Manufactured Goods: There has been very little activity in the goods market this week, overseas buyers remaining almost completely out, except for some forward business extending up to March next year, in the hessian section. All transactions, however, have been on the small side and have done little to support prices. At the opening last week the heavy goods markets were unchanged, and B. Twills were quoted at Rs. 111-12 for August shipment and Rs. 105-8 for October-December shipment. The hessian section was steadier on the strength of some small enquiries, and rates in all sections rose 4 annas, and ready 40" 10 oz. was quoted at Rs. 42 a 100 yards, and October-December shipment at Rs. 41-4. In the absence of any further business speculators took control, and heavy covering in the near position caused a rise of Rs. 1-8 a 100 yards during the day. Other deliveries reacted in sympathy and by Friday morning prices were increased all round. The general lack of interest on the part of both buyers and sellers caused dull conditions to return and even speculators paused in their activities with the result that on Saturday morning the heavy goods market was unchanged with B. Twills ruling at Rs. 113-4 and Rs. 106 a 100 bags for the near and forward positions respectively. A

Raw Jute: Fairly steady conditions have ruled in the raw jute markets over the past week, and although the quantities purchased were again on the small side, it was enough to give sellers reserved ideas. Calcutta mills supported the market by almost daily indications for delivery up to the end of September, but their prices were usually below the quoted rates. They showed no interest in forward shipment jute, except for very small quantities, as the majority of mills still hold very bearish ideas regarding the October-December position. Sellers have been inclined to be reserved for all deliveries, and in many cases are bullish regarding the price of jute towards the end of the year, as they anticipate that events will follow a similar pattern to last year. The present goods market gives the mills little incentive to sell their production, and consequently with the lack of business in the gunny section they have restricted their purchases to essentials. It is reported that the stock position in some mills is very low due to shipments from Pakistan, and in some cases from India, not arriving on schedule, and this is borne out by the fact that towards the close a fair amount of jute was purchased from the Cossipore markets for immediate delivery and delivery before the end of the month. Buyers have naturally had to pay high prices for this jute, but have had no option if they wanted to keep their mills running. In spite of this business raw jute prices ruled easier towards the close, which is perhaps surprising in the light of events from Pakistan.

At the beginning of the week quotations for Upper Assam Bottoms were on the basis of Rs. 27-8 a maund, for August-September shipment, and this rate ruled unchanged throughout the period until Tuesday when all rates dropped 8 annas a maund. An easier sentiment prevailed towards the close on reports of increased imports into uncountry agencies and the local Cossipore markets.

Business done during the week was, in the main, confined to the near positions, and mills paid Rs. 29 for Indian Northern jute Ex-Cossipore

At the close the market is easier in the absence of business and opening quotations on Wednesday morning were as follows:—

	Ready	Sept.	Oct.-Dec.	Jan.-March
Ry.	Ry.	Ry.	Ry.	Ry.
40" 8 oz.	34	34	33	32
40" 10 oz.	41-2	41	40-6	39-8
B. Twills	110-4	107	103	100-8
Heavy Cees (Plain)	110	109-8	104	101
A. Twills	135-8	134-8	131	124
Liverpools	124-8	123-8	119	115

HERE'S Low-cost,
Luxury Motoring
FOR YOU

Rs. 9845/-
EX-PLANT

In appearance, performance and accommodation, the Hindustan Landmaster is truly a luxury car. Spacious and tastefully upholstered and provided with Latex-foam cushioning, it seats five, and sometimes six, persons in ideal comfort. And yet, the Landmaster is amazingly economical to own and maintain: it is low in initial cost and low on fuel consumption. In fact, when you choose the Landmaster, you get big-car luxury for small-car cost.

for immediate delivery and delivery before the end of the month. Forward shipment Dhubri-Northern was done at Rs. 28-8 for Middles only and at Rs. 25-8 a maund basis Bottoms for August-September shipment. Upper Assam jute was done at Rs. 27 a maund for August-15th September shipment, and Western jute at 8 annas less for the same delivery. Murshidabad White and Tossa was bought at Rs. 27-8 and Rs. 28 a maund respectively for September shipment. In the Daissee Section Ordinary Daissee was done at Rs. 27-8 to Rs. 29 a maund for October-November shipment, whilst Daissee White fetched Rs. 27-8 to Rs. 28-8 a maund basis Bottoms for August-September shipment.

Business in Pakistan jute was on a small scale, and mills paid Rs. 28 to Rs. 28-8 for Jat jute for August-September shipment and 8 annas less for Northern jute for the same shipment. In Cuttings the only business reported is at Rs. 97-8 a bale for September-October shipment.

At the close the market is again easier on account of the increased imports upcountry, and in sympathy with the goods market. Opening quotations on Wednesday morning were as follows:—

Indian Jute:	Landed at Mills Rs. a maund.	Shipment.
Lower Assam	27	Aug.-Sept.
Upper Assam	26-8	"
Northern	27	"
Murshidabad White	26	Sept.-Oct.
Daissee-Ex Sheoraphuli	26-8	Sept.-Oct.-Nov.
Daissee Mesta	27-8	"
Daissee White	28-8	"
Bimbi	25 for F.A.Q.	"

Tossa is quoted at Re. 1 a maund above the rates for White jute.

Pakistani Jute.	Rs. a maund basis Bottoms.	Shipment.
Jat	27	Aug.-Sept.
District	27	"
Northern	26-8	"

Activity in the local Cossipore markets has

been on the increase over the past few days and an average of about 75 wagons have been arriving each day mainly from Western and Northern areas. High prices are being asked for this jute as there are ready buyers for all arrivals, and in many cases wagons are being diverted to mill sidings. Reports indicate that the jute contains heavy moisture but the quality is good. Latest quotations for Kishanganj jute, which is the price barometer for this market, are Rs. 27-8 to Rs. 28 a maund for garsat quality.

The Daissee growing districts this week have again experienced favourable weather conditions, but the heavy rains have given sellers little opportunity to dry out the white crop. Heavy business is still being done over the jetty and as mills who purchase jute in this manner are accepting supplies containing large quantities of moisture, and paying higher prices than they would normally pay under contract, operators are being encouraged in this practice and are making no attempt to deliver jute in a storable condition. Consequently the market is very steady and quotations are on the basis of Rs. 29 to Rs. 30 a maund for garsat quality.

Mofussil: Upcountry markets in India are in full swing following the lay off on account of the floods. Heavy imports are reported from all receiving centres, and prices have eased. Sellers are keen for business as there is ample jute at the present moment to meet all demands. Initial reports indicate that the jute is not as wet as expected, and that a large percentage of the arrivals is very immature. Latest quotations in Dhubri are based on Rs. 24-8 a maund basis Bottoms. While the flood situation in Pakistan has improved considerably over the past week, work is still hampered and most of the godowns are under water. Assorting is being done on bamboo machans above the water level, but activity is very restricted under these conditions. Imports into all receiving

centres are increasing, and in Narayanganj arrivals are about 40,000 maunds a day, of which 75 percent is loose jute. Quality and condition of the jute is reported to be satisfactory for the time of the year, and there are ready buyers for all the jute available. Quotations are based on Jat Bottoms at Rs. 23 a maund, and X.Bottoms at Rs. 17-8 a maund.

INCREASING THE FIBRE YIELD OF THE JUTE PLANT

A NEGLECTED RESEARCH PROBLEM

THE letter from Mr. C. R. Nodder on the subject of increasing the fibre yield of the jute plant, published in the I.C.J.C.'s *Jute Bulletin* for April, appears to have aroused considerable interest in a subject which has been too long neglected. So far however, there has been no response from those who are in a position to influence research policies. It is not the purpose of this article to reiterate the advantages accruing from the production of varieties which would yield a higher percentage of fibre from each plant but it may be of interest to recall some of the references to this subject which have appeared in this paper. The earliest mention was made in the 1930's but it is not necessary to go back so far and quotations can be limited to more recent years. In May, 1949, an announcement was made from Dacca that the Government Experimental Farm there had grown a "giant plant" 20 feet high, but no reference was made to any increase in the fibre yield. Commenting on this in the issue of 26th May, 1949, *Capital* stated: "Above all, efforts should be made to develop varieties which give a higher percentage of fibre per plant. This is far more important than the development of huge plants in which the fibre yield would remain at five or six percent."

Again, in the issue of *Capital* of 12th February, 1953, was the comment: "One of the criticisms directed against the Research Institute at Dacca pre-Partition was that, while they had produced varieties which gave a higher yield of green plant, nothing had been achieved in the way of producing plants which give a greater yield of fibre per plant. Any increase in the size of the plants, though it will result in an increase of fibre per acre, also results in a heavy increase in waste material. The main object of research should, therefore, be to increase the fibre yield of the plant."

Improvement of Varieties

Later in the same year—26th November—while discussing the report of the Expert Committee appointed by the Government of India, *Capital* said: "From the summary available it would appear that the Committee has not said anything about research for the improvement of varieties. We have always maintained that the research which has been carried out has not been directed towards the proper object. It has always been directed towards the production of a greater weight of green plant per acre. Now the average yield of fibre in the jute plant is only about six percent of the green weight. We have always advocated that plant research should be directed mainly towards increasing that percentage. If something could be done on that line it would obviate the production of a large quantity of waste material and a greater quantity of fibre could be produced on a smaller area of land."

In a return to this subject on 1st April, 1954, the following comment appeared: "Some recent reports on research have shown varieties which have yielded seven or eight percent of fibre but none of the reports has indicated that the research experts are concentrating on the development of these varieties in order to produce plants giving a still higher percentage. All the reports indicate that the research is being conducted towards other objectives. Much of the research into the jute plant which is being conducted at present appears to have little relation to economic results. Jute development work is being re-oriented to quality instead of to quantity but India requires both: it needs increased quantity on a smaller acreage from fewer plants. That should be the main object of research."

From this brief record it would appear that about a score of years has been lost through the neglect of a subject which is of great importance to the rural economy of Bengal and the other jute-growing states. If its importance is now recognised it may be hoped that something will be achieved in the years to come.

High Grade Jute Exports

Along with the question of producing plants giving a higher percentage of fibre per plant is the problem of marketing high-grade jute. As was recently pointed out in these columns, in spite of the present overhead shortage of the high qualities have been left holding stocks of the high qualities for which they cannot find a market. With a new crop now coming forward they are likely to lose money on these stocks. The growers do not suffer because the so-called "unscrupulous middlemen" have to buy average quality from the growers and sell graded jute to the mills. It seems, therefore, to be only equitable that exports of the higher grades should be allowed since it is obvious that the mills in India cannot consume all that is produced in India. This might help to save some of the pucca presses that are rapidly becoming derelict. In any case if the Government is to continue to encourage the growing of high-grade jute it is the Government's duty to allow it to find a market.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th August, 1955	2,013.8	16,872.4	18,886.2
1st to 15th July, 1955	1,256.8	20,400.8	21,657.6
1st to 15th June, 1955	812.0	10,143.0	10,955.0
	Sacking		
1st to 15th August, 1955	16,254.4	350.6	16,605.0
1st to 15th July, 1955	21,149.6	111.8	21,261.4
1st to 15th June, 1955	12,071.3	437.4	12,508.7

THE FOREIGN JUTE MARKETS

BUYERS' RUSH NOT RULED OUT

(FROM OUR DUNDEE CORRESPONDENT)

MEMBERS of the jute market still appear to be waiting for something to happen and very little business is being done in raw jute, yarns or cloth. Buyers have been out of the market for such a long time that they must surely be forced in to replenish their stocks in the near future. Any transactions that are taking place are for small quantities for delivery as early as possible, and few buyers are willing to purchase any distance ahead. There may be a big rush on the part of buyers one of these days, when they may all come in together, probably finding that they cannot get the delivery they want. Pakistan continues to maintain minimum prices, and the general opinion in the market is that they will be able to do so for some time

yet. Demand for raw jute has been on quite a big scale for early shipment and it seems to be impossible to get all the contracts shipped in time, especially as there are reports of flooding in some districts. Continental spinners have been caught with short supplies of certain grades but particularly Mill Lightnings, and they are paying big premiums to secure the jute; £90 has again been paid by the Continent for Mill Lightnings from stock in Dundee, after £92 done afloat near at hand last week.

Prices quoted here are still at £90 for Mill Firsts, £80 for Mill Lightnings and £70 for Mill Hearts, with crack Daissee-3 at £90 and grade at £80, crack Tossa-3 now at £109 and grade at £99, with Tossa-4 at £99 and £89 respectively, all c.i.f. U.K. Values of jute yarns are firm for all qualities. There is more demand being made for hesian yarns for weaving, delivery wanted by the end of September at 14.48d a lb. for common 8 lb. cops and 8 lb. spools. Sacking yarns are quiet at 11.51d a lb. for 24 lb. weft and 15.05d for 8 lb. chains. Calcutta goods are steadier at 64s 0d for 10 oz. 40 in. and 48s 9d for 7 1/2 oz. August-September, and 63s 3d and 47s 6d October-December, with "B" twills at 172s 6d, 169s 0d and 163s 9d for the respective positions of shipment, f.o.b. Calcutta. Liverpool twills are quoted at 196s August f.o.b.

OIL BRINGS PROSPERITY TO IRAQ

NEW SCHEMES FOR IRRIGATION, FARMING AND INDUSTRY

PETROLEUM is at the present time the largest and most rewarding of Iraq's industries. Barely some three decades back this country gave no indication, except to a handful of specialists, of the vast wealth which lay beneath its surface. The farmer drove his plough and the herdsman tended his flocks without a thought of the precious liquid pool that was under their feet. Today, revenues derived from oil are visibly transforming the life of the people of Iraq, by financing vast flood control, irrigation and power generation schemes; industrial undertakings, roads, schools and hospitals. These changes have been the more revolutionary for the speed with which the country's petroleum potentialities are being developed. Thus crude oil production in 1955 is expected to be eight-fold that in 1949—a rate of increase rarely matched in any part of the world. Every year is pouring into the Iraq Treasury some £60 million, and this figure is reckoned to reach £100 million before the end of the current decade. And the Government, through the Development Board, has wisely decided to devote substantial sums towards the country's enduring economic progress.

So far as Iraq's oil industry is concerned its latest achievement has been the construction of a large modern refinery at Daura adjoining Baghdad, which draws its crude petroleum from the Kirkuk and Ain Zalah oilfields. It is the first large-scale industrial project to be undertaken by the State. It will play a paramount part in furthering the country's industrial and agricultural schemes. Incidentally, Iraq has two smaller refineries at Khanaqin and Basrah, obtaining their petroleum from Naft Khanah and Basrah oilfields respectively. The country's oil industry already employs 16,000 Iraqis at all levels.

Second Five Year Programme

The Iraq Government Development Board embarked on its second five year programme in April, 1955, at the beginning of the new fiscal year.

It is the most ambitious plan yet conceived by this Middle East country, entailing an outlay of £300 million. Of this total, over £130 million is earmarked for the development of agriculture through irrigation, flood control and drainage projects with particular reference to the Tigris and Euphrates valleys and their upper basins. These schemes are scheduled for completion by 1960, and will add 650,000 acres to the country's cultivable land. Moreover, artesian wells will bring water to arid areas far removed from riparian tracts to help settle nomadic tribes. To this end a sum of £2 million is to be expended to drill 400 wells during the period of the plan. A special section of the Board is being set up for the development of farming and livestock with an allocation of £6 million to operate experimental farms, laboratories and research stations. To provide farm-to-market facilities a network of 1,740 km. of modern roads costing £40 million is being built, and 11 bridges constructed for which £8.6 million has been appropriated. An outstanding feature of the planned development of State-owned farming lands on a small holding basis is that they are destined for distribution among landless cultivators. The nation's railway system is to be improved and expanded at an expenditure of £16 million. A further £10 million has been set apart for a new housing scheme for middle income groups. These will be available against payment of annual instalments. Industrial enterprises under the plan call for full exploitation of natural gas in Iraq's major oilfields. Two surveys are under way for deciding on the future development of other secondary undertakings. A mineral survey is being carried out by Site Investigation Company of the U.K., and an industrial appraisal by Arthur D. Little Inc. of the U.S. Funds for these are included in an appropriation of £50 million, part of it being allocated to financing new industries like sugar manufacture from the locally grown beet crop.

Electrification Scheme

Also, part of an electrification scheme designed for the whole of Iraq has been scheduled for immediate implementation so as to provide power for industrial, agricultural and other purposes. This comprehensive plan was drawn up by J. G. White Engineering Company of New York, and it envisages the setting up of central power stations in north, central and south Iraq. It is to be carried out in stages of five year extensions over a period of two decades, the aggregate eventual capacity being 500,000 kw. The Development Board has already decided on the construction of a central station for the northern area, and has invited consulting engineers from the United States, Britain and Europe to submit offers for preparing the final specifications. This plant will be set up in the Lesser Zab river district with an initial capacity of 30,000 kw, costing £4 million. Using natural gas from the Kirkuk oilfield, complete with transmission and distribution lines and transmission stations, it will provide power to the country's four northern provinces—Mosul, Arbil, Kirkuk and Suleimaniyah. The entire electrification scheme is computed to cost £39 million and includes a central power station in Baghdad to serve six of the nation's central provinces with an initial capacity of 60,000 kw. Another station at Basrah will furnish power for the three southern provinces of Basrah, Muntafiq, and Amarah, with an initial capacity of 40,000 kw. The Baghdad installation will be fuelled with crude petroleum by pipeline from Baiji, while that of Basrah will make use of natural gas from the Zubair and Rumaila oilfields operated by the Basrah Petroleum Company. In sum, like its small but very progressive southern neighbour Kuwait, and Venezuela in the New World, Iraq is reaping rich dividends from petroleum.

For offices and industrial establishments Greater efficiency in cool working conditions

—with **Carrier**
self-contained air conditioners

WHEREVER a Carrier self-contained air conditioner is installed, the staff begin working better than ever before. The cool, noise-free atmosphere leads to greater efficiency; even a small increase in efficiency will pay for the cost of the Carrier in a couple of years!

You can change the action of your Carrier to suit the weather, to get extra coolness on hot days, extra dryness on damp days!

Works silently, cuts off noise

Your Carrier self-contained air conditioner works as quietly as a whisper. At the same time, since you shut windows and doors, it helps to cut off street noises, lets you work or relax in silence and comfort.

Cools better at less cost

Specially-designed coils and filters make your Carrier more efficient, help it to cool better at lower cost.

Circulates clean, filtered air

Your Carrier sucks in air in a steady stream, filters it, then spreads it gently and evenly. So you get an equally-cool temperature throughout—no dust, no unpleasant draughts!

Removes more moisture

Your self-contained Carrier not only lowers the temperature but removes moisture from the air—gallons of it! A new "Humitrol" regulates the rate at which moisture is removed.

Remember—the Carrier self-contained air conditioner is remarkably compact, and takes up little floor space. The sale of these

units in India is backed by Voltas' unique after-sale service and their engineers' unmatched experience in the line.

LONDON INSURANCE LETTER

ADAPTING COVER TO RISK

By Air Mail.

THIS summer in the northern hemisphere has not been so favourable to insurance business as the unwontedly fine weather in Britain might suggest. In Europe this fine weather has been punctuated by violent storms. In dry North America fires have been unusually difficult to control. The huge volume of motor traffic has been reflected in the rate of accidents. Some of the misfortunes have revealed to the insured that their policies did not provide adequate cover, and there are already signs that the scope of insurance is extending. In Britain it should now be apparent that simple fire policies are not enough: they include damage by lightning, but not damage by storm, tempest, or flood. Even comprehensive policies, though they may include damage by storm and tempest, do not include damage by flood unless special provision is made for it. However, the range of hazards insured has broadened in recent years and is broadening still; so any spell of stormy weather gives rise to more claims now than it would have involved a few years ago.

The appropriate policy is not, of course, the same for each country or region: climatic and social differences involve different hazards. The risks of hurricane or windstorm are much more serious in many other countries than in Britain; those of earthquake or volcanic eruption are virtually non-existent here. Similarly, damage to property caused by social eruptions—strikes and riots—is insignificant in a country with a temperament and social habits such as Britain's but may be considerable in some countries abroad. On the other hand, a country with Britain's density of vehicles and buildings is peculiarly susceptible to damage of buildings by vehicles—even aircraft; and this hazard is recognised in an increasing number of policies. Since British insurance cover is world-

wide, a catastrophe in almost any part of the world is likely to be reflected in claims on Britain; and as countries abroad adapt their policies to their local hazards the claims, as well as the premiums, tend to increase.

Contractors' Risks

Another kind of overseas insurance is related to the work of British contractors on the big schemes that they undertake abroad. Almost automatically the work is insured in London. Some people, observing the activities of German firms in developing areas, believe that British contractors cannot enlarge, or even maintain, their work in these fields, and that, therefore, the scope for this kind of insurance is limited. They point also to the tendency to develop local insurance services, and, accordingly (in some cases compulsorily), to divert the business from London. The fact remains that this kind of insurance has grown remarkably in London since the war: companies that did little or none of this work before the war make hundreds of quotations annually now. It is still a specialised activity, confined mainly to relatively few companies; but Lloyd's also participates.

All the major risks are covered by what is now almost a standard form of contract. The unpredictable mishaps that may occur during construction work include flooding of a partly-built dam, subsidence of rock under construction, hurricanes that damage unfinished constructions and upset their schedules. These—and public liability, which is also covered by a comprehensive policy—are natural subjects for insurance, and it may be surprising that contractors' cover has developed to substantial proportions only comparatively recently. Now that contractors are familiar with this type of insurance it is commonly their practice to include the prospective premiums among their basic items of cost when they are preparing their tenders, rather than add these premiums at the end as an after-thought.

Of course, many companies' or underwriters' quotations, however favourable, result in no business, as the contractor's tender as a whole may be rejected.

Changing Investments

At home, the insurance companies have to contend with yet another change in the position of investments, and it is tending to change the short term basis of their investment policies. The Chancellor of the Exchequer has made another effort to check the trading boom, but he has shown noticeable reluctance to enforce a further rise in interest-rates for the purpose. The policy, and the method of applying it, have suggested to some investment analysts that the drift out of gilt-edged stocks and into industrial ordinary shares may have gone too far. The insurance companies are not, like the banks, directly interested in the short-dated Serial Funding stock that reaches maturity in mid-November and will presumably be largely converted before then. But this commitment, and others related to the national boards, require—according to present policy—a firm basis for the whole gilt-edged market; and if the authorities wish to raise gilt-edged prices they are quite capable of doing so. A few months ago insurance companies and other "institutions" were saying that 3½ percent War Loan (for instance) must be cheap at 84. Their judgment was faulty, for it has since declined well below 80. But current prices may offer more substantial opportunities.

It is arguable, on the other hand, that ordinary shares must suffer from the restriction of hire-purchase trade and of the banks' lending; or that if these restraints have little effect further restraints must be imposed. The "institutions" can show big profits on past purchases of ordinary shares, and there is no obvious reason to disturb these holdings; but further purchases at current prices might show losses. On the other hand, again, continuing inflation, however mild, favours equities in the long run. And the near-doubling, in little more than a year, of capital that insurance companies invested in United Steel is fresh in mind.

COMPANY AND PUBLIC NOTICES

RANICHERRA TEA COMPANY, LTD.

THE Forty-seventh Ordinary General Meeting of the Shareholders of Ranicherra Tea Company, Limited, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th September, 1955, at 3-30 P.M., for the following purposes.

1. To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to adopt the Accounts for the year ended 31st December, 1954.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 1st September to 8th September, 1955, both days inclusive.

By Order of the Board,

MCLEOD & CO. LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, Netaji Subhas Road, Calcutta, 11th August, 1955.

NOTE: Payment of the proposed dividend, if declared, will be made on or after 18th September, 1955, only to those members whose names are registered in the Books of the Company on the 8th September, 1955, or to their Mandates.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

MARGARET'S HOPE TEA COMPANY, LTD.

THE Fifty-fifth Ordinary General Meeting of the Shareholders of Margaret's Hope Tea Company, Ltd., will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 8th September, 1955, at 3-40 P.M. for the following purposes:—

1. To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to adopt the Accounts for the year ended 31st December, 1954.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 1st September to 8th September, 1955, both days inclusive.

By Order of the Board,

MCLEOD & CO. LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, Netaji Subhas Road, Calcutta, 11th August, 1955.

NOTE: Payment of the proposed dividend, if declared, will be made on or after 18th September, 1955, only to those members whose names are registered in the Books of the Company on the 8th September, 1955, or to their Mandates.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

ALUMINIUM CORPORATION OF INDIA LIMITED

Notice to all holders of 5½% Bearer Debentures of the value of Rs. 15 Lacs secured by Deed of Trust dated 24th January, 1946.

NOTICE is hereby given that the Company will pay off all the Debentures of this series on the 30th day of September, 1955, the date fixed for redemption thereof. The holders are hereby requested to surrender their respective Debentures duly discharged together with unpaid interest coupons at the Registered Office of the Company at 7 Council House Street, Calcutta, on or before the 30th day of September, 1955, and obtain payment in terms of such Debentures. If any Debenture holder fails to surrender his Debenture as aforesaid, such Debenture will cease to carry any interest as from the 30th September, 1955.

By Order of the Board,

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

MadrasLARGE EXPANSION PLANNED FOR
T. I. S. C. O.NEW RS. 10-CRORE EQUITY ISSUE: MR. TATA
SURVEYS THE ECONOMIC SITUATION

THE announcement of the Tata Iron and Steel Company's proposed new Rs. 10-crore equity issue has been interpreted bullishly on the share markets. The soundness of the concern and the expected demand for its products under the second five year plan are a guarantee that the stock will be a first-class investment for those who take it up. The directors have wisely decided not to increase the Company's borrowings beyond the point where its stability might be endangered and only half the costs of the new expansion scheme are to be met by this method—through the World Bank and the Export-Import Bank. The remaining requirements, some Rs. 30 crores, will be provided from internal resources and the new equity issue. In his speech to the 48th annual general meeting of the Company's shareholders last Thursday, published elsewhere in this issue of Capital, the Chairman, Mr. J. R. D. Tata, emphasised the "overwhelming case for an increase in the share capital of the company." The present figure of Rs. 3.74 crores for the total of equity capital, including the premium on deferred shares, is low when compared with Mr. Tata's estimate of Rs. 140 crores or so for the probable size of the gross block in another four years' time. A figure of Rs. 27 crores for the total of preference shares, the existing ordinary shares and the new issue is still, Mr. Tata admits, on the low side. But the investor is more likely to concentrate on the Company's reputation, the good market which will hold for its products, and the prospects of bonus issues in the future than on the weight of debt it might be carrying. Shareholders will subscribe to Mr. Tata's hopes that the Government of India "will grant the necessary sanction" for bonus issues when the occasion arises, because it will be this possibility perhaps more than any other that will be the chief attraction. The Government's present attitude on the subject of bonus shares is encouraging, but its general policy towards the private sector is not. Mr. Tata felt obliged to devote two-thirds of a survey outstanding for its balanced assessment of existing difficulties and its quiet optimism for the future to examining the uncertainties with which private enterprise is faced. That is not an encouraging sign of the times.

What is perhaps encouraging is the fact that the Government is to include private enterprise to such a significant extent in its steel output expansion programme. The decision is a perfectly rational one. The manufacturing capacity is there and so is the experience and considerations of economy alone suggest that it be expanded. But these have not always been accepted in New Delhi as valid grounds on which industrial policy decisions should be based. If this is an indication that the doctrinaire approach will not always be followed during the next five years, it is to be welcomed. In the meantime the country will benefit from the wholly deserved reliance which is being placed in the organising ability and sound business common-sense of one of India's leading units of private enterprise.

The burden of Mr. Tata's survey was that the pursuit of economic wisdom calls for more instances of this sort. The views were expressed in a series of questions, leaving little doubt what Mr. Tata's own answers would be. A cautious outlook is natural to a business man who knows his judgment must eventually be upheld by the figures on the balance sheet. It is that caution applied in a broader field which has prompted the advice "let us beware of the temptation to jettison economic systems or working philosophies based on human nature which have stood the test of time." When so much is at stake in the nation's accounts this deserves to be remembered. There is evidence that Government thinking is moving closer to this line than it was some time ago. But in the meantime the

Constitution and the Companies Bill have both been amended to include powers which, in the hands of a less responsible Government that did not consider itself bound by the promises of its predecessor, could make the position of the private sector impossible. It is no use Government spokesmen maintaining that these new powers will be used only in the national interest and against the anti-social and inefficient business man when one of its less scrupulous successors will have no difficulty in using them against any business man and under any pretext. When Mr. Tata also appreciates what further damage might be done if some of the recommendations of the Taxation Enquiry Commission are implemented it is little wonder that he has many serious doubts.

Those critics who concentrate their attention on the specific measures already taken can learn from the emphasis Mr. Tata has placed on the movement towards a "socialist pattern of society". He has grasped the fact that it is not so much the laws themselves as the philosophy behind them that counts. Without this urge towards a half understood socialism the laws may never be abused. If the country were to ask the same questions about this doctrine as Mr. Tata has asked there would probably be no need for anxiety. India's socialism is, as Mr. Tata suggests, of the "comprehensive" rather than the "empirical" type. There is reason to hope that this phase will pass away as it becomes more obvious that comprehensive is not to be reconciled with democratic. An empirical socialism is at present being adopted by all non-communist countries, with some cost to economic incentive but scarcely any to individual freedom. This may eventually be India's choice, after it has been realised that the socialism of Robert Owen is impracticable in a modern economy. The alternative is State capitalism on the Soviet model. This method would not conform with the traditions of the Indian people or their democratic aspirations; and there are firm grounds for believing that Mr. Nehru returned from Moscow with that fact uppermost in mind. There need be little doubt that sound social and economic philosophies will prevail in the end, but in the meantime too many hostages have been delivered into the hands of the extremists and Mr. Tata and the responsible business

THE RAILWAYS AND THE PLANNERS

THE Railway Ministry's reputation for moving by jerks and jolts is not likely to be diminished by the report that it is now insisting on immediate sanction for its Rs. 1,480-crore plan for expansion over the next five years. Barely six months ago, the broader plan-frame allocated only Rs. 650 crores for the purpose. This allocation is discovered to have been hopelessly short. What is more, it is claimed that if the full benefits of the railways' new claim are to be properly realised, it must be sanctioned at once. The urgency of the matter is obvious, but some may find it hard to avoid the suspicion that the railways are now trying to hustle the Planning Commission into handing over as much as one-third of the total resources it expects to raise for the public sector. Curiously, no explanation is forthcoming as to why the original allocation of Rs. 650 crores now appears to be a highly inefficient under-estimate. It has been suggested that the emphasis on industrialisation had not been fully appreciated when this figure was decided upon. If that is true, the plan-frame betrays a remarkable lack of co-ordination, although co-ordination is supposed to be among the major aims of planning.

The season is in full swing when the Planning Commission is confronted with a multitude of

men he represents have good reasons for their doubts.

The next five years will see a large increase in State economic activity which is not necessarily related to the trend towards socialism. Mr. Tata has questioned this emphasis on the development of heavy industry in the second five year plan on purely economic grounds. His interest in the matter is not altogether academic. A market will have to be found for, among other products of heavy industry, the expanded output of steel of which T.I.S.C.O.'s own increased production will form a part. Mr. Tata suspects that the present pattern of development lacks balance and he would seem to be right. A consumption economy based on the production of cottage industries will not absorb the output of heavy industries. The chief source of demand for steel for example will be the railways and to a limited extent the constructional industries and shipyards. The all-important consumer-goods industries are unlikely substantially to increase their demand. The question the Government should ask itself is whether the sort of economy it has in mind is in fact going to absorb six million ingot tons of steel in five years' time supposing the targets are reached. If it cannot, how long will it be before the industries which could absorb it are established? These are questions which Mr. Tata has examined and apparently answered to his satisfaction, but if there is in fact no need to worry where steel is concerned, it is difficult to say the same for all the products of the proposed new heavy industries. The prevailing attitude towards the economic use of labour is another matter over which Mr. Tata showed anxiety. The Company's expansion schemes could be wrecked if, for doctrinaire reasons, it is not permitted to deploy its labour force so as to keep its costs in line with the new Government-run steel plants.

The decision of the Board of the Tata Iron and Steel Company is typical of many being made in India today. It is a decision to go forward because there is no other way to go if the development aimed at is to be achieved. But it is a progress unnecessarily hampered by doubts about what will be possible considering the framework in which the private sector now has to work. Government assurances are excellent things and Mr. Tata is not alone among industrialists in being eager to accept them while still doubting their ability to bind future Governments. The absence of so much scope for mischief would be more convincing. Mr. Tata has voiced the doubts of responsible industrialists whom the Government is all too ready to forget in its eagerness to discipline the others and who are to be congratulated on the balanced and co-operative view they are taking of the

...the few there are may be found carrying coal from State collieries to State steel plants, leaving others out in the cold. Coal and steel here merely illustrate a more general danger. Being already in possession of the railways and the air lines, and having succeeded in getting its road transport policy tied up in knots, the Government now has a firm grip on the country's transport. With the Government steadily encroaching into important fields of industrial enterprise, it is time to expand transport so that there will never be any question of its being tempted to discriminate against needs other than its own.

BRITAIN'S DIMINISHING SHARE OF WORLD TRADE

EXPANSION OF GERMANY'S MARKET

SOME facts that are gradually emerging this year suggest that the troubles of sterling may be deeper than has been generally perceived. The problem has, of course, been aggravated by inflation in the sterling area, especially in Britain; but to suggest that inflation is the whole problem is to oversimplify it. The recent award of Indian contracts for locomotives, showing outstanding successes for West-Germany and Japan and relatively not much less impressive successes for Austria, Czechoslovakia, and Hungary, but failure for Britain, is further important evidence that Britain's basic markets are no longer assured to her. They are the sterling markets, and Britain's export trade has been largely focussed on them. Such disconcerting failures might be seen as evidence that inflation damages the export trade of a nation that trades internationally. There is, however, another aspect of the problem. By concentrating her main effort on the sterling area Britain has committed herself to markets which have expanded—when they have expanded at all—less rapidly than others. That Germany has some advantages (including, competitors believe, disguised export subsidies) that are not shared by Britain, is apparent from her successes in India, Latin America, and other distant markets. But Germany's major advantage in the recent years of rapid progress has been her position in the midst of the European market, which is a natural outlet for much of her production and which has expanded remarkably.

The sterling area as a whole has never completely recovered from the disturbances of the "Korean boom". The outstanding feature of that boom was the rise in commodity prices, which generated strong inflation in the primary-producing countries of the sterling area and greatly increased the cost of Britain's imports. For a time Britain could sell easily—too easily—in the inflated sterling markets; but the sterling countries had trouble with their external payments, and their imports had to be restricted. In the post-war recovery of trade Britain did surprisingly well. Afflicted with less material damage than the Continent, in general, she reconverted her industry to normal production without undue delay, and by 1950 she had increased the volume of her exports to two-thirds above the pre-war level. In that year Britain's exports of manufactured goods accounted for more than one-quarter of the international trade in such goods, compared with not much more than one-fifth before the war. The total of international trade in manufactured goods has continued, broadly, to expand, but Britain's share of it has steadily diminished. The latest figures have been published in the U.K. Treasury's *Bulletin for Industry*, August issue. They show that in the six months to March 1955 Britain's exports were 20 percent of the total—less than in 1938 (22 percent), much less than in 1950 (25 percent). Between 1950 and 1954-5 the share of the U.S.A. diminished from 27½ percent to 26½ percent, that of the European countries other than Britain and Germany from 30 percent to 28½ percent. In 1954-5 Britain was still ahead of Germany, whose share was 15½ percent; but from 1950 (when it was 7½ percent) Germany's share had more than doubled.

Dr. Hjalmar Schacht, "financial wizard" of Hitler's Germany, on a brief visit to London in mid-August, was non-committal regarding German progress: Germany, too, he emphasised, was experiencing inflation. So it may be that, if Britain can get proper control of her affairs, the advance in Germany's proportion of world trade is nearly ended. But so far as the past few years are concerned the figures speak for themselves: Germany's proportion has advanced while Britain's proportion has receded and only a modest percentage (from 34 to 5) can be attributed to Japan during that period of Britain's relative decline. It would be absurd to suggest that Germany, and to a less extent Japan, had simply encroached on Britain's markets. Other exporters, including American, have suffered likewise from their competition. And the more important difference, probably, is in the expansion of Germany's "natural" markets more

rapidly than Britain's "natural" markets have expanded. It is doubtful if Britain's big deficit on external trade (£2561 million in the first seven months of this year, compared with £308 million in the same period of 1954) can be corrected by expanding exports unless Britain makes profound changes in the direction of her trade. Yet if Britain turns her attention to non-sterling markets, the sterling markets (which are, of course, fundamentally expanding) will import more from non-sterling suppliers. In that situation Britain's deficit will be reduced but the deficit of the rest of the sterling area will be increased.

The Board of Trade in London issues periodical summaries of the trading position of the whole sterling area. That published in August relates to the first quarter of 1955. It shows that in that period, compared with the first quarter of 1954, the area's total deficit on trade with the rest of the world increased from £69 million to £241 million. The U.K. accounted for a large part of that increase, her deficit in the latter period being £171 million, compared with £59 million, but the increase of the rest of the sterling area, from £10 million to £70 million is by no means negligible. The problem of sterling is, of course, the problem of the whole sterling area, and Britain cannot solve it alone. But Britain's payments are the main cause of the weakening of sterling over the past year, and Britain must be mainly responsible for strengthening the currency. The best way of doing so is to provide enough goods (of acceptable character and at acceptable prices) for export to enable her at least to maintain her deliveries to the other sterling countries and at the same time to sell more outside the sterling area. And that means consuming less at home. So it comes back to the problem of inflation after all.

BRAVE NEW AUTOMATIC WORLD

A SECOND INDUSTRIAL REVOLUTION

"BUSINESS men who cannot afford a mechanical computer can now take their problems to an integrated team of giant brains which inhabits an 'electronic brain for rent' centre in New York. Answers to mathematical questions are available at from \$15 to \$445 an hour." (The *Economist*, 13th August, 1955.) In London, the British firms of Elliott Brothers and Ferranti have announced the opening of similar centres. In spite of the fact that large computers of this description are in a comparatively early stage of commercial development and their widespread use in private enterprise far from immediate, their advent has served to emphasise the versatility which automatic production and control has attained.

For the first time the full significance of post-war technological development in this sphere has been brought home to the British public, which has been startled into the realisation that automatic control is no longer a legendary concept of the scientist, but has been a solid reality in Britain as well as the U.S.A. for a number of years. "Automation" (automatic control by instrumentation) is the logical outcome of mechanical evolution dating from the automatic operation of the first steam pressure valve in 1880, the automatic control devices used in windmills, Watt's centrifugal governor of the 18th century, and the introduction in 1801 of Jacquard's punched card system on the loom that still bears his name. The recent developments in electronic control in the 20th century, however, are being viewed by many with extreme distrust. Opinions are being expressed on all sides: Barclay's Bank in its latest *Quarterly Review*, while accepting automation as a general industrial trend, recommends "not only an earnest consideration of recent developments in the somewhat exotic field of automation but more simply good management and good labour relations." The *British Export Gazette*, basing its opinion on the observations of the *Wall Street Journal*, envisages greater expenditure on labour-saving machines as the most probable outcome of the "lay-off" plans agreed to in the U.S. motor-car industry. *New Commonwealth* however sees in automation the possibility of a vigorous expansion of output over many years "despite a declining and ageing labour force."

In the meantime, manufacturers contemplate with misgiving the impending capital outlay on automatic machinery; trade unions point gloomily to the threat of mass unemployment; engineers are frankly enthusiastic, while in London an investment trust is being formed for the purpose of investing capital in companies producing electronic instruments and other automatic factory equipment. A few British firms are even now able to supply the whole range of equipment from small photo-electric cells which count components to giant electronic computers which replace whole offices, and a large and growing export trade is being developed in electronic measuring and control instruments and other automatic production equipment. An increasing variety of products is being made today without any manual labour at

all, while several factories and other plants built during the last few years are already virtually completely automatic. The Ford Motor Company in the U.S.A. commissioned the first motor-car assembly line in 1914 and can rightly claim to be the pioneer of automation in the car industry. In Britain the Austin Motor Company has installed more than 80 modern transfer machines and has developed the transfer of parts by overhead conveyors to the point where all sub-assemblies can be marshalled in the right positions on the final assembly lines at the right time and in the right order. The experiment has resulted in substantial increases in output with only small additions to the total labour force plus improvement in quality owing to the near elimination of the margin of human error.

Modern oil refineries such as the new £40-million plant built by the Esso Petroleum Company at Fawley are almost completely automatic, the through-put of half a dozen men being enough (in weight) to meet nearly one third of Britain's inland consumption of oil products. To facilitate the selection of a production plan that will meet strict and changing market requirements from the existing stocks of crude and semi-processed oil with the minimum of waste and at the cheapest cost the B.T.M. computer "Hec" has recently been installed and the necessary information fed to it on cards. Only 800 of the 3,000 people at Fawley do operational work and the vast majority are engaged on specialised processes or on ancillary operations like storage tanks and pipe lines. There are nearly twice as many maintenance engineers as operators.

The future demand for skilled and semi-skilled men is obviously going to increase. The inevitable changes in the type of personnel recruited for the automatic factory will demand the co-operation of a sympathetic labour force, and its general flexibility will to a great extent determine its fate. Men will have to be willing to change jobs, to retrain and to abandon outmoded and outworn wage rate differentials. Unless this problem can be overcome the general installation of automation will only lead to friction and ultimately negate the purpose of its existence by loss instead of gain in production. Manufacturers face a complete re-orientation of factory planning, lay-out and production engineering. There may too be a serious shortage of scientists and engineers to undertake the vast amount of research design and development that automation will require.

While the threat of redundancy appears to be the main cause of alarm among the trade unions the findings substantiated by the actual experience of near-automatic factories seem to indicate that such fears are largely without foundation. In addition it must be remembered that over half the U.S. and British labour forces are engaged in occupations such as construction, agriculture, mining, distribution, professions, personal services or self employment, none of which is potentially capable of a high degree of automation. Local problems may arise in areas where there is a concentration of labour involved in forms of industry such as metal processing which may soon become near automatic.

The whole question of automation, its future, and the speed with which its complete acceptance is approaching, is inextricably bound up with the impact of the labour problem on the country's economy, for the development of automatic control on an even larger scale may well be precipitated by the very actions of unions who are holding out against it. In the meantime, spurred on by the Institution of Production Engineers Conference on the automatic factory, the Department of Scientific and Industrial Research in Britain is already collecting information and assessing trends over a wide field of industrial activity in an endeavour to interpret the future of automation in relation to the economic, social and organisational problems it will undoubtedly create.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity reveals a fall of 3.2 points during February, 1955. Contributing to the decline were falls in cotton consumption, steel ingots, pig iron, cement, paper, coal and electricity. Cheque clearances and notes in circulation rose because of increased activity.

Balance in Bicycles.—Mr. S. K. Sen's report to shareholders of Sen-Raleigh Industries of India Ltd., is as encouraging a record of progress as a very young enterprise may be expected to produce. During the year ended last September, net turnover increased by nearly Rs. 28 lakhs to Rs. 88.2 lakhs. As a result, the gross profit rose to almost Rs. 14.22 lakhs. Provided the progress is maintained, the prospects of ordinary shareholders participating in the profits appear much brighter now than the preference dividends have been provided for. It is expected that the future

profits are likely to cover the balance of losses carried forward from depreciation, and a start towards the payment of ordinary dividends may be made "at an early date." Demand remains good, but Mr. Sen is mildly critical of the Government's bicycle import policy. According to him, liberalisation of licences when internal production is declared policy of only filling up the gap between demand and indigenous production through imports. The belief that imports are necessary to maintain standards and lower prices is, he feels, mistaken. India is already manufacturing bicycles as good as anywhere in the world and "the price trends of imported bicycles are also hardly related to those of the indigenous ones." In times when industrialists go around with begging bowls asking the Government for more and more protection, it is cheering to hear at least one say: "I believe it is only through higher production and healthy competition amongst indigenous manufacturers that price reduction can be achieved." An important feature of the company's progressive outlook is what it is doing for its staff; Mr. Sen also reports that a long-term agreement with the employees' union is now in the offing and it will lead to larger and improved production in the future.

Ruby General Insurance.—Mr. B. M. Birla, chairman, told shareholders of the Ruby General Insurance Co. Ltd. on Tuesday that considering the competitive conditions prevailing today, the increase in the income of the Company's general department was gratifying. He was opposed to the reduction in fire tariff rates, and reported that under healthy competition in marine insurance continued because of rate-cutting in foreign markets and increased demand for wider covers with nominal extra charge. The miscellaneous department had been showing losses for many years, primarily because the automobile section continued to show an increasingly unfavourable loss ratio. If losses were strictly surveyed and claims settled accordingly, a profit might be possible. But this could be done only if insurers individually followed a stricter claims settlement policy. Mr. Birla stated that Ruby General was following a strict underwriting policy in this regard, and efforts were being made to develop other miscellaneous business which would to some extent offset the results of the automobile department. The working of the life department had shown a distinct improvement. It had been decided to have another valuation. This was expected to show a substantial surplus, which would enable the payment of a higher bonus to policyholders. The Company's efforts to expand its overseas business had yielded fruit, according to Mr. Birla, and there was scope for further increase. A cautious policy of expansion was being followed; this, coupled with the correct underwriting policy adopted at home, would ensure greater progress.

Reviewing Foreign Investment Policy.—The Union Finance Minister, Mr. C. D. Deshmukh, stated in the Lok Sabha last week that the Government would welcome an opportunity to announce afresh its attitude towards foreign investments. This gives significance to the contents of the latest McGraw-Hill American letter which discloses that the number of new foreign investment projects in India is still growing in spite of uneasiness about New Delhi's socialisation plans. According to this publication, although American concerns have so far shown more caution than those of Britain or Western European, if the present negotiations between Washington and New Delhi regarding current investment guarantees can reach a satisfactory conclusion, American financiers may soon show more interest in Indian projects. To a certain extent this has been made possible because of the recent policy of more liberal import quotas for certain products from dollar areas. It has gone a long way towards convincing American industry that India might prove an increasingly important market for engineering goods. While it is recognised that India would be seriously engaged during the coming years in producing these goods within the country itself, it is also surmised that, with industrial progress, new types of capital goods will be needed. Among the new planned enterprises listed is a pharmaceutical plant to be established in Bombay by a West German firm in co-operation with an Indian firm for the manufacture of drugs and chemicals. New Delhi is also believed to be ready to consider favourably new production programmes which might be submitted by American pharmaceutical companies. A good response is likely if the hopes about the liberalisation of the Government's policies on the extent of foreign ownership allowed and the amount of royalties to be paid are realised. Prospects of co-operation in Indian and foreign capital seem to be, however, still more favourable in the field of motor-car manufacture. Plans for making an increasing number of motor-car parts have been finalised. Under the new agreement already entered into, Lockheed hydraulic brakes and Borg and Beck clutches will soon be produced in India. Full imports of these articles will be allowed for nine months or so, but will be progressively restricted

after this period. By the end of 1958 there would be no further imports of these parts. Negotiations which are going on for the manufacture of British diesel engines and Italian Lambretta scooters are also likely to be concluded shortly. The programme for the manufacture of Leyland lorries and buses is also to be adjusted to India's special needs, and British engineers are engaged on preparing blueprints of new models for vehicles suited to Indian conditions. What might prove of wide interest is the news that Krebs of France are interested in building India's fifth oil refinery, in the Saurashtra region, and that the Government of Iran has offered not only to supply crude petroleum for the project but to provide two-thirds of the cost of the refinery. It is believed that the project is sponsored by a group of oil distributors engaged in handling Russian petroleum in the country. One American firm, in collaboration with two West German firms, is also believed to be engaged in preparing project reports on the Indian Government's plan to establish a synthetic oil plant with an annual capacity of 300,000 tons. Mr. Deshmukh's fresh announcement of the Government's attitude towards foreign investment in this country is, therefore, bound to be eagerly awaited by investors abroad.

Lausanne National Fair.—Once again Swiss manufacturers will be showing the world their latest products at the 36th. Lausanne National Fair, to be held from 10th to 25th September. This great exhibition will be based on the four principal groupings of the Swiss productive system: Agriculture, from which the others took their rise, industry, whose products figure so largely at the Fair, and trade and handicrafts, where the emphasis will be on consumer goods. In 22 halls on a site measuring 134,000 sq. yards in area, 2,300 exhibitors from all parts of the country will show what the manufacturers, farmers and craftsmen have achieved in the course of the year and bring home to visitors the excellence of Swiss design

and workmanship. In view of the position Switzerland occupies in world trade, the Lausanne Fair has always been national in character. Nonetheless it has on previous occasions made the friendly gesture of inviting one foreign country to be represented as a guest of honour. Hence, under the aegis of its Legation at Berne and its Minister of Trade, Argentina will be putting its principal resources on show in an official pavilion. It is most opportune that Argentina should have been invited to take part this year, for both countries are at present making efforts to improve and extend their mutual trade. Since the success of the Fair has been due in the past not only to the services it performs for Swiss trade and industry but also to the interesting exhibitions held at the same time, the 35th Lausanne Fair will include a pavilion where the possibilities of the new science of "cybernetics" will be exhibited in unprecedented detail.

Japan and the Sterling Area.—There are strong reasons why Japan should try to increase its purchases from the sterling area. Many Japanese exporters find that the sterling area is their best market and they are anxious that their trade should not run the risk of being restricted through any inadequacy in the flow of trade in the other direction. Japanese traders generally are no doubt anxious also to secure the goodwill of those sterling-area countries which have made reservations in the matter of Japan's accession to the General Agreement on Tariffs and Trade. It is not surprising, therefore, to find that, according to reports from Osaka, the Japanese cotton mills are discussing a plan for expanding imports of raw cotton from the sterling area. The plan, worked out by the Ministry of International Trade and Industry, calls for an increase in imports from the sterling area to 680,000 bales, compared with the last financial year's total of about 400,000 bales. This would affect Japan's raw cotton imports from the dollar area to some extent, particularly imports made on a barter basis or imports with a foreign exchange entitlement under the special export promotion scheme.

Company Meeting

THE TATA IRON AND STEEL COMPANY LIMITED

MR. J. R. D. TATA SURVEYS YEAR'S WORKING

The following speech was delivered by the Chairman, Mr. J. R. D. Tata, at the 48th Annual General Meeting of the Shareholders on Thursday, the 25th August, 1955.

Ladies and Gentlemen

Since I last had the pleasure of welcoming you at this annual gathering, much has happened of special interest to our Company and to industry generally. Important policy pronouncements have been made, significant legislation has been passed, plans have been formulated, a report on taxation has been published, all of immediate or potential significance to us.

As our annual report and accounts are so detailed, there is no need for me to elaborate on them at this meeting except in answering questions from shareholders. I propose, therefore, to devote my speech today to two main subjects, namely, the pattern of Government's economic policy which has emerged from their statements and actions during the year and the proposed expansion of our plant to two million tons per year.

The Economic Pattern

At the last two annual general meetings, I referred at some length to the subject of a Mixed Economy and the role of the private sector in it, and took some pains to set forth what I felt was a fair and sound case for better opportunities to Free Enterprise to enable it to fulfil its task under the series of Five Year Plan.

We all appreciate that bold planning and determined execution of large schemes of development are essential if we are to raise living standards, relieve unemployment, give opportunities to all and ensure a reasonable degree of social justice. Every one, I believe, is agreed that the principal means of achieving these ends as rapidly as possible since production of the country as a whole is possible, without an increase in total wealth, there will be nothing to distribute but poverty. We realise that the task is a formidable one by any standards and that it requires the united effort of all and dynamic action by the State. I have thus welcomed the policy of creating a Mixed Economy in which both State Enterprise and Free Enterprise will, side by side, play their important roles.

It would seem, therefore, that there was little room for disagreement on general economic policy and that the stage was set for fruitful co-operation between Government on the one hand and industry and business on the other. Indeed, several pronouncements by spokesmen of the Administration have appeared to confirm this fundamental identity of sentiment and approach. No less a person than the Prime Minister has, on more than one occasion, held out the assurance that Free Enterprise would have an important place and effective role in the country's development and deprecated the outmoded idea that Socialism means nationalisation. Speaking to the Congress Parliamentary Party in May this year, he said: "I think there is really no choice before us between having a private sector and allowing it to function, and not having it at all. It is foolish to have a private sector and then undermine it and prevent it from functioning. I personally think that even for the proper functioning of the public sector it is desirable to have a competitive private sector."

Equally reassuring was the statement made in July this year by Mr. T. T. Krishnamachari, the Minister for Commerce and Industry, at the last meeting of the Central Advisory Council of Industries, that there would be no nationalisation for the sake of nationalisation. The Minister went on to say that the State could and would enter the field normally reserved to the private sector only if the latter was unable to develop certain industries. At the same time, the State might invite the private sector to co-operate in industries in the public sector.

Still more recently, in the course of the current debate in Parliament on the Companies' Bill the Finance Minister made this encouraging observation on the role of the Industry:

"Having decided that we shall have the private sector, and having come to the conclusion that we should exert to extract the best out of that sector, it is our duty to consider how a private investor could be encouraged to put his money into joint stock enterprise. That seems to me a very legitimate and very laudable object."

While giving full weight to these encouraging pronouncements, it would be unrealistic if we do not take note of certain events of the past year such as the recent amendments to the Constitution, the proposed amendments to the Companies Act, the fiscal policy of the country, particularly in relation to the Report of the Taxation Enquiry Commission, some aspects of the proposals for the Second Five Year Plan, and the way in which the Government's reduction on the socialistic pattern of society is sought to be interpreted and implemented. Let us take them in turn.

Constitutional Amendment

There is little doubt that the Fourth Amendment to the Constitution, by denying to the citizen recourse to Courts of Law, has seriously undermined the right to property, which has been recognised through the ages as one of the fundamental human rights and which the United Nations has solemnly affirmed in a declaration to which the whole world including India is a party. While it is reassuring to note that the present Government have every intention, as stated by the Prime Minister, of paying a fair price for any undertaking they may decide to take over, there is every reason to fear that such sweeping powers, once acquired, may, some day, become an instrument of oppression in the hands of a future government. In addition, the passing of this amendment is bound to shake the confidence of industrialists and investors and thus adversely affect the ability of the private sector to fill its allotted role.

duced it has undergone in the Joint Select Committee important changes, some of which go much beyond the original scope of the Bill and would, if adopted, place serious impediments in the way of the smooth and efficient management of joint stock companies. It is encouraging to note, however, that as against some extreme proposals made during the debate which would change the entire character of the Bill from a constructive improvement of Company Law to a measure striking at the very root of the whole system of free enterprise, some moderating voices have been heard on the floor of the House, the most notable amongst these being that of the Finance Minister whom I have just quoted. We may thus hope that Parliament will refrain from placing on the Statute Book provisions which would permanently cripple elements otherwise capable of assisting in the country's economic development.

Taxation Commission's Report

This is not an occasion on which to analyse the Report of the Taxation Enquiry Commission under the distinguished leadership of Dr. John Matthai, but I may say that I am not amongst those who can see nothing good in the Commission's recommendations. There are, in fact, from the point of view of the private sector, some recommendations in the Report as, for instance, in connection with the development of the early years of income to industry. On rebate which are clearly beneficial to industry. The other half of the recommendations would lead to unfavourable consequences, notably those in respect of Section 23A of the Income Tax Act which may lead to a serious depletion of resources hitherto available for development purposes. What I am more concerned about, however, is the effect which the high level of taxation proposed and the emphasis laid on the need to restrict expenditure and consumption in the early years of income to industry. In Chapter 8 of their Report the Commission have themselves repeatedly stressed the need to avoid adverse repercussions on private productive effort and enterprise. I fear, however, as do many other directly concerned with the working of the private sector, that the abandonment of individual taxation recommended will in fact act as a serious disincentive to productive effort and enterprise. This, coupled with the diversion of an undue proportion of total savings to Government, will impair the private sector's ability to meet the targets allotted to it.

Second Five Year Plan

A preliminary outline of the framework of the Second Five Year Plan has recently been released by Government for purposes of public discussion. This is a healthy move on which the Government of India are to be congratulated.

While the necessity for bold planning is unquestioned, for the needs of the country are both great and urgent, some of the proposals are such as to raise doubts in one's mind. For instance, considering the resources likely to be actually available, can the proposed targets be attained without recourse to a much higher degree of deficit financing than at present contemplated in the plan? The consequent risk of inflation which would deprive the mass of the people of the fruits of their toil? Will the large scale development of heavy industry at one end and cottage industries at the other, without an adequate development at the same time of secondary consumers' goods industries in between, not lead to a lop-sided pattern of development which may result in inflation, scarcity of consumer goods, and also in a substantial part of the capital investment in heavy industry remaining unproductive for some years for want of a market? Is it wise to attempt to reverse the normal historical process by which the establishment of capital goods' industries has followed and not preceded the development of consumer goods' industries? Has the argument that the position could be rectified by the development of cottage industries at a later stage any validity, considering that, owing to the continuing increase in population amongst other factors, there is bound to be a large amount of unemployment at the end of the Second Five Year Plan, and the same arguments will inevitably be used then as now for restricting the development of manufacturing industries? Will the consumer in urban and industrial areas be willing to pay the necessarily higher prices of goods produced by household and cottage industries, even when the quality is satisfactory? Finally, is it realistic to assume that household industries can be developed fast enough to provide all the additional consumer goods necessary to meet the increased demand and, more particularly, that the widespread organisation and the necessary financial-cum-marketing facilities can be built up in so short a time? I would urge, while there is still time, that these important aspects of the problem be considered before the Second Five Year Plan takes final shape.

Socialistic Pattern

Finally, we have the goal of a "socialistic pattern of society" set before the country. If it means a society in which all have equal rights and opportunities, the underprivileged are protected and helped to a better life, economic activities are harnessed to constructive nation-building purposes and controlled by the State for the common good, and selfish abuses and anti-social acts are checked, then we should all support it. But if the means adopted were to lead ultimately to a society in which incentives and initiatives are impaired, the greater part of the industrial apparatus is owned by the State, economic power and responsibility are largely centred in the hands of government, and the individual loses freedom of choice, whether as producer or consumer, then, I submit, this kind of society will be incapable of producing the required volume of goods and services essential for the prosperity and happiness of our people.

Surveying these various trends in the country, one finds running through them two major currents of thought. The first is the belief that the profit motive or the desire for material rewards for individual effort, which has characterised man's progress from the beginning of his life on earth, is anti-social and

by a selfless desire on the part of everyone to work solely for the good of the community. The second is the undue emphasis on Socialism as the only path to prosperity.

The Need for Incentives

Apart from the fact that there is in my view nothing morally wrong in the yearning of individuals to better their own and their families' living conditions and to seek material rewards and financial security in return for hard and productive effort, a remarkable aspect of the disparagement of material incentives and rewards is that, while they are regarded as unobjectionable in the case of the peasant and the worker, they are sought to be withheld from the professional man, the administrator, the manager, the entrepreneur and the investor—the very men from whom we expect the initiative and leadership required for the success of the country's plans of economic development. In their case incentives and rewards are sought to be replaced, it seems, only by a missionary zeal to serve the community.

It is true that many of the men who today lead the nation have dedicated their lives to the country's advancement and are motivated by a noble ideal of service. But, with great respect, I submit it is unrealistic to believe that more than a minute percentage of the people of the country in any walk of life can be expected wholly to eschew personal interests. For the vast majority of the people the removal of material incentives and rewards will merely act as a disincentive, and lead to a reduction of effort and efficiency and to an increasing tendency to let the other fellow do the job. We should face the fact, whether we like it or not, that most men will be driven to hard work only by material reward or fear, or a combination of both.

In a country pledged to the use of non-violent and democratic means, it is clear that our governments cannot and will not, as in totalitarian states, use weapons of force or fear to drive people. But, if we are to eschew both reward and fear, and if selfless devotion to the community can impel only a minority so small as to be incapable of making any material impact on the country's productivity, is it not obvious that the activity of the nation will be retarded and our great Five Year Plans jeopardised? Faced as we are with the imperative need to work, to produce, to build, to save and to invest, is it wise to place so much emphasis at this stage on levelling down incomes and seeking to achieve an egalitarian society before we have created a reasonable quantum of wealth to distribute equally?

While it is true that there is still an undue disparity in incomes in our country, it is I feel not adequately realised that considerable progress has been made in recent years towards reducing inequalities. On the one hand, the income of peasants and wage earners has substantially increased while, on the other, the steep rise in taxation has drastically reduced the earnings of higher income groups.

A particularly unfortunate consequence of going too far in the direction of reducing earnings is the discouragement caused to foreign capital which might otherwise play such an important part in helping the development of our economy.

To sum up my analysis of this important, and too often overlooked, factor in our economic plans, I would earnestly urge that while retaining the ultimate objective of widely distributed wealth and social justice, and curbing abuses, anti-social activities, ostentatious spending and undue accumulation of wealth and power in individual hands, we should make full use of the natural instincts of human nature as it exists and not rely unrealistically on the hope that they can be changed in a short time by executive act or legislation.

Capitalism Transformed

As regards the apparently growing trend towards a comprehensive form of socialism, as distinct from the more empirical form favoured in, say, Britain or the Scandinavian countries, there are some who hold the view that capitalism is wholly out of date. Considering the remarkable progress made in capitalist countries particularly since the war, such a view can only refer to the nineteenth and early twentieth century type of capitalism which is, indeed, just as out-of-date as the nineteenth and early twentieth century type of socialism.

We are, however, no longer living in those days and should not close our eyes to the enormous changes which have occurred in capitalist societies throughout the world since then. Modern capitalism has changed beyond recognition from what it was a century ago. It has shown a remarkable capacity to fit into the most modern concepts of the Welfare State, while creating wealth and prosperity unprecedented in human history. Statistics are sometimes used to obscure this truth; as an instance, I may mention the extraordinary figures of national income growth quoted in a working paper entitled "The Second Five Year Plan's Tentative Framework" circulated a few months ago for purposes of discussion. The picture presented would lead us to believe that the annual growth of national income in socialist countries under totalitarian regimes is three to five times as great as in capitalist countries. To suggest, even by implication, that economic progress is greater in, say, East Germany, Poland, Hungary or Bulgaria than in West Germany, Belgium, France or England, let alone America, is to place a serious strain on one's credulity. There is, in fact, overwhelming evidence that the conditions of living in Western Europe are far better than in Eastern Europe and also that the rate of post-war recovery and economic growth is East Germany as well as West Germany. Though war, the enormous disparity which exists today in the economic activity and in the standards of living of the people is there for all to see, the West Germany has actually had to warn both management and workers not to work so hard and so long; an East Germany where conditions are visibly worse than their output and where small producers restrict business and the fruits of their enterprise will be taken over by the State.

The Choice of Means

If I have taken so much of your time in discussing these recent developments of our economic policy, it is because they seem to me to be of crucial importance to the future of our country. We all

overcoming grievous difficulties and stabilizing our economy since the attainment of Independence. A tremendous opportunity for rapid development within the framework of a free and democratic society now lies ahead. On the choice of the means and methods of achieving our objectives will largely depend the success or failure of our plans, and in our hurry and impatience to get quick results, let us beware of the temptation to jettison economic systems or working philosophies based on human nature which have stood the test of time.

In conclusion, may I repeat that if I have expressed doubts, it is not because I fear that business or industry or the few well-to-do may suffer a contraction of their income or profit, but because I sincerely believe that the voluntary enterprise of our people, individually and in groups, has a great part to play in ensuring the success of the plans on which the country has embarked.

Two Million Ton Project

Let me now turn to our own affairs and particularly to the important project for the further expansion of our Jamshedpur plant to an annual capacity of two million tons of ingots or a million and a half tons of finished steel, about which most of you must have by now heard.

First let me give you a little background. As part of their estimates of the country's consumption of steel under the Second Five Year Plan, Government have set the target for steel production for 1961 at 6 million tons of ingot steel or 41 million tons of finished steel.

Under the declaration of industrial policy of 1948, Government had decided that all major expansion schemes in the steel industry amongst others should be undertaken by the State. In pursuance of this declaration, Government propose to erect three of steel works of about a million tons each and to operate them under State ownership and management.

The addition of this capacity to the existing or planned capacity of the steel works in the private sector will still leave the country short of the target. Instead of building a fourth steel plant, Government have, I am glad to say, agreed that the existing plants in the private sector should be allowed to expand further. This is a decision to be greatly welcomed both because the three projects already planned will by themselves place a considerable burden on Government's financial and managerial resources and because the existing plants can be expanded more quickly and at less cost.

As the present programme already under way at Jamshedpur will bring our capacity by 1958 to 1,300,000 tons of ingots, the new expansion project involves the creation of an additional 700,000 tons of capacity. Preliminary studies have indicated that the project is both technically feasible and economically sound, that it can be completed within three years and that the cost will be in the neighbourhood of Rs. 60 crores. This compares favourably with the cost of putting up an entirely new plant. The technical details of the project are at present under investigation by a firm of American consulting engineers and by our own Management.

The Problem of Finance

The financing of such a costly project obviously poses a serious problem. When discussing the new expansion scheme with Government, we stated that, in order to maintain the financial stability of the Company, not more than half the estimated capital cost should be financed from borrowings. The balance of Rs. 30 crores should be financed from internal resources and from the issue of fresh capital.

I am glad to say that Government have recently decided on doing away with differential prices as between one producer and another, and pending an enquiry by the Tariff Commission which is at present in progress, they have provisionally increased our retention prices by an average of about Rs. 54 per ton with effect from April 1955. A condition of this and any further increase that may be granted on the recommendation of the Tariff Commission is that the whole of the resulting accretion to our profits, after paying tax on it, should be granted on the development account and used solely for purposes of expanding the Company's productive capacity towards the two million ton target. A further condition is that, if we do not go ahead with the project, the net additional profits accruing from the increase in prices must be repaid to Government.

The Government resolution referring the question of a revision in prices to the Tariff Commission

provides that the prices should be such as would enable both the major producers to obtain a portion of their capital requirements for their current and additional expansion programmes from internal resources and as would enable them to raise the balance from outside sources. We have made the necessary representation to the Tariff Commission for a substantial increase in the new retention prices. It is expected that the Tariff Commission will proceed with the inquiry quickly and make an early report to Government.

Even if the Tariff Commission's recommendation and Government's ultimate decision enable us to accumulate over four or five years, as I hope, Rs. 20 crores for the expansion project, there will still remain a sum of approximately Rs. 10 crores to be found.

Capital Issue

The Directors have come to the conclusion that the only source from which this sum of Rs. 10 crores can and should be obtained is a fresh issue of equity capital. Detailed proposals are being formulated to this end and will be submitted shortly for your approval at an extraordinary general meeting. While I cannot obviously anticipate at this stage what dividends will be paid in future, there seems to me to be no reason why, pending the completion of the project, the yield on the enlarged capital on the basis of present market values cannot be maintained.

I have already shown that this major project cannot be financed by borrowings or internal savings. Apart, however, from the need for additional funds, there is an overwhelming case for an increase in the share capital of the Company. Taking into account the present modernisation and expansion programme, the two million ton programme and various ancillary projects and the normal annual capital expenditure, the gross block of the Company, capital expenditure, the gross block of the Company, during the next four years or so, will probably rise to Rs. 140 crores or more and its borrowings to something like Rs. 50 crores. It is clear that on the basis of such enormous figures, an amount of Rs. 3.74 crores, which is the total capital provided in cash by the equity shareholders, including the premium on deferred shares, would be disproportionately low. Even if we add up the preference shares, the existing ordinary shares and the new issue which we now propose to make, it is evident that a total share capital of even Rs. 27 crores will be on the low side for a Company in which not far from Rs. 200 crores will have been invested. This does not mean that I visualise further issues of capital for cash in the near future. The best solution of the problem will lie in the capitalisation of reserves and in corresponding issues of bonus shares. The fact that for so many years shareholders have had to be satisfied with low dividends provides a strong case for such a policy and I hope that the Government of India will grant the necessary sanction as the occasion arises.

Taking all these factors into consideration, I am sure that shareholders will agree that the proposed issue of fresh capital is necessary if we are to go ahead with the project at all. On that assumption, let me now briefly analyse the merits of the scheme itself.

Merits of Project

To my mind there can be no question that the proposed expansion of our plant will bring significant benefits to the Company, its shareholders and its employees, as well as to the country.

It will increase the Company's finished steel capacity by 60%.

It will, as a result of the increased output and the better spread of overheads, help to reduce costs.

It will largely solve the intractable problem of excessive labour which has plagued us all these years.

Finally, it will provide the opportunity for the Company to make an important contribution to the country's economic expansion. I have, in previous speeches as well as in this, stressed that Free Enterprise has a major role to play in the country's regeneration. It would, therefore, be wholly inconsistent with such a view if, when Government did show their willingness to take our assistance, we were to withhold it.

As the implementation of this scheme must, apart from other considerations, depend on the availability of some Rs. 30 crores of foreign borrowings to pay

for the plant and equipment to be purchased abroad, Mr. J. D. Choksi, Mr. A. D. Shroff and I, and later Sir Jehangir Ghandy, visited the United States to investigate the sources of capital and plant available there. We found, for reasons which need not be elaborated here, that American private capital, which has unlimited opportunities in its own country and in other parts of the world where the climate for private investment is exceptionally favourable, would not be available to us to any appreciable extent either in the form of loans or of share capital.

We held discussions with the World Bank and the Export-Import Bank. Both these great financial institutions received us, and listened to our proposals, with cordiality, courtesy and responsiveness. We came away satisfied that the required long-term finance would be made available to us.

Finally, we took the opportunity of calling on some of the highest ranking officials of the American Government and I should like to take this opportunity of expressing our deep appreciation of the interest they took in our proposals. I believe that the United States Government is anxious to help India in her industrial development.

Further progress in negotiating the necessary finance in the United States must await the completion of the technical studies of the project now under way by consulting engineers and our own management. We expect that stage to be reached in the next few weeks, when negotiations with the U. S. Government, the Export-Import Bank and American manufacturers will be resumed. We shall spare no effort to ensure that the scheme as finally adopted is technically and financially sound and that, once it is approved, it is pushed through with the maximum of energy and speed. I am sure in this effort we can count on the support of our shareholders and employees.

Labour's Role

I have specifically mentioned our employees because they have as vital a stake in this project as anyone else and because they will have also an important responsibility in its implementation.

We have in recent years made it clear to them that there was no room left for any appreciable increase in their emoluments except through an improvement in their productivity. We obviously cannot afford to embark upon a scheme of this magnitude if, at the end of it, we are still to be burdened with the gross excess in our labour force which we have today.

The new Government plants will be of the latest type, employing a much lower number of men per ton of capacity than we do at Jamshedpur. It is obvious that if Government pays the same wage rates as we do, their labour cost per ton of steel will be substantially lower than ours unless our output per capita is correspondingly increased. Fortunately, the proposed expansion will provide the opportunity to achieve smoothly and painlessly a substantial increase in the output per capita at Jamshedpur involving no retrenchment and ensuring job security and higher earnings to our workers in the years ahead. I sincerely trust that they will appreciate and seize the wonderful opportunity which the scheme will bring them of serving their own interests as well as those of the country.

As usual at these meetings, it gives me great pleasure to express to our Management and staff throughout the Company's vast organisation our appreciation of the excellent work they have put in during the year and our thanks for their co-operation.

Company Meetings

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

CHAIRMAN MR. S. K. SEN'S

REVIEW

Addressing the Fifth Annual General Meeting of Sen-Raleigh Industries of India Ltd. held at Calcutta, on Saturday, August 27, 1955, Mr. S. K. Sen, Chairman of the Company said:—

It gives me great pleasure to place before you the Accounts for the period ended 30th September, 1954. The progress made by the Company during the year under review resulted in a satisfactory reduction in previous losses even after making provision for arrear and current Preference Dividends, and writing off all Preliminary Expenses.

The higher gross profit at Rs. 14,21,864 has been achieved both by the increase in the total number of Bicycles manufactured in the year as well as by reduction of imported components due to more items coming into manufacture at the factory. The year closed with a sale of approximately 53,000 Bicycles. Wittkop Saddles and Union Chains made by the Company were introduced in the market in some quantity and reports from all markets indicate that these were well received and were up to the expected standards. Your Company can be proud of having produced a Chain which is in all respects equivalent to the best imported ones. The nett turnover at Rs. 88,20,000/- as against Rs. 60,28,000/- of the previous year shows an increased sales value of about Rs. 28,00,000/-. Depreciation allowed so far exceeds Rs. 15,25,000/-. The Company has up to date made provision for payment of Preference Dividends to a total of over Rs. 3,30,000/-. Provided the progress is maintained, the prospects of the Ordinary Shareholders participating in the profits of the Company appear much brighter now that Preference Dividends have been provided for up to date. It is anticipated that the future profits are likely to cover the balance of losses carried forward from depreciation and a start towards the payment of Ordinary Dividends may be looked forward to at an early date.

Continued Demand

The demand for the Company's products continued to be good and the year closed with a carry forward of orders for all the lines introduced within the period which included the major marks Raleigh, Rudge, and Humber in addition to the Robin Hood Bicycles, Union Chains and Wittkop Saddles.

There are certain features in the Government policy for liberalisation of imports announced in the second-half of 1954 with which we are not fully agreed. Liberalisation of licences when internal production is expanding does not seem to be in accordance with the declared policy of only filling up the gap between demand and indigenous production through imports. There also appears to be a mistaken belief that imports are still necessary to maintain standards and lower prices. Now that Bicycles to the World's highest standards are manufactured in India, there can be no fear of lower standards if imported products do not come into the country. The price trends of imported Bicycles are also hardly related to those of the indigenous ones and there is little likelihood that liberalisation of imports would help in bringing down prices of the indigenous Bicycles. I believe, it is only through higher production and healthy competition amongst indigenous manufacturers that price reduction can be achieved.

Pagladanga Factory

The Company completed the Wittkop Saddle Top factory at Pagladanga, Calcutta, and brought into production the Saddle, Plating and Chain Plants. Since then the production of Hubs, Spokes, Pedals have commenced and production of Chainguards and Seat Pillars is expected to commence shortly.

In planning to build 200 Quarters for the workers of the Company, your Directors have in mind the development of the nucleus of a Colony which may be gradually expanded as funds permit to house all employees of the Company and build up a Community Centre developed entirely by the Company in the Private Sector. It has always been our object to build up the healthiest relationship possible between the workers of the Company and the Management and the housing scheme is one more feature of this policy. We feel that the expenses incurred on the housing scheme would be fully justified in the long run.

It gives me satisfaction to report that a long term agreement with the Employees' Union is now in the offing which would lead to larger and improved production in the future.

Before closing, I would like to pay a tribute to my colleagues on the Board and to the staff and workers who have helped to make this one more year of satisfactory progress.

RUBY GENERAL INSURANCE CO., LTD.

CHAIRMAN MR. B. M. BIRLA'S SURVEY

The following are extracts from the address delivered by Mr. B. M. Birla, Chairman, at the Nineteenth Annual General Meeting of the Shareholders of the Company on Tuesday, 30th August, 1955.

Gentlemen,

I welcome you to the 19th Annual General Meeting of the Company.

The Report of the Directors and the Audited Accounts for the year 1954 have been with you for some time and I expect you would allow me to take them as read.

The following figures will reveal the progress of the Company.

TABLE A—GENERAL INSURANCE

	Nett Premiums		
	1952	1953	1954
	Rs.	Rs.	Rs.
Fire	25,94,000	25,90,000	32,76,000
Miscellaneous	34,69,000	35,42,000	37,11,000
Marine	9,75,000	10,48,000	12,78,000
Total Rs.	70,38,000	71,80,000	82,65,000

TABLE B—LIFE ASSURANCE

	1952	1953	1954
	Rs.	Rs.	Rs.
New Business	2,49,99,000	2,63,63,000	3,41,57,000
Life Assurance Fund	2,02,78,000	2,39,91,000	2,83,09,000
Premium Income	56,07,000	57,67,000	62,73,000

Our total reserves have increased this year by Rs. 48,28,000/- Rs. 41,61,000/- in Life and Rs. 6,67,000/- in General Department.

Under the competitive conditions that obtain today in our trade, the all round increase in the income of our General Department is gratifying. The recent downward revision in Fire Tariff rates is yet another obstacle which general insurers will find rather difficult to meet and I for one feel that the results may well be the complete opposite to those envisaged by the sponsors of this move. Our efforts in respect of overseas business have yielded fruit and premium income from this source has substantially increased. There is still scope for further increase of income in this direction and a cautious policy of expansion in the Overseas market followed by our Company, coupled with the correct underwriting policy followed by us at home, will make for increasing progress for this Company from year to year.

Marine Insurance business continued to face unhealthy competition due to rate cutting by foreign markets and increased demand for wider covers with nominal extra charge. Due to this, Regional Councils were obliged to withdraw tariff for many ports to enable Indian Companies to maintain their portfolio. I hope the World Marine Conference which is going to be held in September at Monte Carlo would take steps to put Marine Insurance business on sound footing.

The Miscellaneous Department has been consistently showing losses for the last many years, primarily because the Automobile section continued to show an increasingly unfavourable loss ratio. While it is regretted that this should be so, this unhappy experience is the feature of most general insurers throughout the world. In this connection it is pertinent to note that the 1953 experience of English Companies disclosed an underwriting profit of 2% and odd only. Among the reasons for this state of affairs is the increasing consciousness of the right of the public to claim damages from insurers whether the same falls within Policy Conditions or not. It is possible that if the losses are strictly surveyed and relative claims settled as per actual losses, the Department concerned should be able to show profits. This can only be possible if the various insurers, individually follow a stricter claims settlement policy. We on our part are following a strict underwriting policy in this regard and efforts are made to develop other miscellaneous business which would to some extent offset the results of the Automobile Department.

The working of the Life Department shows a distinct improvement in all directions as is evident from the comparative figures given above. The Life fund has increased by an amount of Rs. 43,17,000/- as against Rs. 37,13,000/- and the premium income has increased by Rs. 5,06,000/- as against Rs. 1,60,000/- in the previous year respectively.

Your Directors have decided to have another valuation of our Life Department for the year ending 1954 and we expect that it will show substantial surplus to enable us to give higher bonus to our policyholders.

The bogey of Nationalisation is in the air. I feel that before nationalising any new industry, Government ought to take stock of what they have done up till now. If one goes into the working of nationalised undertakings, he will find that they are not properly managed and cost to the public has increased. Insurance is one of the few industries which has been able to hold its own against foreign competition without any protection from State.

Our Companies are also making headway in Foreign countries. In the year 1953 Indian Companies acquired a premium of Rs. 8,29 Crores in Foreign countries against net Rs. 6,77 Crores premium completed in India. Cost of insurance to public as you are aware is going down from year to year due to competition among Insurance Companies. If Insurance Industry will be nationalised it would bring stagnant condition in this business which is developing every year and hence I hope Government will allow this industry to play its successful part in the interest of our country.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

GOOD DEMAND FOR FUNDS

Wednesday, 31st August.

MONEY conditions have remained tight during the past week following the announcement of the seven new State loans. The interbank call rate has been maintained at 3 percent, and there are borrowers over at this figure. Advances have remained fairly steady throughout the week and at a fairly high level considering the time of year. This is chiefly due to the fact that sugar stocks have not been moving satisfactorily. Demand from the jute industry has remained quiet and funds are trickling back from upcountry areas.

The market for export documents has been fairly quiet, with only a few tea and gunny bills coming to hand. Remittance has been in moderate demand. Sterling has remained steady and the local dollar rate is unchanged at Rs. 48½.

Bullion was quiet. Silver dropped from the previous week's level of Rs. 168 to Rs. 165-2, quoted today. The rate for forward delivery was quoted at Rs. 164-12. In London silver declined from 78½d to 78½d. The price of foreign silver in New York remained unchanged at 90½ cents.

In sympathy with silver, gold ruled easier and the price fell from Rs. 95-14 to Rs. 95-1. The sovereign at Rs. 61-12 showed little change.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Wednesday, 31st August, 1955, totalled Rs. 1,66,00,000. The average rate of acceptance rose from Rs. 2-8-5 to Rs. 2-8-6 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 43 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 5th September, 1955. During the week ended 26th August, 1955, Government of India Treasury Bills for Rs. 10,60,00,000 were sold in favour of the Reserve Bank of India.

Declines of Rs. 13.55 crores and Rs. 12.89 crores in the total note issue and notes in circulation to Rs. 1,315.82 crores and Rs. 1,285.09 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 26th August, 1955. The contraction in currency was adjusted by reducing foreign securities by Rs. 15 crores to Rs. 622.04 crores. This was done by a transfer to the Banking Department where balances held abroad rose by Rs. 10.20 crores to Rs. 95.50 crores. Deposits of the Government of India and other Government accounts rose by Rs. 13.70 crores and Rs. 10.53 crores to stand at Rs. 104.65 crores and Rs. 36.42 crores. Balances of commercial banks at Rs. 51.36 crores showed a decline of Rs. 44 lakhs. Investments were up by Rs. 27 lakhs to Rs. 62.65 crores. Other loans and advances fell from Rs. 33.38 crores to Rs. 28.15 crores, of which advances to scheduled banks against usance bills totalled Rs. 12.14 crores (Rs. 11.64 crores). These advances amounted to Rs. 184.39 crores since 1st January, 1955.

The return of the State Bank of India for the week ended 19th August, 1955, shows a rise of Rs. 3.44 crores in total deposits to Rs. 214.86 crores. Investments in Government Securities and other authorised investments are up by Rs. 1.02 crores and Rs. 45 lakhs to Rs. 95.39 crores and Rs. 10.27 crores, respectively. Advances, including loans, cash credits and overdrafts and bills discounted and purchased have increased by Rs. 8.21 crores to aggregate Rs. 112.50 crores. Cash and balances are, in consequence, shown at Rs. 19.67 crores or Rs. 84 lakhs higher.

The statement of the position of scheduled banks for the week ended 19th August, 1955, discloses Demand and Time liabilities at Rs. 601.39 crores (Rs. 8.69 crores on account of borrowings from banks) and Rs. 407.64 crores (Rs. 3.84 crores) compared with Rs. 607.65 crores (Rs. 12.08 crores) and Rs. 409.24 crores (Rs. 4.01 crores), respectively in the previous week. Cash has increased by 1 lakh to aggregate Rs. 34.49 crores, while balances with the Reserve Bank have decreased by Rs. 2.16 crores to stand at Rs. 48.16 crores. There is a rise of Rs. 4.59 crores in investments to Rs. 378.03 crores. Advances and bills discounted at Rs. 620.15 crores reveal an increase of Rs. 21.02 crores. The ratios between total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.2 percent and 61.5 percent against 8.3 percent and 58.9 percent.

The following is a statement of the cash balances of the Central Government on the last day of May 1955:

	Rs.
(1) At the Reserve Bank of India in India	54,03,63,000
(2) At treasuries in India	1,93,37,000
(3) In England (Sterling converted at 18d. the Rupee)	2,38,76,000
Total	58,85,76,000

The directors of the MERCANTILE BANK OF INDIA LTD., have declared an interim dividend of 7% less tax.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during June 1955 amounted to Rs. 1,362 lakhs as compared with Rs. 1,274 lakhs in the corresponding month of the previous year. The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,073 lakhs as against Rs. 1,066 lakhs, export duties for Rs. 277 lakhs as against Rs. 189 lakhs and land customs and miscellaneous for Rs. 12 lakhs as against Rs. 19 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,276 lakhs as compared with Rs. 777 lakhs. During the three months, April to June 1955, the grand total of gross customs and Union excise revenue realised was Rs. 7,422 lakhs as compared with Rs. 6,250 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 3,053 lakhs as against Rs. 3,020 lakhs, export duties for Rs. 757 lakhs as against Rs. 588 lakhs, land customs and miscellaneous for Rs. 49 lakhs as against Rs. 67 lakhs and Union excise duties for Rs. 3,563 lakhs as against Rs. 2,575 lakhs.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during July 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries; Exports Rs. 5,100 lakhs; re-exports (transit trade—Rs. 1 lakh) 50 lakhs; imports (transit trade—Rs. 2 lakhs) 4,999 lakhs; total trade Rs. 10,149 lakhs. Treasury: Exports of currency notes Rs. 30 lakhs; exports of others nil, imports of gold Rs. 1 lakh; imports of currency notes Rs. 76 lakhs; imports of others nil. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit

trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 151 lakhs.

It was announced in 195

BRITISH EUROPEAN AIRWAYS

Gielle had buyers at Rs. 25 as did Poobong at Rs. 16 and Sungma and Tukvar at Rs. 13-12 and Rs. 21 respectively. Baitakhal appreciated sharply to Rs. 14-4 whilst Kunchunpore were asked for at Rs. 20-4 and a large volume of business was written in Patrakola at around Rs. 204. Hansqua had strong buyers at Rs. 31-12 whilst Jayshree were done at around Rs. 15-12 and New Terai were slightly better at Rs. 40.

The net profit of the IMPERIAL TOBACCO COMPANY OF INDIA rose by Rs. 16 lakhs to Rs. 1.69 crores after providing Rs. 1.49 crores (Rs. 1.10 crores) for taxation and Rs. 45.39 lakhs (Rs. 42.75 lakhs) for depreciation. Bringing in Rs.26,09,646 there is a balance of Rs.1,94,97,127. Capital reserves get Rs. 3.68 lakhs (Rs. 4.51 lakhs), General reserve Rs. 20 lakhs (Rs. 25 lakhs), and transfer to fixed assets and replacement reserves Rs. 25 lakhs (Rs. 22.32 lakhs). The dividend has been raised from 6% to 8%, including an interim of 4%. The carry-forward is Rs. 25,00,733.

Increasing depreciation from Rs. 1.38 lakhs to Rs. 2.98 lakhs and meeting a capital loss of Rs. 2.26 lakhs (Rs. 1.37 lakhs) on discarded machinery by transferring an equivalent amount, the profit of the CHAMPDANY JUTE COMPANY amounted to Rs. 3.12 lakhs for the half-year ended last March, compared with Rs. 1.72 lakhs. Adding Rs. 22,543 brought in there is Rs. 3,34,934. The dividend has been raised by Re. 1 to Rs. 4 a share, leaving a carry-forward of Rs. 98,278. The directors say that shortly before the close of the half-year under review the installation of the new preparing, spinning and winding machinery at Champdany Mill was completed. The outlook for the current half-year is not discouraging.

The RUBY GENERAL INSURANCE COMPANY increased its profit by Rs. 1.74 lakhs to Rs. 3.35 lakhs for the year ended last December. Bringing in Rs.20,010 there is Rs. 3,55,248. The dividend has been doubled to 8 annas a share. Debts reserve gets Rs. 20,000 (Rs. 27,500) and taxation reserve Rs. 1.05 lakhs (Rs. 25,000), leaving a balance of Rs. 30,348 to be carried forward.

The net premium of the fire department rose from Rs. 25.90 lakhs to Rs. 32.76 lakhs, miscellaneous department from Rs. 35.42 lakhs to Rs. 37.11 lakhs and marine department from Rs. 10.48 lakhs to Rs. 12.78 lakhs. The life department issued policies of Rs. 3.42 crores against Rs. 2.64 crores.

Bringing in Rs. 1,32,654 the credit balance of TRITON INSURANCE COMPANY totalled Rs. 6,39,378 for the year ended last December. General reserve gets Rs. 1.25 lakhs (Rs. 3 lakhs) and reserve against depreciation of investments Rs. 1 lakh. The dividend has been raised by 10% to 45%, including a bonus of 5%. The carry-forward is Rs. 2,09,628. The marine department showed a surplus profit of Rs. 4.17 lakhs (Rs. 4.06 lakhs), fire Rs. 3.94 lakhs (Rs. 2.11 lakhs) and miscellaneous Rs. 42,254 (Rs. 37,502).

The working of SEN-RALEIGH INDUSTRIES OF INDIA LTD., for the year ended last September produced satisfactory results. The net turnover increased by Rs. 28 lakhs to Rs. 88.20 lakhs. As a result the gross profit rose to Rs. 14.22 lakhs. This has been achieved by an "increase in the total number of bicycles manufactured in the year as well as by reduction of imported components due to more items coming into manufacture at the factory". The company has made provision for arrears and current preference dividends. Mr. Sen, hopes that the company will be able to effect this at an early date in view of the progress it is making.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

ANXIETY OVER COMPANIES BILL DEBATE

(FROM OUR BOMBAY CORRESPONDENT)

New Issue of State Loans

Among the events which have diverted the attention of the business community from the progress of the Companies Bill are the issue of fresh State loans to the extent of about Rs. 12 crores by seven of the ten States which originally came on the market on 16th August, the bank award and the review of the economic situation by Mr. J. R. D. Tata, Chairman of the Tata Iron & Steel Co. Ltd., on the occasion of its annual general meeting. While there is no reason to entertain any doubt regarding the success of the seven State loans, these fresh issues have caused a good deal of surprise not only within the narrow circles of the capital market but in the wider ones related to commerce and industry as well. This new departure in the Government's borrowing policy is likely to throw the capital market itself out of gear, giving rise to uncertainties about the borrowing programmes of the Centre and the States in the future. Over-feeding the market with progressively bigger parcels of gilt-edged might scare away investors inasmuch as it reduces the chances of capital appreciation even on a small scale. What is more sinister, however, from the point of view of industry is that it might be difficult for it to find finance for the expansion which is expected in the private sector. As hinted in last week's despatch, industrialists were just beginning to think in terms of inviting fresh equity capital in view of the improvement in the supply of funds. If these supplies are to be drained away by the Government, there would be little left with the public for long-term investment in industry and the private sector might then come to be accused of being "shy" as it was only a few years ago. It is also feared that industry in the private sector might be gradually driven to seek financial aid of a capital nature from the Government or Government-controlled institutions, which would result in control of management from within, in addition to the control which is exercised from outside. It remains to be seen whether several issues of debentures and preference and ordinary capital which are expected will now be forthcoming in view of the supplementary borrowing by as many as seven States.

Reactions to Bank Award

The bank award has not met with much criticism either from the left or the right. This is possibly not because the award is equally acceptable to both sides but because there is a desire on the part of all concerned to put an end to this long-drawn-out dispute. It can be easily seen that the banks are not feeling very happy about it. But they are happy inasmuch as it puts an end to

Mr. C. H. Bhabha, President of the Indian Bank's Association, in a statement on the award, observed that no useful purpose would be served by commenting upon the recommendations of the Gajendragadkar Bank Award Commission. At the same time, he pointed out that the enforcement of the recommendations would undoubtedly mean a large increase in the annual expenses of banks and that in order to maintain their financial soundness they would have to think out ways and means of increasing their income. After referring to the suggestions of imposing a ceiling on the rates of interest paid by banks on deposits and a floor for the rates of interest on advances, Mr. Bhabha went on to give a broad hint that the banks would now have to consider very seriously the question of giving effect to these recommendations along with other means of increasing their income. The general clientele of the banks, however, are likely to question Mr. Bhabha's claim that hitherto the banks have refrained from passing on a portion of the increase in the expense of banks, like those of all other industrial establishments since the war, to their clients, and that they had borne this burden themselves entirely, in view of the fact that not only have the charges for bank services gone up but the quality of this service itself has suffered considerably. Mr. Bhabha, however, warned the clientele openly that the sheer necessity of maintaining their financial soundness would now compel the banks to force their clients to share the burden substantially with them. Mr. Bhabha concludes his statement with the hope that bank managements would do their best to maintain harmonious relations with their workmen and that the latter will reciprocate and will work efficiently, both parties realising that their true interest lies in co-operating with each other in bringing about the expansion of banking facilities needed for the economic development of the country.

While this note of resignation is absent from the comments of the leaders of bank employees, reading between the lines one sees that only mild dissatisfaction is expressed at the award with regard to some of the points, and this also is perfunctory. Mr. P. K. Menon, General Secretary of the Federation of Bank Employees in Bombay, while commenting on the award said that "it represented a partial acceptance of the All-India Bank Employees' Association's demands in the case of Class A and B banks and total rejection in the case of Class C banks." On the following day Mr. F. M. Pinto, President of the Bombay State Bank Employees' Federation, warned the employees to be prepared for a wage cut. He would not say that the award was satisfactory but admitted that it was definitely an improvement on the existing conditions.

Mr. J. R. D. Tata's Speech

All these happenings in the earlier part of the week were overshadowed by the speech of Mr. Tata at the annual meeting of the Tata Iron & Steel Co. last Thursday. While the speech was naturally awaited with considerable interest because of the position of this company both in the world of industry and that of investment, Mr. Tata has during the last four or five years established a tradition of making these occasions an opportunity for examining the economic health of the country in view of the broad trends of Government policy. These occasional utterances by the head of the largest and most respected industrial house in the country are regarded as reflecting the aims and aspirations of private enterprise on the highest plane. After expressing generous appreciation of the outstanding achievements of the Government in overcoming great difficulties and stabilising the country's economy since the attainment of independence, Mr. Tata pointed to the tremendous opportunity for rapid development within the framework of a free and democratic society which lay ahead. At the same time, he gave warning that "on the choice of the means and methods of achieving our objectives will largely depend the success or failure of our plans and in our hurry and impatience to get quick results, let us beware of the temptation to jettison economic systems or working philosophies based on human nature which have stood the test of time." Conceding that bold planning and the determined execution of large schemes of development were essential for raising living standards, relieving unemployment, giving opportunities to all and ensuring a reasonable degree of social justice, Mr. Tata believed that all the people in the country were agreed that the principal means of achieving these objectives was to increase total production as rapidly as possible because, without an increase in the total wealth, there would remain nothing to distribute but poverty. Mr. Tata then referred to the fact that the stage in this country was set for fruitful co-operation between the Government on the one hand and industry and business on the other, and quoted reassuring statements made in this connection by the Prime Minister, the Minister for Commerce and Industry and the Finance Minister.

While giving full weight to these encouraging pronouncements, Mr. Tata said that it would be unrealistic if no notice was taken of certain events in the past year. These included recent amendments to the Constitution, the proposed amendments to the Companies Act, the fiscal policy of the country in relation to the report of the Taxation Enquiry Commission; certain aspects of the second five year plan; and, finally, the manner in which the Avadi resolution on the socialistic pattern of society was sought to be interpreted and implemented. The Fourth Amendment to the Constitution, said Mr. Tata, had seriously undermined the right to property, which had been recognised through the ages as a fundamental human right and which the United Nations had solemnly affirmed in a Declaration to which the whole world including India was a party. While it was reassuring to note that the present Government had every intention, as stated by the Prime Minister, of paying a fair price for any undertaking they might take over, there was reason to fear that the acquisition of such sweeping powers involved a serious risk that these would one day become in the hands of a future Government instruments of oppression. Referring to the Companies Amendment Bill now under discussion in Parliament, Mr. Tata said that it was encouraging to note that as against some extreme proposals made during the debate which would change the entire character of the Bill from constructive improvement of company management to one striking at the very root of the whole system of free enterprise, some moderate voices had been heard on the floor of the House. He hoped that Parliament would refrain from placing on the Statute Book provisions which would permanently cripple elements otherwise capable of assisting in the country's economic development. Commenting on the report of the Taxation Enquiry Commission, Mr. Tata remarked that while from the point of view of the private sector, some recommendations in the report in connection with the development rebate were beneficial, certain other recommendations, notably those in respect of Section 23A of the Income-tax Act, might lead to a serious depletion of resources hitherto available for development purposes. Mr. Tata also expressed the fear that the abnormally high levels of individual taxation recommended would act as a serious disincentive to productive effort and enterprise.

Proposals for the Second Plan

Touching on the subject of the second five year plan, Mr. Tata said that while the necessity for bold planning was unquestioned, *some of the proposals* were such as to raise doubts in one's mind. For instance, could the proposed targets be attained without recourse to a much higher degree of deficit financing than at present contemplated, with the consequent risk of inflation which would deprive the mass of the people of the fruits of their toil? Would not the large-scale development of heavy industry at one end and cottage industries at the other, without an adequate development at the same time of secondary consumer goods industries in between, lead to a lop-sided pattern of development which might result in inflation, scarcity of consumer goods, and also in a substantial part of the capital investment in heavy industry remaining unproductive for some years for want of a market?

The second part of Mr. Tata's speech dealt with certain specific problems of the Company amongst which the most important one was the two million ton expansion scheme at Jamshedpur. In this connection, Mr. Tata explained that the present programme already under implementation would bring the total capacity of the Company's plant by 1958 to 1,300,000 tons of ingots and the new expansion project would involve the creation of capacity for an additional 700,000 tons at a cost of Rs. 60 crores, which compared favourably with the cost of putting up an entirely new plant. Even if the Tariff Commission's recommendation and the Government's ultimate decision on the revision in prices enabled them to collect over the next four or five years about Rs. 20 crores to finance the expansion project, it would still leave a gap of Rs. 10 crores which the directors had decided to fill partly by issuing fresh equity capital. Mr. Tata said that additional equity capital had become necessary apart from the need for finance for the expansion project, on another consideration also. With the completion of the two million ton expansion programme, the gross block of the company during the next four years would amount to Rs. 150 crores, while its borrowings would be something around Rs. 50 crores. The total equity capital of less than Rs. 4 crores would certainly be disproportionately low. Dwelling on the rôle of labour, Mr. Tata said that in recent years it was made clear to labour that there was no room left for any appreciable increase in their emoluments except through an improvement in their productivity, and that obviously the Company could not afford to embark upon a scheme of this magnitude if, at the end of it, it was still to be burdened with the gross excess in Tisco's labour force, which it had today. Mr. Tata pointed out that the new Government plants would be of the latest type employing a much lower number of men per ton of capacity than at Jamshedpur, and that it was therefore, obvious that if the Government paid the same wage rates as Tisco, their labour cost a ton of steel would be substantially lower, unless Tisco's output per capita was correspondingly increased. Fortunately the proposed expansion would provide the opportunity to achieve smoothly, and painlessly a substantial increase in the output per capita at Jamshedpur involving no retrenchment and ensuring job security and higher earnings to Tisco workers in the years ahead.

clearances showed rises of 2.8 points and 0.1 point, respectively.

Correlating all the factors the Capital Index of Indian Industrial Activity declined by 3.2 points during February, 1955.

NEED FOR HIGHER U.K.
PRODUCTIVITYWAGE DEMANDS STILL
MOUNTING

(FROM OUR LONDON CORRESPONDENT)

IF the stock markets are any indication of opinion about the economic outlook, the latter can certainly be classified as being uncertain, for both gilt-edged and equity shares have moved up and down from day to day without any apparent justification, influenced by such tenuous factors as the strength or weakness of sterling exchange or of the Wall Street market; the fact that Thursday passes without any further raising of the Bank rate, and even an overnight stay by the Chancellor of the Exchequer after dining with the Prime Minister at Chequer. Yesterday saw the second meeting of the Cabinet since the recess. Routine business was again the official explanation—and the talks on Cyprus would represent sufficient cause—but a further report from Mr. Butler is widely suggested as finding a place on the list of business, with the possibility of an autumn Budget by no means ruled out. The speculations produce neither confirmation nor denial, so it may be that the authorities are not averse from a period of uncertainty and a general easing of activity, and especially unhealthy activity, pending their measures against inflation beginning to show some real results and a more balanced assessment of the situation proving feasible.

In at least one direction the credit squeeze appears to be meeting with a measure of success. The latest banking returns, made up to 17th August and therefore representing a period of about a fortnight since the Chancellor's request for cuts in loans, the "big five" show that their advances are down by just over £30 million. The target of 10 per cent is still a long way off, but as the latest Barclays Bank Review points out, "there can be little hope that the banks' attitude will soften in the near future." At the same time, it is hinted, even though it may not be categorically stated, in official quarters that the August figures for the gold and dollar reserve and the returns for overseas trade will make a somewhat better showing.

Terms of Trade Improve

For what it is worth in assessing Britain's balance of payments position, it is also satisfactory that the terms of trade are again moving favourably. In July a fall in the import index of one point to 102 (1954=100) was accompanied by a rise of one point to 103 in the index of export prices. In consequence, the terms of trade—the ratio of import to export prices—fell by two points to 99, the most favourable level since the early months of last year. The lower prices of imports were due to a fall of three points in the index for the food, beverages and tobacco group, which has hitherto always resisted this trend, and it is no less welcome even though it has been accounted for largely by seasonal decreases in the prices of tomatoes and new potatoes and a further fall in average prices of arrivals of tea. On the export side the improvement in manufactured goods prices was again general, as in June, with the exception of textiles. Metals, engineering products and other manufactures all showed rises of one point.

Lest one be tempted to read too much into these favourable factors, let us take one more look at how Barclays Bank see the inflationary threat. The Review goes on to point out that the effectiveness of any antidote to inflation which the banks may apply may be counteracted by the absorption of additional poison over which they have no control. For one thing, it emphasises, an immense amount of spending power is today in the hands of people who do not use banking accounts at all. "If they receive increased incomes, as they sometimes do, without any increase in their output, the effect is highly inflationary." Mr. Butler is also reminded that even more important in the context of inflation is the capital expenditure of the Government itself. "It would seem to follow that in the early part of this year, when the Government perceived that the pump had begun to run too fast, it should immediately have lengthened the timetable of its own expenditure on new projects, however desirable each one of them might appear to be."

Pay Claims Widen

Little heed is being paid to either of these obvious dangers to the country's economy. It is true that the Chancellor of the Exchequer has indicated some slowing down of the Government's capital expenditure programme, but this is still regarded in many quarters as being too large in present circumstances. He has also, just issued another warning that this country's first need in the economic field is a rise in productivity large enough to match at least those of our great industrial rivals overseas, pointing out that higher productivity would not only keep our export prices in line but would also halt the rise in living cost at home. There is an obvious limit to the increase of productivity, namely, the limit of the country's resources and its labour force. In the case of the latter we are very near the bottom of the barrel, but the majority of miners, for instance, despite the forthright comments of some of their leaders, are opposed to working alongside foreigners in the pits. Mechanisation, or automation, provides some

the benefits of greater productivity are being dissipated by the rising wage bill.

More workers received pay increases in the first seven months of this year than in the whole of 1954. Altogether 10,676,000 were given rises totalling £4,201,000 a week, compared with 10,117,500 whose aggregate weekly increases were £3,487,600 last year. The cost of living has risen, the retail prices index in July was 150, against 145 in July last year (June, 1947=100), but over the same period the index of wage rates has risen from 142 to 153. Stoppages of work due to disputes (mostly on the flimsiest of pretexts) already total 2,900,000 working days and involve 454,980 workers, against 772,000 days and 220,200 workers in the same period of 1954. The real trouble, however, is that no end to either the wage claims or the threat of strikes is in sight. On the contrary, talks are now proceeding on demands for higher pay for at least six million workers in major industries, and if they are met vast sums will be added to the annual wages bill that might well cripple this country's export trade. Bakers and film studio employees have just been granted increases, and engineers and shipbuilders, railwaymen and farm workers have made fresh claims.

Steel Plant for India

The construction of a large steelworks in India by British companies has now become a probability, but reports that a decision has already been taken to give effect to the recommendations of the British Steel Mission, under Sir Eric Coates, which was appointed as a service under the Colombo Plan, may be premature. It is only a fortnight since the report was submitted to the Government of India, and however favourable an impression this has made, a number of stages will have to be gone through before the time arrives to sign a contract. The Coates mission, which included this country's leading expert on steelworks location and design, is said to have reported that the plan for a third steelworks—agreements for two new plants have already been signed with German and Russian suppliers, respectively—was sound, and it was suggested that the most economic site for it would be at Durgapur in West Bengal. The mission was, of course, an independent advisory body and did not represent the British steelworks construction industry.

The next step will be for the industry itself to enter into negotiations with the Government of India. In this connection, the leading firms have formed a consortium in this country called "Indian Steel Works Construction Company, Limited," as a convenient agency for joint negotiations and services in this particular case. The Chairman is Sir Cyril Jones, well known in India as a former member of the Indian Civil Service. It is expected this group will be invited to send an exploratory mission to New Delhi to discuss the project in detail as soon as the earlier report has been fully considered. Members are said to be ready to go out to India at short notice.

Oriental Telephone's Future

In what may be his last statement to Oriental Telephone and Electrical shareholders, Mr. E. J. Bunbury hints that the group may go into liquidation within the next year. Settlement of the Singapore and Malayan interests is in view, while suitable arrangements have been completed for the disposal of the China and Japan Telephone and Electric Company. This subsidiary sold 75,000 shares in its only operating asset, the Hong Kong Telephone Company, last year at a surplus of £70,000 over book value. Its assets now consist of a further 225,000 Hong Kong Telephone shares, and cash and Treasury Bills. From liquidation of the Rangoon Telephone Company a final payment of about £5,000 is expected to be due to the group. On the question of dividends Mr. Bunbury and his co-directors say that they do not intend to make an interim payment for 1955, and consideration of any payment at all turns mainly on the probable date of winding up. The group's Indian interests were, of course, disposed of earlier.

B. E. A. Makes a Profit

British European Airways made a profit of £63,039 in 1954-55, its first net profit over a full year of operation. That is the outstanding feature of the annual report and accounts, issued last Tuesday, for the figure compares with a deficit of £1,773,797 in 1953-54. Major factors in achieving the profit were: Output, measured in capacity ton miles, was expanded by 17.6 per cent; revenue increased by 16 per cent to £17,141,314; and expenditure at £17,078,275, was held down to only 3.2 per cent above last year's figure. An 18.8 per cent increase in traffic was handled with a rise in staff averaging only 1.3 per cent over the year. But, the report says, it is significant that staff costs were £7,338,094 during the year, or 42.9 per cent of the Corporation's total expenditure. This was £350,000 above the previous year and the largest single expenditure item. Wage claims of over £500,000 were outstanding in the summer of 1955.

The use of larger aircraft made a major contribution to the lower operating costs, attracted more traffic and improved B.E.A.'s competitive position. The 23 Viscounts carried 346,174 passengers and earned £6,298,000 or 38 per cent of the year's traffic income; the 29 Elizabethans carried 610,211 passengers and earned £5,653,000 or 34 per cent of the traffic income. The future prosperity of an airline depends, the report says, on the suitability of the aircraft fleet available. B.E.A. was short of aircraft in 1955 and will be in 1956. The position will begin to improve by the end of next

FRANCE CHOOSES THE LIBERAL
WAY TO PROSPERITYRECONCILING PLANNING AND
INDIVIDUALISM

"PRODUCE better goods in order to sell more" is the rule which French economy has set for itself during the past few years. It is also the general theme of the second four year plan, which in 1957 is destined to increase national revenue by one-quarter, agricultural production by 20 per cent, industrial manufacture by 30 per cent and construction activity by 60 per cent. These few figures do more to show the scope of current French effort than would a long speech. On its success depends the equilibrium of the balance of payments—and a higher standard of living for the French people. If these goals are reached, every citizen will see his purchasing power increase by 4 per cent annually, which means that it will be approximately doubled in 20 years. The present expansion shows that this rapid pace has already been surpassed.

The idea of building a national economic plan is comparatively new in France. It took war destruction, poverty and quota systems to convince the French (with their individualistic nature) of the necessity of even a minimum of co-ordination. It also took the tenacity of an untiring leader, M. Jean Monnet, President of the High Authority of the European Coal and Steel Community, to impose on the Paris politicians the plan which bears his name. One thing should be made clear: In France, the plan contains no systematic and imperative prognostications, as is customary in other countries. It is rather a question of taking stock of the urgent needs and production capacities, and of following this with attempts at adjustment and a choice of those sectors which are to receive priority help from the State.

Influence of Political Freedom

The Government does of course play a leading rôle in this work, but its limited services have no power of decision and consider themselves more as counsellors for private enterprise than as authoritarian planners. The liberal aspect of French politics has certainly given the Monnet Plan—and to a greater extent the Hirsch plan—this originality which distinguishes it from numerous plans in other countries. The elaboration of the plan is characteristic in this respect. No unilateral decisions are made by desk-job specialists or economists; they are made after consultation with professional circles, both management and labour, who work together with Government men in order to prepare the plan. In 1946, 1,000 persons were consulted during the establishing of the plan. In 1953 over 2,000 were consulted for the second four year plan.

Gathered around the conference table, the directors of the major professional branches exchange points of view and clarify their future plans in the presence of qualified technicians from the Plan Commissariat. In the form of general directives, which resemble more a working hypothesis than they do a pre-established outline, each specialised commission voices its detailed recommendations. These latter are then regrouped and integrated by the synthesis Committee, composed of economists and financiers, who in turn outline the general plan in collaboration with the interested ministries.

The Monnet Plan, conceived after the war on the initiative of the executive, was not presented to Parliament. The latter expressed regret at this procedure, and required that all plans be henceforth submitted. In concurrence with this desire, the second four-year plan was offered for approval to the competent Committees of the National Assembly. This judicial nuance has led to a more substantial difference which affects the very scope of French modernisation plans. The Monnet Plan was not intended to modify the entire economic structure. It was designed simply to eliminate production bottlenecks, and more especially to increase basic manufactures which are indispensable for industrial expansion, such as coal, electricity, steel, cement, agricultural machinery and transport.

Emphasis on Modernisation

In each sector, minimum goals were fixed which the Government and private industry both had resolved to attain. A minimum volume of investments was planned for each basic industry. The State agreed to finance nearly half of them, both from budgetary resources and low-interest loans, with the industries providing the rest on the financial market or by auto-financing. Even before they were realised, these goals were modified in 1948 in order to concord with the Marshall Plan, which required that European economies be co-ordinated. The termination date of the Monnet Plan was moved up to 1952, and concern over stabilising the commercial balance and intensifying exchange became the predominating factor. Other revisions ensured, with the purpose of limiting mining operations and intensifying agricultural production. But the overall lines of the plan remained unchanged.

The slogan "modernisation or decadence", launched by M. Monnet after the war, has borne remarkable fruit. Industrialists and nationalised companies (coal, electricity, gas, railroads) have made full use of State aid in order to rejuvenate and develop their production capacity. As a result, by the end of 1952 the plan had been fulfilled almost completely, and often surpassed. In 1952, electricity production had almost doubled,

that of steel had increased by 150 per cent, that of cement tripled. The French stock of tractors jumped from 25,000 to 200,000 units. The 50 per cent increase in coal production had become the highest in Europe, while refined oil tonnage in France climbed from 2.8 to 21.5 million tons. In overall terms, industrial production had made a leap of 70 per cent, and national income had been increased by half. That year, industry had beaten by 8 per cent its pre-war record and national income had surpassed its 1938 level by one quarter. Despite the deficiencies noted in other sectors, notably in agriculture and foreign trade, the results of the first plan were undeniably positive.

This resurgence of French economic power is not the most remarkable aspect of the Monnet Plan. Its principal merit is that of having assured a harmonious progression in diverse industrial sectors. The postwar bottlenecks have disappeared, and the development of key sectors has not resulted in economic distortion. Along the way, French experts began to realise that it was hardly possible to limit the benefits of the plan to basic sectors alone. Other industries have to be included if new bottlenecks are to be avoided in the wake of the key sectors. Transformation industries, agriculture, construction, scholastic equipment, all neglected by the Monnet Plan, also demand modernisation.

Importance of Quality

In these different branches, more goods must be produced in order to improve the living standard and the social equipment of the nation. But, especially, better goods must be produced in order to keep French production on an equal footing with foreign competitors. The goal of the second plan therefore is twofold: increase the volume and the pace of manufacturing in all sectors (and not only in basic industries); and diminish production costs by rationalisation, modernising equipment, and simplifying distribution circuits. Following the "emergency plan" of 1946 is a vast programme which covers all French economic activity. No more imperative than the first, plan—the State rarely forbids activities which are contrary to the plan, but simply provides financial help for those which fall in line with it—the new plan differs from the former one in two major ways:

(1) It provides for the strengthening of insufficiently developed areas, thanks to the modernisation of methods and agricultural equipment, as well as the establishment of new industries in order to employ the jobless labour potential. In this way, Aquitaine, Languedoc, Dauphiné and Champagne are headed towards a new prosperity.

(2) Additional reforms will facilitate results from investments in the various sectors. A greater specialisation within industrial enterprises will be sought, as well as a generalisation of productivity rules. A less burdensome tax system will make technical and financial concentrations easier.

In the field of construction, the industrialisation of manufacturing methods and the regularisation of financing procedures will increase the building pace and at the same time reduce housing costs. In agriculture, a lowering of the cost of fertilisers and fuels, the redistribution of land, and the popularising of techniques will increase the yield, while the rationalisation of markets and commercial circuits will stabilise prices. Generally speaking, the use of credit—spread out over several years thanks to the laws of the programme—will be accompanied by a psychological education of the public (especially the heads of enterprises) and a vast effort in the field of scientific and technical research. Under these conditions, the 9,000 billion francs (almost \$26 billion) to be invested according to the Plan will achieve a maximum efficiency. There will also be a huge shift of labour personnel, more than half a million workers.

Success of the Method

The goals of the Hirsch Plan are qualitative as well as quantitative. A few figures show the scope of the project: by 1957 the number of housing units constructed is to increase from 80,000 to 240,000 a year; the manufacture of agricultural machinery is to increase by 80 per cent and that of machine tools by half; agricultural income is to be increased by 400 billion francs (over \$1 billion), and meat production is to increase by 350,000 tons a year. Steel mill capacity will increase from 11 to 14 million tons a year, and that of cokeries from 37,000 to 54,000 tons a day. In the field of education, classes will be established to accommodate 1,200,000 additional pupils and new hospitals are to be built which will provide 12,000 additional beds.

These goals have been considered optimistic by more than one economic expert, and yet they already seem to be below actual reality. Since January 1954, which marked the inception of the second plan, industrial production has increased 14 per cent. In one year, the manufacture of automobiles has increased from 39,200 to 50,800 a month, and steel production has increased by one-quarter. Two years ahead of the plan, construction has almost reached already the pace of 240,000 dwellings a year. Exports, which were to be increased by 40 per cent in four years, have already increased 30 per cent in less than two years.

Under these circumstances, it is entirely possible that the Hirsch Plan might be revised some time soon in order to set new goals for industry and agriculture. In the furious race against time to fulfil the plan, the French economy has got off to an excellent start, and continues to beat previous records.

The thirteenth Annual General Meeting of the Indian Paper Mills Association, Calcutta, will be held on Thursday, 1st September, 1955, at 4 p.m., at the premises of the Association at 29-B, Netaji Subhas Road, Calcutta. Mr. G. P. Birla will preside.

AMERICA'S DEVELOPING NATURAL GAS INDUSTRY

CONGRESS TO CONSIDER REGULATION

AMONG the major questions reckoned to come before the new Congress early in 1956 is one vitally concerning the development of a most important resource, viz., natural gas. It will be called upon to decide whether federal regulation of natural gas—long applicable to pipeline companies transporting it for inter-state commerce—should include also the independent producer selling his commodity to inter-state pipeline companies; or whether the public interest is best served if producers retain their traditional freedom to produce, bargain and sell under the competitive conditions that have applied to the production of all fuels—solid, liquid and gas. This issue of gas regulation is of national importance in the light of developing and sustaining adequate sources of energy for the future. America's economic well-being, as well as security, rests on energy-powered industry, and in meeting this crucial need natural gas has played an increasingly important part. Indeed, the growth of its usage in industries and homes has been particularly rapid since the end of World War II. Consumption of natural gas has virtually doubled during the period to the point where this fuel now furnishes nearly a fourth of the nation's total energy. Also, proved reserves of natural gas represent a greater amount of aggregate energy than is accounted for by crude oil natural gasoline. Moreover, this great increase in the employment of natural gas has been spread widely throughout the country. There are at present only four states—three in the Pacific North-west and Vermont—which do not have this fuel. The number of customers using it has more than doubled since 1945. Close on 21 million consumers are supplied with it, and an extra four million are using it mixed with gas manufactured from coal. Still the demand goes on rising.

Its Varied Uses

Gas, an old friend in the home, has become an indispensable ally of American industry. Thus, building bricks are baked with it, steel is processed by it and glass windows are a product of its heat. Gas bakes the car's enamel body and moulds its tyres. It provides ease of control and fuel uniformity—two crucial factors in industry. Gas is also used in the meat-packing and food-processing industries. It dries tobacco and alfalfa, and roasts coffee beans and nuts. It bakes bread and ripens bananas. One of the recent uses of gas is in burning smoke in the printing industry. Another is in the production of prefabricated houses finished with baked-on enamel. One of the major uses of gas is in the firing of steam boilers in large electric-power plants. It is also used in oxy-gas torches for cutting metals and alloys.

On top of such industrial uses as these, natural gas is the foundation of a new and fast-growing chemical industry, and projects for its conversion into gasoline are now common. The natural gas and liquefied petroleum gas sector of the industry promises to be even more intimately connected with the petroleum chemicals industry. In these products one is concerned mainly with methane, with smaller quantities of ethane, propane and butane.

Several of the plants making chemicals from natural gas and liquefied petroleum gas are avid consumers of raw materials. For example, a single ammonia unit may consume close on 8 million c.f.t. of natural gas for producing 200 short tons a day of the product. A butadiene plant for synthetic rubber would absorb around 115,000 (U.S.) gallons a day or normal butane for an annual output of 50,000 tons of the commodity. In short, manufacturers of such petrochemicals must have long-range supplies, low value and a strategic location. Other local factors include labour supply, utilities, and low land costs.

Its Origin

In 1824 some residents of Fredonia, a hamlet in western New York, drilled holes through logs to make a pipeline and connected an adjacent gas reservoir with a few downtown habitations. Such were the humble beginnings of the American natural gas industry. Thirty-five years later, in 1859, the nation's first commercial well was completed in Pennsylvania. And with crude petroleum came quantities of gas. In the early days of the oil industry engineers persevered to find means of piping some of this gas to neighbouring urban centres. In the late 'seventies they built a line to carry gas from West Bloomfield, New York, to Rochester, a distance of 25 miles. This was constructed of hollowed logs. Later followed lines of wrought-iron pipe joined with screw couplings—the first major advance towards a natural gas industry. This new pipe was an undoubted improvement. It could be stretched out into lines that gradually grew longer and longer, and by the mid-1920's some pipelines snaked out as far as 300 miles. By 1925 natural gas was serving 3½ million customers in 23 states. Even so, it could be used in volume only within a few hundred miles of the oilfields. In the oil country natural gas was the fuel; elsewhere, it was a rare commodity.

As long as natural gas was a fuel of regional use only its consumption remained fairly modest and steady: 339 million cubic feet in 1906, 509 billions in 1910 and 798 billions a decade later. But then, in the 1920's emerged two revolutionary developments. Firstly, gas in incredible quantities

poured out of the oilfields of Oklahoma, California and the Gulf Coast of Texas and Louisiana. Secondly, engineers developed welded steel pipe and seamless pipe through which gas could be pumped under higher pressures. Ere long, pipelines began spreading out in all directions. By 1930 natural gas consumption rose to 1.9 trillion cubic feet; in 1940 to 2.8 trillions, and 1947 to 4.4 trillions.

Improvements in compressors followed, and engineers devised mechanical means of laying pipe faster. By the end of 1952 America's natural gas pipelines grew into a maze of 261,000 miles capable of delivering 9 trillion cubic feet a year. Half of the \$3.3 billion of the gas industry's outlay on expansion in the five years ending in 1952 went into pipelines. The great pipelines stretch out like a giant's fingers from the major gas states thus:—(1) Texas Gulf Coast to Buffalo, New York; (2 and 3) the Big Inch and Little Big Inch lines, built during the second world war to transport crude oil, deliver Texas gas to New Jersey and Pennsylvania; (4) East Texas to New York City; and, (5) from the South-west to Michigan, to Wisconsin, and to California.

Storage

Gas engineers are also doing their best about delivering the commodity in quantity at times of peak demand. In the past two decades pipeline companies have been transmitting gas during the summer when demand tapers off to old fields adjoining their markets, where they force the gas into the ground to meet the mounting winter demand. Such underground storage is now common practice in several states including West Virginia, Ohio, New York, Kentucky, Texas, California, Kansas, Oklahoma, New Mexico and Michigan. More novel are two other types of storage: forcing gas under pressure into a series of buried "coils" of heavy pipe, and liquefying gas underground in a kind of deep-freeze unit at more than 250 below zero Fahrenheit. By means such as these the gas companies are making it possible to assure a steady supply of fuel when their customers most need it.

Output and Value

In 1953 the marketed production of natural gas in the United States totalled 8,397 billion cubic feet, an increase of 363 billions on the preceding year. Texas, Louisiana, Oklahoma and New Mexico registered most of the gains. Natural gas is consumed in 42 states and the district of Columbia. Rhodes Island received this fuel for the first time in 1953. Gross addition of natural gas to underground storage of 405 billion cubic feet during the year was only slightly greater than during 1952. Withdrawals from underground storage of 247 billion cubic feet in 1953 were 11 percent greater than the year before. In the year under review (1953) the average value of gas at wellhead was 9.2c. a 1,000 cubic feet, an increase of 1.4c. on 1952. The total value of the marketed production at wellhead was \$775 million. The average value of natural gas at the point of consumption was 35.5c. a 1,000 cubic feet, an increase of 2.3c. compared with the previous year. Inter-state shipments and exports of the commodity increased 11 percent in 1953 and represented 50 percent of the marketed production. The number of residential consumers rose by 1.6 million to 24.2 million in that year.

Regulation

Last June, the Supreme Court in the case of Phillips Petroleum Company vs. State of Wisconsin et al construed the regulatory powers and duties of the Federal Power Commission (F.P.C.) under the Natural Gas Act of 1938 as applying to independent producers who sell to inter-state pipelines as well as to the pipeline companies themselves. This decision came like a bombshell to the producing industry, since it cut across long-established practices in the marketing of gas, and also, because of its far-reaching implications for the future of the industry. That the effects of this decision may, unless nullified by legislative action, prove to be "profound" was recognised by Justice Douglas in his dissenting opinion. (Justices Clark and Burton also joined in a dissenting opinion to the 5-to-3 decisions in the Phillips case.) He affirmed: "The price at which the independent producer can sell his gas determines the price he is able or willing to pay for it. The sales price determines his profits. And his profits and the profits of all the other gatherers, whose gas moves into the inter-state pipelines, have profound effects on the rate of production, the old wells that are continued in production, the new ones explored, etc. Regulating the price at which the independent producer can sell his gas regulates his business in the most vital way any business can be regulated. That regulation largely nullifies the exemption granted by Congress."

Apart from the fundamental principles involved, federal regulation of natural gas producers poses formidable practical problems; in particular, regulating the rates of some thousands of independent producers, large and small, whose methods of operation embrace the widest possible variation and whose costs cannot be determined with any degree of precision. In view of the great complexities inherent in any attempt to regulate producers by the "rate base" method, in at least one

instance the F.P.C. permitted a natural gas pipeline company the so-called "fair field price" on its owned gas plant into its pipeline system, and its application to all producers would give rise to a fresh crop of difficulties. Not the least of problems involved in federal regulation of gas producers are the germs of conflict between the federal and state regulating authorities. The F.P.C. was sensible to invite suggestions as to the principles and methods to be applied by it in the regulation of the rates to be charged by independent gas producers. The remarks by Mr. Kuykendall, chairman of the F.P.C. before the American Petroleum Institute in November, 1954, are significant: "The Commission realises that the business of exploring for and developing natural gas reserves entails many risks, and that the financial rewards must be commensurate with those risks, if exploration, drilling and production are to continue. We intend to recognize this indisputable fact in our rate-making, no matter what methods may be employed in testing the reasonableness of producers' rates." He added: "We want you to be economically healthy, healthy enough to produce the oil and gas America needs. In other words, we do not want to socialise the natural gas industry."

Production and Consumption Zones

While gas is produced over a widely scattered area, its major output is concentrated essentially in the south-western part of the United States. The five states of Texas, Louisiana, Oklahoma, Kansas and New Mexico have close on 88 percent of the proved reserves and 84 percent of the nation's current production. Texas alone has more than half of the total reserves and accounts for upwards of 50 percent of the aggregate output. The three greatest reserves of all are the Hugston field of nearly two million acres in Kansas, Oklahoma and Texas; the Panhandle field of 1½ million acres in North Texas, and the Carthage field of 215,000 acres in East Texas. Most of the potential customers, on the other hand, have been in the north-east, the Great Lakes area and California. With the development of long distance transmission lines the consumption of gas has spread widely over the country. Late in 1954 approximately 70 percent of the gas consumed outside the states of Texas, Louisiana, Oklahoma, Kansas and New Mexico emanated from them. The dependence of the rest of the country upon this south-western natural gas will in the normal course continue to increase as new pipeline capacity is built to meet the ever-growing demand. Projected plans for future construction, according to Earl H. Eacker, former president of the American Gas Association, involve a record \$3½ billion construction programme over the next four years, with 90 percent of the outlay going into the natural gas systems.

Sales System

As to prices, there are many indications that the normal economic stabilising influences are taking effect. It is a fact that substantial quantities of gas transported through the pipelines are used by large industrial consumers. These sales are normally made on an interruptible basis providing for curtailment when firm demands, mainly from residential and commercial customers, reach a point on cold winter days which absorbs the pipelines' full delivery capacity. Understandably, the pipeline companies are willing to sell off-peak, or interruptible, gas at a lower price to improve their load factor, or ability to buy and sell gas at an even rate throughout the year. This is of crucial importance in negotiating supply contracts on a satisfactory basis, and setting up more favourable rates for firm demand consumers. Moreover, the prices of the three principal industrial fuels—gas, oil and coal—are highly competitive in many parts of the country. This indicates that reliance on competition will establish fair prices for natural gas without exposing the industry to the hazards of further federal regulation.

Strength from Freedom

The gas producing enterprise is anything but a monopoly. Its thousands of separate entities—individuals and corporations—engaged in the search for, and development of, oil and gas resources, are in the stiffest sort of competition with each other. Their status is basically different from that of the utilities marketing gas at the retail end, and the pipeline companies transmitting it to consuming areas. In the ultimate analysis, the issue boils down to the question of the kind of economic system America believes in. So far as the gas industry is concerned the producer's freedom to discover, develop, produce and sell his commodity in a competitive market has been fundamental to the industry's astonishing growth and ability to meet mounting demands. To alter the regulation at this juncture might gravely jeopardise this healthy progress to the detriment of consumers, and of the maintenance of a sound energy policy for the nation at large.

OUTPUT OF IRON ORE IN JUNE

The estimated total output of iron ore mines in India decreased to 313,700 tons in June, 1955, from 378,935 tons in May, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 71 mines for the month of June show despatches totalling 238,174 tons to the iron and steel plants and 54,377 tons to the export market. The reported stocks at the end of the month amounted to 1,24,192,300 tons.

Jute

GOODS AND FIBRE MARKETS ON THE DECLINE

HESSIANS RECORD NEW LOW LEVELS

THE lack of interest displayed by overseas buyers during the past week caused finished goods to experience one of the quietest periods for some considerable time. Practically no business was reported. There appeared to be little holding power amongst the big operators in the speculative markets, and on the slightest provocation heavy selling took place, resulting in nervous and unstable conditions. The position was worsened by reports that Indian prices were being underquoted by Pakistan in the export market with regular monotony. The recent loss of hessian business with America to competitors across the border was a serious blow from which the Calcutta hessian market has not yet recovered, and the realisation that similar occurrences are a distinct possibility in the near future has caused a slump in hessian prices. Over the past few months, the hessian section of the goods market has ruled comparatively steady. Good business with the Argentine and America early in the year for forward shipment ensured a steady flow of production, and the future was viewed with optimism. But recent events in Pakistan have upset the confidence of pre-devaluation days to such an extent that new low levels have been recorded in hessian; 40" 10oz fabrics fell back to Rs. 40 a 100 yards in the near positions before the close, and for a parallel we have to go as far back as the end of April 1953.

The heavy goods section of the market has reacted to these depressing conditions and a general bearish tendency has been apparent throughout the week. In the absence of enquiries, speculators took control and depressed prices under continuous selling pressure. Calcutta mills have shown no interest at the lower levels, and except for small lots of special constructions, have stayed completely out of the market. Towards the close, under the influence of due date settlements, B Twills showed a temporary advance but a large operator indulged in heavy speculative selling and pulled prices back again. Over the week heavy goods rates have fallen about Rs. 45 a ton.

Raw Jute Easier

The price ratio between raw jute and gunnies has been fairly well maintained, as fibre prices have fallen about Rs. 50 a ton, which is more or less equivalent to the drop in goods prices. The two markets have moved independently, and the decline in raw material of jute into all upcountry receiving centres, both in India and Pakistan, and into the local Cossipore markets. As a result, Calcutta mills have paused in their recent spate of near delivery purchases. On reviewing the position, it appears, they have decided that with their immediate needs provided for, and ample jute available from local markets to draw on, if necessary, they no longer need to support the rising tendency of the past few weeks. Their withdrawal from the market, combined with the easy availability of jute, brought about an inevitable reduction in rates, and over the week prices fell about 8 annas a day. This brought large offers from the sellers at lower prices for all deliveries up to the end of the year, but up to the weekend and on the not be tempted. During the weekend a large mill group holiday on Monday, however, a large mill group indicated that it was prepared to buy Indian and Pakistan jute for shipment in equal quantities during the six-month period October-March. A fair amount of business was done, which should have had a steady influence, but, contrary to expectations, conditions at the opening after the holiday were easier and sellers were still keen for business.

THE JUTE MARKETS

Manufactured Goods: Dull and inactive conditions have prevailed in the goods market over the past week. At the opening on Thursday last, rumours of a squeeze in B Twills pushed up quotations of this fabric by 8 annas, and ready shipment stood at Rs. 110-12 a 100 bags and October-December shipment at Rs. 103-8. The only alteration in the hessian section was in the forward position, where 40" 10oz gained 6 annas to Rs. 40-12 a 100 yards, whilst ready goods were unchanged at Rs. 41-2. Heavy speculative selling, combined with rumours of further underquoting by Pakistan, caused a slump in all sections of the market on Friday. Sacking prices dropped about Rs. 2 a 100 bags and Hessians lost 8 to 12 annas a 100 yards. Speculative covering took place at the lower levels, and on Saturday prices were fairly steady, but the undertone was easier. Panicky selling by weak holders over the weekend brought about a further slump. At the opening on Tuesday new low levels were recorded in Hessians, which dropped to Rs. 40 for ready 10oz and Rs. 39-8 for forward shipment. The sacking section also fared badly. B Twills lost Rs. 1-4 to Rs. 1-12 a 100 bags and stood at Rs. 107 for ready shipment and Rs. 101-8 for October-December shipment.

At the close prices have again fallen due to heavy speculative selling pressure by a large

operator.	Opening	quotations	on	Wednesday
	Ready	Sept.	Oct.-Dec.	Jan.-March
	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	33-4	33	32	31-14
40" 10 oz.	39-14	39-12	39-6	39
B Twills	106	103	101	97-8
Heavy Ceess (plain)	107-8	105-8	101-8	98
H Twills	132	131	127	123
Liverpools	119-8	119-8	116	112

Raw Jute: Throughout the week, raw jute rates have shown a steadily declining tendency, and markets have been weak. Opening quotations on Thursday were on the basis of Rs. 26 a maund for Upper Assam bottoms for August-September shipment, and a little interest was shown at these rates for quick delivery jute. Reports of large imports, both upcountry and in Pakistan, soon caused buyers to withdraw, and they could not be tempted even by lower prices. Sellers were keen and were prepared to cut their rates and assortments to meet mills' counter-bids, but the latter were very few and far between. As a result, a further 8 annas were taken off all indications and jute was on a maund for ordinary Assam. Mills at first resisted the attempts to bring them into the market, but during the weekend a large mill group came out as buyers for forward shipment up to March 1956, for equal deliveries each month from September onwards. A fair quantity of business was done, but instead of steadying the market, prices continued to fall. By Tuesday morning, when the market opened, Monday being a holiday, Upper Assam jute had fallen to Rs. 25 a maund. Sellers were keen, even at the lower rates, but only small transactions were put through and depressed conditions prevailed.

During the week business was done in Dhubri-Northern jute at Rs. 26-8 to Rs. 27 a maund basis Bottoms for one month's shipment, and also at Rs. 22-12 to Rs. 23 a maund for equal shipment during the period October-March. Small lots of Upper Assam jute was transacted at Rs. 26 a maund for guaranteed September shipment. Business was also done in Murshidabad white at Rs. 27-8 a maund for August-September shipment, and jungli jute at Rs. 23-12 for the same shipment. Some small lots of Old Crop Daissee were purchased during the week at Rs. 28-8 to Rs. 29 a maund basis Bottoms for 10 days delivery. Daissee white passed at Rs. 27-8 to Rs. 29 a maund for ready and one month's shipment.

Pakistan purchases were on a restricted scale and were confined to Pakistan Northern at Rs. 27 a maund basis Bottoms for August-September shipment, and also at Rs. 22-12 to Rs. 23 a maund for October-March shipment in equal quantities. Pakistan Cuttings were also done at Rs. 90 a bale for 15th September shipment.

At the close the market has fallen a further 8 annas a maund in sympathy with the weak goods market, and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a maund.	Shipment.
Lower Assam	25-8	September.
Upper Assam	25	"
Northern	25	"
Murshidabad White	24	September-October.
Daissee-ex Sheoraphuli	25-3	"
Daissee Mesta	22-8	"
Daissee White	27	September.

Tossa is quoted at Re. 1 a maund above the rates for white jute.

