There is one important question to which I would like to make a detailed reference. We have accepted a pattern of mixed economy where private and public sectors function side by side. There is an increasing evidence of an appreciation of the role the private enterprise has to play in increasing the total production of the country which alone can eliminate unemployment, raise the standards of living and provide opportunities for all. Recently there have been pronouncements by the ministers of the Central Government, notably by the Prime Minister, the Finance Minister and the Commerce and Industry Minister which have helped to reassure the private sector that it would have an important place and effective role to play in the country's development. While these are encouraging, in giving them due weight we should not keep out of sight some of the recent measures adopted or proposed to be adopted by the Government which might adversely affect the confidence of the private sector and its ability to play the role expected of it. Take for instance the fourth amendment to the Constitution which would deny to the citizens recourse to justice which is one of the fundamental bases of a free and democratic country. Measures like this are not appreciated, much less invoked in any free country of the world. Another similar instance is that the Companies Bill to which I would like to make a special reference.

Companies Bill

The Companies Bill, which may soon become law, is a measure of vital importance to the private sector. The Bill contains so many "dos" and "don'ts" and necessitates attention to the shareholders or to the Central Government for so many things every now and then that it will become extremely difficult to work joint stock companies. The ceiling of 11% to the total out-go from a company on account of managerial remuneration is bound to work considerable hardship for existing companies both in regard to their continued good management and in regard to their expansion and will also be an obstacle to the formation of new industrial undertakings. While the amendments made by the Finance Minister in the course of the discussion of the Bill in the Parliament will exercise a moderating effect to some extent so far as the new undertakings are concerned, it is a question whether the older undertakings will be able to continue with senior experienced personnel in the light of this ceiling. Here I would like to add that the provisions in respect of managing agents have been drawn up without due appreciation of the fact that it is these managing agents who have pioneered and built up Indian industry as we see it to-day. Further, Government have taken the power to terminate managing agencies in the case of any industry or industries by executive notification. The Clause, in the form in which it stands now, has not taken account of multi-purpose companies, i.e., a company engaged in several kinds of industries. The effect of this provision would be that in the case of such companies if Government notify the termination of managing agency for any particular industry, the managing agency of the company cannot continue in respect of any of the other industries also in which the company might be engaged. Further, the termination of managing agencies at any time a natural disinclination to embark upon long term ventures may be expected and this also will be detrimental to the interests of the country. The various powers vested in the Central Government under the Bill are so large and so wide that the future development of joint stock enterprise in the country will depend in a considerable measure on the manner in which these powers are exercised by Government. I hope Government will refrain from adopting an unrealistic or too technical approach in exercising their powers under the new law.

Taxation Enquiry Commission

This year we have had one of the most important reports by a high power commission. I refer to the report of the Taxation Enquiry Commission. It may be recalled that the last Taxation Enquiry Committee reported in 1925. Since then in the course of the three decades subsequent thereto, there have been considerable changes in the country's economy particularly during the War and after and owing to the partition. On the question of taxation, I am glad the Commission have agreed with what has been urged time and again by the business community, i.e., that our tax system should be more broad based. A far reaching proposal of the Commission is that a ceiling should be fixed for personal incomes and that the net personal income after deducting tax should not generally exceed approximately 30 times the prevailing average per family income in the country. Under this proposal a person would be taken as about Rs. 30,000/- to Rs. 45,000/- per annum. Whether such an income would be an adequate incentive, particularly in the context of the emphasis on indus-

try during the next few years, is a question. Only the other day we heard of the Russian steel expert for the Bhilai Plant being paid by the Government a tax-free remuneration of Rs. 4,000/- per month. Adequate remuneration for skilled personnel is necessary and if doctrinaire considerations are allowed to prevail, the country's interests would suffer. I know no free country where ceilings on income have been put in this way. The proposal for a ceiling on personal incomes should, therefore, be reconsidered. The Commission's finding against State-trading as a source for increasing non-tax revenue is particularly significant and I trust that powers that be would take due notice of the same. The Commission's scheme of a surcharge-cum-compulsory deposit is a revolutionary suggestion, which, if pursued, is bound to have severe repercussions.

Trading Profits

As you will have noticed from the accounts, the trading profits of the Company for the year under review are more or less the same as those for the year 1953. There was an increase in the expenditure to the extent of Rs. 1,79,160/- over the figures of 1953 on account of increase in wages and salaries and cost of coal. You will appreciate that in spite of this increased expenditure we have been able to maintain profits and this has been possible only on account of better working and improved efficiency. The gross profit for the year was Rs. 10,47,703/- against Rs. 10,20,840/- in the previous year. After making various adjustments, and adding to the year's profit the balance brought forward from the last year we have Rs. 7,55,026/- available for distribution out of which your directors have recommended a tax-free dividend of 12½% as in the previous year.

Increased Sale

The sale of gas showed an increase of 34,005,500 Cu. ft. from 129,043,100 Cu. ft. in 1953 to 132,948,600 Cu. ft. in 1954 which comes to 2.4% over the previous year. The number on the waiting list stood at 11,676 at the end of 1954. Ever since the new management took over the Company, we have been making our best endeavours to increase the production and serve the consumers to the best. The production has steadily increased from year to year as it is evident that it has increased from 1,115,949,000 cft. in 1946 to 1,507,851,000 cft. in 1954. Thus the percentage of increase is 35.1.

Expansion Plans

As my predecessor told you at the last Annual General Meeting, the plans for expansion of the production capacity of the Company's plant are ready and we expected that we would be able to come to a definite understanding on the three vital points of official assistance to secure the necessary funds, assurance for immunity from nationalisation or municipalisation for 20 years and gas price to enable us to go ahead with the execution of these plans. I am unable to report to you any progress in this regard upto now and therefore I can give no indication in the absence of decision on these questions as to how long it will take before we can implement our expansion programme, however keen we might be to do so without any delay.

Municipalisation of the Company

I would like to dwell on the question of municipalisation of this undertaking at some length as this is a matter of fundamental importance to this Company. Municipalisation of the Company has been under consideration for a number of years. A decision was taken last year by the Bombay Municipality to take it over. We have not heard directly from the Municipality after we supplied them with some information about the Company in response to their request and as far as we are concerned, we are in suspense as to what is proposed to be done. Press reports, however, indicate that the Corporation have submitted a proposal to the State Government to pass early legislation empowering them to acquire this Company and that the cost of municipalisation and expansion of gas manufacture would be two crores of rupees. Talks of this nature have been going on for years; we do not know where we stand. The city demand for gas is much more than our present capacity and additional plant needs more than further capital. No shareholder of a company would like to invest in a company with the sword of municipalisation hanging over its head. An assurance of immunity from nationalisation for a definite number of years is essential to persuade the investors to invest their capital and you will agree that unless this is forthcoming, expansion schemes cannot be taken up.

As far as I can see, proposals for municipalisation of this Company run counter to the policy pronouncements made by no less a personality than the Prime Minister himself on various occasions against nationalisation of privately owned industries. Apart from a matter of policy, I am unable to make out as to the prudence of the Municipality in implementing its proposal in this regard. There are problems of fundamental importance to the city life which must be tackled by the Corporation first. Let us take for instance, slum clearance, water supply, educational and medical facilities, improvement of drainage etc. and the schemes drawn up by them for these items, which are by no means ambitious, call for considerable capital outlay for which they have to secure have estimated a sum of rupees two crores for acquiring the undertaking and its expansion. As against this the Company needs only seventy lakhs of rupees for expanding the present plant and with the provision of this sum we would be able to produce more gas and meet the city's demand. Thus it would appear that we need much smaller finance than that needed for municipalisation to increase our capacity and meet additional demand. Another point that I would like to stress in this regard is that whether the Company is left in the hands of the present management or is municipalised, the present rate of gas cannot make it possible for any party to undertake expansion. I would urge upon the Government to give their serious and thoughtful consideration to these aspects, amongst others, of the question before asking the legislature to empower the Municipality to take over this Company. They should not be swayed by the demand for municipalisation on doctrinaire grounds, but consider it purely from a practical point of view in a dispassionate way. I am sure on such consideration they would clearly see the advantage of helping the present management to expand the capacity of the present undertaking over that of its being taken over by the Municipal Corporation.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLACKNESS PERSISTS

Wednesday, 19th October.

CONDITIONS in the money market have continued easy throughout the past week with advances still returning from upcountry areas. Sugar offtake is now reported to be good and credit requirements are decreasing. Accommodation against cloth stocks is no longer in great demand, and upcountry advances on account of grains are being paid off. There has been some buying of raw jute and call for accommodation has expanded slightly from this source. The extent of the slack season is shown by the further increase in the Treasury Bill tender which is now standing at its highest level for a number of years. Conditions in the interbank market are unchanged and the call rate stands at 2½ percent.

Little bill business has been reported from the market this week. There has been fair demand for remittance. The strength of sterling has been maintained and the dollar rate is unchanged at Rs. 47½.

Silver was quietly steady and the price advanced from the previous week's level of Rs. 166-1 to Rs. 166-8, quoted today. The rate for forward delivery was quoted at Rs. 166-10. The price was unchanged at 79 7/8d. in London and at 91 7/8 cents in New York.

Gold ruled firm on better demand and the price increased from Rs. 95-4 to Rs. 96. The sovereign at Rs. 61-12 showed a gain of 2 annas.

Tenders for Rs. 24 crores of 91-day Government of India Treasury Bills, which were opened on Tuesday, 18th October, 1955, totalled Rs. 4,61,00,000. The average rate of acceptance fell from Rs. 2-7-8 to Rs. 2-7-7 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 68 percent. In view of the holidays, the Government of India Treasury Bill auction will not be held during the period 24th to 29th October, 1955. Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 31st October, 1955. During the week ended 14th October, 1955, Government of India Treasury Bills for Rs. 34,17,50,000 were sold in favour of the Reserve Bank of India.

The statement of the Reserve Bank of India for the week ended 14th October, 1955, shows rises of Rs. 96 lakhs and Rs. 32 lakhs in notes in circulation and the total note issue to Rs. 1,302.41 crores and Rs. 1,311.66 crores, respectively. Foreign securities declined by Rs. 19.87 crores to Rs. 627.10 crores and they were probably transferred to the Banking Department in which balances held abroad rose by Rs. 22.17 crores to Rs. 91.60 crores. Rupee securities in the Issue Department were consequently raised by an equivalent amount to Rs. 533.67 crores. Deposits of the Government of India and other Government accounts increased by Rs. 61 lakhs and Rs. 19.49 crores to Rs. 51.76 crores and Rs. 29.08 crores, respectively. Balances of commercial banks at Rs. 61.94 crores were Rs. 5.31 crores lower. Investments increased by Rs. 11 lakhs to Rs. 50.22 crores. Other loans and advances declined from Rs. 22.10 crores to Rs. 20.94 crores, of which advances to scheduled banks against usance bills totalled Rs. 6 crores against Rs. 6.60 crores. These advances stood at Rs. 195.26 crores since 1st January, 1955. Ways and means advances were shown at Rs. 35 lakhs (Rs. 2.67 crores).

The return of the State Bank of India for the week ended 7th October, 1955, shows a drop of Rs. 26 lakhs in total deposits to Rs. 217.27 crores. Investments in Government Securities are up by Rs. 2.76 crores to Rs. 103.72 crores, while other authorised investments are down by Rs. 13 lakhs to Rs. 9.93 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have fallen by Rs. 4.47 crores to Rs. 91.82 crores. Cash and balances are, in consequence, shown at Rs. 30.68 crores or Rs. 1.33 crores higher.

The statement of the position of scheduled banks for the week ended 7th October, 1955, discloses Demand and Time liabilities at Rs. 610.08 crores (Rs. 10.89 crores on account of borrowings from banks) and Rs. 421.42 crores (Rs. 6.07 crores) compared with Rs. 611.40 crores (Rs. 13.13 crores) and Rs. 417.58 crores (Rs. 4.44 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 58 lakhs and Rs. 6.03 crores to aggregate Rs. 32.92 crores and Rs. 66.88 crores, respectively. There is a rise of Rs. 1.42 crores in investments to Rs. 385.93 crores. Advances and bills discounted at Rs. 589.17 crores reveal a drop of Rs. 4.16 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.7 percent and 57.1 percent against 9.1 percent and 57.7 percent.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sale and land customs revenue collected in the Indian Union during August 1955,

amounted to Rs. 1,242 lakhs as compared with Rs. 1,218 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 934 lakhs as against Rs. 986 lakhs, export duties for Rs. 298 lakhs as against Rs. 213 lakhs and land customs and miscellaneous for Rs. 10 lakhs as against Rs. 19 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,312 lakhs as compared with Rs. 707 lakhs. During the five months, April to August 1955, the total of gross customs and Union excise revenue realised was Rs. 12,685 lakhs as compared with Rs. 10,366 lakhs during the same period of the preceding year. Of this amount, import duties accounted for Rs. 5,033 lakhs as against Rs. 5,063 lakhs, export duties for Rs. 1,406 lakhs as against Rs. 1,092 lakhs, land customs and miscellaneous for Rs. 70 lakhs as against Rs. 110 lakhs and Union Excise duties for Rs. 6,176 lakhs as against Rs. 4,101 lakhs.

THE INDIAN BILL MARKET

PROSPECTS IN THE FUTURE

(By R. M. Mitra)

THE Reserve Bank of India Bulletin, in its issue of September, 1955, presents a stimulating study on the subject of the bill market scheme in India. The scheme was formulated in January, 1952 and brought into force shortly after. As the above study indicates, the scheme is based on an adaptation of the system operating up to 1935 under section 14 of the Indian Paper Currency Act of 1920. This pre-1935 system allowed the Imperial Bank of India to take loans from the Currency Department during busy seasons, subject to a limit of Rs. 12 crores. The conditions regulating these loans required them to be backed by bills of exchange arising out of internal trade.

Immediately after the Bank rate was raised to 3½ percent in November, 1951 the Reserve Bank considered it prudent to withdraw support from the security market. It was feared that this action would result in legitimate credit needs being starved. The Reserve Bank recognised the necessity of providing for bona fide demands for credit and, at the same time, considered it necessary to devise a scheme of self-liquidating finance. It was felt that the Central bank in ensuring the self-liquidating character of bank loans, if the banks, when pressed by sale of securities or through loans against securities. The traditional school of economists has always held that a properly-organised bill market with rediscount facilities at the Reserve Bank would ensure the desired flow of self-liquidating finance. The Reserve Bank took advantage of the situation arising in November, 1951, and decided to set up a "bill market". The "market", at its inception, was confined to scheduled banks with deposits of Rs. 10 crores and above, but has since been extended to all licensed scheduled banks. The technique of the scheme consists in a licensed scheduled bank taking demand loans from the Reserve Bank against the security of usance promissory notes executed, or usance bills drawn, by customers of the borrowing bank. As trade bills in their orthodox form are not expected to be in adequate supply, banks have been asked to split a cash credit or overdraft account into two parts, one part being the usual fluctuating drawing account and the other part representing minimum credit requirements of the customer, being supported by a usance promissory note executed by the party. Section 17(4) (c) of the Reserve Bank of India Act, which enables the Reserve Bank to operate this scheme, requires that the usance instruments should arise out of bona fide commercial or trade transactions and bear two or more good signatures of which one shall be that of a scheduled bank. The Reserve Bank, therefore, makes necessary enquiries and may examine the relative accounts and documents at the borrowing bank, to be satisfied about the purpose of a loan and the financial standing of the maker of the usance promissory note.

Function of Bills

The bill market scheme has been generally regarded as a considerable success. But the question seems to have been overlooked as to whether the success relates to the creation of a bill market or to qualitative control (by the Reserve Bank) of short-term finance. The Reserve Bank of India Bulletin serves a useful purpose in bringing the issue to the fore. It is unfortunate, however, that the study does not clearly bring out the distinction between short-term credit and the functions of a bill. The story of the bill market in the U.S.A., as outlined in the study, also appears to be somewhat misleading. The classical concept of the bill market relates a bill to a definite business transaction which, at its completion, brings in money receipts sufficient to pay for the bill. In older days, retirement of a bill on the due date was almost a self-acting sequence. A bill arising out of such self-liquidating transactions came, therefore, to be used as an acceptable instrument for raising money for the seller of goods before the buyer was in a position to pay. Increasing negotiability of bills also made them popular as a convenient method of short-term investment of temporarily idle money. Round-about methods of production, the growing distance of market, difficulties of matching the demand for and the supply of goods, changes in market technique—all have tended to upset the calculations of time involved in a trans-

In Europe fly BEA

and use
BEA Car Hire Plan

On your next business or holiday trip in Europe, fly BEA. BEA's famous international network links London with over 50 of Europe's main business and holiday centres—by pressurized Viscount and Elizabethan airliners. And the new BEA Car Hire Plan makes the rest of your travel smooth as clockwork. When you arrive in Europe take advantage of this Car Hire Plan in FRANCE, HOLLAND, BELGIUM, SWITZERLAND, NORWAY, SWEDEN, DENMARK, ITALY, GERMANY and CYPRUS; as well as in GREAT BRITAIN. No deposit; full insurance.

Full details of air reservations from your local Travel Agent or any office of BOAC. All arrangements for car bookings at BEA Offices in Europe; or BEA, Dorland Hall, 14-20, Regent Street, London, S.W.1. Telephone:—Gerrard 9833.

action fulfilling itself in money receipts. The resulting experience of loss of efficiency of a trade bill as an instrument for settling a business transaction (as distinguished from a purely financial transaction), has led to utilisation of alternative methods of raising and providing short-term finance.

Bill Market in the U.S.A.

It is necessary here to understand that the market in short-term finance in the U.S.A., comprising trade bills and promissory notes known as commercial paper, is much older than the 40-odd years suggested in the above-mentioned study. The "note shavers" of the U.S.A. were conspicuous in business as early as 1820. During the 1830's the Financial Register of the United States quoted rates on "open-market commercial paper". The change that took place in 1914 was the emergence of bank acceptances as a part of the banking programme represented by the newly created Federal Reserve System. Bank acceptances served only to extend the bill market to the field of foreign trade, but constituted scarcely any new development in respect of internal business which was already covered by so-called commercial paper that originated earlier than 1790 and became an established practice by 1820. The "bill market" that was inaugurated in India in 1952 resembles the commercial paper market of the U.S.A. in so far as both seek to finance the short-term credit needs of traders and manufacturers alike, without being related to specific self-liquidating transactions. But the similarity does not extend much further. Bills created in India are not purchased or discounted but only offered as security to the Reserve Bank against loans granted to banks.

The new Indian bill market also invites comparison with the American system of bank acceptances in that both are officially sponsored. But the two systems otherwise differ in material respects. The Indian system applies to internal business while the American bank acceptances relate largely to foreign transactions. There is direct negotiation between the holders of the Indian bills and the Central Bank, whereas in the U.S.A. a large part of the transactions in bank acceptances takes place through dealers. It is, again, not correct (as suggested) that the American dealers do not invest money in bank acceptances. In fact they often invest money, even if for a very brief period and though the dealers seldom across these bills except when selling them to Federal Reserve Banks. It will appear, therefore, that the bill market is a very old and fully-explored system in the U.S.A. and was only enlarged in scope in 1914. But the changing pattern of economy has rendered bills ineffective as self-liquidating commercial instruments both in internal and foreign trade. The dollar value of commercial paper outstanding in 1920 was \$1,113 million and that of bank acceptances in 1929 was \$1,732 million whereas the respective amounts in 1948 were \$287 million and \$259 million.

LONDON FINANCIAL LETTER

SIGNS OF RENEWED CONFIDENCE IN STERLING

AFTER their statements in September calculated to restore confidence in sterling abroad, the authorities made statements in October which, whatever their intention, had the effect of restoring the confidence in the economic position at home. The implication of what the Chancellor of the Exchequer said at the Mansion House Dinner—that important financial occasion between Budgets—and at the Conservative Party conference was that the troubles were never fundamental, that no more than a shallow recession of business was needed to put them right, and that the "further measures" which Parliament might have to consider in its next session would relate to public rather than to private spending; briefly, that the worst was over. The Governor of the Bank of England fired another shot in the campaign to rehabilitate sterling when he made the very significant statement that in his view it was "still undervalued rather than overvalued in relation to the principal currencies of the world".

London's reaction to such consoling statements was mixed. On the stock exchange gilt-edged securities rose strongly; equities followed later. Neither movement seemed capable of sustaining itself for long. Economists and bankers were fearful that the authorities' besetting sin of over-confidence was reasserting itself, and that the psychological benefits of the deflationary atmosphere would soon be dissipated. How, in logic, could Mr. Butler justify his estimate that exports in the whole of this year would exceed last year's by 10 percent when after two-thirds of the year the increase had been only 5 percent? To realise that estimate exports would have to remain at least at the inflated level of August (when abnormal quantities were being shipped after the dock strikes) for the rest of the year; but the figures subsequently issued for September, though satisfactory by normal standards, were distinctly below August's. What of the physical or monetary restraints in South Africa, Australia, New Zealand and Canada? Or of the increasing competition in Europe and the Middle East?

The restraints here are certainly working; and restraints in other sterling countries, though unpleasant for British exporters, will help the sterling area to restore equilibrium with the non-sterling world. Why, then, in the midst of what

Mr. Butler himself has described as "the unfinished experiment of safeguarding prosperity", should the authorities emphasise that they do not intend to damage the boom? Is it because they realise that the adjustments required represent only a few pence a pound of national income (in that sense, truly, the troubles are shallow), and that a little more would cause serious disturbance? The situation is, indeed, delicate. But if those penny-in-the-pound economies are not forthcoming the disturbance to the balance of payments (itself, of course, marginal) may be still more serious.

Uneasy Balance

The White Paper on the Balance of Payments for the first half of the year merely amplified what the Chancellor had revealed at the Mansion House, that, with American aid included, the U.K.'s current account showed a small surplus of £17 million. (Without American aid there would have been a small deficit of about the same amount.) That outcome was better than most people expected, for the circumstances of the period (aggravated by labour troubles) were such as to require the first doses of deflationary medicine, and after the period those doses were found to be inadequate. Moreover, a revision of estimates for the second half of 1954 substituted a surplus of £21 million for a deficit of £12 million suggesting that the latest result may also have been better than indicated. However, an approximate balance in the first half-year, on current account, is no cause for complacency. In the same period of 1954 there was a surplus of £165 million. (In that period, however, the Government was releasing stocks of food and materials, so easing the pressure on imports.) The first half-year is seasonally much the more favourable part. (Last year's big surplus in the first half was followed by an approximate balance in the second half.) And the current account is the more favourable part of the total overseas account, which must have been in substantial deficit in the first half-year, and more so since.

Figures relating to months previously are, anyway, of only moderate interest at this time, for policy must be based on trends that will reveal themselves months later. There will almost certainly be a large deficit for the second half-year; but it will cause no crisis if conditions are being prepared for the recovery of a big surplus in the first half of 1956. However, even such a surplus would not bring much benefit to sterling if it were achieved by expanding exports to the sterling area. The deterioration in the first half of 1955, compared with the first half of 1954, was due entirely to payments outside of the sterling area and is therefore even worse than it appears. The prime need now—for other sterling countries as well as Britain—is to earn more foreign currency. Outside of the Soviet bloc, most non-sterling currency is hard currency now; so if other measures fail it may be necessary to seek relief again by trading more with the Soviet bloc. Such a policy was officially favoured during the acute dollar crisis, but restrictions on exports with any kind of military potential and lack of suitable products on the Soviet side limited its scope. There may be more foods and materials available now; and the political atmosphere is a little more favourable for relaxing restraints.

Towards Lower Rates

Academically, the City would be interested to know how nearly bank rate was raised to 6 percent during the critical period of sterling's weakness. Now, it seems, the idea of raising the rate has been abandoned. Mr. Cobbold, the Bank's Governor, suggested at the Mansion House that there was danger of overloading the financial instruments when their impact was diminished by the "enormous growth" of the public sector. On the stock exchange, the gilt-edged market responded to what was apparently a hint that the Governor would oppose a further rise in bank rate; and it was prepared to read into the dating of the latest Conversion loan, its first maturity date is timed to coincide with the final date of the 23 percent Funding loan in mid-1957, a hint that the Treasury expected to be able to borrow at lower interest than 4 percent (which the new loan carries) within, say, 1½ years. It is suggested in the market that interest rates have already passed their peak.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 21-10-55.				
Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate	
21-10-55	22-1-56	2,500.00	Rs. 2-7-7½	
14-10-55	15-1-56	2,000.00	Rs. 2-7-6½	
7-10-55	7-1-56	1,500.00	Rs. 2-7-11½	
30-9-55	31-12-55	1,000.00	Rs. 2-8-2½	
24-9-55	25-12-55	1,000.00	Rs. 2-8-6½	
16-9-55	17-12-55	1,000.00	Rs. 2-8-5½	
9-9-55	10-12-55	1,000.00	Rs. 2-8-3½

THE KARVE REPORT ON VILLAGE AND SMALL-SCALE INDUSTRIES

PLANS FOR A COMPREHENSIVE DEVELOPMENT PROGRAMME

THE Karve Committee reporting on village and small-scale industries, whose principal recommendations were published last week, has suggested a pattern of organisation to implement these. The following is taken from the report: the whole field of village and small-scale industries is now covered by six all-India Boards, namely coir, small-scale industries, handloom, silk, handicrafts and khadi and village industries. Of these the last three are under the Ministry of Commerce and Industry. Two of them, namely, silk and coir are statutory Boards. On the whole, experience shows that the existence of these Boards has been helpful in focussing attention on the problems of particular industries and in supplying a channel through which suitable policies of assistance can be framed. It is true that a certain amount of overlapping arises, leading occasionally to the complete neglect of some aspects but more often to a duplication of efforts directed towards the same problem, and it would be well if steps were taken to remedy this situation, but the positive advantage of having six Boards at present is so obvious that no immediate step towards the amalgamation or re-distribution of any of them can be suggested.

Co-ordination of functions, policy and finance must, however, be brought about without any further loss of time. The first step which is clearly called for is to put all these Boards under one and the same Central Ministry. The inherent significance of the fields covered, and the growing importance of this sector of the economy in the national plan, would easily justify the setting up of a separate Ministry. As is made clear in our report, there is an internal unity of policy in regard to the whole field of industry, large-scale as well as small-scale, which necessitates securing a complete integration of industrial policy at the earliest possible stage. We feel, however, that as yet the field to be covered by the decentralised units of industry has to secure for itself that wholehearted recognition which is now readily accorded to the field of large-scale industry. For this reason we recommend that for some time to come the Ministry dealing with small-scale and village industries should be a separate Ministry with Cabinet rank, and that co-ordination in the industrial policy of the Union Government should be brought about through an appropriate committee of the Cabinet. It may be that when the common industrial policy affecting all sectors of industry comes to be more specifically worked out and more generally supported, some other form of co-ordination at a Ministries' level may be thought of.

This is not, however, the unanimous view of the Committee, as one of its members, Mr. Govindan Nair, is of the view that in order to ensure a common approach and effective co-ordination between the large-scale and small-scale sectors, it is essential that even from the beginning both these sectors should be the responsibility of the same Ministry. Another member Mr. Nanjappa, of the Textile Commission is of the view that at least the subject of textiles inclusive of all sectors (mill, powerloom and handloom) should be under one Minister.

Co-ordination of Boards

Whether the Minister for small-scale and village industries acts independently or is a part of a bigger Ministry he should have the assistance of a whole-time Secretary attending to the decentralised sector as a whole. The six Boards which will be the concern of the Minister and the Secretary should themselves have a co-ordinating committee consisting of chairmen of all the Boards and presided over by the Minister in charge. It would be for this committee to ensure that effective co-ordination of policy, finance and administration is secured over the entire field allotted to the Boards. Similarly, in the States, all the functions which pertain to any of the six Boards should be looked after by one and the same Minister. It is equally important that this Minister should be at the same time responsible for co-operation. We also attach great importance to the same Secretary dealing with the connected problems of village and small-scale industries and co-operation. The bulk of the programme in the decentralised sector will have to be executed through co-operative bodies. At all stages of the developmental programme the co-operative as well as the technical or business aspects will have to be jointly considered. This will not be achieved with the requisite speed and efficiency if the spheres of co-operation and village and small-scale industry fall to the portfolios of two separate Ministers.

To ensure the necessary integration of planning at the administrative level, it is important to have a self-contained department in the States looking after all the problems of village and small-scale industries. The head of this department should have a status of no lesser importance than that of the head of any other department of the State Government and appropriate powers under all the relevant Acts which bear on the regular and routine functioning of the department should be conferred on him. A certain duplication of rôle at the highest level is unavoidable, but the practice of comparatively junior officers of a department, namely deputies, exercising dual functions supervised by senior officers of more than one department, should be avoided. An officer of the highest

departmental status should be in effective control of all aspects of the drawing up and working out of the integrated programme for small-scale and village industries.

Administrative Problems

According to the pattern of administration prevailing in each State, individual variations in organisation and nomenclature appear to be natural and inevitable. But for the success of the integrated programme on which so much depends it is essential that in each District there should be at least one whole-time officer looking after the administrative and organisational functions connected with this sector. It is presumed, of course, that for technical aspects of the programmes of several industries, qualified officers will be maintained by the State as well as the Central Governments. To administration and to training we attach the greatest possible importance. Considerable strengthening of the staffs of the departments concerned is essential for the success of the programme. We have, therefore, suggested adequate provision of funds for these items. Any undue economy attempted on these heads will lower the chances of success of the whole plan. The essential staffing will include a block-level officer for small-scale and village industries, who is now sanctioned for the pilot industrial projects, and who will, we assume, be part of all block-level personnel as soon as the programme is extended to them. It is for the Union and State Governments to decide how the several functions, technical as well as organisational, should be distributed among the normal departments and Ministries on the one hand and the special organisations, namely, the Community Projects Administration at the Centre, and the Extension Administration in the States, on the other. We assume, however, that wherever a function connected with the implementation of the programme for small-scale and village industries is transferred to any of these special organisations or is undertaken by a Central Ministry, other than the Minister dealing with the subject of village and small industries in prior consultation with the latter, an appropriate portion of the

original financial provision will be transferred along with it.

The six all-India Boards originated in differing circumstances and hence in their organisation as well as their functions they show various individual peculiarities. The Coir and the Silk Boards are statutory bodies which execute research and servicing schemes within the framework of policies laid down by the Government, but the actual production programmes are the responsibility of the State Governments. In effect, therefore, they are in line with the other Boards except the Khadi and Village Industries Board. All these five, with again one exception, namely the Handicrafts Board, have officials as chairmen, and all their decisions are implemented through either the State or the Central Governments. The actual working out of the detailed plans of several of these namely, the Handloom Board, or the Small-Scale Industries Board is also done in some respects through registered bodies, co-operative or otherwise. Wherever training institutions or central servicing by way of research or experimental working is necessary, institutions operating directly under the control of the Board concerned have been set up. By and large, this arrangement has been found to be satisfactory, though it is necessary to ensure that the all-India Boards and institutions operate in the States through local organisations in order to procure the maximum possible economy of resources and unity of policy. The present arrangement has provided an effective opportunity for persons specially interested in an industry or group of industries to influence policy, planning and administration, without encroaching in any way on the normal constitutional and administrative processes of the Central and State Governments. In their present form these Boards have enough powers to discharge their appropriate functions. While giving adequate opportunities for non-official workers to influence the course of policy, they have effectively orientated normal official action in the desired direction.

Village Industries Board

In its origin, as also in its working to date, the Khadi and Village Industries Board has also been an advisory body, which carries out its executive functions, technically as an organ of the Central Government. The circumstances in which this Board came into being were, however, peculiar. The rôle of traditional village industries in the country's scheme of planned economic development, has been a subject of discussion for some time. Recently ideas on this subject have become more clearly defined, as the circumstances leading

two dates

for 1956

An extra and earlier Fair!

A big change this year—
we are holding two fairs!

Different classes of goods will be shown at each.

The February Fair is devoted to certain classes of consumer goods. We have planned this extra Fair to help buyers who prefer to do their buying early in the year. It will be held at Earls Court, London.

At the April Fair you will see other consumer goods and goods in other classes at Olympia, London, while the Hardware and Engineering exhibits will be at Castle Bromwich, Birmingham.

The February Fair

FEB 22 — MARCH 2

EARLS COURT, LONDON

The British Toy Fair
Baby carriages
Brushware
Chemists' supplies
Fancy and leather goods
Jewellery, cutlery, silverware, watches and clocks
Paper, stationery and printing
Pottery and glassware
Sports goods
Toys and games
General services

The April Fair

APRIL 23 — MAY 4

OLYMPIA, LONDON

Chemicals
Industrial and domestic electrical plant and equipment
Office machinery and equipment
Packaging and printing machinery
Plastics
Scientific, optical and medical instruments

CASTLE BROMWICH, BIRMINGHAM

Hardware
Building and heating
Engineering

Information is obtainable from the United Kingdom Trade Commissioner at Delhi, Calcutta, Bombay or Madras.

to the appointment of this very Committee indicate. But at the time when the first five year plan was made, there appeared to be a strong feeling among certain non-official workers that village industries would not secure a sufficiently enthusiastic and whole-hearted support and direction unless more than merely advisory functions were specifically entrusted to the Board to be created for them. The first five year plan recommended that the Village Industries Board should be in charge of the programmes made by them. As far as its own working is concerned, it does not seem that any insurmountable difficulty has been caused by having to carry on its advisory as well as executive and business functions as on behalf of the Government of India. But the large-scale financial and administrative functions discharged by it could not be suitably fitted into a normal administrative and constitutional set-up. While it was possible to overcome many of the administrative difficulties by establishing an understanding between the Board and the Union Ministry concerned, it was considered that the earliest possible steps should be taken either to conform completely to the normal financial provisions and procedures for the execution of schemes through the normal administrative machinery, or the status of a statutory authority should be conferred on the Board. After some deliberation this latter course has been adopted and a Bill for constituting the statutory Commission has been introduced in Parliament. Most of the States have already set up statutory bodies for the promotion of khadi and village industries, some with official and some with non-official chairmen and secretaries.

While the somewhat special character of the circumstances in which each of these Boards was set up must be recognised, we feel that the time has come to consider the proper type of organisation for implementing a regular and normal programme for village and small-scale industries. Such a programme would be so much a part of the normal activities of planning, finance and administration of the Central as well as State Governments that it cannot either with constitutional propriety or operational efficiency be dis-

sociated from the regular plan administration for long. Before the process of conferring a statutory status on this and similar Boards is further extended it is desirable to give fresh consideration to the whole question. Two Members of the Committee Mr. Govindan Nair, Joint Secretary in charge of small-scale industries in the Ministry of Commerce and Industry and Mr. V. Nanjappa, Textile Commissioner, have appended a minute of dissent to the report. They say:—

The estimated requirements of cloth for 1960-61 seem to be on the low side. The present availability of cloth (i.e. for 1955-56) is about 16 yards per head of population. All cloth that is being manufactured now is being sold without any difficulty. Although mill production has been maintained at the same level as last year—5,000 million yards—the stocks of unsold cloth with the mills have been much less than before. Normally the period, June to September is a slack season in the cloth market, but this year even at the end of August unsold stocks continued at a very low level—less than a month's production. Cloth prices have not fallen during the monsoon period this year as usually happens. Similarly, while handloom production has increased, figures from co-operative societies show that sales have kept pace with the increased production. In fact there are indications that demand for cloth may be outrunning the supply in the near future.

Target for Additional Cloth Production

Apart from food articles it is in such items as cloth and sugar that consumer expenditure increases most rapidly. It would be necessary also to take into account not only the estimated increase in the level of national income, but also the influence of the second five year plan programme for social services like sanitation, health, education, and the possible introduction of prohibition, etc., which may be expected to contribute to an increased consumption of cloth. In this light it is considered that we should aim at a target of providing 20 yards per capita by 1960-61. This

would mean an increase in production of 2,200 million yards over the present level. It would not be advisable in any case to consider a target of additional production of less than 2,000 million yards. The calculations of yarn requirements, and the necessary spindleage, should be made on the above basis. In view of the higher spindleage that would be required as compared to the estimates already given, it will be necessary to continue licensing new spindleage so as to ensure our yarn requirements for the year 1956 and 1957.

In order to ensure a sufficient supply of cloth to the consumer it will be necessary to allow a judicious expansion in the mill sector. There are also a number of uneconomic units where it would be necessary to allow more loomage to achieve balanced production; otherwise there is a risk that they would close down altogether. Priority will be given to such units in permitting expansion in the mill sector. It is estimated that, after taking into account the capacity of the decentralised sector to meet the demand, the total expansion to be allowed to the mill sector would probably have to be about 500 million yards. In the view of Mr. V. Nanjappa, the Textile Commissioner, it is not likely that the handloom sector would be able to produce by 1960-61 more than a total of 2,500 million yards, i.e. not more than 1,000 million yards above their present production. The deficit would have to be made up by a suitable expansion in mill production, by say 500 million yards, and the rest through powerlooms."

Changeover to Powerlooms

They consider also that there is a sufficiently strong case for allowing the handloom weaver to change over immediately to powerlooms on a regulated basis. According to the estimates given, the normal capacity that a handloom would attain on a fly shuttle can be taken at six yards a day. The present production of handloom cloth is about 1,550 million yards, while the number of idle handlooms has been estimated at about 400,000. According to the estimates given in the outline above, it is necessary to bring these idle handlooms into active production in order to produce the additional 1,400 to 1,700 million yards of cloth mentioned as the target for 1960-61. It is doubtful to what extent this could be achieved, and even if it were possible it would involve bringing in, to a certain extent at least, new entrants into the handloom field, and it would be extremely undesirable to increase the number of workers in this low-wage sector. When, therefore, there is no diminution in employment, but fuller employment is being given to existing workers, there could be no objection to the handloom weaver being permitted a changeover to powerlooms, the structure of decentralised production through co-operative effort being maintained. This could be allowed on an experimental basis and limited in the first place to 25,000 powerlooms, the position being reviewed when this limit is reached. This would be the equivalent of about 100,000 handlooms out of the doubtful quantum of idle handlooms. Another point is that unless the existing handloom weaver working on a decentralised basis is permitted and assisted to increase his production and earning in this fashion, there is a risk of small capitalist establishments of powerlooms coming into existence, regardless of Government regulations and prohibitions. This has already happened in the past. Mill production is being restricted and there is, therefore, a strong incentive to such unauthorised powerloom factories.

OUTPUT OF MINERALS AND EMPLOYMENT IN MINES DURING 1954

The aggregate value of mineral output at current prices increased to Rs. 82.97 crores in 1954 from Rs. 82.79 crores in 1953, according to the provisional statistics released by the Chief Inspector of Mines in India. Among the major minerals, the output of coal, iron ore, copper ore and gold increased appreciably, while mica and manganese ore had a severe setback. The output of coal increased to the record figure of 36.82 million tons in 1954 from 35.98 million tons in 1953, despite the reduction in average daily employment to 339,905 from 341,193. Output a man-year thus increased from 105 tons to 108 tons. There was an increase in the output of iron ore from 3.78 million tons to a record of 4.24 million tons. The biggest increase was recorded in Andhra, where several new iron ore mines were opened. Employment in the industry, however, did not materially improve, being 30,506 in 1954 as against 30,396 in 1953. The output of manganese ore declined from the record figure of 1.86 million tons to 1.38 million tons because of a fall in overseas demand. Employment in the industry declined correspondingly from 110,869 to 84,548. The slump in the mica mining industry, which began in 1952, continued into the latter half of 1954. Dressed mica produced at the mines amounted to 103 thousand cwt. in 1954 as against 128 thousand cwt. in 1953. Employment in the industry dropped from 34,871 to 27,062. Despite the closure of two gold mines, output of gold increased from 222,000 fine ozs. in 1953 to over 239,000 fine ozs. in 1954. Output of copper ore also increased from 238,000 tons to 342,000 tons. Employment in mines, governed by the Mines Act, 1952, dropped from 593,868 in 1953 to 565,095 in 1954. The level of employment, however, continued to be about 3 percent above the 1951 level and about 1 percent above the 1952 level. Reductions in employment were recorded in several major industries including coal, mica, manganese and gold.

Stocks and Shares

INDIAN IRON DIVIDEND UNCHANGED

MARKET REACTS STRANGELY TO NEWS: COMPANY REPORT EXPECTED TO BE GOOD

Wednesday Evening.

SPECULATIVE activity in the share market has been comparatively light throughout the week, with operators nervously waiting for the announcement of the Indian Iron dividend. Market expectations were chiefly in favour of an unchanged Rs. 1 and this was what it turned out to be. Immediately after the news was made public Irons dropped to Rs. 38 but recovered swiftly to Rs. 38-9 as bears rushed to cover. The price has since strengthened on further bear covering, assisted by the belief that the report will be a good one. The odd phenomenon of the price increasing when the dividend is unchanged can only be accounted for by the fact that already the news was well discounted and that the bears were heavily sold. With the Bombay market still strong there seems little prospect of any sharp fall now, but the nearness of the Pujā closing may mean that Irons are in for a short period of dullness.

The market has been generally quiet with only a small amount of activity in the engineering section where Jessops and Richardson and Cruddas featured. Government securities have remained firm.

Details of the week's trading follow.

There was a slight contraction in the volume of business reported in Government securities, but the market ruled firm and prices showed a further improvement. During the week the Reserve Bank raised its selling price for 2½% Loan from Rs. 93-7 to Rs. 93-10. Three percent Conversion Loan was initially marked lower at Rs. 80-7 but recovered to close at Rs. 80-8 while 3% Non-terminable Paper continued in demand at around Rs. 80-1. In short-dated loans, 3% 1957 was unchanged at Rs. 99-10 as was 3% 1958 at Rs. 99-8. In the medium-dated group 3% 1959-61 was taken at Rs. 98 but 3½% 1961 was on offer at around Rs. 99-11; 3½% 1961 had strong buyers up to Rs. 98-15 cum-voucher and was later quoted at Rs. 98-13 ex-voucher, but 3½% 1965 had sellers at Rs. 98-9. Three percent 1963-65 was marked at around Rs. 94-9 and 3% 1964 was asked for up to Rs. 94-6-6. The demand for 2½% 1961 at Rs. 92-13 and 2½% 1960 at Rs. 95-11 was maintained but no business was reported owing to the absence of sellers. In long-dated loans, 3% 1966-68 turned sellers at Rs. 91-11 while 3% 1967 was marked back to Rs. 87-6 ex-voucher to close steady at Rs. 87-8. Provincial Loans ruled steady but there were no price changes.

Preference shares continued to attract buyers but in the absence of sellers little business was reported. In Jute, Agarpara were marked at Rs. 116-8, Fort Gloster II came to hand at Rs. 87-8 and a small lot of Gourepore was placed at Rs. 103. Lawrence II were quoted at Rs. 95, Naitahi 7% were taken at Rs. 123-8 and Waverley were done at Rs. 58. In the miscellaneous group, British India Corporation were enquired for at Rs. 136-8, Calcutta Electric were done at Rs. 12-12 and Karanpura Collieries at Rs. 68. Rohtas Industries "B" were sold at Rs. 69-4 and a small odd lot of Shree Gopal Paper changed hands at Rs. 123.

Among bank shares, Punjab National changed hands freely at around Rs. 47-12 and United Bank of India "D" shares reported business at Rs. 4-12. United Commercial were steady at Rs. 52.

The only share dealt in, in the railway section was Dehri Rohtas which fluctuated around Rs. 13-8.

Cotton shares were dull and little business was reported. Cawnpore Textiles were easier at Rs. 9-8 as were Elgin at Rs. 21-4. Several transactions were reported in Kesoram at around Rs. 15-12 ex the dividend of as. 14 a share just declared. New Victoria were a shade better at Rs. 1-9. A small lot of Dunbar was placed at Rs. 273.

Coal shares spent another dull session. Burra-kur were quiet at around Rs. 14 and Bengal eased to Rs. 500. Bharat Collieries and Central India were reported at Rs. 8-2 and Rs. 7-10. New Beer-boom were marked at Rs. 18-12 and Raneegunge were sold at Rs. 11-2. Union were sold at Rs. 16-12 and Western Bengal were quiet at Rs. 6-15.

Except for Albion, Lothian and New Central Jute, which were steady at around Rs. 170, Rs. 512, and Rs. 170, the rest of the shares in the jute section were neglected and prices continued to sag. Here is a chart showing representative price movements:

	Opening 12-10-55 Rs.	Closing 18-10-55 Rs.
Anglo-India	230	219
Birla	18 7	18 8
Delta	255	255
Howrah	28 4	27 14
National	32 7	31 13
Reliance	13 10	13 4

Only two shares were dealt in in the electric supply section namely Benares at Rs. 19-6 and Calcutta at around Rs. 15-8.

Sugar shares were sluggish. Belsund were done at Rs. 11-6 and Carew were crossed at

Rs. 12-8. Darbhanga were marked at Rs. 22-12 and Ramnugger changed hands at Rs. 26-8. Shree Krishna Gyanoday were dealt in freely at around Rs. 17.

Engineering shares were in good demand and prices improved in a number of cases. Burn & Co. on the announcement of a dividend of Rs. 15 a share rose from Rs. 310 to Rs. 322. Indian Standard Wagon were keenly supported at the higher rate of Rs. 155 with few sellers to satisfy the demand. Braithwaite were steady at Rs. 29-6 as were Kumar-dhubi at Rs. 12-2. Jessops improved to Rs. 57 and Richardson and Cruddas to Rs. 25-6. Textile Machinery eased slightly to close at Rs. 24-15. The much-awaited Indian Iron & Steel dividend was announced today. The news that the dividend was to be maintained at Rs. 1 a share was received with disappointment and the shares reacted initially for a few fleeting seconds from Rs. 38-9 to Rs. 38; subsequently the shares recovered to Rs. 38-15 on reports that the balance sheet would disclose excellent results. Tonight's closing quotation is Rs. 38-12.

In the miscellaneous section, paper shares continued to be sought after. Bengal Paper improved further to Rs. 86 and Titagur met with good investment enquiry at the higher rate of Rs. 47-8. India Paper Pulp were active at around Rs. 23-10. Orient Paper closed below the best at Rs. 31, and Shree Gopal were dealt in at around Rs. 16-6. Assam Bengal Cement met with some enquiry at around Rs. 7-4 and Dalmia Cement were transacted at Rs. 15. Sone Valley were marked at Rs. 8. India General Navigation continued to be well supported and rose further to Rs. 147. India Steamship, after a considerable period, showed signs of activity and improved from Rs. 7-12 to Rs. 8-3. Port Shipping were enquired for at Rs. 15-4 xd. Angelo Brothers were steady at Rs. 23-4 as were Bengal Flour at Rs. 33-14. Bengal Chemical were crossed at Rs. 109. British India Corporation improved from Rs. 11 to Rs. 11-4 and Britannia Biscuits were wanted at Rs. 15. Clive Row Investments were turned over freely at

QUIET CONDITIONS IN STOCK MARKETS

INDUSTRIALS IMPROVE BUT

GILT-EDGED FALL

London, 19th October.

QUIET and mixed conditions prevailed in the stock markets last week. The features were a modest recovery in industrial equities and a reaction in gilt-edged securities. Business throughout was small and selective as operators awaited the Chancellor of the Exchequer's "further" economic measures, which will not be known until Parliament meets next week. The industrial market developed a distinctly better trend, and although buying was small and selective, a useful recovery was recorded. The fall in industrials over the last few weeks brought prices down to comparatively attractive levels, and cheap buying coupled with bear-covering was mainly responsible for the fairly substantial rally. Buying, however, was concentrated mainly on the better class issues, and leading stocks were the chief beneficiaries. Gold shares were out of favour throughout, and with interest at a low level, prices moved downwards in most cases. Base metals were irregular, but copper lost ground. Oils recovered with the industrial market, and although business was somewhat limited, prices showed useful gains. Rubber and tea shares remained subdued.

The Money Market

A feature of the money market last week was the financing of a cash portion of the Government's new conversion 4 percent stock. The issue of £250 million was a very large amount to find and it was subscribed by Government departments. Nevertheless, an estimated £100 million was subscribed by the money market and other financial institutions. Consequently, there was some dislocation in the credit system. However, preparations earlier in the week, prior to the opening of the list on Thursday, helped the operation to be carried out fairly smoothly and any shortage of funds was made good by the authorities. Day-to-day loans ruled on the basis of 4 percent, with the December and January bills commanding 4-1/32 percent. In view of the new money obtained by the Government, the Treasury Bill allotment was reduced to £230 million. Applications for Treasury Bills totalled £363,700,000, of which £230 million were allotted at an average rate of 81s 4.99d, compared

with 81s 5.25d in the previous week. This week £240 million are offered. The Bank of England return for the week ended 12th October showed notes in circulation about £2 million lower at around £1,767 million, while bankers' deposits were about £7 million higher at around £257 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 12th October shows that the gold stock increased by \$1 million to \$21,685 million. Foreign deposits decreased by \$3 million, while foreign investments rose by \$9 million. The Federal Reserve purchased \$144 million of bills. Total discounts and advances increased by \$232 million to \$882 million, while excess reserves of member banks declined by \$29 million to \$176 million. The daily average of excess reserves rose by \$68 million to \$591 million, while average borrowings rose by \$64 million to \$893 million. Business loans of the New York City banks declined by \$58 million to \$8,701 million, compared with a rise of \$42 million to \$7,384 million last year.

Rates on U.S. Business Loans

Three leading New York City banks on Friday raised "prime" rates on business loans to 3 1/2 percent from 3 1/4 percent. Last August this rate was raised by 1/4 percent to 3 1/4 percent. The "prime" rate is a charge on loans to the biggest borrowers with the best credit ratings. All other rates are scaled upward from this quotation. The latest increase has come as a surprise, as only a week ago some banking quarters expressed the belief that the tightness in the money market would not last beyond the end of 1955. They saw no reason for increasing the prime rate only to lower it a few months later.

U.S. Commercial Paper Rates

The American price of money in one sector of the lending field has moved a notch higher for the tenth time this year. Major finance concerns have increased their commercial paper rate by 1/8 percent. They now range from 2-3/8 percent for 30 to 89 days' paper, to 2-7/8 percent for 266 to 270 days' paper. The rates are now slightly more than twice as costly as they were last January. An official of a finance firm has explained that the continued tightening of funds "has forced us to increase the rate we pay on commercial paper so that our notes will be attractive to investors." He notes that the Treasury short-term bill rate has advanced to an average of 2.257 percent—the highest in 28 months.

Vegetable Oil Market

Although there was some resistance from the larger sellers, the continued liberal supplies of ready linseed oil provided a depressing element last week. In addition, arriving oil had difficulty in finding ready storage space. With these factors, buyers were extremely cautious and prices eased by a further £2 to £2 1/2 a ton on the week. There were reports that the C.C.C. was offering a small quantity of about 1,800 tons for export on a bid basis. For B.S.S. October to December arrival in the U.K. £97 in bulk was quoted, while a small premium was wanted for January-February arrival at £98, and for March-April £98 1/2 c.i.f. was named. Moderate steadiness was maintained for castor oil, with buyers mainly interested in spot material. For shipment, demand was rather better than of late, and for B.S.S., good mark, £102 was paid for November-December, with sellers at £103, cost and freight, in drums. A considerably weaker interlude developed for groundnut oil and buyers came in more prominently. Indian crude oil on spot in Rotterdam realised up to £103 1/2 in bulk, with sellers not under £104 1/2 at the close. Even so a net loss in valuations of £2 1/2 remained, while on the other hand leading shippers wanted up to £107 for early Indian clearance.

U.K. Antimony Consumption Drops

U.K. consumption of antimony metal and compounds (in terms of antimony metal) declined in August for the third consecutive month, according to the British Bureau of non-ferrous Metal Statistics. At 346 tons, the August figure compared with 388 tons in July, 428 tons in June and 455 tons in May. In August last year, it was 410 tons. Small gains in consumption for batteries and other antimonial lead uses, as well as in bearings, were offset by a drop of 31 tons to 111 tons in oxides for white pigments and a fall of 26 tons to 58 tons in oxides other than for white pigments. Miscellaneous uses took 10 tons against 11 tons in July. Consumption of antimony in scrap in August fell to 345 tons from 365 tons in July.

World Pact on Olive Oil

Work on an international agreement aimed at stabilising the world market in olive oil was completed on Monday at a special U.N. conference. All the meetings were secret. At the close it was announced that the text of the agreement would be published as soon as possible. There are 30 articles recalling the need for the creation of an olive oil council and the setting up of an olive oil fund for stabilising and reducing differences in international supply and demand caused by crop fluctuations. Another article calls on the participating Governments to undertake a special olive oil publicity campaign to increase consumption throughout the world.

Textiles for French West Africa

The French Government has imposed new controls on the re-export of foreign textile fabrics to French West Africa. This action is designed to reduce the volume of foreign textiles entering the West African market. Foreign fabrics shipped to shipment permit from the Ministry of Commerce. The number of permits granted is expected to be restricted in order to help French mills to sell more in West Africa.

New Delhi

TALKS ON DURGAPUR STEEL PLANT

U.K. MISSION TO MEET INDIAN OFFICIALS TOMORROW

(FROM OUR NEW DELHI CORRESPONDENT)

A DELEGATION representing the Indian Steelworks Construction Company Limited is arriving here this week to discuss ways and means of implementing the report of the British steel mission. The company has been formed in the United Kingdom by leading manufacturers of steelworks machinery and electrical equipment. It will assist in the supply and erection of a steel plant which is expected to be located at Durgapur, West Bengal. Companies participating in the consortium include the Davy and United Engineering Company Limited; Head, Wrightson and Company Limited; Simon-Carves Limited; the Wellman Smith Owen Engineering Corporation Limited; Joseph Parks and Son Limited; Sir William Arrol and Company Limited; the Cleveland Bridge and Engineering Company Limited; the British Thomson-Houston Company Limited; the English Electric Company Limited; the General Electric Company Limited; and the Metropolitan-Vickers Electrical Company Limited.

Dr. T. P. Colclough has been appointed technical consultant to the Indian Steelworks Construction Company. Sir Alexander Gibb and Partners and McLellan and Partners have agreed to collaborate with the consortium on this project. The chairman of Indian Steelworks Construction Company is Sir Cyril Jones, Deputy Chairman of the Mercantile Bank of India, who was Secretary to the Government of India, Finance Department, from 1939 until 1947. The Indian Steelworks Construction Company's delegation will consist of Dr. Colclough, Mr. D. T. Barritt (Simon-Carves), Mr. H. M. Denton (Joseph Parks), Mr. Vaughan Pendred (Head Wrightson) and Mr. A. M. Dent (Metallurgical Equipment Export Company Limited). The Secretary to the Ministry of Iron and Steel, Mr. S. Bhoothalingam, has arranged to meet the delegation on 21st, 22nd and 24th October.

Outlay Under Second Plan

Rough estimates of the first year's outlay under the second five year plan are Rs. 700 crores. As already indicated, the total outlay on the public sector of the second plan is expected to exceed the plan-frame target of Rs. 4,300 crores, and it may be around Rs. 5,000 crores. The Finance Ministry has estimated resources for the public sector at Rs. 3,000 crores, including Rs. 1,000 crores of deficit financing, and the Finance Minister, Mr. Chintaman Deshmukh, in accepting the plan-frame expenditure of Rs. 4,300 crores, had indicated an uncovered gap of Rs. 800 crores. But now the total outlay is being further increased primarily because the plan, after the first 12 months, will be flexible. It is liable to be adjusted or modified in accordance with the availability of resources. Looking back to five years ago, when the first plan was launched, there were hardly any small savings and the Government's loan programme was a flop. Now loans are oversubscribed and small savings have exceeded the target. The Government also has substantial reserves to use in an unforeseen emergency. It has, for example, repaid the loan from the International Monetary Fund, and this has made it possible for it to borrow again. Above all, certain categories of expenditure can be postponed if resources are not forthcoming. Expenditure on, say, river valley projects or steel works cannot be staggered, but that on the expansion of schools, hospitals or roads can be. Here lies the advantage of yearly reappraisals of the plan.

Industrial Expansion Schemes

As a result of the Calcutta meeting of the Board of Directors of the National Industrial Development Corporation, which approved various schemes placed before it, the Ministry of Commerce and Industry is asking the Planning Commission to make the following provisions in the second five year plan:

Name of the Scheme	Demand. Rs.
1. Steel Fabrication	10.00 lakhs
2. Iron and Steel Foundries	5.00 lakhs
3. Aluminium	11.00 lakhs
4. Fertilisers	2.00 lakhs
5. Newsprint	6.00 lakhs
6. Rayon and staple fibre	8.00 lakhs
7. Rehabilitation of cotton textile industry.	15.00 lakhs
8. Rehabilitation of jute industry	15.00 lakhs
9. Dyestuffs	5.00 lakhs
10. Carbon black	1.00 lakhs
11. Heavy machinery and machine tools	10.00 lakhs
12. Nylon	5.00 lakhs
Total	93.00 lakhs

The Government of India proposes soon to discuss with representatives of the coal industry ways and means of implementing the second five year plan under which coal production is to be increased to 60 million tons a year, including 15 million tons in the public sector. The Production Secretary, Mr. S. Khera, while in Russia as head of the Indian Technical Mission, explored possibilities of securing technical assistance for the coal industry in India. He has made an encouraging report, which indicates the willingness of certain European countries to assist India with men and

equipment so that she may reach her target production of 60 million tons by 1961. Enquiries also show that the Government is not prepared to give an assurance against nationalisation of the coal industry within the plan period or afterwards. It will, however, give assurances that, in the event of nationalisation, the compensation will be fair and not illusory, and that the new investment, minus depreciation, will be fully paid for. In this context, the following remarks made by the Finance Minister, Mr. Chintaman Deshmukh, in the Rajya Sabha on 27th September should be read with interest:

"We are faced with the problem of increasing the total production of coal from, say, 37 million tons to about 60 million tons during the period of the second five year plan. I believe that production from the Government collieries accounts for about 15 percent of the total existing production. Now he would be a very brave man who would say: well, there is no reason why during the next four years the Government should not take over all the existing coal concerns and raise its own production from 5 million tons to 60 million tons. But in practice one is faced with a very large number of problems. It may be that the solution would lie somewhere else. That is to say, the Government would take on a burden which it feels it can discharge. Now, what that figure is I am not going to say, because (a) it is not fixed, and (b) it is not very relevant, but it will mean a significant increase in the amount of coal that the Government would produce. Now that means that irrespective of the economic policy statement, on practical grounds and as long as it suits us, without any kind of commitment in respect of nationalisation, we say to those who are managing the coal of concerns: we wish you not only to work the mines but on certain fair conditions to put in new money into the development of those mines—mind you, without committing ourselves as to the date of nationalisation; that date will come when the circumstances seem to justify such a decision and it may be that the decision may not affect all the units in the industry or may affect certain units, for instance, mines which are contiguous to the mines which are run by the Government. So it is on these practical lines that these problems will be met. The broad point that I make is that there is no connection between what is available in the plan for industry and what we wish to do in order to regulate the operations of those who will be allowed to run the private sector. We are only concerned with the promoted private sector and we are concerned with the best way of managing that private sector so that the objectives of the plan may be attained."

Indo-U.S. Air Talks

At the Indo-U.S. air talks, India's case will rest on two "fundamentals": one, her right to predetermine the capacity and frequency of air services operated by non-Indian airlines, and two, her right to regulate their air traffic under the Fifth Freedom. All countries other than the U.S.A. and Australia have conceded these rights. Because the U.S. Government did not do so, the air agreement with India was terminated last January. The U.S. Government claims that the two American airlines do not violate the Fifth Freedom and that it would have to revise its air agreements with all other countries if it conceded the right of pre-determination to India. The fact that India chose to terminate the agreement rather than compromise on issues which she regards as fundamental, and any compromise on which would disturb the framework of her agreements with other countries, indicates the probable trend of the negotiations. The two U.S. airlines at present have two weekly frequencies each, and these are not expected to be disturbed.

Air Pact with Britain

An Indian delegation headed by the Communications Secretary, Mr. Bholanath Jha, will visit London soon for the annual review of the Indo-British Air Agreement. Other members are the Deputy Secretary to the Communications Ministry, Mr. K. V. Venkatachalam, the Director-General of Civil Aviation, Mr. L. C. Jain, and the Deputy Director of Civil Aviation, Mr. J. Sen.

Legislation on Sales Tax

As suggested by the Taxation Enquiry Commission, the Ministry of Finance proposes to undertake legislation on sales tax at an early date. The Taxation Commission, it will be recalled, suggested that "Parliamentary legislation will provide for the levy of sales tax on inter-State transactions. It will provide for delegating to the States the powers of the Central Government in respect of assessment, collection, etc. It will also provide that receipts will be distributed to States on the basis of collection. The rate of the Central tax should be low. It may be 1 percent when the inter-State transaction takes place between a registered dealer in one State and a registered dealer in another. As for transactions between registered dealers in one State and unregistered dealers or consumers in another, the rate of tax should be the same as the exporting State imposes on similar transactions in its own territory. Proceeds in excess of the receipts from the rate normally leviable on inter-State trade between registered dealers should be made available to the State where the goods are delivered. Central legislation should make no distinction between ordinary goods and luxury goods for purposes of the rate of tax on inter-State transactions. It should formulate principles for determining the circumstances in which a sale becomes taxable by a particular State and by no other. It should also define in detail what consti-

tutes a sale or purchase in the course of inter-State trade or commerce.

"The main condition will be that no State should have a system of levy other than a single-point tax on such goods. The tax may be either on sales or purchases but will be recoverable only at the last stage of sale or purchase. We recommend that the rate of such tax should be three paise per rupee. No purchase tax will be levied by a State on these goods if a Central tax on inter-State trade has already been levied at the rate of three paise in the rupee. The goods to be specified as goods of special importance in inter-State trade are: coal, iron and steel, cotton, hides and skins, oils and jute."

The Commission explains that essentially the sales tax must continue to be a State tax. However, the power and responsibility of the State must end and that of the centre begin when the sales tax of one State impinges administratively on the dealers and fiscally on the consumers of another State. Inter-State sales should be the concern of the Centre. The Centre should also have the power to control the taxation of sales of raw materials which figure significantly in inter-State commerce. Except in these cases, Parliament should not exercise concurrent power in regard to the levy of sales tax. The latest judgment of the Supreme Court on inter-State sales tax has cleared the way for Central legislation.

Winter Session of Lok Sabha

According to present plans, the winter session of the Lok Sabha will last five weeks, last day of the session being 23rd December. Twenty-five sittings have been allotted for transaction of official business and 2 1/2 hours on four days for non-official business.

Exporting Engineering Products

The Joint Secretary to the Ministry of Commerce and Industry is visiting Calcutta to discuss the export promotion plan for engineering industries, for which the Export Promotion Council was recently inaugurated by Mr. T. T. Krishnamachari. There is hardly any Indian export house and Indians generally do not have enough influence in foreign markets. Export promotion can be assisted, but not promoted, by Trade Commissioners. The plan, therefore, is to organise exports on a co-operative basis and to work through the nationals of importing countries, who may be appointed as agents.

It has also been decided to organise an Import-Export Corporation with an initial capital of Rs. 1 crore. It will be a private limited company. The Corporation will assist Indian traders in business with Communist countries, and will provide them with bargaining facilities. It will also import on Government account articles which are subject to periodical shortages.

As for the export insurance scheme, the Government will shortly set up a committee to examine the viewpoint of the trade.

Loan to Burma

An agreement has been signed under which India has granted Burma a loan of Rs. 20 crores, carrying interest at 4 percent. The principal amount will be repayable in half-yearly instalments of Rs. 2 1/2 crores each commencing in March 1959. The loan is convertible into all sterling area currencies. India had originally agreed to give Rs. 10 crores as loan and a line of credit for an equal amount. But during the negotiations here earlier this month, the provision for the line of credit was interpreted as a "string". India has therefore decided to grant a loan for the whole amount of Rs. 20 crores. It is however understood that Burma will use as much of the loan as possible for purchases from this country.

SPECULATIVE BOOM IN STOCK PRICES

CLAIM PRESSED FOR SEPARATE GUJERAT STATE

(FROM OUR BOMBAY CORRESPONDENT).

WHILE political uncertainties as to the future of this State loom on the horizon, and large tracts of the country have suffered heavily from floods with consequent destruction of crops, the stock exchange in Bombay has been buoyant. Last week marked a further big advance in the prices of equities, which have been rising rapidly for the last two months. Curiously enough, the lead on this occasion has been taken by the cotton textile sector instead of steels which have actually lagged behind. The miscellaneous section, representing a score of industries, has also registered an increase in the equity prices to an extent where the technical position has become vulnerable. There would have been no cause for anxiety if the improvement in prices had resulted from genuine investment demand, but this is not the case. On the contrary, shrewd observers in the investment market are of the opinion that real investors, taking advantage of the present boom and the narrowing of the margin between the yield on equities and the gilt-edged and preference shares and debentures, are shifting from industrial stock to more stable forms of investment. The rise is, therefore, to be attributed mostly to the speculative demand which might disappear at any time, and leave the market high and dry, with all the attendant consequences of such a catastrophe. Suggestions are, therefore, being made from some responsible quarters that either the Government or the Reserve Bank authorities should take some step for curbing the speculators in equities. The Stock Exchange authorities, apart from the margin system which they extended to several scrip some time ago, have so far not displayed any uneasiness over this trend of the market. But it is believed that after the settlement this week, which is likely to prove the heaviest during the last few months, they might be compelled to review the position and devise measures for more restrained trading.

Business Reaction to S.R.C. Proposals

The first authoritative business reaction to the S.R.C.'s proposal for reorganising the State of Bombay came last week from Sir Purshottamas Thakurdas. He welcomed the Commission's report and described it as presenting a solution to the most difficult and intricate problem of the reorganisation of States. He laid special stress on the fact that the Commission had attached more importance to the unity of the country and given it a priority over considerations such as historical developments and linguistic claims. He, therefore, called upon all concerned to study the report in a calm and dispassionate manner, bearing in mind that special regard should be shown for the overriding need for national unity and solidarity. Sir Purshottamas stated that the Commission could not very well satisfy all claims and counter-claims of conflicting interests and pointed out that it had framed its recommendations for the creation of a composite State of Bombay on the balance of all relevant factors, economic, financial, political and administrative. He agreed with the Commission that the importance of Greater Bombay was such that there would be serious repercussions not only in Gujarat and Maharashtra but in the whole of the country, if this city were separated from either Gujarat or Maharashtra. Sir Purshottamas, therefore, appealed to all to accept the solution as the one which was calculated to serve the larger national interest and asked them to rise above feelings of regional particularism and join the common endeavour in promoting the economic progress of the State.

On the other hand, the business community in Saurashtra does not appear to be happy about the Commission's recommendation for the merger of that State in the reconstituted bi-lingual State of Bombay. Two important trade organisations there have vehemently protested against this proposal and voiced their fears that Saurashtra would suffer economically, politically and socially if it was to be merged with Bombay. They have, therefore, requested the Rajpramukh in Saurashtra and the Central Government to retain the separate existence of Saurashtra, at the same time urging that the Centre should continue the financial aid given to the State for development activities. In the meantime, the agitation against the S.R.C. Report has calmed down with the departure of prominent Congress leaders from Maharashtra and Gujarat, as well as State Ministers, for New Delhi at the invitation of the Congress President and the Prime Minister to discuss the future of Bombay. The Chief Minister of the State is already there and it is hoped that some amicable settlement would be arrived at which would set at rest the uncertainties that have followed the report and the doubts which have been created over the future of commerce and industry in Bombay. It was rather surprising that the Deputy Speaker of the Union Parliament, Mr. Ananthasayanam Ayyangar, who was on a visit to Rajkot, the capital of Saurashtra, during last week, should have predicted the formation of a separate Gujarat State sooner or later. What Mr. Ayyangar said was that Gujarat would be a separate State "not because you will agitate for it but someone else will agitate for something else and Gujarat State might be formed as a consequence."

The business community in Gujarat, including that of Ahmedabad, has also not taken kindly to the States Reorganisation Commission's proposal for the establishment of a bi-lingual State of Bombay. At a representative conference where business interests were predominantly represented, Mr. Kasturbhai Lalbhai, the Chairman of the Conference, observed that great injustice had been done to Gujarati-speaking people and that their claims for a separate State had been disregarded for reasons of expediency alone. Among those who took part in this conference and shared this view were Mr. Shantilal Mangaldas, President of the Indian Chambers of Commerce and Industry, and Mr. Navnilal Shodhan, President of the Gujarat Chamber of Commerce, and representatives of other trade bodies. Mr. Kasturbhai said that the restraint exercised by the representatives of Gujarat in not pressing their claims for a separate State before the Commission had been misguided. These representatives had refrained from being vehement in voicing their demand for Maha-Gujarat because of their confidence that the Commission would give due and just regard to their legitimate aspirations. The proposal as it stood, according to Mr. Kasturbhai, was bound to hinder planning and progress, and he appealed, therefore, to Parliament to consider Gujarat's case fully before reaching a final decision on the report. The conference decided to ask for a separate State of Maha-Gujarat and a City State for Bombay. It thus appears that three major partners in the proposed composite State of Bombay—Maharashtra, Gujarat and Saurashtra—are all against this proposal. Only Bombay City and Kutch appear to favour the Commission's recommendation.

Cotton Textile Export Problems

Mr. Chinubhai C. Jhaveri, leader of the Indian textile delegation sponsored by the Cotton Textile Export Promotion Council, has issued a grave warning to the piecemeal export trade in Bombay, as a result of the delegation's impressions gathered during the course of their tour in South-East Asian countries. This was at a meeting here last Friday under the joint auspices of the All-India Exporters' Association, the All-India Importers' Association, the Indian Council of Foreign Trade and the Commerce Graduates' Association, under the presidency of Mr. Morarji J. Vaidya of the All-India Manufacturers' Association. Mr. Jhaveri disclosed that a serious prejudice and antipathy was developing in the countries visited by the delegation towards Indian cloth as well as towards the methods of marketing adopted by Indian shippers. Importers in these countries had openly expressed their doubts about getting any improvement in the dealings, because various promises given to them in the past in this respect had not been honoured. Unless there was a deliberate and planned effort to improve India's relations with the overseas customers for its textiles, there was a grave risk of losing these markets. He also drew attention to the fact that the taste and habits in the varieties of cloth used were rapidly changing in the East and the Indian business man had to study these in detail so as to adjust the nature of his exports. In Burma, for instance, Mr. Jhaveri said, cotton cloth was being replaced by nylon and art silk fabrics for ladies' dress, while in most of these countries men were taking more and more to Western mode of dressing indicating the need for a change in the kind of cloth India offered to them. Another reason why the delegation felt anxious about maintaining the volume of India's trade in textiles in these countries was that the foreign exchange position there was rather unbalanced, which meant that India should try to import goods from these countries in greater volume to remedy this deficiency. Due to these causes, Mr. Jhaveri said that it was not possible to evaluate the future trend and volume of Indian trade in textiles with South-East Asia, all the more so when there were social unrest and political and economic instability as well as ever-changing trade policies greatly in evidence. At the same time, he stated that if India moved with the times and carried out necessary adjustments, there was hope for expansion of this trade in the future.

Textile Industry in Sudan

In the meantime, news has been received here regarding the likelihood of loss of another important market for Indian textiles. Mr. B. Raha, Technical Adviser of the Srivastava group of industries at Kanpur, who was deputed to the Sudan by the Ministry of Commerce and Industry of the Government of India, at the request of the Sudan Government to survey the possibility in that country of starting a cotton textile industry, returned to Bombay last week, after carrying out a special survey for this purpose. During the course of his visit extending over a fortnight, Mr. Raha is reported to have visited both the northern and Blue Nile Provinces of the Sudan and also to have held discussions with the Ministers of Commerce and Industry, Supply and Finance as well as high availability of raw materials, supply of sufficient labour, existing transport facilities and the likely demand. Mr. Raha disclosed that he was very deeply impressed with the enthusiasm of the Sudanese officials and people for this project. He also found that there was a fund of goodwill among the people towards India and its people.

Mr. Asoka Mehta's Approach

Inaugurating a conference of the All-India Bank Employees' Association here last week, called to discuss problems confronting bank employees in the light of the latest Bank Award which would soon be embodied in a Bill by the Government, Mr. Asoka Mehta, Praja-Socialist Party leader and Member of Parliament, advised the trade unions and leaders of the labour movement in the country to adjust themselves to the

changing conditions and to come forward to take a more constructive rôle in the building of the nation. He told them that they had reached a stage where they could improve their service conditions better by a constructive approach than by mere agitation. Speaking about the second plan, which envisaged an expenditure of over Rs. 4,000 crores in the public sector, Mr. Mehta said the right lead had been given. At the same time, he warned that as this might involve deficit financing to the extent of Rs. 2,500 crores, it was necessary that the banking organisation in the country should be geared up to the needs better than in the past. He found fault with the banking industry for not having shown any enterprise so far, leaving vast areas of the country uncovered and said that during the second plan period, it should adopt a vital, dynamic and forward policy by vesting greater responsibility in its employees who could carry "the message of banking and sell the idea of banking" to the people so that not only would the community be enriched but the volume of business of banks would also rise. Mr. Mehta also appealed to the top executives of banks to accept a voluntary cut in their emoluments with grace and warned that "if they do not, circumstances will compel them to do so."

Mr. Morarji Desai's Advice

At a conference of various industrial associations and chambers of commerce in the State, convened here by the A.I.M.O. early last week which he inaugurated, Mr. Morarji Desai, Chief Minister of Bombay, tried to correct the impression that the Government did not want to help the development of heavy industries. Mr. Desai pointed out that small-scale industries also needed development as much as their counterparts and added that both these sections should help each other for the final objective of helping the country. One of the points touched by Mr. Desai during the course of his address was the tendency to concentrate industries in big cities and he advised industrialists in their own interests to start new industries in the rural areas. Appealing to the business men present to contribute towards the betterment of the country, Mr. Desai stated that the final aim of commerce and industry should be to procure happiness for the people as a whole. In reply to the joint memorandum which was submitted to the conference, the Chief Minister assured the representatives of industries of the Government's desire to give all possible help and concessions, provided those were not misused; and at the same time, he advised them against crying down the public sector of the industry which arose from a fear complex on the private sector's part. The Chief Minister told them that the public sector had come into the picture because industrialists in many cases were reluctant to undertake heavy responsibilities. He also advised them not to be afraid of the socialistic pattern of society which did not aim at ruining them but only at providing equal opportunities for all and for administering social justice. Among the other suggestions made by the Chief Minister to managements in industry was that they should change their approach towards workers. He observed that the money provided for improving their conditions should be considered as an investment for maintaining good employer-employee relations.

U.S. Fishing Vessel Gift

The Deep-Sea Fishing Station in Bombay established by the Government of India acquired last week a new and modern streamlined fishing vessel named *Bengoda* which was presented to it by the U.S. Technical Co-operation Mission. Mr. P. N. Thapar, Secretary of the Union Ministry of Food and Agriculture, received this gift at a ceremony. Mr. W. T. Turner, U.S. Consul-General in Bombay, made the presentation. Expressing the appreciation of the Government of India for this ready and generous help by the U.S. Technical Co-operation Mission, Mr. Thapar said that with the transfer of this new vessel along with its sister vessel *Gudjon*, which was meant for the Madras Fisheries Department, the Mission had completed delivery of the major items of equipment promised by it. In making the presentation, Mr. Turner stated that both these vessels were specially designed for "purse-seining," a method of fishing peculiar to the American north-west coast, which was considered suitable for off-shore fishing in India, especially for catching mackerel and sardines off the West Coast. The gift programme, as revealed by the U.S. Consul-General, had provided for technical specialists, training facilities abroad and items of equipment which included 16 wooden fishing vessels, three steel trawlers and 240 small diesel engines, ice plant with storage facilities, nine insulated fish transport trucks and various fisheries requisites such as hooks, nylon twine, nets and fishing winches, at a cost of \$2.6 million all of which had already been delivered. The Mission had also arranged to send two seine fishermen for each of these two vessels to demonstrate this new method of fishing to Indian fishermen.

Plea for Aid to Film Industry

Mr. S. S. Vasan, President of the Film Federation of India, speaking on "Indian Film Industry and Its Future" at a meeting held under the auspices of the Film Journalists' Association last week, made an important point when he indicated that the Government received a sum of Rs. 12 crores from this industry by way of taxes. This, he claimed, was the highest tax revenue from any industry and he deplored that the film industry had not received adequate consideration in return. He encouraged that if this industry was given proper and the people it would make speedy progress in the future.

London

SPECULATION ON MR. BUTLER'S "FURTHER MEASURES"

INDUSTRIAL INVESTMENT CAUSES OVERSTRAIN

(FROM OUR LONDON CORRESPONDENT)

THE reassembly of Parliament is being awaited with some anxiety, for speculation is rife in business circles about the form which Mr. Butler's announcement of his "further measures" is likely to take. Meantime, his speeches—and he is making quite a few just at present—are being studied with some care for possible hints. Not with much success so far, for the Chancellor of the Exchequer is a past master at concealing his intentions without giving the appearance that he is doing so. Addressing the chemical manufacturers the other night he described the present struggle to regain economic stability as "the unfinished experiment of safeguarding prosperity" and went on to admit that industrial investment had exceeded anticipations, and that this, coming on top of booming personal consumption, had caused the overstrain. One school of thought suggests that he might have gone further and explained that this overstrain is concentrated in a few industries, and in relieving it the general restraint will have to be both long and severe, so that the other industries will find themselves working well below capacity before stability is restored. There are still a few optimists, however, who, looking at the payments "surplus" for the first half year, conclude that the gap to be bridged is only modest, and hope that no more than a slowing down is needed.

The Payments Surplus

In view of this conflict of opinion the Balance of Payments White Paper issued by the Treasury last week calls for careful scrutiny. It discloses, as Mr. Butler mentioned at Mansion House, a small surplus. This amounted in fact to £17 million, which although it is a lot better than was at one time expected, compares very unfavourably with last year's surpluses of £165 million in the first half-year and even less than the £21 million earned in the second half. The figures are subject to revision, of course, for as the Treasury points out, information about debits is usually more up-to-date than about credits, the effect of the dock strike must be allowed for, and last year's figures benefited from the sales of Government stocks of food and certain raw materials with a consequent reduction in imports. On the other hand, the £17 million surplus is arrived at after allowing for £33 million worth of United States defence aid, and normally the balance of payments of the U.K. is stronger in the first half of the year than in the second. Anxiety over the figures is therefore certainly justified.

Compared with the first half of last year the deterioration amounts to £148 million, and is shown to have been entirely confined to the non-sterling area. In fact, the £17 million balance results from a surplus of £119 million which Britain earned from the rest of the sterling area, less a deficit of £102 million incurred in transactions with the non-sterling area. Of this £102 million deficit £77 million arose out of current transactions with the dollar area. The high level of imports with the dollar area, for a good deal of the dollar deficit. But the detailed figures also show a sharp drop in the credits from "invisibles" in the first half of this year. This was due to lower net receipts from shipping and from oil. Payments for shipping, especially of steel and coal, and by the fact that the tramp freights rose more than liner freights. The drop in net receipts from oil reflected an exceptionally sharp rise in expenditures arising mainly out of the arrangements for the Persian resumption and those with Iraq. Net receipts from "invisible" items were down by about £60 million. The rest of the sterling area had a surplus plus with other parts of the world amounting to £71 million, which was £5 million lower than in the same period of 1954. This, again, was largely the result of a rise in imports only partly offset by increased exports. During the half-year, but gold and dollar reserves fell by £29 million, but the sterling balances were reduced by £51 million (after deducting the debit balance in the European Payments Union). The total sterling liabilities of the United Kingdom to all countries on 30th June, 1955, amounted to £3,860 million. Of this, £3,029 million was owed to sterling area countries—£1,294 million to the colonies alone, whose deposits rose by another £70 million during the half year.

September Trade Figures

It would be quite unrealistic to expect any correction of the position in the second half of the year; it is at least encouraging that the September foreign trade figures show some signs of an improving trend. Exports, including re-exports at £254 million, were just over £20 million below the record reached in August, but they exceeded the June-August monthly average by nearly £30 million and the average monthly figure for January-June by £7 million. They were, of course, to some extent still influenced by the dock strike backlog. More impressive than this, however, was the cut in the import bill. At £304 million the September import total was £38 million below the August level, £21 million below the June-August monthly average, and £19.3 million under the average for January-May. The effect has been to reduce the visible trade gap for September to £50.5 million, compared with £68.2 million in August and £107.8 million in July. It looks as

though the squeeze is at last beginning to have some effect in this important sector of the economy, but the average monthly excess of imports over exports for the January-September period is still up, at £75.4 million, by £28.1 million over the same period in 1954. The figures for the all-important dollar markets are also encouraging. Exports to North America reached £27.5 million in September. In July and August they exceeded £30 million, but the monthly average for the first nine months at £25.7 million is nearly 12 percent above the level of the corresponding period of 1954. The United States took £15.9 million, bringing the January-September monthly average to £14.4 million, a 19 percent rise over 1954. Canada took £11.6 million, raising the monthly average to £11.3 million, or a 4 percent rise compared with last year.

Lower Retail Sales

Though it is questionable whether the credit squeeze and the anti-inflationary measures can have worked through the economy as yet, it is interesting to find that retail trading in August was very quiet and lower sales were reported in most sections. The Board of Trade index (1950=100) for all merchandise sales reported by large retailers fell to 125, compared with 144 in July and 123 in August of last year. In the household goods sector the progressive levelling off in sales apparent since March was accentuated, with sales falling below the level of the corresponding month of 1954 for the first time this year. The index number of this section at 113 compares with 134 in July and 115 in August last year. Sales of clothing and footwear, which had been running at particularly high levels earlier this year, suffered a severe setback in August. The index dropped from 150 in July to 101 for August and compared with 107 in August last year. Food sales also slowed down and were only 5 percent higher than in August last year. This compares with an increase for the February-July period of some 7 percent over the corresponding period a year ago.

Overseas Trade Fairs

Increased competition in world markets, and the recently established fact that other countries are expanding their exports faster than this country, has led to increasing criticism of British showings in overseas fairs. An article in the current issue of the *Board of Trade Journal* outlined the Government's policy in this matter. This is summarised as follows:—"Official policy starts from the belief that the object of taking part in trade fairs is to sell goods and that selling is the job of individual firms. The individual firm will there-

fore decide whether participation in any particular trade fair is likely to result directly or indirectly in extra sales sufficient to justify its cost. It would be entirely wrong for a Government department to attempt to influence this commercial decision. The Government must, however, to oppose the view, widely held in British industry, that wherever adequate trade sections are available in a trade fair as well as national pavilions the interests of firms will best be served by their exhibiting in those trade sections." On the other hand, it is made clear that this policy applies only to those fairs where adequate trade sections are available. The distinction is important, because the Government does indeed support firms organising British pavilions at fairs, such as the fairs this autumn at Delhi and Karachi, where this is the only method by which British firms can exhibit at all. The article referred to complaints by manufacturers about the increasing number of trade fairs and the burden thus placed upon them, not only as regards money but even more as regards staff time. They suspect that some of the fairs which are being organised owe much less to commercial demand than to the desire of individual promoters for profit and of Governments for prestige.

Steelworks Mission for India

The British Government mission led by Sir Eric Coates, which went to India earlier this year to report to the Indian Government on the desirability of constructing another one-million ton steelworks, reported in July in favour of the project and made recommendations as to the site, size and nature of the plant. It did not suggest as was generally supposed, that the contract should be placed with Britain, which was not included in its task. The Indian Government, however, has now invited British manufacturers to send representatives to New Delhi to discuss ways and means of implementing the project. The manufacturers have formed a consortium under the name of the Indian Steel Works Construction Co. Ltd., and this organisation has sent a six-man mission to India under the leadership of Sir Cyril Jones, Deputy Chairman of the Mercantile Bank of India. It includes representatives of leading British manufacturers of steelworks plant and electrical equipment. To judge from Indian reports, the idea of ordering this plant in Britain is favourably regarded in India—the last two big contracts of this kind having been placed with Western Germany and Soviet Russia. Much may depend, according to these reports, on the delivery periods and credit terms (including the rate of interest) which British suppliers are able to offer.

MR. DESHMUKH EXPLAINS
BASIS OF PLANNINGU.P. CHAMBER'S CASE FOR MORE
INDUSTRIES IN STATE

(FROM OUR LUCKNOW CORRESPONDENT.)

ADDRESSING the half-yearly meeting of the U.P. Merchants' Chamber in Kanpur last week, the Union Finance Minister, Mr. Chintaman Deshmukh explained that integrated planning meant striking a balance between national priorities and regional potentialities. Denying that the Planning Commission or the Government of India were partisan in their attitude towards the allocation of industries, Mr. Deshmukh said: "Your eminent State is fairly well represented in the Central Cabinet." The Chamber President, Mr. Shanti Narayan, had earlier devoted the major part of his speech to an exposition of the industrial potential of U.P. which could not be exploited because of the "unsympathetic" stand taken by the Centre. Mr. Narayan said: "Various industries, on both large-scale and small patterns connected with the manufacture of jute, timber, grass and other pulp materials, and food industries such as those of sugar, oils and fats, fruit canning, edible articles etc., have immense prospects for growth in U.P." Pointing out that there was scope in U.P. also for the manufacture of special qualities of iron and steel, he said: "One can visualise in the manufacture of steels which must be made to some set specifications, considerable scope for many auxiliary small-scale and household industries to thrive." He also referred to the State Government's efforts, in collaboration with a firm of foreign electrical engineers, to set up a large-size electrical engineering unit in the State. All that

Mr. Deshmukh could be induced to say in reply to those overtures was that in appropriate cases the Centre would make direct loans for enterprises of national benefit.

Inter-State Sales Tax

Mr. Deshmukh did not view with favour the plea for the creation of a money market in U.P. for several reasons. According to him, it was for the Government and the people of U.P. to foster conditions for the emergence of sound institutional investors and a stock exchange as a preliminary to a healthy money market. In this connection, he deplored the issue of the U.P. State loan at a discount right from the opening date of the loan. Addressing another meeting of Kanpur industrialists under the auspices of the Upper India Chamber of Commerce, Mr. Deshmukh announced that a comprehensive legislation on inter-State sales tax would be introduced in the next session of Parliament. It would not, however, have any retrospective effect because whatever had been collected by different States as sales tax was based on a previous decision of the Supreme Court. Besides, he added, there were practical difficulties in the way of effecting any refund.

Economy in Expenditure

The Economy Committee of the State Government headed by the Finance Minister, Mr. Hafiz Muhammad Ibrahim, is reportedly meeting with resistance in all departments which have represented that any cuts in allocations would lead to a fall in efficiency. The Committee is now discussing the feasibility of two lines of reform, both of which however have their snags. The first of which relates to a trial run of the British system under which each department is told by the Treasury how much its share will be of the country's Budget and allowed freedom to prepare its own schemes. An attempt was made in India during the British regime when Sir Archibald Rowlands was the Finance Member of the Government of India, but it was abandoned as it was found that it would render three-quarters of the Finance Department redundant. The second reform, which relates to the revision of the present financial year, cannot, of course, be carried out in isolation by one State alone without giving rise to considerable difficulties. The Committee, however, has listed a number of disadvantages of the present financial year, indicating that it would welcome a change. It is stated that at present little or no work can be done for at least six months of the year because by the time the various Budget sanctions reach the executive officers the rainy season sets in. The three months—April, May and June—are virtually wasted and a large section of the field staff is not able to give value for the money spent on them. Assuming that the Budget sanctions reach the executive officers by September, departments like the P.W.D., Irrigation and Electricity are left with barely five months to complete their construction programmes under the Budget. Besides, since the operational season extends beyond 31st March to 30th June and the majority of the works cannot be completed in one year, the departmental heads have to depend on guesswork as to how much will be spent in the budget year.

Losses Due to Natural Calamities

The losses that U.P. has suffered so far in the shape of damage to crops and houses, it is feared, will become heavier still if the current rains continue. In that event, at least 50 percent of the land in the eastern districts is likely to go without rabi sowings. Already in these districts vast areas remain unploughed. In many districts in Western U.P. where ploughing should normally end by 25th October, the land has become waterlogged. According to a statement issued by the Revenue Minister, Mr. Charan Singh, the State Government has so far spent Rs. 2,52,43,774 for flood relief operation. There was a full-scale debate in the Assembly over these operations when an Opposition member made the suggestion that members should contribute at least three days' salary to the relief fund. Curiously enough, this evoked no response whatever from the Congress benches. The Socialists have been quick to point out the contrast between this indifference and the decision of the U.P.C.C. to build up a reserve fund for the party from contributions made by the Congress district boards. The question is, according to one critic: "If M.P.'s, M.L.A.'s and district board presidents can afford to pay Rs. 10 or Rs. 15 a month to the party to which they belong, could not the money going to party funds be retained by the Government and utilised for the people as a whole?" This could be done by fixing a lower scale of salaries and allowances.

Reaction to States' Reorganisation

Satisfaction over the States Reorganisation Commission's recommendation against the division of U.P. has been expressed by some individual members of the Cabinet, although the Chief Minister, Dr. Sampurnanand has declined to comment on it. Of course, the M.L.A.'s from Western U.P. are highly critical and maintain that the Commission has erred in drawing any inference from the absence of agitation for the division of U.P. The Cabinet has not yet formally considered the report nor has a date yet been fixed for the consideration of the report by the Legislature. The State Government, it is stated, has not received any instructions so far from the Home Ministry in this regard. One view canvassed in the lobbies for the State, it is not necessary to put the report before the Legislature at all. The supporters of a division, however, feel strongly that the Legislature must be given an opportunity to discuss the issues raised in the report.

Jute

PROSPECTS OF AUSTRALIAN SACKING ORDERS

HESSIANS STILL TROUBLED BY LOSS OF
BUSINESS TO PAKISTAN

THE main point of interest in the market this week has been the possibility of sacking business with Australia. This particular buyer has shown comparatively little interest in the gunny market over the past few months, and the spotlight has only now been focused because of the realisation that in a few months' time the Government of Australia intends to decontrol cornsacks. This was originally contemplated in 1954, when it was the intention to hand back the purchase and distribution of cornsacks to private enterprise by early 1955. Following strong representations from the associations and private firms concerned, on the grounds that private enterprise would be unable to finance the purchase of supplies to the extent required, the Federal Government agreed to retain the import control on cornsacks for a further period of 12 months. This expires on 31st January 1956, and it is reasonable to assume that before this date a reserve stockpile will be built up to meet all demands in the interim period before private enterprise again finds its feet. Speculation regarding the size of such an order, which would have to be placed in the very near future to ensure arrival before decontrol, has varied considerably, and estimates have now reached such proportions as to cause inflationary tendencies in the sacking market. Speculators have attempted to corner this fabric and create an artificial shortage, and other sections of the market have followed in sympathy. This will be the last of the controls to be relinquished by the Australian Government, as woolpacks were decontrolled from 1st January 1955, and have been operated under private enterprise from that date, supervised by the Australian Woolgrowers Council.

While prices have been soaring in the heavy goods market, hessians have remained quiet, although quotations have advanced in sympathy with sacking. This section is still smarting under the blow from losing more business to Pakistan, and consequently price movements have been kept to a minimum. This has had no effect on foreign buyers who have once again completely neglected the Indian markets. The reported drop in American burlap consumption to 70 million yards in September 1955, further aggravated the situation, and although rates towards the close are higher than they have been for over three weeks, the undertone in general is weak.

The situation in the raw jute market is somewhat different. A very steady undertone prevails and sellers are inclined to be very reserved for a variety of reasons. One of these is obviously sympathy with the advancing heavy goods market, but this has probably had the least effect on rates. To find the real reason for the present firm conditions we have to turn to the farmers. Normally at this time of the year, with the Puja festivities in the offing, farmers flood the mukams with their surplus stocks to gain some ready money to finance their festivals. Thus imports are normally very heavy prior to the holiday, and prices tend to fall away. This year, however, imports into all the Indian upcountry receiving centres over the past 10 days have been very poor indeed, and with the natural law of supply and demand operating in its simplest form, prices have taken an upward surge. There is no need to look for the reason for this apparent apathy on the part of the growers. For several weeks now Calcutta mills have been attempting to scorn the rumours regarding a shortage of jute in their mills, but at the same time many enquiries have been received from them for quick delivery jute in, say three, five, or seven days which is not in keeping with their reiterated statements regarding their stocks. This point has not been overlooked by upcountry operators who, by their present attitude, hope eventually to call 'ne mills' bluff.

THE JUTE MARKETS

Manufactured Goods: There has not been a great deal of activity in the goods markets over the week, and price movements have been governed by speculative activity, especially in sacking. The hessian section has been comparatively neglected, and although rates have advanced, this has been in sympathy with heavy goods. At the opening last Thursday small enquiries for ready sacking caused a slight increase in all fabrics for this position, and B Twills were quoted 4 annas higher than last week's closing quotations at Rs. 104-4 a 100 bags. All other deliveries were unchanged, and January 10 oz. hessians ruled at Rs. 38-2 and Rs. 37-14 for 10 oz. hessians respectively. Small the near and forward positions in heavy goods at this local business was reported in sacking and sacking image, mainly shipper covering, and hessians by two proved by four-six annas and neglected the annas. Overseas buyers once again neglected the markets, and no enquiries were received from the American side. There was some interest displayed by Australia however, and this was concentrated on cornsacks, but the quantities involved were not of sufficient size to warrant the heavy speculative activity that took place in this fabric. Saturday was an official holiday, but heavy speculative activity took place due to bear covering, this

account having been built up in anticipation of the decontrol of cornsacks early next year. All other sections of the heavy goods market reacted in sympathy to these speculative promptings, and by Monday morning B Twills had jumped Rs. 1-12 in the near position and Rs. 1-6 for January-March shipment, actual quotations being Rs. 106-4 and Rs. 103-12. Although speculation was confined to the sacking section, hessian prices were influenced and a steady undertone developed in spite of the absence of any enquiries or business. Ready 40" 10 oz. rose three annas to Rs. 38-6 a 100 yards and January-March shipment two annas to Rs. 38-2. Speculation continued after the opening on a very reduced scale, but cornsack rates continued to rise in the near position and October shipment of these bags improved by 12 annas to Rs. 108 a 100 bags. Other fabrics only registered nominal movements in sympathy.—B Twills four annas a 100 bags and hessians two annas a 100 yards. There was very little alteration in these rates throughout the day and steady conditions prevailed.

At the close the market is easier with speculators pausing. Opening quotations on Wednesday morning were as follows:—

	October	November	December	January-March.
	Rs.	Rs.	Rs.	Rs.
40" 8 oz.	31-8	31-6	31-2	31
40" 10 oz.	38-6	38-6	38-6	38-2
B Twills	105-12	105	104-8	103-8
Heavy Cees	108	107	105-8	104
(Plain)				
A Twills	132	131	130	127
Liverpools	121	120-8	119-8	117
Cornsacks	107-8	107	106	104-8

Raw Jute: The general impression gathered over the week regarding mills' stocks of raw jute was not a very convincing one, despite buyers' attempts to prove otherwise. Whilst refusing many large offers of shipment of jute from agencies on the grounds that they were not in need of jute,

mills turned time and again to buy jute from local markets for guaranteed delivery over very short periods, thus creating the impression that they were not able to wait the longer periods for shipment jute to arrive but were in immediate need of the supplies. These constant ventures into local markets have strengthened sellers' ideas considerably, and high prices are now being demanded for all jute for quick delivery. This attitude has also been transmitted to upcountry markets, where growers are holding back their supplies, in spite of the nearness of the Puja festivities, in the hope of "cashing in" on the artificial shortage thus created. Imports into all upcountry agencies are smaller just now than for many weeks, and prices have increased by about Re. 1 a maund.

Quotations opened this week unchanged from last week's closing rates, and Upper Assam Bottoms stood at Rs. 24 a maund for October-November shipment. Steady mill buying created a steady undertone, and although at this stage prices were not increased, sellers became reserved and cut down the quantities on offer. On Friday morning however, a general increase of eight annas a maund was recorded, but this did not deter mills from doing business. Rates continued to harden on account of buyers' interest and in sympathy with the improved goods market, and over the weekend a fair amount of business was reported at the higher levels. Opening quotations on Monday were increased a further eight annas a maund, bringing Upper Assam jute to Rs. 25 a maund basis Bottoms for October-November shipment.

Good business was reported during the week in Dhubri-Northern jute at prices between Rs. 24 and Rs. 24-8 a maund for October-15th November shipment, and in Northern jute alone at Rs. 24 a maund for the same shipment. Murshidabad Tossa was also done at Rs. 24-8 to Rs. 25 a maund for one month's shipment, and Bottoms only at Rs. 24-12 a maund. In these transactions many contracts were done with a Rs. 2-8 difference between Middles and Bottoms. In the Daisee section good business was done at varying rates, the highest prices being paid for Sheoraphuli district at Rs. 26-8 a maund basis Bottoms for ready delivery. Other prices paid were Rs. 25 to Rs. 26 for Baduria-Bongaon, Rs. 25 to Rs. 25-8 for Chakdaha-Ranaghat for ready and one month's delivery. Daisee Mesta was done at Rs. 22 to Rs. 23 a maund for one month's delivery.

Some small business was reported this week in Pakistan Prodyotnagar Jute at Rs. 25-8 a maund basis Bottoms for October-November shipment, the jute to be shipped from Santahar. Pakistan Cuttings were also in demand, and business was

CALCUTTA TEA SALES IN SEPTEMBER

GENERAL FALL IN PRICES: TIPPY TEAS OUTSTANDING

TIPPY teas were once again an outstanding strong feature and realised very high prices throughout the month. Best C.T.C. Assams also received strong support and remained fully firm to dealer, say Messrs. Carritt Moran & Co. Ltd., in their monthly tea market review. 1. the sale of the month, other kinds met with a good general demand and medium B.O.P.s and O.F.s with a fair show of tip continued to receive satisfactory prices whilst medium Broken Pekoes were firm to slightly dearer. Clean Common kinds were about half an anna lower, commonest kinds one anna lower and whole leaf grades a full two annas lower. In the two subsequent sales, demand was much less general and prices for all kinds, except tippy teas and best liquoring Assams, declined by 2 to 3 annas in each sale. Commonest kinds were a particularly weak feature and with draws of this type of tea were heavy. Whole leaf grades were again neglected and declined by three to four annas in each sale. In the last sale of the month, commonest kinds met with a better general demand and although withdrawals were still fairly heavy, a number were disposed of at about Rs. 1-6 a lb. Whole leaf grades, commons and low medium declined by about one anna. Medium kinds were the weakest feature of the sale, B.P.s declining by 1½ to 2 annas and B.O.P.s and O.F.s without much tip by 2 to 3 annas. Fannings grades generally received better support than Broken. Darjeelings met with fair support throughout the month but shared in the general decline.

The better Darjeeling gardens have maintained their standard of leaf appearance, but there has been a noticeable increase in stalk from many of the lower grown estates. Liquors generally have been about average for the rains period, and although the majority of the offerings were rather plain in character, some quite useful teas with a little flavour have been available. Tippy teas from Assam were still in fairly plentiful supply and a number of cleanly sorted teas with blackish leaf appearance were available, but there was a larger amount of grey stalky leaf in evidence than usual reflecting the large increase in crop from this district to date this year. A few bright liquoring teas with some quality were seen but the majority of liquors were inclined to be plain in cup and thin. Both leaf and liquors of Dooars teas have shown the usual seasonal decline and the standard of tea on offer was slightly below average. Leaf appearance in Cachar was fairly satisfactory for the time of the year, but with a few exceptions liquors were soft and plain in character.

Internal Market

Leaf offerings amounted to about 15,400 chests. The selection was unrepresentative and consisted for the most part of stalky fibrous types for which there was very little demand. A few clean well made teas received fair support at irregularly lower rates but stalky residue grades were difficult to dispose of. A total of 70,450 chests of Dust was offered during the month. In Sale No. 14, there was a fairly general demand particularly for black leafy kinds suitable for the Middle East and the very best C.T.C.s. Others declined by about 1½ annas a lb. In the two subsequent sales demand was less general and although black Middle East types and best C.T.C. Assams continued to receive good support, all other kinds declined by two to three annas in each sale. There was a slightly better demand in Sale No. 17, but prices declined a further 1½ to 2 annas except for Middle East types and best liquoring C.T.C. Assams which were fully firm and occasionally dearer.

Export sales up to 17 totalled 623,348 chests at an average price of Rs. 2-8-5, compared with 593,108 chests at an average of Rs. 2-14-1 during the same period last year. Internal sales at 29,092 chests of Leaf and 172,083 chests of Dust (Rs. 1-7-0 and Rs. 2-4-9) go against 129,220 and 210,611 chests (Rs. 2-4-9 and Rs. 2-6-3) in the corresponding period of last season.

At the beginning of the month business in Export Quota was transacted at 69 and 38 pies a lb. After rising to 72 pies on 8th September, the price gradually declined until 19th September when a small amount of business was transacted at 48 pies. Thereafter the price rose until the end of the month when business was negotiated at 60 pies a lb.

The estimated North India crop to the end of August, 1955 was 282,472,972 lbs. as compared with 278,146,386 lbs. to the same date last year. The

average figure at this date for the three years 1952-1954 was 281,431,114 lbs.

Export Duty

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3-9-6 a lb. with effect from 1st October, 1955, as against Rs. 2-12-8 a lb. in force from 1st September, 1955. The export duty has, therefore, been increased from As. 5 a lb. to As. 8 a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th August, 1955 to 23rd September, 1955, with the corresponding figures of the previous year in parentheses, were as follows: by steamer 426,183 (553,251), by rail 103,189 (73,955) and by air 30,617 (25,033), making a total of 559,989 (652,237) chests. Since the beginning of the season, 1st April, 1955 to 23rd September, 1955, arrivals have been: by steamer 1,252,450 (1,473,805), by rail 320,368 (275,223) and by air 102,667 (86,934) making a total of 1,675,485 (1,835,962) chests.

COCHIN TEA SALES

At Sale 21, the 12 lakh lbs. on offer met with a strong general demand. Low mediums and mediums were one to two annas dearer. Good mediums were fully firm and occasionally dearer. Best liquoring types sometimes advanced four annas following quality. Whole leaf grades were irregularly dearer. Well made black leafs were the strongest feature.

LONDON TEA SALES

At last week's London tea sales the 56,332 packages on offer realised an average price of 5s 2.56d a lb. against 5s 3.59d in the previous week and 6s 6.12d a year ago. Plain broken pekoe was quoted

at 3s 9d to 3s 10d; in the previous week 3s 9d to 3s 9½d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,308	4/2

U.K. Tea Stocks

U.K. stocks of tea on 7th October amounted to 111.2 million lbs. against 96.3 million lbs. a year previously.

Paint Problems are solved at Rishra

Here at Rishra, W. Bengal, I.C.I. have established a unique Paints Technical Service Station. At this Station various problems concerning the uses of paint are examined. Here, paint users are given instructions on their particular painting problems and techniques; new developments in paints are tried and established; answers are found to questions involving the application of paint to a variety of products and surfaces; I.C.I. and customers' personnel undergo intensive training in paint and its application. This Station at Rishra is unique in India—another contribution by I.C.I. to India's progress and prosperity.

HIGH LEVEL OF STEEL OUTPUT
IN U. K.

STRONG DEMAND CONTINUES

CRUDE steel production in Britain last month was the second highest in the industry's history. At an annual rate of 20,680,000 tons output was 6.9 percent higher than in September, 1954, and only slightly below the previous record rate of 20,880,000 tons established in May of this year. The September figure brings output for the first nine months of the year to 14,620,000 tons—6.4 percent more than in the first three quarters of last year. The Iron and Steel Board estimates that, as a result of improved raw material supplies, there is a prospect that total production this year may exceed the 19,500,000 tons forecast in July, and may reach as high as 19,750,000 tons. Deliveries of finished steel to home users in July and August were 14 percent higher than a year ago, and the level of imports continues to rise. There is no sign yet of any abatement of the pressure of demand for almost all sizes and qualities of finished steel, which has now been maintained without a break for a full 12 months.

U.K. BLAST FURNACE SETS RECORD

Producing 11,160 tons of pig iron in the week ended 2nd October, one of the blast furnaces at the Scunthorpe (Lincolnshire) works of a British steel company set a new world output record for lean iron ores. It is believed that this achievement by Europe's largest blast furnace, working entirely on low-grade British ores averaging 20 percent iron content, has not been equalled by larger American blast furnaces which operate on ores containing 55 percent of iron. This performance is also notable because it marks the first occasion on which a British blast furnace has reached a five-figure tonnage in one week. The previous record, set up by the same furnace earlier this year, was 9,130 tons. Still higher outputs at the firm's Scunthorpe works are envisaged when a new turbo-blower, costing over £750,000 and the largest of its kind in the world, comes into service early in 1957.

STANDARD GLOSSARY OF TERMS FOR
WELDING AND CUTTING OF METALS

The Indian Standards Institution has circulated, for eliciting comments, a draft Indian standard glossary of terms relating to welding and cutting of metals. In recent years, there has been considerable development in the techniques of welding and cutting of metals. This has led to an increase in the number and variety of the terms and expressions used and it has become necessary to standardise the terminology. It is hoped that the standard glossary will help in fixing precise meanings for the terms and expressions dealt with. This code is one among the series of more than a dozen standard specifications and codes relating to welding, now under preparation as a part of the steel economy programme of the Indian Standards Institution. Comments on this draft code may be sent to the Indian Standards Institution, Delhi-8, before 30th December, 1955.

BENGAL MOTOR SPIRIT TAXATION

The Bengal Motor Spirit Sales Taxation (Amendment) Bill, 1955, received the assent of the President on 10th October. The Bengal Motor Spirit Sales Taxation (Second Amendment) Act, 1954, which was enacted with the President's assent to amend the Bengal Motor Spirit Sales Taxation Act, 1941, provided for taxation of "motor spirit" for the purpose of aviation at the rate of three annas a gallon. Of late a question has arisen whether the words "motor vehicle" occurring in the definition of the term "motor spirit" in clause (a) of section 2 of the parent Act of 1941 means vehicles for use on roads only. The object of the present Bill is to place the matter beyond doubt by adding an explanation to the definition of the expression "motor spirit" so that the term "vehicle" may include any means of carriage, conveyance or transport by land, air or water.

PROTECTION AGAINST CORROSION

Experiments on 243 different paints over the last 10 years may help Britain to reduce the loss due to corrosion of iron and steel, which is estimated to total £200,000,000 annually. Extensive research carried out by the British Iron and Steel Research Association and the British paint industry indicate that much of the great and unnecessary waste of iron and steel and of money resulting from the use of inefficient painting techniques and the wrong types of paints and media could be eliminated. Experiments also indicate that different types of paints are effective in protecting steel plates against corrosion caused by exposure to the atmosphere under different conditions. No less than 20 of the priming paints tested were found to give better protection than the conventional "red lead in linseed oil". On the other hand, linseed-oil-based paints were found to be more effective for use as priming coatings than paints in synthetic media when paints which did not contain metallic pigments were used. Tests with paints containing metallic pigments showed that aluminium had a marked superiority over zinc. Paints containing aluminium pigments together with basic lead sulphate or zinc oxide were, for example, more effective than those containing zinc.

Calcutta Markets

VERY STRONG DEMAND IN TEA
EXPORT AUCTION

MIXED TREND IN DUSTS

AT Sale No. 20, held on 17th and 18th October, offerings in the Export auction consisted of 51,500 packages. There was an extremely strong demand since, due to the Puja holidays, there will be no further sales until 7th November. Common and Medium Broken were a very strong feature and were 2 to 3 annas dearer, while Fannings grades sold well and were 1 to 2 annas dearer. There was a good demand for Low Mediums and Medium BOP's and O.F.s, which were often dearer. Whole Leaf grades and leafy BP's were well supported and were about 3 to 4 annas dearer while best liquoring kinds were well supported at about last rates. The very best Fannings of this description were dearer. Darjeelings also met with a better demand and tippy teas again sold well.

Quotations	1955	1954
Clean Black Pekoe	2 8 0	2 1 6
Plain B.P.	1 4 6	2 1 6
Medium Assam B.P.	2 0 6	3 5 0 to 3 3 6
Best C. T. C. Assam B.P.	3 4 0 to 3 6 0	3 8 0 to 3 5 0

At the Internal sale, offerings of Dusts consisted of 15,500 packages. The market opened with a fairly good general demand but eased as the sale progressed. Best Assam CTC Dusts and the small powdery medium Assams with good liquors were the strongest features. They were fully firm and sometimes dearer. The remaining offerings opened about firm but were generally 1 to 1 annas below last rates at the close.

Quotations	1955	1954
Medium Doors Dust	1 13 0 to 1 13 6	2 6 5 to 2 7 0
Medium Assam Grainy Dust	1 15 6 to 2 0 0	2 7 6
Best Assam CTC Dust	2 12 0 to 2 14 0	2 6 6 to 2 7 0

The offerings of Other Grades consisted of 2,250 packages. The few clean leaf teas received good support and were generally dearer. The majority of the offerings, however, were stalky residue types and sold at irregular rates.

FREIGHT MARKETS FIRM

SCALE OF BUSINESS RESTRICTED

BUSINESS has been on a rather restricted scale during the past week but there has been no sign of any lack of firmness in the market. Grain fixtures have been the main feature with a wide-spread range of loading ports. Cape Town or Durban-Antwerp-Hamburg paid 120s for bulk maize; U.S. Gulf-Antwerp-Hamburg 103s 6d; West Australia-U.K. 155s; River Plate-Antwerp-Hamburg 121s 6d; Whampoa-Colombo 87s f.i.o. An interesting feature of the grain trades recently has been the increasing number of converted oil tankers participating in them. One fixture was concluded for nine consecutive voyages with optional loading for St. Lawrence ports, U.S.N.H., U.S. Gulf or River Plate. Mauritius-U.K. sugar paid up to 128s and flour was fixed from Rouen and Antwerp to Colombo at 107s 6d. Renewed interest in scrap resulted in the fixtures of a number of vessels to Italy at \$182,000 lumpsum equivalent to about \$20 f.i.o. An interesting situation has arisen at Visakhapatnam as a result of the recent congestion there. The liner interests of the local Steamship Agents Association, who outnumber the tramp agents, forced the Port Authority to give priority at one of the ore loading berths to liners in place of the existing "first come, first served" principle. The result will probably be a hardening in rates for tramp vessels, thus adding one more burden to the ore export trade of the country.

HIDES AND SKINS

The market continued easy and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 11th October and 17th October, 1955)

Cowhides: Wet salted (Ord) 17,000 pcs on the basis of Rs. 9-8 to Rs. 10-12; Wet salted (Sloughed) 11,200 pcs. on the basis of Rs. 12-12 to Rs. 25-8.

Cowhides: Wet salted 147,500 pcs.
Goatskins: Wet salted (Daissee, Killed) 32,500 pcs.; Assam - Dinajpur - Murshidabad - Jalpaiguri 57,000 pcs.; Muzaffarpore-Patna-Pakur-Purnea-Kissenganj 3,56,000 pcs.

LINSEED

Generally firm conditions prevailed in the market last week and fairly good enquiries were noted; trading was poor as an acute shortage of

ready goods resulted from restrictions in railway bookings due to floods upcountry. Better enquiries from crushers and scarcity of supplies resulted in higher price levels. The oil market was fairly active and prices advanced somewhat; there were moderate enquiries from shippers as well as crushers, but these met with little response and sellers were very reserved. Latest quotations were based on October-November Rs. 18-9 a maund.

SUGAR MARKET

During the week ended 18th October, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were poor at only 500 bags a day, though stocks totalled 110,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31-8 for ordinary grain and Rs. 32-10 for big grain. Ex-mill prices for standard grades of sugar varied from Rs. 28-4 to Rs. 29. Offtake in the market improved due to the Puja season.

it's a **GREAT** job...

keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

ELECTRONIC CONTROL FOR
NEPA NEWSPRINT
PRODUCTION

India will soon be able to meet one-third of her requirement of newsprint when the Rs. 6-crore Nepa Mills goes into full production in a few months time. The only one of its kind on the mainland of Asia, six electronic controlled drives of Nepa Mills will turn, abundantly grown *salai* and bamboo of Madhya Pradesh, into useful newsprint playing a very important role in the development of the country's press and literacy.

The quality and production of paper calls for very critical control of the paper machine drive. The G.E. Electronic Amplidyne Control installed at Nepa Mills will enable one operator to co-ordinate all six groups working at the same time. This highly accurate and modern G.E. drive system is being used by leading paper mills in the United States, Canada and Europe.

Using G.E. Electronic Amplidyne drive system, it is estimated that enough paper in a sheet 18 feet wide could be produced in 24 hours to cover the 327 miles from Nepalgunj to Bombay.

COMPANY AND PUBLIC NOTICES

NEW CENTRAL JUTE MILLS CO. LTD.

NOTICE is hereby given that an Extraordinary General Meeting of the shareholders of your Company will be held on Saturday the 12th November, 1955 at 1 P.M. at the Registered Office of the Company at 11, Clive Row, Calcutta, to consider and if thought fit to pass with or without modification the following to be proposed as extraordinary resolutions:—

1. That 86,000 Ordinary shares of Rs. 100/- each forming part of the Capital of the Company whether issued or not, be sub-divided into 8,60,000 Ordinary shares of Rs. 10/- each and for the purpose of giving effect to such sub-division ten shares of Rs. 10/- each be issued in exchange of each of the issued Ordinary shares of Rs. 100/- each credited as fully paid up—

That the authorised Capital of the Company be increased from Rs. One crore to Rs. 5 crores by the creation of:—

- (i) 21,40,000 Ordinary shares of Rs. 10/- each ranking *pari passu* with the existing Ordinary shares.
- (ii) 1,86,000 Preference shares of Rs. 100/- each, of which 19,000 Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 7% P.A. on the Capital for the time being paid-up with effect from the financial year of the Company 1955, and the balance namely 1,67,000 Preference Shares of Rs. 100/- each shall carry such dividend as the directors or the Company in General Meeting shall determine if and when issued. The said 1,67,000 Preference shares will in other respects rank *pari passu* with the existing issued Preference shares.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

RECOMMENDATION of a dividend for the year ended 31st March, 1955, on the Ordinary Share Capital has awaited the result of representations to Government in the matter. After the fullest consideration Government have found themselves unable to agree to any increase over the payment in respect of the previous year. At a meeting of the Board of Directors of the Company held on date the Directors have accordingly recommended payment of a dividend of **One Rupee** per share free of Indian Income Tax being at the same rate as the preceding year. This dividend awaits sanction by the Shareholders at the Annual General Meeting to be held on the 28th November, 1955.

The Ordinary Share Register of the Company will be closed from the 15th November, 1955 to the 25th November, 1955, both days inclusive, and the dividend will be paid on or after the 26th December, 1955, to those Shareholders whose names appear on the Register of Members on the 25th November, 1955.

CORPORATION OF CALCUTTA.

Tender Notice.

TENDERS are invited in duplicate for the following and will be received by the 2nd Deputy Commissioner on 11th January, 1956 upto 12-00 Noon. Each tender in duplicate must be enclosed in a sealed cover and superscribed "Tender for ...". For specifications and tender forms, apply to the Keeper of Records. Price Rs. 50/- per set:—

Laying a new 60" in., alternatively 72" in. internal diameter electrically-welded steel pipe-line, about 13.65 miles in length from Pulta Pumping Station to Tallah Pumping Station for conveying filtered water from Pulta Pumping Station. The pipe line will be laid underground.

The tenderer should be in a position to fabricate the pipes and to lay them underground, after carrying out necessary excavation works, within the time stipulated. The tenderer shall have also to undertake cathodic protection works as anti-corrosive measure, for protection of the new as well as all the existing old mains.

The tenders will be opened on 11th January, 1956. The rates quoted in the tender are to hold good for six months from the date of opening.

B. GHOSH,
Secretary.

8th October, 1955.

THE MANGALORE ELECTRIC SUPPLY CO., LTD.

A Dividend at the rate of 10% for the year ended 31st March, 1955 without any deduction for income-tax paid by the Company, has been declared payable to the shareholders.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 18th October, 1955.

How far will
15 yards of cloth go?

Fifteen yards—no more—is our per capita consumption of cloth. The industry's target for 1960 is 22 yards per head.

Thirty years ago India was importing the bulk of her textile requirements; to day, she has the second largest textile industry in the world. One hundred crores of rupees have been invested in this key industry. It employs a million workers and produces 5000 million yards of cloth annually.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PAKISTANI COMPETITION IN JUTE GOODS

INDIA'S ADVANTAGES STILL TELLING

PAKISTAN has made an auspicious beginning as a manufacturer of jute goods and the recent wage increases granted to the labour in the Indian mills has certainly strengthened her position. The belief has even arisen, in some overseas countries at least, that henceforth the road is clear for Pakistan to expand indefinitely and to erode India's predominant position in this industry. Some people are prepared to "write off" the Hooghly mills in advance, much as Lancashire has been written off by a section of "progressive" opinion. But there are still many in the Indian industry who do not hold this belief and this is the significant point—there are even fewer in Pakistan who accept it. More keenly aware of their difficulties than others, the Pakistani industrialists (of whom the Government in Karachi is the biggest) know that they have some way to go before they can hope to put any of the Calcutta mills out of business. Competition between the mills in the two Bengals there will certainly be, and India will feel the effects of it more each year. But before we can hazard a guess as to the final results of the struggle, we should look more closely at the terms on which that competition will be waged.

The first and most obvious point is that the Pakistani mill industry was established and nursed through its difficult first stages thanks to policies adopted in New Delhi and now belatedly abandoned. There is no interest in apportioning blame for this, and in fact these policies could be justified on other grounds. The two protective umbrellas held out by India to her struggling competitor were the very high export duty on jute manufactures, and the refusal to trade with South Africa. The one gave Pakistan a margin on hessian of as much as Rs. 1,500 a ton at the height of the post-Korean boom. The other gave Pakistan exclusive access to a ready market for jute cloth, which was just the thing an infant industry needed. Both these protective umbrellas have now gone. India has abolished the export duties and it is difficult to believe that they will ever be re-imposed. As for South Africa, so many of the Pakistani exporters have sought cover under that umbrella that there is now no room left. The competition enables South Africa to buy goods at world rates.

Thus Pakistan has lost the two advantages that gave her a good start. She has meanwhile gained as an exporter the benefit of a cheaper rupee, but this does no more than bring her back to par with the Indian mills. In other words, the two countries are on equal terms as far as selling prices go (assuming for the moment that currency values, export taxes and monopoly markets affect only selling prices). The opposite side of the account, raw material and manufacturing costs, is now to be looked at. Here Pakistan retains one decided advantage in that her mills have access to unlimited supplies of high quality raw material for which they pay the world's lowest prices, free of any tax and with only negligible transport costs. Most of the new East Bengal mills are in the heart of the jute-growing areas, linked by river to sources of raw material and to the export towns. They are owned by interests which have a large stake in the raw jute trade. The Government itself has an investment in the mills equal to one-third of their capital, or about Rs. 6 crores—and it also has general control over the cultivation of raw jute. In all these respects the Indian mills are very differently placed. Furthermore, the East Bengal mills, being lately erected, are equipped with the best and most modern machinery, whereas most of the Indian mills are managing with obsolescent plant and old-fashioned buildings.

On the other hand, India has advantages no less important. In passing we might notice that two of Pakistan's superiorities tend to cancel one another out; modern machinery makes high quality fibre somewhat less essential, for it can process a higher proportion of cuttings and the like. As applied to Pakistan, this is only of academic interest, but it suggests that as the Indian mills

modernise they will not suffer so much from the discrepancy in the qualities of Indian and East Bengal jute. Meantime, the Indian mills are much better off as regards power and labour. East Bengal is gravely short of fuel and power, and failing natural endowment with coal or hydro potential, the shortage can be remedied only at considerable cost. (Despite the spectacular mishap at the Sylhet oilwell, there is no sign that the Sui miracle can be repeated in the East.) Electric power now costs about ten times as much as in West Bengal and even at that price there is so little of it that many of the jute looms installed are lying idle for want of motive power. Skilled labour is scarce and even with the more productive

there may be no hope of ever making them entirely independent. Some marginal land will have to be kept under jute in India for reasons that are ultimately political. But political decisions of this sort must nevertheless reckon with economic laws, and it will be as well to remember that if ever Pakistan were to remove the export duties on raw jute and remove all price controls, then India would be gravely embarrassed in maintaining her jute acreage, and hence her independence of East Bengal. We should not suppose that no one in Pakistan has thought of this yet, or that they do not see in it a possible method of embarrassing India. It happens that there have been political reasons in East Pakistan for maintaining the price of raw jute for a few years past, but such conditions are not permanent. To take cover under an umbrella held out by a neighbour may be convenient but, as India herself has just demonstrated with the export duties, such umbrellas can be withdrawn at any time. The conclusion is plain. India has the stronger hand as a manufacturer of jute goods and can face increasing Pakistani competition confident of retaining her world leadership, but as a producer of raw jute she is more dangerously exposed than may appear. We emphasise again the urgency of a task that has frequently been set out in this newspaper: to improve the yield of fibre on India's good jute land—which is a very different thing from increasing the acreage under jute.

BRITAIN'S "INVISIBLE" ACCOUNT

A DECLINING SOURCE OF INCOME

THE troubles of the sterling area's gold and dollar reserve are coming gradually into focus. The official figures of the United Kingdom's current payments in the first half of this year have aided the process. It can be seen that the reserve was diminishing (by £29 million in the half-year) while the U.K.'s current payments were slightly in credit (to the extent of £17 million in the half-year). In the same period the deterioration of the current accounts of other sterling countries, especially Australia and New Zealand, put the whole sterling area in deficit to the extent of £31 million. It was partly the overseas sterling area that reduced the reserve—a process which has continued since mid-year. But Britain must share the responsibility, having improved her payments position with the sterling countries while allowing her payments position with the non-sterling countries to deteriorate. Of any year the first half is more favourable to Britain's balance of payments than the second half: a true comparison must therefore be based on full years. In the year to mid-1954 Britain's current external payments were £319 million in credit; in the year to mid-1955 the credit was only £38 million (on the figures at present available, which may later be revised to show rather more). The main element in this deterioration—£170 million out of £281 million—was visible trade, especially with non-sterling countries. The cost of imports rose twice as much as the earnings of exports and involved large net payments of foreign currencies. But there was a big deterioration also in the "invisible" account—by about £100 million. (The rest of the difference between the two periods represents smaller American aid.)

This "invisible" account deserves more attention than it has received in recent years; for it is one of the major factors (the terms of trade are another) in the post-war economic difficulties of Britain and of the whole sterling area. It has been recognised for generations past that services, instead of goods, pay for a substantial part of Britain's imports. These services include shipping (the largest, in monetary terms), insurance, banking, provision of capital, travel, and—in these times—the overseas earnings of the British oil companies (excluding, of course, the proceeds of exports of petroleum products from the U.K. which are "visible" trade). In the period of her economic predominance Britain established a very broad basis for her "invisible" income—exporting capital, on which interest or dividends would be paid, sending her ships to all parts of the world, providing all financial services relevant to international trade. But that period is ended, and in relation to total trade "invisible" income has tended to diminish, especially since the war.

An obvious cause of deterioration is the balance of payments itself, which provides only a modest and precarious surplus for investment abroad. External investments are still yielding reasonably well (£47 million net in the first half of this year), in response to the earnings of tea and rubber companies and other such interests; but the total of these investments is tending to diminish as loans are repaid and not replaced in Britain. Shipping is a curious case. It might be supposed that Britain, still a big power in the shipping world, would benefit from the rise in freight rates. On the contrary, it embarrasses her, because tramp-shipping rates have risen much more than liner rates, and whereas Britain "sells" more liner services than she "buys", she "buys" more tramp services than she "sells". One result of last year's bad harvest and of the growth of imports of coal

was a considerable increase in payments to foreign shipowners. Net shipping earnings were nonetheless maintained in the first half of this year (at £70 million); but whether the present position is equally favourable may be doubted. The financial services are not officially itemised, but they are a big element in the miscellaneous category. In the first half of this year, compared with the same period of last year, the surplus in this category was much reduced (from £142 million to £85 million). It may be surmised that claims on overseas insurance caused some of the deterioration; and very big claims have been settled or are pending in respect of the Atlantic hurricanes of recent months. However, much of the deterioration is attributed to the oil companies, which were spending heavily abroad during the period; and it must be supposed that this expenditure will be productive later.

An item of particular interest is travel. It is estimated that, for the first time, the number of visitors welcomed to Britain's shores by the end of this year will have exceeded one million in the year. Britain has at last established herself as a country worth visiting—though whether all the visitors have taken back with them such memories of good living as will encourage them to come again is uncertain. On the other hand, more Britons have been travelling abroad than ever before, and their expenditure in the past few months, especially on the Continent of Europe, has been a major factor in the seasonal weakening of sterling. In the first half-year the external-travel account showed a small surplus (£7 million) but there can be no doubt that the deficit in the second half-year will be much larger than that of the same period of last year (£10 million). Some permanent changes have occurred in these "invisible" accounts, and they suggest possibilities of improvement if the right policies are followed. If roads and hotel accommodation and food are improved, and outdated laws relating to the sale of alcohol are revised, tourism can be developed into a very profitable business for the nation. An aggressive policy for international transport—both shipping and aviation—can, perhaps, reverse a disturbing trend in net receipts from these activities. Meantime, however, high interest rates are diverting the erstwhile users of London's financial services to cheaper centres. It is unlikely that, even in a state of full economic recovery, Britain's "invisibles" will ever be as important as they used to be.

BRIGHTER OUTLOOK FOR THE COLOMBO PLAN

THE Colombo Plan for the economic development of South and South-East Asia, whatever its dimensions, is a splendid example of international co-operation among under-developed countries in the economic field. The United Kingdom has no doubt played a very distinct part in the formulation and the working of the scheme, and in a sense, has been the presiding spirit behind it. But the Plan is essentially one of self-help and mutual assistance among the member countries, whose numbers have now grown to cover practically the whole of the South and South-East Asia region. It is of course true that mutual co-operation is confined to technical aid only, because assistance in any other form is not possible at present. But considering the fact that technical aid and expertise are as indispensable to economic development as capital goods and machinery, it would be wrong to minimise the value of this form of assistance. For instance, India is now at a loss to find the 170 technicians she so badly needs for running the three projected steel mills. What is more important is the spirit of co-operation itself. This has been growing with time as the countries realise more and more the value of mutual co-operation and the benefits of the external assistance they have been receiving. The very fact that the member countries themselves took the initiative in extending the life of the Plan (due to expire by June next year) until June, 1961, is proof of the fact.

The growing promise of external assistance is another happy omen. The U.K. has promised an annual contribution of £1 million. Canada, as her spokesman at the conference promised, would step up her present rate of assistance. The United States is also to make increasingly larger contributions than it has been making. That is a very welcome decision. The role of Japan as a giver of technical assistance will also make a difference. External assistance available so far to the Colombo Plan nations has not been on a significant scale; it was considered disappointing a couple of years ago. But such assistance as has been forthcoming has provided valuable help to some of the countries, particularly India. The British mission of experts that came out to this country under the Plan to go into the question of the location of the third steel plant and the Canadian gift of locomotives for our heavily-pressed railway system are two notable examples. The latter's further promise to provide India with a gift nuclear reactor is another instance of precious foreign assistance. The U.S. decision to build a nuclear research centre in South-East Asia will also be of immense benefit to the member countries of the Plan in

this nuclear age, when atomic energy promises mankind new vistas of prosperity and progress.

It may still be argued that these by themselves are not sufficient to meet the needs of external capital in this under-developed part of the world. That is so. But a plan of economic development has a way of gathering its own momentum in course of time, and signs are not wanting that the Colombo Plan is doing just this. The examples of foreign help just mentioned are a possible prelude to a bigger volume of assistance in the future. Voluntary aids apart, international financial institutions such as the World Bank, the newly-formed International Finance Corporation of the U.N. and the Commonwealth Development Finance Company, are likely to provide greater accommodation to the countries concerned than they have done so far. The World Bank's assistance is considerable already. The statement of the leader of the Indian delegation, Mr. G. L. Nanda, who is also Union Minister of Planning that the "plan is now set for much quicker progress" was not merely a polite reference to the proceedings of the Singapore conference, but a hope based on real facts and an accurate reading of the attitudes of the member countries and the external participants. A stubborn opposition to any kind of political alignment for the sake of foreign economic aid has been a great obstacle in the way of the greater inflow of capital assistance. U.S. capital in particular. This factor wrecked the recent attempt to set up the counterpart of the O.E.E.C. in Asia with Japan as the pivot, but that is a reality which the assisting countries will necessarily have to face tactfully.

CURRENT COIN

Producing More Aluminium.—Mr. Lakshminarayana's presidential address at the recent annual general meeting of the Aluminium Corporation of India Ltd. (which appears on a later page) is notable for its comments on plans to expand aluminium production. Four points are stressed; they are not all of equal merit. Firstly, it is stated, good bauxite-bearing properties should be made available to the industry. Secondly, hydro-electric power should be supplied at economic rates. Thirdly, the industry should be adequately protected for another five years. And, fourthly, Indian producers of aluminium should be given financial assistance. Mr. Singhanian points out that some good and extensive bauxite properties are still held by people who are not interested in mining. They obtained these properties on long-term leases for nominal sums before the Mineral Concession Rules came into force. They cannot exploit these properties, and will not part with the leases without huge profits. As a result, the Government loses revenue and the industry cannot get enough raw material. Under the Mineral Concession Rules, says Mr. Singhanian, the Government has the right to take action, so it should see to it that the properties are suitably exploited. As regards power supplies, he points out that what the industry needs is large blocks of direct current at low voltage and at over 90 percent load factor. When charges for power are determined, it is therefore necessary to bear in mind the cost of converting the alternating current at high voltage to the form in which it is actually needed. Mr. Singhanian complains about the "import of an unprecedentedly large quantity of aluminium scrap, ice of duty," and says that this has been used for the manufacture of utensils of sub-standard quality and purity. The result has been a rate war in the sale of circles for utensil manufacture, and uneconomic rebates have had to be offered by virgin metal rollers to compete with circles manufactured from cheap imported scrap. Consumers of utensils, however, got no material benefit as there was no reduction in the price of the finished products. In fact, according to Mr. Singhanian, they suffered by buying inferior materials.

Tea Export Duty.—There seems to be some dissatisfaction with the tea export duty system, and this is expressed in the statement of Mr. H. W. Horner, chairman, to shareholders of Malayalam Plantations Ltd. He says that the duty is an unfair and discriminatory tax on tea, "which is singled out without any justification for expropriation of profits earned, before subjecting them further to the range of taxes upon profits, levied upon all alike." In the case of South Indian teas, it is particularly harsh and inequitable. The rate varies from time to time according as the Government assesses the world price of tea. Thus, when the export duty was increased as from 1st October, the increase was based on a world price assessed at 5s 4½d a lb. At that time, South Indian teas averaged just under 4s a lb, while North Indian teas averaged 6s 5½d, but both paid the same duty. Mr. Horner reviews the company's plans for improving tea and rubber production. In order to make the most of increasing crops of tea, he says, a programme to expand and modernise manufacturing facilities—factories, motive power, machinery, transport, etc.—is in hand. Progress has been made in replanting certain areas of the rub-

ber estates with modern selected material. Discussing the prospects for tea, Mr. Horner expects a reasonable gross profit from sales in the open market. He is doubtful about the Government of India's attempts to sell more tea in Calcutta and less in London, pointing out that Britain buys more than half of India's production and is the world's largest consumer. "Inept handling of such an arbitrary action may dislocate markets and result in loss and damage to producers and the Government of India alike." But the present proposals are not likely to affect South Indian teas directly in the near future. According to Mr. Horner, it is "reasonably certain" that the company will make a satisfactory profit for the current year. Its financial position is sound and its properties are in good order and highly productive. "It is by no means over-optimistic to say that this company can face the future with confidence."

Diamond Supplies.—In a memorandum to the Government of India, Calcutta jewellers have complained against the way anti-smuggling measures under the new Section 178A of the Sea Customs Act are being implemented. In making searches and seizures, says the Calcutta Johuri Mandal, preventive officers seem to think that the polished diamonds which jewellers may have are smuggled, since the import of cut diamonds has been totally prohibited for a number of years. When they make "raids", they take away diamonds, accounts books etc. and detain them for months. As a result, "the jewellery business has been almost paralysed since the new law came into effect." The Johuri Mandal points out that this procedure gives unscrupulous people, who act as informers and agents to the Customs, great scope for harrasing traders. It feels that when information is received, it should be closely examined by responsible officials before any search is made. Although the import of cut diamonds has been banned since 1948, fairly large quantities were brought in and sold to individuals, particularly princes and zamindars, before then. As a result of recent changes, these diamonds have been returning to the market. The Mandal considers that certain impressions about the size of smuggled stocks may therefore be exaggerated. It suggests that the local diamond cutting industry should be encouraged by allowing more rough stones to be imported. At present rough diamonds can be imported on a quota basis up to 25 percent of the diamonds imported in 1946-47. The duty is 20 percent *ad valorem*, but the Mandal thinks it is too high. It is because of this, it says, that although quota licences totalling Rs. 75 lakhs were issued in 1954-55, only Rs. 10 lakhs were utilised. The Johuri Mandal feels that the import duty should be abolished experimentally for four or five years; it is worth encouraging the local cutting and polishing industry in this way, especially as the Panna mines are being developed.

Land for Refugees.—The problem of resettling refugees in India seems to have eluded a satisfactory solution so far, at any rate, in Eastern India. The issue of evacuee property claims between India and Pakistan has taken a long time to settle and Pakistan appears unwilling to accept the whole of India's claims. Nevertheless, the issue is being tackled piecemeal and just now the agreement relating to movable property has been ratified by both the Governments. Such movable properties as securities, shares, debentures and insurance policies left behind by refugees in the countries of their birth will now, with a few exceptions, be released from official custody to be given back to the owners who have been advised to submit their claims within a stipulated period. Given the necessary goodwill and understanding, this happy arrangement can extend to immovable property in due course. A full settlement of this issue, if and when reached, will have settled only a small part of the problem. The real nature of the trouble in Eastern India, as it has come into focus due to the proceedings of the Rehabilitation Ministers of the eastern States, lies in finding enough land for the agricultural class of refugee, which appears to form the majority of the persons displaced from East Pakistan. Among the eastern States in India, West Bengal where the bulk of the refugees have concentrated due to linguistic and social affinity, finds itself hopelessly incapable of finding sufficient land within its own borders for the migrants. The question is where else is land to be found and in what manner can it be found? The land reform and tenurial reform programmes have complicated this question for the time being. Besides, the unwillingness of East Pakistani refugees to go to States other than West Bengal has added to the difficulty of the authorities in finding a solution. Meanwhile, the exodus from East Pakistan continues. This could be checked. Pakistan owes to its minorities the duty of protecting their lives and homes and of taking steps to relieve the economic distress which is the cause of the current exodus. In India, the problem of East Pakistani refugees can be settled only by transferring them to the States where colonies can be set up. This must be done

as speedily as possible. Hardly any other feasible alternative is left.

