conditions, paralyse the industry in these two States." The answer lay in cane development so that the increase in the yield of cane per acre would reduce the grower's cost comparable to that in South India and Deccan.

Progress of Scindia.—Speaking at the 35th ordinary general meeting of the Scindia Steam Navigation Co. Ltd. in Bombay last week, the Chairman, Mr. D. M. Khatau, announced that the overall working results during the past year had not been as satisfactory as those of the previous year. The chief reason for the low profit earned, Mr. Khatau pointed out, was the fall in freight earnings due to a lower level of freight, poorer loadings of cargo and the smaller amount of tonnage employed in some of the trades. This reduction took place chiefly on the coastal trade; in the overseas trade there was little change. Mr. Khatau was able to report that five 7,300 dwt cargo ships were under construction at the Vasakhapatnam Yard. These represented a considerable outlay of funds which was at present bringing no return to the company due to abnormally long delays in delivery. Altogether, Mr. Khatau stated, Rs. 5 crores of the company's resources was bringing in no return; Rs. 3 crores is at present accounted for by investment in the Eastern Shipping Corporation Ltd. and Hindustan Shipyard Ltd. and the amount due from the Government in respect of payment for the shipyard. This year the accounts of the Scindia Workshop Ltd. have been shown separately. This subsidiary had served the main company well in the past year Mr. Khatau reported, permitting repair work to be carried out at reasonable cost. The old workshop is now being modernised. The Government was being pressed by the Coastal Conference to co-ordinate rail and coastal shipping by suitable adjustments in rail rates and by arrangements for through bookings. The use of preferential rates on the Indian railway, Mr. Khatau maintained, for export or import cargoes, if supported by national tonnage, would provide an elastic method for securing to Indian shipping its

mate share in the carriage of overseas trade. The Coastal Conference had therefore recently appointed a committee to work out a pooling arrangement under which member Lines would be entitled to carry their respective quotas of the coastal trades. A good quota system, Mr. Khatau maintained, with a suitable provision for deterrent penalties, would remove restrictions on legitimate expansion of tonnage and would also ensure the observance of Conference rates and practices.

Bombay Budget.—From the point of view of commerce and industry, the State budgets which are being submitted to the respective State Legislatures hold much less interest than the Central Budget. This is all the more so in the case of State Budgets for 1955-56, because most of them have tried to maintain the status quo, pending detailed consideration of the report and recommendations of the Taxation Inquiry Commission. Even in a highly industrialised and commercialised State like Bombay, the budget for the coming year has not evoked much interest apart from the fact that no fresh taxation has been proposed. This is possibly so because even on the basis of the present taxation policy, that fortunate State expects to derive a much higher revenue during 1955-56, to the extent of more than 11 percent over the revised estimates for the current year. What is, however, more significant than the budget itself in Bombay is the appendix to the budget speech of the State Finance Minister which provides data regarding the progress made in many directions during the postwar decade. This progress is particularly striking in two important spheres—the growth of literacy and the co-operative movement. There has been a 35 percent increase in literacy standards and over a 100 percent rise in the number of co-operative societies, which now covers more than one-third of the population of the State. Even in other spheres, the record of improvement effected during this memorable decade is significant and as shown in the supplementary note, consists of a 25 percent decrease in the death rate; a 60 percent increase in medical facilities; a 50 percent decline in malaria; an increase in "irrigable area by Government works" by more than 10 lakh acres; a 25 percent increase in normal food production of which at least half is expected to be maintained permanently; over 100 percent increase in cotton production; a 50 percent increase in the paid-up capital of companies; an 89 percent increase in electrical energy sold as well as energy supplied for industrial power purposes; a 116 percent increase in the installed capacity of power generating units; a 90 percent increase in the number of motor vehicles plying in the State and an 80 percent decrease in the loss of man-days in industrial disputes. Even after making an allowance for the stagnation caused in the case of several nation-building activities during the war years and the preceding decade of severe economic depression, the achievement of Bombay in so many diverse fields should prove an incentive to other more lethargic States in the Union.

Bombay Finance Corporation.—Mr. Purshottam Kanji, Chairman, explained certain aspects of the Bombay State Financial Corporation's loan policy before representatives of small and medium industries in Gujarat recently. The main object of the Corporation is to advance loans primarily for the development and expansion or renovation of small and medium industrial concerns in the State. But loans are also given for repayment of debts where such debts are incurred for productive purposes, i.e. to acquire fixed assets within the preceding three or four years. The question of providing working capital is complicated and it was after considerable thought that the Corporation formulated its policy in this respect after consultation with the Reserve Bank of India and with the approval of the Government of Bombay. The Corporation is now in a position to advance loans for working capital either for current requirements, if the loan is required primarily for block capital or primarily for current requirements. If the loan is required for working capital block capital, the element of working capital would be provided up to 25 percent of the total amount of the loan applied for. With regard to loans required primarily for working capital, they are given to (i) industrial concerns which are of high priority from the point of view of industrial development in the State, (ii) an industry which is organised on sound lines and has a promising future but is working below capacity owing to lack of capital; or (iii) a new unit which is unable to get accommodation from commercial banks and requires assistance for a transitional period. The Corporation will be careful to avoid competition with commercial banks which usually advance loans against liquid assets like raw materials and stocks in trade. In no case will loans and advances be in the nature of a cash-credit arrangement. The Corporation will advance loans on the security of fixed assets, though it may include stocks if necessary. The loans from the Corporation will, therefore, be related to the

net value of the fixed assets and would not exceed 50 percent of them. Even when an industrial concern has taken a loan from the Corporation, if it is in a position to obtain supplementary working capital from commercial banks against security of stocks, it is free to do so.