Pakistani Jute:	Rs. a maund basis Bottoms.	Shipment.
Jat District	25	September.
Northern	25	"

Business in the local Cossipore markets has been brisk over the past week, and imports have shown a steady improvement. Wagon arrivals have averaged about 100 to 120 a day, and in the absence of very much buying interest large stocks are being built up. Prices have fallen about Re. 1 to Rs. 1-8 over the week and sellers are keen for business. Latest quotations are based on Kishen-ganj jute at Rs. 25-5 a maund for garzat quality. In the Daissee districts small quantities of Daissee are now coming forward but initial reports indicate that the condition of the jute is far from satisfactory. It is reported that several mills have now stopped purchasing jute over-the-jetty, as a result of which the Daissee white market is much easier and prices for ready delivery have dropped about Rs. 2 a maund. Quotations in the Northern areas are based on Rs. 28 to Rs. 28-8 a maund for garzat quality.

Mofussil: Imports into all the upcountry markets in India have been very heavy over the past week, but arrivals have found ready buyers, as a fair amount of covering against early delivery

contracts has still to be done. In sympathy with other markets, however, prices have fallen and are now about Rs. 2-8 lower than this time last week. Latest quotations in Dhubri are based on Rs. 21-8 a maund basis Bottoms.

In Pakistan markets are easier on account of the lack of business. The flood waters are falling fast, and many godowns should be workable in about another week's time. Sellers are keen for business in September, but are not showing very much interest in forward sales. Imports are between 30,000 and 40,000 maunds a day in Narayanganj, out of which about 10,000 maunds is baled jute. Latest quotations in Narayanganj are based on Jat Bottoms at Rs. 22 a maund.

Raw Jute Consumption

The consumption of jute by mills reporting to the I.J.M.A. during July 1955 was 490,000 bales, which was a decrease of 9,700 bales on the previous month. In July 1954, the consumption amounted to 470,000 bales.

Arrivals of Raw Jute

In July 1955, 237,600 bales of raw jute arrived in Calcutta and at mill stations. In the corresponding month of last year, arrivals were 293,600 bales. Of the arrivals last month, 163,750 bales were of Indian origin and 73,850 bales were imported from Pakistan. In July 1954, arrivals from India amounted to 204,700 bales whilst imports from Pakistan were 88,900 bales. Thus in July 1955, arrivals from India are down by 40,950 bales, and those from Pakistan by 15,050 bales, making a total drop of 56,000 bales.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian			
	Bags (Tons)	Cloth (Tons)	Total (Tons)	
1st to 25th August, 1955	2,221.4	26,696.8	28,918.2	
1st to 25th July, 1955	1,587.5	23,012.2	24,599.7	
1st to 25th June, 1955	1,303.0	11,470.7	12,773.7	
	Sacking			
1st to 25th August, 1955	23,993.9	1,982.7	25,976.6	
1st to 25th July, 1955	28,423.4	1,861.5	30,284.9	
1st to 25th June, 1955	19,475.8	805.5	20,281.3	

THE FOREIGN JUTE MARKETS

UNCERTAIN PRICES AFFECT BUYING

(FROM OUR DUNDEE CORRESPONDENT)

UNCERTAINTY regarding the future course of prices in the jute industry is keeping buyers from operating with any degree of freedom. On all sides, there are expectations that prices will be lower. It is generally believed that Pakistan will be unable to maintain the minimum prices for raw jute once the weight of the crop is felt, but this will not affect the market next week or the next month, and it is thought that it may be nearer the end of the year before there can be any reduction. In the interval, anything may happen. How often has it occurred before that when prices were expected to go either up or down in the jute industry, they invariably tended in the opposite direction. Representations have been made to Pakistan in complaint against the raising of the export tax by Rs. 5 a bale, which is hitting the Dundee and Continental spinners pretty hard. It is estimated that taken all over, the increase will cost spinners in all markets at least £250,000. The U.K. spinner's share must be in the vicinity of £40,000, and there seems no way in which this amount can be recovered. There may be a rise in prices for yarns and cloth in the near future to cover all the extra costs which spinners have been mulcted in during the past two years, including higher wages, etc.

Shippers are offering daily at the unchanged minimum prices. They have absorbed the increase in export tax in these, but, according to the contract, spinners must pay the increase on all shipped jute bought before Monday of this week. Mill Firsts continue at £90 and Mill Lightnings at £80, c.f. U.K. There is no interest being taken by spinners; indeed, a number are willing to sell some of their stocks to the Continent, where good prices are still being paid for any jute available immediately. Representatives of the jute industry have had talks with two leaders of the Produce Pre-Packaging Development Association, Ltd., for containers for fruit and vegetables, and various other commodities. These are particularly required in greengrocers' shops where there is self-service in operation, and this is becoming quite general in many shops. It is said there are 2,000 of these in Britain alone. If the jute industry can make small open-mesh bags cheaply, there appears to be a bright future for this trade. Hence, the reason why jute should be kept as cheap as possible. The slogan should be to grow more and sell at the lowest possible prices.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

EXPANDING ACTIVITY AND A HIGHER INTEREST RATE

(FROM A SPECIAL CORRESPONDENT IN THE U.K.)

DESPITE official pleadings that holidays should be distributed over several months, and not concentrated in one short period, August remains the great holiday month in Britain, mainly because the Briton is a family man, and that is the month when children are released from school. And so it is that the past few weeks in business circles have suffered from the obscurity caused by the absence of executives and employees. One result of this state of affairs has been that few important decisions have been taken, and that everything that could be has been shelved. Those executives who have paid attention to ordinary humdrum things have read of a few Cabinet Ministers being suddenly called back from their mild diversions in order to consider sharp necessities of the economic situation. But very little information has been disclosed of what the Ministers really talked about, and they have departed once more into sylvan or oceanic retreats.

Just before the holidays began, we were blessed with a series of blowings hot and cold on the part of the Chancellor of the Exchequer. First of all there came the heartening news of Britain's remarkable industrial progress, by the means of which we could overcome all things. Then followed, after a respectable interval, a warning that the financial and economic outlook has disturbing features. A repetition of this mood of grave and gay, so to speak, with consequent official confessions, exhortations, warnings and reassurances, seems likely to be the taxpayers' fare for an indefinite period ahead. It may prove to be the signature tune (one hopes not the swan song) of the present Government. The average man, business or otherwise, troubles himself scarcely a whit about the refrain. He is much more interested in the fact that whereas August 1954 was the wettest within living memory, August 1955 bids fair to be among the driest. Stock Exchange operators, however, listen apprehensively to the Chancellor's unfinished symphony, as well they might. For the vibration of the somewhat uncertain strains has already shaken severely the artificial prices of many securities.

The campaign to reduce the bank and other loans of private individuals and of local authorities also, has now begun in apparent, but hardly deadly earnest, the big businesses or ordinary joint stock undertakings being unaffected. Pointed remarks have been made about nationalised

industries increasing their overdrafts as their contribution to credit reduction has compelled a drawing in of horns in that quarter. It has been said, on good authority, that the Government wishes the banks to reduce existing advances by 20 percent—a figure which every bank manager says cannot be attained under existing circumstances. Higher interest rates are being charged by the Treasury to municipal and county councils, and the building societies have also advanced their interest rates. The demand for some industrial products is bound to be reduced by these measures; but nothing has occurred so far that would make it difficult for the major industries, except perhaps the building trade, to dispose of output on the recent scale. Moreover, there are big offsetting factors to be set against any changes the Government's economic policy may bring about. There is the fact that the vast scheme for the reconstruction of the British railway system is getting under way, as is also that of adding to or widening the roads. More important still, as an immediate influence, are the nuclear contract awards which the Government is making almost week by week.

Competition in Cotton

The outstanding event in the textile world has been the announcement of the boycott of all foreign cloths, which a well known Lancashire textile concern has seen fit to issue. But although this has been outstanding in the dramatic sense, it has not produced the impression that the proclaimers desired. It had been hoped to inaugurate a great movement throughout the country—a fiery mission—with "boycott foreign fabrics" written large upon its banner. But nothing of the kind has occurred so far, not even in Lancashire, and the boycotters are in unspendable isolation. It would, however, be idle to deny the possibility of the Lancashire situation, unsettled as it is, springing unpleasant surprises. The volume of orders is still declining and the number of operatives, gained by much hard recruitment and by the provision of many amenities, continues to diminish. A few prominent men in the cotton trade as a whole are trying to find a solution which will be in harmony with the international liberalisation of trade. But the feeling is becoming widespread, and is even shared by the advocates of liberalisation, that the cotton industry is being forced into a position of filling a less important part in the national economy than it has held of late. It is now, some hold, only a matter of how far the contraction will go. It is significant also that the Government is encouraging the establishing of new industries in Lancashire.

Nevertheless, it may be premature to argue

thus gloomily, in a world where so many dynamic things are happening, the regeneration of old industries as well as bringing into existence new ones. But it must be granted that the reality of the challenge of foreign and Commonwealth competitors is unlikely to become less acute. Can the cotton industry do more to meet these developments than it has done already? Whilst re-equipment of the industry has not been carried out as far as it should have been, sufficient has been done to measure the adequacy of this as a remedy for present ills. The effects of re-equipment have varied considerably, according to the degree of skilful planning and handling that has been brought to bear, but in order to yield its best results, it ought never to be thought of in mechanical terms alone. There must be bold directive minds behind the work. Many of the firms which have held back from re-equipment, or have undertaken the very minimum, have done so on the ground that, from the point of view of maintaining their own financial soundness, any other policy would have been dangerous. They have staked in defence of their inaction, that prices of the cotton have been high and the outlook for the cotton textile markets, on any lengthy view, uncertain. These firms are now claiming that the trend of events is justifying their caution—that theirs, in fact, was the exercise of true foresight. This is superficially impressive; but the vital consideration is omitted that in those cases where there has been no extravagant capitalisation, the re-equipped firms are finding themselves best able to deal with the present emergency.

Co-operation Demanded

What might seem to be reciprocal exchanges are also taking place in cotton circles. They take the form chiefly of criticisms of firms which are said to have refused to co-operate for furtherance of broad aims, or to have made reservations that they only intended to co-operate within narrow limits. This charge should not be classed as altogether one of recrimination; it is partly the outcome of a sincere belief by progressive members of the industry that a great deal is being lost through other members adhering to insularism. There is, so it is contended, often an undue absorption in the pursuit of individual gain, and a failure to perceive that promotion of the good of industry as a whole is to the ultimate benefit of each member. It is as well to have this long smouldering question brought into the open. There are in the cotton textile industry, perhaps more than in any other, executives who demand of any proposition that it must directly benefit themselves, and one might almost say themselves alone, if they are to give it thought. Persons of this temperament are usually the ones who are fearful of imparting any knowledge that might have come their way, lest it should benefit a competitor. Whether all competition is really a form of warfare, and incompatible with co-operation may still be difficult to be absolutely confident about. But there is certainly more room for confidence now than was the case a score of years ago. The tendency for competitors to co-operate is pronounced in many of the leading British industries, so much so that their agreements and sharings lay them open to the charge of monopolistic practices. Naturally, firms should be discreet, especially concerning relationships with their customers, but in every direction possible openness and freedom of communication is desirable.

It is not claimed that the holding of more generous conceptions of their responsibilities by executives can deliver the cotton textile industry from its present troubles; but it is held that the creative effect which would ensue by re-fertilising old ideas and causing new ones to emerge could not be other than refreshing. Many cotton men at Brussels and all agreed that nothing revolutionary was to be seen in the machinery shown there. It was once more a matter of the adding of refinements, further streamlining of design and so forth. What was also evident was that textile machinery is being planned to be produced on a far larger scale than ever previously experienced. One has yet to learn to what extent the financial resources of would-be buyers enabled purchases to be made. It seems safe, however, to draw the conclusion that the world's ability to raise the output of textiles (assuming the raw materials are forthcoming) will be substantially increased over the next few years.

Losses in Rayon

Financial losses by some of the smaller British rayon companies have a moral. These companies have continued to specialise solely in the production of filament yarns, when statistics have shown for a number of years past that industrial demand for staple yarns has been largely replacing that for filament. Filament yarns will always have a distinctive place because fabrics made from them give a superior handling, but the market tendencies showed clearly that these yarns ought not to have had the sole place in companies' production programmes, and that production of rayon staple yarns, with their rising popularity, ought also to have been undertaken. Actually, it would have been wiser to have taken the steps which would have enabled a switching over entirely to rayon staple yarn and have left the manufacture of filament yarns to the powerful rayon companies who can carry them easily among their various kinds of yarns, and indeed, use them for producing mixture yarns. The error of giving all attention to manufacturing problems and forgetting markets is an old one, and it is a little surprising to find it can still exact severe penalties.

Books and Publications

THE UNEMPLOYMENT PROBLEM IN INDIA

A STATISTICAL APPRAISAL

Problems of Unemployment in India—By Professor Moti Lal Gupta. (Obtainable at the University of Rajputana, Jaipur, Pages 184, price Rs. 10).

Professor Gupta has made a serious study of what is acknowledged to be the most critical symptom of the economic problems that face India. There are no omissions, either of important facts, or of the many and varied causes of the all-pervasive unemployment in the country. He has handled the sections dealing with India—the discriminatory tariff, for example, which doubtless has done much to India's cottage industries with the cool objectivity of a scholar. The last part of the book is devoted to policy—short and long term (though the author eschews these terms) measures to cure unemployment and raise living standards.

The poverty of the people and their enforced idleness have long been pet themes of Indian economic thinking. It is difficult for one to say anything that is not already known, or to propound solutions not offered before in some form or the other. In Professor Gupta's case the difficulty is greater as the work was done (for a Doctorate) in a foreign university—Rotterdam—and is based on published and well-known sources. This is not to deny its merits. It is an excellent study from which students as well as lay readers will profit and it throws light on certain obscure corners of our economy. But, as a doctoral dissertation the work must be judged by a different set of standards, to which it has perhaps not measured up. The sustained scholarship that should characterise a thesis is lacking, the constant effort to attain accuracy, and where that is not possible, to know how far one is likely to be out; that tenacious aspiring to the goal which does not allow expending energy on peripheral issues; and, lastly, that conscious limitation of subject matter which is so necessary, particularly in a dissertation, in order to arrive at clear conclusions and valid prescriptions. Large portions of the work are devoted to statistics, mostly gleaned from the last Census of India and the Census of Indian Manufactures, on which the author lavishes so much care that one feels one is being cruel in not appreciating his labours. Except in a few cases, however, they have failed to yield commensurate results. But before citing these, attention must be drawn to certain solid merits of the book.

Rural Unemployment

The most valuable aspect of this work is the emphasis given to the analytically distinguishable varieties of unemployment in rural India—disguised, and visible, seasonal unemployment among cultivators and cultivating labourers, the former including both owner and tenant cultivators. By their very nature, it is difficult to estimate the volume of these two varieties of unemployment. Nevertheless Professor Gupta proceeds to make estimates, undaunted. His basis is the following: He assumes disguised unemployment to exist only among the cultivators proper (owner and tenant), and that both they and the cultivating labourers suffer from seasonal unemployment. To estimate disguised unemployment of the former, he assumes that holdings of 5, 7.5, and 10 acres of land of high, medium and low fertility respectively can be regarded, on a rough basis, as economic holdings, which "would provide opportunities for the full-time use of the available labour of the families cultivating lands of the different qualities". As the distribution of population in the country according to the degree of land fertility is not available, the author has recourse to the distribution according to high, medium and low density of population, a distribution which can be assumed to reflect broadly differences of soil productivity. From this distribution he derives the theoretical minimum total acreage required to provide full-time employment to the rural male population of cultivators. The Census on the other hand, gives the actual total net sown area. If we divide the actual total net sown area by the theoretical minimum by "the all-India short of the theoretical minimum by the all-India average of 7.5 acres (which will take all simple average of fertility) of cultivable land for an economic holding," we get the magnitude of disguised unemployment—15.6 million in 1953. Instead, however, of taking the simple average, the weighted all-India average could be used—6.76 acres, de-all-India average could be used—6.76 acres, de-all-India average could be used—6.76 acres, de-all-India average could be used—6.76 acres. On that basis disguised unemployment would aggregate 17.3 million. Even this would be altered if the net sown area were taken, not for any one year, which is bound to be affected by climate, but as the average of three successive years. We shall see below that in the case of capital coefficients, he uses a five year average.

Seasonal unemployment is estimated by assuming that cultivators and cultivating labourers are unemployed annually for four and six months respectively. It is of interest that the recent agricultural labour enquiry reveals that seasonal unemployment of agricultural labour is six months. However, Professor Gupta estimates total seasonal unemployment as 25.62 million. Added to the 15.6 million of disguised unemployment of 42.3 million he arrives at the figure of 42.3 million being the total rural unemployment—a formidable figure, if one remembers that it is only the number of "self-supporting" persons, as the Census

apparently has questioned the validity of considering the seasonal unemployment of "cultivators" after a full allowance had been made for their disguised unemployment. The "economic holding" of Professor Gupta, providing "opportunities for the full-time use of the available labour", is, on his own figures, almost 142 percent of the actual average holding. If more income could be assured for them, nothing could be better. But it is necessary to proceed by stages and to work within limits imposed by a number of factors for at least the next few years.

After this, the author goes on to estimate unemployment in the non-agricultural sector in 1953—particularly in mining, plantations, cottage and small-scale industries, large-scale industries commerce and general categories of occupations—in some cases resorting to the method of using the loss of employment in particular sectors between 1951 and 1952 or 1953 as a measure of unemployment therein, and in others to even more questionable devices. One cannot help admiring his ingenuity, but how far one can trust the estimates is a different story. In concluding this section, he states rather arbitrarily, that the margin of error in his estimates may be put at plus or minus 10 percent, though he himself seems to view it as a plus rather than a minus entity. However, the total for these subsectors is even less than five million.

Contributory Factors

Professor Gupta has handled commendably the sections in which the factors responsible for unemployment in India are discussed. He cites, with statistics, the fast growth of India's population, the influence of British trade and tariff policy, the poor growth of large-scale modern industry and absence of specialisation in agriculture, and the Government's fiscal policy in which law and order absorbed the bulk of the State's resources, as factors responsible for disguised unemployment, and factors such as the increase of population, system of education, partition and the high cost-structure of Indian industries as being causes for visible unemployment—itsself of small magnitude as the economy still retains its chief element of self-employment. In addition to the historical causes, viewing the present situation in free India, the inadequacy of capital is said to be preventing the elimination, or even reduction, of the disguised unemployment.

In the last part of the book, policy matters are discussed. The Directive Principles of our Constitution lay down the objectives of economic policy for the achievement of which a rational population policy and a rapid rate of capital formation are vital. For the latter, in addition to stressing the need to create a revenue surplus in the public sector, Professor Gupta states that: "a basic solution of the fundamental problem of domestic capital scarcity is the increase in voluntary savings of the millions." The reader is led to anticipate a discussion of the possibilities of deficit financing—but is disappointed.

Capital being scarce, Professor Gupta next enters into a detailed discussion of the industries to which its supply should be channelled, governed by the criterion of the degree of capital intensity; i.e. for the present only such industries should be developed which require the least capital per unit of output. From the fifth census of Indian Manufactures and the Reserve Bank study on company finances, he deduces the average, gross capital coefficients for 44 industries and compares them with similar figures for the U.S.A. But as gross coefficients are not of much use for his analysis, he discards these (one is left wondering why he ever brought them in), and proceeds to compile the net average coefficients from the same two sources. A further table is compiled to compare their respective findings, only to infer that the Census data are more reliable in their own sphere, and can be improved by taking the average for five years 1946-50. This time however he forgets to compare the one-year and five-year averages. However, these are supplemented by data from the Reserve Bank and other sources, and the capital coefficients of the Indian economy are shown in a final table—60 industries being grouped according to the range of coefficients, with a class interval of 0.5. He admits that owing to complementarity in the different sectors, industrial development cannot strictly adhere to the order in which different industries appear in this table. Development would also be influenced by the prospective conditions of the supply of factors of production and of consumer demand—matters on which very little thought has been given. However, Professor Gupta draws up a fresh table showing the industries which could claim priority on the grounds of the criteria of capital coefficients and others—but mainly the first, and on the implicit assumption that we are not arriving at a self-sufficient economy and "some sort of international division of labour" will prevail amidst a general move in the world "for a gradual elimination of trade barriers, if not a complete restoration of free trade." A different set of assumptions would make analysis awkward but this one makes the whole thing unreal. But one cannot help giving the author credit for consistency, and who knows if his prescriptions would not lead us to a better world if only we could adopt them and convert others to follow us?

Future Policy

At this point he ends his book. Though well over three years of India's First Five Year Plan are behind him, he does not pause to compare the expenditure pattern of the plan with the one he has recommended, or their respective employment potentials. Today unemployment is a much-talked-about theme in India. But one feels at times

able to do something positive about it. Like the arms of an octopus, so many are at work against us that the intellect is apt to get numbed and give up the struggle. Every study of the problem throws up new elements—that an inflation is apt to intensify competition in the labour market with additional men seeking jobs, that the break-up of the joint-family system is likely to have a similar result; that the emancipation of women means fewer jobs for men, though one cannot but admire the many refugee women who are earning the family bread; that at least for some years till the birth rate slows down increased education and medical facilities will lower the death rate and increase the net rate of growth of the population while we make heroic attempts to raise living standards. Like Alice, we have to run very fast even to keep where we are, and not to slide back. Unfortunately even today we have not the boldness to admit that, if history is credited with truth, an ailment a hundred and fifty years old cannot be cured in a bare ten or even 15 years when the roots are so strong, so many and so hard to cut. The increase in employment promised in the first five year plan has not been realised, and many doubt if the targets fixed for the second plan will meet with better luck. Whatever else one may say, one cannot blame our planners for being doctrinaire. They are eclectic to a degree that an unkind critic could label as confusion—not without justice.

Industrial Law Digest—By N. K. Khare and L. B. Bhide, (published by N. M. Tripathi Ltd., Princess Street, Bombay. Pages 359; price Rs. 15.)

This Digest has become a standard work. The two previous volumes covered the decisions of the various Tribunals, the High Courts, then the Supreme Court down to April 1953, and the present one carries us down to December 1954. To present the law especially where, as is the case under the Industrial Disputes Acts, it is still in a fluid state, by annual supplemental volumes seems an unsatisfactory method. It may be unavoidable in a monumental work like Halsbury's Encyclopedia consisting of twenty-odd huge volumes and published only at long intervals. But the present work is not bulky and could easily have been incorporated in it, the previous decisions not reserved on appeal. As it is the busy commercial reader or practitioner may have to wade through three volumes before he finds the point he wants, and then after he has discovered it in volume 1, may find it reversed in volume 2. The reviewer emphasises the desirability of an annual or bi-annual consolidated volume because the learned author's careful and systematic digest in which not a single case involving an important principle is omitted has now become a recognised authority and is indeed almost indispensable to all who have to deal constantly with labour disputes. No one would mind paying a little extra for one complete volume with all the cases in it. One is pleased to add, being well used to slipshod printing and typographical errors therein, that a perusal of this work does not reveal a single one.

U.S. ORDERS FISHING BOATS FOR INDIA

Two large fishing boats—a gift to India from the United States Government under the American aid programme—were shipped from Norway this week on board the Norwegian cargo liner "Tulane". The boats were built in Norwegian yards from plans by an American designer, Edwin Monk. They are similar to the boats used by American fishermen on the Pacific coast. The boats—of about 50 gross tons and 57-foot long cost about £17,000 each, and the contracts were secured by Norway in competition with a number of foreign yards.

Let Trayons Transparent Cellulose Film

OPEN A WINDOW ON YOUR GOODS!

Compare these advantages

SO TRANSPARENT
Trayons transparent cellulose film transmits 5% more light than glass!

SO TOUGH
A strip only one inch wide supports 20 lbs. No cracking, no tearing!

SO CHEAP
A 20" x 30" sheet costs less than 6 pice!

Seeing is believing—when a customer sees your goods through transparent cellulose film covering. Trayons transparent cellulose film keeps your goods new all the way from the factory to the sale... shows the customer that he is getting full value for his money! Shirts, piecegoods, soaps, toys, dried fruits get hard-to-resist appeal when you wrap them in Trayons transparent cellulose film... makes it so much easier to sell them!

Commodity Markets

RISING TREND IN INDIAN CLOTH PRODUCTION EXPORTS DURING FIRST HALF OF 1955 DECLINE

PROVISIONAL figures of cloth and yarn output during July indicate that the rising trend is maintained. Cloth output at 446 million yards in July is estimated at a record high level for the year against 401 million yards in May and 418 million yards in June. Production in July last year was 441 million yards. Likewise, yarn output has risen from 133 million lbs. in June to 144 million lbs. in July, against 136 million lbs. in July last year. The total output of yarn and cloth in the first seven months of 1955 is placed at 927 million lbs. and 2,951 million yards, against 910 million lbs. and 2,947 million yards, respectively, in the comparable period last year.

On the export front, although exports of cotton textiles in the first six months of the year show a significant fall compared with the previous year's record, the performance in June has encouraged hope of a substantial overall improvement later. According to the Cotton Textiles Export Promotion Council, 70.30 million yards of mill-made cotton cloth were exported from Bombay Port alone, against 62.12 million yards in May. The oft-taken in June from Bombay alone has exceeded the all-India figure of June, 1954 by 7.13 million yards. Improved off-take during June is attributed to larger shipments to Asian, African and Oceanic markets.

But the quantities lifted by European and American markets have declined from 8.94 million yards to 8.23 million yards and from 2.64 million yards to 2.42 million yards, respectively. Offtake by the U.K., Malaya and Ceylon in June also showed moderate declines, due presumably to the growing hold that Japan is trying to establish in these markets. Exports to the U.K., declined from 8.43 million yards in May to 7.16 million yards in June, those to Malaya from 3.05 million yards to 2.83 million yards and those to Ceylon from 2.34 million yards to 2.18 million yards.

Export Decline

Exports in the first six months to June this year at 398.36 million yards record a decline of 27.01 million yards from the 425.37 million yards exported in the first six months of 1954. The decline of 42.67 million yards in the first quarter has been reduced to 27.01 million yards at the end of the second quarter due to better trading conditions. Export houses report fairly good bookings for Indian cotton textiles by the traditional buyers. While India's 10 main export markets for textiles, namely, British East Africa, British West Africa, the U.K., Indonesia, the Sudan, Aden, Australia, Arabia, Malaya and Ceylon, continue to lift reasonable quantities of the specialties usually bought by these countries, June export figures reveal that Britain and the Sudan have lost their traditional first places to British East Africa and Indonesia. Grey sheets have been in larger demand of late from all these countries. Hongkong's enquiries for sheetings and drills have not resulted in any business due to price disparity, while enquiries and orders from Burma continue to be restricted due to the insufficiency of import quotas there. Singapore has been in the market of grey drill, sheetings, leopards and white shirtings, while there has been scattered demand from Ceylon for voiles, saris, dhotis and superior shirtings.

Demand from Indonesia continues to be good and some good business has been done with Britain in medium greys. But for price disparities and unsuitable deliveries asked for, more business could have been completed with Britain. Enquiries from West Africa and Iraq have slackened, while purchases of Persian Gulf centres have been restricted to meet immediate needs. Business from East Africa is not encouraging and freight continues to be a problem with Mombasa.

Competition in Afghan Market

Russian competition in cotton textiles appears to be challenging India's supremacy in the textile market in Afghanistan, and it is feared that unless better dyed and printed fabrics at competitive prices and delivery schedules are offered to Afghanistan, it may be a difficult job to maintain India's advantageous position in that market. Age-old trade accord between the two countries and the huge offtake of Afghan produce by India had enabled India to cover a good portion of Afghanistan's textile needs running to as much as 70 percent. There is at present a growing tendency on the part of dealers in Afghanistan to go in for more and more Russian textiles, and the Government-to-Government trading between the U.S.S.R. and Afghanistan appears to have helped the larger imports of Russian textiles into Afghanistan, especially with the bid to eliminate middlemen from the trade by organising State monopolies. The retailers appear to be satisfied with the arrangement to draw their needs from the Government pool, without having to lock up funds against tenders and wait for the goods, as in the case of shipments from India. Further, geographical proximity with Afghanistan places Russia in an advantageous position, because she has no transport difficulties, like other supplying countries, such as India whose goods have to pass through Pakistan taking, on an average, three to five months to reach Afghanistan.

In view of the recent political tension between Pakistan and Afghanistan the transport problem has become more difficult and a considerable quantity of Indian textiles is lying in Pakistan en route to Afghanistan. Japanese textiles meant for Afghanistan are now being shipped through the port of Dubai (Persian Gulf) from where they are transhipped to Afghanistan. The first signs of "serious competition" in the Afghan market have made their appearance only since 1954 with the entry of the U.S.S.R., Japan and Pakistan into the Afghan cloth market. While imports from the Soviet Union and Japan have been steadily rising, Pakistan is making a determined effort to establish her foothold in Afghanistan, in view of the special advantages of proximity, though results have been disappointing.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (with the year ended August 1939 as 100) advanced by 0.2 percent to 356.9 during the week ended 13th August 1955 as compared with 356.3 for the previous week. Relative to the corresponding weeks of last month and a year ago, the index was lower by 0.5 and 6.4 percent respectively. During the week under review, the index for Foodstuffs declined by 0.2 percent to 315.2 owing to a fall in the prices of tea (-11%), gur (-4%), wheat at Hapur and dal arhar (-1% each) notwithstanding an advance in the prices of wheat at Jabalpur (+4%), gram at Hapur and rice (+2% each) and sugar (+1%). Higher prices of iron ore (+6%), raw hides (cows wet salted at Kanpur) and groundnuts (+5% each), manganese ore (average export prices) and copra (+4% each), rapeseed in Bombay and raw cotton (+2% each) and raw jute (+1%) raised the index for Industrial Raw Materials by 1.3 percent to 406.3 although the prices of ginglyseed (-14%), linseed in Bombay and lac-shell T. N. (-3% each), rapeseed in Calcutta, castorseed and cottonseed (-2% each) showed declines. The index for Semi-Manufactures fell by 0.2 percent to 326.6. Items which recorded noticeable changes were: sheep skins (-10%), buffalo hides (-8%), castor oil in Madras (-6%), coconut oil in Bombay (-5%), in Calcutta (-3%) and at Cochin (+2%), gingly oil (-5%), gingly cake (-4%), linseed oil (-3%), groundnut oil and groundnut cake (-4% each) and real alapat coir yarn (+2%). The index for Manufactures stood at 371.6 as compared with 371.5 in the preceding week. There was a slight increase in the prices of jute manufactures during the week under review. Lower prices of pepper black at Cochin (-3%), and chillies (-2%) brought down the index for the Miscellaneous group by 0.2 percent to 359.7 as compared with 360.7 for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

Groups and Sub-Groups	13-8-55	6-8-55	16-7-55	14-8-54

GOVERNMENT POLICY FOR USE OF WASHED COAL

The Deputy Minister for Production, Mr. Satish Chandra said in reply to a question in the Lok Sabha by Mr. Sarangadhar Das recently that the Government had accepted the policy that the steel plants should use washed coal. The intention was to set up coal washeries in the public sector if the required quantities did not become available from the washeries set up by the private collieries. Replying to further questions, Mr. Satish Chandra said that the Government had already declared that the price of coal would be reviewed and adjusted suitably to cover washing costs. He said, it was not a fact that private collieries were holding up the washeries because the price structure

Engineering and Transport

ECONOMIC PROGRESS IN INDIA U.S. TECHNICAL CO-OPERATION PROGRAMME

PRESIDENT EISENHOWER in his report to Congress on the Mutual Security programme for the six months ended 30th June, 1955, commented on India's economic progress. "The current situation in India" he said, "gives encouragement for continued economic development. Food and raw materials are more adequate than at any time in recent years. National income and government revenues are rising, and industrial production is climbing. The rise in agricultural and industrial output has brought about an expansion in foreign trade. These favourable developments reflect in part the achievements of the first five-year plan. The percentage increases planned in production of foodgrains and in cotton cloth for the five year period were substantially exceeded within the first three years. Output of cement, ammonium sulphate, and cotton was also running ahead of schedule. The gains in food production, while substantial, have been confined mainly to foodgrains. They have been brought about by a combination of good crop seasons and newly instituted improvement in agricultural methods. Because of population increases, however, agricultural production on a per capita basis is still below the pre-war level. It is increasingly evident that the ultimate solution of the agricultural problem in India rests on more than increased production alone. Greater attention must be paid to other factors, such as storage facilities, credit arrangements, and effective marketing mechanism.

A second five year plan is in the initial drafting stage. Its primary objectives are a sizeable increase in national income in order to raise the standard of living, and a more rapid industrialization with particular attention to the development of basic industries. The plan also envisions several programmes for reducing unemployment and underemployment, factors which have become major problems in both the urban and rural parts of India. During the fiscal year 1955, the United States allotted \$84.3 million for India, of which \$45 million was made available on a loan basis. Of the \$69.1 million of development assistance funds either loaned or granted to India in the fiscal year 1955, \$30 million was programmed for the purchase of cotton and wheat from the United States. The rupees acquired by the United States from the sale of those commodities are part of the \$45 million loan, and will be utilised by India by development of power multi-purpose river valley projects, and other joint undertakings in the Indo-American programme.

The technical cooperation programme has continued to emphasize projects of community development, designed to increase agricultural production and improve conditions in rural communities, where 70 percent of the Indian population live. Contracts are being negotiated with five American land grant colleges to provide technical support to a number of Indian States and agricultural institutions. Water supply and sanitation programme for the villages is getting under way, and more attention is being given to small-scale irrigation, soil conservation and better farm management. The University of Tennessee, under contract, will assist Indian women's colleges in home economics. Under another contract, the University of Texas will help in the establishment of teacher training institutions for the improvement of secondary education.

EXPANDING USE OF HIGH FREQUENCY RADIO

Development of the use of short-wave and ultra high frequency radio equipment is being featured in the British radio exhibition which opened at Earls Court, London, on 26th August. One British company alone has supplied, or is installing, very high frequency radio communication services in such diverse areas as Ceylon, Cyprus, Iraq, Syria, East Africa, Ethiopia, the Gold Coast, Nigeria, Malaya, China, the Rhodesias, Australia and New Zealand, Gibraltar, the Azores, Scandinavian countries, and Iceland. In terms of traffic handling capacity, writes a London correspondent, VHF—as very high frequency communication is known—can be sub-divided to carry many more simultaneous messages than is possible on the ordinary high-frequency band. And even higher radio frequencies than VHF are now in commercial use, and micro-wave stations carrying several hundred simultaneous radio-telephone messages over long distances by the repeater system are now being built. This, the correspondent adds, is an advance which must excite interest in regions where communications present special problems. For example, the modern repeater stations that are necessary for VHF and ultra high frequency services, work entirely unattended and require only a monthly visit to replenish the fuel supply. Thus radio-telephone communications between such widely separated points as Cairo, Baghdad, Damascus, Kuwait, Aden, Riad and Jeddah could, by this most modern system, be conducted with unimpaired efficiency throughout the year—free from heat and the other atmospheric disturbances which affect normal short-wave communications.

For the future, many new developments show great promise in the radio field. The transistor, for instance, bids fair to oust the present ther-

are making possible the use of the higher frequencies which, for many years, were thought to be commercially useless as a reliable means of conveying messages. For airline operation, too, mobile radio systems are coming into considerable use throughout the world. New methods have been devised for giving these systems compactness and lightness. Mobile radio systems of British manufacture are being supplied on a large scale, Egypt, Malaya and Thailand being three of the countries which have made considerable installations of this equipment. In world exports of radio communications equipment, Britain is more than holding her own against all competitors.

ALUMINIUM LIMITED'S SIX MONTHS' EARNINGS

Aluminium Limited's consolidated earnings statement for the period ended 30th June, 1955 shows sales and operating revenues at \$201,585,926, compared with \$159,597,530 for the first half of 1954. Net income is reported at \$23,179,558 for an increase of 24 percent over the comparable 1954 figure. Aluminium Company of Canada Limited, whose accounts are consolidated with those of Aluminium Limited, reports net income of \$18,896,714 against \$17,894,628 for the like period last year. The after-effects of last January's powerline break on Kitimat operations have proved more serious than at first judged and are only now in process of being overcome. The Company estimates that first half net income is lower by approximately \$3 million than it would have been had the existing smelter at Kitimat been in full production at its ultimately expected efficiency. The Aluminium Limited Statement shows separately for the first time "Gain on Disposal of Surplus Fixed Assets". Of the indicated gain of \$1,785,548, which is largely on the sale of real estate and for the most part tax free, \$691,030 was realised in the first quarter of the year but treated in the earnings statement for that quarter as a deduction from cost of sales. Primary aluminium production of the Company's principal subsidiary, Aluminium Company of Canada, Ltd., in the six months ended 30th June amounted to 299,632 short tons compared with 270,031 short tons in the same period last year. Aluminium Limited sales include approximately 27,000 tons of metal purchased at going prices from third parties to meet increasing demand. On the basis of 9,957,234 shares outstanding at 30th June, 1955, Aluminium Limited's profit represents \$2.33 a share for the first six months of the current year, as against \$1.88 a share for the corresponding period of last year. Dividend disbursements at the rate of U.S. 50 cents a share in the first quarter, and U.S. 55 cents a share in the second quarter totalled \$10,196,754 against \$8,853,385 at the U.S. 50 cents rate on the smaller number of shares that were outstanding last year. A quarterly dividend of U.S. 55 cents a share is payable on 5th September to shareholders of record 29th July, 1955.

GIANT BRITISH AIRLINER TO VISIT INDIA

Bristol Britannia, the world's biggest propeller-jet airliner, will make a series of technical flights between England, Africa and India during the course of the next four weeks. Nine flights are at present planned. Two of these will terminate in Bombay. The first trial flight to India is provisionally scheduled for the second week of September, with two intermediate landings on the outward trip and one halt on the way home. The second flight, a week later, will be a direct flight to Bombay with a halt at Cairo only. These operations are a phase of hot-weather trials which form part of the Britannia's certificate of airworthiness programme. Amongst other things the aircraft's performance at take-off, landing and during low level climb at temperatures of about 100 degrees in the shade will be checked against designer's estimates. The Britannia will be operated by B.O.A.C. crews on behalf of the manufacturers who are building a large fleet for use on the Corporation's Commonwealth routes.

COMMITTEE TO PROBE RAIL FREIGHT STRUCTURE

The Indian Railways' Freight Structure Inquiry Committee held its first meeting at its headquarters in Calcutta on 27th August. It is understood that the Committee will shortly issue a questionnaire to elicit public opinion on all aspects of the freight structure for transport by goods to trains. The questionnaire will be circulated to the various Ministers of the Government of India, the State Governments, and other bodies representing users of rail transport for goods. The Freight Structure Inquiry Committee has been appointed by the Government of India to review the existing freight structure on the Railways in the light of a developing economy. It is headed by Mr. A. Ramaswamy Mudaliar, M.P., and its other members are Mr. T. N. Singh, M.P., Mr. D. K. Borooah, M.P., Mr. I. S. Puri, ex-Financial Commissioner for Railways, Mr. V. P. Bhandarkar, ex-Member, Transport, Railway Board, Mr. L. K. Jha, Joint Secretary, Ministry of Commerce and Industry and Mr. A. K. Bag, until recently General Manager, Eastern Railway. Its headquarters are located at 16, Strand Road, Calcutta.

Mr. M. R. Bhide, I.C.S., at present Joint Secretary to the Government of India in the Ministry of Food and Agriculture, has been appointed Managing Director of State Bank of India from the date he takes over charge of the new post.

TEA MARKETS STILL LACK PROPER RESILIENCY

MR. J. P. SHAH'S ADDRESS TO CALCUTTA MERCHANTS

IN his presidential speech at the annual general meeting of the Calcutta Tea Merchants' Association on Wednesday, Mr. J. P. Shah declared: "The transition from a period of prosperity to one of doubts has certainly been sudden and the tea markets have not yet shown, after the debacle in prices witnessed between March and May, the resiliency necessary to give them strength and confidence. I am aware that prices have rallied to some extent in London after the bottom they were touched at 3s a lb. but stock figures in London are considerably higher than at the same point of time in previous years; credit conditions in the London money market are tightening, and at the London auctions, the deposit regulations for buyers have been steeply graded, making carriage of stocks more onerous factors may be counterbalanced by restrictions imposed on consignments to the London auctions, the weather and disrupted communications.

"The latest survey conducted by the U.K.'s Tea Bureau shows that consumption of tea has not been materially affected in that country so far although the tendency towards reduction of stockholding at the household level and slight saving in consumption itself is unmistakable. Price consciousness has definitely grown among the U.K.'s consumers.

Production and Distribution

"For some time, we had the impression that world production was outstripping world demand in tea but certain more important short-term factors have been obscured in this view. The world's supply of tea may be roughly placed at 1,329 million lbs. in 1954 as against 1,163 million lbs. in 1952. In spite of the higher production, however, we had in the last year one of the best years for tea which means that the relationship between demand and supply does not alone account for market movements. The world's exports of tea also increased appreciably in 1954 and a most significant fact here is the increasing quantity becoming available to the world's markets from East Africa, China, Formosa, Japan and Mozambique. Exports from these areas were absorbed in the last year by some of tea's traditional countries to the world's export of non-regulation countries to the world's exports showed an increase of 40 million lbs. in the last year out of a total increase in exports for the world of 161 million lbs. It is pertinent to ask if consumption has increased proportionately to enable us to realise the factors behind the continuous upsurge of the markets in 1954.

"Absorption in the producing countries seems to have declined in 1954 from the total reached in 1952 while outside, it increased by approximately 89 million lbs. thus contributing to roughly 41 million lbs. excess of supply over absorption. Thus production was in excess of current consumption including the needs of normal replacement. The imbalance between supply and demand in 1952 was of a different order, for when the season closed absorption was in excess of supply notwithstanding which we had one of the worst of depressions. This alone should show that stockholding and stock-adjusting have come to have a most determining effect on the health and prosperity of tea. These in themselves, however, are governed by more factors than pure consumption habits. Among such governing factors are the general economic conditions and the monetary policies of consuming countries and as these are not at present favourable to increased imports, and production cannot yet be stated to be on the safety line, it would be premature to state that tea has attained stability in the current season.

The Tea Auctions

"It is against this background we should assess some developments in our own country, the most significant of which is the report of the Tea Auctions Committee and the Government of India's decision on this. We are undoubtedly glad about the main recommendation of the Committee, that the expansion of tea auctions in India is in line with historical and economic facts and is gratified too that this decision was unanimous.

"Having underlined my agreement with the Committee on their main recommendations, I should be excused if I point out that I have not been able to appreciate their observations on certain subjects as the existing rules governing relations between buyers and brokers, the number of brokers operating at Calcutta and similar subjects. I have no doubt at all in my mind that the introduction of a discount on payments made earlier than the prompt date and any expansion of the number of brokers functioning at Calcutta will both be in the interests of this tea centre and will be brought about by the compulsion of logic and the expediencies of practical business. There is hardly any point in trying to force Calcutta and Cochin into competitive centres for tea while perpetuating in these restrictive practices which do not find a place in London or any other tea markets.

"We are in need not merely of improving our competitive position alongside of other producing countries but of meeting developing consumer resistance to price and increasing disabilities of trade from tight money conditions. All the main producing countries are at present showing a de-

cline in the total quantities they have exported while exports from certain non-regulation areas are understood to have increased.

The International Agreement

"The International Tea Agreement is still to be renewed. As the production of countries who have been out of the Agreement seems to be a fifth of the total world production, excluding the production of Russia and China, the importance of concerted action among all producers is clear. There would, however, be no advantage in an Agreement which would allow increased production and export to only one of the participants without corresponding facilities to others equally competent and deserving. In the case of India, whose demand for internal consumption has increased appreciably since the first of the revised Agreements was adopted, some allowance has to be made while fixing permissible acreages of cultivation in the same way as regard is wanted by Ceylon for her new acreages now coming into bearing. I do trust that no producing country feels tempted to take the risk of unilateral expansion on itself by staying out of the Agreement."

LONDON TEA SALES

AT last week's London tea sales, the 52,759 packages on offer realised an average price of 4s 4.5d a lb against 4s 3.9d in the previous week and 5s 1.22d a year ago. Plain broken pekoe was quoted at 3s 7.2d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	774	4/11

CULTIVATION OF LEMON-GRASS

Arrangements for distributing seeds of the red-stemmed variety of lemon-grass to growers are in hand at the Lemon-grass Research Station at Odakkali in Travancore-Cochin. Lemon-grass yields lemon-grass oil which is a basic raw material for the manufacture of a number of aromatic chemicals used in perfumery, soap, cosmetics and pharmaceutical preparations. The oil is a valuable article of export and India supplies the bulk of the world requirements of this oil. Nearly 40,000 acres were cultivated with this grass in 1951-52. In recent years, however, wherever the red-stemmed variety, which yields superior oil, is grown, it has often been found mixed with the white-stemmed grass which yields inferior oil. The Spices Enquiry Committee appointed by the Government of India recommended that adequate arrangements be made carefully to select seeds of the red variety and supply them in sufficient quantities to growers.

At the request of the Indian Council of Agricultural Research and in view of the importance of the lemon-grass industry, the Government of Travancore-Cochin established a Lemon-grass Research Station at Odakkali. The Station will now cultivate the red-stemmed variety and make seeds of this variety available to growers.

Calcutta Markets

FAIRLY GOOD DEMAND IN TEA EXPORT AUCTION

MIXED TREND IN DUSTS

AT Sale No. 13, held on 30th and 31st August, 46,500 packages were on offer in the Export auction. There was fairly good demand especially for well made black teas and for teas with any cup quality. Poorer sorts met with less demand and commonest, plain and low mediums were often one anna easier. Stylish medium teas were firm while whole leaf teas were keenly competed for at above last rates. The best liquoring teas received good support and were about steady, while tippy teas once again sold at high prices. The strongest feature of the sale were the good medium BOP's and OFG's, which often sold at dearer rates.

Quotations	1955	1954
	Rs.	Rs.
Clean Black Pekoe	2 14 0	3 0 0
Plain B. P.	2 0 0	2 15 6
Medium Assam B.P.	2 4 0	3 1 0
Best C.T.C. Assam B.P.	3 4 0	3 3 0 to 3 5 0

At the Internal auction, Dusts offerings consisted of 13,700 packages, for which there was a fair general demand. The strongest feature were the black leaf Dusts suitable for export and these were generally 2 to 4 annas dearer. Commons, Doars and Medium Assams were selling irregularly half to one anna below last rates but once again there was more demand for the small powdery Dusts than the grainy types. The best CTC Assams were fully firm and sometimes dearer, but the poorer fibrous sorts were about one anna easier.

The offerings of leaf consisted of 3,400 packages. There was a fair general demand, clean well made teas being about steady at last rates. The poorer stalky types were very irregular and sometimes easier.

Quotations	1955	1954
	Rs.	Rs.
Medium Doars Dust	2 2 0 to 2 3 0	2 5 6 to 2 6 0
Medium Assam Grainy	2 3 6 to 2 4 6	2 6 6
Dust	2 3 6 to 2 4 6	2 6 6
Best Assam CTC Dust	2 12 0 to 2 14 0	2 10 0 to 2 10 6

The Great Sphinx

Largest of all the Sphinxes, The Great Sphinx at Giza, near Cairo, is undoubtedly the most famous. Its origin is shrouded in mystery, although it is known to be so old that in these modern times it has become a symbol of durability.

And in this matter of durability the Sphinx could almost symbolize S.T.C., whose systems and equipments for communications and control are a by-word amongst those whose responsibility it is to plan for the future. S.T.C. is a world wide organisation. Its immense resources for research and manufacture are constantly producing new and yet more efficient methods of communication and control, and its engineers are always available for consultation.

COAL FIXTURES FEATURE IN FREIGHT MARKETS

THERE was a distinct lull in the freight markets and some signs of weakness at the beginning of the past week, but a spate of fixtures in the American coal trade for U.K. destinations provided some stiffening later. A fixture was made in the local coal market at 60s to Colombo and tonnage is still required for Alexandria and for ore to Japan. Two fixtures have been concluded recently at 60s f.i.o. for rice from Rangoon to Colombo. Several vessels were chartered for coal from America to the U.K. at 66s 6d for September-October positions, subject to steam, which is reported to be increasingly difficult to arrange owing to the recent heavy exports. A 9,570-ton motorship obtained the high rate of 44s a deadweight ton for the voyage out to Australia with delivery Glasgow 15/30 September but a handy-sized Danish motorship accepted 30s 9d. for an Indian round voyage, delivery Gothenburg end October.

SUGAR MARKET

During the week ended 31st August, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were 5,000 to 6,000 bags a day and stocks totalled 120,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30.4 for ordinary grain and Rs. 31.12 for big grain. Ex-mill delivery rates were Rs. 28.8 and Rs. 29.2 for ordinary and big grain sugar respectively. Offtake in a quiet market showed a falling tendency as did the prices.

LINSEED

Whilst the general tone of the market was quiet during the past week, values remained more or less unchanged. Ready goods were scarce owing to very poor despatches from the centres, and crushers were in the market for small ready lots owing to small demand for linseed oil. The oil section remained fairly dull with overseas buyers still holding off; shippers, however, were in the market for small quantities in order to cover previous commitments. Latest quotations

were as follows: August-September Rs. 17-12 a maund.

HIDES AND SKINS

Bazaar Sales

(Between 23rd August and 29th August, 1955)
Cowhides—Wet salted (Ord.) 6,000 pcs. on the basis of Annas 12-6 to Annas 14; Wet salted (Ord.) 5,000 pcs. on the basis of Rs. 8-12 to Rs. 11-8; Wet salted (Slaughtered) 15,500 pcs. on the basis of Rs. 13-8 to Rs. 26.

Goatskins—Wet salted (Daissee, Killed) 75,950 pcs. on the basis of Rs. 225 to Rs. 255, Rs. 310 to Rs. 370 and Rs. 385 to Rs. 395; Assam-Dinajpur-Murshidabad 43,100 pcs. on the basis of Rs. 232 to Rs. 272-8; Patna-Pakur 700 pcs. on the basis of Rs. 190 to Rs. 215; Pakur 800 pcs. on the basis of Rs. 230. Muzaffarpore 4,360 pcs. on the basis of Rs. 245 to Rs. 250.

Bazaar Stocks

(29th August, 1955)

Cowhides—Wet salted 1,58,700 pcs.

Goatskins—Wet salted (Daissee, Killed) 57,000 pcs.; Assam-Dinajpur-Rajshah-Murshidabad 71,500 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kishanganj 1,12,000 pcs.

SHELLAC MARKET STEADY

During the week ended 30th August, the market was quiet at the beginning, dull at mid-week and steady at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 150, 149, 152 buyers.
Lemon No. 1 Shellac	Rs. 155, 150-8, 151 buyers.
Lemon No. 2 Shellac	Rs. 147-8, 145, 146-8 buyers.
F. O. Std. 1 Shellac	Rs. 145 done and buyers;
	139-8 buyers; 142 done and buyers.
Pure TN Shellac	Rs. 136-8 buyers; 133 done and buyers; 134-8 buyers.
4% I. T. N. Shellac	Rs. 126, 122, 122-8 buyers.
No. 1 Kusmi Seedlac	Rs. 146, 144, 144-8 buyers.
No. 2 Kusmi Seedlac	Rs. 138, 137, 138 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 134 buyers; 134, 135 done and buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 133, 130-8, 131 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 5%	Rs. 127 done; 124-8, 125-8 buyers.
Ordinary Bysaky Seedlac (C. P.)	Rs. 122, 120, 120-8 buyers.
Kireelac	Rs. 66 to 65-8 buyers.

Shipments during August until the 25th were 25,103 packages comprising shellac 11,720 packages; seedlac 8,230 packages; buttonlac 329 packages; others 4,824 packages.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SUPPLIERS OF A WIDE RANGE OF INSULATION MATERIALS AND REFRACTORIES

THE SIZE OF THE SECOND PLAN

LIMITS SET BY TAXATION AND DEFICIT FINANCING POSSIBILITIES

If a decision to increase the size of the second plan had resulted from Mr. Nanda's timely reminder of the inadequacies of the plan frame it would have been a pity. The plan is too small to achieve all the development that is needed, but it is already larger than can safely be afforded at the moment. Any attempt to increase it, involving additional burdens on the economy, might have been disastrous for incentives and ultimately damaging to the successful completion of the targets. Priorities within the general framework may have to be rearranged, but at this stage the plan's absolute size can be regarded as the maximum possible, otherwise the disappointments and maladjustments caused by targets not being reached might have serious consequences. There is a good deal to be said for sticking to the realistic and shunning the over-ambitious, and if Mr. Nanda's criticisms have served as a warning that what was originally expected cannot in fact be attained, then the fault lies in expecting too much in the first place.

The present expenditure target of the plan frame will require deficit financing of about Rs. 1,000 crores and outlay from additional taxation of Rs. 800 crores. This amount of fresh taxation will be a formidable imposition for economic incentive to bear. It will involve an increase in the proportion of taxation to national income from 7 percent to 9 percent. The temptation will be to raise most of this from direct taxes. But before all the dictates of sound economics are submerged by the mounting wave of sentimental thinking about the "socialist pattern of society" it is as well to remember that direct taxes are a charge on economic progress, the very thing which the plan seeks to promote. The Taxation Enquiry Commission's report belittled the effect of monetary reward on economic incentives, but nowhere have the facts ever supported that view. There will be some scope for skimming off the "betterment" portion of the wealth which will directly accrue to companies and individuals through Government outlay, but in each case that can best be secured by indirect taxes, especially when it is remembered that it is this margin which will encourage the efforts of the private sector whether represented by agriculture, small-scale and cottage industries, or medium and large-scale concerns. The size of the proposed deficit financing is large and a few years ago might have been considered impossibly so. That might not be the case now. During the latter part of the first five year plan the economy has shown a remarkable capacity for absorbing budget deficits without developing inflationary symptoms. But it would be more remarkable if that capacity were not by now reaching exhaustion. Deficit financing there must be, but there is no reason to believe that its pace can go on increasing indefinitely, especially if the favourable monsoons of the last few years are not repeated. Deficit financing appears as a revenue-finding method devoid of the pains of taxation. To a certain extent it is, and that extent is the point where inflation develops. Mr. Deshmukh has shown himself well aware of the fact. His choice of Rs. 1,000 crores to be found in this manner is based on the evidence of past achievements and it would be dangerous to overstep what is already an ambitious total. Taken together the figures for both taxation and deficit financing are about as high as the economy can stand. Any decision to increase them because the plan frame will not do what was originally expected of it would have been a menace to continued stability.

*

Disappointment that the plan should not provide between 11 and 12 million jobs is natural enough, although it would be wrong to attach too much importance to this particular shortcoming. Unemployment has become an obsession in the minds of some politicians and the true proportions of the problem are being ignored. It is certainly serious among the educated. But on the facts Mr. Nanda has produced it is not so among other

classes. Using Mr. Nanda's figures there are about three million unemployed persons in a total labour force of 152 million. This proportion is only slightly greater than that which existed in the United States at the height of the 1953 boom. It is one-third the proportion of unemployed in Britain in the early 1930s and in the United States at the lowest point of the Great Depression. It is about one percent lower than the figure the early Keynesians considered would be an ideal for full employment without inflation. That is not to say that unemployment can be forgotten, but it is the future of the problem which needs consideration rather than its present. The creation of 12 million jobs is quite likely to leave the proportion of unemployed unchanged at the end of the second plan simply because more people will be seeking work in the new industries and are therefore more easily caught in the statistical net. Any general limit on the fragmentation of land could expand the problem out of all recognition, while an increase in the wealth of the community leading to a reduction in the amount of female labour available could diminish it.

So little is accurately known about unemployment in a developing economy as distinct from that in an industrially advanced one that it would be dangerous to distort all plans for expansion for the purpose of dealing with it. The safer course would be to plan for the largest possible increase in overall wealth while taking what measures are possible for reducing frictional and structural unemployment. Mr. Nanda admits the difficulty of finding a quick solution to the problem but suggests one when he points out that although large-scale capital-intensive industries provide relatively little scope for employment in themselves they do generate increased purchasing power. But his suggestion that the consequent demand for consumer goods be met from household and hand production drops the solution in its tracks. If the expansion of heavy industries can be expected to provide so much employment, the absorption of the increased purchasing power by medium industries would do more or less the same. This higher "multiplier effect" will be lost if the emphasis is placed too firmly on small-scale industries. If these are to

cipline that is encouraged, and the production that is lost, is never clearly stated. There is reason to suspect, however, that before long it might begin to be—not by Mr. Desai, perhaps, but by those who, when charged with the running of India's big new State enterprises of the future, discover that obligations are not to labour alone.

MEASURING IN TENTHS INDIA LEADS COMMONWEALTH TO METRIC SYSTEM

AS production and trade develop, systems that were adequate before become obstructive. Yet the growth of activity has already increased the use of them, and change has become correspondingly more difficult. We do not know how much efficiency is being lost by retaining these inadequate systems, but we can guess that it must be enormous. Among the worst offenders are the measuring systems of the United Kingdom and of many related countries. They comprise collectively the biggest trading unit—internal and external—in the world; yet they lack the facilities of the decimal system that are enjoyed by many smaller units. We have seen recently the first clear signs that this anomaly may be corrected. India has a plan to abolish the subdivision of the rupee and to substitute a simple subdivision on a decimal basis—100 cents to the rupee. South Africa is working on a plan to replace even the basic unit, the pound, with its subdivision into shillings and pence, by a Rix dollar, subdivided into 100 cents. The new system for Cyprus (a British colony, whose currency system is therefore introduced from Britain) retains the pound as the basic unit but abolishes shillings and pence in favour of mills—1,000 to the pound.

These developments have revived in Britain itself a controversy that has never been long dormant in the past century and more. Cannot Britain, too, abolish the anomaly of odd amounts of coinage? And why not at the same time substitute a simple decimal system for the still more complex weights and measures which Britons learn at school and can rarely remember in business? Historians have traced some of these measures back into remote antiquity—nearly four and a half thousand years back. Sentimentalists argue that, so old, they must be accepted as permanent. Rationalists retort that they were not devised for the conditions of our time and that they are no more sacrosanct than ancient methods of tilling the soil or of weaving cloth, discarded long ago in the interests of efficiency. It is interesting that India is leading the British Commonwealth not only towards decimal coinage but also towards decimal weights and measures. North America has decimal coinage but retains the archaic weights and measures. (Some North American measures, such as the pint, have not even the same value as the same nominal measures in the British imperial system.)

Various committees have been set up at various times with the object of simplifying these complicated systems. In Britain, the Hodgson Committee, set up by the Board of Trade, recommended in 1951 that the U.K. and British Commonwealth and U.S. Governments should work out together a plan to change their measurements to the metric system during the following 20 years. The response of the President of the Board of Trade, Mr. Peter Thorneycroft, was quite unfavourable, and no action followed. An alternative suggestion of the Hodgson Committee that the existing systems (there are different ones for different trades, the troy system for the bullion trade being probably the most familiar special one) should be simplified. It can be argued, however, that in this matter compromise can only delay the inevitable. Reform of the coinage was examined in detail by a British Royal Commission in 1918-20. Its conclusions were decidedly in favour of change, but in respect of the coinage a compromise was found to be workable and effective. The idea most favoured was simply to up-value the penny and its fractions by 20 percent, making 10 pence to 1 shilling. The florin (2s.) is already a decimal of £1; so the tenpenny-shilling would itself make a reasonable approximation of a decimal coinage. It might reasonably be hoped that a relation of 10s. to £1 could be established in due course. No-one denies the practical advantages of such arrangements. It is obviously easier to calculate, for instance, one-tenth of one pound weight than to calculate one-sixteenth of one pound weight (one ounce), or to multiply tenths of a shilling than to multiply twelfths of a shilling. The present complexities exist even within the sterling area, where they are at least familiar, and they are worse between the sterling and the non-sterling countries.

The pound sterling and its subdivisions were not devised for modern trading. It was in the 11th century, after the Norman conquest of Britain, that the French introduced a coin called a starling, of which 240 units weighed one pound. The starling was later called a penny—240 starlings one pound, or one pound of starlings—one pound starling. Much later, after the French Revolution, the French adopted the decimal system. Later still,

in the 19th century, the French agreed to base their time-of-the-day on Greenwich if the British would change their currency to an intelligible decimal system. It has to be recorded that the French carried out their part of the bargain but that the odd shillings and pence have remained. It becomes more difficult to change these systems with every year that passes. People who are accustomed to calculate in particular units and subdivisions do not easily adapt themselves even when the new systems are easier; and the greater is the volume of transactions the greater is the task of adaptation. When accounting is mechanised, the task of calculating is simplified and the expense of changing to a different system is increased. Inflation increases the amount of currency in circulation, and the task of changing that currency becomes correspondingly more burdensome. If it is agreed that the present systems are irrational it should be agreed that they must be changed. If they must be changed, why delay the change, while delay causes more obstruction?

CURRENT COIN

West Coast Paper Mills.—An excellent investment opportunity offers itself next week when lists open for subscription to the ordinary as well as preference capital of the West Coast Paper Mills Ltd. Few industries today can boast of better prospects than paper, and the advantages of the new company will be accentuated by its location in western India, where there is a large supply of raw materials and a very good market for its products. Demand for paper has been steadily increasing, and the Planning Commission hopes that production will reach an annual rate of 370,000 tons by the end of the second five year plan. The West Coast Paper Mills will make an important contribution to the increase. They will be located in the North Kanara district of Bombay, and working with modern plant and machinery, will sell their products mainly in Bombay, Madras and Andhra. Having a production capacity of about 60 tons a day, they are expected to have no difficulty in obtaining the main raw material, bamboo; the Bombay Government has granted the company concessions to extract bamboo for 30 years. It is proposed to raise Rs. 1 crore by public subscription to the shares. The issued capital consists of 100,000 ordinary and 60,000 cumulative preference shares of Rs. 100 each. The latter carry 6 percent tax-free interest. The promoters, directors and their friends have taken 50,000 ordinary and 10,000 preference shares. The remaining 50,000 ordinary and 50,000 preference shares are offered to the public at the par value of Rs. 100 each. The Industrial Credit and Investment Corporation is underwriting the issue, and the Bombay and Calcutta stock markets will be asked to list the shares. The directors hope to be able to pay an attractive ordinary dividend after meeting other charges. The capital outlay on the mills, it is estimated, will be Rs. 3 crores, of which Rs. 1.60 crores will come from the shareholders, Rs. 1 crore as loan from the Industrial Finance Corporation, and Rs. 40 lakhs from deferred payments to machinery suppliers.

Prosperity in Paper.—Investors remain very interested in the paper industry because its progress has been good and prospects are excellent. Production of paper and board last year touched a high of 155,328 tons, which compared with 139,704 tons in 1953 and 137,508 tons in 1954. It would have been even higher but for labour trouble in some of the mills. Quality has improved, and manufacturers are trying to make more varieties of paper to suit different needs. Some interesting observations regarding newsprint were made by Mr. G. P. Birla in his presidential address at the annual general meeting of the Indian Paper Mills Association in Calcutta last Thursday. According to Mr. Birla, the excise duty recently levied on newsprint is unfair to the indigenous industry: "foreign newsprint bears the same old nominal import duty since the import duty thereon has not been correspondingly increased to the extent of the excise duty levied on the indigenous newsprint." He admits that the indigenous paper industry has "natural limitations" in reducing the cost of production so as to manufacture cheaper printing and wrapping papers; as a result, imported newsprint continues to offer strong competition. The latter, moreover, is being put to "wide and indiscriminate use", as shown by the steady increase in imports. Japan is offering stiff competition; the landed cost of its newsprint, after paying the nominal duty, is almost equal to the cost of imported old newspapers inclusive of duty. Consequently, consumers prefer Japanese newsprint for packing and wrapping purposes as well, "thereby replacing the use of the indigenous wrapping papers which over and above other handicaps have to bear an excise duty." Manufacturers have been facing great difficulties in selling such papers, and have had to cut their production. The situation has been explained to the Government, and according to Mr. Birla, steps are now being taken to check the unnecessary import of newsprint and frittering away of valuable foreign exchange. However, "in order to ensure that the

Government did not lose revenue on the quantities which might be used for purposes other than the printing of bona fide newspapers, it would have been advisable to levy the same import duty on newsprint as in the case of other printing papers and allow refund on the quantities used for the printing of newspapers alone."

Implementing the Plantation Act.—Addressing the 7th session of the Industrial Committee on Plantations last week, Mr. Khandubhai K. Desai, Union Minister for Labour, called for the immediate implementation of the Plantation Act of 1951. The two-day meeting was attended by representatives of the Union Ministry of Labour, Commerce and Industry, the Planning Commission, the Governments of Assam, West Bengal, Madras, Travancore-Cochin and Mysore, as well as delegates representing both employers and plantation labour. Pointing out the importance of the plantation industry in India's economy, composed as it is of 1,449 estates and employing about a million and a quarter workers, Mr. Desai asserted that neither in India nor in any other part of the world had an industry prospered so much during the years 1953-54. This assumption led him to believe that there need be no hesitation in sharing its prosperity with plantation workers and their families, and he appealed to employers to come forward voluntarily and co-operate in endorsing the decisions taken at the Calcutta Conference of 1951. The issues involved include the question of sharing the profits for the year 1953-54; claims for bonuses, in some cases up to 50 percent of the worker's cash earnings; the need for a revised scale of wages; welfare measures and housing problems, and the extension of the Provident Fund Act to the plantations. The principle that the worker should participate in the profits of his company has its supporters; several firms in the U.K. have recently inaugurated schemes under which their employees can take up shares in the company itself, and the trend towards giving factory personnel a financial interest in their companies is expected to encourage increased production. The practical translation of such an idea in terms that can be applied in the present case presents however an intricate problem. While planters generally are sympathetic, indeed provident fund schemes are already in force in 236 of the estates, there is a feeling that the labour welfare measures being called for in plantations are far above the standard required of any other sector of agriculture or industry. The sharing of profits, it is argued, should be in proportion to the amount the planter must of necessity plough back in order to ensure the future health of the industry. Coffee, second in importance to the tea industry, is at best economically precarious, is heavily taxed, and in addition has reached a stage when it is imperative that most of the coffee plants be replaced. Mr. Desai believes that there is no problem which is insoluble, but the equation might be solved in the long run if, for the time being a living wage, adequate housing, hospital services and general welfare of workers were adopted and enforced as a common denominator throughout industry as a whole.

Record U.S. Production Levels.—The summer has passed with little let-up in the booming pace of U.S. business, reports the First National City Bank of New York in its latest monthly newsletter. The expected "summer slump" turned out to be less than usual, and now business men are looking optimistically toward the fall and a seasonal spurt in activity. Virtually all comprehensive business measures were at record levels when last reported. In July, employment totalled 65 million persons for the first time, and overall construction activity once again set a new high record. New all-time highs were registered also in seasonally adjusted retail sales and industrial output. The Federal Reserve index of industrial production rose one point to 140 (1947-49 = 100) after allowing roughly for the erratic fluctuations of the vacation season. Estimates of aggregate income and production have been boosted repeatedly to new records. In certain lines, notably steel and automobiles, production dropped off from the full schedules maintained during the spring. Steel mill operations averaging 89.7 percent of capacity in August were above July but below the peak of 96.6 in May. Most of the decline is attributable to shutdowns for long-deferred repairs and to disruptions caused by heat, vacations, and labour disputes. There has been no discernible let-up in demand. Automobiles are entering the model change-over period, but with the production race continuing right down to the end of the model year. Last year, output slowed more abruptly at this season to allow dealers to work off stocks before new models appeared. This year dealers' inventories are higher—a record-breaking 700,000 plus of new cars in early August—and some major new model introductions have been scheduled for September. Nevertheless, production of 1955 models still amounted to over 600,000 cars in August and the total output, including early 1956 models, is projected at some 470,000 in September, according to Ward's. At this rate the motor industry by the end of September will have turned out over six million new cars, more than in any full year except 1950 and 1953. Through

July at least, the seasonal declines in steel and automobile output have not prevented production generally from setting new high records. Strength in other durable goods lines and in paper, chemicals, and coal has contributed to the advance. The rise in output in recent months has been widely distributed, though more moderate than that in the first part of the year. With most of the slack in the economy already taken up, and with the motor industry taking a breather during its change-over period, industrial activity, temporarily at least, may be entering upon the generally anticipated levelling-off period, but at a pace much faster than dreamed of earlier in the year. There is still, however, no clear evidence that the cumulative forces of the boom have been weakened. In August the National Association of Purchasing Agents survey reported that new orders received by American industry were at the highest level for that month since 1950 when the outbreak of the Korean war precipitated a deluge of buying. Some support for the thesis of a levelling-off appears in recent figures on home-building, over the past year one of the major propelling forces behind the boom. Approximately 115,000 new non-farm homes were started in July, down one-eighth from the April-May peak of 132,000. The July figures are still equivalent to a seasonally adjusted annual rate of better than 1.2 million, which would be more than in any calendar year except 1950. While it is true that one swallow does not make a summer, and the building figures may yet turn up again, housing officials noted that the June-July decrease "probably reflects some voluntary adjustment in mortgage credit".

The Mills' Case.—The Millowners' Associations of Bombay and Ahmedabad have submitted a memorandum to the Planning Commission regarding the place of the cotton textile industry in the second five year plan. The two Associations between them represent three-quarters of the 208,000 looms and two-thirds of 11.9 million spindles in the country. They have asked for an ambitious target of cloth production of 10,000 million yards by the end of the second plan; 9,000 million yards being for internal consumption on the basis of 22 yards a head for a population of 400 million and 1,000 million yards for export. They have also asked that the share of the organised industry, i.e. the cotton textile mills, should be 7,800 million yards, that for handlooms 2,000 million yards and for powerlooms 200 million yards. These two Associations claim that the target can be achieved with an additional productive equipment of 3.6 million spindles and 90,000 looms, bringing the total spindling in the industry to 15.5 million and the total loomage to almost 300,000. They estimate the requisite financial outlay for this purpose at Rs. 100 crores for rehabilitation of the present plant and Rs. 133 crores for new equipment. The raw cotton requirements of the industry would rise to about 700,000 bales of cotton a year. The memorandum states that the industry has not only achieved the first plan target of 4,778 million yards but it actually surpassed it two years in advance of the target date. The claim of the industry that it has been the mainstay for meeting the country's needs for cloth cannot be denied in view of the fact that even the contribution made by the handlooms and powerlooms has been dependent on the yarn supplied by the mills. Enlarging on its present position, the memorandum states that the present paid-up capital of the textile industry is as much as Rs. 110 crores and its annual turnover Rs. 350 crores to Rs. 400 crores. After agriculture, the textile industry is the most important source of livelihood to the country's working population, over 750,000 workers being employed in over 450 mills. The memorandum tries to justify its ambitious programme of production for the 1956-61 period by holding a different view regarding the probable per capita consumption to be expected by the end of the 1956-61 period, from both the Planning Commission and the Kanungo Enquiry Committee, by placing the per capita consumption of cloth by the end of the second plan period at least 22 yards. It may be recalled that the Planning Commission had aimed at a per capita consumption of 15 yards by the end of the first plan and the Kanungo Enquiry Committee has estimated that it will go up to 18 yards per head by the end of the second plan period. This Committee, therefore, recommended a production target of 8,200 million yards—7,200 million yards for internal consumption and 1,000 million yards for export. On the other hand, the textile industry's memorandum claims that at the beginning of the second five year plan, the country's national income should be Rs. 11,236 crores, rising to Rs. 14,000 crores by 1960-61, when the population will have risen to 400 million and the per capita income to Rs. 350. The memorandum bases its estimated programme of production on the reasoning that out of the per capita income of Rs. 350, Rs. 38.5 would be reinvested and the balance of Rs. 311.5 spent on consumer goods. It points out that this would mean that the per capita expenditure on consumption would have gone up from Rs. 264 in 1953-54 to at least Rs. 312 by 1960-61, representing an increase of Rs. 48. Pursuing this line of reasoning, it is argued that taking Rs. 1.4 as the average cost per yard of cloth to the consumer, the present per

capita expenditure on 15 yards of cloth would amount to Rs. 18-12. Out of the increased per capita consumption expenditure of Rs. 48 and after allotting to food Rs. 16 to 19 out of this, i.e. 33 percent to 40 percent, the memorandum argues that it would not be too much to expect in the case of cotton cloth an addition of Rs. 8 to Rs. 9 which is a mere one-sixth of the additional expenditure. All this looks very plausible especially when the memorandum goes on to say: "Even in pre-war days, the per capita consumption was 15 to 16 yards and with the economic and political changes that have taken place since then, we have succeeded merely in catching up once again, with the level of pre-war consumption. We feel that with the further improvement in the economic condition of the common man that is expected to take place in the second plan, the per capita consumption of 22 yards envisaged by us is, if anything, an underestimate." Accepting the Kanungo Committee's estimate of handloom production at 1,400 million yards and that of the powerloom at 200 million yards and placing the requirements at 10,000 million yards, as shown earlier, according to this memorandum, there would still remain a scope for production of an additional 1,800 million yards by the mill industry to the 5,000 million yards produced by it at present. It doubts whether the handloom-cum-powerloom section would be able to fulfil the target assigned to it by the Kanungo Committee.

Cotton Yarn Policy.—The Government's present export policy for cotton yarn was strongly criticised by Mr. Madanlal Patodia, retiring President of the Calcutta Yarn Merchants' Association, at its 13th annual general meeting on Saturday last. In pursuance of India's resolution to shape her economy on "The Socialistic Pattern of Society," Mr. Patodia emphasised the need for the Government to speed up its development expenditure, to leave adequate purchasing power in the hands of the consumer, to intensify industrialisation in order to alleviate the growing burden of unemployment and to replace the "obsolete" tools

of the cottage workers with modern equipment and electric power. In this connection Mr. Patodia appealed to the Government not to yield to the millowners' demand that the original target of 5,000 million yards of mill-produced cloth fixed for the second five year plan be raised to 6,000 million, a measure which, he predicted, would constitute a grave threat to India's 1.2 million handloom weavers. On the Government's policy of calling for an increase in deliveries of yarn from both spinning and composite mills of about 100 to 120 percent for internal consumption, and for the production over and above this increased limit, of sufficient yarn for an export of at least 50 percent of the excess, Mr. Patodia made it clear that both the handloom board and the Government were under a misapprehension as to yarn production in the country. Far from being a shortage of yarn there has been a steady increase since 1950 and of the five factors given by Mr. Patodia as being responsible for the fluctuations in the prices of cotton yarn, the most important is overproduction. The remaining four he cited as: Prices of cotton lint; conditions of the handloom market; seasonal variations in demand from the weavers and the export policy of the Government of India on cotton yarn. The latter policy of continuing export quotas only to mills, Mr. Patodia condemned as being "detrimental to the full development of the export trade," and in view of the principle of the socialistic pattern of society, "the profit by export only to the mills is discriminatory." Taking a grave view of the present yarn crisis, Mr. Patodia foresaw the granting of a loan from the Cess fund for 1955-56 for the setting up of co-operative societies to supply yarn direct to the weavers as a serious threat to the yarn merchants or middlemen. He was glad however to be able to report that the Ministry of Finance had been considering the abolition of the sales tax on cotton yarn, and that a committee had been appointed to enquire into the freight structure of the railways, which, along with the recent increase in coastal freight rates, had added considerably to the hardships of the business community.

Without Prejudice

ABOLITION OF CAPITAL PUNISHMENT

DECIDING THE PROPER VERDICT WHEN JUDGES DISAGREE

(FROM OUR LEGAL CORRESPONDENT)

WE return to the current controversy about capital punishment: the dispute between the "drips and the drops". The latter is a disgusting attempted witticism coined by an abolitionist weekly which should know better. But it is not so disgusting as the insufferable air of moral superiority with which, with increasing rancour as the cause they advocate seems to be losing its grip on the public, the abolitionists assail those who most reluctantly believe in the retention of the death penalty. Mr. Lloyd George is, one read the other day, probably the member of the Cabinet best liked in the House by all parties; and this not on account of any outstanding statesmanlike qualities, but because of his essentially warm, kindly, humane character. But as Home Secretary he has a terrible responsibility to discharge, and after reference to the trial judge, the law officers and, we may be sure, his own conscience, he has done his duty without flinching, and a woman guilty of a brutal premeditated murder, who incidentally herself rejected any idea of an appeal or of life imprisonment, has been hanged. For his decision Mr. Lloyd George has been most savagely attacked in his personal character. One read with amazement in one generally sober weekly that he himself had been "responsible for" three hangings as if there had been no judge, no jury, no crown counsel and, indeed, no murder punishable by death. It was even implied that he had not bothered to consider the matter with proper care, and it was wickedly suggested that he should have spent less time in the smoking room of the House and more at his desk considering a reprieve.

It is insolent, arrogant nonsense, this attempt to divide the country up into benevolent abolitionists and sadistic savages. One remembers John Simon, Joynton-Hicks, Kingsley Wood, Herbert Morrison, Herbert Gladstone, all Home Secretaries and all deeply religious men; upright judges and anxious juries too who sorrowfully feel that they can accompany their verdict with no recommendation for mercy when convicting a brute for raping and killing an innocent little girl; and, lastly, there is the average citizen who knows that a life sentence is not a life sentence, and that in 15 to 20 years the menace may be let loose to rape and

murder some other child. Nowadays it is submitted that too much stress is laid on the value of the death penalty as a deterrent *pour encourager les autres* as was sardonically said of the hanging of Admiral Byng on his own quarter-deck. It is undoubtedly a deterrent, as the writer happens to know, having received the friendly confidences of one or two gentlemen eminent in the burglary and housebreaking line, who, after due consideration, engaged in their employment unarmed on that very account. But it is also a punishment, the punishment for murder, the normal punishment and the right one. As was said at the most notable execution in history by one of two murderer-thieves: "...and we indeed justly, for we receive the due reward of our sins, but this man hath done nothing amiss."

It is that compassionate reference to "this man" that pulls the believer in capital punishment up with a jerk. The risk of hanging, of, in fact, murdering an innocent man. And there's the rub. We will consider it in the light of the latest Indian case which has shaken up the writer pretty considerably. The reader will bear in mind that in Britain there is no alternative penalty as there is in India, and the man concerned, if convicted, would undoubtedly have been sentenced to death. Therefore, in Britain there is always the risk, infinitesimal no doubt but not negligible. "Mr. Thompson, a gentleman of independent means," as he is described in the article devoted to him in the *Encyclopaedia Britannica*, lived in Evelina Road, Peckham, a sidesman at the Parish Church who at parochial functions used to entertain the devout with excellent renditions of the classics on his violin; also with feats of strength remarkable in one of his advanced years. The good old gentleman suffered from chronic insomnia and often passed a friendly word with the sympathetic policeman on his beat in the small hours when Mr. Thompson was on his midnight rambles seeking rest and finding none. In fact, Mr. Thompson was Charles Peace, murderer and burglar who had been sought for by the police for years and far from seeking rest he was seeking loot. Years later, he was caught, tried and hanged for the murder of one Arthur Dyson. Before his execution, and when he knew that there was no hope of reprieve, Peace without the least sign of repentance casually informed the authorities that, years before, he had sat in the public gallery at Sheffield Assizes and watched day by day the trial of a respectable citizen named Habron for the murder by shooting of P. C. Cook and had seen him convicted and sentenced to death. Peace himself being the murderer. He gave incontrovertible proof that this was so. Habron had not been hanged, the sentence being commuted at the last moment, but he might well have been. He was, of course, re-

leased. Later, there was the case of Oscar Slater, released after many years in jail through the efforts of Sir Arthur Conan Doyle and undoubtedly innocent of the murder of Miss Gilchrist. Powerful argument though tragic miscarriages of justice like these are to the abolitionists, the flaw in it is that the victims of them were not hanged, and there is no reported case as far as one is aware of a man being hanged for murder and afterwards proved innocent. One such case, demonstrably proved beyond a peradventure, might well result in abolition of the extreme penalty.

The Indian case is entirely different and presents the abolitionist with what is to the writer a new and formidable argument. It is that we cannot be certain that the judge and jury have not themselves gone completely wrong. The human liability to err. There is what is euphemistically termed the "strong" judge, which expression too often means a harsh one. A "strong" judge and a "strong" foreman of the jury may hang a man whom another judge and jury would have acquitted. The writer was once engaged at Bristol Assizes in the defence of an ignorant young Irish woman, Mary Doherty by name, on a charge of murder. She was found "not guilty," but being penniless and without a friend in the world, was taken care of by some good nuns and in the domestic service of the Convent has found happiness and the respect of all who know her. But she might have been hanged. It was touch and go. She was tried before Mr. Justice Channell, one of the strictest but also the kindest of judges and his summing up to the jury saved her. Nevertheless, as Sir Percival Clarke, K.C., the Crown Counsel, remarked after Mary Doherty's acquittal, had she been tried before any one of several other just but inflexible judges whom he named she might well have been hanged. One is all in favour of the retention of capital punishment but not in its present cast-iron form. Judges should be supplied with an optional sentence as they are in India, thanks to Thomas Babington Macaulay and his Indian Penal Code. Consider the disturbing implications of this case.

A man named Pershadi was charged with the murder of a little boy, five or six years old. According to the prosecution, the motive for the crime was that the child's father had got Pershadi implicated and eventually convicted in a theft case and the murder was committed out of revenge. The murderer somehow or other persuaded the little fellow to go for a walk with him and after taking off his clothes threw him into a well and left him to drown there. Pershadi, when in jail on the theft charge, had threatened to take revenge on the father and after the murder had told the sub-inspector that he knew where the child's clothes were hidden. Moreover, he actually took the sub-inspector to the hiding place, a brick kiln, and produced the clothes. Pershadi was convicted of murder and sentenced to transportation for life. In Britain, of course, he would have been automatically sentenced to death and hanged, for there could be no question of extenuating circumstances in such a brutal crime as murdering an innocent child. There was no suggestion of insanity. Now, if you believe in the extreme penalty, what you may find disturbing is this. Pershadi appealed to the Allahabad High Court. The appeal was heard by two eminent judges with years of training and experience in the criminal law behind them, both equally resolved to do justice. And they disagreed. Totally and finally. Both on the facts and the law. One of their lordships held that there was no evidence at all against the appellant and that he must be acquitted, and the other that he had been proved guilty of murder and was rightly convicted. So the matter was referred to a third judge who was of opinion that the verdict of guilty was the right one. Accordingly the High Court confirmed the conviction but certified the case as a fit one for appeal to the Supreme Court.

Now, applying this case to the controversy going on in his own country on capital punishment, what does the British reader make of this judicial disagreement? Personally, and very much subject to correction, the writer thinks that once the two judges disagreed the conviction should have been set aside. For if there is any reasonable doubt of the guilt of an accused, he is entitled to the benefit of it and to go free; and what stronger proof can there be of reasonable doubt than the fact that one of two High Court judges finds that there is no case at all against the man?

So much for Pershadi. But if, like the writer, you are a hesitant believer in capital punishment you may find something quite disquieting in the implications of the case. The two judges disagreed fundamentally both on the facts and the law. That means that if Pershadi had been tried in England by Mehrotra J., the jury would have been told that there was no case against him and he would have been found not guilty and acquitted. Tried by Desai J., he would have been convicted and hanged. True, there is the Court of Criminal Appeal, but there their lordships do not interfere with findings of fact by the jury. In findings of fact the jury are mainly guided by the judge's summing up, and bring in their verdict accordingly. But, if you are on a jury how are you going to reconcile it with your conscience to send a man to the gallows by your verdict if you know that the judge may be quite wrong and that another judge might hold entirely different views? The answer may be that that could happen only once in a thousand times. But it has happened, as this case shows. And it makes one think.

[Pershadi v The State. A.I.R. 1955 (August) (Allahabad) 436.]

A DITCHER'S DIARY

aware none of these points—which have a very practical bearing on India's claim—have been put over to public opinion abroad. Instead it has been allowed to fall for the legend of little David Salazar standing up bravely to a ruthless Goliath Nehru.

And while I am on the subject I may appropriately say that an example of good public relations is a little booklet entitled "Transport" issued by Unilever Limited for private circulation. It is a reprint of what Sir Geoffrey (now Lord) Heyworth, chairman of Unilever Ltd., and Dr. Paul Rykens, chairman of Unilever N. V., had to say on the subject of transport at their annual general meetings in London and Rotterdam last May. Unilever's investment in transport, handling equipment and warehouses amounts to £18 millions or nearly 15 percent of the group's total investment in manufacturing and distribution facilities. Transport also has a bearing on the amount of working capital needed to ensure the smooth running of this gigantic concern. The slower the movement of raw materials, intermediate products and finished goods the larger the stocks that have to be maintained and financed. A day's delay in Unilever's world-wide operations would tie up another £5 million of working capital. When you run into figures of this magnitude you can understand (and the business of public relations is to make people understand) how important transport is in modern industry and why the latter's leaders are always on the look out for better services. Transport is, in fact, a major element in the cost of producing anything. The labour cost to Unilever of producing a ton of washing powder is 13 man-hours: the cost of the delivering it 200 miles away from factory to retailer may be 19 man-hours. From these simple facts it is not difficult to see why an immensely complex organisation such as Unilever "must not be tied to any one form or method of transport", and why Lord Heywood should be constrained to remark, "it is strange that the world of transport, which should be one of mobility, is to a certain extent characterised by a rigidity of outlook and policy".

Still speaking of public relations I am reminded that some time ago I made the suggestion that more company chairmen should contribute to public enlightenment on the subject of ownership in joint stock enterprise by giving some analysis of their shareholders' holdings in their annual statements. What has reminded me is a note attached to a copy of the report of the Tata Iron and Steel Company which has very kindly been sent to me. The report contains just the sort of statistics I had in mind when I quoted the Metal Box Company of the United Kingdom as an example, and the note points out that it has been T.I.S.C.O.'s practice to publish such information since the publication of the accounts for the year 1950-51. I found these figures interesting because they also illustrate the point I made previously that the ownership of the shares of public companies is usually widely spread. Of the shareholders of Tata Iron and Steel on 31st March, 1955, no less than 16,713 had holdings of less than Rs. 1,000 compared with only 1,908 with holdings of more than Rs. 10,000. Those owning between Rs. 1,000 and Rs. 5,000 numbered 11,750 while those in the group Rs. 5,000 to Rs. 10,000 totalled only 2,283. The information would perhaps have been even more valuable if it had contained some estimate of the average holdings of shareholders within each group, especially the one of Rs. 10,000 and above—a point which I have already raised. The ordinary shares of the company were distributed among no less than 18,574 individuals. There were altogether 32,154 individual shareholders compared with 51 banks holding

shares, 133 insurance, industrial, and investment companies and 316 shareholders classed as miscellaneous. These individual holders owned 885,095 ordinary shares out of a total of 1,285,000 and the sum of their shareholdings represented 67.73 percent of the issued capital. This seems to me to be a pretty fair representation for the individual and small share owner. If other large enterprises were to offer similar information on the distribution of their shares I am sure that in 99 percent of cases it would not be found to differ substantially from that published by Tatas. If the true facts were more widely known, there might be less doubts in the public mind about who the capitalist really is.

I have always contended that India's greatest need in the political field is a good responsible Opposition Party, but after reading Mr. J. P. Narain's statement criticising the speech Mr. Nehru made in Patna last week, I must confess to the fear that it is as far away as ever. The burden of Mr. Narain's comments seems to be that there is such a thing as an excuse for rioting, lawlessness and insult to the national flag in a democratic country with a properly elected Government. Mr. Nehru may not have been at the top of his oratorical form when he spoke about the goings on in Bihar. But he had good reason to be exasperated, and if a section of the public considered its point of view rather roughly dealt with, it is always open to it to express itself in more peaceful terms next time. Mr. Narain may have intended simply to point out that there were two sides to the quarrel, a fact which no fair-minded person would care to dispute. But what he seemed to be trying to do was to justify acts of lawlessness because the provocation was strong, and that is something no responsible politician should be caught at. If Mr. Narain's Party were called upon to form the Government of the country—as it may well be some day—the chances are that it would take an entirely different view of what is permissible in the way of self-assertion. If it did not, it is unlikely that it would govern for long. I am sure that an elector has more confidence in casting his vote for a Party when he is shown in advance that any attempt to disturb his peace, damage his property or endanger his life will be dealt with firmly and swiftly. Perhaps Mr. Narain is not attempting to make out a case that the country be governed by the passions of a mob of unruly adolescents, but when he attacks Mr. Nehru's rejection of this possibility, that is what in fact he is doing.

For an example of the language with which some "experts" insist on cloaking their thoughts the following piece would take some beating. It is intended to be a comment on the operative technique of Richard Strauss.

"It is clear with atomic certainty that the composer, subconsciously overcome by musical hybris, forced the essential essence of the opera from him by means of repression, withdrew his ego in pathless deviation from the real object of the artistic form and subjected his monomania abjectedly to a thing which in its original idea carried validity only for the producer or scene-shifter."

The aggressive "non-expert" can equally be an offender, although nobody could accuse this little piece of criticism on the same subject of being obscure.

"Well, God help us, there you see was Strauss composing away for all he was worth, and it was going fine, and he came to that bit and he did not want to stop, so he said to himself, well, it's all one wash up, so let's put the servant to music too, and then there needn't be any pause."

You may take your choice which you prefer.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS
A formal Prospectus has been filed with the Registrar of Companies, Bombay.

"Consent of the Central Government has been obtained to this issue, by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any of the statements made or opinions expressed with regard to them."

"A licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

The Subscription List will open on Monday, the 12th September, 1955 and will close on Thursday, the 22nd September, 1955 or earlier at the discretion of the Directors.

THE WEST COAST PAPER MILLS LTD.

(Incorporated under the Indian Companies Act, 1913)

AUTHORISED CAPITAL

3,75,000 Ordinary Shares of Rs. 100/- each	Rs. 3,75,00,000/-
1,25,000 Cumulative Preference Shares of Rs. 100/- each	Rs. 1,25,00,000/-
	Rs. 5,00,00,000/-

ISSUED CAPITAL

1,00,000 Ordinary Shares of Rs. 100/- each	Rs. 1,00,00,000/-
60,000 6% (free of income-tax) Cumulative Preference Shares of Rs. 100/- each	Rs. 60,00,000/-
	Rs. 1,60,00,000/-

The Company was incorporated on 25th March, 1955. On or about 2nd May, 1955, a Statement in lieu of Prospectus was filed with the Registrar of Companies, Bombay, and a certificate for commencement of business was granted on 5th May, 1955.

The Promoters, the Directors and their friends have taken up 50,000 Ordinary Shares and 10,000 Cumulative Preference Shares all of the aggregate face value of Rs. 60,00,000/- on which a sum of Rs. 50/- per share has been paid up.

The remaining 50,000 Ordinary Shares and 50,000 Cumulative Preference shares are offered for public subscription.

The amount payable in respect of both the Ordinary and Preference Shares is as follows:

(a) On application	Rs. 25/- per share.
(b) On allotment	Rs. 25/- per share.

(c) The balance of Rs. 50/- in respect of Ordinary and Rs. 50/- in respect of Preference Shares is payable in such calls as may be determined by the Directors provided that no call shall exceed 1/4th of the nominal amount of the shares and there shall be an interval of at least two months between two calls.

The Directors reserve the right to allot in advance of the opening of the subscription list not more than 20,000 Preference Shares out of the present issue.

By an Agreement dated the 23rd day of August, 1955, the Industrial Credit and Investment Corporation of India Limited, have agreed to underwrite the said 50,000 Ordinary Shares and 50,000 Preference Shares now offered for public subscription for an underwriting commission of Rs. 2 per cent. In addition to the said commission, the said Corporation is also entitled to brokerage at the rate of 1% on the nominal value of all such shares as are either taken up by and allotted to them or have been subscribed for through them and allotted by the Company. In the opinion of the Directors the resources of the said underwriters are sufficient to discharge the underwriting obligations.

RIGHTS OF CUMULATIVE PREFERENCE SHARES

The said Cumulative Preference Shares shall confer on the holders thereof the right to receive in priority to Ordinary Shares in the capital of the Company out of the profits of the Company from time to time determined to be distributed, a fixed cumulative preferential dividend at the rate of 6% per annum free of income-tax on the capital paid thereon and also the right in a winding up of the Company in priority to all Ordinary Shares to repayment of the Capital paid up thereon together with the payment of all arrears and accruals of the said cumulative preferential dividend down to the date of commencement of winding up whether earned or declared or not, but shall not confer any further rights to participate in the profits or assets.

OBJECTS AND PROSPECTS

The Company has been formed, generally for carrying on all or any of the objects and purposes set out in the Memorandum of Association of the Company, and particularly to manufacture white printing and wrapping papers from bamboo and other raw materials.

There are at present 20 Units in the country for the manufacture of paper and paper board with a total capacity of about 1,85,600 tons. Heavy imports are necessary to meet the present demand, requiring valuable foreign exchange.

On the basis of the above figures the annual per capita consumption of paper in India is hardly one lb. This is very low in comparison with that in other countries such as U.S.A. having approximately 400 lbs. Canada 175 lbs. and U.K. 154 lbs.

With the growth of literacy, the expansion of trade and industry, the general rise in the standard of living and the increase in population, consumption of paper in India is bound to increase. The Planning Commission has envisaged a steady increase in the demand and the target fixed for the Second Five Year Plan for the paper industry is 3,70,000 tons compared with the production of 1,55,000 tons in 1954.

The present installed capacity together with the expansion already sanctioned leaves a wide gap to be bridged in order to meet the minimum requirements of the country. The industry, therefore, has bright prospects for further expansion.

The present rate of import duty on paper is 39% ad valorem which provides sufficient protection against undue foreign competition. Moreover there are indications of worldwide shortage of paper as will be evident from the following observations made by the President of the Newspaper

THE WEST COAST PAPER MILLS LTD.—Cont'd.

Society, London, and the Indian Tariff Board as quoted hereunder respectively:

"We face a famine, a real famine in paper not only newsprint but every form of paper. A new source of supply must be found."

"There is an overall world shortage of paper and pulp, making import of any substantial quantity of these products into this country from abroad, a remote possibility."

SELECTION OF SITE

The promoters have selected Dandeli in North Kanara District of Bombay State as the site for the factory after a thorough investigation of all major factors which are briefly enumerated below:

RAW MATERIAL

The various forest ranges around Dandeli have adequate resources of Bamboos for a continuous output of 60 tons paper per day and there will be sufficient supply of suitable bamboo for any expansion of output that may be visualised in future.

It has been ascertained that supply of bamboo is available within an average lead of about 10 miles of the proposed site sufficient to supply a factory with a daily output of 100 tons.

WATER SUPPLY AND EFFLUENT

Kalinadi, a perennial river, flows within a distance of about two furlongs from the factory site, assuring an abundant water supply all the year round. Permission of the State Government has already been obtained to discharge the effluent back into the river after necessary treatment.

AVAILABILITY OF CHEAP POWER

Hydro-Electric power will be available from the Jog-Karnatak Electric Grid, a sub-station of which is situated just opposite the proposed factory site. It is also proposed to establish a thermal power plant for the generation of a part of the Electric power requirements and to make use of the steam from this plant for the process in the factory. Apart from the saving in the costs of operation this will assist in ensuring a continuous supply of Electric Power.

TECHNICAL PERSONNEL

Qualified and experienced personnel required for the erection and in the initial period of operation will be obtained from the Machinery Suppliers.

TRANSPORT FACILITIES

Dandeli is a terminus on the metre gauge branch of the Southern Railways. Furthermore, it is a centre of a number of motorable forest roads. The factory site is about 133 miles by rail from Mangalore Port, which may prove very useful in the long run for the despatch of the products to coastal towns by sea route.

NATURAL MARKET

The products of this mill will be sold primarily in Bombay, Madras and Andhra States which are easily accessible by rail or sea from the factory site.

CONCLUSION

Highly qualified experts have thoroughly examined the location from various aspects and have unanimously acclaimed the suitability of the project. The Chief Engineer of a leading German Machinery Supplier has observed in his report of 25th May, 1955, as under:—

"The Dandeli site is probably the most suitable of the comparatively few presently eligible locations in India for the establishment of a major pulp and paper making unit based on bamboo."

AGREEMENT WITH THE GOVERNMENT OF BOMBAY.

By an agreement dated the 13th August, 1955, the Government of Bombay have granted to the Company necessary concessions for a period of 30 years, the royalty payable being Rs. 3-2-0 per ton paper or pulp going out of the factory and subsequently subject to revision after five years and subsequently after every ten years; such revision at each stage shall not exceed 25% of the basic rate of Rs. 3-2-0 per ton. They have further agreed to grant lease or occupancy rights of 200 acres of land for the Factory and Housing Colony.

CAPITAL OUTLAY

On the basis of the quotations received from wellknown machinery manufacturers, the Directors are of opinion that the capital outlay of the factory of the rated capacity of 60 tons including factory building, township, water works, etc., will be about Rs. 3 crores as under:

1—Plant and Machinery	Rs. 2,40,00,000/-
2—Buildings	50,00,000/-
3—Miscellaneous equipment, vehicles, etc.	6,00,000/-
4—Brokerage and underwriting commission	3,00,000/-
5—Preliminary Expenses	1,00,000/-
	Rs. 3,00,00,000/-

and the same will be provided as under:

	Rs.	Rs.
By Share Capital:		
Already subscribed	60,00,000/-	
Present Issue	1,00,00,000/-	1,60,00,000/-
By Loan from The Industrial Finance Corporation of India (already sanctioned)		1,00,00,000/-
By way of Deferred Payment to Machinery Suppliers	40,00,000/-	
		Rs. 3,00,00,000/-

The working capital, when required, will be provided by borrowings from Banks and other organizations.

The minimum subscription in respect of the present issue on which the Directors will proceed to allotment is Rs. 1,00,00,000/-.

ESTIMATION OF PROFITS

The Company intends to instal the latest Plant and Machinery which will effect a substantial saving as compared with older plants both in the cost of labour as well as of chemicals. Modern Soda Recovery and Recaulcising Plants are expected to effect a substantial saving in the cost of chemicals, and the recovery of steam will be another important economic feature.

Taking into account all these factors and leaving an adequate margin for contingencies, the costs of manufacture have been carefully prepared and examined by various technical experts and cost accountants. On the basis of existing selling prices and after allowing for all selling costs, freight, depreciation, overhead charges, the Directors are satisfied that there will be an adequate margin to permit the payment of an attractive dividend on the Ordinary Shares after meeting interest on loans and on Preference Shares.

PRELIMINARY EXPENSES

The estimated amount of the preliminary expenses (exclusive of underwriting commission and brokerage and also exclusive of the sums of Rs. 30,000/- and Rs. 15,000/- paid to Shri A. D. Chaudhari and Shri M. G. Kotibhaskar respectively) is Rs. 1,00,000/- approximately.

BROKERAGE

Brokerage at the rate of Rupee One per cent. will be paid to recognised Brokers, Banks or Industrial Credit and Investment Corporation of India Ltd. on allotments made in respect of applications bearing their stamps.

DIRECTORS' INTEREST

By an agreement dated 25th day of July, 1955, Shri A. D. Chaudhari has been appointed Technical Director of the Company on a monthly remuneration of Rs. 2,500/- for a period of ten years from the incorporation of the Company and as such he is alone interested among directors.

The Company has paid to Shri A. D. Chaudhari a lump sum of Rs. 30,000/- and Shri M. G. Kotibhaskar a lump sum of Rs. 15,000/- in full and final settlement of the expenses incurred by them for preliminary survey, investigations and preparing the scheme.

DIRECTORS' QUALIFICATIONS AND REMUNERATION

The qualification of a Director, other than a Debenture Director shall be the holding of Ordi-

nary Shares in the Company of the aggregate nominal value of at least Rupees Five Thousand.

The remuneration of a Director shall be not exceeding Rs. 200/- for each meeting attended by him, in addition to a fair compensation for his travelling expenses for attending Board Meetings. Such further remuneration may be given to a Director as by way of salary or commission on dividends, profits or turnover or by participation in profits or by any or all these modes. Provided that such remuneration by way of commission or by participation in profits shall not, without the sanction of the Company in General Meeting, exceed 3% of the net profits of the Company as laid down in the Articles of the Company.

BORROWING POWERS

No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of their powers of management save and except such restrictions as are imposed upon them by Article 61.

RESTRICTIONS ON TRANSFER OF SHARES

The Articles of Association also provide that the Directors may decline to register a transfer in respect of shares upon which the Company has a lien, for all moneys called or payable at a fixed time in respect of such shares.

AUDITORS' REPORT

After the date of the Certificate of Commencement of Business dated 5th May, 1955, the Company has not carried on any business, nor declared any dividends, but has incurred certain expenses out of the moneys received in respect of shares allotted prior to the date of the issue of this Prospectus. The Auditors Messrs. Batliboi & Purohit have made a report in that behalf.

VOTING RIGHTS

The Articles of Association provide that no member shall be entitled to be present or to vote or speak on any question either personally or by proxy whilst any money due from him alone or jointly to the Company in respect of any share or shares in the Company remains unpaid.

Upon a show of hands every member (other than a Preference Shareholder) and qualified to vote when present in person shall have one vote and upon a poll, every member entitled to vote and present in person or by proxy shall have one vote in respect of every share held by him.

The holders of the said Cumulative Preference Shares shall have no right to vote either in person or by proxy at any general meeting by virtue or in respect of their holding of Preference Shares except that they shall have a right to vote only:—

(a) on Resolutions placed before the Company which directly affect the rights attached to Preference Shares;

(b) if the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of the commencement of the meeting.

APPLICATION

Application for shares should be made in the units of 5 shares of either class on the form accompanying the Prospectus or which may be obtained at the Registered Office of the Company, at the Office of the said Underwriters and at any of the offices in India of the Company's Bankers.

Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance of the deposit will be applied towards the amount remaining to be payable on the shares allotted and any balance thereafter remaining will be returned.

The shares when issued will be subject to the Memorandum & Articles of Association and Prospectus of the Company, copies of which can be inspected at the Registered Office of the Company during office hours.

Applications will be made to the Stock Exchanges of Bombay and Calcutta in due course for quotation for the shares.

(COPY OF THE PROSPECTUS CAN BE OBTAINED FROM THE COMPANY'S REGISTERED OFFICE, BANKERS AND BROKERS)

LOWER PRICES, LESS TRADING IN STOCK MARKETS

GROWING ANXIETY ABOUT ECONOMIC SITUATION

London, 7th September.

THERE was no slackening in the stock market recession during the past week, and as prices steadily fell away the volume of business contracted. The main influence was the worsening economic situation. Although expectations of a higher bank rate failed to materialise, the Treasury Bill rate was hoisted sharply on Friday and some quarters said that this pointed to a change in the bank rate in the near future. Sentiment was also affected by the latest gold and dollar reserve figures. Gilt-edged were among the chief sufferers and losses on the week extended to around two points. The feature of foreign bonds was the strength of Japanese and German issues following the Bank of England's decision to allow the export of dearer securities. There was little to assist sentiment in the industrial market, and with small selling going on prices steadily drifted lower. The speech by the President of the Trades Union Congress on prices and production brought an improved tone at one time, but buyers failed to come in, and to the accompaniment of talk of an autumn Budget the market continued dull. Gold shares moved against the general trend, aided by favourable Press comments. Coppers gave ground. Tins lost some of their recent improvements, and other base metals were inclined to ease. Leading oils lost ground, but rubbers encountered selective demand at times reflecting the advance in the commodity price. Teas were quiet.

The Money Market

Credit was again kept on a very tight rein in the money market during the past week with a 4 percent general rate for loans. This continued dearth of money was having its effect on the market's margin of profits, and with continued drain on credit through the increasing number of bills offered week by week it was inevitable that something would have to be done. Therefore the market altered its bid for this week's offer of Treasury Bills and secured a rate of discount of 4½ percent as against just over 4 percent recently. Applications for Treasury Bills totalled £362,900,000. £290 million were allotted at an average rate of 8½ 3.78d compared with 80s 1.10d in the preceding week. This week £300 million is being offered. The Bank of England return for the week ended Wednesday, 31st August showed notes in circulation about £6 million lower at around £1,782 million, while bankers' deposits were about £10 million higher at around £243 million.

U.S. Federal Reserve Return

The Federal Reserve Board in Washington has approved an increase to 2½ percent in the rediscount rate charged by the St. Louis Reserve bank, the previous rate being 2 percent. This makes the St. Louis district the fourth to rise to this new rate. The Federal Reserve Bank, Philadelphia, has also

raised its rediscount rate from 2 percent to 2½ percent effective from 2nd September. This follows similar increases at Cleveland, Atlanta and Ohio Federal Reserve banks.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: Vicious is the only word that describes Wednesday's markets. Vicious that is so far as the layman is concerned. At the moment an ordinary investor would be well advised to stand back and let professionals enjoy their thrills and parry operations unmolested or unassisted. With institutions still holding off and the general economic climate keeping the public subdued, the markets are likely to continue to be both erratic and dangerous. It is advisable to hold on to good class shares and to tread warily in the markets for the time being. There are good stocks to buy but selectivity is the keynote now.

U.S. Cotton Export Policy

Before leaving London for Amsterdam on 1st September, Mr. Benson, United States Secretary of Agriculture, telephoned his under-secretary in Memphis instructing him to give immediate consideration to the British cotton industry's request for a more specific definition of "low quality cotton" incorporated in the United States cotton export policy. The British industry's representatives, while welcoming the assurances given in Ausrut, emphasised the importance of a specific definition in terms of grade and staple lengths. After his London visit, Mr. Benson is to visit the Netherlands, Denmark, Switzerland and France before returning home.

London Rubber Quiet

The London rubber market was quiet during the greater part of the past week, with prices fluctuating narrowly. Physicals were maintained but a steady undertone was maintained with a fair volume of enquiries on Continental account. The accent was on lower grades, with enough business to sustain a small advance. Towards the close a sharp upturn reflecting Singapore advices was extended on support from professionals and outside buying orders together with improved New York advices. Values were about 1½ d. higher on balance. The sole crepe market remained slow and a price of 46d a lb. was somewhat difficult to obtain for No. 1 smooth on spot. There was no evidence, however, of selling pressure.

Malayan Rubber Export Duty

A number of snags were struck at today's talks between the Malayan Federation Government and the rubber industry on a scheme for registering the rubber industry on a scheme for registering forward sales of rubber and fixing export duties on them in advance. But it is understood that a considerable measure of agreement was reached on the proposals put forward by the Government to stabilise profit margins on forward sales by fixing the export duty on the contract price. At present the duties are levied on the Gazetted price prevailing at the actual time of shipment so that producers have to pay higher or lower duties if the price rises or falls between the signing of contracts and actual shipments.

Activity on Wall Street

In the foreign section of the bond market activity was generally slow. Germans were mixed with Government 7 percent of 1949 up over one point on fairly good activity, while Berlin City Electric 6½ percent dropped six points on sale of one bond. Some Italians advanced a point earlier in the period but later gave up the gains. Greek sixes worked higher by nearly two, while Serb sevens gave up about a point. Poland Assented 4½ percent lost over four points under light offerings. Norwegians were unchanged with little interest noted in Denmark. Japanese showed only minor changes on small volume. Chile threes of 1993 finished unchanged, while a few Brazilian 6½ percent were marked up as much as 3 to 5 points on a couple of sales. Domestics were highlighted by the strength and activity in the number of convertible issues. Colorado Fuel and Iron, Vanadium Corporation and Bethlehem Steel were features and sold at new high reflecting the boom in metal company shares on the stock exchange. On the other hand, Phillips Petroleum 3.70 percents were under considerable pressure, dropping more than six points to a new low for the year, following news that the entire issue is being called for redemption. Rails were mostly higher in moderate dealings, while U.S. Governments in intermediate and longer maturity were soft at the outset but eventually firmed. Interest in top quality corporates was directed to the marketing of a number of new issues including the 280 million dollar Baltimore and Ohio offering which met with excellent response from investors. This was the largest single piece of debt financing in American railroading. World bank activity was confined to a sale in the 3½ percents of 1971 with nearly two points' loss.

Vegetable Oil Market

A feature this week has been a demand for linseed oil for shipment next year. The demand came from the Continent which previously had been a seller. Near positions were largely neglected with the result that forward shipments increased their premiums with Indian September-October still said to be available at £94 but for January-April arrival £95½ was wanted after business was done at £95 c.i.f. Cheaper offers are reported coming from India for castor oil and prices have eased about 30s. a ton and more for BSS grade. Business however was quiet.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND SLIGHTLY EASIER

Wednesday, 7th September.

CONDITIONS in the money market remain fairly tight, although a slightly easier tendency seems to be asserting itself. The trend in advances has remained steady and a good deal is still locked up in sugar stocks. Funds continue to return from upcountry areas. The interbank call rate is unchanged at 3 percent, but there are lenders over at this figure.

Fairly quiet conditions have prevailed in the bill market this week, but a few bills appeared last Thursday due to a renewed fear of an increase in the United Kingdom bank rate. Remittance has remained in fairly good demand. Sterling is steady but there is considerable pressure on the current rates. The dollar is unchanged at Rs. 480½.

Silver was steady and the price advanced from the previous week's level of Rs. 165-2 to Rs. 165-12, quoted today. The rate for forward delivery was quoted at Rs. 165-8. The price was unchanged at 78-3/8d. in London and at 90½ cents in New York. In spite of the rise in silver, gold was rather quiet and the price declined from Rs. 95-1 to Rs. 94-15. The sovereign at Rs. 61-10 showed a loss of 2 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 6th September, 1955, totalled Rs. 1,36,00,000. The average rate of acceptance fell from Rs. 2-8-6 to Rs. 2-8-3 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 45 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 12th September, 1955. During the week ended 2nd September, 1955, Government of India Treasury Bills for Rs. 2,50,00,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 7.90 crores in notes in circulation to Rs. 1,292.99 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 2nd September, 1955, while the total note issue was Rs. 50 lakhs lower at Rs. 1,315.32 crores. Notes held in the Banking Department consequently fell by Rs. 8.40 crores to Rs. 22.23 crores. Foreign securities have been raised by Rs. 34.78 crores to Rs. 656.82 crores, while rupee securities were reduced by an equivalent amount to Rs. 508.91 crores. This was done partly by a transfer from the Banking Department where balances held abroad declined by Rs. 32.40 crores to Rs. 63.10 crores. Deposits of the Government of India dropped by Rs. 40.27 crores to Rs. 64.38 crores but other Government accounts rose by Rs. 3.74 crores to Rs. 40.16 crores. Balances of commercial banks at Rs. 54.99 crores showed a rise of Rs. 3.63 crores. Investments improved by Rs. 55 lakhs to Rs. 63.20 crores. Other loans and advances increased from Rs. 28.75 crores to Rs. 33.75 crores, of which advances to scheduled banks against usance bills totalled Rs. 13.66 crores (Rs. 12.14 crores). These advances amounted to Rs. 187.33 crores since 1st January, 1955. Ways and means advances stood at Rs. 25 lakhs (Rs. 80 lakhs).

The statement of the position of scheduled banks for the week ended 26th August, 1955, discloses Demand and Time liabilities at Rs. 608.07 crores (Rs. 8.85 crores on account of borrowings from banks) and Rs. 409.06 crores (Rs. 3.59 crores) compared with Rs. 601.39 crores (Rs. 8.69 crores) and Rs. 407.64 crores (Rs. 3.84 crores), respectively in the previous week. Cash has decreased by Rs. 1.22 crores to aggregate Rs. 33.27 crores, while balances with the Reserve Bank have increased by Rs. 2.07 crores to stand at Rs. 50.23 crores. There is an increase of Rs. 2.25 crores in investments to Rs. 378.28 crores. Advances and bills discounted at Rs. 606.20 crores reveal a fall of Rs. 13.95 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.2 percent and 59.6 percent against 8.2 percent and 61.5 percent.

The return of the State Bank of India for the week ended 26th August, 1955, shows a drop of Rs. 14 lakhs in total deposits to Rs. 214.72 crores. Investments in Government Securities are up by Rs. 1.76 crores to Rs. 97.15 crores, while other authorised investments remain unchanged at Rs. 70.27 crores. Advances including loans, cash credits and overdrafts and bills discounted and purchased have decreased by Rs. 9.11 crores to aggregate Rs. 103.39 crores. Cash and balances are, in consequence, shown at Rs. 19.39 crores or Rs. 28 lakhs less.

The outstanding balance of the four and a half (4½) percent loan, 1955-60 will be repaid on 15th

September, 1955, and no interest will accrue thereon from that date. To facilitate discharge of the loan on the due date, holders may tender their securities at the Public Debt Office, treasury or branch of the State Bank of India at which they are encased/registered for payment of interest on or after 6th September, 1955. Full details of the procedure for obtaining discharge value can be obtained on application at any of the above offices.

TREASURY BILL MATURITIES

The HANTAPARA TEA COMPANY raised its profit from Rs. 28.60 lakhs to Rs. 41.36 lakhs for the year ended last December. The ordinary dividend has been increased from 25% to 60%, including an interim of 5%. Revenue reserve gets Rs. 8 lakhs (Rs. 6 lakhs), and building and machinery reserve Rs. 5 lakhs (Rs. 7 lakhs), leaving a carry-forward of Rs. 2,86,019 (Rs. 1,84,518). The crop declined from 40,410 maunds to 38,610 maunds. Estimates for the current year have been made for a crop of 39,000 maunds at a cost of Rs. 49.25 lakhs. The company proposes to apply to the Controller of Capital Issues for permission to capitalise reserves by issuing one ordinary bonus share for two held.

The BASMATIA TEA COMPANY raised its profit by Rs. 5.39 lakhs to Rs. 8.15 lakhs for the year ended last December. The ordinary dividend has been raised from 25% to 80%. General reserve absorbs Rs. 2 lakhs (Rs. 83,947) and taxation provision Rs. 3.20 lakhs (Rs. 1 lakh). The carry-forward is Rs. 93,034 (Rs. 70,514). The crop was 6,617 maunds (6,233 maunds) and the average sale price Rs. 3-3-2 against Rs. 2-1-7 per lb. Estimates for 1955 are for a crop of 7,000 maunds at a cost of Rs. 7.41 lakhs.

The TATA LOCOMOTIVE & ENGINEERING COMPANY, LTD. made a profit of Rs. 3,303 for the year ended last March, compared with Rs. 3.36 lakhs in the previous year. Depreciation is Rs. 61.84 lakhs lower at Rs. 35 lakhs. Bringing in Rs. 47,047 there is Rs. 50,350 which is carried forward. There is again no distribution. The profit-earning period for boilers under the terms of the agreement with the Government of India commenced on 1st February, 1954 and for locomotives on 1st July, 1954. The company is therefore entitled to a return on the capital employed in the manufacture of boilers for the whole of the year under review and on the capital employed in the manufacture of locomotives for nine months of the year. The directors, however, have not included in the profit and loss account the profit on locomotives and boilers due to the company, because the prices for such locomotives and boilers for the year under review have not yet been agreed upon between the Railway Board and the company.

The profit of the NATIONAL COMPANY fell by Rs. 1.91 lakhs to Rs. 5.64 lakhs for the half-year ended last April. The ordinary dividend is the same at Rs. 1 per share. Taxation absorbs Rs. 2½ lakhs (Rs. 3.30 lakhs), leaving a carry-forward of Rs. 1,35,089 (Rs. 1,88,125).

The Wellcome Foundation Limited announce the building of a factory for the production of essential medicines in Pakistan—Burroughs Wellcome and Company (Pakistan) Limited. The factory situated on the Sind Industrial Trading Estate in Karachi is expected to be in production within twelve months. The Company will train Pakistani technicians thus helping to save Pakistan's foreign exchange and encouraging the development of the local pharmaceutical industry.

Bombay

HARMFUL EFFECTS OF
EXCESSIVE RAINSBOYCOTT THREAT TO SHIPPING
LINES TRADING WITH GOA

(FROM OUR BOMBAY CORRESPONDENT)

AFTER a couple of anxious months due to a prolonged drought which robbed Gujarat and Saurashtra of practically the whole of the rice crop and caused serious deterioration to oilseeds, particularly groundnuts, the monsoon has made up for its earlier truancy by coming down in ferocious torrents. The week has witnessed a very heavy precipitation not only in Bombay and the areas around, but in Hyderabad, north Gujarat and Saurashtra. Even south Gujarat has not escaped, and there the soil and the crops are better suited to absorb more moisture than the sandy north and the rocky Saurashtra where the crops are adjusted more to light showers and moderate rainfall. While the recent rains will on the whole benefit Saurashtra, where water and fodder scarcity have been more severe, it is feared in north Gujarat that the rains will take a fairly heavy toll of the cotton crop. In all these areas, an immediate break in the wet spell, for at least a couple of weeks, will be necessary to save the standing crops of food-grains and cotton. Elsewhere in the State of Bombay, the position is not unsatisfactory and on the whole, agricultural produce is expected not to be below the average in Western India. It will, however, lack the usual balance between foodcrops and the commercial crops, leaving the economy slightly strained. In any case, the two biggest headaches for the Government—water supply and fodder—which cannot be made up with imports, have disappeared with plentiful rains during the later part of August wiping out practically the whole of the deficit everywhere. It is, however, too early for a final reckoning. The rabi or the winter crop is as important here as the kharif, i.e., the rain irrigated crop; but if there is a good spell of rain about the middle or the end of September no appreciable damage to the rural economy will be done.

The heavy downpour in Bombay during the last three weeks has also affected the clearance of goods and the turnaround of ships in the docks. Early last week, nearly 10 ships with cargo to discharge were waiting in the stream as all the berths were fully occupied. While this is not an unusual feature during this season, the difficulties would have been seriously aggravated if the lightning strike by 300 cane drivers had not been called off so promptly due to the timely move of the Port Trust authorities.

Boycott of Goa-bound Ships

The boycott of ships intending to call at Goa, or having cargo for that port, by the Port and Dock Workers' Unions here continues and it might take a serious turn next month. It is understood that the All-India Port and Dock Workers' Federation, which met here for two days last week, has directed its affiliated unions in various other Indian ports to enforce a similar boycott of all ships of any shipping company trading with Goa, with effect from 2nd October. Explaining the decision, Mr. S. Maitra, general secretary of the Federation, stated that the Federation had allowed a month to enable shipping lines to choose between trade with India or trade with Goa. Mr. Maitra said that the decision had been necessitated by the fact that some foreign lines were sending shiploads of provisions to Goa direct, thus nullifying the effect of the boycott enforced in Indian ports. It must be noted that the proposed boycott will affect not only the ships carrying cargo for Goa, but all ships of shipping companies trading with Portuguese possessions in India. Though the boycott is to come into force nearly a month hence, the reaction of the shipping companies concerned to this move still remains unknown.

Late last week it was learnt that the shipping companies engaged in freight services on the India and Australia route, which include the P. & O., the Eastern Shipping Corporation of India and the Royal Inter-Ocean Lines, had decided to raise all freight rates by 10 percent from the beginning of October. It is explained that this enhancement is necessary to meet the increasing operational costs and is the first one during last four years. It is claimed that progressive rise in labour and fuel charges at both ends has contributed to this increase in operational costs.

Mr. Patel's Service to Shipping

Mr. B. R. Patel, Director-General of Shipping, Government of India, has now assumed the duties of the General Manager of the Air-India International and vice-chairman of the A.I.I. Corporation. Mr. Patel, who was the Director-General of Shipping only for 15 months, became very popular in shipping circles during this short period because of the part he played in solving some of the important issues of Indian shipping and especially for making the Seamen's Employment Scheme, acceptable to the shipping companies and the seamen in spite of initial opposition by both. This was reflected not only in the farewell parties which the Director and staff of the Seamen's Employment Office gave as well the National Union of Seamen of India gave to Mr. Patel, but the favourable views expressed by the former critics on this scheme at the latter function. Mr. Dinkar Desai, president of the National Union of Seamen of

men's Employment Office in charge of the operation of the scheme had done extremely well.

States' Second Loan

The second issue of the Bombay, Saurashtra and Mysore loans was over-subscribed on the very first day, while the Andhra, Uttar Pradesh, Madhya Pradesh and West Bengal loans have also been fully subscribed. This success is being interpreted differently, but all are agreed that it goes to testify public confidence both in the economic prospects before the country and the second five year plan. This has led the money market circles here to speculate about the possibility of a fresh issue of a large Central loan. In addition to this, some of the Municipalities might also be encouraged to come out with their modest requirements. Perhaps, the first in the field will be the Bombay Municipal Corporation with a Rs. 3 crore issue at 4 percent, payable in 1967 at a small discount. Subscriptions to the second issue of the State loans are approximately as under: Andhra Rs. 8,08,95,00; Madhya Pradesh Rs. 51,61,400; Uttar Pradesh Rs. 32,12,90,00; West Bengal Rs. 2,00,41,400. Subscriptions to Madhya Pradesh and West Bengal loans will receive full allotment. All applications to Andhra and Uttar Pradesh loans up to Rs. 5,000 will receive full allotment and applications for amounts over Rs. 5,000 will receive an allotment of 70 percent and 80 percent respectively subject to a minimum allotment of Rs. 5,000.

New Deposit System for Stocks

Fortunately for the equity market, the success of the supplementary issues was not manipulated as a fresh support for the bullish wave. Though half-hearted efforts were made by some operators to lift values on this ground, the Finance Minister's cryptic announcement in Parliament that bonus issues might be taxed, together with the measures taken by the Stock Exchange authorities here came as a damper. After a study of the returns showing individual open positions with regard to the standing business, which had earlier been asked for, the Board of the Native Share and Stock Brokers' Association decided to impose a new deposit scheme. Under this, the present deposit rate on Indian Iron of Rs. 1-4 is raised to Rs. 2 while that of Rs. 10 a Tata Steel ordinary share remains unaltered. There has, however, been a reduction of the free limits in both the cases. For that of Tata Ordinary, the limit of 7,550 shares which was allowed to an individual member and 11,000 for partnership firms has been reduced to 4,000 shares and 5,000 shares respectively. Similarly in the case of Indian Irons, this is reduced from 15,000 and 25,000 to 10,000 and 12,500 shares. In addition to this step, the authorities have also not been unmindful of the prevailing volume of speculation in other scrips. With a view to checking this, it has been decided to introduce an overall deposit system on the business carried forward by a member from one settlement to another. In future, if the aggregate value of the standing business both on the long and short side at the making-up price, fixed by the Board for the settlement, exceeds Rs. 20 lakhs but stands below Rs. 40 lakhs, the member-broker will be required to deposit money with the Exchange at the rate of 3 percent of such open business. In the case of partnership firms, the lower limit is fixed at Rs. 25 lakhs, but the upper limit remains the same. For all business carried forward amounting to Rs. 40 lakhs, the deposit will be at the rate of 5 percent of the value. It is, however, provided that those on the short side who can prove that their sales are genuine by giving the distinctive numbers of the shares sold in their possession to the Exchange, will not be required to furnish any margin against such genuine sales. These restrictive measures will come into force from the 27th September settlement for which the carry-forward transactions will take place on 16th September, so as to allow a period of two weeks to the members to adjust their business, if they want to avoid the payment of these margins.

Ceiling on Steel Shares

The authorities of the Indian Stock Exchange, which is supposed to carry on only spot business but which has been used by operators for speculative cross transactions on a large scale, have, besides prohibiting option business in Tata Ordinary, also announced that they would have liked to avoid taking drastic steps, but as outside speculators had used the market to an extent, which under unfavourable circumstances might endanger its stability, their hands had been forced. They notify that until further notice, the daily and weekly quotations of Tata Steel Ordinary shares should not be fixed above Rs. 250 and for Indian Iron above Rs. 40. They have also informed the members that if speculative activities continue in spite of this step, they will suspend without any further notice the rule which empowers the buyers to buy if the sellers fail to give delivery. While the long-term effect of all these measures on the volume of business in both the exchanges remains to be seen, it has no doubt subdued the bullish trend which looked like getting out of hand a week ago.

Manufacturers on Planning

In a somewhat outspoken but controversial memorandum to the Planning Commission, the Working Committee of the All-India Manufacturers' Organisation, has pleaded that no ideological considerations should be allowed to slow down the progress of private enterprise, which has acquitted itself well in the implementation of the first plan. Apart from questioning the emphasis placed on the development of the public sector, to take the country along a socialist pattern of society, the memorandum suggests modifications to the four main objectives of the second plan which have been set down in the tentative framework prepared by the Economic Division of the Ministry of Finance and the Planning Commission.

sizable increase in national income so as to raise the level of living in the country; (2) rapid industrialisation, with particular emphasis on the development of basic industries, irrespective of their being in the public, private or mixed sector; (c) fuller employment based on greater production on the basis of the large-scale and small-scale industries working in a complementary manner; (d) social justice. The memorandum points out that the outlay of Rs. 4,300 crores proposed in the public sector is nearly double that for the first plan, while in the private sector the contemplated investment of Rs. 2,200 crores is only one third more than the corresponding figure for the first plan. It then comments: "If we are to be guided by the rates of savings in the two sectors, it would be more logical to provide for greater rate of development by the private sector rather than place an undue emphasis on the investment by the public sector and the consequent extension and expansion of the public sector in the economic development of the country." While expressing the view that the private sector should be allowed to invest more than the public sector, the Committee is of the view that there is no need to demarcate rigid spheres of production between public and private sectors in the field of industries. The Committee has stressed that all heavy industries should not be the monopoly of the State and that private enterprise should be encouraged by Government to play an adequate rôle in the development of these industries. The memorandum adds further: "New units of basic industries should not be reserved only for the public sector. Also there should no longer be any talk of nationalisation of such basic industries in the private sector. They should be assured of continuous existence and development without intervention by or retreat in Government policies".

Targets and Technical Training

The memorandum emphasises the need for greater technical training facilities because of the non-availability at present of technically trained men in sufficient numbers. The organisation fears that this deficiency, if not made good in time, might constitute a serious bottleneck in the successful implementation of the second plan. With regard to deficit financing, the Organisation agrees with the plan frame, and believes that deficit financing of the order recommended in it could be carried out safely. Another suggestion made in the memorandum is that there is scope for setting up at least one more oil refinery in the country which should be entirely "Indian-owned and managed." Coming to some specific targets, the A.I.M.O.'s memorandum favours a target of six million tons of finished steel and two million tons of pig iron by the end of the plan period; the cement target is placed at 12 million tons. It has also stressed the necessity for three more ammonium sulphate units to be set up on the lines of the Sindri factory.

Plastic Industry Grows

Quite a number of small plastic factories has grown up in Bombay, especially in the suburban area. Their economic position due to severe competition from abroad is not very happy, but, according to Mr. R. C. Shah, who addressed the Bombay Suburban Rotary Club last week on this subject, bright prospects are in store for this industry, because he believed that there is bound to be a good deal of development relating to both consumer demand and the extensive use of plastic goods for various industrial purposes. Mr. Shah estimated the total annual consumption of plastics materials in India at about 5,000 tons. Against this, the present production in the country amounted to only about 500 tons. In industrially advanced countries like the U.S.A., Germany, and the U.K., the per capita consumption of plastics goods varied between eight and 17 lbs, as against the 0.03 lb. per head in this country. Mr. Shah revealed that the industry had an investment of Rs. 7.5 crores and the total number of men employed came to about 12,000.

GOLD AND DOLLAR RESERVES

The gold and dollar reserve fell by \$87,000,000 during August and stood at \$2,437 million on the last day of that month, it was announced by the Treasury in London on 2nd September. Defence aid receipts from the United States during the month are estimated at \$4. million; \$36 million was paid in gold or dollars to the European Payments Union (EPU) in respect of July; and \$2 million was paid to creditors of the Union in bilateral settlements. On the provisional figures for the month, the U.K. had a deficit of £22 million with the EPU, which will fall to be settled in September, as to 75 percent in gold or dollars, and as to 25 percent by an increase of the debt to the Union. The impression gained by London observers is that while August's outcome was better than that of July, the results for August still remain somewhat disappointing. Anti-sterling sentiment has been resumed to a certain extent, but in the Sterling Area this has been less pronounced. It seems that there is still a strong sentiment against sterling in Europe, and this, coupled with the normal seasonal weakness, is the probable reason for the size of the EPU deficit. The underlying exchange position does not appear, as far as can be seen at the moment, to differ from the last reported position. Certain restrictive measures were then taken, but these do not appear yet to have affected the balance of payments. As the Prime Minister, Sir Anthony Eden made clear on 27th August, further measures will be taken if required. This does not mean that they are required at the moment. The Ministers are continually keeping a close watch on the situation. The present intention undoubtedly is to concentrate on measures affecting the internal economy, and so to bring about, in such stages as are possible, a correction of the present

London

MR. EDEN'S FRANK WARNING

STERNER MEASURES EXPECTED

AGAINST INFLATION

(FROM OUR LONDON CORRESPONDENT)

THE past week has produced quite a remarkable change of opinion about the economic outlook, and this was touched off last week-end, when the Prime Minister made an unusual incursion into this field in the course of a speech at a Conservative function at Stoneleigh Park, Warwickshire. The briefest of brief extracts from this speech, summarises the position very well. "I realise," Sir Anthony Eden said, "that in some cases the measures we have taken, and may have to take, may be painful, and that in others they may mean putting off individual and national hopes and plans. What we have to do is to increase production, to sell more abroad, and to battle with inflation. The Government of the day must be determined to continue and to enforce the necessary measures, regardless of considerations of political popularity, to ensure the health and stability of our economy." The warning is frank and unequivocal. Less spending abroad and more saving at home are obvious necessities, and if they cannot be achieved under the present restraints more drastic measures are inevitable. Mr. Butler's "no crisis" reassurance of a month or so ago appears to be less valid to-day, or at all events the City now seems more appreciative of the extent to which the Government is worried at the failure of its earlier measures to halt the inflationary spiral, and the realisation is engendering greater caution. A rise in the Bank rate was anticipated on Thursday and discounted in advance. But when it failed to happen—Mr. Butler is still playing a waiting game—no upsurge developed. What is certain is that financial doubts are at last spreading. That fact, reinforced by the gold reserve figures released on Friday, and the August trade figures due next week, may well produce an entirely new outlook which might prove a lot healthier. The warnings are there for all to see.

Our gold payment to the E.P.U. in August of £12.8 million, the highest for three years, played a major part in bringing the sterling area gold and dollar reserves down by £31 million to £877 million—the lowest they have fallen since July, 1953—at the end of the month. The figure is better than the July drop of £484 million, but seeing that U.S. defence aid contributed £1.4 million, it is evident that we are either over-spending or sterling area exports are not moving as well as they ought to be doing.

Industrial Production

There are indications also that industrial production, which has shown a steady increase over the past twelve months, is now levelling off. For the first time the Treasury has made a downward revision in its provisional figures. The index of industrial production (1948=100) is now given as 138 for May (previously estimated at 139) and 136 for June (previously 137 to 138). The index for July is expected to be 121-122. The corresponding index figures for 1954 were: May 133, June 129, July 117. Month by month comparisons are misleading, for holidays fall differently in the two years, but it is significant that the Treasury index for the first half of this year was about six percent higher than in the first half of 1954. If we take the figures for May and June together, however, they were only about five percent higher, while the provisional figure for July is only four percent higher. It does look as though the expansion ceased after the first quarter of this year, which could even reflect the limit of our productive resources, especially in respect of labour.

The big fall in July needs closer examination. One of the main reasons for this was the fact that output of cotton yarn was 20 percent below July, 1954, output of coal three percent less, of bricks three percent less, and of motor vehicles seven percent less, the last group (steel and electricity, for instance) recorded substantial rises. It is just possible, therefore, that when the holiday season is really over some measure of expansion might be resumed in most industries, and therefore overall. The textile and coal industries must be excluded from that possibility.

In the Doldrums

Lancashire is going through a most difficult phase, and each week produces closures of mills, extensions of holiday periods or increases in short-time working. Cheap imports are still blamed for this state of affairs. This week closed a comparatively small subsidiary of a larger group which is in direct competition with imported textiles, and despite rationalisation finds itself unable to match the price of Indian and Hong Kong cloth by as much as 5d a yard—which roughly represents the wages of its employees. The "Buy Lancashire" campaign is being extended locally, but action on a wider scale still awaits a succession of meetings which are being arranged between representatives of both sides of the industry.

The situation in the collieries is almost as bad. Coal production during the first 34 weeks of 1955 was 3,500,000 tons below that for the corresponding period of last year, the totals being 141,088,500 and 144,644,100 tons, respectively. Imports for the first 33 weeks of 1955 were 7,463,600 tons, against 948,200 tons for the same period last year. The labour force in the mines is still declining, while abatement and stoppages of work are increasing.

so that there is more than a possibility that the manshift output (hitherto quoted as a yardstick for the success of nationalisation and of the miner's appreciation of his responsibilities) will show a falling away. Nevertheless, it is now clear that the National Coal Board's plan for importing about 10,000 foreign workers will have to be abandoned, for the majority of the pits are in opposition. Sir Oscar Hobson makes a good point in respect of this intransigence, which sticks in his and many others' gizzards. It is that in this emergency we are employing foreign miners at vast expense to dig coal for us because foreign miners are not allowed to come and dig the coal from our own mines. He estimates that so far this year this has meant a £40 million debit to a balance of payments which is already in the red, and by the end of the year the figure might well be £80 million or even more.