New British Synthetic Yarns.—One of the most interesting and possibly one of the most important exhibits at Britain's recent National Fabric Fair was a new fibre of the nylon type. This is being produced in a pilot plant by British Celanese, Ltd., which has called it "Celon." It is a wholly synthetic polyamide fibre, whose properties seem to have a greater resemblance to those of "Perlon"—the German nylon-type fibre—than to those of the material hitherto produced in the United States and Britain. It is claimed that it has greater elasticity and a greater affinity for dyestuffs than some other wholly synthetic fibres, besides having all the useful characteristics as regards resistance to moths, easy upkeep and retention of pleats. The British nylon industry, incidentally, seems to have gained a point over its competitors with one of the yarns which it displayed in the textiles section of the British Trade Exhibition at Copenhagen. This is the latest six-denier nylon yarns for the stocking trade, which is even finer than the seven-denier yarn produced in the United States.

CORRESPONDENCE

PLANTATION LABOUR IN CEYLON

(TO THE EDITOR OF "CAPITAL")

Sir,

We are constrained to address you the comments made by "a Colombo Correspondent", on page 473 of the issue of *Capital* dated 6th October, about the demands for increases in tea and rubber wages. "Conditions are indeed hard for them (the workers), and an increase in their wages appears imperative. Social service reports and nutritional experts have pointed out that the living conditions of workers in the tea industry are appalling". We feel obliged to contradict these statements. We must in the first place challenge the existence of any adverse comment relating categorically and exclusively to the living conditions of plantation workers in the official report of any social service or nutritional expert. On the other hand, the report of the Commission on Social Services has observed that "the obligations of employers on tea and rubber estates are greater than those of other employers" and further that "the planting industries have not been unmindful of their responsibilities". Reference has also been made to the improvements connected with housing and medical attention, to the provision of hospitals, schools, maternity arrangements, creches and various other amenities, e.g. the supply of free meals to children, "representing, as a whole, considerable responsibility and expense". Nor does any official report justify the comment that the nutritional standards of plantation workers are "appalling". After a full inquiry conducted in 1941 into the family budget of Indian estate labourers, the present Commissioner of Labour came to the conclusion that a "labourer's diet contains sufficient calories for his requirements even when he has to perform hard manual labour". There is clear evidence that living and nutritional standards of estate workers have improved since 1941. This improvement has been made possible by the payment of a cost-of-living allowance to compensate for any increase in the cost of living and also by periodical revision of the minimum wage, reflected in the rise of the minimum wage index number from 110 in 1941 to over 500 at the present time.

Yours etc.,

CHAIRMAN, PLANTERS' ASSOCIATION OF CEYLON.
CHAIRMAN, LOW-COUNTRY PRODUCTS ASSOCIATION OF CEYLON.

Colombo, 21st October, 1955.

KRUPP

For almost 150 years the name 'KRUPP' has been regarded throughout the world as signifying the best in quality and performance. It also stands for outstanding pioneer work in many fields of technical and industrial research, design and manufacture. The following are but a few of the pioneer inventions and activities which have contributed to the reputation of KRUPP throughout the world:

- | | | | |
|-------------|---|-------------|---|
| 1812 | Alfred Krupp made the first cast steel on the continent of Europe | 1923 | The process of nitrite hardening was invented |
| 1849 | He succeeded in making railway axles and springs from cast steel | 1925 | KRUPP research produced non-ageing steels and highly refractory steels |
| 1851 | At the World Exhibition in London Alfred Krupp exhibited the largest steel ingot which had ever been made up to that time. This brought him very great fame | 1926 | Industrial-scale manufacture of the first sintered carbide in the world, WIDIA Hard Metal |
| 1853 | KRUPP invented the seamless forged railway wheel tyre | 1938 | Introduction of the KRUPP direct process for the smelting of low-grade iron ores (KRUPP-Renn Process) |
| 1862 | The Bessemer process for the bulk production of steel was introduced | 1954 | KRUPP Engine Compression Brake, a third brake for heavy trucks, patented |
| 1912 | The invention of stainless steels was patented by KRUPP | 1955 | Finished and semi-finished products made of TITANIUM, the new material which is opening up new possibilities for the fulfilment of the many tasks which modern technology imposes on industry, just as aluminium and stainless steels did years before, were exhibited by KRUPP |

We draw special attention to the following items taken from our manufacturing programme which comprises practically every field of industrial engineering:

Complete iron and steelworks; blast furnace plants; Renn-kiln plants; sintering plants; rolling mills; forges; foundries; cement, lime and gypsum works, chemical factories and plants for making artificial fibres.

A DITCHER'S DIARY

being able to pool their defence resources and there is no need to fear that such an advantage will be used in any aggressive cause. It would be good to see a little more economic co-operation, especially for India's benefit, such as would be represented by an inflow of British capital. But most of the available capital is in private hands and, if we are to believe Lord Home, there are already many attractive opportunities open to it in other parts of the Commonwealth. As he pointed out, India will have to offer equally good ones if it is to be forthcoming.

* * * *

The comment that the Prohibition Enquiry Commission's findings were a foregone conclusion seems to me to be justified. I have seldom read anything which struck me more as based on pre-conceived notions, unshakable prejudices and a complete determination to avoid all facts, however weighty, which might spoil an enthusiastic conclusion. This is surely puritanism with a vengeance. Although I do not agree with Mr. Kodanda Rao's choice of methods for restricting liquor consumption I do admire the way he has injected a little reason into a large body of predilection. No disinterested person will deny the need to restrict drinking among workers whose increasing incomes might be more usefully spent on improving their standards of living. If the Committee had restricted its recommendations to dealing with this problem its case would probably have been unassailable. But it has shown itself to be considerably more ambitious. Its object is the stern abolition of all drinking whether the drinker can afford it or not. This is purely a moral aim and as we know moral aims have been the enemy of democratic freedom and individual self-respect since long before Oliver Cromwell was born. In the company of all this misdirected righteousness it may seem sacrilegious to drag in such sordid considerations as the raising of revenue, but I consider that prohibition is damned in India on this score alone. The Committee has dismissed the problem of the cost involved with an airiness which State Governments certainly do not feel. If success were assured the price might be worth paying. But the experience of other countries which have tried prohibition indicates that it is not. The United States, in a similar burst of puritanical enthusiasm, brought upon itself such a wave of crime as the world has never before witnessed. The Committee might profitably note that the moral cost to the country was appalling and the financial cost was as great as only a rich nation could afford to bear. The disrespect into which the law was brought has left a legacy which has probably not been completely cleared to this day. It would be a pity if India were to saddle itself with such an impossible policy on the prompting of a handful of fanatics.

* * * *

If Mr. Butler's autumn Budget was intended to reassure sterling holders that everything necessary is being done to maintain the pound's value it might eventually achieve its object. But what it appears so far to have succeeded in doing has been to contradict the Chancellor's own assurances that no crisis exists and at the same time antagonise the trade unions on whom the economy's future depends. But the worst feature of this Budget is the contribution it seems to have made to the steady erosion of Mr. Butler's reputation for sound judgement and expert handling in economic affairs; and that means to his personal policy of reliance

on monetary methods of control. Such loss of standing is probably unfair to Mr. Butler's undoubted farsightedness. This Budget does attempt to tackle, however inadequately, the real causes of excessive demand in the economy—the distortions caused by the socialistic ideas of the post-war Labour Government. But this fact is unlikely to weigh with overseas holders of sterling, who have probably been impressed more by the reaction of the trade unions than by the contribution the Budget will make to long-term stability. In the debate Labour Members welcomed the opportunity for divesting Mr. Butler of some of the prestige he acquired as the architect of the present prosperity. Their point that the last annual Budget was a vote catcher is bound to impress those who are always prepared to see the imprint of the cloven hoof on any move the Conservatives may make. What will be harder to answer is Mr. Gaitskell's criticism that there was no point in imposing on the country the disruptions of an autumn Budget if the last one was in fact planned to cover the period beyond the election date and the monetary measures on which its underlying policy relied are as effective as Mr. Butler still suggests they are. By resisting the temptation to damp down inflation through direct taxation, import restrictions and physical controls, Mr. Butler has now irrevocably nailed his, and his country's, colours to the mast of monetary regulation. If the banner is a little tattered at the edges that is not to say it will cease to fly, especially when expert opinion has it that the more dangerous inflationary factors in the economy are beginning to disappear of their own accord. One indirect advantage of the present disputes over economic policy in the British Parliament seems to me to have been the chance it has given Mr. Gaitskell to substantiate his claim to the leadership of the Labour Party. A sound contribution from Mr. Bevan has been conspicuously lacking.

* * * *

There must be few who will not agree that Princess Margaret has chosen wisely, although the decision is no less remarkable for being the correct one. After the example set by her uncle it would have been neither surprising nor reprehensible if the Princess, whose obligations to the institution of monarchy are so much less than his were, had made up her mind to marry the man of her choice. The fact that she did not is a reflection of the spirit of dedication which her father fostered so assiduously throughout the war and the years during which the new conception of the Commonwealth was taking shape, and which her sister has so brilliantly carried on. Perhaps no great damage would have been done to the monarchy had the Princess chosen differently and the Constitutional adjustments would probably have encountered little opposition. But another question, the religious one, has contributed to the final decision. The Princess has bound herself by a church ruling which appears long since to have slipped out of line with modern views on the sanctity of christian marriage. The Archbishop of Canterbury may have influenced the Princess in the cause of conformity only to invite strong popular support for an immediate change in the Church of England's age-old customs. It is now sincerely to be hoped that the subject will drop completely from public view. In this the British Press has a duty to expiate some of the deplorable lapses of which its popular section has lately been guilty. The Princess has set the newspapers an example in decorum and dedication which all too many of them would do well to emulate.

Company Meeting

MALAYALAM PLANTATIONS, LTD.

SUBSTANTIALLY BETTER RESULT

DIVIDEND AGAIN INCREASED

MR. H. W. HORNER ON MODERNISATION PROGRAMME

The Annual General Meeting of Malayalam Plantations, Ltd., will be held on 17th November, 1955 in London.

The following is the statement by the Chairman, Mr. H. W. Horner, circulated with the report and accounts:—

At this time last year it was possible to say that satisfactory profits for 1954/55 seemed reasonably secure. In the result, although the fluctuations in tea prices which have occurred since then were not foreseeable, results are substantially better than those for the previous year. The tea crop was more than 350,000 lb. ahead, but at a higher cost. The increased crop exceeded the export quota allotted to the company and in the favourable tea market, the additional export quota which we had to obtain was a profitable purchase. The net average price realised was nearly 7d. a lb. higher.

The rubber harvested was, owing to adverse weather conditions, appreciably short both of the estimate and of the crop for 1953/54 but, with a slightly higher net average selling price, the total revenue is not materially different. Export of rubber from India is prohibited, and our production has to be sold within India at a controlled price. From about the time when war conditions were ending—say the middle of 1947—the average controlled price has been substantially lower than the average world price over the period and manufacturers in India using rubber have benefited accordingly, at the expense of the producers.

It is with pleasure that the directors present accounts permitting, for the second year in succession, an increase in the dividend. The profit for the year before taxation is £1,323,437, and, after such taxation, there remains a sum of £640,373, nearly £200,000 more than the corresponding figure for the previous year. There is a heavy export duty on tea from India (which, directly or indirectly, has to be paid by the producer) and, in the months during which about 40 per cent. of the year's crop was sold, the duty represented 4½d. a lb.; for the remainder of the year, the duty averaged just over 9d. a lb.; in all, say £376,000. Adding this sum to the taxes on profits £683,000, it will be seen that this company paid in taxation just over £1 million, apart from and in addition to many other taxes and cesses, not in themselves amounting to a very large sum.

Tea Export Duty

Export duty is an unfair and discriminatory tax upon tea, which is singled out without any justification for expropriation of profits earned, before subjecting them further to the range of taxes upon profits levied upon all alike. The incidence of the duty upon South Indian teas is harsh and manifestly inequitable. The rate varies from time to time in accordance with the Government's assessment of the

world price of tea. As an example, the last increase of export duty as from 1st October was based on a world price assessed at 5s. 4½d. At that time, in the London auctions of the week of 29th September, South Indian teas averaged just under 4s. a lb. whilst in the same week North Indian teas averaged 6s. 5½d., yet South Indian and North Indian teas pay the same duty now 9d. a lb.

The sum available for allocation, after allowing for the items on the credit side of the appropriation account and the amounts already allocated, is £647,204.

The directors have transferred £104,208 to Buildings, Machinery, etc. Special Reserve, £134,793 to Replanting Reserve, and £100,000 to Revenue General Reserve. They recommend a final dividend of 17 per cent. which, less tax at 8s. 6d. in the £, will absorb £177,125 and will make the total dividend for the year 25 per cent., leaving £131,073 to be carried forward, against £103,388 brought in.

In previous years, we have explained the necessity of setting aside in good years a proportion of profits earned in order to put the company in a position to meet without embarrassment foreseeable demands upon its resources in the future, and these appropriations do not need further justification.

We are proceeding steadily year by year with a programme of extending and improving living quarters for staff and labour and in the provision of amenities. In this regard, we know that the cost of compliance with the requirements of the Plantation Labour Act will be heavy, but we are unable to calculate the probable liability: the requirements are to be phased over a period of years and to be, assuredly, capable of modification with any fluctuations in the fortunes of the plantation industries affecting their ability to meet the outlays. In order to make the most of increasing crops of tea, we are working upon a programme of expansion and modernisation of manufacturing facilities—factories, machinery, motive power, transport, etc. We are making progress in replanting, with modern selected material, areas of certain of the rubber estates. Income and super tax of increased stringency is adding severely to the burden of taxation carried by our staff, as well as adding to the difficulty of making adequate provision for superannuation. There is a responsibility in this connection which has to be accepted, both as a matter of fairness and in order to maintain efficient administration of the company's affairs. It does not figure in the balance sheet, but the staff is among the company's most valuable assets.

Labour Situation

The labour situation shows some improvement, for the time being at any rate, and there have been fewer active disturbances than in the past few years. This is not to say that there are no difficulties—they

are constant and ever-recurring, and dealing with them calls for the utmost patience and ability but, in spite of all troubles, the work gets done and the crops are harvested, very greatly to the credit of all concerned in the management of the estates. Much of the valuable time of our staff, and of our agents in South India, is taken up with the elaborate and slow-moving machinery, devised by the Governments, providing for reference to one-man tribunals for adjudication, numerous, and often petty, labour disputes (usually fomented by outside agitators having no direct interest in the company's welfare). It has always been the policy of this company to provide the best practicable conditions of service for all its employees, and we are in full accord with any endeavours to improve the conditions of Indian labour generally. It must be remembered that in the long term conditions can be improved only by increased productivity. Legislation by itself will not effect improvement; much of that directed towards plantation labour has probably had an unfortunate effect, in increased pay in various forms, for shorter hours, for fewer days and longer holidays, with a decreased output for each man's work-day.

We appreciate that the welfare of labour must be an important care of any popular government but only the reverse of welfare can follow from remuneration (in whatever form) not related to the value of work done.

India's Development Programme

We are watching with sympathy, and ever-ready willingness to assist where possible, the progress of India's Programme of development—understandingly pitched in a high key in the light of exuberant nationalistic feeling followed political independence—and it is satisfactory to be able to record that substantial progress has been made. But the realisation is growing that the programme has been over-ambitious and that the warning was well timed, which was given a year ago by the mission of the International Monetary Fund, that it is not possible to provide the necessary money from India's internal resources. The Minister of Planning has intimated that this is in fact the case and that drastic revision is necessary. If practical steps are taken promptly in this direction, breakdown of the programme, and much disappointment in failure to complete schemes in hand, can be averted and India's natural resources enriched, rather than depleted almost to exhaustion. In truth, not development alone but the future of the people of India at any level above bare subsistence will be dependent on foreign capital.

Narrow nationalism may render its own objectives impossible of attainment. Indians generally—and not only the Government of India—must accommodate themselves to foreign capital and to giving the assurances that capital must be expected to demand before venturing into India. It would indeed be calamitous if plans for betterment of agriculture and industrialisation were frustrated or even jeopardised by hostility to financial help from outside India.

Government's Pronouncements

There have been many pronouncements by the Government of India regarding the terms on which capital will be permitted to enter India, including undertakings that there will be no discrimination against it. But the incidence of taxation of personal incomes upon the representatives of foreign capital is almost unbearable, making it difficult for owners of foreign capital to feel assured of their ability to maintain their own representatives in India.

The Finance Minister for India is reported to have said, speaking on 12th September in the Parliament of India in New Delhi, "Government believed that foreign investment would be required in India for many years to come. In order to attract such funds, existing foreign investment should be treated fairly and generally in a manner which did not discriminate between it and indigenous ventures."

Estimates for 1955/56 allow for crops of 15,500,000 lb. of tea and 6,772,000 lb. of rubber. With both products we are, so far, well ahead of last year. Every effort is being made, by more intensive cultivation, to increase the yields of tea in order to counterbalance the steady tendency (for reasons beyond our control) towards increased costs. By extensive prophylactic measures we hope to minimise the losses of crop brought about by the main pests—blister blight and helopeltis in the case of tea, phytophthora and oidium in the case of rubber.

No forward sales have been made in either tea or rubber. An outlet has been ensured for twelve months at prices current from time to time for a grade of tea constituting a small percentage of the total crop.

The Outlook

The outlook for tea offers the prospect of a reasonable gross profit from sales in the open market. The Government of India is endeavouring to divert forcibly more and more of the selling of the tea crop of North India from the London to the Calcutta market, notwithstanding that the U.K. is the buyer of more than half the production of India and the largest consumer of tea in the world. Inept handling of such an arbitrary action may dislocate markets and result in loss and damage to producers and the Government of India alike. The present designs of the Government do not appear likely to affect South Indian teas directly in the immediate future. Sir Eric Miller, Chairman of Harrisons & Crossfield, Ltd., will be dealing in a few weeks, in more detail with the position of tea and rubber production and marketing and, as in past years, a copy of his address will be sent to any member of this company on request.

A satisfactory profit for the current year seems reasonably certain. The company's financial position is sound and its properties are in good order and highly productive. The cost of replacing them would be many times the figure at which they appear in the balance sheet, and there would be many years to wait before the new estates became profitable. It is by no means over-optimistic to say that this company can face the future with confidence. It is fortunate in having a first-class staff of loyal, hard-working and efficient men and women, and we thank and appreciate of the directors and agents members for the invaluable services which they are rendering under conditions of continued difficulty, and of frequent frustration.

Company Meeting

ALUMINIUM CORPORATION OF INDIA LIMITED

SRI LAKSHMIPAT SINGHANIA'S REVIEW

The following address was delivered by Sri Lakshmiapat Singhania who presided over the Seventeenth Annual General Meeting held at Calcutta on Thursday the 20th October, 1955.

Gentlemen,

I have pleasure in welcoming you to the Seventeenth Ordinary General Meeting of the Corporation.

From the accounts and Directors' Report, which have been with you for some time, you would have noted the satisfactory progress the Corporation has made during the year high lighting good labour relations, record production and sales, repayment of a portion of debenture loan before due date, and clearance of arrears of dividend on Preference Shares for 2 years. I am confident that you will also appreciate the devotion of the Managing Agents to this basic industry and their sacrifice in entirely foregoing once again even the office allowance due to them. In the history of Company management, this sacrifice for over a period of seventeen years stands unparalleled.

The one important feature of the market conditions during the year was the import of unexpectedly large quantity of aluminium scrap, free of duty, which was classified just like other non-ferrous metal scraps and was placed in open General Licence. As a result, huge quantities of scrap, mostly alloys, were imported at cheap prices by re-rollers and used for manufacture of utensils of substandard quality and purity. I give below a statement of imports of scrap for the last five years.

			Tons	Nil
1951-52	...	...	Nil	Nil
1952-53	...	...	Nil	Nil
1953-54	...	...	Nil	Nil
1954-55	...	...	2,454	Nil
1955-56 (5 months)	...	...	354	Nil

The dissimilarity between aluminium and other non-ferrous metal scraps is that in case of aluminium there is no difference between scrap and the original virgin metal or its alloys. This fact, together with the harmful effect of use of impure scrap on consumers and unfair competition with domestic virgin metal and huge loss of revenue to the country, was repeatedly brought to the notice of competent Government authorities from July, 1954 onwards. But it is only from the 1st of this month, i.e. 1.10.1955 that the Government has acted by removing aluminium scrap from O.G.L. though the question of duty is still undecided. In the meantime the price of scrap in world market has already soared up due to short supply and the Government action has come only after considerable damage has been done to the indigenous producers of virgin metal like ourselves.

Rate War

The result of the import of scrap has been a rate war in the sale of circles for utensil manufacture and uneconomic rebates had to be offered by the virgin metal rollers to compete with circles manufactured from low priced imported scrap. The consumers of utensils, however, got no material benefit as there was no reduction in price of utensils; only they got utensils of harmful metal in the bargain. The Government lost not only valuable hard currency but revenue duty also.

The progressively large use of imported as well as domestic scrap for manufacture of utensils confirms my statement in several of previous years' annual addresses that in any scheme of expansion of this industry in India too much emphasis should not be laid on use of virgin metal for utensil manufacture. Heavy engineering industries will have to be developed to use any large production of this metal. It is, however, encouraging to notice that industrial uses of aluminium have started and it is hoped that such demand will grow steadily.

I shall now briefly touch on a few other points of interest to this industry. The first is the ever increasing railway freight. The Railway Act as it stands safeguards only the Railways and not the users of the Railway. The old accepted principle of freight being suited to the material carried has been discarded in favour of freight to suit the end use of the material. For example, freight on petroleum coke which has all along been classified as coal, coke or patent fuel and which we have been getting from Digboi, has been enhanced from Rs. 19/5/- per ton to Rs. 65/11/- per ton, simply because it is used for production of aluminium metal costing about Rs. 2,800/- per ton though the price of the material, i.e. petroleum coke, itself is only Rs. 50/- per ton. In fact, the cost of importing the material from the U.S.A. is now cheaper due to increase in railway freight. There is another case of haulage charges for consignments booked as 'smalls'. A sum of Rs. 18/- per four wheel wagon is charged on 'smalls' that arrive at or go out of our siding. The Railway has simultaneously restricted booking of 'smalls' as well. The result has been that no consignment exceeding 3 tons can go as 'smalls' and by causing the consignments to be split the Railways earn haulage charges on each consignment. As all these changes come under local rates there is no appeal to any authority and there is no remedy for such acts by the Railway. It is high time that the entire railway policy is revised with a view to safeguarding the interests of industries also.

Need for Broader Outlook

The second point is the need of broader outlook by the Government for the future development of this industry. So far, by undue criticism of extra capacity for alumina production and short capacity for rolling, what is called 'balanced' production has been forced on the industry with the result that no extra capacity for alumina is now available in this country and many manufacturers of alum and similar products are in difficulty and the Government are now routing enquiries to us to fulfil their needs. The rolling capacities have been increased though no ingots are available and several mills are run-

up modern hydro-electric power plant is no doubt costly, but costlier still is the putting up of a modern aluminium plant to produce the metal at competitive rate.

Revenue Duty

A realistic continuation of suitable revenue duty for at least another five years will give sufficient time for the industry to make long range programme and to develop on economic lines. In fact, nearly all the countries in the world which have aluminium industry of their own, are imposing import duties even though they have been producing this metal in large quantities for a long time and are getting power at very cheap rates from Hydro-electric installations put up before the war.

Gentlemen, it is truly said that no pioneer is honoured in his own generation or country. What your Corporation has achieved against heavy odds has not been adequately appreciated in India, but the progress made and technological results achieved have surprised even outstanding foreign technicians who have visited and stayed at our factory and have drawn unsolicited appreciation from them.

Aluminium ingot is produced in 22 countries of the world by 36 different companies at 87 plants. Of these 11 companies are Government owned leaving only 25 non-Government companies. Out of these 16 companies are inter connected in groups through incorporate ties or pooled producing or selling operations. This leaves only independent non-Government companies operating 17 plants which have no corporate or operating ties with any other producers and your Corporation has the proud privilege of being one of the nine. Incidentally this is the centenary year of aluminium, your Corporation has the unique distinction of producing first aluminium from Indian Bauxite in this country barely 11 years back.

The difficulties and disadvantages overcome and the technical problems solved in building such a highly technical and closely guarded key industry in such a short time and the confidence gained in doing so cannot be described in words; but the completely integrated Jaykannagar factory stands as a visible monument for every one to see, to appreciate and to be proud of. I hope that the achievements of this completely Indian organisation will be viewed by the Government in their proper perspective and all out encouragement and assistance will be given to further expand our Industry.

Gentlemen, I have now pleasure in moving that the Directors' Report and Audited Accounts for the year ended 31st March, 1955, be adopted.

STATE BANK OF INDIA

Successors to the Imperial Bank

Overseas business

For developing our country's economy, the development of our foreign trade is essential. If you are engaged in overseas business, you know the many complicated requirements which need careful attention, the time and expert labour you have to put in before a trade enquiry matures into an export or import contract. It is here that the State Bank of India's assistance to you will be most useful.

The State Bank has a trained staff and is fully equipped to transact all types of foreign exchange business.

The State Bank has offices throughout India and is represented in all the principal trading centres of the world.

The State Bank of India offers many other services too. Why not talk things over with your nearest bank agent, or write for information.

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

DESIGN WORK ON COMET 4
ALMOST COMPLETE

FATIGUE LIFE OF 60 YEARS

IN a progress report just issued, de Havilland states that design work on the structure of the Comet 4 is now virtually complete. The aim to secure a fatigue life well in excess of the commercial life of the aircraft has been achieved. "To be on the safe side," the report explains, "test specimens should achieve an average fatigue life of at least six times the minimum life required of the aircraft. Thus, for a fatigue life of 10 years, test specimens must achieve a life equivalent to at least 60 years. In the case of the Comet the aim has been to ensure a life of 10 years, at maximum utilisation, with no cracks, and a further 10 years during which cracks, if they were to appear, would remain small and harmless."

Components of the Comet have been subjected to tests with this criterion in mind, and their successful conclusion is a fine achievement by de Havilland. Earlier marks of Comet have contributed much to the test programme. In particular, extensive flight trials of the Comet 3, which bears a close aerodynamic similarity to the Comet 4, have enabled the manufacturers to estimate accurately the performance of the later model. This process is to be carried yet a stage further: the Comet 3 will eventually be fitted with Mark 29 Avon engines, which have been specified for the Comet 4. It will then be possible to accomplish some 80 percent of the flying required to obtain a certificate of airworthiness for the Comet 4, which is due to fly late in 1957. Flight trials have provided information on which further research and design has been based. No fewer than 3,000 separate fatigue tests have been conducted on specimen assemblies incorporating fuselage panel joints and similar design features. Meanwhile, valuable wing spar and wing component testing has proceeded on a 100-ton test rig.

The Comet 2, which should receive its certificate of airworthiness before the end of this year and is due to be delivered to R.A.F. Transport Command early in 1956, has also figured in the test programme. The accumulated flying hours of the Comet 2s in service will provide a valuable background of operational flying for the Comet 4. A Comet 2 is about to begin a water tank test. Many features of the Comet 4 are incorporated in this specimen, and a centre section and portion of the fuselage of the Comet 4 is to be placed in the tank with the Comet 2. Other fuselage sections of the Comet 4 are to be tested in a smaller tank. Figures analysing the Comet 4's performance have been made available to airline operators unusually early for a new aircraft. The exhaustive test programme, in which the Comet 3 has played so great a part, has enabled this to be done. By virtue of the 30,000 hours of airline flying, the searching

inquiry of 1954, and the extensive programme of structural test and development work which has been completed so far, the new Comet will probably be the most thoroughly tested airliner in existence.

FIRST DOLLAR ORDER FOR BRITANNIA
AIRCRAFTS

The first dollar order for Britannia airliners—the United Kingdom's latest long-range turbo-prop plane—has been placed with the makers, the Bristol Aeroplane Company, by Canadian Pacific Air Lines. Delivery is scheduled for 1957. The order is for three planes, and the airline has the option on a further five. This will be the second British turbo-prop airliner to fly passenger routes in North America. The first was the Viscount, now in regular service with Trans-Canada Air Lines between Canada and the U.S.A., and also with Capital Airlines on domestic routes within the United States. Canadian Pacific Air Lines operates an extensive network of services on routes which include Canton, Gilbert and Ellis Islands Colony; Honolulu, Hawaii; Tokyo; Hongkong; Fiji; Auckland, New Zealand; and Sydney, Australia; and services via Hongkong, Tokyo, Vancouver, Mexico City and Peru.

Canadian Pacific's present fleet is made up of Douglas DC-6B planes. The decision to order the British machine is the result of close study of the Britannia by officials of the airline in the course of which its president, Mr. G. W. G. McConachie, visited Britain and flew in the aircraft. This latest order brings the total order book to 42, with options on a further seven. These include 33 for British Overseas Airways Corporation; three for El Al (Israel Airlines), plus an option on two more; and three ordered by the British Government. The Britannia ordered by Canadian Pacific Air Lines is the 300-LR version, capable of carrying 93 passengers over very long ranges. It is powered by the Proteus 755 turbo-prop, which is the first engine in the 4,000-h.p. class to be given official clearance for passenger service.

NEW BRITISH TURBO-PROP TO BID FOR
WORLD SUPREMACY

One of the best-kept secrets of civil aviation was revealed recently—plans for a new turbo-prop airliner known as the Vickers 900 Vanguard. An announcement by British European Airways said that it was in negotiation with Vickers-Armstrongs Ltd. for a fleet of these airliners, which, although still on the drawing-board, are scheduled for delivery in 1959-60. The Vickers Vanguard will be a 93-passenger airliner powered by four of the new Rolls-Royce RB109 propeller-turbine engines. It is being designed to meet specifications of requirements drawn up by B.E.A. earlier this year after two years of detailed analysis and discussion. These specifications call for an airliner which "will set a new world standard in its class, and will be ahead of all known competition in reliability, speed, economy, comfort, pilot handling,

maintenance characteristics, ability to make quick turnarounds and, in general, passenger appeal". The specifications supplied to Vickers-Armstrongs covered more than 50 pages, and are believed to have been the fullest and most detailed statement of requirements ever given a manufacturer by an airline. Throughout the design period there has been the closest possible degree of co-operation between B.E.A. and Vickers-Armstrongs.

As a result, the Vickers Vanguard will have built into it all the information and experience accumulated by B.E.A. through the operation of Viscounts and Elizabethans, plus all the knowledge of propeller-turbine aircraft and engines gained by Vickers-Armstrongs and Rolls-Royce since the world's first propeller-turbine airliner went into service with B.E.A. in April, 1953. This mass of engineering and operating experience is without rival in the world. In the opinion of B.E.A., not only will the Vickers Vanguard set new standards of speed and economy, but it will also fully meet requirements for passenger comfort and spaciousness not hitherto attained by any airliner of any type whatever. The designed cruising speed of the Vickers Vanguard will be 425 m.p.h. when the RB109 engine is delivering its full power output. Initially, however, the power output will be limited to 4,000 h.p. and a slightly lower cruising speed will be employed.

RECORD COMMONWEALTH OIL OUTPUT

Just over 19,000,000 metric tons of oil were produced by the Commonwealth countries during the first nine months of this year, according to estimates just published in London by the Petroleum Information Bureau. This compares with some 16,000,000 tons supplied during the same period of last year, and is easily the highest production ever attained over any nine months. Production in India, though still comparatively small, showed a rise of about 30 percent to a total of over 250,000 tons during the period January to September. Canadian oilfields were largely responsible for the Commonwealth increase, their output of well over 12,000,000 tons being nearly 3,000,000 tons up on the 9,350,000 tons produced in the first three quarters of 1954. British Borneo and Trinidad, the next most important Commonwealth producers, showed little change over their level of output during the first nine months of 1954—which amounted to 3,600,000 tons and 2,500,000 tons, respectively. Despite the steady increase in Commonwealth production—which is already equal to more than five times the level of output in 1946—the search for new sources of oil is being vigorously pursued. Besides exploration in countries where oil is already being produced, there has been an extensive search in many other parts of the Commonwealth, including Papua, Nigeria, East Africa, and Australia. There has also been underwater drilling off the coast of British Borneo and in the Gulf of Paria, adjoining Trinidad. In the latter area it has just been announced that oil has been discovered, and tests are now being carried out.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

CONDITIONS REMAIN QUIET

Wednesday, 2nd November.

DEMAND has remained at a low level throughout the past fortnight. Advances continue to return from sugar factories and textile mills, but some buying of raw jute has been reported and the requirements of the industry have increased. There has been little change either way in the total of advances. Conditions in the interbank market were slack until yesterday but a sudden demand for accommodation has today sent the interbank rate to 3 percent.

Very little bill business has passed during the last fortnight. There has been good demand for remittance. Sterling has strengthened further following Mr. Butler's autumn Budget and the dollar rate is quoting Rs. 47 1/2.

Silver was steady. The price advanced from Rs. 166-8 (quoted a fortnight ago) to Rs. 167-9, quoted today. The rate for forward delivery stood at Rs. 167-11. The price in London declined from 79.7/8d to 79/4d. The price of foreign silver in New York fell from 91.7/8 to 91.5/8 cents.

Gold was steady in sympathy with silver. The price rose from Rs. 95-14 to Rs. 96-4. The sovereign at Rs. 61-12 was 4 annas higher.

Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills which were opened on Tuesday, 1st November 1955, totalled Rs. 3,17,25,000. The average rate of acceptance fell from Rs. 2-7 to Rs. 2-7-6 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 85 percent. Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 7th November 1955. During the week ended 28th October 1955, Government of India Treasury Bills for Rs. 22,62,00,000 were sold in favour of the Reserve Bank of India.

Rises of Rs. 9.88 crores and Rs. 2.60 crores in the total note issue and notes in circulation to Rs. 1,321.87 crores and Rs. 1,305.86 crores, respectively were outstanding features of the return of the Reserve Bank of India for the week ended 28th October 1955. The currency expansion was duly covered by raising rupee securities by Rs. 9.93 crores to Rs. 543.60 crores. Notes held in the Banking Department consequently rose by Rs. 7.28 crores to Rs. 16.01 crores. Deposits show an all round rise. Deposits of the Government of India and other Government accounts increased by Rs. 99 lakhs and Rs. 4.75 crores to Rs. 49.33 crores and Rs. 30.23 crores. Balances of commercial banks at Rs. 57.71 crores were Rs. 12 lakhs higher. Balances held abroad fell by Rs. 14 lakhs to Rs. 85.27 crores while investments rose by Rs. 3 lakhs to Rs. 50.33 crores. Other loans and advances increased from Rs. 19.45 crores to Rs. 19.57 crores, of which advances to scheduled banks against usance bills totalled Rs. 4.16 crores (Rs. 4.15 crores). These advances amounted to Rs. 196.22 crores since 1st January, 1955. Ways and means advances stood at Rs. 2 lakhs (nil).

The return of the State Bank of India for the week ended 21st October, 1955, shows a rise of Rs. 26 lakhs in investments to Rs. 216.58 crores. Investments in Government Securities are up by Rs. 90 lakhs to Rs. 106.79 crores, while other authorised investments are down by Rs. 11 lakhs to Rs. 9.82 crores. Advances including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 32 lakhs to aggregate Rs. 91.68 crores. Cash and balances are, in consequence, shown at Rs. 21.27 crores or Rs. 3.03 crores less.

The statement of the position of scheduled banks for the week ended 21st October, 1955, discloses Demand and Time liabilities at Rs. 615.23 crores (Rs. 12.95 crores on account of borrowings from banks) and Rs. 423.93 crores (Rs. 5.67 crores) compared with Rs. 609.81 crores (Rs. 10.58 crores) and Rs. 422.07 crores (Rs. 5.57 crores), respectively in the previous week. Cash has advanced by Rs. 91 lakhs to Rs. 33.47 crores, while balances with the Reserve Bank have declined by Rs. 5.36 crores to Rs. 55.16 crores. There is a rise of Rs. 2.49 crores in investments to Rs. 392.96 crores. Advances and bills discounted at Rs. 590.49 crores reveal an increase of Rs. 1.03 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.5 percent and 56.8 percent against 9.0 percent and 57.1 percent.

Provisional figures of foreign sea and airborne trade of India on private account Government accounts during September 1955, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 56.35 crores, re-exports Rs. 28 lakhs (transit trade negligible); Imports Rs. 48.19 crores (transit trade Rs. 1 lakh); Total trade Rs. 104.82 crores. Treasure: Exports of currency notes Rs. 31 lakhs; others nil. Imports of gold about Rs. 1 lakh; of currency notes Rs. 78

lakhs; others nil. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver exceeded the imports by Rs. 8.44 crores.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

His bath is in the Plan, too!

YES, everything that is being done to keep little Raju—and millions like him—clean and healthy is very much a part of the Plan for the Nation's well-being. Like every other business, big or small, Lever Brothers have an individual responsibility in this Plan. The responsibility which they owe to the Nation is to make good soaps available everywhere at standard prices—prices that all can afford.

In their endeavour to achieve this aim Levers have many crores of partners. The farmers who grow the raw materials. The men who run the trains, the ships, the lorries and other transport that carry these raw materials and the finished products. Men and women from all parts of India whose talents and skills go into the making of such famous soaps as Sunlight, Lifebuoy, Lux Toilet, Lux and Rinso. The wholesalers who distribute them all over India and the retailers who stock and sell them. And above all the public who buy the products they believe in. All of them are partners in an enterprise which is contributing a great deal to the Nation in terms of improved standards of health and hygiene.

The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to

produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

Stocks and Shares

INDIAN IRONS LEAD FIRM TREND IN STOCK MARKET

ENGINEERING AND MISCELLANEOUS SHARES BUOYANT

Wednesday Evening.

THE Calcutta share market has ruled firm since its reopening. The strength has come chiefly from bull support in Indian Irons and encouraging advices from Bombay. The engineering and miscellaneous sections have mainly benefited; coal, jute and tea scrip have remained quiet. Speculation appears to be the only reason for the rise in Irons following, as it has done, the announcement of an unchanged dividend. Irons reacted from their highest levels before today's settlement because of the heavy carry-forward charges. The undertone in present dealings taking place in Irons is steady, but it is rumoured that one prominent bull operator has unloaded a fair proportion of his holdings. Other features in the engineering section have included Jessops and Richardson and Crudas. Among miscellaneous shares Bengal Paper has featured with a sharp rise due to interested buying. The shares of other companies in the Balmer Lawrie group have also improved.

Government securities have ruled firm. It is reported that the price of the Calcutta debentures, issued on 20th October, has advanced to a premium of Rs. 3-8.

Details of the week's trading follow.

The Government security market ruled firm and the volume of business reported was on a fair scale. The enquiry for selected medium-dated issues was fully maintained but towards the close sellers were in evidence, particularly in the case of the three National Plan loans. During the period under review the Reserve Bank raised its selling prices for 2½% 1962 and 3½% 1965. Three percent 1966 was unchanged while 3% Non-terminable was asked for at around Rs. 80-1. Short-dated loans were unchanged with 3% 1957 at Rs. 99-10 and 3% 1958 at Rs. 99-8. In the medium-dated group, 3% 1959-61 had good buyers at around Rs. 98 while 3% 1963-65 was asked for up to Rs. 94-11. Three percent 1964 was taken at around Rs. 94-7 and 2½% 1961 had buyers over up to Rs. 92-14-6; 2½% 1960 met with strong enquiry up to Rs. 95-13 without attracting sellers, while 2½% 1962 was taken at around Rs. 93-12 but 4% 1960-70 was easier at Rs. 101-11. In contrast to the general trend, 3½% 1961 had sellers over at Rs. 99-11 as did 3½% 1964 at Rs. 98-12-6 and 3½% 1965 at Rs. 98-9. In long-dated loans 3% 1966-68 was a strong feature with buyers over up to Rs. 91-14 but 3% 1970-75 was on offer at around Rs. 87-7-6.

Business in Provincial loans was dull and once again sellers were in evidence. However, there were no price changes.

Preference shares continued to meet with keen enquiry but as usual there were few sellers and many buying orders could not be executed. In jute, Agarpara changed hands on two occasions at Rs. 116-8 and Rs. 116. Auckland were placed at Rs. 96 and Anglo-India at Rs. 118-8. Fort Gloster II Preference were done at Rs. 87-8 and Ganges at Rs. 134. A parcel of Hooghly was sold at Rs. 14-8. Hukmchand were marked at Rs. 114-8 and Kamarhatty were done at Rs. 105 x.d. Lansdowne were reported at Rs. 115 and Lawrence 2nd Preference were placed at Rs. 95. Waverley reported business at Rs. 58. Amongst miscellaneous issues, Bharat Coal were marked at Rs. 59-12, Dalmia Cement Fully-Paid at Rs. 102 and the Partly-Paid at Rs. 36. Duncan Brothers were transacted at Rs. 72-4. Indian Aluminium were enquired for at Rs. 75-8 and Indo-Burma Petroleum were crossed at Rs. 108-4. A small lot of Karanpura Collieries was placed at Rs. 68. Indian Standard Wagon were taken at Rs. 138-8 and Indian Iron at Rs. 110. Chrestien Mica Industries changed hands at Rs. 65-8, and Giele Tea at Rs. 84. Rohtas Industries B were enquired for at Rs. 68-12.

In the banking section, a small lot of Hindustan Commercial changed hands at Rs. 13-12. Good business was reported in Punjab National between Rs. 47 and Rs. 47-10. United Commercial were steady around Rs. 52. United Bank of India (D) shares changed hands freely around Rs. 4-13. Among railways, Ahmedpur-Katwa were done at Rs. 59-12. Bankura-Damodar were crossed at Rs. 60-4 and Burdwan-Cutwa at the same rate. Kalighat-Falta were taken at Rs. 61-8 and several transactions were reported in Dehri Rohtas at around Rs. 13-12.

The outstanding feature in the cotton section was Dunbar which spurred from Rs. 272 to Rs. 300. Kesoram recovered from Rs. 15-12 x.d. to Rs. 16-4. Cawnpore Textiles and Elgin Mills were unchanged around Rs. 9-6 and Rs. 21-8 respectively. New Victoria were active and rose from Rs. 1-8 to Rs. 1-15.

Prices of coal shares have shown little variation since these notes were last written. Burrakur fluctuated between Rs. 14-3 and Rs. 14-8 to close at Rs. 14-5. Business was reported in Bengal at the pre-Puja rate of about Rs. 500. Central India Coalfields changed hands on several occasions at around Rs. 7-6 and a small lot of East Indian Coal was sold at Rs. 30-14. New Beerbhoom were marked at Rs. 18-12 and later at Rs. 18-9. A solitary transaction was reported in New Manbhoom at Rs. 10-15. Raneegeunge eased from Rs. 11-2 to

Rs. 10-9. Seepore were crossed at Rs. 29-8. Union changed hands at Rs. 16-12 and Western Bengal were reported at around Rs. 7-4.

Jute shares continued to be neglected and few transactions were reported. Howrah at one time improved to Rs. 28-8 but reacted at the close to Rs. 28-4. Here is a chart showing representative price movements:—

	Opening 22-10-55	Closing 2-11-55

Few transactions were reported in electric supply shares. Agra were marked at Rs. 166, Benares at Rs. 19-6 and Jubbulpore were crossed at Rs. 15-14. Calcutta Electric were dealt in freely at around Rs. 15-7. United Provinces Electric were marked at Rs. 167 and later at Rs. 168.

Sugar shares were fairly steady. Carew improved from Rs. 13 to 13-5, Champaran from Rs. 33 to Rs. 33-8 and Darbhanga from Rs. 23 to Rs. 23-14. Ramnugger Cane were crossed at Rs. 26-2. Shree Krishna Gyanoday changed hands on several occasions at around Rs. 17.

Indian Iron & Steel shares dominated the scene in the engineering section and on bear covering improved steadily from Rs. 39-11 to Rs. 40-11. Subsequently, tired bulls unloaded in view of the high carry-forward charges of as. 8 a share, the highest in recent years, at today's settlement and the price reacted at the close to Rs. 40-2 cum dividend. Braithwaite were steady at Rs. 29-4 against the pre-Puja quotation of Rs. 28-12, while Britannia Engineering eased from Rs. 21-2 to Rs. 20-7. Burn & Company were steady at Rs. 320 x.d. as were Indian Galvanizing at Rs. 25-2. Indian Standard Wagon met with good enquiry at around

The Assam Oil Company plays a leading part in systematically searching for petroleum in India. Come and see what a long, elaborate and costly business it is. No effort is being spared to reduce India's dependence on oil purchases from abroad.

**ASSAM OIL
COMPANY**
does it all!

PROSPECTING

DRILLING · PRODUCING · REFINING

Rs. 160 and Jessop & Company improved from Rs. 57 to Rs. 58. Kumardhubi Engineering were steady at Rs. 12-14 and Richardson & Cruddas were better at Rs. 26-5. Textile Machinery were firm at Rs. 25-13.

In the miscellaneous section, the outstanding feature was Bengal Paper which, on interested buying, spurred further from Rs. 88 to Rs. 98. India Paper Pulp were marked up from Rs. 24 to Rs. 24-7 and Orient Paper were firm at Rs. 31-8. Shree Gopal Paper improved from Rs. 16-14 to Rs. 17-5 and there was good investment enquiry for Titagur Paper at around Rs. 48-6. Assam Bengal Cement were supported at Rs. 7-8, but sellers were scarce. Dalmia Cement Fully-Paid improved from Rs. 15-12 to Rs. 16 as did Sone Valley from Rs. 8 to Rs. 8-6. Hercules Insurance were reported at Rs. 30 and New Asiatic at Rs. 5-12. India General Navigation were active at around Rs. 147. Following the announcement of a 5% increase in coastal freight rates, India Steamship shares initially rose from Rs. 7-11 to Rs. 8-9, but closed lower at Rs. 8. Port Shipping were marked at Rs. 15-14 x.d. Alkali & Chemical Corporation were wanted at Rs. 22 and Balmer Lawrie, on interested buying, rose from Rs. 195 to Rs. 199. Bengal Flour were better at Rs. 34-4 as were Britannia Biscuits at Rs. 15-3. British Burma Petroleum were steady at Rs. 4-10 and British India Corporation improved from Rs. 11-2 to Rs. 11-6. Dunlop Rubber, on the announcement of a decrease in tyre prices, were neglected at Rs. 36. Imperial Tobacco were maintained at Rs. 15-1 as were Indian Cables at Rs. 32. Indo-Burma Petroleum were slightly better at Rs. 44-10 and Indian Wood Products continued to meet with investment support at the higher rate of Rs. 44. Martin Burn were steady at Rs. 26-4 as were Metal Box at Rs. 23-11. Rohtas Industries were steady at Rs. 23-8 and Shaw Wallace were enquired for at Rs. 15-6. Large parcels of Clive Row Investment changed hands at steadily im-

proving prices but tonight's closing quotation was Rs. 11-4 cum the interim dividend of 5% just declared. Gillanders Arbuthnot changed hands at around Rs. 14-12. National Tobacco improved today from Rs. 10-12 to Rs. 11-2 and National Iron & Steel from Rs. 7-12 to Rs. 8-1.

In the mining section, Burma Mines were steady at Rs. 2-1 as were Western Stockholders Investment at Rs. 1-1. Chrestien Mica Industries were better at Rs. 13 and Indian Copper, on rumours of an Interim Dividend, recovered from Rs. 5-15 to Rs. 6-4 to close at Rs. 6-2.

In the tea section, business was mainly confined to Assam scrip where there were several firm features but once again turnover was very small. On good enquiry, Bateli advanced from Rs. 24 to Rs. 26-4, Dhelakhat from Rs. 18-4 to Rs. 19-10 and Telojan from Rs. 30-8 to Rs. 32. Brooke Bond, after changing hands at Rs. 28-14, were later dealt in at Rs. 24-8 ex-dividend, and closed at Rs. 24-6 ex-dividend. Baghmari had buyers at Rs. 28-8 as did Betjan at Rs. 58-8, Dibrugarh at Rs. 29-12 and Methoni at Rs. 30-4. After a lapse of time, Teen Ali came to business at a lower price of Rs. 39-8 and Sapoi also had sellers down to Rs. 36-8, but later improved to Rs. 37-8. Grob 'A' were well supported and improved from Rs. 38-12 to Rs. 39-12. Dhunseri were easier at Rs. 34-8. Of the Doora shares, the principal feature was Carron which, after being crossed at Rs. 255 against the previous quotation of Rs. 230, later had buyers at Rs. 290 without attracting sellers. Banarhat improved to Rs. 645 cum-rights and the price was later adjusted to Rs. 359 ex-rights. A small lot of Hantapara changed hands at Rs. 336 while Ranicherra came to business at Rs. 23-12. Sarugaon were marked at Rs. 40-12 ex-dividend. Little or no business was transacted in the remaining sections. Tukvar declined to Rs. 18-6 due to lack of interest and Roopacherra were also easier at Rs. 25. Loobah

changed hands at around the previous quotation of Rs. 8-8.

The profit of the KANKNARRAH COMPANY amounted to Rs. 1.51 lakhs for the half-year ended last June, compared with Rs. 6.50 lakhs in the previous half-year. Bringing in Rs. 62,312 there is Rs. 2,13,297. Taxation absorbs Rs. 35,000 (Rs. 2.60 lakhs) and depreciation Rs. 75,000 (Rs. 1½ lakhs). The ordinary dividend has been cut from Rs. 4 to Re. 1 per share, leaving a carry-forward of Rs. 19,297.

The KAMARHATTY COMPANY made a profit of Rs. 2.91 lakhs for the half-year ended last June, against Rs. 9.71 lakhs. Adding Rs. 84,190 brought in, there is a balance of Rs. 3,75,686. Taxation absorbs Rs. 95,000 (Rs. 4.05 lakhs) and depreciation Rs. 1 lakh (Rs. 2 lakhs). The ordinary dividend has been halved to Rs. 2-8 per share, leaving a balance of Rs. 24,686 to be carried forward.

Providing Rs. 90,000 (Rs. 1.46 lakhs) for taxation, there is a balance of Rs. 1,92,644 (including Rs. 1,21,195 brought in) of the ORIENT JUTE MILLS COMPANY for the half-year ended last May. The dividend is the same at Rs. 5 per share, leaving a carry-forward of Rs. 68,095.

The profit of the CALEDONIAN JUTE MILLS COMPANY fell by Rs. 2.52 lakhs to Rs. 1.01 lakhs for the half-year ended last May. Providing Rs. 57,000 (Rs. 1½ lakhs) for taxation and making other adjustments, there is Rs. 1,81,453. The ordinary dividend has been reduced from Rs. 5 to Rs. 4 per share. The carry-forward is Rs. 72,000 (Rs. 90,000).

The profit of BURN & COMPANY was Rs. 5.35 lakhs higher at Rs. 43.53 lakhs for the year ended last April. The ordinary dividend has been raised from 10% to 15%. Reserve for works reconstruc-

tion and expansion gets Rs. 10½ lakhs (nil). Taxation absorbs Rs. 15.75 lakhs (Rs. 11½ lakhs) and taxation contingencies Rs. 3 lakhs (Rs. 4½ lakhs). The carry-forward is Rs. 96,435 (Rs. 1,09,198). The directors say that the further programme for the modernisation of the Howrah works has been taken in hand and will involve an expenditure of approximately Rs. 32 lakhs spread over a period of three years. Considerable additional capital expenditure must also be incurred on the expansion of the company's output capacity of higher refractories to meet the growing requirements of the steel industry. The directors have accordingly considered it essential to set aside from the profits of the year under review a sum of Rs. 10,50,000 to the reserve for works reconstruction and expansion.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate the Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

FEDERAL REPUBLIC OF GERMANY

SOUTH EASTERN RAILWAY TENDERS.

The following tenders are invited by the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23:—(1) Tender No. CS8/55/992R(55) for the supply of 5000 Rft. Pale Fencing complete to C.E's Drg. 15889. (2) Tender No. CS7/55/2064R(55) for the supply of 320 Teak Wood Tables and 464 Teak Wood Chairs.

Tender forms are obtainable from the office of the Controller of Stores (IB Section) on remittance of Rs. 2/- (not refundable) for each form for each item of work by money order in case of Mofussil Firms and on production of Cash Receipts from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta by local Firms. Earnest money required for item (1) is Rs. 500/- and for item (2) is Rs. 300/- in cash. Separate tenders are to be submitted for each item.

Valid Income Tax Clearance certificate must accompany the tender.

Closing date for item (1) is 9. 11. 55 and for item (2) is 10. 11. 55 at 12 hours noon.

SOUTH EASTERN RAILWAY

Tender No. GM3/55/M285(55) is invited by the General Manager, South Eastern Railway, Garden Reach, Calcutta-23 for supply of 44 tons 6 cwt. of Wire IG 7 Strands $\times$ 3 SWG for fencing to ISS 278/51. Tender form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta-23 (IB Section) on remittance of Rs. 5/- by Money Order (not refundable) in case of Mofussil Firms and on production of Cash Receipts from the Chief Cashier, Garden Reach by Local Firms. Earnest Money Rs. 750/- in cash. Valid Income Tax Clearance Certificate must accompany the tender.

Closing date 8.11.55 at 12 noon.

Our City Cable

U.K. BUDGET LIFTS INDUSTRIALS

GILT-EDGED RECOVER SLIGHTLY AFTER SHARP FALL

London, 2nd November.

A PART from gilt-edged securities, prices in the London stock exchange were marked up sharply immediately after the Chancellor of the Exchequer's autumn Budget, which on first reading was less severe than had been expected. The markets quietened down considerably later on further consideration of the probable effects of this and other measures, particularly the credit squeeze, whose intensity is expected to increase in coming months. A part of the immediate post-Budget gains were then lost. There was little in the Budget to help gilt-edged securities, which fell back quite sharply and despite steadiness later, were lower on balance. Industrials recorded substantial advances immediately after the Budget, but lost some of the gains subsequently. Gold shares gave a mixed display, while coppers lost ground. Oils went strongly ahead following the Budget, and were helped by British Petroleum's substantially increased interim dividend, but the best prices were not held. Rubbers and teas attracted very little attention but prices were well maintained.

The Money Market

It has been a varying week in the money market, with the supply of funds fluctuating from day to day. It was only on Tuesday that the market was really hard-pressed, with a number of houses having to borrow a small amount for the week from the Bank of England. On Wednesday the position was easy and the authorities indulged in the infrequent operation of mopping up a small surplus. Over the week, day-to-day loans ranged between 2½ percent to 4 percent. A new Treasury Bill with a currency of 63 days is to be introduced. This is the first time that such short-dated bills will have been used. The first of the new Treasury Bills, amounting to £60 million will be offered this week, together with £200 million of the 91-day Bills. Applications for Treasury Bills last week totalled £381,690,000, of which £250 million was allotted at an average rate of 8½ 4/8d compared with 8½ 4/8d in the previous week. The Bank of England return for the week ended 26th October revealed that notes in circulation were £1 million lower at £1,765 million, while bankers' deposits were £9 million lower at £250 million. Fine trade bills for three months quoted 5 percent to 5½ percent.

Activity on Wall Street

Convertible issues accounted for most of the activity in domestic bond dealings last week. Prices advanced at the outset but eventually turned easier in line with the lower trend in stock market values. Rails were very quiet during the period, with some of the speculative carriers moving lower. Investment quality corporates displayed continued firmness over small turnover. U. S. Government obligations developed rallying tendencies under the lead of long-termers. World Bank activity was confined to 3 percent of 1976. Foreign bonds were little changed. German nationals were mixed. Italians were lower by fractions, while Greeks and Serbs were in demand. Norwegians showed small changes either way. Australians were mostly lower. A number of Japanese issues were a shade lower. In a quiet South American market, a few Brazilians rose by a couple of points.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 19th October shows that the gold stock is unchanged at \$21,685 million. Foreign deposits increased by \$28 million, while foreign investments increased by \$3 million. The Federal Reserve made no purchases or sales of bills. Total discounts and advances increased by \$223 million to \$1,023 million. Business loans of New York City banks increased by \$11 million to \$8,665 million, compared with a decline of \$64 million to \$7,315 million last year.

Stock Market Prospects

The Investors Chronicle market newsletter writes: Stock exchange behaviour gives grounds for confidence among investors. The Budget announcement brought little selling and some bargaining hunting. Whatever the Budget may do, investors should not be panicked out of good shares. The medium view is not bearish if the Chancellor is at last determined to give impetus to Britain's economic rehabilitation, which is already witnessed by sterling's improvement. Strong sterling must bring a strong recovery in gilt-edged, which would support leading industrials.

Vegetable Oil Market

Firm offers of Indian groundnut oil became difficult to find last week following reports that Burma was buying from origin at a parity of around £106. The few sellers in evidence sought £102½ to £103 c.i.f. for November to January shipments. Buyers appeared content to hold off in the present strength would not last. Linseed oil Indian rates were about unchanged at £101½ c.i.f. for most forward positions. Coconut oil was featureless and values inclined to ease. Near position linseed reacted sharply, while most other seeds revealed little movement.

Argentina's Currency Changes

Argentina's currency changes seem more important as a reform and simplification than as devaluation. Previous multiple exchange rates grossly distorted production and consumption, and wrecked exports and foreign exchange reserves. Henceforth apparently there will be only two rates for pesos: the official 18 a dollar, and a genuine free rate based on supply and demand, mainly for "official free rate" of 14 was spurious. In effect, there were dozens of rates since the Central Bank could "mix" its three rates of 5, 7½ and 14 almost at will. If the Argentine authorities fulfil their intention of having a genuine free rate, the black market rate will automatically disappear. Argentina's export prices in foreign exchange should not be greatly affected since they depend on the world market where she has been selling Lonardi regime evidently hopes to restore economic realism. Announcing the devaluation of the peso, the Argentine Ministry of Finance said that all exchange permits granted but not yet used would be respected but importers would have to pay the difference between the rates at a dollar rate. All operations that cannot be made through the official market will be left to the free market, thus eliminating clandestine peso operations. The remittance abroad of profits accruing to foreign investments after 30th June, 1955, will Government will be progressively unfrozen by ment of new foreign capital and repatriation of that owned by firms or persons abroad will again be absolutely free.

New Delhi

SECOND FIVE YEAR PLAN FOR COAL APPROVED

PUBLIC SECTOR TO PRODUCE 18 MILLION TONS: RUSSIAN ASSISTANCE EXPECTED

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has approved the Production Ministry's second five year plan for coal, under which production is to be stepped up to 60 million tons a year, including 18 million tons a year in the public sector. Output in the public sector is to be expanded by 15 million tons—from 3 million tons at present to 18 million tons by 1961. As a result of the visit of the Production Secretary, Mr. S. S. Khera, to Russia, the expansion in the public sector will be largely assisted by technicians and equipment from that country. About Rs. 105 crores are being provided to implement this expansion plan—Rs. 75 crores as fixed capital, Rs. 10 crores as working capital, and Rs. 20 crores for the housing of workers. The Government, it is further learned, is not prepared to give any guarantee against nationalisation to the private sector. The utmost it is prepared to do is to assure that, in the event of nationalisation, compensation will not be illusory but fair, and that full compensation minus depreciation will be paid for new capital invested in pursuance of the Government's plan policy. On this basis, the private sector is invited to expand coal production by 8 million tons to 42 million tons by 1961.

Development Plans for Ports

The next meeting of the National Harbour Board will be held at Vishakhapatnam on 8th November. It will consider the second five year plan for major and minor ports. At the request of the West Bengal Government, the Board will also discuss the immediate execution of the Ganga Barrage Project. The greater utilisation of minor ports will be urged by the Madras Government, while the Orissa Government will raise the question of purchasing a tug and a dredger for minor ports. The Board will review the working of decasualisation schemes, rates and charges in minor ports, and the report of the Port and Shipping Statistics Committee.

An expenditure of about Rs. 34.42 crores will have been incurred on the rehabilitation, modernisation and expansion of major ports during the first plan period. The commitments already entered into will be responsible for an expenditure of Rs. 26.59 crores, which will be carried over to the second plan period. The overall expenditure on major port development schemes under the second plan is placed at Rs. 58.32 crores, including the following:

Port of Calcutta:	(Rs. in lakhs.)
(a) Docks and Berths	275.00
(b) Sheds, Warehouses, etc.	220.00
(c) River Training Works	330.00
(d) Floating Craft	365.00
(e) Port Equipment	51.00
(f) Workshops	46.10
(g) Water Supply and Electricity	65.61
(h) Railways	20.00
(i) Housing	100.00
Grand Total.	1,472.71

Port of Bombay:	
(a) Docks and Berths	130.00
(b) Dredging	200.00
(c) Floating Craft	140.00
(d) Port Equipment	190.00
(e) Water Supply, Electricity and Drainage	38.50
(f) Housing	200.00
(g) Welfare Schemes	40.00
Grant Total	938.50

Port of Madras:	
(a) Docks and Berths	61.00
(b) Sheds, Warehouses etc.	15.00
(c) Floating Craft	21.00
(d) Port Equipment	
Grand Total	147.00

Port of Cochin:	
(a) Dock and Berths	12.50
(b) Sheds, Warehouses, etc.	18.80
(c) Improvement to Channel	
Marking	2.25
(d) Floating Craft	67.25
(e) Port Equipment	4.65
(f) Workshops	2.00
(g) Water Supply, Electricity, Drainage and Roads	16.35
(h) Housing	24.00
(i) Welfare Facilities	1.50
Grand Total	156.30

Port of Kandla:	
(a) Docks and Berths	117.00
(b) Housing and Road Construction	79.00
(c) Establishment and Contingencies	16.00
(d) Receipts and Recoveries on Capital Account	(—) 14.00
Grand Total	198.00

Development of Township of Gandhidham:	
	259.00

Expenditure on Major Ports

The expenditure on major port development schemes already in progress or proposed to be

taken up during the second plan will thus be Rs. 5,831.33 lakhs.

Name of Port	Expenditure in Rs. lakhs.
Calcutta	1,988.25
Bombay	1,741.93
Madras	846.04
Cochin	360.80
Kandla	894.30
	5,831.33

The total provision for minor port development schemes is Rs. 5 crores. Proposals received from State Governments involved a total expenditure of Rs. 24.77 crores on schemes to improve and expand facilities at existing ports and to develop new ones. The major individual items relate to the following:

	Rs.
Development of Tuticorin	4.50 crores
Development of Malpe	2.5 crores
Development of Paradip	7 crores
	14.00 crores

Apart from these three major schemes, the following tentative ceilings are proposed to be fixed for various States for the remaining schemes.

	Rs.
Kutch	15.6 lakhs
Bombay	100 lakhs
Saurashtra	40 lakhs
Madras	35 lakhs
Orissa	5 lakhs
Travancore-Cochin	35 lakhs
Andhra	50 lakhs
Pondicherry	29 lakhs

It is explained that the preparation of project reports and other formalities will take a couple of years before the execution of the schemes is undertaken. This explains the wide gap between first estimates and the provision for minor port development proposed now.

Port and Shipping Statistics

The recommendations of the Committee on Port and Shipping Statistics cover the following:

1. The types of statistics relating to ships, cargoes and passengers that should be collected.
2. The necessity for collecting statistics on the freight earnings of ships engaged in the trade from and to Indian ports.
3. The necessity for standard definitions and usages pertaining to terms used in ports and shipping statistics.
4. The authorities responsible for the initial compilation of statistics and the central agency that should be set up for their consolidation and publication.

The recommendations thus cover a wide ground and need consideration by several authorities such as major port trusts, minor port administrations, Collectors of Customs, various Ministries of the Government of India shipping companies, etc. The nucleus of a Central Port and Shipping Statistical Organisation in the Directorate-General of Shipping, as recommended by the Committee, is being set up to prepare a phased programme for the implementation of the report in consultation with the various interests and authorities.

Labour Ministers' Conference

The three-day session of the Labour Ministers' conference will open at Hyderabad on 3rd November. The order paper includes a discussion of the second five year plan abolition of rickshaw pulling, principles for the fixation of minimum wages under the Minimum Wages Act, and a proposal to set up a National Trades Certification Board. The Labour Panel of the Planning Commission, which considered the blueprint for the second five year labour plan set up three sub-committees on (i) industrial relations (ii) wages, productivity and rationalisation and (iii) working conditions. The Hyderabad conference will discuss the reports of the sub-committees. The following are their important recommendations:

It was agreed that the laws relating to trade unions and industrial relations should be revised to give effect to the recommendations of the sub-committee. It was agreed that the number of outsiders on the executives of primary unions should be reduced from 50 percent to 25 percent or to four, whichever was higher. Persons who had worked for at least five years in the same industry should not be treated as outsiders, but the number of such persons on the executive should not exceed 5 percent of the strength of the executive. Such persons could be allowed in addition to the number prescribed for outsiders.

Recognition of Trade Unions

The suggestions contained in the Labour Ministry's note regarding recognition of representative unions were generally approved. The percentage of 33 1/3 suggested as the minimum standard for

recognition as a representative union was accepted. A suggestion for further consideration was that agreements on certain important matters entered into by the representative union should be put to the ballot of all union members.

The sub-committee agreed that if a collective agreement applicable to a whole industry in an area was entered between the appropriate representative union and the employers and there existed already an agreement between an employer and his workers in a particular unit in regard to the same matters, it should be left to the workers of that unit to opt out of the collective agreement if they so preferred. Where there was no such agreement in a unit, the collective agreement applicable to the industry should automatically apply to that unit.

It was mentioned that employers' associations should be properly developed and that provision should be made for the certification of an employers' association in an industry in an area as representative of all employers in that industry in that area. Any agreement entered into by the association of employers would then be binding on all employers. It was suggested that as this was a new point raised at the meeting, a note should be prepared and circulated to employers' associations for their views before any decisions were taken.

As regards the rights of representative unions, it was agreed that for the effective implementation of obligations, meetings of workers should be permitted on the premises of the establishment. The representative union should have the right to recover membership dues on the premises of the establishment. It was decided that there should be no provisions regarding a closed shop or a union ship.

Compulsory Adjudication

The view was expressed that compulsory adjudication had undermined the strength of trade unions and that trade unions were generally weaker today than they were under the old Trade Disputes Act, which contained no provision for compulsory adjudication. If compulsory adjudication were given up, 90 percent of the disputes would, it was said, be settled voluntarily through conciliation and arbitration. Ten percent of the disputes might not be so settled, but there was no harm in leaving them to the parties except in a grave emergency, when emergency measures could be enacted. There was also a suggestion that the principle of compulsory adjudication should be abandoned for a period of three years and the results watched.

On the subject of representative unions, the view was expressed that the proper way of selecting representatives was to arrange for a ballot of all union members, irrespective of the union to which they belonged. If this led to the ascendency of one union and the decline or even obliteration of all others, that was not a matter of any great consequence. If, on the other hand, the ballot led to the election of persons belonging to different unions, even then there was no reason for any anxiety. The elected members should be able to work together on the basis of an agreed programme. A suggestion was made that the experience of Mysore in the matter of establishment of one union through a ballot of all union members might be ascertained and examined. It was agreed that these views might be considered by the members of the sub-committee, who were requested to send in their views.

The view was expressed that an attempt should be made to unify the trade union movement. It should be possible for trade unions with different affiliations to come together on the basis of a common programme of action covering methods, objectives and procedures. It was agreed that the question of unification of the trade union movement might be considered by mutual discussion between the various Central organisations.

Association of Labour with Management

The committee agreed that the association of labour with management should be real and effective and not formal. It felt that, instead of the appointment of worker-directors as suggested in the Labour Ministry's note, it might be better to create in the first instance councils of management as suggested by a member. The council of management should consist of three directors and three workers' representatives. The management should supply full information on all subjects to the council of management, which would be entitled to discuss all matters pertaining to the establishment. The scope of the discussions in the council of management would be far wider than that in a works committee. Simultaneously the management should also make adequate arrangements for giving workers administrative power and responsibility in such matters as welfare activities, canteens, health, education, safety, etc. The budget for such purposes would be settled and placed at the disposal of a committee of management. This would be done without transferring the legal responsibility of the management for safety and welfare under the various enactments. Matters appropriate for collective bargaining would be excluded from the scope of the council of management. To begin with, councils of management should be set up in large establishments where trade unions were sufficiently well-organised. The workers' representatives should be elected by the entire establishment and not by the members of the representative union only. It was felt that a further meeting would be necessary to give concrete shape to these ideas. Meanwhile members were requested to consider the suggestions and to send in their views at an early date.

Let Trayons Transparent Cellulose Film

Compare these advantages

SO TRANSPARENT
Trayons transparent cellulose film transmits 5% more light than glass!

SO TOUGH
A strip only one inch wide supports 20 lbs. No cracking, no tearing!

SO CHEAP
A 20" x 30" sheet costs less than 6 pice!

OPEN A WINDOW ON YOUR GOODS!

Seeing is believing—when a customer sees your goods through transparent cellulose film covering. Trayons transparent cellulose film keeps your goods new all the way from the factory to the sale... shows the customer that he is getting full value for his money! Shirts, piecegoods, soaps, toys, dried fruits get hard-to-resist appeal when you wrap them in Trayons transparent cellulose film... makes it so much easier to sell them!

TRAYONS

TRANSPARENT CELLULOSE FILM

Stops the eye - Starts the sale!

THE TRAVANCORE RAYONS LIMITED

Factory: Rayonpuram, Travancore-Cochin

Sales Office: United India Life Buildings, Madras-1

Managing Agents: Emcete & Sons (Travancore) Ltd.

Stockists: P. Vrajai Dulabhdas & Co. 22, Brabourne Road, Calcutta.

It was agreed that there should be a standing machinery for the implementation of awards and that such machinery should be effective. The precise details should be worked out having regard to the new set-up of labour courts and tribunals envisaged in the amending Bill now before Parliament.

The principle that adequate steps should be taken to discourage illegal strikes and lock-outs and go-slow tactics was accepted. It was felt that the details of the provisions might require further scrutiny.

Payment by Results

The sub-committee recognised that payment by results in the form of a piece-rate system had been prevalent in the country and at present nearly 60 percent of work in all industries was paid according to this system. It felt that, given proper safeguards, the system of payment by results should be further encouraged. The main safeguards listed by the sub-committee were:

- (i) Minimum (fall back) wage should be guaranteed.
- (ii) Earnings beyond this wage should be necessarily related to results.
- (iii) There should be protection against fatigue and undue speed up.
- (iv) All arrangements regarding extension of the system of payment by results should be made after prior consultation with workers.

Wages Commission

While recognising the need for a Wages Commission to evolve a wage policy in consonance with the socialistic pattern of society, as proposed in the memorandum, the sub-committee stressed the main difficulty in the functioning of such a commission, namely lack of data. It was felt instead that Wage Boards should be set up immediately

for all important industries to settle wages on the same lines as the Wage Boards set up in Bombay. Simultaneously it was decided that a wage census should be undertaken forthwith. The sub-committee recommended that, after sufficient data had been accumulated, the Government should take steps, if necessary, to set up a Wages Commission in the later years of the second plan. In the intervening period, the Wage Board, in reaching decisions on matters referred to them, should be guided by the recommendations of the Fair Wages Committee, the Profit Sharing Committee and the settlements reached in the Joint Consultative Board. The sub-committee recommended that the Planning Commission should set up a small unit in order to evaluate from time to time the extent to which wages had improved because of the first and the second plans. In evaluating the wage position, the unit should keep in mind the accepted goal of planning—establishing a socialistic pattern of society.

Bonus and Profit Sharing

There was general agreement that the "hardy annual" of bonus disputes must cease if production had to increase. It was, therefore, decided that the principles for settling bonus must be thrashed out by parties after expert examination by the Planning Commission. The expert body may study all possible evidence, for example the report of the Profit Sharing Committee, the awards of tribunals, and literature relating to similar schemes in other countries. As no single formula could be applied to all industries, different formulas for different industries would need to be devised. Until that time the present arrangements of settlement through industrial tribunals should continue.

Rationalisation

There was a good deal of discussion on this issue. The Sub-Committee agreed that rationali-

sation in the context of unemployment had an adverse psychological effect on workers and that (a) rationalisation must not lead to unemployment, (b) it must not be introduced without securing the agreement of workers, and that (c) while rationalising, stress should be laid on improving working conditions, and providing other safeguards to protect the legitimate interests of workers, particularly in regard to sharing the gains due to rationalisation. It was also urged that there should be a stop to rationalisation for the next two years except in cases where the parties agreed. When employment opportunities increased as the second plan went into operation, there would be no difficulty in introducing rationalisation.

Industrial Targets in Second Plan

The Planning Commission's steering committee, at its third meeting, was reassured by industrial members of their determination to reach the various targets of production, "subject to the climate being favourable for the private sector". The policy of steel imports was explained at the meeting. As already indicated, 1 million tons is the 1955 target for imports. The steel shortage, it was stated, is likely to continue for the next two years partly because of high prices. As a result of increasing competition from Pakistan, a cloudy future for jute exports was envisaged.

More Machine Tools Needed

Although there are two machine tool factories in the public sector, and others in the private sector, their output does not meet the growing needs of Indian industries. The machine tool industry seems to be in the same position as the heavy electrical equipment industry. The Ministry of Production set up an expert committee for heavy electrical equipment, and it is suggested that a similar committee, should be set up for machine tools, so that the units already operating may be expanded to make India self-sufficient.

Bombay

COMMODITY PRICES FOLLOW RISE IN STOCKS

COTTON YIELD ESTIMATES REVISED DOWNWARD

(FROM OUR BOMBAY CORRESPONDENT.)

THE controversy over the future reorganisation of the State and the place of the city of Bombay in the new set-up continues. But all speculative markets in the city seem to have ignored this question altogether. The advance in prices goes on unchecked. The fever has spread from the stock exchange to cotton, oilseeds, cereals and other commodities and, to a limited extent, to bullion also. There is no solid foundation for undue optimism in industrial equities. The general expectation of a greater demand for manufactured goods resulting from extra incomes under the second five year plan is of little immediate consequence. This, however, is not the case with commodities.

In the case of cotton, for instance, the Indian Government released last week for export 100,000 bales of cotton as bonus quota to previous shippers. A Press note issued by the Textile Commissioner here last Thursday stated that cotton of all varieties stapling 3" and below, except Canadas and Bengal Deshi, would be allowed to be exported with immediate effect from the released quota. The announcement stated that the Government had under consideration for some time a scheme for granting bonus quotas to shippers on the basis of actual performance and accordingly the new release would be distributed among the quota holders roughly on the basis of two bales for five bales actually shipped by them during the 1954-55 cotton season. In addition to this, the Government has also decided to release for export a quantity of 50,000 bales of Bengal Deshi, the distribution to the established exporters and registered dealers in this case being in accordance with the general policy for allotment of quotas fixed for the 1955-56 season. Besides this new factor, the yield estimates of cotton as well as that of the total size of the crop are being considerably lowered due to the late rains in many of the cotton-growing areas.

Export Quotas for Cotton and Groundnut

The new crop, which at one time was placed at 5.5 million bales, is now expected to be not more than 4.7 million bales. Anticipating an additional release for exports, the market has been very firm during the past week both as a result of frantic short-covering and fresh purchases by the mills. The I.C.C. February contract now stands in the neighbourhood of Rs. 660 a candy showing a rise of over Rs. 30 during the fortnight. But for the fact that the demand from abroad at present is slack, especially for low staple varieties, the increase in prices of Indian cotton as a result of the additional release for export might have been more pronounced. The market is still waiting for the scheme for the import and disposal of American aid cotton and it is believed that the announcement may come any time this week. About 17 firms have already been nominated by the Government for undertaking these imports, the selection being based on their volume of imports of U.S. cotton in the 1951-52 season.

Another Press note issued by the Textile Commissioner last week states that the Government of India has decided to continue the licensing of cotton dealers and persons who hold cotton in hypothecation or against pledge. Cotton textile mills and persons dealing exclusively in Assam and Comilla cottons, who were up to now exempt from taking out a licence, are required under the revised Cotton Control Order to do so. The revised Order provides for three classes of licences—A Class for the whole of India, B Class valid only in the State concerned and C Class which is exclusively meant for dealers in hand-ginned cotton. These licences will be valid for the period from 1st September, 1955 to 31st August, 1956. There is, however, some relaxation of rules governing the issue of A and B Class licences by doing away with the qualifications prescribed under the old Order for an all-India licence. Persons who did not hold any cotton licence before or those who hold only a C Class licence have now been made eligible for A Class licence the issue of which is within the discretion of the Licensing Authority. The licensing provisions, however, do not apply to persons who purchase or store cotton for their own use. The Government has also decided to remove control on sale of cotton, both Indian and foreign, by manufacturers. The effect of this is that, hereafter, it would not be necessary for a manufacturer to obtain permission from the Textile Commissioner, Bombay, for disposing of his cotton stock.

In the case of groundnuts also, the announcement of export quotas for oil has brought about a marked firmness in the quotations. The prospects for groundnut export are more encouraging, than for cotton and there is a good demand in the U.K. for groundnut oil at remunerative rates. Burma is also believed to be in the market for fresh purchases and there is a good promise of improvement in overseas markets and enquiries at better prices in the near future. That has helped the upward trend of prices. Another factor which has gone to help the process is the reduced quantity of early arrivals because of recent rains. The new-crop movement has been slowed down considerably in Western India and Hyderabad State and till the road transport conditions improve, this short-fall in arrivals is likely to continue. Apart from exports, there has been a brisk demand for groundnut oil both for seeds and oil from crushers

and vanaspathi manufacturers. Castorseed, linseed and nigerseed markets have also been ruling firm, deriving inspiration from the firmness in U.K. markets.

Bullion Market Re-opened

The bullion forward market, which had suspended its business on 12th July following the crisis resulting from a squeeze, re-opened at the beginning of last week. Fresh business has commenced on the basis of a thoroughly revised contract which has been more or less enforced by the State Government for the Bombay Bullion Association to follow. The Association had suggested a revised contract to avoid frequent crises arising from bear raids and bulls squeezes. But this revision was found to be unsatisfactory by the State's Finance Ministry. The Government, therefore, chose to present the Association with a new set of amendments to the contract which has been accepted as the basis for the new contract. With new restrictions thus imposed the volume of trade on the whole has been smaller during the one week it has been in operation. However, the price outlook for gold for the present appears to be somewhat bearish for the future and it is believed that the effect of the new contract may reduce the demand for gold for some time.

Mr. Desai and Small Industries

The Chief Minister of Bombay has been giving assurance to private enterprise that its legitimate functioning and scope for development would receive fullest consideration from the Government. During last week-end, he pleaded strongly for the simultaneous development of both large-scale and village industries for the concerted urban and rural development. While inaugurating the Rural Life Conference at the borders of Greater Bombay, the Chief Minister, declared categorically that it would be a disaster to develop cottage industries at the cost of large-scale industries. Mr. Desai did not seem to agree with the argument that the promotion of cottage industries and through that economic decentralisation would alone make for the growth of democracy in India. Mr. Desai did not underrate the importance of cottage industries to the rural economy, but he expressed the conviction that large-scale industries were capable of solving the problem of unemployment and poverty in a real way. These two wings of industry were complementary and they should be developed as such.

In the meanwhile, the All-India Khadi and Village Industries Board is going ahead with its preparations for creating a huge hand-spinning industry to provide enough yarn to the handloom industry for the 1,400 to 1,700 million yards of additional cotton cloth to be produced by the end of the second plan period. The Board wants the handlooms to be as far as possible, independent in the matter of yarn supply, of the textile mills, at least for the huge additional production which is to be assigned to them under the second plan. In a Press note issued last week-end, the Board therefore announced that with a view to assessing the reactions of the handloom weavers to various centres all over the country it proposed to establish 100 working centres in various States where handloom weavers are concentrated. To facilitate the efficient running of these centres, the Board proposes to provide intensive training to 400 instructors selected from among experienced and skilled spinners from the States concerned. These spinners are to be trained during the next two months at 15 regional camps specially set up for this purpose so as to have by the middle of next December the requisite number of trained instructors, to implement the production programme of handspun yarn. In the meantime, it is understood here that the Central Government is considering a proposal to freeze the production of yarn by the mills along with cloth at a given level and to refuse permission for establishing fresh spindles to the mills who have applied for it till the results of the experiment to produce handspun yarn on an extensive scale by five million spinners all over the country are known.

Poultry Production Scheme

The F.A.O. Conference on Poultry Production in Asia and the Far East, which was in session at Poona for 10 days, concluded its proceedings last Friday. Inaugurating this conference, Dr. Harekrishna Mahab, Governor of Bombay, announced that a countrywide project for the development of poultry in India was about to be launched by the Union Government. Dr. Mahab said that a network of about 300 development blocks would be established for the development of poultry throughout the country, where chickens imported from abroad or produced here from reliable flocks in the country, would be distributed to various breeders in accordance with a carefully prepared plan. The scheme also envisages the housing and maintenance of these chickens during the first four or five months of their life in Government farms, to protect them against contagious diseases before they are distributed. The Governor observed that for the first time a countrywide scheme for the co-ordinated development of poultry had been included in the national plan, because it was found that poultry played a vital rôle in the country's economy and stood only next in importance to cattle. He disclosed that India owned about 73 million poultry or a tenth of the total world population and that though this industry was still undeveloped, its contribution to the Indian economy was considerable. According to the Governor, in addition to the existing farms, it was also proposed to establish five regional poultry farms each capable of maintaining 200 laying birds to form foundation stocks for the various development blocks. The pilot project had already come into existence to gain experience and to ascertain the difficulties in the implementation of such a large

scheme. Some 50 centres would have been established by the end of the first plan period. The conference was attended by about 30 delegates and observers from Cambodia, France, Pakistan, the Philippines, the United Kingdom, the Federation of Malaya and Viet Nam. The conference examined measures for improving poultry production in South-East Asian countries and in the Far East and dealt with many questions of technical planning, improved equipment, proper breeding and feeding of birds and the creation of marketing facilities. Among the recommendations made by the Conference for improving the poultry industry through technical planning, scientific research, improved breeding and marketing organisation, there was one urging for more funds from Government and non-official bodies for the development of this industry and for formulating sound breeding schemes on a national basis. Another resolution urged the Government to carry out experiments on the genetic potentialities of indigenous breeds and the adaptability of foreign breeds to varying climatic and environmental conditions.

Tourism and Hotels

At the reception given by the Hotel and Restaurant Association, Bombay Region, in honour of the delegates to the tenth General Assembly Session of the International Union of Official Travel Organisations Mr. A. P. Sabavala (since) President of the Association, pleaded for a more generous recognition of the part played by the hotel industry in the development of international relations and tourism. He pointed out that apart from providing facilities for sea, air and rail travel for promoting tourism, it was also necessary to organise the hotel industry on proper lines and to establish first-class hotels for promoting tourist traffic. He claimed that this industry provided a better scope for employment than several other industries and deplored the fact that failing to appreciate the peculiar nature of this industry, the Government had brought it within the scope of labour laws applicable to other major industries. This had created great organisational difficulties for hotel managements and they therefore, found it necessary to form the Hotel and Restaurant Federation and the Regional Associations of Bombay, Calcutta, Delhi and Madras to prevent disabilities being heaped on the industry. Mr. J. Bridges, Director of the British Travel Association, while expressing his appreciation of the hotel services in India and the hospitality shown to the delegates observed that there was a shortage of hotel labour in Great Britain, but he found that India was more fortunate in this respect. At the same time, he hoped that steps could be taken to train hotel workers properly, stating, at the same time, that the services in the hotels where the delegates had stayed had left nothing to be desired.

Bank Employees' Further Demand

The All-India Bank Employees' Association at a recent meeting here demanded that adequate provision be made in the Industrial Disputes (Banking Companies) Decision Act to protect the emoluments of bank employees by the guarantee that these would not be subjected to a cut in any form. While generally welcoming the recommendations of the Bank Award Commission, which the Conference interpreted as a denunciation of the Government's earlier action in modifying the Labour Appellate Tribunal's Award, the bank workers demanded that the award be made applicable also to areas with a population of 30,000 or less. Similarly, the Conference also asked that Class C banks should be treated under the category of Class D banks according to the directions of the Labour Appellate Tribunal's Award and the necessary additional emoluments enjoyed by the latter category be also granted to the Class C bank employees.

What is Surplus Profit?

The Labour Appellate Tribunal of India in Bombay recently gave a decision on the calculation of bonus which might prove detrimental to industry in the future. This arose from a cross-appeal before the Appellate Tribunal by the Scindia Steam Navigation Co. and the Bombay Steam Navigation Co. on the one hand and their staff on the other, concerning bonds for the year 1951-52. The primary Industrial Court in calculating bonus had allowed the quantum of depreciation to the companies as prior charges on the footing that the total of depreciation as allowed under the Income-tax Act, without any distinction as to normal initial or special depreciation, would have to be allowed for the calculation of surplus profits. The Industrial Court, therefore, allowed the two companies Rs. 170.29 lakhs for depreciation. It was contended by the workers that the Full Bench formula of 1950 of the Labour Appellate Tribunal did not contemplate the deduction from profits of initial depreciation and additional depreciation which were allowed under the Indian Income-tax Act, because these reliefs to industry were granted by the Legislature to meet certain contingencies and were only for a limited period and that, therefore, it would not be fair in many cases to the workmen that these two forms of depreciation should be rated as prior charges before ascertaining the available surplus for distribution as bonus. The Labour Appellate Tribunal in upholding this point, directed that all prior charges on profits must be regarded from purely normal business standards for the purpose of ascertaining surplus profits and returned the case to the Industrial Court with the direction that "the only allowance for depreciation which can be so regarded is the amount of normal and multiple shift depreciation allowed under the Income-Tax Act" and not the items of initial or additional depreciation which are allowed under the Act as a special temporary concession for considerations outside the normal rule.

Let's look at PROGRESS—Stanvac Quiz No 1

YOU KNOW THAT INDIA'S 5-YEAR PLANS MEAN A BETTER LIFE FOR ALL. BUT DO YOU REALISE THE PROGRESS ALREADY MADE UNDER THE FIRST 5-YEAR PLAN? TEST YOUR KNOWLEDGE AGAINST THE QUESTIONS AND ANSWERS BELOW.

1. IN 1953-54 INDIA ACTUALLY GREW MORE RICE THAN THE PLAN CALLED FOR. IN THREE YEARS HER RICE PRODUCTION HAS INCREASED BY:

A) 1,460,000 TONS
B) 4,250,000 TONS
C) 637,000 TONS

2. COTTON IS ONE OF INDIA'S MOST IMPORTANT CROPS. BY 1954-55, THE AREA OF LAND UNDER COTTON HAD INCREASED BY:

A) 1,252,000 ACRES
B) 3,746,000 ACRES
C) 624,000 ACRES

3. THE PLAN INCLUDES PROJECTS FOR MAKING INDIA SELF-SUFFICIENT, AND ALSO FOR EARNING FOREIGN CURRENCY. IN 1954-55 EXPORTED INDIAN GLASSWARE EARNED:

A) 6 LAKHS
B) 12 LAKHS
C) 20.4 LAKHS OF RUPEES

4. IN INDUSTRY, TOO, INDIA'S OUTPUT HAS RISEN STEADILY. IN 1954-55, THE NUMBER OF BICYCLES MADE WAS:

A) 372,365
B) 60,260
C) 124,120

STANDARD-VACUUM ARE PROUD TO PRESENT THIS TOPICAL INFORMATION ON INDIA'S PROGRESS—AND PROUD THAT OUR THREEFOLD ACTIVITIES OF PRODUCING, REFINING AND MARKETING OF PETROLEUM PRODUCTS ARE CONTRIBUTING TOWARDS IT.

1. 4,250,000 TONS—AN EXTRA 25½ LB. OF RICE FOR EVERY MAN, WOMAN AND CHILD IN THE COUNTRY!

2. 3,746,000 ACRES—AN EXTRA ACRE OF COTTON-GROWING LAND FOR EVERY FOUR AT THE BEGINNING OF THE PLAN!

3. OVER 20.4 LAKHS OF RUPEES WERE EARNED BY THE EXPORT OF INDIAN GLASS—VALUABLE FOREIGN CURRENCY TO BUY VITAL IMPORTS!

4. 372,365 BICYCLES—MORE THAN THREE TIMES THE NUMBER MADE FOUR YEARS AGO!

London

BRITAIN'S AUTUMN BUDGET
CAUSES SURPRISEHIGHER TAX ON DISTRIBUTED
PROFITS

(FROM OUR LONDON CORRESPONDENT)

MR. BUTLER presented his supplementary Budget to the House of Commons on Wednesday before last and ran into trouble on a scale which he could hardly have anticipated, for if there were any surprises they were occasioned rather by the things which he had omitted than by those which he had included. The usual guessing game was in full swing for quite a while in advance, and speculation ranged over a wide field. Higher purchase tax rates headed the list, and in this respect there was no disappointment, but the expected increases in Customs and Excise duties, in television license fees, in the charge for National Health prescriptions, in the cost of the National loaf, the suspension of the investment allowances, and a host of other dire forebodings too numerous to detail failed to materialise. Dividend restraint was one of the few questions which, it was felt with some certainty, would not find a place, but in fact Mr. Butler raised the tax on distributed profits by 5 percent. It is interesting to compare the Budget proposals, of which all the details will already have been known in India, with what, for instance, the Financial Editor of *The Manchester Guardian* thought was the Chancellor's task. This was what he had to say:

"The main purpose of the autumn Budget must be to prevent the boom in trade and industry from getting out of hand and to ease the strain on the economy. That is another way of saying that the Chancellor must try to halt the inflationary rise in prices and restore both the incentive and the scope for the further expansion of exports. To reduce purchasing power is the basic need. Spending plans for the future have to be clamped down and the pressure of total demand for goods and services, whether by public authorities, private business or individuals, has to be reduced. Only when shortages have been relieved and order-books shortened can we hope for the freedom of movement in the economy that will make an expansion of exports possible. Perhaps it is a reasonable guess that Mr. Butler, having left this treatment till late in the day, will do rather more than is necessary to cope with the immediate balance-of-payments trouble. That would make assurance more certain and get rid of a few more distortions which inflation always produces in the economy.

What has Mr. Butler done? The present rates of purchase tax have all been raised by one-fifth, and many kitchen and household goods hitherto exempt have been brought in; tax will also be charged—at 5 or 10 percent—on clothing, textiles and furniture which had been exempt under the D-scheme, now dropped, but young children's clothing remains free of tax. Cuts in most fields of expenditure controlled by the Government—its own building plans, housing subsidies, and spending by nationalised industries, but the roads and atomic programmes are to continue. The levy on distributed profits goes up by 5 percent to 27½ percent. Higher telephone and postal charges are to come into force on 1st January, 1956, to make them economic and to meet the G.P.O.'s development plans. The increased taxation will yield £15 million this year and £112.5 million in a full year. The revenue, however, it is pointed out, is less important than the effect of mopping up the surplus spending power and releasing production, especially in the metal-using industries for whom large imports of steel and coal are now necessary, for the export market.

The above comparison suggests that Mr. Butler has done his job surprisingly well, in the circumstances. He has maintained the incentives of his policy, which he maintains have worked, and it is a reasonable claim; he has stepped up the "disciplinary" side, which has not worked fast enough. The Labour Opposition is full of fight—it is the opportunity it has been waiting for—but Mr. Butler's correctives could work given the necessary co-operation. Unfortunately, that is about the last thing he can expect.

Economic Trends

Against the background of the Supplementary Budget it is necessary to bring the economic picture up to date by brief references to the latest trends as reported by the Board of Trade. Most interesting is a statement on world trade and production which points out that world trade in manufactured goods has been rising rapidly in the past two years. In the first half of 1954 exports of manufactures from Europe, North America and Japan were 7 percent higher than a year earlier; by the second half of 1954 the rate of increase had risen to 8 percent, and in the first half of 1955 it showed a further increase to 13 percent. The share of the United Kingdom in the world exports of manufactures in the first half of 1955 was a little below 20 percent, even after making some allowance for the effect of the dock strikes, compared with 21 percent in the first half of 1954. Canada's share of the total has also declined since a year ago, while the shares of the United States and Western Germany have both risen. The growth of trade in manufactures has taken place mainly between the manufacturing countries, whose mutual trade has risen by about 14 percent between the first half-year of 1954 and the same period this year while total imports from the primary producing countries have been only slightly higher than they were a year ago. The detailed U.K. trade

figures for September show that at £2,884 million imports for the first nine months of this year were 15 percent above the corresponding period of 1954. Exports at £2,123 million rose by nearly 6 percent. The Board of Trade now discloses that nearly one-quarter of the rise of imports was attributable to higher prices but that the increase in volume was about 11 percent. On the export side the 6 percent increase was the same both in volume and value. Export prices showed little change until the latter months.

Terms of Trade Steady

Britain's terms of trade, as measured by the ratio of import to export prices, were unchanged in September. The index of import prices (based on 1954=100) was up from 102 to 103. With the export price index also a point higher at 103, against 102, the index of the terms of trade held steady at 100. At this level it was slightly more favourable than in September, 1954, when it stood at 101. On the import side the main factor was a two-point rise from 110 to 112 in the index of prices of manufactured goods, mainly owing to higher prices for copper and fuels. Among exports the index for engineering products, which rose by a point in July and showed no change in August, was up by another point to 104 last month. Following its 5 percent rise in the preceding three months, the index number of basic materials prices fell slightly in September by 0.4 percent. The index (30th June, 1949=100) was down from 156.4 to 155.8 and at this level was about 8½ percent above the September, 1954, figure of 143.7. The actual price movements were distinctly mixed. Raw wool was 8.8 percent down and raw cotton fell 1.2 percent. Taken together, these two falls more than offset the effect of higher prices for copper (up 5.1 percent), raw rubber (2.8 percent up), hides and skins, which rose 3.1 percent, and imported softwood, which was 0.5 percent up.

Still Hope for Lancashire

The extent to which the Lancashire cotton industry feels it is dependent upon Government assistance to overcome the problems which face it was apparent from its reactions to the Budget proposals so far as they affected its products. At first there was dismay and despondency, but second thoughts produced a more cheerful reaction, at least in certain sections, for the Chancellor has taken note of the objections voiced earlier to the D-scheme and the handicap it imposed on the producers of quality goods and the best export prospects. Its abolition is therefore welcomed, as is the widening of the home market for better quality textiles and the garments made from them. By itself this would hardly represent a bright future, but there are indications, even though they are still slight, that the industry has been given food for thought by the recent conference of the Cotton Board at Harnage, and not least of all by the frank address delivered by Mr. G. E. P. Thorneycroft, the President of the Board of Trade. He rejected the argument that the Government should have "a policy for cotton" unless it owned the industry and pointed out that all industries were taken into account in the formulation of the Government's general economic policy, which gave a very high place to the freeing of trade from restrictions and to the expansion of the volume of trade in all possible directions. Mr. Thorneycroft suggested that it was impossible to stop people from buying cheap cotton goods from Japan and India and that Lancashire could not hope to compete with these two suppliers. There would be increasing competition from Western Europe and the United States, and Lancashire would have to meet it on grounds of price, quality and design, and aggressive selling. On the export side, apparently the Government contemplates severe competition in a narrower field, while in the home trade also more goods will come in from the Continent and the United States unless Lancashire becomes more competitive. The policy which the cotton industry must pursue, accordingly, is that of increasing its efficiency in order to try to enlarge the range of products and markets in which it can meet competition.

This was followed by some equally frank appraisals of the industry's weaknesses in the form of papers by members of the trade showing, from practical experience, how self-help could still save the industry by concentration on output, the study of customers' needs and the creation of demand by more aggressive trade promotion. Some contraction of the industry is now being more widely recognised as inevitable, as also the fact that this will lead to an increase in its efficiency. It is generally agreed, moreover, that competition from other countries cannot be met with a single-shift system, or even a double-shift system (with a reduction in weekly hours and a 20 percent increase in wages) as is now being worked by some mills. This new thinking is a welcome change, and an even more important advance is represented by the acceptance of the principle of three-shift working by some trade unions. There is enough evidence to show that with a new policy based on modern methods the greater part of the Lancashire cotton industry can reasonably survive. It must not be forgotten, moreover, as Mr. Thorneycroft pointed out, that although the cotton industry has 280 of its 1,600 mills and 23,000 operatives working on short-time and that its total labour force has fallen by 28,000, Lancashire is booming. In the north-west region as a whole there are some 50,000 unfilled vacancies.

Hire-Purchase Check

That Mr. Butler took no further steps to limit hire-purchase activity came as a surprise to many, and as a considerable relief to all dealers in the goods affected by the new purchase tax rates. The difficulty of assessing the level of this activity and, therefore, the effectiveness of the restriction

measures already applied, may be part of the answer. It also explains a request made by Mr. Thorneycroft for help in providing the Board of Trade with statistics on hire purchase. Letters have gone out to more than 450 finance houses and 6,000 retailers, asking them to supply information every month on transactions of this kind in such goods as furniture, radio and television sets and domestic appliances. The Minister stated: "As hire-purchase trading becomes more widespread, its influence on the economic well-being of the country becomes greater. It is, therefore, important that the Government should know how the volume is moving so as to take proper account of it in framing its broad economic policies." The information collected will be used to prepare representative statistics showing monthly changes in hire-purchase sales, and debts outstanding, for the main types of goods. The Board stresses that secrecy will be preserved by the use of code numbers. Initial inquiries in trade circles show that although it is appreciated that compliance would help to fill a gap in statistical information which would be useful to the Government, the request would probably meet with a mixed reception. It was expected, however, that retailers would co-operate if the form-filling did not entail a lot of research and clerical work.

Savings Through Insurance

The extraordinary advance of life insurance business in the past year is now brought out in a full report by the Life Offices' Association and the Associated Scottish Life Offices. The outstanding feature is that the amount of life assurance taken out by individuals increased almost as much in the year 1954 as in the previous three years taken together. Here is the main explanation of the startling revival of personal savings in this country which has been shown in the national statistics. The net increase in life and annuity funds as well as industrial life assurance funds during last year was £267 million, and as the report points out this was the largest single source of personal savings in the country. The total new assurances taken out in 1954 amounted to £961 million, of which £758 million was for individual and £203 million group policies. New sums assured under group policies have gradually risen from £75 million in 1950 to £203 million in 1954. At the end of last year the total amount assured under individual policies, including bonus additions, was £5,594 million (against £5,147 million at the end of 1953). The total assured under group policies was £942 million against £821 million. The report states that about 2,100,000 workpeople in the United Kingdom were covered at the end of 1954 for either life assurance or pension benefits—the great majority being covered for both. The amounts so assured had risen to £1,225 million while future pension rights exceed £260 million per annum. As for the business of the insurance societies, the total life premium income, including annuity considerations, in 1954 was £317 million compared with £290 million in 1953. Of this amount 34 percent was in respect of staff pension and life assurance schemes.

Textiles for Burma

A report suggesting the possibility that arrangements may be made for Burma to import textiles worth £750,000 in the near future has been received with caution in cotton trade quarters in Manchester. British exports to Burma in 1954 included £1,788,169 for cotton yards and fabrics, £332,615 for miscellaneous textiles (silk, linen, etc.), £327,033 for wool textiles, and £94,182 for synthetic fibre yarns and fabrics, but so far this year the trade has been very much smaller than in the corresponding months of last year. India and Japan both send much larger quantities of cotton goods than the United Kingdom does, and Japan also has a large share of the market for rayons. Lancashire formerly did a large trade with Burma in fine bleached goods and also in other finished cloths with special designs to meet the market's tastes, among which small symmetrical patterns were prominent. The trade, accordingly, was a valuable one, the average price per yard of the cloths sold being higher for Burma than for many other Far Eastern markets.

Shipbuilding Prospects Improve

Britain's shipbuilding is in a better position than it has been for many years, despite foreign competition. During the third quarter of 1955 orders for new tonnage increased, extending still further the British world leadership in ship construction. According to the latest Lloyd's Register of Shipbuilding Returns, 346 ships, of 2,147,057 gross tons, were being built in British yards at the end of September. Ships on order total 781, of nearly 4,700,000 tons, including 130 for abroad. The total value of the orders was £580 million. Since then this figure has increased to £650 million with the placing of large tanker orders by the Shell and British Petroleum groups. Germany maintained her position during the period as second leading country, although her tonnage output dropped. The United States dropped to bottom place, the Netherlands being second and Japan third.

Parcels Delivery Undertaking

The British Transport Commission is offering the entire parcels delivery undertaking (British Road Services (Parcels) Ltd., with a share capital of £7 million) for sale. Under the Transport Act 1953 this undertaking, with about 4,000 vehicles, 1,200 trailers and a network of depots and workshops, has to be put up to tender as a unit. Any name "Carter Paterson," must pay 10 percent of the purchase price on acceptance and the rest on completion. If no acceptable tender is received within three months Parliament may have to make some new provision.

Madras

RAISING REVENUE FROM THE
AGRICULTURAL SECTORMADRAS HESITANT BUT ANDHRA
SEEMS KEEN TO GO AHEAD

(FROM OUR MADRAS CORRESPONDENT).

THE view appears to be gaining ground in Madras and Andhra that the agricultural sector offers today the best scope for raising additional revenue to meet the demands of the ambitious second five-year plan. It may be noted that land taxation in Andhra, as in Madras, has remained practically static during the last 20 years in spite of the striking increase in the prices of agricultural commodities since 1942. If the 30-year ryotwari resettlements had not been abandoned in 1939, there would have been a normal upward revision of land revenue assessment and the Government would now be getting its just share of the annual wealth produced in the agricultural sector. Although the basic theoretical principle of ryotwari settlement is that half the net income from land should constitute the assessment, the last resettlements in the several districts of the then composite Madras Province had fixed only 8½ percent to 25 percent of net income as the Government's share payable by a landholder. The share taken by the State was far less than the theoretical half-net rate because the Government of those days was anxious to make an allowance for the increased cost of living of the ryot. The commutation rate adopted for determining the money value of net produce (after deducting expenses of cultivation) was the average price of paddy in 20 non-famine years immediately preceding the year of resettlement. A commutation rate similarly determined now will be nearly two to four times the respective commutation rates adopted in different districts in different years for the last resettlements. Although land revenue accounts for about Rs. 8 crores in Madras and Andhra taken together at the present time, it represents, on an average, only 8-1/3 percent of net income from land. Even if a more liberal allowance is made for the ryot's present cost of living, there is still an unanswerable case for doubling the land revenue assessment, if not for trebling it. But, however convincing the case for increasing land revenue may be, the Congress leadership in Madras at any rate is frightened at the prospect of alienating the sympathies of some 41 million landholders owning just under 25 million acres. The Government has recently levied a cautious and modest surcharge of two annas on every rupee of assessment and that too for the needs of local bodies.

Andhra Plans Increase

In Andhra, however, the Congress Ministry which came to power this year with the overwhelming support of landowners seems to be thinking on bolder lines than the Kamaraj Ministry in Madras, although the previous Andhra Government headed by Mr. T. Prakasam had propagated the idea of exempting from the payment of land revenue of all landowners paying less than Rs. 10 per head by way of assessment. In this connection a note circulated by the Government to the members of the Andhra legislature deals largely with the possibilities of additional revenue from land to the extent of about Rs. 20 crores during the second five year plan period. The note points out that the revenue deficits from 1st October, 1953 to 31st March, 1956, come to about Rs. 10 crores and that it is not in the best interests of the State to leave any uncovered deficit in the revenue account. It is estimated that the revenues of the State over the next five year period, taking such possible increases in revenue as might accrue from the larger outlay on irrigation and power projects, would be just sufficient to cover the committed expenditure on old developmental activities. With this financial background the note outlines a number of possible measures for additional tax revenue. These measures relate to a revision of land revenue assessment, enhancement of water rates, special charge on lands growing commercial crops, an agricultural income-tax on bigger incomes, levy of full ryotwari assessment on minor *inam* lands some of which pay only a nominal quit-rent now while some others are held free of assessment, and interim measures for raising additional land revenue which envisage the levy, on an *ad hoc* basis, of a uniform surcharge on land revenue including both assessment and water rates. In regard to water rates, it is pointed out that the standard scale of water cess was fixed as far back as 1873.

Proposal for Betterment Levy

The note also presents a case for a betterment levy. Owing to the general rise in prices, it is stated, the maintenance costs of several irrigation projects have greatly increased. According to the Budget estimates of the current year, the total revenue is Rs. 1.2 crores. As against this, the working expenses and interest charges on those projects total Rs. 2.3 crores. The only other source, besides the increase in water rates, from which an additional revenue on account of irrigation could be derived, is the levy of betterment contribution on lands benefited by irrigation works. The income from betterment levy will, however, not be very appreciable. So, the water rates for lands under dry assessment drawing water from Government sources of irrigation would have to be enhanced uniformly by 25 percent; at the same time, the water rate element in the consolidated assessment

on wet lands, would have to be increased by 18½ percent.

The Andhra Government is anxious to put through these measures almost immediately for the second five year plan is to begin from 1st April, 1956. The question is whether the Communists would exploit the proposed land taxation as an issue on their agitational platform and thus try to wean away from the Congress a section of landowners who had deserted them during the recent elections. The Andhra Government is probably not much worried on that score for the next elections are a far cry as far as that State is concerned. In Madras, however, the Government might not court any such unpopularity in the next year which happens to be its pre-election year.

The Andhra I.F.C.

The Andhra Government has just constituted a 10-member State Industrial Finance Corporation with an initial share-capital of Rs. 50 lakhs divided into 50,000 shares of Rs. 100 each. The State is taking shares of the value of Rs. 20 lakhs; the Reserve Bank Rs. 10 lakhs; scheduled banks, insurance companies, etc., will take shares to the extent of Rs. 15 lakhs; and the remaining shares of Rs. 5 lakhs will be given to others.

The umpire in the dispute of the workers and managements of the Coimbatore Textile Mills relating to payment of bonus for 1954, has just given his award. The parties having failed to reach an agreement. Under the award, 13 mills have been directed to pay a bonus of 4-1/2 percent of the total basic earnings for the year; 16 mills to pay a bonus of 32-1/3 percent; one mill to pay a bonus of 25 percent; four mills to pay a bonus of 16-2/3 percent; two mills to pay a bonus of 8-1/3 percent, and four mills to pay a bonus of 4-1/6 percent. The award shall be applicable to all mills' staff including jobbers and workers of all categories. This will also include apprentices who had worked for not less than three months in the same or in another occupation in the factory. The basic earnings will include basic wages, night allowances, production allowances, maternity and other allowances except dearness allowance, and also compensation paid for involuntary unemployment during the year in question. All the workers who have worked in the year in question will be eligible for the bonus irrespective of whether they are now in service or not. The amount of bonus to be paid under the award is estimated at about Rs. 40 to Rs. 50 lakhs and the number of workers likely to be benefited at about 43,000.

Crisis in Madras Politics

Congress politics in Madras appears to be again heading for a crisis although, with the coming to power of Mr. Kamaraj who displaced Mr. Rajaji, it has been assumed during the last 20 months that the State Government and the Tamil Nad Pradesh Congress Committee would get on well with each other. A move is understood to be afoot now among the members of the T.N.C.C. for voting no-confidence in the President of the organisation who is a Harijan M.P. and who has the solid backing of Mr. Kamaraj, the Chief Minister. The move is more against the Chief Minister than against the T.N.C.C. President and is sponsored by elements who are displeased with Mr. Kamaraj's rule. The Congress reverses in the recent municipal elections are attributed to the incompetence of the President, although the party has won absolute majorities in just half the number of municipalities. Mr. Kamaraj's reported overtures to the leader of the Dravidian Federation which agitates for an independent Tamil Nad have also come in for criticism at the hands of his opponents. The anti-Brahminism of the Dravidian Federation is probably thought of as a major trump card which Mr. Kamaraj could play for winning the next General Elections for the Congress. While the Congress Ministry is still hesitating to halt the process of impoverishment of cultivating tenants and labourers, an effort is being made to divert potential and current agrarian unrest into a sterile anti-Brahmin movement. Rajaji is also relentlessly at war with the B.C.G. which has the effect of discrediting the Government.

PRODUCTION AND USE OF INDUSTRIAL FIBRES

THE POSITION OF INDIA AND PAKISTAN

WORLD production of the chief industrial fibres in the 1953-54 season was about 4 percent below the record achieved a year earlier, while preliminary figures for the 1954-55 season show a further reduction of around 3 percent. That is the outstanding fact brought out in the 1955 edition of *Industrial Fibres*, published by the Commonwealth Economic Committee (price 5s.). The reduction in 1953-54 was entirely accounted for by the decline in jute output, while in the following season it was due mainly to the fall in cotton. The Commonwealth's share in world fibre production has continued to rise, particularly marked advances being recorded in cotton and hard hemp (sisal). Aggregate consumption of apparel fibres again increased during 1954, but this did not prevent a further rise taking place in stocks of cotton and, to a lesser extent, of wool, since production of these materials was still in excess of consumption. Prices of the different fibres showed somewhat divergent movements during the first part of 1954, but in the second half of the year the general trend was downwards. World trade in industrial fibres was slightly larger in 1954 than in the previous year, sharp falls in wool and jute being more than outweighed by the improvements recorded in cotton and rayon.

Production and Prices

The fall in fibre output during the 1954-55 season was largely in the apparel varieties, since production of non-apparel fibres showed very little change compared with the previous season. Nevertheless, the Commonwealth's share in both types was higher, notably in cotton, sisal, and the newer protein and synthetic fibres group. The report summarises developments in cotton production for the 1954-55 season and notes that the crop is expected to be some 7 percent smaller than last season, owing chiefly to the reduction in U.S. out-

put following the imposition of acreage restrictions. Wool production during the same season showed a slight increase, while rayon output in 1954 reached a new peak. Among the non-apparel fibres, jute and sisal showed higher production totals in 1954-55 than in the previous season. World price movements of the main natural fibres during 1954 were less uniform than in recent years, though on balance there was a tendency for them to fall slightly in contrast to the moderate rise which had occurred in 1953. Prices of cotton and wool rose during the early months of the year, but fell steadily in the latter half, the decline being especially marked in the case of wool. Silk and hemp prices also declined during 1954, while those of jute, which fell heavily in the early part of the year, rose considerably in the latter months, as a consequence of the severe flood damage in Bengal.

Trade

Owing to the expansion in exports of all fibres, except wool and jute, world trade in industrial fibres was larger in 1954 than in 1953, thereby continuing the improvement which began in the latter year. While total world exports increased only slightly, those of cotton increased by 7 percent and rayon by about 20 percent; exports of wool, however, fell by nearly 10 percent. The United Kingdom, the world's largest importer of fibres, took some 5 percent less in 1954 than in the previous year; imports of cotton rose by 12 percent, while receipts of wool and jute fell by 19 percent and 28 percent, respectively. U.S. purchases of fibres, which have been falling since 1951, were probably the lowest of the post-war period, the largest falls being in imports of wool and jute. Continental European imports, however, rose slightly, while Japan took about the same as in 1953. In 1954 the Commonwealth again provided almost all the world's jute entering international trade, together with nearly four-fifths of the wool, though the proportion of cotton and other fibres was rather less than a year ago.

Consumption and Stocks

Total consumption of the main apparel fibres showed a rise in 1954 for the third year in succession. The main increases occurred in Japanese consumption of cotton while, with the exception of the United States, there was a practically worldwide improvement in rayon. On the other hand, the consumption of wool declined in most countries and in total is estimated to have fallen by about 4 percent. World stocks of fibres continued their upward trend throughout 1954, the increase being due almost entirely to further heavy additions to cotton stocks, though wool stocks also rose to some extent. By contrast, stocks of jute fell by over 40 percent when compared with the end of the 1952-53 season. The section devoted to the newer man-made fibres has this year been considerably expanded. Output of these fibres has risen rapidly in recent years, and in 1954 amounted to over 400 million lbs. or the equivalent of nearly 10 percent of total rayon production. Nylon is still the predominant member of the group, accounting for well over half the total. New plants are at present being erected in many countries and planned world capacity for the end of 1956 is estimated at some 800 million lbs.

India and Pakistan

That is the general picture presented by this valuable report. To ascertain the position of India and Pakistan calls for considerable research in the multiplicity of tables which it contains. It is possible, however, to arrive at a brief appraisal by running through the various fibre headings. For instance, so far as cotton is concerned, India is the second largest producer in the world, after the United States, while Pakistan follows in sixth place, with Mexico, Brazil and Egypt coming in between. Indian production has shown a steadily rising tendency, and, what is even more important, an improvement in quality as well, whereas Pakistan's output has moved downwards since 1952-53, following acreage restrictions. Pakistan, on the other hand, is the largest Commonwealth exporter of cotton and in 1953 was actually the third largest exporter of cotton in the world, but increased local consumption has led to severe cuts and in 1954 there was a drop of 50 percent and Pakistan was fifth on the world list. India is not a large exporter and over the last few years even the comparatively small volume of raw cotton leaving the country has shown a tendency to fall. Whereas raw cotton exports represented 38.7 percent of Pakistan's total exports in 1953, in the case of India the figure was only 1.8 percent. Indeed, India imports much more cotton than she exports, for the bulk of her own output is of short staple.

Neither India nor Pakistan is a large wool producer, their combined output being no larger than that of the United Kingdom. Until quite recently about half the total was exported, but export quotas imposed in recent years to ensure adequate domestic wool supplies for Indian industry have resulted in a 40 percent cut in that country, while Pakistan's exports, without the imposition of quotas, have fallen by about 12 percent. These wools are of low quality and the exports are used mainly in carpet manufacture.

Under the headings mohair, flax and hemp, neither country finds entry, but India does creep into the chapter on silk as a minor producer, quite a substantial importer and a small exporter of waste silk. On the other hand, they monopolise the jute section. Pakistan is the largest producer, but crop restriction over the last two growing seasons has reduced output to a level just below that of India, while between them they are responsible for practically the whole of the world's supply. Pakistan is virtually the sole exporter and jute represents around 40 percent of her export total,

and since India is the consumer of half the total world production she still takes as much as 25 percent of Pakistan's exports after cutting down her needs from that source drastically in recent years and eliminating all her own exports of the raw material. This year a special section on jute manufactures has been added to the report. It shows that India produces 60 percent of world production, but Pakistan, though a newcomer in this respect, is developing rapidly. Western European countries, headed by the United Kingdom, share about 40 percent between them. This section concludes with a reference to substitutes and alternatives which brings out the difficulties which face the jute industry and emphasises the misfortunes which have befallen it since the partition of India and the present search for self-sufficiency by the two new parts.

The coir trade is confined exclusively to India and Ceylon, with the former exporting less fibre but the bulk of coir manufactures, and the latter just the opposite. These two countries are, after Indonesia, also the principal producers of kapok, but world demand for this product is declining with the appearance of substitute materials in the upholstery and insulating industries. It is significant, however, that whereas Indonesian exports have declined over the last three years, those of Indian and Ceylon have risen.

Indian production of rayon filament yarn, started in 1950 with an output of 300,000 lbs., had risen to almost 12,000,000 lbs. in 1954, but this still represents only 20 percent of her needs, so that she is in fact the world's largest importer, and the second largest importer of rayon staple fibre. Pakistan is also an importer, but on a much smaller scale.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939-100) advanced further by 1.5 percent to 358.8 during the week ended 15th October, 1955 as compared with 353.5 (revised) for the previous week. The index was higher by 1.4 percent as compared with the corresponding week of the previous month but was 6.5 percent lower than that of a year ago. The index for Food Articles advanced sharply by 4.2 percent to 319.4 as a result of higher prices of jowar (+21%), gram at Hapur and dal arhar (+16%, each), wheat (+13%) and tea (+8%) despite lower prices of salt in Calcutta (-8%) and gram at Patna (-6%). The index for Industrial Raw Materials also rose by 2.6 percent to 408.2 due to an increase in the prices of gingellyseed at Jhansi (+11%), cottonseed at Amravati (+10%), mica (+6%), raw jute and rapeseed (+3% each), raw silk and groundnuts (+2% each) and linseed and lac (+1% each) although the prices of manganese ore (average export prices) (-2%) and castorseed in Bombay, cow wet salted raw hides at Kanpur and copra (-1%, each) showed declines. Prices of sheepskins (+11%), castor oil in Madras and groundnut oil in Bombay (+4% each), buffalo hides, mustard oil, copra cake and coir yarn—Anjengo Superior (+2% each) and goat skins (+1%) showed advances while those of cow hides and copper (-6%, each), gingelly oil (-3%), gingelly cake (-2%) and groundnut oil in Calcutta, coconut oil, zinc and brass (-1%, each) were marked down. On the whole, the index for Semi-Manufactures moved up by 0.2 percent to 330.0. The index for Manufactures, however, decreased by 0.9 percent to 370.2 as compared with 373.6 (revised) for the previous week due to a fall in the prices of tyres and tubes (-10%), jute manufactures (-2%) and cotton manufactures and rayon and silk manufactures (-1% each); the prices of chemicals (+2%) witnessed a rise. Lower prices of black pepper at Cochin (-6%) and of chillies at Patna (-2%) brought down the index for the Miscellaneous group by 0.2 percent to 559.0. The price of chillies in Calcutta, however, rose by 2%.

PRICES BOOM IN GOODS MARKET

RAW JUTE REMAINS FIRM

ONCE again Calcutta speculators have succeeded in establishing a market which, taken at its face value, is akin to a boom, but in reality is a fallacy. The present situation can be traced back to the squeeze in cornsacks which began following some enquiries for this fabric from Australia. The resultant increase in activity eventually snowballed into a battle between two rival operators which bore no relation to its origin. Speculation was confined to the heavy goods market and over the past fortnight, which only contained seven working days due to various holidays, B Twill prices were forced up nearly Rs. 70 a ton. This made sacking sales an attractive proposition for the mills, especially as raw jute rates advanced by about half this figure, but with total heavy goods stocks with the mills standing at well below the normal monthly production rate, only very few buyers were in a position to take advantage of the rise even if they could be found. Overseas interests refused to be panicked by the sudden rise and except for a few isolated cases buyers stayed completely out of the market. The present price of heavy goods is the highest since the middle of August, but the general trend of the market can be gauged by the hessian section which has not been affected by speculation to the same extent as its sacking counterpart. In this section prices have only risen by about Rs. 35 a ton over the past two weeks, keeping pace with the advance in raw jute, but are still about Rs. 70 a ton below the prices ruling in the middle of August. Raw jute, on the other hand, is only about Rs. 40 a ton lower than the August rates, and at these levels hessian goods business is not so profitable as sacking.

The raw jute section of the trade is steadier than it has been for some time. A great deal of firmness can be attributed to the firmness of the goods market, but there would be little change in the general situation even without this support. The mills themselves are mainly responsible for the present attitude of the sellers, as over the past few weeks they have been keen to buy jute for quick delivery, some of which they required within three to five days. Naturally this gave the impression that manufacturers were not so well off for jute as they made themselves out to be, and has prompted sellers to withhold offers in the hope that buyers will eventually pay higher prices. This reserved attitude has been strengthened further by the import figures from upcountry. Reports from all agencies indicate that arrivals are very poor, and not all of this can be attributed to the shortage in carrying space. Farmers this year appear to have more holding power than they have had for several years past and they are not marketing their goods at these prices. The general impression is that there is plenty of jute available and that the shortage is only a paper one.

THE JUTE MARKETS

Manufactured Goods: At the opening on Thursday, 20th October, the goods market was still under the influence of speculators who were pushing up sacking prices in anticipation of overseas business with Australia. Opening B Twill quotations were eight annas to Rs. 1-4 better than last week's closing rates, and were quoted at Rs. 107 a 100 bags for October shipment and Rs. 104 for January-March shipment. The hessian section was completely neglected, but prices ruled steady in sympathy with heavy goods, 40" 10oz hessians being unchanged at Rs. 38-6 a 100 yards for October shipment and Rs. 38-4 for January-March shipment. Speculators began to pause when no business was placed, and some profit-taking at higher levels caused prices to ease slightly towards the close, but quotations on Friday morning had again recovered to initial rates. Small speculative activity took place, but there was very little interest being shown due to the nearness of the Puja festivities, and prices only fluctuated within narrow limits, opening on Saturday morning eight annas better in heavy goods and two annas up in hessians. Over the holidays minor transactions took place with the accent on hessians, 40" 10oz hessian opening on the Thursday following the Durga Puja at Rs. 38-13 for ready delivery and Rs. 38-12 for January-March shipment. This was six annas better than the previous closing rates. There was very little alteration in sacking prices, ready B Twills opening four annas better at Rs. 107-12 while forward shipment was unchanged at Rs. 104-8. Small enquiries from West Africa and Australia helped to maintain prices, but there was very little alteration in the quoted rates until Saturday after business with these centres was confirmed. On this news ready B Twills jumped Rs. 1-8 to Rs. 109-8, forward shipment advancing eight annas to Rs. 106-8. The hessian section was steady in sympathy but rates were unchanged. Speculators continued their search for heavy goods and in the absence of sellers prices were pushed up resulting in boom conditions with prices soaring hourly. Heavy business was transacted over the weekend and the holiday on Monday, and by opening time on Tuesday heavy goods had put on a further Rs. 1-8 in all deliveries; hessians rose eight annas in the near position and six annas for forward shipment. The demand for sacking continued on further enquiries being received from West Africa and Australia and during the day B Twill rates moved up Rs. 2 eventually reaching

Rs. 113. These prices eased slightly towards the close, but the market continued to rule very firm, the hessian section following sacking in sympathy.

At the close the market is very firm with speculators pushing up prices. Opening quotations on Wednesday morning were as follows:—

	Ready	November	December	January-March
	Rs.	Rs.	Rs.	Rs.
40" 8 oz. hessians	32-6	32-6	32-4	32-0
40" 10 oz. Hessians	39-12	39-14	39-13	39-11
B. Twills	113-0	112-6	110-2	108-12
Heavy Cees (Plain)	112-8	112-0	110-12	109-4
A. Twills	137-0	136-8	135-8	134-0
Liverpools	129-0	128-0	127-0	125-0
Cornsacks	114-0	114-8	112-12	110-8

Raw Jute: The raw jute markets have ruled very firm over the past two weeks, prices rising during that period by about Rs. 40 a ton or Rs. 1-8 a maund. The main increase was recorded after the break for the Puja holidays, as before that there was very little alteration in rates, and mills took only small interest in jute. On the resumption however, buyers again took an interest in quick delivery jute, and this, coupled with the shortage of imports in upcountry markets and the very steady Calcutta goods markets, caused operators to increase their rates. Good business was done by mills at advancing prices, buyers taking advantage of the rise in the goods market to do simultaneous business. Sellers were inclined to be reserved and many withdrew from the market altogether or reduced the quantities they had on offer, at the same time increasing the price. Daissee jute and Mesta is in great demand, but supplies are very short this year, especially of the latter and high prices have been paid for delivery even up to one month.

At the opening of the period under review on 20th October, raw jute rates were unchanged at Rs. 24-8 a maund for Upper Assam Bottoms, and only small interest was being shown. The next day however prices advanced eight annas a maund on the strength of small business done and in sympathy with the rising goods market. There was no alteration in these rates up to the holiday, and the same rates were quoted at the opening after the break. Increased mill interest and a rising goods market however saw a further eight annas put on raw jute, and a fair amount of business was done at the higher rates. On Tuesday, 1st November, the market reacted to further enquiries and the boom conditions in the goods markets, and raw jute rates were increased to Rs. 26 a maund for Upper Assam Bottoms with sellers looking for higher prices.

The business transacted over the past two weeks was mainly confined to the period between the two holiday breaks, and Dhubri-Northern jute was done between Rs. 24-8 to Rs. 26-8 a maund basis Bottoms for ready and November shipment. Local Packing Northern also came in for a good deal of interest, and business was done at Rs. 25 for November delivery, and Rs. 25-8 a maund for one week's delivery. Upper Assam jute passed at Rs. 24-8 for one month's shipment, and ready Bills of Lading were sold at Rs. 25-4 to Rs. 25-8 a maund. Good business was done in Daissee jute and prices ranged from Rs. 27 a maund for immediate delivery to Rs. 25 a maund for November-December shipment. Small lots of Daissee Ber-December shipment. Small lots of Daissee Mesta were also done at Rs. 23-8 to Rs. 24-8 a maund for ready and one month's shipment. The only business reported in the pucca bale section was in Pakistan cuttings which were done at Rs. 95 to Rs. 105 a bale for ready Bills of Lading and November-December shipment.

At the close the market is firm with quotations showing an eight anna rise. Opening quotations on Wednesday morning were as follows:—

Indian Jute:	Landed at Mills Rs. a maund basis Bottoms	Shipment.
Lower Assam	27-0	November-December
Upper Assam	26-8	"
Northern	27-0	"
Murshidabad White	25-8	"
Daissee Ex-Agency	27-0	"
Daissee Ex-Cossipore	26-8	"
Daissee Mesta	25-0	"
Bimli	25-0 for F.A.Q.	"
Local Packing (Northern)	26-8	"

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the price of White jute.

Pakistan Jute:	Rs. a maund basis Bottoms	Shipment
Jat	27-8	November-December
Distriet	27-0	"
Northern	26-8	"

The local Cossipore markets are ruling very steady in spite of the recent increase in imports. Wagon arrivals now amount to about 100 a day from various centres and a more varied selection of jute has been available. There are ready buyers for all arrivals, but supply is not yet sufficient to meet demand. The main buyers have been mill representatives who are paying good prices for

ready jute. Quotations at the close are based on Kishenganj jute at Rs. 26 a maund for garsat quality. In the Daissee areas imports have also fallen off and heavy demand has raised prices by about Rs. 1-8 a maund. Daissee Mesta is still in very short supply, which is surprising considering that initial reports indicated that this fibre constituted nearly 75 percent of the entire crop. The quality of the small lots of Mesta that have arrived is very disappointing, and much lower than previous years. All arrivals of both Daissee and Mesta contain a considerable amount of moisture, but this is expected to improve in the near future. At the close Daissee quotations in Sheoraphuli are based on Rs. 26 a maund for garsat quality.

Mofussil: Reports from all the Indian up-country markets indicate that imports are exceedingly small for the time of the year. Consequently prices have been raised by Re. 1 to Rs. 1-8 a maund, and there is keen competition for all available supplies. Latest quotations in Dhubri are based on Rs. 23-8 a maund basis Bottoms.

In Pakistan the markets are steady with good quality jute in good demand from balers. Jat jute is at a premium and indications have risen about Rs. (P) 2 a maund over the past few days. The lower grades, however, have been neglected and are ruling steady in sympathy, and on account of the small imports. In Narayanganj daily arrivals now only amount to about 25,000 maunds a day—10,000 maunds lower than last week—and of this amount only 10,000 maunds is baled jute. Latest quotations in Narayanganj are based on Jat Bottoms at Rs. (P) 27-8 a maund and X-Bottoms at Rs. (P) 17-8 a maund, with Tossa quoted at Rs. (P) 1-8 above the price of White jute.

GUNNY SHIPMENT STATISTICS FOR SEPTEMBER

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of September, 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	3,301.7	39,792.1	43,093.8
Short shipped	46.0	1,200.4	1,246.4
September, 1955 (Nett)	3,255.7	38,591.7	41,847.4
August 1956 (Nett)	2,468.4	28,554.5	31,022.9
July, 1955 (Nett)	2,443.7	38,161.9	40,605.6
Gross	38,695.5	715.2	39,410.7
Short shipped	3,273.5	0.1	3,273.6
September, 1955 (Nett)	35,422.0	715.1	36,137.1
August, 1955 (Nett)	30,417.4	2,032.2	32,449.6
July, 1955 (Nett)	36,132.9	2,051.6	38,184.5

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th October, 1955	2,219.4	15,494.0	17,713.4
1st to 25th September, 1955	2,223.5	21,273.6	23,497.1
1st to 25th August, 1955	2,221.4	26,696.8	28,918.2
1st to 25th October, 1955	19,258.3	695.3	19,953.6
1st to 25th September, 1955	24,133.7	453.0	24,586.7
1st to 25th August, 1955	25,993.9	1,982.7	25,976.6

THE FOREIGN JUTE MARKETS

PRICES REMAIN FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE position of the jute trade has shown little change during the past fortnight. One thing is still very obvious, however, and that is the firmness of prices for all commodities. Reports from Pakistan state that shippers are having difficulty in securing their usual standard of jute to offer, particularly with regard to Mill Firsts and grades above. This would tend to confirm the news heard previously that the present crop is inferior in quality to that of last season. Though Mill Firsts can be bought here at £90, they are often quoted at £92, and Mill Lightnings are freely obtainable at £80, with Mill Hearts at £70, all c.i.f. U.K. If early shipment is required, say, by 15th November, the buyers are asked to pay a premium of £2 a ton, while for afloat jute sellers can usually get that amount over the shipment quotations. In some cases, offers of jute afloat have been withdrawn. No doubt the sellers are of the opinion that the squeeze for quick delivery of jute will continue for some time yet. So far as lower terms for the fibre this season is concerned, it appears as if buyers of productions—yarns and cloth—are now reconciled to the idea that this will not mature at least this side of the New Year, as there has been considerably more interest taken in purchasing. Many spinners and manufacturers are now comfortably sold to the end of the year. Buyers are very reluctant to go any further ahead.

The latest story regarding supplies of raw jute comes from Russia, where the fibre is grown to a height of 17½ feet, which compares with Pakistan's and India's average of 12 feet. There are collective farms in the Tajik and other Soviet Republics, which produce first class jute. Little is yet known regarding the probable quantity that could be grown in the jute areas, but evidently the Russians are intending to increase the output considerably. Calcutta goods are firmer after the holidays at 58s 9d for 40in 100z Hessians, November to March, and 45s for 71oz. November 44s 6d December and 44s January-March, with B Twills at 164s 6d, 163s and 160s 3d respectively, all f.o.b. Calcutta.

FREIGHT RATE BOOM MAY HAVE PASSED ITS PEAK

TIME CHARTERING DONE ON LUCRATIVE TERMS

THE past two weeks may well have seen the peak of the present boom in freight rates. American coal charterers have succeeded in reducing rates to 68s 6d whilst there is more eagerness now being shown by owners to take advantage of the lucrative time charter business offering for lengthy periods. An interesting coal contract for U.S.A.-Continent was arranged for 50,000 tons over 1956-59 at \$(U.S.)7.70 for the first four voyages reducing to \$(U.S.)6.57 for the remainder and a 14,000-tonner was fixed for 34 consecutive voyages to Antwerp-Rotterdam-Amsterdam at \$(U.S.)7.10 with the first voyage in January 1956. An outstanding fixture in the time charter section was that of a new-building 12,500 d.w. oilburner for five years, with delivery before September 1956 at \$(U.S.)14.25. Two Liberty type vessels obtained \$(U.S.)14.70 for six months trading while two 10,000-ton motorships took 45s for the same period. An 11,000 d.w. motorship accepted 45s 6d for the trip out to Persian Gulf with delivery Manchester, spot.

In the ore trades, further fixtures were noted from Mormugao at rates ranging from 110s to 100s, gross terms, to the Continent but Japanese charterers obtained tonnage at 98s 6d from India and it is now understood that Japanese shipowners have recommenced operations on the basis of old contract rates, i.e. about \$(U.S.)12.5 f.i.o. Tonnage is now offering a little more freely in this area and it is likely that rates will recede in sympathy.

SUGAR MARKET

During the week ended 1st November, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 90,000 bags. Rates for ready sugar export delivery were Rs. 31.4 for ordinary grain and Rs. 32.12 for big grain. Forward delivery sugar sold at Rs. 31.6 for the big grain variety. Ex-mill rates varied from Rs. 27.5 and Rs. 27.9 according to quality and freight charges. Offtake from the mills has been good and one producer sold 50,000 bags alone. Further falls in ex-mill prices are expected due to the current heavy stock position with mills.

LINSEED

Firm conditions prevailed during the past week, whilst activity was on a very small scale. Sellers were reserved owing to very poor arrivals and firm advice from upcountry. Some speculative business was reported for new crop forward delivery. Ready goods were very scarce, and despite good enquiries from crushers, the turnover was small. The oil market was fairly active with shippers covering their requirements against previous sales. Price indications from overseas were still appreciably lower. Latest quotations were based on October-November at Rs. 19 a maund.

SHELLAC MARKET FIRM

During the fortnight ended 1st November, the market remained firm. The range of quotations was as follows:

Pure Buttonlac	Rs. 160 to 170 buyers.
Lemon No. 1 Shellac	Rs. 163-8 to 171 buyers;
	Rs. 175 done.
Lemon No. 2 Shellac	Rs. 159 to 162-8 buyers;
	167-8, 172 done and buyers.
F.O. Std. 1 Shellac	Rs. 155 done, 157/160 buyers, 164 done and buyers, 167-3 buyers.
Pure TN Shellac	Rs. 151 to 163 basis done and buyers.
4% I.T.N. Shellac	Rs. 140 to 151 buyers.
No. 1 Kusmi Seedlac	Rs. 156-8 buyers, 158 done and buyers, 161-8 to 168 buyers.
No. 2 Kusmi Seedlac	Rs. 152 to 164-8 buyers.
Fine Bysaky Seedlac (Manihum)	Rs. 150 to 163 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 145-8 buyers, 150 done and buyers, 158-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 138 to 150 done and buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 131 buyers, 135/137 done and buyers, 141-8 buyers.
Kireelac	Rs. 67, 66-8, 67 buyers.

Shipments during October until the 28th were seedlac 12,161 packages, buttonlac 706 packages, others 3,340 packages.

KRUPP'S DIRECTOR IN DELHI

The President of the German Industry Committee for the Indian Industries Fair, Professor Dr. Carl Hundhausen, has arrived in Delhi. He will be staying in the capital to welcome officially the high-ranking personalities of the Government of India at the German Pavilion of the Indian Industries Fair. Dr. Hundhausen is the director of the leading German engineering concern of Krupp's.

LONDON TEA SALES

AT last week's London tea sales the 60,524 packages on offer realised an average price of 5s 1.01d a lb against 5s 0.61d. in the previous week and 6s 8.12d a year ago. Plain broken pekoe was quoted at 3s 8d to 3s 9d; in the previous week 3s 8d to 3s 8½d. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	1,079	4/6½
Amgoorie	378	7/4½
Assam Doars	196	4/6½
Assam Frontier	348	6/7
Bagracote	163	4/2
Bargang	570	5/10½
Borjan	198	5/5½
Budla Beta	377	7/1½
Cons. Tea and Lands	1,880	4/11½
Dekhari	126	7/0½
Dickwella	177	7/1
Doom Dooma	498	7/4½
Eastern Assam	234	6/5½
Imperial Ceylon	102	5/1
Jetinga	210	3/8½
Jhanzie	353	6/7
Jokai	1,144	5/9½
Longai	492	3/6½
Lunuvu	792	5/8½
Majuli	558	5/10½
Malayalam	1,554	3/10½
Makum	246	5/9½
Mayfield	102	5/2½
Moabund	252	7/7½
New Dimbula	240	6/2½
Nuwara Eliya	138	6/4½
Pabbojan	282	7/1½
Scottish Tea and Lands	156	6/7
Standard	396	6/8½
United Planters	726	5/10½
Upper Assam	323	6/3½

LONDON TEA TRENDS

The average London auction price for North Indian tea for the week beginning 28th September was 6s 5.3d., as compared with the same figure for the corresponding week last year and 6s 0.5d. in the previous week this September. The corresponding figures for other teas in the three respective periods were: Southern India, 3s. 11.9d., 5s. 11d. and 4s. 0.8d.; Pakistan, 4s. .6d., 5s. 10d. and 3s. 11.3d.; Ceylon, 6s. 0.2d., 6s. 4.7d. and 5s. 11.8d. The average prices for all teas in three periods were 5s. 5d., 6s. 3.4d. and 5s. .4d. These figures are given in the latest monthly statistical summary of the International Tea Committee in London. The summary also shows that stocks held in Britain at the end of September were considerably greater than at the end of the same month last year, but showed a marked drop from August. The Committee gives the total stock at the end of last month as 102,585,000 lbs., compared with 81,337,000 lbs. in September last year and 110,737,000 lbs. in August this year.