Working of the I.M.F.—The visit to this country of Mr. Ivar Rooth, Managing Director of the International Monetary Fund, has helped to bring the broad objectives of the Fund into bold relief and remove many of the misunderstandings which have grown up about its administration. Mr. Rooth, who is on a goodwill mission, made it amply clear at a press conference in Bombay last week that the International Monetary Fund stood for stability of exchange rates, and orderly changes in these rates if and when they were found imperative. The Fund does not envisage rigid exchange rates which can be considered as permanently frozen. Apart from this, the broad objectives of the institution, as emphasised by its Managing Director, are the promotion of monetary co-operation, facilitating the expansion of trade and encouraging employment levels. Elaborating his idea regarding the stability of exchange rates, Mr. Rooth explained that when a par value became inappropriate because of changes in the economic position of any member country, the Fund encouraged a change to correct the fundamental disequilibrium. In proof of this Mr. Rooth observed that there had been almost a complete absence of friction in the economic relations of members, and that competitive devaluation of currencies had been avoided to a very large extent. The Fund aimed at removing all unnecessary restrictions on current international payments by helping its members in establishing convertibility of their member currencies. According to Mr. Rooth, when a country decides to establish convertibility it has naturally to assure itself of its ability to maintain this convertibility for an appreciable period. As an instance in point, Mr. Rooth indicated the Fund's willingness to make substantial dollar funds available to the United Kingdom as a standby, if and when Britain chose to bring about convertibility of the pound sterling. At the same time, he was candid enough to say that it was not certain whether the Fund would advance all the \$2,000 million that the United Kingdom was believed to be in need of as a condition prior to this move. All that he was able to say was that to all countries including the U.K., which contemplated such a step, the Fund would readily render financial support to meet the initial stress or subsequent unforeseen difficulties. Another point made by Mr. Rooth was that the Fund constitutes a code of international conduct for its members. This code naturally stresses the importance to trade of stable exchange rates, and makes the establishment and modification of exchange rates a matter not of unilateral decision, but of international responsibility. It has, therefore, been provided that the member who wishes to change the par value of its currency by more than the initial 10 percent, must obtain the concurrence of the Fund. Because of this salutary provision, and the effective machinery provided by the Fund, the general payment situation of the member countries has improved during the last two years, with the result that now there is not much demand on it for assistance. Since the I.M.F. began its exchange transactions in 1947, the total drawings have amounted to \$1,100 million, nearly \$700 million of which have been repaid so far. Mr. Rooth also explained the loan scheme of the Fund. Under this interest rates charged on loans vary from time to time and with the amount of loan. When the rates charged to any country reach the level of 5 percent, the Fund asks the member to make gradual repayments. It may be noted that India is paying 34 percent at present on loans taken a few years ago and that it has already repaid a part of these loans. Mr. Rooth also tried to remove a somewhat deep-rooted belief that the U.S.A. exercised a predominating influence in the operations of the institution, and that a large number of senior members of the staff has been recruited from the ranks of American officials as a matter of policy. Opposing this belief, Mr. Rooth said that the Fund was making constant efforts to make its personnel as representative as possible and that while it had largely succeeded in doing this, what had handicapped the administration in this effort was want of suitable candidates from each one of the member countries. While admitting that the Fund did depend largely for its initial recruitment on the U.S.A. Mr. Rooth testified that the Americans on the staff, like the nationals of other countries, looked at the problems before them in an unbiased manner and dealt with them entirely from the international point of view. One must accept this explanation, as Mr. Narayan Prasad, India's Executive Director on the I.M.F. who was present at this press conference, agreed that India was on the whole satisfied with the representation that had been given to this country on the staff of the International Monetary Fund.

STOCK VALUES DECLINE ON
BANK RATE INCREASEPARTIAL RECOVERY IN GILT-EDGED
AND INDUSTRIALS

London, 1st March.

A RECOVERY movement on the stock market here early in the past week was sharply reversed following the unexpectedly steep increase in the bank rate. By Thursday's close, all sections had sustained very substantial losses. Although showing occasional uncertainty, the market started to recover again before the week-end on the view that the economic situation is not critical and the higher bank rate may not be necessary for very long. The uptrend continued after the week-end but slowed down slightly today mainly on end-of-account considerations. Following the bank rate increase, gilt-edged securities were marked down substantially but the subsequent strong recovery eliminated most of the decline. Foreign bonds tended easier, although Japanese improved towards the close of the period following the general election result. The industrial share market followed the lead of gilt-edged and also sustained substantial declines which were however reduced later on new buying. This centred round better class issues and in those which had suffered most following the bank rate change. Gold shares fell back on balance with sentiment unsettled by the weakness of Freddie's Consolidated which slumped on rumours that the southern half of the mine might be closed. Coppers and other base metals declined early but later regained some ground. Oils were among the weakest sections and the later rally left prices considerably lower on balance. Rubbers tended easier and tea shares were marked down with sentiment in the latter affected by the price trend of the commodity.