"New Measures"

Heavy coal imports and the reduction of our own coal exports have an adverse effect on our trade figures, and it is not now expected that the August figures will show quite the recovery that was earlier expected. Faced with all these adverse factors, it is hardly surprising that there is much speculation as to what the Government's "new measures" are likely to be. They have certainly been under discussion by the Cabinet at recent meetings, and there is to be yet another next Monday, after which the Prime Minister starts on his tour of the country and the Chancellor of the Exchequer goes to Istanbul for the meeting of the International Monetary Fund and possible further talks with Commonwealth Finance Ministers who will also be attending. The consensus of opinion favours two steps: firstly, another twist of the dear-money screw, accompanied by instructions to the banks to raise their target of a 10 percent cut in loans and advances, followed, if necessary, by a further increase in the Bank rate; and secondly, a joint appeal to the T.U.C., the Federation of British Industries and the British Employers' Confederation for a "standstill" in wages and dividends, for although none of these bodies could promise that such a call would be obeyed, if it carried the moral authority of their approval it would have a much better chance of being heeded. Additional profits arising from greater productivity, it is suggested, might be passed on to consumers in cheaper prices, thus holding down the cost of living. Meantime, Government expenditure is coming under much closer scrutiny than at any time since before the war and all means of reducing it are being examined. An autumn Budget is not ruled out—which would certainly mean additional taxes,—but that will undoubtedly be resorted to only in the last extremity.

Sir John Braithwaite, Chairman of the Stock Exchange, has done something this week to correct a misconception, and appropriately just before the Trades Union Congress annual meeting, though it is doubtful whether it will carry much weight with the rank and file members. He has issued a statement setting out the facts of comparable rises in wages, dividends and profits over the past seven years, and indications so far this year suggest that no material alteration in the relative position has occurred. It shows that wages and salaries with a rise of 69.2 percent between 1947 and 1954 to a total of £9,265 million have had a greater proportion of rising national income than either profits or dividends. Company profits rose 51.6 percent to £2,580 million, while interest and dividends of companies quoted on the Stock Exchange increased 32.1 percent to £1,122 million. These figures demonstrate that dividends have played a negligible part in increasing inflation. Less than 40 percent of interest and dividends, it is shown, goes to private shareholders. A substantial and constantly increasing portion passes to insurance companies, pension funds and charitable funds. Most striking of all, perhaps, is that in each year since 1947 the rise in wages and salaries has exceeded by at least £80 million the whole sum of the rise in interest

and dividends on Stock Exchange securities over the entire seven-year period 1948-1954.

More Sterling for Egypt

After discussions lasting just over two months, the British Government has agreed to raise the rate at which Egypt's blocked sterling will be released in future. Under a new agreement Egypt will have £6 million released this week to bring this year's total to £20 million, and releases from 1956 to 1960 inclusive will run at an annual rate of £20 million. The figures for 1961 and 1962 are put at £10 million each, with a small balance left for 1963. In short, the Government has completed arrangements for releasing the last of the large sterling accounts built up during the war.

Of wider interest is the simultaneous announcement of the abolition of the sterling import entitlement account scheme. Introduced in February, 1953, this had the effect of discriminating against sterling area exports to Egypt. Its abolition should enable exporters from the sterling area to obtain a larger share of the Egyptian market. The Egyptian Government has also given an assurance that it has no intention of introducing in future any currency measure which will have the effect of discriminating against the import into Egypt of goods from the sterling area.

Fairbairn Lawson Re-organisation

Fairbairn Lawson Combe Barbour, the textile machinery firm, which last week announced a trading loss of £30,000, has stated that as part of the company's reorganisation scheme it intends to concentrate the manufacture of its textile machinery in Leeds and Dundee, including the range which has been made in Belfast. The need for reorganisation is mainly due to two world causes—the decline in the demand for flax and hemp machinery and the necessary arrangement recently concluded for jute machinery to be manufactured under licence in India. Efforts have been made to find alternative lines, but it has not been possible to obtain sufficient work of a type which would allow the Belfast factory to run economically. It is, therefore, proposed to close this factory early next year when the present contracts are completed. The company expects to sell its Belfast factory as a working unit complete with all services, administration offices and an available labour force. It is understood that the Northern Ireland Government would consider providing financial assistance to an approved purchaser who would be prepared to bring suitable alternative work to Northern Ireland.

Uttar Pradesh

U.P.'S CLAIM TO HEAVY INDUSTRIES BONUS DISPUTE IN SUGAR FACTORIES

(FROM OUR LUCKNOW CORRESPONDENT.)

A concerted bid to induce the Centre to allocate at least one or two heavy industries to U.P. under the second five year plan is being made by the State Government. Political backing for the move has been secured by a resolution on the subject moved by the State Planning Minister, Mr. C. B. Gupta, and adopted at the recent meeting of the U.P. Congress Committee at Sitapur. Though Mr. Nehru, who was present at the meeting, did not speak on the resolution, the Union Deputy Minister for Production, Mr. Satish Chandra, told the meeting that the location of heavy industries was governed by numerous factors like the availability of power, transport and raw materials. In his opinion, Uttar Pradesh would do well to concentrate on industries producing consumer goods. Whereas the U.P. Government's plea was that heavy industries were necessary to relieve the growing unemployment in the State, Mr. Satish Chandra said that an investment of Rs. 1 lakh in heavy industry would provide employment for only one person compared with a similar investment in small-scale industry which could give employment to several.

The last word has not, of course, been said on the subject and it would appear that U.P.'s planners are leaning heavily on Pandit Pant's influence at the Centre for obtaining at least partial success. Last month a State delegation led by the Chief Minister, Dr. Sampurnanand, and including the Planning Minister and Finance Minister, argued the case for Uttar Pradesh before the Planning Commission. The State's size and population, it is stated, should be given fair consideration in the allocation of heavy industries. According to Mr. C. B. Gupta, U.P. is entitled to have a couple of fertiliser factories and steel processing and fabricating plants in proportion to its population. An experts' committee, which was set up in 1944 to select a suitable site for a fertiliser factory, recommended Harduaganj in District Aligarh, U.P., but in 1946 the recommendation was set aside and Sindri selected instead. Under the Centre's plan for more fertiliser factories, Nangal has been chosen for a second site in spite of the fact that the U.P. Government had assured the Government of India that sufficient water and electricity would be available at Hathras. Uttar Pradesh's present claim also extends to the steel processing factories proposed under the second plan and to some of the new factories to be set up by the Railway Ministry. It is Mr. Gupta's further contention that U.P. is entitled to not less than one-fifth of the divisible pool of Rs. 2,250 crores on the basis of the State's population.

Sugar Factory Bonus Dispute

The U.P. Government has decided to refer the question of a bonus for workers in sugar factories to an adjudicator, whose decision would be binding on the industry. As the evolution of a suitable formula for determining the bonus is bound to take time, the Labour Ministry has instructed the sugar factories to pay out an interim bonus to spare inconvenience to the workers. It may be recalled that the sugar industry in U.P. has been paying a bonus to workers for the last few years. In 1946-47 the Government set up for the first time a committee to decide the issue. The main recommendation of the Committee was that a bonus should be paid on the profits of the factory concerned. Later, at a tripartite conference, it was decided that a bonus should be paid on the amount of sugarcane crushed and sugar produced. The rate of the bonus was also fixed by mutual agreement. In 1948-49 the matter was placed before a court of inquiry which maintained the principle of payment on the amount of cane crushed and sugar produced. In 1949-50 the matter went up in appeal to the Labour Appellate Tribunal which exempted such of the factories as had incurred losses during that year. It is the millowners' contention now that a bonus on the basis of production, which has been in operation so far, is no longer suitable. They prefer payment on the basis of profits but the workers are not agreeable to the suggestion, hence the present dispute.

Meanwhile the complaint has been mounting that the factories are seriously in arrears to the cane growers. The arrears for the last crushing season alone, according to a statement laid on the table of the State Assembly, amount to Rs. 109.59 lakhs besides Rs. 6 lakhs pending from the 1953-54 season. The reason for the delay is said to be the slack off-take of sugar and in many cases as much as 50 per cent of production has remained unsold. To help factories meet their commitments to the growers, the Government has relaxed their realisation of cane cess dues amounting to Rs. 1,85,88,393. The State Government has made a recommendation to the Centre to set up 10 more sugar factories in the State and preliminary work in connection with two of them is in progress. These two factories, which will be run on co-operative lines, will be located in the Tarai Bhabar area. The sites have been selected and the Government is now in correspondence with a foreign firm for the necessary machinery. Cane growers will be given shares in the mills while the Government will contribute financial aid.

Bank Award Anomalies

The sixth annual conference of the U.P. Bank Employees' Union which concluded its two-day session in Kanpur last week demanded certain improvements in the Gajendra Gadkar award. In the opinion of the conference, there are five anomalies in the award, namely, "disparity between the minimum wages of different categories of employees; social injustice with regard to minimum wages and grades; ignoring the claims of the employees of the United Bank of India and of banks in Travancore-Cochin, and non-reduction in the high salaries of bank officers." A resolution adopted by the conference demanded the setting up of a commission to inquire into the working conditions of employees of such banks whose field of operation was limited to a particular State alone. By another resolution, the conference appealed to the Government to convene a tripartite conference and settle the question of a bonus for employees of the Punjab National Bank, the United Commercial Bank and the Central Bank. A third resolution called on the Government of India to declare Kanpur an 'A' class city for purposes of the banking industry.

Three more cities—Lucknow, Agra and Saharanpur—will be brought under the State Employees' Insurance scheme within the next two months. About 20,000 more employees are expected to be covered by the extension. According to an announcement by the Regional Director of the scheme, Mr. S. K. Wadhawan, three dispensaries at Lucknow and two each at Agra and Saharanpur will be opened by the end of October. A local office to administer the working of the scheme will

Madras

MADRAS STATE PLANS FOR INDUSTRY PROPOSAL FOR NEW ALUMINIUM PLANT

(FROM OUR MADRAS CORRESPONDENT)

THE Madras Assembly has discussed and expressed its general approval of the revised draft plan of the State Government. A White Paper, placed on the table of the House, contains the results of discussions between the Madras ministerial delegation and the Planning Commission on the State's preliminary draft proposals. The Paper states that it was agreed in Delhi that the State plan need not make any provision for large and medium industries, the development of which would be undertaken by the Centre on an all-India basis. It was suggested, however, that a provision of Rs. 80 lakhs might be made for assistance to co-operative sugar factories and a provision of Rs. 20 lakhs for timber seasoning plants under small-scale industries. As regards an aluminium plant proposed in the State Plan in particular, it has been ascertained that the Union Commerce and Industries Ministry proposes to appoint a committee to study the economics of production at various centres and that the establishment of a unit based on the Salem bauxite deposits would be examined. Incidentally, Government proposes to go ahead with measures for promoting an aluminium industry in the Salem area. Instead of depending on the Union Government or the Planning Commission, it has been proposed to have a State-sponsored Corporation. The State Government is prepared to subscribe a large part of the capital required and to ask private parties also to take shares. The Central Government has been asked to put in 25 per cent. The estimated capital requirement of the aluminium plant is Rs. 8.37 crores for an installed capacity of 30 tons a day.

The White Paper further states that the Government of India has already decided to establish a factory in the public sector for the manufacture of heavy electrical equipment. The precise location of this factory would be determined after taking the advice of certain technical consultants and after considering the claims of Madras. The after considering the claims of Madras, the Government has decided to establish a factory for the manufacture of special and alloy steel and for the manufacture of steel castings and forgings, by using the Salem iron ores, would be borne in mind when finalising the various allied projects the Government of India have in view. Other industrial schemes such as the establishment of a paper mill, the manufacture of sulphuric acid and superphosphate from gypsum, and of power alcohol are considered more appropriate for development in the private sector. These and other industries in the private sector would receive all possible assistance from institutional agencies, such as the Madras State Industrial Finance Corporation and the Central Credit and Investment Corporation.

Priority for Irrigation and Power

The White Paper continues that it was pointed out by the Planning Commission that even with a total developmental expenditure of roughly Rs. 4,300 crores in the public sector, the amount that could be made available for the plans of all States (excluding the expenditure on railways, heavy industries, etc.), was about Rs. 2,250 crores, out of which Rs. 850 crores would be earmarked for irrigation and power projects. The balance of Rs. 1,400 crores only would be available for other schemes. As a result, the Madras Government, on a population basis, would be eligible for about Rs. 85 crores for investment on irrigation and power projects and Rs. 140 crores on all other schemes excluding heavy industries. The Planning Commission, however, has pointed out that population alone would not be a suitable guide by which to determine the size of the different State Plans. Some special consideration would have to be given to the more backward States. Other factors such as the financial resources of the State concerned, the availability of technical personnel, and the actual expenditure incurred in the closing years of the first plan period, would also be taken into account.

The Madras Finance Minister thinks that a plan of the size of Rs. 225 crores for Madras would be realistic and that the expenditure might be phased thus:—1956-57, Rs. 35 crores; 1957-58, Rs. 40 crores; 1958-59, Rs. 45 crores; 1959-60, Rs. 50 crores; 1960-61, Rs. 55 crores. According to the Finance Minister, most of the Madras irrigation projects are very expensive, and some of them would cost Rs. 2,000 or more for each acre of irrigation. It might be desirable to postpone to the third plan period the least remunerative of the irrigation projects, and to retain, as far as possible, the power projects, the benefits of which would be spread more or less evenly throughout the State. In the revised draft plan the distribution of expenditure provides for 28 per cent of the outlay on irrigation and power, 28 per cent on social services, 14 per cent on small-scale industries, 12 per cent on agriculture and smaller percentages on the others. This distribution appears to be a more balanced one than the allocations under the first five year plan, in which irrigation and power accounted for 87 per cent and social services 17 per cent with a pitiful two per cent for small industries.

sals for three paper mills in the State. An industrialist has applied for the grant of a licence under the Industries (Development and Regulation) Act to set up a paper mill near Papanasam in Tirunelveli district. The Government of India proposes to grant the licence as soon as selection of the site for the mill is finalised. In addition the possibility of establishing a paper mill in Malabar district is being examined. The Madras Government has, of course, its long-standing proposal to set up a paper mill in the Nilgiris district for manufacturing newspaper or ordinary writing and printing paper. The Government has also decided to have its own department of Geological Survey which could make a rapid survey of the resources of the entire State.

Neiveli Lignite Project

The State Minister for Industries has informed the Assembly that the pilot quarry for lignite excavation in Neiveli has gone to a depth of 150 feet below ground level. Eighty-five per cent of overburden has been removed, pending reduction of the pressure of the artesian aquifer below the lignite by large-scale pumping of water. Meanwhile, The Mail reports from New Delhi that implementation of the Rs. 47-crore Neiveli Integrated Project for the production of lignite, light and electricity, electric power and chemical fertilisers is held up, not for technical reasons, not for lack of funds, but because the Union authorities think. It can wait. The technical difficulty is, of course, the water pressure at the bed of the site. Finding that 250 g.p.m. (gallons per minute) pumps were inadequate, the Government has ordered twenty-four 1,000 g.p.m. pumps of which four have already reached the site and four more are due to be delivered in September. But this explanation of delay is beside the point, says the Mail's New Delhi correspondent who claims his information comes from a reliable source. The tests are to find out the pressure of water at the bed at a depth of some 200 feet. This would no doubt be necessary in beginning work on the project, but it is not necessary to regard this test as a determining factor as to whether the project should be undertaken. Whatever the pressure of water, according to experts, it is possible to eliminate any difficulty which it may cause. Wells can be sunk in the area to pump off the water and reduce the pressure so that the lignite workings need not be abandoned. The Neiveli Project, therefore, is practicable. Since the pig iron project originally proposed by the Madras Government and later dropped is dependent on the success of the Neiveli Project, the delay in implementing the latter is particularly regretted by South India members of Parliament. The Mail report suggests, by implication, that the Centre's assumption that the Neiveli Project is still to be judged workable or unworkable, is intended to put off pressure from the South for an iron and steel industry in Salem which is estimated to have iron ore reserves of 375 million tons. Incidentally, a lignite find in the northern part of South Arcot district is reported and is under investigation. There is no artesian water difficulty in this area, and lignite is stated to be available at a depth of 60 feet in a ten-mile square.

Members Walk Out

Twenty-four Malabar members of the Opposition walked out of the Madras Assembly as a protest against the neglect of Malabar district under the second five year plan schemes of the Madras Government. These members did not participate in the debate on the draft plan. All the five members of the Congress Party joined in the protest by signing a memorandum but not by staging a

walk-out. Replying to Communist criticism of the draft plan, the Finance Minister said that the entire foreign policy of the Communist Party was in the melting pot out of which he hoped a true national policy would emerge so that the brains of the brilliant men in that Party would be available for national development. If such a change came about he would be the happiest man and their co-operation would always be welcome.

Further Plans for Industry

Mr. K. C. Reddy, Union Minister for Production, stated at a press conference that the Union Government had no intention of concentrating big industries in any particular part of the country. It wanted, on the other hand, to disperse them as much as possible, keeping in view the availability of raw material, power, water, trained personnel, etc., required for the purpose. The Union Government, he said, has accorded sanction for expansion of the fertiliser factory at Alwaye at an estimated cost of Rs. 2.35 crores. Its present annual production is about 45,000 tons of ammonium sulphate. When expanded, the factory will produce 75,000 tons of ammonium sulphate, 30,000 tons of ammonium phosphate, and 3,000 to 6,000 tons of ammonium chloride. The D.D.T. factory to be set up at Alwaye by the Union Government will involve a capital investment of Rs. 1 crore and give employment to about 300 people.

The Indian Coir Board, at its meeting in Malabar, has finalised plans for developing the coir industry at a cost of Rs. 2.2 crores during the second five year plan period. The industry is to be organised on co-operative lines with three kinds of societies for retting, spinning and marketing. A model factory will be attached to the Beyyore Coir School in Malabar for the manufacture of mats and matting. A research institute, with a pilot plant attached to it, will be set up near Alwaye. A branch research institute and a model factory are proposed for West Bengal. The Indian Central Coconut Committee, meeting in Travancore-Cochin State, has approved a draft scheme costing Rs. 65 lakhs for the development of coconut cultivation. Regarding the import of coconuts and coconut products, the Committee has recommended to the Union Government that imports should be restricted to 50,000 tons per annum in terms of copra. The Committee appears to have ignored the fact that such a restriction might affect the exports of our industrial goods to the South-East Asian countries.

The Madras Government has at last admitted that evictions of cultivating tenants have, in fact, taken place within only a couple of months of their loud denial of such evictions. This recognition has just led to the hurried passage of a Bill according protection to tenants against unfair eviction and providing for restoration of tenants evicted after 1st December, 1953 and, not in possession of their holdings at the commencement of the Act. The Act will be in force for one year during which period further legislation regarding fair rents, security of tenure and limitation of holdings for personal cultivation is expected to be put through. Restoration of evicted tenants will be confined to those not otherwise possessing 6 2/3 acres of wet land or 20 acres of dry land nor paying any profession tax, sales tax or income tax and to such holdings as are not in the possession of other tenants let in bona fide after 1st December, 1953. A landowner, possessing not more than 6 2/3 acres of wet or 20 acres of dry land after resuming a holding will not also be dispossessed if he pays no profession tax, sales tax or income tax, that is, if he has no other avocation. Sustained pressure from a section of the Congress Party in Tamil Nad, from the Opposition and from the Centre has been responsible for this belated measure of justice.

ANOTHER STEP FORWARD
TOWARDS SELF SUFFICIENCY

CALCIUM CARBIDE

a product indispensable in Engineering as well as for illumination is now manufactured for the first time in India on a commercial scale. The Birlapur Carbide Factory will meet the major portion of India's demand.

MANUFACTURED IN INDIA BY
BIRLA JUTE MANUFACTURING CO., LTD.

Mg. Agents: BIRLA BROTHERS LTD.
8, Royal Exchange Place, Calcutta

Every day, prices for raw jute remain unchanged, with no sign of any deviation from this state of affairs. All grades of the fibre are obtainable at the minimum prices, which are £90 for Mill First, £80 for Mill Lightnings and £70 for Mill Hearts.

Any business being done is usually in European baled fibre and the native bales are not getting much chance of making sales. Calcutta goods were rather firmer last week and they have probably touched their lowest points for some years past at 60s. for 10 oz. 40 in. and 46s. 6d. for 7½ oz., September. 59s. 6d. and 45s. 9d. October. 59s. and 44s. 3d. November-December and also January-March. with B Twills 158s., 156s. 3d., 153s. and 150s. for the respective positions of shipment, all f.o.b. Calcutta. Values were anything from 3d. to 6d. up for 10 oz. hessian and 3d. for 7½ oz., with B Twills 3d. to 1s. 6d. higher.

The British Jute Trade Federal Council has appointed Mr. R. D. Marshall as their new Public Relations Officer, to take the place of the late Stanley W. Smith. Mr. Marshall who is 37, has been press and publicity officer of the National Farmers' Union of Scotland, for eight years. He was on the staff of the *Glasgow Herald*, and during the war was commissioned in the Argyll & Sutherland Highlanders and was wounded twice while serving in the Middle East, which lost him an arm. Later he served with Army Public Relations as a Military Observer in Germany until he was demobilised with the rank of captain. Mr. Marshall will take up his office in Dundee in November.

THE AIMS OF JUTE RESEARCH HIGHER YIELD OF FIBRE FROM PLANTS NECESSARY

OUR excuse for returning to this subject is an article which appeared in the *Statesman's Jute Supplement* last week. The article is by Mr. B. C. Kundu, Director of the Jute Agricultural Research Institute of the Indian Central Jute Committee, and it records the progress made since the establishment of the laboratories at Dacca in 1939. Actually research had been carried on at the Dacca farm long before that, though not on the same scale, and the Dacca farm was concerned with many agricultural problems besides those of jute.

Mr. Kundu's article records the development of new strains giving increased yields of 10 to 20 percent over the standard strains. That is, however, the yield of fibre or green plant per acre, which means a similar increase of waste material per acre and a waste of soil values. What we have been trying to do for a long period is to get the experts to realise that what is more important and, in fact, essential, is to develop strains which will give a higher yield of fibre per plant. There is no indication in Mr. Kundu's article that that vital aspect is as yet appreciated by the experts. We need not recapitulate the advantages to the rural economy in the jute districts which would accrue

from even a modest increase in the fibre yield, but we feel bound to continue to stress the need for this particular branch of research until it gains definite recognition from the authorities.

Marketing of Quality Jute

In a recent note in these columns we referred to the desirability of providing an outlet for the higher qualities of jute grown in India. The present trend of the internal market has emphasised the need to allow good quality Indian jute to find a market. The growers are being officially encouraged to produce better jute but, in the present circumstances, there is no way for them to reap any benefit from the extra care and labour involved. Mill buyers are confining their purchases to assortments of from 40 percent Middles and 60 percent Bottoms to 20 percent Middles and 80 percent Bottoms. The result is that merchants in the jute districts, who have to buy average quality from the bharis, are accumulating stocks of Middles which they cannot sell. On a falling market, such as has prevailed for some weeks, that means that they lose money on all the unsold Middles they have in stock. Middles alone are being offered in the market at only Re 1 a maund above the price of Bottoms and there are no buyers even at that rate. Another result of this position is that capital is being blocked in the holding of stocks of Middles, and soon some merchants will be unable to carry on their business on a full scale, while godown space will also be restricted.

There are two remedies for this position. The first is for the merchants upcountry to refuse to buy average quality from the bharis, taking from them qualities suitable only for Bottoms and Cross. It is doubtful, however, if that could be put into practice. If it could, it would in time result in cultivators taking less trouble in the growing of their crop and in the preparation of the fibre for the market. The ultimate consequence would be a general deterioration in the quality of the jute produced, which would not be a good thing for the industry.

The other remedy is to permit the export on a restricted scale of the higher qualities of jute to foreign markets. As the mills do not want these qualities in the quantities in which they are available, they could have no complaint; the position of the merchants would be relieved and the growers would get better prices for the good qualities they are being encouraged to grow. The shortfall in the overhead quantity required by the mills could be made up by their purchasing low grade jute from Pakistan. There may be other ways out of the difficulty but it certainly does not make sense to advise the growers to use better seed, adopt improved methods of cultivation and pay more attention to the retting of the fibre, and then deny them the benefit of a free market for their products.

USE OF JUTE PULP IN PAPER MAKING

Important schemes of research relating to the agriculture, technology and economics of jute will be considered at the 37th annual general meeting of the Indian Central Jute Committee to be held in Calcutta on 10th September under the chairmanship of Mr. K. R. Damle, I.C.S. With a view to increasing the average yield of Indian jute, at present only 2.5 bales an acre, by at least one bale more, it is proposed to undertake extensive manual-cum-varietal trials for studying the performance of the improved varieties of jute and different manual treatments. The use of nitrogenous fertilisers and better seeds, along with the adoption of improved cultural practices, in experiments conducted at the Jute Agricultural Research Institute, has shown encouraging results in terms of increased yield. The aim of the proposed large-scale trials is to ascertain results and responses with reasonable accuracy and to even out chances of variation arising from climatic and soil differences from region to region and from the ecological amplitude of the jute crop.

The agenda also includes a proposal by the director of the committee's technological research laboratories to initiate research on the utilisation of jute stick and waste in the preparation of pulp for the paper industry in West Bengal, which is now in difficulties for want of raw materials. The pressure on paper manufacturers is expected to be greatly eased, if by research it is found possible to develop an economic process for utilising large quantities of pulp available from jute sticks mixed with bamboo pulp. Improvement of the cement bag to prevent seepage and to make it moisture-proof is the point of another technological research scheme to be examined by the committee. Investigation in this regard derives urgency from the decision of the Government of India to build up an export trade in cement by increasing the output of the industry during the next five years. Among the other few important subjects to come up for consideration at the meeting are the annual reports of the different research directorates and the publicity section of the Committee, and the studies of the Director of Economic Research relating to moffusil prices of jute and paddy, improved methods of jute cultivation, allied fibre crops grown in this country and abroad and the economics of jute growing.

In the afternoon on 8th September the Directors of Agriculture of the jute growing States will meet to discuss the broad principles and objective details of their approach to jute development work under the second five year plan. The progress in the production of good quality jute will also be reviewed.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales the 58,326 packages on offer realised an average price of 4s 5.24d a lb., against 4s 4.51d in the previous week and 5s 5.05d a year ago. Plain broken pekoe was quoted at 3s 5½d; in the previous week 3s 7½d. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	510	4/5½
Central Provinces	936	4/8½
Chubwa	516	6/9½
Chulsa	656	3/8½
Cons. Tea and Lands	858	4/3½
Darjeeling Co.	336	5/0½
Deamoolie	120	6/11½
Dekhari	480	7/1
Deviturai	198	4/0½
Dhelakhat	126	7/6½
Duckwari	84	4/6½
Eastern Assam	108	7/0½
Jokai	144	5/3½
Jorehaut	1,052	7/2½
Longai Valley	132	3/5½
Lungla	1,068	3/5
Nedem	66	3/9½
Pabbajan	240	8/4
Rajawella	1,543	4/8½
Scottish Assam	318	6/2½
Scottish Ceylon	342	4/5½
Southern India	966	3/6
Standard	1,032	5/3
Utd. Planters	1,298	4/8

COCHIN TEA SALES

At Dust Sale Q. 500,000 lbs were on offer. Demand was better particularly for Medium Dusts with good liquors which were dearer. Others were irregular and easier.

At Sale 18, 2 million lbs of tea were on offer. Demand was strong for medium and best liquoring teas, particularly broken, which were two to three annas dearer. Medium and good fannings were steady, but others were irregular and easier. Whole leaf grades were dearer, but Middle East types met with much less demand at four annas lower.

NO CHANGE IN TEA EXPORT DUTY

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 2-12-8 a lb. with effect from 1st September as against Rs. 2-9-9 a lb. fixed for the period from 1st August, the Ministry of Commerce and Industry has announced. There is no change in the existing rate of duty of As. 6 a lb.

COLOMBO RUBBER PRICES

The Indian Rubber Board has issued the following prices from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 28-8-55 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.35½	1.35½
No. 2	1.32½	1.32½
No. 3	1.29½	1.29½
No. 4	1.05 Nom.	1.05 Nom.
No. 5	1.00 Nom.	1.00 Nom.
Sheet Cuttings 1	1.27	
do	2	1.22
Crepe:		
Water White-		
R.M.A. No. 1X	1.82/85	1.83½
R.M.A. No. 1	1.77/82	1.80½
Crepe No. 2		1.77½
do		1.71½
Scrap Crepe:		
Sc. Crepe No. 1	1.36 Nom.	1.37
Sc. Crepe No. 2	1.30/34	1.31½
Flat Bark	1.22/26	1.25
Sc. Crepe 3X		1.28

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 28.4 cents in respect of scrap crepe to the above market prices.

KENYA TEA INDUSTRY PLANS BIG EXPANSION

A large-scale expansion of Kenya's tea industry, states a report published in London, is planned during the next 10 years. Plans include the planting of thousands of new acres and the building of six new tea factories. Two leading tea companies are concerned in the expansion. One, which began tea-growing in Kenya in 1926 and now has 5,500 acres under cultivation, plans to increase its area to 12,000 acres during the next 10 years, planting at the rate of from 600 to 900 acres a year. The second company, incorporated in Kenya in 1952 and controlling 5,000 acres of tea, aims at planting 3,000 acres during the next eight years at the rate of between 300 and 500 acres a year. The report stated that the East African market for tea was a healthy one and the companies' policy was to develop it. It was hoped that sufficient tea would be produced for the local market, and that all the surplus would go to world markets—largely to the London auctions. To provide an estimated total of 4,500,000 new plants annually for the expansion, a central 200-acre nursery is to be established. The nursery, planned to be the largest of its kind in the world, will be artificially irrigated.

BIGGER EXPANSION ON THE RAILWAYS

WHY MORE MONEY IS NEEDED

(FROM OUR NEW DELHI CORRESPONDENT)
THE case of the Indian Railways for the second five year plan is very simple. The plan-framers' production target will call upon the Railways to provide increased carrying capacity of 51 percent in goods traffic in originating tonnage by 1961, over the estimated figure of 120 million tons at the end of the first plan, and a 30 percent increase in passenger traffic over the 1955-56 traffic. The Railways claim that, to do the job, they need Rs. 1,480 crores, of which the following is the breakdown:

	(in crores of Rs.)
1. Locomotives and rolling stock	467
2. Workshops (excluding townships), running sheds and plant and machinery	65
3. Track renewals (2,000 miles per annum)	125
4. Bridge rehabilitation	25
5. Ganga Bridge Project	10
6. Line capacity works (doublings, conversions, crossing stations, loop lines, marshalling yards, etc.)	195
7. Signalling works	40
8. Electrifications	130
9. Expansion of goods sheds, terminal stations and transhipment points	10
10. Expansion of stores depots	10
11. Training schools	5
12. Staff welfare and staff quarters	50
13. Amenities for rail users	15
14. Safety works	10
15. Other projects including Vizag Port	15
16. New bridges	10
17. New lines (3,000 miles)	195
	1,377
Plus on suspense account for anticipated increase in stores balances.	100
	1,477

The figure of Rs. 1,480 crores includes an amount of Rs. 250 crores which is expected to be met during the plan period from current revenues and current contribution to the Depreciation Reserve Fund.

The Aims of the Plan

The plan is designed to develop the railway system in order that it may be able to handle the traffic that is estimated to arise out of the fulfilment of the targets of agricultural, industrial and other production activity as indicated in Prof. Mahalanobis's paper. Broadly speaking, this involves the following:

- (a) Provision of increased capacity on the sections concerned to permit movement of

the estimated additional production of steel, coal and cement, and generally to augment capacity on other sections of the main trunk routes up to 50 percent.

- (b) Electrification of certain sections to promote efficiency of operation and to develop capacity most economically.
- (c) Substitution by new stock of a minimum number of old replaced stock which has had to be retained in service to cater for increased traffic, and the provision of additional stock required to carry the new traffic that is expected in 1960-61 when the production targets have been attained.
- (d) Development of adequate repair capacity relative to the increase in stock holdings.
- (e) Increased tempo of renewal of main line track, already overdue, thereby releasing the maximum quantity of track material for building new lines.
- (f) Construction of new lines up to a limit of 3,000 miles in the whole plan period.

Workshops and Running Sheds

Repair and maintenance facilities have to be provided for the total rolling stock in service which will have increased by about 50 percent in the case of locomotives and 100 percent in the case of coaches and wagons in 1960-61 over the number in 1950-51. Provision has also been made for the expansion of civil engineering and bridge workshops. A new M.G. carriage building shop has been included. Details of the provision of facilities and workshops will depend upon the Railway Equipment Committee's report, but the self-sufficiency aspect will be kept in view. The following are the particulars:

	Cost in crores.
New repair shops and expansion of existing workshops	44
Civil engineering and bridge shops	6
M.G. Coach Factory	10
Chittaranjan Loco Works expansion	5
	65

New Lines

The plan includes the laying of new lines up to the limit of 3,000 miles. On new lines, it would obviously be better to lay second-hand released materials. It has, therefore, been deemed expedient to provide for a track renewal programme of 2,000 miles a year during the second five year plan.

Major expansion in handling capacity at loading, unloading and transhipment points is necessary in view of the heavy increase of about 50 percent in originating tonnage. Substantial expansion of the stores depots on the Railways is also essential in order to provide the requisite stocking capacity.

New Bridges

Provision for replacement of existing bridges and for the construction of new bridges required

on new lines has been included under appropriate heads. A special provision of Rs. 10 crores has been made separately in connection with the construction of a bridge over the Brahmaputra and a second bridge over the Jumna near Delhi.

Provision Required on Suspense Account

The stocks of stores carried by the Railways for operational purposes will be substantially increased during the second plan period due to the expanded activities of the Railways. Adequate stocks for construction works will also have to be built so that the materials may be readily available for the execution of works without delay. It is estimated that the stock-holding of the Railways will go up by about Rs. 100 crores during the plan period. Provision has, therefore, been made for this amount.

A study is being made of the pattern of goods revenue, working expenses and surpluses that would accrue to the Railways in the plan period on the basis of the expected targets. The addition of a large number of fixed and moving assets to the Railways in the next five years will require increased provision on Depreciation Account. This may necessitate the revision of the present fares and freights structure and also a revision of the terms of the Separation Convention. It is estimated that the foreign exchange requirements of the plan will be of the order of Rs. 650 crores. Of the total amount of Rs. 1,480 crores, the cost of rehabilitation works out to Rs. 284 crores:

			Figures in Crores.
1. Track and Bridge			150
2. Rolling stock	Nos.	Cost.	
	Locos—BG	749	40.0
	MG	79	2.6
	NG	81	1.9
			44.5
Coaching vehicles			
	BG	3,933	49.16
	MG	1,470	11.76
	NG	633	3.20
			64.12
Wagons	BG	15,815	17.39
	MG	3,755	3.00
	NG	4,021	4.80
			25.19
Total			133.81
			283.81

(or say Rs. 284 crores)

The Railway plan is based on the assumption that out of the additional traffic that will be generated in the plan period, traffic suitable for carriage by sea will be diverted to that mode of transport. Further, the estimate of the requirements of locomotives and wagons takes into account improvements in operational efficiency sought to be secured in the plan period.

a modern business

What makes a business up-to-date? These days, it's the ability to move fast. To note tendencies while they're happening, not after they've happened. Speed and efficiency lead directly to increased profits—which is why Powers-Samas punched-card accounting is so good an investment. It sorts and tabulates vital information in a matter of minutes. It does complex calculations at the press of a button. And there's a wide range of Powers-Samas equipment—suitable for almost every size of business.

THE STRENGTH OF THE INDIAN ECONOMY

RESERVE BANK REPORT REVEALS SOUND BASIS FOR DEVELOPMENT

THE period covered by the report of the Reserve Bank of India does not completely coincide with the penultimate year of the first plan, but that does not affect its value as a guide to the health of the economy after four years of purposeful direction. Appearing so soon after the decision to maintain the second plan targets it is of special importance because it shows that there is a sound economic basis for bold development measures: although it contains nothing which suggests that there is any scope for rash ones. The final year of the first plan may alter this picture completely, but on the evidence of those indicators that are available there is no reason to believe that it has done so yet. The fact which stands out from the report is that development spending had been able to proceed up to 30th June, 1955 without the least sign of inflation in the economy. The trends have, in fact, been mostly the other way. The report reveals that except for a short rise between July and September, 1954, wholesale prices showed an almost continuous fall throughout the year. In May, 1955 they reached their lowest level since April, 1948. The fall in prices was 10 percent over the period and therefore capped the useful results of the previous year when it totalled 6 percent. The decline of most significance for the development of the industrial sector of the economy was that in "food articles" which reached 18 percent. These facts have presented certain problems; the fall in farm incomes has been one of the more difficult. But they do add up to a satisfactory prospect for the next few years of development, provided the necessary qualifications are understood and accepted.

Some idea of what these qualifications are can be gained from what are stated in the report as the reasons for this satisfactory state of affairs. These are "the pressure of increased supplies, stemming from high output levels, a large volume of imports and the relaxation of controls." The last-mentioned factor is a matter for direct Government policy and is therefore relatively easy to control. The second factor too is one which can soon be adjusted to suit circumstances. It is the first which presents the greater measure of uncertainty and it is this which may well determine whether inflation is eventually to take charge. Early development has brought into operation a great deal of capacity which would otherwise have remained completely or partly unused and output has benefited. The question is whether this can be expected to continue throughout the next few years. There is little reason to suspect that it will not. Industrial capacity is not easily expanded and although there is known to be a good deal which is not at present fully utilised, further expansion will no doubt proceed in direct proportion to the new plant and installations which can be brought into production. But agricultural output still stands to benefit disproportionately from the many development projects which are only just beginning to show results. When these are coupled with the Community Projects and Extension Schemes and the efforts to increase the supply of rural credit, a large expansion in agricultural output is reasonably assured, even without the help of a series of favourable monsoons. In the short period this may involve some measure of price support, but in the long run it is the only safeguard against the inflationary effects of the population growth which will take place over the next few years.

*

The deflation in the wholesale price level took place during a year in which the Central and State Governments incurred budget deficits totalling about Rs. 100 crores. The figure for the previous period had been Rs. 65 crores. The report points out that the deficit for the current year is expected to be considerably larger as the tempo of the levelling off which has taken place in the wholesale price index since June. But the index has not yet shown significant signs of rising and until it does the conclusion must be that the present volume of

deficit financing is justified. Whether this means that a greater reliance can be placed on this expedient in the second plan is difficult to say. Certainly it would be less painful than taxation, and it has to be used anyway or deflation will develop. But it is unfortunately not an easy method to control because so much depends on the economy's savings habits. All that can be said is that good use of it has been made so far, there is every promise that better use of it can be made in the future and that no great danger appears yet to be involved, provided there is always a willingness to sacrifice the balance of payments if stability is threatened. A better impression of the capacity of the economy to respond to this form of stimulant will no doubt be obtained from the next report, when the effects of the current year's heavy deficits will be apparent.

The report makes an interesting comparison between the proportion of the national income absorbed by revenue in the pre-war period and at the present time. In spite of the increase in taxes which has taken place since the 1930s the proportion has remained almost unchanged at 8 percent. This, the report states, adds point to the recommendations of the Taxation Enquiry Commission that the tax structure be both widened and deepened. The additional resources required during the second five year plan period may involve more taxes. But when the report quotes the Commission as recommending adjustments in the tax structure for the purpose of "reducing inequalities of income, modified where necessary to provide incentive tax reliefs so as to stimulate capital formation" it has to be remembered that the second part of this recommendation is considerably more important than the first. For the duration of the period during which rapid development is the overriding necessity, it will be dangerous to take any risks with incentive. There is nothing in the report to suggest that the economy cannot bear a

TAXES ON INTER-STATE TRADE

A year and a half of spreading confusion seems likely to end with last week's Supreme Court's majority judgment on the State Governments' right to levy sales tax on inter-State trade. The intentions of those

volve too much unnecessary bother. Indeed, some State Governments seem to think that commercial enterprises should spend most of their time submitting a dozen different tax returns to a dozen different authorities, who follow a dozen different laws and frame as many different rate schedules. The Supreme Court's latest judgment will need to be accepted not only to the letter but also in the spirit in which it is given. One of the major tests as to whether this is being done will be the speed with which the taxes that have been wrongly collected are returned.

TRYING TO TRADE WITH AMERICA

THE LESSON OF A REJECTED DAM CONTRACT

IT is curious, but not illogical, that British firms were pleased less by the assurance that non-American firms would not be debarred from competing for American Government contracts than by the intimation that the American Government might state in advance which contracts would be awarded to American firms, regardless of price. If a low foreign tender is to be rejected anyway, why spend much time and money preparing it? After the rejection of the English Electric Company's bid for the supply of equipment for the Chief Joseph dam, and the award of the contract to Westinghouse Electric at a much higher price, on the ground that Pittsburg (the Westinghouse base) was suffering abnormal unemployment, it is evident that the principle of free competition does not prevail in such contracts; so why tender for them? That attitude had already been adopted by many British firms before this recent dispute. English Electric, having an extensive organisation in the United States, was one of the few British firms that persisted in the belief that struggling against American protectionism was still worth the effort, although it had experienced rejection of low bids previously. Cynicism and defeatism are now general among British suppliers of heavy equipment, so far as the American market is concerned.

The episode of the Chief Joseph dam would have attracted no more attention than similar previous episodes if it had not immediately followed the raising of the tariff on bicycles imported into the United States. Still fresh in memory, too, were the protection of American interests against the "invasions" of Dutch cheese and Swiss watches. But in a sense the tariff on bicycles is more serious, because the American industry concerned had been built up (to an unimpressive size) on the basis of a demand that had been created by foreign (especially British) suppliers. Foreign makers of heavy engineering equipment know that if they compete in America they are opposing a huge and firmly-established industry. It is not altogether to their credit that they have some sympathy with their American opposites—that they would themselves resent American intrusion into their home markets. The case of bicycles is different. No non-American firm, however efficient and progressive, can respond to its Government's call to get into the American market and earn dollars if it feels that the reward of success will be restrictions against its goods.

The implications of these setbacks to the cause of freer trade are not confined to the industries directly concerned, nor even to others that might have attacked the American market but are now discouraged. They extend to the whole principle of competitive pricing. The immediate purpose of British economic policy is to stop the rise in costs and prices, so that British goods will sell more easily in the world market (and less easily at home). The American market is not, of course, the only objective, but it is the most important objective, because the shortage of dollars is the most serious monetary deficiency of the sterling area. If the effort must be diverted from the American market, it is still important to compete in other markets. But British trade has for many years been done mainly with the sterling area, where the struggle for trade is—or has been until recently—less keen than elsewhere. So it is naturally asked whether the results of expanding sales to foreign markets are worth the upheaval of deflation if the dollar trade will not be an important element in those results. Such ideas are certainly not becoming a part of British policy; but they are already a part of the policy of individual British firms, and these latest setbacks in the dollar area provide a plausible excuse for relaxing the effort to sell in America—where salesmen need a strong constitution anyway.

Official policy may change, moreover, in another way. As a matter of principle, and also because it has become possible in practice, many countries have withdrawn a large part of their restrictions against American goods. This relaxation has been gradual and therefore undramatic, but it has opened a wide field for American exporters. It was sometimes an act of faith—faith in the ability of

revived industries to earn more dollars where-with to pay for the increased imports from America. If it must now be accepted that this dollar-earning ability will be frustrated, the policy of freeing dollar-costing imports must necessarily be reconsidered. There is still one mode of discrimination against American goods which is very important in principle, though not necessarily so important in practice—the inconvertibility of currencies, particularly sterling. America's interest in convertibility is in enabling any earner of sterling or other currency to spend it on American goods. Convertibility cannot, however, be permissible unless foreign countries are reasonably free to sell their goods in America, so that there are plenty of dollars in the world available for exchange into the other currencies that are freely offered in exchange for dollars.

All these arguments are familiar in America, as elsewhere. It is believed that the American President is sincere in protesting his faith in freedom to trade. Yet the particular interests in America that are adversely affected by foreigners' freedom to trade there are still strong enough to oppose the general good of America and of the rest of the world. The American constitution itself helps these interests. So the good intentions of the Administration, even though entirely sincere, cannot always be accepted at their face-value. If America cannot now (when so prosperous that she has to restrain her own trade) expand the scope for other countries' products in her vast market, these countries must evidently seek to expand their trade in other directions. They cannot wait for a change of mood in America that may never occur.

THE POWER OF THE ATOM

FROM BOMBS TO BIOLOGY

NOTHING could have been calculated more effectively to exorcise the evil with which atomic power has been imbued since the day of its discovery than the "Atoms for Peace" exhibition now touring India under the auspices of the U.S.I.S. In the face of this graphic delineation of the uses of atomic power for the benefit of humanity, it seems almost incomprehensible that the first use it was put to was destructive and, that for the past ten years the fear of its explosive power has swayed governments, corrupted scientists and alienated nations. The Geneva conference broke the spell, and, albeit at the eleventh hour, the campaign for atoms for peace has been launched. The future use of the atom however, apart from nuclear weapons, has been hitherto shrouded in mystery and discussed with such conservative caution that we learn with astonishment, from Mr. Geoffrey Lloyd, Minister of Fuel and Power, that Britain's atomic power stations are expected to feed a useful supply of electricity into the national grid "within the lifetime of the present Parliament".

Perhaps the most tangible evidence of the value of nuclear research is the radioisotope, of which Britain is now the biggest exporter. Oak Ridge National Laboratory in America and Harwell in England have together made 18,620 shipments of radioisotopes to 47 foreign countries. Of these India received seven shipments in 1954 additional to her original 12. In medicine, radioisotopes with differing chemical bases are used to determine the areas of brain tumours; to measure the quantity of red blood cells; to locate and treat cancer and pave the way for research scientists to explore the final mysteries of disease. Radioisotopes are already saving industry in the U.S.A. an estimated \$100 million a day. Hidden flaws in heavy metal can be detected by the use of radioactive "Cobalt 60," and in paper, rubber, textile and metal-working plants, radioisotopes make it possible to measure and control the thickness of sheet materials during processing. A portable X-ray unit weighing only 10 lbs. but containing a tiny piece of radioactive thulium can provide rays equal to a 100,000-volt X-ray machine, and requires no outside electricity supply. In agriculture, radioactive tracers are being used to determine the quantity and quality of fertilisers, while changes and mutations induced in plants by irradiation produce harder and more prolific crops adapted to alien soils, disease resistant and quick growing.

Current research and development is rapidly leading to the erection of central power plants, either to supplement or supplant present sources of fuel. World coal output has reached its peak and in European countries, particularly Britain, industrial survival depends solely on alternative power supplies. The British government has decided to enlarge its provisional 10-year programme for 12 atomic power stations by building six additional reactors similar in type to those already under construction at Calder Hall, four of which will be sited at Annan in Scotland. The speed with which countries will be able to harness atomic energy will depend largely on its cost and reliability compared with present sources of power, on

raw materials and technical ability. America's first full-scale commercial atom power plant goes into operation in 1957, producing 60,000 k.w., and will be used mainly for research. Australia, Canada and the Union of South Africa are likely to have rapid development, possessing as they do the basic raw materials, precision engineering and chemical industries, a skilled labour force and administrative expertise, without which any large-scale atomic energy development cannot be undertaken. Of the Asian countries, India is the most advanced with plans for a reactor of the "swimming pool" variety for Bombay, and hopes soon to produce her own isotopes. In other underdeveloped areas such as Northern Rhodesia's copper belt, 500 miles from the Wankie coalfields and 300 miles from the projected Kariba hydro-electric scheme, nuclear power stations able to generate a total electrical output of 1,000 Mw are expected by 1970. Northern Australia and the great desert areas of the world might be settled if atomic power could be produced cheaply enough to provide a means of irrigation by distilling sea water or brackish inland water and pumping it over the arid zones while packaged atomic power plants, such as the model displayed at the exhibition, could be transported by air and quickly assembled to pump water or provide power for small and inaccessible mines. Atomic power in its various guises may well be the forerunner of an entire re-distribution of agricultural resources, even of the human race itself. If biologists can adapt plants to varying climatic and soil conditions while improving their yields it is quite conceivable that the whole movement of raw materials might one day undergo a radical change.

The problems confronting the full-scale utilisation of atomic energy are still formidable. The supply of raw materials, however, will ease when artificially-made atomic fuels such as plutonium (to be produced as a bi-product of uranium fission at Britain's six new atomic power stations) becomes more plentiful. Monazite sand, of which the world's richest deposits are in S.W. India contains thorium which can be used like uranium as a source of atomic energy. The potential energy in uranium and thorium is estimated to be 23 times as great as all the energy in the coal, oil and gas deposits of the globe put together, while reactors in operation will build up a vast bank of limitless power, so that by the year 2000 A.D. the entire world's fuel bill will cost only £50 million. The disposal of radioactive wastes is still giving rise to some controversy, and the whole question is being investigated by a special team at Harwell in England. It has been discovered that foodstuffs irradiated by these wastes remain fresh indefinitely and plastics and materials similarly treated can be made stronger and resistant to high temperatures. Obviously one of the biggest stumbling blocks will be the continued supply of technical personnel. In Britain leading firms of consultant engineers have already established nuclear departments within their existing organisations, while the problem is being tackled in Australia with a scheme of postgraduate scholarships in the fields of science and engineering which bear on atomic energy research, tenable in all Australian universities and supported where necessary with grants for special equipment. Research contracts are also being negotiated with a number of university schools to encourage the strengthening of research teams engaged in specific atomic energy projects. The sole problematical deterrent remaining is still accepted as the unknown quantity—the genetic factor and the influence of radioactivity on generations yet unborn. Compromises may have to be made but if the present economic and humanitarian benefits persist time and science may abolish the fear of retribution.

CURRENT COIN

Jute and the Next Plan.—Addressing the Indian Central Jute Committee in Calcutta last Saturday, Mr. K. R. Damle, Additional Secretary to the Food and Agriculture Ministry, said that under the second five year plan it was proposed to produce five million bales of jute annually. The goal was relative self-sufficiency, and there was not expected to be any difficulty in producing a crop of this size. Mr. Damle spoke of the difficulties in assuring a minimum price to primary producers, and said that jute depended entirely on the country's export potential; as such, its price was influenced by that of jute goods, which again was dictated by conditions in the international market. It was hoped, however, that the recent improvement in quality would help producers and tend to reduce price variations during the next plan period. Growers were being assisted with credit facilities; the establishment of co-operatives was being encouraged, and they were being assisted by liberal loans from the Reserve Bank. The Government was prepared to grant short-term loans for the purchase of fertilisers to farmers who were willing to accept the advice of technical experts on how to use them. Mr. Damle pointed out that provision had been made for the construction

of warehouses and seed stores in almost every National Extension Service block. The Government was encouraging the establishment of regulated markets to reduce the scope for malpractices in the marketing of primary produce and to protect producers from paying illegal and unnecessary imposts. The Committee had asked the Government to undertake a scheme for extensive trials over all the jute-growing States to study the performance of the improved varieties of jute and different manurial treatments under varying soil and climatic conditions. Another technological research scheme was to prevent seepage in the cement bag and to make it moisture-proof.

Soap Industry's Burdens.—Addressing the 37th ordinary general meeting of the Tata Oil Mills Company recently, the chairman, Mr. J. R. D. Tata commented with exasperation on the Government's policy to bolster small-scale and household industries at the expense of the organised sector, for the sake of increasing rural employment. He gave the specific example of the soap industry which was one of the fields chosen for this experiment. The factory branch of this industry, said Mr. Tata, had been made to bear a heavy burden of excise duty primarily to aid the development of the cottage sector, and while himself being in agreement with the broad social objectives behind this approach to industrial expansion at the present time, he pointed out the abuses to which the Government's peculiar policy of differentiating household units from the factory concerns has given rise. Factories which produce soap without the aid of power or steam or whose output is less than 125 tons of laundry soap or 50 tons of toilet soap a year are exempt from excise duty. This basis of differentiation, Mr. Tata again pointed out, was not helping the household branch—because many small urban factories had sprung up taking advantage of the situation. The net result was that the household units had not been helped and the Government had been losing much-needed revenue. The heavy rate of excise duty on the organised sector was therefore an unfair burden. Visualising the future demand for soap in the country, Mr. Tata pointed out that with the rise in per capita earnings and extra cloth production through the development schemes, people would need more soap than now, and he estimated the extent of the likely rise at the end of the second five year plan at 50 percent over current production, which was 85,000 tons in the organised section and 120,000 tons in the cottage branch. The Planning Commission expected the production in the organised sector to rise to 120,000 tons by the end of the second plan period, but the heavy excise duty imposed for the sake of small and household industries, Mr. Tata said, indicated a tendency on the Government's part to hamstring the organised industry. This tendency, he commented further, would lead to the very undesirable consequence of lowering the efficiency of the latter while at the same time denying the discriminating consumer established brands of soaps. That might, in its turn, lead to a cornering of high quality soaps and profiteering. The Exchequer would also lose the revenue earned from industrial profits.

I.A.C. Answers.—The Indian Airlines Corporation has answered the charges of inefficiency and wasteful management levelled against it by the Indian Chamber of Commerce, whose brochure on the subject was commented upon in the 28th July issue of *Capital*. While accepting that the losses suffered by the nationalised undertaking have been greater than before, the I.A.C. disputes that the losses in the immediate pre-nationalisation period were really so small, i.e., only Rs. 12.07 lakhs in 1952, or the last year of private operation, as stated in the Indian Chamber of Commerce brochure. The I.A.C. claims that the actual loss should be Rs. 47.07 lakhs if the Rs. 35 lakhs received as subsidy on account of the petrol rebate is excluded. Furthermore, the I.A.C., by its own scrutiny of the financial accounts of the private operators for the year 1952, finds that the loss has been under-estimated by as much as Rs. 27.9 lakhs, which means the aggregate loss should be Rs. 75 lakhs, if the Government subsidy of Rs. 35 lakhs on account of the petrol rebate is not to be included. Explaining the bigger losses suffered after nationalisation, the I.A.C. gives several grounds including such essential items of expenditure as increment to staff salaries, particularly in the lower brackets, cabinet furnishing and upholstery renewals, repair and overhaul of aircraft and introduction of the new *Heron* service on the feeder routes. The I.A.C. refutes that there has been any decline in aircraft utilisation. It furnishes the necessary statistics to prove that in fact, a proportionately greater volume of traffic has been carried against a smaller capacity of ton-miles offered, as the fleet of aircraft has actually been reduced by eliminating a number of useless *Dakotas*. As for the raising of air fares, the Corporation explains the increase as being due to standardisation of fares for identical standards of service for morning and evening *Viking* services

between Delhi and Bombay and the drop in night "air-mail" passenger traffic is stated to be due to the steadily rising volume of mail load which leaves less room for passenger accommodation in the planes. On the point of compensation, the Corporation points out that compensation paid to air companies was on the basis of the stock exchange prices of their shares, which is the practice followed in the U.K. in similar cases, and quotes figures of the face value, stock market price at the end of 1952 and the compensation rates to support its contention that compensation terms were not only fair, but in a sense generous.

World Bank Developments.—Another growth in earnings is reported by the World Bank. For the year to 30th June gross income, exclusive of loan commissions of \$13.3 million, was \$58½ million, against \$50½ million. After expenses, net income was \$24.7 million, against \$20.3 million, which was all placed to supplemental reserve against losses on loans and guarantees. It brought that reserve up to \$121½ million. Loan commissions were allocated to the special reserve and brought its total to \$62.3 million. Nearly \$410 million was lent during the year, making total commitments \$2,324 million of which \$274.2 million actually paid over last year brought total disbursements at 30th June to \$1,679.7 million. Meanwhile, three new loans have just been announced. One of \$5 million was granted to Peru for roads, another of \$4.2 million went to Pakistan to aid in establishing the Karnaphuli Paper Mills, near Chittagong, and a third of \$12 million to Siam for railway development. American banks have taken the early

maturities of each loan without the Bank's guarantee. Of more general interest is the news that the World Bank has now established its new "Economic Development Institute" in Washington and has chosen sixteen candidates from different member countries for the first course, which will begin in January. The Institute will serve as a staff college where senior financial and economic officials nominated by their Governments will study the formulation of development policies. Professor Alec Cairncross, of Glasgow University, is its Director. Among the sixteen members of the first six months' course are officials from Ceylon, Egypt, India, Indonesia, Iraq, Japan, Mexico, Pakistan, Uganda and Yugoslavia. Half the cost of running the Institute has been provided for two years by the Rockefeller Foundation and the Ford Foundation; Rockefeller will be met by the Bank, but the balance will be met by the Bank, but the various Governments will each pay \$1,500 towards the expenses of their nominee and will pay their salaries during their leave of absence.

A Canadian Textile Development.—Earlier this year much attention was directed towards a new highly-durable yarn produced in Canada by co-operation between the Defence Department and leading concerns in the cotton, wool and silk textile industries. This, it was claimed, produced fabrics with a tensile strength anything from four to ten times as great as that of cloths made from natural fibres, and with an unusually high resistance to abrasion. This development is based on multi-core yarns. The best results appear to have been obtained by using a central core of continuous-filament nylon. Two core yarns are used, each being covered by a roving wrapping, and then combined by being twisted together. For the wrapping or outer shell both cotton and wool have been used and the nylon core is said not to detract from the softness and warmth of the natural fibres. The Canadian Primary Textiles Institute, in its latest monthly bulletin, takes stock of the present position of this development. It is now fairly clear, it says, that fabrics woven from multi-core yarns will have their principal use for military and industrial purposes. Strength is the only advantage which these cloths have over others. "They have not demonstrated any particular qualities of appearance, handle or lightness not already available." It quotes from a trade paper the question: "How many women would buy a suit whose greatest selling point was that it would last for ten or fifteen years?"

(FROM OUR LEGAL CORRESPONDENT)

The distinction is elaborated in Sir J. B. Kanga and Mr. N. A. Palkhivala's *Law and Practice of Income Tax* thus: "If, owing to the negligence or dishonesty of employees, some of the receipts of the business do not find their way into the till or some of the bills are not collected, the loss is deductible as being of a non-capital nature and really incidental to the trade itself, for it springs directly from the necessity of deputing certain duties to employees. Thus, an amount embezzled by the assessee's goomastah or shortage in cash in a money-lending business found on making up the accounts of the day is deductible in computing the business profits. But where a trader is robbed of his profits by a stranger to the business, e.g., where

The question in this the latest illustrative case was whether the assessee, Lords' Dairy Farm Ltd., which had lost a large amount as a result of the defalcation of one of its employees, was entitled to claim that amount as a permissible deduction. The facts were that one X was a cashier of the assessee company, and one of his duties was to go to the assessee's bank and withdraw money and bring it to the company's office for making payment from time to time in cash. In the course of discharging these duties, X defalcated various amounts aggregating to Rs. 53,000. These defalcations took place between May, 1946 and April, 1947 and when they were discovered the assessee took from X a promissory note for Rs. 21,000. This note was taken on 28th April, 1947. A criminal prosecution was launched against X, and a certain amount was spent in this litigation, and in the assessment year 1948-49 the company claimed a sum of Rs. 34,053 as a permissible deduction. This latter sum was made up of the balance of Rs. 32,000 left over after the promissory note was given by X, and a sum of Rs. 2,053 as legal expenses. The assessment was concerned with this sum of Rs. 32,000. The Income-tax Department's contention was that the loss caused by embezzlement by an employee of the assessee was in no circumstances a permissible deduction.

The company's first contention was that the case would fall under Section 10(2) (xi), and that it would be entitled to claim the amount when the bad debt was written off, and that as it had written off this debt as a bad debt it must be entitled to claim the whole of the amount as a deduction. This contention was rejected by the Court. "In our opinion," said Chagla C.J., "it is impossible to say that a debt which is written off by a company as a bad debt is a bad debt. Before a debt can be claimed as a bad debt it must be a debt in law."

Nor did the High Court agree with the Tribunal that a case of embezzlement falls under Section 10(2) XV and that the deduction at least the amount actually embezzled in the accounting year, Rs. 13,800, could be claimed as a deduction. "Section 10(2) XV deals with any expenditure laid out or expended wholly or exclusively for the purposes of business, profession or vocation. Therefore the deduction contemplated must arise out of a voluntary act on the part of the assessee. . . . (Here) it is true that there is loss in the business but that loss is entirely involuntary and although the loss may arise in the course of the business or be incidental to the business, it cannot be said that the amount represented by the loss was an amount spent wholly and exclusively for the purpose of the business, profession or vocation." So both these contentions of the assessee failed.

Nevertheless, the company on another ground won its case and was allowed the full deduction claimed. Said the learned Chief Justice: "Therefore we must differ from the view taken by the Tribunal that a case of embezzlement falls under Section 10(2) (XV). But does it then follow that an assessee who suffers a loss in his business due to an embezzlement by his employee can get no relief because the various cases of deductions dealt with under Section 10 do not cover such a case? The answer is that the object of Section 10 is to ascertain the true profits and gains of an assessee. The profits must be ascertained from a commercial point of view. The sub-section (2) of Section 10 deals with certain specific cases of permissible deductions. But, even apart from these permissible deductions, if there is any loss which from the commercial point of view can be considered to be a trading loss, then that loss must be deducted before the true profits can be ascertained. Now in order to decide whether we should permit this loss as a trading loss we must look at one or two facts which have been established. It was necessary for the business of the assessee company to employ X as its cashier. It was also necessary for the business of the assessee company to delegate to the cashier certain duties. It was necessary for the cashier to go to the bank and bring money from the bank so that the money could be kept in the office of the assessee company because the company had to be spent for different purposes of the company. Therefore it is clear that X embezzled these moneys in the course of his duties as an employee and that the loss was caused in the course of the business of the assessee and that the loss was incidental to that business. If it is found that it is not possible for an assessee to carry on his business without appointing employees and delegating to those employees certain duties, it seems to us clear that that is a loss inseparable from the ordinary business of the assessee and must be attributed to trading loss." As to whether the whole amount of Rs. 32,000 could be permitted as an allowance to the assessee, only Rs. 13,800, their lordships held that "in the absence of any evidence we are entitled to presume that the amount became irrecoverable when the assessee wrote it off in its books of account (this the assessee had done in the year of account), and therefore our opinion not only is the assessee entitled to claim this amount of Rs. 32,000 as a trading loss but it is also entitled to claim this amount in the assessment year, viz., 1948-49.

*Curtis v. Oldfield (1925) 9 T.C. 319.

[*Lords' Dairy Farm v I. T. Commissioner*. A.I.R. (Bombay) 1955. (Sept.) 352.]

BRITISH-DUTCH OIL RECORD

British and associated Dutch oil companies in 1954 produced a record total of 111,430,000 metric tons of oil (including natural gasoline). This was an increase of about 7½ percent, on the previous year's output came from many countries, the chief contribution being made by the Middle East. Kuwait supplied 23,860,000 tons and Iraq 15,820,000 tons of oil out of a total of 44,370,000 tons produced by British and Dutch interests in this area. Next most important source of supply was Latin America and the Caribbean, with 38,410,000 tons, of which Venezuela supplied 31,380,000 tons. Trinidad was the second biggest supplier in this area; with 3,210,000 tons. In the Far East, Indonesia contributed 5,440,000 tons to British and Dutch output; a further 4,910,000 tons came from British Borneo. Finally, the U.S.A. provided another 16,430,000 tons of total British and Dutch output.

MR. Malcolm MacDonald, who has this week taken up his duties as United Kingdom High Commissioner in New Delhi, has had remarkably little holiday in relinquishing his old post and beginning work at the new one. But, I gather, he has a reputation for long spells of concentrated hard work, as well as for enjoying himself with a certain gusto. However, having regard to the fact that he has been Commissioner-General in South East Asia for nine years, and that before that he was U.K. High Commissioner in Canada for five years, one might have thought he would have allowed himself (or been allowed by others) more than the two short spells he has spent in Britain this summer while changing jobs. Several people have asked me what a Commissioner-General is, and what he does. As I understand it, the U.K. Commissioner-General in South-East Asia is a sort of co-ordinator-in-chief and Mr. MacDonald's functions in his last post were to co-ordinate Britain's foreign and defence policies so far as they affected the several colonial administrations in Malaya, Singapore, British North Borneo, Brunei, Sarawak and Hong Kong. In his new post at Delhi he is, of course, an ambassador and so far as his own Government is concerned his main channel of communication will be the Commonwealth Relations Office. He comes to India as a man with a friendly and sympathetic understanding of Asian peoples and their problems. He believes in the idea of partnership and that the era of stuffed-shirt politics is over. Certainly, he was tremendously popular with the people of South-East Asia, and there seems to be no reason why he should not quickly establish the same kind of informal relationship here in India.

Last week's award of honours by the President was of great interest. Mr. Nehru was, of course, the recipient of the highest honour *Bharat Ratna*, a title which is linked with his earlier activities in the independence movement. I remember having read in his *Autobiography* some two decades ago that sometimes in his younger days, when he returned home after having addressed mass meetings where the audience pelted him with the affectionate appellation of *Bharat Ratna*, he was often greeted with "Hello, Jewel of India" (which the term means), thus causing a good deal of family fun. Time has made yesterday's jest today's reality. I took particular pleasure in noting that and Mr. M. Viveswaraya shares this high honour, and that Mr. J. R. D. Tata has received the decoration of *Padma Vibhushan*. The industrialists of this country, as I remarked a few weeks ago, were being made to feel ashamed of themselves and their work. The Presidential honours, though tardy (France recognised Mr. Tata's achievements in 1954 when it awarded him "The Cross of an Officer of the Legion of Honour" for his services to civil aviation), should help to counteract this feeling and help to raise the status of a business career in the public's esteem. Calcutta has special reasons to approve the choice of Professor L. M. Banerjee, that wielder of the kindly knife now well on in his seventies, for the *Padma Bhushan*. He was Bengal's, probably India's, first surgeon to have obtained a London degree. The services of Dr. S. K. Chatterjee, Chairman of West Bengal's Legislative Council, have also been suitably recognised by the conferment of a *Padma Bhushan*. He has always appeared to typify in his own person a successful marriage of philology to the gavel.

I have seen neither the original German publication nor the English translation of Dr. Hjalmar

Schacht's *My First Seventy-six Years*: but I have read quite a lot about this much publicised author biography of a highly controversial figure whose rôle in the inner counsels of Nazism is still the subject of some disputation. That the German banker was by no means a negligible figure in the events of the immediate past is clear from the fact that we still speak of "Schachtian economics" and the words themselves still produce a slight shiver down the spine. Schacht paid two visits to India—one in the late 1930's during the period of his temporary banishment by Hitler from the post of Reichminister of Economics, and then later after the war when he came to this country as the guest of a well known Indian joint stock bank. On the first occasion he was under a heavy political cloud, and the resident German communities in Calcutta and Bombay found his presence in their midst a little embarrassing, at least from the point of view of protocol. On his second visit he was somewhat lionised by his Indian hosts, though I doubt if his lofty economic pronouncements left any permanent impression upon his audiences. A good deal of *My Seventy-six Years* was written, I gather, as part of Schacht's successful defence at the Nuremberg Trials and for the subsequent denazification proceedings brought against him by his own Government. To that extent the book is an essay in self-justification, for when a man is literally writing for his life he is unlikely to be scrupulously objective. What is true is that when Schacht came to power in the early 1930's his country was sunk in the morass of depression and unemployment and he pleads this as justification for monetary and fiscal policies which were illiberal, ruthless in execution and often frankly dishonest in intention. Hitler having willed the ends, Schacht had to find the means and he faced two main problems: how to create work for six and a half million unemployed and how to cope with a balance of payments situation that was weighed down by a mountain of external debt. Credit reflation and a cunning system of bilateral trade and payments were the corner-stones of Schacht's policy. "Work creation" very soon became open preparation for war and the rest of the story is known to every adolescent who has read an elementary history book. Schacht was banished from favour because in a memorandum to the Führer he wrote: "there exists no recipe, no system of financial or currency technique, be they never so ingenious or well thought out, sufficiently effective to check the devastating effects on currency of a policy of unrestricted spending by the State....." This is impeccable monetary theory.

Sir Atul Chatterjee, who died in London a few days ago, was a distinguished administrator who served the old régime. His claim to fame in the different India of today would, I suppose, be that he was the first Indian to top the list in the Indian Civil Service Open Competitive Examination. That was as long ago as 1896. It is not easy now to envisage the disabilities which young Indians had to contend with in those remote days when venturing abroad to win academic distinction at British Universities and reach a place of honour in stiff civil service examinations. But Atul Chatterjee came of a gifted Bengali family which achieved success in several walks of life. He subsequently scored another "first", in that he was the first Indian Chief Secretary of a province, occupying that position in the United Provinces. In his later years as a bureaucrat he was much involved in

industrial and labour problems, but he was also responsible for the building of India House in Aldwych during his High Commissionership in London. By common consent India House is one of the best diplomatic headquarters in the British capital. Sir Atul was eighty years of age and for long has. I understand, been one of the best known figures in the Athaenaeum Club in London. In his retirement he gave much of his time to various learned societies which will be the poorer for his passing.

The decision of the previous Government of Pakistan to change the rule of the road was popularly, though no doubt unfairly, associated with the fact that the previous Prime Minister owned a left-hand-drive Cadillac. I thought that this uncharitable theory had been exploded when the new Prime Minister and the new Governor-General sanctioned the promulgation of the ordinance changing the rule of the road as from the end of the year. But a Pakistani newspaper has declared that they probably own left-hand-drive Cadillacs too. Indeed, the same source avers, possession of a Cadillac in Karachi is the mark of "the plutocrat, the politician, the parvenu and the person in power", and the humbler Pakistani is being asked to exchange his heritage of left-handed safety for a mess of Cadillac pottage. Accidents galore are being freely prophesied by opponents of the change, and some of their predictions are blood-curdling: we have waited, they say, eight years for a Constitution, yet overnight "this man-killing device is inflicted on an unsuspecting nation". I doubt if the results will be quite as bad as that, and in any event the change will be of merely academic significance throughout East Pakistan where there is scarcely a road that can accommodate two cars abreast and one keeps neither to the left nor to the right but quite simply to the middle. (The great road-building feats of the Italians, which were to change all that, have come to nothing, for after rehabilitating the seven mile stretch from Dacca to Narayanganj, their agreement has been challenged and matters henceforth rest with the courts of law.) The oil companies in Pakistan are being asked to launch a propaganda campaign, with posters and the like, to advertise the change from left to right, and the remainder of this year is to be spent in educating road-users to the new rule—unless of course the ordinance is upset by Pakistan's legislators when it comes before them for approval. Educating the bullocks that propel so much of Pakistan's transport, and the other animal life that infests the thoroughfares of this portion of the subcontinent, will be another matter; as observant drivers will know, much safety depends on the fact that our bullocks have been trained to keep left. No convincing reason has ever been advanced for the change-over in Pakistan. Such reasons as Mr. Mohammed Ali's familiar political preference for Right over Left, or Mr. Mohammed Ali's Cadillac, or Karachi's desire to be different from India in as many ways as possible, are hardly meant to be taken seriously. The official reason—that Pakistan would be in future drawing most of her vehicles from the United States and that therefore left-hand drive cars would be cheaper—is rather weak. The Americans sell cars throughout our left-handed Commonwealth, and can put the steering on one side as easily as the other. And even if they couldn't, Pakistan could follow the example of the Swedes who mark the difference between themselves and their Scandinavian cousins by importing (and manufacturing) only LHD vehicles and yet drive on the left hand side of the road as we do.

BRIGHTER CONDITIONS IN STOCK MARKET

GILT-EDGED AND INDUSTRIALS IMPROVE

London, 14th September.

DISTINCTLY brighter conditions developed in the stock market, and although business recorded no marked expansion, prices recovered part of the recent losses. Buying was centred largely on better class issues. The feature was a steady improvement in gilt-edged securities following small buying on a thin market. The recovery in prices brought widespread and appreciable gains ranging to well over a point compared with previous levels. In foreign bonds, Japanese issues lost some of the gains which followed the granting of permission to export bearer bonds. Germans also rose, while Peruvian issues moved up on hopes that the long-awaited scheme would be published shortly. Rails attracted little interest, but dollar stocks moved up in response to the advance on Wall Street. Better class issues attracted most of the attention in the industrial market and following small and selective buying a fairly lengthy list of gains was established. Miscellaneous leaders improved, while engineering, electrical, stores and most other groups recorded a quota of gains. Aircrafts responded to the Farnborough air display. Gold shares, after enjoying very firm conditions prior to the week-end, turned easier later in the absence of fresh support and some gains were lost. Coppers recorded substantial gains and most of the rises were maintained in spite of profit-taking. Leading oils came back into favour and

had useful gains, while small demand lifted the prices of rubbers and teas.

Vegetable Oil Market

Linseed oil hardened by around 10s a ton, largely in sympathy with the rise in linseed, but interest remained on a moderate scale. Ceylon coconut oil shippers showed more reserve on better advice from the origin. Ceylon for September-October shipment was offered at £901, while Straits was still obtainable at £871 and possibly less. Indian bulk groundnut oil was offered to the Continent down to £105. With the exception of linseed, the oilseed section was featureless, with British East African sunflower seed offered down to £373 c.i.f. Nigerian palm kernels sold at £501 c.i.f. November-December, with further buyers at the price.

P & O. Debenture Issue

The Peninsular and Orient Steam Navigation Company announced details of the issue of £10 million 5 percent debenture stock, 1975-80 at £97 a £100 stock. The stock is payable as to £25 not later than 28th September, £25 on 14th December, £25 on 25th January next year and £22 on 14th March next year. It is offered to debenture, preferred and deferred stockholders.

The Money Market

The supply of credit in the money market during the past week was again short and a fair amount of funds had to be injected by the authorities to enable discount houses to finance a very large take-up of Treasury Bills. On Friday, however, a complete change came over the situation following a large influx of funds from Government departmental disbursements. The banks, who earlier in the week were only modest in their activity, were string buyers of bills; rates eased to 4 percent for November maturities and to 3½ per-

cent for October. Applications for Treasury Bills totalled £381,140,000. Of this, £290 million were allotted at an average rate of 81s 4.67d, compared with 81s 3.78d in the previous week. This week, another £290 million are offered. The Bank of England return for the week ended 7th September showed that notes in circulation were £1 million lower at £1,781 million, while bankers' deposits were £10 million higher at £253 million.

Rise in U.K. Platinum Prices Likely

Industrial circles in London consider it likely that the two leading U.K. platinum refiners will move up their prices to reflect the increase by the U.S. refiners, Barker and Company. British refiners have been quoting stable prices of around £29 a troy ounce on regular contracts, although marginal supplies have been making around £33. The new Barker price is equivalent to £32½ to £33½ a troy ounce. There is said to be good industrial demand for the metal in the United Kingdom and some believe that there has been speculation in platinum as a hedge against any possible sterling devaluation. It remains to be seen, these people say, whether the higher price will tempt Russia to sell platinum on the U.K. market.

Stock Market Prospects

The *Investor's Chronicle* market newsletter writes: The London stock exchange sentiment appears to have improved. Selling pressure has eased and any drift in prices is almost entirely due to the quietness of the market. Blue chips now offer an average dividend yield of over 5 percent and an earnings yield of nearly 14 percent, which should tempt the big investment institutions. Many leading industrial shares begin to look attractive. It can be argued that a further increase in the bank rate now would defeat its object by undermining foreign confidence in sterling. The possibility of an increase is working just as efficiently as would an actual increase. Some problems remain but there seems to be no reason for panic, especially if other labour leaders follow the admirable approach of the Chairman of the Trades Union Congress.

Rubber Prices Higher

After a week of quiet fluctuations, London rubber prices closed about a farthing a lb. higher on balance. With buying support small, the market failed to maintain the early firmness, and the sagging trend was extended in sympathy with Singapore. Values responded to the rally in the East, but reports that Commission House was selling at New York caused a sharp recession. Heavy selling pressure towards the close induced further easiness, but in the final stages the recovery movement was aided by U.K. and Continental orders, together with the steadiness at New York, and the close was firm. Sole crepe was in small demand, with sales about balancing the intake. Sellers of No. 1 smooth on the spot indicated at 46d a lb after 46½d was asked.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 7th September shows the gold stock again unchanged at \$21,682 million. Foreign deposits decreased by \$10 million, while foreign investments rose by \$3 million. The Federal Reserve made no purchases or sales during the week. Total discounts and advances increased by \$128 million to \$598 million and excess reserves of member banks decreased by \$80 million to \$144 million. Their daily average of excess reserves increased by \$109 million to \$599 million, while their average borrowings rose by \$98 million to \$838 million. Business loans of New York City banks fell by \$97 million to \$8,302 million compared with a decline of \$14 million to \$7,232 million a year ago.

RAPID GROWTH OF AIR FREIGHT TRANSPORT

Air freight transport, which has expanded enormously during the postwar years, is now in a stage of full development. Originally air transport was confined to goods for which speedy transport was essential on account of their nature. These were chiefly goods that could not stand a long journey, e.g. flowers, fruit, foodstuffs, hatching eggs and emergency shipments or goods which could not reach their destination in any other way. As air transport facilities increased, however, the handling of the cargo was simplified, the packing became lighter (in fact it was quite unnecessary in many cases) and the insurance premiums—thanks to the reduced risk—were much lower than for other means of transport, with the result that the total costs became so attractive that more and more shipments of normal freight are now carried by air.

The traffic statistics afford convincing proof of this. In 1946, the first normal year after World War II, air freight traffic all over the world amounted to 177 ton kilometres. Nine years later, in 1954, the volume of air traffic had increased almost sixfold, the total being 1,045 million ton kms. The freight traffic for KLM alone in 1946 was 2,565,000 ton kms. and by 1954 it had risen to 47,108,000 ton kms., which was over eighteen times higher than in 1946. That trend is still continuing, as may be seen from the KLM figures for the first six months of 1955. The number of ton kms. for that period was 25,831,000 compared with 22,060,000 for the corresponding period of 1954—an increase of more than 17 percent. The financial turnover has kept almost equal pace with this expansion, having risen by 16 percent. The goods regularly transported by air include the most diverse products and most of them are neither perishable nor urgent. The fact that such goods are nevertheless sent by air must therefore be due to purely commercial or economic considerations, which amply justify the possible higher costs of transportation.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FAIR DEMAND PERSISTS

Wednesday, 14th September.

MONEY has remained in fair demand throughout the past week, although funds continue to return from upcountry. A good deal of accommodation is still outstanding on account of the sugar industry, considerably more than the usual at this time of year, because of the unsatisfactory disposal of stocks. There has been some buying of jute, and advances to the industry have shown slight improvement. The interbank call rate remains at 3 percent with lenders over.

There has been a moderate amount of business in the market for export documents this week, with some tea and gunny bills in evidence. Remittance has been in fair demand. Sterling has shown slight signs of improvement and the rate has remained unchanged. The dollar is still quoting Rs. 480½.

Silver ruled quiet and the price declined from the previous week's level of Rs. 165-12 to Rs. 165, quoted today. The rate for forward was quoted at Rs. 164-12. In London the price advanced from 78½d. to 79½d. The price of foreign silver in New York was unchanged at 90½ cents.

Gold was quiet in sympathy with silver and the price dropped from Rs. 95 to Rs. 94-8. The sovereign at Rs. 61-10 showed little variation.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 13th September, 1955, totalled Rs. 1,42,50,000. The average rate of acceptance rose from Rs. 2-8-3 to Rs. 2-8-5 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 48 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at Calcutta, Madras, Kanpur, Delhi and Bangalore up to Tuesday, 20th September, 1955, and at Bombay up to 11 a.m. on Wednesday, 21st September, 1955. During the week ended 9th September, 1955, Government of India Treasury Bills for Rs. 37,40,50,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 8.66 crores in notes in circulation to Rs. 1,301.85 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 9th September, 1955, while the total note issue fell by Rs. 25 lakhs to Rs. 1,315.07 crores. Notes held in the Banking Department consequently declined by Rs. 8.91 crores to Rs. 13.42 crores. Foreign securities rose by Rs. 15 crores to Rs. 671.82 crores while rupee securities fell by an equivalent amount to Rs. 493.91 crores. These changes were made by transfers from the Banking Department. Balances held abroad dropped by Rs. 13.87 crores to Rs. 49.23 crores, as did investments by Rs. 14.43 crores to Rs. 48.77 crores. There was an all round decline in deposits. Deposits of the Government of India and other Government accounts fell by Rs. 5.91 crores and Rs. 26.23 crores to total Rs. 58.47 crores and Rs. 13.93 crores, respectively. Balances of commercial banks at Rs. 48.39 crores were Rs. 6.60 crores lower. Other loans and advances declined from Rs. 33.75 crores to Rs. 29.50 crores, of which advances to scheduled banks against usance bills were Rs. 12.32 crores (Rs. 13.66 crores). These advances totalled Rs. 187.73 crores since 1st January, 1955. Ways and means advances stood at Rs. 37 lakhs (Rs. 25 lakhs).

The statement of the position of scheduled banks for the week ended 2nd September 1955, discloses Demand and Time liabilities at Rs. 601.81 crores (Rs. 8.14 crores on account of borrowings from banks) and Rs. 409.78 crores (Rs. 2.94 crores) compared with Rs. 608.07 crores (Rs. 8.85 crores) and Rs. 409.06 crores (Rs. 3.59 crores), respectively in the previous week. Cash has declined by Rs. 9 lakhs to aggregate Rs. 33.18 crores, while balances with the Reserve Bank have advanced by Rs. 6.53 crores to stand at Rs. 56.76 crores. There is a rise of Rs. 1.17 crores in investments to Rs. 379.45 crores. Advances and bills discounted at Rs. 614.7 crores reveal an increase of Rs. 7.97 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.9 percent and 60.7 percent against 8.2 percent and 59.6 percent.

The return of the State Bank of India for the week ended 2nd September, 1955, shows a rise of Rs. 77 lakhs in total deposits to Rs. 215.49 crores. Investments in Government Securities are up by Rs. 13 lakhs to Rs. 97.28 crores, while other authorised investments are down by Rs. 5 lakhs to Rs. 10.22 crores. Advances, including cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 3.66 crores to Rs. 107.05 crores. Cash and balances are, in consequence, shown at Rs. 22.41 crores or Rs. 3.02 crores higher.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of India's foreign trade by land with

Pakistan, Afghanistan, Iran and Burma during July 1955, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	29	155
Western Pakistan	10	6
Other countries	negligible	1
	39	162

Total trade amounted to Rs. 201 lakhs. Trade in treasure and merchandise re-exports were nil. There was thus an adverse balance of trade amounting to Rs. 123 lakhs.

The directors of the CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA have declared an interim dividend of 7½ percent actual subject to income tax.

Longer working life for your vehicles—

with **MARFAK** Lubritection SERVICE

The best way to reduce your operating costs is to reduce wear. Insist on MARFAK LUBRITECTION SERVICE for economic lubrication. You'll get fewer repairs, heavier payloads, quicker operation, smoother riding comfort and longer vehicle life. MARFAK LUBRITECTION SERVICE ensures that every moving part of your vehicle is correctly lubricated at proper intervals—with the right lubricant to prevent undue wear. MARFAK won't wash out, squeeze out, run off or dry. It keeps dirt and moisture out, lubricating—giving all-weather protection—even through the monsoon. Arrange with your friendly Caltex Dealer for MARFAK LUBRITECTION SERVICE at regular intervals.

It's a BIG job....
running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead". For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

Stocks and Shares

DULL WEEK IN THE STOCK MARKET

INVESTORS ADOPT "WAIT AND SEE" TACTICS

DULL and quiet conditions have prevailed throughout the share market this week. Speculative counters have been affected by the inactivity in Indian Irons caused by the general uncertainties of the economic situation. The prospects for Irons are now dominated by the possibility that the Company may announce a higher dividend and until the question of dividend has been settled there seems little chance of any definite movement of the market one way or the other. The various sections of the market have ruled quiet, but in tea there has been some cornering activity, notably in Guelle, and Brooke Bond have benefited from expectation of higher dividend. Jute shares have not responded to the moderate improvement which has taken place in the goods prices.

Government securities have followed the general trend of the market and prices have tended to lower levels.

Details of the week's trading follow.

The Government securities market ruled slightly easier and the volume of business was small. Three percent Conversion Loan 1986 was fairly steady at Rs. 80-6, the enquiry being due mainly to the approach of the interest date (16th September). In short-dated Loans, 3% 1957 was easier at Rs. 99-7 as was 3% 1958 at Rs. 99-5. Amongst medium-dated loans, 3% 1959-61 was offered freely at around Rs. 97-14 and 3% 1961 at Rs. 99-10; 3% 1964 found small buyers at Rs. 98-10, but 2% 1965 shed one anna to Rs. 98-7. The demand for 2% 1961 and 2% 1960 continued unabated and prices were marked up further to Rs. 92-8 and Rs. 95-6 without attracting sellers. In the long-dated section 3% 1966-68 was asked for at Rs. 91-8, but 3% 1970-75 continued on offer at Rs. 87-1-6.

Retail business was reported in Provincial Loans but generally, prices were slightly better. Four percent U.P. 1967 was better at Rs. 99-6 and 4% West Bengal 1967 was taken at Rs. 99-15. Four percent Bombay 1967 was unchanged at Rs. 100-5. There was an enquiry for 3% State Loans 1960, but in the absence of offerings no business was possible.

Selected jute and miscellaneous Preference shares continued to attract buyers but sellers were not forthcoming. Among jute Anglo-India were done at Rs. 110-8, Bally at Rs. 114, Birla at Rs. 103, Empire at Rs. 114, Gourapore at Rs. 103-8 and Hukmchand at Rs. 115. Kinnison were crossed at Rs. 117-12, Lansdowne at Rs. 114-12 and Lawrence at Rs. 116. Amongst miscellaneous issues, Bengal Paper 'A' were quoted at Rs. 138, Calcutta Electric at Rs. 12-10 and British India Corporation changed hands at Rs. 137. Birds Investments were crossed at Rs. 80-8, Dunlop Rubber 2nd were transacted at Rs. 100-8 and there were buyers of Indian Iron & Steel at Rs. 110-8. Orient Paper 1st were taken at Rs. 100, Rohtas Industries "B" were quoted at Rs. 68 and there were buyers of Shaw Wallace at Rs. 85. Titagur Paper 2nd were crossed at Rs. 95.

In the banking section, Allahabad Bank Contributory changed hands at Rs. 178, Hind Bank were done at Rs. 28-4 and United Bank of India "D" shares were dealt in at around Rs. 5-3.

The only share transacted in the railway section was Dehri Rohtas which, after being taken up to Rs. 15-3 turned easier at Rs. 14-14.

Despite the lock-out declared by the Elgin Mills last week, the shares improved from Rs. 19-14 to Rs. 20-2, Dunbar were marked at Rs. 247 Kesoram were easier at Rs. 16-5 and New Victoria changed hands at Rs. 1-10. Following the passing of the dividend Cawnpore Textiles eased to Rs. 8-9. Swadeshi Preferred Ordinary were crossed at Rs. 10-12.

Coal shares were dull with Burrakur fluctuating narrowly around Rs. 14-8. Bengal were reported at Rs. 540, Central India at Rs. 7-9, New Manbhoom at Rs. 10-9 and Talcher at Rs. 3-10. Western Bengal were easier at Rs. 7-2, East Indian were crossed at Rs. 30-4 and Seepore at Rs. 29-12.

Despite the improvement in the jute goods market, jute shares continue to be languid and prices showed little change as will be seen from the following table:

	Opening 8.55	Closing 14.9.55
Anglo-India	236	240
Budge-Budge	203	205
Chandany	190	189
Delta	279	279
Howrah	30 8	30 4
National	35 x.d.	34 5
Union	228	220

Business in Electric supply shares was on a small scale. Calcutta came to hand at Rs. 15-8, Cuttack at Rs. 9-6 and Jubbulpore had buyers at Rs. 14-14. Upper Ganges were marked at Rs. 15-4.

With the exception of Cawnpore, which had buyers at Rs. 23-4, other shares in the sugar section were dull. Balarampur were lower at Rs. 11-5, Belsund at Rs. 11-12 and Shree Krishna Gyanodaya at Rs. 18-12. Carew & Company were quoted at

Rs. 12-8 and Durbhanga were better today at Rs. 23-12.

The weakness in Indian Iron & Steel shares was reflected in most other shares in the engineering section and prices were trimmed down. Indian Iron, from an opening quotation of Rs. 39-11 receded at one time to Rs. 38-11, but a feeble rally at the close brought the price up to Rs. 39-1. Business was reported in Britannia Engineering Old shares at Rs. 20 ex-rights and Braithwaite & Company at Rs. 27-8. Burn & Company were quietly steady at Rs. 292 as were Indian Standard Wagon at Rs. 138. Jessop fluctuated between Rs. 55-4 and Rs. 53-3 to close at Rs. 54. Kumardhubi Engineering were lower at Rs. 12-4 and Marshalls at Rs. 7-8. Richardson & Cruddas were marked down from Rs. 24-8 to Rs. 24-2 and Textile Machinery from Rs. 27-7 to Rs. 26-12.

Business in the miscellaneous section was on a much reduced scale with investors adopting a "wait and see" policy. Bengal Paper dropped to Rs. 71-12, Orient to Rs. 30-3 and Titagur to Rs. 45-12 ex-dividend. India Paper Pulp, however, were unchanged at Rs. 23-6. Sone Valley were marked down to Rs. 8-1 and New Asiatic Insurance to Rs. 5-14. In contrast there were buyers of Hercules Insurance at Rs. 30-4. India Steamers of Hercules Insurance were fairly steady around Rs. 7-8 and ship changed hands freely around Rs. 7-8 and British India Corporation were steady at around Rs. 9-11 as were Alkali & Chemical at Rs. 19-12. Angelo Brothers had sellers at Rs. 22, while Bara-Coke and Birds Investments were fairly steady at Rs. 21-8 and Rs. 18-10. British Burmah Petroleum were easier at Rs. 4-7 and business was reported in Calcutta Tramways today at the higher rate of Rs. 18-4. 11-5, Dunlop Rubber at Rs. 38 and Indian Cables at Rs. 29-14. Imperial Tobacco Products were marked at Rs. 41 and Indo-Burma Petroleum at Rs. 44. Jardine Henderson were crossed at Rs. 119, Martin Burn were done at Rs. 25-2 and Metal Box at Rs. 24-2. Rallis were taken at Rs. 36 and Shaw Wallace at Rs. 14-11.

In the mining section Indian Copper met with some selling pressure and receded steadily from Rs. 6 to Rs. 5-11 to close at that quotation. West-ern Stockholders Investment were unchanged at the Re. 1 and there were sellers of Burma Mines at the lower rate of Rs. 1-4. Chrestian Mica Industries went ahead to Rs. 15-12, but closed a shade lower at Rs. 15-5. Orissa Minerals were marked at Rs. 25-12 ex-dividend.

In sympathy with the general trend of the market, Tea shares held once again rather dull with little business passing. Amongst Assam shares, Baghmari were easier at Rs. 28 as were Bormah Jan at Rs. 22-14 and Grob "B" at Rs. 24. Ananda Bag were crossed lower at Rs. 49 whilst Brahmapootra, after being taken at Rs. 13-8, closed easier at Rs. 13-4. Brooke Bond improved to Rs. 30 while, Dessai & Parbutia had strong buyers at Rs. 475. A small lot of Hooangooree changed hands at Rs. 328 whilst Mohema appreciated sharply to Rs. 27 and Sapoi were taken up to Rs. 45-8. After a considerable lapse of time, business was transacted in Mothola at Rs. 620 whilst Telojian had sellers at Rs. 35-12. Amongst Doars shares, Banarhat were done at Rs. 740 and Hanta-para at Rs. 375 x.d. Hasimara had sellers at Rs. 46-8, para at Rs. 375 x.d. shares, Guelle were a strong feature and, on interested buying, appreciated from Rs. 37 to Rs. 49-12 but closed easier at Rs. 48. Pashok were marked higher at 24 as were Seeyok at Rs. 20 and Soom at Rs. 30-8. Teesta Valley had buyers at Rs. 41, whilst Baitakhal were marked at Rs. 13-8 c.d. and Rs. 12-4 x.d. while Central Cachar were unchanged at Rs. 140. Hatikihira eased slightly to close at Rs. 29-14 and Jayshree were done at around Rs. 14-10.

The profit of the GOHPUR TEA COMPANY increased by Rs. 1.65 lakhs to Rs. 5.15 lakhs for the year ended last December. Transferring Rs. 50,000 (Rs. 1,67,673) to building reserve, Rs. 1 lakh (Rs. 50,000) to reserve, providing Rs. 2 lakhs (Rs. 1,20 lakhs) for taxation and bringing in Rs. 79,542 there is Rs. 2,57,216. The dividend has been increased from 30% to 50%. The carry forward is Rs. 88,213. The crop rose from 528,704 lb. to 556,376 lb. and the average sale price from Rs. 2-4-7 to Rs. 2-13-93 per lb. Estimates for 1955 are for a crop of 580,000 lb. at a cost of Rs. 9.59 lakhs.

There is a decline of Rs. 1.15 lakhs to Rs. 2.78 lakhs in the profit of the ORISSA MINERALS DEVELOPMENT COMPANY, for the half-year ended last December. The dividend is the same at 10%. Development rebate gets Rs. 18,064, tax contingency reserve Rs. 38,815 and taxation provision Rs. 70,000 (Rs. 1 lakh). The carry-forward is Rs. 91,384 (Rs. 1,39,968). Raisings of iron ore were 3,03,531 tons, compared with 2,54,549 tons during the previous half-year. Despatches also increased by 68,428 tons and were 3,10,459 tons. Shipments to Japan decreased by 8,008 tons to 19,002 tons due to the lack of orders from that country. However, advantage was taken of the improved wagon situa-

Replying for the Guests, His Excellency Group Capt. The Hon. Sir Thomas White, High Commissioner for the Commonwealth of Australia in the U.K., touched upon the growing power of aviation

The KLM traffic statistics for the first six months of this year show an all round increase in relation to the corresponding period of 1954. Between 1st January and 30th June, 1955, the "Flying Dutchmen" carried 327,700 passengers (313,500 in the first half of 1954), covering an aggregate distance of 81,700,000 kms (77,400,000 kms) in 28,400 (26,300) flying hours. The number of passengers kms. performed during this period was 752,400,000 (as against 704,800,000 the previous year), while the freight traffic rose from 22,100,000 to 27,600,000 tons kms. and mail from 4,200,000 to 4,350,000 tons kms. The sales—expressed in revenue ton kms.—amounted to 101,800,000 ton kms. for the first half of 1955 (previous year: 94,300,000 ton kms.).

Books and Publications

Norway: A Democratic Kingdom. By Chr. A. R. Christensen. (Published in Oslo in co-operation with the Royal Norwegian Ministry of Foreign Affairs. Translated by R. I. Christophersen M.A. (Oxon)).

This year Norway celebrates a double jubilee, her own as a fully independent and sovereign state, and King Haakon VII's fifty years as a reigning monarch. Since World War II Norway has made enormous strides in her development. The third shipping nation in the world, whaling, fisheries, forestry and agriculture are her principal sources of wealth, while her vast reserves of hydel power for home and industry are still virtually untapped. Side by side with her economic expansion, Norway has consistently pursued an active policy of social reform and has established herself to-day as one of the few countries to have eliminated extremes of either poverty or great wealth from her standard of living. The mountains mirrored in the deep black fjords, the ski-jumps—a mere twenty minutes by electric train from Oslo—the modern hospitals and dental clinics, a free education system through school and college, are equally within reach of every Norwegian, and the King's palace rising at the end of the busy Karljohangate is set in the midst of public gardens—perhaps one of the most telling symbols of a true democratic kingdom. Mr. Christensen's booklet, beautifully produced, and illustrated with vivid and arresting photographs, presents a concise and objective history commemorating fifty years of progress in the economic, social and cultural life of his country.

Progress: Economic and Financial Journal of Upper India. (Published by U.P. Economic Publications Ltd., 14/77, The Mall, Kanpur. Pages 36. Price Re. 1).

This first edition of a new fortnightly economic and financial review has just been published in

Kanpur, for Uttar Pradesh, Vindhya Pradesh, Madhya Pradesh, Madhya Bharat, the Punjab P.E.P.S.U. and Bihar. Its purpose is to provide an appraisal of the economic and financial trends and activities in Upper India. Blessed by the good wishes of the States' ministers, the first number of this journal contains a wide variety of articles on the industrial and economic progress of Upper India, many from the pens of some prominent directors of industry, a full page article from *Science* and a final section entitled "Financial Causerie" devoted largely to the stock market.

The Negotiable Instruments Act. By J. S. Khergamvala. (Published by N. N. Tripathi Ltd., Princess Street, Bombay. Pages 212; price Rs. 8).

Do you know what is a *Shah jog*, a *Jokhmi*, a *Jansabe*, a *Nam jog* or a *Zickri chit* and the Banking and Commercial usages of and concerning the same? Or the difference between "At sight", "on demand", "on presentment" and "after sight"? Or that a man can forge his own signature? All these matters and others of more practical importance will be found in Dr. Khergamvala's well known work of which this is the tenth edition. The first edition published in 1921 was intended exclusively for law students but the learned author has now extended its scope so as to convert the work into what he too modestly describes as "a handy book of reference" for the practitioner. Written in an easy colloquial style it is just the work for the young bank official or accountant newly arrived in India and, for that matter, for his seniors too. The lawyer will find in it the principle he seeks and in the case cited a guide to further research. The price, considering the times, is remarkably low.

Trade and Industry of Japan. No. 12. (Compiled by the Ministry of International Trade and Indus-

try, Government of Japan, and published by the Japan External Trade Recovery Organisation. Review copy received from the Consulate General of Japan, 17, Old Court House Street, Calcutta. Pages 98. Annual Subscription Rate \$1.50, including postage.)

This is a comprehensive, well produced and profusely illustrated quarterly review of Japan's rapidly expanding industrial output. While including such diverse activities as shipbuilding, Japanese silk and folk crafts of the country—the emphasis has been laid on Japan's iron and steel production, and its post-war modernisation.

PAA PASSENGER MILEAGE

Pan American World Airways, Inc., announced recently that it flew 565,955,000 passenger miles and 17,799,854 plane miles in the last quarter of 1955. This compares with 568,249,000 passenger miles and 18,289,444 plane miles flown in the fourth quarter of 1954 and 450,492,000 passenger miles and 15,428,400 plane miles flown in the first quarter of 1954.

New Delhi

THE CONGRESS' DILEMMA IN ECONOMIC POLICY

EMPLOYMENT, TAXES AND THE COMING ELECTIONS

(FROM OUR NEW DELHI CORRESPONDENT)

RESOURCES for the second five year plan was the main subject discussed in New Delhi last week. The All India Congress Committee largely supported Mr. Gulzarilal Nanda's view that the development of village and home industries should be a continuous process, and should not be confined to the five years of the second plan. It supported the targets laid down in the plan-frame, and said it would not mind even if more than Rs. 4,300 crores were needed to implement them. The money it felt, could be raised by steepening the gradients of taxation. The Standing Committee of the National Development Council, meeting subsequently, also approved the financial aspects of the plan-frame.

It was explained that, of the total outlay of Rs. 4,300 crores in the public sector, Rs. 2,250 crores had been tentatively allocated for State plans and Rs. 2,050 crores for the schemes of the Central Government. The draft plans of all the States taken together added up to about Rs. 5,400 crores. Those of the Central Ministries amounted to about Rs. 3,500 crores, thus giving a total of about Rs. 9,000 crores. So far, the Planning Commission had completed discussions with 14 States, which together represented a population of 71 percent and whose draft plans amounted to Rs. 3,709 crores. The provisional allocation made after these discussions amounted to about Rs. 1,500 crores. About 35 percent of the expenditure in these States had been allocated to irrigation and power, 23 percent to agriculture and community development, 13 percent to industry and transport, and the rest mainly to social services. The following are the details:

State	Draft State Plan (in crores of rupees)	Provisional ceiling (in crores of rupees)
Andhra	244.43	118.10
Bihar	642.12	204.25
Bombay	505.00	280.00
Madhya Pradesh	457.54	125.00
Madras	393.72	180.00
Orissa	121.23	62.50
Punjab	322.30	134.83
Uttar Pradesh	725.31	260.00
Saurashtra	79.90	45.00
Ajmer	19.70	8.26
Bhopal	26.90	17.98
Coorg	25.30	3.96
Delhi	115.16	18.37
Kutch	14.30	8.23

The following are the proposals of the States which have still to be examined by the Planning Commission:

	Rs.
Assam	290.70 crores
West Bengal	327.28 "
Hyderabad	382.67 "
Mysore	251.72 "
P.E.P.S.U.	33.92 "
Rajasthan	167.66 "
Travancore-Cochin	130.87 "
Tripura	18.08 "
Vindhya Pradesh	62.72 "
Madhya Bharat	Not known
Himachal Pradesh	Not known
Manipur	Not known

As 1956 is an election year, the situation presents a dilemma. On the one side, as is evident from the speeches of Congress leaders, the emphasis is on the employment potential of the plan; 10 to 12 on the million jobs at any cost and anybody's cost. On the other side, political parties do not wish to increase taxation in an election year. The financial resources required for the plan should be appraised against this background. They were carefully examined by the Standing Committee of the National Development Council last July. It was pointed out that if the balance from revenue plus additional taxation, both at the Centre and in the States, could be brought up to a total of Rs. 700 crores, then, with a fairly large borrowing programme and with deficit financing of Rs. 1,000 crores, a total of Rs. 3,300 crores could be found for meeting the plan expenditure in the public sector. Allowing for possible under-estimation or for some adventitious improvement in revenues, the total resources available were estimated at Rs. 3,500 crores. There was still a gap of Rs. 800 crores to be bridged somehow or other. The Standing Committee, however, agreed that the size of the plan in the public sector should be kept up at Rs. 4,300 crores.

In the initial estimates, it was assumed that of the total of Rs. 700 crores for financing on revenue account, Rs. 375 crores would have to be found by the Centre and Rs. 325 crores by the States. The replies of State Governments to the Planning Commission's circular in regard to the Taxation Commission's recommendations indicate that they could raise a maximum of Rs. 260 crores on revenue account, leaving an uncovered deficit of Rs. 65 crores.

The position may be summarised as follows. The safe estimate of resources for the public sector was Rs. 3,300 crores, including Rs. 1,000 crores of deficit financing and Rs. 700 crores of additional taxation (Centre Rs. 375 crores and States Rs. 325 crores). Since then, the States have expressed

their readiness to raise only Rs. 260 crores, thereby reducing the resources to Rs. 3,240 crores. In the face of these facts, the All India Congress Committee has demanded even higher taxation and the Standing Committee has stuck to its decision of last July. One safe assumption may be at, in the initial stages, the emphasis will be on the millions of jobs, and the additional taxation will take care of itself in the post-election period.

It may be added that the State Governments have not implemented their undertaking to raise additional resources for the first five year plan, as is evident from the Planning Commission's progress reports and the Deputy Chairman, Mr. V. T. Krishnamachari's letter of February 1954. It is yet too early to say whether the State Governments will readily implement their undertaking regarding additional taxation for the second plan.

Scope for Adjustments

Winding up the discussion at the Standing Committee, the Prime Minister said that "there could not be too rigid an approach towards the future and it was necessary to have a measure of flexibility, so that adjustments could be effected as circumstances required. Planning had necessarily to be continuous."

It was, however, against this continuous and flexible planning that the Bombay Government lodged its protest. In May 1954, it stated, "even after the State Planning Commission, a number of schemes sponsored by the Central Government but relating to subjects with which the States are primarily concerned were added. The additional resources were made available by the Centre in the form of loans, and in certain cases partly loans and partly grants, on condition that the States also shared a portion of the additional expenditure involved. This could not but lead to illogical re-use of the resources available with the State Governments had already been taken into account while finalising their plans. At present, therefore, we find that while there are some schemes in the State plans for which Central assistance is given, there are also schemes in the Central plan whose cost is shared between the Centre and the States. There are some activities like minor irrigation and housing where the schemes included in the State plans are supplemented by the Central loans or grants. There is similar sharing of expenditure in respect of schemes for which aid is made available under the T.C.A. or the Colombo Plan. The bulk of the Central assistance and foreign assistance made available through the Centre is included in the overall figure of Central assistance assured to each State. But several specific loans and grants additional to these have also been subsequently agreed to. This haphazard growth should be replaced by a clear-cut distinction in the next plan. It is necessary that all schemes, whether financed exclusively by the Centre or State Governments or by local bodies or jointly by two or more of them, should be settled in advance, taking into account all the resources of the different agencies, their respective financial responsibilities being clearly defined in advance."

The position of Central Ministries, such as the Railways, is likewise uncertain. They still do not know their final allocations, without which they cannot proceed with planning. The draft plan is therefore anxiously awaited.

National Development Corporation

The National Development Corporation held its Board meeting at Bombay last week, the Commerce Minister, Mr. T. T. Krishnamachari, presiding. The Board discussed preliminary reports on nine schemes, including the following:

Structural Fabrication Workshops

The various types of structural fabrication work that would be undertaken during the second five year plan may be classified under the following heads:

- Structural fabrication required for workshops, buildings, warehouses, power houses, hangers, etc.
- Structure for road, railway or river bridges, jetties, docks.
- Structural fabrication required for steel plants, coke oven plant, cement, paper mill, chemical plant, etc.
- Railway wagons, underframes, coaches, signalling equipment, etc., and construction of ships.
- Steel fabrication for mechanical handling equipment like cranes, winches, derricks.
- Hydraulic steel structures like sluice gates, operating gears, pen-stocks required in hydro-electric and irrigation schemes.
- Power transmission towers.
- Aerial handling equipment like ropeways, cableways including cages, trolleys, trestles, etc.
- Pressed steel or welded steel, tanks for water and oil storage.
- Miscellaneous structural work of the pressed, welded or rivetted type.

The demand for fabrication work will increase considerably as a result of the implementation of various projects under the plan. Unless sufficient capacity is established in the country, future requirements will have to be met by imports. The need to develop this industry is evident from the fact that progress in other industries will depend to a great extent on the speed at which structural fabrication work is completed. It is roughly estimated that the current demand for steel fabrication, including wagons, is in the neighbourhood of 250,000 tons. Demand is, however, showing a sharp

rise and the average requirement during the second plan is estimated at 450,000 tons a year. There are, at present, 70 factories engaged in the fabrication of structural items. The total capacity of these factories, as assessed by the Development Wing, will be about 125,000 tons.

New Schemes and Expansions

Besides these units, licences have been granted to three new units with a total capacity of 7,200 tons a year. The expansion schemes of two existing units have also been licensed under the Act, their total expansion capacity being 9,740 tons. There are nine factories which are known to be equipped for the manufacture of wagons. They have a capacity of about 100,000 tons or 14,000 wagons a year. The scheme of Messrs. Ramond Engineering Works, Calcutta, has recently been sanctioned by the Licensing Committee for the manufacture of 3,600 wagons a year.

It will be observed that the existing structural fabrication capacity will fall far short of the estimated demand. There are two ways in which it could be augmented. Firstly, some of the existing units might be gradually allowed to expand to cover a portion of the increasing demand. Secondly, a number of units, say about 10, could be set up in suitable parts of the country, taking into account the regional distribution of the available capacity.

Size of the Units

Each of the large units would have an annual capacity of 18,000 tons a year. Some of the remaining units would have an annual capacity of 12,000 tons a year. The smallest ones, depending on the demands of the selected areas, might be of only 6,000 tons a year. All the units would together make up a total capacity of at least 150,000 tons. The location of the new units has to be decided after taking into account the following factors:

- Shortage of fabrication capacity in any particular area;
- Proximity of the source of raw materials;
- Demand for fabricated structures in a particular area;
- Availability of electric power;
- Availability of water supply;
- Availability of transport facilities;
- Availability of land and the cost of land.

From a study of the present distribution of fabrication capacity in the country and a rough analysis of other factors, tentative proposals for the location of factories are given below:

- Three bigger units can be set up in the vicinity of each of the steel plants.
- Two medium-sized units can be set up in the South as there is a shortage of fabrication capacity in that area.
- One medium-sized unit can be set up somewhere in Northern India.
- One small unit can be set up in Uttar Pradesh.
- One small unit can be set up in Maharashtra.
- One small unit can be set up in Ahmedabad.
- One small unit each can be set up in places such as Coimbatore, Bangalore or Madurai.

The capital investment on a 18,000-ton capacity unit is estimated as follows:

	Rs.
1. Land	1,50,000
2. Factory building	60,00,000
3. Quarters, roads, sanitation, railway siding, etc.	9,50,000
4. Machinery and equipment including cranes, compressors, etc.	1,04,00,000
5. Miscellaneous, including trucks, transformers, furniture, installation for electrical connection, compressors, pipe plants, etc.	5,00,000
	1,80,00,000

The investment on a 12,000-ton capacity factory may be about Rs. 12.5 million and that on a 6,000 tons unit approximately Rs. 7.5 million. The distribution under various heads might be taken roughly in the same proportion as that shown for a 18,000-ton capacity factory.

General Assessment of Turnover

The expected turnover of the 18,000-ton factory that might be used in the first instance to cater to the fabrication requirements of the steel plants is likely to be about Rs. 22 million, on the following basis:

	Rs.
1. Cost of raw materials at the rate of Rs. 500 a ton	90,00,000
2. Cost of productive labour (average will be Rs. 120 a month)	32,00,000
3. Overheads (excluding depreciation at 15 percent)	48,00,000
4. Depreciation (10 percent on machinery and 5 percent on buildings)	14,00,000
5. Manufacturing profits	36,00,000
Total	220,00,000

The turnover may go up to Rs. 30 million when specialised and complicated fabrication work is ultimately undertaken.

Steel Foundries

In order to encourage the growth of heavy industries without involving big individual investments on capital equipment, it is necessary that one or more steel foundries of a total capacity of nearly 15,000 tons a year, and capable for producing

Get most miles per gallon

WITH
**DOUBLE
POWERED**

Mobilgas

WHICH of today's gasolines gives the best mileage? Obviously, the one that keeps your engine running best. And this means **Double-Powered MOBILGAS**—because it corrects more engine troubles than any other gasoline you can buy.

So your engine gives more power, runs more economically. You get the

smooth, powerful performance your car or truck was built to give.

Change now to **Double-Powered MOBILGAS**, the only gasoline with MOBIL Power Compound—most powerful combination of additives ever put into gasoline. It's worth changing, because MOBILGAS gives you more for your money.

AT THE SIGN OF
THE FLYING RED HORSE
—NOWHERE ELSE!

Truck-drivers everywhere praise Double-Powered MOBILGAS—they find it gives full power, top economy!

WEAKER TREND IN DUSTS

AT Sale No. 15, held on 12th, 13th and 14th September, 63,900 packages were on offer in the Export auction. There was less general demand than in recent sales and prices for all kinds except tippy teas were easier. Tippy teas, however, were a very strong feature and sold generally above valuations. The best CTC kinds were firm but poorer teas of this description were up to 3 annas easier. Medium Broken were 2 annas a lb. easier, while Fannings declined by about an anna. There was only a limited amount of clean common tea on offer and these descriptions were generally from 1 to 2 annas lower but the commonest stalky kinds were fully 2 annas below last rates. Whole leaf grades were two to three annas lower, poorly made Pekoes being a particularly weak feature. Darjeelings shared in the general decline except for the few flavoury sorts.

Quotations		1955	1954
		Rs.	Rs.
Clean Black Pekoe	2 9 6	3 0 0	
Plain B.P.	1 14 0	3 0 0	
Medium Assam B.P.	2 2 0 to 2 3 0	3 1 6 to 3 2 0	
Best CTC Assam	B.P.	3 3 0 to 3 4 0	3 5 0

At the Internal Sale, offerings of Dusts consisted of 17,500 packages. Demand was less general than in recent weeks. The market opened 1 to 2 annas easier, but weakened as the sale progressed. It closed 2 to 3 annas below last rates, and withdrawals were quite heavy. The strongest feature were the few black leaf Dusts on offer suitable for export and these were firm at about last rates. Commons, plain liquoring Doonars and Medium Assams were the weakest feature and were often difficult of sale. Some of the very best CTC Assam Dusts sold at about valuations but the majority of the offerings of this description were 2 annas easier.

Quotations		1955	1954
		Rs.	Rs.
Medium Doonars Dust	1 15 0	2 8 6	
Medium Assam Grainy			
Dust	2 1 0 to 2 2 0	2 9 0	
Best Assam CTC			
Dust	2 9 0 to 2 11 0	2 11 0 to 2 12 0	

The offerings of other grades consisted of 3,500 packages, which consisted mainly of stalky fibrous types but the few clean leaf teas were also on offer. There was a fair demand for the clean, well made teas but the remaining offerings were irregular and generally easier. The very poorest sorts on offer were often difficult of sale.

FREIGHT MARKETS
QUIETLY STEADY

TIME CHARTERING ACTIVE

THE markets continued quietly steady last week and delays to vessels loading coal in America are now causing owners to ask for higher rates. Ore was fixed from Vizagapatnam to the U.S.A. at \$15.50 a ton which is more than double the rate paid a year ago. Mormugao had to concede higher rates at 94s 6d f.i.o. to the Continent whilst American coal rates rose to 61s for Continental discharge. Delays of up to a week for a berth at Hampton Roads and to overcome this, charterers are asking for the option of Charleston loading.

A considerable number of time charters have been arranged, some for long periods. Four Liberty ships of one company secured 28s a dead-weight ton for 2 years' trading with delivery U.K.-Continent in October-November. A handy-sized motorship obtained 36s 9d for an Indian round voyage and a 9370 d.w. motorship 31s 3d for one year's trading. The trade agreement between Russia and Burma permits of an annual shipment of 150,000 to 200,000 tons of rice for the next three years against consumer and capital goods from Russia. East Germany has also purchased 61,000 tons. These movements will continue to keep local freight markets firm.

HIDES AND SKINS

The market continued steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 6th September and 12th September, 1955)
Cowhides—Wet salted (Ord.) 7,500 pcs. on the basis of Annas 12-6 to Annas 14; Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 13-8 to Rs. 25-8.

JOINT STOCK COMPANIES' DEBENTURES

Amount Authorised	Amount Outstanding
-------------------	--------------------

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE STATE OF THE PAKISTANI ECONOMY

JUSTIFICATION FOR DEVALUATION: SLOW RATE OF GROWTH IN INDUSTRY

IT is inevitable that in reading the annual report of the State Bank of Pakistan, published a few days ago, one should look for signs of the developments that led to devaluation soon after the Bank's year ended in June. The most obvious one is a slump in the value of cotton exports of Rs. 20 crores over the year, for there is no doubt that foreign offtake of Pakistani cotton was restricted steady, but the position would have appeared much worse if Pakistani industries had been paying cash for their machinery imports, which they have not. A large proportion of the machinery being imported into Pakistan is obtained under deferred payments schemes. So the bare statistics of external payments give a false impression of the country's trading position, and when they are expanded, the necessity for depreciation of the currency is not to be denied.

The consequences that usually flow from a devaluation would cause little apprehension in Pakistan. Food supplies are easy, and the production of domestic consumer goods is improving every month. Imported consumer goods, while still scarce, had been in somewhat easier supply than in the previous years of financial stringency. The official cost of living indices had declined in all major centres. Hopes of sizeable imports of consumer and other goods under the U.S. Economic Aid Programme seem to us exaggerated; there is a curious notion in some Pakistani circles that the country will be flooded any day now with American manufactures—e.g., left-hand-drive motor cars. But well founded or not, these expectations have served to restrain price increases before and after devaluation. There has been much petty exploitation of the situation by traders; the day after devaluation men's suits previously marked at Rs. 100 were taken down and labelled Rs. 144. But this sort of thing has affected only a small fraction of the population. The substantial number of foreign business men and technicians, of whom Pakistan employs more in proportion to her size than India does, are worse off, but those whose services are really urgently needed will be compensated. Finally, any inflationary impetus flowing from devaluation would be mainly felt in East Pakistan, where all the jute and tea are grown, and in that province there has been much political discontent which higher cash incomes might do something to assuage. The very inexperienced United Front politicians who are just now taking over control of East Bengal were at first injured that they had not been consulted on devaluation (the impossibility of consulting such a congeries of popular demagogues on a secret like devaluation did not impress them), but they have now perceived that they may be the chief gainers.

The money markets of Pakistan had shown in the year ended June no sign of inflationary tendencies. Short-term money rates were indeed higher than in the previous year, as banks made

more active use of their resources. The total money supply also increased, by Rs. 28.16 crores to Rs. 394.76 crores. Bank credit expanded on the wider base provided by higher deposits which followed from a foreign trade surplus on private account. But all these expansionary tendencies were no more than one would have expected in an economy that was increasing the domestic output of consumer manufactures. They were definitely not symptoms of inflation. In fact, the inadequacy of the credit system—be it for industrial capital, consumer credit or rural finance—remains the chief mark of Pakistan's slow economic advance. The banking system continues to extend slowly: ten new branches were opened during the year ended in June, while demand and time deposits rose by Rs. 15.47 crores. Some interest is being taken in rural finance, but the only development mentioned in the annual report of the State Bank was a curtailment of credit—the co-operative banks in the Punjab were instructed gradually to discontinue making commercial advances.

The State Bank refers to the incentives to investment that were introduced in earlier years and extended in the 1955-56 Budget, but it makes no assessment of their results to date. The most important for the domestic investor are tax remissions for approved investments, and the direct development outlay of the public sector. For the foreign investor there is the guarantee that capital invested in industrial projects approved by the Government may be repatriated at any time; this was introduced last November and is in addition to the incentives offered in previous years. The State Bank does not refer to something which may have acted as a sharp disincentive to the foreign investor: the long delay in sanctioning the remittance of tea company profits. This hold-up now appears to be easing, and some remittances were reported to have been sanctioned even before the Anglo-Pakistani talks in Karachi this month. Whatever damage this dispute may have done to foreign investment, confidence in Pakistan should be repaired by the free flow of the tea companies' 1954 profits, which are substantial.

The dominating influence over the Pakistani economy for several years past has been the foreign exchange shortage—in fact even the delay in profit

least, is totally inadequate—for example, in motor cars, trucks, aeroplanes and special steels. Such ventures are rarely considered in Pakistan, or when they are it is by the Government, not by the private industrialist who according to his Government is afforded much more scope than in India.

Moreover, lack of an adequate market is accepted in Pakistan as something one can do nothing about, whereas in India for the last five years at least much thought has been given to the problems of credit creation. In other words, if the home market is not big enough, then you can make it bigger by pumping in cash. Some of the developments of this line of thought in India are potentially dangerous and may lead to inflationary demands for materials of which supplies are inelastic, leaving a relatively stable demand for the high-cost output of hothouse manufacturing industries. But in Pakistan the question is seldom even raised, not so much because its dangers are recognised as forbidding, as because its possible advantages have not yet been perceived.

Another reason for the fact that foreign exchange shortages have not been exploited to the advantage of the domestic manufacturer is that the basic raw materials are lacking. The lack of coal and other minerals in which India is comparatively well endowed, the virtual impossibility of a big steel industry, the lack of timber in the West, of stone in the East, and the absence of sources of cheap hydro-electric power have all been as important as the want of enterprise. An importer who found that there was an insufficiency of foreign exchange to permit the purchase of manufactures from abroad, would be told if he considered venturing into industry that there was also a lack of foreign exchange to buy his basic raw materials. So he did nothing. And underlying all the other wants and inadequacies is the fact that capital formation in Pakistan is extremely low, even by comparison with India.

In sum, then Pakistan is and will continue to be for some time heavily dependent for her social and economic advance on her foreign exchange earnings, and for the foreseeable future these will come from the export of commodities and semi-manufactures—jute, cotton, hides, skins and tea. Her manufacturing industry will be of the elementary sort (what was in another age called "colonial industry"), namely textiles, sugar, matches and the like. Where she seeks to export her manufactures she will at once come into competition from her more advanced neighbour, as in cotton and jute textiles. Her foreign exchange earnings must not only, as elsewhere, cover the import of machinery and essential consumer goods, but it must also provide the main method of capital accumulation, the main source of Government revenues and the principal way of expanding the banking system's credit base. This is not a unique situation. It has parallels in the economies of tropical Africa. It is a very different position from India's, although India and Pakistan are commonly and thoughtlessly lumped together as twin backward economies. The importance of a country so placed, having a currency that reflects the demand for its commodity exports in international markets, should be quite clear. The Pakistani rupee was no more falsely valued between 1949 and 1955 than, say, the French franc has been at various times since the war; and perhaps less falsely valued than the American dollar is to this day, in terms of gold.

CURRENT COIN

Post-war Profits, Prices and Wages.—The trend of joint-stock companies' profits, according to a study by the new Department of Company Law Administration, as represented by the combined index, stood 145 percent above the pre-war level during war-time, when the index reached its peak. It fell during 1943-47 because of a progressive diminution of the war-time demand, recovered in 1948 due to a temporary freeing of prices, but fell once more in 1949. The Korean boom helped companies increase their earnings, as a result of which the combined index rose to 217 in 1950 and further to 311 in 1951. There was a decline again in 1952 when the index went down by 50 percent to 191, but in 1953, there was a sharp recovery to 261, a gain of 70 points. Against this highly fluctuating trend of companies' profits, the average annual earnings of industrial workers showed a steadily rising trend. From Rs. 287.5 in 1939, earnings rose to Rs. 619.4 in 1946, Rs. 737.0 in 1947, Rs. 889.9 in 1948, Rs. 985.8 in 1949, Rs. 966.8 in 1950, Rs. 1,035.6 in 1951, Rs. 1,112.2 in 1952 and Rs. 1,108.5 in 1953. The last figure is provisional. The workers' earnings figures are based on the Ministry of Labour, Government of India publications. The trend of wholesale prices which stood in 1949-50 (average of weeks) at 391.3 and at 416.4 in 1950-51, declined to 380.6 in 1952-53, rose again to 397.5 in the following year and recorded a steep decline to 377.4 in 1954-55. Since then the trend has been downward.

Dalmia Cement.—The prospect of rising demand encourages optimism about the prospects of the cement industry, and this was true of the speech

of Mr. J. Dalmia, chairman, to shareholders of Dalmia Cement (Bharat) Ltd. (and reduced) last Thursday. He declared that 1954 was a landmark in the history of the cement industry, for the output target in the first five year plan was practically reached that year. Distribution was also satisfactory, with the high priority given for rail transport. Until recently, South India had a surplus of cement, which had to be exported. But in the past few months, Mr. Dalmia reported, there has been great scarcity; token exports are however being allowed so that foreign markets might be retained. The main raw material for the manufacture of Portland cement is limestone, but deposits are limited. Mr. Dalmia therefore considered it essential that the possibilities of producing other kinds of cement should be explored. Since new steel plants are to be set up, the blast furnace slag that is a waste product from them could be used to make cement. But care must be taken from the very beginning that the slag from these plants is suitable for this purpose. Slag cement has certain useful qualities: it is resistant to soils and water containing excessive amounts of sulphate of alkali metals, alumina and iron, as well as to acid waters. It can therefore be used for marine work. Close co-ordination would however be necessary between steel plants producing the slag and the cement factories using it. Mr. Dalmia also made some encouraging observations about refractories. Demand for these is increasing, so the company proposes to expand its activities in this and allied lines. It also intends to undertake the manufacture of wearing parts of cement machinery which are mostly imported at present.

Jupiter General's Problems.—The report of the Administrator, Mr. R. Varadachari, on the Jupiter General Insurance Co Ltd for last year is not discouraging. The total premium income from all departments shows a modest increase. The Administrator feels that it is a testimony to the inherent soundness of the company's position and its organisation as a whole that in spite of the great handicaps under which it has been working since July 1951, "it has shown such a good performance without any tied business or help from any source in the prevailing atmosphere of cut-throat competition." Anxious to remove misapprehensions in the minds of the public about the Government management of the company, he says that the Government is not placing any of its business directly with Jupiter. The day-to-day running, including such matters as procuring business and setting claims, is almost entirely in the hands of managers who have been working with the company for a number of years. Its reputation for prompt and fair settlement of claims continues to be high in both Indian and foreign markets. The premium in the fire department has been more or less maintained during the past two years, but is about half of what it was some years ago. Mr. Varadachari points out that this is because the company is unable "to enter into the cut-throat competition and the terrible rebating prevailing in the field at the moment". The year has also been an unfortunate one for claims. There was a fire in Burma; and certain foreign inward treaties produced unusually heavy losses. The net premium in the marine department is about maintained, but in the miscellaneous department is about Rs. 2.82 lakhs higher. This increase, however, is because premiums for 1953 and 1954 due from a treaty company, amounting to Rs. 3.27 lakhs, were accounted for in the year under review. The loss in the miscellaneous department, which had been heavy in the previous two years, has now been reduced. New business completed in the life department decreased to Rs. 99.19 lakhs from Rs. 106.6 lakhs. But the renewal expense ratio fell to 17 percent from 18.3 percent.

Singareni Collieries.—Dr. G. S. Melkote's address from the chair at last week's Singareni Collieries Co. Ltd.'s annual general meeting reviewed a year of generally satisfactory working. Production rose to a record of 1,458,000 tons from 1,375,000 tons in 1952—an increase of 6 percent. Working expenses rose by only 1.7 percent—from Rs. 240.33 lakhs to Rs. 244.44 lakhs. Dr. Melkote commented that this was particularly heartening when compared with conditions in other sectors of the coal industry. Three new mines have been opened by the company to make up for the fact that the old mines at Kothagudum are becoming increasingly difficult to operate. This has enabled work to be rationalised at the latter and surplus labour to be transferred to the former. There has been a sustained drive to economise, and it is because of this that output has risen without a proportionate increase in overall costs. The company had a scheme to expand production to 1.5 million tons a year by the end of the first five year plan. The scheme has been reviewed, and the target has now been raised to 2 million tons a year by 1958. Arrangements have been made for a loan of Rs. 86 lakhs, carrying interest at 4½ percent, to buy plant and machinery. This was described by Dr. Melkote as very satisfactory. Singareni coal is priced higher than coal from other fields. This is partly because of certain natural difficulties: the coal is harder, more water

has to be pumped out of the mines, and haulages to the rail-head are long. Partly, it is due to the higher wage structure and lower productivity per unit of labour. The company is therefore introducing the latest machines at heavy cost, and a broad-gauge siding is being built to reduce the lead to the rail-head. Efforts are also being made to increase productivity by offering incentive bonuses to workers. Labour relations, according to the chairman, have been satisfactory and output per man-shift is improving.

Seven Years of I.F.C.—The seventh annual report of the Industrial Finance Corporation covering the year ended 30th June, 1955, is more detailed in the accounts of the Corporation's activities than were the previous ones. The report provides a review of the industries in which loans have been sanctioned for the year in question as also for the six previous years, and the review shows that the industries concerned have been expanding production to meet the country's rising needs. In so far as the Corporation's loans have a bearing on these industries' activities, it can claim to have contributed to the industrial progress of the country. The field of industries covered is diverse: cotton textiles, textile machinery, rayon, chemicals, cement, non-ferrous metallurgy, aluminium, sugar, mining, automobile and tractors are among the important ones. The mistake over the Sodepur Glass Works, to which the Corporation granted a substantial loan, obviously without any regard to the economic and technical soundness of the concern, has been corrected to a certain extent by selling the company off to a Japanese concern which has floated an Indian company to run it. Thus having been bitten once, the Corporation has taken the proverbial caution of being twice shy in granting loans to applicants and there has therefore been some complaint of the rigid and severe manner of scrutiny with which the Corporation now "screens" its prospective loanes. During the seven years of the Corporation's existence, some 164 companies, of which 86 were new undertakings, applied to the Corporation for loans and the amount sanctioned aggregated Rs. 28,07,75,000. The sugar industry has received the largest amount of loans, cotton textiles, chemicals, paper, mechanical and light engineering, automobile and tractor industries coming next in that order. The highest number of loans granted was in the State of Bombay, followed by West Bengal and Bihar as second and third. The new State of Andhra has received the smallest amount. The total of interest due to the Corporation on these loans is Rs. 2,06,60,172 of which the amount actually received was Rs. 1,91,62,972. Defaults of eight companies totalled Rs. 15,51,840 and one of them has been granted an extension of time for an interest payment of Rs. 45,352. According to the schedule of principal repayment, the total amount due to the Corporation was Rs. 1,51,51,000, against which Rs. 1,08,04,000 has been received. Fourteen companies defaulted and four companies paid in full. Four companies have been taken over in default of payment in circumstances similar to those of the Sodepur Glass Works. The new amendment to the I.F.C. Act enlarges the scope of the Corporation's activities, extending it to the State of Jammu and Kashmir and providing for certain important administrative changes and other facilities for the better working of the Corporation. During the year ended 30th June, the I.F.C. made a net profit of Rs. 9,69,509 which has been set aside as "provision for taxation" and the Government will therefore meet the dividend commitment of 2½ percent on the paid-up share capital of Rs. 5 crores, according to the guarantee given.

Progress in Co-operation.—There was considerable expansion in the activities of the co-operative movement during 1953-54, according to *The Statistical Statement Relating to the Co-operative Movement in India for the Year 1953-54* recently published by the Reserve Bank of India. At the end of the year, there were 198,598 co-operative societies of all types in India having a membership of 15.2 million and an aggregate working capital of nearly Rs. 352 crores. This compares with 189,436 societies having a membership of 14.3 million and a working capital of nearly Rs. 327 crores at the end of the previous year. Taking the average size of an Indian family as five members, it may roughly be estimated that 75.9 million or 20.2 percent of the total population had been brought into the fold of the co-operative movement as against 19.2 percent at the end of the previous year. The number of State co-operative banks increased from 17 to 22. These banks advanced loans to the extent of Rs. 51.77 crores as against Rs. 39.93 crores in the previous year. As regards central co-operative banks (including banking unions), their total number declined during 1953-54 from 505 to 499 and their membership also showed a slight decrease from 248,650 to 247,905. The total advances made by these banks fell from Rs. 65.58 crores during 1952-53 to Rs. 64.70 crores during 1953-54. Their share capital and reserves, however, increased; they amounted to Rs. 6 crores and Rs. 5.80 crores respectively in 1953-54 as against Rs. 5.19 crores and Rs. 5.48 crores at the end of 1952-53. The number of agricultural credit societies was 126,954 on 30th June, 1954, as against 111,628 on 30th June,

1953. They formed 76.7 percent of the total number of agricultural societies. These societies had a membership of 58.49 lakhs and a working capital of Rs. 54.41 crores. The corresponding figures for the previous year were 51.26 lakhs and Rs. 49.18 crores. Fresh advances made by the societies amounted to Rs. 29.64 crores, with Andhra, Madras and Bombay accounting for 57 percent of the total advanced. The number of provincial or State non-credit societies fell from 48 to 42. Their business declined following the relaxation of controls and abolition of procurement. The central non-credit societies numbered 2,490 on 30th June, 1954, and had a membership of 1,670,000 individuals and 60,000 societies; the corresponding figures for the previous year were 2,392, 1,614,000 and 54,000. Primary agricultural non-credit societies numbered 30,306 (as against 35,568) with a membership and working capital of 2,511,000 and Rs. 21.54 crores. Their sales fell from Rs. 41.22 crores to Rs. 33.74 crores. There were 21,137 non-agricultural non-credit societies with 3,171,000 members and working capital of Rs. 50.04 crores. For long-term credit, two new central land mortgage banks were set up, one in Andhra and the other in Ajmer. Thus, at the end of 1953-54, nine States had central land mortgage banks (excluding the Land Mortgage Banking Section of the Madhya Pradesh Co-operative Bank). These nine States accounted for 251 primary land mortgage banks. Besides, there were 40 primary land mortgage banks in six States where there were no central land mortgage banks.

Machine Tool Production.—The Prime Minister of India will inaugurate formally the Jalahlali Machine Tool factory next month—a State enterprise run by Hindusthan Machine Tools Ltd. under the effective control of the Union Ministry of Production. The actual production from this factory commenced exactly a year ago though, according to the original plan, the plant should have been commissioned in 1953. The official explanation is that the delay in starting production was due to certain adjustments and changes in the layout of the factory to effect improvements. In the out of the factory to effect improvements. In the production policy of this concern, there is a wholly commendable feature, that is, not to produce tools that will be competitive with those produced by the private units in the industry, which are already working considerably below capacity due to ready lack of markets and their inability to meet certain specified demands of the railways and Defence Services. For instance, according to the original production schedule of the factory, it was to produce 7" lathes for which there is a sizeable demand in the country. But as it was represented on behalf of the private sector, that it was already producing enough to meet the country's requirements and had enough prospective capacity to take care of any future increase in demand, the authorities of the State concern decided to drop producing the type of lathe in question. The factory is producing 8½" lathes at present, besides assembling other types of lathes from rough imported parts, but should the private sector develop extra capacity to produce these 8½" lathes, the Government is reported to have given an assurance that it will reconsider its production programme to avoid over-lapping, and switch production to other specialised types. The State factory is expected to produce 100 8½" lathes during the first year of its existence. The Swiss firm of Messrs. Oerlikon Machine Tool Works is collaborating in the manufacture with a small share in capital investment as well; the share capital amounts to Rs. 3 crores at present, but it is to be increased to Rs. 9 crores as production expands.