RISE IN BRITAIN'S TEA IMPORTS

Britain paid £85,477,000 for tea imports to the end of August this year, compared with £66,039,000 in the same period last year and £46,657,000 in the first eight months of 1953. Well over half these imports to the end of August this year came from India, which sent 172,820,000 lbs. (to the value of £48,466,000) of the total of 326,193,000 lbs. This compared with the 178,763,000 lbs. (to the value of £35,580,000) India sent the same period last year. Over a quarter of Britain's tea imports in the eight months came from Ceylon, which sent 84,302,000 lbs. (£21,420,000) compared with 94,119,000 lbs. sent to the end of August last year, for which Britain paid £21,30,000. Pakistan in the eight months sent 12,830,000 lbs. (£3,369,000) compared with the 8,604,000 lbs. (£1,664,000) sent in the first eight months of last year.

INDIAN TEA EXPORT DUTY UNCHANGED

The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 3-7-6 a lb. as against Rs. 3-9-6 a lb. in force from 1st October, says a Ministry of Commerce and Industry Press Note. There will be no change in the existing rate of duty of 8 annas a lb. it adds.

PAKISTAN RAISES EXPORT DUTY ON TEA

By means of an Ordinance, the export duty on tea in Pakistan has been raised from 3 annas to 6 annas a lb.

COCHIN TEA SALES

Approximately 440,000 lbs. were on offer at Sale No. U held on 24th October. There was a good general demand at about last rates. Best liquoring kinds met with a keen enquiry and were fully firm to dealer. The poorer residual sorts also received strong support and sold at generally dearer rates. Clean Black grainy descriptions were keenly competed for and were a strong feature of the Sale. The Export Quota market remained quiet due to the Puja holidays in Calcutta and was quoted at 68 pips nominal. Internal Sale No. V will be held on 8th November.

At Sale No. 22, the 13 lakh lbs. of tea on offer met with a very strong general demand. Low Mediums and Mediums were two to three

annas dearer. Best liquoring types were barely steady. Whole leaf grades were very strong, black leafs being the best feature.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN SEPTEMBER

Indian rubber output in September was 2,310 tons, according to the Rubber Board of India. Exports during the month were nil and imports totalled 611 tons. Consumption by manufacturers was 2,545 tons, of which 364 tons were imported. Stocks with estates and dealers on the last day of the month amounted to 3,355 tons, including 1,094 tons in transit. Stocks with manufacturers were 2,945 tons of which imports were 767 tons. Manufacturers also used 235 tons of reclaimed rubber, the month-end stock being 408 tons, and consumed eight tons of synthetic rubber of which they held a total stock of 133 tons on the last day of September.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 21-10-1955: (Rupees a lb.)	Average for the period: (Rupees a lb.)
Sheet:		
No. 1	1.35½	1.35½
No. 2	1.32½	1.32½
No. 3	1.29½	1.29½
No. 4	1.05 Nom.	1.05 Nom.
No. 5	1.00 Nom.	1.00 Nom.
Sheet Cuttings 1	1.30	
Sheet Cuttings 2	1.25	
Crepe:		
Water White	—	—
R.M.A. No. 1X 1.70/73	1.71½	
R.M.A. No. 1 1.66/69	1.67½	
Crepe No. 2	1.61½	
Crepe No. 3	1.53½	
Scrap Crepes:		
Sc. Crepe No. 1 1.24 Nom.	1.23½	
Sc. Crepe No. 2 1.16/22	1.18½	
Flat Bark 1.06/14	1.14	
Sc. Crepe 3X	1.14	

To arrive at f.o.b. Colombo prices add 34.4 cents a lb. in respect of rubber other than scrap crepe and 33.4 cents in respect of scrap crepe to the above market prices.

Ganges know the Ropes

The statement, 'From a ball of string to a coil 26" in circumference,' is an appropriate description of the range of ropes manufactured at the Ganges Rope Factory. Equipped with the most modern Hard Fibre Spinning Plant in the East, using only the best raw materials and backed by the practical experience of over half-a-century in the rope business, it can well be said that 'Ganges know the Ropes'.

Raw materials including Coir Yarn, Indian Hemp, Cotton Yarn, Jute, Philippines' Manila Hemp and East African Sisal Hemp are processed to produce a wide range of ropes: Yellow Rope, used by every villager; Manila and Sisal Ropes, employed in the Ship-

ping Trade and Engineering Industry; Heald Cord and Hart/Ganges Lambeth Cotton Ropes, used by the Textile Industry; Coir Ropes, for inland steamer services, (and also an important export to South East Asia) and Temperband Cord, used by the Jute Industry.

TEXTILE MACHINERY CORPORATION LIMITED.

NOTICE is hereby given that the Extraordinary General Meeting of the Company which was advertised to be held on Thursday, the 27th October, 1955 and which was postponed, will now be held on Thursday, the 24th November, 1955 at 3 p.m. at 8, Royal Exchange Place, Calcutta to consider and, if thought fit, to pass with or without modification, the following resolution as an Ordinary Resolution:—

"Resolved that 9,00,000 Ordinary Shares of Rs. 10/- each be issued at par ranking in all respects *pari passu* with the existing Ordinary Shares of the Company and that the same be offered, in the first instance, to the Ordinary shareholders of the Company whose names appear on the register of Members of the Company on 24th November, 1955 (with the right to such holders to renounce in favour of their nominee or nominees approved by the Board) in the ratio of 3 new Ordinary Shares for every 2 Ordinary shares held by such holders with power to the Board of Directors to dispose of and allot the shares not so applied or paid for as they think fit.

Further resolved that the Board of Directors be authorised to take all necessary steps in the matter."

The Transfer Books of the Company will be closed from 16th November, 1955 to 24th November, 1955, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LIMITED,
Managing Agents.

8, Royal Exchange Place,
Calcutta, 14th October, 1955.

N.B.—In case of Non-resident shareholders, the shares will be allotted and issued only after getting approval from the Reserve Bank of India under the Foreign Exchange Regulation Act, 1947.

TEXTILE MACHINERY CORPORATION LTD.

THE Board of Directors of the Company have declared an interim dividend @ Re. 1/- per share free of tax on the Ordinary Shares for the year ended 31st December, 1955 to the Shareholders whose names appear in the register of the Company on 24th November, 1955.

The Share Transfer Books of the Company will be closed from 16th November to 24th November, 1955, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LIMITED,
Managing Agents.

8, Royal Exchange Place,
Calcutta, 21st October, 1955.

N.B.—Dividend Warrants will be posted to the registered shareholders on or after 15th December, 1955. No application for warrants will be necessary.

CLIVE ROW INVESTMENT HOLDING CO. LTD.

NOTICE is hereby given that an interim dividend of annas -8/- per share in respect of the year ending 31st March 1956 was today declared by the Directors payable on 25th November, 1955 without any deduction in respect of taxation payable by the Company. Payment of this dividend will be made only to those members whose names are registered in the Books of the Company on 25th November, 1955.

The Share Transfer Books of the Company will be closed from 11th to 25th November, 1955, both days inclusive.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Secretaries.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O. Po. F. and Dd. indicate Ordinary Preferred Ordinary. Founders' and Deferred shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A PLAN FOR SMALL-SCALE INDUSTRIES

QUICK WAY TO INCREASE WEALTH AND EMPLOYMENT

THE recommendations of the Karve Committee are an excellent contribution towards dealing with rural unemployment and increasing the nation's wealth—with one noticeable exception. The encouragement of cottage and small-scale industries should do nothing but good for the health of the growing economy. It represents the quickest method of increasing individual productivity where capital resources are scarce. It can also provide a welcome alternative occupation for people who would otherwise be dependent on the vagaries of seasonal or part-time agricultural employment, with all that means in terms of fluctuating and inadequate income. With proper organisation and the right approach to the particular problems of small-scale enterprise there should be little difficulty in placing it on the necessary sound footing. Co-operation will be essential and this, in itself, is a habit from which village social and economic life should benefit. It is only when this encouragement of small units takes place at the expense of large-scale organised industry, where labour productivity is high and the surplus of price over costs is available for saving and taxation, that danger arises. It is on this point that the Committee goes astray. There are many things which can be done for small-scale industry provided it is regarded as a stage in the economy's evolution and not as an end in itself. The Committee has stressed this; that is what makes its recommendations for ceilings on mill-made cotton cloth production and the output of rice mills so inconsistent.

The Committee proposes development programmes costing about Rs. 260 crores. The increase in employment which it expects to result is stated as 4½ million. This is a large figure for such a small outlay and may be altogether misleading. It is bound to cover a large number of workers whose participation will only be on a part-time basis. It takes no account of hours worked, nor whether the employment will last the year round. Its potential for developing other employment throughout the economy is low. But it does represent a useful addition to the nation's active labour force, and its power to raise rural incomes from just below to just above the level of subsistence may be out of all proportion to the outlay involved. The target also places too much reliance on estimates of probable demand, but it will mean that in future a fair proportion of consumer industry is going to be based on a decentralised system and this will help to prevent further overcrowding in industrial cities. Too great a faith is shown in the prospects of the proposed Central Ministry for small-scale industry acting with imagination and efficiency, but a new generation of craftsmen and hand workers will be able to grow up without falling prey to the moneylender and the rapacious middleman. There is a great deal of good sound thinking in this report and the effects can be nothing but favourable for the future prosperity of the economy; but there is also much which has to be treated with care.

*

To be anything other than permanent pensioners on large-scale industry, small and individual establishments must produce goods which are competitive both in price and quality. To achieve economies which are commensurate with those of the larger units will involve considerable organisation. There is no reason why these economies cannot be obtained. The particular industries most suitable for small enterprise are those where expensive management requirements are at a minimum. Decentralised establishments weaken the power of mischief-making trade unions. Inspection, which would partly replace the functions of management in small-scale concerns, could be made both rigorous and impartial. Such matters as advertising might be conducted centrally; no doubt the proposed Ministry could take care

of this necessity. Co-operative organisation would be the best for coping with the many small and individual units. Whether it will be more acceptable in this form of activity than it has been in agriculture is however doubtful, but without it there is little prospect for efficiency. Initial capital requirements might be provided from taxation instead of, as the Committee seems to think, from a cess on larger enterprise. It is important to avoid the impression that small industry is entitled to be carried by its larger and more efficient counterpart. It will be better for the future productivity of the economy if small-scale industry is made to understand that it must, after an initial period of subsidy, stand on its own feet. It would be unwise to look to any source other than the units themselves for the resources which will be necessary to keep them abreast of progress. Unless it is decided that the small-industries sector is something desirable in itself—an impression which the Committee appears to refute—care will have to be taken to ensure that the flexibility of outlook and the regard for competitive operation which are necessary for all successful business activity, are obtained from the beginning.

There are many dangers in the popular approach to small-scale enterprise—to which the Committee has, in many cases, been most careful not to subscribe. There is, for example, too much faith in its power for creating employment. It is not generally appreciated that if for some reason the provision of more jobs is regarded as the first aim of the economic system, the improvement of productivity must be a very close second. It is not fully understood that a great deal of economic power is being placed in the hands of people who are fitted neither by training nor inclination for using it wisely. There is perhaps too little priority given to the all-important task of increasing the wealth of the community by the best means that modern technology can devise, no matter how these might conflict with sentiment.

*

The Committee has shown itself to be aware that there are hazards in encouraging small-scale

State of Bombay to be so divided. The Commission's rejection of the demand for a Punjabi-speaking State appears to be based on equally sound grounds. The demand is pressed by the Sikhs who claim safeguards against the Hindu majority of the State. The plea for the Gurumukhi script is really not so important and any grievances that the Sikhs may have had in this matter should have been met satisfactorily by the Sachar-Giyani Singh formula for giving equal place to the Hindi and Punjabi languages in the affairs of the State. The Commission rightly holds that in the proposed Punjabi-speaking State the existing Hindi-Sikh tension will increase rather than decrease and that such a risk cannot lightly be taken in a strategic and border State. The recommendation to increase the size of the Punjab by incorporating the existing Part C States of PEPSU and Himachal Pradesh also reflects anxiety over political security. The Chairman's note of dissent on Himachal Pradesh has many valuable points against the merger of that State with the Punjab. But economic and political safeguards for the simple tribal people of Himachal Pradesh, as also for the Sikh minority in the Punjab, should pose no serious problem.

Enough has been written already discussing the political, economic and socio-cultural aspects of the Report. It has been acclaimed by all thinking persons as a splendidly-balanced document, which has dealt comprehensively with every aspect of the question. Necessary changes in the set-up of administrative services due to the reorganisation proposals have been suggested. Safeguards for the linguistic minorities in multi-lingual and composite States have been set out. Though the economic aspect of the reorganisation has not been discussed in any great detail, it is patently clear that the proposed changes will make for the greater economic progress of the country, not only through the administrative economies that will eventually result but also through the better mobilisation of resources which the creation of larger and more balanced units will facilitate. As the Commission has rightly argued, narrower group loyalties and linguistic particularism can pose a formidable danger to the economic progress of the country in its present stage of development.

UPWARD WITH BUTLER OR DOWNWARD WITH ERHARD TWO OPPOSITE POLICIES FOR INFLATION

IT has been interesting to watch the development in Germany of conditions broadly similar to Britain's. It will be even more interesting to watch the effects of the two countries' methods of correcting these conditions. For the methods are profoundly different. Yet neither is necessarily wrong. The problem is familiar—excessive demands on available resources, causing a tendency to import too much and to export too little. (So far as the treatment is concerned, it is not important that the problem has arisen much more recently in Germany than in Britain.) This is a state of inflation, and the purpose of policy is to ease the inflationary pressure. It is at that point that the divergence appears. West Germany's Minister of Economics, Dr. Erhard, believes that domestic prices should be lowered; Britain's Chancellor of the Exchequer, Mr. Butler, believes that domestic prices should be raised. It may seem that the one or the other must be wrong; yet there are arguments to be advanced on either side.

It can be conceded that Mr. Butler is theoretically correct. He sees rising prices as not only a symptom of inflation but also a cure for inflation. If the supply of money has increased more than the supply of goods a rise in prices will restore the balance between supply and demand. This is the idea behind the widespread increase in taxes on consumer-goods imposed in Britain's recent Budget. It explains the big increase in the price of coal a few months earlier. The Budget last April—granting tax-reliefs with an ultimate value of more than £150 million a year—followed a different policy; but that Budget was presented a few weeks before the general election. Statistically, Dr. Erhard's method—exemplified in the reduction of some taxes—appears faulty. If there is too much money demanding goods at current prices, then at lower prices the disparity will surely be wider. But Dr. Erhard's attention is not confined to prices: he is equally concerned with incomes. And in treating the problem of inflation as a whole, not only as manifested in prices, Dr. Erhard may be more correct than Mr. Butler. Mr. Butler can claim some success for his method. On the information available it appears that in the first half of 1955 personal consumption increased, proportionally, less than production in Britain, although personal taxation was reduced during the period. The rise in prices, which had absorbed much of the increase in incomes in 1954, was still restraining consumption in 1955. Mr. Butler relied on this method of restraint—though as a politician he could not, of course, say so.

Mr. Butler has used all his powers of persuasion to induce organised labour to restrain its wage-claims. He is certainly not content to see incomes increase while prices rise to neutralise the increase. He has, indeed, recently (but before the Budget) presented moderation of the cost of living as a major incentive to keep costs, particularly wages, down. But persuasion does not work. Wage-claims are always—according to the arguments of those who advance them—related to past rises in the cost of living; promises for the future, even if believed, seem irrelevant. Dr. Erhard's policy has not been operating so long: his problem is more recent. His success is no more assured than Mr. Butler's; for wages and other costs have been rising in Germany, despite the Government's exertions. But, whereas theory may support Mr. Butler, commonsense supports Dr. Erhard. Theory tells us that a rise in prices can absorb surplus buying-power—which, so far as it goes, is obviously true. Commonsense tells us that a rise in prices has inflationary effects—we observe them almost daily. The apparent anomaly can be explained by the time factor. Inflation that has already occurred can be corrected by a rise in prices, and the correction is permanent so long as buying-power remains as it was. But if the rise in prices generates more buying-power, the inflation persists and must be corrected again. Mr. Butler has been correcting a past inflation; Dr. Erhard has been trying to prevent a future inflation—even though he has at the same time to contend with a (rather mild) present inflation.

One part of Mr. Butler's budgetary policy will work automatically: the increase in taxes and charges will reduce the public's spending-power—to be more precise, absorb spending-power—to an estimated amount of nearly £140 million in a year. However, the immediate effect of some of his measures, especially the increase in purchase-tax, was to raise the cost of living; and the rise in the cost of living has strengthened demands for more wages. (Some wage-rates, anyway, are tied to the cost-of-living index.) In so far as these demands are granted the deflationary purpose will be frustrated. The success of Mr. Butler's policy depends, therefore, on other measures. His attempts to establish "economic" rents, by modifying subsidies and controls, will, like purchase-tax, stimulate wage-demands. On the other hand, he is enforcing "discipline" on local authorities' spending and on the capital programmes of the nationalised industries; and the pressure on credit, already exerted, is moderating the demands of trade and industry on available resources. The rise in prices is, moreover, immediately restraining consumers' demands; and manufacturers are operating cautiously until they know that this restraint is only temporary. It is possible that these various factors will produce a situation where wage-claims cannot be strongly pressed because unemployment is reappearing. Deflation would then be stabilised. However, there are various other governments—not only elsewhere in Europe but also in other countries of the British Commonwealth—which are inclined to follow Dr. Erhard rather than Mr. Butler, reducing taxes to take the edge off inflation rather than raising taxes to absorb surplus money. It is obvious which method is the more popular.

CURRENT COIN

Oriental Government's Progress.—The Oriental Governmental Security Life Assurance Co. Ltd., has produced good results for the valuation covering the triennium ended last December; the background to these was given in the speech of Mr. D. D. Romer, Director, last week at the extraordinary general meeting which appears on a later page. Mr. Romer points out that a number of favourable factors have contributed to the progressively higher profits. The Insurance Act was amended so that life offices were allowed to add to the surplus the tax deducted at source in the preceding inter-valuation period and provide separately for the income-tax liability. Before this concession was given, life insurance companies had to pay tax on a hypothetical addition to the surplus which in fact was not available for distribution either as bonus to policyholders or as dividend to shareholders. It applied particularly severely to companies like Oriental Government which invested the bulk of their funds in Government securities, on which tax was deducted at source. Mr. Romer also welcomed the amendment of the Income-Tax Act under which relief was given to life insurance companies by exempting tax on 80 percent of the amount distributed to or reserved for policyholders. This had full effect on the latest valuation. Life insurance business, according to Mr. Romer, benefited from the increase in bank rate from 3 percent to 3½ percent in November 1951. Although the value of invested funds depreciated by more or less the same extent, liabilities could be scaled down by increasing the rate of interest adopted in the valuation; substantial advantage was also taken of the opportunity to invest new funds at remunerative rates

of interest. This fact, combined with the change in the Company's Articles of Association allowing greater freedom in investment policy, has enabled the earned average net rate of interest to rise to 3.92 percent during the latest triennium from 2.85 percent applicable at the preceding valuation. The Company has, as a result, been able to strengthen the interest basis considerably. The net result of these developments is that the Oriental Government valuation has produced a large surplus, which has enabled the actuary to recommend bonus at the rate of Rs. 22-8 a thousand per annum on whole-life policies and Rs. 18 a thousand per annum on endowment assurances.

Canadian Aid for India.—Canadian aid to India, as Mr. Pearson, Canada's Secretary of State of External Affairs, informed journalists at a Press conference in the Indian capital last week, is progressively to increase under the Colombo plan scheme of external assistance. Canada has already rendered a fair degree of economic aid to India. It is the happy example of one relatively prosperous member of the Commonwealth giving badly-needed help to another who is striving to achieve quick economic growth. The Canadian supply of locomotives (referred to in the previous issue of *Capital*) has aided the railway system in India significantly. The gift nuclear reactor is likely to arrive in this country soon. Moreover, Canada has undertaken to finance a diesel generating project for supply of power to rural areas in India, supply an aerial magnetometer for surveying the mineral resources, particularly petroleum in Rajasthan, where the survey is already being carried on by Canadian technicians, and two Canadian aircraft for the spraying of insecticide to protect crops. Just before Mr. Pearson went to Delhi he opened the Massanjore dam in West Bengal—a very important component of the Rs. 16 crore Mayurakshi project to which Canada's contribution amounted to Rs. 7½ crores. Mr. Nehru described the dam in his message at the opening ceremony as "a visible and enduring link of friendship between Canada and India." So it is. The decision of the authorities to rename the dam after Canada is therefore a graceful acknowledgment of the valuable aid received. The dam and the reservoir behind it will fill a very important place in West Bengal's economy. The reservoir has a dimension of 16 square miles with a maximum depth of 90 feet. Its irrigation potential totals 720,000 acres of both *kharif* and *rabi* areas; it is also designed for controlling floods. It will have an installed capacity of four Megawatts of electric power. Canada will supply the hydro-electric equipment required for power generation at the first phase.

More Transport, Better Roads.—Road Transport in any country pre-supposes adequate and traffic-worthy roads, and vice versa road-worthy traffic. Some pertinent comments on the subject have been made by the Indian Chamber of Commerce in a recently published brochure which examines the problems of the road transport industry. The Chamber, deploring the slow development of such an important factor in India's trade and commerce, states as one of the impediments the licensing policy of various States and the delay involved in granting permits for neighbouring States. Small transport owners, restricted to a 75-mile radius, obviously find it uneconomic to operate within such a small area. The high incidence of taxation, levied from no less than three agencies, the Centre, the States and the local bodies, is another deterrent to private enterprise in road transport. There is too, they add, great disparity in taxation between one State and another and even the sales tax on motor spirit varies from State to State. The Chamber has therefore pleaded for a reduction of the Motor Vehicles tax to a reasonable level. This should encourage the industry to increase the number of vehicles on the road, thereby making up for any fall in the existing annual revenues of the Central or State Governments resulting from such a reduction. They also ask that the restrictions on distance of operation should be removed and that licences be granted on an all-India basis so that a truck is able to operate wherever it is able to find traffic. They might have added, "wherever it is able to find a road", for, as the brochure points out, India has only 0.2 miles of road per square mile, while by comparable standards of some of the more advanced countries, it should have at least one mile. The Chamber goes on to point out that the railway system cannot hope fully to meet the nation's expanding transport needs. But motor vehicles can reach most of India's 550,000 villages "provided the roads are there to carry them." The brochure also stresses the significant contribution the road transport industry can make towards solving unemployment. Even in its present backward condition it provides employment for about 1½ million people a year. Figures have been quoted showing that in India there are only 1.1 vehicles to the mile compared with 18.1 in the U.K., 16.5 in Belgium, 17.1 in the U.S.A., 2.9 in Australia and 8.1 in Egypt. One point the Chamber failed to stress, was the need to institute, along with the new licences and

all the improved conditions for which they are quite rightly asking, a provision for regular checks on the maintenance and road-worthiness of the fleet of vehicles planned for.

Bounding Prosperity.—United States' business reports during October have been impressive and reassuring, states the *Monthly Letter* of the First National City Bank of New York. Industrial activity continues to rise; probably the Federal Reserve Board's index of production, which in September set a new record at 141 (1947-49=100), will show a further advance when the October figures are in. Retail trade climbs steadily to new highs, and merchants are stocking up for what promises to be the best Christmas season yet. Despite some further weakening in home building, over-all construction activity has continued at peak levels. At the beginning of the month the uncertainties created by President Eisenhower's illness, and by the violent reaction on the stock market, were uppermost in all minds. As the month closes it is plain that the shock has been successfully weathered, and that business shows no disposition to take to the storm cellar. The first question was whether business confidence would be weakened and plans for expansion and capital expenditure would be curtailed. It would be hard to find in the October news any evidence whatever that this has happened. On the contrary, announcements of new programmes for enlarging and modernising industrial capacity have been, if anything, more numerous and extensive than in earlier months. The excellent recovery that the President is making is one reason for the good business news; it not only relieves the world-wide personal anxieties, but assures the effective continuation of the Administration's policies for the remainder of its term, without Constitutional question. Looking further ahead, corporate management plainly believes that the influences for market expansion and economic development outweigh political uncertainties. Business decisions are being made in the faith that the country is growing in population and purchasing power, and in full awareness of the rapid rate of change and improvement in industrial technology. Out of the immense expenditures for research come new products and new and better ways of making old products. Companies which hope to build for the future, and to keep abreast of competition, must carry out adequate programmes of development, modernisation, cost cutting and expansion. Research, population growth and aspiration for better things are the dynamic influences in the economy. The decline in stock prices, while precipitated by the President's illness is now generally interpreted as an inevitable reaction from a long and almost uninterrupted advance to levels which by the usual measures were on the high side, and which in many cases were discounting company prospects a long way ahead. To the extent that the drop has toned down exuberant optimism and reminded people to guard against the unexpected, it has provided a salutary note of caution and moderation.

Bombay Port in 1954-55.—The administration report of the Bombay Port Trust for 1954-55 shows that the cargo it handled rose to a new record of 7.05 million d.w. tons from 6.73 million d.w. tons in the preceding year. Of this, the total tonnage handled by departmental labour also reached a high of 3.26 million tons. On the financial side, the general account for 1954-55 closed with a surplus of Rs. 75.32 lakhs, as against an anticipated deficit of Rs. 4.71 lakhs in the revised estimates for the year. This improvement was due partly to an increase of Rs. 26.50 lakhs in receipts. Partly it resulted from a fall of Rs. 53.53 lakhs in expenditure on account of the slow progress of repairs and maintenance, construction of new minor works, and dredging, and also the putting off of the work of salvaging the three ships s.s. Ramdas, m.v. Deepavati and s.s. Lakshmi. The total expenditure on capital account since the Trust came into existence amounts to Rs. 36.44 crores, of which Rs. 2.22 crores, representing the book value of assets which are now extinct, have to be written off. Thus, as against a net expenditure of Rs. 34.22 crores, the outstanding debt is Rs. 17.10 crores. This means that Rs. 17.12 crores of the debt has been either repaid or adjusted against appropriations from revenue to capital. Of the outstanding debt, Rs. 6.5 crores is due to the public and Rs. 7.15 crores to the Government, while the balance represents loans held by the Trustees themselves. The report stresses that the labour situation at the port continued to be unsettled throughout the year.

Australian World's Fair.—An International Fair, designed to promote world trade with Australia, will be held in 1956, Olympic Year. It will be the largest of its kind ever held in Australia, and will be staged at the Sydney Showgrounds from 26th July to 4th August. Overseas interests and international manufacturing organisations are planning elaborate displays. The United Nations and foreign governments are included in early

bookings. Over 150,000 square feet of space, sectionalised into specific groups, will display the finest products of Australia and overseas manufacturers. Among the 26 sections of the Fair will be: machine tools, scientific instruments, chemicals, household furnishings, plastic products, jewellery, wool, toys, agricultural implements, television and radio equipment, textiles and industrial machinery. Every effort is being made to assure the International success of the Fair. Fifteen delegates from overseas countries are to be flown to the Fair by Qantas Airlines, and also given a tour of Australian industries. In addition, special attractions have been arranged to stimulate world-wide interest. Two of these are: an art competition, open to artists throughout the world, and a military band festival. Many overseas visitors are expected to visit Australia for the Fair and the Olympic Games. For their benefit an information bureau and interpreters will be available on the Fair grounds. Details of the Australian World's Fair, 1956, are available from Australian Trade Commissioners throughout the world, or from any office of Qantas, or from the Australian World's Fair, 234, Clarence Street, Sydney.

British Cotton Mill for Nigeria.—One solution for the problems now worrying Lancashire cotton interests has been found by the David Whitehead group, which is to build the first cotton mill in the Northern Province of Nigeria. For this venture the group will be in partnership with the Government of the province, and the capital involved is £1,250,000. The cloth manufactured will be sold only in Nigeria, in competition with imported cloth from India, Hongkong and Japan. The invitation to the David Whitehead group to establish in the province a mill for cotton spinning, weaving and

finishing came from the Department of Trade and Industry of Northern Nigeria, and the final agreement was signed a couple of weeks ago. That was preceded by a visit to Nigeria last March by the Chairman and Managing Director, Mr. J. Clifford Whitaker, accompanied by another Director, Mr. J. E. Williams. They were so impressed by the potentiality of the market for cotton goods and by the very high grades of cotton growing there that they decided to establish a large cotton mill in the country which would be the finest of its kind in the world. Wherever possible it would be automatic, and it would operate three eight-hour shifts, six days a week. "British, and particularly Lancashire, interests will not be affected in any way," Mr. Whitaker has emphasised. "Like many other young nations Nigeria is beginning to find its feet economically and has decided to proceed with the manufacture of textiles in its own country from its own cotton and for its own internal use." The machinery and technical skill for the new mill will be provided from Britain and, with some exceptions, the machinery will be made in Lancashire. The David Whitehead group has also announced that it intends to extend its existing cotton mill in Southern Rhodesia to increase production there by 50 percent.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge with thanks the receipt of the following donations to the 1955 fund.

Rs. 100 each

W. M.; Blacker & Co. Ltd.

Rs. 50 each

R.J.C.; H.M.L. Williams.

Rs. 25 each

SOCIAL WELFARE IN INDIA PATTERN FOR THE SECOND PLAN PERIOD

(FROM A SPECIAL CORRESPONDENT)

SOCIAL welfare work in India will be placed on a firmer and stabler footing in the next few months, if the policy decisions of the Central Social Welfare Board regarding its future programmes come into effect. These decisions include the starting of new services, the consolidation of the work so far accomplished, the elimination of overlapping and duplication of services in a particular field in a particular area and co-ordination of activities of voluntary welfare organisations operating in allied fields.

In formulating these programmes, the Central Social Welfare Board has proceeded on the basis that an amount of Rs. 15 crores will be provided for social welfare work during the second five year plan period. The assessment of this amount is based on the consideration that it is the minimum required for the Board by the Government of India. It is also based on the budget estimates of the Board during the last two years of its existence out of the Rs. 4 crore provision made for it for the first plan period.

The Board's activities during this period covered the grant of financial assistance to voluntary welfare organisations engaged in diverse social welfare activities; the organisation and implementation of welfare programmes for the women, children and delinquents in about 300 welfare extension projects in the rural areas throughout the country and the inauguration of a family welfare project in Delhi to assist women belonging to the lower income groups to supplement their incomes, by providing gainful employment for about 500 of them in a match factory organised on a co-operative basis. The Board has also taken up the training of women village level workers to be employed in the welfare extension projects, and the first batch of about 750 such workers is undergoing intensive training in 15 training centres of the Kasturba Gandhi National Memorial Trust spread throughout India.

The number of voluntary welfare organisations in India cannot be correctly assessed though unofficial estimates have placed it near 9,000. About 1,850 of these institutions have been given grants-in-aid by the Central Social Welfare Board totalling up to Rs. 71 lakhs during the last two years. The grants are subject to some well-known conditions, two of them being that the institution receiving the grant should utilise it for an expansion of its activities and that it should find an amount equivalent to the amount of the grant, from other sources or in the shape of voluntary services or labour.

Work of the Board

It is estimated that during the second plan period, from 1956 to 1961, it should be possible for the Board to aid another 5,000 welfare organisations in different States. The future grants will, however, be available in accordance with some new principles evolved at the last meeting of the Board, the cardinal objective being to avoid the concentration of a number of welfare activities in certain States and to ensure equitable and even distribution of financial aid among the various States, so that each one will share in the benefits of welfare work. It decided on a State-wise allocation of grants, giving due weightage to such factors as the size, population and backwardness of the State and the need to sponsor new services. Within each allocation a proportion of the funds would be utilised for promoting new institutions and services. Assistance will also be provided, over a prescribed period, to some well-established institutions in each State to enable them to develop into model institutions. The ultimate aim is to create a number of competent, efficient, well-organised welfare institutions in different States which can deal with the community's welfare problems in perspective and which can stand comparison with similar institutions in other parts of the world. The aid to deserving smaller institutions will also continue, so that expansion and consolidation of welfare activities rendered by voluntary organisations will proceed side by side.

Experience has shown that there is a multiplicity of voluntary organisations operating in the same field of welfare work, either women's welfare or child welfare or welfare of the handicapped and the maladjusted groups, resulting in duplication of effort in a particular sphere or the frittering away of financial resources which could be better utilised through effective co-ordination of activities. One of the directions in which State Social Welfare Boards will have to exert themselves in the future is that of encouraging and ensuring this kind of co-ordination among local welfare organisations.

Rural Projects

In regard to rural welfare extension projects, the Central Social Welfare Board's future programmes include a four-fold increase in the number of the projects, by the establishment of an additional 1,050 projects between 1956 and 1961. In these projects, besides the existing welfare services for women and children, new services for the benefit of the rural population are proposed to be introduced, such as the care of the old and the infirm, services for the waifs and strays, and play centres for the children of working mothers. These services are, however, only illustrative and not exhaustive and will be added to in accordance with local requirements in the project areas. The development of these services in the Board's welfare

extension projects will be so arranged that ultimately the project activities can be merged into the activities of the National Extension Service blocks, which are intended to cover the whole of rural India by the end of the second five year plan.

The Central Board's scheme for the training of welfare workers for the welfare extension projects and the urban welfare schemes scheduled for implementation in the second plan period includes, besides the training of *grama sevikas*, or women village-level workers, the training of 1,600 midwives and 6,000 village *dais*, and a number of persons who could undertake the after-care programmes. The training of the basic health personnel will be organised in co-operation with the Health Ministry of the Government of India. It is expected that expenditure on welfare extension projects during the second plan period will be of the order of nearly Rs. 7 crores, while the training programmes are expected to cost nearly Rs. 5 million. The Board's scheme envisages the replacement of every untrained worker in the welfare extension projects or in other welfare services sponsored by it, by trained personnel.

The family welfare projects of the Board will be executed in consultation with the Ministry of Industry and Commerce, and the scheme envisages the establishment in the very near future of match factories (on the model of the factory in Delhi) at Poona, Hyderabad and Vizayawada. The scheme is, however, not restricted to the match industry alone. Each State Welfare Board can select from an approved list one or two industries which are best suited to local conditions.

Spirit of Partnership

The work of the Central Social Welfare Board so far reveals certain significant trends, which may now be summed up. The most important is that the spirit of partnership between the Board, as representing the State, and the voluntary welfare organisations, is growing. The controversy in the sphere of industrial development as to the respective roles of the public and the private sectors is fortunately absent in the sphere of social welfare work. In it the co-operation of the private sector is not only eagerly sought but it is actively assisted by the public sector to discharge specific responsibilities. The tendency is for the State agency to function or channel its programmes through the private voluntary agencies.

The second is the definite movement in favour of encouraging the setting up of regional institutions, which could undertake welfare activities over a specific area and which could co-ordinate activities of all the welfare organisations in a particular field, rather than in favour of smaller units with limited resources, which could undertake only limited activities, or the multiplication of units engaged in the same activity in a particular locality. This is to be welcomed, because it would obviate the frittering away of energies and funds which could be better utilised by a bigger, better-organised institution.

The third is the increasing attention that is being paid in social welfare work to schemes for the welfare of the family as such. The industrial co-operatives, referred to above, the family planning units and so on, concern themselves more with the family than with individuals. This trend is only just becoming manifest, but it shows every sign of acquiring momentum in the next few years.

In conclusion, it may be pointed out that though the provision from Central funds for social welfare activities during the second five year plan period will be about Rs. 15 crores, actual expenditure on them would be approximately double that amount, as all grants made to private welfare institutions by the Board and also all grants made to the State Social Welfare Boards for expenditure on the rural welfare projects are on a matching basis. This means, as already explained, that private institutions are expected to raise funds equivalent to the grants made to them from private sources or through contributions of manual labour, while State Welfare Boards have similarly to secure financial contributions or grants equal to the grants made by the Central Board from their respective State Governments or local bodies or otherwise. When this is done, the total expendable funds on welfare work will be of the order of Rs. 30 crores. It may also be mentioned that the Board has arranged with the Planning Commission for an evaluation of its work and of the work of the State Welfare Boards.

U.K. OFFICE MACHINERY EXPORTS

Britain's exports of office machinery to India in the first nine months of this year were double those of the corresponding period of 1954. To the end of September this year, 3,501 cwt. to the value of £416,000 was sent, compared with 1,854 cwt., worth £200,000, sent to the end of September last year. Britain's total exports of this type of machinery in the first nine months of this year were worth £10,593,000, compared with £9,025,000 in the same period last year. Leading customers were: Australia, £1,830,000; U.S.A., £1,118,000; Canada, £740,000; and South Africa, £690,000. The record quantity of £18,900,000 worth of this machinery was made in British factories during the first six months of this year—£1,800,000 more than in the same period of 1954. Giving these figures, the Association points out that they do not include office furniture, shelving, safes, and stationery, the output of which was also running at a record rate at the beginning of the year. In the first nine months of this year, £5,258,000 worth of steel office furniture, safes, and stationery was exported, compared with £4,705,000 worth in 1954.

THIS year's rains have been, like a fool's eloquence, both profuse and persistent, and as this week's performance has shown, insolently out of place. Reaching its climax much later than it should have, the monsoon very nearly ruined the Pujā holidays and now, after a brief interval of heart-warming sunshine, it seems bent on misappropriating a slice of Calcutta's cold weather, itself more of a meteorological fiction than an established fact. It is small consolation to be told amid the pervading damp and gloom that the cause of all this lies some 200 miles out in the Bay where some depression or other has occurred and resulted in this or that. It is like a sufferer being informed by his doctor, who fails to provide any relief, that his stomach ache is due to his teeth being bad. "Everybody complains about the weather, but nobody does anything about it," once said a wit in fog-bound London. So far as this week's rain-soaked Calcutta is concerned, I do not see how anybody can do anything about it since most people appear to have been spending their evenings, after the day's usual grind, fighting the sulks like Achilles in his tent, or nursing a cold and sneezing into their last handkerchief.

The shares of the Indian Iron and Steel Company have certainly lived up to their reputation for unpredictability lately. Before the dividend was announced the whole market was going up in sympathy with Bombay, but the price of Irons remained steady. Speculators appeared to be expecting a fall should an unchanged dividend be announced. When it did come, and as we know, was unchanged, the share price did in fact, fall from Rs. 38-8 to Rs. 38-4. But only for a few seconds. Within a minute or so it was back to its pre-announcement level—and since then it has not looked back. The recent strength of the Bombay market has helped to sustain prices, Parliament has been in recess, and that has meant fewer frights for investors, but it is still difficult to understand why Irons should have risen to a price around Rs. 42-11 cum-dividend. The company's results were admittedly good. But there is reason to believe that these will not be repeated next year because of technical difficulties, if for no other causes. And even if they were, there is even less reason for supposing that the Government will consent to smile on shareholders, who have this year been so callously dismissed as least deserving of a share in the company's prosperity. This is what makes it all the more surprising that, three weeks after a disappointing dividend announcement, Irons should have reached their highest level since 1947. It is not the yield which is attractive; this now works out at less than 2.5 percent, a very low figure indeed for any industrial share. When Irons cross Rs. 40 memories tend to turn to the great days of August 1946. At that time the boom was sustained by expectations of big things to come in the post-war economy. These were of course dispelled by the disturbances which accompanied Partition. Could it be that those high hopes have only been postponed and that somewhere behind the present feverish speculative activity lies a sanguine faith that in spite of heavy taxation, new and damaging company laws, a frightening amendment to the Constitution, and a coming socialistic pattern of society, investors do believe that big profits are on the way? I doubt it, but I wish I could think of another explanation.

Mythology is not an easy subject, as anyone who has taken his Greek, Roman or Norse legends seriously, will confirm. My occasional struggles with Homer, have often served only to increase

A DITCHER'S DIARY

my confusion over the plethora of names and the complication of events. Yet, in spite of the muddle, there is in mythology an unrelenting magnetism for the imagination. It was this force which compelled me to visit the model display of the Ramayana at present installed in the Calcutta Art Gallery. I hoped that such a novel way of presenting the epics might simplify them for me. So, one very wet Calcutta evening, I put my back to the rain and turned my nose to the one hundred and eight tableaux depicting the story of Rama and Sita, and I was certainly rewarded. The age-old story varies but little, whether it was first told by the Greeks or by the Indians. That may have been no surprise to Freud, but I must admit it has always been a source of great interest to me. But if I found no new philosophy, I did discover a new approach to a most fascinating study. To those responsible for the idea and its execution, and to the artists and the model-makers goes my vote of thanks. The skill and imagination which each tableau combines is indeed a credit to them. I would hesitate to say how many models are to be found in the exhibition but the feel of the sculptor is apparent in each. The backgrounds, too, add a reality and vividness to each scene. The result is a full, fascinating and rewarding fifteen minutes. Lest the story unfolded in this little exhibition should prove rather too absorbing let the visitor keep a fraction of one eye on the foot-boards, conveniently placed to keep one dry shod, or like myself he might fall victim to their undulations.

What should the well-dressed man wear, especially when he is past his meridian? This question has been causing some controversy in the local newspapers lately where correspondents have been airing their views, not unenlivened on occasions by a mild touch of malice. The attack has, of course, been led by women who object to ageing males tricking themselves out in gaudy hues. Having myself seen quite a few men of mature years accoutred in "Hawaiians" or bush-shirts which appear to be made entirely of old newspapers, or even sporting ties and jackets printed over with bathing beauties, I feel strongly inclined to agree with the critics. Because enquirers about Helen's age have always been damned as the pest of poetry, I shall not ask from which age-groups my fellow objectors come, although I have seen some of them, not exactly in the hey-day of their youth, so dressed up as to resemble a walking Christmas tree or, to turn to Oscar Wilde, as "the de-luxe edition of a wicked French novel." Being all for moderation in male attire I would nevertheless be disloyal to my sex were I not to point out to the feminine critics that major erosions in domestic budgets are, as a rule, caused by the demands of the wives' wardrobes. It may be recalled that Marie Antoinette's modiste was, to her, immeasurably more important than her Cabinet Ministers and that the Queen's craze for jewellery was responsible for the *cause célèbre* to which Cardinal Rohan, the diplomat, principally owed his ruin. Nor is this all. Marie Antoinette's hair-dresser introduced a new style of towering coiffure which was rapidly adopted by female society with the result that coach doors and theatre entrances in Versailles and Paris had to be pulled down and re-modelled to facilitate the unhindered movement of these fanciful "crowns of glory." To give only another instance, Mrs. Abraham Lincoln, who was perhaps even more of a husband-harasser than Socrates's shrewish spouse, ran into a debt of \$70,000 on account of her finery when her husband's salary as President was no more than \$25,000 a year. Indeed, the only

relieving feature of that noble man's assassination was that it saved his ever having to worry where the money was to come from.

Whatever the British Government decides will be the next step in the Burgess-MacLean affair it is clear that at least three important questions will have to receive careful consideration. The first is whether the heightening of public and newspaper interest in tighter security is going to be allowed to develop into McCarthyism. The moderate tone of Opposition criticism in this week's Parliamentary debate is encouraging. But a recent headline which appeared in a widely-read national daily, which stated that if there were witches in the foreign office it was time they were hunted, suggests that it might be difficult to keep the matter permanently in its true perspective. The second is whether the "Establishment," as the *Spectator* recently called it, should really be allowed so much influence in the choice of Britain's diplomats. It is not easy to devise a system of selection which will completely ignore that important though indefinable, quality of acceptability; even if it is accepted that it should be ignored in candidates whose most important asset it must always be. But it is obvious that the "Establishment," if it does exist, has perhaps been placing too much store by this one attribute and too little by loyalty; that might be something the public will find difficult to forgive if the popular Press makes a point of drawing its attention to it. The third point, and perhaps the most important of all, is the damage which will be done to Britain's reputation as a security risk if it is found that serious errors of omission have occurred. The fact that security has since been tightened up is unlikely materially to impress, say, the United States, which is hyper-sensitive about these points. There is certainly nothing to be gained by hushing the matter up now, but it is clear that without careful handling, this rare case of defection by two British diplomats is going to have consequences out of all proportion to the real significance of the event.

To those who have been following the discussions on pronunciation lately appearing in the Statesman's correspondence columns, here is an example, borrowed though, from a recent book by that eminent diplomat Sir Harold Nicolson, entitled *Good Behaviour*. In drawing a portrait of the typical aristocratic English country gentleman of the late eighteenth century, whom Sir Harold invests with a variety of amusing, if admirable, attributes, he says, "His intonation in the manner of Devonshire House, must be slow, gentle, drawing. He must say 'Lunnon' for London, 'yaller' for yellow, 'balcōny' for balcony, 'Room' for Rome, 'gould' for gold and 'cowcumber' for cucumber." If I were to add to these examples of aristocratic pronunciation a few of those of the more modern Mr. Quarles (pere) in Mr. Aldous Huxley's *Point Counterpoint*, who is fond of showing off his Oxford breeding by enunciating telephone as "tellophone" and by muzzling such monstrosities as "undoubteblah", "necessarah" and "verrah" perhaps I shall be charged with inciting an agitation for pronunciation according to spelling as there is already one for spelling according to pronunciation. Of course, standard English pronunciation and spelling do not have the neat logic of either. This business of spelling and pronunciation is often complicated further by children who insist, like Abraham Lincoln's little son Tad that "a-p-e" spells monkey.

Company Meeting

ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY, LIMITED.

DIRECTOR MR. DINSHAW D. ROMER'S ADDRESS

At the Extraordinary General Meeting of the Shareholders and Policyholders of the Oriental Government Security Life Assurance Company, Limited, held on the 2nd day of November, 1955 at the Registered Office of the Company, Oriental Buildings, Bombay, Mr. Dinshaw D. Romer, Director, who presided in the absence of Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., J.P., Chairman, who is at present abroad, said:

The result of the twenty-seventh Triennial Valuation of the Assets and Liabilities of the Company as at 31st December last is disclosed in our Actuary's Report which has been in your hands for some time and may, therefore, I presume be taken as read.

The New Business for the last Triennium surpassed all previous records of the Company and amounted to 2,74,110 policies assuring Rs. 92,37,97,061. The total number of policies in force on the Valuation date was 9,49,420 assuring Rs. 2,37,22,50,827 of which Rs. 3,60,38,253 was reassured representing an increase over the total business in force as at 31st December 1951 of 1,19,045 in the number of policies and Rs. 47,97,52,572 in the amount assured.

The Income from Premiums at Rs. 29,17,76,149 shows an increase of 12.82 per cent.

The Net Interest Income amounted to Rs. 6,46,68,246 showing an increase of 29.92 per cent., over that for the preceding Triennium.

The Expense Ratio for the Triennium was 24.0 per cent., as against 22.2 per cent., for the preceding Triennium. The increase is largely accounted for by the first year's commission and other initial expenses on the larger volume of New Business completed during the Triennium.

Claims by Death during the Triennium amounted to Rs. 3,39,02,239 showing a negligible increase of 0.3 per cent., over those for the preceding Triennium, while Claims by Maturity at Rs. 9,00,60,745 show an increase of 30.7 per cent.

The Ratio of Actual Claims to Claims Expected and provided for by the Mortality Basis assumed in the Valuation, viz., the Company's own Ultimate Mortality Experience during the Decennium 1925-35, is 49.4 per cent., for the Triennium as against 50.6 per cent., for the preceding Triennium, which goes to show that the progressive improvement in the Mortality Experience of the Company continues.

Rate of Interest in Retrospect

It is but fitting at this stage to cast a retrospective glance at the course of the rate of interest earned on the invested funds of your Company during the past three decades or so, which has substantially influenced the bonuses declared to policyholders. The First World War was fought at very high rates of interest and this naturally meant large depreciation in the values of invested funds. Although this depreciation was very high during the war years, yet its peak was reached during the immediate post-war years, with the result that at some time during this period the rate of interest obtainable even on Government Securities touched as high as 7 per cent. Although depreciation had to be written off which meant so much loss of capital, yet the consequent rise in the rate of interest enabled life insurance companies and your Company in particular which at that time had practically all its investments in Government Securities, to value their liabilities at fairly high rates of interest so that these liabilities were more or less scaled down very nearly if not actually to the extent that depreciation had to be written off. But there was the added advantage and a substantial one at that, in that new investments could be secured at a high rate of interest and new business underwritten at very profitable rates. Although at the time it occurred, depreciation did engender a feeling of pessimism, its beneficent effect of ushering in high rates of interest came to all with all its force and that is what precisely happened with your Company from the Valuation with respect to the triennium ended with 31st December 1921 onwards. The bonuses declared to policyholders went on increasing step by step till they reached their peak at Rs. 25 for Whole Life and Rs. 20 for Endowment Assurance for three successive trienniums, i.e., those ended with 31st December 1927, 31st December 1930 and 31st December 1933.

Life Insurance Companies experience periods of real difficulty only when the rates of interest are low and this is explained by Sir Purshotamdas Thakurdas, the Chairman of the meeting which considered the Valuation as at 31st December 1948, in the following words:—

"The real periods of embarrassment for institutions like the 'Oriental' occur when the pendulum swings to the other side, that is, when rates of interest are low and this in spite of the consequent appreciation in the values of the invested funds. For the appreciation will be practically neutralized by the increase in the value of the liabilities imposed by the necessity to make the valuation at a low rate of interest and, unlike the contrary case of periods of high yield, there is no compensating advantage, but only disadvantage in that new investments can only be made at unremunerative rates of interest. If during this period high taxation also operates, the resulting embarrassment can only be appreciated by those who have had practical experience of the situation."

Cheap Money Policy and High Rate of Taxation

It is common knowledge that from the year 1934 onwards the rate of interest began to fall and when the Second World War commenced towards the close of the Summer of 1939, those who expected a rise in the rate of interest were disappointed and Government, having learnt a bitter lesson from their experience in the First World War, fought the second at very low rates of interest, and the progressively increasing amounts required by Government both in the U.K. and in this Country to continue the War of the global nature of the Second World War were raised at progressively diminishing rates of interest. To crown all this the departing gift of the previous British administration before they handed over the Government of this Country to the new national, viz., the

reduction by $\frac{1}{2}$ per cent., in the rate of interest available on 3 $\frac{1}{2}$ per cent., Government Paper which was announced in May 1946. One would naturally expect that diminution in the rate of interest payable on a Security would be followed by a corresponding shrinkage in its price. Yet the rate of interest ruling at that time was so low that the fall in the market value was hardly noticeable. The harm done, however, to institutions of the type of the 'Oriental' which invested practically all their funds in Government Securities and mostly in 3 $\frac{1}{2}$ per cent., Government Paper—as this was the only Security of sufficiently large volume that was easily available to satisfy the investment needs of this institution—could be realized if it is remembered that due to this act of Government the interest income of your Company diminished by as much as Rs. 13 Lakhs per annum.

Added to this, the rate of income-tax and super-tax also was progressively stepped up with the result that in early September 1946 when the 3 $\frac{1}{2}$ per cent., Government Paper just before conversion to 3 per cent., 1986 stood at something like Rs. 107, an investor in this Queen of Securities in this Country which realized 2 per cent., net after allowing for income-tax, Bonuses had naturally to be stepped down progressively from Rs. 25 and Rs. 20 at the 1933 Valuation to Rs. 22 $\frac{1}{2}$ and Rs. 18 at the next, and successively down till they touched the lowest point of Rs. 10 and Rs. 8 at the Valuation as at 31st December 1945.

The conditions inducing a feeling of pessimism enumerated above continued throughout the year 1946. Finding that the cushioning business of life insurance sustain sight to make the business of life insurance sustain shocks particularly under the head of interest was getting thinned down, top-ranking companies came to an understanding to increase the rates of premium effective from 1st January 1947. This enabled the companies to turn the corner and at the next Valuation of the 'Oriental' as at 31st December 1948 bonuses could be stepped up from Rs. 10 and Rs. 8 at the 1945 Valuation to Rs. 12 $\frac{1}{2}$ and Rs. 10 for Whole Life and Endowment Assurances respectively. As a matter of fact, commenting on this, the Chairman of the Company, while presiding at the meeting which considered the December 1948, made the following remarks which have turned out to be almost prophetic when taken in the light of subsequent events:—

"It is but fitting that this SEVENTY-FIFTH MILESTONE in the history of this great institution should be the harbinger of welcome news to those associated with it regarding its progress and I am particularly gratified that synchronously with the commemoration of this great event I am in a position to announce the return of the tide as disclosed by the Valuation and recommend for your adoption the increase in the bonuses to Rs. 12 $\frac{1}{2}$ and Rs. 10 per thousand per annum on participating Whole Life and Endowment Assurances respectively....."

There was also another contributing factor and this was the alteration in the Articles of Association of the Company in December 1946 by which restrictions imposed as regards investment of the funds of the Company outside what is required to be invested in Government Securities in terms of the Trust Deed were removed. This enabled the Company to take interest in high class mortgages and although the rate of interest applicable to the Triennium ended with 31st December 1948 diminished to 2.79 per cent., from 3.41 per cent., applicable to the previous triennium, but for the freedom, although small, secured by the alteration in the Articles of Association above referred to, the position might have been somewhat worse. It should be remembered that the diminution in the rate of interest above referred to necessitated also the diminution in the Valuation rate of interest from 2 $\frac{1}{2}$ per cent., applicable to the triennium ended 31st December 1945 to 2 $\frac{1}{4}$ per cent. in the next triennium.

The freedom secured by the alteration in the Articles of Association had its comparatively larger effect in the next triennium ended with 31st December 1951, for the net rate of interest improved from 2.79 per cent., applicable to the previous triennium to 2.85 per cent., in this triennium. This combined with a sizable mortality profit enabled the Company to further increase the bonuses from Rs. 12 $\frac{1}{2}$ and Rs. 10 on Whole Life and Endowment Assurances to Rs. 15 and Rs. 12 on these respective types of policies.

Favourable Factors Contributing Towards Progressively Higher Profits

During the next triennium ended with 31st December 1954 more than one favourable force was present. The amendment made to the Insurance Act by which life insurance companies were allowed to add to the Surplus the tax deducted at source in the preceding inter-valuation period and provide separately for the income-tax liability is the first major beneficial change. It is hardly necessary to say that to secure this concession your Company played a very large part in placing the case of life insurance companies before Government. The law as it stood before this concession was granted made life insurance companies pay tax on a hypothetical addition to Surplus which in fact was not available for distribution either as bonus to Policyholders or as dividend to Shareholders and yet they had to pay tax on this amount. It had its maximum intensity in its application to companies of the type of the 'Oriental' which invested the bulk of its funds in Government Securities on which tax was deducted at source.

The second and by no means less important factor was the amendment to the Income-tax Act in terms of which relief was given to life insurance companies by exempting tax on 80 per cent., of the amount distributed to or reserved for Policyholders. This also had its full effect on the results of the Valuation as at 31st December 1954.

Thirdly, the increase in the Bank Rate from 3 per cent. to 3 $\frac{1}{2}$ per cent. in November 1951 had its beneficial effect on the business of life insurance. Although depreciation in the value of invested funds set in, more or less to that extent liabilities also could be scaled down by increasing the rate of interest adopted in the Valuation while substantial advantage

accrued by the opportunity provided for the investment of new funds at remunerative rates of interest. This combined with the moderate freedom in its investment policy secured by your Company by the alteration of its Articles of Association above referred to increased the earned average net rate of interest applicable to the Triennium under consideration to as much as 3.92 per cent., from 2.85 per cent., applicable to the preceding Valuation thereby enabling the Company to considerably strengthen its assets on a basis at this Valuation as compared to the previous one in spite of the increase in the Valuation rate of interest by a paltry one anna. The sum total of all the forces enumerated above has been that, so far as your Company is concerned, the Valuation has disclosed a very handsome Surplus which has enabled the Actuary to recommend bonuses at the rates of Rs. 22 $\frac{1}{2}$ per Thousand per annum and Rs. 18 per Thousand per annum on Whole Life and Endowment Assurances respectively.

As will be seen from the Actuary's Report, the Valuation discloses a Profit of Rs. 7,09,73,739 as compared with Rs. 4,64,63,479 in 1951. The mode of distribution of the Profit has been carefully considered by the Directors and has their full approval and Resolutions covering these proposals will be placed before you today.

In accordance with the Articles of Association, before any allocation of the Profit can be made to the Shareholders and the Policyholders, not less than one-third of the Gross Profit must be carried to reserve and the balance of the remaining after such deduction must be allocated to the Policyholders and one-tenth to the Shareholders.

Allocation of Profits—50% Higher Bonuses to Policyholders

As shown in the Actuary's Report, the amount out of the Gross Profit of Rs. 7,09,73,739 proposed to be set aside and carried to reserve in terms of the Articles of Association is Rs. 4,36,75,159 which will leave for allocation to Shareholders and Policyholders a sum of Rs. 2,72,98,580. The Contingencies Reserve Fund as a result of the transfer to it of the above sum of Rs. 4,36,75,159 would be augmented to Rs. 4,41,44,831 and it is recommended that out of this amount a sum of Rs. 4,31,27,135 be retransferred to augment the Policyholders' share of nine-tenths of the Net Profit to provide Bonus to With-profit Policyholders for the Triennium ended 31st December last at the increased rates of Rs. 22 $\frac{1}{2}$ per Thousand per annum on Whole Life Policies and Rs. 18 per Thousand per annum on Endowment Assurance Policies and to provide for tax on the Policyholders' portion of the Net Profit. The Shareholders' share of one-tenth of the Net Profit amounts to Rs. 27,29,858 and your Directors recommend that this amount be utilised to provide a Dividend for the years 1955, 1956 and 1957 at the increased rate of Rs. 200 per share per annum and for tax on the Shareholders' portion of the Net Profit. Your Directors further recommend that the following three sums aggregating Rs. 5,44,271 be retransferred from the Contingencies Reserve Fund, viz., Rs. 3,57,600 to Shareholders' Account, Rs. 1,84,732 to provide for tax on the amount transferred to Shareholders' Account and Rs. 1,939 to provide for tax on the portion of profit carried to the Contingencies Reserve Fund.

After these operations, the balance remaining at the credit of the Contingencies Reserve Fund will be Rs. 4,73,425 as compared with Rs. 4,69,672, the amount at which it stood as at 31st December 1954.

If these recommendations are given effect to, the Shareholders' Dividend together with the amount transferred to Shareholders' Account along with provision for tax on both will absorb 4.6 per cent., of the total Profit distributed or allocated together with provision for tax thereon, while the Policyholders' share of the balance of 95.4 per cent. The corresponding figures for the preceding Triennium were 5.1 per cent., and 94.9 per cent.

I should like at this stage to make some comments on the provision made for the first time in the history of the Company of Rs. 3,57,600 to be carried to the Shareholders' Account and also the other amount of Rs. 1,84,732 representing tax thereon. The setting up of these amounts had your Board's most earnest and careful consideration and they came to the conclusion that in fairness to the Shareholders these amounts should be earmarked for their benefit. It was not their desire to increase the net dividend payable to Shareholders beyond Rs. 200 from Rs. 175 paid on each share on the last occasion. At the same time the idea of fairness to Shareholders mentioned above in the light of the total Surplus emerging at the Valuation for the benefit of Shareholders. In this connection, the following table giving the percentage of the total Surplus taken to Shareholders' account during the last few trienniums will be of interest.

Triennium ended with	Percentage of Surplus distributed to Shareholders
1948 ...	... 4.8
1951 ...	... 5.1
1954 ...	... 4.6

It will be observed from a scrutiny of the figures in the above table that the total amount allocated to the Shareholders at the Triennium under consideration including the sum abovementioned of Rs. 3,57,600 and tax thereon represent only 4.6 per cent. of the total Surplus distributed to Shareholders and Policyholders and this you will find is the lowest figure of all the three Trienniums shown in the above table. In the light of these figures which speak more forcibly than words, it is hardly necessary to justify the amount carried to the Shareholders' Account and the provision made for tax thereon.

I have no doubt that the results disclosed by the Valuation, which have enabled the Company to increase for the third Triennium in succession bonuses to Policyholders and that by such a substantial margin as 50 per cent., of the previously declared rates, will be considered very satisfactory by them. The results Shareholders, since the Dividends distributable to them for the next three years have been further increased to Rs. 200 per share per annum free of income-tax besides which a sum of Rs. 3,57,600 will be transferred to Shareholders' Account and amount.

Gentlemen, I now beg to move that the Actuary's Report on the Valuation of the Assets and Liabilities of the Company as at 31st December 1954 be adopted and that the Meeting declares that the amount of Profit which has been realized is Rs. 7,09,73,739, be made provision for tax, as found by the Actuary,

Finance in India and Abroad

THE CALCUTTA MONEY MARKET
SLIGHTLY BETTER DEMAND FOR FUNDS

Wednesday, 9th November. THERE has been a somewhat greater call for funds from the money market during the past week. The improvement is chiefly the result of increased raw jute buying. Advances to the sugar factories continue to return as stocks are cleared. Accommodation against grains and seeds also continues to trickle back from upcountry areas. There has been some slight increase in the requirements of textile mills on account of cloth stocks. Money is tight in the inter-bank market and there are borrowers over at the unchanged call rate of 3 per cent.

Very little bill business has been reported in the last week. There has been good demand for remittance. Sterling continues to strengthen and the dollar is now quoting Rs. 47 $\frac{1}{2}$.

Silver rose on increased demand for the metal owing to the approach of the Diwali festival. The price improved from the previous week's level of Rs. 167-9 to Rs. 169, quoted to-day. The forward delivery was quoted at Rs. 169-2. The London price declined from 79 $\frac{1}{2}$ d. to 79d. The price of foreign silver in New York remained unchanged at 91 $\frac{1}{2}$ cents. Gold was rather quiet. The prices of both gold and sovereign were however little changed at Rs. 96-1 and Rs. 61-13, respectively.

Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills, which were opened on Tuesday, 8th November, 1955, totalled Rs. 3,12,25,000. The average rate of acceptance rose from Rs. 2-7-6 to Rs. 2-7-7 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 90 percent. Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills will be received at all centres up to Wednesday, 16th November, 1955. During the week ended 4th November, 1955, Government of India Treasury Bills for Rs. 21,83,25,000 were sold in favour of the Reserve Bank of India.

The return of the STATE BANK OF INDIA for the week ended 28th October, 1955, shows a rise of Rs. 2.08 crores in total deposits to Rs. 218.66 crores. Investments in Government Securities are down by Rs. 40 lakhs to Rs. 106.39 crores, while other authorised investments remain unchanged at Rs. 9.82 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have advanced by Rs. 1.30 crores to aggregate Rs. 93.48 crores. Cash and balances are, in consequence, shown at Rs. 24.66 crores or Rs. 3.39 crores higher.

The statement of the position of Scheduled Banks for the week ended 28th October, 1955, discloses Demand and Time liabilities at Rs. 616.18 crores (Rs. 14.37 crores on account of borrowings from banks) and Rs. 424.38 crores (Rs. 5.07 crores) compared with Rs. 615.23 crores (Rs. 12.95 crores) and Rs. 423.93 crores (Rs. 5.67 crores), respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 3.50 crores and Rs. 82 lakhs to aggregate Rs. 36.97 crores and Rs. 55.98 crores. There is a drop of Rs. 62 lakhs in investments to Rs. 392.34 crores. Advances and bills discounted at Rs. 592.40 crores reveal an increase of Rs. 1.91 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.9 percent and 56.7 percent against 8.5 percent and 56.8 percent.

Increases of Rs. 11.68 crores and Rs. 8.65 crores in notes in circulation and the total note issue to Rs. 1,317.54 crores and Rs. 1,330.52 crores were outstanding features of the return of the Reserve Bank of India for the week ended 4th November, 1955. The currency expansion was duly adjusted by raising rupee securities by Rs. 9.94 crores to Rs. 553.54 crores. Deposits of the Government of India rose by Rs. 5.36 crores to Rs. 54.69 crores, while other Government accounts declined by Rs. 11.39 crores to stand at Rs. 18.84 crores. Balances of commercial banks at Rs. 59.05 crores were Rs. 1.34 crores higher. Balances held abroad declined by Rs. 3.34 crores to total Rs. 81.93 crores. Investments at Rs. 50.26 crores showed a fall of Rs. 7 lakhs. Other loans and advances rose from Rs. 19.57 crores to Rs. 21.12 crores of which advances to scheduled banks against usance bills stood at Rs. 4.80 crores (Rs. 4.16 crores). Ways and means advances were shown at 1.04 crores (Rs. 2 lakhs).

For the second consecutive year, the world's hoarded gold stocks declined. The reductions of privately-owned bars, sheets and coins was only 2.6 percent against 6.4 percent in 1954. The November issue of Pick's World Currency Report publishes its annual hoarding statistics, estimating the size of the international private gold hoards at \$11.4 billion at the end of October 1955, against \$11.7 billion a year ago and \$12.5 billion in October 1953. The largest gold hoardings continue to be found in France, where according to the Report, about \$3.7 billion of the yellow metal, against \$3.8

billion a year ago, remain in perfectly legal private possession. Hoardings in all other European countries declined from \$2 billion to \$1.6 billion, whereas the volume of privately-owned yellow metal increased in Asia and in Africa. Political unrest in these continents was the major reason for rising gold hoardings. The total amount of present international gold hoards is larger than the sum of the combined official gold holdings of the Central Banks of Canada, England, France, Germany, the Netherlands and Switzerland, which add up to only \$8 billion. At the present rate of increased gold production in the world, it would take 12 years and eight months to extract the 10,400 tons of gold privately-owned by millions of people, who still distrust paper money in 1955.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 11-11-55.

prospecting for oil

Crude oil is not found everywhere in the world. Here and there it may occur in rocks that were once at the bottom of ancient seas and lagoons. But finding an old sea-bed is no guarantee that oil will be discovered there; that can be decided only by drilling a test well.

In some areas, likely clues to buried rock conditions may be found on the surface of the earth, but where surface features are absent as in the Assam Valley, the search for oil possibilities is aided by geophysical surveys.

Three different methods of geophysical surveying for oil are being employed by the Assam Oil Company to "feel" for suitable

rock conditions under the Brahmaputra's thick blanket of Alluvium.

By aeromagnetic, gravity and seismic surveys, scientists can form a picture of the type, depth and attitude of buried rock layers.

But none of these can point to oil—even if it is there. The scientists, after studying the results, can only say—there may be oil there. The only absolute way of finding out is to drill a test well. Frequently the answer then is—no oil. The prospector must try again elsewhere... and so the search goes on, in the hope that India's petroleum requirements may be supplied to an ever increasing extent from her own resources.

Stocks and Shares

BOOM CONDITIONS IN THE SHARE MARKET

INDIAN IRON AT NEW PEAK: BONUS PROPOSED FOR COPPERS

Wednesday Evening

FIRM conditions have prevailed in the stock market throughout the week and today's rise in the price of speculatives has reached boom-like proportions. The market has been sustained throughout the week by the strength of Indian Irons and by rumours of an interim dividend for Indian Coppers. When it was announced today that an interim dividend of 10 percent would be paid and that permission for a one-for-one bonus issue would be applied for, Coppers jumped to Rs. 8—the highest quotation since the company was formed. Greatest activity has been shown in the engineering and miscellaneous sections where the features included Jessops, Richardson and Cruddas, B.T.C., all on interested buying, Metal Box, Textile Machinery and Clive Row Investment. Interested buying has pushed up the price of Bengal Paper and together with the strength of the main speculative counter in this section, has benefited the whole paper group. Other sections have remained quiet, although there is some small enquiry for jute shares.

With the bulls in full control of the market, and sentiment apparently confident, there is no sign of an immediate break in prices. But it remains true that it is chiefly speculative activity which is sustaining prices; investment enquiry remains quiet. Government securities have been somewhat quieter, but the undertone is firm.

Details of the week's trading follow.

In Government securities the enquiry for selected medium-dated loans was maintained, but more sellers were in evidence for other loans due to tighter conditions prevailing in the money market. Three percent Conversion Loan was easier at Rs. 80-7 but 3% Non-terminable Paper continued in demand at around Rs. 80-1. In short-dated loans 3% 1957 was on offer at around Rs. 99-9-6 while 3% 1958 had sellers at Rs. 99-8. In the medium-dated group, 3% 1959-61 was taken higher to Rs. 98-1 while 3% 1963-65 was steady at Rs. 94-11 as was 3% 1964 at Rs. 94-8; 2½% 1961 firm at Rs. 93 and 2½% 1960 was taken at Rs. 95-14, while 2½% 1962 was traded at around Rs. 93-12 and 4% 1960-70 was quiet at around Rs. 101-30. National Plan Loans were again easier with 3½% 1961 at Rs. 99-10, 3½% 1964 at Rs. 98-11-6 and 3½% 1965 at Rs. 98-8-6. In long-dated Loans 3% initially improved to Rs. 91-15 but closed easier at Rs. 91-14 while 3% 1970-75 was on offer at Rs. 87-7. Little or no business was reported in State Loans and prices remained unchanged.

Selected preference shares continued to meet with good enquiry with few sellers to satisfy the demand. In the miscellaneous group, Bharat Collieries were quoted at Rs. 58-12 and a few transactions were reported in British India Corporation at Rs. 136. Calcutta Electric changed hands at Rs. 12-11. Indian Iron & Steel were bought and sold freely at around Rs. 110 ex-dividend. A small lot of Jardine Henderson was placed at Rs. 79 and Martin Burn at Rs. 107. New Victoria Cotton were crossed at Rs. 3-9 as were Textile Machinery 2nd Preference at Rs. 70-12. Titagur Paper 8% Preference were marked at Rs. 150. Richardson & Cruddas were reported at Rs. 94 and Orient Paper 2nd Preference at Rs. 75.

In jute, a small lot of Clive Mills 'A' were done at Rs. 100 and Fort Gloster at Rs. 123-8, Khadah changed ownership at Rs. 106.

In the banking section, Hind Bank changed hands at Rs. 27-12 and a few deals were reported in Punjab National between Rs. 47-4 and Rs. 48. United Commercial Bank of India 'D' shares were marked at Rs. 4-15.

The only share dealt in in the railway section was Delhi Rohas at around Rs. 13-8.

Once again the feature in the cotton section was Dunbar which closed steady at Rs. 300. Cawnpore Textiles were unchanged at Rs. 9-8 as were Elgin Mills at Rs. 21-12. Birla were taken at Rs. 95-12 and several deals were reported in New Victoria at around Rs. 1-15. Swadeshi Cotton Preferred Ordinary were steady at Rs. 11.

In the coal section, Burrakur on bear covering recovered at the close to Rs. 14-13 against an opening price of Rs. 14-6. Bengal were slightly better at Rs. 504 and Bharat Collieries were crossed at Rs. 8-5. Central India and Western Bengal were dealt in freely around Rs. 7-8 and Rs. 7-4 respectively. East India met with investment enquiry at around Rs. 30-8. After a long lapse, Kalapahari reported business at Rs. 20. New Beerbhoom were taken at Rs. 18-10 and Seebpore changed hands at Rs. 29-8. South Karanpura were quoted lower at Rs. 11.

The firmness of the jute goods market lead to a mild enquiry for jute shares and closing prices were higher than opening rates as will be seen from the following table:—

	Opening	Closing
	3-11-55	9-11-55
Rs.		
Anglo-India	225	234
Champdany	173	174
Delta	255	257
Howrah	28 4	29 8
National	32 3	33 9

Indian Iron & Steel shares once again provided the highlight in the engineering section and on powerful bull support were taken up to Rs. 41-8 ex-dividend which is the highest price touched since 1957; tonight's closing quotation is Rs. 41-4. Steady features were Jessop & Company which rose sharply to Rs. 60 and Richardson & Cruddas to Rs. 28. Textile Machinery were very active and business was reported at steadily rising prices up to Rs. 18-12; tonight's closing quotation is Rs. 18-3 ex-rights. Burn & Company met with investment enquiry at Rs. 324 as did Braithwaite at Rs. 29-4. Britannia Engineering New shares were dealt in freely at around Rs. 18-8.

The outstanding feature in the miscellaneous section was Bengal Paper which, on interested buying, rose further from Rs. 98 to Rs. 105. Titagur were steady at Rs. 48 and India Paper Pulp met with good investment support with the price improving from Rs. 24-4 to Rs. 25-4. Orient Paper were firm at Rs. 32-12. Shree Gopal Paper were required for at around Rs. 17-4. Sone Valley Cement improved from Rs. 8-2 to Rs. 8-9 and Triton Insurance were taken at Rs. 175. India General Navigation were better at Rs. 139 while India Steamship reacted to Rs. 8. Angelo Brothers were marked at Rs. 22-8 and Aluminium Corporation were crossed at Rs. 8-4. Balmer Lawrie were in demand at Rs. 190. Britannia Biscuits were required for at Rs. 15-8 and British India Corporation, on interested buying, improved from Rs. 11-6 to Rs. 12-4. There was a large turnover in Clive Row. Investment with the price rising from Rs. 11-14 to Rs. 12-9 cum-dividend; tonight's closing quotation is Rs. 12-4 ex-dividend. Imperial Tobacco changed hands on several occasions at around Rs. 15 and Indian Aluminium were crossed at Rs. 178-8. British Burmah Petroleum were

STOCK PRICES MOVE
DOWNWARD

GILTS AND INDUSTRIALS DEPRESSED

London, 9th November.
QUIET and uncertain conditions prevailed in the London stock market and while a little selective support developed from time to time this had no decisive effect on the general trend which was towards lower levels. The markets had little in their favour. Prospects of the credit squeezes being prolonged into the new year brought a sharp setback in gilt-edged securities. In addition, the appearance of a £10 million Rhodesia and Nyasaland issue carrying interest at a full 5 percent depressed gilts. Outside the gilt-edged market, there was very little selling, reflecting the withdrawal of buyers in present uncertain conditions. Interest in the industrial market was at a low level, and particularly under the influence of the setback of gilts and the stream of new issues of industrial companies, prices inclined lower. Gold shares lost ground but coppers were in demand at times and prices were little changed or higher on balance. Oils were mostly lower. Rubbers were inclined to be easier. Interest in tea shares was at a low ebb with little price changes.

The Money Market

Credit conditions during the past week were much the same as in the two preceding weeks, with supplies of money short, but not to a distressing extent. It was noted that the authorities were not willing to render assistance during the difficult periods, and the market had to borrow from the Bank of England. Under these circumstances, and in view of the Chancellor's statement at the time of his Budget announcement that the credit

squeeze would be felt more as the months went by, the discount market decided to adjust its tender for the offer of Treasury Bills so as to cause an increase in bill rates in order to safeguard itself against having to pay penal rates for the money with which to finance Government paper. January bills usually sold at 4-1/32 percent but it was expected that the effective rate would now be 4-1/16 percent. Applications for £200 million of 91-day Bills totalled £300,205,000, of which the former amount was allotted at an average rate of 81s 11.65d compared with 81s 4.98d in the previous week. Applications for £60 million of 63-day Bills totalled £69,500,000, of which the former amount was allotted at an average rate of 82s 5.19d. This week, offerings consist of £220 million of 91-day Bills and £50 million of 63-day Bills. The Bank of England return for the week ended 2nd November showed notes in circulation around £5 million higher at about £1,770 million, while bankers' deposits were about £1 million higher at around £251 million.

U.S. Bonds Move Higher

The domestic bond market was featured by strength and activity in municipal obligations in over the counter trading. Additional new offerings met with a good reception. New Illinois Road 3½ percent moved to a new high at 110½ bid 110½ offered. On the New York stock exchange listed convertibles and rails worked higher following the earlier spell of indecision with improved demand stimulated by mid-week strength in securities. United States Governments and investment quality corporates were steady to firm in limited dealings. World Bank 3½ percent of 1961 were higher by nearly a point on a few purchases. In the foreign department, German Nationals were soft with losses of a point or more, while a number of municipal and industrials showed wider declines on small sales. Italians gave up fractions to a point while Greek 6 percent and Serv 7 percent drop-

ped at one time over 2 points to sell at new 1955 lows. Greeks, however, eventually regained about half of the loss. Denmark 4½ percent were a shade lower with Norwegians generally mixed. Japanese issues eased fractionally in light trading. Chinese Railway 5 percent eased about 3 points to a new low for the year. Chile 2 percent finished with a small gain while Brazilian 3½ percent were marked down 4 points on sale of one bond.

Sterling Areas Reserves

The sterling area's gold and dollar reserves in October fell by \$48 million, it is officially announced. The total at the end of the month stood at \$2,297 million, compared with \$2,345 million at the end of September. The U.K. showed a provisional deficit of £15 million with the European Payments Union. This compares with a deficit of £38 million in September.

Hongkong Gold

Fluctuations in Hongkong gold during the week were wider than for some time, influenced by the uptrend in U.S. dollars. At the opening the price was at the week's lowest point. Thereafter it fluctuated and finished slightly below the best of the week. Traders attributed the burst of activity to diversion of idle funds from the stock market into bullion. Official offtake was 1,170 and unofficial 33,600. Arrivals totalled 36,000 ounces. Forward contracts were done at 33.75 U.S. \$ (United States dollars). Carryover was 85 cents in sellers favour.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: while there is some doubt as to the effectiveness of the Chancellor's proposals, investors are also at last recognising that continued inflation would be disastrous. Industrial shares may move narrowly for the next few months with a testing time in January-February, when peak tax collections will intensify the credit restriction. On the other hand, the probable improvement in gilt-edged will underpin leading industrial stocks, which will also attract institutional buying at certain levels.

Platinum Strong

Platinum showed considerable strength and the spot metal price was increased by leading refiners to \$97 an ounce for bulk quantities and \$99 an ounce for small lots. The new rates, which became effective from 1st November, were ascribed to the continued high rate of demand. Meanwhile, supplies remained scarce, with the situation aggravated by the absence of offerings from Russia. Dealers were making offers of platinum as high as \$105 an ounce but few, if any, sales were reported at that rate.

Softer Trend in Quicksilver

A slightly softer tone was noticeable last week in the London ex-warehouse quicksilver price; most traders indicated a price range of £90½ to £91½ a flask, as against £91 to £91½ previously. The movement was due to the persistent fall in the U.S. domestic price, which stood at \$280 to \$284 nominal. The trade said that competition was keen on the London market for the limited amount of business.

U.S. Taxation Ruling

A ruling that the yield on bankers' acceptances is generally the same as interest for tax purposes, and is therefore taxable as income in most circumstances, is expected to be made public soon by the U.S. Internal Revenue Service. Under this ruling, both domestic and foreign holders will be subject to heavier taxes than if the yield were considered a capital gain. Most foreigners are not subject to any U.S. tax on capital gains from the United States unless they operate business in the country, officials state. If they have been treating the yield from bankers' acceptances as capital gain, and therefore considered it not taxable, the ruling could subject them to U.S. taxes for the first time.

Argentine Exchange Regulations

The Argentine Central Bank issued new regulations governing exchange operations for imports and exports under the general terms of last week's decree freeing exchange operations and devaluing the peso. The new regulations came into practical effect on 3rd November. In a Press statement accompanying the regulations, the Central Bank pointed out that imports and exports at free exchange rates (as distinct from those that will enjoy the official exchange rate) will be entirely free and will not require price authorisation. The sole exception is power plants, which can only be imported with the prior authorisation of the Ministry of Industry.

U.S. Corporation Profits

Figures now available for the third quarter of 1955 indicate that U.S. corporations may have the second best profits this year in their history. The record year was 1950. A private compilation shows that 428 companies had third-quarter profits of \$2,169,180,000, or 34.3 percent higher than the same 1954 period.

Talks Between Gold Companies

The Rhodesian Goldfields Development Company Limited announces that negotiations are proceeding with the Consolidated Goldfields of South Africa Limited with a view to an offer being made to shareholders of the company (other than New Consolidated Goldfields Limited) to exchange their shares for ordinary shares in Consolidated Goldfields of South Africa Limited on the basis of one for six.

Output of Man-made Fibres

The production of man-made fibres in the U.K. in September totalled 41,200,000 lbs, comprising 19,700,000 lbs of continuous filament yarn and 21,500,000 lbs of staple fibre. This compares with the August figures in the same order of 35,400,000 lbs, 18,700,000 lbs and 16,700,000 lbs.

New Delhi

U.K. STEEL PLANT DEPENDS
ON CREDIT FACILITIESMISSION RETURNING TO LONDON:
MAY COME AGAIN IN JANUARY

(FROM OUR NEW DELHI CORRESPONDENT)

THE British steel mission is returning to the U.K. this week on completing its negotiations with the Government. Assuming that it will be possible to arrange credit facilities, the mission hopes to come again to India in January to finalise the deal, details of which have been settled in the recent negotiations. As already indicated, credit facilities are the crux of the problem. At present, India is not in a position to buy a plant outright. The Finance Minister has spoken of a possible shortage of Rs. 400 crores in foreign exchange to meet the requirements of the second five year plan. He has envisaged raising loans abroad to bridge the gap. The issue of the third one million ton steel plant thus hinges on the credit facilities offered by Britain, or, failing her by any other country.

Meanwhile global tenders have been invited for the one million ton steel plant which is to be built with German assistance. The final project report for the second one million ton plant to be supplied on a credit basis by Russia is expected by the end of December. It will quote prices for the equipment indicated by the Khara mission. The Iron and Steel Ministry is providing Rs. 400 crores for the three steel plants of one million tons capacity each in the second five year plan.

Mechanisation in Russian Industries

The Khara mission to Russia has emphasised the system of full mechanisation and the high degree of production in Russian industries. The mission was sent to Russia in connection with the one million ton steel plant which is to be built at Bhilai with Russian assistance. The Production Secretary, Mr. S. S. Khara, was its leader. In adopting the Russian model, the mission has recommended that "if the Bhilai plant is to be ready for operation according to schedule, the development of iron ore mines and of the transportation system should be taken in hand immediately. We recommend that iron ore mines should be mechanised from the very beginning and such mechanisation should be carried out in collaboration with the Russian consultants as provided in the agreement. In all the three integrated iron and steel plants we visited, the practices followed in respect of coal hauling and preparation were very satisfactory. The plant design for India provides for mechanised unloading and efficient crushing and blending of coal."

The Russian wage system is closely linked to productivity, the mission claims. The basic rate system is prescribed by the Government; it provides weightage for tasks involving special heavy manual or other effort. Most of the wages are piece-rated, with a system of incentive payments. An eight-hour working day is standard, and men and women can do each other's work. Workers' participation in management is purely advisory. Final responsibility for management is not shared with the workers.

The mission thus presents an attractive picture of Russian industries and their working. The basic issue is whether the ideas are applicable to India. As against total mechanisation and labour-saving devices in Russia, the emphasis here is on maximum employment even though it may be wasteful. Much attention is paid to village industries, and rationalisation is opposed. Russian output is high because workers are regimented and are paid by results. Is India prepared to enforce discipline among workers, much less talk of regimentation? In other words, the Russian achievements are worth studying only if the basic conditions in which they come about are considered. If the basic conditions are not similar, it is futile to compare the performance of Russian plant with its possible Indian adaptations. In the last analysis, it is not the design or the plant, but the human material, which produces results. The human material in India is in no way inferior to Russia's. What is lacking here is the will to work, which is the democratic alternative to regimentation.

Oil Tankers from Russia

The possibility of acquiring at least two oil tankers from Russia is being examined here.

Outlay on Second Plan

The Finance Minister, Mr. Chintaman Deshmukh, at a Press conference confirmed earlier reports about increasing the second plan outlay in the public sector from Rs. 4,300 crores to Rs. 4,700 crores. Indications from the Planning Commission point to a still larger outlay—even more than Rs. 5,000 crores, perhaps almost Rs. 5,300 crores. How the resources will be found is still not definitely known. Originally, the Finance Ministry calculated resources at Rs. 3,000 crores, including Rs. 1,000 crores of deficit financing. Accepting the target of expenditure in the public sector at Rs. 4,300 crores before the National Development Council later, Mr. Deshmukh envisaged an unbridged gap of Rs. 800 crores. According to the Finance Minister's own estimates, therefore, the gap has now increased to Rs. 1,500 crores. This may go up still more to say, over Rs. 2,000 crores, when the draft plan is published next month.

A novel type of planning is in progress in New Delhi. Instead of the Planning Commission scrutinising plans and allocating priorities, Central

Ministries are given targets of expenditure within which they have to fit their plans. There are also fears that the coal and steel targets will not be reached. On the basis of these fears, the railway budget is being curtailed. The Prime Minister's realism is among the few safety factors left. He has not attempted to reduce the targets indicated in the plan-frame, but he has directed that detailed planning should be for 1956-57, or the first year of the plan, for which actual commitments may be made.

The Finance Minister estimated that Rs. 2,000 crores out of the target of Rs. 2,300 crores will have been spent on the first five year plan by 31st March, 1956. This represented 87.5 percent of the intended outlay. It included Rs. 500 crores of deficit financing, of which Rs. 200 crores had already been done.

Coal Plan and Compensation

The Finance Minister's remarks on the coal plan and on compensation in the event of nationalisation are of some interest. He did not think the coal plan involved nationalisation "at the moment. The policy statement is there that it will not be nationalised but I should imagine that those who are in the private sector will be given an assurance that if they make plans for increasing their production and lay out money accordingly, then whatever money they lay out or whatever equipment they buy for this additional production will, in case of nationalisation, be paid full compensation, because if that were not so, then we have no right to expect the private sector to proceed with any plans for the increase of production through their own coal mines." The Finance Minister's assurance thus covered a very limited field—only the additional production of 8 million tons during the plan period ending 31st March, 1961. He did not discuss compensation for the coal mines producing 34 million tons a year at present.

The original suggestion was to assure the private sector that if these coal mines were nationalised, compensation would not be "illusory" but fair. The issue therefore is whether the original idea stands or whether, as with nationalisation, the Government is not prepared to give any undertaking. It is for the representatives of the private sector to seek elucidation of this issue when they meet the Government to finalise their coal plan.

The Finance Minister envisaged early legislation on sales tax, to enable the Government to impose inter-State sales tax in accordance with the recommendations of the Taxation Commission. The question of refunding the collections of inter-State sales tax already made was also being examined.

International Finance Corporation

Mr. Deshmukh gave details of the International Finance Corporation, of which India is an original member. Its authorised capital is \$100 million, to which India had subscribed \$4,431,000. The instrument of acceptance was signed by India's Ambassador last month. The Corporation is expected to start functioning from January 1956. Its object is to promote economic development by encouraging private enterprise in member countries. The Corporation will finance only private enterprise, though the existence of governmental interest in an enterprise is not ruled out. Finance will be brought through the grant of loans, apart from bringing together foreign and local investors. The Corporation will not hold any equity capital, nor will it take part in management. But there is provision for converting a loan into equity capital if the equivalent funds are found later by someone else, such as a private investor.

Guaranteeing U.S. Investments

Lastly, the Finance Minister explained at some length the talks between India and the U.S.A. on an Investment Guarantee Agreement and on the Treaty of Establishment and Commerce. He said: "These are two different matters. You are probably aware that the Treaty of Establishment and Commerce was originally known as the Treaty of Friendship, Commerce and Navigation, which covered a much wider field. Both sides have been trying to negotiate it for a number of years. We came across several difficulties and, at some stage in the middle of the negotiations, we thought we would reduce the scope and explore the possibilities of a Treaty of Establishment and Friendship. Even that has thrown up a certain number of difficulties and I should say that the matter is still under consideration, although I cannot claim that it is under active consideration at the moment. One issue that frequently raises a difficulty is that of compensation in the event of nationalisation and that has not been made easier by the amendment of Article 31 of the Constitution that has taken place in the meanwhile. The conditions like equality of treatment for private and public enterprise are apt to give rise to difficulties in a country like ours where we have decided to embark on an ambitious programme of activities in the public sector according to our Economic Policy Statement first announced in 1948 and reiterated last year. Then there are minor matters, which are always difficult but which cannot be said to be incapable of settlement like avoidance of double income-tax and so on.

"Another reason why that particular matter is not under active consideration is that in the meanwhile we thought a Treaty by way of an Investment Insurance Guarantee held out a greater prospect of agreement. You are probably aware that this insurance is intended to be against two risks, one is non-convertibility of exchange from here and the other is misappropriation. We are told that about 26 countries are participating in the

scheme, some of the important ones among which are Australia, Belgium, France, the Federal Republic of Germany, Italy, Japan, the Netherlands, Pakistan, the Philippines, Yugoslavia and so on. There are some countries like Turkey and the U.K. which have subscribed to the insurance against the risk of non-convertibility only. So far as we are concerned, we have had our internal consultations with the Ministries concerned, namely, the Commerce and Industry and the Law Ministry, in addition to the Finance Ministry, and a paper is under preparation which will be submitted to the Cabinet in the not too distant future. Here, again, the main difficulty that is likely to arise is that of compensation in the event of nationalisation, although it is not of the same order as in the case of the Treaty I mentioned before, because here the settlement will be made first between the insuring country, say the U.S.A. if we sign the Treaty with the U.S.A. and their private investors and the matter of compensation will be then taken up between the two Governments. Therefore, it would cease to be a justiciable matter in the sense it might be between a private party and the Government, that is to say, it would be a matter which would have to be settled between the two countries by methods agreed upon as part of the Treaty. That is the stage in which this second matter lies at the moment.

"If there is a dispute it will be settled between the two Governments and left to be settled between the private investor and the Government of the country in which investment has taken place. So far as the private investor is concerned, he is out of the picture. He pays a certain insurance charge and in the event of anything like this happening, he gets the payment from his own Government."

Port Dues from Coastal Shipping

At a meeting held in Cochin in December 1952, the National Harbour Board agreed in principle that coastal shipping should receive favourable treatment in respect of port dues and charges on coastal shipping and traffic. It recommended that the question be further examined. When this matter was brought up at the fourth meeting held in Poona in April 1954, the desirability of evolving a uniform definition of the expression "coastal shipping" was raised. The term "coastal shipping" is defined differently in the various enactments pertaining to shipping and ports, as the definition in each law has been framed with reference to the circumstances and needs of that law. While it does appear difficult to secure absolute uniformity in the definition of this term between the various Acts, it is desirable that there should be a uniform definition so far as it applies to the levy of dues at various ports. The question whether the existing definition of the term "coastal trade" in the Indian Merchant Shipping Act should be modified is being considered in connection with the revision and consolidation of merchant shipping law. The final Indian Merchant Shipping Bill is expected to be drafted shortly. It is proposed to consider the question of uniform definition of "coastal shipping" for the purposes of levy of port dues after the Bill has been finalised.

The existing scales of port dues are levied under the authority of the Indian Ports Act, 1908. In the body of this Act, there is no definition of the term "coastal shipping". Port dues are levied according to the first schedule to that Act, the provisions of which the Central and State Governments are competent to vary from time to time by notification. The following points are taken from the various enactments which are in force at present:

Calcutta: A concession is allowed to "coastal vessels" and to vessels engaged in the India-Burma trade. The term "coastal" has not been defined specially.

Madras and Cochin: A concession is allowed to vessels engaged in the coastal trade. "Coast" has been defined in the first schedule to the Indian Ports Act as extending from the westernmost part of Sind to the southernmost part of Burma. Ceylon is also included. In other words, vessels engaged in trade with Pakistan, Burma and Ceylon are covered.

Bombay: Bombay port makes no difference between "coastal" and "foreign-going."

It will be observed that some concession in the matter of port dues is already admissible to coastal ships at certain ports. It is true that Bombay does not distinguish between "coastal" and "foreign-going" for levying port dues. But the basic rate at Bombay is lower than at Calcutta, where a concession is allowed to coastal ships. The port authorities are generally averse to giving more concessions. They are non-profit making bodies, and are engaged in ambitious development programmes involving the investment of large sums of money which they have to raise by borrowing. Many of them have had to raise their charges in order to meet increasing costs, not only on account of the servicing of loans but also on account of the increasing costs of day-to-day port operation. In this context it may be inopportune to press the port authorities to liberalise the existing concessions applicable to "coastal shipping." The issue will be discussed at the forthcoming meeting of the National Harbour Board.

Commercial Envoys to Meet

The conference of Commercial Secretaries in Indian Embassies in Asia and Africa is meeting here on 20th November to discuss ways and means of boosting trade with these countries. The Indian

Once again the Hindusthan Cars prove invincible....this time, in the Endurance & Reliability Trial conducted by the Automobile Association of Bengal. 34 Cars in B Class (medium size) participated in the Calcutta-Ranchi run. The first, second and third positions were won by Hindusthan Cars. This is the second year in succession when Hindusthan Car outclassed the others in an Endurance & Reliability Trial of the A.A.B.

HINDUSTHAN CARS OUTCLASS EVERY TIME

HINDUSTHAN MOTORS LTD., CALCUTTA.

AUTHORISED DEALERS AT:

Agra; Alameda; Allahabad; Baroda; Bangalore; Bombay; Bareilly; Banaras; Calcutta; Cuttack; Coimbatore; Dibrugarh; Dehra Dun; Indore; Jaipur; Jodhpur; Jaunpur; Jorhat; Jamshedpur; Jullunder; Kanpur; Lucknow; Madras; Madurai; Mangalore; Manipal; Nagpur; New Delhi; Patna; Poona; Rajkot; Ranchi; Sambalpur; Secunderabad; Srinagar; Tezpur; Tiruvandrum; Vijayawada; Vizianagaram.

Industries Fair, now in progress, will show them what India can offer.

Trade Statistics

The compilation of Indian trade statistics has been successfully mechanised as a result of which it has been expanded to cover details which were hitherto unavailable. The list has been increased from 800 to 4,000 items, modelled on the international trade classification. Mechanisation has also speeded up the publication of trade statistics. Seaborne trade statistics in the new form will be published from April 1956.

Shipowners Consultative Committee

The Shipowners Consultative Committee will meet in Bombay on 11th November. The Transport Minister, Mr. Lal Bahadur Shastri, will preside. The various sub-committees will meet in Calcutta on 10th and 11th November.

Indianisation Returns

A fall of 285 in the number of Britons employed in India is shown by the 1955 census of non-Indian employees in non-Indian companies operating in India. The census shows a continued increase among Indian employees, from 6,162 in 1947 to 21,242 in 1955. The increase was particularly marked in the wage group of Rs. 1,000 and above, where the percentage of Indians increased from 30.3 to 35.5 for technical posts and from 33.7 to 38 percent for non-technical posts. Categories of concern in which the proportion of foreigners is more than two-thirds in the salary group of Rs. 1,000 and above declined from nine in 1954 to five in 1955. The proportion of foreigners in each of these categories was: plantation companies 89.6 percent; jute companies 86.6 percent; banking companies 78.1 percent; other agents, merchants, etc. 68.4 percent; and transit and transport companies 66.9 percent.

Foreigners held more than half but less than two-thirds of the posts in the following nine groups of companies: other minerals, etc. 66.1 percent; managing agency companies 64 percent; sugar and breweries 62.3 percent; insurance companies 62.1 percent; cotton mills and presses 60.5 percent; machinery, equipment and tools companies 56.8 percent; automobile dealers, etc. 56.9 percent; all

other companies 56 percent; and printing, publishing, etc. companies 55 percent. The proportion of foreigners is less than half in: chemical and allied trades 49.5 percent; oil companies 47.5 percent; coal companies 45.9 percent; metals, including iron and steel, 41.7 percent; public utility companies 38.9 percent and leather and rubber companies 35.9 percent. Foreigners are in an overall majority only in plantation companies.

Of the total of 7,526 foreigners employed in foreign-controlled concerns in 1955, 6,462 were Britons, 231 Americans, 126 Germans, 124 Swiss, 88 Chinese, 77 Dutch, 59 Pakistanis and 56 Danish. The number of Britons, which had increased from 6,901 in 1947 to 7,214 in 1952, declined steadily thereafter to 6,747 in 1954 and 6,462 in 1955. Britons formed 87 percent of the total of foreigners in 1954 and 85.6 percent in 1955. The number of Chinese, Germans, Dutch, Australians, Pakistanis and Japanese increased during the past year.

The Government of India has accepted a three year plan of Indianisation prepared by non-British foreign companies, as a result of which the grant of visas for their non-Indian employees has become a mere formality. A similar five year plan from the British sector of the tea industry has been approved, under which the recruitment of non-Indians has been reduced to 25 percent of the vacancies in a year. The recent amendment of the income-tax law, which has made perquisites, including passage money, taxable, has further helped Indianisation, particularly in British undertakings. Negotiations are at present in progress to seek some relief, particularly for technical personnel.

Employment under Central Government

Employment under the Central Government, excluding the Railways, increased by 14,804 in the 12 months ended May 1955. Employment under all categories, with the exception of that classed as administrative and executive, has risen. The biggest jump was among clerks—by 22,566 to 181,500. Skilled and semi-skilled workers increased by 2,447 to 157,399, and unskilled workers by 124 to 249,718. As against this, men holding executive and administrative posts were reduced by 10,331 to 48,837.

NEW ALLOYS AND THEIR USES

The October issue of *The Nickel Bulletin* includes a series of interesting items on cast iron, covering thermal-shock resistance, the properties of low expansion nickel-alloy irons and oxidation-resistance of high alloy-types. In connection with high-temperature materials attention is directed to the announcement of a new member of the Nimonic series, Nimonic 100 which can be used at temperatures higher than those permissible for any other alloy of the group. Among abstracts relating to gas-turbine materials is a study of the relation between static and fatigue properties at elevated temperatures, and a report on the influence of vanadium pentoxide on the scaling of alloys at high temperatures. The widening uses of stainless steels in chemical engineering are typified by articles describing their applications in pickling equipment, dyeing plant, pulp-bleaching equipment and other branches of the process industries. The increasing importance of such materials in structural engineering is demonstrated by a report on fundamental research which is in progress as a basis for formulating a design specification for the hardenable 17-7 chromium-nickel grade.

ISSUE OF CAPITAL BY JOINT STOCK COMPANIES

The Government of India has granted 46 applications from Joint Stock Companies in the country for the issue of capital amounting to about Rs. 31.64 crores during the quarter ended June 1955. Twenty-nine of these applications were from industrial companies, seven from companies dealing with agriculture and allied activities and the remaining 10 from non-industrial companies. Out of 46 applications, 20 were from new companies for a total issue of capital amounting to Rs. 9,64,78,750. The 20 new applications include those for a company for the manufacture of soda ash and ammonia chloride with a total issue of Rs. 2 crores; a company for the manufacture of writing, printing and wrapping paper and boards with a total issue of Rs. 1,75,00,000 and a company for the production of ferro-manganese and other by-products with a total issue of Rs. 1,50,00,000.

Bombay

NEW LABOUR POLICY FOR SECOND PLAN

IMPORTANT AMENDMENTS TO EXISTING LAWS

(FROM OUR BOMBAY CORRESPONDENT)

THE programme for labour legislation during the second plan period, and most of the problems of industrial relations, were reviewed comprehensively by Mr. Khandubhai Desai, Union Labour Minister, at the twelfth Session of the Labour Ministers' Conference at Hyderabad, last week. The conference was attended by Ministers Deputy Ministers, Labour Commissioners, and other officials concerned with the subject both in the States and at the Centre. Mr. Desai emphasised that labour policy must be a source of strength to the next plan. It should be so designed as to secure a rise in the standard of living of the masses. The plan must achieve this aim, besides providing for fuller and larger employment for the people. According to him, compulsory adjudication in the absence of an agreed settlement would have to form the basis of the policy in the interest of increased production. He revealed that, since they had discussed the question of industrial relations at the conference last year, it had been decided that no extensive revision of the existing laws should be carried out. Some essential amendments to the Industrial Disputes Act of 1947, in operation at present, would however have to be made. Following this decision, certain conclusions have been reached; these were incorporated in the amending bill now before Parliament. After describing some of the outstanding features of this Bill, Mr. Desai admitted that these amendments would not however settle the main policy. A sub-committee of the Labour Panel had gone into the question and had made suggestions relating to a revision of the Trade Unions and Industrial Disputes Acts. The sub-committee had also gone into the question of associating labour with management and agreed that such association should be real and effective.

Social Security and Minimum Wages

Turning to social security measures, Mr. Desai said that the Employees State Insurance Scheme was being extended rapidly and by the end of the first five year plan period, the scheme was likely to cover two million workers employed in factories using power and employing 20 or more persons. He was anxious that during the second plan period, the scheme should be extended to all factories, mines, shops and commercial establishments regulated by State Acts and employing 20 or more persons. The total number of additional insurable employees to be covered by this Scheme by 1961 was 1,361,000. In this connection, Mr. Desai observed that one of the main difficulties which prevented the Government from proceeding according to schedule was the demand put forward by workers for extension of medical care to their families. Employers had also been supporting this demand, since many progressive employers were providing medical care to the workers' families already. He said that this problem had been receiving the attention of the Employees State Insurance Corporation, which had sought the co-operation of State Governments with a view to meeting this demand. With regard to minimum wages, Mr. Desai felt that implementation of the relevant Act had not been unsatisfactory. At the same time, he indicated that it was necessary to evolve some definite principles on the basis of which minimum wages could be fixed. He also thought that the question of laying down a national minimum wage as recommended by the Central Minimum Wages Advisory Board should be examined. He appreciated the difficulties of State Governments in fixing the minimum, but said that ample material was available as a result of an agricultural labour enquiry conducted by the Union Ministry of Labour. It was essential to raise the standard of living of the agricultural worker. The Conference resolved that the demands and the needs of agricultural labourers should be accorded the highest priority in the second plan. At the conclusion of the three-day session, the Conference in a resolution unanimously urged that agricultural workers, who constituted 30 percent of the total rural families and 22 percent of the total number of rural and urban families, should be given better treatment.

Milk Producers' Co-operative

In the course of his visit to Gujerat and Saurashtra last week, the Prime Minister, Mr. Nehru, declared open the Rs. 40 lakh dairy project of the Kaira District Co-operative Milk Producers' Union at Anand. This is one of the biggest co-operative enterprises in the country. The United Nations' Children's Fund and the New Zealand Government have contributed generously towards the cost of this project and in thanking them for their valuable assistance, Mr. Nehru observed that the problem of milk was a big one and had generally been grossly mismanaged in this country so far. An extension of the project to an area of 1,300 square miles has been envisaged, with a membership of 50,000 farmers of the district within the next five years and the production of 300,000 lbs of milk and 150,000 lbs. of milk products daily are being aimed at ultimately. Mr. T. G. David on behalf of U.N.I.C.E.F. observed that in the construction of the dairy projects several records had been broken. He stated that there were 390 million children in the world, two-thirds of whom lacked adequate provision for milk and that the largest number of such neglected children was in India.

Bigger Oriental Bonuses

The extraordinary general meeting of the shareholders and the policyholders of the Oriental Government Security Life Assurance Co., was held last week, to pass the Actuary's Report on the valuation of the assets and liabilities as at the end of 1954, and to declare a bonus on participating policies. Mr. Dinshaw D. Romer, a Director of the Company, who presided, drew attention to the alteration in the Articles of the Association of the Company by which restrictions imposed on the investment of its funds outside what was required to be invested in Government Securities had been removed and observed that this had enabled the Company to take an interest in high class mortgages. This freedom had its effect in the last triennium when the rate of interest improved from 2.79 percent to 2.85 percent. This, combined with the sizable mortality profit, enabled the Company to increase the bonus. Mr. Romer enumerated all the favourable factors during the triennium ended 31st December, 1954. Amongst those, he mentioned the amendment made to the Insurance Act under which life insurance companies were allowed to add to the surplus the tax deducted at source in the preceding inter-valuation period and to provide separately for the income-tax liability. In securing this concession, the Company had played a notable part in placing the case of life insurance companies before the Government. Another important factor during this period was the amendment to the Income-tax Act in terms of which relief was given to life insurance companies by exempting tax on 30 percent of the amount distributed or reserved for policyholders. The good valuation result had been due also to the increase in the bank rate from 3 percent to 3.5 percent in November 1951. All this had helped the Company to earn an average net rate of interest during this triennium of 3.92 percent in the place of 2.85 percent for the preceding valuation period. The result of these changes was that the valuation disclosed a very handsome surplus enabling the Actuary to recommend bonuses at the rate of Rs. 22½ per thousand a year and Rs. 18 per thousand a year on whole-life and endowment assurances respectively.

Credit for Small Industries

The Governor of the Reserve Bank Sir B. Rama Rau called upon the State Finance Corporations to play an important role in a planned development of village and small-scale industries, especially now that the Karve Committee had recommended an outlay of Rs. 260 crores for the development of these industries during the second plan period. He addressed this plea to the conference of the representatives of the Corporations which he inaugurated last week. Reviewing the work done by these bodies, the Reserve Bank Governor expressed his satisfaction at the fact that most of them had made appreciable progress, particularly in the granting of loans, and stated that, since they had met for the first time in August last year, five more State Corporations—in U.P., Bihar, Rajasthan, Madhya Pradesh and Andhra—had been set up, bringing the total number to 12. He suggested that a few pilot working projects from the point of view of credit should be tried out to establish workable methods of dealing with actual problems in meeting the credit requirements of village and small-scale industries. Sir Benegal revealed that the Reserve Bank was taking steps to build up suitable machinery for the expansion of these Corporations with the object of assisting them in evolving sound business principles, particularly in respect of making advances to industrial concerns.

Claims of Road Transport

In the absence of its President, Mr. E. A. Nadirshah, Mr. A. D. Wenzel, Vice-President of the Indian Roads and Transport Development Association, presided over the annual general meeting of the Association last Friday. He asked the Planning Commission to do fuller justice to the claims of the roads in the second five year plan. Expressing his disappointment at the meagre allocation of Rs. 350 crores for roads in the plan-frame, which now stood the risk of being scaled down further to about Rs. 250 crores, Mr. Wenzel said that it was at one time hoped that the bulk of the balance remaining out of the Nagpur Road Plan comprising about 57,000 miles of roads would be completed during the second plan at an approximate cost of Rs. 500 crores. In view of the emphasis in the second plan on industrialisation, Mr. Wenzel considered this provision very inadequate because industrialisation would certainly demand more roads. At the same time, he expressed his satisfaction at the progress made in respect of roads during the first plan period, as almost 90 percent of the programme was likely to be completed by the end of the current financial year. But he regretted that the road transport industry had not progressed simultaneously with the construction of roads. He also deplored the greater emphasis being placed by the Government on the railways than on other modes of transport and revealed that the Association was the first to assess the overall transport requirements of the first plan at about 30 percent over the pre-plan facilities. While that estimate had been accepted in the case of the railways, it had not been applied to road transport on the ground that the required number of vehicles might not be available and that the necessary capital might not be forthcoming. However, Mr. Wenzel pointed out that both these grounds were applicable to the railways also. While every endeavour was being made to get the requisite rolling stock for railways on the basis of a 30 percent additional requirement, no such attempt was being made for road transport. That policy had resulted in over-developing the railways, in the second plan, the railway demand had gone up to about Rs. 1,500 crores out of a total developmental expenditure of about Rs. 5,000

crores, that is, as much as 30 percent. He felt that the country could not afford to spare about 30 percent of its developmental expenditure on a nationalised transport service, when private capital was forthcoming to develop other modes of transport like roads, shipping and inland water transport. Turning to other problems, he pleaded for the removal of the restrictive provisions of the Motor Vehicles Act which had created a most unfavourable climate for the healthy development of road transport. It was surprising that the enactment, conceived when the railways were suffering from lack of traffic in the thirties, was being continued when the railways were unable to cope with traffic today.

Indo-Arab Trade

The foreign exchange requirements of the second plan period are placed at Rs. 1,100 crores. It is, therefore, imperative for the country to increase its earnings from export. The Union Commerce and Industry Ministry sponsored a drive recently to step up foreign exchange earnings. Mr. D. P. Karmarkar, Commerce Minister of India, while inaugurating the Indo-Arab Trade Conference organised by the Indo-Arab Society, said last week that there was great scope for the development of mutually beneficial trade between India and the Arab countries. Observing that India had so far had an adverse trade balance with most of the Middle East countries, Mr. Karmarkar wished that everything possible should be done to rectify this imbalance. He pointed out that in view of the rapid pace at which India was industrialising there were numerous items, besides the traditional lines of export, such as cotton textiles and tea, which could find a market in this region. Mr. Karmarkar suggested drugs and medicines and light engineering manufactures, now available for export and comparable in quality and price with supplies from other sources, as most likely goods in this respect. Deploping the unhealthy situation of one-way traffic between India and the Arab countries, Mr. Karmarkar said that on account of the West having entered these markets earlier, the trade of these countries had remained artificially diverted, especially as a result of the influence of foreign credit and insurance institutions and the facilities which foreign shipping companies provided for the development of trade in particular directions from the natural channels in which it might have otherwise flowed. Mr. A. D. Shroff, who presided over this conference, wanted efforts at an international level for the removal of restrictions on travel to promote economic relations among countries of the world.

Marine Fisheries

The Bombay Government has formulated a plan, to be spread over the next five years, for developing some of the existing fishing harbours in the State. The four main fishing harbours in Bombay, earmarked for development in the immediate future, are the Sassoon Docks, Versova, Bassein—all of them situated in Bombay Island—and Satpatti, 80 miles away. Two harbour specialists from Sweden, who have been lent by the Food and Agriculture Organisation to India to carry out a survey of the shore facilities for the requirements of mechanised fishing vessels, and who were in Bombay some time ago, are reported to have made a preliminary survey of the ports already. The two experts who accompanied themselves with the movement of sea-waves around Bombay Island and the flood-tide conditions caused by the monsoon, are now touring Madras and Travancore-Cochin. After touring the South, the Swedish experts will fly to New Delhi to hold talks with Union Government officials.

Woollen Piecegoods Imports

Woollen piecegoods dealers in Bombay have urged the Government to remove restrictions on the face value of the imported woollen material during the January-June 1956 period. It is stated that the present provision in the import policy restricting the import of woollen fabrics costing Rs. 6 a square yard or less than that, to 10 percent of the face value of the licence has in practice covered a much wider range of qualities than the authorities might have intended. The trade has pointed out that this restriction was imposed by the Government with a view to cutting down imports of shoddy woollen fabrics presumably to promote indigenous industry. But recent experience had shown that the restriction on the face value had tended to include several other qualities such as palm beach, tropical suiting, and panama. Besides, other varieties such as grey flannel, tweed, velour and overcoating, which are not manufactured in the country and which cost less than Rs. 6 a square yard had also become subject to the restriction. It is claimed that the restriction on the face value has, thus, covered nearly 75 percent of the imported qualities. The present import quota has been fixed at 33 1/3 percent and hence the quota available for this wide range of goods works out to only 3.3 percent. Traders have suggested, therefore, that if the Government cannot remove the restriction totally, it should be applied to 50 percent of the face value of the licence and the ceiling on the face value should be reduced to Rs. 4 a square yard.

Conference on Shipping Problems

Shipping circles in Bombay are looking forward with eagerness to the forthcoming meeting of the Consultative Committee of Shipowners on 18th November here, because it is likely to discuss the issue of Government subsidies to the shipping companies for operations on certain overseas routes, such as India-U.S. and India-Australia, which operations have so far been found to be uneconomic. The Committee is also expected to seek some relief in the existing structure of taxation and in regard to Customs duty on stores, accessories and machinery.

AUTUMN BUDGET FAILS TO SATISFY T.U.C.

FRESH WAGE DEMANDS NOT CONSIDERED INEVITABLE
(FROM OUR LONDON CORRESPONDENT)

THE past week has provided an opportunity for a more restrained appraisal of Government policy on the economic front, as presented in Mr. Butler's Supplementary Budget. The censure motion debate on this question in the House of Commons was not productive, unfortunately, of much more than a continuation of the personal mud-slinging which characterised the Budget debate itself, save that the Chancellor of the Exchequer, fortified by then with the knowledge that he had explained the purpose of his measures to the party backbenchers and secured their general approval, hit back hard and not ineffectively at the Opposition critics. The real test of his measures, however, has yet to come, but his meetings with the T.U.C. leaders and the employers on 1st and 4th November have not succeeded in meeting the criticisms from those directions, even though they may have provided him with some valuable pointers as to how he could secure a wider measure of the co-operation it is so necessary to have if the inflationary spiral is to be halted and confidence restored all round. It is generally believed that Mr. Butler is prepared to make some purchase tax concessions when the Finance Bill is debated in committee, especially in the case of goods which require little or no metal. The T.U.C. view of the Budget is unequivocally hostile. It feels that it could have been avoided had the advice it had offered the Chancellor last March been heeded. That it is now necessary is admitted, but the measures proposed for dealing with the situation it regards as being "inequitable". On the other hand, it does not seek to make political capital out of the situation and promises a fuller statement after further consideration. Unlike the Parliamentary Labour Party, it has not suggested that fresh wage demands are an inevitable consequence.

Fears and Favours

What will happen to wages is the main subject of doubt and fear, and present indications are that the outlook here is most uncertain. No new wage claims have been made as a direct outcome of the Budget—though one at least has been threatened—but several which had been decided upon earlier

and are now under consideration or being negotiated will almost certainly run into difficulties if the cost of living does show any significant upward trend in the near future. In addition, there have been a few token strikes as a demonstration against the Budget, and such disputes could easily get out of control. On the other hand, Mr. Butler can take heart from the fact that opinion abroad appears to have reacted favourably—sterling has been stronger than for a long while—and political opposition to his measures may in fact serve to influence such opinion in favour of believing that they might succeed. The decision to reduce housing subsidies and let rents rise to more economic levels has given an impression of courage and firmness which has been lacking in the Government's conduct lately. It is now admitted that the pressure on local authorities and nationalised industries may have a considerable effect on total activity, especially in conjunction with the continued credit squeeze. In other words, the view that there is nothing to retard the unbounded forward march of inflation is by no means universally held.

The Corner Turned

During October the gold and dollar reserves of the sterling area fell by \$48 million to \$2,297 million at the end of the month. This is a much smaller fall than in September, when they declined by \$112 million. Last month's outflow of gold included a payment of \$80 million to the European Payments Union in respect of September. The loss against the Union was much smaller in October; just over \$30 million falls to be settled during November. Thus for the first time this year there was a surplus (of some \$31 million) in trade between the sterling and dollar areas. A Treasury spokesman pointed out the other day that the figures were a marked improvement on September, and that the dollar account had been relieved of the pressure of bear speculation against sterling. But he gave the warning that, though the underlying position seemed to be improving, too much should not be read into a single month's figures—good or bad. He added that the October settlement with the E.P.U. had "borne the brunt of the deficit" and though it was uncomfortably large there was no reason to think capital movements had influenced it greatly.

The Finance Bill

Apart from giving effect to Mr. Butler's main Budget proposals, the Finance Bill, issued last week and due for debate this week, sheds further light on two minor proposals referred to in the Chancellor's speech, those dealing with "dividend stripping" and the payments into reserve funds

by underwriters. In the case of the former, the proposals relate to the computation of profits of financial concerns whose dividends received on shares are paid out of profits accumulated before the shares were acquired, and cases where exemption from tax is claimed on dividends paid out of past profits similarly accumulated. The effect of the proposals is that the dividends concerned will now be included as a trading receipt. Mr. Butler said that "dividend stripping" had caused considerable loss to the revenue which he could not allow to continue. The bill also announces the increase promised on the amounts which Lloyd's and other underwriters may pay into their special reserve fund or funds under the Income Tax Act, 1952. The present figure of "£5,000 or 25 percent of that profit, whichever is less" is being altered to "£7,000 or 50 percent of that profit, whichever is less."

Persian Oil Progress

Considerable progress has been made in the past year towards reinstating the Persian oilfields to the important position they held in world oil circles until Mr. Mossadeq scrapped the old agreement. Persia had entered into with the Anglo-Iranian Oil Company. It is just a year since the new agreement between the Persian Government, the National Iranian Oil Company and the international oil consortium, in which British Petroleum has a 40 percent participation, came into being, and eleven months since it was actually put to work. In that time Persia received over £26.7 million from the operation of its oil industry in Khuzistan. This is stated in a report issued by the operating companies to mark the first anniversary of the agreement. Payments for the current Persian year, ending next March, are expected to be about £35 million, with an additional £18 million in foreign exchange brought into the country to meet operating expenses. Payments in the year to March 1953, are expected to be about £67 million. Oil production in the eleven months ended 30th September was 12,666,000 tons. Production of crude oil is to be progressively stepped up and will total about 71 million tons in the first three years. About half of this will be refined at Abadan, the balance being shipped as crude. Under the agreement British Petroleum (the former Anglo-Iranian Oil Co.) receives £25 million in ten equal annual instalments from 1st January, 1957, as compensation from the Persian Government and about £214 million from the consortium, mainly from royalties.

New Capital for Brooke Bond

Despite a record turnover, profits of Brooke Bond and Company for the year ended 30th June, 1955, were the worst since group accounts were first prepared in 1948. Turnover rose more than 25 percent to £87,750,000, but the net profit dropped to £467,862 from £1,261,651. This setback is explained by the fact that losses on distribution, particularly in Britain, to the extent of £1,200,000 were deliberately absorbed in keeping down prices to the consumer when tea was costing more. Indeed, the situation might well have been worse but for the writing back of over-provision for overseas taxes in the past and overseas staff pensions and the profits from overseas subsidiaries, particularly tea and coffee plantations. All goes well for the current year, and with a firm tea market earnings are excellent so far. The ordinary dividend has been maintained at 12½ percent.

Soon more capital is to be sought to finance expansion and development both here and abroad, particularly to meet working capital needs at the peak buying season. Among the interesting moves contemplated prior to this is a proposal to give one vote for each 24 "B" shares. At present the 600,000 "A" 5s. shares have one vote per share and 11,400,000 "B" 5s. shares none. If the new voting proposal is agreed and another 3 million "B" shares are issued, total votes of "A" and "B" shareholders will be equal. The innovation comes when non-voting shares are being adversely criticised. Now Mr. John Brooke and his co-directors make their decision to facilitate the "B" share issue. Mr. Brooke has left two methods open by seeking larger borrowing powers and an increase of 3 million "B" shares in authorised capital. Money may be raised by either method or by issuing loan capital with a right to convert it into "B" shares.

Cocoa-growing in Malaya

It is now some years ago that the idea of growing cocoa in Malaya was first mooted and the original tentative experiments towards that end were first undertaken. From the blackout which followed, one might have been led to think that it had been abandoned. This has been far from true, and this week cocoa manufacturers and traders have been asked to subscribe £160,000 to promote a new company that will carry the proposal a stage further. The scheme is backed by Cadbury Brothers, the Birmingham chocolate makers, by C. J. Van Houten and Zoon, the Dutch chocolate makers, by Harrisons and Crosfield, the Oriental planters, and by the Colonial Development Corporation. Malaya, the promoters say, is a new cocoa-growing industry on a large scale. The experiments conducted there have shown that cocoa thrives on Malayan soil as well as in West Africa. They say that world supplies of cocoa have fallen short of potential demand and that by the high cost of its raw material. There is no ground for anticipating adequate expansion in the production of West Africa, America, or the West Indies to supply all the cocoa that could be consumed. Experiments in cocoa-growing in Malaya have been started by the Colonial Development Corporation, which is financed by the British

Uttar Pradesh

U.P. LEGISLATURE APPROVES STATE'S DRAFT PLAN

NEED FOR ORGANISED TOWN PLANNING

(FROM OUR LUCKNOW CORRESPONDENT.)

THE U.P. Legislature, after a four-day debate, has given its approval to the draft of the State's second five year plan. Originally the State had submitted a Rs. 725-crore plan which was cut down by the Planning Commission to Rs. 265. If the new proposals are accepted, the estimated outlay will be Rs. 370 crores. According to the State's Planning Minister, Mr. C. B. Gupta, this is the absolute minimum required for a plan which seeks to increase the national income by 25 percent (1947-48 base year). Agriculture and irrigation claim allotments of Rs. 45.4 crores and Rs. 27.1 crores respectively, as against Rs. 16.9 crores earmarked for industry. Out of the Rs. 16.9 crores to be spent on industrial expansion, Rs. 12 crores is intended solely for the promotion of cottage industries. Although the sum set aside for industry as a whole might seem small compared with the allotments for agriculture and irrigation, the Government claims that substantial sums under other heads will indirectly contribute to industrial development. The expenditure of Rs. 58.5 crores on power projects will thus aid industrialisation by the provision of cheap power, while Rs. 4.9 crores out of the Rs. 27.9 crores set aside for education, has been reserved for technical training schemes.

Flood Damage Insurance Scheme

Inasmuch as the State has attained self-sufficiency in food, the second plan will devote attention mainly to cash crops like sugar cane, jute, cotton and oil seeds. Forests, soil conservation, co-operation and animal husbandry claim Rs. 26 crores. The provision for medical and public health services is Rs. 25.5 crores. The flood-control schemes under the second plan will cost Rs. 27 crores. The State Government has decided to set up a committee consisting of high officials to prepare a flood insurance scheme to insure the villagers against flood damage. It is proposed that every villager living in a "susceptible area" should pay Re. 1 annually as premium. The Government would contribute an equal amount on behalf of each policy-holder, and the funds thus created would insure the policy-holder against flood damage. Some time ago the State Government asked two prominent Indian insurance companies to prepare a scheme for flood insurance but both companies expressed their inability to take any interest in the matter, hence the present decision to go ahead with the scheme entirely on the Government's account.

Opposition criticism was mainly devoted to the disappointment caused by the scaling down of the original Rs. 700-crore plan to nearly half its size, but the blame, according to the State Government, rests with the Centre which had asked the States to prepare plans having regard to their "physical needs". The gap between needs and resources in the State, it was argued, could only be met if the Centre were to make allotments to the U.P. on a population basis. But the determining factors, in the Centre's view, are backwardness and the incidence of taxation. Uttar Pradesh eminently qualifies on the first count because, as Mr. Panikkar's note of dissent to the State Re-organisation Commission has pointed out, U.P. is the most backward of all Part A States in many respects. As regards the State's claim for distribution of the divisible pool on a population basis, it may be recalled that it was admitted both in principle and practice by the Finance Commission of 1952 so far as the divisible pool of income tax was concerned. The Commission had reported that the pool should be distributed "20 percent on the basis of relative collection of the States and 80 percent on the basis of their relative population according to the census of 1951."

Housing and Slum Clearance

Immediate steps to set up an independent town planning organisation in each State to direct the preparation of regional development plans, was recommended by the Autumn Planning Seminar on town planning which concluded in the city this week. The seminar, which was attended by town planners from all over the country, had the two-fold objective of mutual education and the creation among planners of an increasing awareness of the benefits which town planning conferred on the community. The seminar felt that although development plans had been prepared for some towns, suitable legislation for their enforcement was lacking. On the question of land development in relation to housing and slum clearance, the conference was of the view that general principles should be laid down governing payment of compensation. In slum areas, legislation should recognise the provision of services as the liability of the slum owner, and local authorities should be empowered to provide these facilities at the expense of the slum owners on a pro rata distribution of the estimated cost of works. In U.P. alone, there are over 20,000 slums, but except in Kanpur no steps have been taken to tackle the problem. The State's Minister for Local Self-Government, Mr. Ali Zahir, told the seminar that the main difficulty in the way of slum clearance in U.P. was the low paying capacity of the slum dwellers.

The average income of a working class family is not more than Rs. 50 to Rs. 60 a month, and in the case of non-industrial workers it is even less. But the housing units constructed for them, even with a 50 percent subsidy, have to be let out on an economic rent of Rs. 10 a month. Mr. T. J. Manickam, President of the Institute of Town Planners, India, who presided over the seminar, appealed to the Central and State Governments to associate a trained town planner with them, as in Assam. Unless this is done, he said, "there will not be much future for those that are being trained at the Indian Institute of Technology, Kharagpur and those proposed to be trained at the School of Town and Country Planning, Delhi." At present large amounts are being spent on subsidised industrial housing and low-income group housing. The plans are prepared by overseers and assistant engineers without any planning background. An overworked P.W.D. overseer is put in charge of a development block in a community project.

Crisis in Sugar Market

A major crisis has arisen in the khandari sugar market which is U.P.'s most important cottage industry. About 25 percent of the manufacturers have decided to suspend their business as they are not able to bear any further losses. They claim that the ex-Chief Minister, Pandit Pant, had given them an assurance that the present system of sales-tax realisation would be given up in favour of an alternative system based on the capacity of each manufacturer. The present Ministry is aware of no such commitment and it has refused to alter the status quo. More than 70 percent of khandari sugar is exported outside the State and is not liable to sales-tax, but the manufacturers have to undergo a lengthy process of ren-

dering accounts for the entire quantity of sugar, although the liability to pay sales-tax is for a limited quantity only. They feel that this process in which they have to adduce evidence to secure exemption for 70 percent of their product causes them more inconvenience than the actual taxation itself.

Appeal by Worker

In an interesting case arising from the dismissal of a worker from a Deoria sugar mill, the High Court of U.P. (Allahabad) has upheld the verdict of the Labour Appellate Tribunal that the management was within its rights in dismissing the offending worker. The worker had sent a letter to the general manager saying that he resented the purani harkat of the general manager in not allowing leave to office-bearers of the Union to represent their case before the tribunal. The expression was resented by the general manager who held that it was subversive of discipline and dismissed the worker. When the matter went to an adjudicator, he ruled that the expression was without malice and that the punishment was excessive. The management went in appeal to the Labour Appellate Tribunal which reversed the findings of the adjudicator and held that the expression was subversive of discipline. The worker then filed an appeal in the Allahabad High Court which has upheld the Appellate Tribunal's judgment. Mr. Justice Chaturvedi, in rejecting the petition, observed that whether an expression which was offensive and subversive of discipline was true or not had no effect on the expression amounting to misconduct. The malice, according to his lordship, in such an expression when true, is often greater depending on the occasion and circumstances in which it is used.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to August, 1955. Compared with July, the August index for preference shares reveals a rise of 0.1 point, while that for government securities discloses a drop of 0.2 points.

There were increases in banks 11.3 points, coals 2.6 points, jute 6.0 points, minings and oils 27.7 points, cements 5.8 points, engineering 28.2 points, sugars 13.7 points and miscellaneous 1.0 point, while decreases occurred in cottons 7.8 points, teas

12.7 points and papers 1.3 points.

Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 11.5 points during August, 1955.

Jute

SPECULATORS DOMINATE JUTE GOODS MARKET

ERRATIC FLUCTUATIONS CAUSE NERVOUSNESS

THE present acute shortage of heavy goods throughout the world has had far-reaching repercussions in Calcutta. In the short space of a fortnight heavy goods prices have been pushed up by more than Rs. 100 a ton, the controlling influence being entirely in the hand of speculators. Local shippers, who have a fairly large bear account to cover, are being held to ransom for their requirements, because most of the heavy goods available have been cornered by operators who are now reaping their harvest. Calcutta mills have practically no balances to sell for the near position and thus, with no alternative source left open to them, shippers have had to pay the higher prices or default on their contracts. Erratic price fluctuations have been the order of the day, as profit-taking at higher levels followed heavy buying pressure. Thus it has not been possible to ascertain the true state of the market at any one precise moment. This state of affairs was not conducive to business, and it is significant that out of various enquiries received from overseas for firm offers only a few came back. During the week heavy goods prices were higher than they have been since the middle of May this year, and with stocks at a low level the general situation would appear to be sound. There is still little holding power in the market however. The rapid rise, combined with the almost hourly erratic fluctuations, has made operators uneasy, and has brought about a general feeling of nervousness in all transactions. The effect on the market of even the smallest of business has therefore brought about changes out of all proportion to its size. It is natural in these circumstances for the market to be swayed by the remotest or unlikely rumours, and these have played a significant part in the week's dealings.

Several proposals for solving the present problems have been presented in rumour form, not the least of which is the unsealing of the 12½ percent of looms taken out of production under the IJMA agreement of 1952. This was brought to the fore after a recent speech by the President of the Gurney Trades Association in which he urged that the looms now lying idle should once again be put into production because the circumstances leading to their closure are no longer operative.

There have been many rumours over the past few months regarding the mills raw jute stocks, and these have again been raised by the present circumstances. It is the considered opinion of raw jute sellers in general that buyers' stocks are low, and this has been borne out by the fact that buyers have flooded not only the local Cossipore markets with their representatives, but upcountry markets as well. This refers in the main to Daissee and Mesta agencies, as these are the fibres in most common use at this time of the year. It would appear from this that the Cossipore market cannot satisfy their demands, and by their actions in the agencies it is perfectly obvious that they are not concerned with quality or condition, but only with quantity. Their need is so great that in some cases it is reported that they have even sent their own transport to ensure quick delivery. This turn of events has naturally brought about a revision of sellers' ideas, and very high prices have been asked, and paid, for jute containing a considerable amount of moisture. Many sellers have withdrawn from the market completely and it is now very firm. During the week raw jute rates advanced about Rs. 60 a ton, which still gives the manufacturer an advantage when compared with the rise in heavy goods.

Significant Fall in Mills Stocks

The fall in mills' stocks of jute goods at the end of October, 1955, was not unexpected, and indeed was one of the main reasons for the continued firmness in the goods markets. Standing at 62,100 tons, stocks are now at their lowest for over five years and are made up of 29,600 tons hessians, 28,900 tons sacking and 3,600 tons of miscellaneous manufactures. The drop in hessian and sacking stocks are 4,800 tons and 3,400 tons respectively. Compared with this time last year stocks are down by 7,300 tons. Hessians and sacking stocks have undergone a levelling-out process during the month and the percentage ratio between them is now less than 1 percent. Hessian stocks now comprise 47.6 percent of the total and sacking stocks 46.7 percent, miscellaneous manufacturers making up the balance 5.7 percent.

THE JUTE MARKETS

Manufactured Goods: The goods market opened last Thursday on a very firm note, still under the influence of speculative activity, and heavy goods prices were marked up by Rs. 1-8 a 100 bags and hessians by 4-8 annas a 100 yards. B. Twill quotations opened at Rs. 114-8 for ready shipment, and Rs. 109-12 for January-March shipment whilst 40" 10 oz. hessians stood at Rs. 40-8 and Rs. 40-6 for the same deliveries. Overseas buyers were showing no interest in the market. Operators began to get nervous and heavy selling pressure took place in the afternoon session, with speculators taking their profit at the higher levels. This caused an easier feeling to prevail and prices dropped rapidly, and by Friday morning the previous day's gains had been wiped out. Small interest at the

lower levels prompted operators to start another buying campaign, and rates in the heavy goods section gradually recovered. By Saturday morning ready B. Twills were back again at Rs. 114-4 and forward shipment Rs. 109-12. The hessian section was completely neglected and rates here showed no change. All the interest in the sacking section was concentrated in the near-delivery positions, as there was a shortage of ready goods and mills only sold sparingly. Over the weekend persistent rumours that mills were to unseal the 12½ percent of looms closed down under the Working Time Agreement caused speculators to pause, and rates receded. But when this was discounted the market again recovered for B. Twills to open on Monday morning Rs. 1-8 higher in the ready position and Re. 1 for forward shipment. The hessian section responded in sympathy and moved up 2-3 annas. In anticipation of the publication of mill stock figures, prices were marked up during the opening session and, as expected, stocks showed a substantial drop. Quotations were slow to react due to further rumours regarding unsealing of looms, but recovered on speculative buying by bulls on some small enquiries from Burma. A combination of these factors pushed prices up, and by the opening Tuesday ready B. Twills were quoted Rs. 2-4 more than the previous day's quotations and stood at Rs. 118 a 100 bags which is the highest figure recorded for nearly six months. The forward section reacted to a lesser extent and January-March shipment moved up Rs. 1-4 to

Rs. 112-4. The hessian section reacted to the large drop in hessian stocks and 40" 10 oz. advanced 10 annas in all deliveries to rule at Rs. 40-13 for ready shipment and Rs. 40-8 for January-March shipment.

At the close the markets are steady with all fabrics recording slight increases. Opening quotations on Wednesday morning were as follows:—

	Ready	November	December	January, March,
	Rs.	Rs.	Rs.	Rs.
40" 8 oz. hessians	33	33	32-14	32-10
40" 10 oz. hessians	41	41	41	40-10
B. Twills	118-8	117-8	114-4	112
Heavy Cees (Plain)	114-8	114-8	114	112
A. Twills	138	138	137-8	135
Liverpools	133-8	133	131	128
Cornacks	117-4	117-4	116-12	113-8

Raw Jute: During the week raw jute prices have shown a steady advance, and not all of this has been due to the firm goods markets. Mills have shown a fair amount of interest, and are still seeking quick delivery jute, a fact which has caused further speculation regarding the mills' raw jute position. Many sellers have withdrawn from the market completely, and are only interested at their own terms. A seller's market has developed and business done has been at rising prices. Another bullish factor has been the small imports into all upcountry agencies, and mills' attempts to secure jute in these agencies has turned the market against them.

Quotations opened on Thursday last on the basis of Rs. 27 a maund for Upper Assam Bottoms for November-December shipment, this being 8 annas a maund higher than last week's closing rates. For the rest of the week, up to the weekend, there was very little alteration in these rates, but buyers had difficulty in obtaining offers at these prices as sellers were reserved with steady

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October, 1955, as follows:

Description	31st October, 1955.		30th September, 1955		Increase over (+) or decrease from (-) last month		31st October, 1954.	
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons
Hessian Cloth & Bag Standard Hessian (included in above)	11.27	29.6	13.16	34.4	-1.89	-4.8	8.40	22.9
Sacking Cloth & Bag Standard Sacking (included in above)	6.81	28.9	7.74	32.3	- 93	-3.4	5.51	14.9
Others	5.34	21.9	6.41	26.1	- 3.0	-	9.96	44.7
Grand Total (000 Tons only)		62.1		69.7		-7.6		69.4

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai.

ideas. Over the weekend, raw jute responded to the speculative activity in the goods market and prices shot up by Re. 1 a maund. But mills took very little interest at the higher levels. The improvement continued and on Tuesday Upper Assam was quoted at Rs. 28-8 a maund, but no business was reported at this price.

During the week mills took a fair amount of interest in jute at the lower levels, and business was reported in Dhubri-Northern jute at Rs. 27 to Rs. 27-8 a maund basis Bottoms for November-December shipment. Local Northern jute was also done at Rs. 27-8 for ready shipment and 8 annas less for shipment during November-December. Upper Assam jute was done at Rs. 27 a maund for November shipment with Assam Tossa at a premium of 8 annas for the same shipment. A fair quantity of Murshidabad Tossa jute was purchased at Rs. 27 for ready delivery and Rs. 25-8 to Rs. 26-8 for November-December shipment. Good business was done in Daissee jute for 1 November-1 December shipment at Rs. 27-8 to Rs. 28-8 a maund, and for nearer shipment at between Rs. 28 and Rs. 28-8 a maund. Varying prices were paid for Daissee Mesta jute, and for forward shipment rates were based on Rs. 24-8 to Rs. 25 a maund, but for ready shipment mills paid Rs. 25-8 to Rs. 26-8 a maund. The only business reported in pucca bales was Pakistan cuttings at Rs. 103 to Rs. 105 for ready Bills of Lading.

At the close the market is unchanged, but there are very few sellers at the quoted rates. Opening quotations were as follows:—

Indian Jute:	Landed at Mills Rs. a maund basis Bottoms.	Shipment.
Lower Assam	28-8	Nov.-Dec.
Upper Assam	28-8	"
Northern	28-8	"
Murshidabad White	27-8	"
Daissee Ex Agency	29	"
Daissee Ex Cossipore	28-8	"
Daissee Mesta	26-8	"
Bimil	26-8 for F.A.Q.	"
Local Packing (Northern)	28-8	"

Tossa is quoted at Re. 1 to Rs. 1-3 a maund above the price of White Jute.