The money market experienced critical conditions in the past week with the rise in the bank rate as the culminating point. Credit squeeze developed right from the start. Money became dearer and the final turn came on Wednesday when the market was forced to enter the Bank to borrow a large amount. This was thought to be leading up to a further change in the bank rate through forcing bill rates higher. The change, however, was not being expected to come so quickly and Thursday's announcement of one percent increase caused some consternation. The sharp increase meant heavy book losses in respect of the bills bought in past few weeks at 2½ percent with money costing about 3 percent. In these circumstances, the market raised its treasury bill rate by about 1½ percent over last week. The average rate this week was 7½ to 5.32d percent. Treasury bill applications totalled £381,870,000, of which the amount allotted was £260 million. This week £260 million are on offer. The Bank of England return for the week ended 23rd February shows that notes in circulation were about £2 million higher at around £1,658 million, while banks' deposits were about £11 million lower at around £271 million. Rates of final trade bills were raised to 4½ to 4½ percent for three months and to 4½ to 5½ percent for six months' bills.

Activity on Wall Street

In Wall Street, in foreign, German Governments were mixed. A number of municipals developed firmness with gains of five to eight points on very small turnover. Greeks were off more than a point. Italians shaded slightly although Rome 6½ percents of 1952 were higher by 7 points on one side. Serbs 7 percents and Denmarks 4½ percents registered a mild improvement but Norwegians lost ground. Japanese scored both gains and losses of fractions to a point. Chile 3 percents of 1993 equalled 1954-55 high of 40½. Institutional investors backed away from the market reflecting the growing belief that interest rates in the U.S. are on the rise. Top quality corporates were also soft as a result of higher interest rate ideas. Industrial

and utility convertibles as well as the more speculative rail lines moved higher but eventually eased in sympathy with the reaction in the stock market.

Support for Transferable Sterling

The U.K. Exchange Equalisation Account interventions in transferable sterling markets are presumably designed to raise the transferable sterling rate from the recent level of around 2.72 dollars per sterling to somewhere nearer the lower range of the official rate which is \$2.78. This was stated by official sources in London in a comment on Thursday's authorisation to the Exchange Equalisation Account authorities to "use wider discretion" in operating in markets where sterling is traded at a discount. The sources were unwilling to commit themselves as to the exact nature which the Account's intervention in foreign centres of transferable sterling dealings will take. They say, however, on most occasions and certainly in the present circumstances, these interventions will be to support the sterling-dollar rate. The rate at which transferable sterling is being dealt in has been liable to extreme fluctuations. These will be damped down under the new policy and closer relationship maintained with the official market.

S. African Duty on Textile Imports

News about tariff changes in South Africa is coming through in dribbles. Information was received at Manchester that some of the suspended duties have been increased by 5 percent to a total of 20 percent. The practical effect of the decision on British cloth is that certain specifications will now pay 5 percent ad valorem basic duty plus 20 percent suspended duty bringing the total to 25 percent as against 20 percent previously. These cloths made wholly of cotton, or more than 50 percent cotton in the case of mixtures with rayon, are calico drill, twill and sateen within the prescribed definition, the f.o.b. price of which does not exceed 2s a yard of 30 inches width. A similar increase has been applied to comparable cloths imported into South Africa from other countries. The position now is as follows: cloth up to 2s a yard British 25 percent, most favoured nation countries' 30 percent and others' (India and Japan) 55 percent. For cloths over 2s a yard the rates of duty are 30 percent, 30 percent and 50 percent respectively. Applications for increased tariff protection were made by the domestic industry and a leading Manchester exporter said the effect of the decisions announced so far "would not be too bad."

Increase in U.K. Freight Rates

An increase of about 10 percent in freight rates from the U.K. loading ports to Port Said and Suez is announced by the Port Said Outward Freight Committee in London. The increased rates which will be effective on shipments commencing to load on or after 1st April are due, the Committee said, to increased operating costs.

India's Cloth Exports

New Delhi's decision to re-classify the export varieties of cotton textiles so as to make a wider range of the goods exported liable to pay export levy at a higher rate has been received by textile exporters with dissatisfaction. India's traditional customers continue to look towards this country for their cloth supplies. Moderate business is reported with Singapore in varieties like cheaper poplins, bleached long cloths, grey sheetings, calendered in 36" and 42" widths and dyed 35" poplins. Burma is in the market for cheaper bleached long cloths, mulls, grey and dyed drills and coatings, and some business has been booked last week. Although Hong Kong inquired for the usual varieties Indian shippers could not accept its low-paid offers. Ceylon's business has been considerably smaller and that too only for the "needed" styles. With the issue of new import licences by Indonesia inquiries have begun to flow from there and some business is reported in calendered 36" grey sheetings, and bleached ones of the same size width. Australia appears to be booking out for fair quantities of grey sheetings in wider widths, desouth, furnishing fabrics and bleached long cloth. Some business has actually resulted and further business is expected soon from that area.

Limited business is reported for West Africa in grey bafts, and coatings. British importers continue to inquire for medium greys as usual, but due to the price-factor only limited business has been possible these two weeks. With the growing opposition in Britain to the import of Indian textiles, it will not be surprising if British interests expect a remission of import duty on their printed cloth imported into India in return for the "duty-free" imports of Indian grey cloth, indications in New Delhi are that such a remission will not be forthcoming under the present set up. It is never forgotten that Indian grey cloth serves as the principal raw material or end-product for Britain's printed cloth industry, which is having an extensive export market.