Orissa Floods.—Orissa, a food surplus State, has had the misfortune to suffer from drought and devastating flood in quick succession in the course of the same year. The drought, preceding the floods, had done damage to the crops, particularly aus, or the autumn crop, which has been described in some quarters as well beyond repair. Damage must also have been done to the winter crop and this will be difficult to make good by late transplanting or otherwise. The people of this poorest of Indian States are thus faced with the prospect of very hard times ahead. Mr. Nityananda Kanungo, Central Minister of State for Industry, who himself comes from Orissa and has intimate knowledge of its economy, stated last week in Calcutta on his return from a visit to the State, that the rural economy had been totally disrupted. According to Mr. Kanungo's statement, an area of over 6,000 sq. miles, comprising the districts of Cuttack, Puri and Balasore, and portions of Dhenkanal and stray pockets along the Mahanadi and Brahmani rivers with a population of 2.5 million were submerged by the floods, the worst in 150 years. The crops in the areas had been completely destroyed. Mr. Kanungo's own assessment is incomplete because, as he himself pointed out, the true extent of damage and devastation will be apparent only after the floods have receded and communications are restored. A correct assessment is important from the point of view of undertaking the necessary relief measures, and the prompt and sympathetic response of Mr. Nehru, the Central and the West Bengal Governments must be appreciated. But what is more important

are the prompt steps that can put a stop to future calamities. Flood has been a particular cause of the Oriya people's incredible poverty, and with the inauguration of the Hirakud multi-purpose project, one of the primary aims of which was to control the flood in the Mahanadi delta through a series of three dams, new hope had arisen. But that hope has been fading into slow disillusionment as the prospect of the completion of these dams recedes into the distance. Mr. Nanda, the Central Planning Minister, has however promised to complete the dams by next year so that future flooding can be controlled. It is obvious that this is now an imperative need for the rural economy of Orissa.

Trade Prospects with the U.S.—The Indian Industries Fair at New Delhi is scheduled to open just as the U.S.A. is reviving its interest in this country not merely because of its possibilities as a big buyer of engineering goods but also in the hope of increasing the volume of exchange between the two countries. The potentialities of the Fair for promoting this have been fully realised among official and business circles in the United States as can be seen from the decision of the Department of Commerce in Washington to send a strong five-man trade mission to India for the occasion. This mission is expected to reach India about the end of the first week of October and, taking advantage of the interval between the time of its arrival and the opening of the Fair, it plans to visit the three most important centres of commerce and industry in the country—Bombay, Calcutta and Madras. The composition of the trade mission is also significant inasmuch as each member is an expert in commercial counselling and information and occupies a prominent position either in the U.S. Government or in industry or commerce. They will, therefore, be in a position to furnish requisite information to Indian industry and agriculture both with regard to the scope for imports to and exports from America. The U.S. mission is to be headed by Mr. Emil E. Schnellbacher who is an authority on international trade practices. He has been Director of the U.S. Department of Commerce's Office of Intelligence and Services since 1946 and was a member of the Economic Co-operation Administration's commerce mission to Europe and co-author of the mission's 1949 report. The deputy leader, Mr. Prentiss M. Terry, is the Field Office Manager of the U.S. Department of Commerce and conducts his operations through 900 co-operative field offices spread all over the U.S.A. Mr. Terry has had considerable experience as adviser to U.S. business men on foreign and domestic trade. Of the three non-official members of the mission, Mr. Albert A. Sibbald, in his capacity as import manager of Sears Roebuck has special knowledge of all aspects of U.S. import business besides being well acquainted with American marketing and selling techniques. Another member, Mr. F. H. von Mecklenburg is also a member of the New York Coffee and Sugar Exchange, while Mr. Stuart James Hindle is the general agent of the American President Line, one of the world's leading international shipping companies. The mission is suitably briefed to assist Indian business men in the development of two-way trade leading to an expansion of international commerce which, according to the U.S.A. Government, is one of the most effective means of raising the standard of living of all nations. While the mission will maintain its headquarters in the United States pavilion at the Fair, it hopes that those Indian business men who for some reason are not able to pay a visit will contact it during the course of its visits to one of the cities during the pre-Fair period.

The Channel Tunnel.—That hope springs eternal, and especially in the breasts of shareholders, is only too evident at the annual meetings of the Channel Tunnel Company, Ltd. The latest of these has just been held in London—it is the seventy-fourth—and it learnt from the Chairman, Mr. L. F. A. D'Erlanger, that the Government had withdrawn objections it had had on strategic grounds to the building of a tunnel to link Britain and France and now considered there were no strategic grounds for rejecting the project. He explained later that he based his assumption on a reply from the Foreign Secretary, Mr. Macmillan, to a question in the House of Commons earlier this year by Mr. E. L. Mallalieu, M.P., who had asked to what extent strategic objections still prevented the construction of the tunnel. Mr. Macmillan had replied: "Scarcely at all." Mr. D'Erlanger told the meeting that the present circumstances were not propitious for making progress with the tunnel and that there would still be a long waiting period. "But I think we have grounds for thinking that this scheme will be realised." A director of the company, Mr. Christopher N. Shawcross, said that from the outset the tunnel project had been frustrated by the objections of military advisers. "We may take heart now knowing that economy is the real and only objection." The present Government's estimate of the cost of driving the tunnel was about £80 million. The accounts showed a net profit for the year of £1,626. This, added to the 1953 balance of £10,680, was carried forward. The report and accounts were adopted.

LENDING THE OFFICE'S MONEY

(FROM OUR LEGAL CORRESPONDENT)

HERE is a case of rather unusual interest under the Industrial Disputes Act. It relates to a claim by employers to have the right summarily to dismiss an employee without notice for what they considered to be misconduct. As a preliminary refresher on the general law of the land, let us enumerate the primary duties of an employee, breach of which may entitle the employer to dismiss. They are five in number, namely: (1) obedience, (2) fidelity, (3) care, (4) honesty, and (5) punctuality. We must enlarge a little on (1), (2), (3) and (4). As to the duty of obedience the servant must obey the lawful orders not only of the master but also of all those set in authority over him and also in the same employment. Thus—and this is the case with which we are concerned—an office cashier has to render this duty of obedience to his office manager. As to care, a servant has to exercise such reasonable precautions as an ordinarily competent man would exercise in the conduct of his own affairs. And in regard to fidelity and honesty, it has been held by the House of Lords, though the decision has been the subject of much criticism and has been considerably whittled down since it was made in 1932, that a servant is not compellable to make admissions to his master whereby he would incriminate himself under the criminal law; and that there is no obligation under the common law laid on a servant (apart from any special provision in his contract of service) to acquaint his employer with a wrongful act committed by a fellow servant. And, generally, it must always be borne in mind that summary dismissal, like capital punishment, is the extreme penalty only applicable to cases of serious and wilful misconduct, and that the employer who elects to exercise that remedy in preference to discharge with notice or with wages in lieu of notice does so at the risk of being liable in heavy damages if he cannot prove such misconduct up to the hilt.

The question we have to consider in the light of the above principles and remembering also the much wider latitude allowed to Industrial Tribunals is this: Is an employer justified in summarily dismissing an employee, who, being a chief cashier under the orders of an office manager, advances to that office manager for the latter's personal use some of the company's money in his (the cashier's)

charge, he making such advances under the office manager's orders and receiving vouchers and cheques (held in abeyance) for the same?

The employee concerned whom we will refer to as X had been for many years a trusted subordinate and eventually became a chief cashier in the employment of the Imperial Tobacco Company Ltd. in India. As such, he was placed under the direct supervision of the office manager who was the representative of the accountant for the purpose of "checking of the cash, cash book and all other matters in which Mr. X" was concerned. X's story, which was in this respect accepted as true by the Tribunal, was that he was in the habit of making advances out of the contingent fund kept with him to the office manager under the latter's orders against slips and also against cheques held in abeyance and that on 28th July 1952, such advances against cheques and slips amounted to Rs. 6,750 (cheques Rs. 3,150 and slips Rs. 3,600).

Let us stop here and consider the position of X from a commonsense point of view. Very probably the reader, especially if he happens to be a senior executive, will strongly disagree, but the writer's point of view before he had had the advantage of reading the Tribunal's decision in this case would have been this. It is no use looking upon the average large commercial office as a concern run by those employed in it on lofty altruistic lines for the glory of working, each one inspired by the fervent desire to be obedient, faithful, zealous, honest and punctual. If you believe that, you will believe any thing and are nursing a blind ideal. The average office employee says with Mr. Mantalini that his "work is just one demd horrid grind", and so it is; and he will do anything properly in his power to make his job comfortable and safe. If a cashier offends his immediate boss, the office manager, that cashier's job is likely to be both uncomfortable and unsafe in the very near future. Moreover, everyone who has worked in a large office knows, as once did this deponent, that towards the end of the month an obliging cashier placated by a chit is a very present help in time of trouble; and the V.I.P.s at the top having followed the same practice, rules and regulations, if any, to the contrary notwithstanding, in their younger days wink at its practice by their successors. Of course X was wrong. He should by every canon of fidelity, honesty and competency have refused to make a single advance from his employers' money, and have sternly turned down his office manager's requests or orders, with or without chits and cheques as security. What he actually did certainly constituted misconduct. But whether, having regard to the vast discretionary powers of interpretation possessed by the Industrial Tribunals, it would constitute such gross wilful misconduct as to justify summary dismissal involved a good deal of consideration.

In fact the employers, though they summarily dismissed him, behaved with extreme generosity to their cashier. They paid him his provident fund, including their own contribution to it, plus interest down to the time of the termination of his employment, though in view of the Tribunal's findings later they would have been legally entitled to withhold it. But X was not by any means satisfied with this settlement, and urging that he had been wrongfully dismissed and that the principles of natural justice had been violated, claimed very substantial sums as gratuity and retiring benefits.

The Tribunal found that X "knew from the outset that (the office manager) had been taking money from him by cheques (held in abeyance) as well as by slips on the understanding that he would refund the same. This sort of payment out of the contingent cash to the office manager for his personal use is gross misconduct on the part of (X). It was his weakness that he could not report against (the office manager) to the higher authorities in proper time because (the office manager) was the person entrusted with the duty of the checking of the cash in the hands of the cashier (X) and when the office manager himself was requesting (X) for such money out of the contingent cash (X) thought that he was safe in the hands of the office manager. But this weakness on the part of the cashier cannot be held to be a justification for making such improper advances of money out of the company's cash.

"It is true that the cashier has been landed in such plight by his office manager, but the fact remains that (the cashier) was really guilty in that he parted with the company's cash in favour of (the office manager) for unjustified purposes. I hold that his termination of service is therefore justified. It appears that the company took a somewhat lenient view and therefore did not withhold payment of the company's contribution to (his) provident fund, although under the law the company could have withheld such payment. It is not a case of a single instance of misconduct on the part of the cashier. (X) knowingly lent himself to be a party to the collusion and conspiracy and I hold that (X's) misconduct was a very serious one which called for summary dismissal. Summary dismissal on a single occasion only was held to be justified in *Boston Deep Sea Fishing Co. v. Ansell*, 39 Ch. D. 339. It has been held by the Privy Council that summary dismissal is a drastic step and, if it is to be excused the acts or neglects of the servant of which complaint is made must be of a serious nature and such as to show that he is not carrying out his part of the bargain in a manner going to the root of the contract. My conclusion is that summary dismissal was quite proper and adequate punishment for (X) in view of the series of misconduct on his part. So he is not entitled to get any gratuity or any retiring benefits for any part of his service under Messrs. Imperial Tobacco Company of India Ltd."

[Labour Law Journal, 1955. Vol II (August), 97.]

IF it is true that revolution is the chief recreation of the Latin Americans, Argentina is enjoying quite a *fiesta*. Whether it is now President Peron, ex-President Peron or the late President Peron the wonder is not that he has been tumbled so quickly from what seemed a position of unrivalled security among South American rulers, but that he should have lasted so long. His speedy end was prophesied a few years ago when his wife, that remarkable woman Eva Peron, died and left him to carry on alone. It was clear at the time that it would not be easy because Eva enjoyed the allegiance of the workers and their unions while Peron's support came chiefly from the armed forces and the army in particular. A workers' revolt has been expected for a long time; in fact the present trouble has originated with the armed forces. It might still be traced to Eva's death because had she been alive to rally her factions to the régime's support, the armed forces would not have dared risk overthrowing the President and perhaps opening the way for a worker-controlled democracy, if such a thing is possible on a Continent where the most proudly exhibited attraction for the sightseer is said to be the lamp post from which the last president was hanged. The stability of the Peron régime at one time gave the impression that South America was settling down and that the old pastimes were perhaps giving way before the onslaught of football, which is nowadays regarded as something of a substitute for revolution. An acquaintance once related to me how, when he attended a football match in Brazil, the referee had to be escorted to and from the ground by a posse of armed guards and that no insurance company ever took out a policy on a referee; that the spectators were fenced off from the pitch by a thirty-foot high wire netting fence; that nothing in bottles was allowed to be sold anywhere in the neighbourhood and that all spectators were "frisked" for concealed weapons at the turnstiles. In the course of the match this acquaintance lost his tie, his jacket, his shirt and almost his trousers and he came out wearing the brim of his hat for a collar. Such instances, he maintained, are not rare and that is not difficult to believe when one reads that ten people were killed and over four hundred injured in the recent Independence Day *fiesta* in Mexico City.

Although India's film industry is not much younger than its Western counterpart and is said to be the world's second largest, it is sad to note how it has become bogged down in unprogressive channels. At present it seems doomed to turn out a monotonous succession of films which people go to see in search of entertainment and come away from feeling they have wasted their money. A notable feature of recent years has been a large crop of directors who seem to have mushroomed out of nowhere. Some are part-timers who find film-making good week-end fun while others feel qualified for the work because they have themselves acted in a few productions. Most of them are concerned only with box-office success for which they have a tiresome formula based on the assumption that the average film-goer is a gross feeder. The result is a hotch-potch of song and dance, sob-stuff, slapstick and occasionally heroics, all more often than not completely unrelated to the story. It is not surprising that this formula produces a fine collection of flops, but it is surprising that nobody seems seriously to have parted from it yet. That is except for the director of a Bengali film entitled *Pather Panchali* which I saw last week and which, to my mind, is something of a milestone in Indian cinema history. The story is one of the acknowledged masterpieces of Bengali fiction. The film is the work of a newcomer

A DITCHER'S DIARY

to the field who, by the way, is a part-timer, but who has had the advantage of long, intensive discussions with the well-known French director Renoir and has concerned himself with the study of techniques in film production for a number of years. The "popular" ingredients have been ignored, the cast has been chosen from a bunch of unknowns and most scenes have been shot on location. Finance for the production has, I understand, trickled through the fine-meshed audit apparatus of the West Bengal Government, which has itself sponsored the film. Perhaps if there were more like it, Mr. B. R. Bhagat, Parliamentary Secretary to the Finance Minister, would not need to report, as he did in answer to a question in the Lok Sabha the other day, that Indian films had earned no remittances from either Russia or the United States during the months of June and July this year. This one, I believe, is already on its way to America.

Automation seems to have caught the public imagination more than any other of the many subjects discussed at this month's annual conference of the British Association. This is not surprising, for the great majority of people in Britain stand to gain something by automation and in a country in which labour is now in desperately short supply, fear of the social consequences of the machine has considerably abated; although I have no doubt that if there were to be unemployment a modern Ned Ludd would quite soon arrive on the scene. The fact is, of course, that automation in the sense of the replacement of manual by machine operations, has been going on for a very long time indeed. The really big difference between the automation of yesterday and the automation of today is that we have now reached the stage where not only manual, but mental operations can be done by machinery—particularly by the developing science of electronics. In Britain much of the pioneering work has been done at Manchester University, where there is a department of Cybernetics and a massive electronic "brain". One British confectionery concern today possesses a machine which does the weekly wage calculations (including the tax deductions) for 7,000 employees in forty minutes. A piston factory in Russia, which provides pistons for the entire Soviet light car industry, is being run by no more than nine men. An American napalm plant, over 10,000 square feet in area and with a daily output of 650,000 lbs of jellied petrol is worked by five men. These are frightening thoughts; and now I am told that the electronic industry itself is peculiarly susceptible to automation. The guaranteed annual wage agreements, which the big American automobile and chemical workers' unions have recently been seeking, largely spring from the desire to secure protection against lay-offs due to increasing plant mechanisation. The industrially advanced West is only at the beginning of the new automation age. The new techniques will clearly create economic, social and psychological problems which, as yet, we have hardly begun to glimpse. To the lay mind automation would seem to imply the existence of a lot of automatons; or, as one commentator has put it, "under automation there will be a relatively tiny group of super-experts at the top who know how their incredible machines work, and a vast number of button-pressers, gauge-minders, punch-operators and non-producers who have not the faintest idea." One of the chief problems now, as I see it, is to decide what are to be the values of the automation age. Are they to be standardised and equated to the values of the chromium plated machine?

It is a regrettable commentary on the future prospects of an important industry that the proceedings of the Conference of West Bengal Printers, held in Calcutta last Sunday, produced nothing directed towards persuading printers to raise their standards. Instead, that tiresome suggestion for an extension of the Government licensing system to new units entering the industry was put forward as the panacea for all difficulties. It seems to me that when the country is on the verge of a large industrial expansion, this is no time to be restricting the expansion of the printing trade for the benefit of those who are unwilling to improve the standard of their workmanship. An expansion in the demand for good printed material is no doubt in the offing, and it would be no act of benevolence either to the country or to the more progressive-minded printers to help perpetuate the present unhappy standards. The entry of the larger and more efficient units would inevitably be most affected if the suggestion were carried out and there would then be no incentive for the smaller units to bring their practices into line with the best attainable. The conference did show its appreciation of the fact that it is the human element which is still of greatest importance in this highly-skilled occupation, in spite of its employing some of the most costly and precise equipment used in industry. In India it is not surplus capacity from which the trade suffers, but a dearth of sound technical skill. The Central Government has recognised the need by accepting the suggestion for a school for printing. This is a step in the right direction because the need is a serious one. With a large expansion of the industry in prospect and a project for the manufacture of printing machinery to be sponsored by the National Industrial Development Corporation already promised, it would be a pity if the final product were to be of no better standard than much of it is at present. With the exception of a few members of the trade whose pride in what they turn out is matched by the skill and conscientiousness of their workers, the picture is a sorry one. Too much shoddy work is tolerated and the customers are equally to blame. But to the work of those few, Indian printing owes a great deal; it is to be hoped none of them give up the unequal struggle and sink back into the great sea of mediocrity. The customer can help, not least the Government, by rejecting poor workmanship and insisting on the best. Good printing is not an unattainable luxury. It is often a function of the standards on which its readers, or its appraisers, insist.

Ever since I read the Press report of an increase in the lion population of Saurashtra, I have been searching for a fuller account of how the statisticians managed to count so many of these non-violent beasts. It is difficult to believe that the regal denizens of the Gir forest had resolved at some plenary conference to line up before the statisticians' census booth in obsequious obedience to official circulars. Nor does it seem likely that the animals had, by some kind of accident, walked en masse on thorny places and disclosed themselves by casting every available statistician in the rôle of an Androcles. There could conceivably be another way of arranging a leonine census: to photograph the animals in batches. But here again I come up against a difficulty. While I am quite prepared to concede that lions may be as photographic as pin-up girls, I cannot persuade myself on the basis of their current reputation that they are as obliging sitters. Which all leads me to conclude that the old Disraelian definition of statistics might perhaps not be so much joke after all.

Company Meeting

DALMIA CEMENT (BHARAT)
LIMITED (and reduced)

MR. J. DALMIA'S REVIEW

The following speech was delivered by the Chairman, Mr. J. Dalmia at the Third Annual General Meeting of the Company, held on Thursday, the 15th September, 1955 at the registered office of the Company at Dalmiapuram (Madras).

Gentlemen,
It is a privilege and pleasure for me to have the opportunity of meeting you and welcoming you again to-day to the third annual function to review the year's working. The Audited Accounts for the year 1954 and the Directors' Report thereon have been in your hand for sometime and with your permission I shall take them as read.

The year 1954 has been a landmark in the history of the Cement Industry in the country, for, it has practically reached the target of production of the First Five Year Plan. The distribution to the consumers has also been satisfactory with the high priority of rail transport.

In the recent past, South India had a surplus of cement and the cement produced here had to be exported to keep the production going. But since few months, a great scarcity of cement is being felt in South India as well, but token exports are being allowed in small quantities to retain the export markets. The new target of cement production by the end of the next Five Year Plan announced by the Government of India is over a Crore of tons annual installed capacity. The applications made and the licences issued under the Industries (Development and Regulation) Act so far, have reached very near to the new target. The industry may reach this target much before the end of the next Five Year Plan, provided the various proposals which are held up by the Licensing Committee appointed under the Industries (Development and Regulation) Act because the railways have not been able to see their way to meet the increased transport demand, are sanctioned and the railway transport arrangements are augmented in time.

Slag Cement

The main raw material for the manufacture of Portland Cement is limestone, the deposits of which

are limited in the country. With the increased consumption of cement, the life of such deposits would diminish faster. Therefore, it is essential that the possibilities of production of other kinds of cement to serve similar or better purpose should be explored. With more steel works coming into existence in the country, the Blast Furnace Slag Cement, with a mixture of blast furnace slag—a waste by-product of steel works—and portland cement clinker, is an immediate possibility. If care is taken from the beginning that the slag produced from such steel works is of such quality as can be satisfactorily utilised to produce Slag Cement, the problem of Steel Works of the disposal of such waste by-product would also be solved and side by side the life of the main raw material for production of cement can also be increased. The Slag Cement has special qualities for special uses, such as, resistance to soils and water containing excessive amounts of sulphates of alkali metals, alumina and iron, as well as to acid waters and can, therefore, be used for marine work with advantage. The Portland Cement Works nearest to the respective Steel Works should be asked to keep provision for consuming the total slag regularly for producing the Slag Cement and the Slag Cement should be made popular in special and standard uses of all Government Works. The Indian Standards Institution has already drafted a standard specification for the Blast Furnace Slag Cement, which is a very useful guide in this respect. It should prepare standard specifications for other kinds of cement as well.

Your Company started manufacture of refractories during the last war to meet its own requirement initially. Now the demand for refractories is increasing and consequently it is considered desirable to expand the company's activities in this line and allied items. It is also proposed to undertake manufacture of wearing parts of the cement machineries, which are mostly imported at present. This necessitates some additions in the object clauses in the Memorandum of Association of your Company for which an Extraordinary General Meeting is called to be held immediately after this Annual General Meeting to consider and to pass with or without modifications as thought fit, a special resolution to that effect as proposed by your Directors.

The concession of Development Rebate announced by the Central Finance Minister in the last budget speech, the assurances by the Central Industries Minister in the last meeting of Central Advisory Council for Industries and the facilities of loan from the Industrial Finance Corporation and Industrial Credit and

Investment Corporation are quite congenial to help the development of the industries in the private sector. But all these are not of much help unless there is sufficient risk capital forthcoming to be offered as security. Unfortunately such risk capital sometimes tends to become scared on account of irrelevant speeches and statements made by the important politicians and Government members from time to time, which should be avoided if private sector's development is considered essential for the good of the country.

Company Law

The proposed Company law has been largely conceived with the best of intentions; still ignorance and prejudices against the Managing Agency system also has played considerable part in framing the proposed company law by the Government. Had it been done purely on merit, there would have been little dissatisfaction against it, but when Government has to yield to the ignorance and prejudices of the political parties, the grievances among the industrial circle is bound to be there. I do not suggest that there has not been misuse of the Managing Agencies by quite a few people. But instead of punishing them, the proposed company law would make it more difficult for those who have been working honestly. The power is going to be concentrated in the hands of small officers and that would mean harassment and delay in natural and decent working. In spite of all these, if the Government has desired to enact the new proposed company law, it is our duty to give it a fair trial. The Managing Agents should work in a manner so that they will gain the confidence of shareholders, labour and the Government. That alone will help to develop the Industrial Expansion in the country and enhance the prestige of the Industrial community.

It may be that with some employer a fair deal may not be given to the labour; but all progressive employers are anxious to give reasonable wages and decent treatment to the labour with increasing availability of social amenities. Labour has become a strength and a power and it is a pity that most of the political parties in the country are using them for their narrow political ends. The labour should awaken against such selfish political influences which are against the interest of not only of labour itself but against the harmonious relationship of labour and management and retard the Industrial progress in the country.

Second Plan

In the fulfilment of the Second Five Year Plan labour has at least as much if not more responsibility for fulfilling its targets as the Management has on their shoulders. With the intelligent co-operation of both, a lot can be achieved in the country.

I do not visualize that major hurdle against the completion of the Second Five Year Plan will be so much the availability of finance as it is likely to be shortage of technical, qualified and experienced personnel necessary for fulfilling the plan. This shortage would be substantially reduced by introducing proper discipline and training and by cultivating a sense of individual and co-operative responsibility.

The draft of the Second Five Year Plan lays more emphasis on increase in the employment level which is very essential under the present conditions. The Summary of Census of Indian Manufacturers 1948-52 published by the Department of Commercial Intelligence and Statistics of the Ministry of Commerce & Industry of the Government of India, discloses that in spite of an increase in the number of registered factories from 6,144 to 7,155 during that period of five years and the increase in investment in fixed capital expenditure from Rs. 195.64 crores to Rs. 300.94 crores and the total productive capital employed having gone up from Rs. 482.19 crores in 1948 to Rs. 730.77 crores in 1952 in case of 6,470 factories which sent returns, the employment figures declined from 17,04,230 in 1948 to 16,48,443 in 1952, although the total wages and other benefits increased from Rs. 165.82 crores to Rs. 200.75 crores. This should give food for thought to everybody. Even to-day at the present day wage level, the mechanisation of labour saving devices in many cases is not economical and useful in bringing down the cost of manufacture in spite of huge expenditure and foreign exchange involved in import of machineries, but it gives the increasing botheration of every hour in dealing with small individual pin pricks by the rival political leaders of the Unions.

There is a move to abolish contract work even for items connected with loading and unloading of railway wagons, for which in the very nature of things, there is no regularity, either for volume of work or for working hours. The result would be that the employers would be forced to use mechanical means of handling of railway wagons to save demurrage and release wagons in time, which would further tend to reduce the employment.

Goa

The question of Goa has become a national problem; all parties in the country are unanimous about it. It is a very complicated and difficult problem and has created a stir in the international world. We are very proud of all those who have suffered and laid their lives non-violently and in a peaceful manner facing the organised and brutal attack by Portuguese Authorities. The massacre of 15th August 1955 and thereafter in Goa was inhuman, legalised mass murder. In the present time the world sentiment is shocked by watching these atrocities unparalleled in World History. That itself is a tribute to our people and the country. We are sending our deepest sympathies to the members of the family who have suffered a brave and noble bereavement. We are happy to note that the A.I.C.C. in Delhi have passed a resolution about Goa for stopping the Satyagraha completely and leaving to the National Government to take all steps necessary in this connection in conformity of our national and international policy.

In the end, I would like to express on behalf of the Company, our appreciation of the sincere services rendered by the Officers, Staff and Workers of the Company at the Works and Offices during the last year.

I now move that the Audited Accounts for the year 1954 and the Directors' Report thereon be adopted.

Company Report

THE JUPITER GENERAL
INSURANCE CO., LTD.
BOMBAY.

REPORT OF THE ADMINISTRATOR

MR. R. VARADACHARI

Mr. R. Varadachari, the Administrator made the following report in presenting the Revenue accounts and the Balance Sheet of the Company together with the Auditors' Report for the year ended 31st December, 1954—

The total premium during the year 1954 from all departments including the Life Department, amounted to Rs. 75,30,075/- as against Rs. 73,50,402/- in the previous year and it is a testimony to the inherent soundness of the Company's position and its organisation as a whole that in spite of the great handicaps under which it has been working since July 1951 it has shown such a good performance without any tied business or help from any source in the prevailing atmosphere of cut-throat competition. The financial position of the Company is quite sound and the assets have increased to a total of Rs. 3,64,97,657/- as against Rs. 2,88,36,324/- in 1950.

As there is some misapprehension in the minds of the public about the "Government management" of this Company, I should state that the Government is not placing directly with the "Jupiter" any of its business. The Company's share of premium on account of Government business received through the Indian Insurance Companies' Association Pool like many other companies, was—Rs. 25,025/- under Fire, Rs. 22,724/- under Marine and Rs. 15,332/- under Miscellaneous Departments—that is, Rs. 63,081/- in all. The day to day running of the affairs of the Company such as the procurement of business, settlement of claims, etc., is almost entirely in the hands of the Managers who have been working with the Company for a number of years. In particular, the reputation of the Company for prompt and fair settlement of claims continues to be high both in Indian and foreign markets.

Fire Department

The net premium in the Fire Department mounted

to Rs. 15,10,540/- as against Rs. 15,41,959/- in the previous year. Though the premium has been more or less kept up during the last two years, it is about 50% of what it used to be some years back. The fall is due to the fact that the Company is unable to enter into the cut-throat competition and the terrible relating prevailing in the field at the moment. The year has, however, been an unfortunate one for the Fire Department. It had to meet a number of claims arising out of a Fire in Burma; the risks in that area were on the books of the Company even during private management for a number of years. Apart from this certain foreign inward treaties showed rather unusually heavy losses with the result that the Department closed at the end of the year with a loss of Rs. 2,63,992/-, after providing 51% of premium under Reserves for unexpired risks. As the Chairman of a well-known insurance company in London remarked: "A company has nothing to be ashamed of a showing poor results in a year in which catastrophe has been experienced. On the contrary, it can be proud that it has been able to fulfil its purpose; namely, to meet at all times whatever calls may be made upon it. It is some consolation to know that although we have had such heavy losses to meet as a result of these catastrophes, we have been able to alleviate the lot of those unfortunate policyholders who sustained such widespread damage to their homes and personal belongings."

Marine Department

The net premium in the Marine Department amounted to Rs. 4,80,303/- as against Rs. 4,30,141/- in the year 1953. The profit of this Department was Rs. 1,51,114/- after keeping 141% of premium under Reserves for unexpired risks.

Miscellaneous Department

The net premium amounted to Rs. 18,38,048/- as against Rs. 15,85,798/- in 1953, the increase being due to the fact that premiums due for the 40 years 1953 and 1954 from a treaty company amounting to Rs. 3,26,640/- were accounted for in this year. This Department has been running at a big loss during the previous two years but this year the loss has been reduced to practically a nominal figure of Rs. 18,159/-, after providing 50% of premium under Reserves for unexpired risks. This is not unsatisfactory as the loss was really due to our having to increase the re-insures by over a lakh of rupees on account of the increase in premium. The loss due to the Chief Agency at Trinidad opened by the late management and which worked for about a year was over Rs. 3 lakhs

and this is a pointer to the clamour for opening out Branches in far off places without adequate supervision.

Life Department

The New Business completed during the year amounted to Rs. 99,19,000/- covering 3,265 policies as against Rs. 1,06,60,000/- covering 3,332 policies in the previous year. The renewal expense ratio for the year works out to 17.0% as against 18.3% in 1953. The Life Fund increased during the year by Rs. 22,51,392/-, The gross interest earned on the net Life Fund during the year was 3.8% while the net yield was 3.1%.

In spite of various economies, such as the closing of unprofitable Branches and retrenchment of a number of executive officers, the expense ratio in the Fire Department still continues to be high, but this is largely due to the fact that the premium receipts in the Department have fallen down by about 50%. I should add that the expense ratio in 1950 under private management was not very much below that of 1954 notwithstanding the fact that the premium income in that year was nearly twice of this year.

The expenses in the Marine and the Miscellaneous Departments are within reasonable limits, while the renewal expense ratio in the Life Department has actually been brought down to 17.0% from 24.4% in 1950 under private management.

Profit & Loss Account

The Accounts of the year have been closed with a small profit of Rs. 38,951/- and adding this to the balance brought forward from the Accounts of the last year, the total available profit is Rs. 4,72,881/-. After making a further provision for Bad and Doubtful Debts and reserve for taxation amounting in all to Rs. 1,07,565/- the balance of profit is Rs. 4,65,316/- and I propose to carry forward this amount.

The Scheme for the reconstruction of the Capital Structure of the Company in accordance with Section 6B of the Insurance Act, 1938, is pending in the High Court.

Investments

From 11th July, 1951 up to date, the investments of the Company in Government securities and first-class debentures, etc., amounted to Rs. 74,98,870/-, after meeting all the outgo during the period. The total assets of the Company as on 31st December, 1954 amounted to Rs. 3,64,97,657/-.

STATE BANK OF INDIA

Successors to the Imperial Bank

Security for generations to come

On July 1, 1955, the State Bank of India came into existence, taking over the business of the Imperial Bank. It offers you all the services you require and expect.

You will continue to benefit from the guidance of experienced officers, and your business will receive the same personal, completely confidential attention that has been given in the past.

Not only have we inherited the sound banking traditions of a century and a half, but we have also inherited the public goodwill that has been so marked since 1806, when our first constituent bank was founded. And our policy, as always, will be guided by this ideal—to further your interests and those of the entire nation, now and in the years to come.

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

Where oil does two vital jobs

Gargoyle Industrial Lubricants—first choice for hydraulic systems

IN a hydraulic system, power is transmitted through oil; and the flow of oil is regulated through precision valves. If the oil oxidises, or rust is formed, the valves may be blocked—holding up production in an entire plant!

The oil has a double function; in addition to transmitting power, it also lubricates. Choosing the right oil is thus of vital importance. In India, as in so many other countries, Gargoyle Industrial Lubricants—famous for 89 years—are chosen to keep hydraulic systems working efficiently.

There's a right Gargoyle Lubricant for each industrial need. Backed by our experience, correct lubrication—with Gargoyle Lubricants—can help to reduce costs and maintain output in your plant.

For details, write to Standard-Vacuum Oil Company . . . Bombay, Ahmedabad, New Delhi, Lucknow, Calcutta, Madras, Secunderabad, Cochin.

STANDARD-VACUUM OIL COMPANY

(The Liability of the Members of the Company is Limited)

Company Meeting

THE SINGARENI COLLIERIES
COMPANY LIMITED
(INCORPORATED IN HYDERABAD-DECCAN.)CHAIRMAN DR. G. S. MELKOTE'S
SPEECH

The following speech was delivered by the Chairman, the Hon'ble Dr. G. S. Melkote at the 34th Annual General Meeting of the Company at Hyderabad on 16th September, 1955 :—

entlemen,
I have great pleasure in welcoming you to this thirty-fourth Ordinary General Meeting of the Shareholders of The Singareni Collieries Company Ltd. The Annual Report and Accounts have been in your hands for some time and I hope you have had time to scrutinise them carefully. As you must have observed from the Profit & Loss Account, your Company has had indeed a satisfactory year, the results being a new record in the Company's history. There is, however, certain features of the working of our collieries which I should like to mention for the benefit of those who have not found the time, amidst their pre-occupations to study closely the report.

Production and Costs

Production during the year was 14.58 lakh tons as compared to 13.75 lakh tons in 1952, which was the highest achieved so far giving a rise of 6% while working expenses during the year were Rs. 244.44 lakhs as compared to Rs. 240.33 lakhs in 1952, showing an increase of 1.7% only. This is particularly gratifying when viewed in the general context of the conditions in the coal industry generally in the country. In his annual survey of the coal industry for the year 1954, the Chairman of the Indian Mining Association in his speech on 4th March, 1955 stated: "I make no apologies for stating once again and at the outset of my remarks that the affairs of the coal industry are in a state, which is far from healthy. A year ago your Chairman said that the most immediate and vital problem with which we were faced then was that of the inadequate margin between our costs and the controlled prices at which we are allowed to sell our product. The position today is worse than it was a year ago and it is common knowledge that there are many Companies which are now working at a loss".

Condition of Coal Mines

In my last year's speech I mentioned that the old mines at Kothagudem were becoming increasingly difficult to operate, but the Company had a well-set programme to off-set them, i.e., to open up new mines as old mines become un-economic. Three new mines were put in during the year which enabled rationalisation of work in old mines and transfer of surplus labour to the new mines. This coupled with an all-round sustained drive for economies has resulted in advancing our output without a proportionate increase in the overall cost.

Selling Prices

As you are no doubt aware our coal is priced higher than coal from other Coal-fields. This is partly due to certain natural difficulties such as greater hardness of our coal, more water to be pumped out of our mines and long haulages to the rail-head and partly of course due to higher wage structure and lower productivity per unit of labour. To control the natural causes, we have been progressively intro-

ducing the latest machines at heavy cost. To reduce the lead to rail-head, a broad-gauge siding is already under construction. Efforts are being made to increase productivity by offering incentive bonuses which will incidentally improve the wages of the workers. I am happy to report that economies effected have enabled us to reduce the prices of certain grades of coal giving the consumers the benefit of the value of Rs. 1.43 lakhs during the year, and annual recurring benefits of Rs. 2.67 lakhs in subsequent years.

Labour Relations

But for a few stray incidents in the beginning of the year, labour relations during most part of the year were satisfactory. Output per manshift which had declined from 0.30 tons in 1952 to 0.28 tons in 1953 improved to 0.29 tons in 1954 and I am glad to be able to say that it is showing a steady tendency of further improvement. In this connection I wish freely to acknowledge the co-operation which has been readily given by the Union. Not a single worker was retrenched. The All India Industrial Tribunal (Colliery Disputes) appointed by Government to deal with certain disputes which arose with the Industry's labour have not yet concluded their inquiry.

News Letter

We have always prided ourselves as being in the forefront for our solicitude for the welfare of our workers. Early in the year we launched upon a novel experiment. A weekly News Letter printed in Telugu as well as in English is issued free on every Sunday to provide instructions and diversion to our workers in their leisure hours. The letter aims to give the high-lights of News; International, Indian of Hyderabad and of local importance, i.e., of the Colliery townships. I am glad to say that the paper has found a definite place in the hearts of workers. It is almost becoming difficult to cope up with the demand, as most of the workers although themselves illiterate have some one in their families or friends who is literate. It is a common sight to see families listening attentively to the news. In this we are discovering an urge in an increasing section of workers to acquire literacy. We have already arranged to print a pictorial Telugu alphabet on cover page of the News Letter to enable such of the workers who are keen to get over the first hurdle in the task of learning to read and write.

Expansion Scheme

Your Company had an Expansion Scheme of increasing the production to 15 lakh tons per annum by the end of the First Five Year Plan. The Scheme was reviewed by your Directors in consultation with the Government of Hyderabad early in the year and it was decided to increase the target to 2 million tons per year by 1958. Through the good offices of the Hon'ble Finance Minister of the Government of Hyderabad and his Department arrangements have been made with the Indian Bank of Madras for a loan of Rs. 86 lakhs for capital expenditure at a rate of 4½%. This is very satisfactory indeed. The loan would enable most of the expenditure on Plant & Machinery which are productive items to be met.

Managerial Staff

Mr. Berry, General Manager of the Company retired on 10-4-1954 after putting in a loyal and continuous service of 31½ years. He was relieved by Mr. Nargundkar. The change completes the last link in Indianisation of our managerial staff. During the short time that Mr. Nargundkar has been at the helm of affairs of the collieries, he has already proved that we have been lucky in our selection. I cannot allow the occasion to pass without an expression of my appreciation of the many more officers, staff and workers who have all contributed to make the year a success.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS CONTINUE IN DEMAND

Wednesday, 21st September.

TAKING into account the fact that this is the lowest point of the slack season, credit requirements are still at a high level. This is chiefly the result of the requirements of the sugar industry. Stocks of sugar are moving slowly due to the effect of the weather on transport facilities. There has been some jute buying and accommodation is being called for. Conditions are slightly easier in the interbank market where the call rate remains unchanged at 3 percent.

Only a small quantity of export documents has come to hands during the week. Remittance has been in moderate demand. Sterling is showing a tendency to strengthen in its forward positions and Continental currencies are generally lower. The dollar, however, remains unchanged at Rs. 480½.

Silver was steady. The price rose from the previous week's level of Rs. 165 to Rs. 165-15, quoted today. The rate for forward was quoted at Rs. 165-12. The price was unchanged at 79½d. in London and at 90½ cents in New York.

Gold ruled steady in sympathy with silver and the prices advanced from Rs. 94-8 to Rs. 95-14. The sovereign at Rs. 61-15 showed a rise of 5 annas.

A fall of Rs. 8.30 crores in notes in circulation to Rs. 1,293.35 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 16th September, 1955, while the total note issue was Rs. 97 lakhs higher at Rs. 1,316.04 crores. Notes held in the Banking Department consequently rose by Rs. 9.27 crores to Rs. 22.69 crores. Deposits of the Government of India increased by Rs. 3.49 crores to Rs. 61.96 crores but other Government accounts declined by Rs. 50 lakhs to Rs. 13.43 crores. Balances of commercial banks at Rs. 52.89 crores were Rs. 4.50 crores higher. Balances held abroad declined by Rs. 1 crore to stand at Rs. 48.23 crores while investments at Rs. 49.24 crores showed a rise of Rs. 47 lakhs. Other loans and advances increased from Rs. 29.50 crores to Rs. 30.81 crores, of which advances to scheduled banks against usance bills totalled Rs. 12.62 crores (Rs. 12.32 crores). These advances amounted to Rs. 191.73 crores since 1st January, 1955. Ways and means advances stood at Rs. 65 lakhs (Rs. 37 lakhs).

The return of the State Bank of India for the week ended 9th September, 1955, shows a drop of Rs. 3.63 crores in total deposits to Rs. 211.86 crores. Investments in Government Securities are up by Rs. 59 lakhs to Rs. 97.87 crores, while other authorised investments remain unchanged at Rs. 10.22 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased have fallen by Rs. 1.78 crores to Rs. 105.27 crores. Cash and balances are, in consequence, shown at Rs. 17.45 crores or Rs. 5.26 crores less.

The statement of the position of scheduled banks for the week ended 9th September, 1955, discloses Demand and Time liabilities at Rs. 599.76 crores (Rs. 9.01 crores on account of borrowings from banks) and Rs. 413.25 crores (Rs. 2.34 crores) compared with Rs. 601.81 crores (Rs. 8.14 crores) and Rs. 409.78 crores (Rs. 2.94 crores), respectively in the previous week. Cash has increased by Rs. 49 lakhs to aggregate Rs. 33.67 crores, while balances with the Reserve Bank have decreased by Rs. 8.43 crores to stand at Rs. 48.28 crores. There is a rise of Rs. 1.52 crores in investments to Rs. 380.97 crores. Advances and bills discounted at Rs. 609.97 crores reveal a drop of Rs. 4.20 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.1 percent and 60.2 percent against 8.9 percent and 60.7 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during July 1955, amounted to Rs. 1,367 lakhs as compared with Rs. 1,327 lakhs in the corresponding month of the previous year. The following comparison should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,040 lakhs as against Rs. 1,058 lakhs, export duties for Rs. 317 lakhs as against Rs. 244 lakhs and land customs and miscellaneous for Rs. 10 lakhs as against Rs. 25 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,323 lakhs as compared with Rs. 865 lakhs. During the four months April to July, 1955, the grand total of gross customs and Union excise revenue realised was Rs. 10,133 lakhs as compared with Rs. 8,442 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 4,093 lakhs as against Rs. 4,077 lakhs, export duties for Rs. 1,088 lakhs as against Rs. 849 lakhs, land customs and miscellaneous for Rs. 60 lakhs as against Rs. 92 lakhs and Union excise duties for Rs. 4,892 lakhs as against Rs. 3,424 lakhs.

The outstanding balance of the 2½ percent Loan 1955 will be repaid on 1st October, 1955, and no interest will accrue thereon from that date. To facilitate discharge of the Loan on the due date, holders may tender their securities at the Public

Debt Office, Treasury or branch of the State Bank of India at which they are engaged/registered for payment of interest on or after 21st September, 1955. Full details of the procedure for obtaining discharge value can be obtained on application at any of the above offices.

It is notified for general information that the Government of India 4½ percent loan 1955-60 will fall due for repayment with effect from 15th September, 1955. No interest will accrue on the securities pertaining to this loan with effect from that date. The Government of Pakistan has agreed to make payments of the discharge value of the securities enfaced for payment in Pakistan, on behalf of the Government of India subject to reimbursement by the latter. The holders of the securities in Pakistan are advised to tender them at the Public Debt Office, the Treasury or the branch of the National Bank of Pakistan at which they have been enfaced or registered for the payment of interest. Full details of the procedure for obtaining discharge value may be obtained from any Public Debt Office, Treasury or branch of the National Bank of Pakistan.

The following is a statement of the cash balances of the Central Government on the last day of June, 1955 :

	Rs.
(1) At the Reserve Bank of India in India	47,99,67,000
(2) At treasuries in India	2,16,31,000
(3) In England (Sterling converted at 18d the Rupee)	1,54,19,000
Total	51,70,17,000

GOLD SOVEREIGN LEGAL TENDER

A legal decision affecting the status of the gold sovereign, which was reached in a Swiss court recently, has gladdened the hearts of Treasury officials in London. The President of the first division of the Zurich District Court noted that it had been proved to the court's satisfaction that the gold sovereign was "metallic money the circulation of which is largely authorised within the meaning of the international convention for the suppression of

INSANIYAT

A PICTURE AS BIG AS ITS TITLE

unfettering currency." As a result of this intervention the accused was given a suspended sentence of six months for counterfeiting gold sovereigns. This decision is an important one because it upholds the British Government's fight to establish the gold sovereign as genuine legal tender and to stamp out counterfeiting activities throughout the world. Similar legal decisions, recognising the status of the gold sovereign, were taken in Rome June, 1954, and in Tangier in April, 1954. There have been prosecutions against the counterfeiters of gold sovereigns in the past few years in Trieste, Milan, Como, Tangier, Berne and Zurich. The British Government still regards the gold sovereign as possessing the full force of legal tender and it estimated that at least 100 million and probably well over 300 million are at present in circulation all over the world.

FINANCE CORPORATION'S LOANS

The Industrial Finance Corporation has sanctioned loans amounting to Rs. 15,22,50,000 during the last seven years to new undertakings, i.e., factories that went into production after 15th August, 1947, from which eighty six applications were received by the Corporation. During the same period, 78 applications were received from old established undertakings most of which were for renovation, modernisation and expansion. Loans amounting to Rs. 12,85,25,000 were sanctioned to these undertakings. The Seventh Annual Report of the Industrial Finance Corporation, just published, gives a review of the activities of the Corporation during the year ended 30th June, 1955, along with the total loans sanctioned by the Corporation to industrial concerns during the last seven years. Since its inception, the Corporation has sanctioned loans amounting to a little over Rs. 28 crores to 125 concerns. Of this amount, a sum of Rs. 14.5 crores has already been disbursed.

During the period under report, the Corporation has assisted a wide variety of industries. Of the

total amount of Rs. 7,34,00,000 sanctioned during the year ended 30th June, 1955, cotton textiles accounted for Rs. 1,04,50,000, cement Rs. 80,00,000, ceramics and glass Rs. 10,50,000, iron and steel (light engineering) Rs. 11,00,000 and the paper industry Rs. 1,07,50,000. A number of other industries which were substantially assisted during the year include the sugar and automobile industries. During this period, 46 applications for a total amount of Rs. 11,27,00,000 were received and 27 applications for a sum of Rs. 7,34,00,000 were sanctioned. Only seven applications involving an amount of Rs. 2,34,00,000 were pending under consideration on 30th June, 1955.

During the year, five more State Financial Corporations were set up in Assam, Uttar Pradesh, Bihar, Rajasthan and Madhya Bharat. These bring the total number of State Financial Corporations to 11, to all of which the Industrial Finance Corporation has been giving assistance and guidance. In some cases, facilities have been provided to officers of the State Corporations to acquaint themselves with the working of the Central Corporation. Steps have been taken to demarcate the spheres of activities between the Central and State Financial Corporations. It has been agreed that applications for loans up to Rs. 10 lakhs, or 10 percent of the paid-up capital of the State Financial Corporations, whichever was less, should be dealt with by the State Finance Corporations. The Report also contains a review of the repayments. Over Rs. 1,90,00,000 have been received as interest on the loans sanctioned since the inception of the Corporation. The total amount of loans due was a little under Rs. 13 crores. As against a sum of Rs. 1,51,51,000 due, Rs. 1,08,04,000 has been recovered by the Corporation under the Schedule of 'Repayments of Principal'.

LONDON FINANCIAL LETTER

THE CONFIDENCE FACTOR

MUCH of the international goodwill that the British Chancellor of the Exchequer had re-established for sterling in July was lost in August, but he restored it again at the Fund and Bank meetings in September. There is no doubt that the loss of gold and dollars in August would have been considerably less than \$87 million (compared with \$136 million in July) if in July Mr. Butler had added to his assurance on maintaining sterling's parities an assurance on maintaining the margins round those parities. When he stated in Istanbul that all suggestions of impending changes "of the parity of, or margins for, sterling" were "both unrealistic and irrelevant" holders of sterling knew just where they stood. It may seem puzzling, indeed, that the whole policy for stabilising the balance of payments was never clearly formulated until this occasion in the middle of September. It is natural to assume that the Government was in conflict with itself, and hesitating, for months, until it could see that its restraints were taking effect. One may be forgiven the suspicion that manipulation of the exchanges was not finally ruled out until it seemed reasonably sure that inflation could be controlled without measures so drastic that they would cause a political upheaval. It may yet be found necessary to impose further restraints, but they will not, apparently, be severe.

Reasonably satisfied with the trends of bank advances and of hire-purchase trade, the Chancellor is now grappling with another major problem, excessive public spending. It is doubtful if he can do much to restrain the remaining important inflationary factor, the abnormal capital development which he himself stimulated by the investment allowance in 1954; for many plans are too far advanced to be halted. But we do now know that the broad policy is to contain inflation at home, so that exports will expand further, direct control of imports will be unnecessary and the pressure on the exchanges will be relieved. Merely to be convinced of this policy will dissuade foreign holders of sterling from offering their holdings and persuade those who will need sterling that they will not get it cheaper by waiting. This psychological tonic can have profound effects at this time.

Gold and the Dollar Trade

This policy would have eliminated any idea of early progress towards convertibility of sterling, even if Mr. Butler had not specifically disposed of any such idea at the meeting of the Fund; for convertibility, in present circumstances, would require flexible exchanges. If all goes well, however, Britain's internal condition will be prepared for convertibility some time next year. What of external conditions?

What Mr. Butler said in Istanbul must be taken to imply that in the present state of the dollar trade, and at the present price of gold, there is little hope of achieving convertibility at all. He was unusually outspoken on American import policy—or practice; having in mind such developments as the raising of the tariff on bicycles, the rejection of English Electric's low bid for the Chief Joseph Dam contract, and the instruction to the American oil interests to reduce their imports. He offered, in effect, an alternative to liberalisation of American imports: a rise in the price of gold that would increase the dollar-equivalent of the sterling area's sales of gold and would broaden the basis of monetary reserves on which fluctuations in currencies could be supported. This proposal—primarily, of course, South Africa's—was promptly rejected by the Americans.

Mr. Butler's reference to the price of gold was studied carefully, and variously interpreted, in London. On the one hand it was noted that he approached the subject very cautiously, and seemed to agree in advance with the Americans that a time of inflation was not the right time to raise the price. On the other hand, it was seen as significant that the British Chancellor of the Exchequer should at last range himself publicly on the side of those who favoured a rise. The problem of inflation is, admittedly, in this respect difficult; yet it is precisely because inflation has raised nearly all other prices that gold at its pre-war price is unrealistically valued. Britain's approval in principle of the idea of raising its price, as one of the measures that would help to restore currency convertibility, must surely mean that as soon as the immediate difficulties of inflation are overcome this idea will be pressed more vigorously. It is now felt that some more or less dramatic move will be needed to put convertibility into practice, and that if no such move is made some countries will retreat from liberalisation of trade and payments, instead of advancing towards it. In other words, either the dollar problem or the gold problem, if not both, must be solved before long. If America continues to act against imports, and the value of reserves in terms of goods is not appreciably increased, the countries holding inadequate reserves may well have to restrict again their imports from the dollar area, which—in Britain as elsewhere—have been extensively freed during the past year or two.

Expansive Policies

Britain's rejection of import controls, in general, as a means of balancing payments is not simply a matter of principle, or of loyalty to the international bodies promoting freedom of exchange. She has good practical reasons for adopting expansive policies, which, it is hoped, will encourage other countries to do likewise. The rise in exports to a new peak in August was viewed in the City as an encouraging advance towards national solvency (assuming that it was not all due to earlier delays caused by the dock strikes. Industrialists, on the other hand, are watching export trends for evidence of the conditions that may exist when their ambitious capital developments bear fruit. They are resigned to the unpleasant necessity of pressing their goods abroad while demand is restrained in the home market (though not all of them have yet noticed the effects of the restraint). What troubles some of them is the thought that next year the factories initiated in 1954 will begin producing abundantly, and that, even if the home market is not then deliberately restrained, it may be imperative to sell more abroad if full employment of resources is to be maintained.

PORTABLE "POWER PACK"

A new, fully portable hydraulic "power pack" that can be wheeled to wherever power is required has just been shown at the Engineering, Marine, and Welding Exhibition at Olympia, London. The manufacturers say that since it is necessary to make only two hydraulic line connections, the unit can be connected to machine or test apparatus with a minimum of fitting. The unit is made in two capacities up to 5,000 pounds a square inch pressure, and can embody either a single-stage high-pressure, or a two-stage low-pressure and high-pressure, pump unit.

ASSISTANCE FROM UNICEF

The United Health Minister, Rajkumari Amrit Kaur, announced that funds allocated by UNICEF to India for the various health development programmes in the country during the years 1954 and 1955 (up to July) amounted to \$2,681,000 and \$847,000 respectively. The areas for the various health development programmes, the Minister added, were selected by the Government of India in consultation with the State Governments and representatives of UNICEF and the World Health Organisation.

Our City Cable

DULLNESS FOLLOWS EARLY RISE IN STOCKS

EFFECT OF NEW ISSUE ANNOUNCEMENTS

LONDON, 21st September.

A FURTHER advance in the stock market last week was followed by the return of dull conditions later under the influence of the growing activity in the new issue market. The two very large issues already announced—those of English Electric and the P. & O. group—and the prospects of further new issues kept buyers away. The easier trend gathered momentum following Mr. Butler's statement on his return from Istanbul foreshadowing cuts in public expenditure and possibly further measures on the economic front. Virtually all sections of the market participated in the reaction after the recent improvement, and the gains were largely lost. Gilt-edged came back from their better levels and recorded little change compared with the previous quotations. A similar movement was recorded in the industrials market. Prices, particularly of the better class issues, went ahead on small investment demand, but reacted later as the implications of the increasing activity in the new issue market were absorbed. Electricals were the chief sufferers under the influence of English Electric's £11 million new issue, and appreciable losses were sustained. The foreign bond market was subdued throughout and prices were little changed. Lack of support and small selling brought a steady drift to lower levels in Kaffirs. Coppers also lost ground. Oils recorded falls on the news that U.S. oil imports were to be reduced. Rubbers and teas advanced on dividend hopes, although interest was not sustained in these sections.

The Money Market

After a short spell of easy monetary conditions at the end of last week the credit squeeze once again clamped down on the money market. Supplies of credit from normal sources fell far short of requirements and the gap was filled by funds supplied by authorities. Several times the market had to borrow direct from the Bank of England. Disbursement of Education money today brought easier conditions but next week credit stringency is expected to return again in view of the take up of a near two year record number of treasury bills. Applications for treasury bills totalled £344,830,000 and £290 million were allotted at an average rate of 8½ 5/8d compared with 8½ 4/8d last week. Next week £280 million will be offered. The Bank of England return for the week ended Wednesday, 14th September shows notes in circulation about £6 million lower at around £1,775 million, while bankers' deposits about £4 million higher at around £237 million.

Germans Quiet in Foreign Bonds

The foreign bond market was slow. Usually active German Nationals were quiet with price changes mostly small. Greeks and some Polish advanced in small volume, while the inactive Chinese railway 5 percent were over 2 points higher. Some Italians moved fractions to a point lower. One or two Japanese added 2 to 3 points on small sales. In South Americans Uruguay was moderately active with prices recovering following an early spell of softness. Chile 3 percent were up by a small fraction on the week finishing at 4½. In domestic convertibles held the spotlight with the market taking the cue from the strength of Wall Street.

U.K. Trade Balance

The United Kingdom had an adverse trade balance of over £68 million in August despite increase in exports to the peak monthly figure of over £284 million, according to the latest returns by the United Kingdom Board of Trade. Imports totalled over £342 million in August and were probably affected by the strike. In the same period the terms of the trade moved against the United Kingdom following a fall of one point in the export price index. The index for import prices, the Board of Trade said, remained stable.

Hongkong Gold

Hongkong gold remained sluggish fluctuating less than one point from the period high of 253 on Tuesday. Values drifted lower in sympathy with overseas reaching 252½ on Wednesday. The market thereafter drifted aimlessly with no particular trend. The carryover charges of 40 cents were in sellers' favour. The official offtake was 4,350 and unofficial 30,000 and the forward contract was done at 37½ U.S. dollars. Arrivals were 30,000 ounces.

U.K. Platinum Steady

It is understood that the two leading United Kingdom platinum refiners do not contemplate raising their selling price of the metal from its present level of £29 a troy ounce despite the recent increase in the United States where a leading refiner raised its prices from \$80 to a range of \$91 to \$94 a fine ounce. United Kingdom refiners say they are continuing their policy of maintaining a reasonable and stable price. The harder tone recently evident in ex-warehouse quicksilver market in London appears to have weakened despite the steadier tone of the New York market recently. Dealers mention the current London spot price at £91 to £94 a flask compared with the recent prices of £92 to £95. Domestic consumers are reported to be pursuing a hand-to-mouth buying policy. Moreover, it is thought that Italy and

Spain are offering quicksilver much more competitively.

Petroleum Earnings

The Royal Dutch Petroleum Company and the Shell Transport and Trading Company announced earnings subject to audit of the group for the second quarter as follows: Sales proceeds and other income £508,793,000 making a total for the first and second quarters £982,481,000. Costs and expenses £444,639,000 making £537,842,000, estimated taxation on profits for the period £27,839,000, making £54,127,000. The net income after interest on borrowings for the period was £36,595,000, making £70,729,000. The net income after interest on borrowings etcetera for the first six months of 1954 was £69,139,000.

Jute Markets Dull

Consumers of all jute industry commodities are showing little disposition to trade and there is still a strong inclination to withhold orders in anticipation of cheaper prices. Buyers are now undergoing an anxious time, and find it difficult to make up their minds how to act. Pakistan's jute crop this season must have an adverse effect on prices once the material begins to arrive in much larger quantities. Supplies have been held back by extensive flooding both in India and Pakistan but conditions are more promising now that the floods are drying up and allowing press houses to operate. Shippers are firmly maintaining minimum rates at Dundee where spinners are displaying little or no interest. Like other consumers they are looking for reduced minimum rates.

Vegetable Oil Market

After a fairly active interlude demand for linseed oil fell away and it became difficult to hold the closing net advance of 20s on the week. Avail-

able stocks on hand in the United Kingdom are reported to be ample which was inclined to offset the none too certain forward supply situation. There were offers of B.S.S. November-December arrival to be had at £5½ a ton, c.i.f. in bulk, while tanked oil Rotterdam was quoted at around £107. October-November shipment Indian oil was offered down to £104 subject to export licence. Castor oil is still quiet with Indian at £93, while offers of commercial were available from £82 to £84 September-October shipment in drum, cost and freight.

Fall in Pepper Prices

London pepper traders on Tuesday were disappointed at the extent of the reduction of original prices following the abolition of the Indian 25 percent export duty. Malabar first half of October shipment was offered only 15s. a cwt. cheaper at £317½ c.i.f. United Kingdom, meaning that over half the recent export duty has been absorbed by local interests in India. London traders point out that the authorities abolished the duty to make Indian produce more competitive in the export market but present indications suggest this consideration has been overruled by the quantity of pepper available for shipment and the fact that Indian shippers are still engaged in covering recent sales to the Soviet Union of which a substantial weight remains unsecured.

PRODUCTION AND EXPORT OF COAL

The Minister for Production, Mr. K. C. Reddy, gave the figures of coal production in the first six months of 1955 as 19.18 million tons, while the export during the same period was 0.83 million tons valued at Rs. 2.48 crores.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to July, 1955. Compared with June, the July index for Government Securities reveals a rise of 0.1 point, while that for Preference Shares discloses a drop of 1.2 points.

There were increases in cottons 2.8 points, coals 9.1 points, minings and oils 24.3 points, cements 7.1 points, engineering 8.1 points, papers 43.1 points, sugars 20.3 points and miscellaneous 12.9 points, while banks and teas decreased by 6.0

points and 12.3 points, respectively. Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 13.5 points during July, 1955.

Stocks and Shares

PRICES SINK LOWER IN SHARE MARKET

ABSENCE OF BULL SUPPORT AND UNCERTAINTY ABOUT IRON'S DIVIDEND

THE stock market has had a dull week with little activity in any section. Speculative counters have been easier and Indian Irons fell to Rs. 38-6 at today's clearing, a quotation 11 annas lower than that ruling at the last settlement. Irons have since moved narrowly about this figure. The reason for the dull conditions seems to be the absence from the market of most of the prominent bulls. Last week's report that the Finance Minister had stated the absence of any substantial support. The outlook that no new taxes would be levied for at least two years produced some response in the market and Irons improved to Rs. 39-12 only to fall back in is now uncertain and apart from the rumours of the coming Indian Iron dividend which occasionally stir prices, there is no reason apparent why the market should not remain sluggish.

The only redeeming feature at the present time is the strength of Government securities which may be a reflection of withdrawal of funds from other sections.

Details of the week's trading follow.

Trading in the Gilt-edged market was rather dull during the early part of the week and the volume of business was on a limited scale. The market, however, showed a marked improvement today, and as a result of renewed enquiry prices have firmed up throughout the list. There has been an expansion in business, but trading was hampered owing to absence of sellers to meet the market. The Reserve Bank raised their selling prices today for 2½% Loan 1962 and 3% Loan 1970-75 to Rs. 93-4 and Rs. 87-4 respectively. Three percent Conversion Loan 1946 after being quoted at Rs. 80-4 ex-voucher, improved to close at Rs. 80-7, but 3% Non-terminable paper was stagnant at Rs. 80. In short-dated Loans, 3% 1957 had strong buyers up to Rs. 99-7-6 as did 3% 1958 at Rs. 98-5-6. Amongst medium-dated Loans, 3½% 1961 improved to Rs. 99-9-6 buyers and 3½% 1964 was taken higher to Rs. 98-11; 3½% 1965, after easing to Rs. 98-7 recovered at the close to Rs. 98-8 while 3% 1959-61 was asked for at around Rs. 97-14. Three percent 1963-65 was in demand at Rs. 94-6-6 and 3% 1964 was taken at Rs. 94-5; 2½% 1961 hardened further to Rs. 92-10 and 2½% 1960 was better at Rs. 95-8, while 2½% 1962 was marked higher at Rs. 93-3-6 and 4% 1960-70 was steady at Rs. 101-12. In long-dated loans, 3% 1966-68 was a strong feature at Rs. 91-10 while 3% 1970-75 improved to Rs. 87-4.

Dull conditions prevailed in provincial loans and business was practically confined to the new 4% loans 1967. The enquiry for 3% loans continued but once again no business was possible, as sellers were conspicuous by their absence.

As usual there was a good demand for selected jute and miscellaneous Preference shares which continued to be in short supply. Among jute, Belvedere were better at Rs. 122-8. Birla were done at Rs. 102, Dalhousie at Rs. 117, Hukumchand at Rs. 116, Rameshwara at Rs. 11-4 and Reliance at Rs. 113. In the miscellaneous group Associated Hotels were marked at Rs. 65, Calcutta Electric were done at Rs. 12-9 and Chrestien Mica Industries at Rs. 65-12. Dalmia Cement fully-paid were better at Rs. 102, Dunlop Rubber 2nd were placed at Rs. 101 and there were strong buyers of Indian Iron & Steel at Rs. 110-8. Indo-Burma Petroleum were crossed at Rs. 107 and Shaw Wallace came to hand at Rs. 85.

Very few transactions were reported in the banking section. A small lot of Allahabad Bank Contributory changed hands at Rs. 176-8 and Hind Bank were marked at Rs. 27-14. United Bank of India "D" shares were dealt in around Rs. 5-4 and United Commercial were crossed at Rs. 47.

Once again the only shares dealt in in the railway section were Dehri Rohtas between Rs. 14-10 and Rs. 15.

The two features in the cotton section were Elgin Mills which improved to Rs. 20-10 and Cawnpore Textiles to Rs. 9. Basanti reported business at Rs. 5-10, Kesoram were quoted at Rs. 15-12 and Dunbar changed hands at Rs. 248. Swadeshi Cotton Preferred Ordinary recovered from Rs. 10-12 to Rs. 11-8.

Coal shares were neglected and a minimum amount of business was put through. Burrakur fluctuated narrowly around Rs. 14-8 to close at Rs. 14-3. Bengal, after being done at Rs. 541, turned sellers at the close at Rs. 539. Central India and Western Bengal were quoted at Rs. 7-8 and 7-1. The solitary feature in this section was East Indian which had good buyers at Rs. 30-8.

Jute shares continued to be neglected and very few transactions were reported; in fact, selling orders were almost impossible to execute. Here is a table showing representative price movements:—

	Opening 15-9-55	Closing 21-9-55
Anglo India	Rs. 242	240
Birla	19 1	18 15
Budge Budge	200 XD	200
Ganges	96	96

Howrah	30 4	29 12
Lawrence	163	160
National	34 3	33 9
Nuddea	51	51
Union	215	215

Business in electric supply shares was of a retail nature. Calcutta changed hands freely around Rs. 15-8, Bareilly were marked at Rs. 15. Sijua Jheriah at Rs. 12 ex-dividend and U.P. met with some inquiry at Rs. 166.

No interest was shown in sugar shares. Belsund were done at Rs. 11-12, Carews at Rs. 12-8, Champaran at Rs. 32-7 and Darbhanga at Rs. 23-4. Ramnugger Cane were quoted at Rs. 26-4, United Provinces at Rs. 24 and Shree Krishna Gyanoday at Rs. 18-2 ex-dividend.

In the engineering section Indian Iron & Steel shares receded steadily from Rs. 39-10 to Rs. 38-6 which is tonight's closing quotation. Braithwaites were easier at Rs. 27, Britannia Engineering were done at Rs. 20-4 and Burn & Co. were steady at Rs. 299. Indian Standard Wagon met with some inquiry around Rs. 140, Jessops were lower at Rs. 53 while Richardson & Cruddas eased to Rs. 23-14. Textile Machinery receded steadily from an opening price of Rs. 26-14 to Rs. 25-1.

In the miscellaneous section Titagur Paper staged a slight recovery from Rs. 45-4 to Rs. 45-14 while India Paper Pulp eased to Rs. 22. Orient Paper were marked down sharply from Rs. 30-2 to Rs. 28. Some Valley were lower at Rs. 8 as were India Steamship at Rs. 7-7. India General Navigation, on publication of a satisfactory report, improved from Rs. 126 to Rs. 133 but closed lower at Rs. 130. Bengal Assam Steamship were better at Rs. 158-8 and Alkali & Chemical Corporation were steady at Rs. 20-4. Angelo Brothers eased to Rs. 21-12 and British Burma Petroleum were unchanged at Rs. 4-10. British India Corporation, on the news that a certain party had acquired a majority holding, improved to Rs. 10-7 but later sellers appeared and tonight's closing quotations is Rs. 9-14. Calcutta Trams were steady at Rs. 18-6, Clive Row Investments were easier at Rs. 11. Gillanders Arbuthnot were quoted at Rs. 13-10 and Imperial Tobacco were steady at Rs. 14. Indian Cables recovered from Rs. 29-7 to Rs. 29-15 and Indo-Burma Petroleum were steady at Rs. 45. Metal Box were offered at Rs. 24 and Rohtas Industries Old were easier at Rs. 20-10. United Flour were marked at Rs. 34-8.

In the mining section Indian Copper Corporation were marked down from Rs. 6-4 to Rs. 5-13 while Western Stockholders were unchanged at Re. 1. Burma Mines were easier at Re. 1-15 while Chrestien Mica Industries were steady at Rs. 15-8.

In the absence of any fresh enquiry the tea section has been very dull and prices have been inclined to ease still further. Amongst Assam shares, Baghmari were marked down to Rs. 27-12 as were Bishnauth to Rs. 50, Bormah Jan to Rs. 22-8 and Brahmoputra to Rs. 13-4. Brooke Bond were taken at around Rs. 29-12 whilst Grob 'B' had sellers at Rs. 23-4, Jutibari at Rs. 29-8 and Methoni at Rs. 28-8. Dhunseri were slightly better at Rs. 36-4 and there were buyers of Dibrugarh at Rs. 31. Ledo were marked up to Rs. 30, whilst Murphulani Preferred Ordinary were unchanged at Rs. 46-6 and Rajgarh at Rs. 55.

Amongst Doonars shares, Banarhat had buyers at Rs. 628 and Birpara were unchanged at Rs. 215. Hantapara were freely offered at Rs. 368 as were Hasimara at Rs. 46-8 and Huldibari at Rs. 44. Nagasurree were marked down to Rs. 304

gramme the company proposes to issue new ordinary shares of Rs. 20 lakhs and preference shares of Rs. 10 lakhs.

There is an increase of Rs. 13.93 lakhs to Rs. 31.05 lakhs in the profit of the BISHNAUTH TEA COMPANY for the year ended last December. The dividend is higher at 55% against 35%. Reserve gets Rs. 7 lakhs (Rs. 1½ lakhs), building reserve Rs. 1.15 lakhs (Rs. 1.04 lakhs) and repair reserve Rs. 1 lakh (same). The carry-forward is Rs. 2,19,631 (Rs. 1,99,547). The crop rose from 3,34,429 lbs. to 3,75,823 lbs. and the average sale price was higher at Rs. 2-14-5½ a lb. against Rs. 2-5-1½ a lb. Estimates for 1955 are for a crop of 3,880,000 lbs. at a cost of Rs. 60.77 lakhs.

The Directors of the ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO. LTD. at their meeting held yesterday, decided to recommend to the extraordinary general meeting to be held shortly to consider the actuary's report on the valuation as at 31st December, 1954, bonuses to with profits policyholders at the increased rate of Rs. 18 on endowment assurances and Rs. 22.8 on whole life assurances per Rs. 1,000 sum assured per annum. This represents an increase of 50 percent over the bonuses declared at the last valuation, viz., for the triennium ended 31st December, 1951.

The profit of the BARNAGORE JUTE FACTORY rose from £18,140 to £22,258 for the year ended last March, after allowing £22,242 (£14,757) for depreciation and £12,000 (£9,875) for taxation. The ordinary dividend is the same at 15%, including an interim of 2½%. The carry-forward is £64,858, against £71,722 brought in.

The modernisation programme is making progress. The company proposes to sell its shareholding in Kassiapur Co. Ltd., and the Rajabagan property for £174,213. The proceeds will be utilised to finance the modernisation programme.

PROFITS IN RETROSPECT

The following review of the trends in profits over the last thirty-odd years is taken from the summary of the report on joint-stock companies released last week by the Department of Company Law Administration, Ministry of Finance.

During depression, the combined index fell by nearly 70 percent from 1928 level. Later, the index improved a great deal and stood in 1938 nearly 30 percent below the 1928 base. The wartime peak in the combined index stood about 145 percent above the pre-war level. The index, however, fell during 1943-47 due to progressive diminution in "war orders". The combined index recovered again in 1948 consequent on the introduction of decontrol in December, 1947, but it fell once more in 1949. The years 1950 and 1951 were, however, prosperous as a result of Korean war boom, the combined index rising to 217 and 311, respectively. Later it went down by 50 percent to the low level of 191 in 1952 but it moved up by nearly 70 points to 261 in 1953.

All group indices, except for sugar, were severely affected by the depression of 1929-32. Heavy falls were recorded in tea and jute profits. By 1938 tea profits regained a large proportion of the ground lost during the depression but jute profits continued to be substantially lower than the pre-depression level which was not attained even during the best years of the wartime boom. The effect of the depression on coal and cotton profits was less severe. The index for paper went down by 15 percent during 1929-33. It rose well above the pre-depression level in later years. The iron and steel index suffered an early setback in 1929 and improved in the subsequent years. In 1938 it stood roughly 217 percent above the 1928 level. During the post-war period the highest peaks in cotton, jute, sugar, paper and cement profits were reached in 1943 and 1944, whereas in the remaining two groups they were recorded in earlier years—

iron and steel in 1941 and tea in 1942. Owing to the operation of price control measures, system of allocation of war needs and transport bottlenecks, the coal industry could not share the general wartime prosperity enjoyed by other industries. In fact, during the best war years the index of coal profits stood at about 18 percent below the pre-war level. It, however, improved in 1945.

The years 1946 and 1947, generally speaking, were rather lean for most of the industrial groups, such as cotton, coal, paper, cement and iron and steel. Jute profits in 1946 were somewhat better but they fell in the next two years due to partition and its aftermath. There was a spurt in jute profits in 1950 as the Indo-Pakistan relations showed signs of easing of the economic tension. The tea industry maintained a high level of profits in the first two post-war years, with the index standing very near the wartime peak. These profits, however, fell in 1948 and 1949 but improved during 1950 surpassing even the wartime peak. They fell again in 1951 and were turned into a loss in 1952 when the index stood at minus 89 as compared with the base of 1939. The year 1953, however, proved to be prosperous for this industry. Following the decision of the Government to decontrol sugar, profits of the sugar industry in 1948 rose by a big margin but after a brief interlude of high profits they declined again on the re-imposition of control during 1949 and 1950. The position during the years 1951 to 1953 improved very remarkably. Profits in the paper industry registered steady improvement during the whole of post-Independence period, 1948-53. The trend in cement profits continued to be upward right up to 1951 and thereafter they turned downward with the index standing at 279 in 1953. The year 1949 was the best for coal. Excepting 1952, the other subsequent years were not as good for this industry. For iron and steel, the period 1945-48 was one of low profits whereas 1949-51 was prosperous. There were marked fluctuations in cotton profits during the post-war period; the two years 1948 and 1951 were particularly good.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

Engineering and Transport

THE FUTURE OF BRITISH AVIATION

NEED FOR A NEW APPROACH

AT Farnborough each September the British aircraft industry shows the world what it has to sell. Shortly before this year's display a Canberra bomber established a world record on a one-day flight from Britain to America and back. By modern standards the Canberra, which is not particularly fast and carries only a moderate payload, is almost obsolete. It is, however, one of the few British machines that have not been extensively modified, and its success has been phenomenal. Before this year's display at Farnborough both the Russian and the French industries had demonstrated their recent products and had surprised foreign observers by the rapidity of their progress. Can the British industry, bedevilled by incessant modification of its major aircraft, reassert its technical superiority in a trade which has long been dominated commercially by the Americans and where formidable new competitors are appearing? Farnborough this year has disappointed observers who came to see not spectacular aerobatics but serious new aircraft that would fulfil the promise of the industry's post-war period. The promise has not been withdrawn; but there is almost nothing new to suggest that it works partly for military, partly for civil, requirements, with the military, as always, predominating. Skill has been lavished on new aircraft which have later been altered—in some cases many times—and even then, perhaps, abandoned as unsuitable. For years not enough prototypes were made; a prototype would crash, and long delays would follow. These frustrating experiences have been most numerous on the military side, but there has been waste and muddle also in developing civil aircraft.

PAPER MILLS

Bengal—Rs. 71.3—72—71—72—(69.12).

New Delhi

FINANCIAL AID FOR THE JUTE INDUSTRY

COMMITTEE SET UP BY INDUSTRIAL DEVELOPMENT CORPORATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Board of Directors of the National Industrial Development Corporation, at its recent meeting in Bombay, is understood to have approved schemes for industrial development which the Corporation can take up for processing or investigation. The Board also decided to adopt measures to provide financial assistance for the rehabilitation and modernisation of the jute industry. It has set up a Committee consisting of people closely connected with the jute industry, with Sir Biren Mookerji as Chairman, to scrutinise applications from jute mills for financial assistance for modernisation and rehabilitation. On the recommendations of the Committee, assistance will be given by the National Industrial Development Corporation in the form of loans. These loans will be repayable over a period of years and will bear interest at 4½ percent a year. The jute industry is important to India because of its large contribution to the export trade, and is facing severe competition from Continental countries and Pakistan, which have installed modern machinery and equipment. The need for modernisation is urgent because machinery in most of the Indian mills is worn-out and outmoded.

The projects to be processed or investigated by the National Industrial Development Corporation cover steel foundries, forges, and fabrication of steel structural, printing machinery and manufacture of wood pulp. At present there is a shortage of large foundries and their capacity for fabrication and forging is much below requirements. With the setting up of the new steel plants the demand for structural will increase considerably. The starting of suitable central factories, forge shops and fabrication workshops is expected to meet the specialised requirements of various products with lower investment and less danger of capacity remaining idle.

Printing Machinery

The National Industrial Development Corporation has decided to take the initiative regarding printing machinery, since no one has so far come forward with a proposal to manufacture it. It is estimated that during the second five year plan the annual demand for printing machinery will be of the order of Rs. 2 crores.

The demand for wood pulp for rayon and other industries can be met by an independent unit using wood pulp, so that a substantial amount of foreign exchange now spent on imports can be saved. In 1954, rayon grade pulp to the value of over Rs. 1 crore was imported. During the second five year plan, the demand for wood pulp for the production of viscose rayon and staple fibre is expected to go up considerably. The Board is expected to hold its next meeting in October, in Calcutta, when it will consider what other industries can be taken up by the Corporation for processing or investigation.

The value of printing machinery, including printing materials, imported into India is as under:

Year	Rs.
1947-48	1,56,17,407
1948-49	2,09,80,004
1949-50	1,46,49,476
1950-51	82,31,488
1951-52	1,16,04,805
1952-53	56,36,836
1953-54	97,57,378
1954-55	81,58,328

The demand for printing machinery is expected to increase. It will be required not only to produce printed material for the spread of literacy, but will also help create more employment in small towns by enabling independent small presses to be set up to meet local needs. It is not unrealistic, therefore, to place the target of the annual demand for printing machinery at about Rs. 20 million during the second plan.

At present, only two firms, Messrs. India Machinery Company Limited, Dasnagar, and Messrs. Maya Engineering Works, Russa Road, Calcutta, are engaged in the manufacture of printing machinery of the Platen and Flat Bed types. One of the firms produced only 60 units in 1951 and 47 in 1952, while the other produced 23 in 1951 and 31 in 1952. The quality of their products has not been entirely satisfactory, mainly because they do not possess up-to-date foundry and machine tools. As a result, they are not able to manufacture and market a larger number of presses.

Rotary Machines

Apart from these two types, there is the rotary type of machine, which has not so far been produced at all. It seems that there is scope for setting up a completely new and well organised unit for the manufacture of major items of printing machinery, including replacement and spare parts for those types and units now operating in large numbers. The installed capacity of such a unit might be approximately 500 presses of the Platen and Flat Bed types and 10 of the rotary type a year. Considering proximity to supplies of raw materials and consumers, one of the suitable locations might be West Bengal. A survey of the different types

and numbers of printing presses now in use, and the scope for undertaking their manufacture, is being carried out, on which the final decision will depend.

The South Indian unit—Messrs. Ramkrishna Industrials Limited, Coimbatore—claims to have satisfactorily produced all the different types of printing presses. There might be a case for encouraging this unit to undertake production on an expanded scale. It could produce various types of printing machinery ancillaries such as a paper guillotine machine, perforating machine, stitching machine, etc., in addition to some standard types of presses for which there might be scope for more than one unit. Tentative estimates of the capital investment for a new unit are as follows:

Land and buildings	about Rs. 35,00,000
Pattern shop and foundry	Rs. 20,00,000
Machinery for tool room, machine shop assembly, etc.	Rs. 75,00,000
Working capital	Rs. 20,00,000
Total	Rs. 1,50,00,000

It is assumed that heavy castings and forgings for the manufacture of large printing machinery would be obtained from the proposed central forging and casting shops. The heavier gears would be cut from a central gear cutting and gear grinding shop which might also be developed as a separate unit. On this basis, the new unit could produce about 200 Platen presses, 300 Flat Bed presses and 10 rotary type printing machines a year. The estimated turnover would be about Rs. 20 million.

Rayon Grade Wood Pulp

Rayon grade wood pulp is an essential raw material for the manufacture of viscose rayon, staple fibre and transparent cellulose films. Requirements in 1954 were about 9,500 tons. The entire quantity was imported. At present there is no unit in the country manufacturing this grade of wood pulp. Import figures for rayon grade pulp during the last three years are given below:

Year	Quantity in Tons.	C.I.F. value in Rupees.
1952	4,999	63,07,579
1953	8,164	1,06,25,354
1954	9,497	1,00,19,126

The present installed capacities for viscose rayon, cellulose film and staple fibre are as follows:

Viscose rayon	20 tons a day
Cellulose film	15 tons a day
Staple fibre	15 tons a day
	40 tons a day

The quantity of rayon grade pulp required for this capacity is 44 tons a day. The 1961 targets for production are placed at 68 tons of viscose rayon and 25 tons of staple fibre a day; 110 tons of rayon grade pulp a day would be required to meet this demand. One ton of rayon grade pulp costs about Rs. 1,200. The rayon industry in India is based entirely on imported rayon grade pulp, and it is, therefore, necessary to manufacture this in the country.

The principal specifications of rayon grade pulp are a high Alpha cellulose content, over 90 percent, and a very low ash content, less than 0.1 percent. Fir and spruce are the traditional raw materials used in the manufacture of rayon grade pulp abroad. Although there is a fair supply of fir in the Himalayan region, commercial exploitation for the manufacture of pulp has not so far been possible on account of the high altitude and inaccessible tracts. An accurate survey of the East Punjab, Himachal Pradesh and Uttar Pradesh regions is necessary to estimate the quantity of fir that could be made available on an annual sustained yield basis. The price at which it could be supplied at a central place has also to be ascertained.

Experiments at Forest Research Institute

In the manufacture of paper, the fibre length is of considerable importance, whereas in the manufacture of rayon grade pulp, purity, Alpha cellulose content and ash content are the determining factors. Rayon grade pulp is being manufactured in Europe from short-fibre hard-woods such as birch in Germany and Finland, and poplar in Italy. In Australia considerable experimental work has been done for manufacturing rayon grade pulp from eucalyptus. There are plantations of eucalyptus blue gum in the Nilgiris district of Madras State. The Forest Research Institute, Dehra Dun, is conducting experiments on the manufacture of rayon grade pulp from eucalyptus and its report is awaited.

At present the eucalyptus plantations in Madras are too small to support a full-fledged pulp industry since the sustained annual yield is expected to be only 8,000 tons. The yield an acre of eucalyptus blue gum is estimated at 70 to 80 tons, and the regeneration cycle is 15 years. The Government of Madras is working out schemes for planting 1,500 acres every year with eucalyptus blue gum for a period of 15 years. Their report is expected shortly.

Wattle wood is another possible raw material for the manufacture of rayon grade pulp. A yield of 40 tons an acre is possible and the regeneration cycle is ten years. Since wattle bark is used as a tanning agent, the wood is expected to be available at a cheap price. The Government of Madras also has schemes for extensive plantations of wattle for the production of wattle bark. The existing plantations are, however, not yielding sufficient wood for a pulp unit. The suitability of this wood

for the manufacture of rayon grade pulp is being investigated at the Forest Research Institute, Dehra Dun.

Use of Bagasse

Bagasse is a very promising material for the manufacture of pulp. For every 100 tons of sugarcane crushed, 14 to 16 tons of bagasse are produced, from which 4 to 5 tons of pulp could be made. This material is available in large quantities in the sugar producing areas of Uttar Pradesh, Bihar, Mysore, Hyderabad and Bombay. A German firm, Messrs. Aschaffenburg Zellstoff Fabrik, has been invited to prepare a project report on the utilisation of bagasse for the manufacture of rayon grade pulp, printing paper and newsprint. A team of experts from this firm is expected to arrive in India next month. Another team of experts from Messrs. Snia Viscosa, Milan, Italy, has also been invited to prepare a project report on the manufacture of rayon grade pulp. This team is expected to visit India in January 1956. The Ministry of Commerce and Industry has constituted a panel for the pulp, paper and rayon industry and a notification is to be issued shortly.

An economic unit with a capacity of 15,000 tons a year would require an investment of about Rs. 4 crores. Two units, each having a capacity of 15,000 tons a year, would be required to meet the requirements of rayon grade pulp by 1961. The exact location of the units could only be indicated after more information has been collected regarding the availability of raw materials and their suitability.

New State Trading Corporation

A State trading corporation is soon to be set up by the Government of India primarily to increase bargaining power with Communist countries where State trading is the rule. In other spheres the corporation will secure for Indian traders the benefit of collective bargaining by eliminating competitive buying in foreign countries. The corporation is intended to supplement and not supplant private trading and will therefore permit trade channels to operate overseas. In certain items the corporation will enter the market itself.

Foreign Experts For India

A British steel mission, headed by Sir Cyril Jones is expected here by the middle of October. Meanwhile the Government of India is appointing a British firm, The International Construction Company, as its steel consultants. The Government is also arranging to import Russian technicians and machinery to assist India in drilling oil and coal and in diamond mining. The Production Secretary, Mr. S. S. Khera, who is on his way back from Russia, has been negotiating for the import of coal mining machinery and experts, while the Minister of Natural Resources, Mr. Malaviya who is now in Moscow, is negotiating for the oil drilling and diamond mining equipment and expert technical assistance.

Oil Prospecting in Assam

Two representatives, of the Government of India and Assam respectively, will be appointed to the board of directors of the new rupee company that is being formed in March 1956 for oil prospecting in Assam. It has also been agreed that the Government will contribute up to 33-1/3 percent of the company's share capital. The company will employ Indians in preference to non-Indians whenever candidates of the requisite qualifications, calibre and experience are available. It will also arrange for the training of an adequate number of Indians in India and abroad so that the organisation is manned by Indians as far as possible. The Assam Oil Company will be the other subscriber to the capital of the rupee company to which the mining lease will be granted. The memorandum and articles of association of the new company have not yet been drawn up.

Finance for the Next Plan

The proposed gap between resources and estimated outlay for the second five year plan seems to have widened further. As a result of pressure tactics, including a threat of satyagraha by refugees from West Pakistan, the Government has increased its financial commitments to a very large extent as far as the compensation scheme for displaced persons is concerned, which might well have serious repercussions on the availability of financial resources for the plan.

It is no secret that the Finance Minister has lost his big battle over the issue of compensation. The Ministry of Rehabilitation made certain claims, on the basis of which the Union Cabinet was persuaded to accept the compensation scheme. It claimed, for example, economies amounting to crores if the scheme were accepted. The issue is whether the assurances and undertakings given by the Ministry of Rehabilitation are being honoured. It was disclosed by the Government spokesman that more than half the properties in the compensation pool were occupied by persons who had no verified claims and 85 percent of the claimants had claims of Rs. 7,000 and over. In addition in Delhi, there is a large body of occupants who are not even refugees. They are people from East Punjab who have migrated to Delhi in search of business. There is an equally large body of refugees who have had "multiple" resettlement benefits, one in Delhi and one in East Punjab, or one in the name of one person and the second and third in the name of their relations. These facts are known to the Rehabilitation Ministry, which took a census two years ago. It is a matter for some concern that they were not placed before the House.

(FROM OUR LUCKNOW CORRESPONDENT)

The U.P. Branch of the I.N.T.U.C. has already submitted a 46-page memorandum to the Committee in the course of which it makes 12 points. The memorandum suggests that the Committee would do well to divide the subject of inquiry into three parts similar to that of the Bombay Labour Inquiry Committee. The first part should deal with increase in production per man and machine and its relation to wages, the second with improvement in the efficiency of workers and in working conditions and the third with financial and industrial organisation. The memorandum declares that I.N.T.U.C. will accept rationalisation only if it is extended also to cover "the waste arising from managerial activities." The definition of natural wage as given by Mr. Khandubhai Desai must be accepted, and 31st May, 1954 should be taken as the basis date for the determination of the existing volume of employment of all classes of workmen. Conditions of retirement must be defined and an adequate gratuity scheme should be framed for those who retire or voluntarily resign, and in both cases the issue should be made subject to jurisdiction. Comfortable working conditions should be

Levies on Textile Trade

Trade Mark Piracy

An interesting case of commercial piracy of patents and trade marks has been decided by the High Court of U.P., Allahabad Bench. Messrs. Lever Brothers (India) Limited, manufacturers of certain well-known brands of soap, received information that spurious soaps, with coloured imitations of their own wrappers, were circulating in the Kanpur market. The company appointed its officers to make an inquiry and the officers, after investigation, entrusted the matter to the police, who made certain searches and recovered 36 cakes of soap wrapped in coloured imitations of Messrs. Lever Brothers' packaging. The magistrate who tried the case sentenced the shopkeeper to six months R.I. under section 486 I.P.C.. On appeal the High Court ruled that the accused was not the manufacturer of spurious goods and that the offence was punishable under section 482 and not 486 I.P.C.

Non-arrival of Jute

Fictitious Accounts

The U.P. Government has suffered a loss of over Rs. 60 lakhs owing to unfruitful expenditure on development projects in 1952-53, according to the audit report for the year. The report which was laid on the table of the House this week lists a number of irregularities, some of them of a serious nature. Without calling for tenders, a contract was entered into with a foreign firm for sinking 440 tubewells in 1950, but the estimate for the project was not submitted to the Government till 1953, when Rs. 15 lakhs were already being spent on the project, including Rs. 3.8 lakhs paid as advance for the same. Another contract was given to a firm for sinking 550 tubewells without calling for tenders; 228 wells were sunk up to December, 1954, but 53 of them were abandoned owing to lack of ground water. In connection with the construction of a power house, a contractor was paid Rs. 17.19 lakhs in excess of what was due to him. The over-payment was caused by fictitious and incorrect measurements. The contractor subsequently migrated to Pakistan.

In July 1948, a Regional Food Controller approved the offer of a firm for 194,700 gunny bags at Rs. 123 a hundred bags. Meanwhile the Government announced its decision to decontrol all grains. No steps were taken to cancel the order. On the other hand, the Regional Food Controller applied for Government approval for the purchase of gunny bags at Rs. 147-12 from a firm closely associated with the previous one, although the Regional Accounts Officer objected to it. It was stated by the Government that the contract for gunny bags with the first firm was not cancelled because the said firm had helped the Government in an emergency with its stocks of wheat which could not be restored in time and which resulted in a loss to the firm owing to the subsequent fall in price of wheat. A compensation amounting to Rs. 2 lakhs was paid to a firm of building contractors because of the delay in getting out the site of the factory. The site was changed five times between January and April, 1951, owing to differences of opinion between the chief engineer and the foreign consultant.

All payments stated to have been made should be covered by the disbursing officer by the production of payees' receipts. An expenditure for which the payee's receipt has not been produced is both an unproved expenditure and a serious irregularity. The non-production of detailed contingent bills similarly means that the drawing officer has not rendered any account of the money which he has drawn on abstract contingent bills. "But," says the audit report, "there is a prevailing tendency to treat these two irregularities lightly as irregularities of a routine nature. This is evidenced by the fact that large amounts are allowed to remain on the standing under audit objections because of the non-production of payees' receipts and detailed contingent bills. The total amount held under these two objections up to the end of June, 1959 amounts to Rs. 4.43 crores. The Public Works Department alone, the amount under objection on the first account reaches the colossal figure of Rs. 2.32 crores."

WATER-COOLED PERISCOPE

A water-cooled periscope that in effect takes the observer inside a working furnace is being manufactured by a British firm, and will be in full production soon, probably by the end of 1955. It was only recently that the British Iron and Steel Research Association (BISRA) made public full details of the periscope's development, but it has already received inquiries from large Danish, French, and Swedish steelmaking firms which are interested in buying the commercial model when it becomes available. A similar but smaller model designed for the examination of power-station furnaces has reached the prototype stage at the BISRA laboratories.

SMALL HESSIAN BUSINESS REPORTED

RECENT political events in the Argentine have had repercussions in the Indian jute and goods markets. Speculators, whose stock of excuses for manipulating the market must have been running very low, clutched at this latest straw and construed it as a bearish factor, thereby depressing the finished goods markets by Rs. 20 to Rs. 25 a ton in both the hessian and sacking sections. Prior to this, prices had shown a sharp increase due to heavy speculative activity of a fictitious nature which has now continued unabated for several weeks. The main activity was centred on the B Twill market, where fluctuations were erratic. Hessians tended to follow in sympathy, although a steadier feeling was apparent in this section due to a series of bullish symptoms. In the first place, the encouraging increase in burlap consumption in the U.S.A. during August was more than welcome, especially as it followed a period of seasonal decline which had depressing results in local markets. As a result, hessians regained a little confidence, which was further boosted by small overseas enquiries, mainly for the January-March shipment period. Normally these small amounts would have been absorbed with no material effect, but such is the state of the market, that even the smallest transactions have the maximum effect. The forward position is particularly sound at the present moment. There is no discount for shipment right up to the end of the year, and January-March shipment is quoted only 4 annas less than ready shipment. Heavy goods, on the other hand, are discounted about Rs. 4 for shipment in the first quarter of next year, and it is interesting to note that exactly one month ago quotations for January-March shipment were practically the same as those today. At that time, however, they were at a discount of over Rs. 10 on the ready price or Rs. 7 on the September rate. Thus, over this period, the true state of the market can be gauged from the forward position, which has remained fairly constant, whilst the speculative near position has lost a lot of ground.

Reports continued to be received of Pakistan underquoting India in overseas markets, and on several occasions over the past few months business has been done in markets where previously India held the monopoly. The challenge from across the border is, at present, infinitesimal when compared with India, which is still the world's largest producer of jute goods, but this constant undermining of her markets, and the fact that consumers can get better goods much cheaper than they can from India, encourages overseas interests to relinquish the old for the new. Meanwhile Pakistan continues to enforce minimum prices for the export of new jute thus assuring herself of the least competition from overseas manufacturers.

The jute position in India has shown considerable improvement over the past week. The building of stocks in the local Cossipore markets, combined with the arrival of a fair amount of jute at mill jetties has relieved the immediate necessity for mills to enter the market. Consequently prices have fallen, and sellers are keen for business, but not at the cut-rates that some buyers are indicating. The only big business that appears to be going on in ready jute is in the Daissee markets, but the quantities available, as yet, do not appear to be as large as in previous years. Reports on quality are very favourable, and the condition of recent arrivals has shown a vast improvement. Only small quantities of mesta fibre have been received by mills and so a true analysis cannot be made at this stage, but initial reports have been favourable for both quality and condition. The bulk of this crop is not expected until early October.

THE JUTE MARKETS

Manufactured Goods : Prices at the opening of the goods market on Thursday had a downward tendency due to speculative profit-taking at the higher levels of the previous day. Opening quotations in the sacking section were 12 annas down and B Twills stood at Rs. 107 for September shipment and Rs. 103 for Jan.-March shipment. The hessian section reacted partly in sympathy, and partly due to the lack of overseas interest, and 40" 10oz. hessians were quoted at Rs. 38 for positions up to the end of the year, and Rs. 39 for the first quarter of 1956. Very little activity was recorded in the early sessions, but towards afternoon prices registered an upward tendency on speculative buying. By the opening on Friday heavy goods had advanced Re. 1 a 100 bags with hessians showing a 2-anna rise in sympathy. Reports of the outbreak of fresh violence in Argentina brought about a rapid change in Calcutta markets at this stage, and the cancellation of some shipping instructions by India's second best customer for hessian goods caused a collapse. Opening quotations on Saturday morning had dropped Re. 1-8 to Rs. 2 in sacking, whilst hessian goods slumped 8 to 10 annas. Ready B Twills now stood at Rs. 106-4, with forward shipment at Rs. 102-4 a 100 bags, and 40" 10 oz. hessians had

fallen to Rs. 38-14 and Rs. 38-10 a 100 yards for the same shipments. Foreign news continued to depress the markets over the week-end, and in the absence of any overseas enquiries rates continued to decline. Speculators appeared to be pausing to take stock of the position and rates showed only a 2 to 4 anna drop by Monday morning. Markets were officially closed on Monday due to the death of a prominent Jain Muni and no business was transacted. Small enquiries from overseas, and reports of limited business in both sacking and hessian pushed up prices, and opening quotations on Tuesday morning were 12 annas higher in heavy goods and 4 annas up in light goods. Fairly steady conditions ruled throughout the day but prices declined towards evening under pressure from bears. At the close hessians are steady, but heavy goods have again declined due to heavy selling pressure. Opening quotations on Wednesday morning are as follows:—

	Sept.	Oct.	Oct.-Nov.	Jan.-March.
40" 8oz.	32-6	32	31-12	31-6
40" 10oz.	39	39	39	38-12
B Twills	105-8	104-8	104	102
Heavy Cees (Plain)	109	106	105	102-8
A Twills	130	130	129-8	126
Livernools	120	119-8	119	115-8

Raw Jute: Buyers continued to neglect the raw jute markets during the week under review, and except for Daissee, only small business was reported. Mills' immediate needs were satisfied by the arrival of a fair amount of jute by both rail and flat, and their lack of interest caused prices to ease. Rates, however, showed more movement this week as a result of the varied speculative activities in the goods market, and quotations lost or gained 8 annas a maund each day. In the absence of business, all prices could be regarded as nominal and were maintained mainly in sympathy with the goods market. There has been no fresh business reported in Pakistani jute, and since the export controls have been strictly enforced, the majority of sellers have even stopped giving quotations for Pakistani jute.

Prices at the opening last Thursday were based on Rs. 25 a maund for Upper Assam Bottoms for September-October shipment, this being 8 annas less than last week's closing rates. Small business was reported at this level for near deliv-very jute and a firm tendency developed, pushing prices up 8 annas by Friday morning. The col-lapse in the goods market on Friday brought the price back to Rs. 25 a maund, but in the absence of business this could be regarded as nominal. Some business was reported over the week-end, but markets were officially closed on Monday at the request of the Jain community as a mark of respect for the death of a prominent Muni. On Tuesday, prices again fell away and ordinary Assam jute dropped to Rs. 24-8 a maund, but mills continued to stay out of the market even though sellers were keen for business.

Once again, the business transacted during the week was on a small scale and was mainly for shipment in the September-October position. Dhubri jute was done at Rs. 25-8 a maund basis Bottoms for September-October shipment, and at

THE TRAVANCORE RAYONS LIMITED

Factory : Rayonpuram, Travancore-Cochin
Sales Office : United India Life Buildings, Madras-1

Managing Agents : Emcete & Sons (Travancore) Ltd.
Stockists : P. Vrajlal Dulabhdas & Co., 22, Brabourne Road, Calcutta.

Rs. 26 for ready bills of lading, whilst Indian Northern changed hands at Rs. 26 for ready delivery and Rs. 25 to Rs. 25-8 for Sept.-Oct.-Nov. shipment. Small business was done in ordinary Assam ready bills of lading at Rs. 25 to Rs. 26 a maund and in September-October shipment at Rs. 25. Business in Daissee includes jetty purchases up to Rs. 28 a maund for Bottoms, and contract jute at between Rs. 26 to Rs. 27 a maund for September-October shipment. Small lots of Daissee White were also done at Rs. 26 a maund basis Bottoms, and Daissee Mesta at Rs. 24 both for ready delivery and September shipment.

No business is reported in Pakistani jute. At the close the markets are unchanged with mills taking very little interest. Opening quotations on Wednesday morning are as follows:

Indian Jute:	Landed at Mills Rs. a maund, basis Bottoms.	Shipment.
Lower Assam	25	Sept.-Oct.
Upper Assam	24-8	"
Northern	25	"
Murshidabad White	24	"
Daissee ex Agency	26	"
Daissee ex Cossipore	25-8	"
Daissee Mesta	23	"
Bimil	23 for F.A.Q.	"

Tossa is quoted at Re. 1 to Re. 1-8 a maund above the rates for White jute.

The Cossipore markets this week have followed the speculative B. Twill markets, and rates have fluctuated daily. Imports have improved and now average about 80 wagons a day. Mills have taken very little interest in local jute this week, and sellers now have fairly large stocks on hand, and are offering freely at reduced rates. At the close Kishanganj jute is quoted at Rs. 25-8 a maund for garsat quality.

Mills have taken a fair interest in Daissee jute over the past week, and prices in this section have not shown the fluctuations of White jute but have remained steady. Reports on quality and condition have improved and imports into most agencies are reported to be increasing, especially for mesta fibre. Quotations in Sheoraphuli at the close are on the basis of Rs. 26 a maund for garsat quality.

Mofussil: Imports into the Indian upcountry markets have been on the increase over the past few days as a result of which rates have dropped. Good covering business has been done at the lower rates, but there are no enquiries for forward shipment jute. In the absence of buyers, large quantities of jute have been shipped to Calcutta, and ready bills of lading are being freely offered. At the close quotations in Dhubri are based on Rs. 21 a maund basis Bottoms.

Following a fair amount of business in kutcha bales, prices in Pakistan became firm and sellers were inclined to be reserved. Imports are increasing daily and in Narayanganj amount to 30,000 to 35,000 maunds a day, the majority of which is loose jute. The East Bengal Government continues to enforce minimum prices, and very little export business is reported. Latest quotations in Narayanganj are based on Jat Bottoms at Rs. (P) 24-8 a maund, and X Bottoms at Rs. (P) 18-8 a maund.

Arrivals of Raw Jute

In August 1955, 2,65,350 bales of raw jute arrived in Calcutta and at mills stations. In the corresponding month of last year, arrivals were 2,55,700 bales. Of the arrivals last month, 1,79,800 bales were of Indian origin, and 85,550 bales were imported from Pakistan. In August 1954, arrivals from India amounted 2,08,900 bales, whilst those from Pakistan totalled 46,900 bales. Thus, in August 1955, arrivals from India are down from

last August by 29,000 bales, whilst those from Pakistan have increased by 38,650 bales, making a total increase of 9,650 bales. Total arrivals during the current season, i.e., July-August, 1955, are 46,290 bales less than the corresponding period last season, made up by a drop of 69,950 bales from India and an increase of 23,660 bales from Pakistan.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to			
10th September, 1955	1,692.8	14,349.1	16,041.9
1st to			
10th August, 1955	1,724.0	14,015.1	15,739.1
1st to			
10th July, 1955	782.1	11,913.1	12,695.2
	Sacking		
1st to			
10th September, 1955	18,436.7	191.8	18,628.5
1st to			
10th August, 1955	14,707.5	286.0	14,993.5
1st to			
10th July, 1955	18,244.9	89.8	18,334.7

SHIPMENTS IN JULY

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of July 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,609.5	40,021.3	42,630.8
Short Shipped	165.8	1,859.4	2,025.2
July 1955 (Nett)	2,443.7	38,161.9	40,605.6
June 1955 (Nett)	2,401.5	17,213.8	19,615.3
May 1955 (Nett)	3,400.9	26,399.3	29,800.2
	Sacking		
Gross	37,200.4	2,051.6	39,252.0
Short Shipped	1,067.5	Nil	1,067.5
July 1955 (Nett)	36,132.9	2,051.6	38,184.5
June 1955 (Nett)	27,648.1	1,079.4	28,727.5
May 1955 (Nett)	42,161.6	956.6	43,118.2

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption during August staged a good comeback from the disappointing showing in July. At an estimated 73 million yds. last month, consumption was 17 million yds. more than during the previous month and was 3 million yds. more than August a year ago. U.S. burlap stocks declined a further 8 million yds. during August. At an estimated 237 million yds., 152 million yds. were spots and 85 million yds. were afloats. Appearing below are two tables which include the August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap & Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. Burlap Consumption (As reported to TBMA)			U.S. Burlap Consumption (Estimated Industry Total)		
(Millions of Yards)	1955	1954	(Millions of Yds.)	1955	1954
Jan.	58	53	Jan.	62	63 (61)*

THE FOREIGN JUTE MARKETS

PAKISTAN HOLDS MINIMUM RATES

(FROM OUR DUNDEE CORRESPONDENT)

THERE appears to be sufficient business being done in raw jute in Pakistan to enable shippers to maintain their prices. Sometimes the rumour circulates the market that business is possible at under the minimum quotations, but there is nothing concrete to prove that this has been accomplished. It is thought here that shippers are all too afraid to do anything below the market in case they are put out of business. I doubt very much if spinners would buy any jute offered at less than £90 for Mill Firsts £80 for Mill Lightnings and £70 for Mill Hearts, after all the trouble that was caused last season over the malpractices affair. During the past few days, Dundee is credited with having bought a large quantity of raw jute, stated variously from 40,000 to 60,000 bales, but this is news to the jute brokers, who admit to having sold only trifling lots.

Pakistan is still maintaining minimum rates and the general opinion is that they will continue like this for some months yet. Indeed, some knowledgeable people say they would be surprised to see any reduction in the minima, as, they ask, what would Pakistan gain when there is no competition from any other source? There is a lot of jute yet to be bought by most Continental countries for this season, and Dundee spinners have bought only a small percentage of their requirements. They are holding a fair amount of jute, for which they have yet to make sales of jute yarns. Nothing more is now being heard regarding flood and damage to the crop in Pakistan. The floods have apparently disappeared without doing much damage, but the quality of the crop this season so far is generally not so good as it was last season. Spinners here are now more comfortably situated with orders for jute yarns, and delivery cannot now be given before November, whereas last week little had been done beyond the middle of October. Naturally, when prices are all the same, the better class spinners get filled up with orders earlier than the others. Goods are also improved. Calcutta fabrics have ruled firmer during the past week due,

it is stated, to the improvement in the American consumption for August. Quotations are 60s for 10oz. 40in. and 46s for 7½oz., September-October, 59s and 6d and 45s 3d Nov.-Dec. and 59s 6d and 44s 3d Jan.-Mar., with B twills 164s, 162s 6d and 158s 6d respectively.

COAL WASHERY FOR BOKARO

The Government of India have accepted, as an objective, the recommendation of the Coal Board that all metallurgical coal should be washed. As a first step, the Ministry of Production is setting up a coal washery at Bokaro-Kargali to wash the coal produced by the Bokaro-Kargali State collieries. This plant will have a capacity of 550 tons an hour and will supply washed coal to the Rourkela and Bhilai Steel Plants. From its total output of about 1.6 million tons of washed coal a year, 1.1 million tons will be supplied to the Rourkela Steel Plant and 55 million tons will be supplied to the Bhilai Steel Plant. Tenders for setting up the plant are expected by the first week of October. The washery is expected to be commissioned by the end of 1957.

The total requirements of washed coal for the existing and proposed steel works are estimated at about 9.73 million tons a year and for other essential consumers like market coke ovens, Sindri etc., at 1.68 million tons, making a total of 11.41 million tons. The question of creating additional capacity to supply this demand is engaging the attention of Government. Discussions are now in progress with private collieries for setting up washeries to meet the requirements of washed coal for the existing and projected steel plants. The State steel plants might consider the establishment of washeries if their requirements are not adequately met by the private washeries.

INDIA IN INTERNATIONAL FAIR

An International Autumn Fair was opened in Vienna on 11th September, 1955. For the first time India is one of the ten foreign countries participating in the Fair. The large number of visitors who attended the Fair showed keen interest in carpets and handicrafts displayed from India.

Plantation Topics

COCHIN TEA SALES

AT Sale 19, there were 21 lakh lbs. on offer. Enquiry was general but the trend was quieter. Common low medium and medium types were irregularly two annas easier, particularly BOPs. High-grown and all good liquoring teas were very strong and considerably dearer. Pekoes were neglected but orange pekoes and flowery pekoes were about steady.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

Sheet:	Closing Prices on 9-9-1955 (Rupees a lb.)	Average Prices for the period (Rupees a lb.)
No. 1	1.35½	1.35½
No. 2	1.32½	1.32½
No. 3	1.29½	1.29½
No. 4	1.05 Nom.	1.05 Nom.
No. 5	1.00	1.00
Sheet Cuttings 1		1.30
Sheet Cuttings 2		1.25
Crape:		
Water White	—	—
R.M.A. No. 1X	1.90/94	1.93½
R.M.A. No. 1	1.86/88	1.89½
Crape No. 2		1.86½
Crape No. 3		1.77½
Scrap Cresses:		
Sc. Crape No. 1	1.40/45	1.45½
Sc. Crape No. 2	1.30/35	1.37½
Sc. Crape No. 3	1.22/30	1.30½
Sc. Crape 3X		1.34

To arrive at f.o.b. Colombo prices add 33.4 cents a lb. in respect of rubber other than scrap crepe and 27.4 cents in respect of scrap crepe to the above market prices.

Another Typical Installation

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined further by 0.7 percent to 354.8 during the week ended 3rd September, 1955 as compared with 357.2 for the previous week. Relative to the corresponding weeks of last month and a year ago, the index was lower by 0.4 and 7.9 percent respectively. During the week under review, the index for Foodstuffs stood at 338.4 as compared with 312.5 for the previous week; the effect of declines in the prices of jowar (-12%) and wheat at Amritsar, bajra and tea (-1% each) was almost neutralised by the advances in the prices of rice at Vijaywada (+7%) and gram (+5%) and wheat (+3%) at Hapur, dal arhar (+2%) and gur at Muzaffarnagar (+1%). The index for Industrial Raw Materials witnessed a further fall of 2.8 percent to 392.9 as compared with 404.3 (revised) for the previous week as a result of lower prices of cottonseed at Amravati (-8%), manganese ore (average export prices) (-8%), raw jute (-5%), linseed in Calcutta, raw cotton and gingellyseed (-4% each), raw silk (-5%), groundnuts at Bombay and lac (-2% each) and castorseed in Bombay and copra (-1% each). The price of linseed in Bombay (+2%) was, however, marked up. The index for Semi-Manufactures moved up by 0.1 percent to 325.5. Items which showed significant variations were: goat skins and copper (+7% each), copra cake (+4%), brass (+3%), mustard oil (+2%), gingelly oil (-5%), cow hides (-3%) and coconut oil and groundnut oil (-2% each). A fall of 0.5 percent to 368.6 in the index for Manufactures was brought about by a decline in the price of jute manufactures (-5%). Prices of chillies (-8%) and pepper black (-3%) in Calcutta moved down while those of turmeric in Calcutta and betelnuts in Bangalore (+3% each) exhibited advances. The index for the Miscellaneous group showed a fall from 562.4 to 561.8 during the week under review.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year Ended August 1939=100)

Groups and Sub-Groups	3-9-55	27-8-55	Ended 6-8-55	4-9-54

WORLD RUBBER OUTPUT ADVANCES

World natural rubber production in July dipped below last year's corresponding total but the output for the first seven months of this year topped the like period of last year. The Commerce Department's business and defence services administration reported that the world rubber production in July totalled 152,500 long tons compared with 170,000 tons in 1954. For the January-July period, the output was estimated at 1,025,000 long tons, compared with 995,000 tons for the same period a year ago. Consumption of natural rubber totalled an estimated 142,500 tons in July, compared with 130,000 tons in the same month of last year. The consumption during the January-July period came to 1,087,500 tons against 1,005,000 tons in the same seven months of 1954. The Department also gave these estimates of synthetic rubber operations excluding the Iron Curtain countries: For July—production 90,000 tons; consumption, 75,000 tons. For July last year—production, 53,280 tons and consumption, 50,000 tons. In the first seven months of this year, the report said, the output of synthetic rubber totalled 597,000 tons and consumption 582,500 tons. In the same period last year, production totalled 404,491 tons and consumption 422,500 tons.

Calcutta Markets

LESS GENERAL DEMAND IN TEA EXPORT AUCTION

BEST C.T.C. ASSAM DUSTS FIRM

AT Sale No. 16, held on 19th, 20th and 21st September, offerings in the Export auctions consisted of 68,000 packages. There was less general demand for most sorts. Prices for all descriptions, except tippy teas and best liquoring kinds, declined by 2 to 3 annas, although Fannings grades received rather better support than Broken. Commonest sorts were fully 3 annas easier and there were many withdrawals for this type of tea. Leaf grades were neglected and were difficult of sale even at 3 to 4 annas below valuations. Tippy teas were in strong demand and generally dearer, while best liquoring sorts were a strong feature and were fully firm to occasionally dearer.

Quotations	1955 Rs.	1954 Rs.
Clean Black Pekoe	2 6 0	3 0 0
Plain B.P.	1 11 6	3 0 6
Medium Assam B.P.	2 0 0	3 2 0 to 3 2 6
Best CTC Assam B.P.	3 3 0 to 3 4 0	3 6 0 to 3 7 0

At the Internal Sale, offerings of Dusts consisted of 17,500 packages, for which there was only fair demand. The very few black Middle East types on offer sold well, while the best CTC Assams were firm and occasionally dearer but the more fibrous sorts were easier. The remaining offerings were generally selling 2 to 3 annas below last rates.

Quotations	Rs.
Medium Dots Dust	1 12 0 to 1 13 0
Medium Assam Grassy Dust	1 15 0 to 1 15 6
Best Assam C.T.C. Dust	2 9 0 to 2 11 0

The offerings of Other Grades consisted of 4,500 packages, which consisted mainly of poor liquoring stalky and fibrous grades. There was only fair demand at very irregular rates and most teas on offer were upto 2 annas easier.

HIGHER FREIGHT RATES IN COAL AND ORE

INCREASED rates in the coal and ore trades and a firm time charter section were the features of last week's exchanges. A good volume of business was concluded for the American coal trade but terms of fixtures remain undisclosed. Although higher rates of up to 65s for Antwerp or Rotterdam are reported, it is possible that higher commission rates give owners a similar net return to rates ruling previously. An October loader for Antwerp or Zeebrugge has secured 63s, and this is higher than last week. Ore from Mormugao continues to attract tonnage and as this is now mainly ballast, higher rates are being conceded. Three fixtures over November-January to the Continent are reported at 100s, gross terms, which compares with 88s 6d paid in August. In the local market there is a report of tonnage cover for coals to Singapore over 1956 at 52s 6d which appears a low rate on today's market and against the future outlook.

High rates were conceded in the time charter section with liner companies paying 42s 6d for an 8,500-ton motorship for a round voyage to Australia with delivery U.K.-Continent and October, early November. An oilburner, 9,000 d.w., secured 33s 6d for a North Pacific round voyage which is 3s up on the last fixture made at the end of July.

SUGAR MARKET

During the week ended 20th September, sugar sales in the Calcutta market averaged 2,000 bags daily. Arrivals fell to only 300 bags a day with the result that the total stocks at the end of the week declined to 70,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-6 for ordinary grain and Rs. 32-13 for big grain. Ex-mill delivery rates were Rs. 30-4 for big grain and Rs. 29-12 for ordinary grain varieties. The market tended to rise.

LINSEED

A generally easy trend prevailed throughout the past week although prices were well maintained. The turnover was very small owing to scarcity of supplies from upcountry and very little buying interest from crushers. There was a slightly better demand, however, towards the close owing to a somewhat better offtake of linseed oil. After a quiet opening, a better demand from shippers caused a little activity in the oil section. Latest quotations were as follows: September-October Rs. 17-12-0 a maund.

HIDES AND SKINS

The market in hides ruled easy, while that of skins was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 13th September and 19th September, 1955)

Cowhides:—Wet salted (Ord.) 12,000 pcs. on the basis of Annas 12-6 to Annas 14; Wet salted (Ord.) 90,000 pcs. on the basis of Rs. 10 to Rs. 11; Wet salt-

ed (Slaughtered) 16,700 pcs. on the basis of Rs. 13 to Rs. 25.

Goatskins:—Wet salted (Daissee, Killed) 46,000 pcs. on the basis of Rs. 225 to Rs. 245, Rs. 270 to Rs. 305 and Rs. 365 to Rs. 385; Assam-Dimaipur-Murshidabad 18,100 pcs. on the basis of Rs. 232 to Rs. 285; Purneah-Kissanganj 1,600 pcs. on the basis of Rs. 260 to Rs. 270; Patna 2,500 pcs. on the basis of Rs. 163-8; Pakur 6,000 pcs. on the basis of Rs. 220 to Rs. 232-8.

Bazaar Stocks

(19th September, 1955)

Cowhides:—Wet salted 1,41,500 pcs.

Goatskins:—Wet salted (Daissee, Killed) 24,000 pcs.; Assam-Dimaipur-Murshidabad-Pakur 32,000 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kissanganj-Maldah 2,20,500 pcs.

SHELLAC MARKET STEADY

During the week ended 20th September, the market opened quietly and ruled steady for the rest of the week. The range of quotations was as follows:

Pure Buttonlac	Rs. 151 to 155 buyers
Lemon No. 1 Shellac	Rs. 151-8 to 154 buyers; 155 done and buyers.
Lemon No. 2 Shellac	Rs. 145-8 buyers; 148, 150 done and buyers.
F. O. Std. 1 Shellac	Rs. 140-8 buyers; 142 done and buyers; 145-8 buyers.
Pure TN Shellac	Rs. 135/136 basis done and buyers; 139-8 buyers.
4% I.T.N. Shellac	Rs. 122 to 126 buyers.
No. 1 Kusmi Seedlac	Rs. 140 to 141 buyers.
No. 2 Kusmi Seedlac	Rs. 135 to 137-8 buyers; 140 done and buyers.
Fine Bysaky Seedlac (Mambhum)	Rs. 133-8 to 135 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 130-8 to 132 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 123 to 124-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 118-8 to 120-8 buyers.
Kireelac	Rs. 65-8 buyers.

Shipments during September until the 16th were 20,022 packages comprising of shellac 9,921 packages; seedlac 7,542 packages; buttonlac 500 packages; others 2,059 packages.

INDUSTRIAL DISPUTES DURING JUNE 1955

There were 114 cases of fresh industrial disputes during June 1955, according to the provisional statistics released by the Labour Bureau, Government of India. Of these, 104 involved 74,407 workers. The number of disputes current at any time during the month was 145. Of these, 132 involved 79,766 workers. The average duration of disputes current at any time during the month was 127 days as compared to 132 days in May 1955. This indicates that compared to the previous month, a larger number of workers were involved but for a shorter time on the average. Six of the disputes were lock-outs. These involved 14,225 workers and accounted for a time-loss of 1,134,012 man-days. Three of the lock-outs were in Bombay, two in West Bengal, and one in Uttar Pradesh.

One hundred and eight disputes terminated during the month under review. Of these, 65 lasted for not more than five days each and 39 for more than five days but not more than 20 days each. The workers achieved complete or partial success in 17 cases. In 15 cases they were unsuccessful. The result was indefinite in 73 cases and was not known in 3 cases. Twelve fresh disputes related to "wages and allowances", 14 to grievances relating to "personnel", 12 to "retrenchment" and 64 to "other causes".

Among the States, U.P. recorded the highest time-loss during the month. This was mainly due to a general strike in textile mills at Kanpur which continued from the previous month. West Bengal also recorded appreciably higher time-loss which was mainly due to a number of lightning strikes in tea estates, and several major disputes in the jute industry.

Among the industries, the time-loss in plantations rose sharply during the month due to the strikes in West Bengal. In mining and quarrying the time-loss was slightly more than that during the last month. In the manufacturing industries, the time-loss increased slightly as compared to the previous month. This was mainly due to the lock-outs in Khardah Jute Mills and Fort Gloster Jute Mills in West Bengal. Silk and woollen mills also recorded higher time-losses—a strike in the Sadhana Textile Mills and a lock-out in the Castle Mills, Bombay. The time-loss in transport, storage and communication decreased appreciably. The industry group "construction" did not record any time-loss during the month and electricity, gas, water and sanitary services recorded almost negligible time-loss. The time-loss in the industry group, "Commerce" increased appreciably. This was mainly due to a strike in the Allahabad Bank Ltd., Calcutta, which involved a time-loss of 3,300 man-days.

Industrial relations were normal in all the States except Assam, Orissa and U.P., where they were strained in certain industries. In Assam, the workers of tea estates were perturbed over the change in the system of payment of plucking wages. Labour-management relations in Orissa Cotton Mills Ltd., Bhagatpur, were strained. In U.P. the general labour situation was disturbed due to the general strike by textile mill workers over the question of rationalisation. Information received from 14 States shows that in all 1914 complaints were received by the Labour Departments of these States and 1,627 were settled or investigated.

COMPANY AND PUBLIC NOTICES

RAJAHBHAT TEA COMPANY, LIMITED.

THE Forty-sixth Ordinary General Meeting of the Shareholders of Rajahbhat Tea Company, Limited, will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 14th October, 1955, at 4-00 P.M. for the following purposes:—

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE IMPROVING PROSPECTS
FOR STERLINGACHIEVEMENTS OF CREDIT RESTRAINT: BRITAIN'S
INTERNAL ECONOMY HOLDS KEY TO FUTURE

THE effect on sterling of Mr. Butler's statements at Istanbul has been swift and salutary. It is too early yet to say whether it will prove to be permanent, but sterling has been strengthening steadily as Continental operators have rushed to cover sales made only a few weeks ago in expectation of devaluation. This expectation was not widely held, fortunately, or the recent deterioration might have been worse. Faith in Mr. Butler's intentions was based chiefly on an appreciation of the possible damage which such a step would involve for the Conservative Government's reputation. It owed surprisingly little to the fact that Britain's economic embarrassments are marginal and that even limited success for the policies which Mr. Butler has already introduced will mean a rapid disappearance of the symptoms. The British economy is suffering from too much prosperity, which it is politically difficult to damp down. The Government has chosen a method which has few political disadvantages provided it is not overdone, but which is also slow in operating. The first signs of success helped to strengthen the confidence instilled by Mr. Butler. But other signs of returning health in the internal economy are still lacking, and until these appear sterling will remain in danger. In the meantime there is a breathing space and an excellent opportunity for sound economic reasons to accumulate and supplement Mr. Butler's assurances should the run on sterling be resumed.

The original cause of sterling's present difficulties, apart from the short selling which has been going on during the past few months, is the investment boom which began two years ago and is only now beginning to slow up. The impact of the increased purchasing power generated has been added to the less important influence of strikes to put up the prices of home produced goods, encourage imports and discourage exports. The Government's own policies of greater economic freedom and politically-inspired budget concessions have also helped to strengthen the trend. The process has now been going on for two years or so, throughout a period during which the economy of the United States has been purged by recession and the costs of the growing industries of West Germany have been held constant. British exports have been meeting fiercer competition while the tendency for delivery dates to lengthen, due to diversion to the home market, has helped Germany establish herself in traditional British markets and has curtailed exports to dollar areas. The recent tariff increases imposed by the United States Government have probably made little contribution to the situation yet. If devaluation has to be resorted to eventually it will be because holders of the currency regard the British Government's attempts to regain and expand the export markets as having failed. It will not be because of any need to correct long-period distortions in the world economic pattern, such as made the adjustments of 1949 inevitable.

The suggestions that physical controls be used to correct the inflated internal demand have rightly been resisted by Mr. Butler. His faith in the uncertain and often discredited bank rate instrument has remained absolute. There have been signs lately that this confidence might not be misplaced, although it must be remembered that in the early stages this method of credit restriction was completely nullified by a decline in the banks' liquidity ratios and that it was not until the bankers themselves exerted a selective control on advances that any benefit in fact accrued. The figures for the movement in gold and dollars during August showed some improvement and it is generally supposed that the drain might have been halted. If this is true it is no mean achievement at a time of year when payments for imports are traditionally heavy. But the September figures will have to be seen before any final conclusions

can be drawn. Tighter monetary conditions can be expected to make it harder for employers to concede the wage claims now pending. But refusal to pay, or too great a reluctance, could lead to a wave of strikes which might be equally inflationary and perhaps considerably more damaging to the export position. The recent speech by Mr. Geddes at this year's Trades Union Congress showed a commendable awareness of the danger of wage inflation. But the function of trade union leaders is the democratic one of representing their members' views. To hope they will choose to play a conciliatory rôle in the coming struggle, or even to go on advocating restraint, is simply to expect too much. The alternative of a measure of unemployment must be in the minds of many and the Director of the British Employers' Confederation, Mr. George Pollock, has been accused of having suggested it. But that would be disastrous for the Government to permit. Some retreat from the present over-full employment might be politically possible and might serve to discipline the trade unions, but other means will have to be employed to provide the controlled part of what is after all the Conservative policy of "controlled inflation".

The more likely source of salvation for the British economy is the probable behaviour during the next few months of the economies of the United States and West Germany. Both these economies are acknowledging the presence of inflationary tendencies by their moves to curb credit. By now they are both working without any slack. Delivery dates for exports from West Germany are beginning to lengthen. There are some signs of relaxation in the tariff policy of the United States, so British goods may be able to gain some of the ground they have lost in dollar markets, provided internal demand is curtailed. If time can be gained the German and American economies may accumulate a little fat and the situation for Britain could be transformed. One encouraging fact is that costs have remained remarkably steady in the British economy throughout the inflationary upsurge. This has been due to the large amount of new plant which has been coming into production and which can be expected

INDIA AND THE NEW G. A. T. T.

THE Lok Sabha last week did not, as a contemporary puts it, give "unqualified approval" to the revised General Agreement on Tariffs and Trade; rather, the attitude was one of "discriminating support"—the more accurate phrase used by Mr. T. T. Krishnamachari, Minister for Commerce and Industry. But the fact that members were not entirely uncritical of the Agreement does not in any way detract from its merits. It remains a commendable compromise between the need to free trade as far as possible, yet maintain international solvency and enable under-developed countries to proceed with their plans for economic progress.

adjustment, because their economies are liable to rapid change.

These broad needs are adequately recognised in the revised G.A.T.T. The crucial part is Article 18, which deals with governmental assistance for economic development, and the measures necessary to promote the establishment of particular industries. Special emphasis is laid on the development of economies which can only support low standards of living and are in the early stages of development. It is recognised that such countries are justified in taking measures to restrict imports which are necessary for their economic progress. They are allowed special facilities: to maintain enough flexibility in their tariff structures to be able to grant the protection required in establishing a particular industry; and to apply quantitative restrictions for balance of payments purposes in a manner which takes full account of the high level of demand for imports likely to be generated by their development programmes. They are even allowed to take measures not consistent with the other provisions of the Agreement in order to promote a particular industry.

The procedure for modifying tariff schedules has been streamlined by the new Article 28. Under this Article, the firm validity of the schedules of tariff concessions will be automatically renewed for successive periods of three years at a time unless a different period is accepted by the contracting parties by a two-thirds majority. Before the expiry of each such period, any contracting party may negotiate for modifications in its schedule of tariff bindings. Even if there is no agreement as a result of these negotiations, that contracting party can modify or withdraw the concession it has given. Others, of course, would then also have the right to withdraw equivalent concessions. Under special circumstances, a tariff concession may be modified even during the period of binding.

THE WORLD SHORTAGE OF MATERIALS POST-WAR TRENDS AGAINST MANUFACTURERS

WE are familiar with the idea that the terms of trade have moved against the industrial countries—that to import the same quantity of primary goods as before the war these countries must export more manufactures. This year the problem has been eased somewhat, but at current average import and export prices it is still necessary for Britain, for instance, to sell five units of exports to pay for what four units would have bought before the war. Such a comparison may not seem dramatic, but a difference of that order affects profoundly the standard of living or the balance of payments, or both. Mr. Leslie Gamage, vice-chairman of the General Electric Company, addressing the Electrical Industries Club in London in mid-September, made the problem more graphic with specific examples. He was comparing prices in 1938 and 1955, relating the value of major import-goods to the value of manufactured electrical export-goods. In 1938 four electric cookers exported would pay for a ton of beef imported; now a ton of beef is equivalent to eight electric cookers. For a ton of lead that four electric cleaners would buy in 1938 ten electric cleaners are required now. A ton of copper could be imported for the equivalent of five radio sets in 1938; now as many as 23 are needed to pay for it. Similarly, an electric refrigerator will buy now only one-third as much tea as it would buy before the war. And so on.

These, are, admittedly, selected examples, and they exaggerate the trend. But they are also significant examples, because they contrast basic imports with the exports of an industry where rapidly-advancing technique has restrained the rise in prices—in some cases even reduced prices below pre-war levels. The effects of uneven technical advance on the relation between primary and manufactured prices are partly obscured by trading policies, whose regulation of trade may be permanent, by the weather, whose effect on harvests is temporary, and by such abnormalities as changes in strategic stockpiles. But it is indisputable that technology advances more rapidly in industry than in primary production, that industrial production tends, therefore, to increase more rapidly than primary production, and that primary prices tend, therefore, to rise in relation to manufactured prices. This proposition may be immediately disputed by reference to the emergence in the past year or so, of general surpluses of farm products (wheat, sugar, cotton, etc.)—distinct from the particular agricultural surpluses of the United States, which arise from the policy of price-supports. It is, indeed, true, as the United Nations Food and Agriculture Organisation has noted in its report for 1954, that in the non-communist world agricultural production has risen 25 percent above the average of 1946-7, representing a little more than the pre-war quantity per head of population. But this achievement has been possible only by widespread support of agriculture, so that in most industrial countries agricultural prices are artificially high and the natural increase in consumption of food is thus retarded. (Protection of industry, also widespread, relates more to consumer- than to capital-goods.)

Not surprisingly, the problem of relative shortage is focussed on industrial materials, especially the products of mining. It is easier to sow more wheat, or even to increase a herd of sheep, than to produce more coal or copper from underground. Moreover, an improvement of, say, 10 percent in the standard of living between one year and another does not mean an increase of 10 percent in consumption of all goods consumed in the earlier year: more probably, it means widening the range of goods consumed, especially the range of manufactures. So an improvement in living-standards may only moderately increase demand for food and clothing (the basic essentials) but substantially increase demand for metal-based manufactures (the durable consumer-goods that Europe has been buying almost as insistently as America since the war) and for the materials needed to make those goods. There is no obvious solution of this problem; but it can be modified in various ways. A major purpose of credit-restriction has been to restrain demand both for scarce commodities and for the goods made from them. Requests for releases from the American stockpile of copper have reminded us that in a favourable political climate large quantities of materials required by industry will not necessarily be diverted to unnatural use. High prices are not only promoting production of scarce materials (necessarily slowly) but also developing substitution of cheaper ones (for instance, aluminium for copper, synthetic rubber for natural rubber). Scarcity stimulates a quest for substitutes even at higher prices (for instance, fuel-oil for coal).

Many years hence, perhaps, there will be so much cheap power available that huge resources of energy can be devoted to producing and processing any material that is scarce. In the meantime, the problem is likely to become more acute as industrial techniques develop; for it is inconceivable that there can be in agriculture or mining any technique comparable with automation in industry. The primary-producing countries will obviously benefit (as they have benefited already) visously benefit (as they have benefited already) from this tendency—unless they choose to forgo the benefits to build their own industries, operating at relatively high costs. It is often assumed that the manufacturing countries suffer correspondingly: they have to export more in order to maintain imports. But it should be remembered that they are, by hypothesis, producing more easily and in larger quantities. If markets for their goods remain open—preferably, are opened wider—their task should not be too burdensome, and their balance of payments should not be chronically troubled by the diverging trends of prices.

CURRENT COIN

Imperial Tobacco.—Mr. E. H. Hare's address from the chair at this week's annual general meeting of the Imperial Tobacco Co. of India Ltd., which is published elsewhere in this issue of *Capital* reviews a year of encouraging progress. He points out that in a highly competitive industry, it is essential that cigarettes should reach the consumer in first-class condition and there should be no grounds for complaint about the quality of the package or of the contents. This makes it necessary to maintain the company's plant and machinery in a high state of productive efficiency, so the equipment has to be replaced periodically by types of later design and better performance. The quality of the raw materials—raw tobacco and the varied types or wrapping materials—is just as important. A considerable degree of liquidity is therefore necessary for holding raw material stocks and for the maintenance of plant and machinery. Inflationary conditions since the war have raised replacement costs, and suitable provisions have therefore been made from taxed profits. The fixed asset and stock replacement reserve has been built up with these considerations in mind. The general reserve provides for future expansion for, as Mr. Hare points out, "a comparatively modest increase in the volume of sales calls for a considerable increase in the investment in leaf tobacco, materials and stocks." The chairman says he is disappointed that the Taxation Enquiry Commission has recommended no material change in tobacco taxation. "There can, of course, be no question of challenging the right of a Government to tax tobacco products but I would emphasise the view I have always held, that in fairness to the consumer and with a view to ensuring the maintenance of a sound revenue-producing source to Government, the latter should consult with the tobacco industry as to the best method of applying the incidence of such taxation because the tobacco industry—and your Company in particular—is well qualified to advise Government on this matter."

Jay Engineering's Progress.—Sir Shri Ram's address from the chair at last week's Jay Engineering Works Ltd.'s annual general meeting reviewed another year of successful working. There has been an increase in sales, profits, payments to labour and the number of workers. Prices of sewing machines have been cut, and Sir Shri Ram says that they are now "about 60 percent less as compared to the well known makes available in India." A needle-making plant is to be set up,

and machinery has been ordered. Needles are the only part of the sewing machines which have not hitherto been made in India, but the chairman hopes that he "will be in a position to tell you next year that we are now making and supplying our own needles." The protective duty on sewing machines has been removed, but the Government is restricting imports of the cheaper varieties to protect the indigenous industry. Production and sales of all the company's products have increased. But because of the increased domestic demand for sewing machines, exports have had to be restricted. Output is still increasing, so it is hoped that it will be possible for exports to recover. The steady expansion in the company's activities means that much more land than is available at the present site will be needed. So a number of sites are being considered where part of the factory might be moved, but nothing has yet been finalised. Because of space difficulties, a factory for making Bhilawa enamel is to be built at Chindwara. A saw mill is also to be put up at the same place, and it will supply the greatly increased timber needs. It is hoped that costs will thereby be appreciably reduced. Sir Shri Ram reports that production of electric fans has increased considerably. "Not only in sewing machines and hurricane lanterns are we the biggest manufacturers in the country, but I believe during the last few months we have been the biggest manufacturers of electric fans also." Electricity is no longer a luxury and it is the company's intention to mass-produce cheap table and ceiling fans. The chairman claims that "we will try to sell a table fan for, say, about Rs. 60 and a ceiling fan for about Rs. 100, so that even a worker in a factory or the lower middle class people and clerks may also be able to buy."