Pakistan Jute:	Rs. a maund, basis Bottoms.	Shipment.
Jat	29	Nov.-Dec.
District	28-8	"
Northern	28	"

The local Cossipore markets are extremely firm due to the fact that demand far exceeds supply, and this in spite of imports showing a slight improvement. During the week a total of 720 wagons were reported at Cossipore Sidings for an average of about 100 wagons a day, but this was only achieved by a fairly large increase on the last two days. Good prices are being paid for all arrivals, but sellers are not releasing their full quantities. At the close Kishenganj jute is quoted at Rs. 27-8 a maund for garsat quality. The Daissee markets are very firm and increased activity by mill representatives in the agencies has caused sellers to withdraw from the market completely. Imports are very small and all arrivals contain heavy moisture. Latest quotations in Sheoraphuli are based on Rs. 27-8 a maund for garsat quality.

Mofussil: Indian upcountry markets are very firm in sympathy with the Calcutta goods market, and also on account of the deterioration in imports. Sellers are very reserved and are not offering at these prices, which are already above the parity of those offered to Calcutta mills. Latest quotations in Dhubri are based on Rs. 24-8 a maund basis Bottoms.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
1st to 5th November, 1955	906.8	10,720.8	11,627.6
1st to 5th October, 1955	952.1	7,519.8	8,471.9

THE FOREIGN JUTE MARKETS

INDO-PAK CO-OPERATION NEEDED

CONTINENTAL jute manufacturers are now feeling the draught from the abolition of the export taxes on jute goods from India and they find it even more difficult to compete. The Indian jute mills appear to be doing very well for themselves, in spite of the competition from Pakistan. No one wishes to see a price war between the two countries. Hopes are expressed that India and Pakistan should get together and discuss plans for maintaining prices for jute goods at an economic level. Germany, Belgium and Italy are all feeling very depressed over the situation, as they find their export trade in jute goods is disappearing. The former tendency in raw jute prices, last week brought out more business in jute yarns and cloth in this market and prices for these are very firmly maintained. Of course, the U.K. export trade is just a shadow of its former self, owing to the high prices that must be charged. Even with the advance that has lately taken place in value of Calcutta goods, the value of 10 oz. 40 in., after allowing for the expense of bringing the goods to the U.K., etc., is about 8.40d a yard, compared with the net Dundee rate of 12.10d. Shippers of raw jute are not offering so freely Mill Firsts and grades above and values generally are firmer. Known marks of Mill Firsts are not under £92 and Mill Lightnings £82, while Mill Hearts rule from £73 to £75, November-December shipment, cif U.K. In some cases Mill Firsts are not being offered, it being stated that the shippers are unable to secure the necessary quality. Daissee and Tossa qualities are offered all round at unchanged prices, the minimum in all cases. Dundee spinners have been buying more freely of late, but seem to be pausing again.

Calcutta goods have advanced recently, heavy goods being especially strong. At the close on 3rd November, the position was quieter, after a firmer opening, and 10 oz. 40 in. was quoted at 60s 9d for shipment, November to March, and 71 oz. at 46s 3d November, 46s December and 45s 3d January-March, with "B" twills at 172s, 169s and 165s for the respective positions of shipment, f.o.b. Calcutta. Spinners are mostly sold now to the end of this year in the hessian yarns and business is being done for January, while there is a definite improvement in the cloth end. Some changes in prices were issued during the week-end before last to take effect from 31st October. Sacking 24 lb. weight was reduced from 11.51d to 11.18d a lb., and rose from £92.10s to £88.5s for 48 lbs., £88 to £81.5s for 96 lbs. and there was no change in the rate for 200 lbs. Sacking prices were all raised by anything up to .50d a yard, to iron out some anomalies existing in the pricelists, and tarpaulin and bagging rates were all put up a fraction.

PRODUCTIVE TECHNIQUES IN INDUSTRY

The British Institute of Management has published a book setting out ways and means of developing easier and more productive methods in industry. It is a volume devoted to "method study"—which, it is emphasised, does not replace the ability to make the best use of available information or the inventive genius or organising ability necessary to develop new methods. "What the book, 'is to show where change is most likely to be effective by highlighting unnecessary activities and showing where improvements are possible. By integrating method study with the normal process of management the search for improvement becomes a matter of accepted and normal routine throughout an organisation'.

With work study generally, states the British Institute publication, no attempt should be made to apply method study without the full backing of management and until satisfactory relations have been established at all levels. "The techniques have been successfully used in industry for the design of new factories for the distribution of finished products," says the book, "as well as in the many auxiliary activities in canteens, sales departments, and in medical, transport, and fully applied outside the manufacturing industry aircraft gunnery, and the rehabilitation of the blind".

LONDON INSURANCE LETTER

NATIONAL OR PRIVATE

By Air Mail.

IT was not a mere coincidence that two particularly inflationary years, 1951 and 1954, were years of particularly rapid growth in insurance. The current year is also characterised by inflation, and, even without statistical corroboration, one can confidently say that it is another good year for insurance. But what of 1956, after the Government's persistent efforts to halt inflation? Will there be much surplus available for saving through the medium of life insurance? The economics of the relationship are involved, and it is not immediately clear why inflation, which results from too little saving, is good for insurance, which involves saving. The practical explanation is that when incomes are buoyant the public can pay its insurance premiums without seriously restraining its spending.

The supplementary Budget last month was designed to promote saving, but by companies rather than individuals; the tax on distributed profits was raised. Deflation as applied to individuals took the form of increases in indirect taxes and, therefore, in retail prices. If this method works (demands for compensating increases in incomes are already strong), there will be less surplus available for such purposes as insurance premiums—and the deflationary purpose will be to that extent frustrated. However, the public has shown itself remarkably loyal to insurance, even when reluctant to save in other forms. Sums assured on individual policies were valued at £518 million in 1950, at £758 million in 1954—an increase of nearly one-half. (Group assurances increased about one and three-quarters in the same period; but that class was on a secularly rising trend.) Thus, any fear that National Insurance would take a slice out of private insurance has been proved groundless.

The public does not, in fact, recognise an element of saving in the national scheme. It pays

(willingly or reluctantly) its share of the weekly stamp on its insurance card mostly with a view to medical benefits, though the scheme is planned also to provide for unemployment and retirement. It had a high social purpose when evolved during the war, but in the postwar inflation it has been so inflexible and inadequate that there were suggestions at the recent Labour Party Conference that its whole basis should be changed: that the contributions (equivalent to premiums) should cease and the whole scheme be based on taxation. Indeed, the public regards the contributions as a form of tax and would probably be happier if straight-forward assistance, in various forms, could be granted out of public funds, leaving voluntary insurance—based on the individual's assessment of his means and needs—free of any direct competition.

Results Compared

The full returns for 1954 were published by the Life Offices' Association and the Associated Scottish Life Offices last month. In the same month the Industrial Life Offices' Association published its figures for the year. Both groups showed impressive increases. The figures already quoted brought the totals of individual assurances outstanding (including bonuses) to £5,594 million and of group assurances to £942 million. The total premium income on life business was £317 million last year, compared with £290 million in 1953, and 34 percent of it related to staff pension and life assurance schemes. Total life funds, including industrial, reached £3,500 million of which one-third was invested in gilt-edged stocks, one-third in industrial securities (not all ordinary shares), one-fifth in mortgages and real property, and the remainder in miscellaneous funds.

Overseas business was an important feature of last year's activities. Of total new ordinary life sums assured amounting to £671 million, £129 million was written abroad. The proportion in group and endowment business is naturally smaller, but not negligible—£10 million out of £203 million. Industrial—or home-service—assurance is not, of

course, an export. Broadly defined, this business relates to life assurance policies whose premiums are payable at less than two months interval to door-to-door collectors. In terms of the number of policies, last year's business declined; the combined total of companies and collecting societies, at 5,885,000, compared with 6,016,000 in 1953, was less than in any other postwar year. But premium income continued to rise, by more than £5 million to more than £148 million last year. And there was a welcome increase in management expenses in this relatively costly method of operating.

Side-effects of Inflation

The effects of inflation on premium incomes and on total funds are by now fairly familiar. Less publicised is its effect on the insurance companies' staffs. The assistant national organiser of the Guild of Insurance Officials, Mr. J. J. Shaughnessy, has foretold a crisis in relations between managements and staffs, because living standards of insurance workers are deteriorating while the business is gaining increasing returns. He mentioned head offices employing men who could "drag on to a very senior age and never hope to get more than £10 a week"—appreciably less than the average for a male factory-worker. The problem of recruiting is, indeed, urgent, and it cannot be deferred until electronic offices economise labour and enable the salaries of remaining staffs to be substantially raised.

This problem will be aggravated by a Budget which increases the cost of living. On the other hand, if it is financially deflationary, the Budget may reverse the trend of insurance funds into ordinary shares—which had already been checked by the decline of share values after mid-year. Gilt-edged securities seem now to be established on a stable basis; and more industrial loan stocks (on whose interest no distributed profits tax is payable) will doubtless become available to absorb insurance funds.

Let's look at PROGRESS—Stanvac Quiz No. 2

1 IRRIGATION SCHEMES ARE A VITAL PART OF THE PLAN. BY 1953-54, THE AREA OF LAND UNDER IRRIGATION HAD INCREASED BY:

A) 8,100,000 ACRES
B) 1,300,000 ACRES
C) 2,700,000 ACRES

2 EXPORTS OF EVERY KIND ARE VITAL TO A COUNTRY'S PROSPERITY. DURING 1954-55 INDIA'S EXPORTS OF SALT TOTALLED:

A) 4,575,280 MAUNDS
B) 1,505,211 MAUNDS
C) 831,010 MAUNDS

3 THE ORIGINAL TARGET FOR TELEPHONES HAS BEEN SO FAR EXCEEDED THAT A NEW TARGET HAS BEEN FIXED. THE NUMBER OF TELEPHONES PRODUCED IN 1954-55 WAS:

A) 8,233 B) 16,078
C) 48,234

4 THE PLAN CALLS FOR NEW SCHOOLS, EDUCATION FOR ALL. BY 1954, THE NUMBER OF NEW SCHOOLS WAS:

A) 28,063
B) 25,700
C) 12,400

ANSWERS

1 8,100,000 ACRES OF ADDITIONAL FERTILE, PRODUCTIVE LAND—TO GROW MORE FOOD FOR INDIA!

2 4,575,280 MAUNDS OF SALT WERE EXPORTED IN 1954-55, EARNING RS. 3,367,900 IN VALUABLE FOREIGN CURRENCY!

3 48,234 TELEPHONES WERE PRODUCED IN 1954-55. THE ORIGINAL TARGET FOR THE ENTIRE PLAN WAS 25,000 TELEPHONES!

4 25,700 NEW SCHOOLS HAD BEEN OPENED BY 1954—WONDERFUL PROGRESS IN PROVIDING EDUCATION FOR THE CITIZENS OF TOMORROW!

STANDARD-VACUUM ARE PROUD TO PRESENT THIS TOPICAL INFORMATION ON INDIA'S PROGRESS—AND PROUD THAT OUR THREEFOLD ACTIVITIES OF PRODUCING, REFINING AND MARKETING OF PETROLEUM PRODUCTS ARE CONTRIBUTING TOWARDS IT.

Commodity Markets

PAKISTAN'S NEW EXPORT PROMOTION SCHEME

IMPORT LICENCES ON A 'QUID PRO QUO' BASIS

WITH a view to developing the export trade of Pakistan the Government have decided to introduce an Export Promotion Scheme for the period from 25th October, 1955 up to 30th September, 1956. The scheme embraces two kinds of exportable products of Pakistan, namely, primary commodities and manufactured goods. There is no doubt that the Export Promotion Scheme is more ambitious than the Export Incentive Scheme which terminated on 30th September. The incentive provided to these two kinds of exports will further be aided by a separate provision dovetailed with the scheme, allowing a rebate of Customs Import Duty on raw materials used by industries in the manufacture of export goods, making the whole scheme three sided.

The exporters of 67 items included in the primary commodities list will be entitled to receive Import Licences up to 15 percent of the foreign exchange earned by their export, for the import of a range of 46 items in demand in the country. The exporters of 53 items of manufactured goods will be entitled to use 25 percent of the foreign exchange earned from their export, for the import of transport equipment and items of machinery, raw material, and packing material needed in the manufacture of the items included in this category. A further concession is allowed in cases where the importer-manufacturer and exporter is the same company. The concession in each case, however, will depend on the actual requirements and scope of the industry. A distinctive feature of the new scheme is that an Import License will be admissible under it even when the exporter has earned exchange entitlement of Rs. 1,000 only, which should materially help the small exporters.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base year ended August 1939=100) advanced further by 0.3 percent to 359.8 during the week ended 22nd October, 1955 as compared with 358.8 for the previous week. The index was higher by 2.5 percent as compared with the corresponding week of the previous month but was 5.9 percent lower than that of a year ago. During the week under review, the index for Food Articles moved up further by 0.3 percent to 320.4 owing to an increase in the prices of gram at Patna (+12%), dal arhar (+6%), gur at Muzaffarnagar and tea (+5% each), bajra (+4%) and coffee (+2%) notwithstanding a decline in the prices of wheat (-6%) and gram at Hapur (-3%). Higher prices of iron ore (+5%), rapeseed in Bombay and cottonseed at Amravati (+4% each), castorseed in Bombay and lac (+3% each), rapeseed at Kanpur, linseed and groundnuts in Bombay (+2% each), raised the index for Industrial Raw Materials by 0.1 percent to 408.7 although prices of gingellyseed in Bombay and raw silk (-6% each), manganese ore (average export prices) (-3%), raw wool in Bombay and rapeseed in Calcutta (-2% each) and copra (-1%), were marked down. The index for Semi-Manufactures moved up by 0.7 percent to 332.2. Items which showed significant variations during the week were: Mustard oil and gingelly cake (+4% each), groundnut oil in Bombay, cow hides and gingelly oil (+3% each), sheep skins, goat skins, linseed oil, zinc and copra (+2% each) and buff hides (-4%). The index for Manufactures rose by 0.2 percent to 370.9 due to an advance in the prices of jute manufactures (+2%) during the week under review. An increase in the prices of pepper black at Cochin and chillies at Patna (+2% each) was responsible for a rise in the index for Miscellaneous which stood at 559.4 as compared with 559.0 for the previous week.

LONDON TEA SALES

AT last week's London tea sales, the 67,019 packages on offer realised an average price of 4s 11.32d a lb, against 5s 1.01d in the previous week and 6s 5.93d a year ago. Plain broken pekoe was nominally quoted at 3s 6d; in the previous week 3s 8d to 3s 9d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	648	4/6½
Amgoorie	275	7/2½
Assam Frontier	540	6/7
Balijan	126	6/8½
Borhat	378	5/5
Buxa Dooars	252	4/9½
Chubwa	468	5/6½
Consd. Tea and Lands	1,334	4/9½
Dangua Jhar	86	4/2½
Dekhari	263	6/4½
Deviturai	150	4/9½
Duckwari	102	4/11
Eastern Assam	108	6/6½
Highland	108	4/9
Imperial Ceylon	102	4/8
Jetinga	300	3/9½
Jhanzie	868	5/5½
Jorehaut	744	6/11½
Lankapara	131	4/6
Longai	504	3/6½
Lunuva	846	5/1½
Majuli	654	5/5½
Makum	252	6/0½
Moabund	228	7/1
Nedem	2,203	4/
Nuwara Eliya	154	6/6½
Pabbojan	258	6/5
Rupai	138	6/5½
Scottish Assam	276	5/4½
Standard	400	6/6½
United Planters	516	5/11
Upper Assam	312	6/0½

U. K. Tea Stocks

U.K. stocks of tea on 28th October amounted to 110.6 million lbs, against 89.6 million lbs a year ago.

TEA CONSUMPTION AND IMPORTS IN U.S.A.

THE Tea Council of the U.S.A. has issued the following figures to show the per capita consumption of tea in that country since 1937. The points to notice are that consumption has been rising steadily since 1948, and the rise last year was especially encouraging.

	Per Capita Consumption (15 years & over)	Population (Total)
(lbs.)	(lbs.)	(Total)
1937	.95	.70
1938	.87	.65
1939	.93	.69
1940	.91	.69
1941	1.06	.68
1942	.70	.60
1943	.63	.53
1944	.80	.47
1945	.79	.60
1946	.74	.59
1947	.81	.55
1948	.78	.57
1949	.84	.61
1950	.86	.63
1951	.87	.63
1952	.87	.63
1953	.90	.65
1954	.97	.69

India is naturally a major supplier to the American market, and the figures below show the contributions of the more important producers.

	*India	Ceylon	Indonesia	**Others	Total
(In million lbs.)					
1945	48.3	38.1	—	—	86.4
1946	49.2	41.4	—	5.4	96.0
1947	39.2	22.3	—	10.3	71.8
1948	27.5	45.3	3.6	14.9	91.3
1949	34.4	31.8	11.2	18.0	95.4
1950	41.7	44.3	9.1	18.7	113.8
1951	32.7	29.4	8.5	13.5	84.1
1952	35.7	42.2	10.0	6.7	94.6
1953	37.3	45.7	11.2	10.8	105.0
1954	40.9	39.9	14.7	20.2	115.7

*1945-50 tea from Pakistan included.

**British East Africa, including Nyasaland not reported separately before 1951. Since then: 1951-2.5; 1952-1.5; 1953-1.8; 1954-3.1 million lbs.

COCHIN TEA SALES

At Dust Sale V, 450,000 lbs of tea were on offer. There was a good general demand. Powdery Milled Dusts were dearer; others fully firm.

Engineering and Transport

ROLLS-ROYCE "TYNE" TURBOPROP
HIGH POWER WITH LOW FUEL CONSUMPTION

RELEASE of major specification details of the Tyne turboprop engine indicates an important step in the development of a type of powerplant which the manufacturer, Rolls-Royce, pioneered some 12 years ago. The original Tyne project was for an engine of some 2,500 h.p., a figure which presented what was considered the maximum potential of the Dart, powerplant of the Viscount airliner. Detail design work started in 1953, and by spring 1955, when the prototype RB. 109, as it was then known, first ran, a figure of some 4,000 h.p. was obtained. The full initial rating of this engine, which is due to undergo tests in a Lincoln flying test bed early next year, is 4,020 s.h.p. plus 1,175 lb. thrust, a total equivalent h.p. of 4,470 at take-off. However, this does not represent its full development potential. By the time the Vickers Vanguard airliner, for which this engine has been specified, goes into service during 1950-1960, the Tyne may well be developing nearly 5,000 e.h.p.

Fuel Economy

Design of the Tyne's predecessor, the Dart, was started in April 1955 as a 1,000 e.h.p. turboprop engine suitable for trainer aircraft and for possible civil application. Eight years later, when the first Viscount entered service with British European Airways, the Dart was developing 1,400 e.h.p. Today, the Mark 510 incorporates many improvements and produces 1,742 e.h.p. A later development is credited with 2,105 e.h.p., more than twice that of the original project.

One of the outstanding features of the Tyne is its fuel economy. When it starts service life, the manufacturer claims that, although giving 2.8 times the cruising power of the Dart when it first went into airline service, its specific fuel consumption—that is, its hourly fuel consumption in relation to its power—will be 40 percent less. Fuel economy is achieved in turboprop, as in reciprocating, engines by utilising a high compression ratio and maximum combustion temperature. The former is done by using two compressors, low and high pressure units, thus increasing the pressure at which air is delivered to the combustion chamber. The compression ratio of the Tyne, at 12.1, is the highest so far announced for any engine and compares with 5.5:1 for the Dart.

Combustion Temperature

The combustion temperature of the Tyne has not been announced, but is likely to be a good deal higher than in any comparable engine. Normally, very high flame temperature greatly reduces the life of turbine blades, and Rolls-Royce have incorporated developments derived from their latest military turbojet engines, notably the Avon, to counter this problem. The turbine blades are manufactured with integral cooling passages through which air, bled from the compressors, is forced to restrict the blade temperature to a reasonable maximum. Although this system increases the stresses on the blades and uses air which would otherwise be used to drive the turbines, the consequent rise in operating temperature results in a great increase in power. The Dart had an overhaul life of 400 hours when it first went into service. Today, it is operating with an overhaul period of 1,050 hours. It is to be expected, therefore, that the Tyne will establish a similar record of reliability and economy of operation.

\$10 MILLION ORDER FOR BRITANNIAS

Canadian Pacific Airlines' order, recently announced, for three Bristol Britannias, with an option on a further five, brings to 42 the number of these aircraft that have been ordered, with options on seven more. C.P.A.'s Britannias, long range mark 300s, are due to be delivered in late 1957 after orders for similar aircraft for El Al and BOAC have been fulfilled. Apart from a reconnaissance version being built for the Royal Canadian Air Force in Canada under licence, this is the first dollar order to be placed for the Bristol airliner and, with spares, it is worth \$10m. Initially, C.P.A.'s Britannias will be used on long haul Arctic and Pacific routes. Carrying 100 passengers,

it is claimed that they will be able to fly from Vancouver to Amsterdam (4,700 statute miles) in 12 hours, and from Honolulu to Vancouver in less than 7 hours.

CEYLON ORDERS DRAGONFLYS

The Royal Ceylon Air Force has placed an order for Westland Dragonfly helicopters, thus bringing to eight the number of overseas countries to adopt this aircraft. The Dragonflys will be shipped to Colombo for assembly on arrival.

GROWTH OF U.K. OIL CONSUMPTION

Britain's exports of refined petroleum products during the first nine months of this year amounted to over 4,500,000 tons, valued at nearly £57,670,000, according to figures just released in London. Some two millions tons—nearly half the total tonnage—was accounted for by fuel oil worth £13,683,000. Motor spirit, though only 930,000 tons, represented a total value of well over £15,250,000. Other important oil products exported during the period were gas oil and Diesel oil. Noting that total receipts were some £7 million less than in the corresponding period of last year, the Petroleum Information Bureau explains that this is due almost entirely to the rapid rise in fuel-oil consumption in the United Kingdom as a result of growing industrial activity. During the first half of this year, British consumption of fuel oil rose by as much as 25 percent, and home demand for petrol and other products has likewise been steadily increasing.

FOREIGN FIRMS WILL PARTICIPATE IN MORE NEW INDIAN PLANTS

The Carborundum Co. of the U.S.A. will produce grinding wheels, sandpaper and abrasives in Madras in a joint venture with an Indian and a British firm, according to a report in the current issue of the McGraw-Hill American Letter (Indian Edition). A German company, Carl Still, will build a \$9.5 million coking plant at Durgapur in West Bengal. Capacity will be 1,300 tons daily. A Japanese firm has bought 49 percent of the shares in the Government-run Sodepur Glass Works. Germans will build India's first television station in Bombay in 1957 for \$5 million. A U.S. engineering firm has completed studies concerning South Indian steel output and has recommended a \$4.9 million expansion programme for the Mysore Iron and Steel Works.

ALUMINIUM LIMITED ANNOUNCES QUEBEC SMELTER EXPANSION

An immediate expansion of primary aluminium smelting facilities in the province of Quebec to provide an additional capacity of 22,000 tons a year has been announced by Aluminium Limited. The new potroom facilities will be constructed by Aluminium Limited's principal subsidiary, the Aluminium Company of Canada Ltd., as an extension to its existing smelter of 92,000 tons capacity at Isle Meligne in the Saguenay River district. The additional capital investment is estimated at \$15 million and the Company says that in view of the large expansion programme already proceeding at Kitimat and in Jamaica, some new financing will be required. It is expected that Aluminium Company of Canada Ltd.'s outstanding 54 percent second preferred shares will be redeemed and that a larger preferred share issue will be offered in Canada later this year.

ENGINE PRODUCTION IN NORTH AMERICA

Orenda Engines of Canada have announced that, by the middle of this year, 6,500 of their engines had been delivered. The Orenda turbojet powers the CF.100 and Canadian-built Sabre. The U.S. Government is said to be interested in their latest engine, the P.5.13, which has been specified for Avro Aircraft's CF.105. Orenda Engines are reported to be exploring the possibility of having this engine built in the States under licence if an American order is forthcoming. Canadian sources quote it as developing more than 20,000 lb. thrust. Armstrong Siddeley Sapphire (J-65s) are still in large scale production in the U.S.A. By the beginning of October this year, some 6,500 of these engines had been built for installation in American high-performance aircraft. The Bristol Olympus, known in the U.S.A. as the J-67, has been adopted for the XF-103, an advanced experimental interceptor.

Calcutta Markets

LOWER RATES PREVAIL IN TEA EXPORT AUCTIONS

C.T.C. ASSAMS REMAIN FIRM

At Sale No. 21, offerings in the Export Auctions consisted of 48,500 chests. There was a fair general demand when the market opened but as the sale progressed this weakened and at the close most kinds were selling at irregularly lower rates. Exceptions were well made whole leaf grades, all black leafy Broken Pekoes and stylish BPS' which were fully firm and often dearer. The few tippy teas on offer sold well while Darjeelings met with better support. Best liquoring sorts, medium BOP's and all types of Fannings were about one to two annas lower, whilst plain liquoring stalky kinds were also a weak feature of the sale.

Quotations	1955	1954
Clean Black Pekoe	2 8 0	Rs.
Plain B.P.	1 15 0	Rs.
Medium Assam B.P.	2 0 0 to 2 1 0	3 4 0
Best CTC Assam B.P.	3 0 0 to 3 4 0	

At the Internal Sale, offerings of Dusts consisted of 19,400 chests, for which there was a fair demand at the commencement of the sale but for most descriptions this weakened as the sale progressed. CTC Assams, however, were in very strong demand throughout, and sold between 1 to 1½ annas above last rates. The few powdery Assams, with good liquors and the black leaf types suitable for the Middle East were firm and occasionally dearer. The remaining teas on offer opened at about half an anna below last rates but at the close were 1 anna easier. Poor liquoring teas were the weakest feature and were often difficult of sale.

Quotations	1955	1954
Medium Doors Dust	1 12 0 to 1 12 6	2 7 0 to 2 7 6
Medium Assam Grains	2 13 0 to 2 15 0	2 9 6 to 2 10 0
Dust	1 15 0	2 7 6 to 2 8 0
Best Assam CTC Dust	2 13 0 to 2 15 0	2 9 6 to 2 10 0

Of Other Grades 3,000 chests were on offer, among which there were a few clean teas which were about firm. The remaining offerings were very irregular and generally selling at 1 to 3 annas below last rates. The very brown stalky residue types were difficult of sale.

DECLINING TREND IN FREIGHT RATES

The fall in the markets reported last week has continued and is more widespread. Coal from America to the Continent declined to 64s for December shipment representing a fall of 8s in one month whilst Australian grain charterers reduced rates by 5s a ton for bulk wheat at 145s to the U.K. Sugar from Durban to the U.K. fell 2s 6d a ton to 125s whilst there was much more keenness amongst owners to take advantage of the high time-charter rates still on offer. The Indian ore trades featured once again and higher rates were paid from Vizagapatnam to France at 115s f.i.o. and to U.S.N.H. at \$(U.S.) 16.50 which may well have been occasioned by the preference given liners at the ore berths at that port.

SUGAR MARKET EASY

During the week ended 9th November, sugar sales in the Calcutta market averaged 2,500 bags a day. Arrivals daily were 1,500 bags and stocks totalled 110,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-12 for ordinary grain and Rs. 32-12 for big grain. Ex-mill delivery rates varied between Rs. 26-15 and Rs. 27-7 for D-28 grade sugar, depending upon quality and freight differential advantage. The market was quietly easy.

LINSEED

The market remained steady last week and despite a good demand trading was limited owing to shortage of supplies. Crushers showed a keen interest, but with few ready goods available prices moved up appreciably. The oil section was active and there was a notable increase in prices: shippers purchased fair quantities and a good demand continued following a steady rise recorded in the London market. Latest quotations were as follows: November-December Rs. 19-12-0 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 1st November and 7th November, 1955)
Cowhides.—Wet salted (Ord.) 5,000 pcs. on the basis of Annas 11-6 to Annas 12-6; Wet salted (Ord.) 6,000 pcs. on the basis of Rs. 9-8 to Rs. 10; Wet salted (Slaughtered) 14,500 pcs. on the basis of Rs. 12-8 to Rs. 25.

Goatskins.—Wet salted (Daissee, Killed) 34,430 pcs. on the basis of Rs. 220 to Rs. 240; Rs. 255 to Rs. 310 and Rs. 350 to Rs. 375; Assam-Dinaipur-Murshidabad 31,900 pcs. on the basis of Rs. 255 to Rs. 285; Fumeah-Kissenganj 40,900 pcs. on the basis of Rs. 250 to Rs. 280; Pakur-Patna 6,000 pcs. on the basis of Rs. 245 to Rs. 250; Muzaffarpore-Patna 44,000 pcs. on the basis of Rs. 275 to Rs. 280.

COMPANY AND PUBLIC NOTICES

TEZPORE TEA COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the above-named Company will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on Monday, the 12th day of December, 1955 at 4 P.M. to consider and if thought fit to pass, with or without modification the following resolutions, namely:—

- (a) That it is desirable to capitalise a sum of Rs. 3,96,570/- being part of the undivided profits of the Company standing at the credit of the Company's General Reserve Account and accordingly that the said sum of Rs. 3,96,570/- be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 12th day of December, 1955, holders of the 1,58,631 issued Ordinary Shares of Rs. 10/- each in payment in full for 39,657 new Ordinary Shares of Rs. 10/- each and that such 39,657 new Ordinary Shares credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share for every four issued Ordinary Shares held on the 12th day of December, 1955, by such persons respectively, provision being made for fractional cases, and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares save and except that they will not participate in any dividend declared in respect of any period ending on or before 31st December, 1954 and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.
- (b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 39,657 new Ordinary Shares credited as fully paid up amongst the persons who are on the 12th day of December, 1955, holders of the 1,58,631 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them, provision being made for fractional cases.
- (c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreements as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 12th day of December, 1955 by some persons to be appointed by the Directors in that behalf under Article 175 of the Articles of Association of the Company.

The Ordinary Share Transfer Register of the Company will be closed from the 1st December, 1955 to the 12th December, 1955, both days inclusive.

By Order of the Board,

SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 5th November, 1955.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE.

THE Thirty-eighth Ordinary General Meeting of the Shareholders of The Indian Iron & Steel Co. Ltd. will be held on Monday, the 28th November, 1955, at 11-0 a.m. at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

- (1) To receive the Directors' Report and pass the Audited Accounts for the year ended 31st March, 1955.
- (2) To declare a Dividend on the Ordinary Share Capital.
- (3) To elect Directors.
- (4) To appoint Auditors and fix their remuneration.

The Share Registers of the Company will be closed from the 15th November to the 25th November, 1955, both days inclusive.

By Order of the Board,

MARTIN BURN LTD.,
Managing Agents.

Calcutta, 10th November, 1955.

NOTE—If the Dividend as recommended by the Directors is passed at the Meeting, it will be paid on or after the 5th December, 1955, to those Shareholders whose names are on the Company's Register on the 25th November, 1955.

THE METHONI TEA COMPANY, LIMITED.

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any statements or for the correctness of any of the statements made or opinions expressed with regard to them."

NOTICE is hereby given that an Extraordinary General Meeting of The Methoni Tea Company, Limited, will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Wednesday the 30th day of November, 1955 at 3-30 O'clock in the afternoon, for the purpose of considering, and if thought fit, of passing with or without modification, the following Resolutions:—

- (1) That upon the recommendation of the Directors it is desirable to capitalise the sum of Rs. 2,00,000/- being part of the Reserve Account of the Company and representing undivided profits of the Company and accordingly that the said sum of Rs. 2,00,000/- be capitalised and distributed among the members on the footing that they become entitled thereto as capital in pursuance of Article 161 of the Articles of Association of the Company and that the said Capital sum be applied on behalf of the persons who are on the 30th day of November, 1955 holders of 80,000 Shares of Rs. 10/- each in payment in full for 20,000 shares of the Company of Rs. 10/- each and that such 20,000 shares credited as fully paid be accordingly allotted to such persons respectively in the proportion of one share for every four shares held by the holders of the existing shares on the 30th day of November, 1955 and that the shares so distributed shall rank in all respects *pari passu* with the existing shares save and except that they shall not participate in any dividend declared prior to the passing of this Resolution and shall also be treated for all purposes as an increase of the Capital of the Company held by each Shareholder and not as income.
- (2) That pursuant to and in accordance with the last mentioned Resolution and in satisfaction of the said Capital sum the Directors be and are hereby directed to allot and distribute (fractions being ignored) 20,000 new shares of Rs. 10/- each credited as fully paid among the persons who are respectively on the 30th day of November, 1955 holders of 80,000 shares of Rs. 10/- each. PROVIDED that the issue of such shares by the Company shall be subject in the case of members not resident in India, to the consent of the Reserve Bank of India being obtained thereto in accordance with the provisions of the Foreign Exchange Regulations Act 1947, for the time being in force sent not being obtained the Directors be and are hereby authorised to dispose of such new shares in India in such manner and to such persons (including the Directors and the Managing Agents) and upon such terms as they may think fit in the interest of the Company.
- (3) That the draft Agreement providing for the allotment of 20,000 shares of Rs. 10/- each in satisfaction of the said Capital sum submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and the Directors be and are hereby authorised to affix the Common Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding the day of November, 1955 by some person or persons on their behalf as may be appointed by the Directors in that behalf under Article 162 of the Articles of Association of the Company.

By Order of the Board,

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 5th November, 1955.
NOTE: The Share Transfer Book will be closed from 23rd November, 1955 to 30th November, 1955, both days inclusive.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount issued in 1000 Rs.	Rate per cent	Paid up per Share	Market Quotations		Year of issue	NAMES	Amount issued in 1000 Rs.	Rate per cent	Paid up per Share	Market Quotations

FOREIGN EXCHANGE FOR THE SECOND PLAN

TRADE AND BORROWING PROSPECTS: SPECIAL PROBLEM OF PRIVATE CAPITAL

IT is now estimated that the second plan will absorb double the foreign exchange provided for in the plan frame. This was perhaps the most important point raised in Mr. Deshmukh's recent Press conference. Even the new figure of Rs. 800 crores may not be the final estimate because, as the Finance Minister has hinted, the complete plan will probably involve an overall investment target even higher than that contemplated at present. If it does, foreign exchange requirements will almost certainly have to be revised. They may have to be anyway from time to time, because export earnings are not something which can be forecast accurately for an indefinite period ahead. The revised plan estimates now show a gap for investment in the public sector of Rs. 1,300 crores, including the increase in foreign exchange requirements. Part of this gap will be closed by extra taxation. It can be reduced even further by increased deficit financing; this the economy has shown a remarkable capacity for absorbing during the last few years. The least painful method of handling what remains would seem to be to encourage foreign resources into the country on a much larger scale than at present. It would not be impossible to do this. There would be difficulties, but a determined approach could avoid most of them. The over-riding advantage would be that the country could do considerably more with much less strain to itself, and that is a prospect which deserves careful consideration.

All methods of getting hold of foreign exchange will have to be exploited to the full. Export earnings can no doubt be raised, subject to the fluctuations of world markets. An expansion of international trade seems to be assured during the next few years, but it would be surprising if there were no recessions to interrupt its steady flow, and the world's changing tastes do not always provide a completely reliable foundation on which any single country can commit itself to important long-term outlays. One advantage of earnings is that, unlike borrowings, they do not involve any liability which must be serviced in the future. But when the economy has to be distorted to provide them, they do represent a burdensome method of raising urgently-required development resources. They also absorb material and skilled labour which can often more profitably be used within the economy. This point varies in importance depending on the extent to which any particular industry is adapted to serving the export markets, but it is relevant to them all. Straight-forward earning power is going to depend on many variables in the next five years, but if the plan is to have any meaning, foreign exchange sources will have to be diverse so that their combined yields will be fairly reliable.

Inadequate and fluctuating foreign exchange earnings can be supplemented in two ways; the money can be borrowed, or it can be accepted as a gift. The first method is the one which will doubt recommend itself to a country with India's present attitude towards accepting foreign aid. Some use has already been made of it, at least for short-term borrowing, and Mr. Deshmukh has suggested that there might be an approach to the London capital market when the situation demands it. This is all to the good. Resources borrowed represent so much less burden on those currently available internally. International borrowing is a respectable and widely-used means of tiding a country over a difficult economic period. Its sole disadvantage is that it eventually involves interest payments, if not repayment of principal. India's credit is high by comparison with other under-developed countries and there should be little difficulty in raising what loans are required in the course of the coming plan. When the prudent limit of borrowing is reached, financial aid

can no doubt be obtained, in addition to that already expected. But this source is not inexhaustible and, because it is almost completely American sponsored, is dependent to some extent on the changing moods of international politics and the even more rapid variations in the internal affairs of the United States. Foreign aid is the easiest way of obtaining exchange resources, in spite of the prejudices the Government has sometimes shown towards it, but it has certain disadvantages which are not easily corrected. Running down the sterling balances has its drawbacks too, as Mr. Deshmukh has pointed out, although greater use might be made of this method than is being done at the moment.

Private foreign lending is one of the best and most widely approved

cyclical variations. The lack of flexibility in costs is indeed the biggest threat to the Indian industry in the long term.

In the face of a sound statistical position, Britain's poor interest in the Calcutta market has been puzzling. Her stocks, including the quantities entered for Customs and afloat, are lower than they were a year ago. Last year, the extraordinarily low level they had reached induced frantic buying at very high prices. This year, in what looks like a very similar inventory situation, Britain is content to sit out and wait although tea is much cheaper—in fact, about the cheapest it should be considering the expense involved in producing it. The dearth of credit, which is part of the British Government's anti-inflationary drive, is no doubt the major reason why U.K. stocks are being run down. The credit squeeze is also one of the factors hampering the activities of smaller buyers, who normally constitute a useful support for the market. But against this goes the fact that consumption in Britain this year is apparently higher. Deliveries from U.K. warehouses between 1st April and 31st October, 1955, amounted to 293 million lbs. which was nearly 20 million lbs. above the corresponding 1954 figure and 13 million lbs. above 1953. Deliveries still continue at a good average rate of about 10 million lbs. a week. U.K. consumption and stock trends thus suggest that the world's biggest consumer cannot stay away from the world's biggest producer for very much longer.

Even if that proves correct, the fact remains that the industry's prospects for this season have already suffered considerable damage which might, with care and thought, have been avoided. The growing pressure of stocks in Calcutta, in the face of limited warehousing facilities, exercises influence of the sort which restrains buyers from operating on a weak and anxious market in the hope that prices will fall further. With a sound demand-supply position, this could prove a risky policy for consumers; but, as market observers know, sentiment often counts for more than statistics. Whatever happens to tea prices, some of the lessons of recent months cannot be easily ignored. The chief of these lessons remains the need for greater market stability. The obligations regarding this fall not only on producers, but on the host of other interests whose concern it is to improve transport and storage facilities. There is also perhaps a need for official ambitions to be better adjusted to local limitations, and for greater attention to consumer reactions. The last is especially important in the case of export industries, and not tea alone.

THE PROSPECTS OF WORLD SLUMP LETTING A BOOM GO TOO FAR

IN newspapers, magazines, and books, there have been reminiscences and analyses this year of the collapse of the American boom in 1929 and of the international slump that followed it. Nearly every study has concluded that a repetition of those experiences is no longer possible. But that the subject should be raised at all reflects, if not anxiety, at least unease, in a situation where the boom has been allowed, again, to proceed too far. It is generally accepted—though in the nature of the facts it cannot be conclusively proved—that the great world slump of the 1930s was primarily caused in America, and that it was the collapse of values of real property and shares, and consequently of credit, in America that started the chain-reaction in that country. That collapse, in turn, resulted from wild speculation, which so inflated monetary values that they lost contact with reality; current worth (represented, for instance, by shares' yields on their latest dividends) was unimportant when capital appreciation yielded financial wealth almost overnight. America's relative importance has increased, not diminished, since 1929, and if there were signs that the mood was recurring in that country the rest of the world might indeed be apprehensive. But there is also, some economists believe, a danger that we may be too complacent. The absence of those obvious causes of a slump does not prove that no slump can occur.

Speculation and inflation are not the same things. Even in the speculative fever of 1929 recognised symptoms of inflation were lacking. There was no general strong rise in commodity prices, nor any general shortage of labour. The world may not have suffered much from over-speculation in the latest boom, but it has certainly suffered from inflation. The strong rise in commodity prices in 1950-51 was healthily corrected and not fully resumed, but the shortage of labour has in recent years grown more acute. The effects of the reaction against this inflation cannot yet be clearly seen. The inflation itself is uneven, more apparent, this time, in Europe than in America; but in their different ways all the leading countries

are reacting against it. The boom has been moderated, but it has not slid into a slump. It has been said that the boom's resistance—its susceptibility to correction without collapsing—proves that the economic position of 1955, unlike that of 1929, is fundamentally healthy. But, since there had not been excessive speculation, there was no reason to expect any such reaction as occurred in 1929. It remains still to be proved that the forces that continued the chain-reaction in the 1930s, after the speculation had been wiped out, are no longer in existence.

It is easy to point to symptoms of continuing inflation, but it is also possible to see symptoms of deflation. Dismissal of redundant workers in the motor industries of Britain and Germany is significant, as further expansion of these industries has been planned. The motor industry is not as predominant in Europe as in America, but it is relatively more important than ever before in Britain and in some other countries, where it has been hitherto a major element in the boom. In America, recession in the motor industry, which some observers predict for 1956, would alone be sufficient to disturb the whole economy. A decline in house-building is another symptom. The building industry—a big element in any advanced economy—will be visibly in recession if demand for new factories and offices is relaxed. Motors and building use much steel, and the steel industry, at present expanding, would show surplus capacity if such important consumers of its output could not maintain their demand. These are, in the first place, industrial problems, whereas a feature of the slump of the 1930s was the fall in commodity prices and consequent severe damage to the primary-producing economies. But commodity prices, though on the whole mainly steady, are no longer strong. It is significant that copper and rubber, which led the rise in its last phase, have reacted sharply; though the recovery of wool shows that upward movements can still occur. Commodity prices are, of course, very sensitive to industrial conditions and prospects; and primary-producers' incomes are still an important factor in the demand for manufactures. That a shortage of materials and foods is statistically calculable for the future does not mean that a medium-term recession in these categories is impossible.

Another symptom of deflation is the decline of ordinary share prices in the major stock markets of the world. This movement is partly a reflection of counter-inflationary policies, but it represents also a reassessment of the current earnings and the prospects of industry. The stock markets' judgment is not infallible, but they have often in the past predicted both recession and recovery in industry. Moreover, the men who buy or sell shares are in many cases the men who make decisions in trade and industry, and if their activities are cautious in the one sphere they will not be venturesome in the other. We have not yet enough experience of moderating booms to know whether these changes that have occurred this year—especially in the second half of it—are simply a reflection of the policies of restraint, an adjustment of excesses. If so they are entirely healthy. They will allow progress to be consolidated in preparation for the next phase of advance. But those policies will be judged by their effect on supply as well as demand, on production as well as consumption. Inflation will be checked without damage if the slight excess of demand and consumption over supply and production is eliminated, while the "natural" increase of supply and production continues. If both sides of the equation are reduced, a balance can still be struck, but in a state of recession, which might well be cumulative.

CURRENT COIN

Cheaper Industrial Finance.—A useful clarification of the aims and activities of the Industrial Finance Corporation of India was given by Mr. K. R. K. Menon, Chairman of the Corporation, before the committee of the Indian Merchants Chamber in Bombay last week. He said that efforts were being made to reduce the legal expenses involved in securing money from the Corporation. The reduction or abolition of stamp duty depended on State Governments; some of them had agreed to give special concessions on transactions with the Corporation. The suggestion of Mr. Babubhai Chinai, President of the Chamber, that the I.F.C. should be allowed to provide more risk capital by liberalising the terms and conditions under which it gave assistance, apparently met with a cool reception from Mr. Menon. This is understandable. After a number of sorry episodes, such as that concerning the Sodepore Glass Works, it is the Corporation's duty to be stricter about the people and the purposes for which loans are given. It would be doing a real disservice if it came to be looked upon as a convenient source of money for those who, either because of ability or integrity, cannot attract others to invest in their

enterprise. Replying to pleas to reduce the interest rate, Mr. Menon stated that for the Corporation this was determined by the rate charged by the Reserve Bank and the Government. The Corporation did not generally insist on personal guarantees from the directors of borrowing undertakings, but asked for these only in marginal cases. As regards assistance for private limited companies and partnerships, State Finance Corporations were authorised to give loans. Mr. Menon said that in course of time the Industrial Finance Corporation might perhaps be in a position, if the law were amended, to extend assistance on the same lines. For the present, its hands were full with public limited companies. It was proposed to leave the underwriting of shares and debentures for the time being to the Industrial Credit and Investment Corporation. The Industrial Finance Corporation would however consider the suggestion whether it should guarantee payments for the import of plant and machinery.

Control of Indian Insurance.—Mr. J. B. Jalan in his address from the chair at the 48th. Annual General Meeting of the General Assurance Society Limited, spoke strongly on behalf of Indian insurance companies. He discussed frankly the whole question of nationalisation, which as he pointed out "will dampen the atmosphere of confidence and stability generated by the great success achieved by Indian insurance in recent years." The General Assurance Society has, he reported, made encouraging progress during the past year, but this in no way modifies the difficulties with which it still has to contend. These are the high cost of maintenance, increased wage demands and "the bogey of nationalisation." Mr. Jalan pointed out that since the enactment of the Insurance Act of 1938, "the pattern of investment, distribution of profits, extent of expenses etc. already conform to socialistic patterns to an extent not in vogue in any other country." Insurers invest 55 percent to 60 percent of their funds with the Government. On an average a bare 6 percent of profits go to the shareholders while the rest is ploughed back to the policy-holders in the form of bonus. Investments other than in Government and approved securities are strictly regulated and in every way the corrective jurisdiction of the Controller is always there. Proceeding to the suggested utilisation of life funds for the second five year plan, Mr. Jalan showed that, of the total life funds of Indian insurers, 55 percent to 60 percent is invested with the Government. Loans etc. account for say 10 percent to 15 percent; stocks, shares and debentures for another 10 percent to 15 percent and even there it is forbidden to hold more than 10 percent ordinary shares of any company, the balance being invested in mortgages, properties and so forth. In addition, Mr. Jalan recalled the report of the Shroff Committee and its recommendations to the Government in regard to the part that might be played by insurance companies in providing long-term industrial finance. While fully recognising the rôle of insurance companies in this behalf, the Committee recommended the modification of Section 27 and 27(A) of the Insurance Act so as to enable life insurance companies to have greater scope to invest their funds in other than Government securities and approved securities. It also recommended that a consortium be formed jointly by the insurance companies and the commercial banks under the leadership of the Imperial Bank, since converted into the State Bank of India, for underwriting or investing in new shares and debentures of industrial companies. "It is a matter of disappointment to us," added Mr. Jalan, "that the Government could not find its way to act up to these very important recommendations."

Short-fall in Small Savings.—The small savings' target for the first five year plan is unlikely to be reached. According to Mr. Malhotra, National Savings Commissioner, the collection so far totals Rs. 173.8 crores as against the plan target of Rs. 225 crores. The current financial year, which is also the last year of the first plan, is more than half way through. The receipts during the remaining months, considering the annual average during this plan period, cannot possibly make up the gap of over Rs. 50 crores. The target fixed for the second plan is Rs. 400 crores—Rs. 80 crores a year. The annual average during the first plan on the basis of above receipts, making allowance for the receipts during the remaining months of the current financial year, should be placed at not more than Rs. 40 crores. The planners aim at doubling this figure. Mr. Malhotra naturally feels that the existing collection machinery is inadequate for the purpose and suggests that its reorganisation is essential. One idea he has in view is the setting up of saving groups in all parts of the country, particularly in cities and towns. This is the way small saving is promoted in the United Kingdom and the Commissioner thinks that the system can be usefully applied in this country. He also favours an enhancement of the existing ceiling of Rs. 25,000 for individual subscriptions. But this enhancement would go against the objective of the campaign, which is to mobilise the savings of the lower income groups. A practical view of the matter how-

ever suggests some modification of the objective. Mr. Malhotra pointed out that the bulk of the collections came from the provident-fund amounts and from people in the higher income bracket. He had no separate figures for urban and rural areas, but it is obvious that the savers come mostly from towns and cities. Since the Government will also have to draw upon the savings of the urban people for its various development loans, the net must be cast widely among the well-to-do groups in rural areas. One way of raising the figure in the urban areas may be a higher rate of interest, as the example of the National Savings Certificate suggests. But it will be undesirable to go on adding to the Exchequer's liabilities. The network of banking services now being organised in the countryside, the various co-operative agencies and people's local organisations, such as village panchayats, should be able to induce the rural people to subscribe to the scheme in the degree required under the plan. Its contributions to development finance apart, the small savings' scheme can provide a check to inflationary forces.

Progress of Irrigation.—The Deputy Chairman of the Commission, Mr. V. T. Krishnamachari, suggested at the recent annual meeting of the Central Board of Irrigation and Power, that a national survey should explore the possibilities of increasing agricultural acreage through extra irrigation and dry-farming methods. This is a suggestion worth considering, but it has its drawbacks. It is of course true that with the present rate of population increase at four million a year, the need for additional cultivated land is becoming pressing and a mere expansion in agricultural acreage is unlikely to solve the problem. Besides, such marginal land as can be brought under the plough is unlikely to make a material difference to the present precarious man-land ratio, at least during the next 10 year period when it is planned to double rural income. The solution lies chiefly in the improvement of agricultural techniques and organisation. The President of the Board, Mr. Desraj Mehta, chose to emphasise that "it is much more profitable to irrigate one acre of land under good and efficient methods than to water many acres indifferently and haphazardly." Mr. Krishnamachari is however of the personal opinion that about 150 to 160 million acres—that is almost 50 percent of the existing cropped acreage—can be brought under irrigation in this country. This looks much too ambitious a target to be achieved within any foreseeable period, though given time and resources, it is not an impossible one. But Mr. Mehta's warning deserves serious consideration in the present context of things. According to Mr. Krishnamachari's own figures, only seven million acres of land are likely to be brought under "secure irrigation" by the first plan period of a target total of 37.2 million acres for the first and second plan periods. He realises also that the complete target can be reached only during the third plan period. The performance however should not be considered discouraging, in view of the immense difficulties that have to be faced. But it is essential that equally close attention should be paid to improving the method of irrigation itself. Mr. Krishnamachari no doubt recognises this and he stressed strongly the need for a "very efficient and well-organised irrigation service of engineers for the future development of irrigation." How soon such a service can be brought into being will depend upon how well the States co-operate with the Centre. It is obvious that the service must be organised soon, if the tempo of irrigation work during the coming plan period, is to be stepped up in the manner contemplated by the Government.

Folded Yarns are Better.—The "Buy British" campaign, which certain Lancashire interests propose launching, has not yet got under way to any significant extent, but a sort of double-barrelled contribution is being made by the Cotton Yarn Doublers' Association, which has launched a campaign to promote sales of goods made from folded yarns. Publicity is being directed both to the retailer and to the consumer with the object of stimulating demand for high-quality textiles in the home market. It is hoped in this way to encourage increased production and lower prices, which will facilitate the sale of goods in the highly competitive overseas markets. The campaign, directed to the consumer, explains in non-technical language the superiority of two-ply cloths over single-yarn textiles. The emphasis is placed on longer wear, and ease and safety of laundering. The shopkeeper is given a more technical explanation of the virtues of two-ply goods, with the emphasis on increased sales. Retailers and consumers are left in no doubt that two-ply yarns are not confined to cotton goods, but cover rayon and other man-made fibres. The campaign is expected to double the demand for textiles made from folded yarn. The brochure tabulates the goods, the best qualities of which are made from yarns, and they range from shirts and socks to curtains and carpets. All potential buyers of these goods can learn that they are harder wearing, less easily soiled, less liable to fraying, and of greater lustre than similar goods made from single yarn. All

these factors, while they mean that the goods cost a little more at first, also mean a saving in the long run compared with cloths woven from single yarns. Emphasis is also laid on the need to buy British textiles. It is British two-ply cloths that the public is urged to buy. The brochure has reached 10,000 retailers who will in turn pass on a smaller leaflet to their customers.

Anglo-Japanese Trade Agreement.—The agreement on trade and payments recently signed in Tokio, negotiated against a background of increasing Japanese sterling balances, is of interest to the whole of the sterling area, for with sterling so much more convertible now the building up of large balances could be dangerous if they were utilised for payments all round the world. At the time of the 1954 agreement (prior to which sterling did not seem so useful to hold) Japan's sterling position was serious and it had become necessary, to maintain trade at a high level, to give Japan greater opportunities to earn sterling. The Japanese have done better than expected and the position is now reversed. By the middle of last year the tide turned and by the end of 1954 Japan had achieved a net surplus, which was due, it is felt, to the rigid maintenance of import and exchange restrictions to the extent of discriminating unfairly against imports from the sterling area. The purpose of the revised terms is to continue trading at a higher level—up to about £250 million either way—at the same time giving the sterling area the opportunity to earn back some of Japan's surplus by providing greater scope for competitive British exports. The Japanese Government is to set aside £127½ million for sterling expenditure in its winter budget, covering the six months October-March. Import quotas have been raised by about £3 million. Especially welcome in the U.K. is the increase from £2 million to £2,800,000 in the quota of Japanese imports of British wool textiles. The arrangements also provide for Japanese imports, on a limited scale, of high grade cotton

textiles. Japanese importers will also be free to decide whether to use their oil allocation for the purchase of sterling or dollar oil. With regard to "invisibles," Japan has agreed to the release of Britain's blocked film earnings which form the bulk of the blocked account. There should also be greater scope for British invisible exports such as insurance and merchanting. Most of Japan's additional purchases from the sterling area, estimated at around £25 million, will be raw materials from the Commonwealth. Australian wool is probably the most important single item, but Pakistan cotton and Indian iron ore will also benefit. British and Colonial exports to Japan will probably be increased by about 10 percent. Quotas for U.K. imports from Japan are mostly held at the previous level. But the apparel quota is cut by a small margin, while the canned salmon quota is raised by £2,500,000 to £4,700,000.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge with thanks, the receipt of the following donations:—
Rs. 40 H. E. The Governor of West Bengal
Rs. 230 Directors and Staff of J. Stone & Company India Ltd.
Rs. 100 Burmah-Shell
Rs. 55 Covenanted Officers of Lloyds Bank Ltd., Chowringhee.
Rs. 50 A. W. Scott
Rs. 25 each L. H. Merry, Herbert A. Luke.

GILT-EDGED RECOVER AFTER
EARLY FALL

SIMILAR TREND IN INDUSTRIALS

London, 16th November.

THE stock market continued to present an uncertain and dull appearance following the renewed weakness of gilt-edged until immediately before the week-end when a recovery developed on bear-covering. The better trend continued after the week-end, and although business remained small, prices recouped some of the losses. The improved trend was touched off by a recovery in gilt-edged which had fallen sharply earlier under the influence of the credit squeeze. The good October overseas trade figures and the strength of Wall Street were mainly responsible for the rally in funds. Foreign bonds moved within narrow limits and rails attracted little attention. Dollar stocks moved up in sympathy with Wall Street. The fall in gilt-edged brought lower prices for industrial equities early in the period, but losses were by no means large and there was a fairly widespread recovery later in sympathy with securities. On balance industrial equity prices were not much changed from the previous levels although falls predominated. The renewed weakness in Free State Geduld brought widespread falls in gold shares but a recovery was staged later. Prices, however, were lower on balance. Other mining sections moved irregularly, but coppers attracted support following the rise in the metal price and the strength of Wall Street. Oils fell back with the rest of the market but made a good

recovery later. Rubbers tended to be easier, but teas were well maintained for the most part.

The Money Market

Borrowers in the London money market encountered stringent conditions this week and last Wednesday were forced into the Bank of England to borrow a fairly large amount. Acute shortage was again evident on Thursday but the authorities, with the intention of keeping the market out of the bank, provided considerable assistance. Day-to-day money as a consequence ruled around the level of 4 percent for much of the week, while bill rates were firm at 4½ percent for the end of January and early February dates. However, despite the week's experience the money market made no change in its bid for this week's offer of Treasury Bills. Applications for £220 million 91-day bills totalled at an average rate of 82s 43d compared with 81s 11.65d last week. Applications for £50 million 63-day bills totalled £87,975,000 and were allotted at an average rate of 82s 5.70d against 82s 5.19d last week. Next week offerings will comprise £240 million 91-day bills and £50 million 63-day bills. The Bank of England return for the week ended 9th November showed notes in circulation around £2 million higher at about £1,772 million, while bankers' deposits about £5 million lower at around £246 million. Fine trade bills 3 months were 5 to 5½ percent.

Drop in U.S. Bonds

U.S. Government obligations experienced a sharp drop in the past week with a long end of the list showing widest declines. The slump in Treasury's issues was attributed in some quarters to less optimism over an early reversal of the current tight money situation together with a lack of investment interest. Convertibles moved ahead in more active dealings reflecting a rise in security values. American Telephone and Telegraph and

Bethlehem Steel were among active issues and higher by a point or so. Colorado Fuel and Iron and Inland Steel showed the widest gains, advancing some five points. World Bank 3 percent of 1972 and 1976 tacked on fractional gains. In foreigins, Greek 6 percent and 7 percent were in supply declining over a point for a new low, while Serbs were mixed. German Nationals added a point. South Americans were slow.

U.S. Federal Reserve Return

Federal Reserve Return for the week ended 10th November showed gold stock unchanged at \$21,686,000. Foreign deposits increased by \$13 million, while foreign investments rose by \$35 million. The Federal Reserve made no purchases of bills during the week. Total discounts and advances increased by \$17 million to \$1,202 million, while excess reserves of member banks dropped from \$469 million to \$259 million. Daily average of excess reserves increased by \$69 million to \$566 million, while average borrowings rose by \$200 million to \$1,143 million. Business loans of the New York City banks increased by \$44 million to \$8,810 million compared with a decline of \$40 million a year ago.

International Monetary Fund

Mr. C. M. Bernstein, the economist for the International Monetary Fund, has said that conditions for freer exchange of foreign currencies into dollars were "practically achieved." He told the sub-committee of the joint congressional committee on the economic report that current difficulties in Britain and sterling areas were "not large in magnitude and should be overcome in the coming year."

Hongkong Gold

The undertone of the Hongkong gold market was very steady during the past week although prices fluctuated somewhat. Opening at the week's low of 254-1/2, values advanced slowly, then reacted and reached the week's peak on Friday but eased again to close at 255. There was no special reason for the steadiness. Official offtake was 1,550 and unofficial 23,300. Arrivals were 30,000 ounces. Forward contracts were done at 37.75 U.S. dollars. Carryover charges were 40 cents in sellers' favour.

Advance in Platinum

Leading platinum dealers, Messrs. Johnson Mathey and Company, announced an increase in their price to £32½ an ounce from £29 previously. They say the rise was caused by the steady advance in the price of platinum on the free market together with considerable increase in demand. It is also stated that Rustenberg Platinum Mines in Transvaal, South Africa, whose whole output is refined and marketed by Messrs. Johnson Mathey, have already taken steps to increase production.

Rubber Prices Rise

The recent downward tendency was reversed this week with the market in a much more optimistic mood. Prices rose sharply on better outlook for rubber consumption and private reports of a possible shortage of butadiene in the United States, which may hamper synthetic production in the new year. These factors stimulated a broad buying movement and short-covering, with the action of Singapore an additional bullish influence. Developments at Geneva also possibly stimulated some support. Small interest continued in sole crepes with isolated spot demand. Business, however, was done in the usual width for Indonesia for early shipment—the first reported for some time.

Wage Demands in Viet Nam

Work on the Vietnam rubber plantations has been halted since last Thursday, according to reports just received from Saigon. The 25,000 workers on these plantations are asking for a wage increase of 100 percent but so far have only been offered a 20 percent increase. Viet Nam exported 55,000 tons of rubber last year.

U.K. Tea Markets

Offerings on Monday totalling 23,590 packages of North Indian and other Miscellaneous teas met rather better demand and prices were generally higher. Good quality and colour teas met keen competition and low priced plain kinds were relatively bought at distinctly dearer prices, while thinner liquoring medium Broken Pekoes and Pekoe Fannings were more strongly supported than of late. Plain Broken Pekoe was nominally indicated at 44d compared with 42 to 42½d previously.

Vegetable Oil Market

News emanating from the countries of origin gave indications that the oil potential for the next five or six months will be somewhat below world requirements. Most of the trade in the United Kingdom has been for tanked oil for early deliveries as well as early arrivals where offers could be found. Prices have risen another 20s to 30s a ton or to within 30s of the highest of the year. Indian December and January arrivals held for £109, February for £108½ and March-April for £108 c.i.f. in bulk. Castor oil ruled firm in the past week with moderate demand noted. Prices made little advance, however, although the background appears to favour additional advances before long. Indian BSS for November-December shipment made up to £111 with an average of offerings at £108 a ton, cost and freight in drums. Commercial was sparingly offered and was quoted at around £100. Spot supplies in London were also firmer and BSS was traded at £107 to £109. Hull mills increased their prices by a further £2 to £126 for firsts spot to January, seconds to £11½ and Pharmaceutical to £132 naked.

THE birthday of the Prime Minister, Mr. Nehru, has this year been celebrated all over India with even more enthusiasm than in previous years. At sixty-seven he is still wonderfully fit and agile in body and mind. For a man who, with the passage of the years, continues to show the unusual capacity of retaining his youthfulness, it seemed quite fitting that the anniversary should be observed as a Children's Day. Mr. Nehru has always been interested in children and appears never more happy than when he is in their company. The admiration due to him should be not only on account of his quality as a statesman and citizen of the world, but on the peculiar modesty and candour with which he always tackled his problems. I wonder what other man could have said on his birthday: "I am deeply moved and overwhelmed and a little frightened (italics mine) at this abundance of affection and goodwill. No man can be worthy of all this and no man can certainly live up to the expectations which these messages embody. . . ." The only other personality I can think of who might have reacted similarly to an exhibition of popular goodwill is the late Dr. Albert Einstein. When this great man went to Japan at the invitation of a newspaper, his hotel was surrounded by so large and enthusiastic a crowd that he was filled with dismay. He said to his wife, "Elsa, I'm afraid we're swindlers." And then after a little smiling and bowing, "Elsa, I'm afraid we will end in prison yet."

It is no use pretending that the late Henry Ford would have approved of what his heirs intend to do with the ownership of the empire he bequeathed them. A greater industrial individualist in fact never lived. He even refused to revise his ideas about management and proprietorship long after the increase in the scale of manufacturing business, which he had done so much to originate, had left them completely out of date. His descendants are now partly correcting this legacy of prejudice, no doubt with a shrewd appreciation of the harm it did the company in the thirties before Henry Ford II, the great man's grandson, made his first serious break with tradition. Now the company is offering stock worth over \$400 million to the public and, for the first time, the majority voting power is to pass out of the family's hands. The change will not be premature. The trend in most fields of manufacturing, and one in which the motor-car industry is leading the way, is towards ever-increasing scale. Although Henry Ford himself found great economies in decentralising such things as component making, he was nevertheless obliged to undertake a good deal of vertical integration. Now the size of Fords is such that the type of expert management required can only be obtained through wider and more democratic ownership. But this gigantic company will always be a monument to one of mankind's greatest benefactors. Not only has the world to thank his philanthropy, but it will remain perpetually in his debt for the lesson he taught that modern prosperity consists in making things for the ordinary people of this world and giving them value for their money.

In the recent Lok Sabha debates on the Companies Bill constructive criticism came chiefly from one source—Mr. Tulsidas Kilachand. In all that dreary spate of half-digested socialism it was good to hear the commonsense business point of view being put by a business man. I thought at the time what an advantage it would be if there could be more of the same stuff. Mr. Kilachand must have had a similar feeling. In a recent address he has made out a plea for greater representation by business men in the legislatures and other places where decisions affecting business are made.

A DITCHER'S DIARY

He attributes the present unsatisfactory state of affairs to the fact that business interests found it all too easy to get their opinions listened to in pre-Independence days and by the time the change came, had grown slack and careless. I do not necessarily agree with his diagnosis of the trouble. I think the real explanation lies in the self-consciousness of the business man in India and the fact that, until recently, Indian industry has rarely reached the scale at which it needed seriously to consider the question of representation. But I do agree with the remedy he has suggested. If the business point of view were more frequently met with in the councils of State there would be less nonsense talked about economic matters, and perhaps fewer insults thrown at what should be regarded as an honourable calling. I do not suggest that a business man's pressure group is what is needed; and that does not seem to be what Mr. Kilachand has in mind. But there must be scarcely a Central legislature in the world where the business point of view is heard less than it is in the Lok Sabha and that is a bad thing for the community no less than for business interests. The situation is, if anything, worse in the State's governing bodies. I agree with Mr. Kilachand that it is time business men shed their secretiveness—I should like to add, their furtiveness. It will do politicians and the public no harm to appreciate that there are such creatures as honest business men and that their interests are not so diametrically opposed to the interests of the community as the starry-eyed, head-in-the-clouds breed of politician would have the country believe.

One of the best example of what happens when legislatures are out of touch with business interests is at present being provided by the electric supply industry. No enterprise in the country has had a greater struggle to put over to the powers that be the purely commercial facts which govern its existence. It was reassuring to learn from the speech of the chairman, Mr. Kenneth G. Milne, at the annual general meeting of the Federation of Electricity Undertakings, held last week in Calcutta that there has been some improvement in the authorities' appreciation of the industry's problems. It is difficult to agree with Mr. Milne on the evidence provided by the Bill to amend the Electricity Supply Act which was introduced into the Lok Sabha on 26th September. The wholly reasonable suggestion for an increase of one percent in the return to shareholders has merely evoked the proposal to permit half that amount. If this is all the industry is going to get, it will be a long time before the return on new capital in this country is so reduced by the general economic expansion that investment in electric supply undertakings becomes attractive. In the meantime the development of electrification will be held up. The industry's request to be allowed to make provision for deferred taxation liability is merely a claim for sound commercial expediency. It has the backing of the Taxation Enquiry Commission, but not even this seems to have been decisive in its favour. It has simply been ignored in the Bill. It is no wonder that frustration is the prevailing feeling in electricity supply undertakings up and down the country at the present time. Perhaps there would be more chance of their pleas receiving a better hearing if there were more men of business experience in legislative circles.

I hope the sponsors of the South Park Street Cemetery Restoration Fund are right when they

suggest that a sum of Rs. 40,000 will suffice to prolong, at least for a time, the names and deeds of so many of Calcutta's historical figures. If they are, then we are indeed fortunate that, in these hard times, so much can be bought for such a small sum. So many historical theorists have put forward the view that man has, in fact, played no active part in the evolution of this world of ours. These purists never seem content with the factual development of history. We are all familiar with the interpretations of Marx, Fichte, Hegler and Carlyle, each one of whom has devoted his energies to proving that history is the result of impersonal forces, a preconceived pattern working its way towards solution and in the path of which mere individuals have no importance whatsoever. Characters great and small, powerful and inconsequential, are just players on a stage. If they happened to have lived in Calcutta at the turn of the 19th Century they have ended where they should, forgotten in Park Street's cemetery. Personally I do not like to think of people of the quality of Captain Edward Cooke, Lt.-General Sir John Clavering, Sir William Jones, Lady Ann Monson and Elizabeth Jane Barwell as being no more than providential puppets, just as I cannot conceive of Sir Winston Churchill or Mr. Nehru as nothing more than the instruments of a higher destiny. I may be sentimental, but my feeling is that great men have begotten great deeds. I consider that from great names, there are lessons to be studied of the past and precepts to be learned for the future. This attempt to preserve the reminders of some of the makers of Calcutta's history, seems to me a very worthy cause indeed.

It has always been my opinion that snobbery is a more widespread and important social phenomenon than is generally supposed, and will repay more analytical attention than it is in the habit of getting. I was especially interested recently to read an excellent essay on the subject by Arthur Koestler in *Encounter*, in which he enumerates certain causes as well as examples of this chronic social disease. With most of what he says I could not agree more. Have we not all of us seen, even perhaps at times been, autograph hunters, curio maniacs and that specially disagreeable type of snob, w.o. when you are introduced to him, invariably takes care to inform you that he knows your employer very well indeed? I notice, however, that Koestler omits a very interesting type once mentioned by Aldous Huxley in one of his essays. There Huxley gives a very amusing picture of "disease" snobs, pointing out that a sufferer from cancer holds in contempt a mere consumptive. At bottom, snobbery is said to be distorted ambition. History and literature have seen plenty of it. Falstaff is a particularly fine example. Having cut a finger, he was heard to say within earshot of his confederates, "Here's some King's blood". Perhaps when full of sack he firmly believed he was speaking the truth. The most perfect embodiment of snobbery, to my mind, is Elliot Templeton in Somerset Maugham's *The Razor's-Edge*. Many will recall how even when he was on his death bed, he smarted because he had not been invited to a banquet given by an Italian Princess. When, however, a considerate friend brought him a stolen invitation card to sweeten his last hours, this snob's hackles rose. He decided to send a crushing reply to the noble hostess for her delayed invitation, as he imagined it to be, by sending a letter of regret expressing his inability to accept the invitation "owing to a prior appointment with the Almighty".

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

Wednesday, 16th November.
THERE has been little change in the money market position during the past week. The recent slight improvement due to increased raw jute buying has persisted. Advances to the sugar industry on account of grains and seeds are still returning. Money is exceptionally tight in the interbank market. The call rate has increased to 3½ percent and there are reported to be borrowers over at this figure. It is suggested the reason is the recent scarcity of export bills coupled with fair demand for remittances.

Once again very little bill business has been transacted during the past week. Remittance has been in moderate demand. Sterling continues strong and the dollar rate is unchanged at Rs. 477½.

Silver was steady on good offtake. The price advanced from the previous week's level of Rs. 169 to Rs. 169-8, quoted today. The rate for forward delivery was quoted at Rs. 169-2. The London silver price declined from 79½d. to 79d. The price of foreign silver in New York remained unchanged at 91½/8 cents.

Gold ruled rather quiet and the price fell from Rs. 96-4-0 to Rs. 95-2. The sovereign improved to Rs. 62-8.

Tenders for Rs. 2 crores of 91-day Government of India Treasury Bills, which were opened on Wednesday, 16th November, 1955, totalled Rs. 2,66,00,000. The average rate of acceptance rose from Rs. 2-7-7 to Rs. 2-7-10 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent allotted approximately 72 percent. Tenders for Rs. 13 crores of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 21st November, 1955. During the week ended 11th November, 1955, Government of India Treasury Bills for Rs. 8,29,50,000 were sold in favour of the Reserve Bank of India.

Increases of Rs. 14.26 crores and Rs. 14.70 crores in the total note issue and notes in circulation to Rs. 1,344.78 crores and Rs. 1,332.24 crores were outstanding features of the return of the Reserve Bank of India for the week ended 11th November, 1955. The expansion in currency was adjusted by raising foreign securities by Rs. 19.97 crores to Rs. 647.07 crores and reducing rupee securities by Rs. 4.93 crores to Rs. 548.61 crores. This was done by a transfer of securities from the Banking Department in which balances held abroad fell by Rs. 15.65 crores to Rs. 66.28 crores. Deposits of the Government of India rose by Rs. 2.14 crores to Rs. 56.83 crores while other Government accounts declined by Rs. 4.59 crores to total Rs. 14.25 crores. Balances of commercial banks at Rs. 53.58 crores were Rs. 5.47 crores lower. Other loans and advances increased from Rs. 21.12 crores to Rs. 26.98 crores, of which advances to scheduled banks against usance bills aggregated Rs. 8.53 crores (Rs. 4.80 crores). These advances amounted to Rs. 202.08 crores since 1st January, 1955. Investments dropped by Rs. 18 lakhs to Rs. 50.08 crores. Ways and means advances stood at Rs. 2.84 crores (Rs. 1.04 crores).

The return of the State Bank of India for the week ended 4th November, 1955, shows a rise of Rs. 29 lakhs in total deposits to Rs. 218.95 crores. Investments in Government Securities are up by Rs. 83 lakhs to Rs. 107.22 crores, while other authorised investments are down by Rs. 4 lakhs, to Rs. 9.78 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 88 lakhs to aggregate Rs. 94.36 crores. Cash and balances are, in consequence, shown at Rs. 26.02 crores or Rs. 1.36 crores higher.

The statement of the position of scheduled banks for the week ended 4th November, 1955, discloses Demand and Time liabilities at Rs. 614.43 crores (Rs. 15.67 crores on account of borrowings from banks) and Rs. 423.69 crores (Rs. 5.11 crores) compared with 616.18 crores (Rs. 14.37 crores) and Rs. 424.38 crores (Rs. 5.07 crores) respectively in the previous week. Cash has declined by Rs. 1.77 crores to aggregate Rs. 35.20 crores, while balances with the Reserve Bank have advanced by Rs. 3.11 crores to stand at Rs. 59.09 crores. There is a drop of Rs. 63 lakhs in investments to Rs. 391.71 crores. Advances and bills discounted at Rs. 594.30 crores reveal an increase of Rs. 1.90 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 9.1 percent and 57.2 percent against 8.9 percent and 56.7 percent.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during September 1955, are as follows:—**Merchandise:** Exports to Eastern Pakistan Rs. 18 lakhs; to Western Pakistan Rs. 19 lakhs; to other countries Rs. 1 lakh. **Merchandise:** Re-exports—nil. **Merchandise:** Imports from Eastern Pakistan Rs. 281 lakhs; from Western Pakistan Rs. 21 lakhs; from other

countries—negligible. Total trade Rs. 340 lakhs. Trade in **Treasure**—negligible. **Balance of Trade:** The total value of exports fell short of imports by Rs. 264 lakhs.

Stocks and Shares

MARKET CLOSES ON A STEADY NOTE

ENGINEERING AND MISCELLANEOUS SECTIONS

STRONG: TEAS QUIETER

Wednesday Evening.

CONDITIONS in the stock market have continued steady and the feeling has been well maintained up to the close today. Last week's hectic activity in Indian Irons has persisted, but on a slightly smaller scale and without any particular trend developing. The present price of Irons appears high and a number of bulls are known to have taken their profits. But the steadiness of the rest of the market, and the profits which bulls have been making, have helped to keep the price up and business continues brisk. Indian Coppers have receded from their boom levels due to rumours that the Government will not permit the proposed bonus issue. At the moment the price is fluctuating sharply in the face of rumour and counter rumour.

The vulnerable speculative position is no indication of that of the market as a whole. Here the position appears sound with engineering and miscellaneous counters leading the way. Jessops and Richardson & Cruddas are once again outstanding features on continued interested support. The price of B.I.C. has benefited for the same reason. National Tobacco, Metal Box and Martin Burn are strong features. Paper shares have continued firm, but other sections are subdued. Government securities are quieter.

Details of the week's trading follow.

The Government securities market ruled quiet and there was a contraction in the volume of business. Except for one or two loans, sellers predominated and prices tended to ease. Three percent 1986 was quiet at Rs. 80-6 but 3% 1896 was unchanged at Rs. 80-1. In short-dated loans, 3% 1957 and 1958 continued on offer at around Rs. 98-9-6 and 98-8 respectively. Amongst medium dated issues, the three National Paper Loans were all quiet with sellers of 3½% 1961 at Rs. 98-10, 3½% 1964 at Rs. 98-11 and 3½% 1965 at Rs. 98-8. Three percent 1959-61 turned sellers at Rs. 98-1 as did 3% 1963-65 at Rs. 94-11. In contrast, there was a small enquiry for 3% 1964 at Rs. 94-8; 2½% 1962 was marked lower at Rs. 93-11 ex-voucher and 4% 1960-70 had sellers over at Rs. 101-10. In long-dated loans, 3% 1966-68 was on offer at Rs. 91-14 as was 3% 1970-75 at Rs. 87-7. Provincial loans ruled quiet, prices were unchanged and business was of a retail nature.

Selected preference shares continued to be readily absorbed, but scrip was in short supply. Among the miscellaneous issues, Alkali & Chemical were done at Rs. 107, Associated Mining at Rs. 34 and Burn 7% at Rs. 141. Calcutta Electric changed hands freely around Rs. 12-11 and Dalmia Cement Fully-Paid were taken at Rs. 98. Indian Standard Wagon changed hands at Rs. 141 and a small lot of Martin Burn was placed at Rs. 106-8. Orient Paper 2nd Preference were placed at Rs. 74-12 and later at Rs. 75-8. Textile Machinery 2nd came to hand at Rs. 71. Indian Iron & Steel were wanted at Rs. 110. Among jutes, Anglo-India were taken at Rs. 120-8 and a small lot of Caledonian were reported at Rs. 115. Gouropore were done at Rs. 105 and Union at Rs. 120.

In the banking section a small lot of Hind Bank changed hands at Rs. 27-4 and Hindustan Commercial were marked at Rs. 9-14. Punjab National were fairly steady at Rs. 47-10 as were United Commercial at Rs. 51-12. United Bank of India "C" shares were quoted at Rs. 9-4 and the "D" shares at Rs. 5.

In the railway section Ahmadpur-Katwa and Arrah-Sasaram were bought on investment account at Rs. 61-8 and Rs. 75 ex-dividend. After a long lapse, Bukhtiarpur-Bihar reported business at Rs. 16-8 and Delhi-Rohas were transacted freely at around Rs. 13-12.

Among cotton shares, Bengal-Nagpur were marked at Rs. 9-15 while Cawnpore Textiles were unchanged at Rs. 9-8. Elgins met with some enquiry and improved from Rs. 21-14 to Rs. 22-8. Kesoram were active and rose steadily from Rs. 21-14 to Rs. 22-8. New Victoria were steady at Rs. 2 and Dunbar spurted from Rs. 303 to Rs. 322. Swadeshi Cotton Preferred Ordinary were crossed at Rs. 11.

Coal shares were slightly better with Burrakur improving from Rs. 14-11 to Rs. 15-10; to-night's closing quotation is Rs. 15-9. Bengal Coal were better at Rs. 514 and Bharat Collieries changed hands freely around Rs. 8-8. Borrea met with investment enquiry at Rs. 29-10 as did East India at Rs. 30. New Beerboom improved from Rs. 18-15 to Rs. 19-6 and Searsole were crossed at Rs. 15-8. Central India and Western Bengal changed hands on several occasions at around Rs. 7-14 and Rs. 7-4 respectively.

Little business was reported in jute shares despite the firm conditions prevailing in the jute goods market. Prices, however, show little variation as will be seen from the following table:—

	Opening	Closing
10-11-55	10-11-55	16-11-55
Rs.	Rs.	Rs.
Agarpara	13 12	14
Bengal	18	19

Birla	19	18 8
Chitavalah	14 10	15 4
Howrah	29 4	29 4
Kinnison	198	207
National	33 6	33 7
Northbrook	25	26 4

Among electric supply shares, Calcutta were turned over freely at around Rs. 15-2. Patna were taken at Rs. 12-6 and Shahjahanpur were crossed at Rs. 8-8. Muzaffarpore were marked at Rs. 10-4.

In the sugar section, Durbhanga were steady at Rs. 25-4 and Shree Krishna Gyanoday improved to Rs. 18. Cawnpore were steady at Rs. 24 as were Carew at Rs. 12-12. Belsund were placed at Rs. 12-6. Dyer Meakin Breweries met with enquiry at the higher rate of Rs. 7. Once again engineering issues were keenly sought after and a good amount of business was put through. Bhartia Electric Steel were marked at Rs. 16-10 and Braithwaites were steady at Rs. 29-6. Britannia Engineering New shares improved from Rs. 18-8 to Rs. 19-8 and there were buyers of the Old shares around Rs. 22-8. Burn & Company advanced from Rs. 328 to Rs. 342 and Indian Galvanizing were steady at Rs. 25-8. Indian Standard Wagon were Rs. 2 better at Rs. 162 and a small lot of Indian Steel & Wire Products was placed at Rs. 86-12. Kumardhubi Engineering were active around Rs. 12-8 while Jessop & Company and Richardson & Cruddas rose from Rs. 60-4 and Rs. 28 to Rs. 64 and Rs. 28-14 respectively. Textile Machinery were fairly steady at Rs. 18-4. There was a reduced turnover in Indian Iron & Steel shares during the week, but the quotation was fairly steady around Rs. 41 which is tonight's settlement rate.

In the miscellaneous section, Bengal Paper were well maintained at around Rs. 111 and India Paper Pulp were snapped up at Rs. 25-4. Orient Paper improved from Rs. 32-8 to Rs. 33-15 and Shree Gopal Paper were wanted at Rs. 17-8. Titaghar Paper were steady at Rs. 48-8. Assam Bengal

IAC. 2479 (A)

SOUTH EASTERN RAILWAY TENDERS.

The following tenders are invited by the controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23:

(1) Tender No. CS9/55/K6/40(56) for the supply of approx: 600 Tons of Slaked Lime for water Softening Plants containing 75-85% Calcium Hydroxide and moisture 5% Max: during 1956 on Rate contract Basis.

(2) Tender No. CS10/55/K6/39(56) for repairing of approx: 2000 Cast Steel Axle Boxes during 1956 on Rate Contract Basis.

Tender forms are obtainable from the office of the Controller of Stores (IB Section) on remittance of Rs. 2/- for each item by money order (not refundable) in case of Mofussil Firms and on production of Cash receipt from the Chief Cashier, Garden Reach by Local Firms. Earnest Money Rs. 500/- in cash for each item. Valid Income Tax clearance certificate must accompany the tender.

Closing date for item (1) is 29-11-55 and for item (2) is 30-11-55 at 12 hours noon.

SOUTH EASTERN RAILWAY TENDERS.

Tender No. GM4/55/9892-R(55) is invited by the General Manager, Garden Reach, Calcutta-23 for supply of 500 Commodities Flushing C. I. Vitreous enamelled complete to I.R.S. Drg: CA. 1817 (Current). Tender form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta-23 (IB Section) on remittance of Rs. 5/- by Money Order (not refundable) in case of Mofussil firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by Local Firms. Earnest Money Rs. 1,000/- in cash. Valid Income Tax Clearance Certificate must accompany the tender. Closing date 25.11.55 at 12 noon.

FERROSPEED ELECTRODES

are used in the construction of the modern ships built at VISAKHAPATNAM.

FERROSPEED are all-position, structural grade electrodes for use on A.C. or D.C. Quality controlled. Approved by Lloyds.

FERROSPEED are made in India and cost less than any comparable imported electrodes.

concurrently for an interim period from 1st April 1957, until the former can be withdrawn entirely after being substituted by newly-minted decimal coins.

New Aircraft and Aerodromes

Details are now available of the second five year plan for the Communication Ministry. Under the plan a sum of Rs. 57 crores has been provided for the construction of ten new aerodromes, renovation of some of the existing ones and for the purchase of modern aircraft, both for the Indian Airlines Corporation and Air India International. Out of this amount, a sum of Rs. 39 crores has been allotted for the two air corporations and Rs. 18 crores for the construction of new aerodromes, renovation and equipment.

A sum of Rs. 11,60,00,000 will be utilised in the purchase of 10 Viscount aircraft and their spare parts at a cost of Rs. 5,34,00,000 and 28 medium-sized aircraft, at a cost of about Rs. 6 crores by the Indian Airlines Corporation. The latter aircraft will replace the existing Dakotas, but no decision has yet been taken on the type of aircraft. As regards Air India International it is proposed to buy four new aircraft. The existing three Super Constellations will be replaced to standardise the Super Constellation fleet. A sum of Rs. 5 crores has been provided for the payment of compensation to private airlines taken over by the Corporation and Rs. 2 crores for the expansion of existing workshops and hangars. Provision has also been made for the modification of Dakotas and the construction of residential accommodation for the Corporation staff.

Negotiations are still going on between the Communications Ministry and the Ministry of Defence as to whether Palam should remain as a purely civil aerodrome or be handed over to the Indian Air Force. In the event of its going to the Indian Air Force, a new international airport would have to be constructed at New Delhi for civil aircraft. This question will be decided within the next few months. Under the second plan, five more flying clubs will be added to the existing 11 clubs and two more gliding centres will be opened.

Additional targets of the Communications Ministry for the second plan period, include the provision of 250,000 extra telephones and the opening of 1,200 more public call offices, 2,000 new telegraph offices and 20,000 additional post offices. The Posts and Telegraphs Department will receive Rs. 70 crores to Rs. 75 crores for the execution of its plans.

Nutritive Value of Sago

The Government of India has decided to set up an experts' committee to examine the nutritive and other properties of sago manufactured from tapioca and to improve its quality. Dr. A. Nagaraja Rao, Chief Industrial Adviser, Ministry of Commerce and Industry, Government of India, will be the Chairman of the Committee. Its other members will be: Dr. K. Mitra, Assistant Director General of Health Services, Ministry of Health; Prof. B. C. Guha, University College of Science, Calcutta. Dr. V. N. Patwardhan, Director, Nutrition Research Laboratories, Coonoor; Dr. V. Subrahmanyam, Director, Central Food Technological Research Institute, Mysore. Mr. V. A. Mehta, Assistant Development Officer (Food) will act as Secretary to the Committee.

The terms of reference of the Committee will be:—

- Whether the product marketed so far in India as sago is different from that made in other countries; how it compares in nutritive value and other properties with sago prepared out of sago palm;
- Whether it is a wholesome product and can be recommended for the use of children, invalids and others;
- What steps should be taken to maintain a good quality that will make the product consistently safe for the consumer.

New Sea Passage

A Committee of experts has been set up by the Government of India to examine and report on the feasibility and desirability of connecting the Gulf of Mannar and Palk Bay by cutting a channel at the approaches to Adam's Bridge, to enable the navigation of deep-sea ships from the west to the east coast of India. It has been suggested that the construction of such a passage would increase the potential value of the port of Tuticorin if it is to be developed into a deep-sea port. The composition of the Committee, which will be known as the Sethusamudram Project Committee, will be as follows:—Mr. A. Ramaswami Mudaliar, Chairman; The Chief Commercial Superintendent, Southern Railway; Mr. B. N. Chatterji, Retired Chief Engineer, Calcutta Port; Captain J. R. Davies, Nautical Adviser to the Government of India, Directorate-General of Shipping, Bombay, and Mr. R. A. Gopalaswami, I.C.S. Secretary to the Government of Madras, Home Department, Madras—Member Secretary.

The terms of reference of the Committee will be as follows:—

- What is the extent to which shipping in general is likely to benefit by, and in practice to take advantage of, the shortened sea route via the proposed Sethusamudram passage.
- Would the advantage likely to be secured, be commensurate with the expenditure involved?
- What are the traffic prospects of the Tuticorin port during the next decade—

- if the Sethusamudram passage is provided; and
- if the Sethusamudram passage is not provided;
- In the light of the traffic assessment, should the Tuticorin development project be proceeded with? If so, what should be the timing—
 - immediately by itself and independently of the Sethusamudram project;
 - Simultaneously with the Sethusamudram scheme; or
 - at a later stage and if so, when?

Oil Prospecting

The following figures relating to oil prospecting, provide some indication as to India's expenditure compared with the total world outlay, in addition to India's relative oil production.

1. Proportion of potential oil-bearing regions in India to the rest of the world:	1 percent.
2. Total world annual expenditure on oil prospecting:	Rs. 1,333 crores
3. Total Indian annual expenditure on oil prospecting:	Rs. 1 crore
4. Indian percentage of world expenditure:	0.07 percent
5. Total world annual oil production:	705,000,000 tons.
6. Total Indian annual oil production:	350,000 tons.
7. Indian percentage of world production:	0.05 percent.
8. Approximate Indian annual expenditure on oil imports after all refineries are in production:	Rs. 40 crores.
9. Cost of oil exploration in India compared with the rest of the world:	About double
10. Security of tenure for concessionaires:	
Rest of the world:	Average 60 years.
India—until March 1955:	20 years.
Today:	60 years.

Jet Aero-Engine Factory

A decision has been reached to enter into an agreement with the Bristol Aeroplane Company to set up a jet aero-engine factory at Bangalore. It is also proposed to take the manufacturing rights to produce the Gnat lightweight Bristol-engined fighter plane at the Hindustan Aircraft Factory at Bangalore. It claimed by its designers, the Folland Aircraft Company, that the Gnat is not another fighter, but a means of reducing the great volume of expensive vulnerable servicing equipment and fuel storage essential to combat aircraft in the field and of avoiding the need for training super skilled 'pilots for secondary duties.'

The original intention was to set up a factory manufacturing Rolls-Royce jet aero-engines for which purpose a Rolls-Royce team had come out to India and prepared a project report. The Government of India subsequently decided to develop a lightweight fighter plane in which Rolls engines could not be fitted. Bristol were therefore invited to prepare another project report, which has been approved. The Defence Ministry's second five year plan has also been drawn up and is under discussion with the Planning Commission, and the jet aero-engine factory has been given first priority. Residential quarters for defence personnel have also been included in the plan. The Joint Secretary of the Defence Ministry, Mr. N. N. Wanchoo has been appointed Controller General of production.

Machine Tools

The Government of India is shortly setting up a Committee to appraise the requirements of machine tools in India and to demarcate the sphere of private enterprise from the public sector for the future development of the industry. A preliminary survey of the machine tool industry has revealed large scope for its development.

Faster Trains

Two completely air-conditioned railway trains will be introduced early next year. They will run twice weekly between Calcutta and Delhi and Delhi and Bombay and will be faster than any of the present mail trains. These trains are expected to compete with the night air services operating on these routes.

Prohibition

It is claimed in Delhi that nationwide prohibition, as recommended by the Planning Commission's Committee published recently, will unhinge the second five year plan. India can have an orderly and rapid development, providing twelve million jobs, or she can have countrywide prohibition, it is stated here. It cannot have both.

Income-Tax Concessions

Some income-tax concessions will be announced for non-Indian employees of firms in India. The announcement, which will be made in a few days, will declare that money spent on eight passages by husband and wife separately during their 25 years of service in India and one passage thereafter at two and a half yearly intervals. Money spent on one set of passages for children under 16 years will also be tax free, during the parents' service. These concessions have been made largely because the undefined Indian tax rules had created a feeling of uncertainty, among non-Indians, resulting in their premature retirement from India.

London

MR. BUTLER'S CREDIT SQUEEZE MAKES HEADWAY

EXPORTERS' ENCOURAGING PROGRESS IN DOLLAR MARKETS

(FROM OUR LONDON CORRESPONDENT)

ACCORDING to Parliamentary lobby circles the Government may soon decide to make special arrangements to bring home the facts of the economic situation more clearly to the general public. The form these will take has not yet been settled, but the Government is understood to feel that something more than reports of economic debates in Parliament is needed if the man in the street is to be made to appreciate the personal advantages and the national difficulties behind the present full employment, and thereby be encouraged to co-operate with the Government in tackling the problem of inflation. It will not be the first time this has been attempted—the Labour Government tried this educational procedure in the days of austerity—but never perhaps has it been more necessary. Too much political bias attaches to Parliamentary debates to render them educationally useful, and they are even less so now that personal factors have been added to them. The Opposition, having divided the House on both the first and second readings of the Finance Bill, besides tabling a censure motion in between, is planning to fight at the Committee stage with no fewer than 30 amendments. In the face of this, the Government's determination to stick by its Budget proposals is understandable, especially in view of its comfortable majority. That does not mean that Mr. Butler may not offer some concessions, for he believes, and quite sincerely, that the actual effects of the autumn Budget, together with other measures now beginning to show results, will correct the situation, and the general public will then appreciate how small an effect the Budget has actually had on the cost of living.

Of the Government's determination to tackle the inflationary danger resolutely there can now be little doubt. The banks have been given a further directive that the credit squeeze must continue, and that it is showing some signs of being effective is apparent, for instance, on the Stock Market. The earlier optimism has been damped down quite considerably in the past week or so and the City is gradually coming round to the idea that Mr. Butler might win after all. In their discussions with T.U.C. leaders and the representatives of the employers' organisations, also, the Government has not been entirely unsuccessful. Criticism of the Budget is as strong as ever, but it is not without some significance that the T.U.C. has advised unions to be reasonable in respect of fresh wage claims so as not to do damage to the economy as to adversely affect their own position and the full employment which now prevails, while the Federation of British Industries has urged its members to avoid price increases "wherever the level of costs leaves a choice open in the determination of selling prices." Rank and file labour has not so far shown any similar appreciation of the dangers and the claim continues to be pressed, with quite disproportionate increases in the actual demands to offset the effects of the Budget and the future really depends on how these are handled.

Exports in October a Record

British exports established a record high level in October at £268,100,000. This compares with £243,200,000 in September, and £214 million in October, 1954; but the October, 1954, figure was affected by the dock strike. Last month's total was over 13 percent above the monthly average of the first nine months of this year. Exports in October are normally high and this year's record figure was probably influenced to a small extent by shipments delayed by the May-June transport strikes. Even allowing for special influences, however, the figures are distinctly encouraging. A striking feature of the October overseas trade picture is the vital progress made by British exporters in the America dollar markets. Total exports to North America reached £33 million last month, a new peak. Sales to the United States were a record at £19.2 million against £15.9 million in September. Exports to Canada were up from £11.6 million to £13.8 million. A measure of the improvement is in the increase of nearly 29 percent in the October total of dollar sales compared with the monthly average of the first nine months of this year.

Not quite the same success has been achieved in cutting down Britain's imports. But the October figure is not discouraging. Last month's imports bill was £333.4 million, against £228.2 million in October last year. It shows a rise of £29 million on the September total. For this increase seasonal factors are believed to be mainly responsible. Allowing for re-exports of £12,800,000, Britain's trade gap, measured by the excess of imports over exports, was £52.5 million in October. In September the gap was £50.7 million. The significant fact, however, is that the average gap of just over £51 million for the past two months is very much smaller than the monthly average of just over £75 million for the first nine months of this year. Evidence is therefore accumulating to support the view that the Chancellor's credit squeeze and other measures are now beginning to make an impression on Britain's balance of payments problem.

New Dollar Export Drive

With dollar trade showing a welcome upward trend, the need for a new drive to expand British exports to the United States, Canada and the South

American dollar countries would appear to be hardly necessary. Nevertheless, that was the purpose of a meeting called by the Dollar Exports Council in London this week to which some 80 industrialists, bankers and merchants were invited, to listen to the views of Sir William Rooses, the Council's Chairman, and one with a long experience of selling in those markets, supported by Mr. A. R. W. Low, Minister of State at the Board of Trade, and Sir Edward Boyle, Economic Secretary at the Treasury. Recent decisions of the U.S. Government on tariffs and the falling off in exports to Canada have undoubtedly given rise to some doubts as to the desirability of launching what might well prove to be quite expensive efforts to enter dollar markets, when results therefrom might be nullified. The recent report of the joint study group of the Twentieth Century Fund and the National Planning Association, suggesting that there was little scope for increasing sales of industrial manufactures to the United States, has also proved discouraging. To counter these, no doubt, was the main purpose of the meeting, and on the whole the speakers did their jobs well.

This was especially so in the case of the Government spokesmen, who both promised the backing of the Government for any effort of industry and trade to obtain a larger share of the growing imports of the dollar area. Mr. Low explained that in the past five years, United States imports of manufactures had nearly doubled in value and the United Kingdom share of this trade had slightly increased. In any case, the entire British exports to the United States were equal to 0.2 percent of the United States output of manufactured goods, and it ought not to be impossible by strenuous efforts to raise this to 0.3 percent.

Sterling Area Trade

Surprisingly, it is in the sterling area that Britain's main competitors—Germany, the United States and Japan—have all made big strides recently, and the British share has fallen. According to the *Board of Trade Journal*, the value of imports from Britain into the rest of the area did not increase at all in the second half of 1954, but showed a rise of 11 percent in the first half of 1955. Those from Germany, however, increased by 20 and 30 percent in the two periods, those from the dollar area by 8 and 22 percent, and those from Japan by 53 and 63 percent. Imports into Australia rose by 8 percent between the first and second halves of 1954 and by a further 15 percent in the first half of this year. All sources shared in this rise, but imports from both dollar area and the Continental countries of O.E.E.C. were 36 percent higher than a year earlier, while imports from Japan rose by about two-thirds between each half-yearly period. Australian imports from the United Kingdom, on the other hand, increased by only 16 percent over the whole period.

Germany and Japan increased their exports to Malaya in the first half of this year by 66 percent and 37 percent, respectively, compared with the first half of last year, and the Japanese rise followed one of 59 percent between the two halves of 1954. Japan also doubled her exports of textiles to West Africa in the last months of 1954, and although British exports to the Gold Coast and Nigeria rose 18 percent in January-June, 1955, as compared with the same period of the previous year, this was mainly confined to machinery and transport equipment. In India the rising value of imports was shared by most groups of countries, but the advance of Japan was again marked, a 9 percent rise in the first half of this year following a 72 percent rise between the two halves of 1954, due largely to higher imports of semi-fabricated metal products. Imports from the dollar area and from sterling countries other than the United Kingdom dropped back a little in the second quarter from the high rate of previous months; but imports from Germany, particularly of boilers and metal-working machinery, continued to expand. Imports from the United Kingdom in the first six months of this year, on the other hand, were no higher than in the corresponding period of 1954.

REACTIONS TO NEW PLAN TO
DIVIDE BOMBAY STATEKANNADIGAS AND GUJERATIS
QUITE SATISFIED

(FROM OUR BOMBAY CORRESPONDENT)

THE main topic of interest last week was the Congress Working Committee's resolution on the future of Bombay City. The decisions did not come as a complete surprise, but did cause a stir. According to the proposed arrangement, Bombay State will be split into four parts. The southern-most area inhabited by Kannada-speaking people will, with Mysore State, constitute the new Karnataka State. Most of the other areas in the south will form the nucleus of a new Maharashtra State, which will include the Marathi-speaking people from Hyderabad and a big part of Madhya Pradesh, including Nagpur. Bombay City is to form a separate State, the boundaries of which are yet to be demarcated. The northern Gujarati part of the present State, together with Saurashtra and Kutch, will form the new State of Gujarat.

These decisions have been received with mixed feelings. The only people who are fully satisfied are those going to Karnataka State. Even there, a little dissatisfaction exists in the city of Belgaum, which is predominantly Maharashtrian but is surrounded on all sides by Kannada-speaking people. While welcoming the inclusion of the Marathi-speaking parts of Hyderabad and Madhya Pradesh, Maharashtrians feel disappointed over the loss of Bombay City. They have been promised, however, that if at the end of five years the legislature of Bombay City State opts by a two-thirds majority for a merger with Maharashtra, the Congress will agree. But there is very little possibility that the newly-created vested interests, who will have had time to consolidate themselves during this period, will agree to such a transformation. In Gujarat, the people were willing to join in the bilingual State proposed by the States Reorganisation Commission, but are quite satisfied with the latest changes. The position in Bombay City is intriguing. It has a large proportion of Marathi-speaking people who are annoyed that it is to be separated from Maharashtra. But others—Parsis, Muslims, Gujaratis, Sindhis, Punjabis, Kannadigas, Andhras and Tamils—are satisfied that the life of the City, and its commerce and industry, will develop along its own lines with the backing of vast resources.

Business men in general have welcomed the move for a City State. Supporters include Mr. Babubhai Chinai, President of the Indian Merchants' Chamber, Mr. Chimanlal B. Parikh, Vice-President of the East India Cotton Association, Sir Chunilal B. Mehta, Mr. Chinubhai Jhaveri, President of the All-India Exporters' Association and Mr. Navnitlal Shodan, President of the Gujarat Chamber of Commerce. But Dr. John Matthai, Chairman of the State Bank of India, has criticised the proposals. He described the Congress Working Committee's decision as "about the least satisfactory of the several solutions suggested". He added: "in favouring the solution of a separate State for Bombay City, business leadership in Bombay does not seem to have shown either foresight or good judgment." If Bombay City were formed into a separate State with its status subject to final determination after five years, he declared, important business interests would be faced with serious uncertainties and continuous "hostile agitation." Labour in Bombay was predominantly Maharashtrian, and would therefore resent the separation from Maharashtra. Its votes in the city would largely determine the complexion of the State Legislature, and therefore of the Government. He presumed that the attitude of a Government so formed would be highly critical of the business interests of Bombay, to whom the idea of a separate City State was generally attributed. Mr. S. K. Patil, President of the Bombay Pradesh Congress Committee, is another critic of the proposed move. He said that there might have been reason for jubilation if Marathi and Gujarati-speaking people had chosen to live together as they had done for over a century. A State such as the one recommended by the S.R.C. would have been progressive, secular, cosmopolitan and democratic.

The City State's Finances

It is interesting to examine the financial position of the proposed City State of Bombay. It is certain that it would have a large surplus of revenue over expenditure. Judging by the 1955-56 estimates for the present State of Bombay, the new City State might have a revenue of Rs. 25 crores and an expenditure of Rs. 12 crores, leaving a surplus of Rs. 13 crores. The average surplus of the Greater Bombay area, as reported by the State Government to the States Reorganisation Commission, for the three years ended March 1953, was Rs. 12 crores. The Commission indicates that it is probable that this surplus will increase rather than diminish. Assuming the continued application of the present formula for distribution of the divisible share of income-tax (20 percent on the basis of collection and 80 percent on the basis of population), the future Bombay City's share from

this source can be placed at Rs. 3.25 crores, as against the Rs. 10 crores indicated in the current budget for the whole composite State of Bombay. However, the next Finance Commission might change the basis at least as far as Bombay City. State is concerned in view of its special position. With regard to the other sources of revenue of the new City State, excise may yield Rs. 40 lakhs, stamps Rs. 1.5 crores, registration of documents Rs. 10 lakhs and motor vehicles tax Rs. 10 lakhs, while house tax, electricity duty, entertainments tax and sales tax would easily amount to Rs. 15 crores. Its share of the Central excise on tobacco, matches and vegetable products may earn another Rs. 20 lakhs on the present basis of distribution according to population. The population of the future City State has been assumed as four million. On the basis of the present budget and the details given in the last Finance Commission's report regarding the share of Bombay City in the total revenue and expenditure in the State of Bombay for 1950-51, the city naturally cannot expect to retain or to use for itself the huge surplus that would accrue to it on the present basis of taxation and expenditure. At the same time, even after making it contribute something to the two deficit States of Maharashtra and Gujarat, it will have a fair surplus for economic development. The City's expenditure may be Rs. 210 lakhs on police, Rs. 140 lakhs on medical establishments and public health, Rs. 140 lakhs on education and Rs. 100 lakhs on general administration.

Municipal Budget Estimates

In view of the plans for Bombay City, the budget estimates of the Bombay Municipal Corporation for 1956-57, which were presented to its Standing Committee last week, acquire added importance. They show a nominal deficit of Rs. 9 lakhs, with income at Rs. 9.86 crores and expenditure at Rs. 9.94 crores. Against this deficit, however, the budget expects for the first time a large opening balance of Rs. 1.53 crores. The figures for next year show an increase of about Rs. 32 lakhs in income over the current year's estimates, and a fall of Rs. 5.57 lakhs in expenditure. No fresh taxation is proposed and revenue has been estimated on the basis of the current rate of taxation. The Municipal Commissioner states that the retention of such a large balance might not be in the interests of the public, so he suggests undertaking capital works costing Rs. 75 lakhs. This includes, for the first time, a provision for housing for the poorer classes in the suburbs (other than Municipal staff) and also for a beginning in the direction of slum clearance. This would still leave a closing balance of Rs. 78.65 lakhs at the end of 1956-57. The budget expects an increase of Rs. 20 lakhs in debt charges over the current year because of the large-scale borrowing for completing the Vaitarna-Tansa water supply project. The Commissioner points out that large-scale borrowing will have to be continued for improving other essential services which have had to be deferred pending this scheme. No substantial reduction in the borrowing programme is expected for some years to come. The budget states that the strain on revenue resources can be mitigated only if assistance on easy terms is made available under the second five year plan. The proposals also indicate the floating of a loan of Rs. 5 crores for financing capital expenditure in the budget year, which would still leave a deficit of Rs. 1.68 crores. This deficit is proposed to be left uncovered for the present; it is stated that the position could be reviewed later after considering the progress of works expenditure.

Insurance Co-operatives

Dr. Punjabrao Deshmukh, Union Minister for Agriculture, said at the silver jubilee celebrations of the Bombay Co-operative Insurance Society last week that complete nationalisation of all forms of insurance was not easy. He suggested, as an alternative, the further development of insurance on co-operative lines. The Minister pointed out, however, that insurance had a social purpose and could not be given a free run by private, competitive or profit-making interests. If social regulation was needed in any part of the private sector, it was in joint-stock insurance. Nationalisation was not necessary to divert large resources to the public sector, because the proportion of life funds invested outside Government and other approved securities was very small.

Indo-Norwegian Trade

At a meeting sponsored by the Canara Bank Foreign Trade Study Group last week, Mr. Arne Bjorgund, Acting Consul and Trade Commissioner for Norway, said that there were good prospects for selling Indian handloom fabrics to Norway. But, in general, the scope for trade was limited, because Norway was very sparsely populated. About 20 percent of her trade was with the U.K. and with Asian countries it was almost negligible. Norwegian exports to the whole of the East amounted to a little over 5 percent of her total, while imports from these sources came only to 2.5 percent of the total. The biggest export to India was paper, which constituted about 60 percent of her total exports to this country. The chief items of import were cotton waste, spices and coffee.

VARNISH MEDIUM FOR ALUMINIUM PAINT
The Indian Standards Institution has published an Indian standard specification for varnish medium for aluminium paint. The standard prescribes the requirements for the material in respect of flexibility and adhesion, flash point, volatile matter, viscosity, acid value, etc. and specifies methods of test to evaluate these characteristics. It is hoped that the material conforming to this standard will be of suitable quality for its use as a varnish medium for aluminium paint. The Institution is now available at the Indian Standards

MARKETING THE PRODUCTS
OF RURAL INDUSTRIESTHE CASE FOR LAND REFORMS
IN MADRAS STATE

(FROM OUR MADRAS CORRESPONDENT)

THE Planning Commission has reduced the size of the Travancore-Cochin State's draft plan for the second five-year period from Rs. 130 crores to Rs. 75.6 crores. On the basis of population and capacity for expenditure, as judged by the progress under the first plan, the State would have been entitled to only Rs. 50 to Rs. 55 crores. Although the increased allotment is meant to provide for the special needs of the State, the Chief Minister thinks that it is inadequate. The Travancore-Cochin Planning Advisory Board is also of the opinion that the "Second Plan for the State, as approved by the Planning Commission, is hardly adequate in view of the special problems of the State". The most pressing of these problems is, of course, unemployment of both educated and uneducated persons. It is, however, encouraging that the whole question of allotment for industries has been kept open; similarly the question of allotment under communications could be raised again after utilising the available funds. The breakdown of the proposed outlay on the second plan is as follows:—

	(Rs. crores)
Agriculture and Rural Development	... 7.8
N.E.S. and Community Projects	... 3.5
Irrigation	... 6.5
Power Projects	... 23.0
Industry	... 6.6
Transport	... 3.3
Social Services and Education	... 9.0
Medical and Public Health	... 7.6
Welfare of Backward Classes	... 1.5
Labour Welfare, etc.	... 0.4
Housing	... 2.1
Anti sea-erosion measures	... 3.0
Miscellaneous	... 1.3
Total	... 75.6

The Development of Village Industry

The All-India Khadi and Village Industries Board has drawn up a plan estimated to cost Rs. 317 crores for the development of village industries, according to its Joint Secretary who has visited Madras recently. Out of this sum, Rs. 150 crores has been reserved for the development of khadi through the introduction of a new kind of spinning wheel called the *amber charkha*. With a view to studying the possibilities of the *charkha*, it has been decided to start 100 centres where spinning classes would be conducted, each accommodating 60 students. This experiment will be completed before the end of March 1956 and a report on the efficacy of the *amber charkha* will be submitted to the Government. At present mills are supplying yarn for the production of about 1,500 million yards by handlooms. It is estimated that by 1960 the handloom industry should be able to consume yarn for the weaving of 3,000 million yards. Arrangements, it is stated, have to be made for the supply of additional requirements of yarn through the *amber charkha*.

The Board has also decided to continue the development of ten village industries besides khadi, and a sum of Rs. 167 crores is proposed to be spent for the purpose. The industries selected for development are: hand-pounding of rice; pressing of oil with *chekku*; palm *gur*; *khandasari* sugar; match production as a cottage industry; manufacture of soap with non-edible oils; bee-keeping; leather (beginning with the flaying of dead animals); village pottery and hand-made paper. All will be given by way of loans, subsidies and grants. It is further proposed to start a research institute at Wardha to carry on research in these village industries, and this will be in full swing in the course of a few months. The Board will also help the Community Projects Administration to start these industries in the Community Project areas.

Marketing Policies

In all the plans for developing rural industries, the question of marketing the products of such industries does not appear to be receiving much attention, and Mr. Lobo Prabhu, I.C.S., has suggested a plan for the State purchase of articles made to given specifications at declared prices. The question arises as to how the price factor in respect of production and consumption can be controlled. In other words, how can prices be fixed without on the one hand being depressive of production or on the other of loading the State shops with unsaleable items? Mr. Lobo Prabhu gives the answer as follows: In the first place, the present prices include a large margin of insurance against the vagaries of the market. The artisan feels that whatever he can sell must compensate him fully for what he dare not produce or cannot hope to sell. This means that the present selling prices of many items are much higher than they would be if there were continuous production fully employing the artisans. On an average, most artisans could offer many items at 25 percent less than the prices now obtaining. In some instances they may be even prepared to accept 50 percent less. These calculations are based not only on the costing of many of the items, but also on opinions collected from a representative section of the artisans. This reduction in purchase prices has an immediate bearing on the question of the marketability of items purchased for State trade. Demand varies inversely with prices, the market growing

as items come within the capacity of lower income groups. There is also the factor of demand increases influenced by the prevailing fashion set by widespread purchases.

Emphasising that both for the quality and quantity of production, the assurance of steady prices that goes with the guarantee of State purchase is vital for the majority of cottage industries, Mr. Lobo Prabhu thinks that State trading can begin in respect of those items of individual production which have no competition from the sector of mass production. As and when the principle of State trading is established, the range of items may even include those in competition with machine production. It is possible, he says, that the State guarantee to purchase specified items will involve large commitments and some losses. It is, therefore, necessary that the guarantee is given in the beginning in respect of a limited number of items in a limited area. On the experience gained, the range of items and the limits of the area can be increased. There may be some risk, but any loss arising from this can be reckoned as a subsidy for the resuscitation of cottage industries.

India's Agricultural Price Policy

Dr. R. N. Poduval, Deputy Economic and Statistical Adviser, Union Ministry of Food and Agriculture, has just delivered two noteworthy lectures on "Agricultural Price Policy" under the auspices of Madras University's Gokhale Endowment Lectures in Economics. Dr. Poduval thinks that in under-developed economies, causes other than seasonal and cyclical might also be operative in bringing about fluctuations in agricultural prices. In view of the peculiar features of agricultural production, free market prices are felt to be imperfect guides for regulating agricultural production, particularly on a short-term basis. The agricultural price policy has to be viewed against this background. Providing a short-term price stability has the objective of ensuring that agricultural prices bear a reasonable parity with the prices of those commodities which the farmers buy. This means that the agriculturist should have an income parity with those who are deriving incomes from other sources. Secondly, greater economic security to farmers must be ensured through more stable farm prices. Here the objective is a floor price below which prices should not be allowed to fall, so that there is a certainty of getting at least a minimum guaranteed price. Lastly, there must be production adjustments through forward pricing.

State Support for Foodgrains

With this theoretical background in his first lecture, Dr. Poduval dealt in his second lecture with the agricultural price policy in India. He thinks that the absence of a proper price policy has been a serious fault in the first five year plan. The price policy under that plan centred largely round direct physical controls which, in the changed economic climate, were not only inappropriate but became positively unpopular and were acting as a disincentive to production. The Government was forced, therefore, to remove all controls on foodgrains and abolish inter-State restrictions on their movement. When these did not arrest the downward trend in the prices of foodgrains, minimum support prices were announced to prevent them from falling to uneconomic levels. Visualising the agricultural price policy under the second five year plan, Dr. Poduval thinks that its objective should be to stabilise prices within certain reasonable limits and ensure a proper relationship between the prices of agricultural commodities and manufactured articles. It should also ensure an appropriate relationship between the prices of competing crops to fulfill the production targets that might be laid down under the plan. The policy should also be such as to reduce seasonal fluctuations in agricultural prices to the minimum. The reasonable limits between which agricultural prices should be maintained necessitate a minimum and a maximum price. While monetary and fiscal policies might be expected to control the general level of prices, it has been found by experience that the most effective way of controlling the supply and demand for particular commodities is for the State to enter into the market and carry out purchase and sales operations on their own account.

This involves the building up of buffer stocks. For the storage of buffer stocks adequate warehousing facilities should be provided. Under the second five year plan it is proposed to build a storage capacity of about two million tons and

this, combined with the existing facilities, should be fairly adequate for the limited buffer stock operations that are contemplated. It is estimated in this connection that a working capital of Rs. 75 to Rs. 100 crores would be required to maintain a stock of three to four million tons of foodgrains. The need for buffer stock operations in commercial crops is not so great since variations in export-import policy could significantly affect their price level. What is needed in India today is a limited policy for giving price support to basic foodgrains largely by fixing a range beyond which they should not be allowed to fluctuate. The selective policy of price support, according to Dr. Poduval, will not lead to any distortion in agricultural production, as the Government's aim is not to maintain a fixed price level.

The Case for State Landlords

The manner in which land redistribution could release enormous funds for industrialising Madras if a floor price for paddy (unhusked rice) could be fixed and maintained during the next twenty years or so, is dealt with in a memorandum to the Land Reform Panel of the Planning Commission. Of about 16 million acres of cultivated lands in Madras owned by landholders other than religious and charitable institutions, some eight million acres could easily be released from their possession, says the memorandum, by appropriate measures under a possible "land to the tiller" legislation. As 1.6 million acres of these latter are already occupied by tenants, the actual surplus lands of about 6.4 million acres could be distributed to one million evicted tenant-cultivators (evicted since the date of publication of the Kumarappa Committee Report in 1949) in parcels of not less than 3-1/3 wet standard acres (which is the average size of the tenant-cultivated holding now); or 10 dry standard acres or an appropriate composite holding of wet and dry lands. It is doubtful if the tenant-sector thus occupying eight million ownership on the basis of a level of rents ranging from 16-2/3 to 25 percent of the gross produce in terms of the Planning Commission's rent formula. State landlordism appears to be a reasonable way out. The tenant-sector under State landlordism, continues the memorandum, could function easily on the basis of a level of rent representing four times the current land revenue assessment which itself represents only four percent of the gross produce. The tenants holding lands under the State could be vested with a secure cultivation right which can be inherited but not partitioned or alienated or mortgaged except to a Government credit agency, or sublet.

Ownership Rights

If State landlordism is thus chosen, then the ownership rights in eight million acres of lands transferred to and vested in the State would have to be compensated fairly. Such fair compensation should not be less than 50 percent and not more than 75 percent of the market value of land. As land has all along been a marketable commodity, its market value would necessarily have to be taken into account, for otherwise grave injustice would be caused to several hundred thousand owners, most of whom will only be small and medium owners, even though they may be non-resident and non-cultivating. As the aggregate market value of eight million acres might not be less than Rs. 400 crores and as compensation might be up to Rs. 300 crores, the current land revenue assessment on the remaining privately-owned sector of about eight million acres would have to be trebled. The additional revenue from the entire 16 million acres might come to about Rs. 10 crores per annum. The Government could invest this additional annual receipts in profitable industrial enterprises sponsored by it, and the dispossessed landowners be given 43 percent per annum by way of interest on their 20-year or 30-year negotiable bonds. The Government's investments should produce a guaranteed yield of not less than 43 percent per annum. The success of a possible programme of this kind would, however, depend on the maintenance of a floor price for paddy. Such a floor price could be four annas a Madras measure, which is about the same as the control price on the eve of decontrol and which is 20 percent less than the current producer's price. At this floor price, the rent payable by the occupancy holders under the State would be 25 percent of the net income from land and the land revenue payable by the *ryotwari* owners 183 percent of the net income, as against the theoretical half-net ratio of assessment.

TRAYONS TRANSPARENT CELLULOSE FILM
CAN SELL IT FASTER!

Whatever you have to sell, from shirts to sweets to toys, transparent cellulose film will make your sales easier. It catches the eye... shows the quality of your goods at a glance... starts off the sale!

And transparent cellulose film protects, too! Trayons transparent cellulose film keeps off dirt and dust. You can let the customer handle your goods without spoiling them. Dried fruits stay fresh till they are sold.

tations were nominal. On Tuesday, in spite of the easier goods market, these prices were again put forward, but there was an easier undertone and a small business was done at below the quoted rates.

Very heavy business was done during the current week at attractive prices. Dhuhri-Northern was reported at Rs. 27 to Rs. 28-8 a maund basis Bottoms for November-December shipment, and Upper Assam jute at Rs. 27 to Rs. 28 for the same shipment, the higher prices being done on Saturday. Local Northern jute was done at the weekend on the basis of Rs. 28 a maund basis Bottoms for one month's and November-December shipment. Small lots of Murshidabad Tossa were done at Rs. 27-3 and Rs. 28 a maund for similar shipments, and Murshidabad and Western white at Rs. 26-8 a maund. Good business was once again done in the daissee fibres, and Agency daissee was contracted for at Rs. 29 for immediate delivery, and Rs. 28 to Rs. 28-8 for one month's delivery. Daissee mesta was bought at prices ranging between Rs. 25-8 to Rs. 26-8 a maund according to delivery. Small lots of bimli were also reported at these latter prices for the same shipment. Heavy business was done in Pakistan cuttings over the week, the majority consisting of November-December shipment at Rs. 105 a bale, whilst some ready bills of lading changed hands at Rs. 110 a bale.

At the close, the market is unchanged and sellers reserved. Opening quotations on Wednesday morning were as follows:

Indian Jute:	Landed at Mills Rs. a maund basis Bottoms.	Shipment.
Lower Assam	28	Nov.-Dec.
Upper Assam	28	"
Northern	28	"
Daissee ex Agency	27	"
Murshidabad White	27	"
Daissee ex Agency	28-8	"
Daissee ex Cossipore	28	"
Daissee Mesta	26-8	"
Bimli	26-8 for F.A.Q.	"
Local Packing (Northern)	28	"
Tossa is quoted at Rs. 1 to Rs. 1-8 a maund above the price of White Jute.		
Pakistan Jute:	Rs. a maund. basis Bottoms.	Shipment.
Jat	28-8	Nov.-Dec.
District	28	"
Northern	28	"

Conditions in the local Cossipore markets are very steady, as heavy covering business has been going on, and imports are insufficient to meet demand. Wagon arrivals have increased to a total of 870, or a daily average of about 125, but this is much smaller than was expected at this time of the year. Mill representatives are still keen buyers for all arrivals and their activities are tending to keep prices higher than they normally would be. Similar conditions exist in the Daissee markets where imports in all agencies are well below average. All arrivals of both Daissee and Mesta contain heavy moisture, and indications for dry jute vary from Re. 1 to Rs. 2 a maund above the quoted prices. Agency rates are well above the parity of those quoted to Calcutta mills, so very little business on a contract basis has been reported, although jetty purchases at high prices continue. Latest quotations in Sheoraphuli are based on Rs. 28 a maund for garsat quality.

Mofussil: Imports into the main Indian up-country markets are still very poor. This, coupled with a steady demand for all categories of jute, has maintained upcountry prices above the parity of Calcutta rates. Sellers are reserved and are still not offering on a large scale, so only small business has been reported. The recent heavy business in Calcutta has also had a steadying influence, as operators are expecting covering in these contracts to take place shortly as many call for November shipment. Latest quotations in Dhuhri at the close are based on Rs. 24 to Rs. 24-8 a maund basis Bottoms.

In Pakistan the markets are very steady, and the only business reported is in good quality jat Bottoms of pucca bale standard. Imports are slightly less than last week and in Narayanjan are reported to be about 30,000 maunds a day, of which 10,000 maunds is baled and 20,000 maunds loose jute. Imports are expected to improve over the next few weeks, but at the present moment there is no sign of a fall in prices. Quotations in Narayanjan are based on Jat Bottoms at Rs. (P) 23 a maund, B Bottoms at Rs. (P) 24, C Bottoms at Rs. (P) 21 and X Bottoms at Rs. (P) 18 a maund.

Raw Jute Consumption

The consumption of jute by mills reporting to the I.J.M.A. during October, 1955 was 439,400 bales, which was 47,400 bales less than in September.

This can be accounted for by the shorter working hours during October due to the Puja holidays. The total consumption for July-October, 1955, is now 19,32,700 bales. In October 1954, the consumption was 4,37,800 bales and the total for July-October, 1954, was 18,24,800 bales. Thus in the 1955 season so far, raw jute consumption is 107,900 bales higher than in the corresponding period of 1954.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th November, 1955	1,307.5	14,053.1	15,360.6
1st to 10th October, 1955	1,194.7	10,106.0	11,300.7
1st to 10th September, 1955	1,692.8	14,349.1	16,041.9
	Sacking		
1st to 10th November, 1955	21,564.4	655.6	22,220.0
1st to 10th October, 1955	13,122.7	683.1	13,810.6
1st to 10th September, 1955	18,436.7	191.6	18,628.5

GUNNY SHIPMENTS DURING OCTOBER

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of October, 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,602.6	24,922.2	27,524.8
Short Shipped	13.9	360.7	374.6
October, 1955 (Nett)	2,588.7	24,561.5	27,150.2
September, 1955 (Nett)	3,255.7	38,391.7	41,647.4
August, 1955 (Nett)	2,468.4	28,554.5	31,022.9
	Sacking		
Gross	23,130.2	718.6	23,848.8
Short Shipped	679.4	Nil	679.4
October, 1955 (Nett)	22,450.8	718.6	23,169.4
September, 1955 (Nett)	35,422.0	715.1	36,137.1
August, 1955 (Nett)	30,417.4	2,032.2	32,449.6

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of jute goods for the month of October, as follows:

Description	Quantity
1. Twist and Yarn	
(a) For sale	2,144 tons
(b) All other including that used in sewing bags	937 tons
2. Canvas	182 tons
3. Gunny Bags (Tonnage excluding sewing twist)	
(a) Hessian	2,680 tons
	92.2 lakh yds.
	61.5 lakh nos.
(b) Sacking	41,459 tons
	9,89.1 lakh yds.
	4,27.7 lakh nos.
4. Gunny Cloth	
(a) Hessian	27,872 tons
	10,62.9 lakh yds.
(b) Sacking	2,038 tons
	47.3 lakh yds.
5. Other manufactures (including ropes)	1,334 tons
6. Total production (above figures combined)	
(a) All kinds	73,848 tons
(b) Hessian (both bags & cloth)	11,62.1 lakh yds.
(c) Sacking do	10,38.5 lakh yds.
(d) Canvas do	4.2 lakh yds.

	Summary (00,000 Yds.)			(000 Tons)		
	Oct. 1955	Sept. 1955	Oct. 1954	Oct. 1955	Sept. 1955	Oct. 1954
Hessian	11.66	13.52	12.01	30.7	35.4	31.1
Sacking	10.36	11.35	9.53	43.5	47.2	41.1
Others				4.6	4.8	2.5
Grand Total				78.8	87.4	75.4

THE FOREIGN JUTE MARKETS

PRICES REMAIN FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE very firm tone of the raw jute market, with a tendency for sellers to raise their terms has brought about considerable business in yarns and cloth. Both spinners and manufacturers have sold as far forward as February for some things, and it might be difficult now to purchase the hessian yarns and hessians before the beginning of next year. The Calcutta goods market is decidedly easier at the moment and this has put a damper on the position here. Business has not been so active as of late, but the general feeling is that values of all jute trade commodities are not likely to be easier for some months yet, if at all this season. The quality of the jute from Pakistan is not so good this season as last. Some annoyance has been caused to spinners by late deliveries of jute and premiums have to be paid for anything that can be secured quickly. A number of shippers will have to pay late fines by the end of this month. It is said that there are about 150,000 bales of jute lying at Chalna which cannot be shipped. The trouble seems to be that a steamer went aground and it has had to be unloaded on to barges which would normally be employed loading vessels ready to leave.

Mill Firsts are quieter at £93 and Mill Lightnings at £82 for decent marks, though some sellers quoting £1 less claim that their jute is good. Mill Hearts are lowest at £73 and Daissee and Tossa grades are offered at minimum prices. Reports from Pakistan state that values of all grades have tended to advance, but there is no reason given for the higher tendency. The goods market has firmed up and quite a strong position was apparent until there was a drop of 4s a 100 bags for B Twills to 174s 3d for November, 171s December and 167s 3d for January-March, with hessians down 1s 3d for 10 oz. 40 in. at 60s 9d November and December and 60s 6d January-March, and 7½ oz. 1s 0d lower at 45s 6d, and 45s 3d respectively, all f.o.b. Calcutta. Prices for jute yarns and cloth remain very firm and unchanged.

THE DUNDEE JUTE INDUSTRY

The following statement shows the production of jute goods and the number of workers employed by the Dundee Jute Industry from 1949 to 1954. The figures come from the October 1955 issue of the Digest of Scottish Statistics and reveal not only a considerable rise in the production of jute goods by the Dundee Industry during the last six years but also the rapid rise in labour productivity.

	Annual production of jute goods		No. of workers employed
	Yarn	Piece-goods Total (Thousand Tons)	
1949	86.7	50.7	137.4
1950	102.9	62.1	165.0
1951	112.1	68.9	181.0
1952	106.7	64.7	170.4
1953	128.1	76.2	204.3
1954	134.1	80.5	211.8

WHEN IN EUROPE

fly BEA
IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more... if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airlines—more VISCOUNTS for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including—PARIS · NICE · BRUSSELS · VIENNA · AMSTERDAM · OSLO · STOCKHOLM · COPENHAGEN · HAMBURG · GENEVA · ZURICH · BARCELONA · ISTANBUL · MADRID · LISBON · PALMA · MILAN · ROME · NAPLES · ATHENS, and further afield for example, to GIBRALTAR · MALTA · CYPRUS and CAIRO as well as WITHIN BRITAIN.

... and fly on the BEA CAR HIRE PLAN

BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

Madras

SOUTH INDIA, the cradle of ancient Dravidian culture, is rich in monuments of the past. Chief among them is the beautiful seaside temple at Mahabalipuram, near Madras City, admired by visitors from all over the world.

In Madras the old mingles harmoniously with the new. Motorists are proud of their ancient heritage, but have a lively respect for modern progress. That's why they appreciate the virtues of Double-Protection MOBIL OIL and make it a point to look for the Flying Red Horse—honouring a tradition among progressive motorists throughout the world.

NOISELESS TESTING OF AERO ENGINE

NEW LABORATORY IN U.K.

THE advent of the very high powered turbojet engine has given rise to many new problems, not the least of which is the creation of satisfactory testing facilities. The Gyron's 150 hour type test this year established it, at 15,000 lb. thrust (6,810 kg.), as the most powerful aero engine yet announced and it is thought to be developing even more power today. A visit last week to de Havilland's, manufacturers of this engine, revealed that the test bed specially designed for the Gyron is in regular use. Designed by the de Havilland Engine Company's Plant Department, this new engine test laboratory was constructed between January 1954 and May 1955, when a Gyron was first tested on it.

The test house is a tall, narrow structure which broadens at the end where the air intake is situated. From the other end a large circular exhaust duct divides into two outlet silencers which are the largest in use in this country. The detuners that finally direct the gases vertically upwards have the effect of lowering the pitch of the exhaust note so that there is little, if any, aural indication that testing is in progress. The shape and size of the exhaust ducts are influenced by the necessity of maintaining a one-way flow of air through the test bed. Should hot gas from the outlet find its way back to the intake and be put through the engine a second time, power would be affected. A difference in the intake temperature of only 1° centigrade can cause a loss or gain of 100 lb. thrust at the maximum r.p.m.

Testing the Engine

The engine is prepared for testing, mounted on a special trolley and wheeled into the test house. The trolley is placed on a hydraulic lift which raises the engine six feet until it can be suspended by four "ties" or steel tubes. When running, the engine is restrained longitudinally by pads which indicate the thrust generated. Above the engine are two panels carrying more than 400 transmitter pipes for pressure readings, while alongside the engine there is an electrical panel through which 150 test connections are made. A sound-proofed control room overlooks the engine, and it says much for the design of the test house that only two men are needed to operate it. Fuel comes in from four tanks, each of which holds more than 12,000 gallons. A motor drives three pumps, which can provide a maximum of 10,000 gallons an hour—the consumption of a Gyron fitted with after-burner.

PLANS FOR BIGGER SHIPS ON U.K.-INDIA- AUSTRALIA RUN

New and bigger liners are under consideration by the P. & O. and Orient shipping lines for the England-India-Australia run. So far only enquiries are being made of British shipyards capable of handling craft of the type proposed; at existing prices the cost of two such ships would be about £17 million. If ordered, the ships would probably be commissioned about five years hence. Each of the new ships would be bigger than any other on the regular England-India-Australia run and each would carry about 2,000 passengers in the first and tourist classes—an increase of 800 on the biggest liners now in this service. Another requirement of the ship-owners is that both ships should be able to maintain a speed of 27 knots, as compared with the 21-22 of the existing liners. Thus, on the round England-Australia trip there would be a saving of two weeks which would mean runs between London and Sydney of about 21 days against the 23 now occupied by the fastest liners of the P. & O. and Orient companies.

NEW PROCESS IN TUBE MAKING

A new process for welding stainless steel and high alloy tubing, which will "revolutionise" the manufacture of welded tubing and pipe, has been announced by the Trent Tube Company of East Troy, Wisconsin. The new method is said to provide better physical qualities, thereby increasing the potential uses of the welded products. The Trent process eliminates a long-standing production problem—the weld "bead" that forms on the inside of tubing. This imperfection has made it difficult to produce high-quality pipe after cold-working operations. Engineers of Trent Tube are reported to have prevented the formation of a bead by inverting the rolls of the mill forming the pipe or tubing and welding from the underside.

AUTOMATICALLY MADE TRANSISTORS

A machine that automatically makes transistors—tiny amplifying devices which are replacing vacuum tubes for many uses—has been developed by the U.S. Bell Telephone Laboratories. In less than one minute the device, known as "Mr. Metaculous," carries out more than 15 steps in the production of experimental transistors. First it takes a tiny bar, almost as thin as a human hair, of semi-conducting material such as germanium or silicon and examines it electrically. If the bar is acceptable, the machine attaches a fine gold wire to a critical point on the bar with an accuracy of one twenty-thousandth of an inch. Then it connects this wire to one of the four wires leading out of the transistor, turns the bar end over end, and repeats the entire operation with another wire on the opposite side. Finally, it makes electrical tests on the completed transistor.

ASSAM OIL COMPANY PLANS DEEP DRILLING AT HUGRIJAN

The first test well to be drilled in search of petroleum possibilities in the Hugrijan area of Assam began on 2nd November. Hugrijan is one of the new areas of oil interest in Upper Assam for which a prospecting licence was recently granted by the Government, the other being Moran where test drilling will begin early in 1956. The site chosen for the test well in the Hugrijan area is at Naoholia, about five miles from Bordubi Road station and close to the northern boundary of the Nahorkatiya Extension prospecting licence area, where wells Nos. 9 and 10 are at present drilling. Indian drillers of the Assam Oil Company will drill the well in accordance with the advice of the company's geologists. It may be necessary for the drill to go to a depth of 15,000 feet (nearly three miles) in a thorough exploration of prospects in this unproved area. The decision to drill at Naoholia, as also at Moran, was based on the evidence of extensive geophysical surveys carried out during the past three years. All the information it is possible for science to provide has been used in selecting the best places to drill in the newly-licensed areas, but nothing will be known about their petroleum prospects until the test wells have been completed.

COMMONWEALTH COMMUNICATIONS NETWORK STRENGTHENED

The Commonwealth network of communications was considerably strengthened in both the cable and radio fields during 1954. This is the most important fact to emerge from the Commonwealth Telecommunications Board's annual report, just published in London. The Board was set up in 1948 to promote the efficiency and development of Commonwealth telecommunications services. The partner Governments are those of the U.K., India, Canada, Australia, New Zealand, South Africa, Ceylon and the Federation of Rhodesia and Nyasaland. Pakistan is represented on the Board by an observer. The report notes that all the national bodies have, in varying degrees, improved their services, and there was a marked extension of radio-telephone facilities. The report stresses in particular the great flexibility of the Commonwealth network.

Total telegraphic traffic carried in the year ended March 1954 amounted to 740 million paid words—an increase of one percent compared with the previous year. A notable feature was the large increase in traffic between foreign countries carried on the system, which rose by 15 million paid words compared with the previous year. Commonwealth press-rate traffic increased by the unusual amount of 10 million paid words to 55,500,000 due to many events of public interest. Developments reported by the Indian national body—the Overseas Communications Service—included substantial progress in the planning and development of the new station at Calcutta, the main project being expected to be completed before March 1956. Another project at Madras, where sites for transmitting and receiving stations have been acquired, is expected to be completed before the end of next year. A substantial increase in telephone traffic and revenue as a result of the opening of direct radio-telephone services was also reported. Telegraph traffic amounted to 36,445,028 paid words.

RISE IN U.K. STEEL PRODUCTION

The United Kingdom's steel production in October averaged 399,500 tons a week, compared with 374,500 tons a week in October last year. Giving these figures, the Iron and Steel Board says that pig iron production averaged 249,200 tons a week, compared with 230,700 tons a week in October last year.

CALCUTTA TEA SALES IN OCTOBER

BETTER GENERAL DEMAND AT HIGHER PRICES

DUE to the Poojah holidays only three sales were held during October and the smaller quantities on offer met with a very better demand, say Messrs. Carritt Moran & Co., Ltd. in their monthly tea market review. In Sale No. 18, in spite of the increase in export duty from 6 As. to 8 As. a lb., plainest kinds received much stronger support than for several weeks and this support increased as the sale progressed until at the close these kinds were a full half anna dearer than in the last sale of September. Clean commons also met with more interest but declined by about half to one anna whilst medium broken and fannings were about 1½ annas lower. In the two subsequent sales, 1½ annas lower. In the two subsequent sales, demand was strong and general for all kinds and in Sale No. 19, prices advanced about 2 As. a lb. and a further 2 to 3 As. in Sale No. 20. In these last two Sales, there was a revival of interest for whole leaf grades which had been more or less neglected in September. Stylish B.P.Ss and leafy broken were also a strong feature. Tippy teas and the limited quantity of best liquoring Assams continued to receive strong support throughout the month and Darjeelings were selling at dearer rates in the last two sales though the offerings from this district were mostly plain in character.

Darjeeling leaf appearance was generally satisfactory for the time of the year though stalk was rather prominent from many of the lower grown estates. Cup quality was of an ordinary rains description, though a few invoices possessed quite fair flavour in the high grades. Assam cup quality showed a marked decline and only a few bright liquoring teas were available. Leaf appearance was fairly satisfactory but tippy teas were in much less plentiful supply. A few of Dooras estates produced some useful blackish teas but the majority of the offerings contained too much stalk and fibre. Cup quality generally was of an ordinary rains description though one or two bright liquoring invoices were available. With a few exceptions, turn from Cachar district was rather below average, the leaf being ragged and stalky and the liquors soft and plain in character.