India has not been able to sell much cloth to Iraq in recent weeks as trading conditions there are still unsatisfactory. But other Persian Gulf markets have purchased small quantities of mulls, printed voiles and cheaper grey sheetings. Saudi Arabia has been entirely quiet these couple of months, but there are, however, indications of a revival of demand for grey sheetings, bleached long cloth and black permatto. Sudan has been silent and this is attributed to the lack of movement of Sudan's produce to export markets. Aden reports indicate that prices of Saxon sheetings there have declined further to about Rs. 19 or Rs. 19.2. Prices of other varieties too have declined there.

With the introduction of the Finance Bill, 1955, in Parliament on 28th February 1955, the following commodities produced in India become subject to a Central Excise Duty of 10 percent ad valorem with effect from 1st March, 1955:—

- (1) Woollen fabrics
- (2) Sewing machines
- (3) Electric fans
- (4) Electric lighting bulbs and fluorescent lighting tubes
- (5) Electric storage batteries
- (6) Electric dry batteries
- (7) Paper (excluding newsprint) pasteboard, millboard, cardboard and strawboard
- (8) Paints and varnishes.

Stocks of the foregoing commodities in existence at midnight of 28th February-1st March, 1955 at the manufacturing premises, or in any premises appurtenant thereto, are also liable to the new duties. Manufacturers of these commodities are advised to contact the Control Excise officers of their jurisdiction immediately for full particulars of the tariff and of the procedure which has been prescribed for the administration of the new duties. These officers have been instructed to render every possible assistance to manufacturers in this connection and manufacturers are requested to extend full co-operation to the officers.

NOTES ON IMPORTANT CLAUSES
IN THE FINANCE BILL

Clause 2 prescribes the rates of income-tax and super-tax and sur-charges thereon for the financial year 1955-56. The deduction in respect of earned income is being restricted to income up to Rs. 25,000 with marginal relief up to income of Rs. 45,000.

Sub-clause (2) of clause 3 amends the definition of dividend and seeks to check evasion of super-tax by shareholders of private limited companies by drawing profits as loans instead of as dividends and to remove the time limit of six years for taxing as dividends distributions made on the liquidation of companies. It also provides that dividends declared by a company in respect of which cash payment is postponed to a later date, will be treated as cash dividends on the date of declaration.

Sub-clause (3) redrafts the definition of income by including some new items.

Sub-clause (4) defines manager and managing agent in relation to a company in order to remove any doubts about the scope of clause 8 of the Bill.

Sub-clause (a) of clause 4 implements the decision of the Government already announced to relax with effect from the 30th September, 1954 certain conditions relating to exemption of foreign profits brought into India. The concession is now proposed to be continued for an indefinite period.

Sub-clause (b) amends section 4 (3) of the Income-tax Act, and

(i) empowers the Central Board of Revenue to grant exemption to charitable trusts created after the 1st April, 1952, whose funds are applied outside India for international welfare;

(ii) limits the existing exemption in respect of allowances paid for expenditure necessarily incurred for the performance of duties, that is to say, it will be given only to allowances which are

not chargeable under section 7 as perquisites and will be restricted to the actual expenses incurred by the employee.

Sub-clause (3) provides exemption for a limited period to foreign technicians employed in private enterprises in India.

Sub-clause (4) exempts from tax the yield of certain Government securities and Post Office Certificates and implements the decision of the Government already announced at the time of issue of the Certificates. For the sake of convenience, the exemption granted to interest on Post Office Saving Bank deposits and Post Office Cash Certificates by Notification under section 60 of the Act is incorporated in the body of the Act.

Clause 5 amends section 7 of the Income-tax Act relating to assessment of "Salaries".

Sub-clause (2) provides for the deduction of expenses on books, magazines and other periodicals necessary for the performance of the duties of an assessee subject to a maximum of Rs. 500 a year.

Sub-clause (3) makes it clear that "perquisites" or benefits in kind received by an employee from his employer, such as free meals, free domestic services and such other supplies and facilities, are also taxable. To remove hardship in smaller cases, it is provided that the value of such benefits in kind will not be taken into account unless the emoluments received in cash by an employee exceeds Rs. 18,000.

Sub-clause (3) provides for taxation of compensation received by an employee at or in connection with the termination of his employment.

Clause 8 amends section 10 of the Income-tax Act relating to the assessment of Income, profits and gains of business, profession or vocation.

Sub-clause (1) (i) and (iii) amends sub-section (2) of that section relating to allowances and as a further incentive to the development of industrial enterprise in the country provides for a deduction (called "Development Rebate") in respect of new plant and machinery installed in a business after 31st March, 1954, whether the business itself is old or new. This "development rebate" is similar to the "Investment allowance" given in the United Kingdom, and is in lieu of the initial depreciation otherwise available under section 10 (2) (vi) in respect of new plant and machinery. The development rebate materially differs from initial depreciation allowance in that (i) the allowance is to be made at a higher rate, i.e. 25 percent instead of at 20 percent, (ii) the allowance will not be taken into account in computing the normal and double depreciation allowances which will continue to be available for the new assets in addition to the development rebate, (iii) the development rebate will not also be taken into account for computing the maximum amount of allowances admissible or the balancing charge under section 10 (2). The rebate is admissible only in case of businesses and not in other cases to which initial depreciation allowances will continue to be available.