Railway Coaches' Supply.—The railway coach factory at Perambur, which has already been commissioned and which Mr. Nehru will open formally on 2nd October, marks an important step towards self-sufficiency in rolling stock production, particularly coaching vehicles. The Rs. 7.3 crore-factory is being operated in collaboration with a well known Swiss firm; it is claimed it is the largest in Asia and one of the largest in the world. The factory will turn out 20 coaches in the first year of its working, with all components imported from Switzerland, but as production expands to the full capacity of 350 coaches over a period of five years—100 coaches in the second year, 200 in the third, 300 in the fourth and 350 in the fifth year, that is, by 1959-60—components will be manufactured in increasing numbers in the factory itself. The vehicles are called integral coaches, because the body and the underframe are integrated into a single unit, all made of steel. They are nevertheless light-weight—seven tons lighter than the conventional 42-ton coach, with smoother riding qualities. They are also likely to provide greater protection to passengers in the case of accidents as the structure will not disintegrate as that of the existing coaches does. As with other categories of railway rolling stock, arrears of replacement had become abnormal in the case of coaches by the end of the second world war, accumulating since the years of the world depression. By 1952, it was calculated that as many as 5,514 coaches of a total 19,193 had over-aged in addition to 650 already over-aged but retained. By March 1956, a further stock of 3,021 is likely to be over-aged having completed its normal economic life of 30 years. These together add up to 8,535, or roughly 40 percent of the total number of vehicles as on 31st March, 1952, which should be considered obsolete by now, since March, 1956 is only a few months away. But due to a vigorous procurement policy of the railway, which spent over Rs. 250 crores during the first plan period in acquiring rolling stock of all kinds—wagons, locomotives and coaches—a total of 4,900 coaches would have been received from indigenous and foreign sources by March, 1956, though the accent was on procuring as many of the coaches from internal sources as possible. The problem of heavy arrears in replacement still remains, and as passenger traffic is estimated to rise 30 percent during the second plan period over what it will be on 31st March, 1956, it is highly unlikely that internal production will catch up with the requirements of the traffic. The Deputy Railway Minister stated in Parliament recently that 11,000 coaches would be needed during the second plan period.

Frank Speaking in Cochin Chamber.—In an outspoken commentary on the equivocal position occupied by private enterprise in the second five year plan, Mr. W. G. Black, delivering the presidential address at the 98th annual general meeting of the Cochin Chamber of Commerce, voiced the underlying sentiments of investors and business men alike. Reinforcing his suggestion of last year that private enterprise would be greatly assisted by a precise re-statement of the Government's current industrial policy, Mr. Black reminded his audience that the Union Finance Minister had called for a fruitful partnership between the public and private sectors in the interests of the common goal of higher living standards all round. Speaking for the private sector, Mr. Black said: "We are

anxious to respond to that call, but we feel entitled to point out that the private sector requires a measure of reasonable security and encouragement in which to play its part efficiently and successfully." He then went on to enumerate the salient points on the interpretation of which depends this security. "The fourth amendment to the Constitution," said Mr. Black, "by denying the Court's competence to enquire into the adequacy of compensation in respect of property acquired for State purposes has introduced an element of uncertainty and uneasiness in the minds of investors and industrialists. The Companies Bill, which has just been passed, goes far beyond the original Bill framed in 1953 and promises, despite some voices of moderation recently heard in the Lok Sabha, to strike at the root of forces which have long been supporting the economic development of the country. Apart from the development rebate provided in the 1955 Budget, the recent taxation proposals, with increased income tax levels for individual and corporate incomes, threaten to dry up savings which are the source of capital formation besides reducing the incentive to work and invest." Answering criticism of the profit motive as a spur to private enterprise, Mr. Black countered that no improvement in working conditions and the standard of living can be wrung from unprofitable enterprises. Mr. Black's emphasis on the need for some confidence in the basic stability of the economy for a measurable period of time "without which industry cannot make a contribution of value to the increased production which is the central theme in the country's economic plan" is axiomatic. For until all ambiguity is eradicated, and the private sector is provided with a clear delineation of what is meant by, to quote the Prime Minister, "adequate room to function", the present atmosphere of general unease and uncertainty is bound to prevail, and this cannot but react unfavourably on private investment and commerce generally.

Foundries' Problems and Prospects.—Like many other branches of the engineering industry, the foundries have considerable unutilised capacity. The reason is the lack of a sufficient market for their products. But the industry feels that without the Government giving help through its purchases of some of its requirements from home production, it will not be able to employ its idle capacity at all. The reason why it claims to deserve the Government's help is that it has a large employment potential and can add to national production in a useful way. In his presidential speech to the fourth annual general meeting of the Indian Foundry Association, Mr. Monilal Atta stressed these points. The industry, said Mr. Atta, quoting the figures of the Foundry Industry Panel of the Engineering Capacity Survey Committee, consists of 300 cast iron foundries on the Central list and 1,200 foundries on the State list, employing in all roughly 400,000 men. But as matters stand today, about 60 percent of the cast iron foundries are idle, non-ferrous foundries have capacities ranging from 10 percent to 90 percent unutilised and malleable iron foundries cannot work nearly 50 percent of their capacity. That the size of the employment potential is huge is therefore obvious. Mr. Atta however noted the happy fact that the period of depression for the industry is over, demand is improving and he was deeply appreciative of the policy of the railway administration not to import foundry products which the home industry supplies. He also welcomed the establishment of the National Small Industries Corporation which is to help the small industries sector to which the foundry industry belongs. Assuming that demand will go on improving, and the second five year plan is bound to provide considerable impetus, the industry will face the raw material problem in a serious form. The industry's raw material needs even now amount to 600,000 tons of pig iron, and according to the schedules of production of various iron and steel units, existing and new, Mr. Atta estimated that by 1960 not more than 513,000 tons of pig iron are likely to be available. He therefore urged the authorities not to allow any export of pig iron while the home industry's needs remain unsatisfied. The supply of hard coke in adequate quantities is another problem for the industry, but Mr. Atta stated that the Durgapur coke oven plant would remove this difficulty. He therefore urged the authorities to proceed with the scheme as expeditiously as possible.

India's Village Handicrafts.—The All-India Handicraft Board has just published its first report containing an account of its activities during the years 1952-1954. Under the first five year plan, the Board undertook to advise the Government on the problems of India's specialised handicraft industries: on the award of grants and loans to State Governments, private organisations or institutions for financing the improvement and expansion of village crafts; and the promotion of sales in India and abroad. During the period under review the Board received about 150 schemes from State Governments for the development of handicrafts and grants were given to the extent of Rs. 14,03,916. Apart from its overall policy of general assistance,

the Board has undertaken the intensive development of certain crafts either through its own pilot projects conducted directly by the Board, or where possible through the States. These include pottery, mat weaving, bamboo, grass and straw products, toys, with priority for dolls, hand printed textiles and a special study on the utilisation of wool. One of the many difficulties experienced by the villagers which has contributed to the decline of a particular industry has been the supply of raw material. Kora grass for mat weaving, seasoned wood and bamboo for toys and ornamental woodwork, conch shells, once imported from Ceylon and now faced with Government restrictions; ivory of which India's supply is inadequate to meet the demand, and wool which is now exported in such large quantities that the basic requirements of the various wool crafts have to be imported. The Board is helping toward the provision of raw materials by arranging with State Governments for the return of concessions and privileges which will materially assist production. The setting up of wood seasoning kilns and the supply of seasoned wood and bamboo at concessional rates is now under consideration by the Government. For the marketing of products the Board proposes the establishment of a Central Emporium in each state with a network of sales depôts in all important cities. For this purpose Madras has already received a grant of Rs. 56,500 and a loan of Rs. 1 lakh. The marketing conference at Ranchi also recommended that the Board should extend credit facilities to State Governments and marketing agencies against actual orders for goods booked through them, and the Government of India agreed to place an initial amount of Rs. 10 lakh at its disposal up to March 1955, to be renewed the following year. Among other activities of the Board are the arranging of exhibitions,

Air Room for Private Enterprise.—That there is no room for private enterprise in competition with nationalised undertakings would appear to be disproved by the recent experience of the United Kingdom where private operators have been granted greater facilities in the sphere of air transport. There was a noticeable increase of 45 percent in the number of passengers flying with independent operators on scheduled services in 1954-55, it is disclosed in the report of the Air Transport Advisory Council for the year ended 31st March. In 1953-54 independent operators carried 262,550 passengers. In 1954-55 they carried 366,470. British European Airways carried 1,874,316, and British Overseas Airways Corporation 291,010, also showing increases so that the independent companies have achieved their improvement without harming the commercial interests of the Corporations. In a statement accompanying the report, the Minister of Transport, Mr. Boyd Carpenter, points out that the public has benefited both from improved services on the established routes and from the network of new services being operated. These cover many additional points, but also include new types of services which have been developed directly as a result of the initiative of the independent companies. He particularly commends the inclusive tour services, in which passengers pay an inclusive charge, for air transport, hotel accommodation and, in some cases, motor coach tours as well. These tours, he says, are attracting to air transport a large number of people who have never before had occasion to fly, and should therefore be of lasting benefit to air transport development. Other new developments to which the report makes special reference include the "all-freight" services, which are likened to tramp shipping and it is felt that they "may well in the long run prove to be of real value in fostering the development and expansion of British civil aviation", and the short cross-Channel routes designed to link with motor-coach services and so to provide "a cheaper though less speedy and less comfortable through journey to Continental centres than that provided by existing direct normal scheduled services."

Without Prejudice

DISMISSING A WORKER FOR MAKING FALSE CHARGES

EMPLOYERS' RIGHT UPHOLD
(FROM OUR LEGAL CORRESPONDENT)

IT is, perhaps, in the nature of things that persons with a grievance and applying to the authorities for the redress of the same are inclined to exaggerate it. But excusable exaggeration is one thing, and a completely false statement made with intent to injure another person and without any foundation in substance and in fact is quite another. What we are concerned with is this. Suppose that other person to be an employer against whom false and injurious allegations have been made by a workman in a letter of complaint to the labour authorities, what remedy, if any, has the employer against the workman? Of course, there is the law of libel; but the occasion was privileged, being in form a request for the investigation of a complaint, and in any case a manual worker from a financial point of view is not worth powder and shot, generally speaking, so we must rule out libel. But can the employer dismiss the workman for making the complaint? Bearing in mind the not inconsiderable number of allegations made before Tribunals and labour authorities which eventually turn out to be completely false, the question is an important one and we will investigate it, doing so first on the general principles of the law of Master and Servant which are completely binding on the ordinary law courts and which are still the guide though not the inflexible mentor of the Industrial Tribunals.

In a recent issue of *Capital*, we enumerated the five primary duties of an employee, breach of any one of which, except it be on a trifling scale, will constitute misconduct such as to entitle the employer summarily to dismiss. We set them out again as a refresher. They are (1) obedience. (2) care. (3) fidelity (4) honesty, and (5) punctuality. The question is, can you dovetail the writing of a petition containing a false, baseless and damaging charge against an employer, and its presentation

by the employee to a third party, into any one or more of these five categories. The answer is that you can, not as you may think under (3), fidelity, but under (1), disobedience. "Disobedience," says Mr. Barwell in his authoritative work on Master and Servant, "is sometimes styled 'insubordination'. On ultimate analysis the two words have much the same meaning. But, perhaps, the word 'disobedience' is more often reserved to describe an act, whether of omission or commission which runs counter to an express order or direction; whilst 'insubordination' more often than not is used of a course of conduct amounting to deliberate defiance of the master's wishes." There you have the letter of the law. Nevertheless it implies, one thinks, that before an employer could wisely avail himself of the extreme penalty of dismissal, he should be in a position to prove not only that the charge was baseless and false but that the workman himself had no bona fide belief in its truth. If the employer cannot prove that, he should determine the employment by notice or payment in lieu of notice.

The whole topic may be summed up in the words of that great judge Lord Esher M. R., where he stated the rule of law to be that "where a person has entered into the position of servant, if he does anything incompatible with the due or faithful discharge of his duty to his master, the latter has a right to dismiss him." These are wide and general terms and as such open to the objection that they are often difficult to apply to the facts of a particular case. For how are we to define conduct "incompatible with... duty"? The answer brings us back to the five specific duties, enumerated above, which a servant owes to his master. The conduct must be in breach of one or more of those five duties, in order to justify dismissal. And, though oddly enough the writer has not been able after a long search to find any actual reported case on the subject, it is with confidence submitted that to publish to a responsible authority, serious charges against his employer which are to his knowledge false would, at common law, be conduct justifying instant dismissal.

At common law. But the position under the Industrial Disputes Act is very different in that the Tribunals have the right in any particular

case in the interests not only of the master and servant involved but also of capital, labour, and even the community at large to disregard the hitherto inflexible rules of common law in favour of new equitable (so-called) standards based on natural justice or, as some may think, on expediency, appeasement, and peace at any price. Nevertheless, although the latter three principles seemed very much to the fore in the earlier days of the Act, when no one, employer, servant, union or Tribunal had any definite rules and doctrines upon which to work in its administration, the Tribunals, ably officered by men of the highest judicial standing, have now evolved a new set of principles, which, though still fluid, is becoming more and more static, as a standard by which any particular dispute will be decided. Those principles and that standard are the common law, tempered and if necessary varied by new equitable considerations. In regard to the disciplinary control of the management of a company or business over its staff, no one knew with any certainty what those equitable considerations, upon which a Tribunal could interfere with such control, were until the decision in the famous *Buckingham and Carnatic Company's* case, in 1952. But we know them now, and every new-comer to commercial life in India should digest them thoroughly.

This is the gist of the matter. The power of the management to direct its internal administration, which includes the enforcement of discipline of the personnel cannot be denied; but with the emergence of modern concepts of social justice that an employee should be protected against vindictive or capricious action on the part of the management which may affect the security of his service, this power has been subjected to certain restrictions, but at the same time undue interference by a tribunal with administration and management should not be encouraged. It is thus open to a tribunal to examine the findings of the management on the charge of misconduct to assure itself that there is evidence to support the finding and that the decision of the management is a possible view on the evidence before it. In such a case the tribunal should refrain from substituting its own judgement for the judgement of the management, and in such matters the tribunal does not act like a court of appeal but rather as a supervisory body exercising what would ordinarily be regarded as powers of revision for correction of basic errors which go to the root of the matter and of perverse findings. What it amounts to is that a management, not being an impartial body but being on the contrary to an extent the judge in its own case, the State has empowered the Tribunals to interfere with the management's decision where that decision is vindictive, capricious or where the trouble has been provoked by the conduct of the management itself. The result therefore is that the decision of the management in regard to charges against an employee will not prevail if (a) there is want of bona fides, or (b) it is a case of victimisation or unfair labour practice or violation of the principles of natural justice, or (c) there is a basic error of facts, or (d) there has been a perverse finding on the materials.*

Bearing these principles in mind, let us now consider the facts. They relate to the dismissal of one Anil Kumar Basak and the relief, if any, to which he was entitled. He was a machine man of the B. P. M.'s Press. He had written a letter to the Labour Commissioner complaining against the management and making charges against it. These allegations ranged from the sublime to the ridiculous. They included the very grave charge that the managing authority had threatened the workman with murder by goondas to be employed and paid for that purpose, that one of the directors of the press had threatened him with jail by instituting a false charge of theft and tailed off to a complaint that the manager, when the workman had injured his thumb on duty, did not express any sympathy for him. Upon this the management instituted an inquiry, informed the workman of the facts and of his alleged misconduct, gave him full opportunity to explain his conduct and finally dismissed him.

The case came before the Industrial Tribunal, West Bengal, at the instance of the Press Employees' Association on their claim that the workman's dismissal was in violation of natural justice and that he should be reinstated or compensated. Now, you will realise the vital importance of the *Carnatic* case and of the principles it lays down. "Our duty," said the Tribunal, "is to examine the findings of the management on the charge of misconduct, to assure ourselves that there is evidence to support them, and that the decision of the management is a possible view of the evidence before us. We would not be justified to substitute our judgement for the judgement of the management, for we do not sit here as a court of appeal.... it will be necessary to see whether the management acted bona fide, whether they wanted to victimise the employee for his union activities and whether the punishment is unduly severe." The tribunal found in favour of the management and confirmed the dismissal without compensation. So we know now that the bringing of baseless and untrue charges by an employee against his employers, and made to the labour authorities with a view to bringing his employers into disrepute with them, is conduct subversive of discipline such as to justify dismissal.

*Buckingham and Carnatic Co. Ltd. (1952. L. A. C. 490).

One of the largest telecommunication engineering organisations in the British Commonwealth **Standard Telephones and Cables Limited** is engaged in the research, development, manufacture and installation of all types of communication and control systems. Concerned with every aspect of telecommunication engineering, the Company is in an unrivalled position to undertake, within its own organisation, the co-ordinated systems-planning of complete communication projects involving inter-dependent systems of various types.

"Standard" productions include:—

- Telecommunication Line Transmission Equipment
- Radio Broadcasting Equipment
- Radio Communication Equipment
- Air Radio Navigational Aids
- Supervisory and Remote Control Systems
- Railway Communication Apparatus
- Railway Control Equipments
- Telephone Cable
- Sound-Reinforcement Systems
- Public and Private Telephone Systems

"Standard" telecommunication systems serve society on land, at sea, and in the air. In the realm of aviation, "Standard" radio equipment flies in many of the world's leading aircraft, including the *Vickers Viscount* illustrated above.

A DITCHER'S DIARY

be far distant when there will be room for only three motor-car manufacturers in the whole American market.

I was an interested visitor the other day to the exhibition of West Bengal's handicrafts now being held at 11A and 11B Esplanade East as part of the All-India Handicrafts Week organised by the Union Government's Handicrafts Board. The exhibition was inaugurated by the Governor on Saturday last, and of course he used the occasion to refer to the fine achievements of Bengal's varied handicrafts in the past and their near-moribundity in the present. I found that this exhibition was very much like the others of the kind I have seen before—a collection and wide assortment of highly attractive products laid out with reasonably good taste. But when I looked closely at the price-tags, I suddenly became aware of the alarming lightness of my purse. A small clay horse, for instance, demanded a goodly sum of money before it was prepared to cross the counter. Many articles which took my fancy I merely ran my eyes over without touching. No wonder that the finer specimens of this country's handicrafts enjoy a patronage that is more often aesthetic than material. People buy them only when they must—as presents on social occasions like weddings or birth anniversaries; otherwise they mostly lie stored away in godowns to accumulate dust until the next exhibition comes along when they are cleaned up and put on display again. It is not surprising that the industry is perishing from its own high prices. It is all very well to have design centres—the Union Government proposes to have four of them in different parts of the country—but it would be better still to devise ways of reducing selling prices.

It was disappointing to learn from an answer given by Dr. Monomohan Das, Parliamentary Secretary to the Ministry of Education, in the Lok Sabha the other day, that the Government has not yet made any decision on the fate of foreigners' statues in public places. I can see no good reason why the tasteless products of an age which was far too fond of commemorating even the most mediocre personality should remain inviolate. The silly craze for statues was never a feature of purely Indian life, and there will be few among the present generation of Indians or foreigners who would not welcome some move to clear up the rubbish. And why restrict attentions to the statues of foreigners; were there not also too many Indians commemorated by the same means in an age which seemed to know no better? Perhaps India escaped lightly. A visit to the towns of Germany or Austria will show just how much worse the problem might have been had the invader been of some other nationality. Some sort of clean-up would seem to be long overdue and the sooner it is carried out the less chance there will be of India losing some of the many irreplaceable monuments to her own history in an excess of nationalistic zeal. After all, it would be foolish to assert that none of the men whose statues are at present standing in public places were true friends of India just because they were foreigners. Future generations may be able to get the various characters into better perspective, but perhaps action should not be delayed that long. I feel that it is time all statues more than fifty years old were called upon to give an account of themselves before an impartial panel of artists and historians. As an example of the sort of objective fairness which might be aimed at, the panel could be referred to the two statues standing at each end of London's Whitehall, one of Charles I, the other of Oliver Cromwell, the man who had him beheaded.

The recent inauguration of commercial television in Britain does not seem to have been an auspicious one. After such a protracted wrangle it is not surprising. The chief argument used against commercial programmes was that they would be vulgar, tasteless and destructive of the high standards so carefully fostered by the B.B.C. It seems that in its determination to avoid the slightest suggestion of these stigmas the whole experiment has fallen over backwards and that the viewer has been left with the feeling that for all the difference it makes he might just as well watch the B.B.C. programmes, which at least have the virtue of not being interrupted by advertising boosts, however discreetly put over. All this is a pity. There is far too much at stake now for the commercial interests to permit their new medium to plod along in this emasculated form. The danger is therefore that there will now be a reaction the other way and that justifiable restraint could be lost in the process. The hope that some middle course can be steered between the brashness of the American system and the stuffy sedateness of the B.B.C. might be forgotten altogether in the desire to put some punch into the commercials. I can see a fruitful field for endless bother here and while it is going on standards in commercial broadcasting could be irretrievably lost. Although it is time the monopoly of the B.B.C. was broken the Conservative Government was probably wrong in yielding to the strong advertising pressure groups and introducing commercial television when there was little popular demand for it.

Sir Donald Anderson, Deputy Chairman of the P. & O., in an address to the International Banking Summer School at Oxford, has done something to explain why his company is spreading its activities by building oil tankers and by going into the air charter business. He complains that while air transport has been subsidised all along, the shipping industry, at least in Britain, has to stand squarely on its own feet. "We do not fear greater speed, superior caviare or more beautiful air hostesses" he said, "what we are frightened of is lower fares." Generally the effect of competition from air transport has been "to discourage shipping companies from building new passenger ships in a number of trades, but to generate a considerable proportion of new traffic on others." Open competition is desirable, but as Sir Donald sees it competition from air transport is "essentially a sword of Damocles" which might at any moment drop on a particular trade with the direst consequences. "The likelihood of the sword dropping," he said, "is incalculable because of the essentially capricious nature of the fares charged by air transport to its passengers. These may quite suddenly be reduced by 10 percent or 20 percent, regardless of whether the operators were making a profit or a loss beforehand, because the dominant feeling among air operators has always been that to increase their business is more important than to reduce their financial dependence on their taxpayers." Sir Donald has made it clear that he is talking as a shipping man. But this did not mean that the shipping companies were not interested in air transport. On the contrary, British shipping had been prevented by law from engaging in the greater part of the air transport business. "This," he said, "we regard as wrong, for we believe that our business is overseas transport by whatever means are the best at any particular time." He maintains perhaps rightly that the shipping industry is the only one which has "the knowledge, the organisation, the capital, and the wish to handle this newer form of the same problem—how to move people and goods from where they are to where they wish to be."

Company Meeting

THE JAY ENGINEERING WORKS LIMITED

ALL-ROUND PROGRESS:

SIR SHRI RAM'S REVIEW

The following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of The Jay Engineering Works Ltd., at the Annual General Meeting of the Shareholders of the Company held at Calcutta on 21st September, 1955:—

Gentlemen,

We are meeting almost after a year, and I am glad to say that the past year has been of continued greater success and greater service, which is evident from the figures given below:—

Particulars:	Year ending 31-3-54:	Year ending 31-3-55:
Sales (in spite of reduction in prices in 1954-55)	Rs. 1,87,37,729/-	Rs. 2,23,95,049/-
Profits	" 16,31,020/-	" 18,78,517/-
Payment to Labour	" 46,84,106/-	" 54,27,552/-
Number of Workers	2,403	2,639
No. of Schools & Students in Embroidery and Tailoring Schools	Students—4,000 Schools — 72	Students—8,000 Schools — 120
Centres for Sales and Service	712	781

The Balance Sheet, Profit and Loss Account and the Directors' Report have been in your hands for some time and with your permission I will take them as read.

I will now mention a few special features of the year. The most important and in consonance with our past policy was a further reduction in the price of our sewing machines from Rs. 200 to Rs. 175 on the 1st of December, 1954. You will no doubt remember that it was only on the 1st of July, 1953 that we had reduced the prices from Rs. 220 to Rs. 200.

Our prices are about 60% less as compared to the well known makes available in India.

Needle Plant

The Tariff Board, while recommending the removal of protective duty, also suggested that we should put up a Needle Plant, and the Industries Ministry, when conveying this to us, suggested that we should put up a Needle Plant. We are glad to say that we have received a licence for putting up a Needle Making Plant. The orders for machineries have been placed with a reliable firm, and I hope I will be in a position to tell you next year, that we are now making and supplying our own needles; in fact, the only part of sewing machines which up to now was not made by us.

Protective Duty

We are glad to say, and perhaps with some pride, that the protective duty from Sewing Machines was removed during the course of this year, but we are grateful to the Ministry of Commerce and Industry that to protect the indigenous industry from imports of cheaper varieties they have restricted the imports.

Excise Duty

Not only was the protective duty removed but actually when announcing the Budget proposals for the year 1955-56 the Hon'ble Minister for Finance had proposed an Excise Duty of 10% on sewing machines. This was a great shock to the infant industry of sewing machines. I am, however, glad to say that on the representation of sewing machine manufacturers, both on big scale, and on small scale basis, the Finance Minister appreciated that the sewing machine was not either an article of luxury or of consumption, but an instrument of earning their livelihood by tailors and poor class women. He also appreciated that this industry was providing means of livelihood to thousands of people working either on their own on cottage industry basis, or working for the big scale industry in the country. We are also very grateful to Hon'ble Dr. B. C. Roy, who appreciated our difficulty, and helped us in our difficulty. I am glad to say that the Excise Duty from the sewing machines was removed.

I am also glad that the Hon'ble Finance Minister finally levied instead of 10% on sale value, a fixed duty of Rs. 5 per table fan and Rs. 10 per ceiling fan, which has avoided a lot of difficulties and misunderstandings, and we are grateful to the Finance Minister for this.

Exports

While our production has gone up and the sales have also increased for all our products, but due to increased demand in the country, so far as sewing machines are concerned, much to our regret, we had to restrict the export to foreign countries. We, however, hope with our steadily increasing production now, to again increase our exports.

As I said last year, the Industries Ministry have created an Export Promotion Council for studying the

foreign markets and advising exporters. I have no doubt that in course of time they will prove very useful, and we on our part will do everything to make it successful and take full advantage of their services.

Increased Production

I have said above that our production is steadily increasing, and while the average production of sewing machines last year was 6,476, in the month of August last, in spite of fewer working days, we produced 9,241 machines.

Due to our steady expansion we need much bigger area of land, than is available in the present site. We have visited a number of sites to which place we could remove a part of our factory and relieve congestion here. Nothing in this connection has yet been finalised.

Factory At Chhindwara

Partly on account of difficulty of space and mainly to reduce cost, we are putting up a factory for making Bhilawa Enamel, instead of in the factory itself, at Chhindwara, a Bhilawa collecting centre in C.P.

Our requirements of timber for various purposes, either for our sewing machines tables, covers, bases, etc. or for packing purposes having greatly increased, we are putting up a small saw mill at Chhindwara, which is a very big timber centre. We hope this will result in a good deal of reduction of costs.

We are also grateful to the Development Wing of the Industries Ministry for time to time helping us by lending the services of foreign experts got under T.C.M. Scheme. In many cases their advice has been of great help.

Helpful Conference

Since we last met, we invited the Managers of all our Branches, as well as all our agents and sub-agents in the month of March. About 700 people came in this conference. We made very satisfactory arrangements for their board and lodging. We had free and frank discussions with them about their problems and our problems and we invited their free and frank criticisms about our ways of working, about the quality and the defects of our products, and what sort of improvements etc. they would like us to make.

They were taken round the Factory and every process and every part and its function was explained to them. It was only after they had spent a lot of time in the Factory that they realised the enormity of the problems, the amount of work that has to be put in, in making a sewing machine of quality and they also realised the difference between a cheap and a good machine, and they made extremely useful suggestions and we are grateful to them.

It was our first experiment on these lines and it certainly was a very great success.

Higher Dividend

You will have no doubt noticed with pleasure that with the permission of the Industrial Finance Corporation of India, we have increased the dividend this year to 12%.

Section 23A

While on this subject, I might tell you that in the new Budget, as finally approved by the Parliament, the definition of Section 23A has been so considerably modified which may create serious difficulties in the way of our paying back our debts to the banks or even to the Industrial Finance Corporation, or build-

ing up Reserves for future expansions. The changes were: that if 60% of the share capital was held by 5 or fewer persons, the Company had to pay 60% of the profits as dividend and in certain circumstances even 100%. I am glad to say that on the representations made to the Finance Minister, he has agreed to give exemptions under certain circumstances, and we have also applied for the exemption from the new Section 23A.

Electric Fans

You will be glad to know that our production of Electric Fans also has considerably increased. Not only in Sewing Machines and Hurricane Lanterns are we the biggest manufacturers in the country, but I believe, during the last few months we have been the biggest manufacturers of Electric Fans also.

Like many other articles, Electricity is no longer a luxury and it is our intention to produce a cheap table and a cheap ceiling fan which we may be able to produce on mass production basis, and we will try to sell a table fan for, say, about Rs. 60 and a ceiling fan for about Rs. 100, so that even a worker in a factory or the lower middle class people, and clerks may also be able to buy the same.

Like all our other departments, the expansion of our Tool Room could not keep pace with the demand on the same, either from our manufacturing section or from our friends outside for the supply of tools and jigs and gauges. We are trying to expand it as fast as circumstances permit.

Good Advice

As I said last year, our suggestions scheme is going on very satisfactorily and some time extremely good suggestions are received, which are of very great value.

Our Statistical Quality Control Department is also going on, and with the help of the unit formed by the Indian Statistical Institute we are expanding our work in this direction, and are trying to get the greatest benefit from the advice of this unit.

Capital-Labour Relation

I am glad to say that the Planning Commission have very rightly realised the importance of good capital-labour relations which are absolutely necessary for the satisfactory carrying out of the Plans of the country. Meetings were recently held in the Planning Commission between the representatives of Government, Labour and Capital, and it was realised on all hands that steps should be taken to remove all causes of friction and steps should be taken to improve the relations. I hope and pray that much good will come out of the deliberations of this tripartite conference, and it's Committee.

Arbitration

During the last many years various Tribunals, High-Courts, and Appellate Tribunals have given decisions on various matters, and surely by now it should be possible for the authorities, in consultation with the parties concerned, to lay down some sort of norms, and some system of easy solution, and arbitration so that both Labour and Capital may be able to give their undivided attention to their work, and have peace of mind.

While on this subject, I am again happy to say that our relations with all our colleagues, from the highest officer to the smallest worker, have been very friendly and good, and I hope and pray that they will go on improving with the time.

We are glad the 2nd Five Year Plan is of much higher dimensions—we in our humble way will do all we can to make it a success.

Comparative Wages

Some Industrialists in Bombay compare their wages with wages paid elsewhere. They forget that the Industrial Worker in Bombay is the most highly paid in India whether it is due to his better ability or harder work or otherwise I do not know.

But comparing wages paid in Bombay with other places will be as unfair as comparing wages paid, say in U.S.A. with those paid in India and we still claim that our worker is the most highly paid.

Our General Managers, Shri B. S. Agarwal and Shri T. R. Gupta had gone to Europe on Company's work. They and Mr. Holtz, our Development Officer, met with a serious motor accident. Thank God Messrs. B. S. Agarwal and Holtz escaped injury. Our Shri Gupta's leg was badly fractured near the knee joint. After return to India, when his leg had been in plaster for a few days, suddenly his wife died. We are all extremely sorry and I have no doubt you will join me in extending our sympathies to him.

Appreciations

I cannot close my remarks without conveying my gratitude to all my colleagues, right from Bishan Swarup Agarwal and T. R. Gupta to everyone concerned, for the loyal and devoted service they have put in, and I hope and pray that when we meet next year we will be able to give better account of our working.

Company Meeting

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

CHAIRMAN MR. E. H. HARE'S SURVEY

Speech by the Chairman, Mr. E. H. Hare, at the Forty-fourth Annual General Meeting of the Company on the 26th September, 1955.

Gentlemen,

It gives me much pleasure to welcome you to this, our first Annual General Meeting since the Company was converted to a Public Company.

With your approval we will take the Notice convening the Meeting, the Report of the Directors and the Accounts which have been circulated, as read and the Secretary will now read the Auditors' Report.

Since the close of the financial year to which the Accounts now before you refer, Mr. D. G. Albright has resigned from the Board after having served your Company for thirty years. In his place Mr. J. K. Hill, who brings to his new appointment wide knowledge of your Company's business gained over some twenty-eight years' service, will be joining the Board from the 1st October.

The Accounts having been in your possession for some time now, it is not my intention to comment individually on each item.

I believe, however, that this would be an appropriate opportunity for me to give you, briefly, some idea of the overall financial policy which the Board of your Company conceives it to be their duty to follow in the best interests of the shareholders under general trading conditions as they prevail in these present times.

You will have noted from the "Schedule of Fixed Assets" which accompanies the Balance Sheet that the book value of this particular class of asset amounted to no less than Rs. 3 crores 55 lakhs. Furthermore, under "Current Assets" on the Balance Sheet, Stocks of Raw Materials, Manufactured Goods, etc., figure at close upon Rs. 9 crores.

In a highly competitive industry such as the tobacco industry the main essential is that the finished product—the cigarette—should reach the consumer in first-class smoking condition and should give no valid reason for complaint regarding the quality of the package or of the contents.

Plant and Machinery

In order to attain that perfection of product it is necessary to maintain the Company's Plant and Machinery at a high state of productive efficiency, involving, in many instances, the periodic replacement of existing Machinery by types of later design and better performance.

No less important to the quality of the final product is the contribution made by the standard and quality of the raw materials—leaf tobacco and the varied types of wrapping materials—used in the production of your Company's cigarettes.

The maintenance of adequate stocks of raw materials and of the necessary Plant and Machinery to process them alone demands a considerable degree of liquidity, but the problem is not limited merely to the maintenance aspect of the matter.

Since the War, owing to inflation, it has been necessary to provide for replacement, at ever increasing cost, of stocks of raw materials consumed and of plant and machinery that has become obsolete, and this has been done by appropriation of the necessary amounts from taxed profits.

You will see that on the Liabilities side of the Balance Sheet under "Reserves and Surplus" appear two items, Fixed Asset and Stock Replacement Reserves—and General Reserve.

The former Reserves reflecting the policy to which I have just referred represent the amount which, having regard to changes in the price level, should, in the opinion of the Board, be retained towards maintaining that part of the real capital of the Company represented by Fixed Assets and Stocks, whilst General Reserve has been built up to provide for future expansion, as you will appreciate that in a business such as that of your Company a comparatively modest increase in the volume of sales calls for a considerable increase in the investment in leaf tobacco, materials and stores.

It is in the light of that explanation that further appropriations from profits to these two Reserves, as mentioned in the Report of the Directors, have been made.

Despite increased costs of labour and materials and the continuing heavy burden of corporate taxation, the Profit figure for the year under review shows an increase over that of the previous year, attributable in the main, to increased volume of sales.

Catering for All

It is, as I am sure you are aware, the aim of your Company to cater for all classes of smokers and we take pride in the very wide price range of brands of cigarettes which, through an efficient selling organisation and with the helpful co-operation of a multitude of traders throughout the length and breadth of the Union of India, your Company is enabled to offer.

Whilst the members of the Taxation Enquiry Commission are to be congratulated on the speedy and comprehensive manner in which they carried out the very complicated task which was laid upon them, it was a great disappointment to your Directors that no material change in the structure was recommended in so far as Tobacco Taxation was concerned.

The taxation of tobacco products is a fruitful source of revenue to most Governments throughout the World but the form and application of that taxation call for careful and expert thought on the part of the Revenue Departments of the Governments concerned, since it is a form of taxation in which the yield to Government is almost entirely dependent on the ability and willingness of the smoker to contribute by continuing to smoke.

There can, of course, be no question of challenging the right of a Government to tax tobacco products but I would emphasise the view I have always held, that in fairness to the consumer and with a view to ensuring the maintenance of a sound revenue produc-

producing these materials can guarantee continuity of supply and the desired quality at competitive prices, that policy will be continued. I cannot emphasise too strongly the importance to Indian industry of exercising the strictest control over the standards of its products and I am pleased to find that the Indian Standards Institute is taking a keen interest in this matter.

Your Company maintains and is expanding a Research Department where, amongst other activities, experts continually inspect and analyse the raw materials used in the manufacture of all our products.

Your Company's relations with its labour force have been satisfactory during the past year and the provision of amenities additional to those already available is constantly under review by the Board.

The progress of your Company's business is closely bound to the continuing economic prosperity of this country and it is heartening to see the steps that have already been initiated by Government and those that are contemplated in the second five-year plan, to provide to the remotest villages the means by which those who dwell and work there can share in that prosperity.

It would be unwise to venture at this stage a firm forecast of how the current year's trading may develop but I can tell you that the volume of sales for the first five months of this financial year show a satisfactory increase over the same period of last year.

In these circumstances, the Directors have felt justified in declaring an interim dividend of 2%, free of income tax, payable on 17th October, 1955 out of the profits of the current year ending on 31st March, 1956 and I may say that the Directors propose, provided the profits so justify, to declare interim dividends in September and March of each year, leaving their recommendation as to a final dividend (if any) until the results for the full year are available.

I now beg formally to move the adoption of the Report and Accounts for the year ended 31st March, 1955 including the payment on the 17th October next of a final dividend of 4% (free of income tax) on the Issued Ordinary Shares of the Company.

I will now ask Mr. Reeve to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the Accounts, it will be a convenient time to do so.

Designed to produce 20 million mega units of Penicillin every year, the Rs. 2-crore Hindustan Antibiotics Limited, is Asia's newest Penicillin factory. Spread over an area of 200 acres, near Pimpri, 9 miles from Poona, Hindustan Antibiotics is the result of close co-operation, and financial and technical assistance which the Government of India received from the United Nations International Children's Emergency Fund and the World Health Organisation.

Hindustan Antibiotics use highly specialised production methods in processing Penicillin. The preparation of the seed, culture of the mould, fermentation, evaporation of liquid and refrigeration form the most important stages for the production of this wonder drug. Precision electric drive is of utmost importance at each stage.

G. E. has supplied over 100 Electric Motors, ranging from 5 H.P. to 350 H.P., and electric controls for the supply of compressed air, chilled water, mixing of pumping, refrigeration and other processes vital to the production of Penicillin.

G. E. Research and experience have produced precision electrical equipment for installations like the one at Pimpri, which are extremely important to the progress of the nation's health.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

POSITION CONSIDERABLY IMPROVED

INCREASED TRAFFIC RECEIPTS

MR. D. E. WEBB'S SPEECH

The Annual General Meeting of the Calcutta Tramways Company, Ltd., was held on 19th September, 1955 at 1, Queen Victoria Street, London, E.C.

Mr. D. E. Webb, F.C.A., the Chairman, who presided, said:—

Gentlemen.—The accounts we present to you today show the working results of the year to the 31st December, 1954. During that period I am glad to say we had few interruptions to our services, and, as a result, we have been able to strengthen the Company's liquid asset position which was seriously weakened by the disturbances of the preceding year. It has been a period of marking time; strict economies were imposed and no expenditure was incurred which was not necessary for the efficient day to day running of the undertaking. In consequence the results before you today show a considerably improved position on those which I set before you at this time last year.

Turning first to the detailed Revenue Accounts, you will see that traffic receipts have risen by £128,000 over 1953, though they are still £40,000 below the 1952 figures. Working expenditure has increased by some £43,000, of which the greater part is accounted for in increased payments to the employees in India. After charging London Office Expenditure, expenditure on Development Account, and setting aside £80,000 for Renewals Account, the balance carried to Revenue Appropriation Account amounted to £189,639, an increase of £78,000 over 1953.

Change in Accounting System

In the General Revenue Account, there appears a new charge under the heading "Development Account." It is the intention of your Board to charge to this account for the future all expenditure in re-equipping and developing the existing undertaking which otherwise might have been charged to capital. The only exception will be when further outside capital is required for an extension of the undertaking, then the assets representing such increased capital will be shown, as in the past, in the Balance Sheet. The effect of this step in the future will be that no addition to Fixed Assets on the Balance Sheet will appear other than where a major extension of the undertaking requiring additional capital has been carried through. The additions shown this year are in res-

pect of the re-alignment of Esplanade, and this project has now been completed.

As a result of this change in accounting certain expenditure which in the past has been capitalised will now be written off in the year in which it has been incurred. If, as a result of this, after charging taxation, Debenture Stock Interest, and the full £87,157 for Shareholders' Account, there should be shown a loss in the Revenue Appropriation Account, this loss would be made good by a transfer from the Special Reserve Account. This step has been taken on the suggestion of and in full consultation with Government. They felt that, unless major extensions were undertaken, all expenditure, whether involving improvements or not, should rightly be treated as maintaining the existing undertaking. As a result of the foregoing, any increase in the Special Reserve, which you will recall accrues to the benefit of Government if they exercise their option to purchase in 1972, will be represented by an increase in net liquid assets.

Insufficient Funds for Improvements

In the Revenue Appropriation Account £78,000 has been set aside for United Kingdom taxation and, after payment of Debenture Stock Interest and crediting the full amount of £87,457 to Shareholders' Account, there is a balance left to transfer to Special Reserve Account of £10,398.

This amount of £10,398, together with the expenditure of £3,356 on Development Account, represent in respect of this year the only sums available for the modernisation and improvement of the undertaking. Such sums are insufficient to cover the necessary expenditure on improved rolling stock, revised track layouts and the latest equipment for the workshops and sub-stations of this great undertaking. Any increase to these figures can only come from an increase in fares. And yet we are still unable to propose such an increase because the political extremists in Calcutta still take any opportunity to stir up trouble and civil disturbances. How long this state of affairs will continue one cannot foresee, but, until the confidence of the public is restored, with the knowledge that law and order will be maintained, we should be doing a disservice to Calcutta in presenting these extremists with such an opportunity.

The amount credited to Shareholders' Account, added to the balance on that account brought forward from last year, amounts to £204,000 out of which £5,532 has been placed to a Second Debenture Redemption Account, £6,875 was required to pay the Preference Share Dividend, and £21,000 was paid to the Ordinary Shareholders in March as an Interim Dividend of 3% free of tax. It is now proposed to pay a Final Dividend of 4½% free of tax and carry forward the balance of £139,809.

Your Board decided to recommend this increased Dividend for two reasons.

In the first place, the Ordinary Shareholders have had no increase for many years to meet the rising costs of living which are symptomatic of the inflationary times in which we live. Such an increase is more than due to them when one realises the very large increases in wages which all our employees now receive compared with pre-war, and the benefit which the whole travelling public of Calcutta receive every day in being able to travel at pre-war cost.

Secondly, under the agreement with Government entered into in 1951, the annual amount set aside in the Shareholders' Account is available for and payable only to the Shareholders, and any balance on that account will, in 1972, be payable to them in addition to the purchase price. It was necessary to build up a substantial balance on this account for the protection of the Preference Shareholders and the redemption rights of the Second Debenture Stockholders.

Balance Sheet Items

Turning to the Balance Sheet, there are only two points to which I would call your attention. Of the £80,000 put to Renewals and Replacements Account, only £35,484 was spent. This follows our endeavour during this period to curtail our expenditure to a minimum in order to improve our cash position. This, however, cannot go on, and in the current year we shall be spending more than our full £80,000. This expenditure will continue to increase in the future. Secondly, I would draw your attention to the total of some £485,000 showing as Tax Reserve Certificates and Cash under Current Assets. This looks a large sum and it is something which the Union leaders always bring forward when they formulate their demands. I would emphasise the following points:—

(a) Your undertaking is of necessity a cash business. There are, therefore, no Sundry Debtors in the normal course of trade.

(b) When disturbances occur the source of cash immediately dries up, whilst our normal expenses continue. In any period of unrest when our cars are off the road our cash resources are depleted at the rate of about £100,000 a month.

(c) Once that money has been lost we cannot make it up afterwards by working harder. It has gone for good.

(d) During a time of unrest cash ceases to come in, but our creditors still have to be paid. These amount, including taxation, to more than £250,000.

It will be seen therefore, that, although the figure for cash and Tax Reserve Certificates looks impressive, it is, in fact, the very minimum on which an undertaking of this size can go forward with any confidence into the future. It is necessary to strengthen this position still further.

A Remarkable Penny Fare

We have this year included on the last page of the accounts certain statistical information which we felt might be of interest to Shareholders. One remarkable point comes out of these figures, an unsubsidised public transport undertaking in the year 1955 can carry its passengers for 2½ miles for a fare of 1d. and make a profit. I think this says a great deal for free enterprise.

You will have seen from the Report of the Directors that during the year we asked Mr. F. L. Perkins to join us as a Director of the Company. Mr. Perkins is a Partner of a leading Firm of Solicitors and has had great experience both at home and abroad. We feel fortunate in obtaining his services and have already made use of his knowledge on numerous occasions. Later you will be given an opportunity of confirming his appointment.

Current Year's Results

As to the future, the current year so far shows results very similar to those under review. As I have mentioned before, however, expenditure on such items as track and overhead maintenance and renewal is increasing very considerably, and we shall not be happy until we can see the way clear to put sums to reserve in the future commensurate with this expenditure.

Our staff, whilst still continually under the threat of being called out on a token strike for one reason or another, often for reasons entirely dissociated from the working of this undertaking, have rendered good service, and we hope that they are appreciating a period during which they have lost no wages through being called out on senseless strikes which benefit nobody.

Our executive staff have given their usual unstinted service and the mere fact that it is usual should not let it become accepted as a matter of course. Your Company is greatly indebted to them and we, as a Board, intend to look after them in the future as I hope we have been able to do in the past.

The report and accounts were adopted.

Chairman's Speech

INDUSTRIAL FINANCE CORPORATION
OF INDIA

CHAIRMAN MR. K. R. K. MENON'S REVIEW

The following speech was delivered by the Chairman, Mr. K. R. K. Menon, at the Seventh Annual General Meeting of the Shareholders of the Corporation held on 17th September, 1955.

Gentlemen,

I have pleasure in placing before you the Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1955. This task should have fallen on Shri P. C. Bhattacharyya, whom you all know, as he presented the Annual Accounts and the Report for the year 1953-54. He was also Chairman of the Corporation during the entire period of the year under review. This was a difficult period for the Corporation, and I am sure, I am voicing the feelings of all of us who are assembled here today when I say that the Corporation has laid itself under a deep debt of obligation to Shri Bhattacharyya for the most efficient and effective manner in which he discharged his onerous duties as Chairman, in spite of the fact that he was an official Chairman, in spite of the fact that the Railway must have left him with very little time to devote to the affairs of the Corporation. It is my first pleasant duty, therefore, to convey to Shri Bhattacharyya the grateful thanks of the Shareholders and of the Board of Directors of the Corporation for his valuable services.

Before I proceed to the other items on the Agenda I have to refer to the sad demise of our esteemed colleague Shri H. C. Captain who was a director of the Corporation from its early stage. His wise counsels were of immense value to me in joining me in expressing our deep sorrow at his untimely demise and conveying our sympathies to the bereaved family. I would also mention some of the more important changes that have taken place in the Board of Directors of the Corporation. I was nominated Chairman, in succession to Shri Bhattacharyya, on the 6th August, 1955. Shri Sonalker, the Managing Director, retired on the 7th June, 1955 and was succeeded by Shri H. C. Venkatesubrah. To Shri Sonalker I express the thanks and good wishes of the Corporation.

The first item on the agenda is the consideration of the Annual Accounts and the Report of the Board of Directors on the working of the Corporation for the year ended the 30th June, 1955. Printed copies of the Accounts and the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

Satisfactory Year

The working of the Corporation for the year ended the 30th June, 1955, was, on the whole satisfactory, judging from the number of applications for loans received as well as the amount of loans sanctioned by the Corporation, particulars of which are furnished in the Report. Our gross profit for the year, subject to provision for taxation, was Rs. 24.70 lakhs, and is higher than that for the previous year by Rs. 2.51 lakhs. In fact, it is the highest earned by the Corporation since its inception. I should add in this connection that this year also no interest has been charged on the advances made to the Sodepur Glass Works Ltd., and interest on certain accounts which are considered doubtful of recovery has been taken to the Interest Suspense Account. You will observe from the Profit & Loss Account that the interest so taken to the Interest Suspense Account amounts during the year to Rs. 2.45 lakhs as compared with Rs. 1.37 lakhs during the previous year. The increase of Rs. 1.08 lakhs is due to a careful review of the present position of our loan accounts as a result of which the Directors considered that it would be prudent to take the interest on a few more accounts to the Interest Suspense Account in addition to those interest on which was so taken during the last year. I must, however, point out that though the position regarding our gross profit is satisfactory, we have had to call upon the Government this year to pay us a subvention to meet the entire guaranteed dividend, amounting to Rs. 11,25,000/—, on the share capital of the Corporation, as against a sum of Rs. 4,06,363/14/- which was the corresponding figure for the previous year. The main reason for this is that this year we have considered it necessary on a review of our loan accounts in consultation with our Auditors, to transfer a sum of Rs. 15 lakhs to the Reserve for Doubtful Debts, as against a sum of Rs. 5 lakhs which was all that we transferred to this head last year. This brings the total provision under this head of Reserve Account to Rs. 20 lakhs and this does not include any provision for possible loss in the account of the Sodepur Glass Works Ltd. You will observe from the Balance Sheet that the estimated loss in this account will be in the neighbourhood of Rs. 50 lakhs for which provision have to be made from our future profits.

Defaults Position Improves

A reference was made in my predecessor's speech last year to the defaults made in the payment of principal and interest. I am glad to mention that the position regarding defaults during the current year shows some improvement. The percentage of the companies defaulting as well as the amount defaulted shows marked reduction. It is only in the case of a very small number of companies that defaults have been due to their unsatisfactory financial position; in the majority of cases, the defaults were of a casual nature and the Corporation, after careful consideration of the circumstances of default in each case, has dealt with the parties sympathetically, and granted postponements for payments of principal and/or interest wherever this was found possible.

You will observe from Appendix "E" to the report now presented to you that we have attempted, for the first time, a brief review of the development of industries in this country, particularly in the fields in which the Corporation has advanced loans. It is hoped that this review, which has been done in implementation of a directive issued by the Central

Government, will be found useful and instructive, and an improvement on the purely statistical statement we furnished in Appendix "E" to our last Annual Report.

A reference was made by my predecessor, in his speech at the last Annual General Meeting, to the negotiations that had been taken in hand regarding the Sodepur Glass Works Ltd. After consideration of all the aspects of the case, the Board of Directors came to the conclusion that this factory should be sold as early as possible. A Negotiating Committee was appointed by the Board with Shri Bhattacharyya as Chairman, for exploring the most satisfactory terms for the purpose, and, on the recommendation of this Committee, the Board have decided to sell the factory to Messrs. Asahi Glass Company Ltd. of Tokyo. The main terms and conditions of the sale are that the vendee will pay Rs. 62 lakhs as price of the assets of the Glass Works, in instalments spread over a period of 17 years together with interest on the unpaid balances at 3½ per cent. Further, the vendee company will form an Indian Company immediately to take over the assets and work the plant so as to be able to bring the factory into production early next year. The Asahi Glass Company has the reputation of being one of the largest and most efficient glass manufacturing concerns of the world today, and we confidently expect that they will be able to make a success of this venture.

A reference has been made in the Annual Report to certain companies whose assets the Corporation had to take possession of. The specialised nature of the work done by the Corporation and the need for sympathetic treatment of borrower concerns was dealt with by my predecessor in the speech made by him at the last Annual General Meeting. I need only add that the cases referred to above are receiving the careful consideration of the Board of Directors, and it is hoped that a satisfactory solution regarding them will be found before long.

I must now invite your attention to one or two items in the Profit & Loss Account for the year. You will find therein that a sum of Rs. 1.49 lakhs is shown as having been written off on account of loss on the Corporation's building project. At an early stage after the inception of the Corporation, it was felt that a suitable building should be constructed to house the office of the Corporation at Delhi. Accordingly, a site was purchased from the Government, plans, estimates etc. were prepared, and tenders were invited for the construction of the building. However, it was felt on a subsequent reconsideration of all aspects of the matter that the scheme should be dropped, and that other arrangements should be made for suitable office accommodation for the Corporation. The amount spent on architects' fees etc., has therefore had to be written off. Luckily, we were able to re-sell our plot to Government at the same price at which we bought it.

New Finance Act

You are aware that Section 23-A of the Income-tax Act has been substituted by a new Section 23-A

under the Finance Act, 1955. As a result of the substituted Section, the Companies in which the public are not substantially interested have to pay super-tax unless they distribute dividends to the extent of 60 per cent. of the total income as reduced by the amount of income-tax and super-tax payable by them in respect of their total income as also any other tax levied under any law for the time being in force. Discretion has, however, been vested in the Commissioner of Income-tax to reduce the minimum amount of dividend required to be distributed under this Section under certain circumstances. If companies which are engaged in the manufacture or processing of goods, shipping, mining or generation or distribution of electricity or any other form of power, are dissatisfied with the decision of the Commissioner of Income-tax, provision has been made for reference to a Board of Referees to give the Companies opportunity of being heard. Some of the Industrial concerns to whom the Corporation has given financial assistance are likely to come under the purview of the above Section and the Corporation has addressed a circular letter to all the borrower companies to ascertain from them how far this new Section will adversely affect their capacity to repay the instalments of loans advanced by the Corporation. On receipt of their replies, it is proposed to consider in what manner the Corporation can assist the borrower companies in the matter of obtaining exemption from the operation of the new provision in the Income-tax Act.

It has been mentioned in our Report that the Bill further to amend the Industrial Finance Corporation Act, 1948, was introduced in the Lok Sabha on the 12th April, 1955. The Bill has since been passed by both the Houses of Parliament and has received the assent of the President. The Central Government have notified that the Act will come into force with effect from the 18th September, 1955. The amended Act has brought about certain alterations in the structure of the Corporation mainly in regard to the Chairman and the Executive Committee.

Audit Report

A reference has been made in our Report to the audit of the accounts of the Corporation for the first time by the Comptroller & Auditor General of India under the provisions of Section 34 of the I.F.C. Act. You may have observed from the Audit Report that it has raised a number of vital issues regarding the working of the Corporation. The Board of Directors gave their earnest consideration to all the matters arising out of the report and submitted to Government their views on the various issues and also gave detailed replies to the points brought out in the Report. In view of the interest and public criticism that the Audit Report has evoked it would normally have been in the fitness of things if we had placed before you our observations on the various items included in the Report, but we have been unable to do so as we have been advised that, as the Public Accounts Committee's report on the Audit Report has not yet been considered by Parliament, it would not be in order for us to place before our shareholders our comments and observations on the Audit Report. I would like, however, to assure them that no efforts will be spared by the Corporation to remove whatever short-comings there may be in its working.

Before resuming my seat, I would like to convey my thanks to my colleagues on the Board of Directors for their co-operation and guidance in all our deliberations. I would also like to convey on behalf of the Board and on my own behalf, our thanks to the Managing Director and the staff of the Corporation, both here and in the branches, for their loyal and devoted work during an exceptionally difficult year.

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

SPECIALISATION IN ATOMIC RESEARCH

(FROM A SPECIAL CORRESPONDENT IN THE U.K.)

THE number of powerful companies announcing their intention of entering the field of industrial atomic research continues to increase, among the latest being the Murex Company, one of the foremost of British metallurgical concerns. As could be expected, this company is to concentrate its new activities upon "the metallurgical aspect of atomic power." It is, however, interesting to observe that all the enterprises busying themselves with atomic industrial developments, emphasise that specialisation is to be their aim. This avowal is in accordance with modern trends, and one which finds its most conspicuous evidence in the building industry, where sub-contracting is practically universal. But specialisation by manufacturers of capital equipment of the atomic variety falls into a different category, and it is clear that the successful co-ordination of the activities of all firms participating in nuclear energy pile construction is going to present unfamiliar problems. The different participants, for example, will not be at the same stages of achievement, and planning will have to allow for departure from original conceptions, as fresh knowledge comes to hand; and also for modifications in the light of experience—where there are no precedents to afford guidance.

Atomic industrial enterprise necessarily requires the recognition and handling of entirely new features. One of the great differences between the atomic industrial age now coming into being, and the previous industrial epoch, is that in the former research is made co-equal with other activities from the very start. In the 19th century research occupied virtually no place in British industry. In fact, it has come to have significance only during the past 35 years, and then but slowly. But the companies which are resolving to explore the field of atomic energy are all setting up their research departments from the outset, where the work contemplated ranges from the formation of libraries and systematic abstracting to continuous experimentation with pilot plants. It is obvious, therefore, that if some of the atomic problems on the industrial side are as yet too gigantic almost for comprehension, a far more creative and informed approach to this second industrial revolution is being made than was the case with the first.

Classification of Literature

The literature on atomics is already so extensive that its handling, storing and accessibility is causing anxiety and will cause much more in the future. Some of the difficulties are similar to those which have confronted the chemical and other industries for a considerable period. Much of the congestion of research records arises from duplication of matter filed. Scientific knowledge, like a bad joke, has a knack of going round the world and returning home again in a disguised form. The filing clerk cannot be expected to recognise and deal with these repetitions. Constant supervision, even of a not very highly qualified kind, is too expensive and, moreover, extremely risky. Everyone who has been connected with intricate research work knows that the missing link which is being sought is frequently found in what, to untrained minds, would be thought as wholly unlikely sources of reference. As a consequence, the scientific worker who looks upon his work as a vocation would prefer to be overwhelmed with material rather than to risk the throwing of a clue. If the reforms which should be undertaken in order to make research on the documentary side more economical and providing a clearer prospectus is not evident, it is possible that improvements in methods of indexing, which are also a crying need, are to hand.

In this connection, interest has been aroused among research librarians by the system just adopted by the U. S. Bureau of National Standards, which is based upon the conception known as the multi-dimensional or "multi-aspect". This application is at present thought of mostly with regard to records concerning instrumentation—a subject of ever growing importance to modern industry, with its emphasis upon fineness of measuring and weighing. Here the progress of knowledge has been severely handicapped upon the literary side by reason of poor classification and a failure to discern a sufficiency of relevant facts. The new method of indexing involves a radical change in the use of a punched card system, and it is claimed that one set of index cards can accommodate a collection of 18,000 references. To carry out a document search, the investigator removes from the file the card containing the index terms associated with the type of references he is seeking. "These cards are placed on a plastic reading illuminator which properly aligns them. Any holes common to the cards will then be seen as small spots of light. The positions of these visible bright spots identify references common to all the selected cards, which are therefore the references sought." The system is inexpensive, and although fundamentally simple is yet ingenious, and is worth studying by industrialists and others whose documentary records are likely to be extensive.

Closure of Two More Cotton Mills

Signs of uneasiness in the British cotton textile industry continue to increase. The latest happening of a disturbing nature is the decision of the Manchester firm, Balstone, Cooke and Rayonese Ltd., to close down two cotton mills. These mills are being closed to meet the recommendation of

the bank which has been providing finance. A number of other companies operating cotton mills are also nearing the exhaustion of banking facilities, and it is evident that, in their cases also, the question must soon arise of closing down, of finding fresh means of obtaining credit, or of finding the usual channels, or of being afforded special treatment by the banks. The mills now closing are not very large, 450 workers being affected; but it has to be noted that the number of mills which have been closed or partly closed during the current year now amounts to nearly 80.

That there is at present plenty of alternative employment to which dismissed workers can turn eases the situation from the national point of view. The directors of the mills now closing have advised their former workers to find employment elsewhere and to be sure that "it is not in cotton." This is pessimistic, but, on the other hand, it may be noted that the mills are not being offered for sale. The company is also interested in the rayon industry, so it is possible that the directors think that the mills may come in useful for this side of the business, although some of the smaller rayon companies are also finding themselves in difficulties. Their troubles proceed not so much from foreign competition, which, however, is increasing, as from an inability to keep pace with the development programmes being carried out by the leading British rayon concerns.

Wool Carding Techniques

The British Wool Industries Research Association was, through members of its staff, a contributor of a large number of the papers read at the recent International Wool Textile Research Conference held in Australia. The subject of the most topical interest discussed was the Autocount, which expresses a new principle in carding technique. Radioactive isotopes were first used for making this type of equipment, but eventually it was decided to use light-rays and photo-cells. The new process for producing shrink-resistant wool, based on pre-treatment with peracetic acid, was also reviewed at the conference. This process offers substantial advantages over treatment by performic acid and papain.

The Farnborough Air Display

Measured by the number of workers employed—just under a quarter of a million—the British aircraft industry is still relatively small but it is also one of the most active. This year's air display at Farnborough, Hampshire, again reached new records, whether measured by the ground space occupied by exhibits, the number of these, or the strength of the inventive spirit manifested. Total exports of aeroplanes and their parts are expected to be much the same in value during 1955 as the average of the previous two years. The great difficulty in expanding exports is high costs. The industry also, in a trading sense, suffers from its very progressiveness, as one model succeeds another in swift succession, and each has the promise of a fresh development in the near future. Technical advances outrun the pace at which marketing of aero products can be achieved, except, of course when aeroplanes are required for military purposes, and even then selling and buying is often a feverish business. However, the prophecy is for a steadier demand on the civil side, especially for the latest type of airliners.

Artificial Leather Cloth

Artificial leather-cloth, that is, a substitute for leather, made by a fabric with coating of polyvinyl chloride, continues to make headway and it is now used for upholstering some of the most expensive makes of new cars. Information upon how leather-cloth compares in use with leather over a period of years seems to be non-existent. One would have thought that a fabric having a plastic spreading would be at a serious disadvantage in comparison with a material having a natural integrity like leather, at least as far as wearing qualities are concerned. Nevertheless, leather-cloth panels many of the latest British Railways' coaches and is also used for the backs of seats—where wear is severe. Undoubtedly, the cloth has secured striking successes in its use for protective clothing in the chemical and other industries where industrial hazards from acids, etc. are considerable. The fact that various "fillers" can be mixed with vinyl compounds in order to obtain industrial amenability, or lower costs, gives to polyvinyl chloride a wide range of possible uses.

According to a brochure issued by Courtaulds, viscose rayon staple is by far the most widely used man-made fibre in the medical and hospital fields. It has gained considerably at the expense of cotton since 1950. Viscose rayon is less expensive than cotton and has gained from the declaration of the Ministry of Health in 1953 that it is as safe as cotton for use in operating theatres and other anaesthetising locations (the reference being to risks caused by the presence of static electricity). Rayon is often blended with cotton for surgical uses, but in certain cases the medical preference is for rayon alone. An example is rayon lint, which is claimed to be superior to cotton lint, "being more pliable, softer and kinder to the wound and more absorbent. It may be noted that tubing made from woven polythene fabrics has been satisfactorily developed for experimental application in arterial surgery. (Polythene yarn is obtained by the polymerisation of ethylene gas under high pressure.) Fabrics made from various artificial fibres including nylon, Vinyon N, Orlon and Dacron have been used for the making of artificial arteries. These experiments are said to have been promoted by the great increase of thrombosis in the modern world, especially in the United States.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND CONDITIONS EASIER

Wednesday, 28th September.

CALL for accommodation has generally slackened off throughout the past week, and funds are now returning from upcountry areas. The money market is considerably easier than it has been for the past few weeks. The chief reason for this is the improvement which is taking place in the dispersal of sugar stocks now that transport conditions are improved. There has been no change in the requirements of the other industries, but advances against grains and seeds stocks are returning. The increase in the treasury bill tender this week is due to the slacker conditions which are asserting themselves. The interbank market continues to be quiet. The call rate is unchanged at 3 percent.

Only a small amount of business has been reported from the bill market during the week, with a few tea and gunny bills in evidence. Remittance has been in good demand. The principal exchange rates quote: sterling T.T. and O.D. is 53 3/32d, three months' sight bills is 6 11/32d; four months' sight bills is 6 13/32d. Sterling continues to strengthen and the dollar quotation has fallen to Rs. 4801.

Bullion was steady. Silver improved from the previous week's level of Rs. 165-15 to Rs. 169-2, quoted today. The rate of forward delivery was quoted at Rs. 169. The price was unchanged at 79½d. in London and at 90½ cents in New York. Gold ruled firm in sympathy with silver and the price advanced from Rs. 95-14 to Rs. 97-2. The sovereign at Rs. 62-1 showed a gain of 2 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 27th September, 1955, totalled Rs. 1,82,00,000. The average rate of acceptance fell from Rs. 2-8-6 to Rs. 2-8-2 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 38 percent. Tenders for Rs. 1,50,00,000 of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 3rd October, 1955. During the week ended 23rd September, 1955, Government of India Treasury Bills for Rs. 8,69,50,000 were sold in favour of the Reserve Bank of India.

Declines of Rs. 3.93 crores and Rs. 7.66 crores in the total note issue and notes in circulation to Rs. 1,312.11 crores and Rs. 1,285.69 crores were outstanding features of the return of the Reserve Bank of India for the week ended 23rd September, 1955. Notes held in the Banking Department consequently increased by Rs. 3.72 crores to Rs. 26.41 crores. The contraction in currency was covered by reducing rupee securities by Rs. 4.97 crores to Rs. 488.95 crores. Deposits of the Government of India and other Government accounts fell by Rs. 3.02 crores and Rs. 1.19 crores to Rs. 58.94 crores and Rs. 12.24 crores, while balances of commercial banks rose by Rs. 5.64 crores to Rs. 58.53 crores. Balances held abroad were Rs. 1.40 crores higher at Rs. 49.63 crores and investments increased by Rs. 37 lakhs to Rs. 49.61 crores. Other loans and advances fell from Rs. 30.81 crores to Rs. 26.01 crores, of which advances to scheduled banks against usance bills totalled Rs. 8.68 crores (Rs. 12.62 crores). These advances amounted to Rs. 192.98 crores since 1st January, 1955. Ways and means advances stood at Rs. 1.82 crores (Rs. 65 lakhs).

The statement of the position of scheduled banks for the week ended 16th September, 1955, discloses Demand and Time liabilities at Rs. 599.15 crores (Rs. 7.53 crores on account of borrowings from banks) and Rs. 412.62 crores (Rs. 3.30 crores) compared with Rs. 599.76 crores (Rs. 9.01 crores) and Rs. 413.25 crores (Rs. 2.84 crores) respectively in the previous week. Cash has decreased by Rs. 63 lakhs to aggregate Rs. 33.04 crores, while balances with the Reserve Bank have increased by Rs. 99 lakhs to stand at Rs. 49.27 crores. There is a rise of Rs. 2.40 crores in investments to Rs. 383.37 crores. Advances and bills discounted at Rs. 605.46 crores reveal a drop of Rs. 4.51 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.1 percent and 59.8 percent against 8.1 percent and 60.2 percent.

The return of the State Bank of India for the week ended 16th September, 1955, shows a rise of Rs. 4.11 crores in total deposits to Rs. 215.97 crores. Investments in Government Securities and other authorised investments are up by Rs. 97 lakhs and Rs. 15 lakhs to Rs. 98.84 crores and Rs. 10.37 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have fallen by Rs. 2.13 crores to aggregate Rs. 103.14 crores. Cash and balances are, in consequence, shown at Rs. 20.57 crores or Rs. 3.42 crores higher.

The provisional figures of foreign sea and air-borne trade of India on private and Government accounts during August, 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 56.28 lakhs, re-exports Rs. 32 lakhs (transit trade negligible); Imports Rs. 44.79 lakhs (transit trade negligible); total trade Rs. 101.39

lakhs. Treasury: Exports of currency notes Rs. 8 lakhs, others negligible. Imports of gold Rs. 1 lakh, of currency notes Rs. 77.1, others nil. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and with the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 11.80 lakhs.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during August, 1955 are as follows:—Merchandise exports—Rs. 29 lakhs; Exports to Eastern Pakistan Rs. 13 lakhs; exports to Western Pakistan Rs. 15 lakhs, and exports to other countries Rs. 1 lakh. Merchandise re-exports—Nil. Merchandise imports—Rs. 164 lakhs; Imports from Eastern Pakistan Rs. 146 lakhs; imports from Western Pakistan Rs. 18 lakhs; and imports from other countries—negligible. Total trade—Rs. 193 lakhs. Trade in Treasure—Negligible. Balance of Trade—The total value of exports fell short of imports by Rs. 135 lakhs.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 30-9-55.				
Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

THE ACHIEVEMENTS OF THE I.M.F.

RE-ORIENTATION OF POLICY NECESSARY

By Sarup Nath

IT is with sober satisfaction that the latest annual report of the International Monetary Fund, recently presented to the Board of Governors at Istanbul, records the developments in the world economic situation in 1954. It refers to the "persistence of favourable payments balances throughout 1953 and 1954," and to the strengthening and stability of world economy, as well as to certain elements of uncertainty. This article attempts to assess, on the basis of the various factors—positive and negative—how far the Fund has succeeded in achieving its ideals. The value of world trade increased in 1954 by 4.5 percent over that in 1953. The following table gives the figures, from 1952 onwards, of world imports and exports, excluding those of the U.S.S.R., China (Mainland) and non-reporting countries of Eastern Europe:—

	1952	1953	1954
Exports, f.o.b.	73,835	74,766	77,358
Imports, c.i.f.	80,131	76,466	79,258

Source: International Financial Statistics, July, 1955.

That this improvement came in the face of U.S. recession, or "rolling readjustment" as Americans choose to call it, is a sign of a gradual return to normal economic conditions. The stability in the prices of U.S. imports, increased competitiveness of some non-dollar countries in comparison with the U.S.A. and the continuance of U.S. Government expenditures abroad have all contributed to this result. Not only did the volume of international trade increase but also the reserves position of non-dollar countries continued to improve. The reserves of these countries rose by approximately \$2.2 billion in 1954 as against \$2.6 billion in 1953. The comfortable reserves position is reflected in the figures of foreign capital flow into the U.S.A. The U.S. Department of Commerce estimates that foreign investments in the States rose by \$3.2 billion in 1954 to a new high of \$26.8 billion. Of this, \$11 billion was in long-term investment—a gain of \$1.8 billion during the year.

This improvement in the international payments position of the non-dollar world made possible the relaxation, or even virtual elimination, of exchange restrictions. The considerable simplification of payments arrangements by the U.K. and West Germany has been an important step towards multilateral trade and payments. The U.K.'s action was particularly significant as it related to a currency widely used in international transactions. "Fairly satisfactory progress" was made also in the reduction of discriminatory exchange practices, in countries like India, Pakistan, New Zealand, Ceylon, Italy and the Netherlands. Capital control was also relaxed a little. On the whole, says the IMF report, world trade is less subject to restrictions than it was a year ago.

Use of Fund's Resources

The use of the Fund's resources by member countries in 1954 provides yet another proof of the strengthening of their international payments position. Net drawings by members from the International Monetary Fund in 1954 and 1955 are shown in the following table which also gives 1953 figures for comparison:—

	1953	1954	Jan.-Apr., 1955
Member Drawings (Gross)	229.5	62.5	8.7
Repayments through:			
(i) Repurchases	—162.8	—210.0	—57.6
(ii) Other countries' drawings	—157.6	—	—
Member Drawings (Net)	—90.9	—147.5	—48.9

Source: International Financial Statistics, July, 1955.

It will be seen that more amounts were paid back into the Fund than were drawn from it. The gross figure for 1954 was in fact much lower than that shown above; it includes a stand-by credit of \$22.5 million granted to Mexico but not yet drawn upon. Thus, in I.M.F.'s own words, "...The record can be regarded as satisfactory." Apparently, the world is well on the way to the fulfilment of hopes expressed when the Fund was established: the arteries of commerce, hitherto clogged by artificial barriers of exchange restrictions, are beginning to clear up. However, no one will deny that much leeway has to be made up before the goal of full multilateralism can be reached. In the Fund sense, convertibility is synonymous with the acceptance, by member countries, of obligations under Article VIII of the I.M.F. Agreement. At present, only 11 member countries—all in the dollar area—are fully subject to the obligations of this Article. The remaining 45 countries are taking advantage of the post-war transitional arrangements of Article XIV which permits the retention of exchange restrictions subject to annual consultations with the Fund. None of these countries has as yet found it possible to move to Article VIII. It is only when these countries feel strong enough to do so and to dismantle exchange restrictions that full convertibility will come about.

That stage is not yet in sight. World economy still continues to be subject to elements of uncertainty which may place many countries in a precarious position. The Fund report admits this and enumerates the various factors making for uncertainty—U.S. Government expenditure abroad which is supporting the balance of payments of

the rest of the world; accumulation of surplus stocks of export commodities with primary producing countries; farm support policies; and the U.S. tariff policies. Already the sterling area has suffered a set-back; its gold and dollar reserves have dropped rather fast, and Mr. Butler has had to resort to drastic credit control measures to remedy the situation. All that the Fund can do in the circumstances is to continue to hold periodical talks with member countries and impress upon them the desirability of following economic policies, internal and external, designed to bring about a progressive removal of exchange restrictions. As stated in the sixth annual report on exchange restrictions, "the immediate task of the Fund is to help maintain the momentum towards convertibility which now exists in many leading trading countries, and to work with other countries, particularly those in a relatively weak balance of payments position, to overcome their difficulties and facilitate the transition to a multilateral trade and payments system."

Views of Member Countries

Meanwhile, the I.M.F. should set about reforming itself and create conditions which will encourage greater confidence among its members. The Fund has been criticised in the past for its onerous scale of charges for the use of its resources; its interference with members' domestic policies; lack of objectivity and rigidity in its existing policies, etc. Some of these criticisms emanate from its weighted vote system. This gives the U.S. bloc 47,760 votes in the Executive Board of the Fund, which is larger than that commanded by any other country or group of countries. Writing in the *Financial Times* earlier this year, "Lombard" calculated that as against 47,760 votes of the U.S. bloc, the Commonwealth and the OEEC group together have 49,595 votes. This however assumes a situation for which there is no warrant; namely that the interests of the Commonwealth and the OEEC countries are not competitive. The heterogeneous economies of these two groups of countries rule out the possibility of a common front on major economic problems. Coupled with the weighted vote is the over-Americanised staff of the Fund. The belief that the U.S.A. herself applying tariff and trade restrictions rather than exchange control to limit her imports, is using the I.M.F. as an instrument for furthering her own trade policies, is gaining ground. Worse still, that the Fund is a cat's paw to the State Department in Washington. The Fund's decision to expel Czechoslovakia is a case in point. One reason for this decision was the Czech failure to consult the I.M.F. before devaluing her currency in 1953, although the Fund itself has been a passive spectator to the activities of some Latin American countries with regard to multiple currency practices quite contrary to its professed ideals. Also, while the Fund did not accept Czechoslovakia's plea of security and self-preservation as sufficient grounds for her failure to supply economic data, that august body granted the U.S.A. *ex post facto* sanction to apply exchange restrictions against another member country, viz China, for those very reasons.

In the light of all this, no country would like to submit her domestic economic policies to the close scrutiny of the I.M.F. Professor Lionel Robbins vigorously pleading for the Fund's right to comment on and take account of members' domestic policies says: "The idea that you have an effective international credit institution without the power to say boo to a goose was not good sense." But the Professor does not plead equally forcefully for purging the I.M.F. of all its political and other prejudices. It is true that internal and external economic policies of a country cannot be considered in isolation, and the Fund cannot be expected to discharge its functions effectively if the relevant domestic economic policies are shut out from its purview. But the Fund should conduct itself in such a way as to allay all fears as to its intentions. The task it has to perform is sometimes unpopular, and so needs tactful handling. But above all, a genuine desire to help all countries irrespective of political or other extraneous considerations should animate the Fund's activities.

New Outlook Necessary

A reorientation of the I.M.F.'s policies and outlook is called for if it is to play effectively the rôle assigned to it by international arrangement. More so in view of its insistence that all countries should remove all restrictions and move from Article XIV to Article VIII. Before taking up the obligations of the latter article, all countries would like to be reassured that the Fund takes a detached view and is not coloured by the political complexion of any one member country. Lastly, the Fund's attitude to under-developed countries also needs revision. The I.M.F. believes in the cure rather than prevention of the disease—Article VIII permits exchange restrictions only when actual balance of payments difficulties arise and not when the foreign exchange reserves are low. On the other hand, the revised G.A.T.T. agreement permits economically backward countries to impose trade restrictions not only to meet balance of payments difficulties but also to "ensure a level of reserves adequate for the implementation of their programme of economic development," and further, to help promotion of a particular industry or industries. The Fund should incorporate parallel provisions in its Articles of Agreement. Of course, in the absence of any such provisions in the I.M.F. Agreement, under-developed countries can take shelter behind the G.A.T.T. rules, but that will not add very much to the influence, prestige and effectiveness of the Fund. The only course for the I.M.F. is to take cognisance of the special requirements of under-developed countries. If it finds it possible to do so, it will have achieved much, and there will be a reasonable prospect of its success.

THE WORLD WHEAT PROBLEM

ITS FATEFUL IMPLICATIONS

By Paul de Hevesy

THE price of wheat is the most important single element in the economy of the world; for it decisively influences the prices of other grains, which in turn influence those of meat and many other foodstuffs, and these ultimately determine the agricultural price-level. If this price-level is high enough to provide the farmer with purchasing-power, then—and then only—industry, trade, and the professions prosper and full employment prevails. If it is too high, the potential consumer cannot afford to buy. What then should the price of wheat be? Whereas millions of people in certain parts of the world are in want of their daily bread, the United States and Canada are contemplating with manifest apprehension their grain crops for 1955, which promise to be particularly abundant. These crops come at a time when the unsold surpluses that have accumulated in North America are larger than ever before.

WORLD WHEAT SITUATION

	at 1st September, 1955	
Supply	Bushels	Demand
U.S. stocks	1,000,000,000	U.S. annual home consumption
U.S. new crop	1,019,580,000	610,000,000
Canadian stocks	481,200,000	Canadian annual home consumption
Canadian new crop	468,000,000	146,000,000
Australian stocks	134,000,000	Import requirements of the whole world
Argentine stocks	126,000,000	for 1955/56
French exportable surplus	93,000,000	
Total supply	3,213,058,000	Total demand
Minus:		1,656,000,000
Total demand	1,656,000,000	
Unsaleable surplus	1,557,058,000	

All these figures are necessarily tentative estimates. As to Australia and Argentina, their harvest start in October and November respectively. From their last crops, Australia exported 88,500,000 and Argentina 123 million bushels. Information in about stocks, home consumption, and crops in Russia and in the Danubian countries is unobtainable. These enormous surpluses could not be sold at current prices as fixed by the governments of the principal wheat exporting countries. Much of them could not be disposed of even if these governments were prepared to ask nothing for them except that the receiving countries should bear the cost of transport. It would baffle the ingenuity of a great statesman and economist to devise a solution to this formidable problem. In any case, it will have to be approached with the utmost skill and caution; for a landslide in wheat prices might well precipitate a major economic crisis. These surpluses would have never accumulated if planning governments had not interfered with free and open markets and maintained arbitrary prices.

International Agreement

There is an International Wheat Agreement in force that provides for a maximum price of \$2.05 and a minimum price of \$1.55 a bushel for No. 1 Northern Manitoba (at Fort William) and for other grades in proportion. The price at which Canada sells this wheat at home and exports (f.o.b. Fort William) is \$1.76. Within the International Wheat Agreement, the United States exports its wheat at the same prices as Canada, with differences only for quality and position. The aim of the chief wheat-exporting countries is apparently that all wheat prices (c.i.f. Europe) should be approximately the same, with differences only for quality. This price policy renders the Agreement ineffective. When it was concluded, the belief was that competitive prices between the maximum and the minimum would move freely on the open market. In the principal wheat-exporting countries this free movement has been prevented by governmental price-fixing. In spite of the unprecedented surpluses that embarrass all wheat-exporting countries, the minimum price of \$1.55 a bushel, foreseen in the International Wheat Agreement, has still not been reached, except in Australia and France, which, however, export only soft wheat. The obligation upon those importing countries which signed the Agreement to take up their import quotas (an obligation that comes into force as soon as the minimum price is reached) cannot be invoked because the exporting governments continue to keep prices of strong wheat above the minimum. It is perhaps by reason of this policy on the part of the wheat-exporting countries that the traditional wheat-importing countries still prefer, in spite of their high costs of production, to grow as much wheat as they can. In defiance of every sound principle of a competitive world economy, too large a part of their resources is being thus reserved for wheat production.

The present world wheat situation affords a striking proof of the impotence of the Agreement, from which the United Kingdom wisely holds aloof. It is to be hoped that its government will, as a matter of principle, stand firm against all pressure to accede to the Agreement, which expires next July.

Surpluses and Monopoly

In the exporting countries there will soon be as

much unsold surplus wheat in store as corresponds to two years' import requirements of the whole world. Since the minimum price has still not been reached, how many years' import requirements will have to accumulate before it is reached? The parity price of wheat in the United States is at present \$2.51 a bushel. Parity is a standard for measuring farm prices declared by law to be fair to farmers in relation to the prices that they must pay. American export-price subsidies range between 44 cents and 70 cents a bushel. If the United States were to grant another 21 cents of export subsidy, then, instead of exporting on the basis of \$1.76, it could export on the basis of \$1.55 a bushel, and the minimum price would thus be reached.

The most formidable monopoly in the world is that of the principal wheat-exporting countries, which maintain artificially high prices for wheat and, in consequence, for all other foodstuffs. It is true that in recent years wages have risen everywhere; but, thanks to scientific progress, costs of production have been reduced in many instances more than wages have been raised. In view of this circumstance and of the present enormous unsold world surpluses, not only of wheat, but also of course grains, rice (in all rice-exporting countries) and many other foodstuffs, the prevailing high food prices, largely due to the price-support policy of the United States and some other countries, are without justification. The unmanageable surplus of cotton in the United States is also a result of arbitrary price-fixing. For storage costs alone of farm products, the United States authorities have to face a daily bill of one million dollars. The high prices paid to the farmers in many countries can be attributed to their organised electoral strength; and many industrial strikes are undoubtedly due not to low wages but to these high prices. The whole world would benefit if the United States and the United Kingdom, respectively the greatest food-exporter and the greatest food-importer in the world, were to return, by gradual and carefully devised stages, to a free economy and an open market. If the Americans were not to interfere with farm prices any more than they do with the prices charged by their manufacturers and traders; if they were to allow the varying pressure of supply and demand to effect the reciprocal adjustment of prices, food throughout the world would in all probability become less expensive than it now is. In any case, prices of all goods would be thus brought into their proper relations.

United Kingdom

As a nation whose very existence depends on international trade, the United Kingdom should act on the principle that the cheapest and best goods must conquer all markets, including its own. As long as the consumer is unwilling to buy goods on the sole consideration of quality and price, universal prosperity cannot be attained. Unless prosperity is universal, it can neither endure nor improve the positions of the United States and the United Kingdom as world-wide commercial powers. Since the United Kingdom does not export foodstuffs, its agricultural policy has little influence on world food prices; but the competitive position of its industry would be improved if it were to buy all its food from the cheapest sources. Moreover, the economic policies of these two countries are closely watched and are often imitated by other countries. Nobody would be so ungrateful as to impugn the generosity of the United States; but a sound American agricultural policy would be of greater value to the world than all their loans and gifts.

Proof of the assertion that the American wheat prices are far too high is furnished by the fact that the Canadian farmer receives for a bushel of wheat about a dollar less than the American farmer. Thus, in 1954, for a bushel of No. 1 Northern, the Canadian farmer in North Portal, Saskatchewan, received a total of \$1.39; whereas the American farmer, for a bushel of wheat some two grades lower, at Portal, North Dakota—just across the border—received as much as \$2.38. If the Canadian farmer, with his slightly higher cost of production (due mainly to more expensive machinery and equipment) and his much lower price, makes a profit, what profit must the American farmer make?

In the United Kingdom there are about one million acres where the composition of the soil and the incidence of the rainfall are such that wheat of fairly good quality can be grown at a competitive cost. But the present policy of sowing wheat on two million acres makes it impossible to establish a price satisfactory alike to the farmer and to the consumer. The price for millable wheat received by the British farmer averages at present about £30 a ton (\$2.25 a bushel) for wheat which is being sold to the millers at £21 a ton (\$1.57 a bushel). A subsidy of £9 a ton (\$0.68 a bushel) has to be met out of the pocket of the taxpayer, who has also to bear the burden of subsidising bread to the tune of £40,500,000 a year. Yet the current market differential between No. 1 Northern Manitoba and even the highest quality English wheat is about \$0.40 a bushel. As for France, the farmer is granted and paid \$2.70 for a bushel of wheat, of which large surpluses are exported at \$1.40. The French taxpayer has the doubtful privilege of paying the difference. The prices paid to producers for a bu-

shel of their best wheat vary from \$1.50 in Canada to \$4.50 in Chile.

Price Policy

Suppose that the cost of producing one bushel of wheat ranges between 5s. (\$0.70) and 20s. (\$2.80). Suppose further that the total world requirement could be satisfied with wheat costing not more than, say, 10s. (\$1.40) a bushel to produce. In this case, if economic freedom prevails, all those, wherever they may farm, whose cost of production is higher than 10s. (\$1.40) would go out of wheat production, in any case, of wheat export. Quality and distance also would have some effect on prices; but the average world wheat price could then be neither much lower nor much higher than 10s. (\$1.40) a bushel.

The enemies of economic freedom contend that the prices of farm products, if not fixed, are subject to violent fluctuations. But there is no reason to assume that, if economic freedom were to prevail, either world demand or world supply in the principal farm products would vary much from year to year. Consequently, the prices of these products would not vary much either. It is true that the prices of agricultural products underwent sharp fluctuations in the thirties. Industrial prices fluctuated much less from year to year; but industrial output and employment were subject to considerable fluctuations. There has never been, large-scale unemployment in agriculture; only prices have risen and fallen. Conditions

markets; all are responsible for dearness in general and for dear food in particular. To maintain food prices higher than they should be—that is, higher than supply and demand warrant—is wrong in all conscience. From the general point of view, however, it is just as undesirable that prices should be too high as that they should be too low.

Necessary as it may be in times of emergency, the control of prices of agricultural products, and indeed of any product, is not only harmful in its quantitative effects, but also inconsistent with the peace-time activities of democratic nations. For the free and open market provides an international ballot by which millions of consumers are continually casting votes for or against millions of competing goods. Prices—thus maintained, raised, or lowered—regulate both production and consumption. Since these votes express individual preferences, the free and open market, in sharp contrast to the controlled market of the dictatorial system, represents rule by the people themselves.

Consumers

The main cause of the prevailing dearness in all commodities is not so much inflation as the avoidance of competition on the part of the producers. In point of fact, the consumers are more and more becoming the victims of a sort of conspiracy. The conspirators include farmers, manufacturers, and traders. Some of them take far too much, of which they are fiscally deprived in the end. Collusion, which aims at reducing and even suppressing competition, is rampant. Open and secret arrangements for fixing, maintaining, and raising prices of most commodities are concluded at the expense of the public. If a retailer dares to sell an article at a penny less than the fixed price, he runs the risk of offending and alienating the manufacturers and the wholesalers, who may refuse to supply him with the article in question and with other articles. Yet, the very survival of the capitalist system depends on vigorous competition both in production and in marketing; for this is the only way to produce goods of the highest qualities at the lowest cost and to sell them at the lowest prices. This policy can be fulfilled only by promoting a free world market, stable national currencies, the suppression of monopolies, and the conduct of all trade by independent merchants, whose experience and competence present a reassuring contrast to the ineptitude of public functionaries unwisely vested with mercantile powers.

EXPORT OF COTTON SEED OIL CAKE

A trade notice issued by the office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta, says that export of de-oiled cotton seed oil cake will continue to be licensed freely up to the end of December, 1955. A fresh quota of this commodity will be released from the beginning of October, 1955 for export to all permissible destinations up to the end of this year or till the ceiling is reached, whichever is earlier. Licence against this quota will be allowed freely to all exporters on shipping bills accompanied by requisite documents. The maximum quantity that an exporter will be allowed to export initially from the port of Calcutta is 200 tons, adds the trade notice.

DECISION ON SODIUM INDUSTRY

The Government of India's resolution on the Tariff Commission's report on the continuance of protection to the sodium sulphite, sodium bisulphite and sodium thiosulphate industry has been published in the Gazette of India recently. The Government have accepted the Tariff Commission's recommendation that protection to the industry may be withdrawn after expiry of the present period of protection which is up to 31st December, 1955. The Commission has observed that the imposition of normal revenue duties applicable to unspecified chemicals will meet the needs of the industry. The protective duties on the three chemicals in question have accordingly been brought to the level of the revenue duties applicable to unspecified chemicals by a notification issued separately. The attention of the industry has been invited in the resolution to the Commission's recommendation that the industry should take all necessary steps to remove the various deficiencies pointed out by consumers and endeavour, meanwhile, to adhere strictly to the tentative Indian standard specifications formulated in 1950.

WORKING CLASS CONSUMER PRICE INDEX

The Labour Bureau Consumer Price Index number for the Working Class (Base: shifted to 1949=100 except where otherwise indicated) rose in 13 centres during July, 1955. The maximum rise was recorded by the indices for Ajmer and Beawar (Base: August, 1951 to July, 1952=100) which rising by 7 points each increased to 87 and 82 respectively. The index numbers for Dehri-on-Sone and Satna (Base: 1953=100) appreciated by 6 points each to 86 and 78 respectively; for Akola, by 5 points to 80; for Jamshedpur, Monghyr, Jabalpur, Kharagpur and Bhopal (Base: 1951=100) by 3 points each to 97.81, 90.96 and 86 respectively; for Berhampur, Gauhati and Ludhiana by 2 points each to 98.87 and 82 respectively. In this group of centres, the food index increased at 13 centres, fuel and lighting index at 7 centres, clothing index at 3 centres and miscellaneous index at 8 centres. The index numbers remained stationary at 3 centres viz., Cuttack, Silchar and Mercara and stood at 101, 88 and 95 respectively.

Commodity Markets

WORLD COTTON MARKETS

INDIAN GOVERNMENT'S IMPORT RESTRICTIONS

THE decision of the United States Agricultural Department to offer for export sale on an "open competitive basis" one million bales of State-owned cotton after 1st January 1956, has caused considerable unrest in cotton circles in India, and there has been heavy nervous selling by "bulls" last week-end. Although the style offered under this sale will be 15/16" staple length, which constitutes about a fifth of the annual U.S. cotton output it is not greatly sought after by American spinners and the price factor will tend to disturb the position held so far by other styles in the Indian market. Indications are that the U.S. cotton offered will be sold at somewhat below the current minimum federal sale prices. Until then, all export sales from the U.S. will continue to be priced at five percent more than the current support price of 31.7 cents a pound plus freight.

Foreign Import

Closely on the heels of this offer come new restrictions on India's cotton imports. Deviating from the previous policy of allowing unlimited imports of sterling area cotton, the Government of India has now announced that Karnak and Menoufi growths from Egypt, Sudan styles up to XG4L and G5S and Peruvian Pima cotton of 14 staple length can be imported only up to 31st December 1955. This curb does not apply to Giza 30, Peruvian Tanguis and Lower Sudans. Nor has the position regarding the import of East African styles been made known. These curbs obviously indicate that the ground is being prepared to give the American "aid" cotton a fair chance to be tried in India. Judged by the past three years' experience India's cotton spinning industry will require about 1,75,000 bales of Egyptian, 250,000 bales of East African, 75,000 bales of Sudanese and 85,000 bales of American cotton. The comparative cheapness of some of these varieties used to figure prominently in the off-take of such styles, and U.S. recent restriction probably indicates that U.S. cotton will have the chance of covering a major quantity of the foreign cotton requirements of the Indian mills. Recent hopes of a 5.5 million bales crop appear to be slowly receding and a cautious estimate puts the new crop at around 5 million bales. There are doubts as to whether the quality has deteriorated due to the excessive rains in some parts, especially Madhya Pradesh and Madhya Bharat. Official sources estimate the carry-over from the present crop at 24,00,000 bales, and with the prospect of a considerable quantity of U.S. cotton coming in there is a distinct possibility of New Delhi raising the export quota.

Japan May Enter Export Market

The additional quota of 250,000 bales allowed for export in mid-September has raised the quantity of total exports from the 1954-55 crop to 700,000 bales. The validity for the new quota is limited to the end of the year and shippers are not hopeful of exporting any new crop cotton within this period. Apparently, the additional quota has not infused any strength to the trade, and foreign buyers do not have any additional incentive in regard to duty relief, although this was freely discussed. Of the new quota, 80 percent is for 3" staple length for which there is very little foreign demand. Japan, the United Kingdom, China and the United States continue as the principal buyers of Indian cotton, and the recent announcement of a special quota for China appears to have influenced Japan to ask for a similar quota from India. Obviously, Japan has been the biggest buyer of Indian cotton in recent years, and reports are current that Japanese firms which were operating in India before the second world war have now sought New Delhi's sanction to trade in India and export cotton to their country. Although the off-take of domestic cotton by Japan will increase considerably after the Japanese cotton houses step in, such permission will deprive the Indian shippers of a regular turnover of 250,000 bales a year. However, the Government is reported to be inclined to give permission to these firms to trade

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA (Base: August, 1939)

The Middle Class Cost of Living Indices, by groups, have now been brought up to August, 1955. As compared with July, the August Indices for Food and Clothing reveal rises of 1 point and 3 points, while those for Miscellaneous and Fuel and

in India beginning with the next financial year, on condition that they will include some Government nominees in their management. Indian interests will naturally oppose such a move as the Japanese enterprises could undoubtedly capture a good portion of the cotton export trade.

WHOLESALE PRICE INDEX DECLINES FURTHER

THE official wholesale price index (base: year ended August 1939=100) declined further by 0.4 percent to 353.3 during the week ended 10th September 1955 as compared with 354.7 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 1.0 and 8.1 percent respectively. During the week under review, the index for Foodstuffs declined by 0.9 percent to 315.2 as compared with 318.2 (revised) for the previous week, as a result of a fall in the prices of rice at Patna (—6%), gram (—4%), dal arhar (—3%) and gur at Muzaffarnagar, tea, coffee and sugar (—1% each), notwithstanding a rise in the prices of bajra (+4%) and rice in Calcutta and wheat at Amritsar (+1% each). The effect of lower prices of groundnuts in Bombay and raw jute—First and Lightnings (—3% each), rapeseed in Calcutta (—2%) and raw wool at Kalimpong and linseed (—1% each), was almost neutralised by higher prices of gingellyseed in Bombay (+2%), manganese ore (average export prices), raw silk at Malda, rapeseed in Bombay, raw jute—Jat Middles and lac (+4% each), castorseed (+3%), cowhides at Kanpur (+2%) and copra (+1%); the index for Industrial Raw Materials stood at 392.8 as compared with 393.1 (revised) for the previous week. The index for Semi-Manufactures moved down by 0.4 percent to 324.2. Items which disclosed noticeable changes were: gingelly oil (—7%), cowhides (—6%), goat skins (—5%), coconut oil in Bombay (—3%) castor oil in Calcutta, linseed oil in Bombay and mustard oil (—2% each), gingelly cake (+4%) and copper and copra cake (+2% each). The index for the Manufactures group worked out at 368.7 as compared with 368.6 for the previous week. There was a nominal rise in the price of jute manufactures, but the price of red lead paints was marked down by 3 percent. A fall of 1.4 percent to 554.2 in the index for the Miscellaneous group was brought about by a decline in the prices of cashewnuts at Mangalore (—4%), tobacco leaf in Calcutta (—3%) and betel nuts at Bangalore, chillies at Patna and black pepper (—2% each).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

Stocks and Shares

ANOTHER DULL WEEK IN THE STOCK MARKET

COAL SECTION DEPRESSED BY ESTIMATES COMMITTEE'S RECOMMENDATIONS: IRON DIVIDEND STILL AWAITED

Wednesday Evening.

THE share market has had another dull week with transactions limited and prices moving narrowly. A slightly better trend at the weekend has been reversed by today's reports of the recommendations of the Estimates Committee on the coal industry. These urged the nationalisation of that section of the industry producing metallurgical or high grade coal. This includes some of the best companies quoted in the coal share section of the market. Prices of coal shares have sagged and very little business has taken place. The better news for electric supply companies failed to compensate for the impact of the Estimates Committee's recommendations because on close examination the new concessions are found to contain a number of serious qualifications. The Indian Iron dividend is still awaited and the market tends to move in response to the various rumours current on this question.

It is now confirmed that the controlling interest in the British India Corporation, one of the oldest and largest British investments in India, has passed into the hands of Mr. Haridas Mundhra. The share improved during the week to Rs. 10-7, but has now receded to Rs. 10.

The Gilt-edged section is the only bright feature of the market at present. This is probably a reflection of the slacker conditions in the money market.

Details of the week's trading follow.

The recovery in the Gilt-edged marked reported last week was fully maintained and prices firmed up throughout the list. The undertone was steady and there was a slight increase in the volume of business. There were, however, insufficient sellers to meet the demand. Three percent Conversion Loan 1986 improved further to Rs. 80-10 to close easier at Rs. 80-9. After a considerable lapse of time, 3% Non-Terminable Paper found buyers at Rs. 80. In short-dated loans, 3% 1957 was fully steady at Rs. 99-9 and there were buyers of 3% 1958 at Rs. 99-7. In the medium dated group, 3% 1959-61 was in demand at Rs. 97-14 and 3% 1961 improved further to Rs. 99-10; 3% 1964 was taken up to Rs. 98-12 and 3% 1965 was enquired for up to Rs. 98-8. There were buyers of 1963-65 at Rs. 94-7 and 3% 1964 was asked for at Rs. 94-5; 2% 1960 was taken higher to Rs. 92-11 as was 2% 1961 at Rs. 95-9, while 2% 1962 was unchanged at Rs. 93-3-6. Long-dated loans were steady with 3% 1966-68 quoted at Rs. 91-11 and 3% 1970-75 at Rs. 87-4.

More interest was shown in Provincial loans, but business was once again confined to the new 4% issues. Four percent Saurashtra 1967 was in strong demand up to Rs. 99-5 while 4% Mysore 1967 was asked for at Rs. 99-2. Four percent West Bengal 1967 was traded at Rs. 99-15-6 while 4% U.P. 1967 was offered at Rs. 99-6. The enquiry for 3% issues was maintained but no business was reported.

First-class jute and miscellaneous Preference shares were as difficult as ever to obtain and consequently business was on a restricted scale. Amongst jute, Anglo-India were done at Rs. 119, Gourepore were taken at Rs. 103, Hukumchand at Rs. 115-8 and Howrah 'A' at Rs. 116. Lansdowne were quoted at Rs. 115, at which price there were ready buyers. In the miscellaneous group, Calcutta Electric changed hands at Rs. 12-10, Indian Iron & Steel at Rs. 111, Richardson & Cruddas at Rs. 95 and Rohtas Industries 'B' at Rs. 68-8. Burn 6 percents and 7 percents were crossed at Rs. 123 and 143 respectively. British India Corporation were marked at Rs. 138 and Indo-Burma Petroleum at Rs. 107.

In the banking section a small lot of Allahabad Bank Contributory changed hands at Rs. 174, Hind Bank were done at Rs. 27-10 and Hindustan Commercial at Rs. 10-4 and United Bank of India 'D' shares at Rs. 5-1. There were buyers of United Commercial at Rs. 47-8.

In the railway section, Bankura-Damoodar changed hands at Rs. 61-4 and Dehri Rohtas at Rs. 14-12. Shahdara (Delhi) Saharanpur were crossed at Rs. 152-8.

Elgin and Cawnpore Textiles were the two features in the cotton section and on interested buying improved to Rs. 22-8 and Rs. 9-13 respectively. Basanti were marked at Rs. 5-8, Bengal Nagpur at Rs. 9-8 and New Victoria at Rs. 1-7. Dunbar were steady at Rs. 249 and Kesoram were dealt in at around Rs. 15-14.

The recommendations of the Estimates Committee that the State should, as far as possible, take over all private collieries which "wholly or to a large extent are engaged in raising metallurgical or high grade coal" and that all new collieries should be State owned and managed under the ultimate control of the Coal Commission which should be set up immediately, depressed sentiment in the coal section of the market. Sellers appeared for most shares and buyers were difficult to find.

Here is a chart showing price movements of a representative list of shares:—

	Opening 22-9-55	Closing 28-9-55
Burrakur	14-7	14-2
Central India	7-6	7-1
Bengal	539	525
Bengal	539 c.w.	525 x.d.
Katras Jheriah	33-14	33-8
New Beerbhoom	19-14	19-10
South Karanpura	11-12	11-10
Equitable	32	31-12
Anglo-India	241	233
Birla	18-8	18-6
Budge-Budge	205	203
Delta	262	261
Howrah	29-12	29
Ganges	97	96
National	33-12	33-1

Electric supply shares were quietly steady. Calcutta were quoted at Rs. 15-5. Agra were steady at 165 and Benares at Rs. 19-8. Several transactions were reported in Jabulpore at around Rs. 15-4.

Champaran and Cawnpore Sugar met with enquiry at Rs. 33-4 and Rs. 23-8. Belsund were marked at Rs. 11-10, Carew at Rs. 12-8 and Shree Krishna Gyanodaya at Rs. 18-8 ex-dividend; U.P. were lower at Rs. 23-6.

In the engineering section, Indian Iron & Steel, after touching Rs. 39 receded to Rs. 38 on profit-taking; tonight's closing quotation is Rs. 38-4. Braithwaites were easier at Rs. 27, Britannia Engineering Old came to hand at Rs. 20-4 and Indian Steel and Wire Products Fully-paid Ordinary fluctuated between Rs. 83 and Rs. 84. Jessop & Company were marked at Rs. 53-12. Kumardhubi

Head office: HINDUSTHAN BUILDINGS CALCUTTA

What is the measure of an Industry's importance?

If a bicycle, a sewing machine, or even a hurricane lantern were shown along with a steel ingot to the man-in-the-street, he would not take a second look at the ingot. Yet, in machines, factories and buildings...in the making of the hundred things we use every day...Steel is indispensable.

Started less than fifty years ago, India's Steel Industry is to-day a vital factor in the nation's economy. It produces nearly 1.75 million ingot tons of steel at a cost that no country can equal, of which Tata steel accounts for over one million tons. Tatas plan to produce 2 million ingot tons early in the second Five-Year Plan period.

FIRST BRITISH ORDER FOR HERALD AIRCRAFT

ORDER FOR HERALD AIRCRAFT

The first British order for the new 44-seat Hand-Page Herald airliner has been placed by Air Suisse, an associate company of Silver City Airways, and a member of the British Aviation Services group. The airline is to buy a minimum of 10 Herald, valued at over £800,000 with spares, which will be used for further development of the company's coach-air-rail travel services between London, Paris and Brussels. The Herald made its first appearance at the display of the Society of British Aircraft Constructors at Farnborough this

thn: it is a high-wing monoplane with four vee Leonides Major engines, each of 870 horsepower. The chairman of British Aviation Services said that the Heralds would supplement, and eventually replace, the fleet of Dakota and Bristol lighter aircraft currently used on the airline's cross-Channel passenger services. It is expected that the first machines will be delivered in 1957.

MORE BRITISH BUSES FOR INDIA

British double-decker buses have again been ordered for service in Calcutta. They are Leyland Diesel models of a type now used by the majority of British municipalities, and will join well over 150 Leyland buses in services in Calcutta. West

Anglo State Transport, which operates bus services in Calcutta, has a fare structure believed to be one of the lowest in the world. In addition to nearly 50 Leyland Titan double-deckers already in service, it operates more than 50 Leyland Tigers and underfloor-engined Royal Tiger single-deckers, as well as a fleet of 60 Comet medium-capacity Diesel buses.

A new British bus chassis soon to be built in India by Ashok-Leyland Ltd. has just been tested for its suitability for transporting pilgrims. This vehicle was a Leyland Comet, which on its test

Comet negotiated 64 hairpin bends on a 12-mile climb—these having an average curvature of 30 ft. The Comet negotiated the hill climb, including all the bends, without going below third gear. Minimum gradients on the 12-mile climb were 1-in-15, with maximum gradients of 1-in-8. Tirupati, the starting point of the pilgrim route to the temple on the Tirupati Hills (some 3,000 ft.), is about 112 miles from the Ashok-Leyland factory near Madras. Leyland vehicles shipped from the U.K. are at present assembled at this factory.

U. S. AID FOR RIHAND PROJECT

An agreement signed in Delhi last week between the governments of India and the United States allocated \$7,844.15 (Rs. 372.5 lakhs) towards the multi-purpose Rihand Valley Development Project under the Indo-U.S. Technical Cooperation programme. The Government of India will finance Rs. 7,000 crores on the first phase of this development project, which will be obtained from the sale of 30 million worth of wheat and cotton being given to India by the U.S. as a loan. Finance Minister D. Deshmukh and American Ambassador John

herman Cooper were present at the signing ceremony. The Rihand project is a major river valley development scheme designed to speed the agricultural and industrial advancement of Uttar Pradesh, Bihar and Vindhya Pradesh States. The U.S. will finance the first phase of the project, to be completed by 30th June 1957. The second phase, a Technical Cooperation programme, will be completed in 1958. The Rs. 45.26 crore project will generate 40,000 kilowatts of electric power, mitigate flood damages in Bihar, and bring 2,050,000 new acres of land under irrigation, yielding 600,000 tons of additional foodgrain every year as well as other

WORLD CRUDE OIL OUTPUT DOUBLED

The free world's production of crude oil which was more than doubled in the past ten years is at present expanding at a rate of over 10 percent a year. In January/June this year, it totalled about 335 million metric tons, compared with 304 million tons in the first, and 311 million in the second half of 1954. This figure compares with less than 130 million tons produced in the whole of 1945. In addition, the U.S.S.R. and other communist countries produced over 39 million tons, nearly six million more than in the corresponding period last year. The rising importance of oil as a source of

energy is reflected in the fact that the free world's rate of output over the first six months of 1955 is equivalent in calorific value to rather more than 1,000 million tons of hard coal a year which is not far short of the free world's actual production of hard coal which has varied between about 1,000 and 1,200 million tons annually over the past half-

century. The biggest increase continues to come from the Middle East, where production rose by about 13 million tons compared with a rise in the

U.S.A. of about eight million tons, in Venezuela of over six million tons, in Canada of two million tons and of two million tons in the remainder of the free world. For the first time the share of the U.S.A. in the free world's total production is now less than half: that of the Middle East is now approaching one quarter.

DULL CONDITIONS IN STOCK MARKET

GILT-EDGED IMPROVE IN SUBSTANTIAL TRADING

London, 28th September.

DISTINCTLY dull conditions prevailed in the London stock exchange last week. With the exception of gilt-edged securities, virtually all sections lost ground. The uncertain economic situation and the rising flood of new capital issues were the main adverse influences prior to the weekend. The sudden illness of President Eisenhower and the consequent slump on Wall Street provided an additional unsettling factor subsequently. Business remained at a low level throughout. The gilt-edged market proved an exception, trading here being on a fairly substantial scale. The firmness of gilt-edged was assisted by the improvement in sterling in the foreign exchange market. The main feature was the advance in short-dated and medium-dated securities, which scored the biggest gains on yield considerations and on the prospect of the large Government refunding operation due early in November. The longer-dated and undated stocks lagged behind in the advance, although recording gains compared with the previous levels. The firmness of gilt-edged was not reflected in the industrial market, where

prices fell back on a broad front. The chief influence was the growing weight of new issues by industrial companies, but fears of further measures on the economic front, the Australian import cuts and the illness of President Eisenhower all contributed to the general dullness. Dollar stocks suffered severe losses. Kaffirs and coppers also fell. Oils drifted lower but held fairly steady after Wall Street's setback.

The Money Market

Credit conditions in the London money market last week were much the same as in the previous two weeks. During the first three days money was stringent, but the tightness eased and comfortable conditions prevailed later. Money rates varied from a high of 4 percent down to 2½ percent in the open market, and a certain amount was borrowed from the Bank of England at 4½ percent for the week. Bill rates hardened during the most difficult periods but subsequently eased as the credit position improved. Applications for treasury bills totalling £369,740,000 of which £280 million were allocated at an average rate of 8½ 5.14d compared with 8½ 5.52d in the previous week. This week, £280 million are offered. The Bank of England return for the week ended 21st September shows notes in circulation about £3 million lower at around £1,767 million, while bankers' deposits were about £66 higher at around £263 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 21st September shows the gold stock \$1 million higher at £21,683 million. Foreign depo-

sits fell by \$7 million but foreign investments rose to \$45 million. The Federal Reserve sold \$109 million of bills. Total discounts and advances rose by \$536 million to \$872 million, while excess reserves of member banks increased by \$160 million to \$464 million. Their daily average of excess reserves fell by \$17 million to \$825 million, while their average borrowings dropped by \$150 million to \$741 million. Business loans of the New York City banks rose by \$57 million to \$8,547 million, compared with a fall of \$14 million to \$728 million a year ago.

Stock Market Prospects

The *Investors' Chronicle* newsletter remarks that after the recent rally, the stock markets have been drifting again. It is significant that the recovery was halted at virtually the same level as the end-of-August rally, though there is no reason to read anything sinister into this. The balance of various influences weighs heavily against rising prices. Industrials have been subdued by several new issues already announced and by the thought of those still to come. On top of this, the markets have had announcements of higher raw material prices for industry and pending import cuts in Australia to digest. Add to this some evasive answers to some obvious questions put to Mr. Butler on his return from Istanbul, and it will be seen that the immediate outlook is hardly propitious for buoyant markets.

Activity on Wall Street

In domestic bonds, heavy industrial convertible issues were particularly strong last week, with some reaching new highs. Prominent with gains of up to \$5 were Inland Steel, Bethlehem Steel, Colorado Fuel and Iron and American Telephone and Telegraph new 3½. Some of the popular issues later eased slightly from the best levels. Rails were mixed, with U.S. Government obligations firm. World Bonds were neglected. Foreign bonds were quiet, with some German Nationals easing a couple of dollars or more under light offerings. A few Italians showed changes of up to a dollar either way. Norwegian and Denmark 4½ percent were unchanged to a shade higher. Japanese were mostly higher, with Tokyo City 5 percent of 1952 advancing eight points on one bond sale. In the South American list, several Brazilian 3½ percent eased about three points, with the active Chile 3 percent moving fractionally higher to 4½.

U.S. Investment Outlook

A large Wall Street house claims that investors are facing a dilemma. It points out that security prices have advanced to a point where they, particularly the best quality stocks, have probably discounted the current, and to some degree the prospective, business picture. There is little incentive to liquidate now, with stock splits, tax cuts and increased dividends in the offing. Nevertheless, the firm added, the advance since early August has been so rapid that the stock market is vulnerable to a fair sized reaction.

Vegetable Oil Market

After prolonged inactivity, demand for linseed oil expanded sharply in the closing sessions. Similar conditions were evident on the Continent and the U.K., where prices rose £1 a ton. Indian oils in bulk September-October shipment closed on Thursday with doubtful sellers at £96, at which October-November might have been bought. For BSS November-December arrival, £96½ was asked; £97 was wanted for January-April. Indian castor oil recorded a strong upward trend but trading on U.K. account was limited. The increase was attributed to strong U.S. buying and heavy local covering. For BSS October-November shipment £98 was wanted and for commercial £89 a ton, c.i.f. in drums. Offers of groundnut oil for shipment were more difficult to obtain. Near positions received attention; £106 was realised for Indian spot and for South African. Bids of £107 were asked for October shipment of Indian and there were sellers of South African September-October at £110.

World Sugar Market

Total world free market requirements of sugar are 4,690,000 metric tons, according to the revised estimate placed before the International Sugar Council in London. The previous estimate was 4,650,000 tons. The Council gave notice that Greece had ratified the International Sugar Agreement. It also took note of the decision, invoking the hardship clause, to allot reserves of 20,000 tons of sugar to the Philippines for export to co-operating countries in exchange for rice.

Freight Market Firm

The good conditions which have prevailed on the London freight market over the past 12 months have now developed into a boom under the stimulus of demand for coal from North America. The rates of increases over the past few days have been on a scale not seen since the crisis period of the Korean war. Millions of tons of coal have been booked to European countries for shipment up to the end of next year and even later. This has resulted in owners of large fleets booking employment for their vessels for the next 12 months or so at very profitable rates. The demand still continues at a high level, with orders circulating from Europe, Japan, Korea and South America, which have made long-term chartering essential to ensure good coverage. A good European grain harvest has helped to keep the demand for grain carriers at the minimum but a recent expansion of demand has now brought higher rates. Another aspect of the market is that many old and uneconomic tankers which had been priced out of their world market by the influx of super-tankers and yards have been converted into grain carriers and are able to secure full employment at very remunerative rates.

New Delhi

TWO PLANNING BODIES MAY BE SET UP

RESULTS OF MR. NEHRU'S RUSSIAN VISIT BEGIN TO SHOW

(FROM OUR NEW DELHI CORRESPONDENT)

THE first impact of the Prime Minister's recent visit to Russia is expected to be on the second five year plan. In Russia, there are at present not one, but two Planning Commissions; one dealing with the long term and other with the current planning on a yearly basis. The long-term planning is not for five years but for much longer, say, 15 years and covers different branches of industry, as well for as different parts of the country on a territorial basis. Current planning, on the other hand, is on an annual basis. It is a detailed version of the broader five year plan. This pattern is expected to be adopted in India also. Indications are that the Planning Commission will prepare the framework of the five year plan and the detailed estimates for its first year. It is likely that Professor P. C. Mahalanobis will be put in charge of preparing the long-term plan having a physical bias.

The plan-frame places the financial resources in the public sector at Rs. 4,300 crores. The Planning Minister, Mr. Gulzarilal Nanda, in a recent note circulated to members of the All-India Congress Committee, pointed out that the targets of employment mentioned in the plan-frame were unattainable with the available financial resources. He said: "On a closer scrutiny of the physical targets, it appears likely that the contemplated programme to be undertaken will give an increase of less than 5 percent per annum and produce employment opportunities falling substantially short of the 11 to 12 million jobs which had been estimated earlier." Mr. Nanda added: "It must be admitted that to set out targets of national income and employment for the next plan smaller than those already adumbrated will be unsatisfactory."

This view was upheld by the All-India Congress Committee, which refused to lower the targets of employment. Thus the estimates of expenditure in the public sector will have to be stepped up to at least Rs. 5,000 crores in order to provide for the targets of employment envisaged in the plan-frame, irrespective of the actual availability of resources. It may be added that the original departmental estimates placed financial resources at Rs. 3,000 crores, including Rs. 1,000 crores of deficit financing. On that basis, there will be Rs. 3,000 crores worth of deficit financing if the plan in the public sector is to cost Rs. 5,000 crores.

An influential section of the Planning Commission, headed by the Prime Minister, has deprecated attempts to abandon the statistical approach to physical planning. The method suggested is to prepare the plan on an annual basis. This is indicated by the Prime Minister's latest observations to the National Development Council that the next plan should be adjustable on a yearly basis. The Planning Commission may therefore prepare a detailed plan for the first year, and Professor P. C. Mahalanobis may be entrusted with the preparation of the long-term second five year plan on the Russian model, possibly with Russian assistance.

British Steel Mission

A mission sponsored by the Indian Steel Works Construction Company will arrive here on 20th October to negotiate an agreement for installing the third one-million ton steel project at Durgapur. The Company is a consortium of British steel interests who command a wide range of resources. The mission will be headed by Sir Cyril Jones. The mission will be the site selected by the British Steel Durgapur was the site selected by the British Steel Mission which visited India in the summer. The mission two sites it recommended were Bokaro in other two sites it recommended were Bokaro in the Damodar Valley area and Sindri. The Minister for Steel, Mr. T. T. Krishnamachari envisages the early development of these two places as industrial areas, with Bokaro as the site of the fourth steel works.

Dyestuffs Industry

The next meeting of the National Industrial Development Corporation will be held in Calcutta on 9th October. The Commerce Minister, Mr. T. T. Krishnamachari, will preside. The Corporation will consider a proposal for the development of the dye stuff industry in India. Sulphur from pyrites is another project which will be discussed. Dyestuffs are a very important raw material in the textile industry. They are also widely used in the manufacture of leather, paper, paints, etc. The annual consumption is valued at about Rs. 150 million. Providing for some expansion of the textile industry during the second plan, this value may be expected to increase to Rs. 200 million. At present dyestuffs manufacture is based on the imported complex and penultimate intermediates. These raw materials constitute about 70 percent of the cost of production. Very often, the foreign suppliers of intermediates are themselves engaged in the manufacture of the finished dyes. The selling prices of intermediates therefore seem to be manipulated to some extent to the disadvantage of Indian manufacturers. In the circumstances, it is essential that the dyestuff industry should not confine itself merely to the final stages of processing imported complex and penultimate intermediates, but should plan and develop the production of dyes from primary intermediates and basic raw materials.

The establishment of the dyestuff industry on sound lines is a matter of great importance from other standpoints also. Production of dye intermediates is closely linked with the pharmaceutical, explosive, plastic and solvent industries. The products thus not only contribute to the strength of national economy in times of peace but can also be readily switched over to the production of defence stores in an emergency. During the Second World War, the manufacture of some dyestuffs commenced in a small way for producing Rapid Fast Colours, Rapidoxes, Fast Colour Salts and Solubilised Vats, using imported penultimate and ultimate products. An important development took place when Messrs. Atul Products Limited, Bulsar, started in 1952 the manufacture of Acid Dyes, Direct Dyes and Sulphur Black. More recently, schemes for the production of Fast Colour Bases, Nephthols and Vat Dyes have been sanctioned. These are being implemented. The expansion of existing units is also under way.

Expansion Schemes

Although production of dyestuffs at present is based entirely on the imported complex intermediates and penultimate and ultimate products, some manufacturers are considering the manufacture of primary and complex intermediates:

1. Messrs. Atul Products Limited have schemes for the manufacture of Beta-hydroxynaphthoic acid and Dinitrochlorobenzene; some others are also said to be under discussion with their foreign collaborators.
 2. Messrs. Amar Dye-Chemicals Limited are expected to take up the manufacture of Beta Naphthol, Beta-hydroxynaphthoic acid, o-Anisidine, p-Anisidine, o-Nitroanisole, p-Nitroanisole.
 3. The Directorate-General of Ordnance Factories has a scheme requiring Nitro-benzene, Aniline and Dimethylaniline; the question whether they will produce these themselves or obtain them from other local sources to be developed is still under examination.
 4. Messrs. Indian Dyestuff Industries programme for Vat Dyes is based on intermediates which they have planned to produce locally.
- In deciding the location of manufacturing units the following are some factors, which have to be taken into consideration:
- (a) Proximity to consumers, in this case the dyestuffs manufacturers.
 - (b) Availability of synthetic nitric acid from existing sources, if any, or the setting up of its production.
 - (c) Establishment of units for the production of sulphuric acid or oleum, or their availability from existing sources.
 - (d) Proximity to the sources of supply caustic soda or chlorine, which would be required in large quantities.
 - (e) Proximity to the sources of supply of coke oven by-products and coal tar distillation products, namely benzene, toluene, xylene, naphthalene, anthracene, carbazole and pyridine.
 - (f) Other facilities, such as power, water, effluent disposal arrangements etc.

Although large quantities of benzene and toluene will be required, production at present is comparatively small. This is mainly due to the limited capacity for the rectification of crude benzol. Even for the recovery of crude benzol much still has to be done. Coke oven gases at certain places are not fully scrubbed, and at other places they are not scrubbed at all to recover crude benzol. Steps are being taken to encourage the setting up of satisfactory units for scrubbing coke oven gases and for the rectification of crude benzol into different fractions at all by-products coke ovens in the country.

Coal Tar Distillation

At present only about 60 percent of the production of crude coal tar is distilled and even this is not fully processed to recover all the naphthalene. Appreciable quantities of tar are burnt as fuel in the steel works. The requirements of naphthalene, anthracene carbazole and pyridine are expected to be substantial. This will necessitate reorganisation of the coal tar distillation industry to ensure supplies of the various distillation products. Capital investment for establishing the manufacture of intermediates and harnessing supplies of organic raw materials may be estimated at Rs. 90 to Rs. 100 million. To arrive at more precise estimates and to determine a co-ordinated programme of manufacture of simple and complex intermediates, the Government has arranged that Messrs. Montecatini of Italy will undertake a survey and prepare a project report. The advantage in selecting this firm is that it is not aligned with any Indian manufacturer of dyestuffs. Some German interests are also here, preparing a blueprint.

Sulphur Consumption

Sulphur is employed in the manufacture of acids as well as in other industries. At present, requirements for making acids is approximately 50,000 tons a year, and for other purposes about 25,000 tons a year. It is expected that at the end of the second plan the demand for sulphur will rise to a little over 200,000 tons a year. At present the entire amount is imported from abroad. With the exception of some deposits at Ladakh, there are no resources of elemental sulphur in India. Self-sufficiency with regard to sulphur may be obtained in one of two ways. The first method

is to utilise indigenous sulphur-bearing materials, such as pyrites, gypsum and hydrogen sulphide, for the manufacture of sulphuric acid. The other method is to recover sulphur from sulphur-bearing materials available within the country and distribute it to units already established for the manufacture of sulphuric acid. Neither of these methods has been employed so far, although the subject has figured in many discussions during the last five years.

One scheme has already been licensed for the production of sulphuric acid and cement from gypsum. Abroad, it is considered that the minimum economic unit should have a capacity of at least 30,000 tons a year of sulphuric acid and cement each. The scheme that has been licensed has a capacity of only 10,000 tons a year. Production of sulphuric acid from gypsum suffers from one disadvantage. Since twice as much gypsum has to be moved as the amount of acid manufactured, on economic grounds it is necessary to locate such factories near the source of gypsum. This factor restricts the applicability of the gypsum-cement-sulphuric acid method in India to a considerable extent. The other method under consideration has been that of installing pyrite burners in existing sulphuric acid plants, in order to base sulphuric acid production on two materials instead of one. It is envisaged that until an accurate estimate of pyrite resources is made, it may even be worth while to import pyrites and establish sulphuric acid units burning pyrites at port towns. However, the most recent quotation for imported pyrites is Rs. 77 a ton. Since the sulphur content of pyrites is round about 40 percent and the cost of an acid plant based on pyrites is much higher than that of a conventional plant based on sulphur, this price for pyrites will make such a project uneconomic.

Unutilised Capacity

In view of these considerations, and the fact that India already has over 40 units for the manufacture of sulphuric acid whose capacity is not utilised to more than 60 percent, the best solution of the sulphur problem appears to be to recover elemental sulphur from the available raw materials and distribute it to existing acid plants. It is possible to recover sulphur from gypsum itself provided the process is operated on a very large scale. However, the capital expenditure on such a plant, to produce 100 tons a day or so of sulphur, would be several crores of rupees. Another source of elemental sulphur is the hydrogen sulphide content of petroleum refinery gases. It is estimated that the established refineries, could be a source of about 10,000 tons of sulphur a year. Recovery of sulphur from petroleum refinery gases, however, must await a general development of the petro-chemical industries.

Recently, considerable data has been obtained on the Orkla process for the recovery of sulphur from pyrites that is operated by the Orkla Grube-Aktiebolag, Lokken Verk, Norway. This firm produced over 100,000 tons of sulphur from pyrites in 1954, with a sulphur recovery of 86.5 percent. In Norway, the pyrites also contain a certain amount of copper and the simultaneous recovery of copper reduces the cost of production of sulphur to a considerable extent. Orkla Grube-Aktiebolag have indicated that provided India's pyrites do not have a high proportion of arsenic, a recovery of 85 to 90 percent of sulphur should be possible. They say that Messrs. Pyror Limited, Bermuda, who hold patent rights for the Orkla smelting process, will be prepared to assist India in putting up a plant for the production of sulphur from local pyrites on the basis of a collaboration fee of £15,000 in cash and a royalty of 2 shillings a metric ton of sulphur produced during the first ten years of the plant's existence. Orkla Grube-Aktiebolag have also expressed their willingness to allow Government officers to study the operations in Norway and elsewhere before any final decision is made regarding the process in India.

On the basis of data supplied by Orkla Grube-Aktiebolag, an estimate of the cost of production of sulphur from pyrites has been made. It is assumed for the purpose of this calculation that the sulphur recovery plant will be located near the pyrites mines and that pyrites will be available at Rs. 30 a ton. The calculations show that the cost of recovered sulphur will not be higher than Rs. 235 a ton if the assumptions made above are valid. This compares with the present c.i.f. price of about Rs. 255 for sulphur at ports today. The c.i.f. price of imported sulphur is subject to considerable fluctuations because of changes in the freight charged by shipping companies from time to time and it is likely that the c.i.f. price may vary from Rs. 200 to Rs. 275 a ton. It is also necessary to emphasise that for a production of 100 tons of sulphur a day (33,000 tons a year), the annual requirement of pyrites is about 100,000 tons. In order to provide for a sufficient working life for the plant and time for investigations to locate other deposits of pyrites, the project can be undertaken only after establishing the extent of pyrites available at a particular site. A minimum deposit of 2 million tons is considered necessary before undertaking the project.

Debate on G.A.T.T.

The Lok Sabha approved the revised General Agreement on Tariffs and Trade last week. The Commerce Minister, Mr. T. T. Krishnamachari, made some important observations on G.A.T.T., Imperial Preferences and the International Monetary Fund. International trade, the Commerce Minister said, was not a one-way traffic. It was based on the conception of "give and take". If India wanted tariff concessions from other coun-

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery — and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil — in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil — the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

ASSAM OIL COMPANY

does it all

A member of the
Burmah Group of Oil Companies

PROSPECTING • DRILLING • PRODUCING • REFINING

tries, it could get them by offering some in return. What she had been able to achieve was not only freedom of action, but also flexibility of action. In fact, Article 18 was the charter of flexibility. G.A.T.T. would not hinder India from diversifying her trade. "Briefly put, we have the freedom to give, provided we do not mind losing all the concessions we have received."

Referring to Article 28, he said: "Firstly, under this Article and the interpretative notes attached to it, an underdeveloped country can negotiate for a change in tariff bindings at any time. In these negotiations, I would like to point out, it is not essential that an agreement should be reached only on the basis of new concessions in lieu of the ones which are withdrawn. There may be an agreement on the basis of a mutual withdrawal, or the corresponding country might feel that the concessions withdrawn are not material. Secondly, the tariff bindings under this Article would be valid for periods of three years at a time. And during the last six months of the bound period, it will be open to a country entering into these bindings to withdraw any concession, even if it fails to reach an agreement. Of course, when it withdraws a concession without an agreement with the other parties affected, the latter will also have the corresponding freedom of withdrawing their equivalent concessions. The advantage of this freedom lies in the fact that the need of the country which seeks to withdraw will not become the opportunity of the country with whom the negotiations have taken place. I hope honourable Members will please note this. In other words, we need not offer a concession which is more than legitimate or more than we can afford."

"There is one further provision in the Article which has been inserted now. It is quite possible for us at the expiry of the three year period to say that we shall keep the whole of our schedule of bindings free. This will mean that we can act unilaterally in respect of any of them at any time. If we did so, then naturally enough other countries will also be free similarly to withdraw any concessions that we may have received. Therefore, before a country acts under this provision, it must satisfy itself that it is likely to gain rather than lose under a freedom which clearly cannot be exclusive. Actually, the effect of these changes would really be to bring home to every country that in tariff concessions, as in every other matter, there is a question of give and take. No country need give more than it receives, and if it feels that, in the situation in which it is placed, it has to act, it can act unilaterally. A country which values the concessions which it has received will naturally be chary of meddling with the Agreement and acting in haste."

Managing Agents in Textiles

The Rajya Sabha last week discussed the Indian Companies Bill as it emerged from the Lok Sabha. The managing agency system, as could be expected, was the favourite target of attack, but the Finance Minister defended it. Without naming the industry, he indicated that the managing agency system was likely to be terminated in the textile industry after 1960. The Bill provided that for officers or employees of a company, the existing provisions for computing commission or calculating net profits would continue for a period of two years after the commencement of the new Act. The Rajya Sabha reduced this period to one year.

Shipping Policy

The Lok Sabha, in addition to ratifying the revised G.A.T.T., passed the Bill to implement the Bank Award and discussed the shipping policy. Members were carefully briefed, as is evident from their speeches. The Deputy Minister for Transport, Mr. O. V. Alagesan, made a fighting speech in reply to the debate. Replying to the demand that the percentage of overseas trade should be increased from 5 percent now to 50 percent, he said that the critics did not realise that the demand could only be met by adding 180 ships. Talking of the rôle of the private sector in the development of Indian shipping, the Deputy Minister asked: "Is it not the patriotic duty of our importers and exporters to see that they patronise Indian shipping?" The Federation of Indian Chambers of Commerce and Industry, instead of appealing to its constituents to patronise Indian shipping, had passed a resolution asking the Government to do a number of things such as finding cargo. "Mr. Alagesan seemed to ignore the obvious—that under the Welfare State, the emphasis has shifted from the first person singular to the third person plural and the Government is expected to meet all the demands of the people. Shipping interests, likewise, look to the Government not only to patronise Indian shipping exclusively but also to coerce all importers and exporters to do likewise."

Mr. Alagesan rejected the demand for a Maritime Commission and disclosed that the benefits of the Government's loan policy were not utilised by the shipping companies until the Transport Ministry made a special appeal to them in November 1953. The Minister asserted that, unlike Members of Parliament, shipping interests had no complaint against the Government's loan policy. One hundred percent reservation of the coastal trade had already been achieved, added the Deputy Minister. As far as trade with neighbouring countries was concerned, Indian ships carried about 40 percent.

CORRECTION

In our New Delhi letter, appearing in the issue of Capital dated 15th. September, 1955, page 365, column three, paragraph two, Messrs. Raymon Engineering Works Limited of Calcutta have been wrongly referred to as the Ramond Engineering Works.

London

ISTANBUL STATEMENT HALTS DRAIN ON RESERVES

MR. BUTLER TO FACE PROBLEM OF INFLATION

(FROM OUR LONDON CORRESPONDENT)

MR. BUTLER'S activities in Istanbul have paid dividends this week in a strengthening of sterling which has at least halted, if it has not reversed, the drain on our gold and dollar reserves. That does not mean that the economic crisis with which we were faced has been averted. Far from it, for Mr. Butler must now face up to the implementation of the promise he made at Istanbul to tackle the inflationary danger by cutting expenditure, reducing home consumption and expanding exports to correct the unbalance in payments. He was not prepared to go into detail on his return to London, but was no doubt more expansive at the two Cabinet meetings which have been held this week. There has been a hint this week that the level of housing subsidies is receiving attention, and also a limitation of the call-up for National Service, but the major savings on public expenditure—and the whole field has been under careful scrutiny during the Parliamentary recess—may not be announced until Parliament reassembles on 26th October. In other directions he might act earlier, but before doing so he would probably like to await the appearance of a clearer picture of the trend of the trade figures at the close of this month undistorted, as they have been in recent months, by the effects of the docks and rail strikes.

So far as practical steps are concerned, the only move has been a further small adjustment in current interest rates. All loans offered from the Revolving Fund for Industry will bear interest at 5 percent instead of at 4 percent as previously. The increase will not affect agreements already reached. The fund was set up two years ago to provide small short-term loans to small and medium-sized firms with the object of improving productive efficiency and is financed under the Conditional Aid Programme of the United States. A sum of £700,000 is available to be lent and repayments are expected to keep the fund at a useful level. Since the first loan was arranged in May 1954, 24 loans for a total of £1,250,000 have been agreed. At present a further twenty are being negotiated for some £300,000.

Rising Material Costs

One of the biggest problems now facing industry in this country is the rising costs of labour, but a very close second threatens to be the steady rise in material costs. According to the *Board of Trade Journal*, basic material prices rose a further 1.8 percent in August, the index figure rising to 156.5 (mid-1949 = 100) against 153.8 in July. 148.9 in May and 143.2 in August last year. This brings the rise since the beginning of the year to no less than 7 percent. These are the prices of materials, apart from fuel, used by the manufacturing industry. The further rise in August generally was caused by price rises in copper (up 9 percent), raw rubber (up 10 percent), and cotton (up 1 percent). The experience of industries has varied since the beginning of the year, for while the mechanical and electrical engineering industries have faced rises of 10 percent in their materials, house-builders and civil engineers have had to cope with rises of 3 percent. On an average industry's selling prices have gone up by 3 percent so far this year, but there are several trades which have managed to keep their selling prices virtually unchanged. They include the textile, clothing, footwear, glass, dyes, chemical, paint, jute, hosiery, carpet, cigarette and soft furnishing trades.