Quotations

	1955-56 Rs.As.P.	1954-55 Rs.As.P.
Sale No. 18 Plain B.P.	1 10 0	3 1 6
Sale No. 19 Plain B.P.	1 12 0	3 2 6
Sale No. 20 Plain B.P.	1 14 6	3 3 6

Internal Market

Approximately 6,900 chests of Leaf were offered in the three Sales held during the month. Once again the majority of the offerings consisted of stalky residue grades for which there was little demand. The few clean leaf teas on offer received very good support but the remainder were very irregular. Dust offerings amounted to 4,700 chests. Demand at all three Sales was good and particularly in Sale No. 19. The strongest features were the best Assam C.T.C. Dusts and the small powdery medium Assam types. Dusts of the latter description advanced by as much as two to three annas in Sale No. 18 and continued to be firm or slightly dearer in the following two Sales. The very best Assam C.T.Cs. continued to be firm but more discrimination was shown against the fibrous kinds in Sale No. 20. Demand for the grainy dusts was also good and these advanced from 2 to 3 As. over the month in spite of a decline from half to one anna in the last Sale.

Quotations

	1955-56 Rs.As.P.	1954-55 Rs.As.P.
Sale No. 18 Clean Common Dust	1 13 0	2 6 9
Sale No. 19 Clean Common Dust	1 15 3	2 6 9
Sale No. 20 Clean Common Dust	1 14 3	2 7 0

Export sales up to No. 20, totalled 768,614 chests at an average price of Rs. 2-7-7 compared with 663,306 at an average price of Rs. 1-14-1 during the corresponding period of the 1954-55 season. Internal sales at 30,254 chests of Leaf and 219,894 chests of Dust (Rs. 1-6-8 and Rs. 2-4-2) go against 147,599 and 233,262 chests (Rs. 2-4-9 and Rs. 2-6-5) in the same period of last year.

Arrivals (in chests) in Calcutta warehouses during the period 24th September to 23rd October, 1955 with the corresponding figures of the previous year in parentheses, were as follows: by steamer 571,217 (601,239), by rail 98,881 (87,597), by air 23,488 (21,664), making a total of 693,586 (710,500) chests. Since the beginning of the season, 1st April to 23rd October, 1955, arrivals have been: by steamer 1,823,667 (2,075,044), by rail 419,249 (362,820), by air 126,155 (108,598) chests making a total of 2,369,071 (2,546,462).

The price of export quota showed a steadily firmer tendency as the month progressed. At the beginning of the month business was negotiated at around 60 pies a lb. After that, the price advanced fairly steadily and continued to do so until the end of the month, when small quantities were transacted at rates between 69 and 72 pies a lb.

The estimated North India crop to the end of September, 1955 was 371,984,746 lbs. as compared with 368,075,296 lbs. to the same date last year. The

average figure at this date for the three years 1951-1954 was 362,761,993 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3-7-6 a lb. as against Rs. 3-9-6 a lb. in force from 1st October, 1955. The export duty, therefore, remains unchanged at 8 As. a lb.

LONDON TEA SALES

AT last week's London tea sales the 60,015 packages on offer realised an average price of 4s 10.48d a lb., against 4s 11.32d in the previous week and 6s 6.76d a year ago. Plain broken pekoe was nominally quoted at 3s 6d to 3s 6½d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	852	4/5½
Assam Co.	1,001	4/11½
Attaree Khat	1,048	5/5½
Bagracote	106	3/11½
Belseri	138	4/3

Paint Problems

are solved at Rishra

Here at Rishra, W. Bengal, I.C.I. have established a unique Paints Technical Service Station. At this Station various problems concerning the uses of paint are examined. Here, paint users are given instructions on their particular painting problems and techniques; new developments in paints are tried and established; answers are found to questions involving the application of paint to a variety of products and surfaces; I.C.I. and customers' personnel undergo intensive training in paint and its application. This Station at Rishra is unique in India—another contribution by I.C.I. to India's progress and prosperity.

WEAK TREND AT TEA
EXPORT AUCTION

PRICES OF DUSTS ALSO EASE

AT Sale No. 22, held on 15th and 16th November, offerings for Export consisted of 62,700 packages. The market opened at about 2 to 4 annas below the previous rates and demand became much weaker as the sale progressed. Broken Pekoes and BPS grades showed a decline of 4 or 5 annas whilst Fannings were about 4 annas easier. Medium Assam O.F.s. were 5 annas easier while medium and low medium BOP's were neglected and withdrawals of this type of tea were heavy. Leaf grades met with fair demand and were from 2 to 3 annas easier, while teas with fair tip shared in the general decline. The limited quantity of best tippy teas and Darjeelings sold well at about last rates.

Quotations	1955	1954
	Rs.	Rs.
Clean Black Pekoe	2 5 0 to 2 6 0	3 2 0 -
Plain B.P.	1 10 0	3 2 6
Medium Assam B.P.	1 12 0 to 1 13 0	3 4 6
Best CTC Assam B.P.	3 0 0 to 3 1 0	3 8 0

At the Internal Sale, there were 16,400 chests of Dusts on offer. There was a fair demand but as the sale progressed prices eased and at the close most offerings were selling at 1 to 1½ annas below last week's rates. The few powdery Assams with good liquors, selected lines of best CTC Assam and non-wither Dooars were the strongest feature and were firm to dealer. Other teas on offer opened half an anna below last rates but eased by 1 to 1½ annas at the close. The weakest feature of the sale were poor liquored teas from all districts and the fibrous residual types which were practically neglected. The Darjeelings on offer were mostly ordinary in character and sold at very irregular rates.

Quotations	1955	1954
	Rs.	Rs.
Medium Dooars Dust	1 11 0 to 1 11 6	2 5 0 to 2 5 6
Medium Assam Grainy Dust	1 13 6 to 1 14 0	2 6 0
Best Assam CTC Dust	2 12 0 to 2 14 0	2 7 6 to 2 8 0

There were 2,150 chests of Other Grades on offer and the market followed the same trend as in the Export sale. Only a few clean leaf teas were on offer and these were from 2 to 4 annas below last rates. The residual types were in very little demand and were mostly withdrawn without bid.

FREIGHT RATES STILL
DECLINING

A further fall in the coal rates from America to the Continent was noted last week and there has been a sustained enquiry for time charter with owners now showing greater keenness to operate. The coal rate has receded to 60s. representing a decline of 12s. a ton in half that number of weeks whilst two years' consecutive voyages have been fixed at 53s commencing January 1956. Time charter rates were generally marked down and a 9,400 ton motorship accepted 34s 6d for 10 to 12 months' trading which is 3s down on a similar fixture made a fortnight ago. Miscellaneous business included cement from Bourgas to Karachi at 78s f.i.o. and ore from Calcutta to Dunkirk at 110s Tsingtao/Rijeka at 120s f.i.o. and Kollithottam/New York at \$15.50.

SUGAR MARKET

During the week ended 16th November, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals were 2,500 bags a day and stocks totalled 80,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-13 for ordinary grain and Rs. 32-8 for big grain. Ex-mill business was negligible.

SHELLAC MARKET QUIET

During the week ended 15th November, the market remained quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 173 buyers, 171 value, 172 buyers.
Lemon No. 1 Shellac	Rs. 177 8, 175, 175 8 buyers.
Lemon No. 2 Shellac	Rs. 173 to 170-8 buyers.
F.O. Std. 1 Shellac	Rs. 170 buyers, 170 done, 165-8 buyers.
Pure TN Shellac	Rs. 166 to 162 basis done and buyers.
4% I.T.N. Shellac	Rs. 155 to 152-8 value, 151 buyers.
No. 1 Kusmi Seedlac	Rs. 171-8 to 169-8 value, 174 buyers.
No. 2 Kusmi Seedlac	Rs. 166 buyers, 163-8 value, 163 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 165 buyers, 160-8 value, 160-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 160 buyers, 157 value, 157 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 153 buyers, 145-8 value, 145 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 141-8 done and buyers, 138 value, 139 buyers.
Kireelac	Rs. 67-8 to 68-8 buyers.

Shipments during November until the 11th were 11,210 packages, comprising shellac 6,015 packages, seedlac 3,844 packages, buttonlac 602 packages, others 749 packages.

COMPANY AND PUBLIC NOTICES

SHREE KRISHNA GYANODAY SUGAR
LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held on Wednesday, the 30th November, 1955 at 11 A.M. at the Registered Office of the Company at Dalmianagar for the purpose of considering, and, if thought fit, passing with or without modification the following resolutions as Ordinary Resolutions:—

RESOLVED that the Issued Capital of the Company be increased from Rs. 38 lacs to Rs. 58 lacs by issuing 2,00,000 Ordinary Shares of Rs. 10/- each on the following terms and conditions and subject to the following rights and in the manner herein-after appearing:—

(a) Such shares be offered at par to the holders of existing 2,00,000 Ordinary Shares on the Register of Members of the Company on the 30th day of November, 1955 (with the right to such holders to renounce in favour of his nominee or nominees approved by the Board) in the ratio of one new Ordinary Share for one existing Ordinary Share held by such holders respectively (with option to such holders to apply for additional new Ordinary Shares, the allotment of which shall be in the absolute discretion of the Directors) and such offer shall be by notice specifying the number of shares to which the holder of the existing Ordinary Shares shall be entitled to and limiting the time within which the offer, if not accepted, shall be deemed to be declined with liberty to the Directors, from time to time to extend the time for acceptance of the offer as aforesaid either generally or in respect of any particular holder or holders.

(b) The amount of Rs. 10/- per share shall at the option of the applicant, be payable to the Company, either with the application, or Rs. 2/8/- per share with the application, and the balance in three instalments of Rs. 2/8/- each, at intervals of one month each with interest at the rate of 6% per annum on the amount for the time being outstanding from the date of the application until payment. All payments are to be made at the Registered Office of the Company during office hours.

The Shares shall be treated as paid up to the extent the amounts are paid. In case of non-payment of any of the instalments, it will be treated as non-payment of call.

(c) The said new Ordinary Shares shall for all purposes rank pari passu with the existing Ordinary Shares of the Company save and except that the new Ordinary Shares shall not confer on the holders thereof the right to any dividend on Ordinary Shares declared in respect of the accounting year of the Company ending on 31st July, 1955, but shall entitle such holders to all dividends on Ordinary Shares declared for future accounting years of the Company in proportion to the capital for the time being paid up on such shares.

(d) The Directors be and are hereby authorised and empowered to allot the said shares accordingly and to dispose of and allot any of the said new shares not taken up by holders of the existing Ordinary Shares or remaining undistributed to such persons whether shareholders of the Company or not, and upon such terms and conditions and in such manner as the Directors may think fit.

(e) For the purpose of giving effect to this Resolution, the Directors be and are hereby authorised to prescribe the forms of application and renunciation and other documents in respect of such new Ordinary Shares and to give such other directions or do such other act as they think fit including settling any question or difficulty that may arise in regard to the issue and allotment of the new Ordinary Shares.

The Share Transfer Books of the Company will be closed from 24th November, 1955 to 30th November, 1955, both days inclusive.

By Order of the Board,

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PRICES IN THE YEAR AHEAD

AVOIDING DISTORTIONS CAUSED BY
DEFICIT FINANCING

THERE is some justification for the view that business conditions in India are very good at present. The downward trend in agricultural prices appears to have been reversed, but there is no sign of an inflationary upsurge developing yet. Prices of manufactured goods are rising, but increases in output are still sufficient to keep them under reasonable control. Raw materials are meeting growing demand pressure, but here too prices are standing up to the strain. It would be foolish to expect such a satisfactory state of affairs to continue indefinitely. Difficulties will almost certainly begin to accumulate during the coming year, when the economy's capacity for absorbing large amounts of deficit financing will be tested to the limit. At the moment there are good reasons for believing that stability can be maintained, provided no serious and unforeseen circumstances occur. But the economy will be under stress, and inflationary price rises are bound to be touched off at particular points. If these are not watched carefully and dealt with as they arise, they may do damage to the orderly cause of development.

The current total money supply is just over Rs. 2,000 crores. At the height of the busy season earlier this year it reached Rs. 1,989 crores. At this time last year, when the busy season had already begun, the figure was Rs. 1,808 crores. This shows that a substantial increase in the quantity of purchasing power has been pumped into the economy in the past twelve months. Under its impact, the fall in agricultural prices has been halted and industrial costs have started to rise. The peak of the next busy season may well see an increase of more than Rs. 400 crores over the present level—a rise more than double that for the past year. It is not difficult to appreciate that the effect will be considerably greater than it has been this year. If the present rate of all-round expansion goes on, it may be almost twice as great. If it is, then the inflationary impact will be difficult to control. Much depends on the industrial sector's ability to expand; agricultural output for the period is known to be about the same as last year's. But this industrial expansion is by no means assured. Industry has already shown a remarkable talent for increasing output. But how much has been due to actual growth, or simply to better utilisation of excess capacity is difficult to estimate. It may be that the next few months are going to prove the folly of policies which have recently discouraged private industry from undertaking new investment. The public industrial expansion of the second five year plan could come too late to provide the output capacity which private industry might have built up over the past few years, had its future been more certain.

Until recently the trend in agricultural prices has been downward. This has not been anything like the disaster it has frequently been made out to be. Prices would not have declined had output not increased; farmers have probably made up for the lower values by being able to sell more. Unless prices had fallen it is possible that output would eventually have suffered, because peasant proprietors are notoriously subject to the conditions indicated by what economists have termed "the backward-sloping supply curve." The whole community has been able to gain the advantages of agricultural prosperity through falling prices and, provided the growers' incomes are not allowed to deteriorate too far, there is no reason why declining or barely-steady commodity prices should not be compatible with a rising standard of living all round. But it is unlikely things will turn out this way. The good monsoons of the past three years cannot be expected to continue indefinitely. Population pressure on food supplies will increase at a progressive rate. At the moment the chief depressing effect is the large carry-over accumulated during the last three years, and even in the face of this prices are now beginning to rise. The world surplus of agricultural produce will help to prevent a too rapid advance, but there is every reason

to believe that the future trend in commodity values will be upwards.

Whether farm prices will keep pace with the inevitable advance in industrial costs is doubtful. As demand for raw materials, skilled labour, transport, and other scarce resources increases, the trend is bound to be upwards. A low level of food prices will help to keep labour costs down, but not if trade unions are encouraged to behave as they might if workers were in short supply. It is here that the impact of monetary expansion will be chiefly felt. The struggle for all kinds of resources is bound to be acute and if goods are easy to sell there is nothing to stop prices rising. This situation has its attractions for the individual industrialist, but for the economy it can mean disaster. In such a period of cost and price inflation the essential considerations of quality and quantity of output often go by the board. Productivity and efficiency are not promoted by such conditions, and it is these two factors which must eventually determine the community's standard of living. There is little doubt that the next year will see a great deal of this sort of inflation. The good profits of the past year have brought a large part of the available surplus capacity into operation and the rate of new capacity being laid down in the last few years has not been great enough to maintain the rate of expansion.

It is this fact which, more than any other, is likely to decide whether large-scale deficit financing is eventually to dissolve into runaway inflation. The alternative to new capacity is to make the best and most economical use of that already in existence. This can be done by avoiding bottlenecks in the supply of raw materials, improving industrial relations, and permitting rationalisation

INDO-BRITISH ELECTRICAL ENTERPRISE

NEXT to the steel plants, few industrial projects are likely to make a bigger individual contribution to India's plans for economic expansion than the heavy electrical equipment factory. The strong emphasis on hydro-electric development in the first five year plan (as well as in the second) and the railways' electrification schemes, would alone seem to suggest its urgency. In the circumstances, the surprising feature is that it has taken so long to materialise. Last week's agreement, under which Associated Electrical Industries are appointed technical consultants to the Government of India for establishing a heavy electrical manufacturing industry, is a particularly welcome indication that this project is at last passing from the stage of discussion to that of implementation.

Details are inevitably still rather hazy, but on the broad indications so far available it is clear that a very promising start is in prospect. Lord Chandos, chairman of Associated Electrical Industries,

should enable the agreement to be carried out smoothly and enable us to work together for the development of this modern industry."

One of the more useful results of the agreement is likely to be that it will reinforce the interest of British capital equipment suppliers in India's development plans. Although Associated Electrical Industries are only technical consultants on the project, the contribution of U.K. manufacturers is expected to be very substantial. This is all to the good, India's vigorous—and understandable—efforts in recent years to diversify her sources of supply has given some exporters, in Britain and elsewhere, the impression that she offers a market of diminishing prospects. In fact, this is far from being the case. The opportunities which exist today are such as have rarely been known before, though they could be vastly expanded, with India as a chief beneficiary, if official attempts to attract foreign capital were more realistic. Associated Electrical Industries' success in winning the Indian contract despite strong competition from Western Germany and the United States may reassure British industry that there is no reason yet to look away from what has been for it a traditionally important market. Foreign aid from sources other than British, however spectacular for its novelty, is still a trickle compared with the inflow of free investment from the U.K. The Russians may hit the headlines by quasi-political gestures such as transporting steel plants from the Urals to Madhya Pradesh; but the quieter flow of money, equipment and technicians from the free world does not fail to be noticed. Recent developments may not suggest it, but India's leadership is discerning enough to recognise that a steady drizzle from the West does the country's crop of industries more good than a quinquennial thundersquall from the north.

THE MECHANICS OF ECONOMIC RESTRAINT

DECLINING IMPORTANCE OF MONETARY METHOD

THE British Government has found it necessary to impose additional restraints on spending after raising Bank Rate and restricting hire-purchase credit twice this year. The methods of restraining excessive spending have been questioned, not only in Britain but also in the many other countries where similar problems have arisen. The essential problem is the same everywhere: production may have increased, but domestic consumption has increased more, and, therefore, the relation between exports and imports has deteriorated and the balance of payments has suffered. The main purpose is to divert some goods from the domestic market to export markets and, or alternatively, to restrain demand for imported goods. The classical method of dealing with such a situation is to raise Bank rate and to restrict the basis of bank credit. This method is not equally effective in all countries: it may work well where the banking system is highly developed but fail elsewhere. It has limitations now even where the banking system is as developed as Britain's.

The Governor of the Bank of England, Mr. Cameron Cobbold, discussed these limitations when he spoke at the bankers' and merchants' dinner at the Mansion House early in October. He suggested that, though the immediate results of the tightening of money last February were disappointing, from April onward the measures were probably more effective than had been generally supposed. But he did not deduce that the monetary instruments alone could perform any adjustment that might be needed. "The proportion of the economy which is directly affected by credit policy through the banking system, both as to investment and as to consumption spending, is much smaller than it used to be" said Mr. Cobbold. "With the enormous growth of the public sector, monetary action to restrict the borrowing and spending of individuals, firms and companies can be outweighed by the action of Government, local authorities and the nationalised industries." He added that re-distribution of incomes had weakened the impact of credit policy, while the importance of fiscal policy had increased, and that international capital responded less sensitively than before the war to local variation in interest-rates. When Britain's Chancellor of the Exchequer, Mr. R. A. Butler, having raised Bank rate in January and February, produced in April a Budget that could do nothing to restrain inflation, it was said that he was relying almost entirely on the monetary instrument, supporting it only with specific control of hire-purchase credit. However, his subsequent directives to the banks to reduce "significantly" their advances to their customers, with the implication that they should relate their loans to the "national interest" rather than to the customer's security, showed that he did not trust the blind forces of control, operated "from the centre". Now, with a supplementary Budget, he

has reverted to the direct method of restraint, in a more obvious form.

The special advantage of the fiscal instrument is that it can be applied selectively. The authorities can assess which kinds of spending are causing most damage to the balance of payments and can deliberately restrain them. However, taxes on specific goods are arbitrary; and to the extent that they succeed in reducing demand for the goods they fail to assist deflation—by not buying the goods the consumer evades the tax and keeps his money for other use. Income-tax and profits-tax are deflationary in principle, in that they draw off purchasing-power, that the Government can either use for its necessary purposes or neutralise; but both reduce the incentive to earn, and profits-tax is inflationary in practice in so far as it stimulates wasteful spending. More reliable is the policy of reducing public spending. The authorities can themselves determine the extent of the reduction of spending; they know that it will occur, and they know where it will occur. Since military spending is in direct competition with industrial spending (in construction, engineering, electronics, atomics), and is absorbing labour that industry needs, it is easy to see where economies should begin (indeed, they could end there)—political conditions permitting. Every move that these governments in difficulty make reveals their predicament. They do not know precisely how much restraint is required, nor (outside of their own immediate sphere) how much effect will result from the restraints that they impose. This predicament is especially serious in Britain, because, in relation to the size of her external account, her internal statistical services are singularly deficient.

The U.K.'s visible export trade is now at an annual rate of some £3,000 million, her import trade a few hundred million pounds more. A difference of £100 million in the combined total is proportionately trifling. Yet £100 million is about one-third of the annual credit balance of payments to which the Government aspires—and which it is still far from achieving. A slight miscalculation can upset the balance of payments; and the effect on the currency is exaggerated when the gold and dollar reserve is too small. It is because central monetary control is supposed to work subtly that the theorists favour it for such a situation. Its effects should permeate the economy, making slight adjustments to demand over a wide range. Yet the British and other Governments are resorting to more direct methods of control; partly because it is impossible to estimate, in terms relevant to the balance of payments, the effect of an increase of, say, 1 percent in Bank rate; also because changes in the rate of interest and in the volume of credit are effective mainly in the private sector, which has tended to diminish as a proportion of the whole economy. If policy reduces the public sector, then, perhaps, the monetary instrument can be used more effectively.

THE IMPENDING SHORTAGE OF STEEL

THE latest official action on the distribution of steel is a belated recognition of a fairly well-known fact. The Government had obviously not foreseen that consumer demand for steel would rise at such a rate. As the Programme for Industrial Development relating to the first five year plan shows, it was officially estimated consumption requirements in the country would rise to only 2.8 million tons in 1957 from 2.3 million tons in 1952. Why this gross under-estimate of demand for a vitally important commodity, in the face of obviously rising needs, is difficult to understand. When the estimate was made in 1950 or 1951, the Government itself had undertaken a railway rehabilitation programme, and building construction activity was to be stepped up in both the public and private sectors. New consuming industries such as the locomotive, automobile, ship-building, machine tool, textile machinery and a host of other engineering activities, were progressively coming into existence. Yet the Government did not, apparently, think the demand for steel would rise above 2.8 million tons by 1957.

Acting on this assumption, steel imports have obviously been allowed into the country only on a restricted basis. In 1952, steel imports were a mere 196,261 tons. Together with the domestic production the total steel available for the year was 1,330,452 tons. In 1953, imports amounted to 247,511 tons and the internal output to 1,053,565 tons. The quantity of imports rose to 387,401 tons in 1954 and that, with an increased production from domestic sources at 1,255,580 tons, gave the country a total of 1,642,981 tons for consumption. This increase in supply in 1954 was nevertheless short of the actual requirements of the country. Though an accurate estimate of the internal demand for steel is not yet available, it could be safely deduced from the complaints of various engineering interests that a shortage prevailed during that year and that a considerable part of engineering production capacity remained unutilised because of it. It is indeed curious that while the plans for

producing 4.5 million tons of finished steel by the end of the second plan period are being put through in such a hurry, little thought is apparently being given to the maintenance and development of consuming industries. This the Government should already have been doing by allowing bigger quantities of steel imports. Of course, the difficulty of finding the necessary foreign exchange during a period of rising world steel prices has had to be faced. But the fact remains that the Government did not expect internal demand for steel to rise at the rate it has done and has evidently been caught unawares.

The 201,000 tons of steel which the Communist countries will supply will meet only a small part of India's total needs, and it is of course true that some form of rationing in certain relatively essential lines of consumption has to be enforced. But the general policy should be to increase steel supply as much as practicable under the circumstances, particularly of heavy and light structural, by encouraging the existing producers to turn out more of these products.

If supply is not increased fast enough to meet the demand for steel as a whole, it is patently clear that some of the important nation-building projects will be held up. Construction activity in particular, which is to provide a goodly proportion of the 10 to 11 million jobs provided for in the second plan, will inevitably suffer. The Government, it is now said, has a programme for importing at the rate of one million tons of steel a year up to 1958. The current demand is being placed at 3.5 million tons because of the various development plans launched by the Centre and the States. Domestic production, it is thought, will not rise above 1.5 million tons during this period. If the economy has to work, as it seems it must, with a shortage of one million tons of steel annually, the effect on industrial development is bound to be serious.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations Capital's Index of Indian Industrial Activity shows a drop of 19 points during May, 1955. Contributing to this were steel ingots, paper and coal. Notes in circulation rose.

Farm Output in 1954-55.—Indian agricultural output in 1954-55, despite apprehension to the contrary, is unlikely to be appreciably less than that in 1953-54, as the final official estimates show. The Agricultural production index maintained by the Economics and Statistics Directorate of the Union Ministry of Food and Agriculture, shows a small decline at 113.9 from 114.1 in 1953-54 which was considered a record year from the point of view of agricultural production. Some competent unofficial sources however have questioned the accuracy of the official index figure and they believe that the 1954-55 output actually surpassed that of the previous year. This controversy apart, on the official estimate itself, the agricultural production of the year in question is at a high level—55.3 million tons as against 56.1 million tons in 1953-54. In most individual crops including wheat, production was even higher. Notable is the figure for wheat, which at 8.5 million tons (7.8 million tons) has exceeded the first plan's final-year target. The decisive decline was in rice, which was nearly three million tons less than that of the all other increases. Even so, the stock position in official food articles was considered comfortable. The been recording increases over the past few weeks. But this rise may be due partly to seasonal factors and partly to speculative hoarding in rural areas because of the widespread flood damage in the Punjab, U.P., Orissa and other support policy may have contributed as well.

The Indian Sugar Industry.—The story of the growth and development of the Indian sugar industry is told in a booklet, *Facts About the Indian Sugar Industry*, recently published by the Indian Sugar Mills Association. It is intended to supplement the Association's exhibits at the Indian Industries Fair. As far back as the 7th century A.D., sugar making flourished in India, and today not only is India's sugar industry the biggest in the world, its sugar-cane crop accounting for 28 percent of world production, but it is also the second largest industry in the country. It occupies about 20 million cultivators and nearly 140,000 skilled and unskilled workers. The total capital invested in the industry's products for 1954-55 is about Rs. 120 crores. The Indian grower gets a much larger share from the cane price and the consumer can buy his sugar more cheaply than his counterpart in Australia. Hickey upon the usefulness of the sugar plant "not

an atom of which is lost" has been well substantiated by the growth of subsidiary industries dependent on the three bi-products of sugar; bagasse, press-mud and molasses. Power alcohol from cane molasses is mixed with petrol for consumption as motor fuel. Molasses can also be used in the manufacture of acetic acid, plastics, synthetic rubber and toilet preparations. Press-mud can be utilised as one of the components of shoe-polish, carbon paper and mineral wool; bagasse in making paper pulp, cardboard and insulation board. The demand for sugar has been steadily increasing and the revised target for the first five year plan has been set at 1,800,000 tons. The Government has already issued licences for 35 new factories as well as for the expansion of 38 existing units, expected to step up the production capacity by 550,000 tons. A further substantial rise in consumption is anticipated during the second five year plan and the Development Council for sugar has recommended an annual production capacity of 2,500,000 tons against the present installed capacity of 1,600,000 tons. If the Indian sugar industry is to attain and sustain these ambitious targets without having recourse to imports, adequate supplies of a higher quality of cane must first be ensured, the booklet points out. Sugar factories are already helping the growers in their areas through the medium of loans, implements, seeds and technical advice. A network of sugar and cane research stations has been established throughout the country and the Central Government is taking an active part in the improvement of cane production. The industry complains, however, that it has been singled out as the recipient of an excessive burden of taxation. A chart in the Association's booklet, indicates the breakdown of the price of sugar on the basis of Rs. 28-8 a maund. The price of cane and Government taxes, both fixed items, account respectively for 51 and 23 percent of the cost of production. Salaries and wages, again fixed under Government regulations or legal awards, account for another 11 percent. Of the remaining 15 percent, manufacturing charges, including stores, power, fuel and packing, absorb 12 percent leaving a bare 3 percent profit for the industry.

New Forward Markets.—Plans to establish properly regulated forward markets in various commodities are still mostly in an experimental stage; the Government of India's latest decisions on such a market for oilseeds and oils suggest that caution remains the keynote of its policy. This is wise, for experience in the running of such markets has been scanty—and often unfortunate. Broadly, the problem is, on the one hand, to prevent over-speculation; and, on the other, to avoid hamstringing activity with rules and regulations which prevent the markets from becoming a popular barometer of longer-term commodity trends. Achieving a compromise between the two aims is a tricky matter in a country where speculators' ideas are only too prone to sudden and baseless change. Official caution is suggested by the fact that the Government, in accepting the recommendations of the Forward Markets Commission, has modified them to the extent that only some of the regulated markets for oilseeds and oils recommended by the Commission will be established for the time being. The case for the rest will be considered later in the light of actual experience. It has been decided that markets for forward trading will be organised through the following associations: at Madras, the Oils and Seeds Exchange Ltd., for groundnut and groundnut oil; at Adoni, the Adoni Groundnut Seeds and Oil Merchants Association Ltd., for groundnut and groundnut oil; at Delhi, the Om Exchange Ltd., for groundnut oil; at Hyderabad, the Hyderabad Oil and Seeds Exchange Ltd., for castorseed; at Ahmedabad, the Ahmedabad Seed Merchants' Association for castorseed and cottonseed; at Calcutta, the Calcutta Wheat and Seeds Association Ltd., for linseed; at Rajkot, the association which is shortly being constituted at Rajkot by the different applicants from Saurashtra, for groundnut and groundnut oil; and at Bombay, the Bombay Oilseeds Exchange Ltd., for groundnut and groundnut oil, castorseed and linseed. A notable recommendation of the Commission which has been accepted by the Government is that the hedging facilities provided by the Bombay Oilseeds Exchange Ltd., should cover all varieties of castorseed, groundnut and cottonseed and the bold variety of linseed. The other associations will provide facilities only for the locally-grown varieties of oilseeds. The grant of recognition to all the associations is conditional on their previously carrying out such modifications in their Articles of Association, trading bye-laws and working procedures as may be suggested by the Commission.

Import of Essential Chemicals.—Strong dissatisfaction with the Government's restrictive import policy for essential chemicals, was expressed on behalf of the Indian Chemical Merchants Association, by Mr. Laxmidas Devidas in his address from the chair to the annual general meeting held in Calcutta yesterday. Mr. Devidas, while not unaware of the Government's success in stabilising the country's economy, regretted that its policy "so far as the import of chemicals

is concerned, is not working satisfactorily." Taking as examples such items as soda ash, caustic soda and sodium bicarbonate, Mr. Devidas pointed out that the canalisation scheme adopted by the Government, under which only two firms were allowed to import and distribute soda ash within the country during the last licensing period, had resulted in the price of this commodity rising at one time from Rs. 19-3 to Rs. 26 a cwt. This, he maintained, had caused "considerable hardship and monetary loss to a large number of one-time importers and dealers in this important item." Regarding the issue of *ad hoc* licences for the import of caustic soda and sodium bicarbonate, Mr. Devidas expressed the hope that the existing policy would be replaced by the issue of licences to established importers with ceilings imposed regarding the quantity permitted. He suggested also that the granting of licences should be evenly divided among the various ports in order to ensure an even distribution of supplies. With regard to other chemicals Mr. Devidas emphasised that, where the indigenous production is inadequate, foreign exchange should be allotted for their import in the required quantities. Stressing the need for mutual co-operation within the chemical trade, he announced that the Association had sponsored a company under the name of Messrs. Chemical Importers and Distributors Limited, of which membership would be open only to members of the Association and whose main activities would be to import and secure distributorship from the Government as well as from some of the big indigenous manufacturers for soda ash and various other chemicals.

World's Highest Dam.—The gigantic Bhakra-Nangal project has entered its final phase with the actual construction work started at Bhakra on what is going to be the world's highest straight-gravity dam. It was perhaps fitting that this colossal work was inaugurated by Mr. Nehru himself. He has taken a special interest in the project and it was no visionary's dream on his part to say that Bhakra symbolised the future prosperity and progress of this country. For the benefits of this project, when realised, will be immense, and as one of the important officials connected with its execution has put it, the arid lands of Punjab, P.E.P.S.U. and Rajasthan, can be converted into similar green fields, once the flood waters of the mighty Sutlej are dammed and perennial irrigation provided for the thirsty lands in those states. Some 6 million acres will receive irrigation benefits. Power generation—400,000 k.w. of firm power—is also another purpose of this project. That will provide power for rural electrification of the Punjab. The growth of mechanised small-scale industries around the area will also be facilitated enormously. The dam that is being built at the narrow river gorge at Bhakra will be 680 ft. in height. The massive foundations, at some points, are 180 feet below the river bed and will take three and a half years' to complete. The entire cost of the project has been estimated at Rs. 65 crores, the highest expenditure to be incurred on any dam in India. Nearly half this sum has already been spent on what is described as the preliminary of the first phase, which took nearly five years to finish. Of all the commendable work done in the first phase, the two tunnels, each with a diameter of 50 ft. and half a mile long, cut in the rocks that flank both sides of the gorge, are an engineering feat of which India can be justly proud. An important feature of the project administration is that the entire work is being handled by the Punjab Government directly, with scrupulous regard for economy in all possible lines of work.

WORKERS' PARTICIPATION IN MANAGEMENT

NEED TO STRENGTHEN TRADE UNIONS

(By P. N. Krishna Pillai)

"THE worker must feel that he too has stakes in the industry and that the prosperity or otherwise of the undertaking will be reflected in his own prosperity. The development of such an attitude towards the establishment is not possible unless representatives of workers actually sit on the Board of Management of the establishment, share the management's responsibility for the administration, and assist both the management and labour to know each other's point of view." This quotation is taken from the text of a broadcast by Mr. Khandabhai K. Desai, Union Labour Minister, over All-India Radio, during the month of July this year. Ever since, Mr. Desai has reiterated his faith in the workers' participation in the management of industries from more than one platform. Trade Union leaders and political leaders in the country have also expressed similar views on the problem. It is stated that Mr. Nehru was impressed with the workers' participation in industry during his visit to Yugoslavia. In the note submitted to the Planning Commission by the Central Ministry of Labour on labour policy for the second five year plan, it is learnt that a more detailed scheme for the workers' participation in management is given. It seems that the idea is gaining strength and it has become one of the new slogans that is expected to capture the imagination of the people.

Before any decision is taken on this important subject, we must examine it dispassionately from the point of view of the workers, the industry and the country. Above all, we have to decide whether the idea will be in accord with democratic principles or whether it may lead to totalitarian tendencies. It is not the intention here to discuss the workers' participation in industries in the public sector (where the idea is said to be in the experimental stage already) by the nomination of certain "outside" trade unionists who are non-workers to the boards of directors. While many things stated here will be equally applicable to industries in the public sector, it is my intention to confine my remarks to industries in the private sector.

Trade Union Reactions

The sponsors of this idea quote the experiments in Austria, France and Germany to support their

views. They also refer to the "Scanlon Plan" in the United States and point out that "in the United Kingdom voluntary schemes of such associations have existed at different times." In Austria and France, they admit the experiment being tried only in nationalised industries. In coal and steel plants in Germany where the experiment has been introduced, there is stout opposition from considerable sections of the trade unions themselves. Two recent events in the U.K. and the U.S.A. will prove beyond doubt that anything approaching participation by workers in management will be resisted by the democratic trade union movements in those countries. While the United Auto Workers Union was negotiating with the Ford Motor Company for a guaranteed annual wage, the management put forward an alternative scheme to enable the workpeople to acquire shares in the company. Though shares in the Ford Motor Company are much coveted by investors and the workers had more than enough money to purchase them, the United Auto Workers Union rejected the offer and won its battle for a guaranteed annual wage. In the United Kingdom, at a meeting of the Joint Advisory Board, representative of the Trade Union Congress and the employers' organisations, the Minister for Labour and National Service suggested the idea of profit-sharing in industries as a measure to combat the recent menace of successive strikes in that country. Even the idea of profit-sharing, which according to certain political thinkers and trade unionists in this country is the panacea for all industrial ills, was turned down by the Trades Union Congress. Therefore, it can be seen that the idea of workers' participation in the management of industries is alien to the tradition of democratic trade unionism.

Effects on Collective Bargaining

Let us examine the statement by the Union Labour Minister quoted above. The sentiment that the worker must feel that he too has a stake in the industry is unexceptionable. Whether that objective can be achieved by the course of action suggested, namely by permitting a few workers to sit on the board of directors, is highly problematical. Viewed from the workers' angle it will be a disadvantage to them. The meagre participation of one or two workers on the Board of Directors will be ineffective. While they will not be able to shape the policy of the management, they will be responsible to the workers for all the deeds of management. Soon, these worker directors will be disowned by the workers themselves, and they may even demand their discharge. The management will be able to argue that the decisions taken by them with the participation of worker direc-

tors cannot be questioned by unions. Neither can there be any effective collective bargaining in the event of the workers' participation in the management of industries. The fundamental conception of collective bargaining pre-supposes the existence of two sides, namely, a management and the workers represented by a union. When the management, with whom are the unions to bargain regarding wages, bonus and terms and conditions of employment? Workers are, in such instances, bargaining with the management with the management. The valuable right of collective bargaining will be lost to workers in the event of their participation in the management of industries—and that is the main reason why democratic trade unions turn down any such idea. In totalitarian countries, all the industries are managed by the State and the State is supposed to belong to the workers. Realising that the management of industries is at least in theory with the workers, there is no collective bargaining in such countries. What surprises any one with a clear vision of democracy in this country is, that the same set of people, who cry aloud for workers' participation in the management of private industries, also blow the trumpet of collective bargaining, and joint negotiation. In Yugoslavia, the trade unions are controlled by the single political party permitted to function there and that political party controls the State and industries. Workers' participation in management in such a climate with no rights of collective bargaining is feasible, but in a democracy the very conception of such an idea is unthinkable.

Non-Workers in Trade Unions

If the question is viewed from the point of view of industry, the results will be equally disastrous. Today management and ownership are two separate things and management of business has developed into a specialised skill. How can workers or for that matter, anyone without special training, be incorporated into the managerial structure? In India the very provisions of the Trade Unions Act reveal that the workers themselves cannot manage even their own trade unions. The Act provides for electing outsiders who are non-workers up to 50 percent of the prescribed strength in the executives of trade unions. No one will deny that outsiders are managing the affairs of most of the trade unions. If this is the case with the management of trade unions, how can one expect that such workers will be able to participate in the functions of the management of industries which require highly specialised skill. If the pet theory of workers' participation in management in this country is put into practice, there will be the interesting spectacle of workers managing industries and outsiders managing trade unions. Look at the question from another angle. An industry is owned by its shareholders. With the drive towards middle class savings and all the measures being taken to avoid the concentration of wealth, the number of small investors will increase. It is they who elect the board of directors to administer the affairs of the industry. Therefore to have to tell the people who have invested their savings in the industry that others not elected by them will be managing their affairs would constitute a grave injustice. In order to clarify the absurdity of the proposition, let us look at a similar analogy. It is said that the management of a company by its directors, elected by the shareholders, affects the fortunes of the workers, and in order to ensure the safety and to protect their interests, the representatives of workers should also participate in its management. If we stretch the logic of this argument a little farther, it will have to be conceded that the management of the affairs of a trade union vitally affects the fortunes of a company and in order to ensure the safety and to protect their interests, the representatives of the company should also participate in its management. But will the sponsors of the new theory of workers' participation in management agree to the management's participation in the executive functions of trade unions? If you stand later. Where does all this lead? Definitely not to democracy. Under a democratic set up industry belongs to its shareholders and the union belongs to the workers. A mutuality of interest between them is created not by the participation of either party in the affairs of the opposite party. That is created by such well-known democratic methods as joint consultation, communication and above all by collective bargaining.

Development on such lines is rendered impossible by the present legislation laying too much stress on compulsory adjudication. Let us first irrespective of party affiliations. Trade unions in a factory can apply for and get registration, and so long as any such registered union can be present stress on compulsory adjudication will never be self-reliant and the employers will seldom have recourse to collective bargaining. The proposed participation of workers' representatives in management will only worsen a situation which is already bad.

Mr. Leslie Gwilt who left India last year after serving over 20 years with Glaxo Laboratories (India) Ltd. as Managing Director, and was also a Member of the Central Legislative Assembly has now become a Member of the London Stock Exchange and Brokers.

A DITCHER'S DIARY

objections seem manifold. And one may well ask, why must it replace English? The English language has been used with advantage by a large number of socially, economically and educationally important Indians throughout the country for well over 150 years, and has thus served more than any other to give India a sense of oneness. Secondly, Hindi is not understood, never mind spoken, in South India where the four principal languages belong to a family of their own. A third objection I have heard is that the large number of heavily Sanskritised words which have had to be introduced into Hindi to bring the language up to date are difficult for non-Hindi speaking people. The word-makers seem to have forgotten that dictionaries are not literature, that words become live instruments of expression only through varied and extensive handling over a long period. As it is, the objectors argue that the artificial inflation of the Hindi vocabulary does not reinforce its claim to be recognised as a well-developed language. If despite all this the Hindi zealots win the day, as seems inevitable, and English is abolished or relegated to an unimportant place in India's administrative and cultural make-up, I am afraid this country may be heading for an intellectual anaemia.

I have often had occasion to remark, sometimes with satisfaction, that there are times when the classical formulae of economic science go very much awry. Now I notice that the East Bengal Government's carefully-planned theoretical application of the familiar laws of supply and demand to the rice situation has come unstuck. Instead of bringing about a reduction in prices, the unrestricted sales of Government stocks at a price of Rs. 10 a maund, when the market price was double that, has succeeded only in benefiting a few unscrupulous speculators. I am inclined to agree with the East Bengal Government that an investigation is called for, although I suspect that a little harder thinking before the event would have done more good. After all, there is nothing new in what has happened. It seems to me that the so-called "anti-social" elements concerned are not an unfamiliar phenomenon. According to the psychologist Gustav Jung, these people are nothing more than "extroverts". Anybody who, faced with a given situation, comes forward with an immediate reaction, confident that his behaviour is absolutely right, can be grouped under this label. And the fact has to be faced that, where the incentive is monetary, most people will fall into this category. It may be unpleasant to have to take into account such "baseness" in human nature when acting in a worthy social cause. But that is really no reason why a little knowledge of human nature should not be applied to Government rice marketing. If greater quantities of cheap rice could have been released a situation would have been brought about in which the "extroverts" would have found it highly unprofitable to hold on to their "corners". It is even possible that the East Bengal Government might then have been in a position to buy back a certain proportion of the speculators' stocks at a price which would have made the game well worth while. But somebody blundered—there were no greater quantities available. I think the incident can be put down as yet another example of how thoroughly a Government can make an ass of itself when it goes into buying and selling.

I see that quite a few crossword fiends have been congratulating themselves on being able

to do the *The Statesman's* puzzles in what they claim to be record time. One intelligent gentleman claims to have solved a puzzle, so far as I can remember, between his two cups of tea at breakfast. Another, more modest perhaps, has accounted for every single one hitherto published this year usually "by lunch time". These performances no doubt do great credit to the solvers' nimble wits, or whatever other mental attributes may be required. I cannot claim ever to have pitted my own intelligence against either these particular brain-teasers or those which carry for successful solvers promises of monetary rewards running into five or six digits. I must confess that even if I were to try my wits—with all the tea of Assam or coffee of South India to aid my inspiration—I would go no further than the first few squares across or down. I have, therefore, a very proper admiration for these clever people whose sharp minds cut through these tangles with such ease and I shall not ask, like the perplexed mathematician to whom a fine Shakespearean passage was once read: "What does it all prove?" Nevertheless, I cannot help remembering that quite a few persons have achieved and go on achieving bigger things in less time. For example, several speculators make millions on Wall Street while putting on their ties, or so I am told. Byron is said to have composed a number of the stanzas of his *Child Harold* while uncoating himself. And South American Republics, as we know, are notorious for starting and finishing revolutions before one can say President Peron.

I would not care myself to suggest what happened to the *Joyita*, but I shall certainly be interested in the verdict of the experts if one is ever given. Every so often the sea poses a riddle of this kind and then, human imagination being what it is, the name of a small insignificant little ship becomes associated with the magical and mysterious. Now it looks as if the name *Joyita* will join that of the *Marie Celeste*, the ship found abandoned in the Atlantic in 1872, as representing one of the few examples known to man of a cause without any apparent effect. It is really not surprising. The *Joyita* left Samoa on 3rd October and was found drifting abandoned off the Fijis on 16th November. What happened to the captain, crew and passengers and why they left their little ship, is anybody's guess, but it seems unlikely any of them will provide the answer because it is now officially decided that they must all be dead. The only clue seems to be the huge hole in the vessel's superstructure, which newspaper reports say, rather in hope than conviction, looks as if it might have been made by a sea monster. Even if news is scarce these days, this just will not do. Nobody of sound mind is seriously going to believe that the *Joyita* was attacked by some creature of the sea any more than he believes that flying saucers have landed and disgorged hordes of three-foot high Martians—unless of course it can be proved. Freak weather would be a more likely if less sensational explanation. An upheaval of the ocean floor seems to me also to be a little difficult to credit: such things are picked up on seismographs I am told. No, I cannot think of an answer, although I am sure there is a simple one somewhere. The mystery of the *Marie Celeste* was once explained in terms of the insurance which her owners stood to gain. It would be a disappointment to find that such a first-class modern mystery as what happened to the *Joyita* had such a mundane explanation, but it might have.

PRICES RULE STEADY ON LONDON MARKET

INDUSTRIALS IMPROVE

(FROM OUR LONDON CORRESPONDENT)

TRADING has been satisfactory on the London Stock Market this week. Ralls moved within narrow limits. Dollars stocks advanced in sympathy with Wall Street but came back later when New York reacted. The industrial market attracted small and selective buying before the week-end and prices recorded an all-round advance. Some of the gains were quite substantial, but there was little further change after the week-end although the undertone remained satisfactory. Virtually all industrial groups moved up, with the better class issues recording the biggest rises. The cessation of recent Cape selling and reappearance of small buyers brought an extensive and appreciable improvement in gold shares before the week-end but the advance was not carried through and the market relapsed into quiet conditions subsequently. Coppers and tins were firm. Oils also moved up, with Shell an outstanding feature. Teas attracted small but selective buying and recorded a number of gains compared with previous levels. Rubbers were neglected and little changed.

The Money Market

Conditions in the money market during the past week were favourably influenced by the Government repaying the unconverted portion of the 1955 serial Funding loan. This was paid last Monday and conditions on that day and throughout the remainder of the week were comfortable. Day-to-day loans fluctuated on the basis of 2½ to 3½ percent. Banks were not very keen to buy bills, the overall take-off being moderate in view of the comfortable money position. Applications

for £240 million worth of 91-day Bills totalling £315,150,000, and the former amount was allotted at the average rate of 82s 1½d compared with 82s 0½d in the previous week. Applications for £50 million worth of 63-day Bills totalling £64,315,000, and the former amount was allotted at the average rate of 82s 6½d compared with 82s 5½d in the previous week. This week's offering will be £230 million of 91-day Bills and £60 million of 63-day Bills. The Bank of England return for week ended 16th November showed notes in circulation about £5 million higher at around £1,777 million, while bankers' deposits were about £6 million higher at around £252 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: London stock brokers cannot agree on the immediate outlook. Some believe that the market is now in a fairly good position but for the next few weeks would do well to stay around current levels. This certainly applies to gilt-edged. Industrial may also go sideways, though some British shares will benefit if Wall Street continues strong. After the Rhodesian loan failure, there must be a constant fear of what terms may be announced for the next new issue. Combined with the credit squeeze and the narrowing of profit margins, this fear will set the immediate tone for the market. Last season, tea producers made record profits while distributors suffered a heavy setback. Despite rising costs and higher export duties, the producing companies raised their dividends and greatly strengthened their finances. Tea shares participated only slightly in last January's boom. On their last dividends they offer very high yields. Crops and Britain's stocks are higher this year. London auction prices of Assam tea have averaged only slightly below the corresponding period of last year. They should assure reasonable profits even after some further cost increase. As the statistical position of tea remains satisfactory, with a possibility of further gradual increases in world consumption, reason-

able selling prices are expected, particularly for quality teas.

Activity on Wall Street

Convertible and rail issues moved irregularly last week. Prices advanced at first in fairly active dealings in sympathy with the strength of securities. Among convertibles, American Telephone and Telegraph were outstanding. Trading slowed down later and most issues backed away. U.S. Government stocks displayed a steady undertone on small turnover with the announcement of an increase in rediscount rates. In the foreign section, German Nationals were marked down. Italians were generally mixed. Denmark and Polish issues were slightly lower. Australians showed only minor variations. South Americans were featureless.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 17th November shows gold stocks unchanged at \$21,686 million. Foreign deposits decreased by \$17 million, while foreign investments fell by \$14 million. The Federal Reserve sold \$37 million worth of bills. Total discounts and advances decreased by \$654 million to \$548 million, while excess reserves of member banks rose by \$8 million to \$267 million. The daily average of excess reserves increased by \$36 million to \$602 million, while average borrowings rose by \$30 million to \$1,173 million. Business loans of New York city banks increased by \$118 million to \$8,928 million, compared with an increase of \$267 million a year ago.

New York Bank Rate

The New York bank rate has been raised to 2½ percent from 2½ percent with effect from 18th November.

Australian Copper Plant

Pero Mines will build a metal production plant worth £(A) 1 million at Tenants Creek. The Australian company's general manager has said that "the company will seek overseas markets for its copper production. We have saturated the South Wales, and we expect to send regular shipments overseas in future". The company has already sent some shipments through south Australian ports, but early in January the first shipment to be sent through Darwin will leave for Japanese smelting works. The Tenants Creek plant will be the first in the northern territory and will be capable of handling orders from small producers. It is expected that construction will begin in about six months and the plant will be ready within three years.

Platinum Dearer

The U.K. free market platinum price rose further to £40 or 40½ a troy ounce, as against around £38 recently. Two leading suppliers of the Comto £32½ because of the strength of the free market price. Meanwhile, demand is strong and supplies generally are insufficient.

Rubber Prices Ease

Rubber prices fell in London again last Friday morning on hedging against the purchase of lower-grade rubber in a reluctant week-end market, with very few buying orders circulating. No. 1 RSS January-March delivery was traded down to 35½d a lb., compared with 36½d previously. News of the formation of a new synthetic rubber producer in the U.K. was not considered a factor in the decline. Trade quarters pointed out that synthetic production in all industrial countries was inevitable and so far as the projected 50,000 tons of annual production from 1958 by the new British company was concerned, that quantity would be short of the increased requirements by that time.

Synthetic Rubber Output

The rapid rise in synthetic rubber production will prevent a world rubber shortage for at least three years, it was announced at the 40th annual convention of the Rubber Manufacturers Association. The industry's leaders agree that while world rubber consumption will rise by about 20 percent by 1956, shortages will be prevented by a "substantially more rapid rise in world production capacity." They expect that natural rubber will increase by no more than 4 percent between 1956 and 1960. The President has said that it is expected that U.S. production of synthetic rubber will reach an annual rate of 1,100,000 tons by the end of 1956. The Vice-President of the United States Rubber Company has predicted that Malayan production will achieve "modest gains" between 1955 and 1956 because of an "enlightened replanting programme." But Indonesian production will decline from the peak of 800,000 tons in 1951 to 650,000 tons in 1960 because of the uncertain political situation and its effect on investment. World natural rubber production will remain stable at 1,800,000 tons to 1,900,000 tons annually until 1960.

Vegetable Oil Market

Linseed oil ruled firm last week and rose by 30s or 40s a ton to reach the highest level of the year. The main incentive was the price achieved by the U.S. Commodity Credit Corporation for its 10,000 tons at 11.25 cents a lb., f.o.b. There was a brisk demand both here and on the Continent, but buyers were eventually reluctant to follow the advance. Improved demand was experienced for Indian castor oil for shipment and prices were well held to an occasional advance. Offers for B.S.S. for December-January shipment ranged from £106½ to £110. Demand for groundnut oil was quieter, but nevertheless quite useful business was put through. Prices finished steady at rather under last week's level.

Finance in India and Abroad

LONDON FINANCIAL LETTER
CONFUSED INTERPRETATIONS

By Air Mail

ALTHOUGH a supplementary budget has been thrown in—quite unexpectedly—for good measure, the City of London is still unable to judge how the Government's policy is working out. One day there seems to be no doubt that inflation has been checked; the next some new fact suggests that it is as strong as ever. Most of the time the money market experiences stringency: part of the time the stock market responds by marking down gilt-edged prices persistently (the market's "all-time low"); but prices, like mercury, can rise as quickly as they fall. A few unfavourable announcements of profits and dividends can generate pessimism in the industrial-share markets; but this mood evaporates easily in the warm glow of wage-demands and buoyant retail trade—because both signify inflation. The one clear fact—and certainly an important one—is that Mr. R. A. Butler's intention to curb inflation is more resolute than the City believed possible a few months ago. With a solid parliamentary majority and years of office ahead, he has no reason to be politically cautious, but he had seemed to be psychologically afflicted with over-optimism. However, when even careful economists were saying that credit-restriction had done what was needed (not, indeed, restored the balance but set in motion the forces that would restore it), Mr. Butler prepared a supplementary budget—a measure that is normally reserved for emergencies.

The Chancellor was not grappling with an "emergency" or "crisis". It is still a matter for dispute why he acted so dramatically; and the question has not been satisfactorily answered. If the intention was to arouse in the public a feeling that inflation was serious it failed immediately; for the immediate effect of the new and increased purchase-taxes was a spate of new, or at least more vehement, wage-demands. To allay such demands, presumably, the tax on distributed profits was raised. The critics said that two bad taxes that would bring no good results were a poor substitute for the delicate, and effective, working of the monetary instrument. This instrument has not been discarded; on the contrary, its effects are increasingly apparent in a few industries (especially building), and when the big annual tax payments begin in the coming weeks there will be real stringency effects many places—with, doubtless, deflationary effects in the orthodox manner, by central restriction of the quantity of credit, but by specific directives to the banks, telling them, in effect, by how much they must reduce their loans. This method works, but it is clumsy and often unjust.

Trade and Sterling

The foreign exchange markets have evidently been impressed by Mr. Butler's determination, although at times they have shown apprehension regarding the inflationary effects of the wage-demands. These demands are no longer being granted without a struggle; indeed, some strikes have failed. With profit-margins narrower and credit tighter all round, neither wages nor dividends can rise as easily as hitherto. So Mr. Butler's uncamouflaged attack on the consumer—as rent-payer as well as purchaser of almost any manufactured goods—may yet have the effect intended. Anyway, sterling is nearing the end of its season of weakness in gratifying robust health.

The current payments position appears relatively satisfactory in the light of the trade figures for October. That exports reached a new monthly peak of £281 million with no significant assistance from rising prices suggests that it may be possible to stabilise external trade at a high level. Both exports and imports have increased considerably since mid-year, but the visible deficit in each of the past two months has been only slightly over £50 million. It should be remembered that the export and the import figures are not exactly comparable, as the former are based on f.o.b. values at the port of departure, the latter on c.i.f. values at the port of entry. Since freight charges are at least partly and insurance premiums are almost entirely paid to British firms, it is permissible to deduct at least 10 percent from the value of imports to arrive at their true cost in overseas currency; and that deduction, on import totals of the order of £330 million, reduces the monthly visible deficit to less than £20 million. The net invisible balance should absorb that amount and provide a reasonable overall surplus.

It can already be said, though not yet quite confidently, that the external account, which threatened to cause another "sterling crisis" this year, has been stabilised, on the basis of pre-budget policies. But there can be no question of relaxing those policies. Imports at the present level can be supported if exports are maintained, but no significant increase in imports, such as would result from resurgent inflation, can be permitted. To provide a more comfortable margin over the present bare minimum, the overall surplus must be increased by expansion of exports; but it is unlikely that they can be expanded, or even maintained, if inflation reasserts itself. Competition is keen, and we have not yet felt the full effects of the restraints which many other countries have deemed it necessary to impose.

The Common Pool

There remains the serious question of the gold and dollar reserve of the sterling area. It is being gradually fortified by the improvement in the current trading account (the U.K.'s exports to North America reached a new peak in October, and ster-

ling commodities that are important in the dollar account, notably rubber and tin, have recovered recently after a period of uncertainty), but it is still, around \$2,300 million, pathetically small in relation to the sterling area's commitments and transactions. Germany's reserve is considerably more, even France's not much less, although neither country's need is anywhere near as great. However, the "atomisation" of the central reserve, which has at times threatened to disturb the whole sterling system, is no longer—for the present a serious possibility. It was hardly surprising that after the experience of 1949, various sterling countries decided that gold or dollars would be a better basis than sterling for their own reserves, but they have since been more or less convinced (more effectively than continental countries) that sterling will not be devalued again. Certain countries—especially Ceylon, Pakistan, Iraq—have been authorised to acquire gold and dollars for themselves, but only in small amounts. South Africa, of course, is not fully committed to the pooling scheme but is none the less an important contributor. The other sterling countries' "hard" reserves (largely Indian) amount to about one-quarter of the central reserve; whereas their sterling balances amount to more than twice the reserve.

U.S. TARIFF NEGOTIATIONS

The U.S.A. has announced a list of nearly 1,000 items on which it will be prepared to negotiate tariff cuts during the Geneva trade conference opening on 18th January, 1956, according to a copy-righted story in the current issue of the McGraw-Hill American Letter (Indian Edition). Many of India's principal exports are included. Reductions will be the result of hard bargaining and not all items will be affected. But several Indian goods are among the items that have the best chance of lowered duties, the American Letter goes on to say. U.S. negotiators will be restricted by law to total concessions of no more than 15 percent spread equally over the next three years. This means there will be no drastic slashes. But the range of products affected is unusually broad.

The trend of modern industry brings new words into the English language. Prominent among them are "automation" and "autocracy." The first has been honoured by dictionary acceptance, and means no more than the rendering of processing, manufacturing, and all activities pertaining thereto, subject to automatic control and direction. Critics have alleged that automatic control extends to human beings also, who themselves are made automatic in their responses and movements. Indeed, so much has been heard of this allegation that the Institution of Production Engineers has seen fit to appoint a committee with the object of studying automation, which body is to have especially in view a refutation of the charge that automation tends to be inhuman. The members of the committee include directors of well known industrial undertakings; the National Research Development Corporation is also represented. Another of the tasks of the committee will be to promote the "re-education" necessary to secure acceptance of the full implications of automation by the social organisation as a whole. It is also to ensure that the increased leisure which automation brings is to be rightly used. This latter aim is all to the good; but its realisation may be more difficult than supposed. The question to be faced is whether automation, while providing much greater opportunities for leisure, does not also, by affecting the spirit of man, limit the directions in which that leisure can be used. It has been long declared that the possession of a greater amount of time to spare will result in a revival of the crafts, and that men in their leisure will produce articles surpassing the work of the old craftsmen at their best. Such has not yet happened, as anyone who visits the handicraft exhibitions is aware, and in fact, the proportion of the

No marked improvement is shown in the cotton textile industry, but less has been heard of the necessity of imposing prohibitive tariffs and adopting other extreme measures. Indeed, the chief protagonist of drastic actions is said to have be-

The Deputy Minister for Production, Mr. Satish Chandra, told Mr. T. B. Vittal Rao at question time in the Lok Sabha that the question of establishing a Coal Commission was under consideration. Mr. Satish Chandra added that the location of its headquarters could only be considered at a later stage. Mr. Vittal Rao had asked whether any decision had been taken on the recommendation of the Estimates Committee in its fifteenth report about the location of a Coal Commission at Dhanbad or Asansol.

Chartered Bank Buildings, Calcutta.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Index, by groups, have now been brought up to October 1955. As compared with September, the October Indices for Food and Clothing reveal rises of 3 points and 6 points, while those for Miscellaneous

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100

and Fuel and Lighting remain unchanged at 282 and 239 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 2 points during October, 1955.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: August 1939=100) advanced by 1.3 percent to 363.6 during the week ended 5th November, 1955 as compared with 360.9 (revised) for the previous week. The index was higher by 3.4 percent as compared with the corresponding week of the previous month but was lower by 3.8 percent than that of a year ago. During the week under review, the index for Food Articles advanced sharply by 2.4 percent to 439.6 owing to higher prices of gur (new) (+28%) and wheat at Jabalpur (+3%), notwithstanding lower prices of coffee (-4%), sugar (-3%), and wheat at Hapur and salt (-1% each). The index for Industrial Raw Materials also moved up by 2.0 percent to 417.9 as compared with 409.7 (revised) for the previous week, due to an increase in the prices of gingelly seed at Jhansi (+17%), raw silk at Malda (+16%), rapeseed (+5%), manganese ore (average export prices) (+4%), linseed and castorseed in Bombay, cotton seed at Amravati and raw jute (+3% each) and groundnuts in Bombay (+2%), the prices of silk at Bangalore (-8%), gingelly seed in Bombay and copra (-4% each) and groundnuts at Cuddalore (-1%) were, however, marked down. The index for Semi-Manufactures advanced by 0.9 percent to 335.2. Items which showed significant variations were: cow hides (+9%), groundnut cake (+8%), buffalo hides (+7%), linseed oil (+4%), gingelly oil and gingelly cake (+3% each), brass in Calcutta, sheep skins and mustard oil (+2% each) and copra cake (-2%). An advance in the price of jute manufactures (+4%) raised the index for the Manufactures group by 0.4 percent to 372.7 during the week under review. A fall of 2.0 percent to 546.8 in the index for the Miscellaneous group was brought about by a decline in the prices of tobacco leaf in Calcutta (-7%) and pepper, black (-3%) at Cochin. The prices of cashewnuts at Bangalore (+5%), chillies at Patna (+2%) and betelnuts (+3%), turmeric and pepper, black (+1% each) in Calcutta, however, showed advances.

PRODUCTION OF MOISTURE-PROOF FILM IN INDIA

The Transvancore Rayons Limited, pioneers of transparent film manufacture in India, dis-film plant went into operation at their Rayon-consumer goods production in India in the last few years, demand for more attractive, and more production of moisture-proof transparent film in India will thus be welcomed by manufacturers. Several qualities which are lacking in ordinary wrapping paper. By a special process a thin coat-resins is applied to transparent film, which then and moisture. It also becomes 'heat sealing', i.e. envelope will seal it completely. Moisture-proof biscuits, dried fruits and food, sweets, confection-ery, cigarettes, cigars, coffee, powder and tea dust forward in Indian industry.

MARKET CLOSES ON CHEERFUL NOTE

MOST SECTIONS IMPROVED: IRONS CROSS RS. 43 IN UNOFFICIAL DEALINGS

Wednesday Evening

WITH steady to firm conditions prevailing throughout the past week the market closed on Tuesday evening on a distinctly buoyant note. The reason for the last-minute burst seems to have been the strength in the Bombay quotation for Tata Ordinary following the announcement of a new project involving co-operation between T.I.S.C.O. and the American firm of Henry J. Kaiser. Indian Irons followed the improvement and closed yesterday at Rs 42.9 after a hectic rise from Rs 41.15. In unofficial dealings Irons crossed the Rs. 43 mark this evening. The large-scale speculative support which has persisted during the week, in spite of a number of serious bear factors appears to be due to a sudden wave of optimism about the country's economic prospects, much of it generated by the visit of the Russian leaders. Buyers seem to feel that Russian assistance is going to help fill the gap in the second five year plan.

Greatest activity has been in the engineering and miscellaneous sections. Jessops and B.I.C. have featured with substantial increases in price in the face of interested support. Paper shares have remained firm and jute scrip has benefited from the rumours about the mills' intention to unseal surplus looms. Coal shares are better in the hope that the present negotiations in New Delhi will lead to brighter prospects for the private sector of the industry. The prevailing undertone in the market is now distinctly bullish. Government securities alone continue quiet.

Details of the week's trading follow.

Dull conditions obtained in the Government security market and the volume of business was on a mediocre scale. Trading was mixed with buyers for loans carrying vouchers but other issues had sellers rather than buyers. Three percent Conversion Loan eased further to Rs. 80.5 but 3% Non-terminable Paper was asked for at Rs. 80.1. In short-dated loans, 1957 was quiet at Rs. 99.9 and 3% 1958 eased to Rs. 99.7. In the medium-dated group 3% 1959-61 was marked lower at Rs. 98 but 3% 1963-65 was supported at Rs. 94.11 and 3% 1964 continued in demand at Rs. 94.8. 21% 1961 had buyers over at Rs. 93.1 as did 2% 1960 at Rs. 95.14 and 2% 1962 was steady at Rs. 93.11. In National Plan Loans 3% 1961 had small buyers at Rs. 99.10 but 3% 1964 was easier at Rs. 98.10 and 3% 1965 had sellers at Rs. 98.8. In long-dated loans 3% 1966-68 shed an anna at Rs. 91.13 and 1970-75 was on offer at Rs. 87.7. Little or no business was reported in Provincial Loans and prices were unchanged.

Once again investors were attracted by first class preference shares, but there were few sellers to meet the demand. In jute, Anglo-India were marked at Rs. 118.8 and Gourepore at Rs. 105. Hooghly Mills changed hands at Rs. 14.10 and Hukumchand at Rs. 114.8. Business was reported in Waverly at Rs. 58. Amongst miscellaneous issues, a small lot of Bharat Collieries was placed at Rs. 59 and a few transactions were reported in British India Corporation at Rs. 137. Duncan Brothers were crossed at Rs. 72. Gillanders Arbuthnot were marked at Rs. 82.4 and Richardson & Cruddas at Rs. 94. New Victoria Cotton Preference came to hand at Rs. 3.9.

In the banking section, Hindustan Commercial were quoted at Rs. 9.12 and a small lot of Hindustan Mercantile were placed at Rs. 14. Punjab National changed hands at Rs. 47.8 and United Bank of India "D" shares were a shade better at Rs. 5. United Commercial met with good enquiry and improved from Rs. 55 to Rs. 56.

Amongst railway shares, Dehri Rohtas changed hands freely around Rs. 14.12 and a solitary transaction was reported in Howrah-Amta at Rs. 73.

In the cotton section, Bengal Nagpur changed hands freely between Rs. 12.8 and Rs. 11.8. Cawnpore Textiles were steady at Rs. 10 as were Elgin Mills at Rs. 23.4. Dunbar reacted from Rs. 330 to Rs. 323. Kesoram opened steady at around Rs. 18.4, but later met with profit-taking and closed lower at Rs. 17.6. New Victoria Cotton were sold at Rs. 2.

A better feeling was noticeable in the coal section, and there were a few buyers of selected issues. Burrakur opened at Rs. 16.5 and closed higher at Rs. 16.10 with a fair amount of business passing. Bengal improved from Rs. 520 to Rs. 532. Central India were unchanged at Rs. 7.14 as were Western Bengal at Rs. 7.5. After a long interval, Central Kurkend reported business at Rs. 10.12. East Indian met with investment enquiry at around Rs. 31 and Katras Jheriah rose from Rs. 56.8 to Rs. 58.8. Karanpura Collieries closed Rs. 2 better at Rs. 124 and New Beerbhoom were asked for at a higher rate of Rs. 21.8. Pench Valley were quoted at Rs. 23.10 and Rewa at Rs. 19.2 and South Karanpura between Rs. 12.6 and Rs. 12.

Rumours that 64% of the looms of jute mills might be unsealed led to a small enquiry for jute shares, and in most cases prices showed a slight

improvement as will be seen from the following table:

	Opening (17-11-55)	Closing (22-11-55)
Rs.	Rs.	Rs.
Anglo-India	228	230
Auckland	143	146
Champdany	173	191
Howra	29 10	29 12
India	155	160
Northbrook	26 10	27 11
Nudea	48 8	49

Very little business was reported in electric supply shares, but prices were fairly well maintained. Agra came to hand at Rs. 166, Dishergarh Power at around Rs. 102.8 and Patna at Rs. 12.10. Calcutta changed hands freely around Rs. 15.2.

Little interest was displayed in sugar shares and prices showed no variation. Balrampur were unchanged at Rs. 10.8 as were Carew at Rs. 13. Cawnpore at Rs. 24.4 and Champaran at Rs. 35.1. Durbhanga reported business at Rs. 25 and Shree Krishna Gyanoday were marked ex-rights at Rs. 14.4.

A large amount of business was again put through in the engineering section under the leadership of Indian Iron & Steel. Large-scale bear covering coupled with bull support lifted the price further from Rs. 41.15 to Rs. 42.9. Bhartia Electric Steel were better at Rs. 17 while Braithwaite were shaded at Rs. 28.12. Britannia Engineering Old shares were quoted at Rs. 22.12 and the New at Rs. 19.8. Burn & Co. eased from Rs. 346 to Rs. 340, while Indian Steel & Wire Products Ordinary were steady at Rs. 90.8. Jessop & Co., improved from Rs. 64 to Rs. 65.4 while Richardson & Cruddas reacted from Rs. 28.14 to Rs. 28.4. Marshalls were fairly steady at Rs. 8.1 and Saran Engineering recovered from Rs. 10.2 to Rs. 10.12. Textile Machinery were strong at Rs. 19.7.

In the miscellaneous section, Bengal Paper rose further from Rs. 113 to Rs. 116, and India Paper Pulp were active at Rs. 25.7. Orient Paper were firm at Rs. 35.2 and Shree Gopal were a shade better at Rs. 18. Titagurh were steady at Rs. 49.4. Assam Paper were done at Rs. 7.9 and Dalmia Cement at Rs. 15.12. Good business was reported in Sone Valley at around Rs. 8.10. New Asiatic Insurance changed hands at Rs. 6 and Ruby General at Rs. 8.4. India General Navigation were easier at Rs. 137 and India Steamship were quoted at around Rs. 8. Port Shipping came to hand at Rs. 16.7 and Bengal Assam Steamship at Rs. 156. Alkali & Chemical were unchanged at around Rs. 21.14 while Assam Saws were fairly steady at around Rs. 5.14. Angelo Brothers were unchanged at Rs. 22.2 and Balmer Lawrie closed at Rs. 191 against an opening quotation of Rs. 184. Bengal Flour were enquired for at around Rs. 36 as were Britannia Biscuits around Rs. 15.8. British Burmah Petroleum were neglected at Rs. 4.9 while British India Corporation on interested buying rose from Rs. 13.10 to Rs. 14.10. Calcutta Tramways were a shade better at Rs. 18.6 while Clive Row Investment eased from Rs. 12.4 to Rs. 12. Dunlop Rubber were unchanged at Rs. 35.8 and a fair amount was reported in Gillanders Arbuthnot at around Rs. 17.12. Imperial Tobacco were fairly steady at Rs. 15 as were Indo-Burma Petroleum at Rs. 45.8 ex-dividend. Metal Box were crossed at Rs. 27.8 while Martin Burn were fairly steady at Rs. 30. National Insulated Cables were maintained at Rs. 20.8 while Indian Cables met with good enquiry and improved to Rs. 31.12 ex-dividend. Jardine Henderson was slightly better at Rs. 111. National Tobacco reelected from Rs. 13 to Rs. 12.10, while Rallis reacted from Rs. 37.8 to Rs. 36.12. Rohtas Industries were better at Rs. 24.2 and Shaw Wallace were absorbed at around Rs. 15.8. Walford Transport Ordinary were steady at Rs. 2.8.

In the mining section, Burma Mines met with good enquiry and closed better at Rs. 2.6. Chrestien Mica Industries reelected from Rs. 22 to Rs. 21 with sellers at the latter price. Indian Copper were steady at around Rs. 7.10 as were Metal Corporation at Rs. 9.10. Western Stockholders Investment was unchanged at Re. 1.

For the most part teas were neglected but slightly more interest was shown at the close, following more encouraging news from the auctions. Of the Assam shares, the outstanding feature was Brahmapootra which, after being sold down to Rs. 11.2, advanced sharply to Rs. 12.8 on interested buying. In contrast, Bishnauth were easier at Rs. 42, as were Dhekhakhat at Rs. 19.8, Dibrugarh at Rs. 29.8, Naga Hills at Rs. 57 and Sapoi at Rs. 36.10. Brooke Bond continued to be met with sellers and the price was marked back further to Rs. 22.8. Bokakhat were four annas better at Rs. 24.4, East India were crossed at Rs. 25, as were Telojian at Rs. 30.14. Seajuli had buyers at Rs. 38.8, as did Murphulani Preferred Ordinary at the improved rate of Rs. 32.12 and Jutibari were eight annas better at Rs. 27.12. Among Dooars scrips, Banarhat continued to be well supported and the price improved further from Rs. 370 to Rs. 376.8. Choonabutti changed hands at around Rs. 313 and a small lot of Ellenbarrie at Rs. 275. Hantapara declined

looking
for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

“CAPITAL” INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to May, 1955. Compared with the preceding month there were decreases in cotton consumption 3.6 points, jute manufactures 15.8 points, steel ingots 3.1 points,

paper 10.2 points, coal 3.1 points and wagons loaded 6.0 points, while increases occurred in pig iron 1.0 point, cement 53.8 points and electricity 13 points.

The index for notes in circulation reveals a

rise of 3.7 points, while that for cheque clearances discloses a drop of 0.6 points.

Correlating all the factors the Capital Index of Indian Industrial Activity declined by 1.9 points during May, 1955.

“CAPITAL” INDEX OF INDIAN INDUSTRIAL ACTIVITY (1935)

Bombay

DIVIDED OPINION ON CREATION OF BOMBAY CITY STATE

URGENT NEED FOR EXPANSION OF POWER RESOURCES

(FROM OUR BOMBAY CORRESPONDENT)

THE most important set of holidays for business men in western India was Diwali which marked the opening of new account books for the year. The volume of turnover of various commodities and consumer goods which takes place on this occasion has been on a larger scale than during any year since the pre-war period. The conclusion drawn by market observers from this and from the increasing volume of demand for steel and cement, is that the economic condition in general has not only improved but holds a promise for the future. Cloth sales both in Bombay and in Ahmedabad have been on an unprecedented scale at slightly higher prices than those ruling previously which augurs well for the textile industry and the piece-goods trade, in spite of the Karve Committee's report. In the commodity markets, there has been more attention paid to oilseeds as a result of improved prospects for export business in the new year. One of the factors leading to an improved sentiment in the case of groundnut oil has been the reduction in the freight on refined oil by 20s a ton for the U.K. and the Continent, effected during last week by the shipping lines. Chartered freight is available at a much cheaper rate than the Conference Lines' scheduled charges, which amount to £10 5s a ton for groundnut oil and £1 more for other vegetable oils. As a result of this, it is believed that the Conference Lines are seriously considering a further reduction in freight rates in order to bring them into line with chartered rates. Both the spot and forward cotton markets have also been in excellent form and the February contract in the latter advanced from Rs. 650 to about Rs. 690 a candy.

Debate on the S.R.C. Report

The latter half of the week, however, was marked by the excitement occasioned by the commencement of the special six-day session of the State Legislature for the debate on the S.R.C. Report, so far as it affected the re-organisation of Bombay State. The Chief Minister, Mr. Morarji R. Desai, in moving the official resolution accepting the three-State formula as suggested by the Congress Working Committee, claimed that the decision was the best solution under the present conditions. At the same time, he admitted that it might not be acceptable to all as it was difficult to make everyone agree where sentiments clashed. Mr. Desai hoped that an agreed solution might be found some day and appealed to the Members to avoid feelings of bitterness and to maintain the high traditions of the House. This motion has been bitterly opposed by the Opposition Parties. Prior to the commencement of the session of the Legislature there was a meeting of the Members of the Legislature Congress Party where it is reported that the Chief Minister, who is the leader of the party, informed party members that they would not have the freedom to vote against the official motion embodying the three-State formula for Bombay, either in the Assembly or the Council, or to express themselves against it in the House. They were, however, free to abstain from voting if they so desired. If this mandate of the Party is generally accepted by the members there should be no difficulty in getting the motion through the Legislature.

Citizens' Committee's View

Coinciding with the commencement of the special session of the Legislature, the Bombay Citizens' Committee headed by some of the most prominent leaders of the business community with Sir Purshottamdas Thakurdas as President and Sir H. P. Modi, Mr. M. C. Sethalvala, Mr. Pranlal Devkaran Nanji, Mr. Ramdas D'Souza as Vice-Presidents, issued a statement welcoming the resolution of the Congress Working Committee proposing the constitution of a Bombay City State. The Committee's statement announced that the three-State formula was the best solution to the problem of Bombay's future and was best calculated to serve the interests of all concerned under the existing circumstances. The Committee, however, regretted that the Congress High Command, instead of giving finality to the three-unit formula, had provided an option for Bombay City to merge with Maharashtra after five years, and went on to say that this option would provide an excuse for keeping up tensions and uncertainty. It further pointed out that the question of the future of Bombay City vitally affected "not merely a small section of the people but the vast majority of non-Maharashtrians forming 56.5 percent of the total population. No amount of assurances or safeguards can justify the inclusion of a multilingual cosmopolitan city into a uni-lingual State." The Citizens' Committee's statement observed that while it was true that labour from Maharashtra had a place in the economic life of the City, it was not correct to say that the labour population in Bombay was predominantly Maharashtrian. According to this statement "Marathi-speaking labour constitutes at the most only 8 percent of the total population of the city. Therefore, it was highly misleading to say that the labour vote would largely determine the complexion of the City Legislature. Any attempt to coerce the substantial majority of 56.5 percent of the non-Maha-

rashtrian population into the uni-lingual State of Maharashtra would amount to inflicting both insult and indignity on a majority of the population who would be aliens in a State brought into existence to give expression to their own (Maharashtrian) socio-cultural homogeneity based on the sole principle of Marathi language as a binding force."

Electrical Undertakings

At the annual general meeting of the Tata Hydro-Electric Power Supply Company Sir Homi Modi, who presided in the absence of Mr. J. R. D. Tata, its Chairman, referred to the introduction in Parliament of the Bill for the amendment of the Electricity (Supply) Act 1948. Discussing the provisions of the Bill, Sir Homi said that while it provided for an increase of from 5 percent to 5½ percent in the rate allowed to a licensee as reasonable return on his capital base, there were a number of provisions, which, if allowed to remain, would operate to the disadvantage of electricity undertakings. Sir Homi believed that even with regard to a reasonable return, the proposed amendment was not satisfactory, as by fixing the return at 2 percent, above the Reserve Bank rate of interest, no minimum was assured to electricity undertakings, because, if and when the Reserve Bank rate was reduced for any reason, the remuneration of these undertakings would be correspondingly reduced. Sir Homi pointed out that of more serious consequence, however, was the provision that in future no undertaking would be entitled to declare a dividend in excess of 3 percent per annum without the sanction of the State Government, so long as any arrears of depreciation remained to be written off in the books of the undertaking. In this connection, Sir Homi disclosed that all three companies had substantial arrears of this nature and each year, in addition to the item of depreciation charged in the profit and loss account, a separate item was shown in the appropriation account for the year, providing for an instalment towards depreciation arrears; but, as the Bill stood at present, the company

would not be able to continue to pay more than 3 percent in place of the present dividend of 7½ percent without the sanction of the State Government. Sir Homi, therefore, drew the attention of the authorities to the fact that the consequence of any drastic reduction in dividends of electric undertakings could not but have serious repercussions on the financial and investment markets, particularly in regard to electricity shares. Another provision to which Sir Homi drew attention was that enabling electricity supply undertakings to create development reserves out of the tax benefits accruing to such undertakings form the development rebate of 25 percent on new machinery, allowed for income-tax purposes by the Finance Act of 1955. While the concession in the Finance Act was intended as a measure of uniform relief for all classes of industry, the Electricity Bill had circumscribed this for electric undertakings by providing that any investments made from this reserve would neither earn a return for the undertaking nor would rank for compensation when the undertaking was acquired by the appropriate authority at the expiry of the licence. Sir Homi disclosed that the Federation of Electricity Undertakings of India had made representation to the Government on the Bill and, as it is believed that the Bill would be referred to a Select Committee, he hoped that the industry would be given an opportunity to place its case before the Committee regarding the adverse features of the measures, before it was passed into law.

Storage of Electrical Power Likely

On the future of the electric power supply in the Bombay-Poona region, Sir Homi recalled the indication given at last year's annual general meeting of the Tata Power Company that the consumer might look forward to an end of the days of scarcity and to greater availability and use of electric power. He explained that this anticipation was based on the promised output of the Government plant at Chola. Unfortunately, this promise had not been fulfilled and the maximum

Branches at: NEW DELHI - BOMBAY - KANPUR

capacity expected to be available from that source was less than the designed 54 million M.W. The requirements of the railways, which had decided not to proceed with the installation of any additional generating capacity, had also increased, adding to the load on the combined system. This had resulted in a situation where the peak demand was almost equal to the firm capacity of the integrated system and new load could be sanctioned, therefore, only during the non-peak periods. This situation, Sir Homi feared, would persist until Tata's first thermal unit at Trombay was brought into operation in October 1956 and that only after the second thermal unit was commissioned would there again be power to spare for expansion. Judging by the trend of load-growth based on experience, Sir Homi believed that the firm capacity of the integrated hydro and thermal systems would be fully utilised by about 1958-59 and from then until the first phase of the Government's Koyna Project came into operation in 1960, a period of shortage of power was likely to intervene, extending from over 18 months to two years unless further capacity was added to the system. He therefore appealed to the Government of Bombay, the Bombay Electricity Board and the hydro-electric companies, in view of the expected increase in the tempo of industrial development under the second plan, to take steps to secure for the Bombay-Poona area such expansion of generating resources as would be adequate to meet the anticipated load growth. Sir Homi informed the meeting that on their part the hydro-electric companies had already undertaken an examination of various alternative proposals for possible further expansion.

Loan for Expansion of Steel Plant

Mr. J. R. D. Tata, head of the House of Tatas and Chairman of Air-India International Corporation, returned from New York after attending the conference of the International Air Transport Association at Geneva. He disclosed that while he

believed that the required finance would be forthcoming for the expansion of the Tata Iron and Steel plant, negotiations were still proceeding and the exact source of the loan, whether from the Export-Import Bank or the World Bank still remained to be determined. The final decision would be made in consultation with the Government of India. Comparing the progress made by the steel industry in the U.S.A. with the programme in this country, Mr. Tata remarked that the U.S.A. had set aside as much as Rs. 15,000 crores for the expansion of steel industry during next year. Our own plan naturally was only a small fraction of this amount.

Control on Steel Supplies

The Government of India's two notifications early last week re-imposing control on the acquisition and disposal of "perfect steel" and "defective unscrap" steel, which came into force from the 15th of this month have been received with more equanimity than was originally expected, even though the decision to re-impose control on heavy and light structural steel products has created a feeling of uneasiness in the market. Supplies of indigenous steel products in the market are of a limited nature and the present heavy turnover is mostly confined to imported steel, the distribution of which is not controlled. While there has been no noticeable increase in the price of heavy and light structural products 'a black market' in steel is anticipated in view of the prospective heavy demand as a result of the building construction season which has just begun, till the end of the financial year in March 1956, after which deliveries might materialise under the Government's programme for heavier imports.

Uneasy Shipping Prospects

A serious situation is likely to develop with regard to shipping at Indian ports as a result of

the revival of the scheme once adopted by the All-India Port and Dock Workers' Federation to launch a line-wise boycott of those shipping companies whose ships were found trading with or calling at Portuguese possessions in India. According to indications available here, such a scheme might come into effect from the beginning of next month. It may be recalled that at present the boycott extends only to those vessels which touch Goa. It was planned originally to extend this to the whole fleet of what were called the "offending" lines from the beginning of October, but this was given up on the intervention of the Government of India. It is understood from the Port Trust General Workers' Union, which is one of the most powerful units of the Federation, that if this plan is revived, there may not be any further intervention from the Union authorities as they appear anxious to tighten the economic blockade on Goa, and the General Secretary of the Union is believed already to be in correspondence with the Chairman of the Port Trust regarding this proposal. He stated that the Bombay Committee of the Federation would meet shortly to review the proposal of a line-wise boycott and to recommend to the Federation the implementation of the earlier decision in this respect because the Union believed that only such a campaign would serve as a real check on shipping companies violating the embargo and rendering economic sanctions against the Portuguese possessions on the West Coast null and void.

Cloth for Flood Victims

In response to an appeal from the Prime Minister and the President of the Indian National Congress for help to the flood-stricken people of Uttar Pradesh, Orissa and the Punjab, the members of the Millowners' Association, Bombay, have so far donated 260 bales of cloth, valued at about Rs. 3 lakhs, besides a sum of Rs. 48,000. Further donations are to follow.

London

CREDIT RESTRICTIONS CAUSE FALL IN PRICES

FURTHER RISE IN COST OF LIVING INDEX

(FROM OUR LONDON CORRESPONDENT)

THE immediate effect of a change in credit policy on prices can be seen in the Board of Trade index for the prices of basic raw materials used in British industry. These fell after February when the bank rate was raised, rose again after May when money became easier, and have been falling since last month when credit grew tighter again. Based on 30th June, 1949=100, the index for October was 153.0, against 155.9 for September, and 3.5 points below the peak reached in August, but it is still 8.4 points higher than in October of last year. Individual movements are not without interest. Main factors in the fall were lower prices for raw rubber (down 14.7 per cent), copper (4.8 per cent) and raw cotton (4.5 per cent), partially offset by higher prices for hides and skins (up 4.4 per cent), raw wool (0.9 per cent) and tin ingots (1.5 per cent). Now any drop in basic raw material prices is to the advantage of our terms of trade, but it is becoming apparent now that higher interest rates are leading to the holding of much smaller commercial stocks. This development is not confined to this country but applies to most of the Continent, and it must inevitably have the effect of reducing the exports of the producers of these raw materials, and consequently their purchasing power and their ability to take our exports. The import restrictions in Australia and New Zealand are cases in point.

To some extent the success of Mr. Butler's measures to reduce domestic consumption and expand exports will depend on how this situation develops. Another problem which must be worrying the Government at present is the further rise in the cost of living index. On 18th October, according to the Ministry of Labour, this stood at 152, a rise of two points as compared with 15th September, while it was only 144 a year ago. The latest jump is mainly due to higher prices for certain food items, including tomatoes, butter, cheese, eggs, pork and bacon which could move either way—but there were also increases in the prices of furniture and newspapers and in some areas in rents and rates and in charges for the gas, which can hardly be expected to drop. The battle against the cost of living must be given first priority by the Government, for unless it can be won there can be little hope that wage demands will ease, and consequently even less chance of economic stability being restored. Labour is not likely to be satisfied with Ministerial arguments such as those put forward in Parliament this week, that food consumption is running at a record high level and that housewives are demanding better quality articles, or that spending on semi-luxury foods such as sweets and ice cream is a lot higher now than it was before the war.

Finance Bill Setback

In these circumstances it was unfortunate that the Finance Bill ran into trouble in the Committee stage, when a slip-up by the Government at the end of an all-night sitting of the House of Commons resulted in it being removed from the Order Paper. It was a technical set-back, it is true, for it will be reinstated next week at the stage at which the discussion was brought to a close on Thursday morning, but it provided the Opposition with an opportunity to score heavily at the Government's expense. The debate itself has been as uninspiring as the earlier ones, though Mr. Butler gave way in one or two instances of small importance and accepted Opposition amendments on purchase tax items. All major amendments were rejected by comparatively safe majorities. The Government's proposals to cut housing subsidies were debated on Thursday afternoon, and Mr. Sandys, the Minister, was particularly severe on the more exaggerated criticisms which had been made of the measure. He contended that far from raising rents to as much as 15s a week the average effect of the proposals would be to add 7d. a week to council house rents per annum. In all these cases, of course, as much as possible is made of the probable repercussions on the cost of living. So far, however, there are no indications that the Government's plans to bring the economic situation home to the general public and explain the real purpose of the measures it intends to adopt—to which reference was made last week—have been taken any farther.

Heavy Electrical Industry for India

The agreement whereby Associated Electrical Industries, Ltd. are appointed to act as consultants to the Government of India in creating a heavy electrical manufacturing industry in India is widely welcomed here because it has been secured in keen competition with the German firm of Siemens and with American and Belgian firms also interested. For a basic period of fifteen years the company will advise the Indian Government on the design, lay-out and construction of one or more factories for the manufacture of heavy electrical equipment. It is proposed to build a factory to employ about ten thousand people at a capital cost of something like £20 million. The total cost of the whole project, however, may well be much higher. A number of experts will leave for India shortly to survey suitable factory sites. No question of credit seems to be involved at this stage, but it is to be hoped that this project will not run into the difficulties which are being experienced in the case of other large overseas contracts as a result of the credit squeeze here. The negotiations about a steel plant for India, in which about

£80 million is involved, have come up against the problem of raising credit in London on acceptable terms. Reports from New Delhi say that the Indian Government is reluctant to pay the suggested interest charge of 1 per cent over Bank rate. In the City it is understood that the credits required have not yet been offered by any financial institution at any rate of interest. The search for finance will no doubt continue. Of the electrical agreement Lord Chandos, Chairman of A.E.I., has said that the implications are of great significance to the British electrical industry as a whole. The Indian Government intends to build up an industry capable of manufacturing a substantial proportion of the country's needs for hydro-electric plant, electric traction equipment, generating plant and distribution gear. The British company will act as adviser not only on design but also on the procurement of plant, machines and equipment, and the preparation of a training scheme. It will advise also on manufacturing techniques when the factory is working. For this purpose the company will establish a resident engineer in India and send technical specialists. It is regarded as certain that large orders for British equipment will arise from the scheme. One of the incidental effects of the agreement will be that British standards will be introduced into this new Indian industry from its outset.

A Plan for Cotton

Unexpectedly rapid confirmation of my recent summing-up of the attitude of Lancashire cotton interests to the problems which now confront the industry has been forthcoming this week. Nearly fifty leading members of the industry met in Manchester at the instigation of Mr. Cyril Lord and under the Chairmanship of Lord Derby, when the whole question was discussed and, according to the convenor, unanimously adopted "one definite, all-embracing suggestion" for dealing with all the major problems. Mr. Lord would not, however, say what the suggestion was. Its nature was being kept secret, he said, until all those who had been present had discussed it with the various trade associations they represented. They would then report back to Lord Derby, and soon afterwards a public announcement would be made. The mysterious "all-embracing" suggestion clearly includes another approach to the Government for protection from cheap imports of cloth, for Mr. Lord said that it meant taking the industry's case "higher than it has ever been". At what level the approach is to be made, however, is puzzling, since a deputation from the industry saw Sir Winston Churchill when he was Prime Minister earlier this year. It is also, apparently, an approach which will not cut across the one which the Cotton Board is about to make to the Board of Trade, for Mr. Lord said that the action to be taken would supplement that of the Cotton Board. "We are not working against the Cotton Board," he added. "Its chairman, Sir Raymond Street, was at the meeting and he endorsed the suggestions made."

From other hints that Mr. Lord gave, an approach to the Government would not seem to be the whole of the plan. He said that the problems of Lancashire's dwindling export markets had also been studied at the meeting, and that the all-embracing suggestion covered this problem also. The meeting was attended principally by leading representatives of the spinning and weaving sections of the industry, including the heads of most of the trade associations in these sections. A few representatives of the finishing sections were also there, including Mr. R. Lee, chairman of Calico Printers, Limited, who recently attacked the Cotton Board for failing to give the industry the lead it needed in tackling its problems.

Calico Printers Scrap Price Scheme

In the six years or so that the Monopolies Commission has been at work it has cost just over £500,000, and for that expenditure there is really not very much to show. Recent efforts on the part of the Government to make the action against monopolies and restrictive practices more effective, though it has run into criticism from all sides, is therefore welcome. Much will depend on the provisions of the new legislation on restrictive practices in industry and trade which the Government is to introduce. Mr. Thorneycroft has indicated his intention to go beyond the recommendations in the majority report of the Monopolies Commission's latest investigation. This dealt with collective discrimination and other restrictive practices in trade generally, and the intention appears to be that certain specified practices will be regarded as illegal unless the organisation which operates them can convince a special tribunal that they do not operate against the public interest in their particular instance. This will bring about a very great change in the outlook for price control, and those who now operate schemes can be expected to lose no time in considering how they will stand in the new circumstances. Meantime, under pressure from the Government, the Federation of Calico Printers has withdrawn its "percentage quantum" scheme and the other arrangements for the regulation of the calico printing trade which the Monopolies Commission condemned in the report of its investigation. The "pool-and-quota" system, the minimum prices, and the uniform contract terms are all to be abandoned, but the redundancy scheme is to run its course until 1959 by arrangement with the Minister in charge. A long time has elapsed since the machine calico printing trade was referred to the Commission, and other associations in the textile and other industries which operate price control schemes may consider that they can expect at least a similarly long breathing space before they need to give up their regulations. Most of them will no doubt wish to hold on to their schemes until the last possible moment, but that moment may come sooner than they think.

Uttar Pradesh

EXPANSION IN U.P. TAX COLLECTION STAFF

STATE'S SHARE FROM CENTRAL TAX POOL

(FROM OUR LUCKNOW CORRESPONDENT)

THE Income Tax Department can do more than either Communist or socialist propaganda in levelling incomes," said Mr. K. M. Munshi, Governor of Uttar Pradesh, while laying the foundation stone of a new Rs. 8 lakh Income Tax office building in Lucknow last week. The Chairman of the Central Board of Revenue, Mr. A. K. Roy, agreed with the Governor and said that in future the role of the Income Tax Department in securing the socialistic pattern of economy to which the Government was committed could not be minimised. The Central Board of Revenue has plans to erect buildings in other important cities of Uttar Pradesh, namely Kanpur, Agra, Allahabad, Meerut, Dehra Dun, Bareilly, Saharanpur and Aligarh. Formerly, there were only 33 officers of the Board of Revenue in Uttar Pradesh as against 106 today and the process of expansion has been equally marked in the Central Excise Department.

In U.P. there is a fair cross section of commodities on which Central Excise is levied, but sugar is easily the most important. Out of the all-India total of about Rs. 15 crores of revenue from sugar, U.P. contributes over Rs. 9 crores. The total amount of Central Excise duties collected during the last three fiscal years in U.P. represents 15 per cent of the gross collections. Mr. Roy reminded the State Government that the Central Government had been collecting an average of about Rs. 12 crores a year for the U.P. Exchequer. The State's share of income tax and Central Excise duties together formed the largest single item of its revenue, accounting for nearly 20 per cent of the total in 1952-53. With the abolition of zamindari, the top place in collections has gone to land revenue, but still the State's share of income tax and Excise duties forms about 15 to 16 per cent of the total. As regards income tax arrears in U.P., Mr. Roy said that it amounted to Rs. 15 crores for the State as a whole, Kanpur alone accounting for Rs. 9 crores.

Farm Product Prices

U.P. farmers may cease growing fine rice if the Government of India sticks to its present policy of price support. Four varieties of rice—two of them fine and two coarse—are normally grown in the State, but according to the Centre only one of the two coarse grades is entitled to price support. The grain market is also critical of the manner in which the Centre fixes the floor price of a cereal to which it extends price support. The floor price of wheat has been fixed at Rs. 10 a maund and that of rice at Rs. 11 a maund, even though the price difference in the market between the two ranges from Rs. 3 to Rs. 4. The grain traders say that if the wheat price is fixed at Rs. 10, then the rice price ought to be fixed at Rs. 13. The controversy seems somewhat unwarranted, at least for the time being, as coarse rice is actually selling at Rs. 15 a maund and there is no likelihood of its falling, in any case below Rs. 11. The recent unprecedented floods in the State have virtually relieved both the cultivators and the Government of their embarrassment of plenty.

Elephants at the Plough

U.P.'s lead in ploughing with elephants is reported to have met with great success and Assam which has a large elephant population, may follow in its wake. Mr. Jag Mohan Singh Negi, Deputy Minister for Forests, has disclosed that an enquiry into this method of ploughing has been received from the Assam Government. Plans are under way to open a training centre 20 miles from Lucknow where elephants, wild and domesticated, will be trained for six months. An elephant can plough more than three acres of land a day and is said to be cheaper than the cheapest tractor. The average cost of maintenance of an elephant-drawn plough is Rs. 18 a day, inclusive of the elephant's feeding, maintenance of the plough and harness and the mahout's pay. The initial cost of a plough is Rs. 900 and the harness costs about the same. The purchase price of an elephant is quoted at between Rs. 2,000 to Rs. 3,000.

The Buddha Anniversary

One Executive Engineer, four assistant engineers and 12 overseers of U.P. P.W.D. are engaged in works estimated to cost Rs. 62 lakhs in connection with the forthcoming 2,500th anniversary of the Lord Buddha. Gorakhpore occupies the central place for approaches both to Lumbini in Nepal, which was the Buddha's birthplace and Kushinagar in Deoria where he attained Nirvan. The Government is spending Rs. 30 lakhs on the modernisation of the Gorakhpore-Kasia road and Rs. 2 lakhs on the improvement of Kushinagar. The construction of a hostel for 100 scholars has been taken in hand at a cost of Rs. 2 lakhs, and after the anniversary celebrations the building will be handed over to the Buddha Degree College.

Employment Exchange

Arrangements are being finalised for the transfer of all employment exchanges in the State to the State Government. There are in U.P. 10 exchanges run by the Union Government and 11 by the State Government. It is proposed to set up at least one exchange in each district at the end of the second plan period. Statistics have so far been compiled by these exchanges on an occupation basis, but hereafter will be so compiled as to show

Save valuable working hours!

FAST NEW Night Air Service

by Luxurious 4-engineered

Skymaster

to BOMBAY-CALCUTTA
DELHI-MADRAS via NAGPUR

SAVE precious time and unnecessary expenditure on the way—fly overnight by new, luxurious Skymaster service, connecting Bombay, Delhi, Calcutta, Nagpur and Madras. The new service cuts out irritating overnight stops, lands you in time for breakfast—and it is carefully scheduled to connect with 34 morning flights from the big airports. So by midday tomorrow, you can reach almost any important town in India! Wherever you want to go, whichever flight you choose—Skymaster service makes sure you get there in time! And you have complimentary meals, free travel to and from airport, everything. No extras to pay.

Calcutta Markets

TEA EXPORT SALE IMPROVES
AFTER QUIET START

FAIR DEMAND FOR DUSTS

AT Sale No. 23, held on 21st and 22nd November, there were 59,000 chests on offer in the Export auction. The market opened rather quietly but soon improved. There was a better general demand for all kinds except Medium BOP's and O.F.s., which were about 2 annas easier, and the poorer C.T.C. teas. Fannings, except for Medium Assam O.F.s., were the strongest feature of the sale and advanced by 1 or 2 annas, while clean common broken sorts were fully firm and sometimes dearer, while Darjeelings were well supported and sold at dearer rates. Whole leaf grades were in good demand and stylish teas sold well.

Quotations		1955		1954	
		Rs.		Rs.	
Clean Black Pekoe	...	2 6	0 to 2 7 0	3 3	4
Plain B.P.	...	1 11	6	3	4 6
Medium Assam B.P.	...	1 13	0 to 1 13 6	3 6	6 to 3 7 0
Best CTC Assam B.P.	...	3 9	0 to 3 1 0	3 10	0 to 3 11 0

At the Internal Sale, there were 16,000 chests of Dusts on offer. There was a fair demand. The strongest feature were black leafed Dusts suitable for the Middle East, selected lines of powdery Assams with good liquors and brown leafed Dooars. These were generally firm to occasionally dearer. The remaining teas on offer opened from 1 to 1½ annas below last rates but eased a further half anna to close irregularly 2 annas below valuations. Darjeelings were mostly of a very ordinary description being very irregular and generally 2 annas below last rates. Poor liquoring teas from all districts and fibrous residue grades were a very weak feature and were virtually neglected.

Quotations		1955		1954	
		Rs.		Rs.	
Medium Dooars Dust	...	1 10	0	2 4	0
Medium Assam Grainy	...	1 11	6 to 1 12 6	2 4	6
Dust	...	2 10	6 to 2 12 6	2 6	0 to 2 6 6

There were 3,300 packages of Other Grades of leaf on offer which met with strong demand, prices for all descriptions advancing by an irregular 2 annas.

UNCERTAINTY PREVAILS IN
FREIGHT MARKETS

Uncertainty prevailed in the freight markets last week and little business was concluded although isolated fixtures for American coal to the Continent showed improved rates. The Indian ore trade continued brisk and Calcutta-Genoa paid 115s f.i.o. for a spot ship. Tonnage is still required for Gdynia. Mormugao-Trieste paid 88s 9d for December-January and 87s 6d for March. The lower rate of 99s gross terms, was accepted for the Continent. Miscellaneous fixtures included Bourgas-Karachi cement at 78s, and Rangoon-Wismar rice at 145s whilst phosphate was fixed from Saffi-Cochin at 78s 6d.

Recent orders for "super" tankers up to 40,000 tons in capacity have been dwarfed by the placing of a contract with a Japanese yard for two tankers of 83,900 d.w. These vessels will be about 814 feet long, 125 feet in breadth and 62 feet in draft.

SUGAR MARKET

During the week ended 23rd November, sugar sales in the Calcutta market averaged 2,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 80,000 bags. Rates for ready sugar were Rs. 32-8 for ordinary grain and Rs. 30-11 for big grain. Ex-mill delivery rates varied from Rs. 26-15 to Rs. 27-12. Prices fell slightly in a quiet market.

LINSEED

Very firm conditions prevailed last week and there was a fairly good demand, whilst prices advanced appreciably. Arrivals fell off; crushers showed a keen interest in ready as well as forward deliveries; fair trading was recorded, and the market displayed a much staidier undertone. The oil market was fairly active and prices showed a marked incline; there were some fresh enquiries from overseas and shippers were covering against previous sales. Latest quotations were as follows: November-December Rs. 20-8-0 a maund.

HIDES AND SKINS

The market in skins ruled firm and prices showed an upward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 15th November and 21st November, 1955).

Cowhides:—Wet salted (Ord) 4,000 pcs. on the basis of Annas 11 to Annas 13; Wet salted (Ord) 6,500 pcs. on the basis of Rs. 8-12 to Rs. 9-12; Wet salted (Slaughtered) 19,500 pcs. on the basis of Rs. 12-8 to Rs. 25.

Goatskins:—Wet salted (Daissee, Killed), 55,420 pcs. on the basis of Rs. 230 to Rs. 245, Rs. 255 to Rs. 325, and Rs. 350 to Rs. 400; Assam-Dinajpur-Murshidabad 8,000 pcs. on the basis of Rs. 245 to Rs. 280; Purneah-Kissenganj 21,200 pcs. on the basis of Rs. 260 to Rs. 295; Patna-Pukur (Ord) 17,000 pcs. on the basis of Rs. 245 to Rs. 250; Muzafferpore-Patna 35,450 pcs. on the basis of Rs. 280 to Rs. 300.

Bazaar Stocks

(21st November, 1955)

Cowhides:—Wet salted 1,29,000 pcs.
Goatskins:—Wet salted (Daissee, Killed) 32,000 pcs.; Assam-Dinajpur-Murshidabad-Jalpaiguri 56,000 pcs.; Muzafferpore-Patna-Pukur-Purneah-Kissenganj 2,40,000 pcs.

Plantation Topics

CANADIAN TEA IMPORTS RISE

TEA COUNCIL STRESSES NEED FOR
HIGHER PER CAPITA CONSUMPTION

THE population of Canada is expanding rapidly and imports of tea have risen, states the first annual report of the Tea Council of Canada covering the period July 1954 to June 1955. However, it is considered advisable in measuring the activities of the tea trade to think in terms of per capita imports, rather than total imports. Even if the decline in per capita consumption continues unchecked, it says, the growth of population might offset the effects of this trend and total imports might continue to grow. But such a situation would not build a solid foundation for the future of tea.

Throughout the report, all per capita figures are calculated omitting that part of the population which is under 15 years of age, on the assumption that the number of children of less than 15 years which drink tea is negligible. On a per capita basis, Canada imports today little more than half the tea which it imported in the period 1909-1913. Imports over the past 20 years show that the long-range downward trend in per capita consumption is continuing. Consumption is firmly based on an historical preference for the beverage. It is true that at both the noon and evening meals, about 60 percent of Canadian families drink tea. It is also true that over 95 percent of Canadian homes have tea on their shelves. Nevertheless, a decline in per capita consumption is indisputably the trend.

One does not have to look far for the principal cause of this decline. With growing urbanisation and the consequent increased use of restaurants and industrial cafeterias where people eat away from home and where, because of convenience in preparation and their popularity through advertising, coffee and soft drinks are more readily available, the consumption of tea outside the home has steadily declined. Changing this trend away from tea is one of the major problems of the Tea Council. The expanding population offers a challenge. If per capita consumption could be increased, the trade would benefit automatically from increased population. In terms of total imports, a spectacular increase would result.

The Council's Advertising Campaigns

To the average Canadian, tea is a familiar, every-day substance devoid of any glamour or interest. The Canadian drinks it, but he thinks about it very little and he displays towards the beverage none of the passionate devotion evinced by the British. His preference for it has been strong ever since Canada was first opened up, but nevertheless the Canadian has shown himself willing to be wooed away from the beverage. Advertising and publicity during the first 12 months of the Council's operations was directed very largely to making Canadians more tea-conscious. The two principal campaigns of the year, Phases 1 and 2, were devoted to increasing interest in tea and at the same time, pointing out the advantages of drinking the beverage. In Phase 1, the Tea Council began advertising in October and the first campaign carried through to early December. In this first phase, large-space newspaper advertisements with powerful headlines were used to create a heavy initial impression on the public. The theme of the advertisements was that tea is an economical beverage which, because of its relaxing qualities, is admirably suited to the pressure of modern living. In this first campaign, as in each subsequent phase of operations, both television and radio were used in addition to newspapers.

"Tea for Canada Week"

The week of 21st to 26th, March, 1955, was designated "Tea for Canada Week". This was the main promotional drive of the year. Early in February, the Council, assisted by the packer members, launched the trade drive which led up to this event. The grocery and tea trades across the nation were informed of the promotion well in advance. As part of this advance merchandising programme, special displays were built. The Council realised that more advertising and a greater impact could be obtained for the promotion if manufacturers of items which may be sold by association with tea could be persuaded to co-operate. Several manufacturers of such items agreed to carry out special advertising efforts during the Week. With trade activity well under way, an extensive publicity campaign was launched to bring "Tea for Canada Week" to the attention of the public. The co-operation of the Canadian Press was excellent. Almost every principal daily paper in Canada published stories about tea in one or more of its issues.

The benefits of "Tea for Canada Week" were four-fold:

1. Powerful free publicity was given to tea by the Press.
2. The grocery trade, which normally does not devote much attention to tea, engaged in concentrated display activity and advertising at a time when prices were rising—a reversal of normal grocery merchandising practice.
3. Considerable advertising and publicity for tea was arranged by manufacturers of associated goods, thus demonstrating to retailers that selling a packet of tea can increase trade in other departments.
4. Good public relations for the tea industry were built.

The Week made the trade and the consumer much more conscious of tea than they had been for many years. Iced tea is not at present widely consumed in Canada; certainly it enjoys far less

LONDON TEA SALES

AT last week's London tea sales the 62,330 packages on offer realised an average price of 4s 11.57d a lb. against 4s 10.48d in the previous week and 6s 8.00d a year ago. Plain broken pekoe was quoted at 3s 8d; in the previous week 3s 6d to 3s 8d. Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	... 904	4/8½
Amgoorie	... 263	6/9
Attaree Khat	... 120	4/10
Balijan	... 126	6/5½
Bengal United	... 281	4/3
Borjan	... 210	4/10½

Sephinjuri Bheel	... 234	3/9
Standard	... 307	6/9
Tingri	... 258	5/8½
United Planters	... 540	5/6½
Upper Assam	... 809	6/0½

U.K. Tea Stocks

U.K. stocks of tea on 11th November, amounted to 102.6 million lbs., against 97.9 million lbs., a year ago.

The Forward Markets Commission will visit Delhi, Hapur, Amritsar, Ludhiana and Bhatinda from 19th to 26th November, 1955, in connection with the recognition of associations to conduct futures trading in wheat, gram, gur, rapeseed and mustard.

Where oil does two vital jobs

Gargyle Industrial Lubricants — first choice for hydraulic systems

IN a hydraulic system, power is transmitted through oil; and the flow of oil is regulated through precision valves. If the oil oxidises, or rust is formed, the valves may be blocked — holding up production in an entire plant!

The oil has a double function; in addition to transmitting power, it also lubricates. Choosing the right oil is thus of vital importance. In India, as in so many other countries, Gargyle Industrial Lubricants — famous for 89 years — are chosen to keep hydraulic systems working efficiently.

There's a right Gargyle Lubricant for each industrial need. Backed by our experience, correct lubrication — with Gargyle Lubricants — can help to reduce costs and maintain output in your plant.

For details, write to Standard-Vacuum Oil Company . . . Bombay, Ahmedabad, New Delhi, Lucknow, Calcutta, Madras, Secunderabad.

ORDER FOR V. 1000
CANCELLEDBRITAIN LOSES AN IMPORTANT
MARKET

"I THINK this is a national decision we shall regret for many years," says George Edwards, Managing Director of Vickers-Armstrongs (Aircraft) Ltd., commenting on the Ministry of Supply's announcement that orders for the V.1000 transport have been cancelled. With a passenger capacity of more than 100 and capable of flying the Atlantic non-stop in both directions, a civil variant of the turbojet V.1000 was to be Britain's most outstanding candidate for the Blue Riband route in 1960. "With 100 passengers," he went on "the Americans in our view are unlikely to have engines capable of the non-stop westbound Atlantic crossing before that date. The decision to cancel the V.1000 means we have abandoned to the Americans, without a struggle, this highly important market. How important this market is can be seen from the fact that the orders so far placed by a few American operators for big jets total more than £200 million. The total size of the market could be of the order of £1000 million."

Ministry's Explanation

The Ministry explained that "during development, the weight of the V.1000 had grown substantially and had been outstripping the engine capacity. It had taken longer than was expected to solve the problems of meeting the specifications of the R.A.F." However, Mr. Edwards states that the increase in structure weight had in fact been fully matched by increases in engine power, and that the V.1000 could have been in all ways competitive with the two American jet airliners (D.C.-8

and 707), "and in some ways better". The engine concerned is the Rolls-Royce Conway by-pass turbojet which combines power with great economy. It is, at present, the only large by-pass engine that has been made public, and is the second most powerful type-tested turbojet yet announced.

The North Atlantic Route

The Ministry stated that B.O.A.C. which have aircraft on order to the value of £85 million, would soon have "an effective fleet" on the North Atlantic route consisting of Comet 4s, operating with stops, and the slower Britannia turboprop airliner, flying non-stop. No statement was made concerning the replacement of these aircraft in the early 1960s. In a T.V. broadcast, Sir Miles Thomas stated that B.O.A.C. had no intention of ordering American long-range jet airliners at present. He expressed the opinion that these aircraft would not be available for service on the North Atlantic route before 1962.

New Aircraft Announced

The Ministry of Supply stated that aircraft production in Britain has more than doubled during the past 5 years. Today, the industry is building 2½ times as many aircraft as in 1950. A new interceptor fighter—the possible successor to the P.1 in squadron service—was also announced. It is the Saunders-Roe S-R 53 which employs a combined rocket and turbo-jet powerplant. The P.D.11 built by Short Brothers and Harland, is designed for vertical take-off and it is logical to suppose that the development of this aeroplane will have a marked effect on the evolution of the S-R 53 and other fighter aircraft of the future. It was also stated that the English Electric P.1—successor designate to the Hawker Hunter—and the Fairey F.D.2 research aircraft have regularly exceeded the speed of sound not only in level, but in climbing flight. A spokesman of English Electric stated later that the P.1 first

achieved supersonic climbing flight in 1954, before the French SO.9000 Trident. Security prevented the earlier disclosure of this achievement.

Glider's 20,000 Launches

A Slingsby T.21b two-seat training glider owned by the Imperial College and operated by various clubs at Lasham gliding centre had, by the end of October, completed no fewer than 20,000 launches. Bought in February 1949, only minor repairs and replacements have been necessary during the glider's six and a half years' life—a fine tribute to the design and workmanship of the manufacturer. The T.21b is in service in several overseas countries including Holland, Pakistan, India and Ceylon.

NEW DEVELOPMENTS IN MOTOR CYCLES

A marked change in the character of the market for two-wheeled transport was reflected in the British Cycle and Motor-cycle Show at Earls Court, London (12th to 19th November). The big, heavy motor-cycles of the 1,000-cc class have very largely given place to new, lightweight motor scooters and mopeds (motorised bicycles with specially strengthened frames). The demand for these light, motorised two-wheelers follows on the popularity of the clip-on motors for cycles over the last four years, and with which Britain built up a prosperous export market. With the decline, latterly, in the market for clip-ons, British manufacturers have stepped up the production of new designs of scooters and mopeds, and with these they hope to establish a new and wider market.

The interest in mopeds is so great that this year they provide a major section of the show. The new machines have a fuel consumption of more than 200 miles to the gallon, a cruising speed of above 30 mph and a top speed of over 40 mph. All have engines of less than 50 cc and are neat and attractive in appearance. Of the six British motor scooters on show, five are new models. These scooters have proved most successful with their cleanliness, economy, and manoeuvrability in traffic.

In the true motor-cycle field, lightweight machines dominate, and manufacturers have concentrated on improved design. Engines and gear-boxes are treated as single units, and the general higher performance reflects experience in competitions and trials. Among the three-wheeled vehicles the biggest surprise is the Bond Minicar, which, from a weekly output of only 30 two years ago, now can show a production record of 250 weekly. Other three-wheelers are having a comparable sales boom. Despite the success of the scooters and mopeds, manufacturers are confident that a sound market remains for pedal cycles, and it is noteworthy that sales of ladies' cycles continue to increase in both home and overseas markets.

EXPANSION PROGRAMME BY GENERAL
MOTORS IN AUSTRALIA

General Motors-Holden's Ltd., of Fishermen's Bend, Victoria, makers of Australia's popular car, the Holden, is to spend £A14,000,000 on new installations, as part of a £A21,622,000 expansion programme in four States, during the next five years. Production of Holden cars and trucks throughout Australia is planned to reach 100,000 annually by 1958. The new allocation of finance will bring to £A47,750,000 the Company's post-war expenditure on new plants and facilities. The principal expansion will be at the Company's 153-acre site at Dandenong, Victoria, which will be provided with a new railway station on the main Gippsland line, and a spur siding into the plant. The Dandenong body assembly and vehicles assembly plant should be in operation in the first half of 1956, and from that time all Holdens in Victoria should be completed there. Additional equipment is to be provided at the Fishermen's Bend and Woodville (South Australia) plants and at all assembly plants in the five mainland states to raise the output to 100,000 vehicles annually.

Other main purposes of the expansion are to provide additional facilities at all plants to handle an increased volume of the other makes of vehicles which the Company produces and sells. These include Vauxhall, Bedford, Chevrolet, Pontiac, and the G.M.C. truck. The transfer of a spare parts division from Fishermen's Bend to be made here for the Company's Frigidaire land, a new body assembly and vehicle assembly plant will be erected at a cost of £A2,851,000, which have totalled £A40,000,000, will now be increased to more than £A61,000,000. General Motors-Holden's Ltd. states that the capital for the expansion programme was from profits, which were being ploughed back into the business "as a declaration of faith in Australia".

IRON ORE DEPOSITS IN S. AUSTRALIA

Deposits of iron ore discovered by government geologists in the middleback Ranges, Eyre Peninsula, South Australia, may contain between 10 million and 20 million tons of first grade material, according to the Premier of South Australia, Mr. T. Playford. Until recently, geologists had not been impressed with the extent of the deposits in the ranges, but current investigations were fast confirming substantial deposits, and drilling by the Broken Hill Pty. has disclosed new lodes at 600 feet and 1000 feet. The Premier stated that the deposits would have considerable bearing on the development of the State.

Books and Publications

PLEA FOR POLICY OF
SOCIAL WELFARE

A Few Aspects of the Indian Economy. By R. G. Bajpai. (Price Rs. 1-8. Pages 117).

Professor Bajpai believes in a free market economy and maintains that true human liberty is compatible only with such a system. From this belief proceeds his analysis of some of India's important economic problems, particularly population, unemployment and the low productive efficiency of industrial enterprise. He points out that a negative attitude to life and emphasis on a vaguely defined, and also practiced, social equality have been mainly responsible for the under-growth of economies in the East and stresses that in the present context of planning, proper incentive for individual enterprise should be granted for the country's economic progress. The increase in unemployment, he also points out, is the direct result of population increase in India which has the characteristic scarcity of capital equipment and complementary resources of an underdeveloped economy. He would therefore like that the Government's economic, particularly welfare policies, should take second place to those that add quickly to the capital stock and thus to the productive resources of the country. The book is full of sound common sense, though entirely one-sided in parts.

Profit Sharing in Practice and Law. By John C. Harper. (Published by Sweet and Maxwell, London. Available in India from N. Tripathi Ltd., Bombay. Price Rs. 31-5. Pages 368).

Mr. Harper has written a particularly useful book for business men on one of their intricate current problems—profit-sharing between capital and labour. The book, as the jacket blurb claims legitimately, provides a clear and matter-of-fact guidance on the choice and introduction of a profit-sharing scheme. The practical and legal aspects of the problem have been considered duly and such advice as is offered is based on a thorough examination of the profit-sharing schemes at work in the United Kingdom to-day. Such questions as what types of profit-sharing schemes are at work, which best suits the particular circumstances, how is a scheme best introduced and what difficulties may arise in the process have been fully considered and very practical answers given. An indispensable book of reference to business men everywhere, and in India.

COMPANY AND PUBLIC NOTICES

THE BURRAKUR COAL COMPANY LIMITED

AT a Meeting of the Board of Directors held on the 16th November, 1955, the following Dividends were recommended to be paid for the half-year ended 30th June, 1955:—

On 1st Preference Shares	— 7% per annum.
On Ordinary Shares	— 6½% " (without any deduction for Income-tax paid by the Company in each case)
On 2nd Preference Shares	— 6% per annum. (after deduction of Income-tax paid by the Company)

COAL COMPANIES

O, P, F and D indicate Ordinary, Preferred, Founders' and Deferred shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the company has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & other Funds	Increase under Tea	Output and Average Price per lb. realised for crop				Estimate	NAMES	Accounts closed	Managing Agents	Net Profit including taxation	Dividends per cent			Paid-up Share	Latest Market Quotations as available until

BUILDING A THRIVING EXPORT
TRADEA FUTURE FOR MANUFACTURES: DIFFICULTIES
OF A SOCIALISTIC ECONOMY

INDIA'S export problems will need to be handled with determination and resourcefulness if future foreign exchange requirements are to be met. The Minister of Commerce and Industry, Mr. Krishnamachari, made this point clear when he addressed the meeting of the Export Advisory Council last week-end. The latest increase in the second plan estimate for foreign exchange has, of course, emphasised the need for what the Minister called an "integration of the policies for exports and industrialisation". The two policies will clearly have to march in step if the economy is to get the greatest benefit from its earning potential. There is no need to point out that exports will play a proportionately larger part in Indian economic activity in years to come when loans and credits are being serviced. The development of the economy on its present lines means that increasing attention will have to be paid to establishing India as one of the world's larger exporters. It is not only immediate earning power which must be considered—indeed this is probably the least consideration. What is more important is that thinking should be done now on India's gradual adjustment to the position which all youthful economies must eventually assume, unless they have been developed wholly by internal resources.

The reminder that many of India's traditional exports are losing their monopoly advantages was a timely one. The point has not been overlooked by the industries concerned, although Government action frequently appears to ignore it. The new emphasis will be on competitive ability. Exports will be forced to hold their own in a world where minimum requirements of price and quality are considerably greater than they are in the home market at present. Fair competition will not always be guaranteed, which makes it important that India should identify her interests with the spread of liberal trading practices throughout the world. The chief task will be to ensure that the Indian article is wanted for its intrinsic value even when the buyer's choice is a wide one. This is not when the world's markets for manufactures are being factored. At the moment these are dominated by a comparatively small number of suppliers whose economies are geared for the purpose. But open economies are geared for the purpose. India can supply for the type of manufactures India can supply are growing, and can be expected to go on doing so in the next few years. The important thing is that the economy should be in a condition to make use of them. This means that it should not be unduly burdened with high costs, legislative restrictions, transport and shipping difficulties, or a lack of official appreciation of the problems facing an exporting industry.

The fact that India will have to rely to an increasing extent on the export of manufactures for earning the exchange she needs, is now well appreciated. The old staples will still play an important part. Such items as tea, jute and cotton textiles, leather and vegetable oils can be expanded but their rôle must decrease proportionately as India's foreign exchange requirements outpace the growth of world demand for these products. Mr. Krishnamachari's reference to the changing pattern of ownership and management in the tea industry brings to light the official view of this important factor in the industry's future destinies. The suggestion that the Government might itself take a more serious interest in the management of tea gardens, is an alarming one. There are few activities which are less suitable as subjects for Government interference than the plantation industries. If it has at last been decided that the present changes in ownership and management are against the national interest, the best solution would be to remove some of the reasons which underlie them. These include excessive taxation on the product and on the individual manager, an unrealistic labour policy and an inflexible and often capricious official approach to the problems of an

industry the fortunes of which often vary widely from year to year. A larger dose of official realism might also help the jute industry to make its adjustments to increasing world-wide competition. Mr. Krishnamachari sounded almost complacent when he referred to the industry's difficulties. Few manufacturers will share his views until their plants have been thoroughly modernised and the surplus labour burdens removed. The problems of the cotton industry too are not always regarded as intelligently as they might be. The present uncertainty about the future official attitude towards mill expansion and modernisation has prevented the installation of a great deal of the up-to-date equipment which India will need if she is to sell an increasing volume of cloth against growing competition from Japan.

The technique of selling manufactures on world markets remains to be studied closely in India. Without the large marketing organisations which the staple exports enjoy, individual unco-ordinated efforts can often be wasteful and frustrating. Such important requirements as trade information, advertising, quality guarantees and credit facilities can best be organised through central bodies representative of the various units which comprise the industry, acting with or without Government support. Export promotion councils can be set up for each industry to provide the necessary exhortation, investigation and information. Credit facilities are important in this type of trade and some assurance of reliable quality is imperative. The Government has acknowledged this point in its export guarantee scheme. This idea is a useful one, but it also has its dangers. The real answer to the quality problem is the encouragement of better standards among Indian manufacturers. All too many of these have become used to turning out a shoddy article and charging a high price because their home markets

MR. MARTIN ADVISES CAUTION

FROM the market's point of view, there are two features of major importance in the address Mr. T. Leslie Martin, chairman, gave to shareholders of the Indian Iron and Steel Company on Monday. The first is that the question of reorganising the company's capital structure will not arise until the latest expansion scheme, prepared this year, is finalised. This scheme is only in the paper and discussion stage at present; whether it will be implemented depends on the increase in retention

after it has been completed and brought into operation".

The chairman made it quite clear to shareholders that production results this year are "extremely unlikely" to be as good as in 1954-55. Last year, production of finished steel touched a record because accumulated stocks of pig iron, steel scrap and rollable steel ingots could be used. This has not been the case during the current year. Output is also likely to be affected as the modernisation and expansion programme is implemented this year. As Mr. Leslie Martin pointed out, "there must inevitably be a severe and increasing disruption of operations, having regard to the fact that much of the new plant will be sited alongside existing installations. Further, one of the major works under the expansion programme is the extensive development and mechanisation of the ore mines at Gua, and this again must affect the availability of our supplies of iron ore from the mines for the blast furnaces, any shortage in which may not be capable of being fully met from outside sources" because of transport difficulties. The re-lining of the two blast furnaces—one this year and the other in 1956-57—is also likely to affect output.

PROGRESS OF THE COLOMBO PLAN PRACTICAL ASSISTANCE TOWARDS SELF-HELP

OF all the schemes evolved for the purpose of raising the standard of living of under-developed countries the Colombo Plan alone is characterised by the diversity of its commitments, the flexibility of its planning, and the significantly modest size of its administrative staff in relation to the number of men in the field. Not burdened with an over-elaborate or too ambitious programme, its aim has invariably been the provision of practical assistance towards self-help, and the first four years have proved that the problems of South-East Asia can be dealt with on an international basis.

That the life of the Plan should now have been extended from July 1957 to June 1961 is some measure of its success. The annual report of the Consultative Committee has just been published. While an impressive number of objectives have been attained, the Committee does not hesitate to emphasise the immensity of the task ahead. Facts and figures for the fourth year reveal a perceptible increase in the overall trend of production in Colombo Plan countries. Economic indicators point to a noticeable rise in national income, while industry, mining and power capacity are notably higher than in the previous year. Account must be taken however of the disparities between individual member countries and the undoubtedly favourable factor of a generally expanding world economy should not be minimised. Many of the Plan's projects too are concerned with long-term development schemes, whose impact on the countries' economy will not be felt for some years to come. The report stresses the continued necessity for mutual co-operation and Governments are invited to use the annual meetings of the Committee as a clearing house of ideas and information, "bearing in mind that the long-term goal of development is to maximise incomes and so promote higher levels of trade both within the area and with the rest of the world."

The report is careful to point out that although much progress has been made, the current per capita food consumption throughout the area, though substantially higher than the early post-war years, is lower than before the war and below accepted standards of nutrition. The population is expanding at the alarming rate of 10 million persons a year, therefore opportunities for employment must somehow be created in activities beneficial to the economy concerned, and at a sufficient rate to overtake the rise in the labour force. In this connection the Committee strongly supports the creation of a vigorous and expanding private sector and expresses the hope that Governments will realise the urgency of a balanced economy and assist the private sectors to play their part.

As far as India is concerned, external capital investment is a vital necessity and foreign aid the only alternative to the austerity of an impossibly stringent economic policy. A new and sturdily independent nation, suspicious of philanthropy and wary of the political strings which may be attached to the most pure of altruistic motives, is naturally inclined to view offers of help from individual countries with some misgiving. The Colombo Plan however, based as it is on a comity of nations, offers at least one solution to the problem and has succeeded in providing India with external assistance covering an infinite variety of projects and amounting to Rs. 268 crores from March 1951 to July 1955.

One of the salient features of the Plan is the Technical Co-operation Scheme whereby technical training abroad is combined with sustained technical assistance and advice on the home front, in order to bridge the transition period until the countries involved can assume responsibility for the furtherance of the schemes unaided. India is well aware that the formation of the new socialistic State will require a complete reversal of educational policy. Already 7,200 places

for training abroad have been found for men and women from the Colombo Plan areas, while about 3,700 experts have served the countries of the area. There is little doubt but that both Government action and private initiative have helped to produce the results incorporated in the report. As the Committee rightly points out, "The concept of international economic co-operation embodied in the Colombo Plan is of special significance in world history, and as the Plan enters its fifth year its members may take courage from all that has been accomplished and prepare themselves to meet the challenge of the task ahead."

THE EXTERNAL CAPITAL ACCOUNT SLOW PROGRESS OF FOREIGN INVESTMENT

THE Reserve Bank's Survey of India's Foreign Liabilities and Assets, issued over the weekend, offers reassuring evidence of India's health in the international exchange market. Though in some respects it is still not as comprehensive as one would wish, it constitutes a valuable successor to the Census of India's Foreign Liabilities and Assets published just under five years ago. The latter elaborated the position as it existed in June 1948; the new Survey tells the story at the end of 1953. Critics may, with a measure of justice, complain that the statistics are already rather out-of-date; but as background material their importance in framing the second five year plan is not to be denied. It is encouraging to note that the collection of information is likely to be better and prompter in future. That in itself is a small indication that the authorities are realising the increasing significance of the subject. Arrangements are being made to publish each quarter, along with other items of the capital account, more complete and detailed particulars on the movements of private long-term capital under different categories such as direct investment, portfolio investment, etc. Soon after the end of each calendar year, information on foreign investments in India will be brought up to date, after making adjustments for additions to company reserves, reinvestment of profits, etc. To cover the interim period, it is proposed to undertake another survey, similar to the one just issued, which will outline the position at the end of 1955.

The changes brought out by the present Survey reflect mainly the continuing impact of war and partition, and the strenuous efforts of the economy towards stability and expansion. At the end of 1953, India's net excess of assets over liabilities was Rs. 500 crores, the surplus on short-term account being Rs. 346 crores and on long-term account Rs. 154 crores. While the official sector had net assets abroad of Rs. 900 crores, the net foreign liabilities of the private sector amounted to Rs. 399 crores. (The surplus of the official sector was due to the ownership of Government securities, deposits and "residual" items in foreign countries. The private sector was a net debtor because of the large volume of foreign business investments.) Over the five and a half years after June 1948, total foreign liabilities increased by Rs. 261 crores while total foreign assets fell by Rs. 542 crores. This aggregate change of Rs. 803 crores was mainly on short-term account, the official sector being responsible for Rs. 651 crores and the non-official sector for Rs. 152 crores. The net position with Britain worsened, in the technical sense, by Rs. 698 crores and with the United States by Rs. 75 crores. The main items responsible for the change in the country's overall position were transfers to Pakistan under partition arrangements (Rs. 200 crores), foreign official loans (Rs. 138 crores), private foreign investments in the country (Rs. 135 crores), payment of pensions and repayment of railway annuities (Rs. 57 crores), currency settlements (Rs. 52 crores) and a net reduction in short-term assets attributable to current external transactions (Rs. 234 crores).

The Survey indicates the background against which these changes took place, and shows how the adjustments in the country's net creditor position in effect strengthened the economy. Among the factors to be borne in mind were the partition of the country, the inflationary situation which was accentuated by the removal of controls in 1947 and the severe shortage of food until 1952. All these made it necessary to import food, raw materials and capital goods on a large scale. Between the middle of 1948 and the end of 1952, the import Rs. 600 crores. This surplus acted as a major stabilising factor and restrained prices from rising reserves attributable to current transactions would have been much more than Rs. 234 crores if generous official loans had not been received from abroad and without the inflow of private foreign investment. This investment, the Survey emphasises, helped expand industrial and commercial activity. It was a major factor which enabled agricultural and industrial output to show a remarkable increase, the money supply to be reduced,

and the price level to be stabilised near pre-Korean war levels. The economic situation, as a result, distinctly improved, the country became less dependent on foreign sources of supply, and the external deficit began to be gradually replaced by a surplus.

The Survey deserves special attention for it estimates that, contrary to the balance of payment statistics, there was between July 1948 and December 1953 an increase in foreign business investments of about Rs. 132 crores net of repatriation or Rs. 175-180 crores on a gross basis. This particular item is among the most significant of all those covered, in so far as it is an index of foreign investors' confidence and interest in the opportunities offered by the Indian economy. Now that a large measure of stability has been achieved and quick expansion is planned, the scale of foreign investment is likely to receive deservedly greater importance in studies of this nature. During the period covered in the Survey, new foreign investments came partly in the form of cash, leading directly to an accrual of foreign exchange, partly through the retained earnings of foreign enterprises, and partly as imports of goods and equipment which did not necessitate an immediate official release of foreign exchange. Of the total gross receipts, capital received in cash was estimated at Rs. 30-35 crores, re-invested or retained profits at Rs. 60-70 crores, and the remaining Rs. 75-85 crores was in the form of goods and machinery.

Most of the investment was from Britain (Rs. 137 crores). The United States, as a source of capital, was a poor second accounting for only Rs. 13 crores. While the flow of new capital from the U.S.A. was confined largely to the trading sector, investment from the U.K. went to different sectors such as manufacturing (Rs. 56 crores), plantations (Rs. 21 crores), trading (Rs. 20 crores), utilities (Rs. 19 crores) and financial (Rs. 14 crores).

The total inflow of investment, gratifying though it is, is far from enough to satisfy the needs of a developing economy, which may have to depend increasingly on private, as opposed to official, foreign investors in years to come. The unfortunate feature is not so much that India simply failed to get more investment, but that she failed through a lack of appreciation of the foreign investors' hopes and fears. The pace of disinvestment, it now appears, has been slower than was earlier feared; but the scope for attracting new capital, which depends primarily on security and returns, remains far from fully exploited. It is to this aspect that official energies will have to be more forcefully directed in time to come. Even on the most hopeful estimates, a huge shortage of foreign exchange is expected to develop during the second five year plan. The inflationary pressures of former years were successfully resisted only by import surpluses and by generous assistance from abroad, such as the U.S. food loan. But import surpluses on the same scale are no longer possible and foreign loans are, to say the least, uncertain. Meanwhile, heavy new deficit financing could start off an inflationary spiral which is not likely to be restrained even if the projected increases in production actually take place. The larger the amount of foreign capital that comes to India, the further will recede the threat of inflation and the economic distortions it implies. But foreign capital will not come unless returns are attractive in relation to those offered in other countries; unless it is secured against threats of expropriation and nationalisation; unless it is allowed to work with the freedom and flexibility to which it is accustomed; and unless it is defended against the pin-pricks of ill-judged political censure that are now a normal feature of economic discussion in this country.

CURRENT COIN

Incentives for Individuals.—Mr. E. D. Sheppard's address from the chair to shareholders of Killick Industries Ltd. in Bombay last week, published elsewhere in this issue of Capital was a powerful exposition of the difficulties of private enterprise. Among his more important observations were those relating to the report of the Taxation Enquiry Commission. According to Mr. Sheppard the major effect of the Commission's recommendations is to assist corporations and industrial projects to develop, while at the same time ensuring that the individuals responsible for these developments are not permitted to gain from the work they do. This is a logical result of the terms of reference it was given, in being asked to consider ways of reducing inequalities of wealth and income and yet promoting capital formation for productive enterprise. In fact, Mr. Sheppard pointed out, the two conditions are contradictory and irreconcilable. The Commission has first attempted to achieve the "hoary and outmoded" socialistic objective of soaking the rich. Then, realising that this soaking will affect savings and capital formation, it seeks to find a precarious balance for its task by granting a substantial rebate to some established industries and a "tax holiday" to new

ones. As Mr. Sheppard stated, the distinction between individuals in industry on the one hand, and the corporations which they serve on the other, may be good politics but is certainly not good economics. "It can only result in the production of people stamped in the mould of drab equality and devoid of incentive to do anything that is new or clever. It is indeed a curious development that the Taxation Enquiry Commission has sought to label dreary changelessness as venturesome and radical, and to condemn initiative and progress as being reactionary and conservative." The charge on big income is directed mainly at high industrial executives, but, Mr. Sheppard said, most of them work very hard, and certainly many hours longer than those who are protected by legislation in regard to the number of hours which constitute a working week. Further, whether they are in office or outside, they are never free from the anxiety and responsibility of their charge. "With taxation and the cost of living at their existing levels, the salaries which they are paid eventually result in a net accrual to their bank balances each month of amounts which permit of little, if any, saving and leave no margin for unforeseen eventualities".

Tata-Kaiser Agreement.—The Tata-Kaiser Agreement for expanding the T.I.S.C.O. plant at Jamshedpur is welcome news. From the point of view of the current expansionary trend in the Indian economy, the significance of the agreement is considerable. The H. J. Kaiser Corporation, apart from being responsible for the design, procurement and construction of the plant, have undertaken to complete the whole job in 30 months' time. The cost of the entire Tata expansion project is estimated at about Rs. 62 crores, including Rs. 23.81 crores as the cost of the new plant. The sum involved is big enough for Tatas to raise it internally, and it is not clear whether any international agency is financing the project. But the agreement, as far as it goes, brings the benefit of the latest U.S. technical know-how to a vital field of the country's industrial enterprise. In last week's Capital attention was drawn to the danger of the country's economy working under the handicap of an annual shortage of one million tons of steel at present and it was stressed that efforts should be made to increase the supply from indigenous sources by encouraging the production of those items of steel goods which were in short supply. The Tata-Kaiser agreement may offer some scope in that direction. According to the Government's steel-making programme, the private units have to step up their production capacity to three million ingot tons by 1958, of which the share of Tatas, the biggest private producer, is two million tons. There should be no harm in allowing the firm to produce more than the allotted share if it can do so in collaboration with the American firm. The private units do not have the resources of the State, which has entered the iron and steel industry in a big way. But as things stand at present, they alone are in a position to help increase the immediate availability of steel from domestic production; it will be quite some time before the State units produce steel.