Sub-clause (4) provides for taxation of compensation received on the termination or variation of the agreements relating thereto, of managing agencies, commission agencies or other similar agency agreements. To remove the hardship by taxing the lump sum receipts as the income of one year, it is provided that the compensation monies will be charged to tax at the average of the rates of tax of the three preceding years of assessment.

Clause 9 amends section 12 of the Income-tax Act. Clause 11 enlarges the limits for relief in respect of life insurance premia payments under section 15 of the Income-tax Act. Clause 14 increases the rate of interest payable by Government under section 18A of the Income-tax Act on excess payments of advance tax from two percent to four percent. Clause 15 substitutes a new section for section 23A of the Income-tax Act dealing with the compulsory distribution of dividends in the case of private companies. The amendment is intended to tighten up the provisions for preventing avoidance of super-tax by shareholders of private companies resulting from insufficient distribution or non-distribution of dividends, in proper time. It is further provided that the companies falling under that section shall pay super-tax on the undistributed income, subject to certain adjustments, at a flat rate of four annas per rupee. This super-tax is payable, apart from the income-tax and super-tax payable by the company on its total income in the ordinary course, and the shareholders will not get any credit for it in their assessments. In order to provide for extenuating cases, certain further deductions are permitted in determining the distributable income, while excess dividends distributed in the three preceding years are allowed to be carried forward. The new provisions also require the Income-tax Officer to give an opportunity to the company to make good the deficiency in distribution of dividends in cases where there is a difference in the computation of total income by the assessee and the officer owing to honest difference of opinion.

Clause 16 amends section 24 of the Income-tax Act and removes the time limit of six years for carrying forward losses sustained in business, profession or vocation. It also provides that business losses (other than speculation losses) carried forward, will be allowed to be set off against the profits of the same or any other business, profession or vocation carried on by the same assessee in future years.

Clause 17 adds certain new industries to the list specified in section 56A of the Income-tax Act, the dividends from which are exempt from super-tax in the hands of the shareholder company.

Clause 19 amends rule 9 in the Schedule to the Income-tax Act and provides for the computation of profits of insurance business carried on by a co-operative society.

Clause 20 prescribes the date of commencement of the various amendments to the Income-tax Act proposed in this Bill. It also makes clear that the provisions of section 23A of the Income-tax Act as it stands now will continue to apply in respect of profits and gains of companies assessable to tax in the assessment year 1954-55 and earlier years, and the corresponding assessments of the shareholders.

Clause 21 seeks to increase the duties on some goods specified in the Second Schedule. The duty on certain Items, such as tanned or dressed skins [Item No. 36 (2)], leather manufactures like saddlery, harness, trunks and bags [Item No. 37], dressed fur skins [Item No. 38] is being enhanced. An import duty of 3½ percent, is being imposed on second-hand or used gunny-bags or cloth made of jute [Item No. 50 (1)] and cotton ropes [Item No. 50 (4)]. Alternative specific duties are being imposed on porcelain or earthenware tiles [Item No. 59(5)] and zip fasteners. [Item No. 71(13)], so that low-priced imports may not excessively affect indigenous manufactures. A duty equal to the excise duty is being added to the customs duty in respect of some articles on which excise duties are now being imposed. In the Export Schedule rates of duty dependent upon prevailing prices are being substituted for tea in lieu of the existing flat rate on all grades of tea. Cloth is also being re-defined as in the Central Excise and Salt Act, 1944.

Clause 22 continues for another year the existing surcharges on Customs duties.

Sub-clause (i) proposes certain reductions in the excise duty on matches produced in the medium-sized and cottage factories. Sub-clause (ii) proposes an increase of the excise duty on sugar from Rs. 3-12 per cwt. to Rs. 5-10 per cwt. Sub-clause (iii) proposes certain changes in the excise duty on certain categories of cigarettes. Sub-clause (iv) redefines cotton cloth on a more scientific basis, and also proposes alterations in the excise duty on such cloth.

Sub-clause (v) redefines rayon and artificial silk fabrics consequent upon the levy of an excise duty on woollen fabrics.

Sub-clause (vi) proposes the levy of an excise duty on woollen fabrics.

Sub-clause (vii) redefines soap in a simpler manner and at the same time removes an exemption in the case of large-scale factories.

Sub-clause (viii) proposes the levy of an excise duty on certain new items.

Clause 26.—This clause provides for the collection of excise duty on existing stock of the new excisable commodities lying in certain premises.

Clause 27.—This clause proposes a surcharge of 5 percent of the excise duty on motor spirit.

Clause 28.—This clause amends the definition of cloth in Act 12 of 1953 so as to provide for the levy of a cess of three pices per yard on woollen fabrics also.

THE CALCUTTA MONEY MARKET

HEAVY BORROWING BY SUGAR
INDUSTRY

Wednesday, 2nd March.

THE Calcutta money market has been more or less at a standstill in the last few days while the 1955-56 Budget was being digested. In the interbank market the call rate is unchanged at 3 percent. There has been only small business in export bills and remittance. Demand for funds in upcountry centres is however still increasing and the sugar mills are very heavy borrowers. Money is in general tight.

New sterling bill buying rates have been introduced following last Thursday's rise in the Bank of England rate. T.T. now quotes 1s 6 1/32d O.D. is 6 1/16d. 30 days' sight bills 1s 6 5/32d and 90 days' sight bills 1s 6 9/32d. The rise in bank rate has strengthened sterling against the dollar in the spot position but sterling is still weak forward. The local U.S. dollar rate is Rs. 486½.