Another of the normal economic indicators is both good and bad, according to how you look at it. British export prices fell by 1 percent in August, the first fall in the Board of Trade's export price index since last September. It is accounted for by price cuts in the metal and textile industries. The index in August was 102, against 103 in July and 100 at the beginning of the year. Since the import index remained unchanged in August this has led to a rise in the terms of trade index of one point, thus offsetting the favourable trend in the previous month. Even so, as the Board of Trade points out, "the terms of trade index remains at a more favourable level than in any of the preceding twelve months with the exception of July." Against the background of the growing wage demands and the steady rise in raw material prices, and the cost of fuel may well rise further if the National Union of Mineworkers' latest four-point plan for improved conditions for miners, estimated to cost a loss in output of 20 million tons and as much in money, is met—it is encouraging that some sectors of industry are able to cut export prices and so maintain their competitive power in world markets. The Board of Trade states that apart from engineering products "the average values in all the sub-divisions of manufactured goods exported declined in August." Moreover, the latest analysis of the August trade figures shows that while the August export figure was swollen by delayed shipments due to the dock strike it is expected that the export figure may still benefit from this influence for "two or three months to come." Chemicals, machinery and metal manufacturers were the main contributors to the large August export total and the sterling area, which was most severely affected by the strikes, received a large share of Britain's exports last month.

As for import prices, declines in the value of food, beverages and tobacco were offset by increases in the cost of imported materials and

manufactured goods. While imported oranges, butter and tomatoes were cheaper, rubber and copper became still more expensive. The Board of Trade states that the cost of imports in the first eight months of the year was no less than 16 percent higher than in the same months of 1954. Since prices rose by 4 percent over this period it is clear that the volume of imports has risen by approximately one-eighth. That is the real headache so far as the balance of payments position is concerned, and its solution is by no means easy. It is small satisfaction to be able to record that the cost of living index, which measures changes in the average level of retail prices, dropped one point to 149 between 12th July and 16th August. This is the first fall in the index since September 1954, when the figure was 143, but the present level is still the second highest since the index was started in 1947 and is three points higher than in January this year.

Tea Prices Rising Again

Tea prices are steadily creeping up again, with high-grade teas fetching as much as 8s. 7d. a lb. at the auctions. An accurate comparison of prices at different times is always difficult owing to the wide variations in quality, but the movement has been so marked in the case of high-grade teas as to admit of no doubt. Top-ranking estates in Assam are now getting their 8s. 6d. a lb. for tea which, theoretically at least, had fallen as low as 4s. 3d. during the big slump in May-June. Average for Ceylon teas is now over 5s. a lb. against 4s. in the slump. Taking plain broken Pekoe as representative of the low grade teas, the price has risen from 3s. 4d. to 3s. 9d. Assam Consolidated Tea Estates have announced that negotiations for the sale of three of the company's estates in Assam have reached an advanced stage. The price, in the opinion of the board, is satisfactory. It is not intended to dispose of any further tea areas owned by the company.

Mining Engineers' Study Tour

Twelve experts in mining engineering and geology from Asia and the Far East, including Mr. Suresh Chandra Dey (Assistant Superintendent of Collieries, Ministry of Production, Calcutta) and Mr. Bhabesh Chandra Roy (Superintending Geologist-in-Charge, Government Geological Survey, Calcutta), arrived in London on Thursday last to begin an eleven-day study tour of British mining establishments, research institutions in the field of mining and geology, etc. Other members of the group come from Afghanistan, Burma, Hongkong, Indonesia and Japan. They will visit a deep mine near Sheffield and an opencast site near Leeds as part of their study tour in this country, besides examining a mechanisation training centre, safety in mines research establishments and the underground gasification trials near Chesterfield. The group's visit to Britain is the final stage in a 13-week tour which has included inspection trips in the U.S.S.R., in Western and Eastern Germany and in France. The group left New Delhi on 2nd August and flew to Moscow, where they began their study tour, which is sponsored by the United Nations Technical Assistance Administration and the U.N. Economic Commission for Asia and the Far East. The purpose is to provide the experts with information on the latest developments in the fields of mining, engineering and geology, and when they leave here on 4th October they will go to Geneva, where they will prepare a report on the ways in which European mining developments may be applied in Asian and Far Eastern countries.

"Classes" at Harwell

Britain has thrown open Harwell to the world as the first Atom Academy to teach other countries how to develop nuclear power for industrial purposes. Fifty scientists started the £250 three-month course at the research station this week. Among them are 15 foreign scientists from ten countries, including Yugoslavia, India, Argentina and Brazil. Harwell's Director, Sir John Cockcroft, stated at the Geneva atoms-for-peace conference that Britain was prepared to show other countries what she had done by allowing foreign students into Harwell. Classes will be held outside the security fence, but the foreign scientists will be allowed to see research reactors like Bepo and Gleep, prototypes of the first British atom power station at Calder Hall. The students will see work going on in many of the Harwell laboratories.

More Than a Million Tourists

There is no denying that the British Travel and Holidays Association has done a good job over the past few years. It set itself the target of attracting a million tourists to this country in 1955, and it certainly looks as though this will be reached. In the process, as was disclosed at the annual meeting of the Association this week by its Chairman, Sir Arthur Morse, the tourist industry had raised its earnings from foreign visitors since the war to the not inconsiderable sum of £737 million; had achieved the seventh place in Britain's export industries; and, even more important, the first place as an earner of American dollars. These are all achievements of which to be proud. It was all the more unfortunate, therefore, that there should be a cloud on the horizon. It is now becoming apparent that the Association's promotion campaign is outstripping the country's capacity to cater for the extra business that has been stimulated. "There is no doubt that we cannot now cope with all the visitors who want to come to Britain," Sir Arthur said. "More than a million are planning to come next year and they are a challenge to the industry and the Government to provide the extra accommodation needed." There was an urgent need of more hotel accommodation, particularly in London and Edinburgh. Some form of tax-free allowances on hotel investment and the removal of purchase tax on hotel equipment would be essential.

Bombay

OFFICIAL PRECAUTIONS AGAINST DISORDER

MAHARASHTRIANS FEAR DENIAL OF SEPARATE STATE

(FROM OUR BOMBAY CORRESPONDENT)

THE States Reorganisation Commission's report is expected soon, but pending its actual publication, it is widely believed that the Commission will recommend a bilingual State with certain changes in the present boundaries, such as the exclusion of the four districts of Karnatak (these are likely to form part of a new Karnatak State), and the addition of the Marathi speaking areas from Hyderabad in the South and the present States of Saurashtra and Kutch in the North, to the future State of Bombay. This is not likely to be welcomed by the Maharashtrians who have asked for a separate State consisting of the Marathi-speaking areas in Bombay, Hyderabad and Madhya Pradesh with Bombay city as its capital. It is feared that any recommendation which does not meet this demand might be resented; violence may break out, from which business establishments, most of which are controlled by non-Maharashtrians, may suffer. The politicians who encouraged the aspiration for a united Maharashtra in the past, are now themselves disturbed over this ominous prospect. This can be seen in a joint appeal issued by prominent political leaders of all the parties to the people of Bombay city asking them to receive the recommendations of the States Reorganisation Commission in a calm manner, assuring them that leaders will take necessary steps after the publication of the Commission's report and that the people should remain completely unruffled and calm. The Government also has been engaged during the last month not only in making elaborate preparations but in staging rehearsals of the measures to meet violence if it occurs at the time the Commission's report is released. The Press note issued by the Government during the week-end, while noting the apprehensions over the recommendations of the Commission, on the part of a section of the people, assures that democratic and constitutional processes will continue even after the submission of the report and that the alterations of areas, boundaries or names of the existing States will require legislation by Parliament after ascertaining the views of the legislatures of the States concerned. While the Press note hopes that the public will maintain the correct approach and atmosphere for final decisions on the subject and will conduct itself with the dignity befitting an independent nation, co-operating fully with the authorities for the maintenance of normal conditions, it goes on to warn that any recourse to unlawful methods will be firmly dealt with and that adequate measures will be taken in all places to deal with any eventuality.

Coastal Ferry Services

Scindia's Sabarmati sailed from Bombay to Cochin via Mangalore on the Western Coast last Thursday marking the beginning of the coastal ferry services between Bombay and the many ports dotted along the Saurashtra, Konkan and Kerala coast-line, after its having been in suspension for about four months. Due to inclement weather, the number of passengers was very much below normal; the Sabarmati carried only about 200 passengers, that is less than one-fifth of her normal carrying capacity. An important piece of normal carrying capacity. An important piece of shipping news was the announcement by the India, Pakistan, Ceylon and Burma Outward Freight Conference that it had decided to postpone for another month the proposed 35 percent surcharge on cargoes bound for Bombay, Calcutta and Madras. An official of the Conference said that the postponement was made in view of the continued efforts of the Indian Government and port authorities to improve conditions at the Indian ports.

The Nature of Freight Rate Increase

Mr. Vasant J. Sheth, Director of the Great Eastern Shipping Company, who returned from a round-the-world trip extending over 30,000 miles during a little over two months, expressed the view that the present firm condition in the world and freight markets was a durable phase and not a temporary one. Mr. Sheth had undertaken this trip to place orders for two new vessels as a part of the Company's expansion programme. An order for one of these steamers has gone to Japan while the other will be built in the U.K. It may also be mentioned that as a result of this trip, the Great Eastern Shipping Co. has been able to secure the agency of the Hellenic Lines of Piraeus and New York which run a regular monthly liner service between India and U.S. ports. Explaining his opinion on the freight market, Mr. Sheth observed that it was not easy to make a forecast, but he had observed while abroad that the countries owning large shipping lines were inclined to regard the present freight market conditions not as a temporary move but something rather durable, because these conditions were based primarily on the high level of prices for new ships resulting from the still rising level of wages in ship-building yards. Mr. Sheth also pointed out that wages formed a very important part of the cost of a ship and often amounted to as much as 60 percent, and if the wages paid for the semi-processed materials like steel, engines and various component parts that went into the making of a complete ship were also taken into account, the proportion might in some cases be as high as 70 percent. As all these coun-

tries, including those which already boasted of a high standard of living, aimed at raising the standard of living within the next 10 years, it was clear that there would be a further rise in wages. It would, therefore, be idle to expect the present high freight market rates, based on this high cost of ship-building, to show any downward variation in any foreseeable future. Giving other reasons for the present high freight rates, Mr. Sheth pointed to the very heavy coal movements from the U.S.A. to Europe, even to the U.K., the expected rise in the volume of surplus foodgrains available for export and the phenomenal fall in the output of dock labour all over the world necessitating a slower turn-round of ships. In support of the last, Mr. Sheth pointed out that a vessel now spent as much as 250 days at ports as against only 130 days before the war and that these delays had contributed greatly to the hardening of the freight rates.

Transport Users Confer

Railway transport received good attention at the session of the All-India Federation of the Transport Users' Associations at Ahmedabad. This Federation represents nearly 30 passenger organisations in the country. One of the most important pleas put forward by this Conference to the Government was that the planning authorities should convene a special meeting of the members of the consultative committees, representatives of various passengers' associations and trade organisations to consider the draft plan for railways. The Conference believed that such a meeting would serve both the interests of the Railway administration and the users. On the augmenting of the rolling stock, the Conference, in another resolution, while appreciating the efforts of the Government in this direction, suggested to the Railway Ministry that it should utilise all the available resources fully including private workshops, for production of rolling stock to meet the increasing traffic on the railways. The Federation also asked that the passenger amenities fund should be raised to Rs. 6 crores and an assurance given that the amount would be spent for this purpose. Mr. F. B. Dabhi, M.P. was elected president of the Federation for the coming year. It may be mentioned here that judging from its claims, the efforts of the Central Railway to meet the increasing goods traffic demand seem to be succeeding well. The number of wagons loaded with goods from depots in the Bombay area of the Central Railway has risen from 19,456 for the first five months of the year ended 31st August, 1954, to 20,553 wagons for the corresponding five-month period this year, representing an increase of 5.6 percent. Similarly, the inward traffic to Wadi Bundar has risen from 36,891 wagons in the five months ended 31st August, 1954, to 40,193 wagons unloaded in the corresponding five months this year, representing an increase of 11.2 percent. The latest Press note adds that with the cessation of the rains, the first phase of the engineering work in hand at the Wadi Bundar goods depot, which will involve an expenditure of Rs. 14 lakhs, would be pressed forward. It is expected that by November this year, the unloading capacity at Wadi Bundar will have been increased by 100 additional wagons a day.

Depression in Cotton

Cotton has been severely depressed during the last week. Apart from the fact that a good crop, which some people estimate at 5.5 million bales, is expected during this season, the main factor which has contributed to the depression of sentiment both in the forward and spot markets has been the announcement by the United States Agricultural Department of its decision to offer one million bales on an open competitive bid basis next year. There is no possibility of any part of this cotton, except a small quantity, coming to this country; but what the trade fears is the impact of the U.S. export of this magnitude on the world market prices, especially on the markets in Pakistan. By a complicated and tortuous process of reasoning, the trade has come to believe that the new competitive sale policy of the U.S.A. will force down prices at Karachi and make the export of lower staple Indian cotton more difficult. Either India would have to reduce the prices of its export quota or this quota will hang heavily on the available supplies and create a slump in the local market. It is also argued that, if the price of U.S. cotton came into parity with Indian cotton, the Continental importers might divert their purchases to the U.S.A. It may, however, be noted that the present Indian prices of cotton are about 30 percent below the U.S. parity and the competitive sales from the U.S.A. are not likely to wipe off this price differential. There is also a belief among knowledgeable circles in the trade that the production for the current season has been overestimated, almost to the extent of over half a million bales. There is some plausibility in this argument as the first estimate of the cotton acreage at 13,173 million acres shows only a 2 percent increase in area over the last season; even though the final estimate of acreage is likely to be very much higher, some commentators do not place the new crop at over five million bales. If the crop is found to be lower than originally anticipated, the Government would naturally restrict the export quota and this in itself would preclude the chance of a price slump.

It is also likely that Japan might increase its offtake of Indian cotton during the 1955-56 season. The reported move on the part of some of the big Japanese firms, who had offices in India for purchase of Indian cotton in pre-war years, to reopen these offices encourages this expectation. It is

Japanese Offtake

In view of these conflicting views, a good deal of interest was shown here last week in what Mr. Francis G. Hickman, editor and publisher of the *Cotton Trade Journal*, Memphis, U.S.A., had to say with regard to the disposal of the surplus American cotton. Mr. Hickman believed that this disposal should be so planned as not to disturb the international cotton economy. Mr. Hickman suggested that it is up to India, who occupied a leading position in the East today in the world of cotton, to restore the cotton markets of those South East Asian countries which had been seriously disorganised and which were in the process of disintegration. He observed that there was a large increase in cotton production and spinning throughout the world. China, for instance, was planning to raise its production from four to five million bales, while Pakistan was consuming its cotton in its fast developing textile industry in increasing quantities. Against this, Mr. Hickman pointed out that certain markets for textiles in the South East Asian region were rapidly disappearing as a result of lack of buying power in countries like Indonesia, Viet Nam and Burma. He therefore, suggested that India should make an effort to open up markets in South East Asian countries by evolving some plan of help. He hinted that the U.S. Government might be inclined to give consideration to such a scheme and provide necessary financial aid.

Spurt in Pepper

Unlike the cotton market, the pepper market here and on the Western Coast has spurred following the Government's announcement earlier last week on the abolition of export duty on this commodity. While the trade had been asking for this abolition on the ground that it was not able to compete in the world markets due to the handicap, the first reaction of the trade, as usual, was to boost up prices both in the spot and forward markets in pepper, belying its own belief. If the export duty hampered foreign offtake, this price rise to the extent of Rs. 50 to Rs. 75 a candy, might neutralise the relief granted by the Government and even discourage new demand. It is, however, believed that this rise is temporary and that the rates will adjust themselves in relation to prices in the world markets. It may be recalled that the duty, which originally stood at 30 percent *ad valorem* or at Rs. 65 a cwt., whichever was lower, was reduced to 15 percent *ad valorem* last January, as a result of severe competition from Indonesia and Sarawak. This was followed six months later by Indonesia reducing export duty on pepper from 15 percent to 5 percent, which made the position of Indian pepper again difficult in the foreign market, and led to the total abolition of the export duty by the Government of India. The market hopes that the removal of this duty will attract foreign buyers once again to India to place business with the shippers on a larger scale. A much higher crop almost to the extent of 30 percent is expected during the coming season, which will begin to come into the market after a month, and the announcement of the abolition of the duty has come just in time for making forward sales in the new crop.

Symposium on Rationalisation

The All-India Radio, at its Ahmedabad centre, organised last week a symposium on rationalisation in industry. Mr. Shantilal Mangaldas, President of the Federation of Indian Chambers of Commerce and Industry, who spoke on behalf of industry, said that rationalisation would cut prices of commodities and raise living standards. He gave an assurance that displaced workers would be shifted over to gainful employment elsewhere, while conceding at the same time that initially there might be some degree of unemployment; but as the process of expansion would be spread over a period of time, those out of work could be easily accommodated in other industries. The workers' point of view was represented by Mr. S. R. Vasavada of the Indian National Trade Union Congress. While not opposing rationalisation in principle, Mr. Vasavada asked for the setting up of a controlling authority at the national level for each industry to evolve norms and differential standards for working conditions for the alternative employment of workers displaced as a result of rationalisation, which might be brought about by mutual agreement between the workers and the management. Dr. B. R. Shenoy, who might be regarded as representing the academic point of view, suggested that the impact of rationalisation on employment could be appreciably eliminated, if the pace was adjusted to the natural decline of labour force resulting from superannuation, death, etc.

Madras

MYSORE STATE TO INTENSIFY INDUSTRIAL EXPANSION

ENCOURAGING REPORTS OF COMMUNITY PROJECTS

(FROM OUR MADRAS CORRESPONDENT)

MYSORE State, which is already well advanced in industrial development, is planning a further expansion in the second five year period. While priority was given in the first plan to irrigation, power and agriculture, the draft plan for the next period makes provision for a number of heavy and large-scale industries. The proposed industrial projects include the extension of the Bhadravati iron and steel works, the establishment of a raw film industry, a fertiliser factory, an aluminium factory, a cement factory, a ferro-manganese plant and two new sugar factories, requiring a total capital outlay of about Rs. 32 crores. In addition, the village and small industries group will account for about Rs. 12 crores.

Twelve schemes, involving a total cost of about Rs. 17 crores, have been prepared in connection with the enlargement of the Bhadravati works. They include the establishment of a plant of a spun cast-iron pipe plant, a sintering plant, an alloy and tool steel plant, a plant for steel expansion and a third electric pig-iron furnace. The alloy and tool steel plant will produce 1,000 tons of special and alloy steel. The establishment of a stainless steel plant with a production capacity of 15,000 tons per annum, wire and wireless products mills and the expansion of the ferro-alloy plant also form part of the scheme. The proposed fertiliser factory at Bhadravati is intended to produce 30,000 tons of ammonium nitrate in the first stage. Nitro-chalk might also be produced at this factory by utilising the large deposits of limestone near Bhadravati. In view of the magnitude of the scheme, the State Government intends to sponsor the fertiliser factory as a government concern. The ferro-manganese plant, proposed to be set up near Hospet and Sandur in Bellary taluk, will utilise the rich and extensive deposits of manganese ore in the area and the electric power that will become available at the Tungabhadra Dam. To begin with, it is proposed to instal a 20-ton furnace giving an actual production of 6,000 tons of ferro-manganese per annum with a capital investment of Rs. 25 lakhs.

The project for a raw film industry will involve an outlay of Rs. 5 crores and a joint-stock company will be floated to undertake the production of raw films required for the cinema industry, X-ray and photography. The Government of Mysore will contribute Rs. 1 crore; a loan of Rs. 1 crore is to be secured from the Industrial Finance Corporation through the Central Government; Rs. 1.25 crores is expected to be subscribed by the private sector; and Rs. 25 lakhs is to be subscribed by the foreign firm which will work in collaboration. The proposed aluminium factory, involving a capital outlay of Rs. 5.5 crores, will also be a joint-stock company in which the Mysore Government is to invest Rs. 1 crore; and about Rs. 1.5 crores is expected to be subscribed by the public.

Rural Development

In the sphere of village and small industries, the rural industrialisation scheme now in force in the State will be continued and intensified at a cost of Rs. 1 crore under the second plan. Five new small-scale schemes will be launched for the manufacture of thermometers, mechanical toys, forged steel, metal parts and sparking plugs, etc., involving an expenditure of about Rs. 7.6 crores.

The Andhra Planning Minister has announced that the Planning Commission has made a tentative provision of Rs. 125 crores for the State's second five year plan. The allocations under various heads are:—

	Rs. crores.
Agriculture and rural development	16
National extension and community projects	11
Irrigation	34
Electricity	22
Industry	10
Transport	53
Education	83
Medical and public health	83
Housing	2
Labour and labour welfare	5
Welfare of backward classes	3
Miscellaneous	14

Additional provision is expected to be made by the Planning Commission for flood control, development of minor ports, inland transport and the like, which might amount to Rs. 19 crores. The size of the entire second plan will thus be of the order of Rs. 145 crores as against the Rs. 240 crores proposed in the State's preliminary draft proposals. As for power projects, the Planning Commission has made allotments for the Machkund, Tungabhadra and Sileru hydro-electric projects. The Sileru Project, costing Rs. 25 crores, is expected to be completed by the middle of the third plan period. After completion of all the power projects, included in the second plan, the power potential will be increased from 71,000 kW. to 194,000 kW. in 1961. Meanwhile the first generating unit of the Machkund Project which will have an ultimate capacity of 100,000 kW. has just been commissioned, and work on the scheme will continue during the second plan period.

In the sphere of small-scale industries the Planning Commission has agreed to the establishment of a pilot plant for the production of bolts, nuts and rivets at Visakhapatnam and a plant for

the manufacture of scientific glass apparatus at Gudur. Other schemes in the same category will provide for the training of artisans.

The Private Sector in Industry

Some forthright views were expressed by Mr. S. Anantharamakrishnan, a Madras industrialist, at the general meeting of the Malabar Chamber of Commerce. He said that the very existence of the private sector in industry was being threatened in India. He recalled that the private sector consisted of 30,000 joint stock companies in the country, 80,000 income-tax assesses, and a large public. The investment in the private sector all over India was computed at Rs. 4,000 crores as against Rs. 1,400 crores in the public sector. It was the private sector, he pointed out, that stood by the Congress during the struggle for freedom by contributing liberally to its funds. The calamity on the private sector, he continued, was undeserved, and he could not think of any other agency which could replace the private sector efficiently. In this connection, he observed that in the new Company Law Amendment Bill there were almost 150 penal sections and that, judging from the speeches of members in the Union Parliament, it looked as if the private sector consisted only of tax-dodgers, profiteers and black-marketeers.

Referring to nationalisation, Mr. Anantharamakrishnan said that even now the Government was getting half the profits of concerns, and asked what need there was to nationalise and employ a large number of people for the purpose. The insurance companies were investing half their funds in Government securities and he asked whether there was any need to nationalise them. He expressed the view that in the event of nationalisation the companies would not work as efficiently as in the private sector. Referring to the question of finance for industry, he observed that the rate of interest charged by the various industrial development corporations was too high. Subsidies were necessary but unless the Government provided these the rate of progress of industries would be necessarily slow. Finally, Mr. Anantharamakrishnan urged that small royalties should be given to people in the U.S. and other countries, who were willing to help new industries with their technical expertise.

Community Development Projects

Official reports of the progress of the National Extension and Community Projects in Madras State are very encouraging. The schemes now in progress cover a population of 74 million out of a total rural population of 29 million. The entire population is expected to be covered by the community development programmes by the end of the second plan. The reports coming in from various development blocks speak of a new life and a new spirit among villagers. In the N.E.S. Blocks in Tanjore district, "the people have come round to think, plan and work for themselves and to develop ideas of self-help, self-reliance and self-confidence. They are now coming forward to give their lands free for forming roads and to extend their help to achieve improvements by their labour. There is a healthy competition in offering contributions in labour, kind and cash for development works to be taken up and in securing more amenities for their villages.... The introduction of this scheme to some extent is responsible for the eradication of internal differences among the villagers."

In an N.E.S. Block in Trichy district, "the old casual and indifferent way in which people used to treat the works under execution in their villages is gradually disappearing. This is illustrated by the way in which the people take to improved methods of agriculture and sanitation. Though this cannot be termed as a cent percent change, still there has been a marked change in the pattern of participation."

In a Community Development Block in Chingleput district, "improvement to houses at least in the way of white walls, painted doors, and properly thatched roofs with newly-cut hay spread over is being stimulated by grants of the materials required. Walls are being raised at least by one foot, and provision of doors and windows with the requisite heights arranged wherever they are badly needed. On an average, at a cost of Rs. 5, a mud hovel has been transformed into a properly white-washed and thatched house."

In a Malabar district N.E.S. Block, "public contribution is insisted on for all activities in these blocks and the villagers have been munificently contributing their share, wherever required. The people have begun to realise that N.E.S. is a people's programme and that they should not look forward to Government help for everything. They have never failed to come forward with their share wherever and whenever necessary."

These glowing accounts are, however, not corroborated by any non-official enquiry of note. If these reports are even 50 percent true, then the heavy expenditure proposed to be incurred under the second plan for the National Extension and Community Projects will have justified itself.

Need for Increased Rubber Yield

At the meeting of the newly-constituted Rubber Board, the Secretary of the Union Ministry of Commerce and Industry indicated that the Government was seriously considering the establishment of a synthetic rubber plant to augment natural rubber production in India. The Government, he added, had recently approved a scheme which contemplated replanting 7,000 acres annually in the existing areas under higher yielding varieties. Under the scheme, 70,000 acres will eventually be replanted with improved strains. Referring to European planters, he said that they were good planters, and Indians had much to learn from them, and added that the Government had no idea of driving them out.

LONDON TEA SALES

AT last week's London tea sales, the 54,569 packages on offer realised an average price of 5s 5.85d a lb, against 5s 0.41d in the previous week and 6s 0.86d a year ago. Plain broken pekoe was quoted at 3s 8d-3s 9d; in the previous week, 3s 7d.

	No of packages	Average per lb.
Amalgamated	750	4/6 1/2
Attaree Khat	216	6/4
Bagracote	196	3/11
Balijan	126	9/
Bargang	378	6/0 1/2
Borelli	341	6/
Central Provinces	174	5/3 3/4
Chubwa	421	7/2 1/2
Chulsa	335	4/
Consd. Tea and Lands	1,508	5/4
Dangua Jhar	251	4/0 1/2
Deamoolie	120	7/10 1/2
Dekhari	210	7/8 1/2
Deviturai	144	4/7 3/4

Upper Assam	294	6/11

U.K. Tea Stocks

U.K. stocks of tea on 16th September amounted to 118.7 million lbs, against 101.9 million lbs a year ago.

COCHIN TEA SALES

At Sale No. 19 (briefly reported last week), held on 20th September approximately 22,000,000 lbs. of tea were catalogued. Quality from the Nilgiris generally showed an improvement, but from other districts little change was noticeable. The Sale opened to a good general demand and Best Liquoring Nilgiris showed advances of up to 3 annas with buyers following quality. Good Mediums with bright liquors were well sported, while Low Mediums and common descriptions met with a good enquiry but at rates which declined by an irregular 2 annas. Whole Leaf grades generally showed an easier tendency. The strongest feature of the Sale was the few lines of tippy teas, the weakest feature being thin liquoring stinky descriptions which were neglected.

Quotations	1954 Rs.As.P.	1955 Rs.As.P.
Low Grown Travancore B.O.P.	1 12 0	3 1 0
Medium Travancore B.O.P.	1 15 0	3 2 0
Anamallai B.O.P.	2 3 6	3 4 0
The Best Liquoring Nilgiri B.O.P.	3 4 0	3 10 0
Nilgiri B.O.P.	2 12 0	
Black well made O.P.	3 1 6	3 4 0

The Export Quota market sharply declined from 5 1/4 to 4 1/4 annas during the last week and considerable transactions were made between these levels. The price has since hardened with buyers strong at 4 1/4 annas and sellers scarce. Export Sale N. 20 will be held on 4th October.

At Dust Sale S. 400,000 lbs. of tea were on offer. The Demand was good and general for all new offerings. Milled Dusts and best liquoring types were irregularly dearer; Mediums were about steady and Reprints neglected.

COLOMBO RUBBER PRICES

The Indian Rubber Board has issued the following prices from the weekly market report published by the Colombo Brokers' Association:

Closing Prices on 16-9-55 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:	
No. 1	1.35 1/2
No. 2	1.32 1/2
No. 3	1.29 1/2
No. 4	1.05 Nom
No. 5	1.00 Nom
	Sht. Cutts 1 1.31
	Sht. Cutts 2 1.27
Crepes:	
Water White	—
R.M.A. No. 1X	Rs. 1.97
R.M.A. No.1	Rs. 1.94/96
	Creme 2 1.91
	Creme 3 1.86 1/2
	Creme 3 1.78
Scrap Crepes:	
Sc. Crepe No. 1	1.45 Nom
Sc. Crepe No. 2	1.35/40
Flat Bark	1.25/32
	Sc. Crepe 3X 1.27

To arrive at f.o.b. Colombo prices add 34.4 cents a lb. in respect of rubber other than scrap crepe and 27.4 cents in respect of scrap crepe to the above market prices.

Jute

ACTIVITY IN GUNNY MARKETS MOSTLY SPECULATIVE

MORE REPORTS OF COMPETITION FROM PAKISTAN

ACTIVITY in the jute goods markets last week followed the familiar pattern. Heavy goods, under speculative influence, showed erratic fluctuations, passing through a range of about Rs. 2-4 from the highest to the lowest levels. Rumours regarding overseas interest paved the way for speculators, who took advantage of the uncertain conditions to make their profit. Foreign buyers continued to sit out of the Calcutta markets except for some negligible quantities, although small business was again reported with Pakistan. The solving of the Argentine's internal problems gave rise to hopes that some interest would be displayed from that source, so hessian ruled comparatively steady, although at the beginning of the period 40" 10oz hessian again touched rock bottom at Rs. 38-8 a 100 yards. This figure has now been reached several times over the past few weeks, but operators have always managed to produce some reason to prevent rates dropping below it.

Towards the end of the week, goods prices were maintained to a large extent by the firmness of raw jute. It is generally accepted that in spite of recent arrivals many mills are following a hand-to-mouth buying policy; to ensure the running of their particular units, buyers have to resort to frequent incursions into the local markets. This practice has resulted in local operators holding back their offers, at the same time demanding high rates for the small quantities released. Recent stock surveys of the Cossipore markets appear to indicate that there is no immediate shortage of jute, but an apparent shortage has been created by this policy, resulting in the present steeper conditions. Mills are reported to be fairly well covered for deliveries during October. November and December, but it is most unlikely that the quantities will be shipped at the beginning of the contracted periods. The general practice in the trade is for sellers to wait until the last possible moment before shipping in the hope of catching falling prices. Thus, it is the period between now and the end of October that will worry manufacturers, and any shortages during this period can only be made up from local sources. With this in mind, many operators are conserving their stocks in the hope of "cashing in" at a later date.

THE JUTE MARKETS

Manufactured Goods: The finished goods market opened last Thursday on a very weak note. Disappointment at the lack of overseas interest in the Calcutta markets coupled with the repeated loss of business to Pakistan caused both sections of the markets to collapse, and uncertain conditions prevailed. B Twills hit the lowest rate for a fortnight by recording Rs. 104-2 for September shipment and Rs. 101 a 100 bags for Jan.-March. Hessians fell back to Rs. 38-8 a 100 yards for September shipment with Jan.-March shipment at a discount of 4 annas a 100 yards. These rates were Re. 1 to Rs. 1-8 lower in heavy goods, and 8 annas down in Hessians compared with last week's closing prices. At the lower levels, speculators indulged in bear-covering, which brought about a partial recovery in heavy goods. Prices improved 8 annas to Re. 1 during the day, but Hessians continued to be neglected and prices were pegged at Rs. 38-8. Speculative activity caused erratic fluctuations at this stage. By Saturday morning, ready B Twills had advanced to Rs. 105, which was 14 annas above the week's opening rates, and forward shipment was Re. 1 better than the opening quotations, standing at Rs. 102 a 100 yards. Hessian followed in sympathy and showed the first movement of the week with a 2-anna advance. During the week-end heavy speculation continued and this, coupled with the steeper tendency in the raw jute markets, saw ready B Twills rise Rs. 1-4 to Rs. 106-4 a 100 bags. This was over Rs. 2 above the opening quotations. Hessians also showed an improvement over the week-end, but small overseas enquiries were the main cause for the rise in this section. Ready 40" 10oz. stood at Rs. 38-13 a 100 yards and forward shipment at Rs. 38-10; Hessians had still to make up the losses incurred at the outset. Some small enquiries for forward shipment heavy goods on Monday caused a slight rise in Jan.-March shipment, but the near positions fell by 4 annas. Hessians continued to rule steady and small increases were recorded for all deliveries. At this stage conditions were fairly steady as a result of the improved jute markets, but there was very little price movement and speculators appeared to be pausing in their activities.

At the close the market is unchanged with a steady undertone. Opening quotations on Wednesday morning were as follows:

	Ready	Oct.	Oct.-Dec.	Jan.-March.
40" 8oz.	32-4	32-4	31-12	31-4
40" 10oz.	38-14	38-14	38-14	38-12
B Twills	106	105	105	103
Heavy Cees (plain)	112-8	108-8	106-8	103-8
A Twills	130	130	129-8	126-8
Liverpools	120	130	129-8	126-8

Raw Jute: In sympathy with the declining goods markets at the beginning of the week, the raw jute markets opened on a very weak note. Mills were displaying very little interest. Sellers were keen for business and were reducing their rates in an attempt to bring mills into the market. Buyers were not in a very strong position to offer any serious resistance to the selling pressure, as their stock and supply situation was far from healthy, and eventually many were forced to enter the market to ensure the smooth running of their mills. This caused a complete reversal of sellers' ideas. Towards the end of the week offers were reduced and prices increased. Mills purchased a fair amount of jute over the week, most of which was for quick delivery or ready bills of lading. Once again no business was reported in the Pakistan markets and the latest developments between that country and European manufacturers are causing concern in local jute circles. It is essential that the Indian mills receive a constant supply of Pakistani jute to cover the shortfall of indigenous supplies, but the minimum prices imposed by the East Bengal authorities and the proposal to set up selling agencies at fixed rates may price Pakistani jute out of the market for mills on this side of the border. Over the past few weeks there have been no offers of any consequence for Pakistani jute, and local manufacturers are anxiously watching the present trend of events.

Raw jute rates opened the week Re. 1 below last week's closing rates, and at Rs. 23-8 a maund Upper Assam Bottoms reverted to the lowest touched this season. Heavy selling pressure, combined with the weak goods market, was the main cause for this collapse, but prices gradually improved as conditions varied over the week. As a result of considerable business before the week-end, the initial loss in rates had been made up by Monday morning, and Assam Bottoms were quoted at Rs. 24-8 a maund with sellers looking for higher prices.

Business done during the period under review was mainly confined to immediately before the week-end, when Dhubri-Northern jute was done at Rs. 23-8 a maund basis Bottoms for October-November-December shipment, and Local Northern at Rs. 23-8 to Rs. 24 a maund for ready delivery and forward shipment. Upper Assam jute was also done at Rs. 23 to Rs. 23-8 for the same deliveries. Murshidabad District jute, combined with other Western agencies changed hands at Rs. 23 a maund whilst Tossa from a maund for October-November shipment. Large quantities of Daissee were purchased over the week at prices ranging between Rs. 25-8 to Rs. 27 a maund basis Bottoms, depending on the district and delivery. Daissee Mesta ing upon the district and delivery. Daissee Mesta was also done at Rs. 22 a maund basis Bottoms for equal quantities in October, November and December.

At the close the market is steady with no alteration in the quoted rates. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at mills Rs. a maund basis Bottoms.	Shipment. Oct.-Nov.
Lower Assam	25	"
Upper Assam	24-8	"
Northern	25	"
Murshidabad White	24	"
Daissee ex Agency	26	"
Daissee ex Cossipore	25-8	"
Daissee Mesta	22-8	"
Bimli	23 for F.A.Q.	"
Local Packing (Northern)	24-8	"

Tossa is quoted at Re. 1 to Re. 1-8 a maund above the rates of White jute.

Pakistan Jute: Rs. a maund basis Bottoms. Shipment. Oct.-Nov. Jat District 27-8 " Northern 25-8 " The local Cossipore markets, after opening on a quiet note, tended to become steady towards the close. Fair business for quick delivery caused many sellers to withdraw from the market or reduce the quantities on offer, and rates were increased. Imports were much the same as last week, averaging about 80 to 90 wagons a day, but most arrivals found ready buyers. At the close Kishenganj jute is quoted at Rs. 25 a maund garsat quality.

Mills have taken more interest in the Daissee markets and prices are steady. Imports are slightly below average for this time of the year, but the present deficiency is expected to be made up in the coming month. The quality of recent arrivals is reported to be very good, but many complaints have been received regarding the condition of the jute. Daissee Mesta is reported in increasing quantities but, as yet, only small business has been done in this fibre, and here again the moisture content is very high. Latest quotations in Sheoraphuli are based on Rs. 26 a maund for garsat quality.

Motussil: It is reported from upcountry agencies that imports over the past week have not

come up to expectations, so rates have improved and sellers are inclined to be reserved. Heavy covering business against September shipment contracts is being done in all agencies and there are ready buyers for all the available jute. Latest quotations in Dhubri are Rs. 20-8 a maund basis Bottoms.

The Pakistan markets are in a hesitant mood following the proposals of the East Pakistan Government relating to the formation of jute selling agencies. Only small business has been reported and sellers have stopped offering anything but the smallest quantities. Imports have been maintained at about 35,000 maunds a day in Narayan-ganj, mainly in loose jute form, for which there appear to be ready buyers. Quotations have fallen recently, but are mainly nominal and are based on Pakistan Jat Bottoms at Rs. (P) 24 and X Bottoms at Rs. (P) 18 a maund.

AUSTRALIAN CONTROLS END

Australia's Minister for Commerce and Agriculture, Mr. J. McEwen, announced recently that commercial importation of cornsacks would be returned to private trade from 1st February, 1956. Mr. McEwen said that this action marked the final step in the policy of the Federal Government to remove controls from all jute goods as soon as practicable. "Jute control" he added "was introduced in 1940 as an emergency measure to ensure adequate supplies of jute goods for Australian requirements." The control was continued in the post-war years to cover the period of short supply and dislocation in the trade. However, because of the improved position, the Government was able last year to discontinue Government buying of woolpacks, chaff bags and raw jute. The control of cornsacks meant that trade in all jute goods would now be in private hands. "Even though the majority of interested organisations are well satisfied with the present arrangement whereby the Government purchases all cornsacks, the supply position and other factors affecting the trade are now such that the need for control no longer exists," said Mr. McEwen. "It has been the policy of the Government not to remove controls until all the circumstances of the trade indicate that supplies will be available in adequate quantity and at reasonably stable prices. These conditions are now met and Government participation in private trade is no longer required or justified."

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th September, 1955	2,209.3	16,548.3	18,757.6
1st to 20th August, 1955	2,059.5	18,306.6	20,366.1
1st to 20th July, 1955	1,367.4	21,145.5	22,512.9
	Sacking		
1st to 20th September, 1955	22,422.6	453.0	22,875.6
1st to 20th August, 1955	18,135.0	350.6	18,485.6
1st to 20th July, 1955	23,101.5	111.8	23,213.3

THE FOREIGN JUTE MARKETS

BUYING FROM HAND-TO-MOUTH

(FROM OUR DUNDEE CORRESPONDENT)

THE position of the jute trade is often characterised as unsatisfactory, but on the whole spinners and manufacturers are not too badly off. Consumers of all commodities in the industry are buying from hand-to-mouth, but there is always enough business passing to maintain production. Some spinners or manufacturers may complain of a lack of orders, but these are the people whose quality is not of the best. The same applies to yarns and cloth as to the raw jute end. At the moment, when sellers are quoting the same rates for all grades of the fibre, the shippers who sell the recognised good marks get all the business. There are some producers who can give delivery of yarns and cloth practically off the shelf, while others are compelled to refuse business for delivery before December. There is no short time being worked in Dundee and district and firms are able to dispose of their production. The wide widths of Hessians and also sackings are more or less neglected meantime and weavers would welcome orders for these.

Shippers are still adhering to their minimum prices for raw jute and a small business is being done at £90 for Mill Firsts, £80 Mill Lightnings and £70 for Mill Hearts. Occasionally a spinner is in the market for prompt delivery and a quiet business is being done between spinners where a firm has a surplus to dispose of. The Jute Control sometimes buys in the market to maintain emergency stocks of raw jute. Should local spinners purchase from these stocks, they do not get delivery until three months afterwards. It would not do if delivery could be got right away, as this would relieve local spinners of the responsibility of buying their jute so far ahead. Jute yarn business is improved and prices are very firm at 14.48d from common 8lb. cops and 8lb. spools a lb., with 3 ply 8lb. twist at 16.04d a lb., and there is a steady trade in jute cloth at 12.48d a yard for 10oz. 40in. Hessians and 10.23d for 8oz.

Calcutta Markets

BETTER GENERAL DEMAND AT
TEA SALESSTRONG ENQUIRY FOR BEST
LIQUORING ASSAMS

AT Sale No. 17, held on 26th and 27th September, 63,500 chests were on offer in the Export auction. There was a better general demand. The best liquoring Assams were strongly competed for and were often dearer, while the tippiest sorts sold well. Commonest teas were in stronger demand than previously and were often dearer but Commons and low Medium teas were generally about an anna easier. Medium BOPs and O.Fgs. were one of the weakest features of the sale and were from 2 to 3 annas easier, while Medium B.P.s were from 1½ to 2 annas easier. Whole Leaf grades were in more demand than in previous weeks but sold about an anna below last rates. Darjeelings met with fair support but at lower rates, while Fannings grades of all descriptions were better supported than previously.

Quotations			
	1955		1954
Clean Black Pekoe	Rs. 2 5 0		Rs. 3 1 0
Plain B.P.	1 10 6		3 1 6
Medium Assam B.P.	1 14 0		3 3 0 to 3 3 6
Best CTC Assam B.P.	3 4 0 to 3 6 0		3 7 0 to 3 8 0

At the Internal sale, 19,600 packages of Dusts were on offer. There was a better general demand than in previous sales. The best liquoring CTC Assams were in strong demand and were fully firm and sometimes dearer, while black leaf Dusts suitable for the Middle East sold at high prices. The remaining offerings received fair support but sold generally from 1½ to 2 annas below last rates.

Quotations			
	1955		1954
Medium Doonars Dust	Rs. 1 10 0 to 1 11 0		Rs. 2 9 0
Medium Assam Grainy Dust	1 13 0 to 1 13 6		2 9 6
Best Assam CTC Dust	2 10 0 to 2 12 0		2 12 0 to 2 12 6

There were 3,400 packages of Other Grades on offer, the majority of which consisted of stalky and fibrous types. There was a fair demand for these teas at irregularly easier rates.

FIRM TREND MAINTAINED
IN FREIGHT MARKETS

THE market again showed a very firm trend with North American trades prominent. Last week's report of 65s having been paid for coal Hampton Roads-Antwerp or Rotterdam was confirmed and this rate was soon exceeded when 68s 6d was paid for an October loader and 69s for November. A new-built vessel is reported to have accepted 20 consecutive voyages at 53s 6d with May 1955 cancelling for the first voyage. There was also a flurry in the grain trades with a handy-sized vessel obtaining 75s a ton for consecutive voyages during the 1956 St. Lawrence season, with the option of Churchill loading at 82s 6d. U.S. Gulf-U.K. rose 2s 6d during the week to 100s. The time charter section produced a good demand and representative fixtures were 32s 6d for a Liberty for 6 to 8 months trading, 37s 6d for a fast 6,880 ton motorship for two years and 40s for an oilburner, delivery Hull, re-delivery New Zealand.

SUGAR MARKET

During the week ended 28th September, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were 5,000 bags a day and stocks totalled 50,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-10-0 for ordinary grain and Rs. 32-12-0 for big grain. Ex-Mill delivery rates were Rs. 28-8-0 for D-29 and Rs. 29-2-0 for C-29 grades of sugar. The market went dull due to anticipations of a sales tax levy on sugar by the West Bengal Government.

HIDES AND SKINS

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 20th and 26th September, 1955)
Cowhides—Wet salted (Ord) 6,000 pcs. on the basis of Annas 12 to Annas 13-6; Wet salted (Ord) 18,000 pcs. on the basis of Rs. 10 to Rs. 11; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 12-8 to Rs. 25;

Goatskins—Wet salted (Daissee, Killed) 66,750 pcs. on the basis of Rs. 225 to Rs. 245; Rs. 265 to Rs. 300 and Rs. 325 to Rs. 365; Assam-Dinajpur-Murshidabad 30,050 pcs. on the basis of Rs. 222-8 to Rs. 265; Patna-Pakur 6,000 pcs. on the basis of Rs. 222-8 to Rs. 235; Pakur 2,600 pcs. on the basis of Rs. 230 to Rs. 240; Muzafferpore 3,500 pcs. on the basis of Rs. 265 to Rs. 270.

Books and Publications

VILLAGE EXCHANGE SCHEME

THEORY AND PRACTICE

Industrial Development—A New Approach. By Sushil Dey. (Published by Thacker, Spink, Calcutta. Pages 82; price Rs. 5.)

The village exchange Scheme of Mr. Sushil Dey, Development Commissioner, West Bengal (better known to the readers of *Capital* as S. K. Dey, I.C.S.) has provoked widespread controversy because of its superficial resemblance to the system of primitive barter. But such ways criticism betrays a lack of understanding of the nature of Mr. Dey's scheme. Villagers produce goods in their spare time for one another's needs, ascertained mutually in advance of production through the exchange. The goods are brought into the village exchange and prices fixed according to the current level of market prices and then exchanged among various members. The difference between debit and credit is settled on a multilateral basis and in this way accounts are squared over a period of time, so that the principles of an exchange economy are followed, but not directly. The only plausible criticism that can therefore be made of Mr. Dey's scheme is that it seems to be too much influenced by J. B. Say's or classical laws of the market that fundamentally only goods exchange for goods and that money as a medium of exchange is charged with little consequence. Mr. Dey however is not willing to enter into a theoretical controversy; he has prepared his own theoretical apparatus for the exchange scheme, has gone ahead and tried it in practice, and found that it has been producing results. Elsewhere, Mr. Dey has given statistics of the extra wealth produced in the villages through the application of the scheme, and notes with enormous satisfaction that 500 villages are engaged in it. Some 2,000 artisans, farmers and villagers have taken to the project wholeheartedly, and he has even a plan for granting capital loans to them as production develops and with it the credit-worthiness of the villagers. This is his new approach to the industrial development of India where capital scarcity is acute and idle manpower resources immense. As for the scheme itself, to satisfy sophisticated theoreticians, he has given it the technical name of "a commodity and service exchange with a clearing house device for credits". In a larger sphere, the comparable institution is the E.P.U., and Mrs. Joan Robinson, the celebrated Cambridge economist, who first analysed the theoretical basis of Mr. Dey's scheme and later visited some of the villages where the exchange scheme is working, records her agreement with its theoretical validity and practical utility. Nevertheless, after going through the book, no clear idea emerges as to the long-term aspects of the scheme which Mr. Dey is content to leave to a purely empirical way of working.

A Short History of Indian Currency.—By K. N. S. Nambudiripad. (Published by Continental Prakashan; Poona. Pages 380; price Rs. 7-8.)

This is a textbook which the author has written for the benefit of under-graduate students of the economics honours course. The book is a thorough and painstaking work on the history of Indian currency, though on an elementary level, from the later Hindu, Muslim and Moghul periods to recent years. An under-graduate student is hardly likely to miss anything of importance he should know, and those intending to advance their knowledge on any particular matter will find the list of reference books at the end of each chapter extremely useful.

The Federal Tax System of the United States.—By Joseph P. Crockett. (Published by the Columbia University Press. Available in India from the Oxford University Press. Pages 267; price \$4.75.)

This book is a survey of the law and administration of the Federal Tax system in the United States, which the author who is technical adviser in the with 30 years' experience in Federal Tax law. International Tax Relations Division of the Internal Revenue Service is well qualified to write. Mr. Herrick K. Lidstone of the Harvard Law School who contributes the foreword, commends the book for its description of the complicated rules of the Internal Revenue Code under which various taxes are collected in the United States, in a manner easily comprehensible to the non-technical reader and foreign student of the U.S. economy and tax system. A readable account of the Internal Revenue Service and its organisational set-up has been deservedly commended as an important merit of the book. In addition much information is included about the U.S.A. which is of general economic interest. For instance, the cost of collecting every \$100 of tax is only 49 cents; the total tax collected (Federal, States and local bodies) in 1951 was \$68 billion, which was 29 percent of the national income, and income-tax collections, personal and corporate, account for about 75 percent of the total Federal Tax Revenue. It is thus a helpful reference book for all those interested in the subject. The author does not deal with customs duties, as the scope of the book is confined to internal revenue only, but some

reference to the structure of customs levies would have added to its usefulness.

The Indian Journal of Power and River Valley Development.—(Edited by K. K. Sinha and published at 6, Waterloo Street, Calcutta, 1. Pages 84; price Rs. 5.)

This monthly magazine, devoted to the development of the power and water resources of Asia and primarily directed to the engineering world, nevertheless includes much information regarding the broad aims underlying development projects, which can be of interest even to the layman. This special number of June 1955, is entirely concerned with the achievements, activities and future plans of the Damodar Valley Corporation, which was conceived on the lines of the famous American organisation, the Tennessee Valley Authority. The Damodar Valley Corporation is unique in that it is the first attempt in India to embody the American conception of an integrated exploitation of the entire resources of a river basin, involving the construction of dams, barrages and power stations, flood control, soil conservation and irrigation, and finally agricultural and industrial development. So far, the Durgapur Barrage has been opened and the Tilaiya Dam and the Bokaro Thermal Power Station are already in operation, and each article in the journal, all from authoritative sources, deals exhaustively with a separate facet of the scheme, its progress, aims and possibilities. The Damodar Valley Corporation however, envisaged more than simply the building of dams and power stations, and both the Editor and a member of the Corporation have discussed the implications of the authority originally vested in the governing body at its inception, and commented frankly on the restrictions subsequently imposed, "seriously curtailing the autonomous character of the D.V.C. as well as the range of purpose of its operation." Excellently produced on foreign art paper, the articles are generously illustrated with photographs, maps and diagrams.

Indian Engineering Industries—1955 Edition. (Published by the Engineering Association of India, 35, Stephen House, 4, Dalhousie Square East, Calcutta. Pages 534; price Rs. 16 plus postage.)

The fifth edition of the Engineering Association of India's annual directory has just been published. This year the scope of the volume has been considerably enlarged to include the activities of other allied industrial organisations. The publication covers a wide field and contains a fund of useful information for engineers, business men and economists, while industrialists will find the section surveying the present position of engineering industries both informative and interesting.

LINSEED

After a better opening somewhat easier conditions prevailed in the market last week. Prices were rather well maintained. Trading was very poor whilst arrivals from the centres were on a very small scale, and the demand from crushers was meagre. The oil market was quiet and buyers were adopting a cautious attitude in anticipation of lower levels. Latest quotations were as follows: September-October Rs. 17-12-0 a maund.

COMPANY AND PUBLIC NOTICES

DUNCAN BROTHERS & COMPANY, LD.

NOTICE is hereby given that the Fifty-sixth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Wednesday the 19th October, 1955 at 11-30 A.M. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1954.
2. To confirm the dividend paid on the Preference shares and Interim dividend on Ordinary shares and to declare a final dividend on the Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To transact such other competent business as may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 12th to 19th October, 1955, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,

DUNCAN BROTHERS & CO., LD.,
R. H. DUGUID,
Director.

Calcutta, 26th September, 1955.

THE GROB TEA COMPANY, LIMITED

COAL COMPANIES

O, P, F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THERMAL INSULATION ENGINEERS

RUNNING STATE ENTERPRISE

THE ESTIMATES COMMITTEE'S SUGGESTIONS ON ORGANISATION AND STAFFING

THE Estimates Committee has made a number of important recommendations on the future organisation and administration of the nationalised industries. Not all of them are significant because they ought to be adopted. Some are ill-advised and serve only as examples of what should be avoided. But among the others are a few suggestions which show that the Committee has been thinking along the right lines and has grasped the fact that whether State-controlled or not, the main thing about any industrial concern is that it should be run efficiently. There will be many attempts during the next few years to tamper with this principle. A nationalised industry is a standing invitation to those elements in a community which seek to turn everything to political or narrowly social ends. If this is not sternly resisted the expansion planned for the public sector will yield scanty benefit. Having made the decision to build up public enterprise the sensible course is to ensure that it is allowed to work at a standard of efficiency as close to that of private industry as it is possible to attain.

The Committee favours the public limited company type of organisation as being the most efficient available for the majority of State-controlled units. The choice is a good one. This method has been proved the best for medium and large-scale industrial concerns such as the State has in mind. But it has always owed its strength to the independence of its managers in their day-to-day decisions and the democratic control exercised over them by the shareholders at the annual meeting or when it is urgently required. The Committee has indicated that these conditions can only be simulated in nationalised concerns if the managing director is given full scope to act as a business executive and is not forced to accept the detailed control under which the civil servant has to work. General policy would then be enforced through the Minister acting on behalf of the elected Parliamentary representatives of the shareholders. The theory is excellent. The practice is not so simple and in the many instances where it has been tried—in Britain and in the Soviet Union for example—it has been found that the happy medium between too much control and too much freedom is difficult to find. The mistake usually made at first is that of too much interference. This is often due to fear on the part of the Ministry in charge which suddenly finds that its reputation depends on a new commercial process with which it is entirely unfamiliar. When the resulting difficulties are diagnosed there is usually a swing the other way and the managing director is then given a measure of power and independence which he could not hope for if he had shareholders to answer to. In the Soviet Union the second phase has been reached. It is being maintained because it ensures the maximum industrial efficiency where there is no need to bother about Parliamentary control. Nationalised concerns in Britain have left the first stage and efforts are being made to prevent their entering the second. But the lesson from British experience is that the only real way to avoid the civil service mentality ruling nationalised industries in a democracy is to return them to private enterprise.

*

The first essential for the efficiency of State industries is a clear profit policy. That has not yet been formulated. Until it is, the manager of a State concern can have no idea whether, and under what circumstances, he is to act like the manager of a private firm. This point is not so easily clarified as might appear. State enterprise is not always threatened with competition. Special circumstances are often created so as to shelter the unit with a guaranteed monopoly. Sometimes this may be desirable as well as inevitable. The question is whether the situation is always to be exploited to the full. If it must be then the public is bound to suffer. If it must not, then the ticklish choice arises of how much exploitation is

large-scale business management has to be developed before it can be drawn on.

*

One of the Committee's recommendations would certainly be damaging to efficiency in State enterprise. What prompted the suggestion that 25 percent of the capital of all Government concerns run as joint stock companies should be available to the public is difficult to discover, unless it is the wholly false idea that by this method the popularity of nationalisation will be increased. If the Committee means debenture capital there is no point in the idea at all. Debentures in a State enterprise would be indistinguishable from ordinary Government loans. Both would have the guarantee of the State behind them, and to pay one section of lenders more than another would simply favour the limited numbers lucky enough to be allocated debentures. It would also saddle the concerns themselves with completely unnecessary charges. If preference shares are held without voting rights, the risk to the investor of leaving his income to be regulated by current political fads on what constitutes fair returns to capital, is all too plain. If the shares have voting rights, then, under the provisions of the new Companies Act, the minority shareholders will have wide powers to interfere in the conduct of the business. Under such conditions a concern would have to propitiate two opposing factions, the Government and the shareholders, whose interests will seldom coincide. It is difficult to make out any case for public participation under the peculiar conditions which govern State concerns. What gains might be derived from associating the public with its industries will be lost through the difficulties and disruptions which are bound to arise.

The idea of public participation suggests a desire to eat one's cake and have it. Many irreconcilables are bound to be encountered when such a large measure of State control is attempted in a democracy. Not the least of these will be involved in preventing a large public sector from developing into State capitalism on the Soviet model. If this is not avoided the evils of concentrated economic power, patronage, inequality of opportunity and downright inefficiency will be far worse than they could possibly be under any system of private enterprise. It is useful to remember that when it decided that industrial expansion should take place chiefly through the public sector, the Government chose to face problems which have never yet been satisfactorily solved. It is unfortunate that in the next few years so much attention will have to be absorbed in dealing with them which might otherwise have been saved for the all-important task of raising output and efficiency throughout the economy.

CONDITIONS FOR ENGINEERING EXPANSION

NOT many industries in India today are enjoying as reasonable prosperity as engineering; not many have such reassuring prospects in the near as well as the long term. Yet Mr. D. N. Jalan's presidential address at last week's annual general meeting of the Engineering Association of India, by itself, hardly conveys this impression. It constituted, for the most part, a familiar recital of

they make very little difference to total supplies; the reason why some producers object to them is that the inferiority of their own goods is shown up in comparison with the quality of imports. If total imports were completely eliminated, the consumer would never find out whether the local razor blade is better than the imported one; nor would the local producer, who would be content to double the number of blades he sells because they last only half the time, at double the price.

The official stores purchase policy is another fashionable point of attack. As the Stores Purchase Committee recently discovered, there is still considerable scope for adjustment so that local producers may utilise their capacity more fully, and the opportunities should be, as they no doubt will be, explored. But Mr. Jalan chose an unfortunate example to illustrate his arguments regarding railway purchases. We quote from his address: "Recently the Chittaranjan Locomotive Works drew the attention of the Association that they were in need of bolts, nuts, set-screws, studs, steel castings and forgings. These were some of the items which they were still importing. The Association has collected information from its members and finds that a number of these items can be manufactured in India without difficulty. It appears that the Chittaranjan Locomotive Works have not routed their enquiries to proper quarters." Therefore, adds Mr. Jalan, imports of such items should be banned. The approach to the question might have struck some as rather inverted, for it is not always the buyer's duty to go to the seller; it is just as much the seller's duty to go to the buyer. In the competitive market of today, of which Mr. Jalan complains, the seller's duty to seek out and persuade the buyer is the greater. Of course, if a co-ordinating agency could be established, it would help matters a great deal; but it is hardly fair to expect buying agents from the Chittaranjan locomotive works to go round ferreting out small engineering workshops in the back-alleys of Strand Road, or elsewhere, whenever they want a few screws. Concerns that are starving for orders cannot afford to imitate the retailers of tooth-paste, who merely wait for the customers to drop in and buy a tube.

The smaller engineering concerns, as has been pointed out, are the main victims of poor demand, and better organisation is necessary if they are to prosper. Those with a moderate backing of capital resources and technical skill will have few grounds for complaint if they cannot benefit from the vast opportunities offered to the engineering industries as a whole today. Others, with no capital and with poor technical skill, may have some claim for assistance, but are unlikely to benefit from it unless a change in outlook in first forthcoming. The sort of outlook that favours banning imports, creating artificial markets and maintaining high prices is no augury for survival in an expanding economy. Mr. Jalan, for instance, spoke with concern of the fall in the prices of electric fans and radio receivers. As an example of what a progressive concern is doing with its electric fans, he might have referred to the recent speech of Sir Shri Ram at the annual general meeting of the Jay Engineering Works. There he would have discovered that one firm, at least, has realised that when people do not have the money to buy an electric fan or a sewing machine at a particular price, you have to produce a cheaper fan and a cheaper sewing machine. And if you lose money by cutting the price, you more than make up for it by increasing your turnover. The same goes for radio receivers. More than one firm cut prices some months ago because enough radios could not be sold; now the order-books of many are as good as they would want them to be. Competitors whose experience has been more disappointing should search their hearts and look for symptoms of inefficiency before they ask New Delhi to fill their begging-bowls with alternating doses of inflation and protection.

CURRENT COIN

Hindustan General Insurance.—Dr. N. N. Law's address from the chair at last week's annual general meeting of the Hindustan General Insurance Society Ltd., which is published elsewhere in this issue of *Capital*, reports some encouraging increases in premium income. The gross direct premium income on fire account has risen from Rs. 8.5 lakhs in 1953 to Rs. 9.7 lakhs in 1954. In the accident department, it has increased from Rs. 4.86 lakhs to Rs. 5.26 lakhs, and in the marine department from Rs. 3.49 lakhs to Rs. 4.74 lakhs. Dr. Law points out that these increases have been achieved in rather difficult conditions. General insurance is hedged in with rules, regulations and codes which make expansion difficult. Expenditure on plans which are likely to yield results over a series of years are related to current premium income. This restricts the activities of insurers in the formative stage particularly, and most of them in India belong to that category. It is essential that they be allowed to plan for the future and incur expenses for expansion which can yield a commensurate income only after a period of time. Dr. Law makes

out a strong case why insurance should not be nationalised. It is already, he says, the most rigorously controlled industry in India: it requires the best talent for organisation and development; so complete State control is unsuitable. If general insurance business is to be successfully conducted, risks have to be redistributed over a wide area and this makes insurance international in character. Furthermore, facilities for reinsurance are very poor in this country, and a large part of the reinsurance business of Indian companies has to be placed with foreign companies. According to Dr. Law, "it would be difficult, if not impossible—both temperamentally and for other reasons—for a State Department of Insurance in a nationalised set-up to co-operate with and to receive full co-operation from, foreign private interests who dominate the world reinsurance field. In the second place, nationalisation will deal a mortal blow to Indian insurance business outside India, for business will be looked upon as a projection of the Government of India as a political entity in foreign lands."

Insurance Companies' Progress.—Sir Bijoy Prasad Singh Roy's address from the chair at the 48th annual general meeting of the National Insurance Company refers in glowing terms to the outstanding progress made by the Company and its subsidiary, the National Fire and General, over the past year. Reviewing the increase in every branch of the Company's business Sir Bijoy emphasises the fact that the credit for the growth of Indian insurance in general, since its inception fifteen years ago, goes entirely to private enterprise. This promising position, he points out, is not confined to India alone, for Indian insurance companies have built up valuable connections abroad, earning foreign exchange in increasing volume and contributing in no small measure to goodwill and amity in business circles overseas. Sir Bijoy, after a survey of international political and economic conditions, commented on India's progress during the last five years, drawing attention to the uncertainty prevailing over the Government's policy towards the private sector in the next five year plan. "Capitalism," he says, "has come to be erroneously viewed as outmoded and as a hurdle in the way of the achievement of a socialistic pattern of society and if only a little thought were given to the part it had played in the economic and industrial development of the country, the picture would be altogether different." Referring to the rumours of nationalisation, Sir Bijoy says that it is regrettable that in the present stage of the insurance industry and with such tremendous tasks before it, talk of impending nationalisation should again gain currency. Any such move, he believes, cannot but be a step backward in the drive for the spread of insurance in the country and for extending operations abroad. Sir Bijoy stresses the fact that insurance in particular requires the prompt service and personal touch which the stereotyped methods of Government organisations can never provide. "Nationalisation," he says, "will only be a penalty for achieving success and maintaining efficiency and more a hindrance than a help to further rapid development of business."

Jute Brokers Meet.—Mr. J. S. Kuthari's presidential address to the Jute Brokers Association in Calcutta last Saturday was of a piece with Mr. D. N. Jalan's speech to the Engineering Association of India three days earlier (the latter is discussed on page 457). Mr. Kuthari's main trouble, as far as one can see, is that the members of his Association are not getting enough business. This is not the first time that he has "referred to the question of availability of more business to the brokers in the membership of the Association from the jute mills." But "I am sorry to find that the position of our member-brokers has not improved." So the hoary complaint stands: "I find that lately a number of brokers who are not on the approved list of any of the recognised jute brokers associations have entered the field and are getting regular business. As a consequence of this, the normal business of many of our member-brokers has been adversely affected." Mr. Kuthari does not give one single reason to explain how this state of affairs has resulted, apart from the significant statement: "It is often reported that the jute mills are reluctant to place business with the member-brokers since they feel that the brokers, due to one or two defaulters, are unable to deliver goods in case there is any upset in the markets." He merely claims that "brokers having long-established connections will naturally create confidence and offer satisfactory conduct of business." Clearly something is wrong somewhere in Mr. Kuthari's reasoning. If a "long-established" broker can "create confidence" and "offer satisfactory conduct of business"—and keep his prices competitive—why should a mill not buy from him? If he is neglected in favour of newcomers, surely it is reasonable to assume that, in the mill's view at least, one or more of these conditions is not being fulfilled. No mill is foolish enough to go out of its way to buy dearer jute from less reliable people. One does not need the hard-earned experience of years to find out that if A is doing business with C, it is usually because he cannot do better business with B. The

direction of Mr. Kuthari's exhortations, hitherto addressed outwards, might well be reversed.

The Centrifugal Pump Industry.—In the drive for greater industrialisation the Government is going to find it increasingly difficult to steer a course between a ruthless jettisoning of uneconomic units and what may in some cases be a purely philanthropic support of indigenous small-scale industries. In his presidential speech at the second annual general meeting of the Indian Pump Manufacturers Association in Calcutta, Mr. N. W. Gurjar presented the case of the twenty organised units in the country engaged in the manufacture of power-driven centrifugal pumps. "It is not our capacity to manufacture but it is our capacity to sell consistent with the existing level of costs of production that is most important," he said. Protesting that the Government has imposed restrictions only on the imports of pumps up to 6 inches Mr. Gurjar asserted that "taking into consideration the huge stocks of pumps held by the various manufacturers it can be safely said that the entire demand of centrifugal pumps from 12 inches to 14 inches can be met from indigenous sources," and stated that "as regards special types of pumps required by sugar factories and other chemical plants, the existing units are quite capable of handling these if proper specifications of the requirements are known to them." Detailing the difficulties attendant upon the smaller units Mr. Gurjar included the burden of heavy taxation and put forward a plea for a lower taxation rate of earned profit spent on expansion. He suggested that since smaller units cannot afford to spend money either on research or development, technical institutions should be persuaded to take up the hydraulic problems of the pump industry.

The Fate of Small-Scale Industries.—Once again the Government, by its avowed policy of encouraging small-scale industries, seems in danger of being hoist with its own petard. The galvanised iron pipe industry, which since the war has been producing water, gas and steam pipes, is claiming recognition and aid as a beneficiary under the Planning Commission's proposals for the development of cottage and small-scale industries side by side with the public and State-sponsored heavy-industries sector. Referring to the establishment under Government patronage of the two big concerns of Messrs. Kalinga Tubes Ltd., and Messrs. Indian Tube Company Ltd. Mr. Kishori Lal Chowdhury, speaking at the second annual general meeting of the Indian Pipe Manufacturers Association, said: "I take this opportunity of urging upon the Government of India to announce their definite policy whether they would like to keep this small-scale industry going, or would like to see it pack up and make its exit for ever. I see from the Press reports that the Planning Commission are attaching great importance to the cottage and small-scale industries and in the second plan frame emphasis is on the small-scale and cottage industries. If it is Government's policy then they should categorically state that although two big pipe manufacturing units have been established, the smaller sector of the industry which has so far not been recognised will henceforth be given all possible assistance by way of adequate raw materials, financial and marketing facilities." Mr. Chowdhury estimated that the demand for pipes by the end of the second five year plan would amount to 75,000 to 80,000 tons a year. "Against this," he said, "Messrs. Indian Tube Company Ltd. have an estimated capacity of 84,000 tons on a three-shift basis, and Messrs. Kalinga Tubes Ltd., 30,000 tons a year on a two-shift basis" "whereas out of the total estimated capacity of 12,000 tons of our members, the production in 1954 was only 1,100 tons. If the necessary assistance is available," he added, "not only the idle capacity will be utilised but also scope for additional employment would be provided." Some relief had been afforded to the industry, said Mr. Chowdhury, by the Government's restrictions on imports. The import of 'A' class pipes up to 2" has been banned and that of 'B' and 'C' class has been allowed at the rate of 20 percent of the licence issued during January-June 1955. Mr. Chowdhury then went on to urge the Iron and Steel Controller to consider whether the smaller sizes might not be reserved for the smaller manufacturer; "so that while there is no unnecessary duplication of capacity, the smaller sector of the industry is also kept alive side by side with the two big units who will be producing on a very large scale."

The Case for Cotton Textiles.—Apart from producing a voluminous report giving the fullest possible statistics on every aspect of the cotton textile industry in the country and detailing all developments during the year, the Millowners Association in Bombay deserves to be congratulated on its policy of issuing small booklets to keep the public continuously informed about the various phases of the industry. The latest of these discusses the place of the industry in the nation's economy. Mr. G. D. Somani, the chairman, states in a foreword that it is necessary for the country's textile manufacturers to be prepared to cope with

the additional demand for cloth which will result from a 25 percent increase in the national income during the second five year plan. He suggests that the task of meeting this new demand should be given to the mill and the handloom sectors strictly on the basis of their present performance and their capacity to expand within the stipulated period. Mr. Somani concedes that the handlooms are entitled to a place in the economy so long as unemployment remains a major problem, but he is quick to point out that this fact should not blind us to other considerations of equal importance. The cotton textile industry, which has been a target of attack by many public men in recent times, deserves more careful study and consideration at the hands of the public and the authorities in view of the fact that it is the nation's biggest organised industry, accounting for 15 percent of the total paid-up capital of all joint stock companies and for nearly 35 percent of the annual value of the entire industrial output. As shown in this booklet its basic raw material furnishes the means of livelihood of an important section of the rural population, while its processing into finished goods is a major source of employment and wage and salary income. It is computed, on an average that the industry consumes annually about 3.8 million bales of Indian cotton, besides 750,000 bales of imported cotton. The value of the raw material alone comes to about Rs. 200 crores. Besides being a large consumer of fuel, electricity and lubricants, valued at Rs. 11 crores, it supports a number of ancillary industries producing dyes and chemicals, mills stores, sizing and packing materials, which can be valued at about Rs. 26 crores per annum. Its contribution by way of taxes and levies to the Union and State Governments comes to Rs. 40 crores annually, while it provides jobs to three quarters of a million workers to whom it pays Rs. 80 crores a year.

The Rational Approach.—Yet another deep dent in the basic idea of Prof. Mahalanobis's plan frame has been made with the publication of an article in the latest issue of the Reserve Bank of India Bulletin, by Dr. B. K. Madan, Economic Adviser to the Bank. This questions Prof. Mahalanobis's diagnosis of the problem of unemployment and Dr. Madan points out that the diagnosis "errs seriously in reading the nature of the malady that is afflicting the economy and the right lines of its treatment." To a large extent Prof. Mahalanobis's whole structure rests on his belief that the problem of unemployment, or at least the present volume of it, is of recent origin, something like the nature of an epidemic and therefore requires immediate treatment. To meet the urgency of the situation, Prof. Mahalanobis suggests a distinct phasing of the programme of industrial development (1) until unemployment is liquidated and (2) after it has been brought under control, and asks that the provision of cheap power and small machines to the hand industries to increase productivity as well as any increase in factory production of consumer goods, should be put off to the second stage. Rejecting this reading of the situation and the remedy suggested by Prof. Mahalanobis, Dr. Madan propounds the theory that "the incidence of unemployment, having shifted from the numerically large but not vocal class of landless agricultural labour to the politically conscious urban classes, the problem has come to the surface, but it is endemic." He argues that there is nothing in the characteristics of the unemployment situation today which would justify so radical and far-reaching a step as the banning of technical advance and improvement in production efficiency. According to Dr. Madan, the development programme should be attuned to the employment approach on a durable, long-term basis, to take account of the abundance of man-power and labour co-existing with a scarcity of capital resources. This stand inevitably leads Dr. Madan to suggest that the need in India today is not only for an increase in capital, but also for an increased use of capital-saving methods, i.e. of methods which increase the productivity of capital as well as of labour without the increased use of capital. He consequently lays special emphasis on the increased use of better as well as more tools and improved methods and techniques and disapproves of Prof. Mahalanobis's attitude towards technical progress as an anachronism in this atomic age. Having thus demolished the entire edifice of the second plan as visualised by Prof. Mahalanobis and the orthodox Gandhian economists, Dr. Madan comes to the conclusion that the view that, until all those who are at present (or will be in the near future) dependent on the household and hand industries are fully employed, there should be no encouragement of factory industries or adoption of technically efficient equipment in the household industries cannot be accepted as an effective means of meeting the present needs of the country. As the continued absorption of the output of capital goods, especially machinery, is necessary, Dr. Madan rightly advocates a larger degree of expansion in the consumer goods section than that which is provided for in the plan-frame.

Investment and Income Distribution.—A cogent plea against the Taxation Enquiry Commission's recommendation for a ceiling on private income to

bring about a socially-equitable pattern of income distribution was made by Mr. Rangnath Bangur at the half-yearly general meeting of the Bharat Chamber of Commerce. In his address from the chair, Mr. Bangur said that the proposal of the Commission to "freeze private income practically at the level of Rs. 25,000 after tax," was only illusory, because already assesses with an income of over Rs. 25,000 were contributing 62.9 percent of the total income-tax collected. Any statutory limit was unlikely to achieve a better income-diversionary effect, but it would surely affect risk enterprise adversely and therefore economic growth. The effect of such a policy on employment was obvious. Besides, such devices are peculiar to totalitarian régimes and ill suited to a democratic society based on the fundamental assumption of individual freedom. He then referred to the widespread popular belief that business men were carrying away fantastically large profits while the rest of the community subsisted in poverty. This notion of fantastic business profits was wrong, Mr. Bangur pointed out, and the point could be proved by a reference to the recent Reserve Bank of India's study of company earnings. In 1952, the 746 companies dealt with in the survey had a sales revenue of over Rs. 1,037 crores, of which the gross profit before tax was about Rs. 40.8 crores. That is a before-tax profit of 4.8 percent in every rupee of the proceeds of goods sold, which represented 2.5 percent after tax. During the previous year, the corresponding figures were 3.9 and 2 percent. As against this, in the United States during the first quarter of 1955, some 576 companies earned a before-tax profit of 7.2 cents for every dollar worth of goods sold which represented 3.8 cent after tax. From this Mr. Bangur concluded that business profits in India are not fantastic; in fact the profit-

to-sales ratios should be higher, considering the state of development in the country and rate of capital savings.

Wealth and Welfare.—To the current confused thinking in India on the creation of a welfare state, Mr. N. L. Kanoria brought a healthy breath of realism in his presidential address at the second quarterly general meeting of the Indian Chamber of Commerce. A welfare state was not something which could be created out of legislation alone, Mr. Kanoria pointed out. The creation of enough wealth and capacity to sustain extensive welfare measures must come first, and the necessity is the greater for a country industrially undeveloped, or under-developed. He stressed the need for pressing all productive agencies into action: public or private, the distinction was immaterial. The private sector has been functioning efficiently in its field. Any interference with its operation on "sentimental or doctrinaire grounds" would only hamper production. Mr. Kanoria welcomed the latest statement of the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, which reassured the private sector that the Government did not intend nationalising private units merely for the sake of doing so. The Government has plenty of new fields to exploit and if the aim is to maximise national income, it is essential that it should stick to these. Mr. Kanoria was doubtful whether the freeing of consumer goods production in the organised sector to bolster small enterprise and hand trades is consistent with the objective of achieving a 5 percent rate of growth in national income during the second plan period. He agreed that the scope for developing cottage industries is great, but considered that their development must necessarily be co-ordinated with those of large-scale industries. His plea was for a thorough re-examination of the present industrial development policy during the next plan, as otherwise inefficient means of production will not be able to sustain the level of employment aimed at, in spite of protection and generous State assistance. Mr. Kanoria suggested developing road transport side by side with the railway system, since it is becoming increasingly clear that the rate of economic expansion has substantially exceeded the traffic-carrying capacity of the railways and transport bottlenecks look like becoming almost a permanent feature of the existing transport services.

Without Prejudice

EXTORTION UNDER THREAT OF MURDER

SUPREME COURT REJECTS APPEALS

(FROM OUR LEGAL CORRESPONDENT)

THIS case is worth nothing only because it relates to a type of crime very unusual in India, though quite customary in the West and in the United States. Blackmail is not customary here and extortion under the threat in writing of murder is virtually unknown; apparently our criminals regard the latter as in bad taste or, perhaps, too risky. At any rate, whatever the reason may be, after a fairly regular perusal of the law reports during a good many years, this is the first case of its kind the writer has seen reported; which is a remarkable fact considering the simplicity of the crime and the frequency of its occurrence elsewhere.

Mangilal, a wealthy business man of Bijainagar, on 16th July, 1952, received by express delivery a letter. The letter was actually delivered to his son Laduram who, on reading it, found that it purported to have been sent by one "Bhayankar Daku Dal", and in the approved style of the Hollywood "whodunit" it demanded that at 6.30 p.m. on 17th July, Mangilal in person or by deputy should "at the crossing near the 27th milestone on the Ajmer-Bijainagar Road" attend and pay over the sum of Rs. 5,000. The alternative to payment was put in words succinct. "If you cheat or do 420 (sic), or in case you inform the police, no other punishment except that of death will be meted out to you and you will be shot dead and made to lie on the ground." Laduram took this letter with its envelope to his uncle Ramjas at Ajmer, and both of

them consulted the Superintendent of Police, gave him the letter and envelope and asked for immediate protection and investigation. The result of this urgent request was, as the learned Chief Justice dryly put it in the Supreme Court later: "The Superintendent of Police, however, took no action in this behalf."

So Mangilal, left to his own devices, had to project himself as best he could and this he did or tried to do by hanging his gun from a peg on the wall of his shop. The blackmailers were prompt and businesslike. You will have observed that their letter of demand had been received by the merchant on 16th July and that he was given only until 6.30 on the evening of the next day to raise and pay the money. Mangilal was not a man easily to be intimidated and perhaps he had been reassured by the police. At any rate he had no intention of paying and neither he nor his deputy turned up at the crossing near the 27th milestone; 6.30 p.m. came and went, and at 9.30 the same night the merchant was sitting unperturbed in his shop with his clerk Gajanand, going through his accounts with his gun handy, hanging on its peg. Two men suddenly walked in from the street, one dressed in a khaki suit and the other in a blue one. The former grabbed Mangilal's gun from the wall and the man in blue demanded a reply to the letter. On Mangilal replying that his son had taken the letter to Ajmer, the man in blue wasted no time. He drew a Mauser pistol and shot Mangilal dead. The two visitors then ran away. On the way they threw the pistol and some khaki clothes in the street.

The police now acted with commendable celerity and efficiency, two exemplary qualities which had, you may think, not been particularly in evidence when the murdered gentleman's relatives

made their request that he should be accorded police protection. It appeared that this was not an isolated case and that a gang was in existence which, in the words of Mahajan C. J. later, "had acted in conspiracy and realised money from rich persons through threatening letters." Within a week after the murder of Mangilal the police believed that they had run the gang to earth and had challenged four persons. Now, in the town of Bijainagar there lived and flourished a well-to-do citizen named Hem Raj who owned a cycle shop. The authorities were of opinion that this gentleman was one of the gang and he was one of the four arrested in regard to Mangilal's murder, the other three being Hukum Singh, Milap Singh and Abdul Hakim. Hem Raj and Hukum Singh were arrested on the evening of 26th July at Bijainagar and were sent to jail on 28th July, 1952. On 30th July, 1952, Hem Raj made a confession in jail before a magistrate. The date should be noted, for Hem Raj "sat on" his confession, so to say, till 5th September without resiling from it. On that day, at the first hearing of the case before the committing magistrate, the confession was retracted by means of an application made through counsel, and a number of grounds were given why the confession was inadmissible and not of any value. All the accused persons denied the charge. Milap Singh and Abdul Hakim were acquitted by the Sessions Judge who, however, convicted Hem Raj and Hukum Singh of the various offences with which they had been charged. They both appealed to the Judicial Commissioner at Ajmer. Hukum Singh's appeal was allowed but the conviction of Hem Raj was confirmed. Hem Raj then appealed by special leave to the Supreme Court, and the State also appealed by special leave against the acquittal of Hukum Singh.

The report of the proceedings before the Supreme Court does not deal in any detail with the actual evidence connecting Hem Raj with the murder. He had been tried before a judge and jury which had had that evidence before them and his appeal to the Judicial Commissioner had failed. The Supreme Court was not prepared to disturb these two concurrent findings by re-opening the whole case again and allowing every fact and circumstance which had already been heard and disposed of by the two lower courts to be argued afresh; and the importance of this case from a legal point of view is that the Supreme Court laid down the principles on which in only very exceptional circumstances it will, in such a case as this, exercise its powers to overrule concurrent findings of the courts below. "Unless," said Mahajan C. J., "it is shown that exceptional and special circumstances exist, that substantial and grave injustice has been done and the case in question presents features of sufficient gravity to warrant a review of the decision appealed against, this Court does not exercise its overriding powers under Article 136(1) of the Constitution, and the circumstance that the appeal has been admitted by special leave does not entitle the appellant to open out the whole case and contest all the findings of fact and raise every point which could be raised in the High Court. Even at the final hearing only those points can be urged which are fit to be urged at the preliminary stage when the leave to appeal is asked for."

Dr. Tek Chand was the barrister whom Hem Raj had been fortunate enough to be in a position to retain as his leading counsel; but even he, one of the most eminent and learned lawyers in the country, was unable to make bricks without straw and thus restricted—and if one may respectfully say so, properly restricted—had to confine himself to three points. They all related to the confession. This was a most damaging document, consisting of 21 pages, full of the most precise details of the crime and its circumstances; and unless it could be upset, was virtually fatal.

Dr. Tek Chand therefore concentrated his efforts on the confession. His first point was that it was inadmissible in evidence because it was not freely and voluntarily made but was extorted by the police by threats and promises. The Supreme Court considered this in detail and rejected it. The second point was that the magistrate who recorded the confession did not inform the prisoner that he was a magistrate and that he did not comply with the requirements of law when he recorded the confession. The magistrate himself disposed of that point in his evidence. He said that he told the prisoner that he was a magistrate and we reproduce the questions he put to Hem Raj as being a model of what they should be. "Do you wish to make a confession? Answer, 'Yes'." "Are you making it of your own free will and without the compulsion of anybody?" Answer, "Yes". "You are not bound to make a confession. Do you understand this?" Answer, "Yes". "If you make a confession it may be used in evidence against you. Do you realise this?" Answer, "Yes". "Shall I record your confession?" Answer, "Yes". The Supreme Court rejected this point. And the third objection which had been made before and rejected by both the lower courts was also rejected by the Supreme Court. It was that there was no independent corroboration of any of the material facts contained in the confession. The conviction of Hem Raj was therefore upheld. But the State's appeal against the acquittal of Hukum Singh was dismissed, the Supreme Court agreeing with the Judicial Commissioner that there was a reasonable doubt as to his guilt.

(Hem Raj v. State of Ajmer. Supreme Court Appeals. 1955. p. 50).

A DITCHER'S DIARY

that Calcutta's second-hand bookshops have not passed into literary history as have London's. Fitzgerald's *Omar Khayyam* languished unknown until D. G. Rossetti discovered it in an old-book shop where the publishers had dumped almost the entire edition, except for the few copies that had sold. Rossetti worked up a movement in its favour and as a result it has since found world-wide readership. Many again will recall the story of how George Bernard Shaw, having presented one of his books to a friend with his compliments, happened one day on the very same book in a London old-book shop. Being Shaw he sent it a second time to that friend "with renewed compliments".

I have never subscribed wholeheartedly to the theories which interpret history wholly on economic lines, but I must confess a high regard for the sound commonsense of Mr. Franz Pick when he gives his opinion of the influence currency management has had on the relations between nations, especially in the last fifty years. This he does in the foreword to the 1955 edition of *Pick's Currency Yearbook*, his monumental attempt to unravel the tangle into which war, economic development, and often downright bad management are persistently landing the world's currencies. I particularly approve his opening quotation, "The last silver bullets win a war" said by Raimund Count of Montecucoli, seventeenth century Imperial Austrian Field Marshal, and the rather bald comment of his own "Since the beginning of the twentieth century, currencies have become foremost instruments of power." He does not exaggerate when he says that "Good monetary management creates civilisations or perpetuates them." But when he adds that "Bad currency administration, mostly beginning with foreign exchange legislation, destroys forms of living, political systems, and often leads to war and complete subjugation of individual countries" I begin to suspect he is being too much of a purist. There are instances where currency manipulations have saved the world much misery (notably during the Great Depression) which strict adherence to the more orthodox methods would have perpetuated. But if Franz Pick does speak with the somewhat self-righteous air of one who has the American dollar jingling in his pocket, his words serve as an excellent warning to those Governments that consider their country's currency will always be as docile and willing to be of service as a milch cow. He may not be altogether right when he lays so much of the world's evil at the door of socialised currencies, but any words aimed at the all-too-prevalent tendency of Governments to pile currency control on top of currency control is always worth saying. He sadly points out that "The 'don'ts' have by far out-distanced the 'do's' in currency legislation ruling the lives of ninety percent of the world's population. Procedures connected with the simple transactions of importing or exporting merchandise are, at present, an elaborate science in African, all Asiatic, Australian, European and South American countries". I wish it were possible to contradict him.

As Desmond Shawe-Taylor says: "First rate operatic singing and playing go a long way towards creating their own dramatic illusion, and this illusion can survive almost anything short of the absolute prose of a concert performance with Tristan bobbing up in tails to answer a Dior-clad

Isolde." But this involves nothing more unorthodox than a matter of costume and décor, and after all we have already seen *Hamlet* in modern garb. The real test comes when we are asked to accept variations on an original theme, and just how far it is permissible to plagiarise, transcribe or parody without offending susceptibilities or infringing the unwritten law of moral copyright, is a delicate question. We have been startled over the last few years by crooners coming out with song lyrics based on Tchaikovsky's first piano concerto, by urchins whistling Chopin nocturnes, and by London's latest musical *Kismet* "borrowing" its theme song from Prince Igor. Now CinemaScope gives us *Carmen Jones*—with music by Georges Bizet. The beauty of the voices, which of course do not belong to the actors, has difficulty in surviving a libretto in which a husky American negro prize-fighter mouths the Toreador's song to the words "At the sound of the bell we fight like hell." Being old-fashioned enough to eschew opera in such a bastard form I find myself inclined to side with the purists. The more charitable among us will no doubt attempt to excuse an attitude of "Well so what?" by arguing that surely it is better for the public to read a bad translation of Goethe or of Virgil's *Aeneid* and listen to a crooner swinging Chopin or murdering Stravinsky, than to remain forever wedded to a world of whodunits and boogie-woogie in blissful if shocking ignorance of the great.

I have learned to entertain a deep distrust of footprints ever since all the ballyhoo about the Abominable Snowman came to nought. And now a correspondent quotes "pugs" in answer to my recent comment on the census of the lions of the Gir forest in which I poured good-humoured (as I thought) ridicule on what were the statisticians' probable methods of computation. This correspondent assures me that pugs, found around drinking places in jungle clearings, often serve as a basis for a census of wild beasts. He also draws my attention to a solemn fifteen-summer-old official publication which, he says, contains a full report of a contemporary census of tigers. Not having access to this venerable publication and, in any case, not being able to summon sufficient interest in it, I still hold that pugs as a source of calculation may be misleading. For example, what about those small fry among the Gir lions who may have elected to obey the time-honoured maxim of following in the footsteps of their elders? Not inconceivably they were left out of the reckoning, thus making nonsense of the statisticians' arithmetic. Then there is also the possibility, not to be wholly discounted, of a few three-legged monsters who may have made accuracy difficult, if not impossible. Obviously, therefore, pugs alone will not do. If the statisticians have not been able to discover during the last fifteen years some better means of arriving at the truth, I would strongly suggest that they refund all the salary they have pocketed so far. I might also recommend to them the methods of America's F.B.I., or "G" men as I believe they are called. I read some time ago that this much-screened organisation has been called in to decide which was which between two identical baby twins. Although I cannot imagine why it should be important to sort them out at that age, before they had incurred any income-tax liabilities at all, the occasion was risen to and identification was made from the differing footprints. And now, if anybody challenges me again, I would sooner be thrown to the lions than explain that all this is by way of a joke.

Company Meeting

HINDUSTHAN GENERAL INSURANCE SOCIETY LTD.

INSURANCE IS THE LEAST SUITABLE SUBJECT
FOR STATE INTERFERENCE

Speaking at the last Annual General Meeting of the Hindusthan General Insurance Society Ltd. held in Calcutta on the 27th September, 1955, the Chairman, Dr. N. N. Law, M.A., Ph.D., said:—

In my last address to you, I expressed the hope that your Society would endeavour, within the prevailing limitations of the business, to increase the premium income. That hope, I am glad to say, has been, to a certain extent, realised. Fire gross direct premium income has gone up from about Rs. 8,50,000 in 1953 to about Rs. 9,70,000 in 1954. Likewise the premium income in the Accident and the Marine departments has gone up from about Rs. 4,86,000 to about Rs. 5,26,000 and from about Rs. 3,49,000 to about Rs. 4,74,000 respectively.

The increase in premium incomes, as stated earlier, has been achieved in rather difficult conditions. In the first place, general insurance business is now hedged in with rules, regulations and codes that make expansion a difficult task. Expenses relating to plans likely to yield results over a series of years in the future are related to current premium income. The anomalous position created by the current expense regulations in the matter of developing general insurance business has been more than once brought to the notice of the Controller of Insurance and the Government of India, pointing out that the disincentive engendered by such regulations has been acting as a brake on progress, which otherwise could have been achieved. The restrictive effect has fallen more heavily on insurers in the formative stage, to which category most of the Indian insurers belong, as from the nature of the case they must plan for the future and incur expenses for expansion which can yield a commensurate income only after the lapse of a reasonable period.

In the next place, general insurance business as other forms of insurance has had to operate in an unfavourable climate quite for many months since when the role of private enterprise in the domain of insurance came to be questioned by important official personalities. As you are aware, private enterprise in the field of insurance has been under a state of comments and criticisms calculated to undermine its useful role and create doubts in the public mind about its future status. Criticisms and constant threats of nationalisation from official quarters cannot but have a stifling effect on the initiative of the insurance for expansion, and incidentally upon the volume of current business and current investments in the insurance industry. While the debate on nationalisation goes on, the industry cannot help feeling that its future is uncertain, adopting, under the circumstances, a

policy of wait-and-see. Already the rot has gone far and it is time that the Government came out with a clear statement of policy, and not let this sword of Damocles hang over the head of the industry quite indefinitely.

Nationalisation

Whatever might be said of the merits of nationalisation in other fields, insurance, for the obvious reason of being already the most rigorously controlled industry in India, and yet requiring the best talent for organisation and development, is the least suitable subject for State interference of this extreme form. Apart from various other aspects of insurance which make it unsuitable for nationalisation, it is well-known that successful conduct of general insurance business involves a redistribution of risks over a wide area, a circumstance which makes insurance truly international in character. Furthermore, facilities for reinsurance, which is an integral part of general insurance business, are very poorly developed in our country at present and the bulk of the reinsurance business of the Indian companies has to be placed with foreign companies. The value of such foreign reinsurance facilities to Indian business is evident from the concession in the matter of assessment which the Taxation Enquiry Commission, to whose recommendations I shall presently refer, has proposed in favour of the foreign reinsurance companies. While at present the flow of reinsurance business is still in favour of foreign companies, there can be no doubt that in course of time, with the gradual development of the internal market and acquisition of more and more strength, the gap will be progressively reduced, and reinsurance will be fully reciprocal in character. It is quite easy to see that it would be difficult, if not impossible,—both temperamentally and for other reasons—for a State Department of Insurance in a nationalised set-up to co-operate with and to receive full co-operation from, foreign private interests who dominate the world reinsurance field. In the second place, nationalisation will deal a mortal blow to Indian insurance business outside India, for business will be looked upon as a projection of the Government of India as a political entity in foreign lands. Thus will vanish a valuable invisible export with consequent loss of foreign exchange and business connections.

I feel that the scope for this particular trade has rather to be enlarged than circumscribed. This business is written now in our country through a maze of rules and regulations which curb the initiative. The need of enterprising talent in this business is as important as in other fields. Regulations must not act as a disincentive. So long as the regulations do not bar the path of progress, there is not much to be said against them. Unfortunately, however, they are not so. A restrictive provision to which I drew your attention in my address last year is in regard to the Principal Agency system which is scheduled to terminate from 1957. I do not see how the country would stand to gain by eliminating Principal Agency altogether. In the absence of houses of brokers, as they are in the U.K. and which in this country have yet to grow, Principal Agencies must necessarily take the place of the brokers. They have been rendering useful service to insurance for a small return. I see no good in opening the flood-gate of insurance in the market without an Agency House to control and regulate the same. I am afraid that the danger of abuse, if at all is more inherent in its abolition than in its retention.

Internal Problems

Turning now to the internal problems of the industry, one of the most pressing problems of the past has been that of rebating. The problem has been under the active consideration of the Executive Committee of the General Insurance Council which recently evolved a code of conduct with a view to stopping this malpractice. The final eradication of the evil of rebating will not however be possible unless the insuring public, the agents as well as the executive officers are impressed with a full realisation of the permanent injury to the whole industry which the misdeeds of a few can inflict.

In this connection, I cannot help referring to the recent reduction of premium rates in the Fire section of the industry at the instance of the Tariff Committee as a check on rebating. While its efficacy in checking rebating is doubtful, it has placed the future of Fire insurance business in serious jeopardy by inflicting a privation on honest and scrupulous companies.

Cuts in Premium

With reserves low and considerable scope for the improvement of the standards of service still to be attained, compulsory cuts in premium rates will hinder the building of reserves and the development of business on sound lines. There is, therefore, a very good case for a reconsideration of the whole question. Moreover, the machinery for checking rebating created under the auspices of the Executive Committee of the General Insurance Council is now in operation in various parts of the country and it must be given sufficient time for producing tangible results. Until this is done it is premature to try other remedies.

I have already referred to the report of the Taxation Enquiry Commission which was published early this year. While not conceding in full the claims of the industry for a more sympathetic treatment at the hands of the Government in the matter of taxation, it is gratifying to note that the Commission has recognised the special position of insurance, and also of general insurance, in the national economy and has made a number of recommendations in its favour in the right direction. While this does not meet the requirements of the industry to the full, it can be regarded as an augury of more sympathetic treatment in future, and the Government should lose no time in giving effect to the recommendations of the Commission as early as possible.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

FUNDS RETURNING

Wednesday, 5th October.

MONEY is now flowing in from upcountry areas. The liquidation of the sugar stocks is releasing a good deal of capital. There has been no change in the requirements of the other industries and demand for advances for the holding of pre-Puja cloth stocks has not yet made itself felt. In spite of the slack money conditions generally, the interbank call rate in Calcutta is unchanged at 3 percent, although there are lenders over at this figure.

A very small amount of business has been done in the market for export documents this week. Remittance has been in moderate demand. The principal exchange rates are unchanged, but sterling continues to show signs of increasing strength. After some fluctuation the dollar quotation is unchanged on the week at Rs. 480½.

Silver was quiet on profit-taking. The price fell from the previous week's level of Rs. 169-2 to Rs. 167-4, quoted today. The rate for forward delivery was quoted at Rs. 167-8. The London price advanced from 79½d. to 79-7/8d. The price of foreign silver in New York also rose from 90½ to 91-7/8 cents.

Gold ruled easy in sympathy with silver and the price declined from Rs. 97-2 to Rs. 96-1. The sovereign at Rs. 61-13 showed a loss of 4 annas.

Tenders for Rs. 1½ crores of 91-day Government of India Treasury Bills, which were opened on Tuesday, 4th October, 1955, totalled Rs. 3,20,00,000. The average rate of acceptance fell from Rs. 2-8-2 to Rs. 2-7-11 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 85 percent. Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 10th October, 1955. During the week ended 30th September, 1955, Government of India Treasury Bills for Rs. 1,05,00,000 were sold in favour of the Reserve Bank of India.

A decline of Rs. 547 crores in notes in circulation to Rs. 1,280.22 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 30th September, 1955. The total note issue was Rs. 72 lakhs higher at Rs. 1,312.83 crores. Notes held in the Banking Department consequently rose by Rs. 6.20 crores to Rs. 32.61 crores. Deposits of the Government of India and other Government accounts fell by Rs. 90 lakhs and Rs. 60 lakhs to Rs. 58.04 crores and Rs. 11.64 crores, respectively while balances of commercial banks increased by Rs. 4.24 crores to Rs. 62.77 crores, following easier money conditions. Balances held abroad declined by Rs. 1.97 crores to Rs. 47.66 crores. Investments at Rs. 49.85 crores showed a rise of Rs. 24 lakhs. Other loans and advances dropped from Rs. 26.01 crores to Rs. 23.11 crores of which advances to scheduled banks against usance bills totalled Rs. 7.80 crores (Rs. 8.68 crores). These advances amounted to Rs. 193.93 crores since 1st January, 1955. Ways and means advances stood at Rs. 2.02 crores (Rs. 1.82 crores).

The statement of the position of scheduled banks for the week ended 23rd September, 1955, discloses Demand and Time liabilities at Rs. 608.74 crores (Rs. 12.09 crores on account of borrowings from banks) and Rs. 415.23 crores (Rs. 3.39 crores)

PARRY & CO. LTD., MADRAS

compared with Rs. 599.15 crores (Rs. 7.53 crores) and Rs. 412.62 crores (Rs. 3.30 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 84 lakhs and Rs. 6.06 crores to aggregate Rs. 33.88 crores and Rs. 55.33 crores, respectively. There is a drop of Rs. 1.93 crores in investments to Rs. 381.44 crores. Advances and bills discounted at Rs. 599.18 crores reveal a fall of Rs. 6.28 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.7 percent and 58.5 percent against 8.1 percent and 59.8 percent.

The return of the State Bank of India for the week ended 23rd September, 1955, shows a rise of Rs. 35 lakhs in total deposits to Rs. 216.32 crores. Investments in Government securities are up by Rs. 60 lakhs to Rs. 99.44 crores, while other authorised investments are down by Rs. 56 lakhs to Rs. 9.81 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased have fallen by Rs. 4.36 crores to Rs. 24.61 crores or Rs. 4.04 crores. Cash and balances are, in consequence, higher.

Company Meeting

NATIONAL INSURANCE COMPANY LIMITED &
NATIONAL FIRE & GENERAL INS. CO. LTD.

SIR BIJOY PRASAD SINGH ROY'S SURVEY

"If Indian insurance now shows the rich promise of bud and blossom, the credit goes entirely to private enterprise. Private enterprise had sown the seed of insurance when the country was crying for economic freedom. Private enterprise had nursed it against the strong competition from outside. Now Indian insurance companies have built up valuable connections abroad and are earning for India a good name amongst international business circles and are also contributing to international goodwill and amity besides earning foreign exchange in increasing volumes."

Thus observed Sir Bijooy Prasad Singh Roy in addressing, in the absence abroad for unavoidable reasons of their President, Sri Lakshminath Singhania, the 48th Annual General Meeting of Messrs. National Insurance Co., Ltd. on Friday, the 30th September. Referring to the talks of nationalisation, Sir Bijooy said, "Nationalisation will then be only a penalty for achieving success and maintaining efficiency and more a hindrance than help to further rapid development of the business."

"It is indeed a matter of gratification", continued Sir Bijooy "that the performance during the year of the National and its subsidiary, the National Fire & General has been a remarkable one. National completed a New Life Business of Rs. 18,18,01,806 during the year which represented an increase of Rs. 6,08,67,411 over Rs. 12,09,34,392 of the year previous. The average sum assured per policy rose from Rs. 2,936 in 1953 to Rs. 3,379 in 1954. The total Business in Force at the end of 1954 rose sharply to Rs. 67,12,76,297 with an addition of Rs. 11,36,68,469 to the last year's figures."

"Total premium in the Life Department appreciated by Rs. 38,94,078 to Rs. 3,01,83,243. Helped by so many favourable factors, the Life Fund of the company swelled to Rs. 13,74,94,572 from Rs. 12,22,99,882. The Total Claims amounted to Rs. 74,40,903 during the year. Last but not the least, there has been a drop in the renewal expense ratio of the Company which, excluding depreciation, now stands at 14.91%."

"In the fifth year of its running, the premium income of the General Department has risen to Rs. 15,07,617 from Rs. 14,42,623 in the previous year."

"Coming now to the working of the subsidiary, National Fire & General, I may point out that there has been an improvement in the working of the Marine and Miscellaneous Departments. The Fire Department fetched during the year a net premium of Rs. 20,30,999 as against Rs. 24,48,606 of the year previous. But as against Rs. 6,48,122 in 1953, the net premium in the Marine Department rose to Rs. 7,06,764 in the current year. The net premium from the Miscellaneous Department too appreciated to Rs. 12,78,047 as against Rs. 11,55,581 of last year. Thus the subsidiary has in all departments earned this year a net premium of Rs. 40,15,810. If, however, we add up the figures of your General Department to those of the National Fire & General, it will be seen that our total net premium income in the General section has been Rs. 55,23,427."

Marked Economic Progress

Before coming to the figures of the Companies, Sir Bijooy gave a masterly survey of the international political and economic conditions. And then referring to conditions in India, he said, "During the year, our own country made marked progress in its economy with a measure of overall stability though fall in agricultural prices and the continued seriousness of the unemployment situation were most disquieting. Assisted by adequate supplies of raw materials and improvement in labour-management relations, industrial production was 8 percent more than in 1953. The first Five Year Plan is now expected to come to a satisfactory completion and plans for the next one dominate the economic scene. The new plan has ambitious targets and their fulfilment will improve the lot of the people considerably and raise their standard of living."

Drawing attention to uncertainties about Government policy towards private sector, he commented, "The statements by persons in responsible position to the misgivings prevailing about the attitude of the State towards private enterprise. Capitalism has come to be erroneously viewed as outmoded and as a hurdle in the way of achievement of a socialistic pattern of society. If only one would ponder over the part played by it in the economic and industrial development of the country, the importance of economic incentives in attaining efficiency and advancement, and the altered structure and position of capitalism in modern society, the picture should be altogether different."

Talking about insurance in general, Sir Bijooy said that insurance in this country has made remarkable progress since its inception and, more particularly, within the recent past. He marshalled statistics to show how in the course of 15 years from 1938 to 1953 the Indian Companies in India have swelled the Life Business in Force from Rs. 2,03,99 lacs to Rs. 8,30,00 lacs and how the premium income in the Life and General Section has during the period risen from Rs. 10,45 lacs to Rs. 39,59 lacs and from Rs. 90 lacs to Rs. 676 lacs respectively. The success of Indian insurance companies again, he pointed out, is not confined to the boundaries of our country. During the last 15 years, Indian Companies have made remarkable progress outside and increased the Life Business in Force from Rs. 15,15 lacs in 1938 to Rs. 77,03 lacs in 1953. Life premium income has risen from Rs. 82 lacs to Rs. 426 lacs and General premium income from Rs. 72 lacs to Rs. 829 lacs during the period.

Nationalisation

"It is regrettable" said Sir Bijooy "that in the present stage of the insurance industry and with such tremendous tasks before it, talks of its impending nationalisation should again gain currency. Any such move cannot but be a step backward in the drive for the spread of insurance in the country and for extending our operations abroad. Nationalisation, by creating a monopoly, kills incentives to efficiency and improved methods of working. Insurance needs prompt service and a personal touch and so is not adaptable to stereotyped methods characteristic of Government organisations. Moreover, the insurance connections developed abroad have been done through personal contacts elimination of which cannot but affect foreign business. Nationalisation will be only a penalty for achieving success and maintaining efficiency and more a hindrance than help to further rapid development of business."

After describing the conditions in General Business, he said, "For the last few years we have been emphasising the desirability of forming a Reinsurance Corporation in this country under private auspices. We cannot but feel happy at the prospect of one taking shape in our midst. An insurance market to be complete must have a professional Reinsurer. By removing this want we hope to add to the strength of the Indian insurance market. It should be as broad-based as possible, supported by willing co-operation of all concerned."

In conclusion, Sir Bijooy expressed the hope that through the collective efforts of all concerned the year to come will be a better and brighter one than any ever before.

WEST GERMANY'S FABRICS EXPORTS

Jute fabrics totalling 1,874 tons valued at 3,267,000 D.M. were exported out of West Germany in the first quarter of this year. Exports during the corresponding period of 1954 were slightly lower being 1,685 tons worth 2,998,000 D.M. Among the importing countries Norway and Sweden purchased the largest quantities namely, 336 tons and 240 tons respectively compared to 88 tons and 145 tons in the first quarter of 1954. Shipments to the United States, the largest single buyer of West German jute manufactures in previous years, dropped to 354 tons from 378. Sales to Denmark were 430 tons against 536 tons, while these to Switzerland remained unchanged at 314 tons.

Stocks and Shares

MORE CHEERFUL CONDITIONS IN THE
STOCK MARKETFIRMER BOMBAY ADVICES HELP SPECULATIVE
ISSUES

Wednesday Evening.

THE last three days have seen brighter conditions in the share market. The feeling appears to have originated in Bombay where Tata Ordinary are now quoted at almost boom levels. Indian Irons have been more sluggish in answering to the improvement in sentiment, but these too have now gone ahead in both Calcutta and Bombay on rumours that the dividend announcement will be made soon. The reason for the sudden change in the Bombay market's fortunes is to be found in the threatened shortage of cloth for the Puja buying; this has been responsible for price rises throughout the important cotton textile section. There is also the rumour of the Tata rights issue, which was expected shortly, will now be delayed for some time and the bulls are feeling flush with funds.

The indications seem to be that market operators are having a short pre-Puja spree after the quiet conditions of the past few weeks. But the bears are still strong in the Calcutta market as the large carry-over charges at today's closing would seem to indicate.

The Gilt-edged section of the market has remained firm throughout the week and is benefiting further by the better conditions ruling in the equities market.

Details of the week's trading follow.

The gilt-edged market continued firm and prices were again marked up throughout the list. The enquiry was fully maintained and there was a further increase in the volume of business. During the week the Reserve Bank once again raised their selling prices for 2½% 1962, 3% 1970-75, 3½% 1964 and 3½% 1965 loans. Three percent Conversion Loan 1986 was taken higher to Rs. 80-9 and the 3% 1896-97 had buyers at around Rs. 80. In short dated loans, 3% 1957 was better at Rs. 99-9 and 3% 1958 was taken higher to Rs. 99-7. Amongst medium-dated loans, 3% 1959-61 was fully steady at Rs. 97-15 and 3½% 1961 was traded at around 99-10; 3½% 1964 was better at Rs. 98-14 and 3½% 1965 improved to Rs. 98-9, but there were sellers rather than buyers at this level. Three percent 1963-65 was in demand up to Rs. 94-8 and 3% 1964 was quoted higher at Rs. 94-6; 2½% 1961 gained a further 2 annas at Rs. 92-13 and 2½% 1960 was asked for at Rs. 95-10, while 2½% 1962 was marked up to Rs. 93-7 and 4% 1960-70 was asked for at around Rs. 101-12. In the long-dated section, 3% 1966-68 had buyers at Rs. 91-9 ex-voucher and 3% 1970-75 was quoted higher at Rs. 87-8.

More business was reported in Provincial Loans and there was a broadening of enquiry. The outstanding feature was the 4% Saurashtra Loan 1967 which firmed up to Rs. 99-7 following the recommendations of the States Reorganisation Commission. The newly floated 4% State Loans continued to be enquired for. Four percent Bombay 1967 improved to Rs. 100-10 while 4% West Bengal was taken at par and U.P. at Rs. 99-7. Among other State Loans 4% U.P. 1963 was asked for at around Rs. 100-5 and 4% Bombay 1963 was marked at Rs. 101-4.

As usual, there was a sustained demand for selected jute and miscellaneous preference shares and sellers were difficult to find. Among jute, Dalhousie were quoted at Rs. 115-8, Anglo India at Rs. 118 and Lawrence B at Rs. 93. Reliance came to hand at Rs. 113. In the miscellaneous group, Calcutta Electric changed hands at around Rs. 12-11, Indian Irons & Steel were better at Rs. 111-8 and Orient Paper Second were taken at Rs. 76-8. Rohtas Industries 7% were done at Rs. 134 and the B at Rs. 68. Textile Machinery First were crossed at Rs. 101-12 and the Second were done at Rs. 71.

In the banking section several deals were reported in United Commercial at around Rs. 48-4 while United Bank of India 'D' shares were quiet at Rs. 4-15.

A solitary transaction was reported in the railway section in a small odd lot of Baraset-Basirhat at Rs. 11-4.

The features in the cotton section were Elgin Mills and Cawnpore Textiles which continued to meet with interested buying at around Rs. 21-12 and Rs. 9-13. Dunbar were done at Rs. 250, Kesoram at Rs. 16 and New Victoria had sellers at Rs. 1-6.

Most shares in the coal section continued to be depressed with the exception of Katras Jherriah which improved from Rs. 53-12 to Rs. 55. Burakur stagnated around Rs. 14, Bengal were quiet at Rs. 520 and East Indian eased to Rs. 30-4. North-West Fully-paid and Contributory changed hands at Rs. 18-8 and Rs. 15 respectively. Karanpura Collieries were transacted at Rs. 121 and Sibpur were scarce at Rs. 29-8. Standards changed hands at Rs. 20-8, Central India were marked at Rs. 7-14 and Western Bengal at Rs. 6-14.

Jute shares continued to be in the doldrums, as a result of poor offtake of jute goods from

overseas buyers. Here is a chart showing representative price movements:—

	Opening 29-9-55 Rs.	Closing 5-10-55 Rs.
Anglo India	232	233
Barnagore	183	183
Budge-Budge	203	195
Chandpany	175	180
Delta	261	261
Cheviot	265	265
National	32 14	32 12
Naihati	113	113
Howrah	29	29 2

Electric supply shares were steady, but little business was reported. Agarpara were wanted at Rs. 105, Calcutta Electric were done at Rs. 55 and Upper Ganges were marked at Rs. 15-2.

In the sugar section there was a good enquiry for Cawnpore at Rs. 24-4. Belsund were marked at Rs. 11-6 and Carew at Rs. 12-6. Durbhanga were quoted at Rs. 217 and Champaran at Rs. 33-4. Dyer Meakin Breweries were taken at Rs. 6-4 and Ramnugger Cane at Rs. 26.

The recent increases in the selling prices of various categories of steel had little effect on Indian Iron & Steel shares as the Company will not benefit financially and the shares fluctuated between Rs. 38 and Rs. 38-14 to close tonight at Rs. 38-14. Braithwaites were quoted at Rs. 26-14. Burn & Company were steady at Rs. 300. Indian Galvanizing were sold at Rs. 23-10 and Indian Standard Wagon were wanted at Rs. 139. Jessops were firm at Rs. 55-4 while Kumardhubi Engineering and Marshalls both eased to Rs. 11-6 and Rs. 7-2. Richardson & Cruddas were quiet at Rs. 24 and Textile Machinery reacted initially to Rs. 23-8 following the announcement of a "rights"

INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

GERMAN ENTERPRISE ABROAD

South Asia—Foreign Trade Edition. (Publishers: Handelsblatt Ltd., Pressehaus, Düsseldorf, Germany.)

Along with the economic reconstruction of the Federal Republic of Germany, has developed the expansion of her foreign trade. This overseas supplement of the *Handelsblatt*, is directed towards further stimulation of the interest shown by South Asia in the German market in finished goods, industrial equipment and technical assistance. The August edition of this illustrated trade newspaper covers a wide range of German products, imports and exports, and the trade policies of the countries involved. Among contributions from several leading personalities in South Asian commerce, is an article by Mr. B. M. Birla, dealing with the new steel plant project at Rourkela, in which the German firms of Krupps and Demag are participating.

Plantations in India's Economy. (Published by the Information service of the United Planters' Association of Southern India, and printed by the Commercial Printing Press Ltd., Fort, Bombay. Pages 25; price Rs. 1-8).

This small, easily-read handbook might well serve as a primer on plantations. Using charts, maps and diagrams and the minimum of words, the salient points relating to India's plantation industry are simply delineated. Facts and figures are set out under clear and precise headings and a plain statement is included on the disposition of the much disputed profits of the industry.

The Art of Investment. By A. G. Ellinger. (Published by Bowes and Bowes Publishers Ltd., London. Review copy received from the publishers' agents Rupa and Co., 15, Bankim Chatterjee Street, Calcutta. Price 15 shillings; pages 170).

Our City Cable

INVESTMENT BUYING KEEPS GILT-EDGED STEADY

INDUSTRIALS MOSTLY LOWER

London 5th October.

A PART from gilt-edged securities, which again provided the exception, the London stock market lost further ground last week under the influence of a combination of adverse factors. Business throughout remained very small and it was the absence of buyers rather than selling pressure which was responsible for the fall in values. The uncertain economic situation and the increasing activity in the new issue market continued to restrain buyers, while the illness of President Eisenhower and the consequent fall on Wall Street unsettled the markets further. Compared with previous levels virtually all sections of the market, apart from gilt-edged, were lower. Gilt-edged attracted steady investment buying because of the firmness of sterling. Buying tailed off after the week-end but prices retained most of the earlier gains. Industrial equities held fairly steady prior to the week-end following a little selective buying, but prices receded subsequently under the influence of various adverse factors. Virtually all groups in the industrials market lost ground, but there were occasional movements against the trend. Kaffirs gave a mixed display, whilst coppers and oils receded under Wall Street's influence.

The Money Market

Credit conditions in the London money market were distorted to some extent by the way in which discount houses paid for this week's allotments of the new treasury bills. As this week's bills mature at the end of the year, the market had allocated to take up the greater portion in the latter half of the week. Money during the first few days was therefore very light and credit conditions were comfortable. Thereafter the situation sharply reversed with the position attenuated by the end of the month factors. As a result there was a fair amount of borrowing from the Bank of England in order to finance heavy payments for the new bills. Applications for treasury bills totalled £259,459,000 of which £280 million were allotted at an average rate of 81s. 5.33d compared with 81s. 5.14d. last week. Next week £270 millions will be offered. The Bank of England return for the week ended Wednesday, 28th September shows that notes in circulation were about £1 million lower at around £1,766 million, while bankers' deposits were about £24 million lower at around £239 and fine trade bills 3 months were at 5 to 5½.

Gilt-Edged Firmer

The *Investor's Chronicle* newsletter writes that a feature of the stockmarket over the past few days has been the firmer tendency of gilts. It is of course a fact that with an operation to deal with the £524 million of 3 percent serial funding which matures in November, the Government must be keen on better sentiment in the funds. The strength of sterling is also a factor in the market and there has been a definite move of investment buying from industrials to gilts. It can hardly be denied that there are some bargains here but there are still better bargains in the industrial section, where, provided shares are carefully chosen, the potential appreciation over the next few years is every bit as good as gilts. Among mining shares, it is now reliably understood that the Free State Geduld has successfully advanced its workings out of the water zone near number two shaft so that comparatively rapid progress will now be made in developing towards the South.

Activity in Wall Street

Domestic convertible bonds suffered a severe shake-out at the beginning of last week in the

heaviest dealings witnessed for some time. Losses ranged from three to as much as 16 points. The heavy selling reflected the uncertainty created by President Eisenhower's illness and the sharp break in security values. However, when the stock market rebounded, the short privilege issues attracted support and recovered part of their losses. Rails were weaker, with some issues dropping as much as five points before recovering. U.S. Government obligations advanced along a broad front with increased demand partly based on the theory that any decline in the volume of business would free a large amount of funds now being loaned to firms for investment in bonds. Federals, however, eventually gave up some of the gains under realising. Top quality corporates held firm, while World Bank bonds were neglected. In the foreign sector, German Nationals, Italians and Greeks gave up some ground early, but in subsequent dealings moved higher by a point or so. Denmark's 4½ percent and Norwegians improved slightly. Australians and Japanese were mixed, while in the South American list the active Chile 3 percent of 1993 fluctuated irregularly but managed to finish unchanged on the week.

Silver Exceptionally High

The open market price of silver in the United States on Friday rose to the highest level in 35 years. The advance of 1½ cents an ounce primarily resulted from the U.S. Treasury running out of local stocks of so-called domestic free silver, with the recent tight market position attributed to Mexico selling large quantities to West Germany and Saudi Arabia as well as to the recent labour strike in the American Smelting and Refining Company which interrupted normal movements and from which repercussions still continue to be felt. No further price advances are expected at the Treasury's selling level has already reached the permissible peak at which Government's stocks are available. Friday's silver trading was confined to the open market where local dealings comprised 200,000 ounces and estimated 100,000 ounces were sold to out of town customers. Demand in the open market was not fully satisfied. Europe showed good buying interest but no sales have so far been confirmed.

Vegetable Oil Market

An upward surge has taken place in linseed oil and while buyers have followed cautiously an improved trade was completed both in Britain and on the Continent. Sellers were very reserved throughout and asked advances as much as £3½ to £4 a ton. For October/November and November/December arrival BSS oil £100 was asked and £101 for c.i.f. in bulk for January/April arrival. Continued local activity and covering of the recent sales to the United States brought higher prices again for Indian castor oil for shipment. As far as the United Kingdom was concerned, buying interest was mainly for spot material. For Indian BSS £105 and over was asked and realised several times with October/November shipment in drums held for £103 spot commercial was priced at £97 upwards depending on the shipping mark with October/November quoted at £92 cost and freight or £5 above the quotation a week ago.

U.K. Coal Board's Shipments

A feature of the London freight market was the chartering of vessels by the United Kingdom Coal Board for shipment of one 11 million tons of coal from Hampton Roads over the next year on the basis of 65½ shillings a ton to Antwerp or Rotterdam.

Synthetic Mica

The United States Government has authorised the General Services Administration to enter into research for domestically produced synthetic mica, the supply of which was insufficient for mobilisation requirements. The new programme was agreed to after a review of the report by the Office of Minerals Mobilisation which recommended five years research and development to be undertaken, partly by the Federal Government and partly by the industry with financial assistance by the Government.

New Delhi

SHORTAGE OF CLOTH FEARED SOON

KHADI AND HANDLOOM SUPPORTERS NEED TO THINK AGAIN

(FROM OUR NEW DELHI CORRESPONDENT)

A CLOTH famine during the Durga Puja and Deewali festivals is predicted here. Stocks of cloth are abnormally low. The July-September quarter, it is explained, is the slack season during which stocks normally accumulate to a point equal to about three months' production. This time, however, stocks have fallen to a level which has not been reached in the last seven years. As a result, a sellers' market has re-emerged in the piecegoods trade. Existing stocks equal about three weeks' production. The rise in population and purchasing power explains why consumption has increased. The good monsoons this year will stimulate demand further. The Congress policy of limiting the production of the mill industry is another reason for shortage. Mill production has been falling, primarily because mills have been closing down; 26 mills were shut during the last 12 months because their worn-out machinery could not be operated. The khadi-handloom advocates note that production would rise in that sector envisaged that production would output of yarn, the greater use of "Amar" charkhas and additional spinning mills. These expectations have not been realised. The private sector, outside Madras, does not find it profitable to set up spinning mills.

The obvious long-term solution would be to lift the ban on the mill industry and permit it to expand production by installing more powerlooms and spindles. For obvious reasons, this will not be done. There can be no compulsion to install additional spinning capacity although the move has been suggested by some labour leaders. The alternative is for the Government to undertake the unprofitable task of setting up spinning mills. This alternative is now being seriously examined. Even if it is accepted, it will take two years to increase the availability of yarn and cloth. To avert the cloth famine this winter, two possibilities are being considered: to ban exports or bring in foreign exchange ports. Both will affect the foreign exchange position and are therefore unlikely to be accepted.

In the ultimate analysis, the determining factor is not so much the employment as the political potential. The consumer, being unorganised, has no political power. He will have to pay higher prices for cloth in coming months.

Steel Prices Raised

With effect from 1st October, the Government of India has raised the price of steel by about Rs. 80 a ton to Rs. 500 a ton. The last price increase was on 1st July, 1955. Since then, there has been a further increase in world steel prices. Consumption has also shown a marked increase. The present price rise has become necessary in view of the growing gap between Indian and world prices, and in view of the need for importing substantially larger quantities of steel which have to be subsidised from the Equalisation Fund. Even after the latest increase, Indian steel will be about Rs. 150 a ton cheaper than world prices. The increase is not uniform. The prices of the categories of steel like galvanised and corrugated sheets, which are used by the common man, particularly by agriculturists and by the processing industries, have been increased by less than Rs. 80. Other categories will go up by more than the average.

A Flexible Second Plan

At a Press conference last week, the Prime Minister, said that the provisional draft of the next plan would be issued in about two months' time. It would be as flexible as possible "because of the new facts that are coming before us. Our present approach is to make a broad five year plan, a flexible one, with a detailed plan for the first year or so, and have really detailed annual plans within that particular structure. So we will have a flexible, non-rigid five year plan, to be revised annually, and detailed annual plans. In addition to this, we will have perspective planning, that is, looking much further ahead, ten years, 15 years, 20 years, not in detail. We are setting up a joint statistical unit with which will be associated the Planning Commission and the Economic Section of the Finance Ministry. It will be a separate unit under Professor P. C. Mahalanobis to undertake statistical work and broader perspective planning."

The present system of planning on a five year basis has some definite disadvantages. The case of the new steel units illustrates the point. Both the Russian and the British Steel Mission ruled out Bokharo in the Damodar Valley Area for the establishment of a new steel plant, because of its inadequate transport facilities. A railway bridge is needed to make Bokharo a suitable site for a steel plant. In the context of short-term planning, the development of transport facilities would always be linked to the development of industries. Every time Bokharo is considered, it would be ruled out because of the inadequacy of transport facilities, and transport facilities would not be created unless there are industries to warrant their development. It is on the basis of perspective planning that the Steel Ministry has asked the Railway Board to include the provision of a railway bridge on the approaches to Bokharo in its second five year plan.

Some suggestions are available here in regard to the Prime Minister's decision to have a flexible, non-rigid second five year plan, and a detailed plan

for the first year of the second plan period. The Finance Ministry had originally placed the financial resources for the public sector at Rs. 3,000 crores, including Rs. 1,000 crores of deficit financing. It is suggested that all the development schemes should be divided into two categories. Category "A" should include only schemes which are of the utmost importance, and the total estimates for which would not exceed Rs. 3,000 crores. Definite commitments to provide money for such schemes should be made. In the second category should be included all other schemes, the total estimates of which may even reach the figure of Rs. 6,000 crores, but in respect of which no commitments should be made. If, at the end of the first year, fresh resources became available, further commitments to the extent of those additional resources could be made by picking up schemes from the second category.

Loan to Burma

India agreed to give Burma a loan of Rs. 10 crores at the latter's request. She also agreed to allow credit to the extent of another Rs. 10 crores to enable Burma to finance her purchases in India. The terms of the loan and the credit are being discussed with a Burmese mission which arrived here last week.

Air Agreements with U.S.A. and Britain

A U.S. delegation is expected here by the middle of October to negotiate an Air Agreement with the Government of India. The last Indo-U.S. Air Agreement was terminated early this year. An Indian team will go to London for the annual review of the Indo-British Air Agreement. K.L.M., which operates services through Calcutta, will divert one of them through New Delhi with effect from 8th October.

Indian Delegation to F.A.O.

The Union Food and Agriculture Minister, Mr. Ajit Prasad Jain, will lead India's delegation to the forthcoming session of the Food and Agriculture Organisation at Rome next month. The delegation of eight will include officials and non-officials. It will leave for Rome by the end of October. The Secretary of the Ministry, Mr. P. N. Thapour, will leave earlier, say by the middle of October.

Estimates Committee's Functions

Four reports of the Estimates Committee were published during the Autumn Session of Parliament. All related to the Ministry of Production. Two dealt with six industries in the public sector, one with coal and salt, and the last with the organisation and administration of nationalised industries.

The Committee holds that nationalisation of the coal industry, is inevitable in due course. As, however, the Government has not sufficient technical manpower at present to take over immediately all the private collieries, the private sector may be allowed to continue for some time on the following terms:

1. Adequate capital is invested with a view to set up production to the limits laid down by Government for each colliery;
2. Scientific methods are adopted for raising coal;
3. Suitable safety measures are introduced wherever they are lacking;
4. The conditions of working for labour are brought up to the standards laid down by the Government.

The Committee has recommended the setting up of a Coal Commission.

The Salt Organisation, it says, should be abolished and its functions be distributed to more suitable organisations created for the purpose. "An autonomous Salt Board directly responsible to the Minister-in-charge should be created for the purpose of determining the quality, standards, production targets, policy of distribution, export, inspection of production and distribution centres and the scientific methods of production for rendering advice thereon and for looking after labour welfare in salt mines." The Committee has recommended the transfer to the State Governments concerned of the control of test inspection laboratories, but their expenses are to continue to be met by the Centre. "The cess is collected at present through the State Treasuries where lessees have to pay the amount in cash. The Committee feels that the work relating to the collection of cess should be made over to the Central Excise Department." The report on the organisation and administration of nationalised industrial undertakings includes recommendations on the pattern of nationalised undertakings, management cadres, dispersal of industries and amenities for staff.

No Comment on Estimates

None of the four reports has any comment on the estimates which the Committee is supposed to have examined. In other words, the Committee has been encroaching more and more on matters of policy, and thereby assuming the rôle of a parallel government. This is largely due to the fact that the Committee was set up without any definition of its terms of reference. A similar attempt by the British wartime Committee on National Expenditure, as distinct from the Estimates Committee, caused Mr. Herbert Morrison to complain that it had "got really into the field of executive administration, had pulled up civil servants rather too frequently, and had asked questions which in the judgement of some of the Ministers at that time were running rival with the executive responsibility of the Minister himself." This is exactly what the Estimates Committee of the Indian Parliament is doing.

Mr. Basil Chubb, in his classic book on the control of public expenditure in Britain, says: "In a Committee of private members, the only

test of value can be the experience which may be presumed to come from service, for any special knowledge and aptitude arising out of members' professions or interests." No one knows what are the special qualifications of the members of the Indian Estimates Committee to make recommendations for the complete overhaul of the coal industry and the salt industry, and for the reorganisation of the pattern of management in State undertakings. Mr. Chubb, speaking of British Committees of Estimates, says: "While it sat as a single, unaided body, its potential capacity was too low and the standard of its interrogation poor. Its proceedings were amateur, loose and often ill-informed." The proceedings of the Indian Committee, when available, will show how far this criticism could be applied to it.

The test of the success of a Parliamentary Committee lies in the implementation of its recommendations. From its very inception, the Committee has been producing essays on administration, none of which has materially touched the machinery of Government. They have remained pious recommendations. Side by side, the Committee has neglected the work entrusted to it, namely the detailed examination of the published volumes of estimates.

In *Government by Committee*, Mr. K. C. Wheare points out: "All these Committees, including the Estimates Committee, have one point in common—they are not authorised to formulate or criticise policy. What they scrutinise is the application of policy—its forms and its results. To this extent only they are concerned with policy." There is an urgent need to define the terms of reference of the Estimates Committee if it is to become a useful instrument and prevent the waste of public money.

Agriculture and Co-operatives

During the concluding week of its Autumn Session Parliament discussed economic policy with special reference to agriculture. Mr. Jain, initiating the discussion, referred to the creation of a National Co-operative Development Board, a Warehousing Board, a National Warehousing Corporation and State Warehousing Corporations. He said: "The creation of the Board and the Corporation has been accepted in principle and a Bill for setting up these institutions is being drafted and will soon be placed before Parliament. The functions of the Board will be to plan and promote on a countrywide basis the development of co-operative activities in production, processing, marketing, etc., and provide facilities for storage and warehousing of agricultural produce. The Government will pay the Board a non-recurring grant of Rs. 5 crores and a recurring grant each year of not less than Rs. 5 crores for the next five years, and thereafter such sums as may be necessary to enable the Board to discharge its functions. Out of these allocations two funds, namely a Development Fund and a Warehousing Fund, will be created and Rs. 15 crores allocated to each. The developmental activities will include the setting up of primary and apex marketing societies and the promotion of production and processing co-operatives. The Board will advance money to State Governments as grants and loans and the State Governments will in turn assist co-operative societies by (1) subscribing to the share capital; (2) loans and grants for construction of godowns; and (3) grants to subsidise expenditure on staff during the initial years. The processing co-operative societies such as sugar mills, cotton gins, oil expellers, jute balers, etc. will be assisted by the advancement of loans on easy terms. It is proposed to set up 1,500 primary marketing societies and construct 1,200 godowns during the second five year plan period. At the apex, we hope to set up a number of new societies and give one society to each Part A and B State. The total cost of these operations will come to about Rs. 18 crores."

"The Bill will also provide for the establishment of a Central Warehousing Corporation and State Warehousing Corporations. The Central Warehousing Corporation will have a share capital of Rs. 20 crores, out of which 50 percent will be immediately subscribed. The Government of India will contribute Rs. 4 crores to the share capital and the balance will be provided by the State Bank of India, commercial banks, insurance companies, co-operative societies, etc. The functions of the Central Warehousing Corporation would be to set up warehouses at places of all-India importance and to subscribe to the share capital of the State Warehousing Corporations. Preliminary steps are being taken for the location of warehouses and for the selection of commodities for warehousing. The State Governments have also been advised to include in their second five year programme the construction of warehouses. A Technical Committee has been set up in the Ministry of Food and Agriculture to work out the suggestion regarding the number of warehouses, the type of construction required, the choice of commodities to be stored and the requirements of personnel for the warehouses. As a result of the programme of warehouses and the construction of godowns, it is expected that by the end of 1960-61 storage space having a capacity of 2 million tons will be available. The warehousing will cost the Central and State Governments Rs. 10 crores during the second plan period."

"In order to provide personnel for the co-operative movement, each important State will have at least one institute for the training of subordinate rank personnel which will turn out 3,000 persons every year. There will be five Regional Training Colleges which will provide 1,500 trained personnel in the intermediate grade during the second plan period, and the all-India Co-operative Training College, Poona, will train 300 higher grade officers during the same period. A Co-operative Officer will also be posted in every National Extension (Continued on Page 470)

Uttar Pradesh

AMERICAN AID FOR RIHAND VALLEY PROJECT

U.P.'S EMPLOYMENT STATISTICS

(FROM OUR LUCKNOW CORRESPONDENT)

FOR the second time in two months the Eastern districts of Uttar Pradesh have been subjected to severe floods. This disaster has reinforced the case of those who argue that the State's second five year plan should be entirely recast so as to give priority to flood control. This trend of thought, however, does not seem to find favour with the Government either here or in Delhi. The Prime Minister's exhortation to his countrymen to ignore the floods may conceivably lose some votes for Congress in Gorakhpore and other flood-ravaged areas of the State, but the Government has been advised that any endeavour to raise the level of housing sites in the thousands of villages involved is not a practical proposition. The Centre has, however, allotted Rs. 27 crores for flood protection projects in the State and an allocation of Rs. 2 crores has been made in the Rs. 5-crore supplementary State budget for the same purpose. As regards the Central allocation for the second plan, there seems to be renewed hope now that the Planning Commission is willing to raise its original offer of Rs. 260 crores by another Rs. 20 crores. Even so the total will be less than half of the Rs. 725 crores originally asked for by the State Government. The Planning Commission's grouse against U.P. is that unlike other States which have been helping themselves, there has been no move here so far to impose a development levy on the beneficiaries of the development projects. In fact, the Commission points out, U.P. has even reduced the canal rates by 50 percent, resulting in a loss of revenue to the tune of Rs. 2 crores.

Funds for the Rihand Project

The agreement with the U.S.A. on the Rihand valley development project of Uttar Pradesh was amended last week, extending the last date for incurring expenditure on the project from 30th June, 1956 to 30th June, 1957. The project, estimated to cost Rs. 45.26 crores, is already being assisted by the Centre under the Indo-U.S. aid programme. Eight million dollars have been allocated for the purpose of financing the purchase of equipment. The amended agreement provides that the rupee expenditure on the project up to June 1957, which is expected to be Rs. 7 crores, will be

found from the rupee advance that the Government of India is receiving as part of the loan content from the U.S. in 1954-55. Of the total allocation of \$60.5 million under development assistance, a sum of \$45 million is being treated as a loan. Roughly half the allocation is being taken in the form of wheat and cotton which are to be sold in India for rupee equivalents. The main purpose of the amendment was to treat Rs. 7 crores out of these funds as a loan to the U.P. Government for the prosecution of the Rihand project, which is expected to be completed by 1960-61. For a time the project was held up due to a controversy as to whether it should be built of cement concrete or stone masonry. The decision has finally been made in favour of cement concrete.

Oil Mills' Grievances

The U.P. Minister for Industries, Mr. C. B. Gupta, has announced that the Government will soon lift all restrictions on the export of cloth to Nepal. Addressing a cloth dealers' conference in Kanpur last week, Mr. Gupta also said that the Government was considering the introduction of a new scheme of sales tax beginning early next year. The oil millers of the State had been demanding the abolition of the sales tax on oilseeds but Mr. Gupta said that he was unable to oblige them as several other organisations of businessmen interested in oilseeds were opposed to the proposition. In U.P. there are 200 registered oil mills with a production capacity of 2 million maunds of oil annually. A large number of these mills, however, are lying idle owing to a lack of sufficient demand for their products. The root of the trouble, in the opinion of the Government, lies in the cut throat competition from other States and a lasting solution can only be found, not by giving small concessions to mills in U.P., but by seeking redress on an inter-State basis. In collaboration with the Central Oilseeds Committee, the Government of U.P. is engaged in experiments for raising the yield per acre of oilseeds. Lack of adequate transport is a chronic grievance of U.P.'s oilmillers, the main problem being how to secure a sufficient number of wagons on the Assam-Bengal railway link. The railway authorities have intimated that traffic on this line is primarily intended for fulfilling the mutual requirements of Bengal and Assam, and so no special facilities can be given to the Uttar Pradesh mills without the express desire of these two Governments.