India's Non-Ferrous Metals.—Addressing the first conference of the Non-Ferrous Metals Industries held in Bombay, Mr. B. K. Netavia, President of the Indian Non-Ferrous Metals Manufacturers Association, outlined the growth of the industry, assessed its rôle in the country's economy and suggested ways and means for its future control. Mr. Netavia underlined the importance of an industry largely occupied in producing from base metals, semi-manufactures vital to other industries, such as copper wire for the electrical industry, metal type for the printing trade, aluminium for aeroplanes and brass for bullets and cartridges. While observing that India is fortunate in possessing valuable deposits of mineral wealth, Mr. Netavia pointed out that a substantial capital outlay will be necessary for their full exploitation. Cheap and easily-available electric power is essential for running refineries large enough to process the country's almost inexhaustible deposits of high grade aluminium ore. Intensified exploration of copper resources will be needed to raise the present production level of 7,000 tons a year to the required 30,000 tons, while requirements in virgin zinc ore are estimated at 40,000 tons a year. Without a large-scale zinc smelter, the production of refined zinc is unfortunately nil. Although in many cases the requirements of the industry can be met from indigenous sources the country will be forced to depend on a certain percentage of imported virgin metal and scrap for some time to come. In this connection Mr. Netavia welcomed the establishment of the Bombay Metals Exchange Limited, the first organisation in the country for forward trading in metals, and the Government's decision to release more funds for the work of the Geological Survey of India and the Indian Bureau of Mines. On the other hand, however, Mr. Netavia pointed out that due to the unplanned growth of the non-ferrous metals industry, its manufacturing capacity is at present far in excess of the actual demand. In addition, while running at one-third of its production capacity, the industry faces grave com-

petition from under-selling by the Government's ordnance factories. Another important point stressed by Mr. Netavia—in view of the part village industry is destined to play in the second five year plan—is the increasing import of stainless steel which is replacing copper and brass in the manufacture of household utensils, previously an important cottage industry. As stainless steel sheets cannot be processed by village industries, the import of these is not only "prejudicing the future of a well-established indigenous industry", said Mr. Netavia, but "causing widespread unemployment among the home industries located throughout the country."

CORRESPONDENCE

PROHIBITION'S MORAL AIMS (TO THE EDITOR OF "CAPITAL")

Sir, In "A Ditcher's Diary", Capital 3rd November, the Ditcher flays the Prohibition Enquiry Commission principally on the ground that "its object is the stern abolition of all drinking whether the drinker can afford it or not". He goes on to explain that "this is purely a moral aim", and he disposes of all measures with moral aims in one fell sweep as "the enemy of democratic freedom and individual self-respect since long before Oliver Cromwell was born". The Ditcher presumably considers the law which prohibits Suttees even on the part of the most devoted wives, the penalising of child-marriage, even if marital concourse is strictly limited to the post-puberty period, the regulation which prescribes an "age of consent" in the case of sexual offences, and the provision in the Indian Penal Code which seeks to deprive the self-respecting citizen of his elementary right to attempt to take his life, as falling in this category of enemies of democratic freedom, as these laws, like others of a similar nature, do curb the individual's personal liberty, and are doubly accursed as they have also a moral purpose! Even the prohibition of slave-trade must come under this category of "enemies of democratic freedom", as the slave is deprived of his right voluntarily to choose to be the object of a sale, which might conceivably be not only a thrilling experience but also a profitable one to him! The Ditcher's dictum hardly needs any further comment.

It remains to examine why, even if the drinker "can afford it", all drinking must needs be prohibited. The main reason is that the drinker, unfortunately, is least able, while in the process of drinking, and certainly when he is in a state of being "drunk", to decide, with any marked degree of clarity of thought, whether he can "afford" it or not. Even if he is able to decide that he cannot afford to drink any more than what he has already had, the odds against him, in the shape of a pleasant weakening of the mind and still more "pleasant" company, are so heavy that he rarely gets the chance to assert his will at the right moment in the right manner. Unlike in the case of other physical indulgences, drinking is not only the most difficult to check before the border-line of excessiveness is reached, but it is also fraught with the gravest consequences to the individual and his family, and therefore to society, if it is not so checked. This, to my mind, is sufficient reason for dealing with the problem in no less drastic a fashion than the one adopted by Public Health authorities who pin their faith to the destruction of the mosquito, more than to propaganda for the use of the mosquito-curtain, in their anti-malarial campaign. I refuse to shed any tears on the wholesale destruction of millions of innocent non-malaria-bearing mosquitoes in the same manner as I refuse to plead the cause of those who would probably not drink to excess but have nevertheless to be prohibited from drinking, along with their less fortunate brethren who demonstrably stand in need of being saved from themselves in order that their families and society may be saved from them. I subscribe myself,

Yours, etc.,

Company Meeting

THE INDIAN IRON & STEEL COMPANY LIMITED

CHAIRMAN MR. T. LESLIE MARTIN'S SURVEY

At the Annual General Meeting of the Shareholders of The Indian Iron & Steel Company Limited, held in Calcutta on 28th November, 1955, Mr. T. Leslie Martin, the Chairman, dealing with the year ended 31st March, 1955, said:—

Gentlemen, The outstanding feature of the working results of your Company for the year under review was the phenomenal production of finished steel which constitutes a record for the Company.

Given plant facilities and availability of raw materials, production is, of course, governed primarily by the will to work on the part of labour and I am pleased to report that since the unfortunate events of 1953 there has been a vast improvement in efficiency and effort on the part of the workers. Apart from the fact that without co-operative effort no industry can progress, this effort under a modern wage structure such as that adopted by your Company, brings its own material reward as the particulars of our payments to employees will demonstrate and it is more than unfortunate that the present incidence of taxation levied by Government denies any commensurate monetary reward to the executive and managerial staff on whose efforts, equally with those of labour, progress must depend.

The improvement in efficiency was very marked in the Melting Shop where a large reduction was effected in the time taken for the repair of the Open Hearth Furnaces and with the added availability of the Furnaces it was, thus, possible to fully utilise the large stocks of pig iron and steel scrap that had accumulated as a result of the 1953 labour troubles in supplementation of the 521,838 tons of hot metal produced for steel-making purposes available from the two Blast Furnaces at Burnpur.

The output of steel ingots at 528,118 tons was, accordingly, a record for the Company and this, again, was increased by the large accumulated stock of ingots carried over from the preceding year. The Rolling Mills responded admirably to the challenge of the available tonnage of ingots with the result that a record production of 461,013 tons of saleable steel was finally achieved.

In view of the fact that the accumulated stocks of pig iron, steel scrap and rollable steel ingots have so greatly augmented the total production of finished steel during the year under review, it must be borne in mind that it is extremely unlikely that output re-

sults for the year 1954/55 will be repeated. There are also certain other factors which may, and in all probability will, affect this. The two Blast Furnaces at Burnpur are due for relining; one during this year and the other in 1956/57. With the large expansion programme under way, there must, inevitably, be a severe and increasing disruption of operations, having regard to the fact that much of the new plant will be sited alongside existing installations. Further, one of the major works under the expansion programme is the extensive development and mechanisation of the Ore Mines at Gua and this, again, must affect the availability of our supplies of iron ore from the Mines for the Blast Furnaces, any shortage in which may not be capable of being fully met from outside sources due to the anticipated shortage in transport from the railways on which we must depend.

A Windfall

As has been mentioned in your Directors' Report, all previous indications were that No. 2 Blast Furnace at your Burnpur Works would have to be relined in 1954/55. It, however, proved possible with careful handling to retain this Furnace in full operation throughout the year and with the additional hot metal thus made available and the other factors to which I have referred, the actual production of saleable steel greatly exceeded the estimated output of 290,000 tons that had been adopted by Government for the purpose of the fixation of a sales retention price to the Company. The result was a large increase in revenue and consequent profit which must be regarded as a windfall and, as I have said, is unlikely to be repeated. I have already explained that the large increase in tonnage is due to a marked improvement in efficiency of operation and to the carry over of raw materials from the previous year. A further factor, I would mention, is the excellent results from your Foundries at Kulti. For some years past these Foundries have been operating under heavy competition and it was only by the installation of a Sown Pipe Plant and the entire remodelling of the Works that Kulti came into its own and was able to prove what a large foundry was able to achieve. The installation of the new plant at Kulti and the expenditure incurred in the work of reorganisation was met entirely from your Company's resources and not from Government financial assistance. Under all the circumstances I have explained, your Directors, not unnaturally, desired to mark

the greatly improved working results by the distribution of an increased dividend or an ad hoc payment to shareholders for the year.

Dividends

In the course of the early negotiations in 1952 in connection with the financial arrangements to be made to provide for the extensions now in progress, Government stated that in view of the large amount of finance that had to be provided by the Company from its own resources and the heavy indebtedness on loan account that would be incurred, they must be consulted in the matter of the distribution of profits. In June last, detailed and prolonged representations were accordingly made to Government to permit under the exceptional circumstances, not necessarily a raising of the basic rate of dividend, but at least a payment of a special cash bonus for the year in order to allow to the shareholders some participation in the increased prosperity of the Company. It is a matter of a great regret to your Directors that Government could not see their way to concede this or to take a wider view in the matter under the exceptional circumstances which were fully explained to them. Your Board, however, consider themselves bound by the orders of the Government on whose goodwill we must depend for discharging those onerous obligations which we have undertaken in connection with the expansion of the Company. These orders, they feel, cannot be ignored or their legality challenged without serious detriment to the interest of the Company. I urge upon you, therefore, the desirability, in spite of the disappointment that we all feel, of accepting with good grace the Government's final decision in the matter. The recommendation of your Directors is, therefore, limited to the payment of a rate of 10% per annum, free of Indian Income Tax, the balance of the profits earned being carried to reserves. While I need not assure you that the attitude adopted by Government is as disappointing to us as it is little consolation we can from the fact that the Company's reserves have benefited by more than Rs. 2 crores from the operations of the year and that to this extent the finance of the expansion programme and the ultimate repayment of the loans has been facilitated.

In my speech to you last year I detailed the financial arrangements that had been made in connection with the current expansion programme. Full particulars of the relative loans, programme. Full particulars of the Bank Overdraft facilities will now be found incorporated in the Balance Sheet and the Accounts thereto, that are before you. As regards the Accounts themselves, these are as usual fully detailed, and beyond drawing your attention to the adjustment of Rs. 8,80,000/- made on General Reserve March, 1953, on the shares held on Investment Realisation Account and the credit for a similar amount afforded in the Profit and Loss Account in respect of the dividend on these shares for the subsequent year, there is not anything I think, I can usefully say.

Increase of Capital

There have been many rumours of late concerning the question of the Company raising further capital and I would take the opportunity of warning you that expectations entertained to the effect that rights or other share capital will be raised by the Company are premature and may prove to be without foundation. In order to explain the position I would remind you that there are two schemes of extensions which, though from a technical point of view may be regarded as one, are, on first consideration, to be treated as entirely separate and independent of each other. The first one is described as the 1953 extensions in respect of which, as you know, we have incurred heavy liabilities to the World Bank and the Government of India. This scheme is in progress and is expected to be completed, all going well, in 1958. The second scheme, described as the 1955 extensions, production of saleable steel by 100,000 tons, the enlargement of the finishing capacity of the existing capacity, in order to make the production more flexible to meet the varying conditions of the market. This scheme is still under consideration and negotiation with Government and no definite plans can be formulated until we know what the future retention prices, which are now under investigation by the Tariff Commission, are likely to be. It is for the implementation of this second scheme that the raising of further capital would be required, supplemented by means of such special element consisting of an increase in the new retention prices, as the Tariff Commission may recommend and the Government may allow, in order to fully cover the position. It will be clear to you, therefore, that no decision as to the necessity or otherwise of raising further capital can be made until the Tariff Commission's Report and the Government's Resolution thereon have been received by us.

Our primary duty is that we should not undertake any further liability which would in the slightest degree endanger the full and punctual discharge of all our heavy obligations in respect of the 1953 extensions out of the normal earnings of our existing equipment and of the new plant, after it has been completed and has been brought into operation. This is not to say that given reasonable conditions we are not prepared to do our best to further the interests of the country to the utmost of our power. What I wish to emphasize now is that until we know the recommendations of the Tariff Commission and the Government's Resolution, and have had full opportunity to assess the position we shall not be able to come to any decision as to the proposed 1955 extensions.

In concluding I would take the opportunity to express our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and his staff whose efforts have made possible the results that have been achieved. Given a continuation of the forward co-operation that now exists we can look forward with confidence to fulfilling our part in the contribution that is required from the private sector towards the attainment of the country's output of steel under the Second Five Year Plan.

A DITCHER'S DIARY

that could be done the movement of goods and services would revert to the ordinary pattern dictated by the price system, which, thanks to the prevalence of corruption, would not differ greatly from what it is now, although it would certainly gain in speed and efficiency. What would happen though is that a large proportion of the present body of officials would become redundant. Whether that is accepted as the welcome feature it ought to be depends of course on whether unemployment is regarded as a greater evil than corruption and economic inefficiency. If the remaining officials were then given salary increases so as to remove the need for their accepting bribes, the results, I feel, would surpass all expectations. So long as officials remain in a position to control almost every economic and social action which an individual must perform in the normal course of his life, so long will corruption be necessary to keep the wheels turning.

I am by no means an expert in advertising. But because wherever I go I am constantly stared at beamed upon, exhorted, quizzed, cajoled warned and appealed to buy it, I have a strong temptation to splinter a friendly lance with Mr. E. J. Fielden, the out-going president of the Advertising Agencies Association, who addressed that organisation in Calcutta last week. He said that Indian advertising had made a noticeable improvement during the last decade. From the point of view of general progress, it is impossible not to agree with Mr. Fielden. Things, I presume, have a habit of progressing over a period of time, and Indian advertising now is certainly some way ahead of where it was ten years ago. What I object to is the undertone of complacency I seem to detect in this utterance. I may be wrong, but I have a suspicion that with a little more self-criticism, together with a more favourable turn in circumstances, advertising in this country would have made a better showing than it has. On the visual side, it has done admirably and has touched heights which certainly appeared over-ambitious in 1945. A fine crop of artists has lately matured, and several of them have earned honourable mention in the various international advertising annuals. But it is on the copy side that I notice a continuing weakness. Good advertising slogans should pass easily into everyday speech. I cannot on the spur of the moment remember more than a paltry couple which have done this lately, but perhaps there are others. That poor copy can be a drag on fine illustration, appears to be too seldom appreciated. One bane of advertising is, of course, the dictatorial client who combines technical ignorance with financial omnipotence. Another, no less serious, is the agencies' practice of keeping their executives on the same or similar accounts from year's end to year's end. The result, inevitably, is staleness and uninspired work. Yet a third is the vacuum in which advertising in this country is functioning, unlike the West where there are specialised journals and other media for discussing the profession's work and problems.

I cannot help but share the opinion of Mr. G. B. Pant, Minister for Home Affairs, that the Prevention of Corruption Amendment Bill will not, by itself, put an end to corruption. Indeed, it is unlikely that any administrative measure can ever stop this menace. It might help to stir up public opinion against it; but that is a purely negative function. It can do nothing to promote a high standard of personal honesty where none existed before and that is, after all, the real enemy of corruption. I have often wondered if it is really in the community's true interests that this so-called evil should be abolished. It is not a pleasant thing to have to tolerate, but the fact must be faced that it has a sound economic purpose and that without it life in some countries would be very difficult indeed. Illegal gratification is nothing more than the amount which would have to be added to existing prices to bring them into line with true market values. It is a feature of a distorted price system—distorted, that is, by official interference. It flourishes in direct proportion to the amount of Government direction and control. If it did not, the difficulties which would have to be overcome in the normal course of events would quite likely bring the economy to a standstill. The only real cure for corruption is to make it legal and honourable, not to pass laws against it. If

committee work of the various insurance associations. He was also a member of the Calcutta Regional Council for a number of years and there are few personalities in eastern India, either past or present, to whom Indian insurance owes a greater debt. Another name which was well-known in Calcutta circles is that of Joseph Berry, one-time Managing Director of Shalimar Paint. Joseph Berry joined the company in 1921. He was twice chairman of the Paint Federation. He was also an active member of the Calcutta Branch of the U.K.C.A. and especially of that dedicated body, the Publications Sub-Committee. In his bachelor days he was well-known about town and in later years he earned a reputation as an excellent host. Many will remember his ability to speak a genuine Lancashire patois such as is seldom heard these days even within the boundaries of the County Palatine.

Is the female weaker than the male? This question might have been an exciting one in the age of Charlemagne, when the well-known Salique law excluded women from dynastic succession. But it is hardly so now. Yet the thesis was vigorously propounded last week in the Lok Sabha by Mr. B. K. Mukherjee, M.P., speaking in the debate on the Hindu Succession Bill which is to put women on equal terms with men in inheritance matters. "If women had to fight they should direct their struggle against Providence who made them the weaker sex", said Mr. Mukherjee. Considering that Parliament has a sprinkling of what he had the temerity to call the weaker sex, I am amazed he was allowed to get away with it. The English suffragettes were, it will be recalled, a great bane of the earlier political life of Sir Winston Churchill who, on more than one occasion, received a good dressing at the hands of Miss Pankhurst and Theresa Garnett. I wonder what might have happened to Mr. Mukherjee had he said what he did in ancient Scythia whose warlike Amazons cut off their right breasts to facilitate the use of the bow; or how he would have fared in a race with Atalanta. Why, I wonder, did not some of the women Parliamentarians put Mr. Mukherjee in his place by pointing out Hercules's blunderings with the distaff, which every Greek woman of old could handle with dexterity; or King Alfred's disgrace at the hands of a Wessex housewife, who gave him the rough side of her tongue on discovering that he could not do so simple a thing as bake a cake. I hope Mr. Mukherjee has since taken note of the fact that an increasing number of women are entering India's various administrative services. He may yet find himself painfully henpecked in his district, with a woman magistrate supported by a large staff of women officials.

Over long years Dr. Graham's Homes in Kalimpong have been doing excellent work in the good cause of caring for poor children of the Anglo-Indian community. At the present time as many as 550 of these youngsters are receiving food, shelter and education in the Homes, while, unfortunately, those who cannot be accommodated far exceed that number. The funds at the disposal of the Homes which, of course, come from the charitably disposed, are far too limited to permit of any large expansion in their schemes. The Homes, therefore, propose as in previous years to organise Heather Day on 3rd December as a means of raising much-needed funds. On that day a small band of volunteers will appear on the streets of Calcutta offering to the public sprigs of heather brought over from Scotland. May I recommend my readers to buy one each and pay handsomely for it?

P. L. M. WEEK
December 1-7

Our shocked knowledge that crores of rupees are annually paid by the railways in Claims must need be balanced by the conviction that Claims are mostly man-made and can, therefore, be almost wholly prevented. You, as a consignor, can help the railways by ensuring every time that your consignment is securely packed, properly labelled and correctly marked.

THIS IS HOW YOU CAN HELP

- ▶ Pack the goods in strong cases, nail properly and securely.
- ▶ Line the case with shock-absorbing and water-proof material.
- ▶ Enclose a spare label.
- ▶ Remove all traces of old markings.
- ▶ Address neatly, boldly and indelibly.
- ▶ Mark correctly.
- ▶ Indicate the nature of goods consigned.

Stocks and Shares

FIRM TREND CONTINUES IN THE STOCK MARKET

COALS BETTER: GOVERNMENT SECURITIES WEAK

Wednesday Evening.

THE share market has been buoyant throughout the last four days of trading. By the close this evening Indian Irons had risen to Rs. 43-3 after the week-end's sharp rise; other speculatives are strong in sympathy. Monday's speech of the company's chairman, Mr. Leslie Martin, has been taken as an excuse for even greater optimism and further bull support has appeared in the market. In unofficial dealings Indian Irons have ruled steady. The engineering, coal and miscellaneous sections of the market have continued steady, although a modest reaction in the latter section has caused a slight setback from best levels. The undertone of the equities section remains strong, with little sign of weakness developing. But Government securities continue weak.

The market has been closed during Tuesday and Wednesday due to the visit of Messrs Bulganin and Khrushchev.

Details of the week's trading follow.

Extremely dull conditions obtained in the Government securities market and although there was an enquiry for selected medium-dated loans, sellers predominated in other loans. Three percent 1966 was slightly better at Rs. 80-6 and 3% Non-terminable Paper was steady at Rs. 80-1. In short-dated loans, there were sellers over with 3% 1957 quoted at Rs. 99-9 and 3% 1958 at Rs. 99-7. In the medium-dated group, 3% 1959-61 was asked for at Rs. 94-12 and 3% 1964 was in demand at Rs. 94-3 with few declared sellers; 2% 1961 and 2% 1960 were fully steady at Rs. 93-1 and Rs. 95-14 while 2% 1962 was traded around Rs. 93-11. In National Plan issues, there was an enquiry for 3% 1961 at around Rs. 99-10 due to the approach of the interest payment date (1st December), but 3% 1964 was weak at Rs. 98-10 and 3% 1965 had sellers at around Rs. 98-8. Long-dated loans were quiet and both 3% 1966-68 and 3% 1970-75 were on offer at Rs. 91-13 and Rs. 87-7 respectively. Provincial loans ruled quiet and there were few declared buyers to meet market offerings. Four percent West Bengal 1967 was sold at Rs. 100 and 4% U.P. 1967 was offered at Rs. 99-6. Other 4% issues were quotably unchanged with sellers over.

The demand for high calibre fixed interest stocks continued unabated with scrip in short supply. In jute, Anglo India were taken at Rs. 119 and Hooghly were marked at Rs. 14-12. A small lot of Howrah "A" was placed at Rs. 118 and Standard at Rs. 101. Among miscellaneous preference shares, Bathgate & Co., were wanted at Rs. 41 as were British India Corporation at Rs. 138. Burrakur 1st Preference changed hands at Rs. 127 and a small lot of the 2nd Preference at Rs. 8. Calcutta Electric were quoted at Rs. 12-11. Carew & Co., were done at Rs. 106 and Chrestien Mica Industries at Rs. 66. India General Navigation changed hands at Rs. 80 and Indian Iron & Steel were taken at Rs. 110. Jardine Henderson were transacted at Rs. 78-12 and Kumardhubi Engineering at Rs. 108. Richardson & Cruddas were wanted at Rs. 94 and Rohtas Industries "B" Preference were sold at Rs. 68-12.

The outstanding feature in the banking section was Punjab National which, on brisk buying, rose from Rs. 48 to Rs. 50-8. United Commercial also met with good enquiry and improved from Rs. 56-8 to Rs. 68. A small lot of Hindusthan Commercial was crossed at Rs. 8-14 and Hind Bank were placed at Rs. 31. United Bank of India "D" shares changed hands freely around Rs. 4-15.

In the railway section, Delhi Rohtas came to hand on several occasions at around Rs. 15-4. Howrah Amta met with enquiry at Rs. 72-8. The outstanding features in the cotton section were Cawnpore Textiles and Elgin Mills which on interested buying rose from Rs. 10 to Rs. 12 and Rs. 25 to Rs. 28-8; closing quotations, however, were slightly below the best. Jayshree Textiles were turned over freely at around Rs. 6-12. Kesoram were fairly steady at Rs. 17-12 and New Victoria were taken at Rs. 2-1.

There was an expansion of business in the coal section and widespread gains were recorded. Here is a chart showing representative price movements:

	Opening 24-11-55	Closing 29-11-55
Bengal	Rs. 532	Rs. 548
Burrakur	16-9	16-11
Central India	8	8-8
East Indian	31-10	32-4
Equitable	32	33-8
Katras Jherriah	62-4	64
Agarpara	228	224
Anglo-India	13-12	13-11
Birla	19-6	19-8
Champdany	186	189
Howrah	29-10	29-10
India	162	168
Lothian	510	525
National	34-8	34-5

Contrary to the general trend, Northbrook continued to meet with good enquiry and improved at the close to Rs. 28-8.

Prices of electric supply shares showed little variation, and the volume of business was negligible. Agra were unchanged at Rs. 66 as were Benares at Rs. 19-4 and Calcutta at Rs. 15-2. Jubulpore were reported at Rs. 16-15 and Patna at Rs. 12-12. A solitary transaction was done in Sijua Jherriah at Rs. 11-15.

In the sugar section, Carew improved from Rs. 13 to Rs. 13-8 and Cawnpore from Rs. 24-12 to Rs. 25. Balmampur were unchanged at Rs. 10-8 as were Belund at Rs. 10-4. Durbhanga came to hand at Rs. 26-4 and a few transactions were reported in Ramnugger at around Rs. 23. Shree Krishna Gyanoday Old shares were turned over freely at around Rs. 15-4.

A fair amount of business was put through in the engineering section with Indian Iron & Steel improving further to Rs. 43-4 on continued bull support. Bhartiya Steel were unchanged at Rs. 17 while Braithwaites closed slightly better at Rs. 29. Burn & Co. were steady at Rs. 34-2 as were Indian Galvanizing at Rs. 27. Indian Standard Wagon met with enquiry at Rs. 165 and Jessop & Co., after being taken up to Rs. 68-12, closed slightly lower at Rs. 67. Richardson & Cruddas improved from Rs. 28-6 to Rs. 28-14 and there was a good enquiry for Saran Engineering at around Rs. 11. Textile Machinery met with keen enquiry and rose from Rs. 19-10 to Rs. 20-7.

In the miscellaneous section, Bengal Paper continued to meet with interested buying and improved further from Rs. 116 to Rs. 118. India Paper Pulp were shaded at Rs. 25-1 while Orient Paper were steady at Rs. 34-10. Shree Gopal were in good demand and improved from Rs. 19-12 to Rs. 20-4 with scrip in short supply. Titaghar were steady at Rs. 48. Assam Bengal Cement Ordinary were turned over freely at around Rs. 7-12 and Dalmia Cement were marked at Rs. 13. Good business was reported in Sone Valley at around Rs. 8-12. New Asiatic Insurance were placed at Rs. 6 and Ruby General at Rs. 8-4. India General Navigation closed Re. 1 better at Rs. 14-2 while India Steamship, on the news that the ordinary dividend was to be passed over again, were neglected at Rs. 8. Port Shipping met with good enquiry at around Rs. 16-14. Alkali & Chemical improved from Rs. 22-7 to Rs. 23-12 as did Assam Saws from Rs. 6-6 to Rs. 6-9. Angelo Brothers were a shade better at Rs. 22-10 and Bengal Flour continued to meet with investment support at around Rs. 37. British Burmah Petroleum closed a shade better at Rs. 4-10 while British India Corporation after being done up to Rs. 14-12 eased at the close to Rs. 14-2. Calcutta Tramways were active at around Rs. 18-6 while Dunlop Rubber were unchanged at Rs. 35-12. Hindustan Motors reported business at around Rs. 10. Imperial Tobacco were steady at Rs. 15 and Indian Aluminium were well supported with the price improving from Rs. 179 to Rs. 185. Indian Cables, on the publication of a satisfactory report, spurted from Rs. 32-13 to Rs. 34-4. Indo-Burma Petroleum were firm at Rs. 47 as were Indian Wood Products at Rs. 45-12. Jardine Henderson were a shade better at Rs. 113-8 while Martin Burn and Metal Box kept fairly steady at around Rs. 29-12 and Rs. 26-14. National Tobacco found sellers at Rs. 12-4 while F. & C. Osler on interested buying improved to Rs. 18-14. Rallis India were marked at Rs. 37-4 and Rohtas Industries rose from Rs. 26 to Rs. 27. Clive Row Investments were turned over freely at around Rs. 12. Good business was reported in National Rolling Mills Old shares at around Rs. 11. Northern India Oil Industries were crossed at Rs. 2-13 and Smith Stanistreet were steady at Rs. 23. Walford Transport Ordinary came to hand on several occasions at around Rs. 2-7. United Flour were crossed at Rs. 40.

In the mining section, Burma Mines were active on rumours of an increased dividend and were bought in large quantities with the result that the price improved from Rs. 2-6 to Rs. 2-9. Chrestien Mica Industries had sellers at Rs. 21 and Indian Copper were fairly steady around Rs. 7-9. Metal Corporation met with enquiry at around Rs. 9-14 and Orissa Minerals were steady at Rs. 25. Western Stock Holders Investment were unchanged at Re. 1.

Once again the volume of business in tea shares was very meagre, but prices were changed were generally better with one or two noticeable features. In the Assam section, Jutibari advanced sharply from Rs. 27-12 to Rs. 30-8 as did Tengpani from Rs. 92 to Rs. 103 on investment buying. Dhelakhat were also fully steady at Rs. 19-14. Bishnauth improved slightly to Rs. 42-4 but Brahmoputra had many sellers at Rs. 12-2. Brooke Bond changed hands at around Rs. 22-8 and East India declined to Rs. 24-8 as did Grob "A" to Rs. 41-10. Methoni were marked at Rs. 23-8 ex-rights. Of the Doonars shares, Jaybirpara were the feature and improved from Rs. 25-8 to Rs. 26. Banarhat improved further to Rs. 379 and Carron were slightly better at Rs. 266. Hantapara continued to change hands at around Rs. 330 and Hasimara were asked for at the slightly higher rate of Rs. 41-14. Ranicherra had sellers at Rs. 22-12. Of the remaining shares, Tukvar eased further to Rs. 16-14 with sellers over, and Chamong

STOCK MARKET QUIET
SELECTIVE ENQUIRY FOR
INDUSTRIALS

London, 30th November.
NO decided trend developed in the London stock market last week but the general undertone was satisfactory and selective buying was responsible for a number of gains, particularly among industrial equities. The market, however, was very thin, with business restrained by current economic uncertainties and the recent disappointments in the international situation. Activity was at a very low level and the market was going through its quietest period for a very long time. In addition, the competitive attractions of an increasing number of new issues attracted funds away from existing securities. Idle conditions prevailed in gilt-edged and prices moved within narrow limits to record little alteration from previous levels. Among foreign bonds, Germans lost some of their previous advance and were inclined to be easier. Others were little changed, apart from the Peruvian Corporation, which responded to the long-awaited capital scheme but did not hold the best prices. Rails attracted little attention. Dollar stocks moved in sympathy with Wall Street. A feature was the firm tone of industrial equities. Although business was small, modest selective buying caused fair gains. Engineering, electrical and stores shares advanced most. Gold shares failed to maintain the previous week's recovery and tended lower in the absence of renewed interest. Coppers were unaffected by various annual reports, but drifted lower later. Other base metals were firmer, where changed, under the influence of higher metal prices. Oils

advanced, helped by the continued rise in U.K. consumption, but gains were diminished after the week-end. Selective demand brought quietly firm conditions in teas and several gains were recorded, but rubbers were subdued and little changed on balance.

The Money Market

With discount houses taking up a larger number of bids, short loan conditions in the money market were less comfortable last week. However, in spite of one difficult day, Monday, the volume of money available to the market over the period proved to be just in balance with demand. Day-to-day loans fluctuated on the basis of 2½ to 4 per cent but the majority of the requirements were obtained around 3½ per cent. There was a fair offtake of Bills by banks and the current applications for £230-million worth of 91-day Bills totalled £311,055,000 and were allotted at an average rate of 82s 0.88d compared with 82s 1.18d last week. Applications for £60-million worth of 63-day Bills totalled £75,790,000 and were allotted at an average rate of 82s 6.34d compared with 82s 6.02d last week. Next week offerings will include £240-million worth of 91 day Bills and £50-million worth of 63 day Bills. The Bank of England Return for the week ended 23rd November showed notes in circulation about £3 million higher at around £1,780 million and Bankers' deposits about £4 million higher at nearly £256 million.

Stock Market Remains Firm

The Investor's Chronicle market newsletter writes that the underlying firmness of the London Stock Exchange has decidedly strengthened sentiment. Business remains very small but absence of selling pressure suggests that the market has a floor. International politics, internal wage demands and the credit squeeze justify some caution. Recent profit margins are likely to be

reduced but big dividend cuts are unlikely and the markets could be reasonably steady over the next few weeks. Profits of Doonars tea companies will be sharply below last season's abnormal figures.

Activity on Wall Street

United States Government obligations gave considerable ground earlier in the period under review in response to the Federal Reserve Board's action in raising the rediscount rate. Selling pressure, however, eventually was lifted and the market staged a partial comeback with some investment demand evidently attracted by better yields. Convertibles and some of the rails developed rallying tendencies when the stock market resumed its forward movement to come within striking distance of the 1955 highs. In the foreign section, Greeks six per cent and seven per cent both established new lows for the year in fairly active turnover. German Nationals were mostly lower by fractions. Italians and Serbs were mixed with Denmark 4½ per cent and several Norwegians slightly lower. Polish issues were a soft spot with seven per cent of 1947 off nearly nine points on a single sale. Australians and Japanese banked away fractions to a point under moderate offerings.

U.S. Federal Reserve Return

The Federal Reserve Return for the week ended 23rd November shows that gold stocks rose by \$1 million to \$21,687 million. Foreign deposits rose by \$21 million and foreign investments by \$2 million. The Federal Reserve sold \$99-million worth of bills during the week. Total discounts and advances increased by \$248 million to \$796 million, while excess reserves of member banks declined by \$112 million to \$155 million. The daily average of excess reserves rose by \$15 million to \$615 million, while average borrowings declined by \$362 million to \$811 million. Business loans by the New York City banks increased by \$15 million to \$3,943 million compared with an increase of \$5 million to \$7,532 million in the corresponding week a year ago.

Motor Car Industry

International competition in the motor car industry showed no signs of slackening from the "very severe" conditions of the past year, according to the Chairman of the British Motor Corporation, Sir Leonard Lord, in his annual statement in London on Thursday. Although he was confident that the Corporations' total output could be sold, profits might be somewhat less in future despite an increase in turnover. He added that according to present indications an output of 12,500 vehicles should be achieved by next summer.

Trinidad Leaseholds

Shareholders of Trinidad Leaseholds will be asked at the annual general meeting in London, on 15th December to approve resolutions increasing the authorised capital of the company to £5 million and capitalising reserves totalling £655,781. The former will be achieved through the issue of 4 million new ordinary 5s shares. The latter will take the form of a one for five scrip issue. The Directors report in the annual statement to shareholders that net profit for the year ended 30th June totalled £2,312,682 against £1,851,623 in the previous year. They recommend a final dividend of 10d per 5s share.

Further Fall in Quicksilver

Ex-warehouse quicksilver quotation in London continues to drop with both Spanish and Italian metals now indicated around £90 a flask. Recently the price stood around £90½ to £91½. Continued competition for available limited supplies prompted the decrease, according to trade sources. Over the past year the price has fallen by about £20. Meanwhile the U.S. domestic market has present level of around \$280 a flask and allowing London parity.

Vegetable Oil Market

The recent declines in freight rates are tending to lower the prices of Indian oil but better enquiry countered the downward trend while resellers are less in evidence. Buying activity in linsseed oil was slightly better at reduced prices with Indian bulk oil for forward arrival around £107½ c.i.f. and nut oil displayed a firm trend with most recent business in Indian bulk oil to Italy at up to £106½ c.i.f. Coconut oil was relatively steady but in c.i.f. and Ceylon £92 c.i.f. December-January. Fair business was done in Malayan palm oil with shipment. Cheap offers of Philippines copra were parcels said to be bidding up to \$172 c.i.f. British reported in Hull and Marseilles at up to £55½ c.i.f. December-January.

P.A.A. DIVIDEND

At a meeting held on 1st November, the Directors of Pan American World Airways, Inc. declared a dividend of 20 cents per share payable the close of business on 25th November, 1955. This is the forty-fourth dividend paid by Pan American, and the fourth this year. Payments of 20 cents per share were made on 9th September, 17th June and 11th March. Dividend payments have been made each year since 1941.

New Delhi

SCANT CONSOLATION FOR THE
COAL INDUSTRY
NO DEFINITE RULING ON
COMPENSATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE much-advertised coal conference, convened here on 23rd November to discuss the development plans of the private sector, for increased production, did not prove a resounding success. The participants were asked to return and submit plans within the next two months for raising an additional eight million tons of coal. The second five year coal plan, it will be recalled, raised the potential coal production from 37 million tons to 60 million tons by 1961; from three to 18 million tons in the public sector and from 34 to 42 million tons in the private sector. Development in the private sector is dependent largely on certain assurances and clarifications. The coal industry is believed to have wanted a definite guarantee against nationalisation for a reasonable period. This has not been forthcoming. The conference, according to reports, was told that the stepping up of production from three million tons to 18 million tons in the public sector should not be regarded as an aspersion on the efficiency of the private sector. The decision had been taken at the highest level and was not open for discussion.

Compensation was the next issue raised. In particular, the Finance Minister's recent statement that compensation would be paid in respect of capital invested to raise the additional eight million tons, was referred to. It was emphasised that difficulties would arise in demarcating the line where the outlay of new capital for the maintenance of the existing production ended, and the investment necessary for raising additional production commenced. No satisfactory reply appeared to have been given beyond a reiteration of India's high moral standards. As already reported, in order to expand production in the public sector, the Central Government will acquire the unworkable portions of the coal mines from their existing lease-holders. The areas "immediately contiguous to the worked areas" were however to be left with the existing lease-holders. Some clarification of this provision was sought unsuccessfully.

Coal Marketing

The marketing of coal was another issue indirectly raised at the conference. Under the existing pattern of trade, the public sector, whose cost of production per ton was the highest, catered exclusively for its own needs. The private sector catered both for the public and private sectors. The question asked was whether the existing pattern of trade would be maintained. Although no clear reply was forthcoming, one of the participants is reported to have hinted at the establishment of a central marketing organisation by pooling the production of both sectors. Incidentally, such a plan, by equalising selling prices, would provide a cover for higher costs of production in the public sector. Such a plan was ruled out by the Indian Coalfields Committee of 1946, which, however, had said that "it is a possibility which should, we think, be borne in mind, since a situation may arise at a later date requiring such action." The Coal Washeries Committee of 1954, made a definite recommendation that "A central coal marketing organisation be formed under State control for the preparation and distribution of coal for the market."

There has been some change in the fieldwise break-down of output for the two sectors under the plan as will be evident from the following:—

Field.	Public sector, original plans in million tons.	Public sector, revised plan in million tons.
Raniganj	3.4	2.50
Bokaro	0.40	0.50
Kharanpura	4.00	4.00
Korba	4.00	4.00
Central India	3.00	2.50
Singareni		1.50
Field.	Private sector, original plans in million tons.	Private sector, revised plan in million tons.
Raniganj	15.00	15.00
Jharia	2.68	3.44
Kharanpura	3.50	3.50
Central India	0.56	0.56
Singareni	0.50	0.50
Assam	1.07	
	0.20	
	8.51	8.00

Further Pruning of the Plan-Frame

The Planning Commission has got into difficulties, largely created by itself. Instead of first appraising the resources within those resources, it invited State Governments to put forward their own plans. The States and Central Ministers conjured up visions in which the demon of unemployment had been laid low. The result was a collection of schemes, the total outlay on which exceeded Rs. 6,000 crores. At this juncture, the Finance Minister came out with its estimate, which, at the existing level of taxation, placed the resources of the public sector at Rs. 2,000 crores. Professor P. C. Mahalanobis produced a plan frame, in which the total outlay on the public sector was placed at Rs. 4,300 crores. The National Development Council

approved the targets outlined in the plan frame and the Finance Minister at that stage envisaged a gap of Rs. 800 crores between the outlay and the National resources, inclusive of Rs. 1,000 crores of deficit financing. The Planning Commission, since then has been engaged in chopping and chiselling the Central and the State schemes. Meanwhile the Finance Minister indicated during the week that he had reconciled himself to the figure of Rs. 4,800 crores. He said that when the country wants certain things badly, some means must be found to supply those things. The question as to how the extra resources are to be found for implementing the Plan—by taxation, by further borrowing or by intensive saving campaigns—is being considered.

The Planning Member, Mr. Gulzarilal Nanda, further confirmed this statement by adding that "further pruning of the draft plan is necessary to reduce the total outlay from Rs. 5,400 crores to Rs. 4,800 crores." An ad hoc and arbitrary cut of varying percentages is suggested. This may mean the end of all planning. For it is conceivable that while adjusting the cut, a Central Ministry, because of political pressure, may retain a number of lesser schemes, at the cost of one of vital importance unless an indication is given by the Planning Commission itself as to how these cuts are to be effected.

Resources and Deficit Financing

How the necessary resources for the plan are to be met is another thorny question. The first year of the second five year plan is also the election year, during which politicians are not in the habit of imposing fresh taxes. Indications are not wanting that the main burden of additional taxation will be imposed during the last three years of the plan. How steep this might be can be judged by the fact that it would be spread over only three years instead of five. A section in New Delhi has been pressing for the expansion of the plan, irrespective of resources. At least one economist, Professor Milton Friedman of America, here at the invitation of the Planning Commission, has sounded a note of warning. In a memorandum, he points out that the amount of deficit financing over a five-year period sufficient to maintain the level of prices would be of the order of Rs. 300 crores to Rs. 475 crores. "Deficit financing at the rate of Rs. 1,000 crores over a five-year period is likely to produce a price rise of at least 28 to 42 per cent." At the existing rate of taxation, the Finance Minister's original "gap" of Rs. 800 crores to finance the plan frame of Rs. 4,300 crores, included the deficit financing of Rs. 1,000 crores, or nearly Rs. 2,000 crores if the "gap" was converted into deficit financing. Since then the outlay on the plan has mounted to Rs. 4,800 crores or it may even be in the region of Rs. 5,300 crores, increasing simultaneously the extent of deficit financing. Ultimately, the Prime Minister's recipe may have to be adopted. The Planning Commission may present a detailed plan for 1956-57 and a sketch for the remaining four years.

Shipowners Meet

A meeting of the Consultative Committee of Shipowners was held at Bombay on 28th November. The following formed the Agenda for the meeting.

1. Report on action taken on recommendations made at the previous meeting of the Consultative Committee of Shipowners and further discussion on the following important recommendations, which are still outstanding:—
 - a. Salvage organisation.
 - b. Provision of Government cargoes for Indian ships in the overseas trade.
 - c. Global licences.
 - d. Chartering of vessels on the coast.
 - e. Chartering Committee.
 - f. Relief from taxation.
 - g. Dock labour situation.
 - h. Report of the Port and Shipping Statistics Committee.
2. Second five year plan.
3. Policy regarding employment of chartered vessels on the coast and chartering of Indian vessels to outside parties.
4. Shortage of tonnage on the coast.
5. Policy regarding sale and replacement of ships.
6. Second Shipping Corporation for tramp vessels.
7. Purchase of tankers.
8. Orders for Hindustan Shipyard Limited for the second plan period.
9. Rate of interest on the loans for ships built at Visakhapatnam.
10. Co-ordination of the shipping activities of various Central Ministries with a view to the development of shipping.

Arrival of Russian Technicians

The Russian technicians under the Indo-Soviet Agreement arrived here during the week. They included five oil technicians, two experts on non-ferrous metals and two on diamond mining. Their primary function will be to advise the Government of India on the type of organisation and the manner and method of setting up the organisation. Technical aspects of oil drilling, geophysical surveys, the type of training, the number of trainees needed for each category and the type of equipment most suitable for India, will also be recommended by the Russian experts. The Soviet Government has

also agreed to supply equipment and training for Indians. Its technicians, however, will not participate in oil prospecting in this country.

The technical mission, which accompanied the Minister for Natural Resources, Pandit K. D. Malaviya, had also visited Rumania, and the Deputy Minister for Rumania has visited New Delhi, as a result of which the Rumanian Government has also offered to supply oil technicians and equipment to India.

Crude Oil Production

The annual rate of world crude oil production doubled in the ten years between 1944 and 1954. The following figures illustrate the sources of crude oil produced in 1954.

Country	Tons
North America	351,000,000
Middle East	137,000,000
Latin America	128,000,000
Far East	17,000,000
Western Europe	4,000,000
U.S.S.R. Block (estimated)	637,000,000
	70,000,000
	707,000,000

Production in the U.S.S.R. block of countries (about 80 per cent is found in Russia itself) while representing an appreciable quantity of crude oil, is nevertheless a small contribution, less than 10 per cent in comparison with the rest of the world. If North American production (351 million tons) is excluded, the U.S.S.R. block can still only claim to contribute rather less than 20 per cent—a percentage which is moreover likely to decline in the face of the energetic development and rapid expansion of the free world's resources. Contributions to the overwhelming achievements of the free world are made by many parties including the major international oil companies and it is of interest to compare the performance of one of the latter with the U.S.S.R. block. In 1954 this major group produced from its own sources 68 million tons of crude oil or approximately the same quantity as the entire U.S.S.R. block. Production, however, only follows from successful exploration—a costly protracted venture which offers no absolute guarantee of ultimate success.

Production in the U.S.S.R. block, apart from Russia itself, where British interests at one time worked concessions, is centred in satellite countries of which Rumania is the most important. It must, however, be remembered that much of the pioneering work in the field of exploration and subsequent production, was undertaken by British, Dutch and American interests whose concessions remain, but at the present time are separately controlled. Outside the U.S.S.R. block intensive exploration is in progress in all corners of the world under every condition of climate and terrain. The same major Group, for example, is actively conducting exploration in all continents of the world including 16 countries which are already producing for the Group and in addition many other undeveloped areas. This Group's exploration operations which include off-shore concessions, extend from Canada to Nigeria and Columbia to New Guinea. In the process of prospecting and drilling in dense tropical jungles, deserts, in snow and off-shore, this major Group have amassed a unique store of experience which is constantly applied in evolving new and more efficient techniques. In 1954 capital amounting to no less than £110 millions was expended on exploration and production.

World refining capacity in 1954 was:—

	Tons
North America	448,000,000
Rest of free world	299,000,000
U.S.S.R. Block	747,000,000
	73,000,000
	820,000,000

Refining Capacity

The U.S.S.R. block refining capacity only represents 9 per cent of the world total or 24 per cent excluding North America. As a further comparison the same major Group's refining capacity of 110 million tons, which is located in all the continents of the world and is designed specifically to process the various types of crude oil encountered, is no less than 1½ times the total capacity of the U.S.S.R. block of countries. Consumption of petroleum products in the world during 1954 in terms of crude oil equivalent, reached 705 million tons, of which the U.S.S.R. block consumes 70 million tons or less than 10 per cent. In the same year the major Group of companies distributed 87 million tons throughout the world, nearly 25 per cent more than the entire U.S.S.R. block. Statistically it may be seen that the U.S.S.R. block of countries holds a relatively small place in the world-wide picture of petroleum. In fact, their performance is overshadowed by one major international oil company.

Apart from statistics, however, there is a significantly greater disparity between the U.S.S.R. block and the free world or for that matter one major oil company, namely the vital "know how" of operations under all conditions. In this field the advantage lies heavily with the free world which has behind it the benefit of techniques evolved and adapted to suit circumstances experienced in all parts of the world. This knowledge is the accumulation of intensive effort over many years and is a practical advantage denied in a large measure to the U.S.S.R. block through the

WHEN IN EUROPE

fly BEA

IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more... if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airlines—more VISCONTES for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including—PARIS · NICE · BRUSSELS · VIENNA · AMSTERDAM · OSLO · STOCKHOLM · COPENHAGEN · HAMBURG · GENEVA · ZURICH · BARCELONA · ISTANBUL · MADRID · LISBON · PALMA · MILAN · ROME · NAPLES · ATHENS, and further afield for example, to GIBRALTAR · MALTA · CYPRUS and CAIRO as well as WITHIN BRITAIN.

...and fly on the **BEA CAR HIRE PLAN**

BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

Plantation Topics

BRIGHTER OUTLOOK FOR INDIA'S RUBBER INDUSTRY

RE-PLANTING SCHEME SANCTIONED

A NEW phase has begun in the history of India's rubber planting industry with the inauguration of the new Rubber Board which is constituted under the Rubber (Production and Marketing) Amendment Act of 1954. The new Board has the full blessings of the Union Government and is not likely to suffer on account of lack of co-operation. The Government has sanctioned a rubber re-planting scheme covering 1,20,000 acres and the Board's staff is now working on the details. The Board is meeting next week in Kottayam to finalise the proposals. The replanting scheme is a part of the Government's plan to raise the production of natural rubber in India to meet the increasing demand for the commodity. At present there is a gap of more than 3,000 tons between indigenous production and consumption, which is covered by imports. According to certain estimates the gap is likely to widen up to 14,000 tons towards the final year of the second five year plan. Certain quarters suggest the erection of a synthetic rubber plant as a measure to cover the gap, but this is strongly opposed by the planters. There is ample scope for increasing production of natural rubber in the country. Enough land is available on the west coast for new plantings. Many of the present stands require replantation. If high yielding strains are used for both these purposes production can be substantially raised.

No Need for Synthetic Plant

The building up of a synthetic industry is a costly affair. Machinery as well as raw materials would have to be imported from other countries. At a time when the country is badly in need of finance for more important development schemes, it would be wiser to invest the money in new plantations, which will not only yield the required quantity of rubber but will give employment to several hundred workers. As the rubber tree takes five to seven years to mature there is bound to be some initial deficiency in production. This, however, can be covered by imports which will undoubtedly be cheaper in the long run than the setting up of a synthetic rubber plant.

The Rubber Board has obtained a site for its Research Institute near Kottayam. The area of the plot is 76 acres with a rubber area of 22 acres, and the work of conversion into an experimental station has begun under the direction of two research officers appointed by the Board.

Effects of Inter-State Sales Tax

Inter-State sales tax complications have compelled Dunlops and Firestone to shift their purchasing department to Fort Cochin. Consequently, Kottayam is gradually losing its importance as a rubber market. Most of the planters are now passing on their rubber direct to the manufacturers' depots at the shipping point and the dealers are losing ground. Although rubber production has been hampered by excessive rains in September and early in October, there is now enough to go round the market. Production and consumption for the first 10 months of the year were about 17,000 tons and 23,000 tons respectively.

LONDON TEA SALES

AT last week's London tea sales the 49,136 packages on offer realised an average price of 4s 10.56d a pound, against 4s 11.57d last week and 6s 10.38d a year ago. Plain broken pekoe was quoted at 3s 8½d; last week 3s 8d.

Prices obtained by some of the companies are given below:—

	No. of packages	Average per lb
Amalgamated	900	4/7½
Amgoorie	136	6/5½
Assam Frontier	623	6/2
Balijan	126	6/3
Bargang	174	5/1½
Borbheel	408	5/2½
Borjan	186	5/1½
Budla Beta	378	6/2
Cons. Tea and Lands	1,149	4/10½
Deamoolie	260	6/1
Dickwella	105	6/7½
Doom Dooma	246	6/2½
Duckwari	114	5/3½
Eastern Assam	263	6/3½
Greenwood	354	5/7½
Imperial Ceylon	126	5/5
Jetinga	330	4/0½
Jhanzie	568	5/7½
Jorehaut	612	6/1
Koomsong	394	5/8½
Lunuvu	622	5/6½
Majuli	428	5/3½
Makum	252	5/5½
New Dimbula	258	6/1
Nuwara Eliya	86	6/7½
Pabbojan	120	7/1
Scottish Assam	246	5/0½
Singlo	491	4/0½
Standard	229	6/4½
Tingri	269	6/6
United Planters	624	5/7
Upper Assam	396	5/11½

U.K. stocks of tea on 18th November amounted to 102m. lb, against 96.8m. lb a year ago.

COCHIN TEA SALES

At Sale No. 24, 2,000,000 lbs of tea were on offer. There was a general demand, but the market was irregular and easier by As. 1 to 2 for everything except well made black leaf and best liquoring Fannings which were firm to dealer. Whole Leaf grades met with better demand at lower rates.

COIR YARN EXPORTS

The European coir manufacturers met in Paris last week. Dr. Wilhelm, President of the Coir Manufacturers Association, presented a report on his visit to India. The meeting discussed the recommendations of the various ad hoc Committees of the Coir Board. The ad hoc Committee on External Marketing recommends among other things the restriction of coir yarn exports as a measure to increase the exports of manufactured articles. The danger in this policy however lies in the fact that European coir manufacturers use sisal and other fibres along with coir yarn for the manufacture of mats and mattings. Therefore any effort at this end to curtail coir yarn exports will naturally compel them to turn to other fibres rather than buying manufactured goods.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

Sheet:	Closing prices on 18-11-55 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings 1	1.30	
Sheet Cuttings 2	1.25	
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.68/69	1.68
R.M.A. No. 1	1.66/68	1.65½
Crepe No. 2	1.63½	
Crepe No. 3	1.59½	
Scrap Crepe:		
Sc. Crepe No. 1	1.30 Nom.	1.26½
Sc. Crepe No. 2	1.25/30	1.23½
Flat Bark	1.10/20	1.14½
Sc. Crepe 3X	1.19	

To arrive at f.o.b. Colombo prices add 40.4 cents a lb. in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

INDIAN RUBBER PRODUCTION AND CONSUMPTION IN OCTOBER

Indian rubber output in October, 1955 was 2,450 tons, according to the Indian Rubber Board. Exports during the month were nil and imports amounted to five tons. Consumption by manufacturers was 2,214 tons. Stocks with estates and dealers on the last day of the month totalled 4,515 tons including 1,465 tons in transit. Stocks with manufacturers on the same date amounted to 2,027 tons, including 289 tons of imported rubber. Manufacturers also used 201 tons of reclaimed and 9 tons of synthetic rubber of which their month-end stock amounted to 421 tons and 131 tons respectively.

U.S. NATIONAL OUTPUT

The Commerce Department has reported that U.S. steel mills operated at 98 percent of rated capacity last month. The strength of the national economy was based on the rated capacity of 1st January, 1955. Discussing the business situation in its monthly publication, *Survey Of Current Business*, the Department states that in October record national business levels were supported by strong consumer demand and by increased business purchases of plant and equipment. During the month, the Department notes, retail sales were at a new high, the rise in output of the metal-using more civilians called for a record steel production; 65,200,000 persons, were employed; and the pace of commercial building was by far the most active on record. Average weekly earnings were nearly one dollar above September. The Department also notes that new construction during the month was 11 percent above October 1954. The survey of this year continued the marked advance since the autumn of 1954. Gross national product climbed to a new record annual rate of \$391,500 million—\$6,500 million higher than in the second quarter of 1955, and \$32,500 million higher than the third quarter of 1954. The Department also notes that personal income in the U.S. advanced from an annual rate of \$306,500 million in the third quarter of 1955 to \$306,000 million in remained stable.

INDIA'S POSITION UNDER G.A.T.T.

THE BENEFITS DERIVED FROM IMPORT CONCESSIONS

(By C. G. Balakrishnan)

THE evolution of foreign trade policy in the post-war world provides an interesting but lengthy study. Indian commercial policy, since the close of the second World War, has had to adjust itself continuously to a fast-changing international background, and hence cannot admit of easy and brief exposition. Nevertheless, the broad scope of foreign trade policy can be indicated in terms of the Havana Charter and the contemplated international trade organisation for its enforcement. The General Agreement on Tariffs and Trade and the newly proposed organisation for trade co-operation. Had the world envisaged by the Havana Charter ever come into existence, it would have ushered in an era of fairly stable and lightly bound tariffs without any other major restrictions on international trade in manufactures. But unfortunately the Charter set out a code of commercial conduct and a pattern of trade relationship among nations altogether too idealistic in a world of planned economies, of state trading, import quotas, price ceilings, wage regulation and of managed instability in exchange rates. Hence the Charter was still-born and the much cherished I.T.O. never came into existence.

A preparatory committee was constituted by the Economic and Social Council of the United Nations Organisation for the purpose of preparing a charter for world trade. In April 1947 negotiations were opened for the progressive reduction of tariffs and the results of these negotiations were embodied in an agreement which was hastily dubbed a general agreement on tariffs and trade—hence the unmelodic G.A.T.T.

India's Participation

The Government of India, after long deliberation, decided to participate and the General Agreement went into operation on July 1948. Consequently to the acceptance of the terms of the Agreement, the Government of India effected certain changes in the Indian Tariff Act in February 1949. As a result of the concessions conferred the value of trade covered by direct concessions to India amounted to approximately Rs. 47.0 crores and the value of trade covered by indirect concessions to about Rs. 19.0 crores. As against this, direct concessions granted by India covered imports to the value of about Rs. 15.0 crores whereas indirect concessions covered trade to the extent of about Rs. 8.0 crores.

As regards exports, India pressed for concessions for manufactured goods, the most important item in this group being jute manufactures. The countries from which India secured concessions were France, New Zealand, Norway and the U.S.A. As regards the export of cotton piecegoods, India secured a concession in the form of a reduction in the Australian preferential duty levied on cotton piecegoods from the U.K. Besides, there was also a reduction in the Australian duty on certain varieties of printed or coloured cotton textiles. India also secured concessions on the export of woollen carpets and rugs and sports materials. Above all, duties on a wide range of processed materials were either reduced or bound. As regards raw jute, its free entry was bound by Czechoslovakia, U.S.A. France and one of the Scandinavian countries. Chile in South America had reduced the duty on raw jute by one-third. Australia reduced the duty on Indian mica while France bound the duty-free entry. Concessions were secured from a number of European countries for tea, spices, coffee, raw rubber, goat skins and paraffin wax.

In granting concessions on imports into the country, the Government of India was guided by certain maxims. Concessions granted were to be either positively beneficial or at least were not to be harmful to national interests. Above all, they were not to involve heavy loss of revenue to the public exchequer. These maxims, sound as they were, went a long way towards determining the import structure on desirable lines. Foodstuffs, industrial raw materials, capital plant and machinery are import items which have benefited from negotiated concessions. Broadly speaking, India has not been a losing partner in G.A.T.T., though it must be stated that she has gained certain concessions only at the expense of certain sacrifices.

Basic Objectives

Conceived originally as a stop-gap pending the ratification of the Charter of I.T.O. the temporary G.A.T.T. now seven years old, is a remarkably slender structure, but one which has held different nations of the world together on the same track as far as the main lines of trade policy are concerned. It has sponsored three successful world conferences, at Geneva in 1947, at Annecy in 1949, and at Torquay in 1950-51. The General Agreement contains tariff schedules binding more than 55,000 items of 31 countries and the Benelux Customs Union. In practice, the deterrents provided in the Agreement to the evocation of negotiated concessions have proved quite effective. And in the recent past, the conference on world tariffs held at Geneva, reaffirmed the basic objectives and obligations in trade and the general prohibition-discrimination in trade and the general prohibition on the use of quantitative restrictions on imports. A new article has been incorporated in the Agreement by virtue of which the country concerned might restrict, without the prior approval of the contracting parties, the importation of a commodity, on which the rate of duty is not

SOUTH EASTERN RAILWAY TENDERS.

Tender No. GMS/55/M171(55) is invited by the General Manager, Garden Reach, Calcutta-23 for conversion of 253 tons of Gun Metal Borings mixed with white metal available at the Railway's Scrap Yard at Kharapur into 60 tons of Phosphor Bronze Ingots Class I, 38 tons of Gun Metal Ingots Class II and 155 tons of Lead Bronze Ingots Class III to ISS Spec: N6-49. JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

BANKS

H indicates that Share capital is half paid. O, C and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CHANGES IN THE TEA INDUSTRY

ECONOMIC FACTS BEHIND MR. KRISHNAMACHARI'S DOUBTS

RECENT statements made by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, suggest that the Government is having doubts about present ownership and management trends in the tea industry. Why it should have chosen this particular time is difficult to understand. The process has been going on since before the war. The rate of change at the moment is certainly no faster than it has been since Independence, and is considerably slower than it was in 1954. It will almost certainly continue so long as the difficulties which face the industry persist, although there is no sign of a stampede developing yet. Indeed, British interests in the tea industry can probably be regarded as more secure than in most other activities. The arguments against changes in tea often apply with equal force to those which are taking place elsewhere. The fact has to be faced that, except in some engineering and miscellaneous concerns, India is no longer looked upon as a favourable proposition by the British investor. The same is of course true of other European and American capitalists. Mr. Krishnamachari's words are one of the first indications that this is not exactly the impression the Government has been trying to create. There is little chance of reversing the trend now; it is indeed doubtful if it could be halted. But if the Minister was in fact expressing the Government's concern that, at least with tea, these changes are not always in the national interest, it may serve a useful purpose to go into the reasons for them.

One of the chief causes of the changes in ownership has been the activities of cornerers. These have only affected the rupee companies and what repatriation of British capital has been involved has not usually been great. They have not always meant immediate changes in management, although there have frequently been radical revisions of management practices enforced by the new proprietors. Very often the cornerers have obtained gardens for a fraction of the price they would have had to have paid in the market. The reserves accumulated by years of sound management have occasionally been dissipated in a remarkably short time. Gardens have been left permanently in an unsound financial position and such postponable items as maintenance and replacement have suffered when trading conditions have deteriorated. This was no doubt what Mr. Krishnamachari meant when he referred to the British managements' interest in tea bushes; at least these were always maintained intact. The other method by which gardens have changed hands has been the outright purchase of the sterling assets from owners eager to take their capital elsewhere. This is the one of greatest significance because, it reflects the foreign capitalist's judgment of India as an investment proposition. The reluctance to take risks with the future might have been rather greater in tea than in other activities because of the peculiar problems which always face a plantation industry. But the trend remains an indication of what foreign investors as a whole are thinking, and it is a development the Government will have to watch if it is serious in its desire to attract foreign capital for the second and subsequent five year plans.

*

Ensuring a steady and reliable income from investment in the tea industry has never been an easy proposition. The market has always been subject to sharp fluctuations and unless gardens are able to offset bad years against good it is not possible to run them as a business proposition at all. There is no denying that this fact has lately been ignored by the Government. Good years have been made the excuse for imposing burdens which have, perhaps as early as the following year, become millstones round the industry's neck. In spite of the desperate straits in which the gardens found themselves in 1953, for example, the profits of the next two years attracted all sorts of impositions, including the Plantations Labour Act. The

recently-introduced sliding scale of export duty is perhaps the only acknowledgment of the fact that unless costs can be adjusted to meet fluctuating world market conditions, the industry cannot hope to survive. The foreign investor in tea has had this one consolation in a huge mass of discouragements. He can be excused the opinion that a single swallow does not make a summer and that the overwhelming mass of adverse factors is more indicative of the real trend. Among these must be numbered the various taxes and levies imposed by State Governments with little or no consideration for the interests of the economy as a whole, the high cost of maintaining British management and the possibility of nationalisation or other form of political interference at some unspecified time in the future. With these facts to be faced it is not surprising that the sources of fresh sterling capital are drying up. The British investor has many opportunities more tempting than tea dangling before his nose; and if in spite of the other attractions he still prefers to have his money in this industry, he has better propositions than India in which to put it.

The best that can be hoped, if the Government concern is as real as Mr. Krishnamachari seems to imply, is that present British tea interests can be persuaded to stay. In a "socialistic pattern of society" this may mean that tea will have to be regarded as a special case among industries and a separate policy worked out for it. Plantations have been a feature of low-cost, undeveloped economies; it has yet to be proved that they can prosper under other circumstances.

*

One of the most difficult problems which will face the British section of the industry during the next few years will be that of holding its present management and attracting new recruits. Life on the gardens has few attractions in a world which, year by year, becomes better stocked with interesting activities and diversions, unless it is also a lucrative one. The enjoyment of home leave

with a full pocket and an early retirement in comfort have helped to compensate for a lonely and monotonous life. But the profession of tea garden manager is now being crushed between the upper millstone of full employment in Britain and the nether one of high taxation in India. Indianisation often appears as a tempting way out of the dilemma and one which conforms with Government policy throughout foreign concerns generally. But the life appeals to only a few Indians at present, although no doubt the numbers will grow. And foreign investors usually like to feel their capital is in the hands of their own nationals. This is a very real dilemma for the British gardens. How many of them will solve it by selling out when the next attractive offer comes along will depend upon how far other factors can be made to compensate for these personal ones. It is not only direct taxation in India which will help to drain British capital out of tea. Death duties in the United Kingdom itself will mean that from time to time gardens will have to be sold to raise resources; and where outside Calcutta can a buyer be found for a tea garden these days?

With all these factors helping the shift in management and ownership it is surprising that it has not gone further than in fact it has. Sterling interests still predominate in tea and foreign nationals still constitute the bulk of the higher managerial staff. No large group is known actively to be contemplating an immediate withdrawal. The process is one of attrition, with gardens being sold off one by one as inflated costs or changed circumstances make it necessary to do so. Each new imposition will bring a fresh crop of marginal gardens to the auctions. The new Companies Act, with its limit to the number of separate concerns any one managing agent can hold, can be expected to make a large contribution to the flow. So will another budget like the last one. It is inevitable that as one economic burden is piled on top of another the gardens should pass into the hands of those who do not regard Government regulations, high taxes, unrealistic welfare commitments and the difficulty of keeping experienced staff as any bar to making money quickly. If sound business management in the tea industry is finding it difficult to survive present economic trends in India its position is only slightly worse than that of the same commodity in other industries. When taxes are high, restrictions and regulations arbitrary and all-pervasive, and the economic climate anything but certain, it is not easy to earn economic returns using the sound methods which are traditional for British business.

THE NEW CANDIDATE FOR REGULATION

AS a barometer of trends in private investment, the stock markets occupy a position of first importance in the economy. Their healthy functioning is a major factor determining not only that the maximum amount of savings will be forthcoming, but also that these savings will be directed

the Gorwala Committee, modified in the light of subsequent suggestions and criticisms.

The measure, though belated, has nonetheless been widely welcomed for its aim of bringing a certain stability to stock markets where manipulation, overtrading and similar features are more common than they should be. Criticism so far has centred mainly on the point that it gives the Government wide and sweeping new powers which are apt often to be misused. That the powers under this Bill, taken in conjunction with the Company Law Bill, are wide and sweeping was in effect admitted by the Central Finance Minister, Mr. C. D. Deshmukh, in the Lok Sabha last week. But his defence was the familiar one that they would not be used unless circumstances arose to justify them. This has not been found entirely reassuring in the light of previous experience of official intervention in the affairs of private enterprise. The special directorate in the Department of Company Law Administration, which it is now proposed to set up instead of the stock exchange commission originally envisaged, will need to be especially careful that its activities do not hamper those of the stock exchanges. The plan to staff it with people having specialised knowledge of the working of exchanges, and the association of advisory councils, is to be welcomed.

The most important point to bear in mind in the course of future changes is that the flexibility of the markets should not be allowed to suffer, except under very exceptional circumstances. An essential aspect of flexibility will be to ensure that it becomes easier and cheaper to transfer shares. Proposals to restrict blank transfers will have to be trimmed down considerably to meet this aim. No less important for the popularity and reliability of the regular stock exchanges are a number of other factors over which they themselves have little or no control. It is, for instance, not entirely within their power to keep a stern check on credit, whether from banks or elsewhere, that goes into speculation. Companies in this country are still chary of giving shareholders details about the progress of their properties that cannot possibly be regarded as being of assistance to competitors but are essential to a correct valuation of shares. Finally, no small part of the over-speculation in stock markets today is due to the delayed decisions. If the regulation of stock markets is to prove a success, a rather more enlightened attitude on aspects such as these will be necessary.

BANKS' LIQUIDITY HABITS

A NOVEL EXPERIMENT IN HOLLAND

TWO recent developments in continental banking have aroused particular interest in Britain, because British banks pride themselves on their liquidity and find it increasingly difficult to maintain the standards of liquidity established by tradition. The developments in question are the Amsterdamsche Bank's scheme to attract long-term deposits in the form of seven-year bonds, and the Austrian National Bank's instruction to the Austrian commercial banks to keep at least 5 per cent of their deposits as reserve balances at the central institution. This new requirement in Austria involves, of course, no new principle in banking. A legal requirement to keep at least a specified proportion of deposits as balances at the central bank is enforced in many countries. Britain is, however, one of the exceptions, and another adherence to the principle has raised the question whether the British banks' activities should be similarly formalised. There is a system in Britain, but it is informal—an "understanding", not a commitment. The commercial banks do not (except occasionally, for very short periods) allow their balances at the Bank of England, plus their fill money, to fall below 8 per cent of their deposits. They observe, also, a convention that their total of cash and short loans and bills shall be not less than 30 per cent of their deposits.

This informal "liquidity ratio" is essential to the nation's monetary policy, for the Treasury and the Bank of England must be sure that in restricting the banks' liquid resources they will restrict bank-credit. Because monetary discipline through the mechanism of the market has not been conspicuously successful this year, it has been suggested in London that informal arrangements are inadequate and should be replaced by compulsory regulations. In fact, however, the position would not have been altered by compulsion: the banks did not depart from their minimum but replenished their liquid resources by selling securities. On the other hand, if these ratios were not only legally enforceable but also variable (like the minimum reserve ratio in the United States, for instance) the authorities would have an additional control-instrument in their hands. The problem of liquidity with which the Amsterdamsche Bank is concerned is of a different kind. It is not a problem peculiar to Holland but is increasingly troubling commercial bankers in Britain and elsewhere. Nearly all money deposited at

banks is withdrawable on demand or at short notice. In modern banking there is virtually no fear that large numbers of depositors will withdraw all their money simultaneously, as happened in the disastrous "runs" on banks in earlier times; yet there is a principle, which bankers cherish, that money which is technically withdrawable over a short period should not be loaned for very long periods.

Lending practice varies from one country to another. In Britain it has always been strict. Loans for, or investments in, real property are not approved by the banks. In some other countries the banks finance property with mortgages of 20 years or even longer. But whatever the general policy there is an inescapable tendency to lend money for longer periods than were considered wise in former years. The banks are required to provide interim finance for the capital projects of industry (whether privately or officially sponsored), and in practice the "interim", before the loans are put into a permanent form, may last for many years. The principle on which conservative bankers like to work, that loans shall be self-liquidating, is more or less in abeyance. The Amsterdamsche Bank's idea has been discussed abroad as a rational solution of the problem—to the extent that its seven-year bonds attract depositors. If assets are becoming long-term while liabilities remain short-term, and if this process of lengthening the term of assets cannot be reversed, it seems logical to attempt to lengthen the term of liabilities. To accept money for a period of years and lend or invest it for a period of years is as proper in principle as accepting "sight" or "short" deposits and using them for short-term financing.

It is unlikely, however, that this method will be tried in the near future in Britain, because in Britain interest-rates are now relatively high. On bonds corresponding with those which bear 3 per cent in Holland the British banks would probably have to offer more than 5 per cent to attract long-term depositors, and it is doubtful if the rates charged to borrowers could be high enough to allow a reasonable profit to the banks. But this is a temporary objection: interest-rates change, but the tendency to "lend long" persists. There are various possible methods of operating the principle that the Amsterdamsche Bank has initiated, and various countries can, doubtless, adapt it. The principle itself is of the highest importance, for there are serious defects in the financing of modern industry (and even trade, now that export credits have to be financed over periods of years). If all the other methods of financing worked smoothly and regularly there would be no need to make special provision for banks' finance. But it is impossible to judge all requirements in advance and to get the needed capital through the stock market, and conversion of bank loans into permanent securities is not always easily arranged. Savings are channelled through the insurance companies and the banks. The insurance companies are now recognised as a source of long-term capital—their liabilities are mostly of long-term character. But the resources of the banks are needed, too. They are, indeed, used—but only, hitherto, by ignoring the difference of time-scale between liabilities and assets.

FRESH OUTLOOK ON LABOUR PROBLEMS

MODERATE AND RESPONSIBLE TRADE UNIONISM NEEDED

INDIA'S labour policy for the next five year plan is now being formulated and the whole question of relationship between management and worker is under discussion. With the emphasis on heavy industries, increased output and mechanisation, it is being realised that the human element is, perhaps the most important of the three production factors, and that the future stability of the economy will require a more realistic handling of labour problems. At the third all-India Conference of Labour and Welfare Officers, held in Nagpur last week-end, the dominant note was the promotion of healthy industrial relations and the key to prosperity "a contented and happy labour force...the sine qua non of industrial progress and the foundation of an industrial democracy." A glance at the provisional statistics of industrial disputes for September proves the need for a firm and constructive labour policy. During the month, 61 fresh disputes occurred, 50 of which involved 16,465 workers, with the current number of disputes at any time during the month standing at 200. Of these, 149 involved 84,377 workers. Thus, although no specific reasons were given for the decision, it is scarcely surprising that—in spite of Mr. Khandhubhai Desai's plea that workers' representatives should sit on the boards of management—the conference, while recommending the association of workers in the administration of industries at appropriate levels in gradual stages, adopted a resolution "that the participation of workers' representatives in the

management and direction of industries is not feasible at present."

Mr. Shantilal Shah, Minister of Labour, Bombay, presiding over the Conference, pointed out that the significance of trade unionism and collective bargaining was growing every day. While it was imperative to establish labour and personnel management and welfare as a "science and an art", valuable as it may be in providing an important link between management and staff, "it can never be a substitute for organised trade unions." Although no definite line of action seems to have been laid down, it was generally agreed by the conference that some drastic changes are needed in the present formation of trade unions. The Labour Minister for Madhya Pradesh, Mr. Dindayal Gupta deplored the multiplicity of unions flourishing within the same industry leading to inter-union rivalries which cut at the very root of the trade union movement. His own State Government, he said, had taken steps to foster the growth of one union for one industry and the State Industrial Disputes Settlement Act had recently been amended whereby the right to be the spokesman of all workers in that industry had been given to the union which had the largest membership.

The Conference also stressed the need for the exercise of proper caution in referring cases for adjudication and re-affirmed its faith in the system of collective bargaining and joint consultative machinery. Now the fundamental conception of collective bargaining presupposes the existence of two sides, an employers' association and workers, represented by a union, which should create a regular channel for disputes. While it is eminently desirable that workers should have full use of this channel of communication, it is equally desirable that it should not be open to misuse. It is important too that the potential union leaders should have some training in industrial relations, should have outgrown the desire for personal power and the consequent resorting to such practices as demanding tithe from a worker whose wage claim he has succeeded in implementing and that he should be devoid of political bias. The conference stressed the need for consultative, labour management, works and production committees and resolved that conciliation should be undertaken only if every possible avenue of internal machinery for the settlement of a dispute had been explored, and that conciliation proceedings should be concluded within a prescribed time limit of 30 days from the date of commencement of proceedings. Further, the resolution adopted agreed that the Government should have full discretionary powers in the matter of referring a dispute to a tribunal and that, if there was any hindrance in the existing law to the exercise of this discretion, the relevant provisions of the Industrial Dispute Act should be suitably amended.

The building up of an enlightened and co-operative labour force in an emergent and industrially immature society is a long and arduous task, demanding a complete revision of ideas on the part of labour, trade unions and management. Much can be done in the initial stages by labour officers and labour exchanges seeing that the right man goes to the right job, and not because his views are the right political colour, or that by accident of birth he is of the right creed, caste or province; by the provision of training facilities for the misfits or the unskilled. The services of efficient personnel officers are essential for talking over petty grievances, administering welfare, educational and social services, and for the encouragement of effective, moderate and responsible trade unions.

CURRENT COIN

Sugar Manufacture.—In his statement to shareholders at the annual general meeting of the Decan Sugar and Abkhari Co. Ltd., published on another page of this issue of *Capital* the Chairman, Mr. G. N. Noel-Tod gives some important reasons for the improvement in the company's fortunes in the last two years or so. He points out, firstly, that the factories had received as much cane as they could crush; more was grown because the cane price was maintained at a level that was relatively high compared with other crops. Secondly, there has been a sustained improvement in the quality of the cane offered to the Pugalur factory as a result of co-operation between the company, the Government and growers to eliminate disease. Thirdly, the selling price of sugar has been reasonably well maintained, so that a fair return has been obtained on Pugalur sugar; transport of sugar from Samalkot however has suffered from railway difficulties. The chairman goes on to give an encouraging account of prospects for the current year. He says that the Pugalur factory finished on 15th October a successful special season during which 59,320 tons of cane were crushed, giving a recovery of 9.7 per cent. This was a very satisfactory figure. The main season started on 25th November, and the factory seems assured of a crush of 135,000 tons of cane, compared with 130,400 tons last year. Regarding

Samalkot, expectations are that 90,000 tons will be crushed, as against 86,000 tons last year. Quality is also expected to be better. Plans are being made to increase the company's output as consumption is expected to rise under the second five year plan. At Pugalur, it is intended to increase the crushing capacity from 800 tons to 1,000 tons by installing additional plant at a cost of Rs. 5 or 6 lakhs. A feature is that growers in the area will co-operate in the expansion plan by placing deposits with the company which will bear interest and will be repayable from future profits. Expansion of the Samalkot factory is also being considered, and definite recommendations are expected in a few months' time; new capital might be raised for this scheme.

Bihar's Transport Problems.—Prominence was given to the need for greater co-operation between road, rail, river and air transport in Bihar by Mr. Shanti Prasad Jain in his address from the chair at the 28th annual session of the Bihar Chamber of Commerce. Mr. Jain stressed the fact that Bihar, in spite of its immense mineral and forest resources, had the lowest income per capita, in India, and he welcomed the State Government's intention to speed up development during the second plan period. The problem of the establishment and maintenance of large and medium-scale industries however, as Mr. Jain pointed out, "is intimately bound up with the availability of railway transport and a helpful freight structure." Mr. Jain hoped that the Freight Structure Enquiry Committee set up by the Railway Board would consider a readjustment of freight rates on the basis of revised goods classification and an examination of the uneven telescopic rates *vis-à-vis* short- and long-distance traffic. "As compared to other countries," said Mr. Jain, "especially the U.S.A., it will be found that our gradation is much steeper for medium haulage." Equally urgent problems, he added, are the provision of railway facilities in new areas and the necessity for an over-all efficiency in the supply of wagons. "Facilities are not adequately available for the direct booking of goods from South to North Bihar," he said, "and indents remain pending even for six months." Considerable difficulty too has been experienced regarding the movement of goods across the Ganges and trade and industry have suffered. Mr. Jain also strongly advocated the creation of an independent department to deal with the co-ordination of rail, road, river and air transport. He pointed out that while rail, road and river transport are dealt with by the Public Works Department, road transport is the responsibility of the Political Department and river transport that of the Labour Department. "I am constrained to say," he added, "that lack of co-ordination and the secondary importance that is being attached to these subjects by the departments which deal with them have often adversely affected the interests of the State."

Crop Outlook for Current Year.—Dr. Punjab Rao, Deshmukh's statement in the Lok Sabha that food production during the current agricultural year (1955-56) is unlikely to "show any significant variation from the previous season's output" is supported by the Union Food Ministry's first rice acreage estimate. As the experience of previous years has shown, the first estimate stands up to the final scrutiny to the extent of 90 per cent. The first estimate in question places rice acreage in 1955-56 at 5.4 per cent higher, at 65,916,000 as against the previous year's first adjusted estimate of 62,542,000 acres. Besides, as the Union Food Ministry's Press note states, the increase has occurred mainly in winter crops in most of the States, particularly in West Bengal, Bihar, U.P. and Assam. The floods have no doubt done extensive damage in West Bengal, Assam, Delhi, Uttar Pradesh, Bihar, P.E.P.S.U. and Orissa, and the estimate of the total loss, as calculated by the States, amounts to Rs. 81 crores. But the Central Minister for Agriculture has cautioned that the Union Government should not accept the States' figures as final and a thorough-going enquiry is now being held to assess the losses accurately. Dr. Deshmukh's statement should therefore allay fears in the country of a possible food shortage in the coming year and as was pointed out in the last issue of *Capital*, anticipatory hoarding because of the flood damage has partly been responsible for the current upward trend in the food articles item in the wholesale price index. The Government might profitably take steps to increase supply by releasing from its stocks in such areas where this rising tendency is particularly noticed, just as it supports farm prices against depressions in pockets under heavy supply pressure. The price support policy, to be of real value to the economy, should be flexible in both directions according to the needs of circumstances.

Employment in October.—The fresh registrations at employment exchanges declined in October 1955 to 121,978 from 144,888 in the previous month.

There were 695,239 applicants on the live registers in spite of this fall in registrations. The number of applicants on the live registers of employment exchanges at the end of the previous month was 693,775. The employment situation as from the statistics of vacancies received during this month could be termed as satisfactory. The employment exchanges received 28,289 vacancies as compared with 23,343 during the previous month; 13,461 registrants had been placed in employment during October as against 13,386 during the previous month. Employment statistics further indicate that there had been some opportunities of employment in the private sector where placement figures increased by 800 over the figures for the previous month. Under the training schemes of the Ministry of Labour, 11,578 persons, including 596 women and 2,132 displaced persons, were receiving training at different training institutes-centres, at the end of the month. There were 99 instructor-trainees at the Central Training Institute, Koni-Bilaspur, and 21 women instructor-trainees at the Industrial Training Institute for Women, New Delhi. Under the apprenticeship training scheme for displaced persons, 888 apprentice-trainees were undergoing practical training in production work at industrial undertakings in Uttar Pradesh and West Bengal.

Lancashire Shows its Paces.—Although the Lancashire cotton industry is looking to the British Government to find a solution for its difficulties, it is encouraging to see that it is not losing sight of the need to keep up-to-date with its products. It recently staged a National Fabric Fair at the Royal Albert Hall, London, where nearly one hundred new cotton dress fabrics from 38 leading British manufacturers were displayed on two fabric walls arranged by the Cotton Board Colour Design and Style Centre. The fabrics had been chosen to illustrate cotton's range in the dress field and to draw particular attention to the new design themes, finishes and fabric types likely to be of importance in next summer's cotton fashion. Mills out here may be interested in a brief review of the Fair as a guide in framing their own manufacturing policies. Though not all of the cloths had been chosen from the ranges of firms exhibiting independently in the Fair, most of the major design trends could be studied in some detail in the individual displays of the 56 British cotton houses participating. Here are

NOTICE

With the weekly issue of *CAPITAL* dated 22nd December, it is proposed to issue a 123-page supplement, the *Annual Review of Commerce, Trade and Industry*. Besides essays on specific industries, e.g. jute, coal, tea, etc., the Review will contain exclusive articles by, among others, the Oxford economist Dr. T. Balogh on education and technical progress in India; Dr. B. R. Shenoy on finance for the second plan; Prof. C. N. Vakil on the Plan-frame; Dr. Sudhir Sen on Indian Shipping. Mr. S. K. Dey on small-scale enterprise and Mr. N. Das on the future of industrial enterprise. The Review will be distributed free to registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, *CAPITAL*, at 5, Mission Row, Calcutta 1. Orders for extra copies should be placed early.

some of the ideas which were on offer: new weaves as well as prints; prints on new surfaced cottons; positive-negative, large and small, stripe and check companion fabrics; glitter weaves and glitter prints; the print with black; new lingerie cottons. Small-scale brocade type motifs in one or two colours are typical of the return to woven patterns in dress cottons. Other woven cottons included larger size checked ginghams, crease-resistant cotton shantung and uncrushable cotton tweed; a fine satin check on white cotton and novelty checked voiles; a satin shadow check, a peasant-style woven stripe and a new lightweight ribbed cotton with a woven-in tuck. Denims have a new look, too, with butcher-stripes and tiny suiting-style checks. Faille satin, self-colour dobby weaves, foulards and pique stripes extend the range of novelty grounds for cotton prints. An increasing trend was evident for companion prints and weaves to add variety to making-up, being specially styled for separates.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge with thanks, the receipt of the following donations:—

Rs. 50 each
A. W. Figgis & Co. Ltd., Anonymous.
Rs. 10 each
Anonymous, A.D.B., P.F.C., J. B. Atherton
Total Rs. 140
Previously acknowledged Rs. 3,323-10-0.
Grand Total Rs. 3,463-10-0.

Without Prejudice

PRESS COMMENT ON LAW SUITS

DANGERS OF LIBEL AND
CONTEMPT OF COURT

(FROM OUR LEGAL CORRESPONDENT)

At the elbow of every newspaper editor throughout his career are perched two twin devils. They are Libel, and Contempt of Court; and it is with the two latest expositions of the law in India on the latter subject that this article and its successor will deal. Contempt may be a very serious matter indeed. Some years ago one commented in this column on the case of a famous London daily whose eminent editor slipped up so astonishingly badly in observations, while a criminal trial was proceeding, on the past of the alleged criminal as, in the opinion of the Lord Chief Justice and his two colleagues, to make it almost impossible for the man to have a fair trial before any jury. The editor's motives were above reproach. They were to serve the public weal. Moreover every word in the article was true and could be proved up to the hilt. But that did not help the editor in the least. Nor the newspaper owners. One forgets what the fine was. It ran into thousands of pounds. And the editor was serving a sentence of six months in jail for contempt when the man whose past he had exposed truthfully—Haigh, the habitual murderer—was hanged.

The highest of motives is no answer to contempt. Nor, in pending proceedings, is the complete truth of the allegations made. And, what is more astonishing, in the light of the two cases which we are to consider, it seems that it is no defence even if the editor was completely unaware that any proceedings were pending at all. Editors, owners, printers and publishers may all be liable, and probably the manager. Moreover, year by year the law becomes stricter, as it does in regard to the other twin devil, Libel. If Mr. Pott, that doughty editor of the *Eastonswill Gazette*, lived today and his opposite number still edited the *Eastonswill Independent* there could be no references to "that disgraceful and dastardly journal, the *Independent*" and "that false and scurrilous print, the *Gazette*". Both editors would no longer be editing owing to their seclusion in jail for criminal libel. Editorial freedom lasted much longer than Dickens's day. Henri Labouchère in *Truth* and, even later, Horatio Bottomley in *John Bull* and

Lord Alfred Douglas in *Plain English* said things and got away with it that would horrify the editor of today. And, if you consult the old files of *Capital*, you will find that that great editor, Pat Lovett, in the *Ditcher's Diary*, scarified men and institutions in terms of such candour as might, if published at this present, mean jail or heavy damages. But they were truthful, honest, mainly criticisms made without malice. Those days are gone for good. Personally, one regrets the fact. *Toujours la politesse* can be overdone. True it is that courtesy costs nothing but it may be worth precisely what you pay for it.

And that brings us back to contempt and to the case of an unfortunate, if temporarily careless, editor, to wit the editor of a daily newspaper styled *Jagran* and certain publications allowed by him therein of 7th and 12th November, 1952, only just reported, which publications were alleged to amount to contempt of court as they were said to create an atmosphere of prejudice against one of the parties with regard to a criminal case pending before a city magistrate.

The criminal case was brought by one Mr. Nanuram against a Mr. Shukla, said to be a prominent political and labour leader in the city of Indore. We are not here concerned with the allegations in this case but only in the interesting exposition of the principles of the law of contempt by newspapers as analysed by Sambasiva J. later. The newspaper *Jagran*, in the same issue of 7th November, 1952, contained a letter from Mr. Nanuram to the editor having bearing on the pending criminal case and also on page 1 of the issue a report of the proceedings in the case. Mr. Nanuram's letter published on page 4 of the daily was surmounted by headlines.

There were several interesting defences to the subsequent charge of contempt. It was asserted that the editor "considered it his duty to publish every information in regard to the conduct and character of Mr. Shukla for the information of the public at large", as Mr. Shukla was a political and labour leader in Indore city. It was also claimed that at the time of giving the letter from Mr. Nanuram for publication in the issue of 7th November, the editor was not aware that any proceedings were pending in any court and that the other two publications were a fair and accurate report of the proceedings in court without any undue comment. Further, it was asserted

that the opposite party as editor, printer and publisher of a newspaper claimed it to be the right and duty of the Press to bring to the notice of the public "the cases in which political leaders are involved". These forthright defences were prefaced with "an unqualified apology for any contempt that may have been inadvertently committed".

Sambasiva J. rejected the editor's reply and in doing so made one general observation which is well worth noting by newspaper managements: "It is high time that the Press should understand its responsibilities and limitations while authorising publications in connection with matter pertaining to pending litigation and it certainly takes great risk in doing so." Yes, an enormous risk sometimes. Think of the stupendous damages Messrs. Maclean and Burgess would recover if they suddenly returned and proved that they were not homosexual drunken traitors but engaged in counter-espionage. Not much risk of that, maybe. But what about Mrs. Donald Maclean? All she seems to have done is, with her children, to rejoin her lawlul husband. For that she has been nounced without, as it seems, an atom of proof as a liar and as a traitress herself. She might, and even may reasonably be expected to, return at any time, to live in affluence on damages collected from newspapers all over two continents.

All this, however, relates to Libel, and not Contempt. Nevertheless the same slogan applies to both. "When in doubt, do not comment on pending cases, criminal or civil." And be careful, especially about headlines. A contributor or reporter may submit a piece quite innocuous in itself, leaving it to the news editor to compile the headline which may constitute the contempt or libel. It was a "scare headline", to use his lordship's expression, which was largely responsible for landing the editor of *Jagran* in a substantial fine and costs with jail in default of payment, for contempt of court, and the consequent ridicule and loss of prestige to the newspaper. This is the principle laid down by the Calcutta High Court some 20 years ago: "Even if there is nothing misleading in a headline or headlines, yet, if taken with other headlines in an article commenting on the trial of a case, they, in fact, amount to criticism of the prosecution case under the guise of a summary of the day's proceedings, there is enough justification for action to be taken by the court for contempt." Similarly, presumably, as regards criticism of the defence case.

* * * *

Nor will it be of any avail—except perhaps in mitigation of penalty involving a fine instead of imprisonment—for an editor to say "I didn't know", however truthfully. "The publication," said his lordship, "of Nanuram's letter to the editor and the proceedings of the criminal case by Nanuram against Mr. Shukla are published in the same issue of 7th November, 1952, and it is futile to assert that while directing publication of the letter the editor was unaware of the matter printed on page 1 regarding the case against the petitioner. An editor is responsible for the entire issue and the contempt consisted in the publication of prejudicial matter to injure a pending case.....An editor cannot be allowed to shirk his responsibility by a plea of this sort."

The fact is that both in regard to contempt and libel an editor of a newspaper in India is in no better position than an ordinary member of the public. "The method employed in this case," proceeded Sambasiva J., "by the opponent (the editor) of making publications having bearing on the case is highly improper and it cannot be denied that it was calculated to prejudice the mind of the public at large against the petitioner. The (editor) does not make a secret of it and he comes out with an assertion that it is his duty to bring to the notice of the public the conduct and character of those who are engaged in political work.....The (editor), as it appears from his attitude in his reply, is labouring under the fallacy that it is his right and duty to publish matter having a bearing on the conduct and character of a party in a pending case. He claims that he can do this in the public interest." Now we may—without meaning a word of it—prattle about the liberty of the Press as if we should have no rights, civil, political or religious, without it; we may—with our tongues in our cheeks—hail it as the strong arm of justice, the bright sunbeam of truth, the chosen guardian of freedom, whereas in truth a newspaper is simply a printed document published periodically with one sole object, namely, the making of financial profits for its owners, and the boasted liberty of the Press is merely another name for the liberty of the individual citizen, that and nothing more.

The Privy Council summed it up neatly 30 years ago:

"Their lordships regret to find on the one side in this case the fallacy that some kind of privilege attaches to the profession of the Press as distinguished from the members of the public. The freedom of the journalist is an ordinary part of the freedom of the subject and to whatever length the subject in general may go, so also may the journalist, but, apart from the statute law, his privilege is no other and no higher. The responsibilities which attach to his power in the dissemination of printed matter may, and in the case of a conscientious journalist do, make him more careful. But the range of his assertions, his criticisms or his comments is as wide as, and no wider than, that of any other subject. No privilege attaches to his position."

A DITCHER'S DIARY

I am sure I shall be expressing the sentiments of lovers of peace the world over when I say how regrettable it is that the Russian leaders' tour of South East Asia should have degenerated into an undignified propaganda campaign. Why such a heaven-sent opportunity for convincing the world of the Soviet Union's avowed intention to relax international tension, should have been so wantonly thrown away is a mystery to me. When the holiday mood has passed little more than a ragged collection of ruffled diplomatic feathers, a bunch of impossible promises, and the memory of an astonishing display of bad manners promises to remain. Those who were hoping that the visit would pave the way to greater international understanding are facing bitter disappointment. The cold war is now a few degrees hotter and it is no consolation that this time the Russians cannot escape the blame. It may be that the proposed trip to the United Kingdom will be one of the many casualties of this Asian tour; and that is a pity because it could have made an even greater contribution to world peace. But as Sir Winston Churchill has suggested, Britain cannot allow her friends to be abused from her public platforms. It would be a pity if the Russian leaders were to be confined to their own country in future because they have not yet learned that it is the duty of a guest to consider the feelings of his host. The words of a succession of British Foreign Office spokesmen seem hardly adequate to describe some of the allegations which have been made against that country. Perhaps the one which blamed Britain for the German attack on Russia was the bitterest of all. Sir Winston must have recalled somewhat wryly his swift decision to proclaim Russia an ally when she was being styled a "cobelligerent". But to those with the ability and inclination to read there are enough history books already written which will put such matters right. Those who do not possess these attributes will have to rely on their own good sense to tell them what can and what cannot be accepted as the truth. For the sake of world peace it is to be hoped that this will suffice. India especially may have reason to regret the turn which this visit has taken if only because it has so conveniently given Portugal the opportunity of turning Goa into an issue in the cold war. If this should happen, Mr. Nehru's policy of sound commonsense may soon count for little; the world has the example of Formosa to show what can happen to a just cause when it becomes an issue of international power politics.

I have not read Mr. H. A. Davies's *Outline of the History of the World*, nor yet seen a copy of it; the title is so close to that of H. G. Wells's great work that I have a suspicion that I may have got it wrong. But all this is beside the point. The really important thing is that a historical work by Mr. Davies, published by the Oxford University Press and claiming to provide an outline of the world's history has, according to a P.T.I. report, run into foul weather in Karachi. That city's Chief Commissioner has declared forfeited "all copies wherever found" of this book on the grounds that it "contains a chapter on the rise and spread of Mohammedan power which is deliberately and maliciously intended to outrage the religious feelings of the Muslims". If the book is really guilty of all that, I must say it has earned the treatment it has received. But I notice that the publishers are well known for their services to the world of letters and have always been credited with a high sense of responsibility. About Mr. Davies, the general impression is that he is a sound scholar. The question is whether such a book can be guilty of so malicious a distortion of facts; probably not, although I do not expect that

Calcutta's cool, grey wraith of a winter is not only a harbinger of smoke, colds, and horse-racing. It is also the beginning of the annual musical concerts. Tuesday's performance at the New Empire cinema was the first of six in a series which is now entering its thirty-second year. It was indeed a creditable birthday celebration. Some feeling of satisfaction is excusable because on this occasion none of the glory needed to be shared with outside celebrities. Mr. Bernard Jacob proved himself an accomplished conductor. He guided his orchestra with skill through an excellent programme of Weber, Bruch and Beethoven. Mr. Stanley Gomes, the soloist, excelled himself with Bruch's concerto in A minor, opus 26, for violin and

orchestra, which, if it does not give the player wide scope for showmanship, compensates for lack of ostentation by the richness and beauty of its melody. Mr. Gomes made the most of the few brilliant arpeggios, double-stopping, clever cross-stringing bowing, and the occasional thrilling harmonic. Both Mr. Jacob and Mr. Gomes, I believe, received their early musical training at the Calcutta School of Music under Dr. Sandre. Perhaps it was the family spirit of this institution, which, shared by the rest of the players, was responsible for the excellent team work. This was never more evident than in Beethoven's Symphony No. 7 in A major, opus 92. Even Beethoven—"brainowner"—a modest designation of his own choosing, might in his grudging way, have smiled approval. As a prelude to the five remaining concerts, this performance was a stimulating *apertif*. I understand that this is the last season in which Señor Casanovas, Calcutta's well-known leader, worker and exponent of music, will be appearing. Calcutta owes Señor Casanovas a great debt and he leaves behind him a heavy responsibility. The latter seems to be in capable hands, and the former will be discharged in full by more concerts of the quality of that given on 6th December. I learn that future fare will include Benjamin Britten, Peter Pears and Raffi Petrossian.

I notice that West Bengal has decided to commemorate some of India's celebrities through the medium of oils and canvas. Life-size portraits of Mahatma Gandhi, Rabindranath Tagore, Deshbandhu Chittaranjan Das and Netaji Subhas Bose will take primary place on the walls of the Assembly by the end of the financial year, while the State coffers are reduced by Rs. 20,000. I understand that within the next four years, twenty-eight more portraits will be hung alongside them at an additional cost of Rs. 40,000. Presumably the remaining twenty-eight will not be given equality of treatment with the leading subjects, unless of course the application of artistic talent is subject to increasing marginal returns. But I hardly think that is likely. The situation reminds me of the story about the picture gallery in Edinburgh's Holyrood Palace, told by H. V. Morton in his book *In Search of Scotland*. There a startling sight meets the visitor's eyes. One hundred and ten portraits of Scottish monarchs, some real, some fictitious, disfigure the historic walls. So disreputable are they, that Sir Walter Scott himself said of their subjects "If they ever flourished at all, they lived several hundred years before the invention of painting in oil colours." Before historical evidence proved him wrong, Morton concluded that the portraits must have been the result of peevishness on the part of Hawley's dragoons for having been routed by Prince Charlie's Highlanders at Falkirk. Delving into the archives, however, he discovered that the culprit was one James de Witt. Some force of circumstance had obliged this unfortunate Dutchman, in 1684, to conclude a contract with Hugh Wallace, Keeper of His Majesty's Cash, for the painting and delivery within two years, of portraits of all the kings who ever reigned in Scotland, actual or mythical, "in large royal posture". This Henry Ford in oils undertook the job for a consideration of £120 a year. He had to provide his own oils and canvas and inscribe each portrait with the name of the subject. Not for one moment do I consider that such a fate could befall India's heroes. But the efforts of poor de Witt bear witness to what can happen when the muse is put on a production belt.

Company Meeting

THE DECCAN SUGAR & ABKHARI CO., LTD.

CHAIRMAN MR. G. N. NOEL-TOD'S ADDRESS

Chairman's Statement to Shareholders at the 59th Annual General Meeting of the Company held on Wednesday, the 30th of November, 1955.

I regret that it was not possible to call this meeting earlier, owing to pressure of work having made it impossible to complete the accounts by early October as had been hoped and was in fact forecast by the then Chairman in his speech last year. However, a certain measure of reorganisation has been carried out and is still in progress so that I am confident it will not be necessary for me to repeat this apology next year. In any case, I trust that the declaration of the interim dividend has served to mitigate any inconvenience felt by shareholders.

The financial results of the Company's year under review are fully disclosed in the accounts and the Directors' Report and I do not propose to elaborate on them beyond to mention that your Directors have given very special attention to the question of the quantum of the Company's profits for the year that should be placed to reserve and distributed as dividend. Against the background of the need to repay the outstanding loan of Rs. 12 lacs to the Industrial Finance Corporation, the annual repayment instalments of which commence in December 1956 and against the background of the need for the Company to expand its manufacturing capacity to which reference was made in the Directors' Report and on which I will have something to say later in this speech, your Board had no hesitation in following a reasonably conservative dividend policy in restricting the amount of dividend recommended to the maximum that is permitted under our agreement with the Industrial Finance Corporation of India. We have to look not only to the immediate interests of shareholders but to their long term interests which lie in husbanding the resources of the Company to provide a buffer against a repetition of the lean years through which we have recently passed. An increase in the sum to the credit of general reserve and the creation of a taxation equalisation reserve, both of which have, I think, been adequately commented on in the accounts and report, are practical steps to put your Company's finances in a secure position from which the future may be faced with confidence.

Change in Fortunes

You will of course have observed a remarkable change in the fortunes of your Company compared with two years ago, and I would like to comment on the principal reasons for this change. While I would like to give the very fullest credit to all officers and staff of the Company from my colleagues on the Board downwards, we must not blind ourselves to the fact that these efforts by themselves could not have achieved the results now before you. Three other important factors contributing to the present state of affairs are firstly, that the price of sugarcane has been maintained at a level which is high in relation to that of other crops, the prices of which have generally declined and therefore, there has been great incentive to growers to produce sugarcane, and the factories have received as much as they can possibly crush; secondly, that there has been a sustained improvement in the quality of cane offered to our Pugalur factory, resulting from the past operations of the Company in co-operation with Government and the growers themselves to eradicate disease in the cane; I hope and believe that we shall continue to have the co-operation of growers in the continued

prosecution of pest control in cane in which respect our efforts must never be relaxed, because during this last year the growers have been able to see for themselves that good quality cane gives them a better return by way of the substantial bonus they receive under the SISMA formula; thirdly, the selling price of sugar has been reasonably well maintained so as to enable the Company to obtain a fair return on its sales of Pugalur sugar though the situation as regards Samalkot sugar has not been so encouraging because of the difficulty amounting to almost impossibility of moving any substantial quantities of sugar from Samalkot by rail.

I will now comment on the prospects for the current year. The Pugalur factory finished on 15th October a successful special season during which 59,320 tons of cane were crushed, giving a recovery of 9.7%. This was a very satisfactory figure. The main season started on 25th November and the factory appears assured of a crush of 1,35,000 tons of cane which is to be compared with last year's main season crush of 1,30,400 tons. I cannot be sure that we shall obtain the same excellent recovery figure of 10.5% as was secured last main season but, as I have already mentioned, the payment of a bonus based on the SISMA formula in respect of the last main season amounting to as much as nearly 10% lacs has done much to make the growers quality conscious.

In Samalkot

In Samalkot the season started on the 10th of this month and was inaugurated by the Hon'ble Mr. Gopala Reddy, Chief Minister of Andhra State, we expect to crush 90,000 tons compared with 86,000 tons last year. There are indications that the quality will also be slightly better, largely because measures have now been put in hand to improve irrigation in the upland area by the sinking of wells, thanks in a large measure to the strenuous efforts of the Sri Polunadu Tube Wells Irrigation Co-operative Society Ltd. and its Chairman, Mr. Thota Ramaswamy. There still however, remains much to be done in this direction before we can be assured that the large quantities of upland cane will be adequately protected by lift irrigation against the depressing effects of drought during the hot season.

I would not like to close this review without making a special reference to the services of our sugarcane expert, Dr. R. D. Rege, which we still continue to enjoy. It is under his guidance that continual propaganda is constantly made at both factories to make growers quality conscious and practical measures implemented.

As regards staff and labour, salary cuts which were unfortunately necessary to tide the Company over its difficult period have been restored in full, and with retrospective effect. The technical and managerial staff have, throughout the year under review and during this present year, worked loyally and efficiently in the Company's interest. As regards labour, we have had our ups and downs but I am glad to say that at Pugalur there appears to be a growing awareness on the part of Union Leaders that their interests are linked with those of the Company. After some months of agitation for various additional benefits, it has been possible, with the aid of the Government Conciliation Officer, to reach an amicable settlement without resort to adjudication which inevitably takes up much time, adds to the working expense of the Company, and what-

ever the decision reached, rarely succeeds in improving relations between labour and management, in fact usually the reverse.

The Future

And now with your permission, I propose to take a quick look into the crystal bowl and endeavour to give you some appreciation of the future that lies before us. At the moment, the sugar production of Madras State and Travancore-Cochin is less than the demand in that area and the shortfall is met by stocks of imported sugar and also to some extent by consignments of sugar from Mysore and Andhra and North India. This last point is of particular significance since it reveals that the consumption of sugar elsewhere in India is still inadequate to absorb production. It is true that consumption is increasing and a very large increase is expected during the currency of the Second Five Year Plan and it is on this basis that three new sugar factories are in various stages moving forward to come into production in Madras State. Two of these are so placed as to compete in the market with our Pugalur factory, namely Thiru Ayroor Sugars Ltd. near Tanjore and Cauvery Sugars & Chemicals Ltd. near Trichinopoly. This latter company is being sponsored by members of the Parry Group and to protect the interests of this Company in that area, your Directors have thought fit to enter into negotiations with Cauvery Sugars & Chemicals for the establishment of a selling agreement with a view to eliminating cut throat competition and to ensure that so far as it is possible under market conditions from time to time, a fair price is realised.

This Company, along with all others in the private sector, has its part to play in the Second Five Year Plan and has an obligation to develop its productive capacity to the full extent that its resources permit. Over the last year, your Directors have been giving close consideration to ways and means to achieve this objective and have thought it right and proper that the growers who stand to benefit from an increase in the productive capacity of either factory, should take their share in raising the additional resources required so that the full burden thereof may not fall upon the Company and the shareholders. At Pugalur, the plan is to increase the crushing capacity from 800 tons to 1,000 tons and this can be achieved by the installation of additional plant at a cost of between Rs. 5 and 6 lacs. I am glad to say that the growers in this area have indicated that they are willing to co-operate by placing deposits with the Company which will bear interest and will be repayable from future profits. With the aid of these deposits and from the present cash resources of the Company, together with such additional reserves as it may be possible to build up over the next two years, your Directors expect to be able to put through this expansion without the issue of further capital and without having to place so much to reserve as to jeopardise the rate of dividend.

Exploring Possibilities

At Samalkot, the position is rather different. The factory plant is neither as new nor as efficient as that of Pugalur and the production is higher sales, by reason of the restrictions on sugar transport to which I have already referred, and which on the west coast, the sugar being shipped to ports nearer naturally lower the net return. The combined effect of the Samalkot factory is able to operate at only a very small profit. This is a situation which alternatives before your Board as to whether to continue. To dispose of Samalkot and employ the capital recouped in development elsewhere or to increase the capacity and efficiency of the plant so that it can operate on a profitable basis. Your Board is now engaged in exploring the possibilities of implementation in the long run and because it fits in with the obligation of this country's economy to which I have already made reference. Here again, the co-operation of the growers is being sought and while no definite agreement has yet been reached with them, a fair prospect that within the next few months your Board will be in a position to make definite recommendations. These recommendations will probably involve the raising of a certain amount of new capital, the opportunity to subscribe to which will, of course, be given to existing shareholders and at that in the past, shareholders have paid a high premium for their shares which present market values do not fully justify. At the same time, the Board will endeavour to restrict the quantum of new capital on the new and old capital and the balance resources may be sought from the growers and possibly by means of a further small loan or by such other means as may commend themselves to the Board. The expansion contemplated for Samalkot will bring the factory's crushing capacity from its present figure of 700 tons to 1,000 tons and will effect the necessary improvement in efficiency that is sought, and is estimated to cost in all Rs. 25 lacs. I may say that in the past, the profitability of this scheme, allowance has not been made for an improvement in rain-net price obtainable for sugar but if such improvement does come about, then the benefit to the Company should be increased. It is further to be borne in mind that, if temporarily there is production of sugar in excess of demand, and the price of sugar falls, unless the efficiency of the Samalkot factory is improved as contemplated, that factory will undoubtedly be operating at a loss, whereas a modern and efficient plant it will be better placed to compete.

I trust I have succeeded in giving you a fair picture of the present position of your Company and that, subject to no adverse turn in the general economic situation of the country with particular reference to the sugar industry, these prospects are bright. To take full advantage of them some very hard work will be required of all concerned during the next two years and to support that work the resources of the Company must be husbanded. Before moving the adoption of the accounts I shall be glad to answer to the best of my ability any queries which any shareholders may have to make.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET SLACK SEASON ENDS

Wednesday, 7th December

THERE is now little doubt that the slack season has ended and that seasonal busy conditions are well under way. Demand for funds is improving daily. Sugar-crushing has begun and the industry's requirements of funds have increased. This has, however, been partly offset by the liquidation of stocks which has released funds on this account. More purchases of raw jute are being made and the industry's needs are increasing. Call for accommodation against raw cotton, which has been bought for spinning, is better. Money remains very tight in the interbank market, and there are borrowers over at the unchanged call rate of 3½ percent.

The slack conditions in the market for export documents persist and this, coupled with the fact that remittance is still in fair demand, is chiefly responsible for the continuing tight conditions in the interbank market. Sterling remains strong and the dollar rate is unchanged at Rs. 47½.

Silver ruled easier on lack of demand at the higher levels. The price declined to Rs. 171-2. The forward price was quoted at Rs. 169-14. The price in London declined to 77½d, as did the price in New York to 90.16 cents.

Gold was quiet in sympathy with silver. The price was lower at Rs. 95-2. The sovereign declined to Rs. 61-15.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 6th December, 1955, totalled Rs. 1,15,00,000. The average rate of acceptance was unchanged at Rs. 2.8 percent per annum. Tenders for Rs. 99.6 percent were accepted. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to Monday, 12th December, 1955. During the week ended 2nd December, 1955, Government of India Treasury Bills for Rs. 6,02,00,000 were sold in favour of the Reserve Bank of India.

The statement of the position of scheduled banks for the week ended 25th November, 1955, discloses Demand and Time liabilities at Rs. 619.36 crores (Rs. 13.49 crores on account of borrowings from banks) and Rs. 424.27 crores (Rs. 6.91 crores) compared with Rs. 612.75 crores (Rs. 12.99 crores) and Rs. 423.20 crores (Rs. 6.76 crores), respectively in the previous week. Cash has declined by Rs. 2.25 crores to aggregate Rs. 35.27 crores, while balances with the Reserve Bank have advanced by Rs. 6.63 crores to stand at Rs. 61.12 crores. There is a rise of Rs. 1.30 crores in investments to Rs. 394.76 crores. Advances and bills discounted at Rs. 594.02 crores reveal a drop of Rs. 4.37 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 9.2 percent and 56.9 percent against 9.9 percent and 57.3 percent.

The return of the State Bank of India for the week ended 25th November, 1955, shows a rise of Rs. 2.22 crores in total deposits to Rs. 221.31 crores. Investments in Government Securities are up by Rs. 1.23 crores to Rs. 109.29 crores, while other authorised investments are down by Rs. 50 lakhs to Rs. 9.28 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.46 crores to aggregate Rs. 93.08 crores. Cash and balances are, in consequence, shown at Rs. 28.00 crores or Rs. 3.18 crores higher.

Increases of Rs. 4.31 crores and Rs. 11.97 crores in the total note issue and notes in circulation to Rs. 1,349.71 crores and Rs. 1,355.72 crores were important features of the return of the Reserve Bank of India for the week ended 2nd December, 1955. The currency expansion was covered by raising rupee securities by Rs. 4.97 crores to Rs. 553.58 crores. Notes held in the Banking Department were consequently 7.65 crores lower at Rs. 13.99 crores. Deposits showed an all-round decline. Deposits of the Government of India and other Government accounts fell by Rs. 3.77 crores and Rs. 2.27 crores to stand at Rs. 51.36 crores and Rs. 10.16 crores. Balances of commercial banks at Rs. 62.37 crores showed a fall of Rs. 1.53 crores. Balances held abroad were Rs. 1.38 crores lower at Rs. 71.25 crores while investments rose by Rs. 38 lakhs to Rs. 50.43 crores. Other loans and advances increased from Rs. 22.67 crores to Rs. 25.39 crores, of which advances to scheduled banks against usage bills totalled Rs. 6.70 crores (Rs. 6.45 crores). These advances amounted to Rs. 203.23 crores since 1st January, 1955. Ways and means advances stood at Rs. 2 crores (Rs. 1.89 crores).

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of

the total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during October 1955, are as follows: Merchandise: Exports Rs. 34 lakhs; exports to Eastern Pakistan Rs. 28 lakhs, exports to Western Pakistan Rs. 4 lakhs, exports to other countries Rs. 2 lakhs. Merchandise: Re-exports Nil. Imports Rs. 218 lakhs; imports from Eastern Pakistan Rs. 191 lakhs, imports from Western Pakistan Rs. 10 lakhs, imports from other countries Rs. 17 lakhs. Total trade Rs. 252 lakhs. Trade in Treasure-Negligible. Balance of Trade: The total value of exports fell short of imports by Rs. 184 lakhs.

HE FLEW TO

LONDON

BY TWA

Says Ramnath Kapur, "Excellent personal service during my recent flight. Your highly efficient personnel were extremely courteous."

*Mr. Ramnath Kapur, Director, Ritz Ltd., Airlines Hotel Ltd.

TWA serves over 80 cities in four continents, carries more than 40 lakhs of passengers annually aboard the world's largest fleet of Constellations. These vast resources are

at your personal service when you fly TWA. Serving the people of India... the people of the world... TWA operates the world's finest airline.

Mr. Kapur, one of Bombay's leading hoteliers, knows good service. He enjoyed TWA's superlative service on his most recent visit to Europe.

*Mr. Kapur flew via Cairo, Rome, Geneva and Paris.

For full information, prompt helpful service, see your Travel Agent or nearby TWA Ticket Office.

Fly the finest... **FLY TWA**

**It's a BIG job....
running an oilfield**

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead". For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

Stocks and Shares

STOCK MARKET RULES STEADY

IRONS MOVE NARROWLY AFTER SHAKE-OUT

Wednesday Evening.

PRICES are steadier after last week's severe shake-out in speculative scrip. The sudden drop in Indian Irons was caused by heavy selling by one prominent speculator who took advantage of the market's precarious technical position. The price of Irons touched Rs. 39.14 at one stage, but the opposing forces now seem to be roughly equal and the quotation has moved between Rs. 40 and Rs. 41 for the last few days. Other scrip tended to weaken in sympathy with Irons but the undertone is now steady. A weak feature today has been Indian Cables on rumours that the Government had rejected the proposed bonus issue. Indian Coppers receded for the same reason. One strong feature has been Anglo Brother on rumours of an impending change in the ownership of the managing agency.

Most sections have suffered from the general contraction of business. Engineering and miscellaneous scrip have chiefly been maintained; coal shares remain well supported, while tea and jute shares are quiet. Government securities are dull. Although most of the bear activity seems to be over in the market for the time being, there is little sign that the trends of a fortnight ago are likely to be resumed in the near future. The 6 percent cumulative redeemable preference share issue of the Standard-Vacuum Refining Company is due to open on 12th December. The company appears already to be fully confident of raising its needs. Details of the week's trading follow.

The Government Securities market continued dull and the volume of business was on a restricted scale. Three percent Conversion Loan 1986 was unchanged at Rs. 80.6 while 3% Non-terminable Paper was taken at around Rs. 80.1. Short-dated loans were quiet and both 3% 1957 and 1958 were marked back one anna to Rs. 99.8 and Rs. 99.6 respectively. In medium-dated Loans 3% 1959-61 was quoted at Rs. 98 while 3% 1964 was offered at Rs. 94.10. In contrast 3% 1964 was marked up one anna to Rs. 94.9 due to the approach of the half-yearly interest payment date (15th December); 2½% 1961 continued in demand at Rs. 93.1 and 2½% 1962 National Plan issues 3½% 1961 was easier at Rs. 99.3 and 3½% 1964 had sellers at Rs. 99.9-5 while 3½% 1965 was traded at around Rs. 98.8. In long-dated loans 3% 1966-68 had sellers at the lower rate of Rs. 91.11 but 3% 1970-75 was better at Rs. 87.8. Provincial loans ruled quiet and very little business was reported. Three percent issues continued on offer but no changes in quotations were recorded.

Selected Preference shares continued to meet with keen enquiry, but sellers as usual were shy. A small lot of Alkali & Chemical was done at Rs. 106.8. Aluminium Corporation were placed at Rs. 104.8 and Associated Hotels at Rs. 65. Bharat Collieries were marked at Rs. 59.4. British India Limeries were marked at Rs. 137 and Calcutta Electric at Rs. 12.10. Dalmia Cement fully paid Preference were crossed at Rs. 99.5 and the 2nd Preference were done at Rs. 72.4 and a small lot of Indian Aluminium at Rs. 110 and Karanpura Collieries were crossed at Rs. 70.6 as were Kumardhubi Engineering at Rs. 109. National Tobacco came to hand at Rs. 80 and Richardson & Cruddas were crossed at Rs. 95. Rohtas Industries B were marked on four occasions at around Rs. 68.4. Business in jute Preference shares was on a small scale. A small lot of Howrah "A" was crossed at Rs. 118.12 Clive Mills 6% were done at Rs. 91.8. Reliance Jute were placed at Rs. 112 and Waverley at Rs. 57.

Business in bank shares was on a very small scale and the recent enquiry for Punjab National Bank appears to have petered out with the quotation slightly easier at Rs. 49. Allahabad Bank Contributory were crossed at the higher rate of Rs. 182.

In the railway section, a solitary transaction was reported in Futwah-Islampur which were crossed at Rs. 56.8.

In cotton shares, Bengal Nagpur were steady at Rs. 11.11 while Cawnpore Textiles were a shade easier at Rs. 10.8. Elgins recovered from Rs. 25.8 to Rs. 27.4 but reacted at the close to Rs. 26.14 while Kesoram were slightly lower at Rs. 14. New Victoria were in good demand and improved from Rs. 2 to Rs. 2.3. Dunbar reacted from Rs. 320 to Rs. 316 while Bowreah were better at Rs. 385. Swadeshi Cotton Ordinary were dealt in on several occasions at around Rs. 11.

Selected coal shares continued to meet with investment enquiry and the leader in the section namely Bengal improved sharply from Rs. 544 to Rs. 562. Burrakur recovered from Rs. 15.13 to Rs. 16.9 as did Central India from Rs. 8.1 to Rs. 8.8 and Western Bengal from Rs. 7.1 to Rs. 7.8. East Indian were higher at Rs. 33.12. Equitable improved sharply from Rs. 33.8 to Rs. 36 and Kataras Jheriah were steady at Rs. 64. New Manbhoom met with small enquiry and rose from Rs. 11.15 to Rs. 12.2. Hurriladih had buyers at Rs. 23.8. Karanpura Collieries were dealt in freely

at around Rs. 135. New Beerbhoom rose from Rs. 21.2 to Rs. 22.

Conditions in the jute section were more or less unchanged and prices showed little variation as will be seen from the following table:

	Opening 1-12-55	Closing 7-12-55
Rs.	Rs.	Rs.
Agarpara	13 8	13 8
Anglo-India	224	224
Birla	19	19 1
Delta	160	260
Howrah	29	29
Kamarhatti	190	186
Kinnison	222	216
Champdany	33 6	33 3
National	180	182
Reliance	13	12 14

Prices of electric supply shares moved narrowly and in the majority of cases, prices show no change since these notes were last written. Agra were quoted at Rs. 166. Bareilly came to hand at Rs. 15.10 as did Calcutta at Rs. 15. Cuttack were marked at Rs. 8.12 and Shahjahanpur at Rs. 8.4. Jubbulpore were unchanged at Rs. 16.8.

Sugar shares tended to sag. Balmampur were marked down from Rs. 10.8 to Rs. 10. Belsund from Rs. 12.4 to Rs. 12 and Carew from Rs. 13.4 to Rs. 12.8. Cawnpore, Champaran, Ramnugger and Durbhanga however, were maintained at Rs. 25.14, Rs. 35.4, Rs. 26 and Rs. 25.12. In contrast, United Provinces improved from Rs. 23.6 to Rs. 23.12. Purbapore were placed at Rs. 17.2 and New Savan were quoted at Rs. 6.4. Shree Krishna Gyanoday Old were quiet at Rs. 14.8.

In the engineering section, there was a sharp break in Indian Iron & Steel shares at the beginning of the period under review, with the price reacting from Rs. 43.4 to Rs. 39.14; tonight's closing quotation is slightly better at Rs. 40.8. Indian Standard Wagon were unchanged at Rs. 163 and Indian Steel & Wire fully-paid Ordinary were maintained at Rs. 90.8. Indian Galvanizing were sought after at the higher rate of Rs. 27.3 while Richardson & Cruddas reacted from Rs. 28 to Rs. 27. Jesop & Co. were supported at Rs. 64.3. Textile Machinery were fully steady at around Rs. 19.12. Braithwaites, on the other hand, were easier at Rs. 28.4.

In the miscellaneous section, Bengal Paper improved further to Rs. 120 while Titaghar Paper eased from Rs. 48 to Rs. 47.6 as did Orient Paper from Rs. 34.10 to Rs. 34.3. India Paper Pulp were shaded at Rs. 24.10, but Shree Gopal rose from Rs. 20.4 to Rs. 21. Assam Bengal Cement were required for at around Rs. 7.11 and Sone Valley were active at around Rs. 8.11. After a considerable period, business was reported in General Assurance Society shares at Rs. 25.12. New Asiatic Insurance were marked at Rs. 5.15 and Ruby General at Rs. 6. India General Navigation eased from Rs. 142 to Rs. 138 while India Steamship on rumours of better working met with good enquiry and recovered from Rs. 8 to Rs. 8.8 (after Rs. 8.12). Port Shipping were steady at Rs. 16.12. Alkali & Chemical at Rs. 24 and Angelo Brothers on interested buying improved from Rs. 22.10 to Rs. 27, but closed easier at Rs. 25.10. Bengal Flour were marked at Rs. 34 ex-dividend and Assam Saws reacted from Rs. 6.10 to Rs. 6.5. Bharat Airways were crossed at Rs. 4.8 and Britannia Biscuits met with investment enquiry at the higher rate of Rs. 16. British India Corporation were active at around Rs. 13.10 while Dunlop Rubber were subordinated at Rs. 35. Clive Row Investment were taken up at Rs. 12. Hindustan Motors receded from Rs. 9.13 to Rs. 8.14 and Indian Aluminium improved from Rs. 185 to Rs. 193. Two good features in this section were Indian Cables and National Insulated Cables, which on the publication of satisfactory reports improved from Rs. 34.4 to Rs. 38 and Rs. 21.8 to Rs. 24.4. Today however Indian Cables met with selling pressure and dropped sharply to Rs. 34.4. Calcutta Tramways were steady at Rs. 18.6 and Cherra Chhatrak Ropeway changed hands at Rs. 7.1. Duncan Brothers were quoted at Rs. 134 and F. & C. Osler were marked back from Rs. 18.14 to Rs. 17. Hoare Miller were placed at Rs. 7 and Humayan Properties at Rs. 13.4. Several transactions were reported in Imperial Tobacco at around Rs. 15 Indo-Burma Petroleum receded from Rs. 47 to Rs. 45. Jardine Henderson were unchanged at Rs. 112 while National Tobacco were easier at Rs. 12.2. Martin Burn were shaded at Rs. 28.8 and after a considerable period, business was reported in Northern India Oil at Rs. 2.12. Rallis India were marked at Rs. 37.4 and Rohtas Industries were steady at Rs. 25.4. Shaw Wallace came to hand at Rs. 15.12 and Smith Stanistreet at Rs. 20.

In the mining section, Burma Mines were well maintained at Rs. 2.9 while Chrestien Mica Industries receded from Rs. 20.8 to Rs. 19.14. Indian Copper after being marked down to Rs. 7 ex-dividend recovered at the close to Rs. 7.5. Metal Corporation were steady at Rs. 10.1 while Orissa Minerals and Western Stockholders Investment were unchanged at Rs. 24.10 and Re. 1. Karanpura Development came back from Rs. 22.8 to Rs. 21. Tea shares were again neglected and turnover was negligible. Of the Assam shares, Brooke Bond

declined further from Rs. 22.4 to Rs. 21.4 with sellers over and Jutibari and Methni were also easier at Rs. 29.4 and Rs. 83.4 respectively. Grob "A" met with some support and improved from Rs. 41.4 to Rs. 42. Dhunseri were marked at Rs. 27.12 and Bishnauth also had sellers at Rs. 41. Kotamallai were crossed at Rs. 40. In the Doars section Banarhat were slightly easier at Rs. 376, but Choonabhatti came to business at the higher rate of Rs. 518. Small lots of Gaikhat changed hands at Rs. 350 and Ranicherra were sold at Rs. 22.8. Of the remaining shares, Tukvar declined further from Rs. 16.8 to Rs. 15.4, but Arcuttipore again found support at Rs. 14 due to interested buying. Roopacherra improved slightly to Rs. 23.14 and Loobah were marked at Rs. 9. Patrakola met with good support and the price advanced from Rs. 185 to Rs. 201.

The profit of the BURRAKUR COAL COMPANY rose by Rs. 39,000 to Rs. 11,53 lakhs for the half-year ended last June. Taxation absorbs Rs. 4,93 lakhs (Rs. 4,67 lakhs); contingency reserve Rs. 75,000 (Rs. 65,000); debenture redemption reserve Rs. 50,000 (same); ropeway replacement reserve Rs. 11 lakhs (Rs. 70,000); general reserve Rs. 25,000 (Rs. 30,000); and development rebate reserve Rs. 32,000 (Rs. 20,000). The dividend is the same at 3½%, leaving a carry-forward of Rs. 1,40,510 (Rs. 1,87,027).

Raisings totalled 513,556 tons (510,755 tons) and despatches 506,261 tons (539,960 tons). The directors say that it is a matter of great concern to the company to ensure that sufficient supplies of sand are available to enable its collieries to continue sand stowing programme with the help of which maximum coal extraction ratios, and conservation are achieved. Repairs to 28 ovens were completed and the directors report that the balance repair programme is scheduled for completion during the next twelve months.

They also mention the difficulties facing the coal industry in the absence of a clearly defined Government policy as to the future role to be played

by private enterprises. They expect that the company will be allowed to continue with its contribution to the requirements of the country and in particular of the steel industry.

The CHANDYPORE TEA COMPANY made a profit of Rs. 66,346 for the year ended last December. Bringing in a debit balance of Rs. 1,04,863 there is a debit balance of Rs. 37,722 which is carried forward.

The directors comment that they have accepted an offer of Rs. 3,00,000 for the Ballakandi division to take effect from 1st January, 1955 from the board of the Central Cachar Tea Co., Ltd. under the same managing agency. This offer, which is considered a satisfactory one, is meanwhile provisional as, in order to implement it, it will be necessary for the Central Cachar Tea Co., Ltd. to alter its Memorandum of Association. Furthermore, since the sale of the Ballakandi division will in fact, constitute a sale of this company's entire undertaking, which is outside the powers both of the directors and of the company, it can only be effected by putting the company into voluntary liquidation and authorising the liquidators to complete the sale on the terms provisionally agreed. So far, as can be at present ascertained, in the event of the necessary majority of shareholders agreeing to liquidation and the proposed sale, the amount payable subject, however, to settlement of all taxation liabilities and to the expenses of liquidation is estimated to be approximately Rs. 160 per share.

The CENTRAL CACHAR TEA COMPANY earned a profit of Rs. 5,98 lakhs for the year ended last December, against Rs. 2,83 lakhs in the previous year. Adding Rs. 12,406 brought in there is Rs. 6,10,409. Taxation absorbs Rs. 1,15 lakhs and reserve Rs. 3,75 lakhs. Reserve account is allocated Rs. 37,300. The dividend has been declared at 7½%, leaving a carry-forward of Rs. 8,109.

The Burnie Braes estate produced 4,235 maunds and Seripore 5,004 maunds. Estimates

for the current year are for crops of 4,800 maunds and 5,436 maunds, respectively.

The directors say that they have made a provisional offer of Rs. 3,00,000 for the purchase of the Ballakandi Division of the Chandypore Tea Co., Ltd., comprising a registered area under tea of 265 acres as from 1st January, 1955. This offer has been accepted by the directors of the Chandypore Tea Company Ltd. subject to its shareholders agreeing to place the company in voluntary liquidation and authorising the liquidators to complete the sale. The offer is provisional so far as this company is concerned since under its Memorandum of Association neither the company nor its directors have powers to purchase property of this nature. Before the offer is finalised it will be necessary to alter the Memorandum for which purpose a special resolution will be put forward for the consideration of shareholders at an extraordinary general meeting to be held in the near future. To finance the purchase it is intended to raise further capital and the directors' proposals in this regard will be placed before shareholders.

Let's look at PROGRESS—Stanvac Quiz No. 4

1 INCREASED FOOD—GRAIN PRODUCTION
IS A VITAL PART OF THE PLAN. BY MARCH 1955, INDIA'S YEARLY YIELD HAD INCREASED AS MUCH AS:

A) 15,560,000 TONS
B) 11,590,000 TONS
C) 2,800,000 TONS

2 THE PLAN CALLED FOR INCREASED OUTPUT IN THE WOOLLEN INDUSTRY. RESULT: MANUFACTURED WOOLLEN GOODS IN 1954-55 TOTALLED:

A) 9,350,000 LB.
B) 20,875,000 LB.
C) 3,200,000 LB.

3 AS MORE PEOPLE READ BOOKS & BUY PACKAGED GOODS, THE NEED GROWS FOR PAPER & PAPER BOARD. IN 1954-55 THE OUTPUT REACHED:

A) 191,200 TONS
B) 169,000 TONS
C) 82,035 TONS

4 INDIA NEEDS MORE CEMENT, A VITAL BASIC MATERIAL FOR HER MANY PROJECTS & EXPANDING INDUSTRIES. IN 1954-55, SHE INCREASED HER CEMENT OUTPUT BY:

A) 285,000 TONS
B) 575,000 TONS
C) 175,000 TONS

1 11,590,000 TONS—WELL BEYOND THE FOOD—GRAIN TARGET FOR THE END OF THE PLAN! SAVED: OVER RS. 150 CRORES IN FOREIGN CURRENCY.

2 20,875,000 LB.—NEARLY 3 MILLION LB. MORE WOOLLEN GOODS, HELPING TO MEET THE DEMAND FOR WARM CLOTHES.

3 169,000 TONS OF INDIAN-MADE PAPER FOR WRITING, PRINTING, WRAPPING & MAKING CARDBOARD BOXES.

Our City Cable

STEELS LEAD RISE IN EQUITIES

GILT-EDGED DULL AFTER GLASGOW CORPORATION ISSUE FAILS

THE stock markets gave their best performance for some considerable time during the past week. Generally there was little or no expansion in business, but industrials provided the exception with a marked increase in demand for equities, particularly steels, following the excellent Consett Iron figures and the Colville dividend. In many cases considerable gains were scored, notably in Turner and Newall, which advanced on a higher dividend. There was not a great deal of activity elsewhere, but the tone was very satisfactory. Record industrial production figures for October and good company and trade news stimulated the demand for industrials, while end-November gold reserve figures helped sentiment in gilt-edged. On balance, the latter showed little change, having turned dull after the failure of the Glasgow Corporation issue, of which no less than 87 percent was left with the underwriters. The later announcement of a Liverpool Corporation issue on better terms than Glasgow had little effect on gilt-edged. Foreign bonds were subdued. Germans attracted modest demand, though potash eased, while Japanese were fractionally higher. Rails attracted little attention, while dollar stocks reflected Wall Street. Gold shares were neglected. Tins advanced on the higher price of the commodity. Rubbers were in small demand on prospects of increased consumption, while teas attracted small and selective buying to record small gains.

The Money Market

On the first three days of last week, credit conditions were difficult. Supplies of money were stringent, and on each day the market was forced to borrow from the Bank of England, although the total amount borrowed was very small. The tightness was such that the daily financing of bills by discount houses cost them in the region of 4 percent on Thursday. There was a change for the better, however, following the disbursement of the War Loan dividend money. At the end of the week, money was so plentiful that the authorities worked in reverse to mop up surpluses. The rate was

down to 2½ percent from clearing banks and to 2 percent from non-clearers. Applications for £240 million worth of 91-day bills totalled £304,090,000, and the former amount was allotted at an average rate of 8½ 5.60d, compared with 8½ 1.18d in the previous week. Applications for £80 million worth of 63-day bills totalled £64,215,000 and the former amount was allotted at an average rate of 8½ 7.06d compared with 8½ 6.34d in the previous week. This week, offerings will comprise £240 million worth of 63-day bills. The Bank of England return for the week ended 30th November showed that notes in circulation were about £15 million higher at £1,795 million, while bankers' deposits were about £7 million higher at £263 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: The London Stock Exchange continues subdued, and with little business, individual shares are susceptible to any special influence. Both sellers and buyers are restrained, most orders being small. In a few months' time, the present prices may appear to have been extremely attractive, but with the holidays approaching and the likelihood of little improvement in prices over the next few weeks, there appears little incentive. New issues continue to attract attention and afford an opportunity of taking an interest in expanding business. The immediate outlook is not particularly bullish. No serious fall is expected but one would be satisfied if the present levels are maintained.

Activity on Wall Street

Convertibles showed a mixed trading pattern in smaller turnover in domestic bond dealings last week with the market largely dominated by the trend in securities. Prices moved higher at first, with a number of issues, including Bethlehem Steel, Standard Oil of Indiana and General Dynamics moving up, but eventually they gave up part of the gains. Rails were mostly higher, and investment quality corporates a shade lower in quiet dealings. In the foreign section, German Nationals showed mostly fractional changes either way on light volume. The recently depressed Greek 6 percent and 7 percent attracted improved demand, moving up on fair volume. Italians were little changed. Several Japanese issues showed plus and minus signs of a point or more, with the Government 5½ percent of 1955 advancing. Among South Americans, Chile edged higher, with a few Brazilians advancing.

Sterling Area Reserves Fall

The U.K. Treasury has announced that the sterling area's gold and dollar reserves fell by \$14 million to \$2,283 million in November. In October, they declined by \$42 million to \$2,297 million. The U.K. had a provisional deficit with the E.P.U. of £4 million in November compared with a deficit of £15 million in October.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 30th November showed that gold stocks increased by \$1 million to \$21,938 million. Foreign deposits rose by \$4 million to \$21,938 million. Foreign deposits by \$16 million. The Federal Reserve purchased \$1,048 million worth of bills. Total discounts and advances decreased by \$178 million to \$618 million, while excess reserves of member banks decreased by \$67 million to \$88 million. The daily average of excess reserves declined by \$173 million to \$442 million, while average borrowings rose by \$159 million to \$970 million. Business loans of New York City banks increased to \$9,033 million, compared with the increase of \$43 million to \$7,575 million in the corresponding week a year ago.

Platinum Continues Firm

The price of platinum in the U.K. free market has continued to rise, and dealers now indicate around £42 a troy ounce against about £40 recently. There is a sustained demand for the limited supplies available. Two leading suppliers of Commonwealth platinum are still quoting £32½ a troy ounce. Although some dealers claim that supplies have become even tighter primary suppliers continue to furnish platinum to meet the requirements of their established customers at \$97 to \$99 a fine ounce depending on quantity. While conceding that supplies are tight, these major sellers believe that some claims regarding scarcity by dealers, jobbers and small refiners, and the United States would welcome large offerings of European platinum. Dealers are reported to be offering the metal in New York at prices up to \$115 or even higher.

Vegetable Oil Market

Linseed oil was in less market demand on Continental account last week, but the underlying tone was steady, with little pressure to sell. Prices of Indian arrival linseed oil were generally £109 for March-April arrival, with bids made at £109 for March-April arrival, but without success. Trading was very slow in groundnut oil, with no Indian crude oil to Genoa encountered. Offers of £108½ c.i.f. January-February, while to the Continent from £107 down to £106½ was wanted. British West African groundnuts in bulk were offered at £101. Castor oil was practically neglected, and featureless conditions ruled in most grades of castor oil were marked up to £103 and £104 c. and f. in drums. Philippine copra was more freely offered and business was reported at £174. Other seeds were generally quiet, with Nigerian groundnuts offered at £86 c.i.f. and British East African castorseed up to £50½ ex-ship.