Bullion was firm on good offtake. Silver increased from the previous week's level of Rs. 163.2 to Rs. 165.8, quoted to-day. The ready price was 4 annas higher. The price was, however, unchanged at 74d. in London and at 85½ cents in New York.

Gold rose from Rs. 93.2 to Rs. 94.6. The sovereign at Rs. 59-10 showed little variation.

Rises of Rs. 83 lakhs and Rs. 37 lakhs in notes in circulation and the total note issue to Rs. 1241.99 crores and Rs. 1254.56 crores, respectively, were notable features of the return of the Reserve Bank of India for the week ended 25th February, 1955. Notes held in the Banking Department consequently fell by Rs. 47 lakhs to Rs. 12.57 crores. Deposits of the Government of India and other Government accounts rose by Rs. 13 lakhs and Rs. 8.56 crores to stand at Rs. 51.87 crores and Rs. 22.68 crores, respectively. Balances of commercial banks at Rs. 48.36 crores showed a fall of Rs. 2.72 crores due to good demand for funds. Balances held abroad declined by Rs. 3.09 crores to Rs. 65.50 crores as did investments by Rs. 1.26 crores to Rs. 66.99 crores. Other loans and advances increased from Rs. 20.47 crores to Rs. 24.19 crores, of which advances to

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

scheduled banks against usance bills totalled Rs. 6.44 crores (Rs. 4.97 crores). Such advances aggregated Rs. 9.34 crores since 1st January, 1955.

Tenders for Rs. 1 crore of three month Government of India treasury bills, which were opened on 1st March 1955, totalled Rs. 2,76,50,000. The average rate of acceptance was lower at Rs. 2-7-8 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent were allotted approximately 53 percent. Tenders for another Rs. 1 crore of treasury bills will be received at all the usual centres up to the close of business on Monday, 7th March 1955. During the week ended 25th February 1955, Government of India treasury bills for Rs. 6,26,75,000 were sold in favour of the Reserve Bank of India.

The Statement of the position of Scheduled Banks for the week ended 18th February, 1955, discloses Demand and Time liabilities at Rs. 590.91 crores (Rs. 10.17 crores on account of borrowings from Banks) and Rs. 371.37 crores (Rs. 2.35 crores) compared with Rs. 580.91 crores (Rs. 9.77 crores) and Rs. 370.95 crores (Rs. 2.50 crores) respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 6 lakhs and Rs. 1.62 crores to aggregate Rs. 32.06 crores and Rs. 49.21 crores, respectively. There is a drop of Rs. 91 lakhs in investments to Rs. 354.33 crores. Advances and bills discounted at Rs. 582.27 crores reveal a rise of Rs. 7.11 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.4 percent and 60.1 percent against 8.4 percent and 60.5 percent.

The return of the Imperial Bank of India for the week ended 18th February, 1955, shows a rise of Rs. 3.14 crores in total deposits to Rs. 232.48 crores. Investments in Government Securities are down by Rs. 1.04 crores to Rs. 100.41 crores, while other authorised investments are up by Rs. 17 lakhs to Rs. 11.67 crores. Loans, cash credits and overdrafts have decreased by Rs. 3.71 crores to aggregate Rs. 101.51 crores, while bills discounted and purchased have increased by Rs. 6.36 crores to stand at Rs. 14.02 crores. Cash and balances are, in consequence, shown at Rs. 21.40 crores or Rs. 2.20 crores less.

it's a **BIG** job... flying for oil

Have you ever seen a Whirlybird? Or a Helicopter, to give it its proper name? At the Assam Oil Company's helicopter base in Digboi an Indian pilot and his mechanics specialize in this new branch of aeronautics.

In the rough jungle country where the Assam Oil Company is engaged in the never-ending search for new sources of oil, helicopters are invaluable. They can land straightaway in places where it would take months to prepare airstrips for conventional aircraft. They can even come down on water or swamp, when fitted with rubber floats.

What are they used for? For fetching and carrying, mostly. Much valuable and expensive equipment is used by the oil prospectors. Helicopters move this equipment quickly and safely, wherever and whenever it is wanted.

Helicopters are expensive "vehicles" of course. In fact the Assam Oil Company spends crores of rupees just in looking for oil. And the company intends to spend more—so that India's vital flow of oil may be supplied to an ever-increasing extent from India's own resources.

THE annual general meeting of the Bengal Chamber of Commerce and Industry always falls in the last days of February and thus has the disadvantage, from the weekly columnist's point of view, of being rapidly overtaken by the annual budget earthquake. This year, in particular, last Friday seems a very long while ago, so great has been the intervening shock of Mr. Deshmukh's income-tax proposals. It is like trying to remember the hopeful song of a lark when a bull has just bellowed in your ear. There is the added irony that the outgoing Chairman of the Chamber, Mr. G. Mackinlay, emphasised the new attitude of business men to the ambitions of the welfare State. In Mr. Deshmukh's budget, they have got small reward; co-operative or not, they have to pay a quite unfair part of its costs from their own pocket. However, Mr. Mackinlay's words of course remain true. The servants and directors of free enterprise are not the enemies of welfare they are imagined to be. On the contrary, it is their exertions, their abilities, their talents (not to mention their taxes) which alone can put a tangible meaning into welfare by increasing the supply of goods and the opportunities for employment. It is to these objectives that the industries grouped in the Bengal Chamber are dedicated and it is with the infinite intricacies and discouragements of that task that the Chamber Committee has to deal. It will have the support and the good wishes of the mercantile community in continuing that work under its new and experienced Chairman, Mr. G. A. S. Sim.