High Rate of Rural Employment

A survey carried out by the Economics and Statistics Department of the U.P. Government shows that the completely unemployed male population in the rural areas during the period July 1954 to April 1955 constituted less than four percent of the effective labour force in the villages. Unemployment was lowest in the months of October, November and March when the number dropped to two percent of the effective labour force. The survey was carried out by collecting data from sample villages selected from all over the State, but covering only those male workers who were either engaged in some productive occupation or were in search of it and constituting about 50 percent of the total male population of rural Uttar Pradesh. According to the results of the survey, the effective labour force during these ten months never fell below 95 percent and never rose above 97 percent of the total labour force. The number of persons fully employed was lowest in January. Those working for eight hours or more a day were counted as fully employed and only those who were completely idle were counted as completely unemployed, those falling under the category of under-employed ranging from persons who had all but full employment to those who were very nearly but not completely idle. The actual loss of man-hours due to under-employment amounted to about 30 percent of the total working man-hours. However, the report concludes, "in the light of an eight hour working day and making no allowance for a weekly holiday, even those who were under-employed had, on an average, five to six hours of work every day." The findings of this survey, needless to say, is in refreshing contrast to the often gruesome picture of rural unemployment which is so frequently presented.

U.P.'s Cottage Industries

That in Uttar Pradesh at any rate rural unemployment need never be a serious problem was clear from some of the figures released during the Handicrafts Week. The number of persons in Uttar Pradesh engaged in cottage industries is 20 times more than those employed in factories of all kinds, including textile mills and sugar factories. The handloom alone provides a livelihood to 800,000 people who produce goods worth about Rs. 27 crores annually. The silk industry gives employment to nearly 150,000 people, while in Banaras alone there are 30,000 workers engaged in the production of gold and silver thread brocades. Dyeing and cloth printing is another flourishing industry, giving employment to about 8,000 people. Moradabad, the home of ornamental brassware, has a similar number engaged in this industry. The number employed in the bangle industry at Firozabad is estimated at 21,000. Pottery gives employment to about 250,000 workers, and more than 100,000 are engaged in various fibre industries.

Handicrafts Week in the U.P. in which the celebrations were accompanied by lamentations over the indifference of the modern Indian to the arts and crafts of his own country was also the occasion for some grateful recollections of a few distinguished British patrons like Lord Curzon and General Birdwood.

Ceylon

CEYLON WANTS FOREIGN CAPITAL

RIISING WAGE DEMANDS IN TEA AND RUBBER

(FROM A CORRESPONDENT IN COLOMBO)

A MOST welcome step towards encouraging foreign concerns to invest capital and open new industries in Ceylon, was taken here last week with the inauguration of the Ceylon Association of Manufacturers. The need to inspire the confidence of the foreign investor, and to assure the maximum security for capital invested in Ceylon, has been urgent for the past few years. The absence of these conditions has tended to keep foreign capital out, in spite of the wide scope that the country offers for investment. In point of fact, Ceylon has been hard put to it to prevent whatever foreign capital there is, from being withdrawn. During the period June 1948 to June 1954 Rs. 151.3 million left the shores of Ceylon, and up to the first half of this year a further Rs. 23.9 million has been withdrawn by foreign interests.

The formation of the Ceylon Association of Manufacturers is the first tangible step towards correcting the systematic flight of foreign capital from this island. The newly formed Association will set out to ensure not only the maximum security for capital invested here by foreigners, but will also work out adequate safeguards and sufficient freedom for such investors to run their business to their own satisfaction. As a first step in this direction, the Ceylon Association of Manufacturers proposes to communicate with potential foreign investors and inform them that there is now a specially equipped body, enjoying the patronage of the Government, to assist them in capital investments and industrial ventures in Ceylon.

Rubber Wages Up

With natural rubber enjoying a firm demand in world markets, it came as no surprise when rubber workers here pressed for increased wages. But employers were not in favour. They did not think there was any justification for workers to ask for a share in the rubber industry's new prosperity, considering that the industry was urgently in need of rehabilitation, as the result of earlier losses. The wage claim came up for discussion before the Rubber Wages Board twice in the course of this month. At a meeting of the Board last week-end the employees' representatives secured by a three-vote majority, an all-round increase in the wage structure of rubber workers. Over 125,000 rubber workers, the majority of them of Indian origin resident in Ceylon, will receive an additional ten cents a day, as a result of the Wages Board's decision.

The new wage rates are: Male workers Rs. 1.40 a day, female workers Rs. 1.30 a day and children Rs. 1.05 a day. Workers' nominees on the Wages Board secured the wage increases on the basis that rubber producers received Rs. 750 an acre from the Government for rehabilitation, and could therefore afford to share a percentage of their increased profits with labour. It was also pointed out that during the Korean War, when rubber enjoyed a boom, fetching nearly Rs. 2 a pound, workers did not enjoy a corresponding wage increase. The increase in workers' wages is not expected to affect to any great extent the cost of rubber production in Ceylon. The 10 cent all-round increase will send the cost of production up by roughly two-and-a-half cents a pound, which will, however, be offset by the increase of 25 cents a pound recorded by rubber in the past eight weeks.

Tea Workers Ask for Wage Rise

Workers in the tea growing and manufacturing trade have requested the Tea Wages Board to increase their wages by 50 cents a day. The matter will be taken up for deliberation on 6th October. The wage demand has been made as a result of an increase in the average Colombo auction price during the last three months. In June this year, the average price for best grown Ceylon teas had declined to Rs. 1.28 a pound, but by July the market picked up and has been steady ever since. Over the last two weeks the average price has remained at Rs. 2.50 a pound. In support of the 50-cent wage increase, it has been claimed that the existing wages are below the minimum basic human requirements. The present daily wages of tea workers are: Males Rs. 2.24, females Rs. 1.87 and children Rs. 1.55. The demand for higher wages by tea workers will prove more than difficult to negotiate, because the industry, though enjoying settled conditions now, is not in a very prosperous state. Many big producers are still wiping out the losses incurred in the first half of this year when the market was poor. To add to their troubles, the Government increased the export duty on 8th September from 50 cents a pound to 65 cents a pound. The producers have still not recovered from this latest move to siphon off, what they claim to be, their modest profits.

The workers on the other hand are adamant. Conditions are indeed hard for them, and an increase in their wage appears imperative. Social service reports and nutritional experts have pointed out that the living conditions of workers in the tea industry are appalling. Public sympathy is with them, and their cause is not unlikely to find support among the nominated members on the Wages Board, who are in a position to influence

a decision either way. It will be a difficult decision to arrive at. The interests of the industry will have to be considered because tea is vital to the island's economy, and it would be unfortunate if any serious financial burden were imposed on it at the moment. The workers' plea however, is equally important because their plight cannot be overlooked for much longer.

Ceylon Revenue Surplus

The country's present fiscal year which ends this month promises to set a record for revenue. Figures for the ten months ending July show that the Government has collected Rs. 956 million in revenue. This amount is well ahead of the revenue realised over the same period last year, which was only Rs. 801 million. The revised estimate of revenue for the financial year due to conclude at the end of this month is Rs. 1,156 million, but treasury officials expect the total revenue to exceed this estimate. This may well be possible as a result of the recent increase in the tea export duty, which is anticipated to bring in an additional Rs. 5 million. Owing to the record revenue expected for this year, and the high proportion of under-expenditure up to the end of July (only Rs. 625 million have been spent during this period) statisticians expect the year to end with a record surplus.

China-Ceylon Trade

The Prime Minister of Ceylon, Sir John Kotelawala cabled last week to his Commerce Minister Mr. Shirley Corea (who is now in Red China negotiating a price revision for both rubber and

rice) and asked him to give China's debt to Ceylon the highest priority in his negotiations. China's debt, in the operation of the China-Ceylon trade agreement over the last two years, has been computed to be Rs. 57 million. The debt has arisen due to the fact that China pleaded some time ago that she was short of sterling to pay for Ceylon rubber, and suggested that Ceylon should import other commodities from her to cover the debt, but this was not possible as there was little else that Ceylon needed from China.

The position now is more difficult because Ceylon is entitled to a price revision for rubber which would result in an increase. At the moment China pays Ceylon 27 pence for top quality sheet, although the world market price is well over 36 pence a pound. On the basis of current market prices for rice, Ceylon pays China a higher price a ton of rice than the world price. The Minister of Commerce must therefore ask China to cut her price of rice, which in turn would increase China's debt to Ceylon. The serious difficulties that are attending the negotiations in Peking between Ceylon and the Chinese Government are reflected in the fact that no decisions have so far resulted from the talks which opened at Peking on 6th September and are still proceeding.

Mr. M. A. Salgar, lecturer in chemical engineering and technology at the Delhi Polytechnic, has arrived in the United Kingdom for a year's postgraduate course in the department of ceramics at the North Staffordshire Technical College, Stoke-on-Trent. The course has been arranged under the Technical Co-operation Scheme of the Colombo Plan.

TRAYONS TRANSPARENT CELLULOSE FILM

**PROTECTS YOUR GOODS...
PROMOTES YOUR SALES!**

Your goods must be seen by the customer to be sold. Transparent Cellulose film wrappings attract attention... let the customer see the quality of your goods at a glance... make sales so much easier!

And such wonderful protection, too! Trayons transparent cellulose film keeps out dirt, damp and dust—your products stay factory-new till the moment they are sold.

In such a competitive market your product cannot do without this modern wrapping. Write to us for free samples today.

ORIENTAL

IS PROUD TO ANNOUNCE

**OUTSTANDING RESULTS OF THE
27th TRIENNIAL VALUATION**

AS AT 31st DECEMBER, 1954.

Profit for the Triennium Rs. 7,09,73,739

Bonus recommended by the Actuary

Rs. 18

Per Rs. 1000 per annum on With Profits
ENDOWMENT ASSURANCE POLICIES

Rs. 22½

Per Rs. 1000 per annum on With Profits
WHOLE LIFE ASSURANCE POLICIES

being an increase of **50%** over the Bonuses
declared for the previous Triennium

The Directors have decided to recommend to the Extra-Ordinary General Meeting of the Company to be held on 2nd November, 1955, declaration of bonus at the above rates.

--- Highlights of the Actuary's Report ---

Mortality	The Mortality basis adopted for the Valuation was the Oriental 1925-35 Table. Actual deaths amount to only 40% of those expected on the basis of the Mortality Table adopted.
Interest	The Valuation was performed on 2½ per cent. interest basis. The net rate earned during the triennium was 3.92 per cent.
Expenses	22 per cent. of future premiums have been reserved for future expenses.

Continued improvement in mortality, increased interest yield on the Company's funds and low expenses of management ensure future bonuses at attractive rates.

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO., LTD.

(Established 1874)

Head Office: Oriental Building, Fort, Bombay-1

Engineering and Transport

BRITAIN'S JET FLAP

NEW APPROACH TO SLOW FLYING

OF all the interesting items at the Society of British Aircraft Constructors' recent Exhibition, now of greater significance than the jet flap displayed in model and diagrammatic form on one of the two Ministry of Supply stands. This development promises a novel and effective solution to what is, perhaps, the most pressing problem in present-day aviation—the inability of very fast aircraft to land and take-off in a short space. Aeroplanes are expensive to operate, and to be profitable they must be able to carry a sizeable payload which, if the aircraft is to have good slow flying qualities, necessitates a wing of adequate size. This increases drag which, in turn, lowers the operating speed. Therefore, to ensure speed and load-carrying capacity, it has become the practice in recent years to reduce wing size and thus raise wing loading—that is, the amount of the aircraft's total weight carried by each square foot of wing surface. This has resulted in high landing and take-off speeds because a heavily loaded wing has to travel quite fast—100 m.p.h. or more—before sufficient lift can be generated to sustain the aircraft in flight. This means more power, fuel, and, consequently, weight, and long run-ways—all of which cost money. The average commercial wing loading in 1939 was 20 pounds a square foot, while today it is nearer 70.

Problems Involved

Lift from a wing is obtained by inclining it in an air-stream, but if the inclination is progressively increased, more drag than lift results because turbulence sets in on the upper surface, which provides some two-thirds of the total lift, thus breaking up the boundary layer. Thus the solution to this problem is bound up with control of the boundary layer, or the thin coating of air (less than one inch in depth) that exists between the free air-stream and the fractional layer of almost static air next to the wing surface. Measures were taken as long ago as 1918 to solve this problem when F. Handley Page (now Sir Frederick Handley Page) and Dr. Lachmann patented a leading-edge wing slat which forced the airflow to cling to the upper surface at low speeds. Today, powered control of the boundary layer is the subject of much research and, broadly speaking, two lines are being followed. Air from the propeller or engine is blown over the wing surface thus "infusing kinetic energy into the boundary layer" as Dr. Lachmann puts it. Alternatively, air is bled from the turbine compressor and used to create suction through a porous skin on the wing; this is intended to keep the boundary layer in close contact with the surface at all times—a vital consideration at supersonic as well as at low speeds.

Results of Research

Another field of research has been explored by the National Gas Turbine Establishment which, a few months ago, produced a simple deflection device by which the jet efflux could be partially directed downwards at take off and landing. Thus some of the aircraft's weight is taken off the wings, the wing loading reduced and the slow flying characteristics improved. Now the Establishment has announced the jet flap. In this system, which represents a new approach to the problem of slow flying, the propulsive jet is discharged horizontally from the trailing edge of the wing in a long, spanwise sheet, instead of from circular orifices. In low speed flight, the jet efflux is deflected downwards, creating what is, in effect, an aerodynamic flap of far greater proportions than would be possible with a conventional 'solid' flap. Indeed, the effective area is similar to that of the wing itself. In addition, use is made of the direct lift principle of the Establishment's earlier jet deflection device. Thus the greatly increased effective flap area and direct lift combine to make a heavily loaded wing efficient at low speeds. Mr. I. M. Davidson, of the Establishment, is giving a lecture on the jet flap to the Royal Aeronautical Society on 20th October. It may then be possible to evaluate further the great possibilities of this device.

NEW AIRBORNE RADAR FOR P.A.A.

Pan American World Airways announced recently purchase orders for \$2,000,000 worth of airborne radar, enough to equip its entire fleet of long-range DC-6s and DC-7s. It will be installed on Pan American's present fleet of 48 DC-6Bs, the seven DC-7Bs now being delivered, and on the 33 DC-7Cs scheduled for delivery beginning early next year, just as quickly as deliveries of the radar can be made. The airline decided to buy the radar after its pilots had put the equipment through an extensive series of tests in all kinds of weather conditions. More than 2,000 actual flying hours were logged on radar-equipped DC-6Bs flying between the United States, Europe and South America.

The system to be used will be the AVQ-10, a lighter and more sensitive cousin to the military model. It will allow the pilots to "see" the weather ahead for 150 miles from scopes mounted in the pilots' compartment. Armed with this advance weather information, the crew has ample time to determine the least turbulent channels in the cloud formation ahead and rechart a course. Besides making the flight smoother, the cloud-piercing ability of the equipment will result in faster flights. In heavy weather, plane speed has to be increased and in certain cases a long detour has to be made around the cloud formations. Equip-

ped with the new radar, however, the pilot flies right through the rainstorm at cruising speed and often arrives at destinations ahead of schedule. Like the common bat that navigates by measuring the time it takes for his high-pitched shrieks to bounce back from an obstruction, radar can tell the observer his distance from objects by sending out impulses in the air at a high rate of speed and measuring their rate of return after striking an object. Radar can determine not only distance from objects but their direction from the plane. In addition to its weather-probing ability, the radar is also a navigational aid. By tilting the radar antenna earthward, pilots can "read" the terrain ahead of them and thus double-check their position. Check points of high contrast such as coastlines, lakes and large rivers show up vividly on the scope. Also mountainous terrain or tall towers and other obstructions can be detected 30 miles away giving sufficient warning time to pilots to pull up to safe altitudes. Pan American is a pioneer in the commercial use of airborne radar. The airline has been gathering experience in its use since 1947 when a DC-4 Cargo Clipper was equipped with radar.

INDO-BRITISH ENTERPRISE

The products of Indo-British enterprise in the field of automobile manufacture in this country are to be exhibited at the coming Indian Industries Fair opening in New Delhi on 29th October. Concerns like the Standard Motor Products of India Ltd., recognised by the Government of India as "progressive manufacturers" of the Standard Vanguard and the Standard Ten; and Ashok-Leyland Limited, manufacturers of a wide range of commercial vehicles, are exhibiting some of their latest models. In the "Standard" stall will be seen the Standard Vanguard and the Standard Ten. The manufacturers will also be exhibiting the various components of these cars now being produced in this country. Armstrong shock absorbers and British electric horns which it is proposed to manufacture in this country in the near future will also be shown.

Ashok-Leyland Limited exhibits at the Fair will include five Leyland chassis, some of them specially designed for heavy duty passenger transport. One of these, the *Royal Tiger Worldmaster* chassis, model FRT 1/1, 216" wheelbase, powered by the Leyland horizontal six-cylinder direct-injection compression-ignition engine, located amid-ship under the floor, is specially suitable for high-speed inter-city operations and for luxury travel on international coaching tours. Leyland *Comet 90* chassis, model ECP02/1R, 203" wheelbase, is powered by the Leyland type '350' 6-cylinder, direct-injection, compression-injection engine and is designed for operation in temperate or tropical climates with permissible gross laden weights up to 24,000 pounds for the goods models and 22,800 pounds for the passenger models. The other three Leyland *Comet* models to be exhibited are: type ECP02/2R with an all-steel four-cubic-yard tipping body and Bromilow and Edwards model 2-AT twin under-body ram and tipping gear, complete with combined power take-off and pumping unit; type ECP02/1R, 203" wheelbase, with city type bus body; and type ECP02/1R, 203" wheelbase with mofussil type bus body.

BRITISH DIESEL FOR NEW SCIENCE COURSE

The Indian Institute of Science at Bangalore is to use the 250-type Leyland Diesel engine for a new automobile engineering course shortly to be started there to help familiarise young Indian engineers with the workings of a Diesel engine. This type of engine has been chosen by the Institute because so many of India's goods and passenger vehicles are Leyland Comets powered by this engine, and also because it is a unit which is soon to be built in India by the newly-formed Ashok-Leyland Ltd.

U.S. INVESTMENTS IN INDIA

Business men in New York are becoming increasingly aware of prospective sharp cuts in certain exports to India as industrialisation of the sub-continent progresses, according to a copyrighted story in the current issue of the McGraw-Hill *American Letter* (Indian Edition). A recent report by the U.S. Department of Commerce urging them to consider the establishment of plants in India, or licensing arrangements with local producers, will have considerable influence. There is still much uneasiness about the future of American investments in India, but repeated assurances from New Delhi that foreign capital will continue to be welcomed is beginning to have effect. A tremendous market potential, particularly for engineering and chemical goods, is foreseen for India and the neighbouring countries, the *Letter* goes on to say. More Americans will be travelling to India soon to assess the possibilities of manufacturing there. Assembling or finishing enterprises based on imports of semi-finished goods, and industries based on local raw materials are particularly attractive.

COAL PRODUCTION TARGET

The Deputy Minister for Production, Mr. Satish Chandra, said in the Rajya Sabha in reply to a question by Mr. B. C. Ghose that it had been proposed in consultation with the Planning Commission that the target of additional production of coal should be 23 million tons annually by the end of the second five year plan, bringing the total annual production to 60 million tons. The allocation of the increased output between the private and public sectors, Mr. Satish Chandra added, had not yet been finally decided upon.

LONDON TEA SALES

AT last week's London tea sales, the 53,602 packages on offer realised an average price of 5s 5.03d a lb. against 5s 4.95d in the previous week and 6s 3.43d a year ago. Plain broken pekoe was quoted at 3s 9d-3s 10d; in the previous week 3s 8d-3s 9d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	822	4/4
Assam Co.	898	6/4
Balijan	126	7/8
Bargang	600	6/
Borelli	336	5/9
Budla Beta	125	7/9
Cons. Tea and Lands	1,982	4/9
Deamoolie	132	8/2
Devilur	174	4/7
Dickwell	258	6/5
Doom Dooma	624	7/9
Emerald	60	3/8
Highland	114	4/9
Imperial Ceylon	162	4/10
Jetinga	198	3/7
Jhanzie	618	6/3
Jorehaut	1,356	7/5
Lunuvu	912	6/
Makum	252	7/1
Malayalam	2,010	3/9
Meabund	318	8/
Nedem	108	4/1
New Dimbula	750	6/1
Pabbajan	246	8/2
Scottish Ceylon	294	5/2
Sephinjuri-Bhovel	240	3/10
Southern India	258	3/4
Standard	1,116	6/7
Sylhet	232	4/4
Tingri	294	6/10
United Planters	891	5/8
Yataderia	108	5/0

U.K. Tea Stocks

U.K. stocks of tea on 23rd September amounted to 113.1 million lbs. against 102.2 million lbs a year ago.

EXPORT DUTY ON TEA

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3-9-6 a lb. with effect from 1st October, 1955, as against Rs. 2-12-8 a lb. in force from 1st September, 1955. The export duty at this price will be As. 3 a lb. which is an increase of annas 2 a lb. as compared with the duty hitherto in force.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing Prices on 23-9-55 (Rupees a lb.)	Average for the Period (Rupees a lb.)
Sheet:		
No. 1	1.35	1.35
No. 2	1.32	1.32
No. 3	1.29	1.29
No. 4	1.05 Nom.	1.05 Nom.
No. 5	1.00 Nom.	1.00 Nom.
Sheet Cuttings 1	1.36	"
do	2	1.30
Crepe:

SHARP FALL IN GUNNY MARKETS

OVERSEAS BUSINESS REMAINS POOR

IT had become increasingly apparent over the past few weeks that speculators in Calcutta were reaching the limit of their ability to influence the market. For several weeks now, they have been the mainstay of prices but the holding power of pre-partition days is no longer evident. The continued lack of overseas enquiries has eventually had its effect; a pessimistic note has crept in and nervous holders have begun to unload, resulting, towards the close of the week, in the collapse of the goods market. The present situation is being viewed with a certain amount of alarm by manufacturers, as the majority still have fair balances of their production for the last quarter of this year for sale, which, of necessity, has had to be covered in jute to ensure delivery within the required period. Thus, on paper, many mills are now long in jute much against their wishes, and unless sales are made at reasonable prices in the very near future, they are liable to show heavy losses against these purchases. The days of simultaneous business in raw jute and finished goods appear to have gone for the time being, for only on a very few occasions has the market been favourable for this type of transaction to take place at a profit, and when the opportunity arose it was invariably for a delivery that manufacturers had no balances to sell.

The raw jute markets gave a little support to the goods section in the early part of the week and tended to remain steady whilst gunny rates declined, but this situation did not last very long and prices soon slumped in sympathy. Steady but small business was done nearly every day, but it was a buyers' market, and mills' prices, deliveries and assortments were invariably met by sellers who showed a keenness for business they had not previously displayed. In the majority of cases of forward business, however, especially where sales covered a wide range for equal quantities each month, sellers asked for the option of delivering earlier, the option to be on their side. This was a demonstration of weakness on their part, and was a further indication of the tightness of the money market as they were no longer able to keep large sums of money tied up in unsold stocks. Some of the larger mill groups welcomed this new innovation, and had no hesitation in including this option in their contracts. Others, however, who were working to a strict budget, were not interested in earlier delivery than that contracted for, if it meant payment in a period before the option was exercised in their calculations. The recent fall in the price of jute has ensured mills receiving deliveries against their guaranteed shipment contracts, as most of these can now be considered as high-priced, and sellers would not run the risk of cancellation through non-delivery. Buyers have taken every opportunity so far of enforcing this clause, and have not hesitated to cancel undelivered balances.

THE JUTE MARKETS

Manufactured Goods: The absence of overseas enquiries, combined with heavy selling pressure in the fatka market, caused jute goods prices to slump at the opening on Thursday morning. Near delivery B Twills dropped by Rs. 1-4 a 100 bags to Rs. 104-12 while January-March shipment lost Re. 1 to Rs. 102 a 100 bags. Hessian did not fare any better and new low levels were recorded by a drop of 8 annas in all deliveries, bringing 40" 10oz. down to Rs. 38-6 for ready shipment and Rs. 38-4 a 100 yards for Jan-March shipment. Speculators appeared to pause at this stage, and the market took on a steadier tendency at the lower levels. Trade enquiries were very limited, and mills were not interested so the market continued on Friday on this basis with rates unchanged. Some minor fluctuations took place during the day on account of settling day activity but when most of the accounts were closed a reaction set in and a weaker tendency prevailed. Saturday morning brought about a general reduction in rates in both sections of the market, Hessians again setting new lows with a 4-annas drop both in the near and forward positions, and heavy goods following suit with a fall of 12 annas for ready delivery and 8 annas for Jan-March shipment. Small overseas enquiries over the week-end were exaggerated out of all proportion. Sacking and hessian responded, and on Monday morning 40" 10oz. Hessians gained 2 to 4 annas, and B Twills 8 annas to Re. 1, the larger increase in both cases being for forward shipment, wherein lay most of the interest.

When the volume of business expected did not materialise the market received a setback, and prompted by lower advices from the raw jute section, prices collapsed. The hessian section fell 4 to 6 annas a 100 yards for 40" 10oz. to record Rs. 38 for all deliveries right through to the end of March 1956, this being about Rs. 30 a ton lower than last week's closing rates. The fall in the heavy goods section was more pronounced, and B Twills recorded a fall of Rs. 2 a 100 bags in all sections, ready delivery standing at Rs. 102-8 and Jan-March shipment at Rs. 100-8. This was Rs. 35 a ton lower than the previous week's closing quotations.

At the close new low levels were again recorded in the hessian section, and an easier tendency

ruled all round. Opening quotations on Wednesday morning were as follows:

	Ready	October	Nov.-Dec.	Jan.-Mar.
40" 8 oz.	31-6	31-4	30-12	30-8
40" 10 oz.	37-14	37-14	37-14	37-12
B Twills	102	102	101-4	100-8
Heavy Cees (Plain)	110-8	105-8	102-8	101
A Twills	128	128	127	124
Liverpools	118	118	117	114

Raw Jute: After an initial drop of 8 annas a maund in raw jute quotations at the opening last Thursday, this section of the market took on a temporary steadier undertone. The cut in rates was the meet mills' indications and a fair amount of business was done at the lower levels. Sellers were keen for business but in many cases were not offering for the periods buyers were indicating. Once again mills were only interested in quick shipment jute, or forward shipment up to January or February next year. Sellers for the latter position were inclined to be reserved, but there were sellers over for quick delivery jute, as fair stocks have been accumulated over the past few weeks in local markets. Daily selected buying in local bazaars by mill representatives tended to keep this market steady, but selling pressure was very heavy and business was usually possible at below the quoted rates. Many of the transactions involved Daissee and Daissee Mesta jute, although the latter is only being received as yet in small quantities and in a very wet condition. High prices are still being paid on occasions for jute purchases, allowing this market to rule firm. There is no interest in Pakistani jute, and Pakistan's determination to enforce minimum rates for the export of her jute makes it virtually impossible for Indian mills to do business with their neighbour.

Opening quotations on Thursday last were on the basis of Rs. 24 a maund for Upper Assam Bottoms, and a fair amount of business was done at this level. There was no change in these rates until Tuesday morning, when in sympathy with the weaker goods market prices dropped 8 annas a maund, but buyers were still looking for lower rates.

Good business was done in Dhubri-Northern jute during the week and prices varied between Rs. 23-8 and Rs. 24 a maund basis Bottoms for Oct.-Nov. shipment and November-February shipment in equal quantities each month. Local Northern jute was also done at Rs. 24 to Rs. 25 a maund for one month's delivery. Ordinary Assam jute from selected agencies passed at Rs. 23-8 to Rs. 23-8 a maund for Oct.-Nov.-Dec. shipment, with Tossa at a premium of Re. 1 to Re. 1-8 for the same shipment. Fair interest was shown in Murshidabad Tossa and prices paid ranged between Rs. 23 and

Rs. 25 a maund basis Bottoms for Oct.-Dec. shipment. In the Daissee section ready delivery fetched Rs. 26-8 to Rs. 27-8 a maund, whilst for Oct.-Dec. shipment mills paid Rs. 24-8 to Rs. 26 a maund. Small lots of Daissee Mesta were done at Rs. 22 to Rs. 22-8 for forward shipment. Ready bills of lading of Pakistani Cuttings were on offer, and these were taken up at Rs. 100 a bale.

At the close, raw jute prices have fallen a further 8 annas a maund in sympathy with the goods market, and opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at mills Rs. a maund basis Bottoms.	Shipment.
Lower Assam	23-8	Oct.-Nov.
Upper Assam	23	"
Northern	23-8	"
Murshidabad White	22-8	"
Daissee ex Agency	25	"
Daissee ex Cossipore	24-8	"
Daissee Mesta	22	"
Bimli	22 F.A.Q.	"
Local Packing (Northern)	23-8	"

Tossa is quoted at Re. 1 to Rs. 1-8 above the prices of white jute:

Pakistan Jute:	Rs. a maund basis Bottoms.	Shipment.
Jat	25	Oct.-Nov.
District	25	"
Northern	24-8	"

Imports into the local Cossipore markets continue to vary between 75 and 85 wagons a day, but all arrivals, especially the better classes of fibre, are finding ready buyers in Indian mills. Fair business has been done and the market is inclined to be steady, but there has been no increase in rates. At the close Kishanganj jute is quoted at Rs. 24-4 a maund for garsat quality. In the Daissee markets business is brisk, and at present there is ample jute to meet all demands. High prices are still being paid for jute purchase, and at present all arrivals contain heavy moisture due to the unfavourable weather conditions of the past week. Latest quotations in Sheoraphuli are based on Rs. 25-8 a maund for garsat quality containing a considerable amount of moisture.

Mofussil: There is very little to report from the upcountry agencies in India, where prices have shown a gradual decline over the week. Imports are still smaller than normal for the time of the year, but this is due to farmers holding back their stocks at these low prices, hoping for a rise. Very little business has been reported now that there are no immediate contracts to be covered and latest quotations in Dhubri are on the basis of Dhubri Bottoms @ Rs. 19-8 a maund.

There is very little business passing in the Pakistan markets and prices have fallen slightly over the week. The undertone however is firm in spite of the Government's insistence on minimum prices. In Narayanganj imports continue at about 35,000 maunds a day and there are ready buyers amongst bales for all arrivals. Quotations are based on Jat Bottoms at Rs. (P) 23-8 a maund and

Now on Show at
HIND, BINA & BASUSREE
and at
several important Centres.

Jat X Bottoms at Rs. (P) 18 to Rs. (P) 188 a maund.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 30th September, 1955	3,301.4	39,792.1	43,093.5
1st to 31st August, 1955	2,880.9	41,672.2	44,553.1
1st to 31st July, 1955	2,609.5	40,020.9	42,630.4
Sacking			
1st to 30th September, 1955	39,689.2	715.1	40,404.3
1st to 31st August, 1955	34,514.7	2,121.3	36,636.0
1st to 31st July, 1955	37,200.3	2,051.3	39,251.6

JUTE GOODS EXPORT

Jute goods licensed for shipment during the month of September 1955, totalled 81,413 tons, according to a trade notice issued by the Joint Chief Controller of Imports and Exports, Calcutta. These included 39,076 tons of hessian and 38,075 tons of sacking.

THE FOREIGN JUTE MARKETS

PAKISTANI PRICES FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THERE is still no sign of weakening on the part of sellers of raw jute in Pakistan, and many are now beginning to believe that there will be no change in the minimum prices for raw jute from that quarter. Pakistan has everything in her favour for maintaining the minimum rates for the fibre, in which she has the monopoly for supplying the world. It is argued that jute is the main cash crop in Pakistan and if prices were reduced there would be a considerable loss in revenue. Not only that, but something drastic would require to happen before Pakistan would be able to engineer an advance again. Minimum prices were originally imposed in order to arrest a heavy decline in the market and they have not been below £81 for Mill Firsts, compared with the week-end's rate of £90. The only competition which Pakistan has in prospect at the moment in raw jute is that which might come from Brazil. This has been brought up occasionally over the past few years, but in 1950 it was estimated that the production of the fibre in Brazil for that year would be 25,000 tons, much the same as the quantity claimed to be produced today. Though the Brazilian Government has been urged to foster the growth of jute it has so far shown little interest. The call has been sent out in Pakistan for a considerable increase in the area sown under jute, and an appeal made to industrialists to supply more money to build additional jute mills. This looks as if Pakistan wishes to have the monopoly of supplying jute goods to the world. Her motto seems to be to keep prices for raw jute high for her competitors and low for her own mills, so that jute goods might be produced at cheaper rates for export to all consuming countries.

Buyers of all commodities are still afraid of a reduction in prices, but only Calcutta goods are declining. The week-end's quotations were down to 58s for 10 oz. 40 in. and 44s 9d for 7½ oz., October to December and 57s 9d and 43s 9d January-March, with "B" twills at 159s 3d and 155s 6d respectively f.o.b. Calcutta. Business in raw jute here is dull and any transactions in yarns and cloth are mainly for near delivery, which can be quite easily obtained from most sellers.

TAMING THE TIGRIS

IRAQ'S £11 MILLION MULTIPURPOSE PROJECT

THE ancient kingdom of Iraq has been the scene of devastating floods from time immemorial. Its twin rivers—the Tigris and the Euphrates—swollen by spring rains and melting snow have the habit of overflowing their banks and inundating the countryside, causing damage to crops, decimating livestock and imperilling human life. As recently as last year (1954) floods swept the country, swamping pasture lands and property, submerging railways and roads, threatening the very existence of Baghdad, the capital city and leading to losses running into millions of dinars (or pounds sterling). In the past, much time, labour and money have been expended every year in building up the embankments controlling the flow of these turbulent rivers, but these measures, though reducing the risk of serious inundation in densely populated areas, seldom furnished an effective answer to this ever-present problem.

Since the end of the second world war, with a change of fortune brought about by a spectacular rise in revenues from oil, the Government of Iraq was enabled to embark on a £155 million programme of economic development, and not less than half of this sum has been set aside for promoting irrigation, flood control and power generation schemes. The largest single undertaking is the Wadi Tharthar Flood Relief project now being carried out, at an outlay of £11 million, on the Tigris river north of Baghdad. This multipurpose scheme is designed to end the annual flood menace to the Tigris Valley, and to provide water for irrigation and power generation.

The major activities of this work, one of the world's greatest flood relief projects, are centred around Samarra, an historic Arab town founded by Caliph al-Mutawakkil over a thousand years ago as the capital of the Islamic Empire. Much of the work is situated across the river within sight of the golden dome of its mosque and its unique 9th century Moslem tower. Here, today, the air reverberates with the din of pile drivers, concrete mixers and other modern machinery engaged on the construction of a huge barrage across the Tigris river 60 miles upstream from Baghdad. A little farther away is the mouth of the 42-mile long escape channel through which flood waters, diverted by the barrage, will flow to the Tharthar Depression—an immense egg-shaped hollow in the land enclosing close on 5,000 square miles of desert. The barrage and the channel with its protective embankment form two of the main facets of the scheme, and each is being executed by a different contractor.

By the end of 1954 nearly three-quarters of the work on the channel and embankment, and one-fourth of the barrage, was completed. The entire scheme is scheduled to start operation prior to the advent of the 1956 spring floods. The Tigris river is being diverted from its present course by an earth dam built from both ends at the same time when its level dropped in May of this year. The aim of the barrage is to raise the upstream level of the river from about 190 feet (its highest flood waters can be diverted to the Wadi Tharthar Depression, and water flowing downstream to Baghdad and beyond can be kept at a reasonable level. During the flood season the barrage will enable more than half of the river displacement to be diverted.

The Barrage

Standing about 65 feet high from its foundations, the barrage will consist of a 760-feet-long concrete structure, with seventeen 36-feet five-ton electrically operated sluice gates, with a discharge capacity of 8,350 tons of water a second. Its floor will be concrete, with baffle and deflector blocks, and a cut-off wall carried down to an impervious stratum. Piers will rise up from the concrete floor, and a series of reinforced con-

crete bridges will be built across them to carry a 20-foot wide roadway and two footpaths for traffic passing to and from Samarra. This roadway will continue across the top of the earth dam thrown athwart the river's present course. A similar embankment of compacted earth with a steel-pile cut-off, reaching down to the impervious stratum, will link the barrage to a concrete regulator, designed to control the discharge of flood waters, built up by the barrage, through the escape channel to the Tharthar Depression. At times of maximum flow this regulator will be able to discharge up to 9,000 tons of water a second. About twice as long as the barrage itself, the regulator will have thirty-six 36-foot sluice gates bridged by two reinforced concrete bridges, one carrying the roadway and footpaths to Samarra, and the other the main Baghdad-Mosul railway line.

Hydro-electric Power

Apart from the barrage regulator and embankments, a power-station intake and a fish ladder form parts of the project. The intake will be necessary for the proposed construction, at a later date, of a hydro-electric power station comprising seven turbines of about sixteen megawatt capacity each. Located between the barrage and the power station intake will be the fish ladder—a complicated structure in view of the varying upstream and downstream levels of the river—enabling fish to pass through a chain of artificial pools, from one side of the barrage to the other. To facilitate the construction of the Samarra barrage, the headworks of the Ishaqi Canal, later to be utilised for the proposed irrigation scheme, are being incorporated in the overall programme on which 40 foreign technicians and 565 Iraqis were engaged early in 1955. Work on the escape channel and the protective embankment extending over 42 miles from the regulator to the Wadi Tharthar Depression, began early in 1952, and is expected to be completed by the end of this year.

The Basin

When the flood waters of the Tigris are discharged through the regulator in the spring, they will flow into a basin, nearly two miles wide, bordered on one side by an embankment of compacted earth and by high ground on the other side. This basin extends back to the entrance to the escape channel, and to the protective embankment running alongside it, up to the southern tip of the Tharthar Depression. The embankment, which is being built with the soil excavated from the channel, is calculated to prevent the flood waters from flowing southwards over the cultivated areas adjoining Baghdad. For the first 30 miles the land north of the channel is a remarkably level and ideally suitable as an overflow area. But for the rest of the distance it is hilly, so that the channel has to be dug more deeply to raise its capacity to 6,000 tons of water a second. The depth of the channel thus varies from 15 feet to 42 feet along its 40-mile length. The spill area, over which the escaping water can spread for the first 30 miles, has a maximum capacity of approximately 600 million tons.

The actual task of digging the channel, whose maximum width will be 360 feet, and raising the embankment with the excavated earth, is understood to be the biggest excavation job now going on anywhere in the world. Altogether, by the end of 1955, 50 million tons of soil will have been moved, representing half of that involved in cutting the Suez Canal. The embankment itself is being constructed with loam, silt, sand, rock and gravel, excavated from the channel and from the desert on its open side where there is not sufficient in the ditch itself. The largest of the scrapers used is capable of excavating 23 cubic yards of soil a minute under favourable conditions. Several motorised scrapers, of 14 cubic yards capacity, lift the soil and carry it to the top of the embankment to drop it. Also, elevating graders are cutting up the earth and transferring it on belts to trucks of 30 cubic yards capacity. In an endeavour to complete the work on schedule, operations are going on almost continuously night and day. In the middle of 1955 progress was averaging about half-a-mile every six weeks on each of the three sectors, covered.

The Embankment

The central part of the embankment, with a width of 30 feet at the top, is being specially constructed to form an impervious zone. To this end, dry layers of loam are laid and sprinkled with water by 2,000-gallon water tankers, and then flattened by 50-ton rollers. The loam sets like concrete to form the impervious zone, some 30 feet wide at the bottom and 9 feet wide at the top. Although the soil employed in the construction of the embankment is mainly gravel and gypsum, tial for the work are on hand, including water. Nearly 300,000 gallons of water, procured from ditches dug on the open side of the channel, are utilised each week in a single sector.

The exact dimensions of the Wadi Tharthar Depression, where the flood waters will evaporate known, but a rough estimate that it could absorb gives some indication of its capacity. In the spring of 1956, at a time when, normally, anxiety and fear the river rises, the flood waters of the Tigris should be swirling safely down the man-made channel from Samarra to Wadi Tharthar; and a menace that has for centuries threatened the entire economy of the country, and the lives and livelihood of the people, will at long last have been brought firmly under control.

Calcutta Markets

PRICES IMPROVE IN TEA EXPORT AUCTION

BETTER DEMAND FOR DUSTS

A T Sale No. 18, held on 3rd and 5th October, offerings in the Export auction consisted of 54,000 packages. More interest was shown by buyers from the United Kingdom and there was a better general demand which improved as the sale progressed. Clean Commons were about ½ to 1 anna lower but Medium Broken and Fannings declined by about 1½ annas. Leaf grades met with better support but were generally 1 anna easier and the Darjeeling offerings, which were mostly plain in character were also easier. Tippy teas and best liquoring kinds were well supported and remained about steady. The commonest sorts were generally dearer, but a considerable weight of this category of tea is still selling below the cost of production.

Quotations

	Rs.
Clean Black Pekoe ...	2 4 0
Plain B.P. ...	1 10 0
Medium Assam B.P. ...	1 12 6
Best CTC Assam B.P. ...	3 4 0 to 3 6 0

At the Internal Sale, offerings of Dusts consisted of 13,300 packages. The market opened about 1 anna below last rates but demand improved considerably and most offerings were sold at dearer rates. The powdery types received more support than in the last few sales and there was generally more interest for this type of tea as compared with the grainy sorts. Commons and Medium Assams and Grainy Doars advanced generally by 1 anna but the powdery types were frequently 2 to 3 annas dearer. The best CTC Assams realised high prices, while poorer sorts advanced irregularly by 1 anna. Darjeelings received fair support at irregular rates.

Quotations

	Rs.
Medium Doars Dust ...	1 11 0 to 1 12 0
Medium Assam Grainy Dust ...	1 13 6 to 1 14 6
Best Assam CTC Dust ...	2 11 0 to 2 13 0

As regards other Grades, the internal leaf offerings consisted of 3,000 packages for which there was a better demand than in previous weeks. The few clean teas on offer sold at about 1 anna below last rates. But the main bulk of the offerings, which consisted of fibrous stalky types, were very irregular.

COAL FIXTURE FEATURES FREIGHT MARKETS

INCREASING JAPANESE DEMAND FOR INDIAN ORE

THE outstanding feature of last week's business was the fixture by the National Coal Board of 1,150,000 tons from Hampton Roads or Baltimore to Antwerp-Rotterdam-Amsterdam with full U.K. options, for delivering December 1955 to December 1956. This contract was placed with one London Greek shipowner and the rate reported is 65s 6d basis Continental discharge with the rates for U.K. discharge undisclosed. The usual additional is 6s 6d a ton extra W.C.U.K., 7s 6d a ton Manchester and 8s 6d a ton E.C.U.K. Spot vessels have secured 70s for Continental discharge. Sugar from Mauritius to the U.K. paid 120s and from Gdynia-Gdansk to Karachi 106s 6d f.i.o.s. Burma-Colombo repeated 60s for rice and a Hongkong-operated ship secured 30s a d.w. ton for 12 months' time charter, delivery December, with trading limits not East of Japan or West of Cape Town. A Liberty ship obtained 31s for 12-14 months' trading and the high rate of 50s a d.w. ton was paid for a modern motorship of 9950 d.w. for the trip out to Persian Gulf with delivery the U.K. Japanese importers are endeavouring to offset the drop in supplies of ore from Goa by purchases in India but, although the ore is available, the old bogeys of lack of rail and port facilities make it unlikely that substantial quantities will move.

SUGAR MARKET STEADY

During the week ended 4th October, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 5,000 bags and stocks totalled 90,000 bags. Rates for ready sugar export Kantapur delivery were Rs. 31-6 for ordinary grain and Rs. 32-6 for big grain. Ex-mill delivery rates for D-28 and D-29 grades of sugar were Rs. 28 and Rs. 28-6 respectively. Prices remained steady, but are expected to rise during the coming weeks due to the ensuing Hindu festivals.

LINSEED

Firm conditions prevailed during the past week and activity was scarce. Sellers were very reserved owing to poor arrivals and scanty offering from the centres. There were keener enquiries from crushers for both ready and forward deliveries but the turnover was small. The oil market was firm; there were fair enquiries from shippers although sellers were rather reserved and activity was some-

COMPANY AND PUBLIC NOTICES

PASHOK TEA COMPANY LIMITED.

NOTICE is hereby given that the Eighty-fourth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Fairlie Place, Calcutta, on Saturday, the 22nd October, 1955, at 10-45 a.m.

AGENDA.

- (1) To receive and approve the Report of the Directors and the Company's audited Accounts for the year ended 31st December, 1954.
- (2) To declare a dividend.
- (3) To elect Directors.
- (4) To appoint Auditors and fix their remuneration for the current year.
- (5) To transact such other competent business as may be brought before the Meeting.

The Dividend, if passed, will only be paid to Registered Shareholders or their Mandatees, and holders of Shares on blank transfer are requested to send in such Shares for registration in good time before the closing of the Company's Share Transfer Books on 12th October, 1955. The Books will remain closed until 22nd October, 1955.

By Order of the Board,
KILBURN & CO. LTD.,
R. J. L. OAKLEY,
Managing Director,
Managing Agents.

Calcutta, 1st October, 1955.

THE EAST INDIA TEA CO. LTD.

NOTICE is hereby given that a Dividend of 35% for Season 1954 has been declared payable on or after the 29th September, 1955.

Warrants will be issued to Registered Shareholders whose names were in the Register on the 23rd September, 1955, or in accordance with the instructions received from them.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the profits for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued in Rs.	Rate per cent	Paid up per Share	Market Quotations 3-10-55	Year of Issue	NAMES	Amount Issued in Rs.	Rate per cent	Paid up per Share	Market Quotations 3-10-55

NEW BURDENS FOR THE JUTE INDUSTRY

WAGE INCREASES HAMPER INDIAN MILLS IN COMPETITIVE STRUGGLE WITH PAKISTAN

THE Industrial Tribunal has chosen an unfortunate time to recommend wage increases for jute mill workers. It was not to be expected with the climate of feeling on labour problems as it is at the present time, that the claims would be rejected outright. But there is no doubt that this would have been the only decision which could possibly have been made had the prevailing competitive position of the industry been given full consideration. The increases might have been absorbed by the mills without much difficulty in the circumstances existing before devaluation, but under present conditions they represent an effective subsidy to the mills' chief competitor—the Pakistani industry. This was not the Tribunal's stated intention. Judged on the period during which most of its enquiries took place, there is some justification in the claim that the proposed increases are no more than the industry can comfortably bear. But more than the industry has recently undergone a radical change and the industry is now well aware, if the Tribunal is not, that it is entering a crucial phase in its existence. If it is to be continually burdened with an unrealistic labour policy it will be in poor shape for the competitive struggle to come.

The Tribunal appears to have based its recommendations on the most shaky ground. It is difficult to find from the report any reason for the concessions other than the fact that the 1951 award was based on a 48-hour working week and since then the industry has had periods of working shorter time. There seems to have been no embarrassment caused by the fact that the industry has been working a 48-hour week for some months now, while the mills' claim that real wages have risen since the 1951 award because the cost of living has fallen, is brushed aside as untenable. It is clear that the long-term prospect of the industry being able to shoulder the extra burden has not been adequately considered. Pakistani competition is not necessarily the bogey it is often made out to be, but it does exist and its strength is growing. So is the competition from a large number of other small manufacturers at present working for self-sufficiency, not to mention the spread of bulk handling with many large buyers, while the encroachment of Japan on the important North American market is an ever-present threat. The Tribunal points to modernisation of plant and diversification of products as solutions to the long-term competitive problem. These are of course the correct ones and both the industry and the Government have long since recognised them to be so. But diversification of products cannot be expected to increase world demand significantly and retrenchment, which must be the complement of modernisation if it is to bring about a rapid improvement, is being strongly resisted. The industry is caught between rising costs and the prospects of falling world demand for its products; the recommended wage award increases the discomfort of that squeeze.

For some time now the mills have been unable to make a profit on simultaneous business because of the high cost of raw material. This is partly due to the minimum price policy of the Pakistani Government. The Indian industry has gained no cost benefits from the cheapening which devaluation should have brought in raw material prices. At the same time some competitive gain has been obtained from Pakistan's minimum price policy through its effect on other producers who do not have the advantage of home-grown jute supplies. On balance, devaluation has not benefited the Indian industry, even on short-term considerations; on long-term it has definitely been harmful because of its intended effect of establishing Pakistan as the world's second exporter of jute goods. The removal of the jute export duty has not benefited the industry either. After the duty had played its part as one of the chief safeguards of the developing industry in Pakistan, the benefits of its abolition have been lost to the Indian industry due

to the subsequent fall in the price of gunnies. The Indian mills are now a little further back than they were before devaluation.

Pakistan's advantages are clear enough. Cheap labour, abundant high-quality raw material, modern machinery and two-shift working. Against these must be set the shortage of power, the lack of skill and experience and the loss in economies from having to operate on a smaller scale. Pakistan's plans provide for an output of 240,000 tons of gunnies within two years. Of these 50,000 tons will be required for home consumption. The remainder are free to compete on world markets. Further ambitions include an eventual increase in loomage to 1

selves, but it is difficult to see how they can be reduced at its present stage of development and considering the circumstances in which it operates. Costs can be lowered if production is increased, and this Telco proposes to do. It has been decided to increase the capacity of the locomotive division by as much as 50 percent "despite the fact that the meagre return on the additional investment will make it an unattractive investment by itself." Government policies and procedures are themselves in no small way responsible for the present state of affairs, and it is unfortunate that this aspect of the problem is invariably ignored. In line with New Delhi's policy, for instance, some castings are bought from local foundries; many are unsatisfactory in quality and are rejected by railway inspectors. As a result, there are constant production hold-ups. The severity and sluggishness of the railways' inspection methods have been criticised by suppliers other than Telco, such as the wagon-builders. There can be no excuse for relaxing standards, but it is evident that considerable scope for improving procedures exists, and Mr. Tata is justified in suggesting that a little energy be sometimes devoted to this problem. If it is not, private undertakings are liable to suffer in comparison with the more privileged, but not always more efficient, State enterprises. Comparisons between the private and the public sector should by all means be made, but they must be based on a proper appreciation as to whether the privileges and handicaps in both cases are the same. To say that a private concern which is running a three-legged race with the Railway Board lags behind a State undertaking which receives a special supply of vitamin tablets is hardly fair to the former or complimentary to the latter.

TOWARDS A MORE REALISTIC VALUE FOR GOLD A WAY OUT OF THE WORLD DOLLAR SHORTAGE

THE forthright comments in Istanbul of the British Chancellor of the Exchequer on American economic policies started a chain of reactions that could lead ultimately to a rise in the price of gold. American talk of an impending crisis in Anglo-American economic relations had some basis in fact: when Mr. Butler, borrowing the words of Mr. Dulles's strategic thinking, spoke of "agonising re-appraisals" he was clearly warning the American Government that those economic relations would be weakened if present tendencies in American external trade continued. And it may be that of all the unpleasant alternatives (unpleasant from the Administration's viewpoint) a rise in the price of gold will be the most easily accepted. The case for such a rise is simple and familiar: by a stroke of the pen the gold reserves of the non-dollar countries could be made more nearly adequate in relation to the total of those countries' external payments, and the countries that exported gold could increase the value of their export. But to be effective the price must be raised in terms of dollars as well as of other currencies; otherwise the dollar-value of the non-dollar countries' reserves would be unchanged. The most familiar case against a rise in the price of gold is thus equally simple; America does not require an increase in the value of her gold reserve, since it would have inflationary effects on internal credit. Nor is she willing to pay more dollars for the gold that she imports. And she is reluctant to "devalue" the dollar.

The essential difficulty is that the dollar and the non-dollar countries are in different economic circumstances, and that a rise in the world price of gold would not discriminate between them. The British Treasury believes that modern methods of credit-control are capable of making the appropriate adjustments. It believes, too—and South Africa shares this belief very fervently and the other gold-producers in varying degrees—that America should pay a fair price for gold, not buy it artificially cheap. As to "devaluation" of the dollar, there could surely be little objection to it if all currencies were correspondingly "devalued". Devaluation is objectionable, it may be said, only when it applies to one currency relatively to others, not when it applies to all currencies relatively to gold. There is a suspicion that all America's objections to raising the price of gold resolve themselves into one supreme objection: the rise, being indiscriminate, would increase the international value of the reserves and of the current production of gold of the Soviet Union. Otherwise, why ignore the obvious possibility of neutralising the inflationary effects in America, either by increasing the ratio of gold to the note circulation and to bank-credit (so reversing the process of the past 16 years) or by removing to a special account the surplus arising from revaluation of gold (as was done in 1934)?

The western governments are naturally unwilling to help Russia; though the sterling area's producers of commodities may feel differently about raising the value of Russia's gold, as some of her purchases of commodities are financed by

sales of gold, and these purchases would presumably increase if the metal's price were raised. But the British argue that, if it is a choice between two evils, the "agonising re-appraisals" of which Mr. Butler spoke would be worse than moderate gratuitous assistance to Russia. There is no doubt what Mr. Butler had in mind. Britain and the other sterling countries—and, of course, countries outside of the sterling area—have in recent years withdrawn many of their restrictions on imports from the dollar area, and those imports have, in fact, substantially increased. This development represents important progress towards convertibility of currencies. No further progress is possible until the "dollar problem" is, in the main, solved. On the contrary, Mr. Butler implied clearly that the process might have to be reversed.

A healthier state of payments between the sterling and the dollar areas has always been a precondition of convertibility of sterling. What is new is the British Treasury's public and formal acceptance of the idea of raising the price of gold for this purpose. The Americans have asserted that revaluation of gold would not correct the basic "imbalance" of payments, and when Mr. Butler referred to this expedient as a means to establish "an enduring equilibrium in world payments" he did not imply that it was sufficient in itself. It is not a permanent substitute for "good creditor" policies on the part of America, but the British Treasury is now convinced that revaluation of gold can make good some of the deficiencies of America's import policy. It may be that the Americans themselves will see the matter in this light if foreign economic relations become really critical. Discrimination against dollar goods has been modified so far that the Americans are, it seems, no longer urgently interested in the "final act" of convertibility of non-dollar currencies; but they could not remain complacent if the non-dollar countries were forced to reimpose restrictions. In admitting foreign goods into America more freely there are political difficulties that the Administration seems, at present, unable to overcome. If the point were reached where the gold reserves of

PUJA HOLIDAYS

Because of the Puja holidays there will be no issue of CAPITAL on 27th October, 1955. The last issue of this month will be dated 20th October and the first issue of next month will be published on 3rd November, 1955.

non-dollar countries were inadequate to support the present volume of trade the Americans might then agree to revalue gold. If the Americans are so persuaded it will be not Mr. Butler's exhortations but the hard facts of the situation that persuade them. Mr. Butler has not, indeed, become overnight an impassioned advocate of revaluation: he spoke cautiously of choosing "the right moment" and did not suggest that it was now. But the monetary facts are changing inside as well as outside America: America's own gold reserve has declined substantially since 1949, while the volume of credit has risen substantially. Even in America it may seem desirable to correct this weakening of the ratio of gold to credit.

SMALL-SCALE INDUSTRIES IN INDIA AND JAPAN

SMALL-SCALE and village industries have been assigned a crucial rôle in the economic development of India, particularly during the second plan period. This is partly in order to increase the supply of consumer goods to match the increasing money expenditure on capital-intensive industries and on building social capital and partly to promote fuller employment in the rural sector. Despite the unceasing controversy on the economic wisdom of such a course, due largely to the recognisably inefficient methods of production that these industries represent, the Government and the Planning Commission have taken an irrevocable decision on the issue. The Mahalanobis plan-frame, in spite of its crude statistical equations, must now be regarded as a settled fact. But it is rather disquieting that having opted finally for such a course, the authorities appear to have given little thought to its long-term aspects. The fact that sooner or later the ends of big and small industries, as they are being developed now, will be mutually conflicting is only imperfectly realised.

A great deal of money is going to be poured into the small-scale industries sector and expenditure is already considerable. The idea is to provide an impetus for the revival of these industries and the associated decayed village crafts, with a view to providing the agrarian population with fuller employment. But are not these industries to be woven into the pattern of an industrial economy in which the big industries will eventually have to provide the major part of the people's consumption needs so that their existing meagre standards of living can be raised in real terms? The course that is being adopted now is clearly contrary to this goal as no careful planning is going into the develop-

ment of small industries, which are being developed on a competitive rather than on a complementary basis with the big industries, at the expense of the latter. If this is the nature of the development from the beginning, it is difficult to see how in the long run the interests of the two can be harmonised.

A study of the highly efficient small-scale industries in Japan by Mr. M. P. Gandhi, a well known Indian publicist, who takes an active interest in the industrial economy of the country, contains some useful suggestions for the Indian planners. The small-scale industries of Japan do occupy a large area of national production but they are scarcely competitive with the big industries of that industrially advanced Asian country. To quote Mr. Gandhi: "Several of the small-scale industries which are capital-light and labour-intensive are geared to and integrated with large-scale industries for which they manufacture particular component parts regularly. These industries sell their production directly to the large industries at prices fixed in advance. They are responsible companies, and maintain production regularly, and according to schedule, to ensure that the large-scale industries which depend upon them are not let down in any manner, e.g. bad quality or sudden fall in production, late delivery, etc. This is due largely to the fact that the workers are made conscious of their obligations and feel responsibility towards their duties. Many small industries are thus ancillary to big industries."

Mr. Gandhi of course tells very little of the history of the development of small-scale industries in Japan and how they come to be working in such a complementary relationship with the big industries of the country. A reasonable inference seems to be that either the establishment of heavy industries is planned on the basis of small industries' production or the other way round. In either case, the process should appear to have been achieved through careful planning and co-ordination of their activities. Since Japan's is the conspicuous example of an Asian country in which big and small industries co-exist in complementary harmony, and since several economic factors are common to that country and India, those who frame the pattern of industrial development in this country might profitably draw on the experience of Japan.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations Capital's Index of Indian Industrial Activity reveals a rise of 12.5 points during March, 1955. Contributing to the increase were rises in cotton consumption, jute manufactures, steel ingots, cement, paper, coal and electricity. Cheque clearances and notes in circulation rose.

Nationalising Kolar Gold Fields.—Mr. M. A. Sreenivasan's address from the chair to members of the Kolar Gold Field Mining Companies published elsewhere in this issue of Capital discusses for the most part official threats of nationalisation. This was appropriate in the circumstances, as serious uncertainties have been created by the threats in the minds of those most closely connected with the working of the companies. He traced the history of the nationalisation proposals, and pointed out that the three companies together constituted the largest enterprise in the private sector in Mysore State. As recently as 1949, they accepted an extraordinary measure of Government control, and agreed to bear new financial burdens which, as far as they know, are without parallel. Mr. Sreenivasan considered it unfortunate that they should now be made to suffer so much doubt and insecurity regarding their future. "Your directors can well realise the concern and anxiety with which you have received the news and announcements of the recent happenings, which anxiety will be shared by British industrialists and investors in particular, and the financial and business world in general." Mr. Sreenivasan went on to discuss the progress of the companies individually. Production at the Mysore Gold Mining Company (KGF) Ltd has been seriously affected not only by labour strikes but also by the rockbursts in October and November 1954. The price of gold has risen, but the increase has been barely sufficient to meet costs and royalty to date. The prospect for a dividend for 1955 is therefore not favourable. The price trend of gold during the past 12 months has however been encouraging, and if production can be raised, the outlook should improve. The production of the Champion Reef Gold Mines of India (KGF) Ltd has been affected by labour unrest also, and by the shut-down of the Biddick shaft for three months. Although a higher price has been received for gold since January, the financial results so far do not compare favourably with those for 1954. In the case of the Nundydroog Mines (KGF) Ltd, production has suffered from unsettled labour conditions and an underground fire. But in view of higher prices, "provided there are no setbacks between now and

the end of the year the financial results for the current year should compare favourably with those for 1954".

Textile Export Promotion.—Cotton textile exports are an important source of India's foreign exchange earnings. Their importance will increase in the next plan period when the country's need of foreign currency will be greater, due to the development schemes which will require considerable capital goods imports. The seller's market, that came as a windfall after the war to the Indian textile mill industry due largely to the temporary absence of the competing industries in the U.K., Japan and the Continent, has since passed away, and competition has progressively increased. But India has to hold on to and expand its export markets if the mills are to maintain their existing level of output and the handloom units be kept alive by protection in certain of their lines of production. This explains the Government's anxiety to promote cotton textile exports, and the creation of the Cotton Textile Export Promotion Council which has just completed one year of its useful life. Incidentally, the idea of an export promotion Council came originally from the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, who did everything in his power to bring it into being and has encouraged the formation of similar bodies for other export industries. Manifold functions have been assigned to this Council, among which are market survey and research, the despatch of trade missions, the fixing of standards of quality and packing for cloth and yarn meant for export, the investigation of importers' complaints about the quality or value of goods and liaison between the various interests in the trade, such as the mills, the exporters and foreign consumers. The Council has been performing its functions with vigour. A few months ago it sponsored a delegation, representing both the manufacturing and trading interests, to five South East Asian countries—Burma, Thailand, Indonesia, Malaya and Singapore and Ceylon. The delegation has since returned after studying market potentialities, consumer preferences, the comparative position of Indian textiles in these markets, importers' difficulties over Indian goods and the sales promotion techniques of competitors. Its report will be published soon. The Council is also establishing offices in important overseas market centres and appointing correspondents in others so that a constant study and appraisal of the market problems can be made on the basis of the first-hand information that these agencies will provide regularly. For the benefit of foreign consumers the Council has been giving wide publicity to the Government's pre-shipment examination scheme for ensuring that Indian goods meet the exact specifications of importers. It is also proposing to bring out a separate edition of its fortnightly Journal Texprocil Bulletin to provide a wide range of trade information to overseas buyers. The journal is also serving as a useful medium for communicating to the domestic industry important market information and trade enquiries, official policies on exports and other trade intelligence which an exporting industry must have. The Government, in its turn, has been taking steps to facilitate the Council's activities. Its credit guarantee scheme, meant for insuring the exporter and importer against risks not ordinarily insurable, when implemented, will help the activities of the Council enormously.

Engineering Productivity Project.—The Labour Ministry, the Engineering Association of India, Bombay region, trade unions of Bombay and the Productivity Centre set up by the Central Government with the aid of the I.L.O. have done well in establishing last week a productivity project for engineering industries in Bombay. The project is intended to assist such industries by applying modern techniques to raise productivity. Increased productivity, as Mr. Sakalchand G. Shah, Chairman of the Engineering Association, explained, is to be achieved without additional investment of capital. The project envisages a series of discussions in which management at all levels and representatives of workers from ten different factories will participate. The discussions will cover such subjects as human relations, production planning, production control, lay-out of machinery and equipment, and material handling. Mr. C. R. Wynn-Roberts, Chief of the I.L.O. Productivity Mission to India, who was present at the inauguration, pointed out that only in countries where productivity was high was there a high standard of living. Productivity missions of experts were being sent out by the I.L.O. to see that no steps were taken which would injure the interests of labour; workers were represented in all the projects the missions undertook. Bombay's Minister for Labour, Mr. Shantilal Shah, who inaugurated the project, urged both industry and labour not to neglect the interests of the consumer. If they made extravagant demands, he said, it was the consumer who suffered ultimately. The Bombay Government intended to make the State foremost in the country for engineering industries,

but there were many handicaps. Raw materials such as coal and steel were not available nearby, for instance. Even so, he was confident that industrialists and workers, by their combined efforts, could make Bombay a leading industrial centre. Mr. Shah advised workers to co-operate in the productivity project and said that it was wrong to believe that increased productivity would result in unemployment. The I.L.O. and the Government would never encourage anything that would increase unemployment.

Employment in August.—Fresh registrations at Employment Exchanges declined in August, 1955, to 141,068 from 157,446 during the previous month. Registrations had increased heavily in July after the announcement of examination results. The increase was in keeping with the normal seasonal pattern. The employment opportunities available to Exchange registrants, as well as placements by Exchanges, recorded small increases over the figures for the previous month. Despite this the total number of unemployed persons still seeking employment assistance at the end of August had increased as a result of renewed registrations by nearly 17,500 and stood at 683,632 at the end of the month. Employment opportunities in the public sector declined slightly, but this was offset by a small corresponding increase of opportunities in the private sector. Under the training schemes of the Ministry of Labour, 11,221 persons, including 492 women and 2,075 displaced persons, were receiving training at the training institutes of the Ministry of Labour at the end of August.

European Railway Co-operation.—An interesting development in the field of international co-operation is the recent formation of "EUROFIMA" (Societe Europeenne pour le Financement du

Materiel Ferroviere), which marks yet another step in the gradual integration towards what might well be called a Western European economy. The object of the new body will be to finance the purchase of railway rolling stock for nine member countries. Existing stockholders are the railway administrations of Austria, Belgium, France, Germany, Italy, Luxembourg, the Netherlands, Spain and Switzerland. Denmark, Portugal and Yugoslavia have expressed a desire to join. To begin with, "EUROFIMA" will have a capital of Swiss francs 50 million, subscribed on the following basis: Belgium 12 percent, France 28 percent, Germany 28 percent, Italy 14 percent, Luxembourg 3 percent, the Netherlands 6 percent, and Switzerland 9 percent. Major decisions will be taken by a 70 percent majority, so that no single country will be able to veto decisions. Any country may subscribe part of its capital contribution in rolling stock redeemable by instalment payments within ten years. Seat of administration of the new company is to be at Basle. Switzerland has been chosen as the country of domicile as this would facilitate access to the Swiss capital market. It is understood that if this new venture in international co-operation proves successful it is to be followed by a similar pan-European organisation for the financing of aircraft purchases for civilian traffic.

August Coal Output.—The output of coal in collieries in India increased from 2,958,561 tons in July, 1955, to 3,118,751 tons in August, 1955, according to official statistics released by the Chief Inspector of Mines. Despatches of coal amounted to 2,879,565 tons in August, 1955, as against 2,757,088 tons in the preceding month. The coal stocks at pitheads decreased from 3,902,184 tons at the beginning of the month to 3,697,098 tons at the close of the month. During the month under review, 828 collieries were reported to be working with an average daily employment of 330,967 workers. The output per man-shift was estimated at 1.11 tons for miners and loaders, 0.59 ton for all workers underground and in open workings and 0.37 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 14.54. Coke plants at collieries and elsewhere produced 392,074 tons of hard, soft and other kinds of coke during the month and despatched 224,838 tons.

INCOME-TAX CASE

(FROM OUR LEGAL CORRESPONDENT)

"IN our opinion," said Chagla C. J. in this interesting and important case on income-tax law, "the question submitted to us by the Tribunal is capable only of one answer, although Mr. Palkhivala, with considerable force, has argued that it is capable only of the contrary answer." Now, what counsel "submits" in argument, whether with or without considerable force, does not necessarily represent his own actual view of what the law is. That is one of the reasons why he invariably says "I submit" and not "I think" that the law is so and so. But when counsel, in a case dealing with a branch of the law in which he is not only himself an acknowledged expert but also is the author of the leading text book on the subject, he is sometimes placed in an embarrassing, and to his opponents not unamusing, position since his argument may be defeated by his own book. True it is that here is a judicial convention, though it is often unobserved in the breach of it, not to cite as authoritative books of which the learned author is still living. Dr. Blake Odgers, K.C., was and his famous book still is the greatest authority on the law of defamation. It is told of him that he was appar-

ing for one side or the other in a claim for damages for libel and his opponent was on his feet dealing with the law of privilege. Dr. Odgers was irritated and also seemed faintly puzzled. "Nonsense," he said in an audible aside. "I am quoting word for word from Odgers on Libel and Slander" observed his opponent neatly. Can you imagine a more smashing answer? Not that Mr. Palkhivala was in that predicament. What he "submitted" to be the law in the following case, as an advocate, he also in the more independent capacity of an author, plainly claims to be such in his and his distinguished colleague's book.

Now for the facts. They are quite brief. The assessee was an importer of dates from Iraq. At the relevant time there was a notification issued under the Imports and Exports Control Act prohibiting the import of dates by steamers. Import of dates was only permissible by country craft. In breach of this notification the assessee imported large quantities of dates by steamers. The Customs authorities under Section 167(8) of the Sea Customs Act confiscated the dates so imported and gave the assessee the option under Section 183 of paying a fine of Rs. 82,250 in lieu of confiscation. The assessee paid the fine and released the goods from the Customs authorities. In the relevant assessment year he claimed Rs. 82,250 as a permissible deduction under Section 10 (2) (XV).

Under this Section and sub-section, an allowance may be made for expenditure "laid out or expended wholly and exclusively for the purpose of such (i.e. the assessee's) business, profession or vocation." The assessee's contention was that the expenditure by payment of the fine was necessary

for salvaging the goods. He said that if he had not paid the fine, he could not have traded with those goods; the Income-tax Department could have obtained no tax at all and in that sense this expenditure was laid out "wholly and exclusively for the purpose of his business."

Note the words "wholly and exclusively". There is a criminal prosecution there is another purpose behind the expenditure and quite possibly it is the main one, and that is to save the assessee from going to jail which is certainly not a business purpose. In *C.I.T. v. Hirjee*, the Supreme Court held that expenses incurred by an individual assessee in defending himself in a criminal proceeding, which ended in an acquittal on a charge of selling goods at excessive prices in contravention of the law were not allowable under sub-section XV, since there was a possibility of the proceeding terminating in the conviction and imprisonment of the assessee and therefore the purpose of the expenditure could not be regarded as wholly and exclusively a business purpose. Certainly there is the purpose, in incurring the expense of defending a criminal case, of protecting the good name and reputation of the business on which it depends for making profits. But you may think that if you are the accused in a criminal case your principal object in paying out legal expenses is not to salvage your business but to salvage yourself, in short, to keep out of jail. Thus costs incurred by a firm of incorporated accountants in successfully defending a member of the firm against a charge of conspiracy to defraud the revenue with reference to a case professionally handled by the firm have been disallowed. Likewise, expenditure incurred by a firm of liquor merchants in defending its partners against charges under the Excise Act were held to be inadmissible on the ground that they were not expenditure incurred for the purpose of earning the profits of the business. But these are all actual criminal charges in which a conviction involves the imminent possibility, even the probability, of imprisonment. Breach of the Sea Customs Act 167(8), though an unlawful act and quasi-criminal, is not a crime and is not punishable by imprisonment. The offender has no fear of jail. We may well visualise him thinking over the option given him by the authorities of paying a huge fine or losing his goods and asking himself whether it will profit his business better to pay the fine and trade with his recovered goods or not pay the fine and lose them altogether. In that event is not his purpose wholly and exclusively a business one?

Apart from the present case, one eminent authority appears to be quite definitely of the opinion that the expenditure is a permissible deduction. "Since," says Mr. Palkhivala in his book, "the Income-tax Act is not concerned with the legality of transactions but taxes the profits of an illegal business, an infraction of the law should not be taken in all cases as defeating the right of the assessee to claim a deduction for costs or penalties incurred as a result of this infraction." And then the learned author as such comes right to the point in regard to the main issue of the case in which he had appeared as counsel. "For instance," he says, "where goods are confiscated (without a personal penalty) under Section 167(8) of the Sea Customs Act, the proceedings are in rem and no personal liability whatever attaches to the importer and there is no question of saving him from any conviction or sentence; in such cases if the importer exercises his option of paying a fine in lieu of confiscation merely in order to salvage his stock in trade, a deduction should be allowed in respect of the fine despite the infraction of the law." This may sound like plain commonsense. True it is that as an exposition of the law it has been now viewed as an incorrect one in the decision of the Bombay High Court.

Said Chagla C.J.: "It is erroneous to suggest that this fine was paid by the assessee in order to salvage the goods. Any amount spent for safeguarding or saving the stock in trade of a business would undoubtedly fall under Section 10(2) (XV) but Mr. Palkhivala puts the case of his client very euphemistically when he suggests that he paid this fine in order to save or safeguard his goods. This fine was paid as a consequence of the illegal act of the assessee and it is a very far cry from paying a penalty for committing an offence to a case where a business man spends money to save or safeguard his goods. In order to be satisfied that the expenditure was wholly and exclusively for the business the Court must look at the circumstances under which that expenditure was incurred and if the Court is satisfied that the circumstances were such as to disentitle the assessee to claim the deduction, it must do so. It would be impossible to accept the position that the Court must so detach itself as only to remember that the assessee paid a certain amount and got back the goods, forgetting and overlooking the fact that that action was due to his earlier action in committing a breach of the law."

The deduction was disallowed. But it is interesting to note that Mr. Palkhivala qua author doubts the correctness of this decision. In the latest edition of his work brought right up-to-date, he says that "the Bombay H.C.'s decision to the contrary...is, it is submitted, incorrect."

increase in economic activity; it would be wrong to damage it further to satisfy the Hindi fanatics.

I have noted with interest the emergence of a new phenomenon—the "conversational institute". It has appeared not indeed in this city—thank heaven—but in Delhi and Bombay. Mind you, it is not the usual single-teacher drawing-room sort of thing where conversational English, French or Hindustani is taught. It is a real school where instruction is given in conversation as an art. From the claims I have seen made, it would appear that if one is prepared just to sign on the dotted line and pay the fees, preferably in a lump sum, one will at the end of some three months or so come out a full-blown Oscar Wilde bubbling with scintillating epigrams, although at the time of admission one might have been little better than a Goldsmith who "wrote like an angel but talked like poor Poll." I have, of course, heard of, though to my occasional regret never used, correspondence courses that descend for a consideration to evoke people's hidden spiritual power and personality, or to teach how one can write one's way to riches—in one's spare time of course. But conversational institutes are quite new to me. I hope that they will do something more than teach per little debutantes to call bearded old stagers by their first names and, what is no less important, teach them to stop their "conversation" when they should. Maybe they will succeed in producing many a Mrs. Sarojini Naidu who, when her friend Sir Francis Low, former editor of the *Times of India*, greeted her as "Your Excellency" (after her appointment as the Governor of the U.P. which took place about the time the proprietorship of the *Times of India* passed to Mr. Ram Krishna Dalmia), retorted by addressing him as "Sri Francis Dalmia." Among the most noted conversationalists in this country have been Rabindranath Tagore, some of whose wittiest conversation has fortunately been preserved for posterity by Mrs. Rani Chanda, the gifted wife of the Deputy Minister for External Affairs, Mr. A. K. Chanda; Abanindranath Tagore, who was a charming raconteur; and Sir Tej Bahadur Sapru, who could interlard his talk with the aptest excerpts from Urdu, Persian, Arabic and English poetry.

Frankly I was surprised at Wall Street's reaction to President Eisenhower's illness. Is not the President the head of a Government which is dedicated to balanced budgets as Satan is dedicated to sin? I know that a few moves have been made to lighten the weight of taxation on business especially where it hampers plant expansion, but surely these are no substitute for the bubbling profits which come with inflationary budgeting? Yet the business community remains wedded to Republicanism as indissolubly as the British farmer does to the Conservative Party in spite of the easy money which Labour put into his pocket. The answer to the paradox would seem to lie in the American business man's attitude towards Government interference, even if it does prove to be as beneficial for him as the New Deal was. In the United States the business man is apparently most at ease and therefore does his best in his own particular field, not when inflation is making things comfortable for his profit and loss account, but when freedom from official meddling is giving him a sense of security. The drop on Wall Street has a lesson to teach on the psychology of the business man. It is one which might profitably be noted here in India.

I hope Mr. Geoffrey Crowther will not be lost to journalism when he vacates the editorial chair

of *The Economist* next March. The announcement of his resignation suggested that in future he would be confining his activities to the business side of the paper and perhaps to business activities generally. It would be a pity if he did that to the complete exclusion of his writing, because, in the last few years, he has developed a first-class technique of expressing the economics of the lecture room in the language and style which the business man and the general reader understand and like. His articles have always revealed a witty appreciation of the various paradoxes of economic and commercial life which is all too rare in the exponents of "the Dismal Science". As an editor he has been the circulation manager's dream. When he took over *The Economist* in 1938, at the early age of thirty-one, it was a journal with a venerable past and a somewhat stuffy undistinguished present. His energy has transformed it into one of the most influential newspapers in the world and one which no business man, wishing to be well-informed, can afford to ignore. Few have done more to sell Britain's ideas on foreign politics to the United States, or to sell American economic ideas to the British public. It would be a pity to end such a journalistic career; perhaps we shall hear that writing is not to be excluded when Mr. Crowther discloses what his plans for the future are. Up to the present we can only rely on the old saying that "once a journalist always a journalist" to support the suspicion that we have not seen the last of him in print. His successor, Mr. Donald Tyerman, is not yet a widely-known figure in journalism, although his career has been distinguished enough. He was assistant and then deputy editor of *The Economist* from 1937 to 1944 and during the latter year he also held the post of deputy editor of the *Observer*. He then joined *The Times* and was at one time considered a likely candidate for the editorship. One interesting fact about him is that he is paralysed from the waist down. That is a serious handicap for anybody to have to triumph over, especially a journalist.

Occasionally the fundamental laws of economics seem to get a little out of hand and when a Government Order to revise the price of a bus ride results in the suppliers of the service refusing to charge consumers a price at all, I think it is time to consider our Marshallian doctrines all over again. Of course, one cannot overlook the fact that the system of costs and receipts on bus route 95 must have been out of hand in the first place, because for the life of me I cannot think of motor bus proprietors as philanthropists. But the retaliatory action of certain owners to the West Bengal Government's edict to revise fares between Kachua and Jessore Road certainly showed that there was nothing wrong with the traditional theories of consumer reaction, even if it appeared to indicate that costs as a whole for buses plying along the route were amply covered. If private transport is so rewarding as to bring forth such pecuniary disregard from bus owners, it seems a pity that a similar attitude cannot be taken when there is no administrative action to spite. To witness two would-be "Ben Hurs" urging their well-worn chariots to first place at each bus-stop along a route is a terrifying experience. But their attitude seems to me to be perfectly understandable because, I believe, the greater the sum collected in fares, the larger the pay packet. Who can blame them: without incentive what can be achieved? But motorists, cyclists, pedestrians and passengers alike are imperilled in the competitive race. The only reason I can think of for there being fewer disasters than, according to all the laws of chance, there should be, is the fact that on the lips of us all is the constant plea *Domine defende nos, contra hos motores bos*.

Company Meetings

TATA LOCOMOTIVE AND ENGINEERING COMPANY LIMITED

CHAIRMAN MR. J. R. D. TATA'S REVIEW

The following speech was delivered by the Chairman, Mr. J. R. D. Tata, at the Annual General Meeting of the Shareholders on Wednesday, the 5th October, 1955.

Gentlemen,

During the year under review satisfactory progress was made by the Company in its manufacturing and constructional activities. There was a substantial increase in the output of the Locomotive Division, the production being 47 locomotives and 45 additional boilers as compared with 22 locomotives and 32 additional boilers in the previous year. The progressive manufacture of Diesel trucks started ahead of schedule, and the target rate of production is being maintained in spite of considerable delays and difficulties arising from the congestion in the Calcutta Docks.

The erection of factory buildings and structures for the steel and alloy iron foundries has made steady progress despite the mounting shortage of structural steel. The construction of additional housing and services in our rapidly expanding Colony has proceeded apace. And we are now embarking on a substantial expansion of both the Locomotive and Automobile Divisions and also of the Alloy Iron Foundry.

Prices for Locomotives and Boilers

This progress, however, was not reflected in the financial accounts for the year. As explained in the report, owing to a disagreement between the Railway Board and the Company on the level of our manufacturing costs of locomotives and boilers, no profit has been shown in the year's accounts, although under the Agreement with the Government of India, the Company was entitled to a return on the capital employed in the manufacture of locomotives and boilers during the year. To that extent the accounts presented to the shareholders may be considered as provisional pending the completion of the inquiry into our costs by the Tariff Commission and such final settlement of the prices for locomotives and boilers as may be arrived at thereafter.

If the prices had been fixed on the basis of the Company's actual costs with the addition of 7% profit on the capital employed in the manufacture of locomotives and boilers and initial and other special depreciation allowed, the profits for the year would have been in the neighbourhood of Rs. 48 lakhs and the allocation to depreciation would have been Rs. 89 lakhs as against Rs. 35 lakhs actually provided.

Manufacturing Costs

We are by no means satisfied with the present level of our costs of production, but we do not accept the view that they are unduly high at the present stage of development and in the circumstances under which we have to operate. The four most important elements which affect our costs are: (1) the purchase price of local and imported materials and components, (2) the rate of production achieved, (3) labour costs and (4) depreciation charges.

We have no control over the price we have to pay for purchased raw materials, and, in regard to components, only to the extent that we are able to reduce their number by progressively manufacturing more of them ourselves. The percentage of components, other than castings, manufactured at Jamshedpur has shown continued progress, but the manufacture of castings must necessarily await the completion of our foundries. Until then there is no alternative to castings being bought either from abroad or in India. While there is no alternative to importing the heavier and more complicated castings, we have, in keeping with Government's policy, pursued other measures from local foundries, but unsatisfactory quality leading to heavy rejections by railway inspectors has resulted in constant production hold-ups.

The rate of output has an important bearing on costs. We have made progress in that respect, but the fact remains that our output is still below what it should be. We are making every possible effort to increase production up to our present capacity, but even when that is achieved our costs will still be on the high side because of the relatively small capacity of the plant in relation to the capital invested in it. It is primarily with a view to meeting this situation and securing a substantial reduction in costs that we have, in response to the request of the Railway Board, decided to increase the present capacity of our Locomotive Division by as much as fifty per cent despite the fact that the meagre return on the additional investment will make it an unattractive proposition by itself.

Problem of Inspection

While we are grateful to the Railway Board for the assistance they have given us all these years in the establishment of this important industry, in fairness to the Company, I must mention a factor within the control of the Railway Board which has been partly responsible for restricting our output, namely, the delays caused by the degree of inspection imposed upon us and the procedure adopted for this purpose. We appreciate the fact that in a product like a locomotive, in the operation of which an element of public safety arises, there must be a degree of control over quality more thorough than is called for in most other types of products. At the same time, insistence on a degree of inspection beyond the needs of safety, operational efficiency or durability, while achieving no useful purpose, materially restricts output through delays and unnecessary repetition of work.

Apart from the nature and degree of inspection itself, the methods of inspection adopted also cause delays which materially affect our costs. Although we have a comprehensive system of inspection of our own, the Standards Office of the Railway Board insist on carrying out inspection not only at the stage of the finished product but also at an unduly large number of stages of manufacture of individual components

and sub-assemblies. Unless the degree and frequency of inspection in the course of manufacture is reduced and the procedure of inspection is simplified, serious delays and avoidable increases in costs of manufacture will continue to arise.

Although I am chary of treading on delicate ground, I think it is only fair to us, in view of the fact that the Railway Board have told us that our costs compare unfavourably with those at their Chittaranjan Locomotive Works, that I should mention that the type and degree of inspection at Jamshedpur is as much more comprehensive and detailed than it is at Chittaranjan. This raises an important question of principle. As shareholders who have read my speeches at the annual general meetings of the Tata Iron and Steel Company know, I have been a strong supporter of a mixed economy in which both State enterprise and Free enterprise contribute side by side to the country's economic development. If such a mixed economy is to function satisfactorily, however, and to create the conditions and atmosphere necessary for maximum effect in both sectors, it is clearly necessary that whenever units in the same field of industry operate in both sectors they should be treated equally and should be allowed to operate under similar conditions. It is to my mind all the more important that this should be so in the case of the consumer of the units in the private sector happens, as in this case, to be the owner and operator of the unit in the State sector.

We have brought this important aspect of the question repeatedly to the notice of the Railway Board in a friendly and constructive spirit and, while I believe they appreciate the validity of our argument, it has apparently not been found possible up to now to give it practical expression in the case of our industry.

Another factor, within the control of Government, which has greatly restricted our output and inflated our costs is the large variety of units, particularly in respect of spare boilers for which orders have been placed on us since the inception of the Company. In an industry such as ours, large-scale and continuous production at low costs is impossible with short-run orders. Each order requires long range planning of the most elaborate kind, the ordering of materials and components months and sometimes up to two years in advance, separate tooling and precise inter-locking of materials, jigs and tools. We have repeatedly drawn the attention of the Railway Board to the complications, delays, low production and high costs resulting from the large variety of short run orders placed on us. They have appreciated the position and have undertaken to do their best to give us orders for longer runs covering as few types as possible. They have already done so in respect of locomotives but we still have many short runs of various types of spare boilers to manufacture, and it is not until about 1958, when the manufacture of spare boilers will cease, that we may expect to be relieved from this costly burden.

Labour Costs

The third important element in the costs of our locomotives and boilers is the labour cost. This item is related to wage rates and man-hours. While we have little control over wage rates which must substantially conform to the rates prevailing in other industries at Jamshedpur, we have been informed that our man-hours per locomotive and boiler are higher than at Chittaranjan. This may be so, but unless one is able to compare all the factors involved and the circumstances under which we are compelled to operate, we cannot accept the conclusion that our man-hours or labour cost are higher for reasons within our control. The Tariff Commission, if permitted to make a detailed comparison between our costs and those of the Chittaranjan Works, will no doubt clarify this point. It is relevant for me to point out here, however, that whereas the Chittaranjan Works were able to draw upon a large number of skilled men from the various railway workshops throughout the country, we suffered from a shortage of men of having to train our men over a period of years. Furthermore, because the new men were either unskilled or totally inexperienced, we were compelled in the early years to carry a greater number of men than we would otherwise have needed in order to increase production. This is a situation which is bound to correct itself in due course as the skill and experience of our men improve.

Incidence of Depreciation

The incidence of depreciation in our costs of production forms a very substantial proportion of our total costs. Under a specific clause in the Agreement with the Railway Board, depreciation as an element of cost is allowed to be charged at the same rates as allowed for income-tax purposes. From the start it has been agreed between the Railway Board and ourselves that this clause covers initial and other special depreciation allowances under the Income-tax Rules. Because our factory was built after the war when prices of plant and equipment were already very much higher than before the war, the rate of depreciation on the costs of locomotives and boilers is naturally much heavier than in the case of locomotive factories elsewhere which, built many years ago at low cost, have little or no burden of depreciation to bear today. This has an important bearing on any comparison of our costs with those of imported locomotives to which I shall refer shortly.

Public Accounts Committee's Report

The Public Accounts Committee in its thirteenth report has commented at length on the working of our Company and on the Agreement between Telco and the Railway Board. Some of their remarks seem to have been based on a misunderstanding of the real facts. Unfortunately we were given no opportunity to place the correct facts before the Committee and explain matters. I would respectfully suggest that

when the occasion arises for the Committee to consider matters concerning Companies with whom Government Departments have Agreements, an opportunity be given to such Companies to tender evidence before the Committee provided Parliamentary rules permit it. In the present case, the Financial Commissioner of Railways answered the Committee's queries on matters concerning our Company and we are grateful to him for the fair and impartial manner in which he did so. I should like to deal briefly with one or two of the main points dealt with by the Committee.

Initial Depreciation

It seems that the members of the Committee are not satisfied that initial and additional normal depreciation should have been included in the costs of production which formed the basis of the prices charged to the Railway Board. This is difficult to understand in view of the terms of the clause in the Agreement and the correspondence on the specific subject exchanged between the Company and the Railway Board in 1945 and 1947, which make it clear that even in the original negotiations preceding the contract it was clearly agreed that all depreciation allowances including initial depreciation should be taken into account in calculating the prices for locomotives and boilers. There has been no dispute on this account between the Railway Board and ourselves, but if it is now felt that the burden of depreciation should be spread more evenly in future, we shall be willing to consider any reasonable proposal to that effect notwithstanding our rights under the Agreement.

The members of the Committee seem to have come to the erroneous conclusion that the payment of initial and special depreciation included in the prices paid by the Railway Board has involved Government in a loss. As rightly pointed out by the Financial Commissioner, as the total amount of the depreciation can in no case exceed 100 per cent of the value of the assets used on the manufacture of locomotives and boilers and the Company would have in any case been entitled to receive this amount sooner or later, there can be no question of Government having incurred a loss on that account. All that may be said is that they have paid higher prices in the earlier years which will be compensated by lower prices in later years. The fact that some of the assets may not be wholly depreciated on the expiry of the contract is not of material consequence because it is obvious that the Railways will continue to buy locomotives and boilers from Telco even after the expiry of the contract and that the Company will agree that the total amount of depreciation previously provided should be taken into account. The Committee has also failed to appreciate the fact that the payment of higher prices for locomotives and boilers to our Company during the earlier years has served the valuable purpose of making available to the industry funds required for the completion and expansion of the locomotive work and for undertaking the foundry project. No part of the money obtained by the Company in the form of depreciation has been disbursed to shareholders or others. It has been wholly ploughed back into the business. In view of the great financial stringency that has prevailed in the last few years, it would not have been possible for the Company to undertake the foundry project so urgently needed to supply large and complicated castings to both the Locomotive Works without the extra funds made available from accelerated depreciation allowances. The benefit of the expenditure thus incurred will in due course accrue to the Railways in full measure.

Priority to Locomotive Manufacture

The Committee have found fault with the Company for the delay in attaining the requisite output of locomotives and boilers and seem to have had in mind the possibility that this delay was caused or aggravated by the diversion of part of our capacity to other lines of production, including Diesel motor trucks. What is true is that the establishment of production at the prescribed rate has taken substantially longer than originally hoped for, reasons mainly beyond our control, of which the Railway Board are fully aware. I should like to take this opportunity of giving a categorical assurance to Government and Parliament that the manufacture of locomotives and boilers has always had first priority on available materials, men and machines in our Company. Other work, such as the manufacture of underframes and road rollers, utilised only such part of available capacity as was surplus and in any case underframes and road rollers were made solely on orders from Government.

Although it has always been our intention to diversify the Company's range of products, we have refrained from considering any of the attractive propositions which came our way until we were satisfied that we had reached a steady rate of production of locomotives and boilers in accordance with our obligations under the contract.

It was only in October, 1954, well after the prescribed rate of locomotive and boiler production had been established, that the Company started assembling Diesel trucks from imported units, while progressive manufacture of such trucks started only in March this year. There can therefore be no possible reason to believe that the truck project has in any way interfered with the production of locomotives and boilers.

Import Prices

The Public Accounts Committee and the Railway Board themselves have laid some stress on the high costs of the Company's locomotives and boilers when compared with those at which they are being imported. I believe there is today no sound basis of comparison between our costs and prices of imported locomotives. The steam locomotive is fast dying out in the world. The rapid shrinkage of export markets for steam locomotives has led to cut-throat competition between the manufacturers of various countries, aggravated by secret subsidies and other devices granted by some foreign governments with a view to maintaining employment and output in their own countries and to earning foreign exchange.

As an example, I might mention the so-called "trade link system" which has been introduced in Japan to help exporters. Under that system monopolies of importing into Japan products such as sugar and other food articles, are granted to heavy industries in order to recoup losses incurred by Japan's exports under this and co-related systems totalling more than 200,000 dollars in the first half of 1954. I.e. about one-third of Japan's total exports in the same period. It is significant that in spite of large increases in costs of production which have taken place in all industrial countries in the last seven

eight years, the price at which the Railway Board have been able to buy locomotives this year was actually lower than it was shortly after the war.

Furthermore, most of the locomotive works of other countries were built many years ago and depreciation on them has been fully provided by now. Such manufacturers are therefore able to ignore in their quotations the incidence of depreciation and other costs such as housing which together form such a large part of our own costs. In the circumstances, it is, I submit, not fair to compare our costs with the prices of imported locomotives. Nevertheless, we realise that our present costs are on the high side, and as I have already indicated we are making every effort to improve efficiency and to reduce costs.

Tariff Commission Inquiry

We welcome the decision of Government to entrust to the Tariff Commission, aided by a foreign expert, an inquiry into our operations and manufacturing costs. We hope that this inquiry will be completed in a short period of time and that it will enable the Railway Board and ourselves quickly to finalise the prices for the previous and the current year's output. To the extent that the inquiry will disclose possibilities within our own control of reducing costs, we shall be happy to act upon any recommendations that may be made on the subject.

Automobile Division

In contrast with the picture presented by the activities of the Locomotive Division, I am glad to report the highly encouraging progress of the Company's Automobile Division. The demand for Tata-Mercedes-Benz vehicles has grown to such an extent in the last year that we have had to revise our programme almost before it could be initiated. Whereas we had planned progressively to manufacture 3,000 trucks a year, we have, in consultation with Messrs. Daimler-Benz, decided to double the productive capacity almost from the start, subject to Government's sanction. While this will involve an additional capital expenditure of about Rs. 4 crores, there can be little doubt as to its profitability and its resultant benefits to the shareholders.

As the economic activity of the country develops under the Second Five Year Plan, it is to be expected that the demand for trucks and bus chassis will continue to grow and we believe that even after the proposed expansion the demand will exceed our capacity.

Our partners, Messrs. Daimler-Benz, have agreed to invest a further Rs. 80 lakhs in shares of the Company as their contribution to the automobile manufacturing programme. Our sincere thanks are due to them for their valuable and unstinting assistance and for their willing co-operation in meeting all our requirements.

Labour

As mentioned in the report, apart from a slow-down followed by a strike in the Forge and Smith Shop, the labour situation during the year was more or less normal. Management can procure the best available tools and equipment, excellent working conditions and teach the men up-to-date production techniques. This we have done and will continue to do. It is for the workmen themselves to realise that their own prosperity depends on the Company's earnings which will continue to be restricted unless they make a determined and honest effort to increase their productivity.

Future Prospects

Before closing, let me say a few words about the future, as I see it, in the light of our present experience and of our development plans. Within a couple of years, we shall be producing within our own foundries all the iron and steel castings that we shall require and I hope at a cost below the prices which we have to pay for castings from outside. Our Locomotive and Automobile Divisions will then be entirely self-sufficient for all our needs of castings.

With the increase in our production and improvement in the efficiency of our workers resulting from a greater realisation on their part that their prosperity is in their own hands and depends upon their willingness to work. I have every hope that the manufacturing costs of our locomotives will fall substantially and that there will be no cause for complaint. That score on the part of the Railway Board. Shortly thereafter our annual output for sale will be 100 complete locomotives, 6,000 truck and bus Diesel chassis and over 3,000 tons of heavy and complicated steel castings for the Chittaranjan Locomotive Works and other industries. This will represent an annual turnover of about Rs. 17 crores.

I appreciate that shareholders would like to know what effect these developments will have on the earning capacity of the Company and when they may expect a dividend. I am sure they will realise, however, that pending the completion of the Tariff Commission's inquiry and the fixation of prices for locomotives, it is impossible for me to make any forecast of the profits of the Locomotive Division. I can only say that at this stage I see no reason to expect that the Company will be deprived of the profit on the capital employed in that Division specified in the Agreement with the Railway Board.

As regards the Automobile Division, provided no unforeseen difficulties arise and Government policies in respect of the industry remain as they are today, I am confident that shareholders will have no cause for complaint about the profitability of this side of our business.

More specifically, and taking the two Divisions as a whole, I hope it will be possible for us to wipe off the arrears on preference shares next year and possibly to pay an initial dividend on equity capital.

We are in the process of developing our plant into a large and efficient unit of which the country may be proud and are simultaneously building up a corps of skilled and highly trained workers and an efficient managerial cadre. I am firmly believe that in the long run our efforts will reap their just reward and that shareholders, who have waited so patiently for nearly ten years, will obtain a satisfying return on their investment. I would in this connection like to draw the attention of those who tend to overlook or belittle the important service which the investor renders to the long period of waiting and the risk which he so often to bear before he secures any return at all.

In closing, may I on your behalf and that of your Directors offer our thanks to the General Manager, officers and men at Jamshedpur and elsewhere for their unremitting efforts?

THE KOLAR GOLD FIELD MINING COMPANIES

CHAIRMAN MR. M. A. SREENIVASAN'S REVIEW

Mr. M. A. Sreenivasan, Chairman, in the course of his annual address to the members of The Mysore Gold Mining Company (KGF) Limited, The Champion Reef Gold Mines of India (KGF) Limited and Nundydroog Mines (KGF) Limited at the Annual General Meetings held on 29th September, 1955, said:

During the past few months the Government of Mysore have been contemplating action that may seriously affect the future of your Company. Brief announcements have been made in the Press here and in the U.K. from time to time, but I hasten to take this opportunity to give you an indication of the present position as far as it is known.

As you know, in the year 1949 a new agreement was entered into by your Company with the Government of Mysore under which, in addition to the 5% royalty on the sales of gold, and the additional royalty payable under the leases, a substantial share of the net surplus known as "Contribution" of Contribution to the Government of Mysore in became payable to the Government of Mysore in consideration of their removing the Gold Duty. At that time and with the price of gold then prevailing, it was expected that the Government would receive between Rs. 25 lakhs and Rs. 30 lakhs a year by way of Contribution from the four Mining Companies then operating. Due to a steep fall in the price of gold by nearly 25% in 1952, and a rise in costs, mainly on account of increased payments to labour and for materials, the net surplus suffered a shrinkage and in consequence practically no Contribution or additional royalty has been payable since 1952. Partly for this reason and for other reasons which I need not dilate upon here, the Government of Mysore have been critical of the agreement entered into by the Government in 1949. Last year the Government appointed a Committee to enquire into the effect of the repeal of the Gold Duty and to examine the position arising out of the 1949 agreement and to recommend measures to increase the returns from the Mining Industry to the Government. The Companies were not invited to appoint a representative to this Committee. They however received a lengthy questionnaire which was fully and carefully replied to. Your Directors also met the Chairman of the Committee (the Minister for Home and Industries) and submitted additional information and clarification. The Report of the Committee was published in February last.

Engineering Committee

The Committee concluded that "important clauses in the agreement have been honoured more in the breach than in the observance" by the Companies. Finding that "there appears to be no prospect of anything more than bare royalty being paid to Government so long as the expenditure and the price trends continue to be what they are" the Committee concluded and recommended that there was "no alternative but to enhance the royalty to 10%".

The Management submitted a reply, that was published, denying the allegations made in the Committee's Report and presenting the facts in regard to each of the matters dealt with by the Committee. It was pointed out that the first part of the Committee's recommendation regarding rising expenditure and falling gold price trends did not justify their recommendation to enhance the royalty. It was submitted that the Committee had failed adequately to recognise the fact that the fall in the revenue anticipated by the Government was due almost entirely to the fall in the price of gold and that had the price of gold continued to be what it was in 1949 the Government would actually have received far more revenue than was originally expected—even more than double the royalty—due to the increased output and improved efficiency that had been attained.

The Management pointed out also that had the Gold Duty not been removed, all the mines would inevitably have been closed down in 1951 and that if, nevertheless, the Government were of the opinion that the Duty should not have been removed or that the agreement of 1949 should not have been entered into, it was a matter about which the Companies could do nothing beyond expressing their readiness to discuss a revised agreement—which they had done. It was also represented that if Government felt that any of the terms of the agreement had been violated or departed from, the Government may be pleased to refer the differences to arbitration as was clearly stipulated in the agreement itself. Unfortunately, the Government replied that they were not in favour of referring the matter to arbitration.

No orders were passed by the Government on the Report of the Committee. The Government, however placed the Committee's Report in April last before the Mysore Legislative Assembly and the Mysore Legislative Council which both passed resolutions approving the recommendations of the Committee and authorising the Government to take such measures as they may consider necessary.

On the 18th of June, at a press conference, the Chief Minister of Mysore announced that the Mysore Government was in favour of nationalising the mines, and added that in view of this decision of the Government's policy it was not necessary "to enter into minor controversies with anyone". It may here be noted that Nationalisation was not among the recommendations of the Committee.

On the 13th of July, the Management, at their request, met the Home Minister who informed them of the irrevocable decision of the Mysore Government to nationalise the mines. This decision was repeated at subsequent meetings which the representatives of the Management had with the Chief Minister.

tatives of the Management had with the Chief Minister.

State's Largest Private Enterprise

Your Company and the two other gold Mining Companies in the Kolar Gold Field together constitute the largest private sector enterprise in the Mysore State. In the past over half a century during which a township of over 150,000 has grown around the industry, the Companies and their Management have received the confidence and support of successive Governments of Mysore. As recently as in 1949 the Companies accepted an extraordinary measure of Government control. They also agreed to bear new financial burdens which, as far as they know, are without parallel. It is indeed unfortunate that in these circumstances such an enterprise should still be subjected to so much doubt and insecurity as to its future. Your Directors can well understand the concern and anxiety with which you have received the news and announcements of the recent happenings, which anxiety will be shared by British industrialists and investors in particular, and the financial and business world in general.

Your Directors are doing all they can to explain facts, clear up misconceptions and secure fair and just consideration of the subject and to re-establish the atmosphere of harmony in which alone the enterprise can function efficiently and in the best interests of the State, the employees and the shareholders. In the discharge of this duty they have felt reassured by and are grateful for the assurance they have recently received from the Government of India that no step will be taken without a thorough and careful consideration of all the aspects of the matter.

A few days ago, a team of officers of the Central and State Governments visited the mines to examine the technical and financial implications of nationalisation. A questionnaire received from these officers concerning the assets of the Company and other matters is receiving the attention of the Management.

"Your Directors will keep you informed of any development that may take place".

Referring to the adjudication by the Industrial Labour Tribunal of demands by your Company, the Chairman announced that the Mysore and Champion Reef KGF Companies had recently reached an agreement which provides for an increase in wages of 3 annas a day, for the introduction of a Termination Gratuity Scheme which will however cease in the event of nationalisation, for a bonus of 33 days' basic wages instead of 24 months awarded by the Tribunal and for 54 months' arrears of the increase in wages instead of 11 months awarded. The award given by the Tribunal was still under appeal in the case of the Nundydroog Company.

Dealing with the results for the current year to date the Chairman spoke as follows in respect of the individual Companies:

The Mysore Gold Mining Company (KGF) Ltd.

"Production has been seriously affected not only by the stoppages and disruption caused by labour strikes but also in consequence of the rockbursts which occurred in the 43rd Oreshoot in October and November, 1954. Fortunately the price of gold rose sharply in January 1955 and the higher price received, which for the eight months to the 21st August averaged over Rs. 251/- per ounce, has been maintained. The higher revenue per ounce has however been barely sufficient to meet costs and royalty to date and in consequence the prospect for dividend for the year 1955 is not favourable. The trend of the price of gold over the last 12 months is however encouraging and if production can be raised towards the 1954 level with the co-operation of labour, the outlook for the future should improve."

The Champion Reef Gold Mines of India (KGF) Ltd.

"Production has been affected not only by Labour strikes and unrest but also in consequence of the shutdown of Biddick shaft for three months". The Chairman said that in spite of the higher price received for gold since January, the financial results to date do not compare favourably with those for the corresponding period of 1954.

Nundydroog Mines (KGF) Ltd.

"Production has been affected by the inability to work during the first two months of the year on account of fire and the unsettled labour conditions". The Chairman referred however to the higher price received for gold since January 1955 and said that "provided there are no set-backs between now and the end of the year the financial results for the current year should compare favourably with those for 1954".

DIVIDENDS.

The following dividends were declared for the year ended 31st December, 1954:

The Mysore Gold Mining Company (KGF) Ltd.	6%	payable to Stockholders on 28th October, 1955.
---	----	--

The Champion Reef Gold Mines of India (KGF) Limited	4½%	payable to the respective Sterling (Holding) Companies.
Nundydroog Mines (KGF) Limited.	6%	

The Reports and Accounts were adopted.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to March, 1955. Compared with the preceding month there were increases in cotton consumption 8.8 points, jute manufactures 6.2 points, steel ingots 11.6

points, cement 12.5 points, paper 8.1 points, coal 4.1 points, wagons loaded 11.0 points and electricity 13.4 points, while pig iron dropped by 3.3 points.

The indices for notes in circulation and cheque

clearances showed rises of 10.3 points and 22.9 points, respectively.

Correlating all the factors the Capital Index of Indian Industrial Activity advanced by 12.5 points during March, 1955.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CALL RATE REDUCED

Wednesday, 12th October.

FUNDS are in better supply and easier conditions prevail in the money market. Advances continue to return from upcountry on account of the sugar industry and the rate is expected to be accelerated as additional stocks are released for the Pujas. Accommodation against grain and seeds is also declining. There has been little buying of raw jute. Requirements of funds on account of Pujia cloth stocks have not shown much increase this year, the reason being that demand for cloth has been better and a more satisfactory rate of release has been achieved by the mills. Conditions are considerably easier in the interbank market and the interbank call rate has been reduced to 23 percent. At this level there are reported to be lenders over.

Very little business in export bills is reported this week. Remittance has been in moderate demand. The stronger tendency in sterling continues and the dollar rate now quotes Rs. 47½.

The local silver market ruled quiet and the price declined from the previous week's level of Rs. 167-4 to Rs. 166-7, quoted today. The price of forward delivery stood at Rs. 166-15. The price was unchanged at 79 7/8d. in London and at 91 7/8 cents in New York.

Gold ruled quiet in sympathy with silver and the price dropped from Rs. 96-1 to Rs. 95. The sovereign at Rs. 61-10 showed a loss of 3 annas.

Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills, which were opened on Tuesday, 11th October, 1955, totalled Rs. 4,23,00,000. The average rate of acceptance fell from Rs. 2-7-11 to Rs. 2-7-8 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in the full and those at Rs. 99-6-0 percent allotted approximately 63 percent. Tenders for Rs. 2,50,00,000 of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 17th October, 1955. During the week ended 7th October, 1955, Government of India Treasury Bills for Rs. 37,27,50,000 were sold in favour of the Reserve Bank of India.

A rise of Rs. 21.23 crores in notes in circulation to Rs. 1,301.45 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 7th October, 1955, while the total note issue was down by Rs. 1.49 crores to Rs. 1,311.34 crores. Notes held in the Banking Department consequently declined by Rs. 22.72 crores to Rs. 9.89 crores. Foreign securities were Rs. 24.85 crores lower at Rs. 646.97 crores, and these were partly transferred to the Banking Department in which balances held abroad rose by Rs. 21.77 crores to Rs. 69.43 crores. Rupee securities increased by Rs. 24.84 crores to Rs. 513.79 crores. Deposits of the Government of India and other Governments fell by Rs. 6.89 crores and Rs. 2.05 crores to stand at Rs. 51.15 crores and Rs. 9.59 crores, respectively. Balances of commercial banks at Rs. 67.25 crores showed a rise of Rs. 4.48 crores, following easier money conditions. Investments rose by Rs. 26 lakhs to Rs. 50.11 crores. Other loans and advances declined from Rs. 23.11 crores to Rs. 22.10 crores, of which advances to scheduled banks against usance bills totalled Rs. 6.60 crores (Rs. 7.80 crores). These advances amounted to Rs. 194.53 crores since 1st January, 1955. Ways and means advances were shown at Rs. 2.67 crores against Rs. 2.02 crores.

The return of the State Bank of India for the week ended 30th September, 1955, shows a rise of Rs. 1.21 crores in total deposits to Rs. 217.53 crores. Investments in Government Securities and other authorised investments are up by Rs. 1.52 crores and Rs. 25 lakhs to Rs. 100.96 crores and Rs. 10.06 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 2.49 crores to Rs. 9

Stocks and Shares

STOCK MARKET RULES QUIETLY STEADY

PAPER SHARES FIRM: JUTE, COAL AND TEA NEGLECTED

Wednesday Evening.

THE share market is quieter again after its burst of activity yesterday when Indian Irons were taken to Rs. 39-8 on rumours that an announcement of a higher dividend was imminent. Irons closed today at Rs. 39 but the undertone remains steady. The bulls have been assisted in their operations by the strength of the Bombay market, which is largely due to increased activity in cotton textile shares. Features have included I.G.N., Braithwaite and two scrip of the Balmer Lawrie group, Bengal Paper and Bengal Flour, on interested buying. The jute section has been dull and weaker under the impact of the recent Tribunal award. Apart from the influence of Bombay advances the whole strength of the market appears to be the result of expectations of a higher dividend for Irons. Whether an announcement will be made before the Puja shutdown now seems to be doubtful.

The Government security section of the market remains well supported and brisk business has been done.

Details of the week's trading follow.

The gilt-edged market continued firm and prices were once again marked up. The demand for securities was fairly well maintained, but some sellers were noticeable at the higher levels. During the week the Reserve Bank of India increased its buying prices for 3% 1957, 3% 1958 and 3% 1959-61. Three percent Conversion Loan 1986 encountered selling pressure and eased by one anna to Rs. 80-8 sellers. In contrast, 3% Non-Terminable Paper was better at Rs. 80-1. Short-dated loans were in good demand, particularly 3% 1957 which was marked up to Rs. 99-10 and 3% 1958 to Rs. 99-8. In medium dated loans, 3% 1959-61 was supported at Rs. 98 and 3% 1961 was taken higher to Rs. 99-11; 3% 1964 was firm at Rs. 98-14, but 3% 1965 had sellers rather than buyers at Rs. 98-9. Three percent 1963-65 hardened to Rs. 94-9 and 3% 1964 was taken at Rs. 94-6; 2% 1961 continued in strong demand at Rs. 92-13 and 2% 1960 improved further to Rs. 95-11. In long-dated loans, 3% 1966-68 was marked higher to Rs. 91-11 and 3% 1970-75 was traded at around Rs. 87-8.

There was a substantial increase in turnover in Provincial Loans and once again 4% 1967 issues provided the highlight. Four percent Saurashtra 1967 was the outstanding feature and was marked up further to Rs. 99-13. Four percent U.P. 1967 was in demand at Rs. 99-7 and 4% West Bengal 1967 was taken at par. Four percent Bombay 1967 had buyers up to Rs. 100-11 and 4% Hyderabad 1967 met with enquiry at Rs. 99-1. Amongst other issues, 4% West Bengal 1964 was quoted at Rs. 100-6 and 4% U.P. 1963 and 1964 were both taken at Rs. 100-4-6.

There was a strong demand for selected Preference shares but sellers were scarce. Anglo-India were taken at Rs. 118, Bengal Jute at Rs. 96 while Hooghly were offered at Rs. 14-8. Hukamchand were done at Rs. 112, Naitati 7% were crossed at Rs. 122 and Reliance were placed at Rs. 113. Waverley were marked at Rs. 57-12. Among miscellaneous issues Calcutta Electric were taken at Rs. 12-10, Kettlewell Bullen 2nd changed hands at Rs. 68-8 and Martin Burn were crossed at Rs. 105-4. There were buyers of Indian Iron & Steel at Rs. 111, Rohtas Industries 'B' were placed at Rs. 68 and Titagur 8% at Rs. 150-12.

United Commercial fluctuated in the bank section and rose from Rs. 49-8 to Rs. 52. Allahabad Bank Fully-paid were done at Rs. 366 and the Contributory at Rs. 175. Hindustan Commercial changed hands at Rs. 9-14, Punjab National Bank were quoted at Rs. 47-8 and United Bank of India 'D' shares were easier at Rs. 4-13.

In the railway section, Dehri-Rohtas were done at Rs. 13-5 and Shahdara-Delhi were crossed at Rs. 152-8.

In the cotton section, Cawnpore Textile and Elgins continued to be popular and were both steady at Rs. 10-6 and Rs. 22-10. Kesoram Cotton recovered to Rs. 16-10 and New Victoria were better at Rs. 1-8.

Coal shares were dull and the volume of business was infinitesimal. Burrakur fluctuated narrowly at Rs. 14-2. Bharat Collieries were done at Rs. 8, Central India at Rs. 7-8 and East India at Rs. 30-4. Equitable were sold down to Rs. 30-8, Bengal to Rs. 512, New Beerboom were quoted at Rs. 19 and several deals were recorded in Western Bengal at Rs. 6-14. Katras Jheriah were steady at Rs. 55-4.

The latest wage increase proposed by the Jute Tribunal brought further gloom to the jute section and, in fact, selling orders were practically impossible to execute. Howrah receded steadily to Rs. 29-6 to close at Rs. 28-8. Here is a chart showing representative price movements:

	Opening 6-10-55	Closing 12-10-55
Anglo-India	Rs. 233	Rs. 230
Budge-Budge	195	189
Chitavalsah	14-14	14-9

Empire National

Electric supply shares were firm but little business was completed owing to the absence of sellers. Agra were done at Rs. 163, Benares at Rs. 19-8 and Calcutta at Rs. 15-6. Jhansi were better at Rs. 9-12 and Patna were done at Rs. 13.

In the sugar section there was a good enquiry for Cawnpore at Rs. 25. Balrampur were marked at Rs. 11-12 and Belsund at Rs. 11-6. Carew was steady at Rs. 12-6 and Darbhanga were better at Rs. 22. New Savan changed hands at Rs. 6-5.

Braithwaite & Company provided the outstanding feature in the engineering section with the quotation advancing from Rs. 27 to Rs. 29-4; scrip, however, was in very short supply. Bhartia Steel were taken at Rs. 15-10. Jessops were dealt in at Rs. 55-8 and Kumardhubi Engineering at Rs. 11-11. Marshalls were marked at Rs. 7-5. Richardson & Cruddas eased to Rs. 23-15 and Textile Machinery fluctuated narrowly between Rs. 24-8 and Rs. 25-4. Indian Iron & Steel at one time receded to Rs. 38-10, but recovered to Rs. 39-8 and closed at Rs. 39-1.

In the miscellaneous section Bengal Paper was the outstanding feature spurring from Rs. 75 to Rs. 81. India Paper Pulp were taken at around Rs. 22-14 and Orient Paper was steady at Rs. 30-12. Titagur Paper were in demand at Rs. 46-12. Sone Valley were dealt in at around Rs. 8, Hercules Insurance were lower at Rs. 28 and New Asiatic changed hands at Rs. 5-12. Several deals were reported in India Steamship at around Rs. 7-10. Alkali & Chemical were easier at Rs. 21-14 and Angelo Brothers turned sellers at Rs. 23-2. Britannia Biscuits were steady at Rs. 14-2 and British India Corporation fluctuated between Rs. 11-4 and Rs. 11. Bengal Flour were marked up from Rs. 31 to Rs. 33-8 and Clive Row Investments were active at Rs. 11-4. Dunlop Rubber were easier at Rs. 37-8 and Indian Wood Pro-

Each occasion demands a different and appropriate dress. Similarly, each particular painting 'job' should have a specialised and suitable paint. I.C.I., over many years, have developed specialised paints for specialised purposes—all Supreme Paints!

Manufactured by: THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

Sole Selling Agents: IMPERIAL CHEMICAL INDUSTRIES (INDIA) LTD.

Calcutta, Bombay, Madras, Kanpur, New Delhi.

Duco

the car finish used by 9 out of 10 car manufacturers. Give your car complete 'Ducol' protection by using the full 'Ducol' refinishing system.

Dulux

the synthetic enamel with a world-wide reputation for outstanding durability. Used on all forms of transport; for decorative purposes, too.

Necol

a range of specialised products suitable for a wide variety of industrial uses; a product for every purpose.

Brushing Duco

the 'brushing' version of the famous 'Ducol' finish. Used in and around the house for decorating and in the workshop for minor repair jobs.

ducts, after rising to Rs. 44-8, turned sellers at the close at Rs. 44. Indian Cables were quiet at Rs. 31-2 as were Indo-Burma Petroleum at Rs. 43-8. Martin Burn were done at Rs. 25-4 and there were sellers of Metal Box at Rs. 23-8. Rohtas Industries Old shares were fairly steady at Rs. 21-4 as were Shaw Wallace at Rs. 14-14. I.G.N. spurted today from Rs. 132 to Rs. 139.

In the mining section, Indian Copper were easier at Rs. 5-13 while Burma Mines and Western Stockholders were unchanged at Rs. 1-15 and Re. 1. Orissa Minerals were taken at Rs. 25-6.

The volume of business in the tea section was restricted, although prices where changed were generally better. Of the Assam shares, Baghmari had buyers at Rs. 27-12 as did Bormah Jan at Rs. 22-4. Jutlibari at Rs. 28-2 and Moheema at Rs. 28. East India declined to Rs. 26 on heavy offerings but later recovered to Rs. 26-6. Brahmaputra, after being taken up to Rs. 14 cum-dividend, were later marked at Rs. 12-12 ex-dividend with sellers over. Dibrugah met with good enquiry and changed hands at Rs. 28-2 as did Tezpur at Rs. 33-8. Sapoi advanced sharply on good enquiry from Rs. 36 to Rs. 41-4 but later reacted to Rs. 40-8. Dessai and Parbutia had sellers at Rs. 478. Among Doars scrips, Banarhat were well supported and improved to Rs. 635 and after a considerable time Sarugan were marked at Rs. 46 against the previous quotation of Rs. 42-8. New Doars were crossed at Rs. 575 and Ranicherra had buyers at Rs. 24. Birpara was easier at Rs. 206 as was Gairkhanda at Rs. 340. Nagaisuree, after changing hands at Rs. 303-8, had sellers at Rs. 300. Hasimara met with good enquiry and the price improved to Rs. 41-2. Of the other shares, Tukvar, after changing hands at Rs. 20, declined to Rs. 19-10, while Teesta Valley were crossed at Rs. 45. Roopacherra met with good enquiry and advanced to Rs. 25-12. Pathemara were easier at Rs. 19-2 as was Tirrihannah at Rs. 34-8. New Chumta had buyers at Rs. 44-2 whilst Gungaram were crossed lower at Rs. 375.

The twenty-seventh triennial valuation of the ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE Co., Ltd. has produced excellent results. There is a profit of Rs. 7.10 crores against Rs. 4.65 crores. This has enabled the actuary to recommend bonuses of Rs. 22½ and Rs. 18 per 1,000 per annum

on whole life and endowment policies, respectively. A dividend of Rs. 200 per share per annum has also been recommended. During the period under report the income of the company rose by 15.58%. The report disclosed a progressive improvement in the mortality experience of the company. The average rate of interest increased by 1% to 3.92%. The funds shot up from Rs. 63 crores to Rs. 78 crores.

The profit of JARDINE HENDERSON, LTD. rose by Rs. 8.58 lakhs to Rs. 41.68 lakhs for the year ended last March. Bringing in Rs. 5,26,226 and other miscellaneous receipts there is Rs. 46,97,926. Taxation absorbs Rs. 15.25 lakhs (Rs. 13.30 lakhs), general reserve Rs. 3 lakhs (Rs. 2½ lakhs) and superannuation fund Rs. 2 lakhs (nil). The ordinary dividend has been maintained at 7½% to absorb Rs. 15 lakhs, leaving a carry-forward of Rs. 4,70,107. The directors say that the company's main interests lie in the managing agency field and it is inevitable that its income will be, to some extent, affected by the restrictions to be placed on Managing Agents, Secretaries and Treasurers, etc. by the Companies Bill now before Parliament. The directors have, however, taken steps to increase profits by expanding the activity of the company.

The profit of the DESSAI & PARBUTIA TEA COMPANY was Rs. 5.81 lakhs higher at Rs. 9.26 lakhs. Bringing in Rs. 36,977 there is a balance of Rs. 9,63,359. The dividend has been doubled to 40%. Taxation absorbs Rs. 3.70 lakhs (Rs. 1.70 lakhs), reserve Rs. 2.40 lakhs (Rs. 3 lakhs), dividend equalisation reserve Rs. 42,000 (Rs. 17,500) and taxation equalisation reserve Rs. 19,500 (nil). The carry-forward is Rs. 51,859. The crop totalled 13,887 maunds (14,036 maunds); the average sale price rose from Rs. 2-3-1 per lb. to Rs. 2-13-10 per lb. Estimates for the current year have been made for a crop of 13,800 maunds.

The BARADIGHI TEA COMPANY raised its profit by Rs. 6.85 lakhs to Rs. 13.95 lakhs. Adding Rs. 46,882 brought in there is Rs. 14,41,496. The dividend has been increased from 30% to 65%. Taxation gets Rs. 3.92 lakhs (Rs. 56,000), reserve Rs. 5 lakhs (Rs. 9,25 lakhs), dividend equalisation reserve Rs. 60,000 (Rs. 30,000) and taxation equalisation reserve Rs. 46,000 (Rs. 84,000). The carry-forward is

Rs. 53,496. The crop was 17,728 maunds (17,883 maunds) and the average sale price Rs. 2-11-7 per lb. (Rs. 2-0-3 per lb.). Estimates for 1955 are for a crop of 17,215 maunds. The directors say that an application has been made to the Government of India for permission to increase the capital of the company to Rs. 12,00,000 and to make an issue of bonus shares to members at the rate of one new share for each share held. Sanction has not yet been forthcoming.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during September 1955 was: pig iron 95,300 tons; steel ingots 87,500 tons; semi-finished steel for sale 19,900 tons and finished steel 45,800 tons.

Beaten, heated to 3,500° F —this oil won't give up!

How Gargoyle Lubricants protect diesel engines

STANDARD-VACUUM OIL COMPANY
(The Liability of the Members of the Company is Limited)

TEMPERATURES in a diesel engine often exceed 3,000 degrees Fahrenheit. The flame generated in the engine cylinders, every time the fuel is injected, attacks the thin film of lubricating oil. This oil film is all that protects the cylinder walls from destruction.

That is why choice of the correct lubricant is vitally important. In India, as in so many other countries, Gargoyle Industrial Lubricants — famous for 89 years — are chosen to protect crores' worth of equipment.

Different diesel engines have different lubrication needs, and there's a right Gargoyle Lubricant for each. Backed by our experience, correct lubrication — with Gargoyle Lubricants — can help to reduce costs and protect machinery in your plant. For details, write to Standard-Vacuum Oil Company... Bombay, Ahmedabad, New Delhi, Lucknow, Calcutta, Madras, Secunderabad, Cochin.

The heart of a modern business

Is there anyone in your office who can keep track of all that goes on in the business: who can tell you all about last week's sale trends, and this week's payroll, current stock records, and day to day costs? If so, it probably means there's already Powers-Samas punched card equipment in the house. If not, it's time you learnt how. Powers-Samas can revolutionise office-work: digest statistics in a matter of minutes, carry out complicated accounting jobs quickly and accurately. And don't imagine Powers-Samas is only for the biggest kinds of big business: there is Powers-Samas equipment for almost every size of business.

POWERS-SAMAS

Accounting Machines (Sales) Limited,
2 & 3, Clive Row, Calcutta 1.

15/16, Indra Palace, Connaught Circus, New Delhi.
P. O. Box 489, Kirtan Bhawan, 198, Janshedji Tata Road, Churchgate, Bombay 1. 1508, Mount Road, Madras. Pakistan: McLeod Road, Karachi. Ceylon: Office Equipment Co., Colombo. Head Office: Powers-Samas House, Holborn Bars, London E. C. 1, England.

GILT-EDGED STRONG AND ACTIVE IN STOCK MARKETS

EASIER TREND IN OTHER SECTIONS

London, 12th October.

THE activity and strength of gilt-edged provided the outstanding feature of the stock markets during the past week. The counterpart of this was seen in other sections, which receded steadily to record widespread and substantial losses compared with the previous levels. The divergent trends which developed followed the Chancellor of the Exchequer's statement reiterating his determination to keep the pound strong and foreshadowing further economic measures to bring the overseas trading figures into balance. An additional adverse influence for markets other than gilt-edged was the renewed fall on Wall Street on nervousness regarding President Eisenhower's illness. Gilt-edged went strongly ahead prior to the week-end, reaching a peak on Monday, when gains of up to two points were scored in a record day's business. Rises on the week ranged up to three points in some instances. The long-dated and undated stocks were the chief beneficiaries. Losses were widespread, and in some cases substantial, in the industrial market. Among foreign bonds, Japanese were firm and German, polish issues met some support, but generally the section was neglected. Dollar stocks eased sharply. Gold shares fell back steadily while coppers also receded in line with the weakness of Wall Street. Other base metals were easier. Oils recorded many substantial falls, while rubbers and teas moved to lower levels.

The Money Market

The credit situation in the money market last week was tight. Demand was keen and day-to-day loans maintained a level of 4 percent, with up to 4½ percent paid on occasions. Bill rates also remained firm, with December at 4½ percent and November at 4 percent. Borrowing at the Bank of England was undertaken, but despite the dearth of money discount houses retained the same bid for the offer of Treasury Bills and the average rate was almost unchanged. Applications for Treasury Bills totalled £361,375,000, of which £270 million were allotted at an average rate of 8½ 5.25d compared with 8½ 5.33d in the previous week. This week £260 million are offered. The Bank of England return for the week ended 5th October showed that notes in circulation were about £3 million higher at around £1,769 million, while bankers' deposits were about £11 million higher at around £250 million. Fine trade bills for three months were 5 percent to 5½ percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 5th October shows that the gold stock increased by \$1 million to \$21,684 million. Foreign deposits increased by \$5 million, while foreign investments rose by \$3 million. The Federal Reserve system purchased \$49 million of bills. Total discounts and advances declined by \$12 million to \$650 million, while excess reserves of member banks declined by \$59 million to \$829 million. Business loans of the New York City banks rose by \$139 million to \$8,749 million, compared with a rise of \$72 million to \$7,342 million a year ago.

Vegetable Oil Market

Following an overnight rise in Canadian linseed, Indian linseed oil prices jumped by as much as £2 a ton. However, buyers showed no inclination to follow the increase, and on the receipt of lower opening advices for seed from Winnipeg, values of oil receded to finish barely changed. Arrivals of this year could usually be had at £99½, with around £1 more wanted for new year arrivals. Groundnut oil also developed an easier trend with buyers paying little attention. Offers of Indian for November-December were down to £106½, December were down to £106½ and December-January were offered at £105½. Coconut oil was inclined to sag, with Straits oil available down to £89½ c.i.f. and Ceylon at £92 or even a shade less. Groundnuts ruled steady on better enquiry and no offers of Nigerian were mentioned prior to December-February. Most other seeds claimed little support, with values tending to weaken.

Freight Rates Firm

Tramp freight rates continued to climb last week. Strong demand for coal booking was reported from North Europe. In addition, a large vessel was arranged for consecutive voyages over three years commencing next June-July at £7.10 a ton. Vessels for early cargoes to Antwerp or Rotterdam secured up to 70½ a ton as against 70s paid in the previous week. The grain trade showing signs of the seasonal revival in demand and rates improved. Business from the U.S. Gulf to Japan at \$22 showed an increase of \$2. Chartering for scrap iron from North America to Europe on lump sum terms ranged from \$6 to \$10 a cargo over the previous week, while lumber and general cargo from the North Pacific on U.K. account was \$2 higher at \$22 a ton. Large miscellaneous enquiries again circulated in other sections. Shipments had difficulty in attracting tonnage, with the result that barley from East Australia advanced from 150s to 162½ a ton to Antwerp-Hamburg range. Gains of 5s a ton were seen in maize from South Africa to Antwerp-Hamburg at 110s and for sugar from Mauritius to the U.K. at 125s a ton. Generally operators see little hope of an early recession in values. In fact, urgent calls for increased exports from the U.K. are almost certain to strengthen the very bullish market.

LONDON INSURANCE LETTER

INSURING NUCLEAR RISKS

NOT since the early years of the internal-combustion engine has the insurance market been confronted with a new insurable object so potentially important as nuclear energy. It was appropriate that in the year when this new force had demonstrated great advances it should receive serious consideration at the annual conference of the International Union of Marine Insurance. An American delegate to Monte Carlo, Mr. Percy Chubb, said that American insurers had devoted more attention to the industrial than to the marine aspect of the subject; that they recognised that a nuclear catastrophe was potentially more serious than anything yet known in industry; but that they believed atomic installations to be insurable up to normal commercial limits, provided that proper safeguards were enforced. Mr. A. B. Stewart, of Lloyd's, criticised the reluctance of some of his fellow-underwriters to accept their responsibilities in offering protection against the hazards of nuclear energy, and asserted that to set a "ceiling" to such protection below that which was conceded for such catastrophes as hurricanes and earthquakes (an apt comparison this year) was "fantastic". Scientists have made many encouraging statements concerning the safety of atomic plants, but until ordinary people can dissociate atomic energy from atomic bombs they will think of it as dangerous. Insurers, as such, are not technically qualified to judge, and they cannot adopt the normal basis of assessment claims experience, because in the actuarial sense there is no experience. The essential fact is, as Mr. Stewart pointed out, that the world insurance market has a tremendous risk-capacity, and it should not be afraid to use it.

It was obvious from his statement that Mr. Stewart had investigated the subject with some care; and he assured his audience that his investigations had convinced him that the risk of a catastrophic loss, in the insurance sense, arising from nuclear fission was negligible, that the risk of explosion was no more than ordinary, and that the risk of costly accidents was remote. He urged immediate consideration of the whole subject, because in various countries projects for nuclear-powered merchant ships were already in progress. And he proceeded to convince his audience that this mode of power would not involve significant new risks to either hulls or cargoes—though as an added precaution shipowners would doubtless require additional protection against damage to other ships or property that might be caused by breakdown of a reactor. In the light of the proceedings at Monte Carlo, and of the information on nuclear development that is forthcoming every day, underwriters in this country are generally agreed—some of them still reluctantly—that there is a new field of insurance waiting to be cultivated, and that work on it must begin very soon.

New Form of Profit-sharing

"Profit-sharing without tears" is the Licences and General Insurance Company's description of "reinforced" with-profit policies of a new kind that it has introduced. The purpose is to resolve the prospective policyholder's dilemma between with- and without-profit policies, by giving him a profit-sharing scheme which is obviously acceptable. The essential of this scheme is that bonuses from profits will be added for the whole period of the policy (or, in the case of whole-life policies, to the age of 70), even though the assured may die before the policy expires. In the event of early death, bonuses already declared will be added to the sum assured and bonuses in respect of future years will be added at an assumed rate. To implement the scheme, decreasing temporary assurance for the estimated value of future bonuses will be added to ordinary whole-life or endowment assurances.

The life offices are adapting their activities in other ways, notably in this finance of house-purchase. Demand for their facilities has become much keener since the building societies, under the pressure of the credit squeeze, restricted their loans. The cost of a loan from an insurance company is, of course, higher, because it includes an important element of cover—for which reason this kind of policy was increasingly popular even before other sources of finance were restricted, and repayment of building society loans was often assured independently. Two kinds of policy are relevant: endowment, and decreasing-term assurance. In the former case, which appears to be the more usual, the loan is secured by an endowment policy covering the life of the borrower for a sum equivalent to the loan for the duration of the loan: the policy is lodged as collateral, and if the borrower dies before repayment is complete the money arising from the claim is used automatically to complete repayment, any surplus being paid to his survivors. The decreasing-term policy provides simply that any amount of the loan outstanding shall be paid on the death of the borrower, so that his survivors can inherit the property unencumbered.

How Much to Invest?

The official survey of national income and expenditure, published a few weeks ago, did little to answer the question how much individuals had been saving; and increased borrowing on mortgage from insurance companies is one of the confusing factors in the position. There is little doubt, however, that saving through the medium of life assurance is still increasing. But the offices have been investing very little through the stock exchange during the recent months of uncertainty, and it is widely assumed that they will have large sums accumulated by the time they see fit to re-enter the market in earnest.

New Delhi

EXAMINATION OF CONSUMER GOODS PRODUCTION

CONTROL OF THE HANDLOOM INDUSTRY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Village and Small-Scale Industries (second five year plan) Committee has made its report to the Planning Commission. The Committee, it will be recalled, was set up to prepare allocations for resources required in the second five year plan period by different administrations and industries to achieve certain objectives and targets in the field of village and small-scale industries. The consumer goods in common demand selected by the Committee for detailed examination were cotton fabrics and woollen goods produced by the handloom industry from handspun or millspun yarn, hand-pounded rice, vegetable oils, gur, khandsari, leather footwear, matches and coir goods. Here are the main conclusions of the Committee:—

Cotton Weaving (Handloom).—After taking into consideration the estimated increase in per capita consumer expenditure (on the basis of a 25 percent increase in national income and a 20 percent increase in consumer outlay), the elasticity of demand of the various income groups plus other relevant factors, the demand for cotton cloth for internal consumption is estimated to increase to about 7,150 million yards by 1960-61. Allowing for 1,000 million yards for export, the total demand for cotton cloth is estimated to rise to about 8,150 million yards. The probable increase above the present level would thus be 1,400 million yards. Under more favourable conditions the estimated increase in the internal consumption of cloth would be about 7,450 million yards and the total demand, inclusive of exports, 8,450 million yards, namely 1,700 million yards above the present level. The market demand would be less than the above estimate according to the extent to which requirements can be met from domestic handlooms or self-sufficiency schemes.

It would be possible to meet the entire estimated increase of 1,400 million yards under normal conditions and the possible 1,700 million yards under favourable conditions of demand by further development of the handloom industry. This would require a special planned effort for raising the productivity per loom, bringing idle looms into full use and generally strengthening the production and marketing organisation of the industry on co-operative lines. To ensure room for the expansion of the handloom industry, production by mills should be limited to 5,000 million yards assuming an export target of 1,000 million yards and production by power-looms to 200 million yards. Such steps may be taken as are necessary to maintain mill production at the level of 5,000 million yards. The total number of handlooms as reported by the States in 1951 is 2,870,000. According to information available to the Committee, the number of handlooms engaged in silk is about 200,000 and the number of those engaged in wool about 80,000. The remaining 2,590,000 handlooms are engaged in cotton and also in mixtures and other fibres, the number of the latter being relatively small. The total number of non-commercial looms in Assam, Manipur and Tripura engaged in cotton, is estimated at about 500,000 so that the total number of commercial looms engaged in cotton, both active and idle, works out to about 2 million.