New Delhi

EXPANSION OF TEXTILE MANUFACTURE

"SOCIALIST" BATTLES OVER THE AMBAR CHARKHA

(FROM OUR NEW DELHI CORRESPONDENT)

THE battle for socialism is in progress here. The All-India Khadi and Village Industries Board has proposed the introduction of 2,500,000 Ambar charkhas during the second five year plan period. It claims that they would make 412 million lbs. of yarn, required for the production of 1,500 million yards of cloth. The Khadi Board hopes that the introduction of 2,500,000 Ambar charkhas will provide part-time and full-time employment to 500,000 spinners, 846,000 weavers and 425,000 assistants in weaving. It will also provide full employment for 72,000 carpenters and their assistants, and about 20,000 persons in administrative and organisational jobs. The Planning Minister, Mr. Gulzarilal Nanda, opened the offensive by organising a demonstration of Ambar charkhas in the Central Hall of Parliament House. The Union Labour Ministry, which is opposed to rationalisation and the installation of automatic looms in the cotton mill industry, has no objection to the Ambar charkha, which represents rationalisation in the khadi industry and would throw spinners on Gandhian charkhas out of employment. According to reports, the Labour Minister, Mr. Khandubhai Desai, is prepared to permit three shifts in spinning mills during the period of yarn scarcity created by the introduction of the Ambar charkha and the freezing of the installed capacity of spinning mills.

The first move was made by the Kanango Committee, which recommended freezing the output of mill-made cloth at 5,000 million yards. This has been endorsed by the Karve Committee; the latter has recommended that the production of cloth by mills and power-looms should be frozen at the present level of 5,200 million yards a year and the additional demand for cloth should be met by stepping up handloom production from 1,600 million yards to 3,200 million yards a year.

One difference between the viewpoints of the Gandhian ideologists and of Mr. T. T. Krishnamachari, Commerce Minister, is over the production of yarn. The former would like additional quantities to be produced by Ambar charkhas alone. The other is over handloom versus khadi, or North versus South. The Commerce Ministry claims that with the rising standard of living, the demand for cloth has already exceeded the target on which the Karve Committee's recommendations were based and is likely to touch 20 yards per capita in the second plan period. On this basis it is suggesting a higher target for mill-made cloth. Mr. T. T. Krishnamachari told the Handloom Board last week: "I have got an Ambar charkha in my room, which reminds me constantly of what stands in the way of progress. The economic development of the Ambar charkha mentality is the same as the economic development of the child who pushes a perambulator." Proceeding, the Commerce Minister referred to the quality of yarn produced by the Ambar charkha and suggested a technical test to see whether its tensile strength justified a subsidy, which would be 250 percent. "If you buy mill yarn at four annas, you have to pay an additional ten to twelve annas for the Ambar charkha yarn."

Communists and Capitalists

Making a direct attack on the I.N.T.U.C. leader, Mr. Vasavada, Mr. Krishnamachari, said: "If I were a Communist, I would say Mr. Vasavada is an agent of the capitalists. Mr. Vasavada wants to freeze production in order to help the capitalists. Mr. Vasavada is the representative of the mill industry. He has to speak in favour of the Ambar charkha in order to help the mill industry. If loom production for all time to come is fixed at 5,000 million yards, it would benefit the mill industry, which does not want to export yarns, because they get better prices in the home market. What does it matter to them if the country has no foreign exchange?"

The Commerce Minister declared that the price of cotton piecegoods, despite the decontrol, had not declined. "They say, 'do not issue any more

licences.' I have issued licences for 1.9 million spindles, out of which about 350,000 spindles have been installed. It is likely that another 600,000 spindles may be licensed, some of them in replacement, some of them new ones. Four to five hundred spindles may be left, for which the Karve Committee says, 'wait till April 1956.' The moment I say that there is no licensing tomorrow, there will be a black market in spindles. This recommendation of the Karve Committee will be an impediment in the way of my providing adequate supplies of yarn to the handloom industry and that is the responsibility which, so long as I am in charge, I must discharge."

Proceeding, Mr. Krishnamachari said: "A representative of the Coimbatore Mills said 'that yarn stocks were mounting up. My information is to the contrary. Prices are hardening. I have been thinking in terms of establishing some mills myself. One of the mills I want to establish is a mill which will weave finer counts, because it is not possible to make private enterprise shift to finer counts. If I establish a mill with 15,000 spindles, I shall make Rs. 25 lakhs a year.'"

The Handicrafts Board supports the Karve Committee and 20 Members of Parliament have asked for a Congress Party meeting to discuss the issue.

Foreign Exchange Requirements

A World Bank Mission is expected here at the beginning of spring to appraise and discuss with the Government of India the foreign exchange requirements of the second five year plan. Both the size and the phasing of the plan are still under discussion; until they are finalised, the exact requirements of foreign exchange will not be known. Apart from the direct demand on foreign exchange resources, the increase in purchasing power will create an indirect demand by increasing the need for consumer goods, which can be met by curtailing exports or boosting imports. The alternative is inflation. The economics of the Ambar charkha, it is claimed, will raise the demand for foreign exchange, because larger purchasing power will be faced with an inadequate supply of consumer goods.

Regulating Stock Exchanges

A leading stock broker of Bombay, Mr. Gutt, has been appointed temporarily as Officer on Special Duty in the Ministry of Finance to assist the Government in setting up the Stock Exchange Regulation Organisation. He will soon commence discussions with the boards of various stock exchanges.

The set-up of the new Company Law Division of the Finance Ministry, of which Mr. D. L. Mazumdar is Secretary, has almost been completed. It will have three Joint Secretaries. Two, Mr. K. R. P. Ayyangar and Mr. M. R. Bhide, have already been appointed. The former is in charge of Company Law, and the latter is in charge of Capital Control and Investment. The draft rules under the Company Law Bill are now ready and will be laid on the table of Parliament during the Budget session. Prior to this, the Company Law Advisory Commission, as provided in the Company Law Bill, will be set up.

Projects at Nagal

The American firm of Vitro Engineering, the French, St. Gobain, and the British, Costain John Brown, have been appointed technical consultants to the Government of India to prepare the preliminary project reports for the heavy water plant and fertiliser factory at the Nagal headworks in Punjab.

Higher Technical Institute

To assist India in establishing a Higher Technical Institute at Bombay, the Russian Government, through U.N.E.S.C.O., is providing 15 specialists, three translators (to prepare English versions of Russian textbooks), equipment for certain specified laboratories and training facilities in Russia for 20 Indian teachers at a cost of six million roubles. The Institute is expected to start functioning in 1957.

Conference on Coal Leases

The Ministry of Production has convened a conference of representatives of State Governments producing coal to meet here on 9th December. The conference is intended primarily to reassure State Governments that there is no intention of depriving them of their powers or revenue. In raising coal production in the public sector from 3 million tons to 18 million tons, the

Central Government will merely replace some of the private lease-holders by becoming a lessee of State Governments. A Bill giving effect to the Government's plan to enter the unworked areas of private lease-holders in order to prospect for coal may also be discussed by the conference.

Railway Surveys

A feature of the 1955 Indo-American programme of technical assistance for railway rehabilitation is surveys of the Indian Railways in order to make recommendations on the immediate steps to be taken to alleviate the increasing pressures on the system. Another study is for the purpose of recommending certain capital expenditures over a five or ten year period in order to achieve the optimum of railway capacity. The second survey will evolve recommendations on the combined rail-sea shipment of bulk commodities with a view to relieving pressure on the railway system primarily caused by coal traffic. Top-ranking American railway experts are due to arrive in India shortly for these surveys.

Size of Cargo Fleet

The Indian cargo fleet consists of 117 ships of a G.R.T. of 473,543. They are employed in the following trades:

Trade	No. of ships.	G.R.T.
1. Coastal	84	252,583
2. Overseas		
(a) India-U.K.-Continent	24	168,806
(b) India-Persian Gulf	3	9,861
(c) India-Australia	2	14,433
(d) India-Japan-Far East	2	10,759
(e) India-Singapore	1	8,580
(f) India-East Africa	1	8,521
	117	473,543

Industrial Development Body's Plans

The National Industrial Development Corporation has decided to initiate development in the following industries: (a) steel foundries, forges and fabrication of steel structural; (b) printing machinery; (c) air compressors and related equipment; (d) refractories; (e) wood pulp; (f) carbon black; (g) intermediates for dyestuffs; and (h) sulphur from pyrites. After the project reports have been prepared, the Corporation will consider methods of implementing them.

Liquid Fuel from Coal

The Koppers-Totzek Process for the gasification of pulverised coal has been recommended by Messrs. Heinrich Koppers of Germany in their project report for the production of liquid fuel from coal. The report is being examined by an expert committee set up by the Government.

Next Steel Plant Site

The Government has decided to take steps to develop a site near Bokaro, in Bihar, with a view to establishing a fourth steel plant if such a scheme is taken up.

Talks on Aero-engine Factory

The Under-Secretary of the British Ministry of Supplies has arrived here for negotiations to set up a Bristol aero-engine factory at Bangalore.

Second Five Year Plan

The Panel of Economists set up by the Planning Commission will meet here soon to discuss the draft memorandum on the second five year plan.

Promoting Regional Trade

Commercial Secretaries in Indian Embassies in Asia and Africa have been holding consultations here with the Commerce Ministry in order to evolve a plan to promote exports to these countries. The Bandung conference, it will be recalled, emphasised the need to develop regional trade. The consultations have proved very useful. The Government of India is studying the needs of neighbouring countries and evolving a plan to stimulate trade with them. To give effect to the decision, some organisational changes are envisaged.

Search For Oil in Rajasthan

Reconnaissance in the form of geophysical surveys using gravity and magnetic methods were carried out over an area of 800 square miles in the Jaisalmer area during March-May 1955. The work was suspended in the region during the summer, on account of the extreme heat, and during the monsoons. The preliminary survey has

revealed an interesting gravity anomaly zone which calls for more intensive exploration. Some of the data collected from the earlier gravity surveys of the Burma Oil Company have been studied. More gravity and magnetic surveys are planned. The geophysical party left for Jaisalmer on 16th September, 1955. The work has been hampered to some extent by illness and by the desert nature of the terrain.

The survey (gravity and magnetic) was resumed around Sultana village in which area a gravity and magnetic anomaly was found last summer. To map the eastward extension of this anomaly, north-south traverses were run in this area, using a theodolite to lay the straight line traverses and a Dumpy level to determine the elevations of the measurement stations. Measurement stations were also set up on the track going northward from Sultana toward Bhuttewala. These stations were surveyed, using a plane table

with a telescopic alidade. The work done during this period is as follows:

Traversing with plane table	17½ miles
Traversing with Theodolite	20½ miles
Levelling	58 miles
Number of stations at which gravity magnetic and radio activity measurements were made	79

A party of four geologists is at present stationed in the area. They are carrying out detailed geological studies of the structures of the rock formations north of Jaisalmer. Aerial photography is now proceeding and arrangements have been finalised to commence an aeromagnetic survey this month. The search for oil in Rajasthan involves aeromagnetic surveys, gravity surveys, seismic investigations and deep drilling. The area is a vast desert full of sand dunes. Progress in such a region is slow and very difficult because of the nature of the terrain. Efforts are being made to procure instruments and equipment, and it is hoped that when these are received, more rapid progress will be made.

Exports of Vegetable Oils

For oils, oilseeds and oilcakes, 1955 was a good year. Foreign demand was fairly brisk and prices remained reasonably steady. The export policy for oils and oilcakes was liberalised. With the exception of groundnut oil, all oils are practically licensed freely. Even in the case of groundnut oil, the quantity of 1,73,000 tons actually allowed for export from July, 1954 to June, 1955, was higher than exports in any previous year—the previous highest exports were 83,295 tons in 1950-51 (financial year). Quantitative restrictions for the qualification of shippers have been prescribed for only a few items. Thus, at present, exports of linseed oil, cottonseed oil, kerdiseed oil, nigerseed oil, mustard oil and vanaspati are licensed freely without any restrictions. Restrictions on the export of castor oil are only nominal.

Between July, 1954 and June, 1955, a quota of about 1,73,000 tons of groundnut oil was released for export by established shippers and crushers. Actual exports for the same period amounted to 1,50,973 tons. It is true that the entire quota was not released at the same time; but considering the period of scarcity and high prices from which India had just emerged, the Government was anxious to proceed with caution. Besides, about 38,000 tons of H.P.S. groundnuts were released during the corresponding period for export by established shippers and co-operative societies.

On 10th August, 1955, a quota of about 27,000 tons of groundnut oil was released for export by

established shippers and crushers. Allotments to crushers were based on shipments made by them during the period February-July, 1955, a higher percentage being fixed for those who had done the export business direct in their own names. At the same time, as the ruling foreign price of groundnut oil was high, the export duty on groundnut oil was raised from Rs. 100 to Rs. 150 a ton.

On 22nd October, 1955, a further quota of about 37,000 tons was released for export by established shippers and crushers. Allotments to crushers were based on the quantities shipped by them during February-July, 1955. A small quantity was reserved for crushers who may not be entitled to a quota under the present regulations owing to the limited period allowed for shipment of groundnut oil in the past, but who have nevertheless exported an allied commodity (groundnut oilcake) during the period February-September, 1955. A quota of 20,000 tons of H.P.S. groundnuts has been released for export by established shippers and co-operative societies. Statistics of export of H.P.S. groundnuts and groundnuts oil are given below:

Year	(Figures in tons)	
	Groundnut (including H.P.S. groundnuts)	Groundnut oil
1952-53	12,736	68,247
1953-54	5,326	1,500
1954-55	22,837	80,654
1955-56 (April-September)	13,327	70,640

The export of ordinary groundnuts is not allowed.

Free Licensing

Towards the end of 1954, free licensing was introduced through established shippers of 1951, 1952 and 1953, subject to a maximum of 600 tons for each shipper. In addition, non-established shippers who were dealers in the internal or export trade of vegetable oils (other than vanaspati) and oilseeds and having a minimum turnover of over Rs. 25,000 in any of the years 1951, 1952 or 1953, were also eligible to receive allotments subject to a maximum of 50 tons (subsequently raised to 200 tons). As exports were not moving satisfactorily, the duty on castor oil was reduced from Rs. 200 a ton to Rs. 125 a ton from January, 1955. Exports of castor oil since then have been licensed freely for established shippers. The restriction on maximum shipments by non-established shippers was also removed on 11th March, 1955, and since then exports have been licensed freely for them as well. Figures of exports of castor oil during the last three years are as under:

Year	(Figures in tons)	
	Castorseed	Castor oil
1952-53	4,311	37,770
1953-54	Nil	19,013
1954-55	Nil	28,460
1955-56 (April-Sept. 1955)	Nil	200,880

The export of castorseed is not allowed. The export of linseed oil is licensed freely, and there is no export duty. The statistics of exports during the last three years are as under:

Year	(Figures in tons)	
	Linseed	Linseed Oil
1952-53	68	29,049
1953-54	Nil	3,872
1954-55	Nil	9,635
1955-56 (April-Sept. 1955)	Nil	52,355

The export of linseed is not allowed. **Manufacturing Cloth for Burma**

Burma, according to Rangoon reports, has made approaches to India and Japan, which may alter the present pattern of the cotton textile trade. According to these reports, it proposed to take American cotton as part of the U.S. Government's plan for assistance through surplus commodities. It has asked India and Japan to convert this cotton into piecegoods, but has not yet disclosed the type of cloth it needs, the processing charges it is prepared to pay, and whether the piecegoods so manufactured will be in addition to its normal imports or whether they will replace imports to that extent.

Trade with Communist Countries

The Indian Industries Fair, which has now been extended until the end of the year, may change the pattern of India's foreign trade, it is thought here. Communist countries have launched an aggressive export policy through this Fair. They have been offering machinery, plant and even consumer goods at prices generally lower than those quoted by Western countries, particularly the United Kingdom. Their delivery dates are better and they have offered to provide for the inspection of material which goes into the production of their goods in order to safeguard the interests of purchasers as far as quality is concerned. Western countries have made no such approaches. On the contrary, they are largely on the defensive.

The Communist countries have had some success with the private sector, but none so far that the Government may make some purchases provided it is satisfied with the quality of goods, and if delivery dates and prices are attractive. As trade with the Communist countries is largely through barter, they will have to step up their imports from India. The Government here is determined not to use its sterling or dollar resources for the payment of goods from non-sterling countries. These things would mean a larger volume of trade with Communist countries.

London

FINANCE BILL PASSES COMMITTEE STAGE

MR. BUTLER JUSTIFIES THE PROFITS TAX

(FROM OUR LONDON CORRESPONDENT)

THE Committee stage of the Finance Bill has been concluded with rather less trouble than had been originally anticipated. The Report stage follows on Thursday 8th December, and the third reading next week, thus clearing the decks before Parliament recesses on a date now provisionally set at 21st December. The Chancellor of the Exchequer has made two minor concessions with regard to purchase tax, exempting shopping baskets and bags and brushes, brooms and mops because in their manufacture blind people play a large part, but the real interest in the debate came with his justification of the profits tax, which he explained was part of a coherent plan to arrest inflation and not a stunt tax designed to delude the workers into believing companies are being punished as well as householders under the purchase tax. Because the corporation tax, recommended as an alternative by the Royal Commission on Taxation, would not serve his immediate end of checking inflation he had not adopted it, but he was not prejudging the fitness of the corporation tax in a non-inflationary situation or, for that matter any of the other recommendations of the Royal Commission, whose report, he felt, the House ought to have an opportunity of debating if the Leader of the House could find the necessary time.

Considerable interest has also been aroused by reports that Mr. Butler has been considering the introduction of a sales tax. According to what he is believed to have told a meeting of the Conservative Finance Committee what he really had under consideration was a gradual extension of purchase tax at reduced rates over a wider field. Thus, approximately the same revenue would be raised but with less distortion of the pattern of production. He made it clear that he was dealing with long-term possibilities and that no immediate change was planned. For the time being, it would seem, the Treasury aims at maintaining revenue at a level adequate to meet the growing cost of the social services and meet the needs of defence. A reduced but more widely spread purchase tax would have something of the character of a sales tax, with the important difference that whereas the former is levied on the wholesale transaction the latter is payable on the retail transaction. The sales tax would be a simpler system and would probably bring in enough revenue by indirect means to lessen the burden of direct taxation, but its introduction would certainly have to await less stringent times. For the moment economic conditions will remain what they are, with the credit squeeze being maintained—though there is some evidence that a number of borrowers are seeking and some have obtained loan accommodation outside normal banking channels at fancy rates—and taxation continuing high. It is felt that if productivity can be stepped up steadily and wage demands kept within reasonable bounds the present claims need not prove disastrous, and the Government is no doubt hoping that when it initiates a determined effort to stabilise the cost of living next February with the publication of costs, posed White Paper on the relationship of costs, prices and wages, it will have behind it not only the support of the public but of the unions and employers as well.

Check to Production

Whether these anticipations will be realised is a moot point. The provisional index of industrial production for October, estimated at 142.143, though it marks a new record, is disappointing in that it shows a continuance of the levelling-off trend which has been noticeable in the last few months. In the first quarter of this year production was 6 percent above the corresponding period in 1954. In the second quarter the increase was only

5.7 percent; in the third quarter barely 4 percent. The October figure indicates the rise is now only about 3 percent. Undoubtedly, strikes in the summer and their later effects had much to do with this decreasing rate of increase, but shortages of basic materials, and especially coal and steel, are now beginning to be felt. Even more disturbing is the fact that the Treasury has once again had to revise its earliest estimate for September downwards, as it has done for every month since June. Even allowing for the statistical uncertainties of this index, it does look as though factory output as a whole has not in fact been rising any further since the late spring. In the first ten months of the year the index has averaged 134, compared with 128 in the corresponding period of last year. This is an increase of rather less than 5 percent, and unless the rest of the year brings a sharp expansion the year as a whole may show industrial production only about 41 percent higher than in 1954, which would be less than was expected.

On the other hand, the gold and dollar reserve figures for November, released briefly as this despatch is being prepared, at least suggest that the Government's economic measures are producing some results—but only slowly. The reserves fell by a further \$14 million to \$2,283 million, but this is a mere trickle compared with the declines of \$48 million in October and \$112 million in September. U.S. defence aid provided only \$2 million, and but for the large deficit with E.P.U. in October of £15 million—reduced to £4 million in November—the reserves would actually have shown an improvement.

Peace in Industry

Following upon the strikes earlier this year, the efforts of Sir Walter Monckton, Minister of Labour, supported by the Prime Minister to get the trade union and employers' representatives to reach agreement on means to improve relations in industry and avoid strikes, are being continued in the Joint Consultative Committee of the National Joint Advisory Council—the body which advises the Government on labour and kindred questions. So far, however, the only real progress that can be reported is on the negative side. For instance, it is certain that proposals for achieving industrial peace by legislation are definitely out. Neither the Government nor the organisations of employers and trade unionists favour legislation to make arbitration compulsory, extend secret ballots or prevent unofficial strikes. Nor has a proposed inquiry into industrial problems by a Royal Commission or some other independent body found favour. On the other hand, a variety of sources have furnished suggestions to achieve smoother working and these have been reduced to seven main proposals which, though they have not all been accepted by both sides have not been completely rejected either, and are now in fact providing material for individual members of the Committee to study in drawing up an agreed statement for submission to the Council, which the latter could issue some time next year as guidance for all sides of industry. The proposals are as follows:—1. The development of profit sharing and co-partnership; 2. Improvements in joint consultation and human relations; 3. A voluntary period for reflection before strike notices are issued; 4. Voluntary extension of arbitration procedure; 5. Improvements in negotiation procedure; 6. Education and publicity in industrial and economic problems; and 7. Improvement of procedure for handling inter-union difficulties.

Call for Government Lead

On the basic needs of the country's economic well-being there is no real difference of opinion. Both the T.U.C. and the employers' organisations in their recent surveys of the economic outlook have emphasised the importance of fighting inflation. Where differences arise is as to the measures to be adopted for this purpose. The T.U.C. is strongly critical of the Butler proposals, the employers perhaps less so, but the latter have just reiterated their view that if industry is to be asked to reduce or curb excess the Government should give a lead by reducing its own expenditure. Sir Graham Hayman, president of the Federation of British Industries, has just suggested to a regional

annual meeting that the F.B.I. "through our own contribution and concerted effort," should help to ensure the success of Mr. Butler's policies which, on the whole, met with his approval though he thought that the banks must try to avoid arbitrary restrictions of credit "which may impede progress where it is justified and necessary." He thought well of the Chancellor's insistence that producers should hold down prices, but emphasised that excessive Government expenditure was a major factor in the inflationary process. Sir Graham believed that the restrictions recently applied to capital investment were in the nature of a short-term holding operation. At the same time the shortage of labour was assuming, in one or two special directions, what he called "alarming proportions." He hoped that plans for industrial expansion would not fail because of a labour shortage, and stressed the need for higher productivity. It was wrong, in any case, for anyone to be guided by the fear of redundancy or surplus. Instead, people should be inspired by a real spirit of adventure and confidence.

Difficulties of Private Airlines

Although the independent airline operators are doing extremely well on the whole—the entry of many shipping companies into this field would suggest this—they are not without their troubles, as the 1955 report of the British Independent Air Transport Association points out in no uncertain fashion. The main complaint is that they are still confined to insecure and economically doubtful operations. The present policy of the Government, it says, seems to be aimed primarily at protecting State enterprises from competition and at "the permanent confinement of the independent operators to the comparatively insignificant and generally inferior sections of the industry." In spite of their "frustration" the independent operators report a considerable growth in their activities. During the year ended last June the fifteen members of the Association increased load-ton miles flown on scheduled services by 53 percent. Inclusive passenger tours have attracted growing public interest and in this form of holiday service passenger miles flown increased by 120 percent. But statistics, it is claimed, may be used to confuse the issue. Trooping represented 67 percent of the total passenger-miles operated and "air trooping is too uncertain and short-term to be of value towards long-term development." The same uncertainty about official policy appears in the otherwise satisfactory experience of inclusive tour services, for which, almost without exception, licences are granted for one summer season only. The effect of this uncertainty is demonstrated most clearly in future orders for aircraft. It is stated that by 1955 the independent operators should have been bringing modern new aircraft into operation. Instead, only a small number of new aircraft has been ordered. The danger is that foreign operators who have recently been placing very large orders for new equipment may gain years of advantage as a result of the uncertainty which is now making their British competitors hold their hand.

Cotton Industry's Structure

The earlier unanimity of almost all sections of the Lancashire cotton industry in favour of Government action to solve the problems which face it, and especially the duty-free imports of cheap textiles from the East, appears to be dissipating—but slowly. The suggestion that there should be an independent inquiry into the industry, raised at the meeting called by Mr. Cyril Lord and referred to in an earlier despatch, also ran into some opposition. The trade unions are far from enthusiastic, contending that the problems are already well known and that what is now needed is action. Among employers some are in favour while others feel that little more can be expected from such an inquiry other than recommendations that the industry modernise itself and improve its efficiency. Finally, we have the decision of the legislative council of the United Textile Factory Workers' Association that the time is not suitable for the presentation of a petition bearing signatures of both workers and employers to the Government to demand action to help Lancashire.

What is the measure of an Industry's importance?

If a bicycle, a sewing machine, or even a hurricane lantern were shown along with a steel ingot to the man-in-the-street, he would not take a second look at the ingot. Yet, in machines, factories and buildings...in the making of the hundred things we use every day...Steel is indispensable.

Started less than fifty years ago, India's Steel Industry is to-day a vital factor in the nation's economy. It produces nearly 1.75 million ingot tons of steel at a

cost that no country can equal, of which Tata steel accounts for over one million tons. Tatas plan to produce 2 million ingot tons early in the second Five-Year Plan period,

(FROM OUR BOMBAY CORRESPONDENT)

Problems of Indian Shipping

At the meeting of the Consultative Committee of Shipowners, which was held in Bombay last week, Mr. Lal Bahadur Shastri, the Union Minister for Transport, took the opportunity to review and elucidate the Government's policy on several important problems of Indian shipping. Mr. Shastri was gratified to note that the threat by some overseas shipping conferences of the imposition of a surcharge on goods coming to and going out of India had not so far materialised, but regretted that one of the conferences stood against any serious consideration of the question. Mr. Shastri said that the situation created by this threat had led to the establishment of a proper liaison with the overseas shipping conferences operating on the Indian coasts and a separate Consultative Committee representing Indian and foreign shipping interests had been formed, which had held its inaugural meeting at Calcutta. Speaking about the tonnage position of the country, he was somewhat apologetic but believed that the results achieved so far should be considered satisfactory in view of the fact that this country commenced its tonnage expansion programme, particularly with regard to overseas trading, only in 1947. In 1948, the country had to undergo scrapping of the existing tonnage had taken place than had been anticipated. He was, however, optimistic with regard to the possibility of the country reaching the first plan target of 600,000 tons before long. The expenditure of about Rs. 19 crores on shipping, which was originally envisaged in the plan, had to be raised subsequently to about Rs. 26 crores. He also reported that a sum of about Rs. 20 crores had already been expended and that firm commitments had been entered into with regard to the unspent balance. For the second plan, Mr. Shastri regretted that the Planning Commission could not see its way to accept the target of 445,000 tons recommended by the *ad hoc* Committee appointed for studying the question of the target on tonnage expansion. In fact, the Committee's target itself was very much below that envisaged by the Shipping Policy Committee in 1947. He remarked that this pruning of the Study Group's recommendations by the Planning Commission was bound to cause justifiable disappointment among Indian shipowners; but they should remember that this was necessitated by the limits of our financial resources. He also reminded them that apart from shipping, the Planning Commission had found money for the development of ports and lighthouses and revealed that the total provision likely to be made in the second plan for the development of major and minor ports would be about Rs. 50 crores with an additional amount of Rs. 5 crores for lighthouses.

At the same time, Mr. Shastri believed that port

Touching lightly on the controversy that is going on at present on the chartering of vessels by Indian shipping companies, Mr. Shastry pointed out that in the Government's view shipowners owed it to the country as part of the policy of coastal reservation to carry the whole of the coastal trade in their own fleets. It was difficult to regard the employment of chartered tonnage by them as in any way different from the direct employment of foreign ships by their owners. This amounted to a negation of the policy of coastal reservation. At the same time, the Government recommended to concede that in view of the prevailing shortage it might be necessary to permit a limited number of chartered ships on the coast on certain conditions, provided the ultimate objective remained that all companies operated their own ships on the coast. He therefore wanted them to consider the purchase of 25 to 30 ships within a short time to fill the existing gap in coastal shipping and added that he was already exploring the possibility of getting a number of either new or second hand ships from abroad for this purpose. The Minister also dwelt upon the questions relating to the increased tonnage tonnage rates, acquisition of the tanker for the movement of petroleum products along the coast and steps to secure Government cargoes for Indian ships in the overseas trade. He also revealed that it would now be possible in the near future for the Government to take a decision on the question of floating the second Shipping Corporation.

The arrival of Britain's 4-jet airliner *Comet III* at the Santa Cruz airport last week after a record run of 2,780 miles between Cairo and Bombay in 5 hrs. 10 minutes, drew a fairly large crowd including Mr. J. R. D. Tata, Chairman of the Air India Corporation. On this proving flight from the U.K. to Australia, the Comet carried a crew of 15 including 11 technicians. The plane was in Bombay for about two hours and left for Singapore in the evening. According to Mr. John Cunningham, who commanded the aircraft, the flight from Cairo was very smooth and they had been able to maintain an average speed of 540 miles an hour. During its flight the plane had cruised at an altitude of 37,000 to 42,000 feet. On the preceding day at a press conference, Mr. H. G. Rice, representative of the de Havilland Aircraft Company Ltd., announced here that jet-propelled Comets would once again be brought into service on an immensely improved basis. He added that the *Comet III* airliner only marked a stage of development aiming at the production of a *Comet IV*. In fact twenty *Comet IV*s had already been ordered by the British Overseas Airways Corporation for delivery beginning from 1958.

Giving details regarding the *Comet III* on its proving flight, Mr. Rice said that the Rolls-Royce Avon engines of the *Comet III* each developed 10,000 lb. thrust and those of the *Comet IV*, 10,500 lb. thrust. The *Comet IV* could accommodate 50 to 76 passengers and have a 2,945 statute-mile stage length with a cruising speed of 500 m.p.h. The cost of manufacturing this airliner would be in the region £1 million. Mr. Rice was very enthusiastic about the future of the *Comet IV* which, he thought, would be capable of operating on a great majority of the world's major air routes at unmatched speeds. Giving a short history of the aircraft, Mr. Rice said that the *Comet*, first conceived in 1946 and first flown in 1949, opened the world's first jet passenger services with B.O.A.C. in 1952. Early in 1954, after 30,000 hours of successful operation with the B.O.A.C. and three overseas operations, two accidents led to the suspension of the service. The subsequent technical investigation of the aircraft conducted on a national scale proved that the cause was failure of the pressure cabin due to a hitherto unsuspected manifestation of metal fatigue. Mr. Rice went on to say that the *Comet IVs* would be coming off the de Havilland production lines for B.O.A.C. in the latter half of 1958, a year after the prototype of the new aircraft took the air, and by that time a number of *Comet II's* would be in service with the Royal Air Force Transport Command.

The third conference of the All-India Labour and Welfare Officers at Nagpur last week has excited considerable attention both among the leaders of industry and workers here. Mr. Shantilal Shah, Bombay's Labour Minister, addressed the conference and appealed to employers and Government agencies to work together in a spirit of goodwill and co-operation for the attainment of a welfare State. Mr. Shah was gratified that the significance of sound industrial relations was now being recognised by industrialists as well as the authorities and that the human factor was being given its due place both in industry and in the general economy of the country. Mr. Shah believed that mere industrialisation and technological advance would not bring about economic progress, if it was relations and unco-operative human elements in industry. It was because of this conviction that he advocated the development of labour and person-

nel management and welfare of workers as a science and an art, pointing out that the human being behind the machine was an equally potent factor, though more variable and unpredictable than the machine. Mr. Shah welcomed the efforts that were being made by several progressive employers for devoting more time and attention to machines and workers rather than those of employers' organisations and trade unions to settle questions regarding management, discipline and other disputes by direct negotiation and advised that such settlement between parties would be both more welcome and lasting than other efforts such as compulsory adjudication.

One of the important subjects which came up for discussion at this conference was the participation of workers in management. Mr. M. R. Masani opened the discussion on this subject with a paper in which he advocated a major step in this direction through the establishment of Councils of Management of an advisory nature consisting of one-third members representing shareholders, one-third representing workers and the other third consisting of managers, executives and technicians. Mr. Masani was of the opinion that progress in this matter would be of the experience of other countries was to be of a long-term nature, each step of the advance being marked by the level in the education and training of workers. He said that the concept of workers' participation in management should be more acceptable as an expression of the urge to social justice to private enterprise than to centralised State capitalism. Mr. Masani also hoped that such participation on the part of the workers would lead gradually to increased production for the general benefit of the enterprise, the workers and the country's economy as a whole. At the same time, Mr. Masani pointed out that once workers were fully represented in management they would have to sacrifice not only their right to strike, but their position with regard to collective bargaining also, right to a certain extent be weakened. After an interesting discussion, however, the conference as a whole came to the conclusion that the time had not yet come for the participation of workers' representatives in the management and direction of industries and that it would be in their interest to rely on the system of collective bargaining and a joint concern in the industry with the association of workers in the administration of industries at appropriate levels in gradual stages. It was admitted that the workers' representatives did not yet have the necessary technical knowledge, training or administrative experience to enable them actively to participate in the management and direction of industries.

At the Ninth Annual General Meeting of the Bombay Region of the Engineering Association of India, Mr. Sankalchand K. Shah, Chairman, expressed his satisfaction at the fact that there had been a 50 per cent rise in industrial output during the first four years of the first plan. The engineering industry, however, was experiencing difficulty in the supply of steel, pig iron, power, transport and fuel and he requested the Government to help the Association to overcome this. He asked for legislation to afford protection to the infant industries. He also pleaded the lines of the "Buy American" Act. He also pleaded that if Bombay City or State of Maharashtra and Gujarat, it should be given a special status as a City State to ensure its cosmopolitan character and its importance as a leading industrial, trading and commercial centre. Mr. Shah's complacency was somewhat disturbed, however, by Dr. Hare Krushna Mahatab, the Governor of Bombay, who inaugurated the session. He asked industrialists to shed their "importer's mindsets" and to concentrate on the development of fully Indian industries. The Governor recalled that during his visit to the Indian Industries Fair at New Delhi earlier in the week, he was distressed to find that the so-called Indian manufactured machines that were displayed in the various stalls were not fully Indian and contained some parts imported from abroad. He deprecated the tendency among Indian industrialists to depend more on imports of important parts and machinery for the manufacture of industrial products and looked forward to the day when Indian industries would be run with plants entirely manufactured in the country. At the same time, the Governor invited foreign capitalists to invest in building up industries in this country and expressed his fear that unless India built up its export trade it would be swamped by neighbouring countries.

Another important industrial body which held its session here last week was the Association of Indian Industries. Mr. G. N. Banerjee, the president of the Association, paid a good deal of attention to the course of his address, to the Karve Committee's report and the question of small-scale and village industries. While calling upon the Government to evolve a clear-cut policy for the development of cottage and large-scale industries, and stressing the need for integrating industrial policy with that of foreign trade, Mr. Banerjee displayed considerable misgivings regarding the possibility of substantial additions to the production of consumer goods through cottage industries in time to cope with the increasing consumer demand. He pointed out that if this did not materialise the Government would have to resort to the control of the distribution of all essential goods in order to avoid inflationary pressure.

A PRESS Note states that in November the Eastern Railway achieved a new record for dispatch of wagons while another Note appearing the same day reports that there is a large crop in the U.P., that Calcutta buyers are active and that the railway authorities have been asked to provide more wagons. The nature of the goods loaded is not stated, but the fact certainly cannot have been a record in the number of wagons provided for jute. Actually, the jute industry is suffering more than usual from a shortage of wagons. In some areas the shortage is acute. In U.P. booking to Calcutta mills has been severely restricted, and in some places, entirely stopped.

Just before the Puajahs something of a sensation was caused by reports in the Press that a large number of wagons was held up at Hovhrar because cotton piecegoods merchants were refusing to unload them so as to create an artificial shortage during the pre-Puajah shopping rush. This gave jute dealers food for thought, because the demurrage charged on jute was much less than that on cotton piecegoods, and the jute was held up so heavily that it would not be worth the trouble of unloading. How was it that cotton piecegoods merchants were allowed to use railway wagons for storage purposes when there was a dearth of wagons for jute?

Actually there seems to be a lot of confusion in regard to the allotment of wagons for jute. One railway up country stops booking and gives as the reason that this has been done at the request of the authorities in Calcutta while the authorities in Calcutta deny this. Applications for wagons for mills are refused while they are available for booking jute to Cossipur and so on.

The railways frequently complain of slow turn-round of wagons. It is unlikely, however, that any such case could be made out against jute mills. On the other hand, slow movement of wagons is the cause of much delay and cases have been reported of wagons loaded at stations 50 or 60 miles from Calcutta taking two weeks or more to reach mills in the Calcutta area. The cause of this delay seems to be due to lack of local shunting power which causes the hold-up of whole trains while the main line goods engines do local shunting. It is, of course, a matter for the experts but, when a train with, say 60 wagons is held up for hours while half a dozen wagons are shunted into mill sidings and then the same thing happens again a few miles down the line and so on until all the wagons have been placed, it is not surprising that the movement of wagons is slow and that there are not enough wagons available for the transport of jute. It would seem that a little better organisation at destinations would facilitate the movement and turn-round of wagons to the advantage of the railways themselves and of the jute industry.

The main interest in the markets over the past week centred on the near position, where local shorts were desperate to cover heavy goods commitments for steamers closing in the first week of December. Demand for green heavy Cees, A and B twills was heavy, and early in the period high prices were paid for these fabrics. This was very pronounced as far as green Cees were concerned, this particular construction having been in heavy demand since the middle of last month and on occasions being quoted at a premium of up to Rs. 3-6 over plain heavy Cees. Current premiums are now only about Re. 1 a 100 bags, and as the buying pressure eased, it is likely that this fabric will revert to its former position. Demand having been satisfied, the near position of the goods market came under heavy selling pressure from speculators who had either over-covered or had unsuccessfully attempted to corner these constructions. From Friday morning the market began to slip back and by Tuesday heavy goods had lost over Rs. 30 a ton. The continued lack of overseas interest held out little prospect of the fall being arrested. The forward section of the market, although neglected, tended to rule steady. For three days, while ready quotations were showing large fluctuations, prices there remained constant, which would appear to indicate a certain amount of confidence in the future.

Towards the close, the market tended to anticipate the publication of the mill stock figures, which speculators confidently predicted would again show a reduction. Their theories were based on the continued improvement in shipping statistics over the last half of November which, as in the first half, kept just ahead of the production rate. This was not surprising as many contracts entered into earlier in the year were for shipment in the current period.

Hessian was completely neglected, and any price movements were only in sympathy with sacking. In spite of the inactivity, there was a steady undertone and quotations towards the close were only Rs. 8 a ton below those ruling at the beginning of the period. Here also the market tended to be influenced by the hope that the im-

provement in American consumption during October would continue in November.

Business in raw jute was again small, as most buyers withdrew on account of the weaker goods market. Jute failed to be influenced by the rapid movements in gunnies, and in general the market was steady at lower levels with sellers reserved. The main reason for this was the very steady upcountry markets, where imports are well below average for the time of the year. This was particularly true of the East Farquhar Islands, where harvesting the paddy crops, and unlike former years, they were able to go ahead with this without first having to sell their jute holdings to finance the project. This steadiness had a great influence on Calcutta sellers, who in most cases strongly resisted buyers' attempts to force down prices. In many cases mills had to revise their ideas on prices where quick delivery jute was concerned, but forward shipment jute was done in small quantities at below the quoted rates. Buyers registered very strong complaints regarding the condition of recent arrivals, and many parcels were returned on the account. Dry jute in all stations and mokkams, was being sold at very high premiums, and sellers were facing heavy financial losses against contracts made early in the season for delivery in December.

Manufactured Goods. At the opening of the jute goods market after the holiday, prices showed a considerable drop. Ready B Twills slumped by Rs. 2-8 a 100 bags to Rs. 114, and April-June shipment by Re. 1 to Rs. 107. Hessians reacted in sympathy and ready 40in. 10oz. fell by 8 annas to Rs. 40-14 whilst forward shipment recorded a 2-anna drop to Rs. 39-12 a 100 yards. After this early easiness, the market firmed up on shipper covering against steamers sailing in early December. Prices for ready goods, especially in the sacking section, gradually improved, until by Friday morning B Twills had recovered Rs. 1-4 of the previous day's losses. The forward section was not affected and quotations were unaltered. The rise was shortlived as the demand was soon satisfied, and B Twill prices came tumbling down, although green heavy Cees continued to rule steady and commanded a premium. On Saturday morning, ready B Twills dropped back to Rs. 115-2 but forward shipment remained at Rs. 107. Hessians also tended to be steady and near delivery 40in. 10oz. only a few annas to Rs. 41, with the forward section steady at Rs. 40. There was very little alteration in these rates after the week-end, but the lack of overseas interest combined with heavy speculative selling pressure in the fatka market caused an easier sentiment to prevail. Heavy goods prices dropped rapidly, B Twills losing Rs. 1 or Rs. 1-12 by Tuesday morning, and Hessians falling 4 annas in sympathy. Towards evening, the market was slightly steadier but prices remained the same.

At the close the market is unchanged with buyers taking no interest. Opening quotations on Wednesday morning are as follows:

	Ready	December	January- March	April- June
	Rs.	Rs.	Rs.	Rs.
40" 8oz.	32-10	32-8	32-6	32
40" 6oz.	40-10	40-7	40	39-8
B Twills	113-4	110-14	108-2	106-6
Heavy Cees (Plain)	113-12	112-8	108-12	106-8
Heavy Cees (Green)	114-4	113		
A Twills	137	136-8	135	129-8
Liverpools	130-8	130-8	123-8	119-8
Cornsocks	113	112-4	109-8	107

Raw Jute. Calcutta buyers displayed very little interest in the raw jute markets, unless at lower rates, and only indulged in spasmodic buying. Several attempts at forcing down the market failed. Although business for forward delivery was done on a small scale at about 8 annas below the quoted rates, the majority of sellers were not interested at these prices. Price movements were very small, and with the gunny market falling rapidly the possibility of double business was remote. Upcountry markets were credited with influencing the local Calcutta markets. It was reported that prices were well above the parity of those quoted to mills, and were not likely to show any large reductions in the near future, due to the very small imports. The mills' stock position appeared to be a little better, as most of them had this position fairly well covered. Unfortunately the market did not fall in this period to the extent that operators expected when the contracts were made some months ago. Contract rates were in most cases about Rs. 2 to Rs. 3 a maund below current prices. Consequently many arrivals contained heavy moisture as sellers attempted to recoup some of their losses.

The market opened last Thursday slightly lower than the previous closing quotations. Assam and Northern jute was quoted at Rs. 27 a maund basis Bottoms for December-January shipment. With the goods section showing a declining tendency, buyers took no interest at these rates and no

business was reported. Raw jute quotations showed no change on Friday when gunnys improved, and small business was done in forward shipment jute at below the quoted rates, and again on Saturday, but any attempts to reduce the price of near shipment jute met with stiff resistance. Assam jute was slightly easier after the weekend and quotations dropped to Rs. 26-3 for Lower Assam and Northern jute and Rs. 26 for Upper Assam for December-January shipment. Small business was reported and Tuesday brought no change in the quoted rates in spite of the weaker goods market.

During the week, Calcutta mills paid Rs. 26-8 a maund for ready bills of lading of Lower Assam jute and the same price for December shipment. Upper Assam jute was done at Rs. 26 a maund, but shipment in this case was in December-January. Small business was done in local packing jute towards the end of the period at Rs. 25-8 a maund for one month's shipment. Before the start of the season, the prices of Karimganj-Bongaon tossa at Rs. 26 a maund basis Bottoms for December-January shipment. In the Daisee section fair business was done for both quick delivery jute and forward shipment, and prices paid ranged from Rs. 26-8 to Rs. 27-8 a maund basis Bottoms according to delivery. Daisee Mesta also came in for a great deal of interest and mills paid Rs. 24-8 to Rs. 25 a maund basis Bottoms for December-January shipment. Bimbi and Bimbi-Bimbi passed at Rs. 24-8 a maund for F.A.Q. for December shipment. The only business reported in Pakistani jute was for Jat Cuttings at Rs. 100 a bale for December-January shipment.

At the close the jute markets are unchanged, and although sellers are keen for business they are reluctant to reduce prices. Opening quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills Rs. a maund Basis Bottoms.	Shipment.
Lower Assam	26-8	Dec-Jan.
Upper Assam	26	"
Northern	26-8	"
Murshidabad White	25	"
Daissee ex Agency	27	"
Daissee ex Cossipore	26-8	"
Daissee Mesta	24-8	"
Bimli	25 for F A Q.	"
Local Packing (Northern)	26	"

Tossa is quoted at Re. 1 a maund above the price of white jute.

Pakistan Jute :	Rs. a maund.	Shipment.
	Basis Bottoms.	Dec.-Jan.
Jat	28	
District	27-8	"
Northern	27	"

Imports into the local Cossipore markets showed a marked deterioration and wagon arrivals averaged under 100 a day. Consequently prices remained steady for most of the week, and un-economic as far as the mills were concerned. There were keen buyers at lower rates but only small business was done on this basis. At the close Kishengani jute was quoted at Rs. 25-8 a maund for garsat quality. The Daisee section continued to rule firm, especially in the agencies where imports were lower than for some time. Heavy mill buying over the jetty tended to keep prices high, but Daisee and Mesta arrivals contained very heavy moisture. At the close quotations in Sheoraphuli were based on Rs. 26 a maund for garsat quality.

Mofussil: There was nothing to report from the upcountry markets in India where business was at a standstill due to the disparity of rates between Calcutta and agencies. Imports were very small and sellers were reserved. Quotations in Dhubri were based on Rs. 23 a maund basis Bottoms.

In Pakistan the markets were steady, with several large operators taking an active interest in baled jute at market rates. Imports into all receiving stations were small, and in Narayananj total arrivals only amounted to about 25,000 maunds a day, of which about 18,000 maunds was loose jute and 7,000 maunds baled. Latest quotations in Narayananj are as follows:

Pucca Bales :	Rs. (P) a bale.	Kutchia Bales.	Rs. (P) a maund
Mill Firsts	160	Jat Bot	27-8
Export Firsts	134	Jat B Bot	23-8
Dacca Tossa 4's	198	Jat C Bot	20
Dundee Tossa 4's	147	Jat X' Bot	17-8
Output Tossa 2/3	129		
Output Tossa 4's	110	Tossa is quoted Rs. (P) higher than white jute.	
Narayanganj Cuttings	87		

RETURN TO QUIET CONDITIONS

THE jute markets in the U.K. and on the Continent have lost much of their activity and conditions have reverted to dull trading again. Though raw jute is quiet and most spinners have come down to the minimum level for all grades of the fibre for shipment, there is still no indication that the minimum prices will be officially broken. Say "officially" because there has been business done in afloat jute at under the minimum, and there seems every likelihood that this will be repeated. A fair quantity of jute afloat is being offered, the major portion being Tossa, which no one seems to want these days. There are also some parcels of Mill Lightnings on board steamers bound for the U.K. Recently, spinners have been keen enough to pay a premium over the shipment quotations for that grade of jute, but there is more likelihood now that sellers might be persuaded to sell at a discount rather than risk

warehousing. The general belief in the trade is that Pakistan will be able to maintain the minimum prices. In the case of Daissee and Tossa, for instance, the position has been very quiet and prices have not moved from the minima of £90 for crack Daissee-2/3 and £109 for crack Tossa-2/3, with grade at £10 less in each case. There are now few sellers of Mill Firsts asking more than £90, or Mill Lightnings above £80, and even Mill Hearts are more readily obtainable at the minimum of £70. Only lately were shippers quoting £73 to £75 for Mill Hearts.

Most spinners are more comfortably placed with orders for jute yarns for weaving. Some are sold to 31st March in the hessian qualities and it will be difficult to buy for delivery this year now at 14.48d a lb. for common 8 lb. cops and 8 lb. spools. Twist is much improved as the result of demand from the carpet industry at 16.04d for 3 ply 8 lb., and sacking yarns are in a strong position at 11.18d for 24 lb. weft. Rove is steady at £88.5s for 48 lbs. and £72.5s for 200 lbs. Cloth demand continues in quiet but steady demand at 12.48d a yard for 10 oz. 40 in. hessians and 10.23d for 8 oz. Manufacturers are quite busy and sold for about 10 weeks ahead. Sacking and tarpaulin are comfortable. Calcutta goods have quietened down a bit to 62s for 10 oz. 40 in. and 46s 6d for 7½ oz., December, 61s 9d and 46s 3d January and

also February-March, and 61s and 45s 9d for April-June, with "B" twills at 171s, 170s, 168s and 164s for the respective positions of shipment, all f.o.b. Calcutta. Some business has been done with the Jute Control this week at a few shillings under the general market quotations.

GUNNY SHIPMENT STATISTICS

The following figures, including coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta, are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
	Bags (Tons)	(Tons)	(Tons)
1st to 30th November, 1955	2,115.7	27,144.0	29,259.7
1st to 31st October, 1955	2,602.5	24,922.3	27,524.8
1st to 30th September, 1955	3,301.4	39,792.1	43,093.5
	Sacking		
1st to 30th November, 1955	34,008.0	783.5	34,791.5
1st to 31st October, 1955	23,129.9	718.5	23,848.4
1st to 30th September, 1955	39,689.2	715.1	40,404.3

I.J.M.A. STOCK FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports stocks of jute goods at the end of November 1955 as follows:

Description	30th November 1955		31st October 1955		Increase over (+) or decrease from (-) last month	30th November 1954		
	Lakh Yds.	000 Tons	Lakh Yds.	000 Tons		Lakh Yds.	000 Tons	
Hessian Cloth & Bag	10.51	27.8	11.29	29.7	- 78	- 1.9	10.04	27.0
Standard Hessian (included in above)	6.86	18.1	8.09	21.2			7.18	19.3
Sacking Cloth and Bag	7.28	31.0	6.81	29.0	+ 47	+ 2.0	8.94	40.6
Standard Sacking (included in above)	3.70	23.5	5.30	21.9			5.95	25.4
Others		4.3		3.6		+ 0.7		1.4
Grand Total (000 Tons only)		63.1		62.3		+ 0.8		69.0

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai.

SPOT BURLAP CONTINUES SCARCE IN NEW YORK

The tightness in burlap spot and aloft supplies in the U.S.A., first noticed in the middle of September mainly as an aftermath of the dockers' strike, persisted through the entire month of October, according to the The Jute Bulletin of the Indian Central Jute Committee. Sluggish demand notwithstanding, spot goods were held in firm hands. Activity was limited to immediate requirements only, with buying confined to small parcels from spot stocks. Consumers preferred to stay on the sidelines and wait out uncertainties in the Calcutta market. Burlap 40" 10 oz. was practically non-available in the New York area. Comparatively moderate quantities of Japanese burlap were offered daily at prices competitive with Calcutta goods landed on the Pacific Coast ports, where alone the ocean freight rate favoured the Japanese shippers. There was no offer by the Continental mills, who continued to find it difficult to compete with Calcutta burlap on the basis of the present fixed minimum prices payable for Pakistani raw jute.

WEST GERMANY'S OUTPUT RISES

West German jute spinning mills produced 7,900 tons of yarn in August, an increase of 1,400 tons over the previous month. The output of the weaving mills also increased from 5,300 tons in July to 6,200 in August. Raw jute imports, however, dropped during the month to 3,850 tons from 4,900 tons a month ago. Manufacturers reported steady sales on the domestic market, with the backlog stated to be large enough to ensure full employment until the end of the current year. The growing uncertainty about future raw jute prices was holding up placing of new orders by consumers. The latter seemed generally inclined to wait for a reduction in price, which, however, was thought unlikely to materialise in view of the very low margin now left between production costs and selling prices. Export sales were diminished in face of keen Indian competition, accentuated by the recent removal of jute goods export duties and the higher duty now payable on exports of Pakistani raw jute. Exports of jute cloths to the U.S. totalled 584 tons in the first half of 1955 against 2,140 tons in the similar period of 1954 and 7,873 tons in 1953.

Engineering and Transport

VITAL LINK IN U.K. EXPORT DRIVE

TRAINING UNITS AT BRITISH ENGINE SCHOOL

FOREIGN attendance at aero-engine schools, a number of which exist in the U.K., emphasises the wide acceptance overseas of British powerplants of all sizes. On 24th October, United Nations Day, representatives of no fewer than nine countries were attending courses at the Rolls-Royce aero-engine school. Founded in 1938, its capacity has risen from a single course of 10 trainees to many separate instructional units covering a wide range of engines and purposes. Since its foundation, some 32,000 trainees representing 41 nationalities have undergone training, 15,000 of them since the end of the war. The functions of this school extend beyond the provision of standard courses on engines. It can be used as a background to customers' own training establishments and as a means of providing instruction for operators and pilots in the maintenance, handling and overhaul of Rolls-Royce products.

Two-week Courses

Many of the principles of engine-handling procedures that apply to civil airliners today were adapted from those formulated during the war by Rolls-Royce for the bomber offensive, fighter and coastal patrols, and photographic reconnaissance. By 1945, 17,000 British and Allied air force engineers and pilots had undergone training on the numerous makes of Merlin engine in service. Today, training requirements have become more varied, since Rolls-Royce gas-turbine aero-engines are available to both civil and military operators. The following standard two-week courses are, at present, being conducted: Dart (93 completed so far), Avon Series 100 (115), Avon Series 200 (36), Nene (101), and Derwent (218). These are in addition to engine handling courses.

Discussion Groups

The staff appreciate that the value of the school is enhanced by discussion between those who attend the courses. These include foreign airline technicians, inspectors from aircraft corporations, test pilots, airline captains, designers, aircraft and flight engineers, besides pilots and engineer officers from the Services. The varying experience of these men encourages a profitable exchange of views. The staff is trained in the company's various departments and has attained professional standards in lecturing and teaching. The lecture rooms and workshops are used for standard familiarisation and maintenance courses on each of the main types of engine. New items of equipment are continually being added to the school's already impressive stock. Recently a control simulator for a Dart engine was completed and put at the disposal of trainees.

Training Aids

An important and popular service undertaken by the Rolls-Royce school is the provision of training aids. These are kits containing all necessary instructional material for the initial equipment of a training unit. The contents vary according to the type of engine, but the basic kit contains large instructional diagrams, trainees' note-book diagrams, notes for instructors, manuals, a set of sectional components, service and maintenance strip films. Moreover, under certain circumstances, a trained instructor can be provided in the initial stages, until the customer's own staff take over. The organisation caters for a wide range of requirements and includes special courses and instruction when language difficulties arise. Training is free of charge to main users of the firm's civil and military engines. Applications from suitably qualified individuals, such as aircraft engineers engaged in 'C' license work, are also considered.

NEW ALUMINIUM PLANT IN TASMANIA

The new aluminium plant built by the Federal Government at Bell Bay, Tasmania, at a cost of £A12.5 million, will add greatly to Australia's industrial strength and defence potential, particularly if the normal supplies of bauxite from overseas are cut off. This plant has been designed to use low-quality bauxite, obtainable in large quantities from St. Leonards, Tasmania, and New South Wales, in an emergency. Because of the high percentage of silica it contains the use of this ore is now uneconomical. But, big deposits of good quality bauxite are found on Wessel Island, off the Northern Territory. The Bell Bay plant will save Australia more than £A3 million a year when in full production. Australia's Minister for Supply, Mr. O. H. Beale, who opened the plant in November, and the Australian Aluminium Production Commission, which will operate it, have emphasised that the price of aluminium from Bell Bay will compare favourably with that of imported metal. The project is a big step forward in Australia's industrial development, and many persons consider it the beginning of a huge new industrial centre comparable with Newcastle and Port Kembla in New South Wales.

The plant has been located at Bell Bay because of the availability of unlimited electric power, cheap land and a deep-water harbour.

When in full production the plant will produce 13,000 tons of aluminium yearly, about 75 per cent of Australia's requirements. The Aluminium Production Commission hopes to produce 6,000 tons this year, 10,000 tons next year, and reach full capacity in 1960. To produce 13,000 tons of aluminium the plant requires in the first stage of production 52,000 tons of Malayan bauxite, 20,000 tons of coal, 5,000 tons of limestone and 4,000 tons of soda ash. In the reduction process which follows, 26,000 tons of alumina are required, as well as 5,600 tons of petroleum coke from California, 2,800 tons of pitch from Britain and Australia and 650 tons of cryolite from Greenland. The foundations of the plant alone cost £A1.5 million, and more than 120,000 tons of concrete were used to build them. The electric furnaces are based on rock 25 feet below the surface level. More than 5,000 tons of structural steel and plates have been used, and the 144 reduction furnaces are housed in three buildings each 800 feet long and 60 feet wide. The electricity supplied to the plant by the Tasmanian Hydro-electric Commission's power house at North Esk is alternating, and must accordingly be converted into direct current before it is fed to the furnaces. This change is effected by a series of mercury rectifiers—the largest installation of such equipment in Australia.

NEW PROSPECTING DRILL

According to a recent issue of *New Commonwealth* magazine, new prospecting equipment mounted on a truck—the Drillmaster power arm drill—has been developed by Hands England Oilfields Equipment Ltd., Letchworth, Herts. Although the machine was designed primarily for oil prospecting work, with minor modifications it can easily be used for other kinds of mineral prospecting, for instance to drill holes for quarry blasting. The rig, which can be stowed for travelling, can be easily set up at any given point. Power is centred upon an arm which is pivoted at its front end. At the rear end of the arm is the rotary head which turns the drill string. The drill pipe and bit are rotated at 80 to 240 r.p.m. by hydraulic motors developing 15½ h.p. A guide mounted under the rotary head a short distance from the ground ensures that the first length of the drill pipe is held vertically; it also helps to reduce whip in the drill string. The main members of the arm are made of alloy steel and, to ensure rigidity during drilling operations, the whole structure is electrically welded and cross-braced.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales the 42,204 packages on offer realised an average price of 5s 0.69d a lb., against 4s 10.56d in the previous week and 6s 10.00d a year ago. Plain broken pekoe was quoted at 3s 9d; in the previous week 3s 8½d.

Prices obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	876	4/7
Borelli	654	4/11½
Ceylon Amalgamated	126	5/2½

U.K. Tea Stocks

U.K. stocks of tea on 25th November amounted to 109.8 million lbs, against 101.8 million lbs a year ago.

ARECANUT CULTIVATION

The Indian Central Arecanut Committee wants to retain the import duty on arecanuts at the present high rate of 12 annas a lb. in order to "stabilise the price of indigenous areca" whereas the importers are pressing the Government for a reduction in duty. India is now spending Rs. 3 to 4 crores on imports of arecanuts every year. The Committee at its meeting held last week in Trivandrum has decided to allot more funds in 1956-57 for the

Delhi

RICH in the history of two vividly different eras, Old and New Delhi provide a wonderful contrast between past and present. Moghul civilization is perpetuated in the splendour of the Kutub Minar, Jama Masjid and the Red Fort; while the Central Secretariat, Parliament House and Rashtrapati Bhavan reflect the graceful simplicity of modern architecture.

Proud of their magnificent heritage, Delhi motorists have a lively respect for progress. That's why they appreciate the virtues of Double-Powered MOBILGAS, and make it a point to look for the Flying Red Horse—honouring a tradition among progressive motorists throughout the world.

Sc. Crepe 3X	—	1.22

To arrive at f.o.b. Colombo prices add 43.4 cents a lb. for rubber other than Scrap Crepe and 31.4 cents for Scrap Crepe to the above market prices.

Calcutta Markets

PRICES EASE IN TEA EXPORT AUCTION

FAIR DEMAND FOR DUSTS

A T Sale No. 25, held on 5th and 6th December, offerings in the Export auction consisted of 58,000 packages, for which there was less general demand. Medium Assam B.O.P.s declined by 1 to 2 annas and O.F.s. by about 1 anna, whilst common and low medium broken were 1/2 to 1 anna lower. Fannings, good clean leafy B.P.s and stylish B.P.s. showed little change, the former being the strongest feature. The very few good CTC Assams were well supported but the more ordinary sorts, which comprised the bulk of the CTC Assam offerings, were 2 annas lower. Whole leaf grades shared in the general decline but Darjeelings were well supported and the few teas with tip sold well.

	1955 Rs.	1954 Rs.
Clean Black Pekoe	2 7/8 to 2 1/2	3 9/8
Plain B.P.	1 1/2 to 1 1/4	3 8/8 to 3 8/6
Medium Assam B.P.	1 1/4 to 1 1/8	3 11/8 to 3 11/6
Best CTC Assam B.P.	2 1/4 to 2 1/8	3 15/8 to 3 15/6

The offerings in the Internal sale consisted of 19,500 packages, for which there was a fair demand. The strongest feature were the black leaf types suitable for the Middle East, and these were strongly competed for at generally dearer rates. Medium Assams, commons and Doors were 1/2 to 1 anna easier; they fell as the sale progressed and were 1 to 1 1/2 annas below last rates.

at the close. C.T.C. Assams opened about 1 anna easier but were a full 2 annas below the previous week at the close of the sale. Darjeelings which were of a very ordinary description shared in the general decline.

	1955 Rs.	1954 Rs.
Medium Doors Dust	1 9/8	1 14/8
Dust	1 10/8 to 1 10/6	1 14/8 to 1 15/8
Best Assam C.T.C. Dust	2 9/8 to 2 11/8	3 2/8 to 3 3/8

The leaf offerings consisted of 2,400 packages, for which there was a fair demand at about 1 to 2 annas below the prices of the previous week.

SUGAR MARKET

During the week ended 6th December, sugar sales in the Calcutta market averaged 5,000 bags a day. Arrivals were 3,500 bags daily and stocks totalled 90,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30.8 for ordinary grain and Rs. 32.8 for big grain. Ex-mill delivery rates varied from Rs. 27.8 to 28.8. The market remained quiet.

LINSEED

Slightly quieter conditions prevailed during the past week and values displayed a small decline. Supplies from the centres were fair, and crushers cautious owing to the smaller oiltake of oil; the turnover was rather poor. Lesser activity was recorded in the oil section owing to a decline in overseas prices; shippers were rather cautious and trading was small. Latest quotations were as follows: December Rs. 20.10-0 a maund.

Commodity Markets

WHOLESALE PRICE INDEX DECLINES FURTHER

THE official wholesale price index (base year ended August 1939=100) declined further by 0.5 percent to 363.2 during the week ended 19th November, 1955, as compared with 365.1 (revised) for the previous week. The index was higher by 0.8 percent as compared with the corresponding week of last month but was lower by 3.1 percent than that of a year ago. During the week under review, the index for Food Articles declined further by 2.7 percent to 320.7 as compared with 329.6 (revised) for the previous week as a result of lower prices of tea (-15%), jowar at Amravati (-13%), gur at Muzaffarnagar (-6%), rice in Calcutta (-3%), gram at Hapur (-2%) and dal arhar and coffee native flat (-1% each), notwithstanding a rise in the prices of gram and rice at Patna (+3% each) and bajra (+2%). The index for Industrial Raw Materials, however, advanced by 1.2 percent to 419.4 owing to an increase in the prices of rapeseed in Bombay and raw silk at Malda (+4% each), raw jute and linseed (+3% each), castorseed in Bombay (+2%) and rapeseed and lac-button pure in Calcutta and groundnuts (+1% each) although the prices of manganese ore (average export prices) (-11%), gingellyseed (-9%), raw silk at Bangalore (-3%) and lac-shell T.N. pure in Calcutta and copra (-1% each) were marked down. The index for Semi-Manufactures also moved up by 0.4 percent to 336.0. Items which showed significant variations during the week were: castor oil in Madras (+4%), copra in Bombay, groundnut oil, mustard oil, linseed oil and gingelly cake (+3% each), coir yarn -Anjengo Superior and buffalo hides (+2% each), copra cake (-3%), groundnut cake (-4%), and coconut oil at Cochin (-3%). Prices of jute manufactures moved up by 2 percent while those of glass fell by 3 percent. As a result the index for the Manufactures group advanced by 0.2 percent to 373.6 during the week under review. A rise of 0.2 percent to 542.4 in the index for the Miscellaneous group was brought about by an increase in the prices of chillies at Patna (+3%) and betelnuts (+2%); the price of pepper black at Cochin, however, fell by 1 percent.

COAL PRODUCTION TARGETS

The Central Government have sanctioned so far 14 schemes costing over Rs. 1 crore for the development of State collieries. In addition 25 schemes, costing over Rs. 1.2 crores are proposed to be taken up during the second five year plan. This was stated in the Lok Sabha by the Minister for Production, Mr. K. C. Reddy, replying to a question by Mr. S. C. Samanta. The Minister said that the target of 60 million tons of coal to be reached at the end of the second five year plan had been worked out taking into account the coal requirements of the railways, the existing industries, the expansion schemes of existing industries under consideration, and the new industries likely to be set up during the second plan period. Of the additional production to be achieved during the second plan, eight million tons a year had been allocated to the private sector. The present annual production in Central Government collieries was about three million tons while the Singareni Collieries owned mainly by Hyderabad State produced about 1.5 million tons. The Government proposed to establish new collieries in Korba, Karanpura, Central India and in Raniganj areas. It would be difficult at present to give any indication of the actual number of new collieries expected to be established. The private sector was expected to increase its production from existing mines and immediately contiguous areas and not from entirely new collieries, the Minister said.

Oil
in the day's work

When it's warm work keeping cool in the office do you ever think how much hotter under the collar you'd be without the cooling properties of oil? Yes, oil. The oil that keeps your fan freely turning. The oil that lubricates it here and now, the oil in the generators back in the power station and the oil in the transformers in between.

We'd like to point out that Burmah-Shell has enough bulk storage tanks to hold over 200 million gallons of this electrifying substance, oil.

Time for your morning's paper-chase through the In Tray? Perhaps a word about paper will provide a welcome excuse for not buckling down to the grindstone *ek dam*.

Papermaking is one among scores of Indian industries where the wheels are oiled by Burmah-Shell. If you tot up all the wheels and other moving parts that there are in the coal, steel, jute and paper industries—to mention only a few—you'll find it hardly surprising that over 15,000 Burmah-Shell employees are kept on their toes delivering oil where it's wanted when it's wanted (which is almost everywhere almost all the time).

BURMAH-SHELL ...
IN INDIA'S LIFE
AND PART OF IT

THE ALEXANDRA JUTE MILLS, LIMITED.

STORING HEAT FOR FUTURE USE

According to *The British Export Gazette* a heating system which uses electricity during the night and stores the heat generated for use next day is to be installed in a school in Turkey. The system was developed in Britain by the General Electric Co., Ltd., and this is the first installation to be made outside the British Isles.

The heater used is called the "Nightstor" and is based upon the economical Continental practice of using a small fire to heat a mass of brickwork, which gives out its stored heat to the surrounding air and thus provides background heating over a long period.

The "Nightstor" consists of a sheet metal casing finished in bronze in which are mounted centrally-placed elements surrounded by a number of blocks which store the heat. The heaters are time-switch controlled so that they use electricity during the night when power stations are not troubled by a peak demand for current, the heat being stored for the next day's use. Room thermostats enable accurate and evenly-controlled temperatures to be maintained and ensure that the heaters only receive sufficient charge to give the right temperature throughout the following day.

The school in which the system is to be used is being equipped by George Wimpey & Co., Ltd., in connection with the Hirfanli Dam scheme, where it is necessary to keep the load demand on the temporary generating plant at a minimum. The heaters, however, will

BANKS

H indicates that Share capital is half paid. O, C and Dd indicate Ordinary Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PRIVATE ENTERPRISE IN THE
SOCIALISTIC PATTERNASSOCHAM SEEKS WORKING CO-OPERATION
WITH GOVERNMENT POLICY

THE annual general meetings of the Associated Chambers of Commerce are no longer occasions for stating national policies. But this year's has shown that they are now playing an equally important rôle as opportunities for the sort of discussion on which policy is eventually based. A changed purpose is in keeping with that change in the times at which both the main speakers hinted—the President, Mr. G. A. S. Sim, from the side of bewildered big business striving to serve new needs with modern methods while still preserving what is best in traditional habits, and the Union Minister, Mr. T. T. Krishnamachari, from the point of view of a Government determined to build a prosperous national future. The task of dovetailing the two attitudes is not proving an easy one. A political party representing the views of business, and providing the kind of opposition which Mr. Krishnamachari would welcome, might be the answer. But until there is such a thing, it is left to occasions like the ASSOCHAM general meeting to provide the exchange of ideas on which the development of democratic policy takes place.

The two points of view are expressed succinctly—Mr. Krishnamachari's "socialistic pattern" and Mr. Sim's "co-operation". The Minister remarked that no reference had been made by the President to the Government's re-orientation of general policy. That is because it has been accepted, if not without misgiving, at least with appreciation that it represents little more than is already happening in other parts of the democratic world, though much more slowly. The term "socialism" has changed in the same way that everything else has. Its meaning in India is, according to Mr. Krishnamachari, no more ominous than it might be in the United Kingdom. In that country, whatever else has suffered from a too hasty introduction of such a policy, it has not been established business. The chief effect has been on new enterprise and the individual consumer and taxpayer. There is nothing, unless it be conscience, which prompts the business man to reject a policy which he knows from experience will pay him comfortable profits in the short-run, and the detrimental effects of which will be of interest only to the economist. It is the means rather than the ends which business finds most difficult to accept, as Mr. Sim suggested. These do not always appear to conform with the Government's stated intentions. Business can be excused its bewilderment on all the questions the President raised. If these could be dealt with there is no doubt that the established private sector could settle down and enjoy the benefits which socialism, such as Mr. Krishnamachari outlined, will bring it. Whether it is the best policy for the future freedom and prosperity of the people of India is another matter. If occasionally there peeps through the bright prospects of high profits and easy markets the suspicion that these things are not good for the healthy development of sound, hard-working economic enterprise, that is merely a tribute to the objective conscience which lurks under the material crust of every honest business man.

ness enterprise is already established. There is no large annual increase in population to be provided for. Newly-created wealth can go to improving standards of living, and not merely to maintaining already-inadequate ones. In spite of these advantages, Britain remains the world's worst example for the defenders of high taxation policies. The burden there was only successfully shouldered during the war years. Since then there has been a constant trend towards lightening it through inflation. This, in its turn, has hampered the economy's competitive struggle from which it was so conveniently shielded in the early post-war years. The rate of growth of West Germany and the United States, both comparatively low-tax countries, and incidentally more determined exponents of free enterprise, compared with that of Britain, is something which India could profitably ponder. If any lesson is to be learned from Britain's experience, it is that a nation is more likely to prosper when its taxes and restrictions are cut to the bare minimum consistent with the inescapable defence and welfare burdens of a modern economy. But if permanent high levels of taxation must now be accepted in India, many of the personal grievances could be met, as Mr. Sim pointed out, if so much of the burden did not fall on so few, and if those who at present escape with such apparent ease could be made to take their share of it.

As alternatives to higher taxation Mr. Sim suggested more deficit financing and borrowing. The first has had a remarkable record of success. But it may not continue. This need not be the fault of the way it is being handled—the President rightly congratulated past and present Finance Ministers on their competent management. It is more likely to result from manufacturing capacity now being strained to the full and the provision of fresh capacity having been hampered recently for one reason or another. Borrowing can be expected to play an important part in future, but not unless, as Mr. Sim suggested, "the money can be converted quickly and efficiently into capital assets." If this means fails the temptation to introduce some form of compulsory saving may grow. It is difficult to decide which is the more dangerous, the forced saving which arises from inflation, or the compulsory saving introduced by a hard-pressed Government. Both are equally damaging to economic development and to political democracy. It will require great skill on the part of those who manage India's finances to avoid either.

It is difficult to appreciate why the Government should run such risks when a larger inflow of foreign capital would help to avoid them. Mr. Krishnamachari's reluctance to proffer the begging bowl is understandable—no independent nation would consent to do that unless, of course, the position was desperate. But it is not always

necessary. India has already accepted aid, and there has been no question of her independence having suffered. Many countries in Europe, including the United Kingdom, have received aid; it has not been detrimental to their independence either. Any suggestion that the United States, for instance, on whose help all needy countries have been able to rely, necessarily demands something in exchange, is to be less than fair to a spirit of generosity which has done that country nothing but credit. It would not be degrading for India to take more help from her friends, and amid ups and downs, there is nothing to suggest that the Americans have ceased to be that. But aid, and the begging bowl Mr. Krishnamachari considers it represents, is not necessary if private foreign capital can be attracted. The Minister's alternative to wooing the "shy maiden" is to leave her to frigid spinsterhood. This is an heroic sacrifice if she shows signs, given a little encouragement, of growing into an excellent wife. If it is in the nature of maidens to be shy they cannot all be left alone on that account. A happy and mutually beneficial union is always worth a little effort, and if, like all her kind, she has a few minimum requirements to ask of her future household, that does not say she need eventually come to dominate it. This simile can be carried too far. And anyway foreign investment is no maiden, others have already found her most accommodating.

It is more important to look at the facts as they are, than to work from analogies. Foreign capital from present sources asks for nothing more than to be treated the same as Indian capital, which itself is now being forced to work under a body of directions and restriction unparalleled in any other democratic country in the world. To say that the foreign investor has nothing to fear from the fourth amendment to the Constitution is to deny the purpose behind the new law, and to ignore the fact that it will not always be in the hands of statesmen like Mr. Krishnamachari. Both foreign and Indian capital have a great deal to fear from this amendment because, whatever its intended purpose, it provides all the apparatus of expropriation. It is the general climate facing all private capital in India, and the prevailing high rates of taxation, which are discouraging the foreign investor. Under-developed countries do offer prospects of high returns unless their economies are too heavily burdened and discouraged. India is no exception; the potential is here if only it could be tapped. The Minister did not give much hope that the Government's attitude might change. That is a pity because the lack of the assets which foreign investors could provide might make all the difference between success and disaster for the country's development schemes, and therefore for the survival of democracy.

The possibility of Mr. Sim's "co-operation" with Mr. Krishnamachari's "socialistic pattern" would seem to depend largely on detail; there is no fundamental gap between them. While leaving it to others to disagree on questions of broad policy, Mr. Sim and his colleagues are prepared to do their best with the opportunities open to them. It was unfortunate that Mr. Krishnamachari did not suggest any way in which these might be extended. Perhaps this was the result of speaking extempore and in public; perhaps it is an indication that the Government considers an attitude that is somewhat uncompromising and certainly paternal, the best for encouraging the sort of private industry it is prepared to maintain in this country. After listening to Mr. Krishnamachari's speech the business man can be excused the suspicion that the Government regards his rôle as a minor one and has little patience with his doubts and fears. He may well feel that if this Minister, whom he knows and trusts as one of the few true friends of private industry in the Government, can speak this way, those who are being brought up exclusively on socialist ideas and who will eventually provide Mr. Krishnamachari's successor, are going to be difficult to convince that the private sector is entitled to a point of view at all.

The most discouraging of all the difficulties which industrialists are facing in India is the growing evidence that appreciation of, and sympathy for the economic and psychological factors on which the development of free economy is based are diminishing year by year. That is just

Contents

as bad for the economy as a whole as it is for private enterprise. It is distressing for the prospective entrepreneur to find he cannot launch a new venture because high taxes make it uneconomic, but it can be disastrous for the country. A person can adjust his output of work in the face of curtailed earnings, but the community is then left with no way of ensuring the effort necessary for the efficiency of the economy. It is showing commendable independence to reject foreign resources, but it is spurning the very method by which most of the world's more prosperous and influential democratic nations have built themselves up. The business man may well ask if all these restrictions and discouragement are in the true interests of economic expansion—he already feels they cannot be to his own long-term advantage. The question of greatest importance is whether the spirit of modern liberal economic thinking is gathering any following at all in India. The words of Mr. Krishnamachari did not suggest that it is.

THE STABILITY OF INTEREST RATES SWING IN FAVOUR OF DIRECT CONTROLS

THE monetary restraints that most countries have felt it necessary to impose have already continued longer than some observers expected, and it is evident that their purpose is not yet finished. There is a general tendency to fortify these restraints, rather than to relax them. But different countries are using different methods. Especially, there seems to be a divergence between North America, where higher interest-rates are favoured, and Europe, where other methods are generally preferred; and other non-American countries are generally inclined to the European rather than to the American ways of dealing with inflation. In Britain, after Bank rate had been raised in January and again in February, it was assumed that the authorities would use the same instrument more vigorously if further restraint were needed. In the event, further restraint was needed, but the authorities avoided Bank rate and reverted to a method that had been abandoned a few years previously, direct control of the banks' lending—which is still control even though informal. Elsewhere outside of North America a few Bank rates continued to rise, but only slightly. It was especially significant that when the authorities in the Netherlands—the one international financing country where "cheap money" still prevailed—perceived that restraint was needed they restricted the granting of credit by the banks and the capital market rather than raise interest-rates.

This preference for direct control can be attributed partly to disappointment in the effects of higher interest-rates. Germany's rates had been relatively high while other countries' were low, but inflation asserted itself in Germany as elsewhere—though, for various reasons, rather later. In Britain the rises in Bank rate and in interest-rates generally did not stop the growth of bank-credit; demand for loans was unabated, and by selling securities to replenish depleted liquid assets the banks had no difficulty in financing an increase in advances. It was not until the authorities disapproved of this procedure and requested that advances should be deliberately reduced that restraint of credit had any noticeable effect. Other countries' experience was broadly similar. It has been argued that the interest-rate instrument failed because the authorities lacked courage in using it. Unquestionably, there is some level—only experiment can find it—at which interest-rates can subdue any "normal" inflation. In these times, however, when most Governments have to pay interest on huge debts (not all long-term and invariable), high interest-rates can involve a heavy burden on the national finances. Britain, moreover, holds large standing balances on overseas account, and a rise in the rate of interest paid on them can perceptibly affect the national balance of payments.

It is interesting to recall that the great era of "cheap money" that began in Britain in 1932 was intended not so much to stimulate trade as to reduce the cost of the national debt—which was then, of course, much smaller than it is now. It is interesting to recall also that a subsidiary purpose was to restrain the flow of foreign money into London after confidence in sterling had been restored (the gold standard having been abandoned in the previous year); whereas the "dear money" policy of 1955 had more apparent effect in diverting financial business to Amsterdam than in attracting international funds to London. If Governments had no regard for the cost of finance they could, of course, redeem maturing debt on some terms. In fact, however, the rise in interest-rates has unsettled Government bonds so that only very generous terms would attract investors, and some arrangements for permanent financing have therefore been deferred. Expenditure, however, continues, and in such circumstances it must be

financed on a short-term basis. It has, in fact, been financed by increasing the issue of Treasury bills and by direct borrowing from the banks. Yet either procedure runs counter to the purpose of raising interest-rates. In Britain the reduction of bank advances has been impeded by public borrowing and the banks' assets have become so liquid in consequence of the increase in Treasury bills that monetary stringency by orthodox means could no longer be easily applied even if it were attempted.

The banks, however, are increasingly resistant to unorthodox restraint. They cannot be persuaded that selecting borrowers according to "the national interest" is a part of their function, and a preference for a yet higher Bank rate has been openly expressed. They argue—and they can adduce some evidence—that customers who fail in their efforts to get credit from the banks can obtain finance elsewhere; which would be either impossible or too costly if stringency were applied by orthodox means. In Britain in recent weeks there has been a significant strengthening of opposition to monetary stringency as such, irrespective of the method of applying it. Lord Chandos, chairman of Associated Electrical Industries, has described credit-restraint as "a very blunt instrument", which could do great harm if it were used much longer. It affects developing companies more than mature ones, he has pointed out. But the managing director of one mature company, Mr. A. S. Dick of Standard Motor, has said that the restrictions have made it "practically impossible" to obtain from the capital market the finance needed to instal new cost-saving equipment, so that more profits must be retained for capital purposes. The next phase is not easy to envisage, if inflation, checked but not halted, requires further treatment. If interest-rates are stabilised, as they appear to be, the Governments of various countries will not easily find means to restrain demand without arousing resentment among bankers and industrialists. It may be that they will have to consider more seriously what one British banker, Lord Airlie, governor of the British Linen Bank, emphasised as the most important of all deflationary measures—economy in public expenditure.

CALCUTTA EMPLOYMENT SURVEY

IN a recent assessment of the achievements of the first five year plan, Mr. Deshmukh admitted that the unemployment position at the end of it would be considerably worse than what it was at the beginning. On his calculation, the plan has resulted in creating about five million new jobs on the basis of the expenditure incurred. But the increase to the labour force resulting from population growth during this period amounts to nine million people. Thus, at least four million people have been added to the unemployed manpower during the first five year plan, and obviously the Government is facing worse unemployment at the start of the second. The true extent and character of this problem however have not yet been accurately determined. The Planning Commission has been holding a countrywide survey through various competent institutions. The Calcutta University's socio-economic survey is one such. Its findings, so far as the unemployment problem in the city of Calcutta is concerned, broadly uphold Mr. Deshmukh's assessment of the problem as a whole.

The Calcutta survey reveals that over the past three and a half years, there has been a net decline in employment to the extent of 3.7 percent in the organised private sector. The trend nevertheless is, in a sense, a mixed one. In office establishments, there has been a certain increase in managerial staff, such as officers and assistants, and the strength of the subordinate or clerical staff remains more or less unchanged. In factories and workshops, the managerial staff too has increased. But all other categories of employees have fallen in number, the biggest drop being amongst the semi-skilled. The decline in the latter category of employees dictates the trend of employment. No complete explanation is given in the Press report of Dr. Neogi's statement of this peculiar trend. He is reported to have said that in the year 1953, the worst year of the survey period from the employment point of view, the economic plight of the jute, coal and iron and steel industries during the year might have been responsible for the fall in employment volume. He was not completely sure whether rationalisation had much to do with the fluctuations, as the evidence from various sources was conflicting and no positive conclusion could be based on it.

Since unemployment has been consistently increasing among the semi-skilled, it would be worth while to go deeper into the causes than the survey has done. It is certainly a very disturbing feature at this time when the industrial economy of the country is supposed to be expanding. While industrial production has been rising, implying a higher output per worker, considerable production capacity remains unutilised in many industries, particularly engineering of which Calcutta is the

main centre for the country. This fact more than any other seems to explain the character of unemployment in Calcutta, so far as it affects the semi-skilled worker. The comparatively low rate of fall in the employment of unskilled workers also supports this conclusion. The unskilled workers are mobile and can be shifted about from industry to industry according to the conditions of demand for their services, while the semi-skilled are very much less mobile as their professional skills are necessarily specific.

The survey records the fact that the employment position was a little better in 1954 than it was in 1953, but compared with 1951, the position was worse. That was inevitable. While the existing volume of employment was declining, the number of job-seekers was increasing due firstly to the influx of refugees and secondly to the normal population growth. The survey thus discloses a gloomy picture of things with only two exceptions. One is that the problem of the educated unemployed, particularly those with higher education, has been mitigated to some extent by the extra jobs available on managerial and supervisory staffs. The other is that the real income of those in employment has increased due to the falling cost of living index. But these are a few silver linings, and do not materially affect the problem's essential character.

TEA IN TEARS

THE cup that cheers seems to be rapidly becoming the cup of tears. The sharp decline in tea prices at the auctions this week is the worst phase yet in the months-old trend of a softening market. The main reason for the fall is that the stock congestion in Calcutta shows no signs of easing; demand remains low, not enough tea is being exported and huge quantities are at present on the way down from the producing areas. This congestion, in line with the indications given in Capital a month ago, is partly the result of the Government of India's policy of allowing less North Indian tea to be exported direct to London for auction there. Producers are now seeking to alleviate the situation by asking the Government to release an extra eight million lbs for direct shipment. But the main reason is that demand for tea from the Calcutta market has been poor; the year is approaching its end, and there is still no sign of a recovery in British purchases. The commodity is caught in a vicious circle: people will not buy tea because they think that the pressure of stocks will push prices down further, meanwhile the size of the stocks becomes embarrassingly large because the tea is not being bought. When, and in what circumstances, the circle is likely to be broken is becoming increasingly uncertain.

The downward movement in prices has meanwhile received sharp new impetus from the large increase in North India's crop last month. Until the end of October this year, the crop was 456.1 million lbs, or 5.6 million lbs in excess of the corresponding 1954 figure. But 62.2 million lbs have been produced in November 1955, as against 52 million lbs in November 1954. The excess over last year has as a result, shot forward to 15.8 million lbs (the total until end-November being 518.3 million lbs as against 502.5 million lbs). Meanwhile, figures for other major exporting areas show that they too have much more tea to offer. Until the end of October, Ceylon's output was 17.3 million lbs ahead of last year at 318.6 million lbs; and South India's was nearly 2 million lbs ahead at 110.3 million lbs. As against this, Pakistan was 5.1 million lbs behind at 40.7 million lbs, and Indonesia was 4.6 million lbs behind at 71 million lbs (until end-September). Thus, according to the statistics so far available, the world's major exporters have produced 25.3 million lbs more tea this year than they did last year; but it is not yet certain whether consumers will be wanting all the extra. In fact, there is evidence to suggest that they have made do with last year's tea for a little longer than usual. If the steadily rising production of East Africa is taken into the account, the situation becomes even more disturbing. What the trade described as a fairly sound statistical position only a month ago now seems decidedly less so.

Tea has hitherto been basking in the Riviera sunshine of its 1954 prosperity, but perhaps the time has come when it may awaken to realise that the sun probably set quite a while ago. In the gathering dusk, the correct choice of its journey home to health and stability depends on whether it takes a good look at three main guiding stars in the international firmament. The first of these is the fate of the International Tea Agreement, which was said in former years to serve, however inadequately, as an instrument of market stability. The second is that Ceylon is determined on an extraordinarily large increase in her output. The third is that East Africa seems bent on much the same thing; and a good deal of her industry is in the hands of interests close to the main consumer. Whatever the ups or downs of the immediate future, the long-term outlook is one of steadily increasing competition in tea. That in itself would be no bad thing, but what is hardly yet realised in influential quarters is that a reduction in costs would be the crucial factor for survival in the new

CURRENT COIN

India's Foreign Trade.—Foreign trade statistics relating to the half year January-June, 1955, as published in the November issue of the Reserve Bank of India Bulletin, disclose a satisfactory position. There was a small deficit during the second quarter no doubt, but that deficit (Rs. 0.4 crore on current account) was seasonal and was strikingly small compared with the same quarter of 1954 when the deficit was Rs. 13.1 crores. The first quarter had a large surplus of Rs. 26 crores and the position for the half year as a whole is one of a sizeable surplus. The capital account was equally satisfactory. During the first and second quarters there were net surpluses of Rs. 19.3 and Rs. 3.3 crores respectively. The only adverse feature was the terms of trade, which deteriorated after a full year's stability. The net terms of trade index declined from 111 to 104 during the second quarter. This was the result of a decline of only one point in the imports unit values index at 93 in the second quarter while the quantity index fell by 5 points to 106; the exports unit values index dropped by as much as seven points to 97 during the second quarter from that of the first and the quantity index was only a point lower at 105. Region-wise, a deficit of Rs. 5 crores occurred with the sterling area excluding Pakistan during the second quarter as against a surplus of Rs. 27.4 crores during the first, resulting mainly from a markedly smaller volume of exports. With Pakistan, the deficit of Rs. 0.1 crore during the first quarter was converted into a surplus of Rs. 0.6 crore during the second, principally due to bigger invisible receipts. The surplus with the dollar area continued during the second quarter, though it was slightly less at Rs. 10.8 crores (Rs. 11.9 crores). The fall was due to a higher volume of imports and a decreased quantity of exports mainly represented by tea. The O.E.E.C. countries also had a surplus against India—Rs. 13.2 crores during the second quarter as against Rs. 14.3 during the first. India however had a surplus with the rest of the non-sterling area of Rs. 6.4 crores during the second quarter and Rs. 1.1 crore during the first. Commodity-wise, tea fared the worst among India's exports, the earnings declining by as much as Rs. 42 crores during the second quarter. This fall was represented more in quantity than in price—the proportions being 60 percent and 26 percent respectively. Jute and cotton textile exports were maintained. Private imports of raw cotton, vegetable and mineral oils and machinery ran higher than during the previous quarter, which offset the decline in Government imports to a large extent, the net position showing the nominal deficit.

Steel Shortage.—The problem of steel shortage facing the engineering industry was stressed again in Mr. Sankalchand G. Shah's presidential address to the ninth annual session of the Engineering Association of India, Bombay Region, held recently in Bombay. Mr. Shah did not agree with the Union Minister for Industry, Mr. T. T. Krishnamachari that the Government had not been warned by the private sector at all about its increasing demand for steel. He thought the Minister's statement was rather strange in view of the fact that repeated representations had been made to the Government for a long time for increasing the steel supply before the Government actually set up and took notice of the fact. He therefore welcomed the Government's decision, though belated, to import one million tons of steel a year and also its plan to expand steel production in the country to the extent of 4.5 million finished tons by the second plan period. He suggested that the Government should import more than one million tons in view of the above steel production programme, so that by the time 4.5 million tons of finished steel was actually produced, the consuming industries would be in a state of readiness to absorb that quantity.

Role of N.E.S.—The agricultural extension development centre for Asia and the Far East, opened at Bhopal recently by the Deputy Chairman of the Indian Planning Commission, is designed to serve a great purpose. Agricultural development is necessarily a very important part of the economic development programmes of the under-developed countries of Asia. The national extension service has therefore a fundamental rôle to play in development. India is in the fortunate position of leading the rest of the countries in this part of the globe in this respect. Already a good part of the country has been covered by national extension service blocks and it is proposed to extend the service to the entire country by the end of the second five year plan. Popular co-operation has come forth for this purpose in an encouraging

measure. The report of the Planning Commission's programme evaluation body testifies to this. The administrative problem of organising the blocks and staffing them with adequately trained personnel has yet to be overcome and Mr. Krishnamachari's statement reflected the Planning Commission's anxiety to remove all bottlenecks as quickly as possible. Without administrative handicaps removed, it will be impossible to cover the entire country with N.E.S. blocks by 1960-61 and as technological improvements in agriculture are now closely linked with this movement, the problem has assumed a great urgency. Technological changes have been occurring in Indian agriculture since the postwar years, but the rate has been rather slow for very obvious reasons. The 1951 Indian Livestock census, and that is as up-to-date data as one can get on this matter, bears this out. Between the years 1945 and 1951, modern agricultural implements such as iron ploughs increased to 931,110 from 480,998, oil engines to 95,140 from 12,002, electric pumps to 29,834 from 8,561 and tractors to 8,354 from 4,524. But this also shows that the Indian peasant is quite receptive to new ideas and if he can be helped along with credit and technical guidance he will take to modern technology more readily than imagined. The Government's rural credit organisation has removed one need—the N.E.S. will remove the rest.

U.S. Boom Continues.—The business boom continues, with trade and industrial activity holding at peak levels and no early slackening in sight, says the First National City Bank of New York in its latest monthly letter on U.S. economic conditions. The rate of climb in industrial production has levelled out, as was to be expected after the basic industries began to bump against the ceiling of practical capacity, but this in itself has not dampened optimism. Most people have understood that the spectacular gains of late 1954 and early 1955 could hardly continue; and in housing and automobiles, which have contributed so much

NOTICE

With next week's edition of CAPITAL, dated 22nd December, it is proposed to issue a 128-page supplement, the Annual Review of Commerce, Trade and Industry. Besides essays on specific industries, e.g. Jute, coal, tea, etc., the Review will contain exclusive articles by, among others, the Oxford economist Dr. T. Balogh on education and technical progress in India; Dr. B. R. Shenoy on finance for the second plan; Prof. C. N. Vakil on the Plan-frame; Dr. Sudhir Sen on Indian Shipping; Mr. S. K. Dey on small-scale enterprise and Mr. N. Das on the future of industrial enterprise. The Review will be distributed free to registered subscribers. Additional copies at Rs. 5 each may be obtained from the Manager, CAPITAL, at 5, Mission Row, Calcutta 1. Orders for extra copies should be placed early.

to the 1955 showing, a small decline is more commonly expected than further advances. But in many important lines new orders are outrunning shipments and unfilled orders are still mounting. The urge is for expansion, not curtailment. A good many manufacturers would be producing more if they could; for example, the railway car builders, with order-books filled, are unable to operate full time for lack of steel, although the steel producers are turning out all the tonnage that they possibly can. The advance in the stock market during November must also be viewed as a sign that confidence, disturbed earlier by President Eisenhower's illness, has risen again. In successive surveys, business men reaffirm optimistic sales expectation for their own products even though they may see reasons for caution in other parts of the economy. Consumers evaluate their financial outlook cheerfully and consider this a good time to buy. More and more reports have been emphasising the problems of prosperity—scarce materials, labour shortages, transport bottlenecks, rising prices and tight money. In an economy with activity at an all-time peak, it is natural to find some lines straining at the seams. Besides the well publicised shortages of steel, copper, nickel and aluminium, such varied materials as newsprint, glass, platinum and cement are in tight supply. Manufacturers find skilled labour increasingly hard to get, while retailers complain of difficulty in finding temporary sales help for the Christmas season. The trend of industrial wages and prices is upward, although obscured in over-all commodity indexes by lower agricultural prices. Few think this trend has yet run its course.

WHEN IN EUROPE

fly **BEA**
IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more... if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airliners—more VISCONTES for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

... and fly on the **BEA CAR HIRE PLAN**
BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

BRITISH EUROPEAN AIRWAYS

Full details of air reservations from your local Travel Agent or any office of B.O.A.C. All arrangements for car booking at BEA Office in Europe; or B.E.A. Dordrecht, 14-20, Regent Street, London, S.W.1. Currant 1933

Without Prejudice

PRESS COMMENT ON LAW SUITS

A CONTEMPT OF COURT CASE

FROM ORISSA

(FROM OUR LEGAL CORRESPONDENT)

NOTHING, of course, will excuse personal invective against the judge himself. That is contempt of the very worst kind. Hardly anything, not even the most abject and grovelling apology, is likely to save the offender from jail, there to remain until the court considers the offence expunged. And here we come to an important distinction between the law of contempt and the law of libel. It would be a complete defence to a suit for damages for libel for an editor to prove that defamatory statements contained in a report in his newspaper of judicial proceedings were both fair and accurate, and were published contemporaneously with the proceedings. Such statements, if true and demonstrably true in substance and in fact, are privileged. But this is not so in contempt of court. And the reason is this. Invectives against judges and juries are not punishable in order to vindicate the personal dignity of the individuals or to protect them from insult as individuals, but to vindicate the dignity and authority of the court itself and to prevent acts tending to obstruct the due course of justice. And the invective or insult must be made against the judge *qua* judge. Subject to the law of libel, I can write that Sir Nathaniel Pipkin is a colossal fool without committing contempt, but if I say the same thing of the Hon'ble Mr. Justice Pipkin while his lordship is trying a case, I am sunk, not for insulting Sir Nathaniel Pipkin but the High Court of Justice by implying that one of its judges trying issues for the solution of which brains and intelligence are necessary is destitute of the same.

Nevertheless an editor has his rights. The court's right to punish contempt does not militate against the right of the Press to publish full reports of trials and judgments or to make, with fairness, candour and decency, comments and criticisms on what passed at the trial and on the correctness of the verdict or judgment. But there is a difference between a decided case and pending proceedings. The exact limits of the power to punish for contempt of court with reference to the latter have been the subject of controversy, the Press to liberty and of the public to free discussion of the proceedings of courts of justice, with the claims of the judges to due respect and

of the parties to litigation that their causes should not be prejudiced before trial by outside interference. The law here is not settled. What would be fair comment in a decided case may tend to influence the mind of the judge or jury in a case waiting to be heard and will accordingly be punished as a contempt. But it is permissible to make fair and truthful comments on a pending case so long as they are not calculated to interfere with the due course of justice in the case; and once the judgment has been given, the courts will not interfere, though the proceedings are misrepresented to the injury of the applicant; but scandalising the judge even after the end of the case will mean durance vile.

Talking about scandalising the judge brings to mind an incident which, if it had developed, might have involved the most famous judge of his day in sending to jail the official head of the bar in England. The judge was the great Henry Hawkins, later Lord Brampton the "hanging judge," as he was styled on account of his inflexible severity, and, strange to say, held in respect and even affection by the criminal tribes who styled him "Enery Orkins". Sir Edward Clarke was one of the three great advocates of that time, his only rivals being Sir Edward Carson and Sir Rufus Isaacs. The time came when the octogenarian judge decided to retire, full of years and honour, to become a Law Lord. It is the custom, when a senior Queen's Bench Judge retires, to stage a ceremonial farewell. The Attorney or Solicitor-General appears officially and makes the first of several adulatory speeches to which the judge—still a judge, remember, and vested with full powers—gracefully replies and then steps off the Bench. Sir Edward Clarke was Attorney-General and upon him was to devolve the speaking of the eulogistic farewell. He was a scrupulous, honest and humane man, and he not only disliked the judge, but considered him a disgrace to the Bench, an opinion which probably not one single other person in all England shared. He not only declined to make the usual speech but, as he narrates in his autobiography, informed the organisers that if the little ceremony were held, he would turn up and make a public protest, describing Hawkins J. as a wicked judge and a wicked man. If he had done so, it would have been the contempt case of the century, for knowing the judge's stern and implacable nature the organisers were certain that he would have instantly clapped the Attorney-General of England into jail for contempt, as his last judicial act.

A pretty kettle of juridical fish! But it is odd how these crises are averted. The judge himself, without knowing anything about this one, uncon-

sciously saved the situation. He hated all humbug, ceremonial and anything in the nature of public praise. He told no one the actual date, but when it arrived with a little extra gravity to the bar, and bowed quietly behind the curtain and from a steeped distinguished career. You can't really blame Clarke. He had appeared long years before for the defence in the Penge case, the very first murder trial over which the judge, just appointed, presided; and was convinced that all the accused had been unfairly and unjustly tried, convicted and sentenced to death, through the bitter partiality of the judge, and after reading the report of the case in the Famous Trials series, one can have little doubt that Clarke was right. There was no Court of Criminal Appeal in those days, so nothing could be done to set the convictions aside, though the death sentences were commuted. He watched, himself no doubt bitterly partial, the judge's career year by year afterwards and was confirmed in his opinion that his lordship was a menace to the public. Yet someone, Sir John Simon one thinks it was, said on Lord Brampton's death that an innocent man on trial could not be in better hands than his. The reader will forgive these digressions which occur to one as one writes; with which apology we will return to contempt by newspapers.

The latest Indian case on the subject comes from the Orissa High Court and concerns an article on a pending criminal trial published in a weekly named *The Utkal Bharat* of Berhampur. The facts were that one Uchhap Patra filed a complaint against 16 people for criminal trespass inside his house, looting his properties and burning a substantial portion of his effects. He further alleged that when he laid his information about the incident before the police, the sub-inspector abused him and refused to take any action and that other police officers were also against him on account of his poverty and being suborned by the accused men. While the case was pending, and the very next day after the close of the prosecution case, the weekly published an article which, the accused men claimed, constituted contempt of court in that the article had a tendency to interfere with the fair trial of the accused. This is the English translation of the article. It began with an excellent example of a "scares-headline" of the innuendo type: "On whose side is the Police?", clearly suggesting that the police are not impartial but take sides. Then it proceeded: "Acute friction is going on between two factions in village Chatula..." It is reported that the sub-inspector of police of Vangpur, Sri Mori Panda, has taken the side of the rich man and is harassing the weaker party. He went to the extent of helping two rich men of the village named Gopinath Dura and Krushnamurti Dura—two of the accused in the pending case—to burn the house of a very poor man of the village named Uchhap Patra (the complainant in the pending case) and to cut away his paddy crops. And it is also reported that in that area oppression by the police has increased considerably. Will the A. S. P. . . kindly look into the matter?"

There was clearly no doubt that the impugned article would tend to interfere with the fair trial of the accused. This was not seriously contested in the subsequent contempt proceedings against the editor and publisher of the weekly. But counsel on his behalf urged that he had no knowledge of the pendency of the criminal case and that consequently his action did not amount to contempt of court. Now, good faith, absence of criminal intention, and the existence of the highest motives are no defence to a charge of contempt though they will go a long way in mitigation of penalty. But what if the editor knew absolutely nothing about any pending proceedings at all? The defence will not avail him except, if the court believes him, as an extenuating circumstance.

We have not space now to quote fully the extremely interesting judgment of Narasimham J. But his lordship summed up the reason behind a hard, if logical, rule as follows: If the summary procedure for contempt is not strictly enforced against the editor and publisher of the article unless actual knowledge is brought home against him (which in most cases is an impossibility), the stream of justice cannot be kept pure and unsullied and the law of contempt would become quite ineffective. The reasons for which good faith and absence of criminal intention have never been held to be a good excuse would apply with full force even in those cases where there was absence of knowledge of the pendency. The editor was held guilty and fined.

It should however be borne in mind that absence of knowledge of the pendency may be a sound defence where the pending proceedings are civil and not criminal.

The State v. Biswanath. 1955. A.I.R. (Orissa). 169.

Shukla v. Ishwarchandra. 1955. A.I.R. (M.B.). 183.

PAKISTANI CONTRACT FOR SCOTLAND

The oldest Scottish firm of railway-wagon builders—R. Y. Pickering and Company, of Wishaw, Lanarkshire—has received an order from Pakistan for the construction of 1,100 covered railway wagons, the total cost of which is £1,500,000. Delivery of the wagons is to begin towards the end of 1956 and is expected to be completed about seven months later.

THE second ASSOCHAM general meeting since the Government announced its "socialistic pattern" was not nearly as exciting as the first. Private industry has had a year or more to get used to the new look and adjust itself accordingly—or make other plans. If Mr. Krishnamachari did not offer the same reassurances as Mr. Deshmukh it is only because they are probably no longer needed. The worst is now known and industry has been left in no doubt that it will have to make the best of it. Mr. Krishnamachari was neither conciliatory nor encouraging—he was merely explanatory. One had the feeling he might have concluded his speech with "so let us hear no more of these complaints". He will hear no more from me, not in this Ditcher paragraph at any rate. But one point which Mr. Krishnamachari did bring up, and which I am sure my readers will agree he did not altogether get right, does call for comment. Satisfaction is usually a matter of temperament, not of material possessions, but given a straightforward choice, there would be few who would choose an income of Rs. 25,000 a year in India in preference to £2,000 in the United Kingdom. I believe one can live cheaply upcountry, but it is not possible in Calcutta or any of the other big cities. And I know that £2,000 does not go as far in London as it does in the provinces. But it remains true, for a European that is, that Rs. 25,000 a year does not nowadays provide even the bare necessities for an average family enjoying a middle-class standard of living, whereas £2,000 a year most certainly does. I do not know the exact figures, but I think it is quite likely, as Mr. Krishnamachari suggested, that a man with this income in Britain, and keeping a family, say, wife and three children, would be paying as much tax as he would in India. If he were, free medical treatment, various welfare benefits, including both sickness and pensions, and free education of the best quality at all grades, would all contribute towards making him considerably better off. In India, the same man would have to send his children home to boarding school or university, keep servants, and provide for an early and often unwelcome retirement. If Mr. Krishnamachari had said that Rs. 25,000 a year in India is roughly equivalent to £900 a year in Britain, I think he would have been nearer the mark, provided of course one ignores such things as the trying climate, the long periods of separation which families must suffer, the loss of earnings involved in leaving India and finding a job in Britain or in retiring at an age when those who stayed at home are still looking forward to ten of the most profitable years of their working lives. And on top of all that there is Prohibition.

A number of my readers seem to think that because I write in a financial newspaper I am therefore an authority on the art of making a fortune on the stock exchange. I always have my answer ready. It is quite a simple one—I am still writing for a financial newspaper. I often wonder if they believe me because they then ask: Well, what advice have you to offer on playing the market? I have an answer to this too; it is the same as Mr. Punch's advice to those about to get married—don't. After all that I suspect they still look on me with a scepticism which I fervently pray the tax man does not share. But the fact remains that the person who can make a fortune on the stock market is as rare as the punter who can make one on the horses, and for very much the same reason. All that the average person can do is to secure for himself a modest return on whatever capital he might have by investing it wisely. That is, after all, what the market is really for. On this point advice is easier to give; I suggest a good stockbroker and a sound resolve to listen to his counsel. For those who prefer to

A DITCHER'S DIARY

exercise their own judgments, or for the suspicious minded who unjustly consider stockbrokers a bunch of crooks, there is always a book on the subject. One has just appeared in the United Kingdom entitled *A Simple Guide to Shareholding and Company Accounts*. It is published by Putnams at 9s 6d and has been written by Mr. John Wood, who not long ago left the staff of the *Manchester Guardian* for a new career in the banking world. The guide is very simple indeed. It is planned specially for the small personal investor who either has a few shares or would like to buy some. Mr. Wood takes his readers through the procedure of buying and selling a share, the meaning of profit, gross and net dividends, assets and earnings. Perhaps most important of all, he strives to give the inexperienced some grounds for confidence in the face of professional advice. I am afraid the question whether a person who knows so little about investing ought to be encouraged to buy ordinary shares in the first place, is left open. Unless he has fully insured his life, established himself in his profession and made sure that a setback cannot ruin him, I do not think he should.

Gambling in stocks and shares is not the only thing the inexperienced should avoid—real estate is an equally tricky commodity to handle. It is even more so when it is not even on this planet, but on the moon. An interesting little story has just come from the United States where Mr. Robert Coles, a former chairman of the Hayden Planetarium in New York and now president of a company called the Interplanetary Development Corporation, has been offering one-acre plots on the moon for a dollar a time. Already 4,500 people have paid their money. Each purchaser has received (1) a general quit-claim to an acre of good crater bottomland (in the Copernicus crater in the moon's north-east quadrant), the buyer receiving the fishing and winter sports rights near his plot; (2) a brochure describing the wonders of the moon; and (3) a map that shows the purchaser how he can see his land through a powerful telescope. The dollar is not therefore entirely wasted. But Mr. Coles does not regard his enterprise as a joke. He has filed an affidavit with the City Clerk at Glen Cove, Long Island, claiming the entire moon. In this he has said that his long study of the moon has convinced him that an expedition will soon land there, and that he will be a member. Since nobody has ever claimed land rights there before he says he can see no reason why it should not be done now. But there are others who do not regard it as a joke either. The New York State Attorney-General's office has ordered an investigation into Mr. Coles's activities.

An avalanche of words lasting one hundred and thirty-three hours. Incredible as it may sound, this is the record just established by Mr. Kevin Sheehan, an Irishman—of course. What can this feat be compared with? Niagara? The mighty Amazon? The rains of Cherrapunji? But these are natural phenomena; they cannot, without some unforeseen disturbance to the rhythm of nature, do otherwise than go on flowing or falling. It would only be if they were to stop that they would become news like Mr. Sheehan, or Lord Northcliffe's man eating dog. Coming to human analogies, I do not know if there has ever been an orator from Cicero to Mr. Khrushchev, or a preacher from the Buddha to Billy Graham, (who, by the way, will shortly be arriving in Calcutta) who could be considered to rival the voluble Celt.

MEETING OF ASSOCIATED CHAMBERS

TEXT OF RESOLUTIONS ADOPTED

AT the annual general meeting of the Associated Chambers of Commerce in Calcutta this week, the following eight resolutions were adopted unanimously.

Corporate Taxation.—Bengal Chamber of Commerce & Industry. The Associated Chambers of Commerce of India:

(a) welcome and urge the early implementation of the Taxation Enquiry Commission's recommendations regarding the treatment of bonus shares and the abolition of the system of calculating depreciation on the "months of use" basis;

(b) deplore the recent widening of the field covered by Section 23A, particularly in respect of manufacturing and trading companies;

(c) draw attention to the existing unsatisfactory double taxation relief arrangements and urge the negotiation of double taxation avoidance agreements with the principal countries with which India trades;

(d) regret the extension of the liability to tax on distributions in a liquidation with the consequential additional liability on "excess dividends";

(e) deprecate the continuing application and recommend the deletion of Section 18A.

Personal Taxation.—Bombay Chamber of Commerce. The Associated Chambers of Commerce of India, having carefully studied the recommendations of the Taxation Enquiry Commission and having observed with dismay the practical effects of the implementation of some of these recommendations as part of the 1955 Budget and Finance Act:

(a) contest, in particular, the conclusions reached by the Commission on the present scope for a further increase in the level of personal taxation; the imposition of a ceiling on incomes; and the levy of a "surcharge-cum-compulsory deposit";

(b) invite the attention of the Government to the serious and adverse effects which the adoption of these proposals would have, and which the 1955 Budget measures are having on the ability of commerce and industry to attract and retain the administrative and technical personnel necessary for the development of the private sector of the country's commercial and industrial economy;

(c) repeat their view that if the current and second five year plans are to be successfully accomplished, it is essential that greater encouragement be given to the individual to work, save and invest; and with this object in view;

(d) recommend:

(i) that the level of taxation be such as to leave adequate incentive to the individual;

(ii) that it be accepted that the imposition of a ceiling on income and/or the levy of a surcharge-cum-compulsory deposit would be inconsistent with requirement (i) above, and that such conceptions should be abandoned as not being in the best interests of the country's economy;

(iii) that early steps be taken to implement the Taxation Enquiry Commission's recommendation that the employer's contribution to provident fund and interest thereon should not be treated for tax (including super-tax) purposes as income in the employee's hands;

(iv) that the employee's contribution to provident fund and/or life assurance premia should be allowed as an abatement for super-tax as well as income tax purposes; and

(v) that relief on earned income be restored.

Taxes on Commodities.—Bengal Chamber of Commerce and Industry. The Associated Chambers of Commerce of India, having duly considered the implications of the Assam Taxation (on goods carried by roads or inland waterways) Act XIII of 1954, and the West Bengal Taxes or Entry of goods in Local Areas Act, resolve that the Central Government be asked to take such action as is deemed appropriate to ensure that no commodity is made liable to taxation merely by reason that it moves from one State to another or from one place to another within the same State, and, further, that no commodity which is subject to Central excise or export duty be taxed by any State Government save with the consent and approval of the Central Government.

The Cotton Textile Industry.—Upper India Chamber of Commerce. This Association, while recognising the extent of the problem of unemployment and under-employment in the country, and appreciating the reasons for the support and encouragement of small-scale and cottage industries, considers that the objective of a healthy and viable cottage handloom industry will not be achieved by an arbitrary restriction on the productive capacity of the mill industry. The two industries can be complementary, not competitive, and better methods than this exist for protecting the former against the latter. Moreover the restrictions placed on the mill industry are leading to the loss of markets and foreign exchange and have an inflationary effect. The Associated Chambers therefore urge:

(a) that the target for production of cotton cloth, as well as the quota of the mill industry by the end of the second five year plan should be substantially increased;

(b) that every encouragement and assistance should be given to the modernisation of plant and methods in the textile industry as a whole, so that

cottage industry, co-operating and not competing with an efficient mill industry, may expand and share in its prosperity.

Labour Legislation and Industrial Disputes.—Madras Chamber of Commerce. This Association considers that in the interests of the maintenance of industrial peace and the development of spontaneous and healthy labour relations:

(a) the statutory changes contemplated in the Industrial Disputes (Amendment & Miscellaneous Provisions) Bill should be reviewed with the object of reducing the range of potential disagreement and, more particularly, that there should be an amendment of the provisions regarding retrenchment and lay-off, that the definition of workman should be clarified to exclude all supervisory staff, and that the proposed discretionary interference with Standing Orders should be abandoned;

(b) since the right of appeal is being withdrawn by the Bill, it is most desirable that qualifications for appointment to Industrial Tribunals and Labour Courts should be fixed at levels considerably higher than those contemplated in the Bill and that principles and norms should be formulated for the guidance of Industrial Tribunals and Labour Courts;

(c) the provisions in the Bill regarding notice of change, which are likely to cause grave dislocation, require to be amended at least to conform to the requirements of normal business practice;

(d) the extension of legislation such as the Employees' Provident Fund Scheme and the Employees' State Insurance Scheme to new areas or industries should be made with caution in order to reduce to the minimum the strain on employer-employee relationships involved in practice by such extension, particularly where satisfactory arrangements already exist;

(e) the formulation and application of new legislative measures dealing with labour relations should be examined in the light of the considerable volume of such legislation which has been applied to industry generally during recent years;

(f) the Government should resolutely oppose any resort to violent agitation and lawlessness, as also the declaration of strikes and hartals for political reasons, and in the suppression of such activities should utilise more effectively the legal sanctions with which they are already equipped.

Rail and Road Transport.—Punjab and Delhi Chamber of Commerce. While appreciative of the difficulties involved, this Association draws the attention of the Government of India to:

(a) the grave inadequacy of the country's rail and road transport systems to cope with the increased traffic which has already resulted from the expanding economy of the country and the failure of both systems to anticipate rather than to follow that expansion;

(b) the threat to the success of the second five year plan inherent in the inability of these transport systems to move the increasing volume of traffic which will be associated with agricultural, industrial and—in particular—the mineral development under that plan;

(c) the need for the highest priority to be given to an appropriate expansion programme of rail development, in co-ordination with sea and road transport, and on a scale sufficient to guarantee adequate transport facilities throughout the second plan; and

(d) the necessity for early action to rationalise the Central and State taxation of road transport and the licensing procedure for goods vehicles.

Stores Purchase Enquiry Committee Report: Delay in the payment of bills for goods supplied to Government.—Bengal Chamber of Commerce & Industry. This Association deprecates the continued failure of Government indenting departments to make payment of bills due to suppliers with reasonable promptitude. While welcoming the fair and constructive attitude which has been adopted in the report of the Stores Purchase Committee, both to this matter and to other unsatisfactory aspects of the present stores purchase procedure, it has noted with regret that action on the great majority of the recommendations made in that report is not yet effective. The Association therefore urges that these recommendations should be implemented immediately and that there should be strong administrative and executive action together with such strengthening of the staff of the departments concerned as may be necessary to eliminate the present causes of delay in bill payments.

The Indian Companies Bill, 1955.—Bengal Chamber of Commerce and Industry. This Association, in drawing attention to the numerous and onerous responsibilities which will devolve on the Company Law Administration Branch of the Union Finance Ministry on the bringing into force of the Indian Companies Act, 1955, wishes to urge the importance:

(a) of building up an adequate and trained cadre of Government officers capable of discharging these responsibilities with efficiency and promptitude;

(b) of the early publication for opinion of the draft rules, notifications, forms etc. to be made or prescribed by the Government under the Act; and

(c) of refraining from bringing the Act into operation until these two prerequisites have been met.

DISCUSSION ON ASSOCHAM RESOLUTIONS

THE Assocham resolutions each year are an index of the importance of various items in the list of business worries. This week's collection gives some idea of the rate at which the State's fiscal balloon is being inflated in that no less than three of the eight unanimously adopted relate to taxation. The creeping advance of the welfare State and the "socialistic pattern of society" are seen from at least three other resolutions—on labour legislation, the cotton textile industry, and the Companies Bill. The inadequacy of transport comes in for discussion in one resolution, now a hardy annual, and the Government's stores purchase policy in another.

Introducing the resolution on corporate taxation, Mr. G. R. Crooks (Bengal Chamber) said that he hoped the Government would not tax bonus shares. "The issue of two pieces of paper in the place of one does not, of itself, produce any income," he declared. It was essential that section 23A be amended, as it did not allow many companies to plough back for future development as much from their profits as was desirable. This would hamper their progress. Mr. Crooks spoke of the difficulties over double taxation, and thought that treaties should be quickly negotiated with the principal countries with which India trades. He concluded by pointing out that section 18A is anachronistic, and should be scrapped. Mr. R. L. Powell (Upper India Chamber), in seconding the resolution, spoke in greater detail about section 18A. He said that wholesale repeal of the section might not be an immediate possibility, but ways could be found of moving toward that aim in stages. For instance, the minimum income to which it applied could be raised, and the percentage of estimated tax to be paid in advance could be successively reduced.

Mr. K. G. Milne (Bombay Chamber) moved the resolution on personal taxation by pointing out the defects in the Taxation Enquiry Commission's approach to the problem. He said the general idea was to reduce economic inequalities because it was thought that riches brought power. This was incorrect. The country was short of suitable people for the higher cadres of business and Government, yet the incentives for such people were sought to be reduced. Criticising the taxation of travel concessions and other perquisites, Mr. Milne said: "The young man of overseas countries too looks well ahead, and no matter how much the services of some of them may be needed here, I fear that one glance at the Government of India's new 'passage rules' will be enough to dissuade them entirely." Sir Allan Elliott Lockhart (Bengal Chamber), who seconded the resolution, spoke of the Taxation Enquiry Commission's "failure to comprehend that to lift the burden on a company but at the same time to increase that on the individual is a contradiction in terms, leading us precisely nowhere. A company consists of individuals, and if these individuals consider themselves badly or indifferently treated, and if their individual efforts are going to lead them nowhere, they will clearly not give of their best and the company will suffer."

Mr. H. K. Stringfellow (Bengal Chamber), introducing the resolution relating to taxes on commodities, indicated the serious harm liable to be done to the tea and jute trade by certain measures of the Assam and West Bengal Governments. Other commodities, industries and States might be involved later, so it was necessary to ensure that nothing which was subject to Central excise or export duty should be taxed by any State Government except with the Centre's consent. The resolution was seconded by Mr. F. W. A. Morris (Madras Chamber).

The resolution on the cotton textile industry was proposed by Mr. W. H. J. Christie (Upper India Chamber). He urged the Government to treat the industry as "an integrated whole, and not as divided into two competing sections, whose respective interests are incompatible. We regard, and we hope that the Government can be persuaded to regard, the prosperity of the cotton textile industry, the mill industry as well as the handloom industry, as indivisible." If the mill industry was allowed to modernise and expand its production, there would be not necessarily larger, but certainly more efficient units. These would be engaged less with the finer products to meet an increasingly selective internal and export demand. The bulk of the increased demand would be satisfied by the cottage industry. Mr. K. G. Milne (Bombay Chamber) seconded the resolution, saying: "It is clear that if India is to maintain her exports, which are so essential for the implementation of the second five year plan, and if she is to produce sufficient cloth to meet the probable domestic demand, there is not only room for, but need for, both the cottage and mill industries, and freedom must be given to them both to expand to meet the demand."

Moving the resolution on labour legislation and industrial disputes, Mr. T. Rogers (Madras Chamber) said that it was essential for labour and management to work together for economic expansion. Many provisions of the Industrial Disputes (Amendment and Miscellaneous Provisions) Bill were vague and inadequate. As it was intended to abolish Labour Appellate Tribunals, other ways of ensuring consistency in interpretation were necessary. The Government should therefore clearly lay down guiding principles and norms. Mr. J. F. Sinclair (Bombay Chamber) strongly urged that the definition of "workman" be made more specific, and reference to supervisory and technical personnel be excluded.

Mr. Bharat Ram (Punjab and Delhi Chamber), introducing the resolution on rail and road transport,

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND CONTINUES TO IMPROVE

Wednesday, 14th December.

THE improvement in the offtake of funds has continued throughout the past week. The same sources of demand have been chiefly involved. Sugar-crushing is now in full swing, and the requirements of the industry have increased. Accommodation against raw jute has increased, possibly on account of better purchases but, more probably, due to decreased sales. The needs of raw cotton buyers have been maintained. Money continues to be very tight in the interbank market. The call rate is unchanged at 3½ percent, and there are borrowers over at this figure.

Only a few export documents have been reported from the market again this week. These have been chiefly tea bills. Remittance has been in good demand. Sterling has improved and the dollar rate is now quoting Rs. 47.71.

Silver was steady on better demand. The price advanced from the previous week's level of Rs. 171.2 to Rs. 171.12, quoted today. The rate for forward delivery was quoted at Rs. 171.8. In London the price advanced from 77½d to 87d. The price of foreign silver in New York remained unchanged at 90.16 cents.

Gold was quiet and the price declined from Rs. 95.2 to Rs. 94.15. The sovereign at Rs. 61.12 showed a loss of 3 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 13th December, 1955, totalled Rs. 1,22,50,000. The average rate of acceptance remained at Rs. 2.8 percent per annum. Tenders at Rs. 99.6 percent were allotted approximately 85 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 2nd January, 1956. During the week ended 9th December, 1955, Government of India Treasury Bills for Rs. 41,29,25,000 were sold in favour of the Reserve Bank.

The return of the State Bank of India for the week ended 2nd December, 1955, shows a drop of Rs. 17 lakhs in investments to Rs. 221.14 crores. Investments in Government Securities and other authorised investments are up by Rs. 41 lakhs and Rs. 20 lakhs to Rs. 109.70 crores and Rs. 9.48 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 2.03 crores to aggregate Rs. 95.11 crores. Cash and other balances are, in consequence, shown at Rs. 29.68 crores or Rs. 1.68 crores higher.

The statement of the position of scheduled banks for the week ended 2nd December, 1955, discloses Demand and Time liabilities at Rs. 618.56 crores (Rs. 14.33 crores on account of borrowings from banks) and Rs. 423.33 crores (Rs. 6.86 crores) compared with Rs. 619.36 crores (Rs. 13.49 crores) and Rs. 424.27 crores (Rs. 6.91 crores), respectively in the previous week. Cash has decreased by Rs. 1.16 crores to aggregate Rs. 34.11 crores, while balances with the Reserve Bank have increased by Rs. 3.39 crores to stand at Rs. 64.51 crores. There is a drop of Rs. 31 lakhs in investments to Rs. 394.45 crores. Advances and bills discounted at Rs. 601.35 crores reveal an increase of Rs. 7.33 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are in consequence, shown at 9.4 percent and 57.7 percent and 9.2 percent and 56.9 percent.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 16-12-55.			
Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate
16-12-55	17-3-56	1,00.00	Rs. 2-8-0%

SOUTH AFRICA'S PROGRESS

In his address at the annual meeting of the Industrial Development Corporation of South Africa, Doctor H. J. van Eck stated that the Easol—oil from coal—project had absorbed £25 million in share capital, and £9.5 million in loans. Setbacks, of a minor character in themselves, had resulted in serious delays, but production on a limited scale had begun.

The investment in Foskor had reached £1.5 million in share capital, with interest-free loans of half that figure. Production of phosphate concentrate began last March, but the initial installation was not sufficient to produce to capacity. Expansion of output depended on experience with the plant, and "Foskor still has important problems to overcome particularly in connection with the provision of railway facilities." An additional loan of £150,000 had been granted to Foskor.

The share investment in Saiccor—the cellulose project at Umkomaas—had reached £2 million. Production of pulp began before the scheduled date, and the bleaching plant was also in operation. By the end of 1955 output should reach 50 tons. The end of 1955 output should reach 50 percent of planned capacity, and there would be an official opening of the factory in January with representatives of Courtaulds and Snia Viscosa.

During the financial year the corporation accepted 16 propositions out of the 150 approaches received. Excepting Sasol and Foskor, they involved amounts of £2,139,316. Since its establishment in 1940, the corporation has thus accepted 185 propositions, involving over £55 million.

BOOM IN STEEL SCRAP

The U.K. steel scrap market is running wild, writes the *Iron Age*. Prices have broken through the levels set by mills and jumped sharply to record highs. Prices in some areas have touched \$50 and more for top melting grade. The magazine says that it is only a matter of time before steel consumers get bad news on price boosts that will affect all major products. It will be some time before the worst is over in the way of supplies. More production cutbacks owing to steel shortages are on the way. Mills hardly know themselves which way to turn. Their production is sold out for the first six months of next year and it is impossible to squeeze another ton into most mill schedules.

TRAYONS TRANSPARENT CELLULOSE FILM CAN SELL IT FASTER!

TRAYONS
TRANSPARENT
CELLULOSE FILM

Stops the eye - starts the sale!

Compare these advantages

- SO TRANSPARENT**
Trayons transparent cellulose film transmits 5% more light than glass!
- SO TOUGH**
A strip only one inch wide supports 20 lbs. No cracking, no tearing!
- SO CHEAP**
A 20" x 30" sheet costs less than 6 pice!

Stocks and Shares

PRICES MARKED DOWN IN MOST SECTIONS

MARKET TAKES MR. KRISHNAMACHARI'S SPEECH BEARISHLY: UNDERTONE QUIETLY STEADY

THE market has been quiet during the past week, with little movement in the price of the main speculative and a reduced volume of business all round. The undertone is steady, but at the moment there is no evidence of a trend either way. Indian Irons have moved narrowly about the Rs. 40-8 mark to close this evening at Rs. 40-11. The slightly brighter conditions which developed towards the week-end gave way before the bearish interpretation given to Mr. Krishnamachari's speech at the ASSOCHAM general meeting. Coals were the chief sufferers, although the Minister said nothing new about the Government's coal policy. Burakurs fell from Rs. 17-2 to Rs. 16-6 at today's closing. Activity in other sections has varied. Jute and tea shares have tended to weaken while engineering and miscellaneous have been fully maintained. Features have been few throughout all scrip.

After the recent quieter conditions the market is in fair shape technically, but the approach of the Christmas and year-end period can be expected to encourage the persistence of quiet conditions. Government securities have shown signs of improvement.

Details of the week's trading follow.

A better tendency was noticeable in the Government Security market and after a lapse of time, more buyers were in evidence, but enquiry continued to be confined to medium-dated scrip. Three percent Conversion Loan remained unchanged at around Rs. 80-6 as did 3%. Non-terminable Paper at Rs. 80-1. Short-dated loans were steady and both 3% 1957 and 1958 had buyers at Rs. 99-9 and Rs. 99-6 respectively. In the medium-dated group 3% 1959-61 was quoted at Rs. 98 and 3% 1963-65 had sellers at around Rs. 94-10. The demand for 3% 1964 continued at Rs. 94-9 cum-voucher but sellers were reserved. 2½% 1961 had unsatisfied buyers at around Rs. 93-1 and 3½% 1962 was better at Rs. 93-12. Four percent 1970-70 was marked up to Rs. 101-13 but without business passing. In National Plan issues, 3½% 1961 was quoted at Rs. 99-8 and 3½% 1964 hardened to Rs. 98-10-6 while 3½% 1965 was marked up to Rs. 98-9-6 buyers. In the long-dated group 3% 1966-68 turned buyers at Rs. 91-11 while 3% 1970-75 was steady at around Rs. 87-8.

State loans were also better, but enquiry was centred on 4% issues which were quoted at a discount. Four percent U.P. 1967 after being traded at Rs. 90-6 improved to Rs. 99-6-6 while 4% M.P. 1967 was in demand at Rs. 99-7. Four percent West Bengal 1967 was quoted at around Rs. 100 and 4% Saurashtra 1967 was asked for up to Rs. 99-10.

As usual, Preference shares continued to meet with strong enquiry, but there were insufficient sellers to meet the market. In the miscellaneous group, Aluminium Corporation were crossed at Rs. 107-12 and the 5% Preference at Rs. 93. Bharat Collieries were done at Rs. 59-8 and British India Corporation were a shade better at Rs. 138. Bengal Paper (Rs. 50 paid-up) were placed at Rs. 65-12 and two transactions were reported in Calcutta Tramways at around Rs. 8-12. Calcutta Electric changed hands on several occasions at around Rs. 12-8. A small lot of Chrestien Mica Industries was crossed at Rs. 67. A small odd lot of Dalmia Cement 2nd Preference came to hand at Rs. 34 and Gillanders Arbuthnot were marked at Rs. 72-8. Indian Iron & Steel were in demand at Rs. 110 and Jardine Henderson were crossed at Rs. 79. A parcel of Richardson & Cruddas changed hands at Rs. 95. Rohtas Industries 1st Preference were quoted at Rs. 135-8. Among jute, Anglo-India were transacted at Rs. 110-9 and Hooghly Mills at Rs. 14-8. Lansdowne Jute were marked at Rs. 117 and Lawrence 2nd Preference came to hand at Rs. 99.

Very little business was reported in bank shares. Punjab National changed hands at around Rs. 49-8 and United Commercial were steady at Rs. 56-8. United Bank of India "D" shares were done at Rs. 5.

The only share dealt in in the railway section was Delhi Rohtas at around Rs. 14-2.

With the exception of Kesoram which was steady at Rs. 18 there were few price changes in the cotton section. Bengal Nagpur were unchanged at Rs. 11-8, Bowreah at Rs. 385 and Cawnpore Textiles at Rs. 10-10. Elgins eased from Rs. 27 to Rs. 26-8 and New Victoria was reasonably steady at Rs. 2-3. Several transactions were recorded in Jay Shree with the price improving from Rs. 6-9 to Rs. 7-4.

Although Mr. T. T. Krishnamachari said nothing new regarding the Government's attitude towards the coal industry, his remarks at the annual general meeting of the Associated Chambers of Commerce on Monday were bearishly interpreted by market operators and coal shares closed well below the highest prices touched during the week under review as will be seen from the following table:

	Opening	Closing
	8-12-55	13-12-55
	Rs.	Rs.
Bengal	815	580
Central India	9-1	8-7

East Indian	34-12	34
Equitable	36-12	35-4
New Beerbhoom	23-2	22-8
Raneegunge	13	12-10

Contrary to the general trend, Karanpura Collieries met with strong enquiry and rose from Rs. 150 to Rs. 160.

Jute shares were sluggish and prices displayed a sagging tendency. Here is a chart showing representative price movements:

	Opening	Closing
	8-12-55	13-12-55
	Rs.	Rs.
Agarpara	13-8	13-2
Anglo-India	224	220
Champdany	182	180
Howrah	29	28-12
Lawrence	150	147
National	33-6	33-2

In contrast, Belvedere and Delta were a shade better at Rs. 193-8 and Rs. 262.

Very little business was reported in electric supply shares and prices showed no material change. Agra were marked at Rs. 162. Bareilly at Rs. 19-4 and Calcutta at around Rs. 14-14. Patna were quoted at Rs. 12-12 and a small lot of U.P. changed hands at Rs. 169.

Few transactions were reported in sugar shares and here again prices showed little variation. Carew were transacted at Rs. 12-6, Champaran at Rs. 35-4, Durbhanga at Rs. 25-10 and Cawnpore at Rs. 25-4. Samastipur came to hand at Rs. 14 and Shree Krishna Gyanoday old at Rs. 14.

Good business was reported in engineering shares and prices kept very steady, with the exception of Bharia Steel which dropped back from Rs. 16-10 to Rs. 15-15. Braithwaites were unchanged at Rs. 28-4 as were Britannia Engineering at Rs. 21-8. Burn & Co., improved from Rs. 335 to Rs. 337 while Indian Galvanizing were maintained at Rs. 27-6. Indian Standard Wagon were wanted at Rs. 164 and Jessops were fairly steady at Rs. 64-8. Several transactions were reported in National Iron & Steel at around Rs. 8-13. Richardson & Cruddas improved from Rs. 27-10 to Rs. 28-2 and Textile Machinery were well supported with the price improving from Rs. 20-1 to Rs. 21-3. Indian Iron & Steel shares ruled rather quiet and receded from an opening price of Rs. 40-13 to Rs. 40-8.

In the miscellaneous section, Bengal Paper went from strength to strength and closed firm at Rs. 133-8 against an opening price of Rs. 122-8. India Paper Pulp were neglected at Rs. 24-4 whilst Orient Paper were steady at Rs. 35. Shree Gopal Orient Paper were steady at Rs. 20-8 and Titagurh from eased from Rs. 47-2. Ashoka Cement were marked at Rs. 47-2. Assam Bengal Cement at Rs. 7-10. A solitary transaction was reported in Dalmia Cement at Rs. 15-12. Sone Valley came to hand on several occasions at around Rs. 8-9. The only share transacted in the insurance group was New Asiatic at Rs. 5-14. Calcutta Landing & Shipping were marked at Rs. 14-8 while India General Navigation receded from Rs. 137 to Rs. 132 as did India Steamship from Rs. 8-11 to Rs. 8-8. Port Shipping were crossed at Rs. 17. Angelo Brothers were fully steady at Rs. 26-11 while Assam Saws were depressed at Rs. 6-4. Balmer Lawrie met with good enquiry and rose from Rs. 193 to Rs. 202. British Burmah Petroleum also met with good buying support and improved from Rs. 4-6 to Rs. 4-8 as did port and improved from Rs. 13-10 to Rs. 13-13. Dunlop Rubber on the announcement of the Indian Aluminium, on the announcement of the Company's proposal to sub-divide the Rs. 100 paid-up shares into Rs. 10 paid-up shares, spurred from Rs. 195 to Rs. 220. Indian Cables were dull at Rs. 35 while National Insulated Cables were steady at Rs. 22-10 ex-dividend. Bengal Flour were placed at Rs. 33-6 and several transactions were reported in Clive Row at around Rs. 12. Duncan Brothers were quoted at Rs. 134-8 and F. & C. Osler at Rs. 17. Rallis improved from Rs. 37-4 to Rs. 38 and Rohtas Industries from Rs. 25-4 to Rs. 26-2. Shaw-Wallace were bought on an investment account up to Rs. 16. National Tobacco were placed at Rs. 12-2 and Tide Water Oil improved from Rs. 17-10 to Rs. 18. Indo-Burma Petroleum was steady at Rs. 45-8 as were Martin Burn at Rs. 29-8. Walford Transport Ordinary were steady at Rs. 2-12.

In the mining section, Burma Mines was steady at Rs. 2-8 as were Western Stockholders Investment at Rs. 1-1. Chrestien Mica Industries had sellers at Rs. 19-8 while Indian Copper, on selling pressure, were marked down from Rs. 7-4 to Rs. 7-1.

Conditions in the tea section have shown no change and business was again restricted. Among the few transactions recorded in Assam shares, Bateh were easier at Rs. 28-12 as were Brooke Bond at Rs. 20-10, East India at Rs. 23-10 and Jutibari at Rs. 28-4. Seajuli declined from Rs. 37-8 to Rs. 35 as did Telojian from Rs. 30-4 to Rs. 28-8. Murphulani Ordinary improved by as 4 to Rs. 29-8, but Kotamullai came to business Re. 1 lower at Rs. 39. Grob "A", after improving to Rs. 41-8, had sellers at the close at Rs. 41-2. In the Doonars section, a fair amount of business was written in Banarhat at the lower price of Rs. 370 and small

What makes a business

up-to-date? These days,

it's the ability to move fast.

To note tendencies while

they're happening, or after

they've happened. Speed and

efficiency lead directly to increased

profits—which is why Powers-Samas

punched-card accounting is so

good an investment. It sorts and

tabulates vital information in a

matter of minutes. It does complex

calculations at the press of a button.

And there's a wide range of

Powers-Samas equipment—suitable

for almost every size of business.

POWERS-SAM

lots of Choonabhatti changed hands around Rs. 520. Hantapara eased further to Rs. 320 and Hasi-mara also had sellers at Rs. 396 against the previous quotation of Rs. 416. New Doars found buyers at Rs. 320. Of the remaining shares, Tukvar came to business at Rs. 15 and Patrakola improved further to Rs. 205. Rajnagar found support at the lower price of Rs. 14-10 as did Atal at Rs. 11.

Providing Rs. 55,931 (Rs. 50,935) for depreciation and Rs. 1,16 lakhs (Rs. 1,23 lakhs) for taxation there is profit of Rs. 1,74 lakhs of the Bunge and Roof Company for the half-year ended last June, against Rs. 1,87 lakhs. Bringing in Rs. 1,07,072 there is Rs. 2,90,749. General reserve is allocated Rs. 75,000 (Rs. 1 lakh). The dividend is the same at 7½ percent, leaving a carry-forward of Rs. 1,15,742.