The special budget sessions of the Indian stock exchanges on Monday evening were little more than a farce. For an hour and a half people bought and sold shares with only the foggiest conception of what the budget contained and no conception at all of what its provisions would entail for investment and industry. The scraps of information that had reached this centre by seven o'clock on Monday night (by which time many lakhs of shares had changed hands at various prices) were exiguous and misleading. Worse, they were mixed up with a number of simply false reports, which may have arisen from the error of taking all the Taxation Commission's recommendations as part of the Finance Bill; or they may have arisen otherwise. Altogether, it was not an edifying spectacle and did little credit to the stock exchanges, which are supposed to be rationally conducted markets for the sale and purchase of debts and equity. I know that the special budget session is an old institution in India, but other advanced investment centres manage without it and in fact most Governments arrange matters so that shares will not be sold until the effects of the budget have been thought over and slept on. Of course the gamblers will always have a punt on the contents of the budget, and if any man is clever enough to realise before his neighbour what its consequences will be, then I am content to see him take the reward for his cleverness. But if some people want on the last day of February to make a book on the budget just when the Finance Minister is going to the starting barrier, if they want to lay the odds while garbled bits of proposals are coming through, then they might find some more suitable place for it than the respectable precincts of the investment market. I shall be told that the importance of the budget session is demonstrated by the volume of business transacted during those hours. In fact, this is the strongest argument against it, for most of those transactions take place in an atmosphere of frantic ignorance.

Here I am back on the budget again. My excuse is that I have not heard anything else discussed.

A DITCHER'S DIARY

for the last three days. I looked up the full report of the Taxation Enquiry Commission for the arguments that led it to recommend taxation of perquisites, because I wanted to see whether the economists on the Commission were under the delusion that the revenue authorities were going to get much extra revenue out of this proposal. I find it frankly admitted (in Volume Two, page 45) that the additional revenue involved is small and that the effort to collect it will run the risk of entailing "harassing enquiries". But the Commission comes to its decision "on considerations of equity". It evidently could not endorse the views of those witnesses who urged before it "that perquisites assist in attracting personnel to out-of-the-way places; the additional revenue involved is inconsiderable; and taxation of perquisites will only result in harassing enquiries into the personal affairs of employees without any substantial benefit of revenue". Only the question of harassment aroused any interest among the commissioners, and it was in order to minimise it that they decided that perquisites should only be taxed in the hands of people who are already drawing fairly high salaries. Even for those who will now have to pay tax on their benefits and allowances, the Commission "further recommends that the Central Board of Revenue should issue executive instructions to ensure that no attempt is made to evaluate or tax petty items". This pious wish does not seem to have been heeded, for the Finance Bill itself starts right off by talking earnestly about "free meals"; it would be hard to find anything pettier. The commissioners give no hint of what they would regard as a perquisite except to ask the Government to screw up the provisions of the Income Tax Act to make sure that assesses do not evade the law by claiming expenses "wholly and necessarily incurred in the performance of the duties of office". Considerations of equity seem ill assorted with vague and penny-pinching measures of this sort, measures which will of course only bear on those who are already paying their full tax, and paying heavily.

Business men's conventions are commonly thought to be one of the funnier aspects of the modern way of life, and I suppose when the hotel and transport interests play too prominent a part in promoting them, and when the main purpose of "getting together" is mutual congratulation, they can become silly and ostentatious. A convention of undertakers complete with multi-coloured buttonholes and lady entertainers is an obvious subject for mirth. But not all conventions are like that, even in the United States. Here in India, where several progressive firms have seen the value of bringing together their dealers and distributors from all over the country, the idea has a great future. The immense gap between the manufacturer and the consumer in a vast and mostly illiterate country is notorious, and the gap between manufacturer and retailer is sometimes as big. Booking a block of rooms in a Calcutta hotel and maybe paying fares from stations all over India is an expensive but often inevitable necessity if the maker is to meet the men who sell his products. Such functions are not domestic jamborees because most dealers and distributors are independent small business men whose contact with the firms whose goods they sell is otherwise remote; it becomes a genuine convention of people with similar interests. Chloride and Exide, the battery manufacturers, have just held one such meeting in Calcutta and Philips Electrical held one some months ago. When it includes, as is customary, a visit by the dealers to the factory where they see how

their wares are made, the results can be instructive and the exchange of information is many-sided. Anyone who dismisses these shows as stunts has not understood the trend to a distributive economy that is now happily under way in India.