Full Utilisation of Looms

On the basis of the results of a sample survey conducted by the Textile Enquiry Committee (1954), it is estimated that about 20 percent or 400,000 handlooms out of the total of 2 million are idle. The number of handlooms in the co-operative sector is at present 850,000 and is expected to increase to one million by the end of 1955-56. Handlooms in the co-operative sector enjoy the benefit of a rebate on the sales of cloth produced by them and they are also assisted by the provision of working capital. These and other forms of State assistance, by bringing about an improvement in the earnings of the weavers, operate as an incentive for increased production.

A major objective of any development programme for the industry should be the full utilisation of handlooms which are now partially or wholly in use. It is estimated that about 200,000 handlooms will be brought into full use as a part of the Handloom Board's programme of including 1,450,000 handlooms in the co-operative fold by 1960-61. The production programme for the handloom industry should aim at ensuring by 1960-61 the working of about 2 million handlooms for about 300 days in the year with a daily average output of six yards a loom. The programme should be phased for the five year period and should be periodically reviewed. If at any stage there are adequate reasons to think that the programme cannot be worked to schedule, the position should be reviewed and alternative arrangements examined for obtaining the requisite production of cloth.

All the handlooms in the co-operative fold should be equipped with flying shuttles and take-up motion attachments. Technical assistance provided for their conversion should also be extended to handlooms operated for domestic purposes or self-sufficiency schemes on the same basis as for commercial looms. If the performance of handlooms is found to be inadequate even after the schemes of technical improvement and other assistance have been implemented, it should be considered whether further measures should be taken.

for the introduction of technically more efficient or power-driven equipment in the handloom industry on a decentralised basis.

Additional Spindleage

Requirement of Yarn.—The total additional requirements of yarn for a five year phased programme of handloom production are estimated at 375 million lbs., on the basis of an additional requirement of 75 million lbs. in each of the five years. With the mill spindleage already in commission and taking into account the recently licensed spindleage likely to be installed, the additional yarn supply which might be available for the handloom industry is estimated at about 150 million lbs. by the end of 1957-58, roughly equal to the estimated additional yarn requirements. In conformity with the basic approach of the Committee to the question of the development of village and small-scale industries, production of yarn required for the additional production of cloth during the plan period should be organised on a decentralised basis to the greatest possible extent. Among the manually-operated spinning units which have been devised and experimented on in recent years, the one described as *Ambar Charkha* is the most important.

It is understood that the results of the experiments being carried on by the Sarva Seva Sangh in about 100 centres regarding the suitability of *Ambar Charkha* yarn from the technical angle as well as from that of its use on the requisite scale will be known by the end of April 1956. If on review of the position in May 1956 it is found necessary to license new spindleage, it is desirable that this should be achieved mainly in the public or the co-operative sector but it should be ensured that new spinning units are of the minimum economic size and located in places accessible to weaving centres.

The technical and organisational experiments connected with decentralised spinning units with or without the use of power should be pursued with vigour. Any interim steps taken to meet the urgent requirements of yarn supplied should be without prejudice to the prospects of a decentralised spinning and weaving industry organised on the domestic and co-operative pattern. Even if the experiments now being made with *Ambar Charkha* in selected centres are for any reason not successful it is assumed that the programme for the development of khadi production from *charkha* yarn would continue to be carried out mainly on a self-sufficiency basis and, to a limited extent, for the wider market.

If the production of cloth by mills is limited, as recommended by the Committee, to 5,000 million yards and the reservations of certain categories such as dhotis, sarees, etc. in favour of the handloom industry, continue on the existing basis, it is expected that the handloom industry could adjust its pattern of production to meet the estimated market in both these and other categories.

The present system of the levy of cess on mill cloth and the grant of rebates or subsidies on handloom cloth and khadi sold through co-operative societies or fair price shops, is somewhat cumbersome and gives rise to several difficulties in actual operation. It might be considered whether it would be feasible to replace or to supplement it by a system of guaranteed Government purchase of handloom cloth and its sale through the institutional agency of co-operative societies. It is suggested that this alternative system be introduced in the first instance on an experimental basis in a few selected centres and for selected varieties of cloth. The total expenditure required for the development programme of the handloom industry from the public sector is estimated at Rs. 80 crores. Out of this, about Rs. 19 crores are for investment, namely for the improvement of equipment, etc., about Rs. 17 crores for working capital, nearly Rs. 42.5 crores for schemes of marketing, subsidy, etc. and about Rs. 1.5 crores for organisation, publicity, administration, etc.

Fuller Employment for Weavers

Silk Weaving (Handloom).—On the basis of available information, the number of handlooms engaged in silk and art silk is estimated at about 200,000. Expenditure during the plan period on the basis of the plan of development of the Handloom Board is estimated at Rs. 5 crores. Assuming that the proportion of idle looms to the total number of handlooms engaged in silk and art silk is the same, namely, 20 percent as in the case of handlooms in cotton, it may be estimated that about 40,000 handlooms will be brought into full use as a result of the implementation of the development programme and all 200,000 looms utilised to capacity. Fuller employment may thus be created for about 250,000 persons. The extent of increase in production as well as employment will, however, depend largely on the relative prices of silk handloom fabrics and other textiles and the shifts in consumer preference.

Wool Weaving (Handloom).—The number of handlooms engaged in the woollen industry is estimated, on the basis of available information, at about 80,000, and expenditure proposed by the Handloom Board for the plan period on handlooms in wool to be brought into the co-operative fold is on the same scale as on handlooms in cotton but has not been shown separately. The expenditure may be estimated on a pro rata basis at about Rs. 3 crores. Assuming the same proportion of idle looms as in cotton about 16,000 handlooms may be estimated to be brought into full use. Fuller employment is likely to arise for about 100,000 persons.

Wool Spinning and Weaving (Khadi).—The programme of the Khadi Board for wool spinning and weaving from handspun yarn is intended to be

in addition to that of the Handloom Board. The Committee's view is that the element of sales subsidy provided in the programme is not necessary for the success of the programme. After making the adjustments, the estimated expenditure on the khadi woollen goods production programme over the plan period may be placed at Rs. 2.2 crores. As a result of the programme additional employment opportunities will arise for spinners as well as weavers. Employment created for weavers is not likely to be above that already mentioned in regard to wool weaving (handloom). Part-time employment for willowers, carders and spinners may be estimated at about 30,000.

Decentralised Cotton Spinning and Khadi.—The programme for the development of decentralised cotton spinning through *Ambar Charkha* and the programme for the development of khadi production are, to a large extent, alternative to each other. If experiments now being made on *Ambar Charkhas* are successful, a programme for their manufacture and introduction in a large number of centres and also for the necessary purchase and stocking of cotton and yarn may have to be drawn up. An allocation for this programme will have to be made after taking all the relevant factors into consideration. The production programme of khadi from yarn spun on ordinary *charkha* in that event would probably be continued only on limited scale and on a self-sufficiency basis. Until the experiments are successful or their results known, the programme of khadi production will be carried on and necessary provision for that has to be made. The average annual expenditure on khadi, taking into account expenditure in 1954-55 (revised) and 1955-56 (Budget), is about Rs. 310 lakhs. Allowing for an average annual increase of 10 percent, it may be estimated for the next plan period at about Rs. 23 crores. An allocation of Rs. 23 crores has been suggested for decentralised cotton spinning and khadi. The extent of employment opportunities created will depend on the nature and dimensions of the programme of development which is eventually adopted. If an enlarged khadi production programme is carried out, part-time employment will be created for 200,000 to 300,000 spinners.

Rice Production Control

Handpounding of Rice.—The production of rice in 1952-53, 1953-54 and 1954-55 was 22.5 million and 24.2 million tons respectively, giving an annual average of about 24.8 million tons. On the basis of an estimated increase of 10 million tons in food-grains production over the plan period, the increased production of rice on a pro rata basis may be estimated at about 4.4 million tons. In terms of paddy this would be equivalent to about 6.6 million tons. New sheller or combined sheller-huller mills or huller mills or single hullers should not be allowed to be set up and no increase in production above the present level should be permitted during the plan period, except when handpounding cannot be organised, for example, when production in an area where labour is scarce and has to be augmented quickly or supplies to a new industrial area have to be arranged. In such cases, the mills permitted should be owned wherever possible by co-operative societies or by the Government.

Schemes for the manufacture and introduction of improved handpounding equipment such as *chakki-dhenki* units, improved (Assam) *dhenkis* and winnowing fans and the organised marketing of handpounded rice should be given all possible encouragement and assistance. It should be ensured that such assistance is extended through co-operative agencies. An excise duty at an appropriate rate should be levied on all sheller or combined sheller-huller mills to offset the advantage which would accrue to them as a result of the ban on the establishment of new mills. The proceeds of the excise duty could be made available for improving equipment and establishing a more effective organisation of the handpounding industry. The excise would offset substantially the differential advantage enjoyed by rice mills and together with the measures of positive assistance recommended by the Committee would enable the handpounding industry to withstand the competition of the mills. However, it may be necessary, in the initial stages, to give, where competition is keen, extra assistance in the form of a temporary subsidy, to co-operative societies or to approved registered institutions composed of handpounders in order to induce and assist the changeover to improved methods.

In making the above recommendations the Committee has taken into account the production and employment aspects of rice milling. The higher nutritive value of under-milled rice is admitted by nutritional experts, and how these nutritional advantages can be obtained through regulation of the rice mills and their processes is a matter for the Government to decide. The total expenditure on developing and improving the handpounding industry, with a view to the handpounding of the entire increased production of rice, over the plan period, is estimated at Rs. 8.26 crores. It is estimated that additional seasonal employment will be provided to about 1 million persons engaged in the handpounding of rice.

Edible Oilseeds

Vegetable Oil (Ghani).—The production of major oilseeds in 1954-55 was estimated at 5,880,000 tons and is estimated to increase, according to the tentative target for the second five year plan, to 7 million tons, while that of major vegetable oils is estimated at about 1,400,000 tons from both mills and ghani. The crushing capacity of the mills is stated to be about 2,200,000 tons of oilseeds and that of ghani about 2 million tons of which only about half is stated to be utilised at present. The bulk of the production of *sesamum* and *almot* the whole

the production of *niger* and *kardi* oilseeds is being crushed by *ghanis*. In addition a part of the groundnut, rapeseed, linseed, castor and *muhua* crop is also being crushed by *ghanis*. The Government should examine the possibilities of utilising cotton seeds which are not being used at present for oil crushing, for augmenting the supply of vegetable oils in the country. As such utilisation of cotton seed in the oil mills would also enable larger supplies of edible oilseeds to be made available for crushing in *ghanis*, the Government should give assistance to the mills for the crushing of cotton seed.

Subject to administrative feasibility, measures should be adopted for discouraging and where necessary regulating on a regional basis, the crushing of sesamum, *niger* and *kardi* seeds by the mills. In view of the difficulty experienced by *ghani* owners, even when organised co-operatively, to secure seeds supplies in a highly competitive market, a programme should be formulated for State Governments ensuring the requisite supplies from season to season. As even the existing capacity of oil mills is not fully utilised, no new mills should be allowed to be set up except in areas where alternative methods of crushing oilseeds are not feasible. It is not necessary to prevent fuller utilisation of capacity by the oil mills by legislation.

Organisation of Cottage Units

Leather Footwear and Tanning (Village).—"The production of leather footwear in both factories and small-scale and cottage units at the end of 1955-56 may be estimated at about 90 to 91 million pairs. Of this about 6 million pairs are probably factory produced and the remaining 84 to 85 million pairs in small-scale and cottage units. In order to estimate the increase in demand for leather footwear during the period of the second five year plan, the most suitable basis is the percentage increase in consumer expenditure per capita on footwear, and on this basis the additional number required would be about 16 million pairs, namely about 106 million pairs by 1960-61.

No expansion of capacity of the large-scale factories should be allowed, but they should be encouraged to produce as much in the way of leather goods as possible within the scope of present unutilised capacity. Small-scale and cottage units producing footwear should be organised into co-operative societies for the purchase of raw materials and the marketing of finished goods. The necessary financial assistance should be extended to them by way of a contribution to their share capital for the improvement of equipment, working capital, etc.

The total output of the small-scale and village sector of the tanning industry which consists of (a) small-scale chrome tanneries working on a factory basis with the aid of power, (b) small-scale vegetable tanneries producing vegetable tanned leather almost entirely by manual labour and (c) village tanners, is the order of 174 to 194 million pieces of tanned hides and 23 to 26 million pieces of tanned skins. The requirements of tanned hides and skins are likely to rise during the plan period because of the increased demand for leather footwear and other leather goods. The programme of development for the tanning industry should aim primarily at raising the present extremely low level of technical efficiency of the small tanner by providing certain common services for improved tanning, finishing, etc., at well-equipped centres serving well defined areas. The general pattern of organisation should be that in addition to flaying centres and small tanning centres or tanneries in rural and urban areas, there should be central tanneries for providing finishing and other facilities to smaller units.

No expansion in the capacity of large tanneries should be allowed during the period of the plan. Expenditure on the development of the leather footwear and tanning industry in rural areas is estimated at Rs. 6.15 crores. This is exclusive of expenditure on leather industries which are within the sphere of work of the Small Scale Industries Board. Fuller employment may arise during the plan period for about 38,000 persons."

Expansion of Factories

Gur and Khandasari.—"The estimated consumption of factory sugar in India shows a definite and appreciable increase in recent years. Consumption of *khandasari* sugar and gur, on the other hand, has shown marked variations but no clear trend towards an increase. The demand for sugar is estimated to increase from 1,750,000 tons in 1954-55 to 2,250,000 tons in 1960-61. It would not be desirable to prevent an increase in the capacity or production of sugar factories with a view to reserving to *khandasari* the new production for meeting the entire increased demand. The process used in the production of *khandasari* yields a low percentage of sugar even after taking into account the processing of edible molasses and is, therefore, wasteful. An allocation of Rs. 8 crores is suggested for the development of the *gur* and *khandasari* industry. Generally speaking, the implementation of the development programme may be expected to result in the improvement of the quality of *gur* and *khandasari* and reduction of costs. The employment potential of the programme will be relatively small and unimportant.

Cottage Match Industry.—"The consumption of matches in India at present is estimated to be of the order of 30 million gross boxes. During the period of the first five year plan, neither internal consumption nor export has shown any appreciable increase. Assuming that the increase in consumption leads to an increase in demand for matches, the second plan period, the total

demand may be estimated to increase by 1960-61 to 35 million gross boxes. The total annual rated capacity of "A" class factories is estimated at about 22.8 million gross boxes and of "B" and "C" class factories 12.5 million gross boxes. Recently it was decided to create a new "D" class match factory. No expansion of capacity of "A" class factories should be allowed and their production should be stabilised at the level already reached or at such lower level as might have been agreed to by a factory. The increased demand estimated during the second plan period should be met by increased production from "B", "C" and "D" class factories. All factories which are set up to meet the increased demand should be organised as industrial co-operatives. It is estimated that additional employment will be created during the plan period for about 10,000 persons on whole-time basis and about 1 million persons on part-time basis.

Other Allocations for Development

Other Village Industries.—Expenditure on the development of other village industries including palm *gur* during the plan period is estimated at Rs. 11 crores. It is estimated that employment will be provided for about 140,000 persons in terms of whole-time employment.

Handicrafts.—An allocation of Rs. 11 crores has been made for the development of handicrafts. The employment potential is difficult to estimate but roughly, whole-time work may possibly be created for about 36,000 persons.

Small-Scale Industries.—An allocation of Rs. 65 crores has been made for small-scale industries of which Rs. 10 crores are intended for the central schemes of small industries, Service Institutes, the National Small Industries Corporation, hire-purchase of machines, etc.; Rs. 10 crores for industrial estates and Rs. 45 crores for service and production schemes for small-scale industries. It is difficult to estimate the extent to which employment could be created in this sector during the plan period but opportunities for employment could well arise for about 160,000 persons.

Sericulture.—The sericulture industry is important from the point of view of subsidiary employment to agriculturists in the main area of concentration namely, Mysore, Madras, Jammu and Kashmir, West Bengal, Assam, Bihar, Punjab, Orissa and to a smaller extent other States. The production of mulberry raw silk in 1954 was about 2,400,000 lbs. and of non-mulberry silk a little over 8 million lbs., while the production of silk waste is 1,760,000 lbs. About 5 million persons are stated to depend on sericulture as their subsidiary means of livelihood. The plan for the development of the silk industry, prepared by the Central Silk Board, provides for expenditure on schemes for the improvement of the mulberry tree, organised supplies of healthy high-yielding seed, the modernisation of silk reeling, the establishment of a raw silk marketing society, research, development of non-mulberry silk and similar other items. The programme is generally acceptable and an allocation of Rs. 6 crores is suggested for the development of sericulture.

Coir, Spinning and Weaving.—The development of the coir industry which is concentrated largely in Travancore-Cochin, Malabar and the South Kanara areas of Madras, depends on the adequate organisation of three stages; (i) the collection of husks and their distribution for retting, (ii) collection and distribution of the retted husk for spinning and (iii) collection of yarn and its marketing. As coir spinning is being done by a large number of producers in their homes and cottages, the middleman has established himself at all the three stages. The development programme proposed by the Coir Board for the second five year plan, aims mainly at the organisation of co-operative societies for collecting husks, arranging for retting, production and marketing of yarn, research, etc., and an allocation of Rs. 2 crores is suggested for the second plan period.

Scheme of Allocation of Resources.—Estimates of expenditure and allocations suggested by the Committee for different industries and for general schemes are given below:—

Industry	Allocation of resources Centre State Total (In lakhs of Rupees)
1. Cotton weaving (handloom)	150 7800 8000
1. Silk weaving (handloom)	10 490 500
3. Wool weaving (handloom)	6 294 300
4. Wool spinning and weaving (khadi)	26 194 220
5. Decentralised cotton spinning and khadi	100 2200 2300
6. Handpounding of rice	26 800 826
7. Vegetable oil (ghani)	40 1260 1300
8. Leather footwear and tanning (village)	30 385 615
9. Gur and khandasari	100 700 800
10. Cottage match	40 60 100
11. Other village industries	35 1065 1100
12. Handicrafts	300 800 1100
13. Small scale industries	1000 5500 6500
14. Sericulture	32 568 600
15. Coir spinning and weaving	30 170 200
16. General schemes, administration, research etc.	600 900 1500
	25.25 234.36 259.61

Iron and Steel

The Ministry of Iron and Steel has asked the Planning Commission to make a provision of Rs. 2.5 crores for railway expansion and Rs. 3.5 crores for creating an industrial estate at Bukhro, in the Damodar Valley area, the idea being to instal the fourth steel plant on that site in due course.

London

MR. BUTLER'S BID TO FIGHT ECONOMIC MALAISE

"EXPAND SUCCESS AND CURB EXCESS." THE NEW SLOGAN

(FROM OUR LONDON CORRESPONDENT)

THE anticipation in last week's despatch that we would have to wait until Parliament re-assembled later this month before we should know what "further measures" the Chancellor of the Exchequer has in mind to deal with our economic difficulties has been confirmed, for that was what Mr. Butler told the bankers and city merchants at the Mansion House dinner on Tuesday before last and the Conservative Party Conference at Bournemouth on the Thursday following. In the circumstances, there was little difference in the two speeches, save that in the second one he included a new appeal for restraint in both wage demands and dividends, saying that the benefits of increased production and improved methods ought to be passed on to the community as a whole by reduced prices rather than to particular sets of workers and shareholders and he asked companies and workers to co-operate in making things cheaper. The fresh warning is long overdue seeing that the earlier ones have proved so ineffective, but in the absence of means to enforce such restraint this particular symptom of the general economic malaise is likely to continue to defy treatment. "Invest in success" was Mr. Butler's slogan at last year's conference. He was more than taken at his word, apparently. This year, therefore, he has amended it to "Expand success and curb excess"—though we have yet to be informed just how this somewhat contradictory operation is to be achieved.

Though he failed to go as far as many would have liked him to do in these speeches, Mr. Butler certainly gave a number of "pointers" both with regard to the economic outlook and the things the Government would do towards restoring its stability. He was even more emphatic about the things it would not do, for although he did not seek to minimise the seriousness of the situation he still rejected the term "crisis" and refused to be stampeded into taking any panic action. His review of the situation was encouraging enough to justify his confidence. The volume of exports, he announced, looked like being 10 percent larger this year than last, and the balance of payments in the first six months of 1955 had yielded a small current surplus, including United States aid—much better than most people expected,—and the Budget seemed to be turning out better than he had forecast in April. On the other hand, the Chancellor stressed the overloading of the economy by too much spending, and the resulting growth of imports and inadequate expansion of exports. Insufficient restraint at home, said Mr. Butler, was the basic cause of our difficulty, and he promised that the restraint would be intensified.

Policy of Restraint

What line is Mr. Butler's policy to take? He rejects, quite flatly, any return to physical controls, allocations, rationing and restriction. Nor will imports be cut, for this would provoke retaliation against our exports. What the Government will do, briefly, is to hold back sharply on new Government buildings, maintain the existing programme of road improvements but reject any further schemes at present, reduce housing subsidies and shift the emphasis on the housing programme to slum clearance, and adjust the defence programme to modern needs. Agriculture will continue to be supported, but subsidies will be reviewed with the object of saving on what Mr. Butler described as the "immense bill" for imported feeding stuffs. The credit squeeze will be continued, and be supported by restraint in public spending by the Government, local authorities and the nationalised industries. Mr. Butler defined his policy as "discipline and incentive."

Mr. C. F. Cobbold, the Governor of the Bank of England, welcomed in his speech the assurances about restraint in public expenditure, which he pointed out was running at so high a level that it was hampering the tight credit policy and masking just how effective this had really been in the private sector since April. Mr. Cobbold also had something to say about sterling—the value of which, Mr. Butler had said earlier, the Government would defend at all costs. In the opinion of the Governor of the Bank of England sterling was still under-valued rather than over-valued. In 1949, he said, the pound had been over-valued, but the devaluation in that year made sterling cheap. Since then the margin had been lessened, but today it was still cheap in relation to most of the principal currencies of the world. Coming from such an authoritative source, this judgment ought to demolish finally any lingering ideas that the present difficulties of this country may lead to another devaluation.

Drain on Reserves Checked

Earlier, on 4th October, the Treasury had revealed that Britain's gold and dollar reserves fell by \$112 million last month, and at the end of September stood at \$2,345 million. This loss compares with one of \$87 million in August and of another of \$136 million in July—making an aggregate drop in the third quarter of \$355 million, the largest quarterly loss for over three years. These figures are grave enough to give cause for reflection, but in assessing them it should not be forgotten that a large part of this loss has resulted from speculation against the pound on the Continent, and both the Treasury and Mr. Butler have pointed out that

that undesirable element in the drain was stemmed at the middle of last month following the Chancellor's speech at Istanbul. Allowing for that factor the September loss is considered to be no worse than that in August and certainly better than in July. Of the September loss of \$112 million, about \$59 million was accounted for by the monthly settlement to the European Payments Union and the bilateral settlements with members of the Union took a further \$2 million. On 1st September, moreover, a sum of \$8 million was paid to Canada as the quarterly instalment on her loan. The United States defence aid, however, brought in \$2 million. The residual deficit thus works out at \$45 million, which was \$8 million better than in August and \$85 million less than in July. Compared with September, 1954, the deficit is \$30 million greater, but the speculative element may have contributed something to that. The immediate outlook shows no early prospect of the significant improvement that would be necessary to improve both the reserves and the underlying payments position. The U.K. deficit with the E.P.U. last month amounted to \$106 million, of which about \$80 million will have to be paid in gold within the next week, and looking further ahead we have to allow for the \$150 million which will be needed to service our North American debts at the end of December.

New Defence Bonds

Another dearer money move has been made with the Treasury announcement of a new defence Bond issue from 1st November carrying a 4 percent coupon, the highest rate yet paid on this type of security. The current 3½ percent Defence Bond issue will be withdrawn on 31st October. As with earlier offers, the Bonds will be repayable at 103 after 10 years or at 101 if they have been held for five years or more. Repayment within the first five years can be made at par on three months' notice, instead of the six months required with the present issue. Once again up to £1,000 maximum may be taken up in the new Bonds, and applications must be for £5 or multiples of £5. After holding 3 percent Defence Bonds, the fourth issue, for 10 years the option will be given to convert these into 4 percent Bonds. Recently the attractive yields in gilt-edged market securities have tempted holders out of 3½ percent Defence Bonds. Now the disparity between the market gross redemption yields and the new 4 percent Bonds will be ½ percent or less and may encourage the purchase of the new Bonds.

Control of Cloth Imports

The North West Regional Board for Industry, whose support was probably necessary for its success, decided at a meeting at Manchester this week that for the present it could not support any agitation to curb imports of grey cloth from Hong-kong and India. After considering a request for support to the proposed agitation from six district committees in cotton areas, the Board passed the following resolution: "From representation and information placed before it, the Board has been impressed with the increasing difficulties and continuing loss of confidence in the cotton industry. It recognises, however, that it is not in a position in this particular case to form a balanced judgment of the effects or repercussions on all industry if the policy advocated by the cotton industry were to be adopted. Indeed, it appears that some modification of Commonwealth and/or other international trade agreements might be involved. And it is therefore impracticable for the Board to make any assessment of possible repercussions on trade generally. In such circumstances the Board does not consider it can be in a position to give its unqualified support or otherwise to the proposal for quantitative restriction on cotton cloth imports, since the issues involved are not at present ascertainable, and appear to be more national than regional."

Large Shipping Merger

A preliminary announcement that Clan Line and Union Castle, two of Britain's larger shipping companies, are to amalgamate has just been announced to the shareholders of both companies. A third company is to be formed, which will make an offer to holders of all the shares in both groups. Clan Line and Union Castle both do much of their business with South Africa, while the former also provides a regular service to the East and has recently linked with the Hunting group to run an air charter business. At the moment it appears that the new company will not enter any new fields and that the two existing companies will continue to be operated separately, with different offices. Sir George Christopher, Chairman of Union Castle, said one advantage would be the sharing of tonnage when one company was short. No offer is being made to holders of Union Castle debenture stock. The new group, if shareholders agree to the offer, will be controlled by Clan Line whose former shareholders will hold roughly 60 percent of the equity in the company.

The new holding company will have a total issued capital of £11,483,000. In formulating the scheme account has been taken of the fact that Clan Line steamers have been paying in ordinary dividends a much smaller percentage of its profits than the Union Castle Company. In due course interim payments amounting to 25 percent in the case of Clan Line and 7½ percent in the case of Union Castle will be paid, but it is not proposed to recommend any further dividends for 1955 for either company. The shares of the new company are expected to rank for dividends from 1st January, 1956, and with satisfactory trading conditions next year it should be possible to pay dividends totalling 16 percent for the year. Both boards have strongly recommended the scheme to shareholders, but there is strong opposition in some circles among Union Castle shareholders.

Madras

S.R.C. SUGGESTS RE-DRAWING SOUTH INDIA'S MAP

EMOTIONS LIKELY TO SUBSIDE BEFORE ITS LOGIC

(FROM OUR MADRAS CORRESPONDENT)

THE map of South India will be radically re-drawn if the recommendations of the States Reorganisation Commission are ultimately accepted. In the new scheme of things there will be a United Kerala State composed of the present Travancore-Cochin State and the Malabar district of Madras State, a Karnataka State composed of the present Mysore and Coorg States and the Karnataka districts of Bombay, Madras and Hyderabad States, a truncated Hyderabad State composed of its Telugu-speaking districts, a Tamil-speaking Madras State including the Tamil-speaking taluks of the present Travancore-Cochin State and a Telugu-speaking Andhra State. Even the truncated Hyderabad State might cease to exist in a few years' time with its possible incorporation in Andhra State. Thus South India may ultimately come to be composed of Andhra, Karnataka, Madras and Kerala—each State holding within its borders a distinct linguistic group in overwhelming majority. The long-cherished aspirations of the Telugu, Canarese, Tamil and Malayalam-speaking nationalities for linguistic autonomy will thus have cent percent fulfilment. The new Madras State, as reconstituted, will have a population of about 30 million and an area of about 50,000 square miles. In the words of the Commission, it will be "a compact and integrated territory and will form one of the important units of the Indian Union with a history of stable administration. Neither its administration nor its plans of economic development will be affected."

The prospective Kerala State, which will include the Fort Cochin area and the Laccadive and Amindive Islands in the Arabian Sea, will have an area of about 15,000 square miles and a population of about 14 million. In the words of the Commission, "it will be linguistically homogeneous....and geographically compact. It will be well served from the point of view of communications." After carefully examining the economic and financial objections raised in this connection, the Commission says that "the financial picture is no longer as gloomy as it was generally believed to be. Any argument, therefore, which assumed that the financial position of the future Kerala State will necessarily be worse than that of the existing State of Travancore-Cochin does not appear to be valid."

Karnataka And Other States

The proposed Karnataka State, which will include the Kolar gold field area, will have an area of about 73,000 square miles and a population of about 19 million. In the words of the Commission, "the agricultural, mineral, water and forest resources of Karnataka are considerable....A united Karnataka will be found to have the essential features of a culturally homogeneous and balanced economic region; and to a considerable extent, this unity is even independent of the ties of a common language. There will be no serious dislocation because the existing Mysore State provides an administrative machinery, a capital and a High Court and all the other appurtenances of a modern government." The residuary Hyderabad State will be a compact and well-knit unit with an area of about 45,000 square miles and a predominantly Telugu-speaking population of 11 million. The Commission has recommended that it may be unified with Andhra after the general elections in 1961, if by a two-thirds majority the legislature of the residuary Hyderabad State expresses itself in favour of such unification.

The Andhra State, which will again have the Tungabhadra Project area in some Bellary taluks which were joined to Mysore at the time of Andhra's separation from the composite Madras State, will have an area of about 65,000 square miles and a population of about 21 million. The highly emotional Andhras, pursuing visions of a bigger Vishalandhra including the Telugu-speaking areas of the existing Hyderabad State, are already agitated over the Commission's refusal to concede their demand for Vishalandhra here and now. But the Telengana people do not appear to be in a very great hurry for unification. The Commission's recommendations in respect of the South Indian States are, on the whole, a just dispensation fully in accord with the requirements of the four Dravidian nationalities. If passions are roused here and there by interested groups, they are likely to subside quickly if the impeccable logic behind the Commission's arguments comes to be widely known. The proposed reorganisation of the States in South India appears so rational and sound that it can only spell progress and prosperity in the long run by eliminating some very acute tensions that have all along prevailed and by enabling unified economic development in the geographically compact State of the future.

New Factories

With the inauguration of the Rs. 7-crore integral coach factory at Madras by the Prime Minister, Mr. Nehru, the first all-steel light-weight coach for use on broad gauge railway lines has come off the assembly lines. The giant factory is claimed to be the biggest of its kind in Asia, built in record time of three years. From now onwards it will be producing 350 railway coaches, one every six working hours. But this target will be attained only in the fifth year of production. Another big industrial enterprise which has just gone into production in Madras City is the Carborundum

Universal, Limited, for the manufacture of bounded and coated abrasives. It is a joint Indo-British-American concern. The present annual target of bonded abrasives is 230 tons which will be ultimately raised to 600 tons. The present capacity of the machinery for coated abrasives is 23,000 reams a year which will soon be raised to 70,000 reams. While the raw materials for the bonded varieties are imported, some of the raw materials for the coated varieties are indigenous.

Mr. Nehru had also inaugurated the Hindustan Machine Tool Factory at Bangalore. This Rs. 81-crore industrial venture in the public sector is the only one of its range and scope in the country and aims to produce the machines-to-make-machines on a large scale on the most modern lines. The production targets of the factory are, high speed lathes—900; milling machines—460; heavy duty drilling machines—240. These targets are to be reached in six years in gradual stages. During the first stage a production rate of 550 centre high-speed lathes will be reached in three years from the date of commencement of balanced production, namely, 1st January, 1955. A lathe produced by the factory was exhibited in the Congress Exhibition in Madras this year.

Mysore's Second Plan Allotment

The Mysore Chief Minister has announced that the Planning Commission has tentatively allotted Rs. 84.73 crores for the second five year plan of the State. In addition to this the Planning Commission is also likely to allot Rs. 16 crores for the expansion schemes of the Bhadravati Iron Works and for urban water supply. The size of the plan as originally presented to the Planning Commission was of the order of Rs. 175 crores. A breakdown of the proposed outlay is as follows:—

	Rs. crores.
Agriculture, animal husbandry, etc.,	10.7
Community projects and national extension	4.0
Major irrigation projects	17.4
Power projects	22.5
Industries excluding Bhadravati Works	7.2
Roads and road transport	5.4
Education	8.0
Public Health	3.7
Housing	3.4
Welfare of backward classes	2.0
Miscellaneous	0.9

The above allocation gives a *per capita* expenditure of nearly Rs. 85 during the plan period, which compares very favourably with that in the plans of other major States in South India. Mysore State has been given generous treatment in view of her high targets and achievements during the first plan period, although on the basis of population she would have been allotted only about Rs. 57 crores.

Tamil Nad's Agrarian Situation

That the agrarian situation in Tamil Nad has gone from bad to worse on account of the State Government's "brave talk and masterly inactivity" during the last few years was brought home to the Tenancy Reform and the Size of Holdings Committees of the Land Reform Panel of the Planning Commission during their visit to Madras. The former Convener of the T.N.C.C. Land Reforms Sub-Committee which carried out a State-wide enquiry last year told the Planning Commission's sub-committees that the area cultivated by tenants prior to 1949 when the Kumarappa Committee reported was roughly between 40 percent and 45 percent of the total ryotwari area in Tamil Nad. But this percentage has come down to about 10 at the present time. This, in his view, was due to successive waves of resumption of land by owners for their personal cultivation. This, again, has resulted in the dispossession of tens of thousands of customary tenant-cultivators and their reduction to the status of landless labourers. It would not have been an agrarian tragedy if the virtual elimination of the tenant-cultivated sector had simultaneously meant the conferment of ownership or permanent occupancy rights on the erstwhile tenant-tillers of the soil. But, unfortunately no such result has ensued. The State Government's belated move to fix fair rents under some forthcoming legislation at an unrealistically low level will only have the effect of further reducing the size of the tenant-sector despite the possible security of tenure. The picture in respect of ceilings on landownership will be still worse for the holdings are so neatly divided up that very little land will be available for redistribution above a possible maximum limit of 25 acres of wet or 75 acres of dry land. Land Reform will have thus been robbed of its purpose and *raison d'être* in Madras, for when it ultimately comes as it has been threatening to come all these years, the State Government will have successfully locked the stable-door after the horse has been stolen! The Communists are already chuckling, for the uprooted tenant-tillers are justly angry and drawn into their net.

Bombay

MIXED PUBLIC RECEPTION
TO STATES BODY'S REPORTMAHARASHTRIAN AGITATION
CONTINUES

(FROM OUR BOMBAY CORRESPONDENT).

THE report of the States Reorganisation Commission, retaining the bi-lingual State of Bombay with some alterations in its composite parts, has been received with mixed feeling by the public as a whole. The cosmopolitan section and the business community in the city have welcomed it with a sense of relief, but there are many linguistic and political sections here and in the State who refuse to take the recommendations as the last word on this question. Political leaders, as usual, have come out with their reactions. The Communist Party was the first to raise its voice against this proposal. Mr. S. K. Patil, President of the Bombay Pradesh Congress Committee, on the other hand, has commended the report for its emphasis on the idea of national unity. The nation, he has pointed out, can ill afford to dissipate its energies in a controversy, which does no good to anybody and certainly much harm to the nation. There is, however, a good deal of discontent among the leaders and the rank and file of the Maharashtra Pradesh Congress Committee and the Samyukta Maharashtra Parishad, the latter an all-party body. Their executives have been deliberating on the steps to be taken in a constitutional manner to get the report so changed as to achieve a separate Maharashtra State with Bombay as its capital, with the exclusion of Gujarat, Saurashtra and Kutch and the inclusion of Mahavidharbha. Their agitation will continue. In the meanwhile, the Government is taking no chances. The police are taking precautions against all possible disorder.

High Cost of T.E.L.C.O. Production

In the course of his speech to the shareholders at the annual meeting of the Tata Locomotive and Engineering Co. last week, Mr. J. R. D. Tata, Chairman, raised an important question of principle. He demanded equal treatment for the private units with the public ones in the same industry. He pointed out that this was all the more important in the cases where the consumer of the private units happened to be the State sector, as was the case with engines and boilers produced at the T.E.L.C.O. factory. This question arose because of a disagreement between the Railway Board and the Company on the level of Company's manufacturing costs of locomotive and boilers, which matter had to be referred to the Tariff Commission for a final settlement of the prices the Government should pay. While admitting that they were by no means satisfied with the present level of costs, the Company was not prepared to accept the view that these costs were unduly high at the present stage of development and the circumstances in which they had to operate.

Analysing these costs, Mr. Tata stated that they were governed by four important elements: (1) the purchase price of local and imported materials and components, (2) the rate of production achieved, (3) labour costs and (4) depreciation charges. Mr. Tata pointed out that the Company had no control over the price of raw materials, while they could reduce the volume of component imports by producing these in progressively larger numbers at their own works. The percentage of these was increasing, but until the completion of the foundries, there was no alternative to their being brought from abroad or purchased within the country. On the rate of output, Mr. Tata pointed out that while progress had been made in this direction, it remained still below what it should have been but he added that even when production was still below the full capacity of the plant, costs would still be on the high side because of the relatively small capacity of the plant in relation to the capital invested in it. To correct this situation, the Company had agreed to the request of the Railway Board to increase the present capacity of the locomotive division by 50 percent, even though the return allowed on the additional investment would render it an unattractive proposition, when considered by itself. Mr. Tata also mentioned that the control of the Railway Board and the degree of inspection imposed on the works, as well as the procedure adopted for this purpose, were partly responsible for restricting output.

He complained against the degree of inspection beyond the needs of safety, operational efficiency or durability, which, while achieving no useful purpose, only resulted in materially restricting the output through delays and unnecessary repetition of work. Against this, he mentioned the fact that the type and degree of inspection at Jamshedpur was much more comprehensive and detailed than it was at the Government's locomotive works at Chittaranjan. On labour costs and the Railway Board's contention that the man-hours per locomotive and boiler were higher at Jamshedpur than at Chittaranjan, Mr. Tata observed that while this might be so, they could not accept the conclusion that these were higher for reasons within their control, unless all the factors involved and the circumstances under which they were compelled to operate were compared. He hoped that the Tariff Commission, if permitted to make a detailed comparison between the costs of the two factories, could clarify this point. Dealing with the question of depreciation, which formed a very substantial proportion of the total cost of their production, he pointed out that, as the Chittaranjan works were started during the war, when prices of plant and

equipment were very much higher than in the pre-war days, the element of depreciation on the cost of both locomotives and boilers had been heavier than in the case of locomotive factories built elsewhere at low cost and thus having little or no depreciation to bear at present.

P.A.C.'s Comments

Mr. Tata also dealt with the thirteenth Report of the Public Accounts Committee which has commented on the working of the agreement between the Company and the Railway Board. Here, Mr. Tata's complaint was that some of the remarks of the Committee appeared to have been based on a misunderstanding of the real facts; but unfortunately the management had not been given any opportunity to place those facts before the Committee and explain relevant matters. He, therefore, suggested that whenever an occasion arose for the Committee to consider matters concerning the organisations with which Government Departments had agreements, an opportunity might be given to such companies to tender evidence. Apart from being dissatisfied with the provision in the agreement that initial and additional normal depreciations should be included in the costs of production, which formed the basis of the price paid by the Railway Board for locomotives and boilers, the Committee had also found fault with the Company for the delay in attaining the requisite output of locomotives and boilers. The Committee appeared to have had in mind the possibility that this delay was the result of or at least aggravated by, the diversion of a part of the capacity to other lines of production such as diesel motor trucks.

Tariff Commission's Enquiry

Mr. Tata also referred to the stress laid by the Public Accounts Committee on the high cost of the Company's engines and boilers compared with import prices. Mr. Tata submitted that there was no sound basis for such comparison because the rapid shrinkage of export markets for these products had resulted in cut-throat competition among the manufacturers of various countries, which was aggravated by secret subsidies and other devices adopted by some foreign Governments, with a view to maintaining employment and output in their own countries, as also to earning foreign exchange. In this connection, he mentioned the "trade link system" which Japan had introduced to help exporters. He, therefore, welcomed the decision of the Government to entrust to the Tariff Commission aided by a foreign expert an enquiry into the Company's operations and manufacturing costs, and hoped that this enquiry would enable the Railway Board and the Company quickly to finalise prices for the last two years' output. Pending the completion of this enquiry, and the final settlement regarding prices to be paid by the Government, he said, it was impossible for him to make any forecast of the profits of the locomotive division, but he was glad to report highly encouraging progress in the Company's automobile division. He stated that while the Company had planned progressively to manufacture 3,000 trucks a year, they had, in consultation with Messrs. Daimler-Benz, decided to double the productive capacity almost from the start, subject to the Government's sanction. While this would involve an additional capital expenditure of about Rs. 4 crores, there could be little doubt as to its profitability and its resultant benefit to the shareholders. He disclosed that a debenture issue for Rs. 1.5 crores was proposed to be made around March, 1956. In replies to enquiries by shareholders he explained that, while it was originally intended to issue this block of debentures immediately, they had to wait for six months more, because, under the law, to make this issue an approved investment for insurance companies, the interest on the previous issue of debentures must have been paid for five years from the date of the first payment. He also informed the meeting that the Company would undertake the manufacture of diesel engine cars in due course.

Industrial Development of Bombay

The All-India Manufacturers' Organisation is currently holding a conference of the representatives of industrial associations and chambers of commerce in the State, to consider proposals for the development of industries in the State under the second five year plan. Members of the State Government including the Chief Minister and Secretaries of the ministries concerned are also attending this meeting, at which a draft memorandum containing proposals for the establishment of new industries and expansion of the existing ones, will be considered. In the meantime, Mr. Murarji J. Vaidya, Chairman of the Organisation, at the quarterly meeting of the A.I.M.O.'s Central Committee, expressed the opinion that the country's economy had shown a tendency towards stability in most sectors while the industrial sector in particular had recorded fairly satisfactory progress, with considerable improvement in production in most major industries over that of 1953. He pointed out however, that this progress was not uniformly distributed over all industries and that there were cases of imbalance between installed capacity and the availability of raw materials, as well as between productive capacity and demand. Paucity of skilled personnel for manning the plant to its full capacity was responsible for unbalance in some cases. He, therefore, pleaded for paying greater attention to these factors in the second plan. To secure a rapid growth of industrial production, marketing organisations should plan out their purchasing and selling methods.

Referring to the Company Law Bill, Mr. Vaidya said that in their anxiety to prevent inequality of wealth and the concentration of economic power in a few hands, legislators had created a complex mechanism in the form of the new Company Law that in actual practice, honest entrepreneurs

would hardly find it worth their while to carry on even their existing industrial and commercial activities without a feeling of frustration. He appealed to the Finance Minister therefore to see to it that the law was administered in such a manner as to provide incentive to genuine enterprise. Another suggestion made by Mr. Vaidya was that authority should leave import and export transactions in the case of authoritarian regimes to the established channels of trade, while assisting them in dealings and negotiations with the support and good offices of the consular and diplomatic missions abroad.

During its session the Central Committee welcomed the initiative taken by the Planning Commission in the formulation of the labour policy for the second plan and associating representatives of employers and labour right from the initial stages. In doing so, the Committee recommended that this question of industrial relations should be examined afresh in all its aspects. In its anxiety over the steel shortage, the Committee asked the Government to import 1,00,000 tons of steel (to bridge the gap between the present production in the country and the present minimum requirement of steel). If allowed to go unchecked, this acute shortage might cause damage to the country's entire economy. The Central Committee also passed a resolution dealing with factory production of consumer goods and cottage industry production, in which it expressed its concern about the over-emphasis placed in the draft plan on production of consumer goods by household and hand industries. The Committee observed that there was ample scope for expansion in both the sections, and there was no need for a negative policy of promoting one at the expense of the others.

Shipping Freight Rate Revision

Shipping interests are optimistic as to the outcome of the meeting with the Ministries concerned at New Delhi, on the question of increasing coastal freight rates, for which the companies had applied some time ago. During this interval, the Government has studied the demand of the shipping companies for a 10 percent increase in freight rates for general cargo and coal. It is understood that at the coming meeting, the Government would place certain proposals before the shipping interests and that the discussion is expected to centre mainly round the question of determining the extent of relief necessary in view of the increased cost of operations. While it is not expected that any conclusions will be arrived at at this stage, it is believed that the results of these discussions would be placed before a meeting of the Indian Coastal Conference to be held in Calcutta soon. It is taken for granted that the rates, when finally settled at the Calcutta meeting will come into force with immediate effect and will remain in force until the Rail-Sea Co-ordination Committee has finalised its recommendations about the entire freight structure.

No Boycott of Shipping Lines

The Bombay Committee of the All-India Bombay and Dock Workers' Federation has decided temporarily to suspend the earlier decision to boycott those shipping lines which trade with the Portuguese possessions in India. This step has been taken, it is understood, under pressure from the Union Transport Ministry which warned that disciplinary action would be taken if the workers persisted in this policy. It is understood that the boycott of individual ships touching these settlements will continue as before.

Welfare of Seamen

It is understood in Bombay that far-reaching welfare measures are to be undertaken by the Government of India for the welfare of Indian seamen during the coming years, by way of implementation of the I.L.O. conventions on shipping matters including those relating to maritime labour. Only two of the 20 major conventions have so far been implemented, but the Union Government has now decided to bring into effect several of the remaining conventions along with the attainment of the one million ton target for the plan. This would necessitate the revision and consolidation of the Indian Merchants Shipping Act, Mr. P. R. Subramaniam, Acting Director-General of Shipping, is already engaged in this work which is now nearing completion. It is believed that a Bill to amend this Act will be introduced in Parliament at the next session. In the meantime, the general meeting of the National Union of Indian Seafarers which met here recently demanded the establishment of a national tripartite maritime board and a social welfare board by the Government for implementing of the I.L.O. maritime conventions and recommendations and called upon the Government to review and improve the service conditions of seamen.

Telephone Expansion Scheme

The General Manager, Telephones, Mr. P. M. Agarwal, disclosed at the Bombay Suburban Rotary Club last week that Bombay city and suburbs would have about 120,000 telephones before the end of the second plan period under the expansion scheme formulated by the Union Government. This scheme, which would cost over Rs. 12 crores, was being carefully considered at present by the Government of India. Mr. Agarwal agreed that to keep pace with the development in other countries and said that while India had only 0.7 telephone per thousand of the country's population, the United States had 210 and the United Kingdom 115. Among the other projects to be undertaken is the installation of a teleprinter factory to enable India to be self-sufficient in all types of telecommunication equipment.

RAILWAYS UNDER THE SECOND
FIVE YEAR PLAN

THE PROBLEMS OF EXPANSION

(By G. Runga Raju)

AMONG the Central Ministries, under the first five year plan, the Ministry for Railways will have reached its allotted target of Rs. 400 crores before the completion of the plan period and indeed, it will be exceeded by about Rs. 18 crores (Rs. 155 crores for current depreciation and Rs. 262.5 crores for development expenditure). There are Ministries with significant shortfalls, in 1954-55, with the exception of the Ministry of Food and Agriculture, and it is unlikely that they will recover the lost ground, for reasons for which they are not, of course, wholly responsible.

Why this should be is a pertinent question and the answer is that certain fortuitous circumstances give this Ministry a lead over others. Long before planned economy had been adopted by the Government as the desired objective which would fulfil the aims of a welfare state, the Railway Board worked to a plan, or rather a programme, for at least 10 years ahead at a time, with regard to normal renewals and replacements of locomotives, coaches and goods stock and equipment as well as capital works such as the construction of new lines, improvements to existing lines, remodelling of stations, goods depots, marshalling yards and the like. It was this systematic planning, hampered unfortunately on occasions by financial exigencies, which bore the brunt of two world wars and the holocaust following on Partition. In addition to planned development the Railway Board enjoyed another exceptional advantage. When the Engineering Standards Committee, established in the United Kingdom in 1901, eventually became the British Standards Institution in 1931 the Railway Board founded about the same time the Central Standards Office for research, forestalling the Indian Standards Institution and the National Laboratories, which came into existence after 1947. This research organisation expanded in course of time and now established at Lucknow, it consists of various departments: track research, building and soil mechanics research and locomotive, carriage, wagon, fuel, chemical and metallurgical research, and is almost self-contained as far as the railways' needs are concerned.

With such a tradition of outstanding achievements and with a well-trained and experienced personnel—administrative and supervisory—the Ministry for Railways is forging ahead and it will not be surprising, if it spends the entire allotment of about Rs. 1,480 crores asked for under the second five year plan and later demands more, if the required quantity of steel and other equipment is made available.

Railways' Demands

As regards the second five year plan, in general, the Mahalanobis plan frame, under which transport and communications are provided with Rs. 900 crores, seems to be the most likely to be adopted; but it is stated that though its approach has been accepted, its estimates of expenditure have not. So far as the railways are concerned, the programme under the second plan must continue the progress achieved in the first plan, under which the objectives were (1) extensive rehabilitation both of the fixed and mobile assets of the railways, in order to recover the pre-war standard of efficiency (2) removal of the principal bottlenecks on existing lines in order to handle the existing traffic and the provision of additional facilities to enable railways to legislate for the new traffic bound to arise out of the implementation of the five year plan and (3) the improvement of amenities for the travelling public and the adoption of measures designed to raise the standard of housing and welfare of railway personnel.

It will be relevant in this context to take note of the various categories of expenditure, under the first five year plan, many of which will continue under the second plan, with the exception of "dis-mantled lines", which are expected to be restored before the completion of the plan period as follows:

Categories of expenditure	Total provision for 5 years. (1950-51 to 1955-56) Rupees (in crores)	Total expenditure for 3 years. 1950-51 to 1953-54 Rupees (in crores)	Percentage of total expenditure under each head.
Rolling stock and machinery	207.96	109.78	52.8
Track	64.87	32.74	50.6
Bridges	5.60	1.95	34.8
Other structural and engineering works	43.41	23.17	53.4
Collieries* and ports	2.49	0.42	16.9
Labour welfare, staff quarters and other welfare works	24.09	11.49	47.7
Restoration of dismantled lines	56.6	8.39	17.9
New lines, including electrification of track and major bridges	28.52	6.76	23.7
Passenger amenities	15.00	7.38	49.2
Miscellaneous items	2.40	1.79	74.6

* Collieries have been transferred to the Ministry of Production from 1st October, 1954.

It is expected that before the completion of the plan, the first objective will have been achieved in large measure, but with over-aged locomotives, etc., still in commission. Complete self-sufficiency

the demand of the public and private sectors, in fact, a regular and unimpeded supply of coal in sufficient quantities will contribute in no small measure to its success.

Alternative Motive Power

The greatest contribution, therefore, which the railways can make to the progress of the plan is by adopting an alternative medium of motive power by which the consumption of coal on their own account can be reduced, as far as possible, thereby saving the wagons thus released, for the conveyance of public coal or other merchandise. While Chittaranjan and Tatas are progressing rapidly in the drive to make the railways self-sufficient in locomotives before the end of the second plan, it is disconcerting to find that the steam engine has been discarded in the U.S.A. and its fate is also sealed in the U.K., its birth-place, as under the £1,200 million 15 year plan £345 million have been allotted for its replacement by the diesel electric locomotive. In the building programme for the next year, steam engines have not been included for erection. The British Transport Commission reached this decision by "careful consideration of the merits of all the various forms of traction. The steam locomotive has in the past served the railways well. It has the virtues of low first cost, simplicity, robustness and long life. On the other hand, many factors combine to indicate that the end of the steam era is at hand." (*Modernisation and Re-equipment of British Railways*—page 11). In point of efficiency, it is stated that only two diesel or electric units are required in place of three steam units, in performing the same task and the former are particularly useful in negotiating gradients and ghat sections, not uncommon on the Central and Southern Railways, which are far away from collieries. The changeover from steam to diesel or electric motive power will result also in an accelerated goods train service as well as a saving in the high grade coal used by the railways, not to mention the wagons required for its haulage. The fact that diesel oil is not produced in this country should not discourage the changeover, for neither is it produced in the U.K. and the compensatory advantages deriving from its use will more than counterbalance the demand on foreign exchange. It will, therefore, be necessary to consider under the second five year plan the erection of plants for the manufacture of diesel electric locomotives, preferably in collaboration with American producers, who have considerable experience in long-distance haulage, under conditions more or less similar to this country.

New Lines

Proposals for the construction of new lines, amounting to about 3,000 miles, for inclusion under the second plan, are under consideration, though the demand from sectional interests might be for a much longer mileage. These proposals, it is assumed, conform to the priorities laid down by the Minister for Railways in winding up the debate in the Lok Sabha on 5th March, 1954, and include areas where heavy industries are developing, those with potential mineral workings and underdeveloped areas, where communications are deficient. The financial outlay for the construction of these lines may be estimated at Rs. 150 crores, at an average cost of Rs. 5 lakhs a mile. In addition to the priorities mentioned above, another consideration, which has not received as much attention as it deserves, is that the advantage, arising from the availability after the completion of the Khandwa-Hingoli link in about 2 years, of an all-metre gauge line running from north to south, as an alternative to the present all-broad gauge line, should be fully exploited. From the transportation point of view, the former holds immense possibilities, which cannot be assessed now with precision and it is desirable to have spurs all along the line, for relieving the strain on the broad gauge or for other operating conveniences. For instance, the all-metre gauge line in question, with the addition of a short link of about 80 miles of metre gauge from Renigunta to Madras, can be run as far as Madras port, which will facilitate the uninterrupted movement of iron and manganese ores from the Ballary area to Madras port for shipment, and will also eliminate the necessity of transshipment at Guntakal, one of the worst points among about 50 of its kind on the Indian Railways. Again, the present metre gauge line from Guntakal to Chamrajnagar could be extended to Coimbatore, linking up with the existing metre gauge line up to Madras and Trivandrum Central and thence to Cape Comorin. Traffic surveys of the Renigunta-Madras metre gauge and the Chamrajnagar-Coimbatore metre gauge have already been made. The extension of the all-metre gauge line from Bhatinda in the Punjab to Madras port and Trivandrum and thence to Cochin Port, after the Quilon-Ernakulam line, now under construction, is completed, is of primary importance and is bound to relieve the all-broad-gauge line, much overworked in certain sections at present, and for the improvement of this proposals are under consideration, involving heavy expense.

Passenger Amenities

In connection with the provision of improved amenities for passengers which the Government is anxious to expedite, the primary necessity is to relieve overcrowding in trains. Goods wagons cannot be overloaded for fear of violating safety regulations intended to prevent accidents; but passenger trains are habitually so overcrowded and Section 102 of the Indian Railways Act, prohibiting the railway staff from allowing the stated capacity of each compartment to be exceeded is a dead letter, for the third class in particular. During the three years—1952 to 1954—342 new trains have been introduced and the runs of 345 trains have been extended and still overcrowding continues. The changeover from power steam to diesel or diesel

* Five Year Plan Progress Report for 1953-54, page 228.

* Report of the Taxation Enquiry Commission, Vol. I, page 96.

electric motive power would be of significant advantage in this case, as a greater number of coaches can be attached to each train, as compared to the limited capacity of the steam train and also with greater speed. The provision of Rs. 15 crores under the first five year plan refers to amenities of the tertiary type such as the provision of electric fans and similar comforts. The delay in execution should now be minimised, consequent on the posting of a Deputy General Manager for the purpose, on all the zonal railways.

The Prime Minister and the Chairman of the Planning Commission stated recently that their present approach was to make the second five year plan a flexible one with detailed plans for the first year or so and annual plans within that broad structure for the later period. In addition there will be "perspective planning" for 10 or 15 years ahead, so that even five year plans will come within its purview. The plan for the development of the railways, already accustomed to look ahead for about 10 years at a time should be adaptable to this type of planning, for in comparing with other means of transport, they must consider the actual needs of the present as well as the future. In other words, the supply of overall transport capacity should be ahead of the demand, for the statement on the 15-year British plan on *Modernisation and Re-equipment of British Railways* issued by the British Transport Commission is equally applicable to the Indian Railways!

"Despite the growth of alternative forms of transport it is clear that the country must continue to look to the railways to carry the main flow of bulk traffic, both passenger and goods, for many years to come."

.....It is not so much a question of whether the nation can afford to make the new investment in its railway system here proposed, as whether it can afford not to do so and thereby continue to carry the economic burden of a public transport system that lags far behind the standard of efficiency technically possible. This plan aims at providing the country with a railway system which will not only be fully efficient and economic when the plan is achieved, but will also be adaptable to meet the requirements of many years to come thereafter."

Engineering and Transport

HEAVY ELECTRICAL EQUIPMENT FACTORY

TALKS ON APPOINTING A.E.I. AS TECHNICAL CONSULTANTS

THE Government of India has decided to enter into detailed negotiations with Associated Electrical Industries, a British firm, in connection with the setting up of a State-owned heavy electrical equipment factory in India. Their terms were more favourable than those of the other firms. The negotiations are for the purpose of appointing them as technical consultants for the electrical project. In March this year, the Government decided, on the recommendation of the Heavy Electrical Equipment Enquiry Committee, to set up a new State-owned factory to manufacture heavy electrical equipment. It invited leading electrical manufacturers of international standing to discuss the scheme and to indicate the basis of their collaboration. A number of foreign firms from the United Kingdom, the United States and some European countries offered to assist. A committee of technical experts examined the offers and the Government has now decided to conduct detailed negotiations with Associated Electrical Industries. The electrical equipment factory is expected to manufacture hydraulic turbines and generators for diesel sets and static capacitors. The factory will also manufacture certain other items of large sizes e.g., heavy transformers.

EXPORT PROMOTION COUNCIL FOR ENGINEERING GOODS FORMED

An Export Promotion Council for Engineering Goods has been set up to encourage the export of a large variety of engineering products from India. This Council is the fourth in the series of Export Promotion Councils which are being set up with the assistance of the Government of India as part of the export promotion drive. The other three are for cotton textiles, silk and rayon textiles and plastic goods. The Engineering Export Promotion Council, which has its headquarters in Calcutta,

was formally inaugurated on Monday by the Central Minister for Commerce and Industry, Mr. T. T. Krishnamachari. The Council will later open a branch office in Bombay. The Council is expected to undertake market studies abroad, send out trade missions and organise publicity for Indian goods. It may also appoint representatives in foreign markets to collect statistics and other information regarding engineering goods, lay down standards of quality and packing for export, investigate complaints received from foreign buyers and commercial disputes by arbitration.

The engineering goods industry, which has made great strides in recent years, has an appreciable exportable surplus now. Considerable progress is expected to be made by it during the second five year plan. Already India's annual exports of engineering goods are valued at about Rs. 4 crores. Some engineering items which India offers for export are bicycles and bicycle parts and accessories, incandescent lamps, stoves, steel furniture, steel structural, sewing machines, hurricane lanterns, duplicators, oil ghanies and oil expellers, decorticators, textile machinery, jute machinery, sugar mill machinery and tea processing machinery, electric fans, electric motors, electric lamps, radio receivers, storage batteries for motor vehicles, dry batteries, brass lamp holders, plastic electrical accessories, diesel engines and power driven pumps. Other products which this country is in a position to export are agricultural implements, gramophone needles, razor blades, arc welding electrodes of mild steel, cutlery, pen-nibs, weights, machine tools, abrasives, grinding wheels, bolts and nuts, wood and machine screw, steel wire netting, hair and cotton belting, rubber ply transmission and conveyor belting, pilfer proof seals, hinges, crown cork, brass and copper utensils, aluminium utensils, brass and copper sheets and strips, lead sheets, lead tubes, brass and copper rods, and brass and copper wire for non-electrical purpose.

The Export Promotion Council consists of representatives of the Engineering Association of India, Federation of Indian Chambers of Commerce and Industry, Government officials and other trade representatives. Separate panels for 24 different engineering industries have been formed by the Council and each panel is represented on it. One of the immediate tasks facing the Council will be to disseminate information in prospective markets about this country's growing industrial and export potential in different engineering goods. The Council will try to create awareness in foreign countries, particularly neighbouring countries, about India's capacity to supply articles like diesel engines, electric motors, fans, sewing machines and bicycles.

TRANSPORT AT A PROFIT

TWO NEW BRITISH AIRCRAFT

AN order for six Handley Page *Heralds* has been announced by Air Cruise Ltd., an associate of Silver City Airways. This is the first British order for an aeroplane which, as Sir Frederick Handley Page put it, has been designed as a "workhorse of the air", and it indicates that the *Herald* may be as popular with home operators as with overseas airlines, for whom it was primarily intended. Already, say the makers, overseas orders total more than £4 million in value for this aircraft, thus proving that the market for which it is intended—short to medium range branch-line services—urgently requires new equipment. Many of these services operate obsolete types which were never intended for such duties.

A world-wide survey of nearly every airline in Europe, Asia, Africa, Australia and South America preceded the drafting of the *Herald* specification. A project team began work in 1952 and detailed design was started during 1954, incorporating the results of the world survey.

The prototype made its first flight less than six weeks ago, and subsequently took part in the S.B.A.C. Flying Display. Modern design and construction allied with robustness and simplicity make this aeroplane an attractive proposition to operators both in undeveloped areas and in countries already served by air routes. The *Herald* is fitted with four Alvis *Leonides* Major piston engines, and interior layout permits the carrying of freight or the seating of up to 44 passengers.

New Short Take-off

The Scottish Aviation *Twin Pioneer*, with two *Leonides* engines, is smaller than the *Herald*, but is designed more or less for a similar purpose. In many parts of the world, the absence of adequate landing spaces restricts aircraft operation to helicopters and light planes. The *Twin Pioneer* is intended to provide inexpensive air transport for these regions. A development of this manufacturer's single-engine *Pioneer*, which is performing invaluable work in Malaya, the *Twin Pioneer* was originally evolved for operation in the Highlands of Scotland and from islands round the coast. These conditions called for an aeroplane with exceptionally short landing and take-off qualities, a payload of about 3,000 lbs., and a range of up to 500 miles. The *Twin Pioneer* first flew on 28th June this year, and the prototype has logged 50 hours' flying so far.

At the S.B.A.C. Flying Display, its exceptionally short take-off and landing runs attracted much attention. The makers claim that this aircraft, with a full complement of 16 passengers and fuel for 500 miles, requires a take-off run of only 100 yards on a grass surface. A direct operating cost including U.K. petrol tax) and a speed range of 48-180 m.p.h. make the *Twin Pioneer* an attractive proposition. Indeed, keen interest in this aeroplane has already been expressed by operators in more than 40 countries.

Jute

INDUSTRIAL TRIBUNAL'S AWARD CAUSES GREAT ANXIETY

HIGHER WAGES FOR SURPLUS LABOUR WILL AFFECT INDIA'S COMPETITIVE STRENGTH

THE Indian jute industry received a severe jolt when the recommendations of the Industrial Tribunal on jute mill workers' wages was published. The implementation of the award, if it is accepted, will have far-reaching effects, increasing manufacturing costs by about Rs. 14 a ton. This is equivalent to an increase of 8 annas a maund in the price of raw jute, and the industry can ill afford it at the present time. It is unreasonable that the Government should saddle manufacturers with this burden when the competitive strength of India's biggest dollar-earner is being affected by growing competition from Pakistan. Many mills could dispense with the services of about 50 per cent of their labour force, and be left with a much more efficient organisation to take advantage of modern machinery. If retrenchment could be carried out to this extent, the industry could afford to pay higher wages. But when the greater part of the increase is to go to workers who are already surplus to requirements, then the Award defeats the purpose for which it was intended, as it could eventually price Indian goods out of overseas markets. It seems that within a few short months, the advantage gained by the withdrawal of the export duties on jute goods will have been partially nullified.

The latest developments will increase Pakistan's advantage in the export markets where she continues to capture business in areas where hitherto India dominated. At present, Pakistan has a manufacturing surplus of 80,000 tons a year. She has very little difficulty in finding customers as her goods are of very fine quality. Within a year, the surplus will be more than double this figure, and will constitute a very formidable threat in world markets. Pakistan has the advantage of having no surplus labour, having started from scratch and employing only the force required to run mills under modern conditions.

Substantial Drop in Mills' Stocks

Good shipments during September caused mills' stocks of jute goods to fall to 69,700 tons, which is the lowest since December, 1954. Indeed, over the past three years, total stocks have only been lower on three occasions—in the three months preceding December, 1954. September's stocks were 9,500 tons lower than in the preceding month. Hessian fell by 7,200 tons to 34,600 tons. This was not unexpected as a portion of the large Argentine order placed earlier in the year was scheduled for shipment in September. Heavy goods stocks continued to drop, and the decrease of 2,100 tons brought sacking stocks down to 31,600 tons—a new low level. Hessian stocks now comprise only 49.5 per cent of the total and sacking stocks 45 per cent, the balance being made up of miscellaneous manufactures.

THE JUTE MARKETS

There was limited activity in the goods markets over the week, the only interest displayed by foreign buyers being in the forward positions. Prices fluctuated rapidly from day to day at the beginning of the week mainly as a result of shipper covering at lower levels and speculation, but the general tendency was in a downward direction, although towards the close rates were only slightly lower than the week's opening quotations. Some enquiries for January-March shipment heavy goods, mainly B Twills, and to a lesser extent 11 porter Hessians, caused these fabrics to register a temporary rise. The business concluded was of a very small nature and markets continued weak.

Manufactured Goods: Opening quotations on Thursday last were substantially better than last week's closing quotations and October shipment B Twills advanced Rs. 1-8 to Rs. 103-8 a 100 bags whilst forward shipment rose by Re. 1 to Rs. 101-8. This was due to a combination of small overseas enquiries, and in anticipation of a fall in mills' stocks of jute goods. Hessian responded to these factors, and 40" 10oz. improved by 6 annas in the near position and 4 annas for forward shipment, quotations being Rs. 38-4 and Rs. 38 a 100 yards respectively. Minor fluctuations occurred, and the opening quotations on Friday continued to indicate a steadier market with prices in both sections recording a 2 to 4 annas advance. Interest was limited to forward shipment and January-March B Twills recorded a substantial rise whilst other deliveries were unchanged. The Hessian section was quiet and prices were reduced by 2 annas. Very little activity was reported over the week-end and prices tended to decline. Heavy goods opened on Monday Re. 1 lower at Rs. 103 for October shipment. With the spotlight off heavy goods, forward shipment also fell and a drop of 12 annas brought January-March shipment down to Rs. 101-4. Hessian 40" 10oz. prices were reduced to Rs. 38 and Rs. 37-10 for near and forward shipment respectively, which was 4 annas and 6 annas lower than the previous quotations. On Tuesday, markets were unchanged, with forward goods showing a slight tendency to rise.

At the close the market is slightly steadier with B Twills up to Rs. 1 and Hessians up by

2 annas. Opening quotations on Wednesday morning were as follows:

	Oct.	Nov.	Dec.	Jan.-March
40" 8 oz.	Rs. 31-6	31-2	30-14	30-8
40" 10 oz.	Rs. 38-2	38-2	38-2	37-14
B Twills	Rs. 104-0	103-8	102-8	102-0
Heavy Cees (Plain)	Rs. 106-0	104-12	103-8	102-8
A Twill	Rs. 130-0	129-8	128-8	126-0
Liverpools	Rs. 120-0	119-0	118-0	115-8

Raw Jute: A little more interest was shown in the market, with mills buying small quantities each day. The main business was for forward shipment upto the end of the year, but some good business, especially in the Daissee section, was done for quick shipment. The question of assortment is bothering many mills, and towards the close indications were being given out for a high percentage of Bottoms or Bottoms and X Bottoms alone. There are very few sellers for the lower grades of fibre at this stage in the season, and offers of even small lots are few and far between. Prices have shown only small fluctuations, but the undertone has been steady. Indian mills continue to buy fair quantities of jute in the local markets through their representatives, and this has tended to keep prices higher than they normally would be, especially for ready delivery. Several bills of lading were again put up for sale and business was done at varying prices. Pakistan jute was again neglected as the gap between it and the indigenous product tended to widen due to the steadier Pakistan markets.

Quotations opened the week on the basis of Rs. 23-8 a maund for Upper Assam Bottoms for October-November shipment, this being 8 annas a maund higher than last week's closing prices. Small business at these levels kept the market steady, until on Saturday, with mills taking more interest, prices were increased 8 annas a maund. Monday was a dull session in both sections of the market, and little of importance was reported, resulting in prices reverting to Rs. 23-8 a maund basis Bottoms.

During the week business was done in Dhubri jute alone at Rs. 24-8 a maund basis Bottoms for October-November shipment, and in Dhubri and Northern combined at Rs. 23 to Rs. 24 a maund for the same shipment. Local packing Northern was done at Rs. 23 a maund with supervised marks fetching Rs. 23-8 to Rs. 24 a maund basis Bottoms. Small lots of Murshidabad Tossa were sold at Rs. 24 to 24-8 with Jungli Tossa Re. 1 a maund cheaper for October-December shipment. Good business was done in the Daissee section and upto Rs. 26-8 was paid for ready delivery jute whilst forward shipment varied between Rs. 24 for October-December shipment to Rs. 25-8 a maund for October delivery. Imports of Mesta are still small, and only small business was reported at Rs. 22 to Rs. 23 a maund for October and October-November shipment. Business was also done in Pakistan Cuttings at Rs. 82-8 a bale for October shipment and Rs. 95 a bale for ready delivery.

At the close prices advanced 8 annas a maund, and sellers are inclined to be reserved. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a md.	basis Bots.	Shipment, Oct.-Nov.
Lower Assam	24-8		
Upper Assam	24-0		
Northern	24-8		
Murshidabad White	23-8		
Daissee ex Agency	25-0		
Daissee ex Cossipore	24-8		
Daissee Mesta	23-0	for F.A.Q.	
Bimil	23-0		
Local Packing (Northern)	24-8		

Tossa is quoted at Re. 1 to Rs. 1-8 above the price of white jute:

Pakistan Jute:	Rs. a maund.	Shipment, Oct.-Nov.
Jat	27-0	
Distriet	26-8

Local Cossipore markets have ruled steady over the week with imports unchanged at about 80

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September, as follows:

Description	31st August 1955		30th September 1955		Increase over (+) or decrease from (-) last month		30th September 1954.	
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth & Bag	15.96	41.6	13.06	34.4	- 2.90	- 7.2	9.73	26.7
Standard Hessian (included in above)	12.64	33.1	9.70	25.6			6.94	19.1
Sacking Cloth & Bag	8.08	34.4	7.68	32.3	- 40	- 2.1	9.12	39.7
Standard Sacking (included in above)	6.70	27.7	6.41	26.2			7.55	32.6
Others		3.2		3.0		- 0.2		1.5
GRAND TOTAL (000 Tons only)		79.2		69.7		- 9.5		67.9

N.B. These figures are based on replies received and represent all members of the Association and Gagalbhai.

wagons a day. There is a heavy demand from mills for low quality jute, and as the majority of arrivals have been from the Western and Jungli areas there have been ready buyers for all imports. Latest quotations are based on Kishengani jute at Rs. 24-8 a maund for garsat quality. Good business has been done in the Daissee markets and imports are average for the time of the year. All arrivals, however, contain very heavy moisture, and dry Daissee is at a premium. Imports of Daissee Mesta are still small and are, at the present moment, well behind last year. In Sheoraphuli quotations for Daissee are based on Rs. 25 a maund for garsat quality.

Mofussil: A fair amount of covering business against 15th September contracts has been done and prices in all agencies upcountry are inclined to be steady. There are ready buyers for all imports but arrivals are lower than normal for the time of the year. Interest has centred mainly on the lower grades of jute as this is in great demand, but sellers are not willing to release only Bottom quality jute. In Dhubri prices are based on Bottom quality jute at Rs. 20 a maund.

In Pakistan, the markets are quiet but steady. There is very little business passing, but the fact that imports have fallen off has prevented prices from falling. In Narayanganj, total arrivals now only average about 20,000 maunds a day, of which only about 4,000 maunds is in bales. The quality of recent arrivals has fallen off, and a considerable quantity of flood-damaged jute is appearing. Quotations are based on Jat Bottoms at Rs. (P) 23-8 a maund and X Bottoms at Rs. (P) 18-8 a maund. Tossa jute is quoted at Rs. (P) 2 more than white jute.

I.J.M.A. PRODUCTION FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total production of jute goods for the month of September as follows:

Description	Quantity
(a) For sale	2,146 tons
1. Twist and Yarn	
(b) All other including that used in sewing bags	1,052 tons
2. Canvas	118 tons
3. Gunny Bags (Tonnage exclude sewing twist)	2.5 lakh yds.
(a) Hessian	3,040 tons
	1,09.4 lakh yds.
(b) Sacking	45,161 tons
	66.6 lakh nos.
	10,86.2 lakh yds.
	4,77.3 lakh nos.
4. Gunny Cloth	32,199 tons
(a) Hessian	12,40.6 lakh yds.
(b) Sacking	2,096 tons
	48.8 lakh yds.
5. Other manufactures (including ropes)	1,604 tons
6. Total production (above figures combined)	
(a) All kinds	87,416 tons
(b) Hessian (both bags and cloth)	13,50.0 lakh yds.
(c) Sacking (—do—)	11,35.0 lakh yds.
(d) Canvas (—do—)	2.5 lakh yds.

Summary						
	(Lakh Yds.)			(Thousand Tons)		
	Sept. 1955	Aug. 1955	Sept. 1954	Sept. 1955	Aug. 1955	Sept. 1954
Hessian	13.52	12.54	12.58	35.4	33.2	32.6
Sacking	11.35	10.59	10.13	47.2	43.7	43.7
Others				4.8	4.5	2.7

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai.

GUNNY SHIPMENTS IN AUGUST

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of August 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,881.0	41,672.3	44,553.3
Short Shipped	412.6	13,117.8	13,530.4
August, 1955 (Nett)	2,468.4	28,554.5	31,022.9
July, 1955 (Nett)	2,443.7	38,161.9	40,605.6
June, 1955 (Nett)	2,401.5	17,213.8	19,615.3
Sacking			
Gross	34,514.8	2,121.4	36,636.2
Short Shipped	4,097.4	89.2	4,186.6
August, 1955 (Nett)	30,417.4	2,032.2	32,449.6
July, 1955 (Nett)	36,132.9	2,051.6	38,184.5
June, 1955 (Nett)	27,648.1	1,079.4	28,727.5

In industry, commerce, banking, law, records, libraries, universities, laboratories and hospitals, where reproduction of important documents is a frequent necessity, the Dupliphot is the ideal apparatus for copying by photographic process. It is economical to use, saves time and renders an exact facsimile of the original.

Calcutta Markets

DEMAND IMPROVES AT TEA SALES

FANNINGS STRONG IN EXPORT AUCTION

AT Sale No. 19, held on 10th and 11th October, offerings in the Export auction consisted of 44,500 packages. There was a greatly improved demand. The market opened 1 to 1½ annas dearer, and strengthened as the sale progressed. At the close, most kinds were selling at about 2 annas above the previous rates. Fannings grades of all descriptions were the strongest feature, while Whole Leaf grades received rather better support and were about 1 anna dearer. Darjeelings which were mostly plain in character sold at better rates, and tippy teas were again strong.

Quotations	Rs.
Clean Black Pekoe	2 5 0
Plain B. P.	1 12 0
Medium Assam B. P.	1 13 6 to 1 14 0
Best CTC Assam B. P.	3 4 0 to 3 6 0

At the Internal Sale, offerings of Dusts consisted of 18,200 packages. There was a strong and excited general demand, and prices advanced for most descriptions. As in last week's sale, more interest was shown in the powdery teas as compared with the grainy types. Doars, Commons and Medium Assams were selling irregularly at 2 to 3 annas above last rates, while Darjeelings which were mostly plain in character received only fair support and were the weakest feature of the sale. A few very black Middle East type, received fair support and sold at about valuations. The best CTC Assams were firm while the poorer sorts were irregularly 1 to 2 annas dearer.

Quotations	Rs.
Medium Doars Dust	1 13 6 to 1 14 6
Medium Assam Grainy Dust	2 0 0 to 2 1 0
Best Assam CTC Dust	2 12 0 to 2 14 0

Offerings of Other Grades consisted of 1,650 packages, for which there was a good demand. Prices advanced by an irregular 2 to 3 annas above last rates.

COAL AND GRAIN FEATURE IN FREIGHT MARKET

THE American coal trade again dominated the markets last week, although a broader interest was generally displayed by charterers. The peak rate of 72s was paid for a December loader Hampton Roads-Antwerp, Rotterdam or Amsterdam, and this equals the highest rate paid during

the Korean war period. The National Coal Board fixed a new-building 11,000-tonner at \$7.10 for the same ports for three years' trading, commencing July 1956, while other fixtures included Japan at \$18 and Italy at \$9. The grain trades were active with Durban-Continent paying 110s, South Australia-Continent 153s 9d, North Pacific-U.K. 125s and Northern Range-U.K. 87s 6d. A large number of voyages were arranged for rice from Burma to Ceylon at 60s.

The time charter section was fully steady and a fixture of local interest was that of a 9,671 d.w.t. coalburner at 26s for 12 months' local trading.

SUGAR MARKET

Sugar sales in the Calcutta market during the week ended 11th October averaged 3,000 bags daily. Arrivals a day were 5,500 bags and stocks rose to 120,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-12 for ordinary grain and Rs. 32-8 for big grain. Ex-mill delivery rates were Rs. 28-8 for ordinary grain and Rs. 30-2 for big grain. Business by mills was poor and the market was quiet.

HIDES AND SKINS

The market ruled easy. Stocks were higher than in the previous week.

Bazaar Sales

(Between 4th and 10th October, 1955)

Cowhides: Wet salted (Ord) 5,000 pcs on the basis of Annas 12-6 to Annas 13-6; Wet salted (Ord) 8,000 pcs. on the basis of Rs. 9-12 to Rs. 10-12; Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs. 12-12 to Rs. 25-8.

Goatskins: Wet salted (Daissee, Killed) 29,356 pcs. on the basis of Rs. 220 to Rs. 235, Rs. 275 to Rs. 310, Rs. 365 to Rs. 390 and Rs. 350 to Rs. 385; Assam-Dinajpur-Murshidabad 20,300 pcs. on the basis of Rs. 210 to Rs. 295; Purneah-Kisenganj 11,500 pcs. on the basis of Rs. 257-8; Muzafferpore 7,800 pcs. on the basis of Rs. 275.

Bazaar Stocks

(10th October, 1955)

Cowhides: Wet salted 1,49,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 29,000 pcs.; Assam-Dinajpur-Murshidabad 22,500 pcs.; Muzafferpore - Pakur - Patna - Purneah - Kissen-ganj 3,08,000 pcs.

LINSEED

The general tone of the market was quietly steady, though values declined slightly. Supplies were still rather scarce because of poor arrivals from upcountry. Despite the somewhat cautious attitude of crushers following the small oil offtake, there was a fair turnover for ready and forward deliveries. Some activity was recorded in the oil section, chiefly by shippers covering against previous commitments. Latest quotations were based on October Rs. 18-3 a maund.

QUIET CLOSE IN SHELLAC

During the week ended 11th October, the market was firm during most days and slightly quiet at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 154 to 160 buyers; 159 value.
Lemon No. 1 Shellac	Rs. 155-8 to 161-8 buyers; 161 value.
Lemon No. 2 Shellac	Rs. 151 buyers; 153-8 done and buyers; 157-8 buyers; 156-8 done and buyers.
F. O. Std. 1 Shellac	Rs. 148 to 153 buyers; 152-8 done and buyers.
Pure TN Shellac	Rs. 141 to 127/146 basis done and buyers.
4% I. T. N. Shellac	Rs. 132, 136, 135-8 buyers.
No. 1 Kusmi Seedlac	Rs. 147 value, 148-8, 151, 150 buyers.
No. 2 Kusmi Seedlac	Rs. 140 buyers, 145 done and buyers, 147-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 139-8 buyers, 142 done and buyers, 143 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 135-8 to 141-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 128-8 buyers, 131 done and buyers, 135-8, 134-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 121 buyers, 126, 128 done and buyers.
Kireelac	Rs. 66-8 buyers, 67, 66 done and buyers.

Shipments during October until the 7th were 7,186 packages comprising shellac 3,626 packages, seedlac 2,423 packages, buttonlac 110 packages, others 827 packages.

RECORD OPERATING PERFORMANCE ON EASTERN RAILWAY

Three all-time records were established in the operating performance of the Eastern Railway during September 1955. The Railway loaded daily, on an average, 4,287 wagons with coal and goods, as against 4,272 wagons during February this year, which was the previous highest daily loading figure. This Railway handed over to the Northern Railway at Moghalsarai 1,764 wagons daily on an average, as against the previous highest figure of 1,735 reached in August this year. The daily interchange with the Northern Railway at Moghalsarai also touched the highest mark, being 3,424 wagons as against the previous record of 3,355 wagons.

CORPORATION OF CALCUTTA.

Tender Notice.

TENDERS are invited in duplicate for the following and will be received by the 2nd Deputy Commissioner on 11th January, 1956, upto 12-00 Noon. Each tender in duplicate must be enclosed in a sealed cover and superscribed "Tender for...". For specifications and tender forms, apply to the Keeper of Records. Price Rs. 50/- per set:—

Laying a new 60" in. alternatively 72" in. internal diameter electrically-welded steel pipe-line, about 13.65 miles in length from Pulta Pumping Station to Tallah Pumping Station for conveying filtered water from Pulta Pumping Station. The pipe line will be laid underground.

The tenderer should be in a position to fabricate the pipes and to lay them underground, after carrying out necessary excavation works, within the time stipulated. The tenderer shall have also to undertake cathodic protection works as anti-corrosive measure, for protection of the new as well as all the existing old mains.

The tenders will be opened on 11th January, 1956. The rates quoted in the tender are to be good for six months from the date of opening.

B. GHOSH,

Secretary.

8th October, 1955.

COAL COMPANIES

O Po F and Dd indicate Ordinary Preferred Ordinary, Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Di indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

WANTED—A POLICY FOR COAL
UNCERTAINTY HAMPER THE INDUSTRY'S
PLANNED EXPANSION

THE plan frame has set a target of 60 million tons of coal by the end of the second five year period. The figure suffers from the usual defects of planned targets in being dependent on so many other factors in the growing economy that it may be unrealistic by the time it is achieved. What can be accepted is that an increase of about 60 percent over current output will probably be necessary if other industrial expansion plans are fulfilled and provided no new source of power is established on a large scale in the meantime—a most unlikely contingency. This represents a formidable rate of expansion for any industry to accomplish. But growth is not expected to be uniform throughout. The Government is relying chiefly on the nationalised collieries to produce the extra coal. The present production of these pits is about three million tons out of a total of 37 million tons for the whole industry. The expansion required of them will be about 90 percent, so as to reach an output of 18 million tons. The increase proposed for the private sector is eight million tons or about 23 percent.

The reason for the difference in the output targets is difficult to understand. The Government's partiality for nationalisation in coal has been known for a number of years. Shouldering the private collieries out of the industry could be one way of implementing it. The recent tentative policy put forward by some sections of opinion in New Delhi suggests that this might possibly be the aim. What does not seem likely is that the Government seriously considers that a rate of expansion of 500 percent can be achieved by the present nationalised section of the coal mining industry, even with foreign technical assistance. The Government's ideas about the efficacy of nationalisation are believed to be in the process of modification and the Prime Minister has continually affirmed the view that the country's resources will be better employed in new ventures rather than in taking over old pits. The significance for the future of the economy of the high costs of the existing State mines, as pointed out by the Estimates Committee, cannot have gone unnoticed. Yet, as far as is known, there has so far been no change in the allocation of output increase between the public and private sectors. If the figure of 60 million tons is to be achieved at a cost the country can afford it seems clear that the private sector will have to play a bigger part than has been allotted to it. It is well able to do that, provided its present feelings of insecurity are cleared up and the necessary investment can be made. The time has come for the Government to put the industry's mind at rest by formulating a clear policy for coal. The present collection of committee recommendations and ministerial pronouncements are not enough to do that.

★

This need for assurance was the burden of the speech given by Mr. G. A. S. Sim to the shareholders of the Bengal Coal Company last week. This pit is representative of the better units of the industry and Mr. Sim can be considered as speaking for colliery owners generally. His requirements are simple enough—some security for his future investment and fair treatment with transport and price policy. If these can be given, Mr. Sim considers that the private pits can achieve most of the 23-million ton increase in output which the second plan will involve. There would then be no need to expect miracles from the public collieries and the country would not be faced with such a high bill for the production of its coal. The prospect must be a tempting one for the Government and it is difficult to see what prevents its being accepted. Political considerations, many of them based on sound judgment about prevailing trends of opinion in the country, are of course strong and must be expected. There is also no doubt a reluctance to violate the spirit of the fourth amendment to the Constitution. But it is doubtful if the last named of these two factors needs to be entirely put on one side in order to give the private section of the industry the

security it needs. As for the first, the eventual consequences of a failure of coal output in the second plan would be so serious or the economy that it might be well worth the Government's paying some small price in political popularity now to avoid it.

The present position of uncertainty is damaging for the

less than fair to the Indian manufacturers in making highly selective price comparisons. If some of the attention given to bus and truck tyres had been devoted to cycle and passenger tyres; and if a little more awareness had been shown of price levels in the more comparable markets of Australia and South Africa; it is quite possible that different conclusions would have emerged.

The question whether Indian tyre and tube prices are too high is fundamental to the whole enquiry, for it is from this shaky hypothesis that the Commission proceeds to throw out its other two main charges—that the companies are making too big profits, and are not properly controlling their expenditure. The first point to note is that both charges are such as can easily be made but are far from easily proved. The charge of high profits especially is very much the rage in these days of the welfare State. The Tariff Commission has followed the fashion. Its basic theme is a familiar one: cut expenditure, lower prices, and you will still be able to make the profit you deserve. In themselves, all three are commendable aims. But when the Tariff Commission pronounces itself on cutting expenditure, for instance, its suggestions are expected to be a little more precise, a little more definite, a little more realistic than the suggestions one would expect to hear from, say, a mazdoor union chief at a Maidan rally. In criticising the tyre companies, the Commission has failed in its purpose. It suggests broadly that selling and distribution expenses should be reduced to about the 1953 level. But, may one ask, why 1953, why not 1943, or 1933, or, for that matter, 1923? No substantial clue is forthcoming. The Commission has decided that these expenses are too high simply because, according to it, they have increased by 229 percent in the case of Dunlops between 1946 and 1953, and 104 percent in the case of Firestone. To begin with, the Dunlop percentage is based on incorrect premises. Secondly, comparisons with 1946 are invidious because in that year distribution controls had not been dismantled and companies were still working with less than their normal staff for war reasons. Thirdly, if this rise in expenses is the direct result of a vigorous sales campaign that will yield results only years later, there is every justification for it.

Some of the most disturbing aspects of the Commission's report concern profits, reserves, bonus shares and dividends. The criticisms are directed chiefly at Dunlops, but they deserve the attention of every single company here and abroad for their highly original contribution to modern business theory and practice. Briefly, the argument is that profits have been too big; not enough has been put away into reserves; and the money has instead been "squandered away" to shareholders in the form of bonus shares and dividends. But the facts speak differently. In discussing profits, the Tariff Commission seems to have been hardly aware of the Taxation Enquiry Commission's report. The latter contains a careful analysis of profits in various major industries, which suggests that, in relation to capital employed as well as to business turnover, what is now proposed for the tyre companies is basically unjust. The same goes for the Tariff Commission's remarks about dividends. In 1946, Dunlops distributed Rs. 20 lakhs in ordinary dividends at the rate of 40 percent on an ordinary capital of Rs. 50 lakhs. The same Rs. 20 lakhs was distributed each year until 1950. In 1951, when the ordinary capital was Rs. 160 lakhs, ordinary shareholders got only Rs. 4 lakhs more at Rs. 24 lakhs. Since then, they have been getting the same Rs. 24 lakhs from the same rate of dividend (15 percent) on the same capital (Rs. 160 lakhs).

The Tariff Commission seems worried that increases in ordinary capital have come from the distribution of bonus shares. In fact, there is nothing extraordinary about this. It is a normal, and commendable, practice for expanding concerns to plough back their reserves into buying new assets, and then, by issuing bonus shares, expand their capital to reflect better the size of the new assets. The only reason why shareholders allow these reserves to be reinvested is because they expect some return on the reinvestment. But the Commission, in a remarkable departure from accepted canons of business procedure, discovers that "in calculating fair profits we do not consider it proper to take into account the additional liability incurred by the company by issuing bonus shares." And having expressed this opinion, it goes on to add: "We consider it fair to reckon the dividend due to the ordinary shareholders as 10 percent tax-free, on the original amount of Rs. 50 lakhs." (This quotation is from the official Press Note giving a summary of the report). Credulity is strained when these words are eaten four sentences later in the Press Note: "In a letter to the Government (after the report was submitted), the Chairman (of the Tariff Commission) has pointed out that the Commission has nowhere stated that future dividends should not exceed 10 percent on the original capital." (Brackets ours). The contradictions, in sum, are little short of ridiculous; the comparisons invidious; and a molehill of statistics has been used to cover up a mountain of preconceptions that could do lasting damage to the whole fabric of Indian industry.

INTERNATIONAL RECESSION IN BUILDING

U.K.'s RESTRAINT ON PUBLIC AND PRIVATE WORKS

IN Britain, where the value of building and civil engineering work reached almost £1,850 million last year, the building industry must bear a substantial part of the burden of deflation. Much constructional work is done on credit, and the industry is already feeling the effects of the restriction of credit. The local authorities, which undertake a large amount of residential building, as well as schools and other social amenities, can no longer easily obtain finance, even at higher interest rates. The Government has declared its intention to reduce the housing subsidies. It is not surprising that spokesmen of the building industry have asked for reassurances that their activities will not be excessively curtailed, nor that these reassurances are not forthcoming. From the viewpoint of the community in general, it is fortunate that these restraints occur after most of the ravages of the war have been repaired—though much remains to be done to provide satisfactory standards of housing, hospitals, and schools, and to construct a network of roads appropriate to a populous and developed community. It is, however, precisely because the community has become accustomed to a high rate of building that the consequences of the threatened recession of building may be unexpectedly severe. The recent United Nations *Economic Bulletin for Europe* remarked that the large number of dwellings constructed in recent years had been "one of the main factors" that had "kept the economy of Western Europe at high levels". A recession of building in one or two countries would not necessarily have wide repercussions; but there are signs that the recession itself may be widespread.

A recent article by Professor Arthur Lewis in *The Manchester School* (published by the University of Manchester) has shown that there has been no international recession of building at any time in the past hundred years. There have been booms and slumps in building in the United States, Britain, Germany, France; but neither boom nor slump has occurred in all those countries simultaneously—until the latest boom. Now there are signs that the boom may be ending in all those countries together, and in others—notably the Scandinavian group and the Netherlands. Europe congratulated itself on emerging unscathed from the last general recession in America. But it is relevant to ask whether Europe would have been similarly unaffected if that recession had not itself been moderated by the continuing activity of building in America. In Europe, the *Economic Bulletin* pointed out, demand for certain types of dwellings is already nearly saturated. In America, according to the Federal Reserve Bank of New York, fewer new households will come into existence between now and 1960 than in recent years; therefore, in that period the rate of new building, which has sustained the American economy so well for so long, will probably decline.

The big problem will be to prevent the recession of building from spreading its effects widely over the economies; and the problem will be the more difficult because building is not an isolated activity. Steel and cement and bricks and timber and other materials are not all that is involved in building, nor do glass and paint and other finishing materials complete the list. A home will be furnished and decorated, a factory or an office will be equipped. Curtailment of building implies curtailment of demand for many consumers' and producers' goods. Buildings are capital assets, and it will not be surprising if recession of building coincides with recession of capital development in general. Building a factory is the beginning, not the end, of a process of expansion—expansion of the supply of goods to be produced in that factory; and so much factory-building has been done in the past year or two, especially in Europe, that in even slightly restricted conditions of buying, the demand for the final goods may not justify much more building of this kind.

In Britain the authorities are already restricting—by their policy, if not by their direct actions—both industrial and residential building. The British Employers' Confederation has hinted that (among other economies) expenditure on the roads and on other civil engineering projects should be reduced until the economic position is easier. It is, indeed, true that, though building building boom has been an important element in building materials such as steel and cement and bricks requires large quantities of coal—and the reduction of exports and increase of imports of coal will add nearly £100 million to the adverse balance of payments this year. However, it is also an essential of policy that restraint of inflation shall not cause a general recession of industry, nor serious unemployment in any particular industry. The authorities, in other countries as well as in Britain, are overcoming short-term troubles in

their balance of payments by measures whose effects are partly long-term. Restraint of constructional activity is one of these measures. Its effects should be calculated as far ahead as possible. It is accepted that modern governments attempt to level fluctuations in the trade-cycle by varying their expenditure on public works. In Europe, however, so many needs remained unsatisfied during the war that public and private demands on available resources were unavoidably crowded together for a decade after the war. Now, in Britain especially, public and private demands are being restrained together; and it appears that the restraint will be particularly effective in the basic activity of construction. It may yet be necessary, within a few months, to reconsider the policies for public works. But big plans cannot be prepared in a hurry. Nor can work on big projects be switched on or off like an electric light.

WEST BENGAL'S SECOND FIVE YEAR PLAN

WEST Bengal's economic plan for the next five-year period has apparently received more favourable treatment from the Planning Commission than have those of other States. No discrimination between one State and another however is involved in allowing West Bengal to execute a relatively bold plan, though the personal influence of Dr. B. C. Roy might have counted. The needs of West Bengal are obviously desperate. Partition has done immense damage to its economy, depriving it of the richly fertile and well-watered lands of East Bengal, while at the same time throwing on its diminished resources millions of displaced persons. Their hard and often infructuous struggle for living space and livelihood has created many difficult economic and social problems such as very few other States have been facing. The problem of unemployment for the growing number of educated young men has added immeasurably to the Government's worries.

Against this background of the State's economic and social problems, nothing short of a bold approach will do. Dr. B. C. Roy is fully justified in claiming liberal aid from the Centre. To attack the State's problems from several fronts in a simultaneous and concerted manner, but still within realistic limits, a plan such as the West Bengal Government has drawn up is the best answer to the needs. The original expenditure estimates of the plan, after the Planning Commission's scrutiny, have apparently been scaled down to an overall ceiling of Rs. 161.4 crores, but as the Chief Minister's statement at his Press Conference suggests, the State is practically free to pursue its own original plan of Rs. 245 crores if it can raise the balance outside the Centre's contribution of Rs. 132 crores, from its own resources. This, the Chief Minister considers optimistically, is quite possible, though the Planning Commission does not share his view, and he is expecting substantial voluntary contribution to the development fund from the people themselves.

A total of nearly Rs. 340 crores is planned to be spent on the development projects of the State. Of this, the Centre's contribution comes to Rs. 180 crores, made up of Rs. 113 crores on refugee rehabilitation, Rs. 57 crores on the Ganga barrage scheme and the Durgapur group of schemes (excluding the proposed steel mill) Rs. 10 crores on gram panchayat, flood control, urban water supply and rural development schemes. The Reserve Bank of India is expected to contribute Rs. 30 crores as agricultural credit. Of the balance of Rs. 175 crores, the Centre grants Rs. 132 crores to the State from which has to be deducted Rs. 6.5 crores as the State's contribution to its Development Corporation. The balance of Rs. 125.5 crores, plus the estimated Rs. 29.5 crores to be available from internal resources, gives a total of Rs. 155 crores to the State Government with which the State has to finance all its own schemes.

The Chief Minister is of the opinion that the State can raise additional funds to the extent of Rs. 60 crores, outside the above Rs. 29.5 crores, from voluntary contributions and through other means, and he is thus optimistic that it will be possible to push practically all projects through. The total expenditure both on the Central and the State account might therefore exceed Rs. 340 crores, and if Dr. Roy's optimism can be justified by the yield from internal resources, the original estimate of Rs. 445 crores might very nearly be reached. Of the State's schemes, important are those to improve water supply to the city of Calcutta, the north and south lake reclamation projects for middle-class and lower-income groups' housing, the sewage gas scheme for fuel and lighting purposes and the employment scheme for 100,000 of the educated unemployed, included in a total of 300,000 jobs the development schemes are expected to create. Further industrialisation and rural development also occupy a prominent place. The

Chief Minister claims that the State has done very well during the first plan and on the basis of that performance, he is confident that it will do as well or even better during the next. Whether the State has the necessary administrative equipment to handle a plan of this magnitude is a question which should exercise the Government at present, and it can be expected that it already does.

CURRENT COIN

Municipalising Bombay Gas.—Shareholders in the Bombay Gas Company are understandably worried over the Bombay Municipality's plans to take over the company, but no definite information is yet forthcoming as to what exactly the latter proposes to do. At the annual general meeting this week, Mr. B. L. Jalan, in his address from the chair, (published on a later page) quoted Press reports as saying that the Bombay Government had been asked to pass a law enabling the municipality to take over. But this sort of talk has been going on for years and even now "we do not know where we stand." Meanwhile expansion plans are being hampered. Demand for gas is already well beyond the company's capacity, but investors are naturally chary of putting capital into more plant and equipment unless a guarantee against take-over is given. "Unless this is forthcoming," says Mr. Jalan, "expansion schemes cannot be taken up." He points out that the municipality already has enough to do in the way of slum clearance, water supply, better drainage etc. It is reported to have estimated the expenditure on taking over and expanding the company's facilities at Rs. 2 crores, and in the circumstances this would seem a poor way of using its limited resources. If the company itself were to expand output, it would need only about Rs. 70 lakhs. In any case, Mr. Jalan states, whoever produces the gas, its price would have to be raised, for at the present rate no one can undertake expansion schemes. The company's profit last year was about the same as in 1953. Expenditure on wages, salaries and coal rose; Mr. Jalan says the fact that the profit was maintained despite this indicates greater efficiency. Sales show a modest increase of 2.4 percent over 1953, and production since 1946 has risen by more than one-third. The dividend is maintained at 12½ percent tax-free.

The Konar Dam.—The Konar dam, which Mr. Nehru inaugurated last week-end, marks yet another landmark in the progress of the D.V.C. The Konar is the fourth project of this great river valley scheme to be completed so far. Built over a period of four years, the dam is considered an outstanding achievement. The initial difficulties were immense—the right equipment for a gigantic dam of this size, some 160 ft. above the bed of the Konar river and with a length of 12,760 ft. could not be obtained for a considerable time and work had to be carried on with whatever was available close by. Yet the work could not be slowed down. The working of the Bokaro project is ultimately to depend upon this dam which is designed to provide cooling water to the latter. Its completion is therefore a tribute to the administrators and the engineers working on the D.V.C. and also to Mr. Voodruin of the T.V.A. who designed it. Of the D.V.C.'s other projects, the Tilaya dam—a small but quite important part of the scheme as a whole—and the first thermal unit at Bokaro which has already been supplying electric power to several industrial concerns in the area, were opened by the Prime Minister in 1953. In August last, the Vice-President of India opened the Durgapur barrage, meant to control the irrigation provided by the large dams. The Konar dam is expected to have a normal storage of 260,000 acre feet. Its likely perennial flow has been calculated at 400 cusecs. Apart from the supply of cooling water to Bokaro, electric power of some 40 megawatts—will also be generated from the storage. It will thus be the first source of hydro-electric power from the D.V.C. The dam will have little effect on flood control which will largely be the function of the Panchet and Maithon dams, but it will irrigate 68,000 acres of rabi and 36,000 kharif crop areas. The economic value of the dam has been questioned in some quarters because of the large sum of money spent on its construction. But the final assessment must await the completion of the D.V.C. project as a whole. Any piecemeal calculation of cost and returns is likely to lead to wrong conclusions at present, because of the inter-dependent nature of the various projects.

Indian Industries Fair.—More than 25.4 crores are being spent by 20 countries and several foreign and Indian industrial concerns, on the pavilions they are building at the Indian Industries Fair, due to be opened by the Prime Minister, Mr. Nehru, on 29th October. Conspicuous by its smallness, in comparison with the efforts of other countries, is the U.K. pavilion. The Americans,

with their 100,000 sq. ft. site, and 200 crates-full of atomic reactor display, are the biggest exhibitors. The Russians, with 64,000 sq. ft. of space, where they are constructing a "Crystal Palace" style of pavilion, are not much less impressive. Other "Peoples Republics" are also having costly, ambitious displays. The East Germans have some heavy machinery for display. The Chinese (90,000 sq. ft.) have rich, ornate stand decorations. Rumania's 146-foot oil derrick, and marble-floored hall containing petroleum exhibits, promise to show India something of the oil industry's progress. The Czechs have a timber-arched roof pavilion, and Yugoslavia's stand, with its light pre-fabricated iron work, is the envy of the numerous designing experts who are here for the Fair. Sources close to the U.K. High Commission in New Delhi say that Communist efforts in Fairs such as these have been an integral part of the "cold war", and free Governments and industries, have been put to great "prestige" expense for which they do not get a comparable return in trade sales. As in several European exhibitions, Britain is on the defensive. The modest (20,000 sq. ft.) pavilion has been divided into stalls for several leading U.K. firms—B.O.A.C., British Iron and Steel, B.S.A., etc. Another defence measure is a circular which the U.K. Trade Commissioner in New Delhi has sent to all participants using British goods. This says that he has with him a large stock of "Made in Britain" showcards, which he would be pleased to supply free of cost. Also, the Trade Commissioner's office plans to print a brochure listing all the exhibits at the Fair, which have been manufactured in Great Britain. These extra efforts might offset part of the bad publicity Britain will probably get when eight million Indians compare the enormously expensive (and impressive) Communist displays with the somewhat feeble British attempt. India herself, however, is putting up a powerful show. For indeed this will be the biggest Industries Fair ever held not only in India, but in the East. Government enterprises are well represented. The Chittaranjan Locomotive Works and the Rs. 172-crore Bhakra project are among the several national enterprises which will be seen in miniature. The efforts of the private sector, too, are impressive. The British and American oil companies have striking stalls. The Assam Oil Company has an oil derrick as the "centre-piece" of its pavilion.

PUJA HOLIDAYS

Because of the Puja holidays there will be no issue of CAPITAL on 27th October, 1955. This is the last issue of this month and the first issue of next month will be published on 3rd November, 1955.

and Stanvac and Burmah-Shell hope to publicise their big new refineries. Philips intend to show live television, never before seen by any large Indian audience. Dunlops and Tatas Kirloskars and Lever Bros and several other concerns well known in India hope to show some of their contributions to India's life and economic development, in what the Fair authorities have called the "biggest window in the East".

Cloth Hoarding and Output Ceilings.—Reports that cloth dealers in Calcutta are deliberately not clearing stocks lying at the railway yard, possibly in order to profit from scarcity during the Puja buying season, do not refer to an isolated phenomenon. Signs of hoarding are evident in many other parts of the country also. Some in the textile trade expect a shortage soon because domestic and foreign demand is increasing. As with sugar, consumption of cloth has been rapidly increasing with the rising standard of living. But in order to push handloom products, the authorities have placed a ceiling on mill production and reserved certain popular varieties like dhotis and sarees for handlooms. The handlooms, however, have not been able to show an adequate increase in output. Apprehensions of scarcity in coming months are therefore as much a result of Government policy as of hoarding by dealers. One obvious remedy is to relax restrictions on mill production. Reports indicate that most mills in Bombay and Ahmedabad have already sold their production for the next three months in advance, and their stocks are below normal. Stocks with primary dealers are also believed to be smaller than usual. Foreign demand, especially from East and West Africa, has revived. Shippers report good business during recent weeks, in spite of reduced purchases by the U.K., Burma and Indonesia. U.S. interest in Indian grey cloth has been increasing and orders for about a million yards have been placed. More business is expected in the near future. Since the Government wants to earn more foreign exchange, it is thought that it would be reluctant to restrict exports. In that case, the pressure of internal consumption would push up prices. But there would be no justification for that, as mills are willing and able to increase their output at short notice.

SECURITY AND SERVICE

THE LIABILITY OF MEMBERS OF THE COMPANY IS LIMITED.
(INCORPORATED IN ENGLAND)

Calcutta Office:
2, Fairlie Place.

THE BANK OF BARODA LIMITED.

WE ARE GLAD TO ANNOUNCE
THAT A BRANCH OF THIS BANK
WILL BE OPENED AT

THE INDIAN INDUSTRIES FAIR

Mathura Road, New Delhi,

On Saturday, the 29th October, 1955, for the convenience of the exhibitors and the visitors during the period of the exhibition. For further particulars please apply to the Bank's branch at New Delhi.

Mathew S. D'Souza,

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

FURTHER RESTRAINTS LIKELY

(FROM A SPECIAL CORRESPONDENT IN THE U.K.)

IT will be recalled that upon the Conservative Party being returned to power industrial trends in the United Kingdom became pronouncedly expansive and many new enterprises were foreshadowed as coming into existence in the near future. However, that exuberant mood was soon damped down by the Chancellor of the Exchequer's warning that steps were to be taken to reduce the inflationary elements at work in the economic situation. Some of the measures for brining this about were made known immediately, but it was also announced that there, possibly of a more sweeping nature, were being devised for later presentation. Particulars of these have still to be given, and, pending their disclosure, industrialists have temporarily lost much of their zest of a few months ago and their policies have not opened out in the manner which then seemed likely. Meanwhile, Mr. Butler has not lessened apprehensions by declaring that, far from there being any modification of his original credit restriction ideas by reason of chastening second thoughts—as some had dared to hope—he has become more convinced than ever of the necessity of a return to partial austerity. Therefore, he intends to introduce measures of a more salutary kind than he has hitherto contemplated. The details of his contribution to soaring deliriums and living laborious days have been reserved for the reopening of Parliament in a fortnight's time. That something truly unpleasant is in prospect has been inferred from the Prime Minister's avowal that Mr. Butler will have his complete support and that no changes will be made in the Cabinet until the new crusade against over-

liberal spending is well under way. It would be unwise to draw too many conclusions at this stage, if only for the reason that, for the sake of retaining popularity, the Government would probably relent somewhat if sufficient excuse offered itself; for example, a substantial improvement in the balance of trade. But it would appear that, in any event, the falling off in retail demand for goods must be extensive; it is plainest at the moment in such lines as furniture, textiles, jewellery and other luxury articles. It is regarded as certain that, beyond credit restriction, Mr. Butler, with the aid of other Ministers, will attempt to deal with the notoriously ill-directed and over-generous disbursement by the State of various kinds of reliefs and aids to incentive—to give them polite names. Since these gifts have now become an accepted part of English life for the majority, to interfere with their distribution will be to excite widespread resentment. Then there is the question of the exercise of restraints upon output and trade. Can the Government really tackle these in earnest?

Export Trade Portents

Amid all its reiterated calls for drastic economic and financial readjustments lie ahead, and cannot be escaped, the Government is careful to give the assurance that nothing will be done which would harm Britain's export trade, and, that in fact, this branch of industry may expect official encouragement. Whether a contraction of home trade can be brought about without having untoward reactions in the export trade is debatable. That point, so often made, has not been stressed on this occasion. But the Government's professions of its paternal love for the export trade have not prevented industrialists from asserting that if the export trade is to continue to flourish, then the Government's outlays must be substantially decreased and so make a further re-

duction of taxation possible. That way alone, it is emphasised, can production costs be lowered to a truly competitive level.

Advertising Expenditure

If there is doubt with regard to the amount of the spending power of the community in the near future, so there is also as to how it will be allocated. This arises not only from the belief that domestic budgets will undergo curtailment as a result of a lessening of hire purchase facilities etc., but also by reason that the advent of commercial television may benefit some firms to a far greater extent than others. It is true that there are three principal grades of charges for television advertising, according to the nature of the programme and the time at which it is shown, and that fleeting seconds may be seized for possible commercial advantage at the cost of a few hundred pounds or so. But the rate for the most impressive kind of commercial appeal, that combined with human interest in a "documentary" can be as much as £4,000 for 15 minutes. This, it should be noted, is the transmission charge. The cost of production is a by no means trifling extra. It is evident that only very wealthy firms can afford to risk these outlays. Although, no doubt, there will be substantial cuts in advertising expenditure in other directions, (especially in newspapers and periodicals. The sales pull of commercial television in Britain cannot be estimated at all closely at present; but favourable American experience is cited in support of the generous forecasts which are being made by the sellers of this new kind of space. It is also alleged that the apparent expansions of sales caused by the recommendations of television stars to use the soap that they use, drink the beverage that they drink etc., now so prominent on boardings and in the Press, warrant the utmost optimism in calculating the rewards to be reaped from commercial television. Commercial television, so it is said, will get right into the home and right into the heart—and it is the heart, and not the mind, at which most advertisers should aim.

Textile Prices

The chief happening in textiles has been the reduction in prices of nylon and Terylene yarns. It is claimed in the case of nylon that the price reduction is possible because of increased production of the yarn. The words used in connexion with the Terylene announcement were that "the time has come to put the fibre on a commercial price level." It should be observed, however, that foreign producers have been recently offering nylon at below the British rate—which is now brought down to the lowest of any producer. In both instances, the reductions will allow British textile manufacturers to charge lower prices for their finished goods.

Some of the remarks recently made in the U.S.A. by Mr. George S. Buck Jr., technical director of the National Cotton Council of America, have been given a good deal of publicity. Mr. Buck did not deny that cotton had lost important markets to its synthetic competitors, and was in danger of losing others; but he held that it had made important gains in other spheres—as far apart as women's clothes and military clothing. He believes that many lines of profitable research are still open to cotton and that more money is needed for their exploration. What attracted most attention was his declaration that "in a sense, the entire textile industry is threatened by Research Chemistry and the related sciences." These had contributed new fibres and finishes but they could also lead to the replacement of textiles themselves by special papers, plastics, films and entirely new non-spun and non-woven structures. The textile industry's challenge should be a greater technological effort on behalf of its products. "The dominance of one or other fibre may possibly be less important than the survival of the textile industry itself," Mr. Buck's views are not, in essence, new. They acquire additional authority at his hands and he carries further the possible implications of current trends, more especially where packing and wrapping are concerned.

Markets in Non-Capitalist Countries

It is interesting to see how very differently worded are industrialists' references to Communist countries, compared with what they were a year ago. Certainly, the man of business has never adopted the strident tone of party orators, and has heeded, as far as he dared, the time-honoured maxim that business knows no politics. The only relevant question for him is whether any of his goods are wanted and whether payment would be forthcoming within a reasonable time. This might, indeed, be the way not only of self-interest but of the maintenance of peace. Nevertheless, he has thought fit to remain guarded in his references of Communist countries until of late. Now he does not hesitate to announce with pride the contracts that he has secured or hopes to secure in non-capitalist countries. Thus the great British dairy combine, United Dairies, has made known that a second contract with the U.S.S.R. for dairy machinery is in course of negotiation. The engineering firm of Acrow, whose new works were opened a few months ago by the Chancellor of the Exchequer, has formed an associated company in Hongkong to take care of sales in the Far East and, in the Chairman's words "with an eye to the future when the vast continent of China will re-open its gates to international trade." These are welcome signs to men of sanity and goodwill. A few more of them and Britain's inflation clouds, which at present hang over the industrial scene, will lose their power to cast shadows and no one will quite know how the transformation has come about.

A DITCHER'S DIARY

of its own heroes? It is perhaps because of this kind of mistreatment to which history is always being subjected that it has often been cynically defined as mere edited gossip or, to use Henry Ford's name for it, "bunk".

The President of the Congress Party, Mr. U. N. Dhebar, has already proved that he is not afraid to express a novel view of the problems on which he occasionally expounds. His recent comments about the duty of a Government to follow the dictates of its Party broke new ground among the accepted principles of democratic representation. Now he is offering us some fresh ideas on the rôle of the female in this drama of life. I am sure he has the entire fair sex with him when he calls for greater opportunities for women to achieve social, economic and psychological fulfilment; although I suspect that woman's chances of escaping the drudgery of the kitchen varies in direct proportion to the household's ability to pay for somebody or something to undertake it for her. It is when he demands an end to "lipstick civilization" that I suspect he is on weaker ground; when he asks women not to wear for at least ten years any jewellery given to them by their men folk. I know he is. The use of lipstick in the modern world has always grown as female emancipation has spread. Before then it could be worn only by the woman of the wealthy and independent upper classes; among the others, poverty and sheer weight of prejudice stood in the way. Nowadays it is used in all countries by women who wish to show that life means something more to them than domestic drudgery and now the one unmistakable sign of freedom and independence in women is their ability to make the best of themselves. Mr. Dhebar's comment that it must have been the men who cheered in response to his advice about wearing jewellery, was probably right. Most men would agree that such female adornment is rather the badge of their own servitude. In western countries the wearing of jewellery has, like the use of lipstick, increased with emancipation and many men of the older generation know it to their cost. I suspect Mr. Dhebar has tempered his ideas about women with a little of the revolutionary puritanism which distinguishes his politics. He appears still to subscribe to the views of the early campaigners for female rights—that the only way a woman can show she is as free and independent as a man is to act like one. Some of them used to put those ideas into practice and the results are a nightmare to this day. All that has long since gone out of fashion and the modern woman no longer seeks her freedom by denouncing the more endearing characteristics of her sex. Nor does she now consider it necessary to adopt the excesses in aggressive plainness which at one time earned English women such a bad name. It seems to me that it will not be the renunciation of lipstick or jewellery which will secure the women of India their freedom so much as a release from the drudgery of poverty, disease, back-breaking toil, and too many children.

The tenth birthday celebrations of the F.A.O. reminded me more than ever of a scientific convention. But a scientist, I suppose, is what the farmer is these days or should be if the lurking spectre of Dr. Malthus is to be held permanently at bay. The world is likely to double its population in the next hundred years or so and if all those extra mouths are to be fed as often and as adequately as their good health demands the farmer will have to be backed by all the ingenuity science

can muster. The F.A.O. has made some contribution towards raising farming to the status of a modern profession. But it will be a long time before all the world's farmers are equipped with the necessary smattering of chemistry, bio-chemistry, biology, agronomy, meteorology, veterinary science, economics, law, administration, business management, motor mechanism and elementary electricity. It is little wonder that the trend throughout the world is towards the larger agricultural holding where the benefits of division of labour can be gained. Throughout the world, that is, except in India, where the movement seems to be all in the other direction. I do not envy the Committee of Land Reforms its job. It has to declare itself on issues which are probably, in the long run, of more importance to this country than the growth of its industries. But the suggested maximum of 30 acres of land is not going to be high enough to permit scientific farming. Nor will it be enough to yield the surplus over individual needs which can be taxed for revenue purposes. When all available land has been brought into cultivation and the population has expanded so that all holdings are pressing on the lower limit, what can be done with the increasing numbers of those who will then have to go landless? Co-operation is one answer to the problem of increasing yields, coupled with industrialisation for the surplus numbers. But co-operation, as Stalin discovered, is not much to peasants' liking, and force is ruled out in a democracy. The eventual results might even be two nations, one farming just enough land to keep itself alive, paying no taxes and marketing no surpluses, the other industrialised, buying its food from abroad and paying the taxes for the combined community. The problem is a tricky one; I would not like to be called upon to decide how it can be solved.

The International Union of Official Travel Organisations is to meet in New Delhi this week for its tenth general assembly. The least that is required of it is that it should ginger up the Tourist Division of the Union Transport Ministry whose work, at the moment, leaves much to be desired. The idea of promoting India's internal tourist traffic has not yet got beyond the tentative stage, although it is regarded as an axiom of tourism everywhere that the growth of the incoming flow is directly related to the size of the internal movement. This reminds me that both in the U.K. and on the Continent a good deal of effort is being spent on attracting tourists to places with literary associations. In this country, Santiniketan is the only place which enjoys that kind of tourist patronage. Why, I have always wondered, cannot something be done to popularise other places associated with the memory of well-known poets and men of letters? But this is perhaps linked up with the larger question of popularising the different regional literatures through translations in a medium which most educated people throughout the country can understand. It is all too common in India today that highly-educated and cultured people from one part of the country should know little or nothing of the literature of another part. I do not see why the Union Education Ministry, which has already undertaken so much literary work, such as the publication of Gandhiana and a comprehensive history of India, should not find the task of encouraging the spread of regional literatures through translations well within its purview. English translations, for instance, would not only go a long way towards mitigating the every-State-for-itself-and-the-devil-take-all-India spirit. They would also have the advantage of acquainting the outer world with India's literary wealth.

Company Meeting

BENGAL COAL COMPANY LIMITED

CHAIRMAN MR. G. A. S. SIM'S REVIEW

Addressing the shareholders of the Bengal Coal Company Limited, at the General Meeting held on 13th October, 1955, the Chairman Mr. G. A. S. Sim, said:—

Gentlemen,

You have already seen the Accounts for the half year ended 30th April, 1955. They seem to me to speak for themselves, but if you have any questions to ask, I shall be happy to answer them.

Your Board are glad to have been able to recommend an increase in the dividend. Some of you may feel that the dividend should have been higher in that, with the threat of nationalisation of the coal industry, there is little purpose in maintaining the reserves of the Company. Your Board are not unconcerned about the imponderables of Government's policy—and I will refer to these later—but they have faith that there is an important place for your Company in the future and if, as is our intention, we are to contribute substantially to the increased production of coal, your Company's reserves will be fully employed.

I would remind you that the dividend is Rs. 17/8/- for the half year on each share of Rs. 200/- nominal value. This is at the rate of 17½% per annum on the nominal value of the share. The share is however a share in the whole undertaking of the Company which has been built up during more than a century and the real return of the dividend is in relation to the latter, and not to the nominal value of the capital. Calculated on the capital employed in the Company,

the dividend represents a return of less than 5½% per annum, a very small return for a coal company working a wasting asset.

From time to time, those who disapprove of private enterprise, refer to companies like yours as if they were owned by a few rich individuals whose rapacious pockets are constantly filled by profits produced by the reckless exploitation of minerals belonging to the State. I would like to give you a few figures which may paint a different picture.

There are 1,578 Ordinary Shareholders in this Company, holding an average of 31½ shares each. Of these, 891—over 56%—hold ten shares or less. Their annual income from the Company does not exceed Rs. 350/- per annum. Another 289—or 18%—hold more than ten but less than twenty shares. Of the 75 shareholders who own over 100 shares in the Company 32 are Institutions or Joint Stock Companies who are themselves owned by numerous individual shareholders. So there is no concentration of wealth here.

We have already seen that the yield on the capital employed is very low, but I would remind you that whereas the Ordinary Dividend requires Rs. 8,75,000/-, the provision for taxation for the half year amounts to Rs. 15,00,000/-. So the pockets of the State are being well lined.

No Reckless Exploitation

As for "Reckless Exploitation", I need hardly tell you that your Company does not indulge in bad

mining practice—but the Mines Department of Government itself is responsible for seeing that all coal companies work their collieries in a safe and proper manner.

Raisings during the half year totalled 13,27,000 tons. This is again a record output. It has always been your Company's policy to keep in line with India's growing requirements of coal and, in pursuance of that policy, the Company laid, soon after the last War, the foundations of far-reaching development plans which included the sinking of Chinakuri and Girimint collieries—names with which you are familiar. Development still goes on, and in the four years ended 30th April, 1955, the Company spent no less than Rs. 1,23,00,000/- on Capital Account. While India's output of coal has increased by 23% since 1939, your Company's output has risen by 70%.

Amid this general increase in production a setback was experienced in April this year at Parbelia where, owing to an outbreak of fire in the underground workings, the pit had to be temporarily closed. The mine galleries have been carefully explored and, as a result of information gathered from initial investigations, plans have been drawn up for the re-opening of the colliery. In order to ensure the safety of those working underground as well as of the property itself, however, this work will have to be done with great skill and care and will therefore take some time.

This question of production has assumed a new sense of urgency and significance in the context of the Second Five Year Plan. The industrial development of the country contemplated in the plan will call for, as one of the essential conditions for its success, a vast increase in the output of coal. Against the present annual production of 37 million tons, it has been estimated that by 1960 the country will need to raise about 60 million tons of coal. Increasing the production of an entire industry by over 60% of its total current output is a task of formidable dimensions, which can only be achieved by the most strenuous efforts of all concerned. How best to plan for the attainment of the coal target has been the subject of considerable thought in Government and industrial circles during the past few months. At present, out of the total annual production of 37 million tons private enterprise raises 34 million tons and Government-owned collieries 3 million tons. The additional production required is so large that, not only is there ample scope for development in both private and public sectors, but it is essential for the two sectors to work together in a spirit of mutual understanding and confidence.

Prejudices

In the general structure of the Indian economy it is recognised that private enterprise has an important role, and it has been said that there should be no nationalisation of any existing industry for the sake of nationalisation. Yet in relation to the coal industry there appear to be, in certain circles, pre-conceived prejudices which cause private enterprise to be looked upon as a vague embodiment of evil which has to be fought and destroyed. Should this view prevail with Government it is obvious that with its enormous resources and with so many powerful weapons in its armoury, it would be an easy task to demolish the present structure of the coal industry. This might lead to a sense of self-satisfaction in some quarters, but the ultimate result of any industrial policy will be judged, not by the negative test of destruction, but by the positive one of what has been successfully achieved.

Government has already been assured by the private sector of the industry that it is in a position to produce the bulk of the additional 23 million tons required, and that for this purpose it is eager to mobilise all its resources. In response to a query as to what facilities were required to achieve this increase, Government was informed that to embark on such a gigantic task, which naturally called for long-term plans of investment, some reasonable security of tenure should be given. This request for security of tenure is fully justified by the length of time it takes to develop virgin coal properties, and by the apprehensions which have been present in the coal industry for some years now. The industrial policy statement of 1948 envisaged the possibility of the coal industry being acquired by the State in the future, although it was stated that for a period of ten years nothing would be done to alter the industry's structure. As 1958 approached doubts naturally arose as to the shape which Government policy might take in future. These doubts were increased by the Fourth Amendment to the Constitution, which specifically referred to the extinguishing and modification of the rights to work minerals, and which rendered it unnecessary in the event of State acquisition to pay full compensation as previously understood. In view of this it is not unnatural or unreasonable that the private sector, while expressing its eagerness to play its full part in the development of the country, should feel that it should be given some sense of security, for a sense of impending decay must necessarily sap all initiative and enthusiasm with bacterial thoroughness.

Points to Ponder

In the context of the great increase in coal production which must be achieved within a very limited period of time, it is manifest that destroying the many years of an industry which has been built up over harder. I hope that, before a definite policy is formulated, due consideration and weight will be given to all the relevant factors. It is necessary, for instance, to assess carefully the financial resources which would have to be diverted by Government to coal, when the same resources could be released for the country's other essential needs if the private sector were allowed to participate freely in the development of the coal industry. The cost of producing coal is working results of the State Collieries have shown that their cost of production is higher than that of most other collieries, and the majority of the State Collieries are running at a loss. While I believe that the existing selling prices of coal are unrealistic in relation to present day costs, if the cost of State produced coal is higher than that of coal produced in the private sector, any extension of State production will mean that either higher selling prices of coal will have to be fixed than would be necessary if the bulk of the industry continued under private management, or Government will have to subsidise its own production. Neither of these courses would materially assist industry. If, on the other hand, Government decides that private enterprise still has a useful role to play in the coal industry, then private enterprise should

be encouraged to function with vigour instead of having its stability undermined at every opportunity. In some quarters a policy is advocated whereby all collieries not run by the State would be frozen to more or less their present dimensions, while the public sector alone would see any significant expansion. Such a policy in an industry which has to work a wasting asset would be tantamount to the progressive elimination of the private sector. A healthy, vigorous and expanding private sector working in close co-operation and harmony with the State collieries, can undoubtedly ensure the successful achievement of the Plan.

The existence of new and expanding collieries outside Government's direct sphere of operation would not mean that Government would be precluded from having adequate control over them. There is nothing for instance to prevent Government from taking steps to ensure—as in fact they now do—that at all collieries mining operations are carried out in the most scientific manner, and that all possible precautions are taken to ensure the safety of those engaged in the industry. No one objects to any reasonable measure which Government may take to furtherance of aims such as these. To achieve these results, however, it is not enough to take private enterprise which can, with a little encouragement, be mobilised behind the Government in the great task of developing this great country. It would be folly to waste this.

Transport

The direct connection which availability of transport has with the level of production in the coal industry is a subject to which Chairman of this Company have been drawing attention for over 100 years. Nevertheless I make no apology for emphasising that the success of the Coal Plan and in fact, the Second Five Year Plan as a whole, will be largely conditioned by the ability of the country's transport system to shoulder the very heavy responsibilities which will be placed upon it. I believe that the Railways are conscious of this, and are engaged in planning up comprehensive schemes to meet the situation. The early finalisation of these schemes, and above all their implementation with the utmost possible speed, are essential if the growing demand for coal throughout India is to be met. The railways at present are hardly able to cope with the current level of production, and every year we witness the spectacle of mounting stocks at the pitheads in the months preceding the monsoon. This year the loading of wagons in the Bengal and Bihar fields has on average been better than in the two preceding years: the average daily loadings during the period January/June, 1955 having been 3,175 wagons against 3,103 and 3,020 in the corresponding periods of 1953 and 1954. The monsoon months, however, additionally bring with them a falling off in general traffic with a corresponding increase in the number of wagons offering for the coal industry. In this respect the current year has proved to be most disappointing. During the months of July and August this year the daily average number of wagons offered by the Railways for allotment was 3,183 and 3,443 respectively as against 3,367 and 4,131 for the same months last year. This is a disturbing feature of which serious note has to be taken for it is a danger signal warning us of a trend which, if not checked in time, may set in train the familiar chain of events leading ultimately to increased stockpiles at the pitheads and resultant difficulties in production.

There is another aspect of railway transport to which attention should be drawn. Experience has shown that State collieries are given preferential supplies of wagons at the expense of collieries not operated by Government. If the public sector is to expand at a rapid rate and transport capacity continues to lag behind, there is a danger that such wagons as are available will be directed primarily towards the State operated mines, to the neglect of the others, thereby interfering with the expansion plans of the latter. In the interest of the coal industry as a whole, wagons should be allocated between the two sectors on a fair and equitable basis and not on the basis of discriminating in favour of one at the expense of the other.

Sandstowing

In the interest of safety, as well as of the best method of working a mine, stowing is recognised as playing a most important role. As I reminded you last year, we first began sandstowing in the Dishergarh Seam in 1916 and, in the years that have followed, the practice has been widely extended at your Company's collieries. The Damodar Valley Project which will undoubtedly bring great benefit to the country has, however, created an incidental problem causing concern to all those who are engaged in mining near the Damodar and its tributaries.

It is expected that the Maithon Dam will be completed in 1956 while the Panchet Dam will be ready in the following year. Thereafter all sand carried down by the Damodar and the Barakar rivers from their upper reaches will be deposited above the dams. The sand supplies below the dams will no longer be replenished each year, and so less and less sand will be available there. Since our sandstowing sites are situated below the dams the position is—using some anxiety. Owing to the annual replacement of sand during the monsoon, it has been possible to limit sand gathering to relatively short distances from the edge of the Damodar, and because the water level of the river falls appreciably during the dry season, a substantial proportion of our sand requirements can be obtained by hand loading. After the completion of the dams, however, the water level will be higher and so will reduce the areas of the river bed available for hand loading of sand. As there will be little or no replacement of sand in future it will be necessary to recover sand from greater depths below water level and from greater distances. This will entail the provision of more powerful sand pumps than those now in use and of extensive transport arrangements for the haulage of sand. Thus not only will the cost of sand getting be appreciably increased, but the loss of replacement sand will mean a steady depletion of the existing supplies leading to ultimate exhaustion which in some areas may come about in a few years' time.

The problem of stowing in relation to the dams in the Damodar Valley is one which requires careful examination, and I am glad that Government has recently set up a committee to go into the matter in detail.

Labour Relations

There have been no serious disputes at any of your Company's collieries during the last twelve months. In the meantime proceedings still continue before the All India Industrial Tribunal, which was constituted last year to review the wage structure in the coal industry as a whole. Your Company is represented at these proceedings by the Indian Mining Association and it may interest you to know that the Association has been able to secure the services of Mr. L. J. Barracough as its adviser during the pendency of the tribunal proceedings. I think all of you present here today remember the long and distinguished career which Mr. Barracough had as the Chief Mining Engineer of your Company, and we are glad that his vast experience and knowledge of conditions in the Indian mines is now available to the Indian Mining Association.

We have continued our long tradition in this Company of providing amenities for our labour, the outstanding example of which is the Sanctoria Hospital. Long before the extension of hospital facilities in the coalfields under the auspices of the Coal Mines Welfare Fund, our hospital at Sanctoria set a standard for medical attention to labour which compares favourably with any similar institution in the country. It is a 150-bed Hospital, although it frequently has to look after patients in excess of this number. Staffed by highly qualified personnel, the measure of its utility can be gauged by the reputation it enjoys throughout the Rancegunge and Jharia fields.

Among other problems of health Tuberculosis has a special importance in this part of India and we are doing our share in the efforts being made to combat it. Your Company is closely associated with the Asansol Tuberculosis Association and is represented on its committee of management. We have also given assistance to the T.B. Hospital and Clinic near Kult. It is encouraging that the Company's employees themselves are fully conscious of the necessity of every possible help being given to fight this scourge, and an appreciable sum of money has been collected and made available for this purpose from the Dishergarh Group alone. Some of this money has been

earmarked for a hostel to be built near our Seetalpur Isolation Hospital for the accommodation of patients who are undergoing treatment but cannot gain admission to a regular hospital.

Education

In the sphere of education the Company runs thirteen primary schools at its collieries including a special school for Santal children near Sodepore 9 and 10 pits colliery. We also provide generous financial assistance to the Boys' High School and Girls' Junior High School at Sanctoria.

As regards technical education, our technical school at Sanctoria continues to do very useful work. During the half year under review we had 28 mining apprentices and 59 electrical and mechanical apprentices undergoing training. The school was also responsible for training 40 lamp cabin workers and for running a course of instructions in first aid for colliery workers.

Sports have always been encouraged by the Company and numerous programmes were organised throughout the last twelve months at our own collieries, while labour from our collieries also took part in sports organised under the joint auspices of the Coal Mines Welfare Organisation and the Industry. The increasing number of men participating in these sports, as well as their enthusiasm, shows that these gatherings are becoming increasingly popular with our labour forces.

An open air cinema at Sodepore 9 and 10 pits provides weekly shows to labour whilst the Company regularly assists the staging at its collieries of traditional theatrical shows with which is entwined so much of India's popular folk lore.

The satisfactory results for the half year under review are in no small measure due to the untiring efforts of your Chief Mining Engineer, Mr. Rosser and to all those who work under him. Their achievements can be seen in the very high degree of efficiency with which all your establishments in the coalfields are operated, and I am sure you will join me in congratulating Mr. Rosser and his staff on their excellent work.

Company Meeting

BOMBAY GAS COMPANY LIMITED

MR. B. L. JALAN'S SPEECH

Speaking at the Annual General Meeting of the Bombay Gas Company Ltd. held on Monday, the 17th October, 1955 at the office of the Company at the Empire House, Bombay, Mr. B. L. Jalan, the Chairman said:—

Gentlemen, We meet to-day under the shadow of the grievous and irreparable loss sustained by the Company in the sad and premature demise of our last Chairman, Shri K. D. Jalan. It was only due to his diligent and strenuous efforts that the management and control of the affairs of the Company were transferred to India. He guided the affairs of this Company in every detail and the services he rendered surpass any expression of appreciation. He was a man of outstanding ability and striking personal qualities. His tenacity of purpose and zeal for work will be remembered by all who were associated with him in the various spheres. His election to the high office of the Presidency of the Federation of Indian Chambers of Commerce and Industry at the remarkably young age of 32 was a fitting recognition of his interest in and the lead he gave to the business community. He was very closely connected with many commercial and industrial institutions and worked with distinction on various governmental and other committees.

Since we met last, the outlook in the international field has seen remarkable improvement. The five principles of co-existence enunciated by our Prime Minister are being widely recognised by the different countries. We are proud to-day of the part which India's foreign policy, thanks to our Prime Minister, has played in easing the international tension and it has earned laurels throughout the world. Nearer at home, the trouble over Portuguese pockets in India has considerably increased, but I am sure this problem will be satisfactorily solved with the non-violent though firm policy of our Government to deal with it in a peaceful way. I hope that better sense would prevail with the Portuguese Government and they will follow the footsteps of our British and French friends.

Economic Outlook

The general economic outlook in the country to-day is brighter than ever before. The country is stirring with activity and hope of large-scale achievements in this sphere on a planned basis. This is the last year of the First Five Year Plan and we feel a sense of satisfaction that much has been done under this Plan which will provide the necessary foundation and base for further economic development of

the country which alone can help us in our objectives of fuller employment and improved standard of living. The Planning Commission is now busy in finalising the Second Five Year Plan a tentative framework of which has already been placed before the country. While we have reason to be satisfied with the overall targets of national income, investments and employment, there are certain basic techniques which should be carefully considered by the Commission before finalising the Plan. I sincerely hope that the Government will give due consideration to the question of relative importance of large scale, small scale and cottage industries in the industrialisation programme of the country, the relation between the private and public sectors and the role of consumption in providing stimulus to growth. These are basic questions and on the selection of the correct approach to them will depend the success of the Plan to a great extent. I have no doubt that the Plan will be formulated and implemented in a way that would ensure further uplift and economic betterment of the common man.