Eight hundred words spoken in defence of the managing agency system by India's Finance Minister would, I thought, have been news at this particular moment. The Calcutta daily press thought otherwise, for none of the three newspapers in this citadel of the agency system bothered to report Mr. Deshmukh's reply last Friday to criticism of "exorbitant agency house profits". To give them their due, they had perhaps not bothered either to report the original attacks in Parliament, so presumably it is not only defence of managing agency that is ignored, but any mention whatsoever of this steel frame of the Indian economy. Mr. Deshmukh is reputed, on what authority I know not, to have become one of the leading depreciators of managing agency, but he appeared in a very different rôle last Friday. Answering the member for Calcutta North-East, he exposed the old and ever-recurrent error of relating profits simply to the original share capital, rather than to capital at work in the business, including ploughed back profits from earlier years. He went further and said that in any case the share capital of an agency house bore no relation to the services it rendered to the managed companies. "I feel", he declared, "that it is fallacious to think that the earnings from managed companies should have some relation to the share capital of the agency company. It is quite conceivable and happens quite often that an agency company with a very small nominal capital might be managing more than one company, and may draw earnings from them many times its own share capital. The essential point is that these earnings represent the remuneration due to the managing agent for personal services, that is to say for management of companies, rather than on the capital employed in the agency company itself". He dealt similarly with an allegation that companies managed by agency houses were also making exorbitant profits and pointed out that "investments by British managing agency companies in the companies they manage are, except for one or two exceptions, not so heavy as the Member is inclined to think". At two places in his speech Mr. Deshmukh knocked on the head the familiar attempt to single out British agencies for attack, thus converting an economic issue into a nationalist one. Indian and British companies are in the same boat—and after Friday's speech it is hard to believe that Mr. Deshmukh wants to sink it.

Since guessing games seem to be forever popular except when they are difficult, I shall this week set a very easy one. The subject of the following accurate and anonymous description was lately in this city: "The sheer quality of his facial structure, a fine head, despite his deficiency of chin, gave him something which, allied to impeccable taste in clothes, made him look too good to be true. He is, today, no longer quite so well dressed. He sometimes looks almost careless. It is as though he had realised that men do not take to other men who look too good to be true. But he is still conscious of his good looks, which is why he prefers to screw up his long lashes in order to bring people into focus rather than destroy the line by wearing spectacles. And so everything about him has always been distinguished—save his speeches. Only his hats have passed into the language".

CHAIRMAN REPORTS LESS SATISFACTORY WORKING RESULTS

Tonnage Programme

I wish to take this opportunity of referring to the question of pricing of the ships built by Messrs Hindustan Shipyard Ltd. for Indian shipowners. So far, the price charged to Indian shipowners for ships built at Vizag has been based on the U.K. parity price. However, the U.K. parity price, at present, is higher than the price ruling on the Continent and elsewhere for comparable ships. In my view, there

of Indian shipping in the Overseas trades by starting the services to U.S.A. in 1947 and to U.K. and the Continent in 1948. We have been the pioneers in establishing a regular line on the international route between India and the United Kingdom. As you will doubtless recall, this was the first service operated by the Company with our first steamers "s.s." "Loyalty" and later resumed by our T.S.S. "Jalajawahar" and T.S.S. "Jalajawahar". The carriage of passengers in first class comforts has been our practice not only to the destinations but, nearer home, to Burma and the East. India as also along the West Coast of this sub-Continent, to Rangoon to Cochin. We are also carrying a large number of passengers between India and East Africa and India and Malaya as Managing Agents of the Eastern Shipping Corporation, Ltd. In the sphere of insurance and marine shipping, it was at our instance that in 1952 there was established in India the Hull Insurance Market to which the Government have since diversified all hull insurance in India. Shipping. Finally, we have now a programme of reaching the East, about 2,15,000 G. R. T. by 1956/57. These vessels

Another matter which had engaged the Federation was the movement to standardise Indian weights and measures. The Federation had given its comments to the Central Government on the possibility of introducing the metric system into India, but, said Mr. Dyer, "we have been profoundly disturbed by the steps being taken by the Bombay Government to insist upon the use of the Imperial Gallon as a measure unilaterally in that State. Members should be aware that all over India, and much inconvenience would be caused if one State was to insist on all sales being made in Imperial measure."

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

DOUBTS ABOUT CONTINUING PROSPERITY

CONSIDERABLE technical advances have been announced during the past few weeks, notably in plastics and chemicals, but, by reason that the whole industrial situation has become overclouded by developments in the financial and economic field, little attention has been paid to them so far. As a result of the change of mood the assertions heard so confidently also yesterday, that Britain had entered on a period of unlimited prosperity have given place to a questioning whether her people are not living beyond their means. There is no doubt that they are, as the term goes, outrunning the constable, and that they have been doing so for some time past, despite the comforting appearance of the national revenue returns. But such a state of affairs did not seem to matter very much all the time there was the prospect of a continuously expansive industrial and trading future, upon which one would be able to draw, repay all indebtedness and have a handsome margin to spare.

It has been pointed out here on previous occasions how the hire purchase system in Britain, emulating in some degree the American example, has grown, and how all the promises of repayments have been based on the assumption of full employment being maintained and of there being no decreases in wage rates. The feeling that this is almost divinely ordained is now not quite so assured. There is, on the contrary, a belief that the home market for goods, with its record high retail sales for December, must slow down within the next few months. The belief springs partly from the increasing evidence that foreign competition is now a reality and that the long spell of immunity has definitely ended. It follows that if this challenge is to be truly met, then British workers' wages, if they are not to recede, must be related to productivity per worker; that, in fact, an issue long toyed with, can no longer be evaded. But if this is discerned by the economic student, it is still far from being realised by the average trade unionist. Evidence of this is to be found in the labour troubles which have arisen where the number of workers has had to be reduced owing to a shortage of orders. Demonstrations and threats of strikes have occurred on the part of the workers retained, with the object of compelling employers not to stand off redundant labour, even for possibly a short period. There has been no offer by