There is a rise of Rs. 31,000 to Rs. 4,73 lakhs in the profit of the KATRAS JHERRIAH COAL COMPANY for the half-year ended last July. Allowing Rs. 60,000 (Rs. 73,500) for depreciation and Rs. 2,39 lakhs (Rs. 2,38 lakhs) for taxes and cesses, there is a balance of Rs. 2,76,128, including Rs. 1,03,480 brought in. The dividend has been raised by 6 annas to Rs. 3 per share. The carry-forward is Rs. 1,26,128. Raisings amounted to 145,054 tons (145,596 tons) and despatches declined from 184,664 tons to 167,070 tons.

The KALAPAHARI COAL COMPANY incurred a loss of Rs. 1,09 lakhs for the half-year ended last August, compared with the previous half-year's loss of Rs. 86,163. Providing Rs. 13,620 (Rs. 28,633) for depreciation and Rs. 19,300 (nil) for taxation and transferring Rs. 19,300 from general reserve, there is a debit balance of Rs. 2,96,262 which is carried forward. There is again no dividend. Raisings totalled 1,660 tons and despatches 1,752 tons.

The TYROON TEA COMPANY made a profit of Rs. 16,43 lakhs for the year ended last December, against Rs. 4,42 lakhs. General reserve gets Rs. 32 lakhs (nil), and building and machinery reserve Rs. 2½ lakhs (Rs. 50,000). The dividend has been increased from 10 percent to 60 percent, leaving a carry-forward of Rs. 9,014.

The crop amounted to 14,597 maunds (12,434

maunds) and the average sale price rose from 31.83 annas per lb. to 50.47 annas per lb. Estimates for 1955 are for a crop of 15,000 maunds at a cost of Rs. 18,91,088.

The INDIAN ALUMINIUM COMPANY has announced an interim dividend of 4½ on ordinary shares. An extraordinary meeting of shareholders has also been called on January 16th to approve a split of the existing ordinary shares of Rs. 100 each into ten shares of Rs. 10 each.

The Indian Aluminium Company, which is associated with the Canadian international enterprise, The Aluminium Limited, is establishing a 10,000 ton capacity smelter at Hirakud in Orissa. Fresh capital will be raised early next year in connection with the financing of this expansion, and it is hoped that a denomination of Rs. 10 for the company's ordinary shares will enable a larger number of people to invest in this expanding industry.

The valuation results of the EMPIRE OF INDIA LIFE ASSURANCE COMPANY as on 31st December, 1954 are excellent. There is a profit of Rs. 81,82 lakhs for the triennium. After making a provision of Rs. 18,27,070 for the payment of income-tax and excluding Rs. 1,78,942 paid as interim bonus, the balance has enabled the company to distribute Rs. 57,12,754 as reversionary bonus to the with profit policyholders whose policies were in force for the full sum assured on 31.12.1954 at the rate of Rs. 18 per thousand per annum on whole life policies and Rs. 15 per thousand per annum on endowment assurance policies. The shareholders' share of the surplus comes to Rs. 4,63,196.

The actuary says that after the unfortunate events of 1951 which disrupted the entire organisation of the company, it is indeed a notable achievement that during these 3 years the company has consolidated its position and is set on the road to further progress.

The mortality experience of the company showed a considerable improvement, being 47.6% against 66.9%, while the average rate of interest yielded by the assets constituting the life insurance fund has been over 3.3%. Expenses have been kept rigidly under control and the 1954 figures are far below those of 1952 or 1953.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during November, 1955 was: pig iron 91,900 tons; steel ingots 86,200 tons; semi-finished steel for sale 16,500 tons; finished steel 46,900 tons.

SHARP DROP IN TEA AUCTION PRICES

HEAVY WITHDRAWALS IN EXPORT SALE

AT Sale No. 26, held on 12th and 13th December, offerings in the Export auction consisted of 65,700 packages, for which there was a much weaker demand than in the previous sale. Withdrawals were heavy and most kinds were about 3 to 4 annas lower. Internal operators were very quiet and most of the support came from Exporters. Common and Low Medium brokens were 3 to 4 annas lower. Fannings of this description being 2 to 3 annas lower. Medium BOP's met with little demand and were difficult of sale. CTC Assams were virtually neglected and only a few selected lots sold at 2 to 4 annas below previous rates. Whole leaf grades, Darjeelings and the very few tippy teas on offer also shared in the general decline.

Quotations

	1955	1954
Clean Black Pekoe	2 4 0	3 11 9
Plain B.P.	1 9 0	3 8 6
Medium Assam B.P.	1 10 0 to 1 11 6	3 11 9
Best CTC Assam B.P.	2 10 0	3 14 0

At the Internal Sale, offerings of Dusts consisted of 20,000 packages, for which there was only a fair demand. The sale opened 2 to 3 annas below last rates and eased as it progressed. At the close Clean Commons, Doars and Medium Assams were 3 annas easier. The poorer and commonest types were selling 4 annas below last rates and were difficult of sale. CTC Assams opened 2 to 3 annas easier but were difficult to sell and at the close were a full 4 annas down. Withdrawals of this type of tea were heavy. The strongest feature were the black leaf types suitable for the Middle East and the very few flavoury Darjeelings. These were generally dearer.

Quotations

	Rs.	Rs.
Medium Doars Dust	1 6 6 to 1 7 0	1 14 0 to 1 11 6
Medium Assam Grainy	1 9 0	1 15 0
Dust	1 7 6 to 1 8 0	2 3 5
Best Assam CTC Dust	2 5 0 to 2 7 0	2 3 5

The Leaf offerings consisted of 4,400 packages, for which there was a fair demand. The few clean black teas on offer received good support and sold at 2 annas below last rates, while stalky residue grades were irregularly 3 to 4 annas easier. Residue CTC's were difficult of sale and these were a full 4 annas easier.

TIME CHARTERING ACTIVE IN FREIGHT MARKETS

CONGESTION AT CALCUTTA PORT

A REVIVAL of interest in the time charter section underlines the trend of the market, now in owners' favour. Six Liberty vessels were fixed at \$ (U.S.) 4.75 to \$ (U.S.) 4.85 according to position for three to four and six months' trading, at \$ (U.S.) 4.10 for 12 months and at 27s 6d for 2½ years. A 9,000-ton motorship obtained 45s for the voyage home, delivery Australia in April and the good rate of 52s 6d was conceded for a fast 10,000-ton motorship for the trip to Japan via Mormugao with delivery Persian Gulf in January and a 9,000-ton oil burner obtained 47s 6d for the same business with delivery Karachi in February. Coal from Hampton Roads to the Continent has remained steady at 85s 6d and local charterers have conceded 70s for Singapore for a December loader. Many ore cargoes are quoting from India but the only fixture published is a December ship from Bombay to Constantza at 107s 6d f.i.o. Congestion in the sheds in Calcutta Port is increasing and the influx of large quantities of steel is proving a headache to the authorities since the Port is equipped most inadequately to handle this commodity. The provision of mobile cranes would greatly ease the position.

SUGAR MARKET

During the week ended 13th December, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were 2,500 bags a day and stocks totalled 120,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-8 for ordinary grain and Rs. 32-8 for big grain. Ex-mill delivery rates varied from Rs. 27-4 to Rs. 28-12. There was little change from the week's trends in the market.

LINSEED

There was a notable advance in prices during the past week and the undertone remained very firm with a scarcity prevailing locally. Owing to the steady trend of upcountry markets and a brisk demand at the centres despatches were poor, and supplies fell far short of demand. There were good enquiries from crushers for ready and forward, as well as new crop positions: the turnover was small. In the oil section, a slight improvement in foreign prices, and continued demand from shippers covering against former commitments, caused a further rise in prices, although actual trading was rather limited. Latest quotations as follows: December Rs. 21-0-0 a maund.

Let's look at PROGRESS-Stanvac Quiz No 5

YOU KNOW THAT INDIA'S 5-YEAR PLANS MEAN A BETTER LIFE FOR ALL. BUT DO YOU REALISE THE PROGRESS ALREADY MADE UNDER THE FIRST 5-YEAR PLAN? TEST YOUR KNOWLEDGE AGAINST THE QUESTIONS AND ANSWERS BELOW.

1 THE PLAN CALLED FOR MORE VANASPATI - A SOURCE OF IMPORTANT VEGETABLE OILS WE NEED IN OUR DAILY FOOD IN 1954-55, THE MANUFACTURE OF VANASPATI WAS INCREASED TO:
A) 37,500 TONS
B) 364,017 TONS
C) 225,383 TONS

2 THE COTTON TEXTILE INDUSTRY HAS MADE REMARKABLE PROGRESS. IN 1954-55, IT FURTHER EXCEEDED THE PLAN'S TARGET FOR ALL-MADE CLOTH BY PRODUCING:
A) 359 MILLION YDS.
B) 5076 MILLION YDS.
C) 679 MILLION YDS.

3 MORE AND MORE DRY BATTERIES ARE BEING MANUFACTURED IN INDIA, AND NOW AN EXPORT MARKET HAS BEEN ESTABLISHED. DURING 1954-55, THE NUMBER OF DRY BATTERIES MADE WAS:
A) 251,000,000
B) 148,400,000
C) 49,500,000

4 MINERAL PRODUCTION HAS INCREASED TOO, RESULTING IN EVER LARGER EXPORTS. IN 1954-55, EXPORTS OF MANGANESE ORE TOTALLED:
A) 944,922 TONS
B) 311,307 TONS
C) 102,700 TONS

STANDARD-VACUUM ARE PROUD TO PRESENT THIS TOPICAL INFORMATION ON INDIA'S PROGRESS - AND PROUD THAT OUR THREEFOLD ACTIVITIES OF PRODUCING, REFINING AND MARKETING OF PETROLEUM PRODUCTS ARE CONTRIBUTING TOWARDS IT.

ANSWERS

1 225,383 TONS OF VANASPATI - MAKING THIS VALUABLE FOOD AVAILABLE TO 3½ MILLION MORE PEOPLE THAN AT THE START OF THE PLAN!

2 5076 MILLION YARDS OF PENSIVE CLOTH FOR INDIA - MORE THAN THE TARGET FOR THE END OF THE PLAN BY 376 MILLION YARDS!

3 944,922 TONS OF MANGANESE ORE WERE EXPORTED, EARNING OVER RS. 12.4 CRORES FOR INDIA.

THE ECONOMIC DEVELOPMENT OF THE GOLD COAST

DIFFICULTIES IMPOSED BY A REVENUE SURPLUS

(FROM A NIGERIAN CORRESPONDENT)

BY the end of the present financial year, March 1956, the Gold Coast expects to have spent on its revised 1951 development plan and its reserve development plan, the sum of £88 million. The final figures, when available, will show that more than £80 million have been spent up to March of this year. In addition to this, there will still remain the expenditure on the extension of Takoradi Harbour, for which more than £5 million will have been borrowed from the Cocoa Marketing Board and lent to the Railway and Harbour Administration by March 1956. Money for the development plans is paid out of the development and special development funds, which derive their incomes directly or indirectly from cocoa, the main source being the contribution of export duty.

In spite of these very large expenditures, the reserves of the Gold Coast have continued to rise. In the middle of 1952 the Gold Coast had a sterling balance of £14 million to her credit, £89 million being held by the Cocoa Marketing Board and £43 million by Government and official institutions. The country's total reserves by the end of September, 1955 had reached £189 million; £75 million were held by Government and official institutions and £73 million by the Marketing Board.

Expenditure Rates

The question has been raised as to the reasons preventing rapid rate of expenditure with a corresponding acceleration of economic development. Ministers and officials in the Gold Coast would, however, point to the figures already quoted and show the rate at which expenditure has been growing. In 1951-52 some £83 million pounds were spent on the development programme. In the following year the figure rose to nearly £14 million and in the year after that to £15½ million, while it is expected that works completed and in progress in the financial year just concluded will eventually cost £25.6 million. This increase in development expenditure is reflected in the figures of Government expenditure as a whole, and it is perhaps these which indicate most clearly the astonishing expansion in Government activity in recent years. The total Government expenditure in 1938-39, the last financial year before the war, amounted to less than £3½ million. By 1954-55 it

had risen to £57 million. In 1948-49 it was still no more than £11½ million, while in the current financial year it is expected to top £66 million.

Revenue Increases

Rapid as this rise in expenditure has been, the revenue has been rising even faster. In 1938-39 the total revenue was £3.8 million; in 1954-55 it was more than £81 million. As a result, large revenue surpluses have been accumulated. Last year the surplus amounted to the enormous sum, by Gold Coast standards, of £24 million. A surplus of this size was entirely unforeseen. Revenue was expected to be under £49 million, compared with the £81 million it is now thought will have been collected. The error in the original estimate is not difficult to trace. Cocoa exceeded all expectations. "The price rose rapidly to heights which can be described as fantastic" was the way the Minister of Finance put it.

The estimated revenue from cocoa duty was based on an assumed average price of £220 a ton, whereas the average price realised in the 1953-54 crop year was little short of £360. Against this price increase there was a fall in the size of the crop, but this was more than offset by increases in the rate of duty, and finally the export duty on cocoa brought in nearly £46 million instead of the £15 million originally expected from it. Happenings of this sort certainly bear out the argument of the Colonial office Memorandum on the Sterling Assets of the British Colonies, that the financial reserves of colonial governments have gone up because of "their inability to spend money on development as quickly as their revenue rose".

No one can expect a development programme to absorb at once a windfall of £30 million. Nevertheless, it is interesting to attempt to discover in more detail, what sets the pace of development expenditure. Finance cannot be the limiting factor. Even before last year's accretion of funds, reserves were ample enough to sustain a much higher rate of expenditure. The answer to the question throws a good deal of light both on the country's economic situation and on official thought and policy on economic matters.

Handicaps to Economic Growth

The Seers Report treated port capacity as the worst bottleneck. The ports, it was argued, were working to capacity, and were quite incapable of handling extra imports. Because these extra imports could not therefore be brought into the country and as the supply of home-produced goods, such as food, could not expand very rapidly, "a wave of new purchasing power would swing backwards and forwards across the economy with sharp in-

flationary effects". Development expenditure could only go forward without inflation, and if a tight rein was kept on cocoa farmers' incomes. There has been much criticism of the theory that the physical capacity of the ports set the limit to economic growth. Perhaps the most common view in the Gold Coast is that the bottleneck in port capacity was an important phenomenon, but a transitory one, and that even by the time the Seers Report was published, it had ceased to be of paramount importance. It is doubtful if anyone, today, would select port capacity as the primary limitation on greater development spending. Port capacity remains a potentially limiting factor, no doubt, the Tema and Takoradi extensions are proof of its existence, but there is every reason to believe that port development already planned or under way will take care of any likely demand, and it is expected that when the present plans are completed the country's needs will be met for many years to come.

Undoubtedly, in the Gold Coast as in many other countries, staff shortages are a serious handicap. Adequate planning and supervisory staff are essential for an effective development programme. That staff shortages have not imposed an absolute limit is apparent from the rising level of expenditure, but no doubt progress could have been faster if staff had been more plentiful.

Future Prospects

The capacity of the building industry is reasonably well utilised at the present level of development expenditure, despite a substantial growth in capacity and an increase in the number of African building contractors. The demands of Government have drawn building resources away from the private sector, but this movement might well be reversed if private incomes showed a substantial rise, as they would if there were any sizeable increase in the production price of cocoa.

There are still difficulties over the long delivery dates for equipment and with supplies of iron and steel manufactures. In the background looms the future demand on resources of the Volta River scheme, though the Government believes that careful planning will prevent the general development programme from being disrupted when the Volta project gets under way. It seems however that these present physical problems weigh less heavily on the mind of the Government, than the fear of the future. Official thinking on economic development is dominated by the problems of recurrent costs. Paradoxically enough, therefore, with the public coffers brimming over, the main problem still appears to be one of money.

New Delhi

ECONOMY CUTS IN THE SECOND PLAN

RAIL TRANSPORT MAY SUFFER

(FROM OUR NEW DELHI CORRESPONDENT)

THE Panel of Economists, as already reported, will hold its two-day session here on 15th and 16th December. A memorandum containing an outline of the second five year plan is being finalised for the discussion of the Panel. The Planning Commission is now working up to the target figure of Rs. 4,800 crores for the outlay in the public sector. As already indicated, the Planning Commission is now engaged in imposing cuts in order to reduce the plan-frame outlay from Rs. 5,600 crores to Rs. 4,800 crores. This figure of Rs. 4,800 crores, however, is on the assumption that the reports of the Prohibition Committee and Karve Committee, will involve additional expenditure of Rs. 350 crores over the next five years. The provision for the railways, for example, is likely to be reduced from Rs. 1,400 crores to just over Rs. 800 crores.

On the resources side foreign assistance is placed at Rs. 800 crores, additional taxation in the last three years of the second plan period at Rs. 500 crores and deficit financing at Rs. 1,200 crores, leaving the balance of Rs. 2,300 crores to be met from the existing resources.

Reference in this connection is made to the problem facing the coal industry. The private sector, had asked for an assurance that railway transport would be so developed as to carry its enhanced output of 42 million tons. The Railways, in view of the reduction in their provision, have made it clear that they should not be expected to cater to the increased traffic generated during the second plan period. This may further add to the apprehensions of the private sector, that in the event of transport inadequacy, it would be the public sector, which would receive higher priority.

S.R.C.'s Recommendations

The Government of India has finalised its decisions on the States Re-organisation Commission's Report, so far as they related to areas other than the Punjab and Bombay, on which decisions will be reached by Christmas. With the exception of the following, the Government has approved of the recommendations of the S.R.C.:

1. One Andhra instead of two will be created from the outset.
2. The capital of Madhya Pradesh will be Bhopal and not Jabalpur.
3. Tripura, instead of being merged with Assam, will continue to remain a Centrally-administered territory.
4. The two small islands, namely Lacadare and Maldives, instead of remaining a part of the proposed Kerala State, will become Centrally-administered territory.
5. Under these decisions the State of Delhi will be abolished, probably by 1st April, 1956.

I.F.C. Dividends

Under Section 5 of the Industrial Finance Corporation Act, 1948, the repayment of principal and the payment of an annual dividend on the shares of the Industrial Finance Corporation are guaranteed by the Central Government. The rate of dividend guaranteed on the shares of the Industrial Finance Corporation is 2½ percent. In the years in which the profits of the Corporation are not sufficient to enable the Corporation to pay the guaranteed dividend, the Government makes subvention to the Corporation of an amount sufficient to enable the Corporation to pay the dividend. The subvention given by Government up to the year 1954-55 amounted to Rs. 30.95 lakhs as indicated below:

	Rs.
1949-50	10.89 lakhs
1950-51	8.69 lakhs
1951-52	4.31 lakhs
1952-53	3.00 lakhs
1953-54	Nil.
1954-55	4.06 lakhs.

The increase in the amount of Government subvention in 1954-55, as a result of the Corporation's decision with the approval of Government, was that the interest accrued on loans which were considered to be of doubtful recovery should not be taken credit for in the Profit and Loss Account but should be held in the "Interest Suspense Account."

This year the Corporation asked for a subvention of Rs. 11.25 lakhs for payment of dividend to the shareholders for the following reasons:

- i. Interest on advance given to the Sodapore Glass Works had not been charged;
- ii. Interest accrued on the accounts of six companies had not been taken credit for in the Profit and Loss Account; and
- iii. A sum of Rs. 15 lakhs had been set apart on the advice of the Corporation's auditors for bad and doubtful debts.

After the payment of expenses of administration and interest on borrowings, and transferring Rs. 15 lakhs towards Reserve for doubtful debts, the net profit of the Corporation came to Rs. 9,69,509 which has been set aside as "provision for taxation". This did not leave anything for payment of the dividend and accordingly the whole amount of Rs. 11.25 lakhs due as dividend on the shares

of the Corporation had to be provided by the Government of India. There was, however, a provision of only Rs. 7 lakhs in the Budget for 1955-56. Payment of Rs. 4.25 lakhs was, therefore, made from the Contingency Fund of India to cover the shortfall and the Corporation was accordingly paid in October 1955, an amount of Rs. 11.25 lakhs to enable it to pay the dividend for the year ended 30th June, 1955, at the guaranteed rate of 1½ percent.

Steel Plant at Durgapur

A leading firm of consulting engineers has been selected to advise the Government of India generally on all steel matters and in particular on the construction of the steel plant at Durgapur. A sum of Rs. 25 lakhs, which is expected to be spent during the year, is made up as follows:

- a. Sterling expenditure on account of payments of fees to the consultants Rs. 15 lakhs.
- b. Rupee expenditure on account of acquisition of land, clearance of site, provision of temporary water supply and salaries of Indian staff Rs. 10 lakhs

Agreement with the consultants has not yet been finalised. But according to the draft agreement total payments that may have to be made to them will be £1,600,000 or £1,400,000 if the whole or a large portion of the works is ordered by the Government from one contractor. The terms of the draft agreement provide that 12 percent of the total amount is to be paid during the first year following the date of signing the agreement, and also that 3 percent of the total amount payable to the consultants is to be paid within two weeks after the date of the signing of the agreement. It is, therefore, estimated that about 6 percent of the total amount may have to be paid to the consultants during the year which works out to about £96,000 or Rs. 13 lakhs. A margin of Rs. 2 lakhs has been kept to cover additional payments, if any. The consultants will be required to maintain at their own cost in India 12 experts in the former case and 5 experts in the latter, but the internal expenditure on the experts, for instance office accommodation, transport, office equipment, etc. will be borne by the Government of India. The agreement will be for six years.

Indo-Soviet Steel Project

The Soviet Deputy Minister of Iron and Steel, Mr. V. B. Khlebnikov, who is accompanied by 13 Soviet steel experts, has brought with him the detailed project report of the Bhilai Steel Project which the Government of India are setting up in collaboration with the Soviet Government. The Indo-Soviet Steel Agreement signed in New Delhi this year the Soviet authorities were due to present the detailed project report by 15th December, 1955, that is nine months from the date on which they were notified of the exact works' site for the steel plant.

Re-Insurance

An agreement, it is learned, has been reached among the various Indian insurance companies to

launch a re-insurance corporation to which at least 10 percent of the re-insurance business will be placed to begin with. The subscribed capital of the Corporation will be in the neighbourhood of Rs. 2 crores. It is hoped that a meeting to finalise the scheme will take place next month. India at present loses at least Rs. 2 crores a year in foreign exchange through re-insurance business being placed with non-Indian companies.

As soon as the new Department of Company Law in the Ministry of Finance has been properly organised, in addition to its normal administrative work it proposes to undertake the following special items of work, in course of the next 12 months:

Legislative Work:

1. Stock Exchange Bill.
2. Capital Issue (Continuance of Control) Bill.
3. Revision of the State Finance Corporations Act.
4. Revision of the Chartered Accountants Act.

Organisational Work:

1. Reorganisation of the machinery for the administration of the new companies Act (Central, Regional and State)
2. Establishment of the organisation for regulating the work of stock exchanges, (in consultation with the governing bodies of the stock exchanges).
3. Establishment of an Institute of Costs and Works Accountants.
4. Establishment of an Institute of Company Secretaries.

Institutional Development Work:

1. Creation of a new issue market through the co-ordination of the activities of I.C.I.C., I.F.C., State Finance Corporations, and of other related existing or contemplated institutions in the present capital market in collaboration with the Reserve Bank;
2. Furthering the developmental activities of the Institute of Chartered Accountants, particularly in the fields of accounting research and extension of technical control and leadership over the profession by the Institute;
3. Co-ordination of the developmental activities of the Institute of Chartered Accountants, and the proposed Institutes of Cost and Work Accountants and of Company Secretaries;
4. Promotion of applied research in the different aspects of Company finance in collaboration with the Universities, the Reserve Bank and other specialised institutions.

India's Mineral Oil

India produces only a fraction of her mineral oil requirements. While the Geological Survey of India has been carrying out preliminary investigations for oil as part of its normal field programme, the major prospecting work for oil in India has so far been done by foreign firms in areas where they have been granted exploring and prospecting licences. In the absence of any private enterprise in the country with the necessary resources and "know how", the Government has decided to take up this work. Steps have accordingly been taken to set up an Oil and Natural Gas Division for

Small-Scale Industries Board Meets

After deliberations extending over two days, the Small-scale Industries Board passed several resolutions. It felt that, in addition to the financial aid being given at present by way of loans, subsidies, contributions to capital and marketing facilities, small producers should be supplied with elec-

Function of Trade Unions

Bombay Talks on Textile Bonus

Promotion of Exports

Excise Duty on Art Silk

The Union Ministry of Finance has revised the rates of excise duty on art silk with effect from 1st January, 1956, and put them on a shift basis. The new rates will be Rs. 22-8 a loom a month for the first shift, Rs. 15 a loom for the second shift and Rs. 11-4 a loom for the third shift. This has come as an unpleasant surprise to the silk and art silk mill industry at a time when it is being urged to expand. Mr. D. N. Shroff, Chairman of the Silk and Art Silk Mills Association, stated that the change was quite unexpected and he failed to see what purpose it would serve. Mr. Shroff contended that it affected a small-scale industry which was struggling for existence. The change would mean that mills would have to pay a duty of Rs. 37-8 a loom for two shifts and Rs. 48-12 for three shifts, as against the present flat rate of Rs. 22-8 a loom irrespective of the shifts worked. They would find it difficult to run two or three shifts because that would mean an increase of about 66 percent on the second shift and 116 percent on the third.

(FROM OUR MADRAS CORRESPONDENT).

Dr. Shenoy then outlined his views on the permissible size of the plan. The aggregate investible resources, he said, consisted of current domestic savings, past savings held as currency reserves and foreign assistance. The requirements of the public and private sectors had to be drawn from this pool. Revenue surpluses, loans, small savings, profits of State enterprises, ploughing back of corporate profits, deficit financing, etc., were but devices of drawing upon it. There was no device of creating resources, which were not saved. The total investment could not exceed the limit set by the investible resources. Any attempt to do so would generate inflationary pressure. The only exception was investment by *Shramadan* which, if "debited" leisure and idleness, would add to the national product. The plan-frame, he continued, assumed that at the close of the first plan the rate of savings would be about six percent of the national income. During the next three years the rate of savings, expressed as percentage of the national income, was more or less stationary. Here Dr. Shenoy assumed that the rate of savings would not be more than 7.5 percent of the national income at the end of the second plan. On this assumption, the total domestic saving available for the second plan would be less than Rs. 4,000 crores. Adding the foreign resources, that is, withdrawals from the currency reserves and foreign assistance to this, the total investible resources would be of the order of Rs. 4,600 crores. The investment outlay—net investment—in the public and private sectors should be restricted to this limit. On a rough calculation, investment on this scale might raise the national income by about 15.28 percent—from Rs. 10,800 crores in 1955-56 to Rs. 12,450 crores in 1960-61.

Over-Ambitious Plan

In another lecture in the series, Dr. Shenoy returned to the subject of deficit financing in a forthright manner. Although a combination of factors seemed to be conspiring against the use of foreign assistance on any appreciable scale, he said, there was no short-cut to economic growth through inflationary deficit financing. To give an idea of how far non-inflationary deficit financing could go, Dr. Shenoy gave some relevant figures. Since 1948-49, he said, Indian national output had grown at an average rate of three per cent. The total money supply as in March, 1955, was Rs. 1,976 crores and, at the beginning of the second plan, it might be a round figure of Rs. 2,000

Unemployment Problem

Dr. Shenoy also expressed the view that inflationary deficit financing would not help solve the unemployment problem. 'As deficit financing, by its very nature, could not add to the real resources of the economy, it could only produce such consequences as increased production of non-essential consumer goods, diversion of savings into non-essential urban property, gold hoards, foreign exchange scarcity, reduction of exports and increase in imports. When savings were thus dissipated in consumption or diverted away from developmental investment, total employment could neither grow nor rest on a normal basis. Economic instability was not conducive to a stable progress of employment. Under-employment in India was the result of investment. For continued periods, falling below the demographic rate, and the solution to this problem was an increase in the volume of investment, which could not be done in a five-year period.

Nagarjunasagar Project

Prime Minister Nehru has just laid the foundation stone for the Rs. 122-crore Nagarjunasagar project in Andhra. When completed, this will rank as the biggest irrigation project in South India with a reservoir capacity larger than that of Bhakra or Hirakud. The utilisation of water from the project will be 10.7 million acre feet, which is nearly three times the existing utilisation in the Krishna delta. The total take-off from the reservoir by the canals on both sides, will be 33,000 cusecs, the biggest for any reservoir in India. The canal on the right side with a take-off of 21,000 cusecs will be the biggest irrigation canal in the world. The total area that will be brought under irrigation will be 3.4 million acres resulting in the production of 1.2 million tons of foodgrains. The firm power generated will be 75,000 kW. The estimated cost of the entire project will be as follows:—

Cost of Dam	Rs. 35 crores
Cost of left bank canal	Rs. 26 crores
Cost of right bank canal	Rs. 61 crores
Total	Rs. 122 crores

The first stage of the project, estimated to cost Rs. 75 crores and irrigate 2.4 million acres, is expected to be completed in seven years' time. The second stage may occupy other three years. Only in the third and final stage will hydro-electric power be generated.

NEW FILTERING GLASS

A new filtering glass has recently been placed on the market by a Belgian glass-works. This product is a new cast, printed and reinforced glass available in two colours: V (green) and B (blue). It has a light-transmitting power greatly superior to that of ordinary coloured glass and tones down the contrasts without affecting the colours. Its advantages over ordinary glass are that it considerably reduces the passage of ultra-red rays, transmits almost as much light as ordinary glass, subdues the light, filters and reduces the brilliance of the sun, avoids the costly necessity of painting glazed surfaces, reduces air-conditioning expenses, protects the eyes against sun rays in both schools and workshops and enables work to be carried out in the best visual conditions. "Filtrasoil" glass neutralises the harmful rays and, while barely reducing the transmission of the light, gives the latter a subdued colour much more easily tolerated by the human eye and its use is particularly indicated in industrial buildings, textile factories, schools, hospitals, aerodromes, automobiles, public laundries, garages, workshops and laboratories.

DOWN TO REALITY

In this country money has a "half-life" (to borrow a nuclear term) of approximately 15 years; it has been losing half its value in that period. The depreciation of the prospective value of savings represented in the early premiums payable on a life policy is, indeed, considerable; but in the later years of the policy the premiums themselves have depreciated considerably in real value, and the subsequent depreciation of the savings is only slight. Often discussed, but so far without result, is the possibility of inserting a "value of money" clause into insurance contracts (and, indeed, into other contracts, such as Government loans). A useful compromise is, however, already available in the with-profit policy, which is already making good some of the depreciation resulting from the decline in the value of money. The one radical solution of the whole problem is, of course, to stabilise the purchasing value of money; but the immediate effect of the Government's deflation policy has been further depreciation, by raising prices. Another effect has been a marked increase in demand for insurance companies' money, in substitution for advances that the banks are no longer permitted to grant. Even the third big "institutional" group, the building societies, have had to resort to the insurance companies this year to counterbalance depositors' withdrawals. Whatever the national economic effect of these complex movements, there is no doubt that in the narrow sense new insurance funds can be put to profitable use.

Fighting Fire

This year's report of the Superintendent of Insurance in Canada was another reminder of the importance of British fire insurance abroad—especially in North America. Whereas Britain's part of the dominion's life business is only a trifling proportion of the whole, British companies' share of the fire business is larger (in terms of net premiums and net claims) than that of either the Canadian or the foreign group. The fire departments are necessarily keenly interested in the campaign against fire in any country where they operate. At home, and, on the whole, abroad as well, the results of this campaign have been disappointing, but there are some signs here that the hazard is being brought slowly under control. The direct wastage by fire in this country is still estimated to exceed £50 million a year, but if the monetary figure is not perceptibly increasing, the real loss, in this age of inflation, is presumably diminishing, even though it is spread over an increasing quantity of buildings and goods. The discrimination that the insurance companies exercise, very properly, between a good and a bad risk is impressing upon policyholders the economy of fire-precautions: and scientific research into the origin and behaviour of fire is showing practical results: new warning and fire-fighting systems are helping to control outbreaks. Yet the hazard itself increases as industries—the oil industry, for instance—develop.

For coal-mining the Safety in Mines Research Establishment demonstrated last month a promising new method of fire-fighting with a mass of foaming bubbles; which reduced the temperature of a pile of blazing timber from 1600°F to 50°F within 2 minutes, though released at a distance of 85 yards. There seems to be no essential reason why this method should not be developed in industry. The radioactive products of nuclear reactions have already been enlisted in the campaign against fire. One of the first instruments using radioactivity is the Minerva detector, which detects the slightest trace of smoke (whether or not there is any flame) and automatically starts an alarm or an extinguisher.

Tailor-made Policies

The insurance business has not been tardy in responding to the needs of the new atomic industry. The Alliance Assurance Company seems to be the first in this country to offer any special cover that users of radioactive materials may need, and it is devising as well an "all risks" policy to cover not only isotopes but also their containers and some equipment incorporating them. This is, of course, a field of almost unlimited scope which has only just been scratched as yet. Insurance relating to reactors—the core of the whole industry—has not come forward so promptly, but the companies are already investigating how it can be worked. A still more topical, if more transitory, note is sounded by the news that the Institute of London Underwriters has set a scale of additional premiums for vessels going to the Antarctic.

INDUSTRIALS DULL AFTER
EARLY RISEGILT-EDGED QUIET: STEELS
IMPROVE

London, 14th December.

A FURTHER advance was recorded in the stock markets before the week-end under the lead of industrial equities. Subsequently, conditions turned dull under the influence of the setback on Wall Street which followed the latest news regarding President Eisenhower's health, the Israel-Syria border trouble and the November trade figures. End-of-account profit-taking also made itself felt in industrials, though most gains were fairly maintained. The renewed advance prior to the week-end followed good company and trade news. Gilt-edged remained very quiet and interest was centred on the new issues. Prices as a whole recorded no great change, although the tendency was slightly easier. The two recent corporation issues of Glasgow and Liverpool improved. A feature of the foreign market was the strength of Berlin 6 percent on the news that debt settlement negotiations were to start. Other Germans were dull, and the rest of the market was subdued. Rails attracted little attention. Dollar stocks moved up before the week-end but reacted later. Industrials attracted by far the most attention, widespread and in many cases appreciable gains being scored. Steels dominated the market, and although quieter conditions developed towards the week-end, further gains were scored in advance of the Consett Iron issue. Almost all in-

dustrial groups joined in the rise and many good features developed. Hawker Siddley provided the outstanding feature following an excellent dividend and profit figure. Several statements, including those from Metal Box, Radiation and Distillers, however, disappointed the market. Gold shares remained quiet, and even the satisfactory December dividends failed to arouse any enthusiasm. Tins advanced on the rise in the metal price, but other base metals moved narrowly. Oils reacted after early firmness and the leaders were lower on balance. Rubbers and teas were little changed.

The Money Market

For the first time since Mr. Butler introduced his new credit squeeze measures, the money market enjoyed a whole week of very comfortable conditions. The money supply, which rose late in the previous week because of the War Loan dividend money, was given a further boost by the call of £22 million of Gas money. Tighter credit conditions were expected as these funds came to be absorbed by other sources. But as both the market and the banks held maturities in a comfortable position, easy conditions developed on Friday as dwindling funds were reimbursed by Health money. The bulk of the requirements were obtained at 21 while funds from non-clearers were obtained at 21 percent and lower. Banks were good buyers of bills, with 4-1/32 percent quoted for Februarys and hot bills and 4 percent for January dates. There was no change in the market's tender bid for Treasury Bills. Keener outside competition, however, reduced the quotas to be taken this week. Applications for £240 million worth of 91-day Bills totalled £361,135,000, of which the former amount was allotted at an average rate of 81s 4.35d compared with 81s 5.60d in the previous week. Applications for £50 million worth of 63-day Bills were £61,230,000, and the former amount was allotted at an average rate of 81s 6.68d compared with 81s 7.06d in the previous week. This week, offerings will be comprised of £220 million worth 91-day Bills and £60 million worth of 63-day Bills. The Bank of England return for the week ended 7th December showed notes in circulation about £33 million higher at around £1,828 million, while bankers' deposits were about £14 million lower at around £249 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: London industrial shares have started on a noticeable upward gradient after the recent virtual stagnation. With a minimum of selling, buyers have probably influenced prices unduly. The stemming of the gold and dollar outflow, Colville's excellent results and Wall Street recovery have contributed to the brighter atmosphere. However, while there is nothing to suggest a major setback, there is still no pointer to any major upswing in the near future.

Activity on Wall Street

Convertibles generally advanced in domestic bond dealings last week in sympathy with the trend of the security market. Rails fluctuated irregularly in slow trading, while investment quality corporates were a shade easier. Municipals were also lower despite the good reception given to the \$50 million New York State Thruway issue. U.S. Governments eased slightly in limited dealings, while World Banks were inactive. Among foreign bonds, German Nationals were mostly fractionally higher. Serbs and Polish issues ruled easy with losses of one or two points. Denmarks and Norwegians were largely neglected but ruled steady. Australians showed only minor variations either way, while a few Japanese issues registered both gains and losses of a point or so.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 7th December shows that gold stocks increased by \$1 million to \$21,689 million and foreign deposits by \$33 million to \$441 million, but foreign investments were unchanged at \$3,558 million. The Federal Reserve system purchased \$85 million worth of bills. Total discounts and advances increased by \$360 million to \$978 million, and the excess reserves of member banks by \$156 million to \$244 million. Their daily average of excess reserves increased by \$37 million to \$479 million, while their average borrowings declined by \$38 million to \$932 million. Business loans of the New York City banks increased by \$20 million to \$9,053 million, compared with a decrease of \$8 million to \$7,567 million in the corresponding period a year ago.

Prospects for Tin

The Chairman of the Sungei Besi Mines Limited and the Ayer Hitam Tin Dredging Company Limited, Mr. G. W. Simms, says in his annual statement to shareholders that it would be in the best interests of the Malayan tin industry if the International Tin Agreement did not operate. The future prospects of tin look good and if the industry is allowed to function free from control it would develop naturally. The overall effect of the Agreement, he believes, would be to reduce the price of tin.

Shipping Tea for London Auctions

The news that North Indian tea producers are seeking permission to ship an additional 8 million lbs. of tea to the U.K. for auctioning there has caused no great surprise in trade circles in London. It is pointed out that warehouses in Calcutta are embarrassingly full and supplies from upcountry are consequently immobilised. It was recently estimated that stocks of unsold tea lying in and around Calcutta totalled about 100 million lbs.

THE RISE OF THE RAYON INDUSTRY
IN INDIA

EFFECTS OF PROTECTIVE MEASURES

By N. A. Shah

INDIA'S rayon weaving industry (both pure and mixed) commonly known as the art silk industry, enjoyed protection even before it was born, because the Government, in its anxiety to protect the country's biggest industry, the manufacture of cotton textiles, imposed wide restrictions on the imports into the country of rayon fabrics, mainly from Japan. Rayon fabrics were subjected to an import duty of five annas a square yard in 1930 for the first time for general revenue purposes. In 1934 the duty was increased to Rs. 1-8 a pound or 50 percent ad valorem, whichever was higher and transferred to the protective schedule on the recommendation of the Tariff Board Report on the cotton textile industry. In spite of these safeguards, the industry failed to develop rapidly probably because its main raw material, rayon yarn, had to be imported and the protection given was neither direct nor guaranteed for a particular period.

By 1937 about 16 mills had come into existence controlling 100 looms or so, and by 1941 the number of mills had increased to about 26 and the number of looms to around 3,300. During the period 1938 to 1941 the industry appears to have worked to capacity because imports of rayon yarn nearly doubled, rising from 1.7 to 3.4 million pounds, the value of the yarn imported jumping from less than Rs. 1 crore to over Rs. 22 crores. Then came a period of stagnation and acute difficulties. Rayon yarn imports fell precipitately to 200,000 pounds in 1942, but by 1945 they had revived steadily to attain the pre-war figure of 1.7 million pounds. The value of yarn imported, after touching the low figure of Rs. 3 lakhs, rose to 56 lakhs, and the number of mills and looms remained practically unchanged.

First Signs of Expansion

With the end of the war production of rayon yarn in the world increased with amazing rapidity. India's imports of rayon yarn rose from less than two million pounds in 1945 to 40 million pounds in 1948. With the acute scarcity of cotton cloth in the country and the easy availability of rayon yarn the industry began to expand. Meanwhile in 1946 the Tariff Board examined the question of the continuance of protection to the cotton textile industry and deciding that this was no longer necessary, it recommended that protective duties on cotton and rayon fabrics should be allowed to expire on 1st April, 1947.

The Government however decided to continue the protective duties on rayon fabrics on the ground that the rayon weaving industry was in its infancy, and these duties were extended to 31st March, 1948 and later to 31st March, 1949. Meanwhile on 10th April, 1948 the Tariff Board under the chairmanship of Mr. G. L. Mehta was asked to examine the case for the industry. At that time according to the returns submitted to the Tariff Board by the Bombay Silk and Art Silk Mills Association, the total capital invested in the industry by its members in Bombay State amounted to Rs. 9 crores, and the number of workers employed in the industry had risen from 21,000 in 1946 to 45,000 in 1948. The number of member mills had increased to 117 and the looms to 8,700. In addition there were seven or eight mills in West Bengal with about 800 looms in actual operation employing about 2,500 workers.

Protective Duties

The Tariff Board prepared estimates of fair selling prices by allowing four percent return on working capital and 10 percent return on gross block. These estimates indicated a level of duties which were 50 percent lower than the duties prevailing at the time of the inquiry. But the Tariff Board justified the levying of 100 percent higher duties on the grounds that the duties were not merely protective but also served as an indirect luxury tax. As a disinflationary measure duties on rayon fabrics were raised on 9th November, 1948 (under Ordinance No. xxxiii, 1948) by increasing the surcharge from one-fifth to one-half. The Board recommended the extension of protective duties for a period of two years and the Government's Resolution dated 18th April, 1948 extended the period of protection to 31st March, 1951.

The case was again taken up by the Tariff Board (1951) under the chairmanship of Dr. H. L. Dev before the expiry of the period in accordance with paragraph two of the Government Resolution dated 6th August, 1948. By this time the number of member mills attached to the Silk and Art Silk Mills Association of Bombay, had increased to 267 and the number of looms to 19,954. The Bengal Silk Mills Association, Calcutta, had nine member mills with 755 looms, and the Textile Manufacturers Association, Amritsar, had 68 member mills and 1,879 looms, giving a total number of 364 mills and 22,588 looms.

In addition 3,213 looms were reserved for rayon fabrics by various cotton mills, so that in all 25,801 looms were engaged in the manufacture of rayon fabrics in the country. To this had to be added the agreed number of 75,000 handlooms which were taken as exclusively devoted to rayon weaving. The ratio of 5:1 was adopted for equating

handlooms with powerlooms, making the number of powerlooms 40,801.

The 1951 Board, following the same procedure, as that of 1948 estimated fair selling prices by allowing the same rate of four percent interest on working capital. They also allowed 10 percent return but instead of the phrase "gross block" they used the word "estimated or actual block values". The change in the terminology was effected without any explanation, and their estimates indicated duties which were practically the same as the prevailing ones. They therefore recommended the continuance of existing duties for a further period of two years. The proposal was duly implemented by the Government in a Resolution dated 30th April, 1951, and the period of protection was extended to 31st March, 1953.

As the Tariff Commission was not free to undertake the inquiry within the specified time limits this period was further extended to 31st December, 1953, then to 31st December, 1954 and finally to 31st December, 1955. Meanwhile the Tariff Commission took up the inquiry under Section 11 (e) (read with Section 13) of the Tariff Commission Act, 1951. The Commission, under the chairmanship of Mr. M. D. Bhat, investigated the industry and submitted a report on 7th March, 1955.

Increase in Mills

During the intervening period the industry had expanded still further. The number of mills in existence rose from 364 to 1,849 and the number of looms to 37,727. Of the total number of mills and looms 1,327 mills and 28,105 looms were in Bombay State and to-day nine-tenths of the industry is concentrated in Bombay, Bhiwandi and Surat. Most of the rayon mills are fairly small. The Bombay Silk and Art Silk Mills Association, has a membership of 311 mills; of these, 202 mills possess less than 50 looms each, only one mill having 600 looms. Surat has three co-operative organisations with a membership of 1,182 mills. Information about mills on the basis of looms is available for 828 mills only, showing that 693 mills have less than 10 looms and only one mill has more than 100 looms.

There are 173 mills in the Punjab, of which 84 are members of the Textile Manufacturers Association and possess 2,951 looms. Out of these 84 mills 49 have less than 25 looms, 27 more than 50 looms and only five mills have more than 100 looms. In addition there are 26 cotton mills which have reserved 4,080 looms for the manufacture of rayon fabrics.

According to data received by the Tariff Commission from various associations, the capital invested by their members amounted to more than Rs. 21 crores and the total labour force (both technical and non-technical) directly employed by a member mills exceeded one hundred thousand. A reliable estimate for the handloom sector is not possible. The Planning Commission in its *Programme of Industrial Development 1951-56* has estimated the number of handlooms engaged in the manufacture of rayon fabrics at 181,278. Information received by the Tariff Commission in regard to the handloom sector from the States of Bihar, Orissa, the Punjab, Assam, Travancore-Cochin, Hyderabad, Madras, Bombay and U.P. shows that 67,779 handlooms are engaged in the manufacture of rayon fabrics. This figure, however, does not cover the whole of India and is therefore incomplete.

Power and Handloom Ratio

According to the information furnished by the All-India Handloom Board, Bombay, out of two million, nine hundred handlooms reported to be in existence in the country, about 57,000 are engaged in the production of rayon fabrics. Data furnished by the Handloom Board however is also far from complete, so the Tariff Commission accepted the figure of 150,000 handlooms agreed to at the public inquiry. At the public inquiry the Tariff Commission also agreed to modify the ratio from 5:1 mission also agreed to modify the ratio from 5:1 to 3:1, so that the total number of handlooms was equated to 50,000 powerlooms. Applying the altered ratio to the 1951 Inquiry, we find that the total number of powerlooms has increased from 51,000 to about 92,000.

The Tariff Commission has discarded the phrase "fair selling prices" and has also raised the rate of interest from four to four and one-half percent on working capital. It first estimated fair ex-works prices for 1953 and on that basis worked out estimates of future fair ex-works prices for seven varieties. It shows that the existing duties are slightly lower than those indicated in the case of two varieties and from 20 to 250 percent higher in the case of the remaining varieties.

The Tariff Commission states that there is no doubt that the industry has not yet been able to consolidate its position and in order to enable its establishment on sound and healthy lines, protection at the existing level of duties, which are on the whole reasonable, should be continued till 31st December, 1958. The Government in its Resolution dated 6th August, 1955 accepted the recommendations of the Tariff Commission and extended the period of protection to 31st December, 1958. The Government has already established a Develop-

ment Council for the industry and has promised to consider other recommendations of the Tariff Commission.

The Benefits of Protection

The industry continued to be protected for the first 14 years under the wing of the cotton textile industry. After that it enjoyed a very high level of protection on its own merit and in spite of the difficulty of obtaining rayon yarn freely, especially during the Korean war period, the industry was able to secure about 40 million pounds annually during the last six years except in the year 1952-53, when the import of rayon yarn came to a little over 22 million pounds. The fall in imports was not so much due to the lack of import quotas but to the sudden slump in prices, which fell from about Rs. 2,400 to Rs. 600 a case of 200 pounds. In such circumstances importers thought it best to leave their quotas unutilised and thus avoid heavy losses. Since then yarn prices have been moving in a comparatively narrow range around Rs. 800 a case.

The industry did suffer during the short period of the sharp upheaval in prices, but barring that, it appears to have made attractive profits. This is evident from the fact that within a short period of four years, from 1950 to 1954, the number of looms has practically doubled. The industry today is suffering from an excess capacity. The capacity of the powerlooms alone has been estimated at 570 million yards by the Tariff Commission and is "far in excess of domestic demand." At the moment the industry is not utilising even half its capacity, and production is only about 250 million yards.

Import of Foreign Fabrics

During the postwar period the industry imported modern machinery with Government assistance and has improved the quality and variety of its fabrics, which have now attained a standard comparable with foreign products, although unfortunately the old prejudice against indigenous fabrics still persists.

The import of foreign fabrics however is severely restricted. From an annual import of over 50 million yards in pre-war days it has dropped to about two million yards. The high level of protective duties, at the most conservative estimate has put an extra Rs. 25 crores in the industry's pocket every year at the cost of the consumer, and it may be recalled that the capital invested in the industry is only Rs. 21 crores.

EXPORT OF COMMODITIES

Trade notices issued by the office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta, reveal the following in regard to the export trade:—A provisional quota of refined glycerine has been fixed for export by non-manufacturers during the half year January-June 1956 to all permissible destinations; the export of paints, varnishes and enamels will continue to be licensed freely during 1956. The export of sugar products, not covered by the term "confectionery", will continue to be licensed freely on shipping bills up to the end of December 1956 to all permissible destinations; The export of cane jaggery and cane gaggery powder (gur) will continue to be licensed freely on shipping bills up to the end of December 1956 to all permissible destinations; the export of cresolite oil (light) will continue to be licensed freely on shipping bills up to the end of December 1956 to all permissible destinations, and similarly with regard to the export of sisal twine.

THE INDIAN PAPER INDUSTRY NEED FOR REVISION OF PRODUCTION TARGETS

By Iturriel

THE thirst for knowledge today has created a new need, a need for greater supplies of paper, for the printed word is still man's best means of communication. Aware of the likely increase in demand, the Government of India, while drafting the programme of development for the paper industry during the first five year plan, estimated the actual production of paper at the rate of 200,000 tons by the end of 1956. Judging from the progress achieved so far it can be safely predicted that the industry will not experience much difficulty in reaching the required target.

Although earlier attempts to manufacture paper in India can be traced back to 1870, only five paper mills existed until the end of 1913. Between 1925 and 1937 the number rose to nine with a total production of about 48,500 tons. During World War II, the number of mills increased to 15, while the annual production reached the figure of 104,000 tons. On the eve of the first five year plan the number of units increased to 17 with an annual rated capacity of 136.6 thousand tons. There are at present about 20 units in the country with an annual capacity of about 185,600 tons. The production of paper and board since 1950-51 increased steadily with the result that by the end of 1954, production amounted to 155,327 tons as against 137,507 tons in 1952.

In this connection, it may be pointed out that the Panel on the paper, pulp, board and chemical cotton industry (1947) had estimated the consumption of paper, excluding newsprint, at 220,000 tons in 1951 and 320,000 tons in 1956. However, after taking into account the effect of partition, the increase in prices and certain activities connected with the literacy campaign which were expected to stimulate the demand during the period of the first five year plan, the Planning Commission estimated that the demand for paper would increase to 200,000 tons in 1955-56. As against the estimated demand of 200,000 tons, the average annual increase in the production of paper and paper-board during the first three years of the plan was about 5,000 tons. For instance, the actual production of paper and paper-board reached the peak figure of 155,327.64 tons in 1954 as against 139,704 tons in 1953 and 131,916 tons in 1951. The following statement gives the actual production of different varieties of paper and board produced by the mills in the country since 1951.

	1951	1952	1953	1954 (Jan.-1955)
1. Printing and writing.	79,263.30	91,430	96,625.90	1,02,875.78
2. Kraft incl. ink imitation.	—	—	—	58,269.04
3. Brown.	17,102.79	12,078	12,055.07	14,114.11
4. Special varieties of paper.	3,118.23	2,818	3,409.91	4,827.06
5. Duplex and triplex boards.	11,450.22	10,676	7,995.05	10,328.11
6. Pulp Boards.	8,254.91	5,076	4,693.98	5,641.57
7. Other boards other than straw, board and mill board.	4,341.48	7,672	6,637.64	8,062.55
	121,915.35	137,517	139,704.55	155,327.64

It is needless to state that the production would have been still higher but for strikes, lock-outs and other labour troubles in some of the units of the industry which retarded production considerably. While the increase in the demand for paper and paper-board has been fairly modest during the first five years of the plan, considerable progress has been made towards increasing the capacity of the industry. For instance at the commencement of the period of the first five year plan, the annual rated capacity was estimated to be about 136,000 tons. Since then three new units (Messrs. Cauvery Paper Mills, Ballarpur Paper and Strawboard Mills and Paper and Pulp Conversions Ltd., Poona), have gone into production and the expansion and modernisation of seven of the existing factories have been completed, with the result that there are at present 20 units in the country with an annual capacity of about 185,600 tons as against the target of 211,000 tons laid down in the plan to be achieved in 1955-56. It is understood that up to

September, 1954, licences had been granted by the Government to increase the capacity of the industry to the extent of 315,000 tons. Despite the increase in production of paper and paper-board, the per capita consumption of paper in this country is about one and a half pounds which is the lowest recorded figure in comparison with other countries. However, the mills in the country are making an endeavour not only to increase production but also to diversify it with the result that it will not be long before most of the varieties of paper and board at present imported, are manufactured within the country.

Import Policy

Although the overall production of paper in the country today falls short of the demand, the gap lies more in certain special varieties than in ordinary printing and writing paper, kraft paper and paper-boards. For instance, the demand for writing and printing papers had been estimated by the Planning Commission at 95,000 tons. Production of these varieties of paper however, rose to 102,875.78 tons from 79,263.30 tons in 1951, showing that the indigenous production is quite sufficient to meet the entire demand of the country in respect of these varieties. This fact has not been taken into account by the Government while framing its import policy, with the result that the import of about 17,252 tons of writing and printing paper was permitted during 1954. Consequently, the total availability of printing and writing paper has been much more than the actual requirements. This has naturally affected the sale of indigenous writing and printing paper and has created difficulties for the mills manufacturing these varieties in maintaining the tempo of production. Similarly, in the case of packing and wrapping papers, there is no dearth of low-priced wrapping and packing paper manufactured by the mills in the country along with the indigenous available old newspapers, which are also used for packing and wrapping purposes. On the other hand, as a result of the excessive import of packing and wrapping paper into the country, the total amount available, including imports of these varieties of paper, was about 85,628 tons in 1954 against the estimated demand of 50,000 tons per annum. In the case of paper-boards, the present indigenous production is also quite sufficient to meet the entire demand, while in the case of strawboard, production is far short of the installed capacity. In the circumstances, it is essential that the Government should suitably modify its import policy so that imports are allowed simply to bridge the gap between the country's production and its normal requirements, and in respect of those varieties of paper and boards that are not being manufactured in the country.

Raw Materials

Bamboo and sabai grass are the two important raw materials of which most of the paper mills in the country make use. The following table shows the consumption of raw materials by the 19 mills in the country which were in production in 1953.

	Forest Products	Urban Wastes	Other	Imported
Mill Number	Bamboo	Sabai Grass	Waste paper, etc.	Waste paper, etc.
1	1.5	—	1.8	0.2
2	2.0	—	0.1	—
3	23.0	11.0	0.7	0.5
4	—	—	0.5	0.5
5	—	—	3.6	1.7
6	—	—	0.7	2.0
7	20.0	—	—	1.0
8	11.0	—	0.4	1.1
9	—	—	—	—
10	90.0	0.3	—	—
11	—	—	1.5	—
12	9.5	—	1.2	3.0 Spruce
13	26.0	—	6.0	2.6 Bagasse
14	—	30.0	0.7	7.9
15	18.0	—	0.5	0.4
16	—	24.0	0.2	0.2
17-18	95.0	3.7	4.8	4.8
19	—	—	1.8	1.4 Hemp
20	—	1.0	1.8	0.2
Total	286.0	60.0	24.5	23.5
Percent	70.0	14.5	6	2.5

Out of the 19 mills, 10 are using mainly bamboos, two base their operations chiefly on sabai grass, six mills use rags and waste paper entirely while one mill utilises hemp and hemp rope waste exclusively for manufacturing cigarette paper. As can be seen from the above table, the consumption of waste paper and rags is not confined to these smaller units, since almost all the mills make use of these materials. It is interesting to note in this connection that the utilisation of reclaimed paper, judged by Western standards, is relatively low, amounting to only about six percent by weight, of raw material inputs. Rag consumption includes the use both of high quality hosiery and tailor cuttings and of tattered and grimy "sweeper" rags collected from households and city streets. Both grades of rags are utilised in the making of better grades of printing and writing papers. Most rag material is cotton, but a certain amount of jute waste and old gunny bags is also utilised in the making of wrapping papers.

However, in spite of the abundance of bamboo and grass forests in the country, the paper mills are experiencing considerable difficulties in obtaining these essential raw materials due to the lack of a centrally-controlled and co-ordinated forest policy. The Planning Commission recommended the reservation of specific forest areas for the paper industry, grants of long-term leases, following a rational method of fixation of royalty on an all-India basis and the development of roads in forest areas, etc. While the above recommendations

have been accepted and endorsed by the Central Government, some of the State Governments have persistently refused to fall in line with this policy and have been auctioning their forest areas solely in order to derive the highest possible revenue. Similarly, they are also charging excessive rates of royalty. It is needless to state that long-term leases would assure the paper industry of a continuous and sufficient supply of raw materials. The industry would then be in a position to invest considerable capital and to undertake in their own interest, adequate development of the forest areas and the construction of roads to inaccessible areas. Moreover, through the scientific exploitation of bamboo forests, the yield from these areas would be considerably enhanced, thereby fetching an appreciably increased royalty to the State. It is, therefore, necessary that the Central Government should prevail on the State Governments concerned to implement the recommendations of the Planning Commission.

Another problem which the industry has been facing, recently lies in the distribution of the available raw materials. Some of the State Governments have expressed their desire to have fresh units established at a new location within the State, even though the expansion of an existing unit in such circumstances would have been more economical. A new location is selected irrespective of its suitability and without regard to the essential pre-requisites for the establishment of a paper manufacturing unit. It is essential that whatever capital is available should be put to the maximum advantage, and it should be the responsibility of the State Governments to see that in the distribution of available raw materials, preference is given to the existing units and due consideration shown to commitments already made before entering into new schemes, otherwise the healthy growth of the paper industry will be hampered considerably.

Newsprint

A serious drawback to the full expansion of the paper industry has been that so far there has been no mill manufacturing newsprint in the country. Thus every year India has been spending about Rs. 5 crores on the import of newsprint from abroad. The Planning Commission had envisaged the establishment of a newsprint factory with a capacity of 50,000 tons per annum in the public sector. The State-aided factory "Nepa Mills" commenced production in January 1955 and produced about 820 tons of newsprint up to June 1955. The progress of the Nepa Mills, it is needless to state, has been retarded on account of the lack of expert knowledge regarding capital requirements, cost of production, etc. Since the Nepa Mills started producing newsprint only recently, the entire requirements of the country in respect of this item have still to be met through imports from foreign countries. Due to the difficulty in identifying newsprint, a larger quantity of newsprint than that actually required by the press is at present being imported. These excessive imports are largely utilised by booksellers and publishers for printing text-books, making exercise-books, etc. On account of the wide and indiscriminate use imported newsprint is being put to, it is offering strong competition to the indigenous paper industry, which is finding great difficulty in marketing its products, even though the Government has taken steps to check unnecessary imports of newsprint. In order to remove the handicap to the indigenous industry created by the imposition of excise duty, it is also necessary that imported newsprint is brought on a parity with other printing paper by the levying of an equivalent import duty.

Development During the Second Plan Period

An examination of the actual consumption of paper and paper-board (excluding newsprint) during the last five years will help in fixing the target of production to be achieved by the industry by 1960-61. In 1953-54 the total available amount of paper and paper-board (excluding newsprint) was about 193,000 tons on the basis of domestic production plus imports. Judging from the present trend of consumption and also taking into account the improvement in economic conditions and the spread of literacy, the demand for paper and paper-board is likely to increase considerably during the second plan period. Assuming an annual increase of 10 percent, the demand for paper and paper-board of excluding newsprint by 1960-61 can be estimated at about 360,000 tons. In order to enable the industry to achieve this target, it will be necessary to augment the rated capacity by about 135,000 tons, since the total capacity by about 135,000 tons so far issued, is expected to reach about 315,000 tons by 1957. In addition, while issuing licences should fix a minimum of 50 tons as the economic capacity is likely to find difficulty in competing with the other economic units. Efforts should be made by the industry to produce special varieties of paper and improve their quality. There is also a persistent demand for cheaper varieties of printing and writing paper in the country, and some of the units have already made arrangements to meet this demand. It is hoped that during the next plan period, it will be possible to stop paper, particularly newsprint and old newspapers, and the price difference between the indigenous and imported varieties has been the main cause for the use of more imported papers.

Despite the difficulties and handicaps, the paper industry has a promising future. Against the repressed statement in the press that the world's timber forests are rapidly diminishing due to over-exploitation by the wood-pulp industry, the prolific growth of bamboo, an essential raw material for the manufacture of paper, should place India in a strong position as a paper-manufacturing country.

Jute

TOO MUCH MOISTURE IN JUTE DELIVERED TO MILLS

INADEQUATE CARE BY CULTIVATORS

A MAJOR headache for the jute industry at present is that fibre is being delivered with too much moisture. This is not confined to any one district or type of fibre, but is true of all agencies. It is not unreasonable for mills to expect at this time of the year jute which, in terms of the contract, is in "a dry and storable condition". Normally, deliveries during this period conform to this description. Recent arrivals however have been in anything but a storable condition, and arbitration awards and private settlements have called for the rejection of many parcels. The much-maligned seller has been accused of a too liberal use of the "watering can", but although it is admitted that in many cases this is unfortunately true, the greater majority of sellers are merely the victims of circumstance.

Reports from upcountry agencies indicate that the moisture is there long before the jute gets into the hands of the sellers, and the real culprit therefore is the cultivator. It is suggested as one of the main reasons that farmers have had to wait for late rains to fill the retting tanks before they cut their jute, and once the jute was cut, the demand was so great that they did not have time to dry it before despatch. This was particularly the case with Daissee and Daissee Mesta. Having got away with it in the early stages, they continued the practice, with the present unfortunate result. This puts the seller in a dilemma where he is faced with three choices. He may either ask for an extension, which in the majority of cases would be granted by the mills. Or he pays an exorbitant price for dry jute. Or he buys wet jute, the price

continued to be dull, but the steady undertone derived from sacking was reflected in a rise of 2 annas for 40in. 10oz. hessians to Rs. 40-14 for December shipment and Rs. 39-14 for forward shipment. Throughout Monday, the market ruled steady, but over-speculation and the falling off of overseas support caused prices to slump towards the close. On Tuesday morning sacking had dropped by Re. 1 and hessians by 4 to 6 annas. Speculators paused to take stock at this stage and a quieter tendency developed.

At the close quotations have again fallen but the following rates quoted at the opening on Wednesday morning can be regarded as nominal due to the fact that the market was closed on account of the eclipse of the sun.

	December	January	January- March	April- June
Rs.	Rs.	Rs.	Rs.	Rs.
40" 8oz.	32-4	32-4	32	31-10
40" 10oz.	40-4	40	39-10	39-4
B Twills	111-14	110-8	109	106-8
Heavy Cees (Plain)	113	111	109-8	107
Heavy Cees (Green)	111-12	110	—	—
A Twills	136-8	136-8	134-8	130
Liverpools	130-8	129	125	120-8
Cornacks	112	111-4	110-4	107-8

It was decided at a meeting of the I.J.M.A. yesterday afternoon that 21 percent of the present total of about 8,000 idle looms should be unsealed from 9th January, 1956. This is expected to increase monthly production by about 2,000 tons.

of which is still well above the rate of most countries ruling today. Whichever path he chooses he faces heavy financial loss, because even if he takes an extension and eventually gets dry jute, prices show no indication at the present time of falling back to the former low levels ruling when the contracts were made. The position of the buyer is little better, as the receipt of wet jute upsets many of his calculations, although he does have recourse to arbitration to cover his losses.

THE JUTE MARKETS

The heavy goods market saw rapid changes last week. The main movements were in the forward section, where overseas enquiries boosted prices, which at one time rose Rs. 20 a ton over the opening rates. As so often happens, speculators immediately went into action and heavy buying, followed by profit-taking and selling pressure, caused near delivery prices to vary sharply. This occurred only in sacking. Hessians ruled steady throughout the week, recording small rises each day in sympathy with heavy goods. Very little business was reported, as America appeared to be completely out of the market. Rumours played a big part in the week's activities, and were based mainly on the question of unsealing looms. On Monday, both sections of the market fell back, and hessians lost all they had gained over the week. This state of affairs is not conducive to business, and it is not likely that overseas buyers will continue to take an interest in such unstable conditions.

Manufactured Goods: There was very little change in the gunny markets at the opening on Thursday, the forward position in both hessian and sacking being the same. The only change in the near position was a 4-anna increase in ready B Twills to Rs. 113-8 a 100 bags. April-June shipment B Twills remained at Rs. 106, while ready and forward shipment 40in. 10oz. hessians still quoted Rs. 40-10 and Rs. 39-8 a 100 yards respectively. After a quiet opening prices advanced slowly, mainly in the forward section, due to small overseas enquiries from both Australia and China, for green heavy Cees, B Twills and cornacks. Later, prices of these fabrics advanced rapidly in the January-March and April-June positions under buying pressure whilst near delivery quotations were unchanged. January-March heavy Cees and B Twills both jumped by Rs. 1-12 by Friday morning and April-June shipment by Re. 1 a 100 bags to be quoted in the latter section at Rs. 107-8 and Rs. 107 respectively. The improvement was maintained in forward shipment while near quotations changed for ready, December and January shipment. Hessians ruled quiet but steady in sympathy with sacking and there was no alteration in quoted rates. Speculative covering in anticipation of further orders continued to force up heavy goods rates, and by Monday morning April-June B Twills had reached Rs. 108 or Rs. 2 higher than at the beginning of the week. December shipment stood at Rs. 113-10 a 100 bags. Business in hessian

Raw Jute: The quieter tendency which developed in the raw jute markets last week was again apparent in the current week, and mills at the opening showed very little interest. The fluctuations of the goods market were not reflected in this section, and quotations were once again governed by the steadiness of the upcountry markets, where imports continued to be very poor. Sellers were reserved and were not willing to sell at below the quoted rates. Small business was done when the goods market improved. Jute prices advanced, but offers were kept down to a bare minimum and the majority of sellers would only indicate 1,000 to 2,000 maunds at a time. The transport situation had a lot to do with sellers' reluctance to do business, as many have been hard hit by having money blocked through their inability to secure space or wagons. This has been reflected in the supply position of the local markets, which have firmed up considerably due to the heavy drop in imports. Mills' representatives are still buying at every available opportunity, and do not appear to be deterred by the high prices demanded or the unsatisfactory condition of the jute. All mills continue to protest against wet jute received against all contracts irrespective of price, but there is little that the seller can do about it at the moment, as the fault lies initially with the farmers who are despatching jute to the mokams in a very wet state. It is a big disappointment and loss to the mills as normally at this time of the year they can depend on receiving jute in a storable condition.

There was no change in raw jute quotations at the opening last Thursday, and Upper Assam Bottoms ruled at Rs. 26 a maund for December-January shipment. Mills showed very little interest, but with upcountry districts reporting poor imports there was little chance at this stage of any reduction in rates. After a quiet opening in the gunny market, speculative covering at lower levels caused an improvement in goods prices. Raw jute was not slow to follow this lead and on Friday morning quotations were marked up 8 annas a maund for all types of fibre. Mills indulged in spasmodic buying at this stage, and a steady undertone developed with sellers looking for higher rates, but there was no change in quotations until Tuesday morning, when Upper Assam jute increased by 8 annas. All other grades however remained static so this brought Upper Assam jute on a par with Dhubri and Northern Bengal at Rs. 27 a maund basis Bottoms.

Once again business concluded during the week was on a restricted scale, mainly due to the scarcity of sellers. Small lots of Dhubri jute were purchased under ready bills of lading at Rs. 26-8 a maund basis Bottoms, and the same price was paid for Northern Bengal jute for December-January shipment. Upper Assam fetched between Rs. 26 and Rs. 26-8 a maund basis Bottoms but business in this section was on a very limited scale. After the week-end business was done for selected districts of Murshidabad Tossa at Rs. 26-8 a maund for one month's shipment. Interest was maintained throughout the week in Daissee and Daissee Mesta, and prices for the former ranged from Rs. 27 to Rs. 27-8 a maund, and Rs. 24 to Rs. 24-8 for the latter, both for one month's delivery. A small lot of Bimli was done early in the week at Rs. 24-8 a maund for F.A.Q. for December-January shipment.

The only business reported in the pucca bale section was in Pakistan Cuttings, which changed hands at Rs. 102 to Rs. 105 a bale for December-January shipment.

On Wednesday morning the jute markets were closed on account of the eclipse of the sun, and the

Narayanganj N.C's.	107 a bale	Ready.

The local Cossipore markets are ruling very steady due to the poor import figure. Arrivals dropped to a new low of 460 wagons, for a daily average of only 65 wagons, which emphasises the confusion prevalent in rail transport and the acute shortage of wagons. Sellers were very reserved and asking high prices for the little jute that was available. At the close Kishanganj jute was quoted at Rs. 26.8 a maund for garbat quality. The main worry in the Daissee markets was the condition of the very small imports. All arrivals contained anything from 5 to 10 percent moisture, and in some cases dry jute was quoted up to Rs. 4 a maund above the current rates. This is most unusual for the time of the year, and if the situation does not improve, the majority of sellers will face very heavy losses as many low-priced contracts due for delivery have still to be covered. At the close quotations in Sheoraphuli were based on Rs. 26.8 a maund for garbat quality jute containing not less than 2 percent moisture, and Rs. 29.3 a maund for dry jute.

Mofussil: The Pakistan markets are quiet, prices having fallen about 8 annas a maund over the week. Very little business is reported as buyers are holding off for still lower prices. Imports have varied from 25,000 to 30,000 maunds a day, only a small percentage of which is baled jute. Latest quotations in Narayanganj are as follows:

Pucca Bales:	Rs. (P) a bale.	Kutcha Bales. Rs. (P) a maund.
Mill Firsts	157	Jat Bot 27
Export Firsts	121	Jat B Bot 23

Dundee Tossa 4's	145	Jat X Bot 17.8
Output Tossa 2/3	127	Tossa is quoted Rs. (P) 1
Output Tossa 4's	106	higher than white jute.
Narayanganj Cuttings	85	

Raw Jute Consumption

The consumption of jute by mills reporting to the I.J.M.A. during November 1955 was 527,600 bales, which was 68,200 bales more than in October. This was due to the fact that there were a larger number of working hours in November. The total consumption for July-November, 1955, is now 24,60,600 bales. In November 1954, the consumption was 516,500 bales, and the total for July-November, 1954, was 23,41,300 bales. Thus, in the current season, raw jute consumption is 119,500 bales higher than in the corresponding period of last season.

I.J.M.A. PRODUCTION FIGURES FOR NOVEMBER

The Indian Jute Mills Association reports the total production of Jute goods during the month of November, 1955 as follows:

Description	Quantity
1. Twist and Yarn	2,936 tons
(a) For Sale	
(b) All other including that used in sewing bags	1,099 tons
2. Canvas	294 tons
	6.9 lakh yds
3. Gunny Bags (Tonnage exclude tonnage)	
(a) Hessian	3,177 tons
	1,09.6 lakh yds
	77.2 lakh Nos
(b) Sacking	48,116 tons
	11,56.6 lakh yds.
	4,88.6 lakh Nos.
4. Gunny Cloth	31,134 tons
(a) Hessian	11,92.4 lakh yds
(b) Sacking	1,740 tons
	42.3 lakh yds
5. Other manufactures (including ropes)	2,017 tons
6. Total production (above figures combined)	
(a) All kinds	90,513 tons
(b) Hessian (both bags and cloth)	13,02.0 lakh yds
(c) Sacking (—do—)	11,98.9 lakh yds
(d) Canvas (—do—)	6.9 lakh yds

Summary	(0000 Yds.)	(000 Tons)

PAKISTAN JUTE MARKETS

The jute market maintained a firm and steady outlook throughout the month. Supplies were rather restricted, and price changes were few but on the whole the trend was upward. Sellers were reserved and superior marks were not offered at all. Export noted a rise of Rs. 2 a bale and recorded the price of Rs. 137 a bale. Overseas demand was steady and Export First was quoted at £32 a ton c.i.f. United Kingdom and the Continent. It is interesting to note that export prices for standard marks of jute have advanced beyond the official minimum fixed, owing to keen overseas demand for prompt delivery. This indicates that spinners abroad have no stocks but are depending on regular supplies. According to the third estimate of the jute crop published by the Provincial Government, the total yield this season will be nearly 56,00,000 bales, but in the opinion of the trade in general the out-turn should reach a minimum of about 70,00,000 bales.

The disparity between the Government and the trade estimates, it appears, has arisen mainly out of the different assessments of the extent of the damage caused by floods. While the Government estimates that the area totally destroyed by floods represents 4.8 percent of the total area originally under jute cultivation this season and the partially damaged area represents 6.6 percent, the trade in general seems to be of the opinion that actual damage so far as the quantity of jute is concerned was negligible. On the basis of the Government estimate the total supply of jute will be about 59,00,000 bales; on the basis of the trade estimate it should be in the range of 73,00,000 bales.

So far as export is concerned, as in the previous two years, the total exports this season, including movement to India, are likely to be in the neighbourhood of 52,00,000 bales. Internal consumption is likely to rise to 12,00,000 bales, bringing the total estimated demand to about 64,00,000 bales. It would thus appear that on the basis of the Government estimate the total jute available will fall short of the demand while according to the figures favoured by the trade, there will be a carry over of about 9,00,000 bales.

FRENCH JUTE PRODUCTION

The production of yarn and cloth by the French jute industry averaged 6,499 tons and 5,046 tons respectively during July and August, 1955, compared with 9,009 tons and 6,933 tons during June. The fall in output was also reflected in the number of workers employed in the industry, which were 9,398 in July and 9,340 in August, against 9,479 during June and 9,500 in April. Raw jute discharged at the French ports amounted to 4,369 tons in July and 3,758 tons in August as compared to 4,369 tons in June, 8,561 tons in May and 13,325 tons in April. Stocks of raw jute at the end of August stood at 13,311 tons against 16,910 tons at the end of June, 20,583 tons at the end of May and 23,983 tons at the end of April.

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT)

THE jute markets are very quiet again and the position is being made worse at the moment by the attitude of some raw jute shippers. One firm is offering to sell Grade Daissee-2/3 and Grade Tossa-2/3 and fours, also Dacca Tossa-5 and 6, at 10s under the minimum prices. One other firm came out two days ago offering to do business at 20s under the minima for Tossa, but the rate has gone back again to minima. There is no interest in Tossa meantime and it is understood that there is quite a quantity afloat unsold. Anyway, business could be done at £3 a ton under minimum for Tossa-2/3. It is a mystery how it can be done, but the sellers appear to ignore the threats of the Pakistan Jute Board of cancelling trading licences if it is known that attempts are being made to sell at under the fixed minima. White jute is firm and there is no mention of anything under £90 being possible for Mill Firsts, £90 for Mill Lightnings or £70 for Mill Hearts, and one or two are still asking £1 or £2 more for the better qualities. Only a very limited business is being done with spinners here.

There is little doing in jute yarns. Buyers have all secured their needs for the time being and spinners are not able to give quick delivery of most descriptions. They are all well booked up in the ordinary hessian yarns, some even to the end of March, and prices rule very firm on the basis of 14.48d a lb for common 8 lb. cops and 8 lb. spoils. There is more doing in twist by the carpet industry. This has been quiet for so long and 3 ply 8 lb. twist is firm at 16.04d a lb., while sacking yarns are enjoying a ready sale at 11.18d a lb. for 24 lb. web, business being done again as far forward as May next year. Rove is quiet but firm. In some widths and weights of hessians manufacturers are quoting April as their nearest delivery and the trade is fairly satisfactory. Meantime little fresh business is passing, yet prices remain firm at 12.49d for 10 oz. and 10.23d for 8 oz. a yard. Calcutta goods are steadier, after weakness, at 61s 6d for 10 oz. 40 in. and 46s 0d for 7 1/2 oz. December and January. 61s and 45s 9d February-March and 60s 6d and 45s 6d April-June, with "B" twills at 169s, 165s 6d 165s 6d and 164s for the respective positions, f.o.b.

Commodity Markets

BRITISH TEXTILE REVIEW

FACING FACTS

THE finding of the International Cotton Advisory Committee that relief of uncertainties on prices was a matter of extreme urgency was naturally approved in Lancashire—for whose benefit, indeed, the British Board of Trade had exerted strong pressure in Washington. But in advance of an agreed plan for disposing of America's surplus cotton there was still no basis for confident trading in Lancashire. Strong criticism here does not mean that the predicament is little understood, or that the British can see an easy way out. The harm has already been done—by price-support, in consequence of which acreage-control has completely failed to limit production. To get nearly 21 million bales more from about 17 million acres than an average of about 281 million acres yielded in 1934-8 would in normal circumstances be most gratifying, but in the absence of demand for the extra cotton it is only embarrassing. Disposal of the surplus is evidently impossible without large-scale exports from the U.S.A.; yet the Advisory Committee has suggested on current trends "outside" growths will satisfy all requirements outside of the U.S.A. a few years hence. The suggestion is not fanciful, for this season's estimated production outside of the U.S.A. and the Soviet bloc, at 17 million bales (compared with rather less than 15 million bales for the U.S. crop), is about 50 percent more than the average of 1934-8.

There seems to be no solution of the problem otherwise than by raising consumption. But consumption is increasing mainly in those countries which produce cotton: important consumers are such as Britain, and other European countries, are tending to reduce consumption. Lancashire is inclined, therefore, to favour (if feasible) for America a solution that seems to be working well for Egypt. Of that producer's output a substantial proportion is being diverted to China, Russia, Poland, Czechoslovakia, Hungary, Rumania, to counterbalance the decline in shipments to the U.K., Germany, France, Italy, Switzerland, and India. However, those countries of the Soviet bloc are actually or potentially strong competitors in the export markets for cotton goods; while Japan's apparent willingness to limit exports to America and Europe may well imply keener competition in Australia, Africa, and Asia. Meantime, however, grudgingly, the British industry has made two important moves that should strengthen its competing power, even eventually, increase its consumption of cotton. The Federation of Calico Printers, yielding to what it describes as "political force", has abandoned its minimum-price schedule and its "percentage quantum" scheme; so that—at least in form—this section of the industry will in future compete within itself. Other sections are necessarily reviewing their own restrictive practices in the light of impending legislation. In the two-and three-shift working for weaving. Negotiations for a central agreement broke down on the insistence of the operatives' union that only union labour should be employed on night-shifts, but negotiations with individual companies are proceeding quite well.

Wool's Position Sound

The continuing strength of wool at the last series of auctions in London this year has further fortified confidence in the industry. In the raw wool trade, by contrast with the raw cotton trade, the relation between supply and demand is nicely balanced. The long-term tendency is, perhaps, towards deficiency, but the use of man-made fibres in the industry, though at present on a small scale in relation to the use of wool, can maintain the balance. Concluding its sixth session in London last month, the International Wool Study Group estimated world production (greasy basis) at 4,650 million pounds in 1955-6, compared with 4,500 million pounds in 1954-5 and with a prewar average of 3,810 million pounds. Consumption has increased slightly this year, after the moderate fall last year, and in the twelvemonth to September it was closely in line with production. The trade can already see evidence that the decline in values, only recently reversed, has stimulated consumption—though the Study Group remarked, non-committally, "it remains to be seen to what extent the lower level of raw wool prices which has been established at the beginning of the current selling season will stimulate a further increase in total world consumption".

The Yorkshire industry has no very serious grounds for complaint concerning trade, even ex-

port trade—though it is glad to turn to China as a big outlet for tops. It is well to remember that British mills supply about one-half of the world's exports of wool-based goods, and that the Commonwealth's raw wool—more than one-half of the world's total—is converted into dollars not only by direct sales but also in the form of these British manufactures. Nearly one-quarter of the value of this leading export—on a rough average, £30 million out of £125 million—is earned in the dollar markets.

Aiming for More Dollars

For the North-American market the high-class apparel trade is reinforcing its campaign. London Week, beginning on 16th January, will be directed especially at that market. It will be the occasion for showing the creations of haute couture, as well as the more practical products of the ready-to-wear, knitwear, and fabric, houses; for the Incorporated Society of London Fashion Designers—representing houses whose prestige has been remarkably enhanced since the war—has brought shows of spring collections forward to London Week. Since the readjustment of purchase-tax in Britain the manufacturers and designers have had more incentive to develop this higher-class trade, and they should have more to show than in recent years. Whether they will have correspondingly more incentive to export depends on the strength of demand at home—it may be stronger than the authorities envisage.

In one particular section—for a particular reason—there has been a marked increase in sales to North America. The vogue there for seamless nylon hose has far exceeded local manufacturing capacity, and the British hosiery industry, relatively better equipped with the special circular machinery required, has been able to raise its exports to the dollar markets from a few hundred dozen pairs monthly at the beginning of the year to tens of thousands of dozen pairs monthly in recent months. Here, however, is a case where recent months' demands are directly competing, home and export demands have become fashionable also at home. It seems sensible to focus on the dollar markets while they offer opportunities, for local production will doubtless catch up with demand there before long.

WORLD WOOL PRODUCTION RISING

A statement issued in London after the recent meetings of the International Wool Study Group indicates that in wool consumption is lagging somewhat behind production. Total world production in 1955-56 is forecast at 2,620 million pounds (clean weight) compared with 2,580 million pounds in 1954-55 and with a prewar average of 2,070 million pounds. The Australian and New Zealand clips are expected to be somewhat larger, and in South Africa the high level of production achieved seems likely to be maintained or improved upon. Uruguayan production is expected to be maintained, but a decrease of several million pounds may occur in Argentina.

Stocks of wool carried over by the producing countries at the end of the 1954-55 season appear to have increased by some 40 million pounds, the increase being largely attributable to Argentina, the increase being largely attributable to Argentina and Uruguay where, however, tentative estimates only are available. In 1954 consumption showed a fall of about 5 percent compared with the preceding year. During the first nine months of 1955 world consumption of wool was estimated to be about 2 percent higher than in the same period of 1954, and for the year ended September, 1955, is estimated at 2,520 million pounds.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: August 1939=100) advanced by 0.4 percent to 364.5 during the week ended 26th November 1955 as compared with 363.2 for the previous week. The index was higher by 1.0 percent as compared with the corresponding week of the last month but was 1.9 percent lower than that of a year ago. The average for the month of November 1955 stood at 364.7 as against 357.2 for October 1955 and 376.1 for November 1954. During the week under review, the index for Food Articles advanced by 0.5 percent to 322.2 due to an increase in the prices of tea (+7%), dal arhar at Hapur and gur at Muzaffarnagar (+6% each), rice in Calcutta (+3%) and at Vijayawada (+4%), and gram (+2%) and wheat (+1%) at Hapur notwithstanding a decline in the prices of jowar at Amravati (−14%) and rice at Patna (−3%). The index for Industrial Raw Materials also moved up further by 0.5 percent to 421.4 as compared with 419.5 (revised) for the previous week as a result of higher prices of manganese ore (average export prices) (+12%), cotton seed (+7%), gingellyseed

(+5%), groundnuts and castorseed in Bombay (+4% each), and linseed in Bombay (+3%) although the prices of groundnuts at Cuddalore (−6%), raw silk (−4%), copra (−2%) and lac (−1%) were marked down. The index for Semi-Manufactures rose by 0.6 percent to 340.8. Items which witnessed noticeable changes during the week were: Castor oil in Calcutta and groundnut oil (+4% each), linseed oil in Calcutta, copper in Bombay and buffalo hides (+2% each) and copra cake (−2%). The index for the Manufactures group increased from 373.6 to 373.7 as a result of an advance in the prices of jute manufactures. Higher prices of betelnuts (+5%) raised the Miscellaneous group index by 0.2 percent to 513.4, the price of black pepper at Cochín, however, fell by 2 percent.

GRADUAL IMPROVEMENT IN DEMAND

A steady decline took place in the price of export quota during the first two weeks of the month and thereafter the price remained firm and showed little fluctuation. A noticeable feature of the month has been the steadiness of the price of quota in comparison with the fluctuations in the price of tea. The price of quota has not reflected the rise and fall of the tea market to the same degree as is usually the case. Business at the beginning of the month was transacted at rates around 80 pies a lb. but during the following fortnight declined steadily to about 60 pies a lb. and by comparison the price of tea had dropped by as much as 54 pies a lb. During the remaining two weeks of the month the price remained fairly steady at about 60 pies a lb. The estimated North India crop to the end of October, 1955 was 456,126,600 lbs. as compared with 450,510,259 lbs. to the same date last year. The average figure at this rate for the three years 1952-1954 was 442,857,314 lbs. The Government of India has issued a notification fixing the price for tea for the purpose of export duty at Rs. 3.45 per lb. against Rs. 3.76 a lb. in force from 1st November, 1955. The export duty, therefore, remains unchanged at Rs. 8 a lb.

Arrivals in chests in Calcutta warehouses during the period 24th October to 23rd November, 1955, with the corresponding figures of the previous year in parentheses, were as follows: by steamer 448,258 (465,706), by rail 129,434 (128,246) and by air 17,538 (18,464), making a total of 585,230 (612,416) chests. Since the beginning of the season, 1st April to 23rd November, 1955, arrivals have been: by steamer 2,271,925 (2,540,750), by rail 548,658 (491,066) and by air 143,693 (127,062), totalling 2,964,271 (3,158,878) chests.

The coffee harvest has commenced in South India. The new crop is estimated at about 27,000 tons made up of 17,000 tons of arabica and 9,775 tons of robusta as against 1954-55 season's 25,100 tons. The abolition of export duty will enable the Board to give more, to the coffee growers making the total payment for the season Rs. 2.5/ a point.

Tea shipments from Cochin during the first 10 months of the year amounted to 63.5 million lbs., as against 63 million in the corresponding period in 1954. Exports to U.K. and the U.S.A. were lower by about 6 million and 1½ million whereas shipments to Australia were up by 1.3 million lbs. Shipments to other Indian ports, mostly for internal consumption, registered a substantial gain at 10.1 million lbs. The production of tea in South India to the end of September at 96.2 million lbs. was about a million lbs. over that of the corresponding period in 1954. Production for the year is likely to show at least a mild gain over the 1954 output of 128.5 million lbs. which was a record.

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 1-12-55 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet	Cuttings 1	1.30
Sheet	Cuttings 2	1.25
Crepe :		
Water White	—	—
R.M.A. No. 1X	1.65/66	1.66
R.M.A. No. 1	1.64/65	1.64½
	Crepe No. 2	1.62½
	Crepe No. 3	1.56½
Scrap Crepe :		
Sc. Crepe No. 1	1.30 Nom	1.30
Sc. Crepe No. 2	1.24/28	1.25¾
Sc. Crepe No. 3	1.15/20	1.17½
Flat Bark	1.09/12	1.10½
	Sc Crepe 3X	1.21

To arrive at f.o.b. Colombo prices add 43.4 cents a lb. in respect of rubber other than scrap crepe and 31.4 cents in respect of scrap crepe to the above market prices.

EXPANSION OF KENYA'S TEA INDUSTRY

Kenya's Minister of Agriculture has recently told settlers in the Nandi Hills that the Chairman of a big Assam company was willing to invest £2 million to £3 million in the Kenya tea industry. He had received many inquiries from other overseas sources about investment in the industry. At present, 3,500 acres in the Nandi Hills of the White Highlands are planted with tea but the potential acreage is estimated at 15,000.

RUBBER PLANTING SCHEMES

Mr. A. V. George, a leading planter in Kerala, has been re-elected as Vice Chairman of the New Rubber Board. Mr. George has held this post continuously since 1949 and he is now a large growers' representative on the Board. Among the important decisions taken by the Board, the one on replanting stands first. The Board has approved a scheme for replanting with high yielding strains 70,000 acres in 10 years for which the small grow-

ECONOMISTS EXAMINE THE
SECOND FIVE YEAR PLANSOME ASPECTS OF THE SMALL-SCALE
INDUSTRY SECTOR

The Calcutta Review Special Number. (Published by the University of Calcutta. Pages 129; price Rs. 2-8).

This special number contains a symposium on different aspects of the second five year plan frame-work. The contributions are drawn mostly from the Calcutta University's Department of Economics with a few research scholars thrown in. The discussion is methodical, systematic and done on a highly competent level. The critical standard is also high. The symposium opens with the contribution of Dr. S. K. Basu, University Reader in Economics, who analyses the problems of the small-scale industries in the context of planned economic development. Dr. Basu agrees that small-scale industries should play a vital part in the development of industrially backward countries, but his approach is different from that of Professor Mahalanobis, the author of the plan-frame. On the latter's definition, the small-scale industries which must receive special State protection for producing consumer goods needed to match the high level investment expenditure on heavy goods industries are the household and hand industries that do not use power or machines. The Professor is also against any degree of mechanisation or modernisation of these industries until the unemployment problem is fully solved.

It is in this particular approach that Dr. Basu sees the germs of dangerous inflation because such industries represent by and large, antiquated and inefficient methods of production which will fail to meet the demands resulting from expenditure on capital-heavy industries, in points of both quantity and quality. He draws attention to an important fact which planners have surprisingly overlooked, that is, a spontaneous growth in the number of small mechanised units in the Indian economy, capable of providing a large volume of employment and producing consumer goods, efficiently and quickly. "It is interesting to find in this context," says Dr. Basu "that while the village and hand industries have been rapidly declining in India, the small power-driven industries have been steadily developing against enormous odds. In 1946, 41.78 percent of the registered factories in India (i.e. those employing 20 or more workers and using power) were small mechanised concerns. Of the 29 industries covered by the census of manufactures, 1948, establishments employing up to 50 workers constituted 60.3 percent of the total, and establishments with a total production capital below Rs. 1 lakh constituted 50 percent of the total." Dr. Basu maintains that capital intensity is not necessary greater in the case of these power-driven small units than in the case of the hand industries of Professor Mahalanobis's conception, and he gives instances where capital ratio to labour employed is actually smaller in the former case. He is therefore one with the Ford Foundation's International Planning Team that the small scale industries in India must undergo a process of rationalisation so that they can form a useful part of the rapidly developing economy. But more important than that, is his final conclusion that the planners have refused to face facts by trying to yoke industrialisation with mass employment which are quite incompatible objectives—in the short period, at any rate.

Dr. Basu does not consider the social and political aspects of mass unemployment which some of the other contributors do, particularly Mr. S. B. Mukherjee who discusses employment questions. Mr. Mukherjee however expects a substantially higher rise in population than anticipated in the plan-frame and his conclusion is that "from the macro point of view, the investment programme of the plan-frame is not likely to make the unemployment position in different sectors, rural and urban, in any way better than it is at present." Besides, Mr. Mukherjee holds that the target of employment and the assumed increase in per capita productivity are arbitrary and no consistency between the two exists. He does not stop merely with pointing out the faults in the various statistical assumptions relating to employment, but he also makes some concrete suggestions as to how the problem of unemployment in a vast and predominantly agricultural country like India should be tackled; his suggestions on correcting the regional imbalance in economic development and its offshoot, the inequality of employment opportunities, are sound and deserve consideration.

Mr. S. N. Sen's contribution on savings, capital formation and deficit financing provide illuminating discussions on these problems, though it may not be prudent to accept his suggestion that deficit financing on a scale larger than that proposed in the plan-frame can be undertaken without any risk to economic stability. His reliance on the dynamism of the productive forces in the economy seems much greater than circumstances warrant. Mr. P. Chakrabarty's discussion, on a highly abstract level, of the balance of trade problem ends with the obvious conclusion that the balance due to the import requirements of the second plan is likely to be far more adverse than the planners' estimates. Mr. Arunkumar Ghosh, a research scholar, contributes an interesting article on the tax structure of under-developed countries with special reference to India, in which some sugges-

tions for revenue expansion have also been made. Another research scholar, Miss Sabita Banerjee's contribution on the criteria for factory size measurement, is a study in the classification of industries in the context of economic planning. It is a useful piece of work. It goes to show the predominant place of small-scale industries in the overall industrial structure of the country. Mr. Alok Ghosh offers a general criticism of the plan-frame. Dr. M. N. Ghosh's articles on railway development is a valuable contribution on the subject. All these contributions add up to a highly useful critique of the second five year plan frame-work, in its most important aspects.

The Law and Practice of Income-tax. By Sir Jamshedji B. Kanga. Kt., M.A., LL.B. sometime Judge of the High Court of Bombay and Advocate General, Bombay and N. A. Palkhivala, M.A., LL.B., Advocate, Supreme Court. (Published by N. M. Tripathi Ltd., Law Publishers, Princess Street, Bombay. Third Edition. Pages 2427; price Rs. 40.)

The present writer had the privilege of reviewing the first edition of this massive work and ventured to predict that it would become, as it has, the standard authority on the subject with which it deals. What astonished one then was not the vast learning and research displayed,—that was only to be expected from the names of the two distinguished authors,—but the fact that they had found it possible to endow a treatise on what is probably the most deadly dull and confusing branch of the law on which it is possible to write, with real sparkle and wit. Every now and again one comes across a little dry aside such as "Income tax, if I may be pardoned for saying so, is a tax on income". "There is no equity about a tax", "Logic is out of place in Income-tax questions." There is an under-current of real indignation in these terse apothegms; the indignation on behalf of the taxpayer at the confused state of Income tax law, felt by two of the most eminent practitioners in the subject. Occasionally this indignation breaks out in plainer terms. "It is passing strange that an Act which brings more revenue to the Government than any other and which makes a welfare State possible should be the most untidy Act on the Indian statute-book. It is an Act exiled from Order and System....When in the near future Parliament again blithely turns its hands to fresh amendments, the draftsman should be persuaded to perform the task, however irksome of reading the whole of the Income-tax Act."

Sir Jamshedji and his colleague are of opinion that the time has come to frame an entirely new Act as has been recently done in England. This should be done not only in the interest of the taxpayer but also of income-tax officers who have to administer the Act and upon whom the bulk of the wrath of the taxpayers generally falls, though the real blame lies not with officials but in the Act itself. Sir Jamshedji being himself an adept at cracking the satiric thing will not object to a gentle rejoinder in kind. Time marches on and it is now some thirty three years since he retired from the High Court Bench. Accordingly he deemed it appropriate to introduce the first edition of this truly great work with a few valedictory words; words, as is his custom, beautifully phrased but written, one is persuaded, very definitely with his tongue in his cheek. "The riders in a race do not stop when they reach the goal. There is a little finishing canter before coming to a standstill(But) the race is over....." So this volume was the finishing canter. But now, five years later out comes the third edition blithe and epigrammatic as ever, with the veteran jockey still in the saddle. Which is all to the good for he has ridden another winner.

* * * * *

India's Mineral Wealth By J. Coggin Brown and A. K. Dey (Published by Geoffrey Cumberlege, Oxford University Press, Apollo Bunder, Bombay 1, and obtainable from the Oxford University Press, Mercantile Buildings, Lal Bazaar, Calcutta 1. Pages 761; price Rs. 30.)

Dr. Coggin Brown, a former superintendent of the Geological Survey of India, and Dr. A. K. Dey, a present superintending Geologist of the Survey, have collaborated in an up-to-date and comprehensive survey of minerals found in India, Burma and Pakistan. The main purpose of the book is directed towards the potential commercial and industrial future in the exploitation of mineral wealth. Each mineral is dealt with individually, geographically and geologically together with its commercial or industrial history. Well illustrated with maps, charts and photographs, this impressive and fascinating work also contains two chapters on Soils and Water Supplies, a valuable contribution to the problems confronting agriculturists in their endeavours to increase the food production of the country.

Scindia Endeavour. Independence Day Number. Edited by Subhas Chandra Basu. (Published by International Enterprises, 1, Netaji Subhas Road, Calcutta 1. Pages 64; price not stated.)

This fairly recent publication, produced and written by the shore staff of the Calcutta branch of the Scindia Steam Navigation Company Limited, is an ambitious effort to rise above the ordinary run of house magazines. Much could be gained by more careful proof reading, but the staff has contrived to provide its readers with a wide selection of articles of general interest.

Theory and Practice of Co-operation in India and Abroad. By K. R. Kulkarni. (Published by the Co-operators' Book Depot, Bombay. Pages 438; price Rs. 15).

The first volume of Professor Kulkarni's book was reviewed in *Capital* some time ago. The second volume is also written as a text book for students preparing for appropriate examinations. It completes the author's treatment of co-operation in theory and practice in India and in other parts of the world and the various forms this extremely useful movement has taken and the many fields to which it has been applied. The first volume was devoted chiefly to the growth of the co-operative movement in India and the general economic philosophy which gave birth to the idea of co-operation as a movement and a way of life. The second volume deals with the movement in foreign countries, particularly with the radical changes occurring in the field in recent years. The author does not claim any exhaustive treatment of the whole range of these changes, but he certainly deals with the most important ones such as, the consumers' co-operative movement in Great Britain and Sweden, the co-operative credit movement in Germany, Italy and Sweden, credit unions in the U.S.A. and Canada, farm credit administration and its set-up in the U.S.A., the co-operative movement in Russia, Yugoslavia and Palestine, and Induscos in China. It is thus a valuable source of up to date information on the co-operative movement, and the second volume, as is the first, is the kind of book that eminently suits the needs of under-graduate students.

Banking Almanac, 1955-1956. (Published by the Insurance and Banking Publications, P.O. Box 676, New Delhi. Pages 444, price not stated).

This useful reference book is the first publication to present a comprehensive survey of all information relating to the banking industry in India. In addition to details of the capital, directors, offices, etc. of all Indian banks, it contains a valuable appendix dealing with important Banking Acts as well as banking information of general use.

My Three Years in Peking. By Ko Ling; translated by T. H. Yang. (Review copy received from Siddhartha Publications Ltd., 35 Faiz Bazar, Delhi-7. Price Re. 1; pages 146.)

DISCUSSION ON ASSOCHAM
RESOLUTIONS

(Continued from page 782)

port, said that a much bolder plan for expansion of the railways was necessary. Other forms of transport should be more fully used, and the disabilities of road carriers in particular deserved to be properly looked into. Mr. F. W. A. Morris (Madras Chamber), seconding, pointed out that practically nothing had been done to improve river transport, and major ports were badly congested.

The resolution on the Stores Purchase Enquiry Committee's report was moved by Mr. N. D. Harris (Bengal Chamber). The report itself was welcomed, but Mr. Harris pointed out that "improvement is slow, if in fact there is any." It seemed that official measures were not really practicable, possibly because of faulty and creaking systems, and possibly because of lack of adequate staff of the right quality. Prompter payment of bills was necessary, and more and better staff should be recruited. Sir Robert Menzies (Upper India Chamber), seconding the motion, declared that complaints by suppliers had increased alarmingly, and Government had slowed down. This was largely the result of administrative orders issued by the Directorate-General of Supplies and Disposals, which did not appear to take into sufficient consideration the actual conditions of supply.

Introducing the resolution on the Indian Companies Bill, 1955, Mr. W. H. S. Michelmores (Bengal Chamber) stated that the Government did not yet have an organisation of the size and calibre necessary for the tasks it had undertaken under the Bill. Nor would it be easy to assemble and train suitable staff in the short time that remained. There was a considerable danger of long delays at best, and at worst of a total breakdown which would seriously clog the wheels of company administration and management. Mr. Michelmores urged the Government to review seriously the or was any doubt about its completeness, to defer the implementation of the Act by a few months or a year rather than risk a breakdown. Mr. T. Rogers (Madras Chamber), seconding the resolution, recalled the confusion and frustration of the early days of import and export licensing. He said that the number of applications submitted had involved work so greatly in excess of the capacity of the new department that whole rooms in its offices were filled with unopened envelopes "which, in at least one case, were, to my knowledge, sold as waste paper." If a similar situation arose under the new company law, the business of whole sections of the private sector may well be paralysed.

Engineering and Transport

U.K. GOVERNMENT POLICY ON
AIRLINES

BUILDING ON SUCCESS

REGINALD MAUDLING, Minister of Supply, has outlined the Government's policy during the next 10 years with regard to large airlines. His speech clarified the position which, following the recent decision to scrap the V.1000 (and consequently, its civil counterpart) had, in many people's eyes, become obscure. In the *Viscount*, he said, Britain had a world-beater and the *Britannia* was coming on close behind. "But America has..... resources and a home market many times as great as ours. To gain orders, our manufacturers must produce machines significantly better than the American, and must have a home purchaser who can first operate and develop the aircraft." Referring to the V.1000 he said, "The Government and Vickers both realise that without a home operator to purchase it, an aircraft of this magnitude cannot be launched in world markets."

What does this mean for the British Aircraft Industry and its export prospects? In the early 1960's, the Americans say they will have.....transatlantic non-stop pure jet aircraft which can offer the advantage of some saving of time on the journey at considerable additional cost. Our policy must surely be to build on success. With the *Britannia*, the *Viscount*, the *Comet* and their family of successors we can offer the world an unbeatable range of aircraft for middle and long-distance travel. If we exploit their possibilities to the full there will be rich markets for the British Industry for many years to come". It is clear that the *Britannia* and *Comet 4* will be used on the transatlantic route. Later, the B.E. 25-engined *Super Britannia* will be available. The *Comet* will also be used on the Empire routes, for which it was primarily intended, as will versions of the *Britannia*.

Of the future, Mr. Maudling had this to say: "Now, also, is the time to consider the next step. The Government is discussing with the airline operators, and will then discuss with manufacturers, the next British civil aircraft which can be, and must be, a significant improvement on anything flying today. You can see in the *Viscount* and in the prospects for the *Vanguard* what can be and in the prospects for the *Vanguard* what can be done by collaboration between airline operators, manufacturers and Government. This is the process we are now starting for the next British airliner to follow on those of which we are so proud today."

P.A.A. COMPLETES ORDER FOR DC-7B
PLANES

The last unit of a seven-plane order for DC-7Bs has been received and placed in service by Pan American World Airways. First introduced to passengers this June, the DC-7B is the fastest transport plane flying between the United States and Europe. It carries 71 passengers and flies at an average speed of 353 miles an hour. The Pan American order represents an investment of \$14 million for the new Douglas planes. It is part of a \$120 million order the airline placed early this year for 40 planes, the largest single order ever placed by one airline with a manufacturer. Seven of the planes were the DC-7Bs and the remaining 33 are DC-7Cs, due for delivery beginning next April. The 7B has an extended range which allows it to fly distances of 5,000 miles non-stop. Because of the long range and the speed—30 miles an hour faster than any other transatlantic transport—one and one-half hours have been cut from the New York-Paris time and one hour and 15 minutes from the New York-London flight. Using Idlewild, New York, as a base, the new planes operate to London, Paris and Frankfurt daily; to Rome four days a week; to Amsterdam three days a week; to Glasgow three days a week; and to Shannon and Brussels one day a week. With its full load of 71 passengers, the new Clippers can carry 6,300 pounds of baggage and cargo. The plane is powered by four of the newest Wright turbo-compound engines that give it 13,000 horsepower at take-off.

JET TRAINER FOR EXPORT

It was announced last week that 18 R.A.F. cadets have now spent some two months on the world's first basic jet flying training course at Hullavington, Wiltshire, and have all gone solo. Only six of the cadets had had previous flying experience, and as the average time to first solo for the whole course was 10 hr. 35 min., it seems that jet flight will present few, if any, additional problems to the pupil pilot. Moreover, all the landings and take-offs were made from runways, thus bringing additional problems of cross-winds in the early instructional stages. The aircraft concerned, Hunting Percival *Jet Provosts*, with Armstrong Siddeley *Viper* turbojet engines, were a pre-production batch.

During the end of October and beginning of November, the NATO Air Training Advisory Group sent a team to Hullavington to evaluate the *Jet Provost*. The official report has yet to be received, but a Hunting-Percival spokesman stated that the pilots were "very loud" in their praise of the aircraft. It may be, therefore, that the *Jet Provost* is destined for use in overseas air forces, thus following in the footsteps of other British basic military trainers. The piston-engined *Provost* is

used by the R.A.F. and by the air forces of Rhodesia, Burma, Eire and Iraq. Another Hunting-Percival product, the *Prentice*, is in service in India, the Argentine, and the Lebanon. The de Havilland *Chipmunk* is in wide use in many air forces, including those of Denmark, Eire, Ceylon, Jordan, Lebanon and Portugal, while the Auster *Aiglet* trainer has been adopted by the Arabian Air Force.

ARC FURNACE FOR STEEL SMELTING

The largest arc furnace in Europe will shortly be put into service in the Charleroi region in Belgium. This furnace of 24 feet diameter, with a nominal capacity of almost 150 tons of steel, will be installed by a foreign firm, but with 30,000 kVA triphase electric equipment built by a Belgian firm in Mercinelle. This installation, which will have a monthly production capacity of 15,000 tons of steel, is of the revolving roof type. Both the lateral displacement of the roof for feeding the scrap metal and the tipping of the furnace for casting are carried out by means of hydraulic oil pistons. One of the hardest problems arising in the conception of such a furnace was that of the sudden changes of current caused on the general supply system by the rapid variations of the load during the period of smelting. The builder of the electric equipment and the supplier of the electric energy carried out very advanced joint studies which resulted, on the one hand, in the adoption of the 150,000 volt network and, on the other hand, in the realisation of a special installation scheme where a synchronous compensator—a synchronous motor running in a vacuum—produces permanent equalisation of the loads and suppresses the reactive power which would otherwise uselessly overload the station generators. The works are connected to the inter-connection sub-station by a 70,000 volt line. Three triphase transformers reduce the tension. Three triphase transformers reduce the tension in three stages. A 75,000 kVA, 150,000/70,000 volt transformer connects the works line to the 150,000 volt main. Another 42,000 kVA, 70,000/10,500 volt transformer feeds the works installations. Finally, a 30,000 kVA, 10,500/480 to 175 volt transformer supplies the electrodes of the arc furnace with the 41,000 A. necessary for smelting the 130 tons of scrap in some two or three hours.

RISING AIRCRAFT EXPORTS

Figures for October 1955 show that British aviation exports totalled £5,701,107 in value, an increase of £1,773,658 over the figure for October last year. The estimated annual rate, based on the first 10 months of 1955, is more than £634 million, as against a total of £56,293,914 last year. Employment in the aircraft industry during September, at 246,900, showed an increase of 2,200 over the total for August, and an increase of 11,500 over the comparable figure for September 1954.

JAPANESE EXPORT OF HEAVY MACHINERY

Japan's export of heavy machinery including electric, communications, textile, and other machines was rather inactive in the first half of the current fiscal year (Apr.-Sept.), according to the survey recently conducted by the Ministry of International Trade and Industry. Plant export validated during the period totalled as much as

\$235 million, showing a conspicuous rise of \$67 million from the preceding half-year period. When compared with the corresponding period last year, the rise is as big as \$160 million. Of the \$235 million, the export of vessels occupied \$209 million, rolling stock and automobiles \$11 million, and heavy machinery only \$15 million or some six percent of the total plant export, nearly half as much as the similar figure of a like period a year ago.

When broken down into different categories, the export of heavy machinery approved by the Ministry during the April-September period is as follows:

- 1) Electric machinery (\$2,490,000)—generating equipment and fluorescent-lamp making equipment to Brazil.
- 2) Communications machinery (\$90,000)—automatic telephone exchange equipment to Okinawa.
- 3) Textile machinery \$6,690,000—cotton spinning machines and others to Pakistan, India, Burma, Formosa, South Korea and Egypt.
- 4) Manufacturing machinery and others (\$6,160,000)—bridges and sugar-making equipment to Thailand, paper-making machines to Formosa and the Philippines, iron/steel cold strip equipment to India, boilers to Formosa, and others.

The dull trend in the nation's export of heavy machinery is ascribed to the following causes:

a) Most of the countries in South East Asia, Middle and Near East, Middle and South America, potential buyers of heavy machinery from Japan, have long been under the influence of and still greatly depend upon European countries and the United States.

b) It was only after the end of the war that Japan started to exert herself for the promotion of heavy-machinery export to these countries so the quality of her machinery has not been fully appreciated.

c) In order to accelerate her export of heavy machinery Japan requires further study of the various markets.

d) In order to foster the establishment of heavy industries overseas, Japan will have to supply them with not only technical assistance but also the necessary capital.

INDIAN FIRM MAKE REVERSIBLE AIR
CONDITIONER

A room air conditioner which heats and cools a room in winter and summer respectively has been manufactured by an Indian engineering firm, Messrs. Voltas Limited, in their factory in Bombay. This firm which was the first to manufacture room air conditioners in India, has now made use of the well-known principle of "reverse cycle" in manufacturing this double-purpose air conditioner. Normally an air conditioner absorbs heat from air inside the room thereby cooling it, and delivers the heat to the air outdoors. With the "reverse cycle" operation, however, the air conditioner absorbs heat from the outside air and heats the air within the room. This process is not hampered even by low atmospheric temperatures during winter. This dual function makes the room air conditioner useful throughout the year, and renders special heating arrangements unnecessary.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

time arrives for framing the third plan, that would be regrettable. Mr. Driver is on good ground in suggesting that the Government should at least "lay the outlines of the rough estimates for coal for the third plan before the coal producers' associations for their reactions."

The whole debate about whether or not to nationalise coal has brought to light at least one disturbing feature of present-day official thinking. This is that standards of efficiency and economy matter least; what really counts is the notion that if the Government is the major consumer of a commodity, it should also become the major producer. This sort of thinking affects basic materials particularly: the "socialistic" gas then omitted in discussing them begins to pervade a whole lot of non-basic things, which even officials know to be quite unfit for State management. If Mr. Driver's hint about the connection between coal nationalisation and the third plan is correct, it would seem that the Government's anxiety springs mainly from the magnitude of its future needs for the steel plants and the railways. This anxiety is not only ill-founded, but is extremely unfair to the private industry. It is unfair in the sense that if anybody has failed to get enough coal in recent years, it has not been because of the producers' inability to raise it, but because of the railways' inability to carry it. If the Government feels that the steel plants and the railways have a better chance of getting their coal requirements when collieries are nationalised (which, on the evidence available, seems a false hope), that would be no more than a comment on its own methods of working. At least two words, discrimination and favouritism, would in that event require to be dropped from the official dictionary.

THE WORLD'S POPULATION AND RESOURCES INDUSTRIAL RAW MATERIAL PROBLEMS

THE reviewers of 1955 will probably agree that its special characteristic was the effort of many countries to restrain inflation; but they have to record that in the closing months of the year, material prices, defying these restraints, resumed their rise. Against this background an unusual number of long-term analysts—both economists and scientists—in Britain have been discussing the relation between resources and consumption. Some of these analyses—notably those of the scientists who have studied the subject for *Political and Economic Planning*, of Professor A. V. Hill in *The Manchester Guardian*, and of Dr. Julian Huxley in *The News Chronicle*—are frankly pessimistic; others—notably that of Mr. E. H. Stern in the *Westminster Bank Review*—are convinced that mankind will find means to develop its prosperity indefinitely. The problem arises from the unprecedented rate of increase in the world's population (the daily increase, not far short of 100,000, would populate a medium-size town) and in consumption of the world's resources. The increase in population increases consumption automatically; but even if the population were suddenly stabilised there could still be a huge increase in consumption. An earlier study, the celebrated *Paley Report*, showed that merely to raise the economic standards of all nations to that of the United States "would raise consumption of all materials sixfold". And Mr. Stern has estimated that more non-renewable materials and fossil fuels have been consumed in the past 50 years than in all previous history.

The distinction between renewable and non-renewable resources is obviously of the highest importance. It is not merely a coincidence that the main commodities that are now scarce, notably metals and coal, were formed in the ground in the remote past and are not, for practical purposes, renewable there, whereas the main commodities that are now plentiful, notably grains and fibres, are rapidly renewed by sun and air and soil. One may see significance in the fact that timber, which is renewable (though slowly), has become again for constructional purposes a serious competitor with steel, which is derived from minerals that cannot be replaced. On the other hand, fibres derived from coal and oil are gradually replacing animal and vegetable fibres—but the quantities of fossil fuels consumed in the process are almost negligible compared with the quantities burned. No one has suggested that the irreplaceable resources are nearly exhausted. But the most accessible reserves have already been used, and those remaining are both more difficult to extract in the increasing quantities required and more costly to extract in any quantity. That assessment has to be modified when some unknown reserve, with a big potential yield, is discovered, but it remains true that minerals are always tending to become scarcer.

The supply of vegetable matter, and therefore of animal products, is not similarly limited. The possibility of producing more from land already cultivated has been proved with embarrassing

consequences by American cotton-growers; and Dr. Dudley Stamp, the eminent British geographer, reassures us with the thought that only 10 percent of the world's land surface is at present used to produce materials and foods. Yet we cannot deny Dr. Huxley's charge that man has ravaged the natural soil in many places where he has cultivated it—and erosion is still encroaching on naturally-fertile lands. To some serious-thinking people it seems only a matter of time before the collective greed of man, as he continues to increase, causes widespread poverty. Others, less hopeless, foresee a continuing advance, but against increasing difficulties. Yet others believe that the abundance that man—however numerous—can enjoy in future generations will make our present living seem like wretched poverty. While each opinion can be respected, the truth is that we do not know enough about available resources or about possible methods of using them to justify a firm conclusion. We can surmise that, by nuclear methods, effective resources of power will be immensely increased; and such power would certainly facilitate extraction and treatment of materials and foods, even in conditions which would at present make them quite uneconomic. But the problem could only be deferred, not solved, by replacing a scarce commodity with a more plentiful one, until that one also became scarce and had to be replaced. Matter itself (including the atmosphere, which contains vast wealth) will always be abundant; however misused, it cannot cease to exist. The ultimate question is whether, with unlimited power, we can process almost any kind of matter into materials for industry.

The policies that concern us now are necessarily for the coming months and years, not for the coming centuries. Yet these considerations of the long-term trend are not just an interesting way of wasting time. They ought, surely, to guide even short-term policies. In the light of these analyses some of these policies are difficult to justify. Some weeks ago Professor Frederic Benham, an economist with intimate experience of Malaya, addressing the annual meeting of Britain's Free Trade Union, questioned the basic principles on which the "underdeveloped" countries were being developed, and, indeed, the very term itself. Whereas, he said, Canada, with immense resources of minerals and power and with less than one-third of its agricultural land cultivated, was classed as a "developed" country, "underdeveloped" Asian countries had been advised by engineers of the Economic Commission for Asia that if they had no coaling coal they should operate small blast-furnaces with charcoal—industrialise in the manner of the 18th century! A topical thought that arises from these discussions is that pressure for supplies, and therefore basic costs, are always tending to increase, in these times rapidly. That is quite possibly one reason why inflation is so persistent.

OVER-PRODUCTION IN TEA

WITH world tea supplies rapidly outpacing demand, Calcutta warehouses overflowing and U.K. buyers shy, the annual increases in taxation and recent welfare legislation, it is no wonder the outlook for North Indian tea is far from bright. The seriousness of the situation was stressed by Mr. O. C. Ames in his address from the chair at the 69th annual meeting of the Calcutta Tea Traders Association. Outlining the problems confronting the industry, Mr. Ames placed over-production as the primary cause of the trouble. The world has produced a record crop, the significance of which was not appreciated until the middle of 1955. Credit restrictions, which could not be anticipated, reduced British buyers' normal forward purchasing by 33 percent, with the result that on the falling market, poorer kinds of tea met with little demand, the resources at the buyers' disposal being expended largely on the better qualities.

The heavy accumulation of stocks has been further complicated by the restrictions imposed by the Government of India limiting shipments of unsold tea for offer in the London market to 140 million lbs. for the entire 1955 season. With the absence of a free outlet, not only are stocks overflowing into company barges and immobilising transport, but much of the crop still on the gardens will have to remain stored there for some considerable time in the new year, while, if offerings in the auctions require to be reduced, the position will become almost untenable. Ultimately, 1955 teas may well be competing with the new season's teas next June. As Mr. Ames pointed out, the U.K. is India's main customer, and it is vital that there should be some modification of Government policy on the direct shipment of tea. Half the current crop is still unsold and the outlook for disposing of the surplus is now a depressing one. "I cannot refrain from emphasising," said Mr. Ames, "the dire results of overburdening the Calcutta market with a consequent failure to sustain prices above the cost of production."

Mr. Ames went on to point out that although stocks in the U.K. are reasonably low, an alarming

number of countries are increasing production. Teas from Nyasaland, Kenya, Uganda, Tanganyika, Rhodesia, the Belgian Congo, Portuguese East Africa, Mozambique and Malaya are now being sold in London, so profiting from the absence of normal supplies of teas from India. In addition, competition from Ceylon has been intensified. Not only is her record crop of last year likely to be exceeded by about 15 million lbs. but she is already exploring the Australian, New Zealand and Middle East markets. "It is clearly, therefore, a matter of the highest importance," said Mr. Ames, "for the Government of India to secure international agreement if India is to retain her warranted share of tea exports. While hesitating to predict the precise effect of the new State taxes which have upset the calculations on which the new 'slab system' is based, Mr. Ames said that a disturbance in the market was certain, since all teas passing through the Calcutta auctions would be placed at a disadvantage compared with South Indian and other teas."

The world's markets are limited. By the end of 1957 it has been calculated that the total supply will exceed absorption by 80 million lbs. Britain, whose yearly tea consumption, at 8.7 lb. a head, is the highest in the world, can scarcely be expected to expand her market, while that of the U.S.A. is likely to remain static or even decrease due to a lowering in the price of coffee and the expanding soft drinks industry. In spite of the postulated rise in living standards during the second five year plan, the scope for internal demand is far from promising. India, with a yearly per capita consumption of one half-pound of tea, consumed less in 1954-55 than in 1953-54. It seems obvious that only immediate measures by the Government to increase the direct shipment quota and to reach an international agreement on the widest scale for the regulation of exports, can save the day.

CURRENT COIN

Expansion in Shipping.—Mr. A. H. Bhiwandiwala, chairman, told the annual general meeting of the Great Eastern Shipping Co. Ltd. in Bombay last Friday that the main task before Indian shipping was to expand tonnage as fast as possible, and to ensure that this tonnage found gainful employment. The most important factor hindering the expansion of the coastal fleet was "the precarious character of coastal working." The turn-round of ships at ports was extremely slow, and costs had risen, as more was being spent on ships, stevedoring labour, salaries of floating and shore staff and bunkering. According to Mr. Bhiwandiwala, the worst item affecting operational costs was the dock labour situation. For an 8,000 d.w.t. coaster, one day's extra delay at a port meant a direct loss of Rs. 4,500 to Rs. 5,000, apart from port dues. Shipowners had repeatedly drawn the Government's attention to "the crippling effect" of port delays, and had pressed for effective remedies. The Dock Labour Enquiry Committee was appointed to look into the question, and it submitted its report in September. On the basis of Press reports, Mr. Bhiwandiwala felt that the Committee had made balanced and constructive recommendations which, "while fully safeguarding all legitimate interests of dock labour, should go a long way to restore healthy conditions at the ports and put an end to the ruinous delays." He hoped that something would be done to implement them soon. Another complaint from the chairman of Great Eastern Shipping related to the inadequacy of port facilities. He pointed out that without up-to-date mechanical appliances for handling bulk cargoes, Indian ports would never be able to ensure a sufficiently quick turn-round of vessels. Such measures as better maintenance of equipment, adequate supply of spare parts, more and newer cranes, and better utilisation of godown sheds could immediately raise efficiency. They should be implemented at once, he said; even if a piece-rate system was introduced in line with the recommendations of the Dock Labour Enquiry Committee, dock workers would be able to do their best only if they were given better tools and more facilities.

Coffee Production Plan.—India is a small coffee producer—her position is exactly fourth among the five countries of the world who produce coffee. Brazil is the largest producer, accounting for nearly 51.69 percent of the total world output of 41,228.63 cwt. Central America comes next with 35.39 percent, followed by Africa (11.33 percent), India (0.98 percent) and Indonesia (0.61 percent). India's share in the export trade is naturally very small, and consumption demand at home has recorded a spectacular increase over the 1938-39 level, now standing at nearly 20,000 tons as against 8,000 tons of the 1938-39 period. Export prospects also seem good, as the foreign consumer likes the flavour of Indian coffee and its other qualities, reflected in rising export figures. In the circumstances, there is every justification for a plan to expand coffee output in India, and the Indian Coffee Board has just drawn up a scheme for this purpose. The case for it has been presented in the form of a brochure, which also incorporates a suitable draft plan for

"intensive and extensive cultivation of coffee." The draft plan lays down a production target of 68,000 tons or 1,360,000 cwt. to be attained by 1970-71 as against the current production of 406,630 cwt. or a little over 20,000 tons, valued at nearly Rs. 8 crores. The target is based on the fact that in the last ten years there has been a "definite trend in the upward direction" in points of yield as well as acreage. The Board also expects that due to the stabilisation of coffee prices, technological advances and "the general awareness of the people interested in the coffee culture and the trade" production, given normal conditions, will rise to at least 30,000 tons in the next two or three years and may reach 40,000 tons in the next ten-year period, rising further to 45,000 tons by 1970-71. Even with this increase, the average yield per acre will be a long way short of the world figure, and the draft plan for intensive and extensive cultivation of coffee is designed not only to raise the total acreage under cultivation, but also to increase the average yield to the acre, so as to realise the extra production of 23,000 tons which will take total output to the 1970-71 target of 68,000 tons. The existing coffee acreage in India amounts to 228,160, to which under the plan, will be added 65,000 acres through reclamation and fresh plantings. The intensive cultivation scheme will cover 121,000 acres of the existing cultivated land. The plan involves a financial expenditure of over Rs. 14 crores which it has been suggested should be raised from Government loans and grants (Central and States), from the Coffee Board's General Fund and the Pool Fund and from the estates through small levies. Coffee is at present grown in the States of Coorg, Mysore, and Travancore-Cochin. But possibilities of cultivation in Bombay, Orissa, Assam and Madhya Pradesh exist.

Land Ceiling in West Bengal.—The lower House of the State Legislature has passed the West Bengal Land Reforms Bill, after it has been on the anvil for a considerable time. The delay was due to the Government's desire to allow a thorough discussion of its provisions in the House. As the voting on the final reading showed, it had a beneficial effect. The Bill went through the House with an unusual measure of support. Only one P.-S. member was reported to have dissented. Other Opposition members remained silent, which can be interpreted as consent in this particular case. The provisions of the Act are eminently reasonable and they satisfy the criterion of social justice no less than any other. The ceiling on land ownership has been fixed at 25 acres. That, as the Revenue Minister, Mr. S. K. Basu explained, gives the owner a net annual income of Rs. 1,080, or Rs. 90 a month. At the same time, the rights of sharecroppers have been fully safeguarded by law and in the Reform Act itself, provisions exist for registering their names in the Record of Rights. It is true that the pressure of population on land in this State is among the highest in the country. But on the present income-yielding capacity of land, the Government had reduced the ceiling of 33 acres, proposed in the initial stages of this legislation, to the present one. Since it is the idea to introduce the system of small peasant proprietorship in land in this country, the West Bengal Government has done what is correct in the circumstances. Co-operative farming or collective farming (not of the Russian model) are the only methods ultimately able to raise agricultural productivity and improve the economic basis of the farmers' lives, 70.7 percent of whom now live below the subsistence level. But taking away from the existing 32,000 families (out of a total of 3,350,000 agricultural families), their total holding of 1,672,000 acres, would make no appreciable difference to the land problem from the redistribution point of view, the man-land ratio in the State being what it is. The State Government, however, owes to the agricultural population in its charge measures which can relieve poverty and under-employment in the quickest possible time. It is to be hoped they will be forthcoming soon.

Rayon Research Developments.—The report of the British Rayon Research Association for 1954-55 records steady progress in several important fields—covering both fundamental research and the day-to-day problems of the industry. In the first category there have been important advances towards a fuller understanding of the precise chemical structure and behaviour of wood cellulose. Because of the gaps in the scientists' knowledge of these matters very substantial losses take place during refining. The research staff have now been able to throw new light on the probable causes of these losses and are engaged on finding methods to avoid them. "Even a small reduction in losses would pay handsome dividends," says the report. Significant advances have also been made in research into the behaviour of dyed cellulosic fibres exposed to strong light. The "tendering" damage which occurs in curtains is one of the evidences of this which it is hoped it will be possible to avoid when more is known about molecular structure of dyestuffs. On the technological side, fifty/fifty viscose blends with acetate, cotton, nylon, Terylene and Orlon have been made and the yarns produced have been woven into cloth, dyed

and finished. The work is now being extended to fibres in other proportions. In collaboration with member firms a detailed experiment on sizing and size removal is in progress under mill conditions, with a view to finding the most suitable size for use on rayon. The Association's experimental planting of bamboo in south-west Scotland as a possible means of developing a British source of cellulose is making some progress, says the report. A final planting in an exposed peat moss in Gallo-way is to be made next spring, and if this is successful the Association proposes to approach the Agricultural Research Council. This is perhaps the most potentially important single project on which the Association is engaged, since a source of rayon produced on otherwise unproductive land in Britain would be of great benefit not only to the industry but to the whole national economy.

Japanese Failure in G.A.T.T.—The session of G.A.T.T. which has just ended at Geneva was marked especially by Japanese failure to secure complete rehabilitation among the trading nations of the world. Negotiations proceeded both at the formal meetings of the 34 contracting parties to the Agreement as well as privately, but the 14 countries who agreed to Japan's admission but refused to exchange most-favoured-nation treatment with her remained stubborn to the end in refusing mere assurances of better trading practices and insisting on effective guarantee. These 14 countries, which include Britain and France with Colonial territories as well as India, are, however, of vital importance to Japan's foreign trade. Japan hoped that by joining G.A.T.T. her sometimes unsavoury past would be forgotten. The fact that she has been admitted only as a marked member seems to have pained her a great deal. Mr. Toru Hagiwara stressed before the conference that the Japanese Government "insists" that "rules solely applicable to Japan should not be adopted within the G.A.T.T.", and adheres to its opinion that "non-discriminatory treatment on the part of the free world is a

HOLIDAY NOTICE

Because of the Christmas and New Year holidays there will be no issue of CAPITAL on 29th December, 1955. The first issue of the new year will be published on Thursday, 5th January, 1956.

condition *sine qua non* for collaborating with it." In spite of the ingenuity of the G.A.T.T. drafters it has not been found possible to fit something into the Agreement which would take into account the exigencies of the Japanese case without alluding to Japan. On the other hand, the G.A.T.T. discussion has shown the peculiarities and the unfavourable consequences of the Japanese wages structure and trade practices. It is generally admitted that there is a degree of absurdity in Japan's present position in the G.A.T.T. It is not disbelieved that Japan's intentions are honourable, but, it is pointed out, wage structures, for instance, cannot be transformed overnight. In most quarters the feeling is that Japan's best hope of deriving all the advantages of G.A.T.T. is to convince by deeds the doubting members that she not only intends to be, but in fact has become, a fair and equitable trade partner. It will be interesting to see what happens before the tariff negotiations are resumed next April.

"CAPITAL" CHRISTMAS TOY FUND

We acknowledge with thanks, the receipt of the following donations:—

- Rs. 250 American Men's Association of Calcutta.
- Rs. 100 E. C. Benthall Charitable Trust
- Rs. 60 Directors and Staff of Shaw Wallace & Co. Ltd.
- Rs. 25 each Anonymous, R. G. Wetherall
- Rs. 20 each FRB, J.R.C., Anonymous.
- Rs. 15 J.H.I.
- Rs. 10 each G. B. Herbert & Co. Ltd., P.D., M.L.N.
- Rs. 7 R. S. T. C.
- Total Rs. 582
- Previously acknowledged Rs. 3,513-10-0
- Grand Total Rs. 4,095-10-0

We also acknowledge with thanks, having received from the Metal Box Co. of India, toys worth Rs. 65/- and from L.F.M. 18 books and a Meccano set.

Without Prejudice

THE LAW OF FIRE INSURANCE

INTERPRETATION OF A LIMITING
CONDITION IN A POLICY

(FROM OUR LEGAL CORRESPONDENT)

HERE we have an interesting and rather out of the way point on the law of fire insurance. It concerns a warranty, or as the writer would prefer to term it, a condition in a policy limiting the degree of liability and indemnity which would, in the absence of the condition, be afforded to the assured by the policy. A warranty is, in fact, a warning by the insurance company that it will only undertake to indemnify the assured against the usual risks subject to certain specified conditions which are set out on the face of the policy. From the point of view of the responsibility of the assured person we may say that by a warranty the assured undertakes that some particular thing shall or shall not be done, or that some condition shall be fulfilled or that some particular state of facts exists. It is a condition which must be exactly complied with, whether it is material to the risk or not; and if it is not so complied with, then, subject to any express provision in the policy, the insurer is discharged from liability. That, it is submitted, is an accurate summary of the law and it is now for the non-legal reader to apply it to the following facts.

The warranty in this particular case of fire insurance was that "smoking and cooking be strictly prohibited in or about the said premises, except in places specially set apart for such purposes only." In the opinion of the Calcutta High Court later, "a clause or warranty for prohibiting smoking is one of the usual clauses of the defendant company's fire insurance policies, and such a clause or warranty was intended to be a part of the contract of

insurance which was entered into between the plaintiff and the defendant company." The insurance was substantial and was effected in respect of machinery and stock of goods in factory premises. This stock of goods was damaged by fire, which was alleged to be of accidental origin, and eventually a suit was filed for recovery of the amount of the substantial loss alleged to have been sustained.

We are only concerned here with one part of the company's defence to the suit, and it is this. The insurance company contended that the fire originated from smoking (biri), and that in view of the clause or warranty prohibiting smoking, the suit was not maintainable. The plaintiff, on the other hand, urged that whether the fire was started by smoking or not, he, on his part, had posted notices forbidding smoking in and about the premises and had therefore complied with the warranty and the fact that some employee might have, in spite of the plaintiff's warning and prohibition, smoked a biri or cigarette on one occasion did not amount to a breach of the warranty, nor exonerate the company from liability. The plaintiff admitted that some of his employees were in the habit of smoking and the learned judge was of opinion that the fire was caused by cigarette or biri smoking. Was the claim maintainable?

Now, fire insurance which originated in England from the widespread havoc caused from the Great Fire of London more than a century before any other country thought of it has, as to its principles, never been governed by statute law. The law has been almost exclusively developed from cases decided in the courts. It was to the latter therefore that Bose J. turned to solve the problem in this case: "A temporary non-observance of a rule even by the assured himself may not be a breach of warranty as where the warranty was that no smoking should be allowed on the premises and it was held that if the rule was laid down and generally observed, the non-compliance on one

occasion by the assured himself would not discharge the insurer." His lordship was quoting that eminent authority, *McGillivray on Insurance Law*, and the learned author himself appears to have relied on a 65-year-old American decision, in which also one of the judges observed: "The jury having found that the assured forbade smoking in the mill, the mere fact that other persons or even one of the assured did afterwards smoke there was not sufficient to avoid the policy." Well, we live and learn; but, with no pretensions to being an expert, the writer was staggered to read this exposition of the law of fire insurance.

A contract of fire or any other form of insurance is what is known as a contract *uberrimae fidei*, that is, a contract based on the very utmost good faith, and if the utmost good faith be not observed by either party, the contract may be avoided by the other party. That is the law. It is also common sense. The insurance company has to rely solely on the good faith of the assured supplying it with full and true information of the fact, on which the character and nature of the risk, and consequently the rate of premium, depend, and any misrepresentation, however innocently made from mistake, ignorance or accident of any material fact, will entitle the insurance company to avoid the policy. That is the position during the negotiations for the policy and before the policy on cover note is concluded or issued; and after the policy or cover note is issued, it is of course the duty of the assured strictly to observe every warranty or condition in it. It is hardly possible to imagine a more frequent cause of fire in a factory than illicit smoking. And warranties are construed strictly by the courts. It seems that this American gentleman, one James W. Hosford, that day in 1888 wrought more than he knew. His policy contained a warranty against smoking in the insured mill. Though it is immaterial, it is a fact that he was well aware of the prohibition and had had notices forbidding the practice pasted all over the mill. It was he himself who had broken the rule. Yet it was decided, and the British courts have ever since accepted and followed the decision and now have no alternative but to continue to do so, that Mr. James W. Hosford's deliberate and intentional breach of a most important—one might say vital—condition in his own policy, did not avoid it. Where is the sense in all this? This deponent knoweth not. But the judicial reasoning behind the Hosford decision seems to be based on that of the celebrated housemaid excusing the arrival of her illegitimate offspring. "It was only a little one", she pleaded. "It was only a little smoke", pleaded, in effect, Mr. Hosford. That one little smoke might have consumed the whole mill. Nevertheless, the plea succeeded.

Though Mr. Hosford's case—that of the policyholder himself being the delinquent and not his employees—is an extreme case, the British courts had been edging towards the same conclusions years before, and they have been followed and accepted necessarily in India. There was the old House of Lords case *Dobson v. Sotheby*. In a policy of insurance on premises of a certain description "where no fire is kept and no hazardous goods are deposited" it was held that these words must be understood to mean habitual use of fire and habitual deposit of goods. In this case the loss on the policy happened in consequence of the making of a fire and the bringing of a tar barrel on the premises for the purpose of repairing them and it was held that the insured was entitled to recover. Being rather inclined to the view that words, sentences and phrases mean what they say, the writer would have thought that "no fire is kept" means just "no fire is kept" and "no hazardous goods are deposited" means simply "no hazardous goods are deposited"—nothing more and nothing less; that when you light a fire on the premises you are "keeping a fire", and when you bring a tar barrel on the premises you are depositing hazardous goods there. However, that is all wrong. If a Methodist Moderator says, "I do not get drunk", or if the Archbishop says, "I do not beat my wife", they do not mean that literally; all the Moderator means is it seems—"I am not an habitual drunkard", and His Grace, "I am not an habitual wife-beater". An odd binge now and then or an occasional conjugal wallop does not apparently conflict with the pious affirmations to the contrary. At any rate, that seems to have been the view of Lord Tenterden in *Dobson v. Sotheby*. His lordship said: "I think the condition (where no fire is kept and no hazardous goods are deposited) must be understood as forbidding habitual use of fire, etc." On this reasoning Mr. Dobson won his case and it has been followed ever since. Justice, no doubt, was done anyway, and no one can quarrel with the principle laid down, provided he is not so pedantic as to insist that words and sentences mean what they say. The danger is, of course, obvious. For a clear, express prohibition you substitute a vague, cautionary direction, and neither the company nor the insured know where they stand. How many smokes may I have and how many times may I bring hazardous goods on the insured premises before doing so becomes habitual?

In the latest Indian case Bose J.—bound as his lordship was by these venerable and many more recent decisions—held that the fact of smoking a cigarette or biri on one occasion by some employee or other in spite of the prohibitory notices did not amount to a breach of warranty and that therefore the claim was maintainable and the plaintiff was entitled to recover.

1955. (Nov). A.I.R. (Calcutta). 594.

December 22, 1955.

SO Christmas is here again. I know it must be because I have lately found myself sitting shivering with cold, scribbling on innumerable Christmas cards and wishing that houses in Calcutta had fireplaces at this time of year. Why I did not make a careful note of all the initials and addresses I have come across in the past twelve months I shall never know. But I sincerely regret my lack of foresight and promise myself that it will all be different next year. If it is not, it will not be for the want of the best intentions. When one is very small, Christmas seems to come round slowly. Later, of course, it is on you before the presents are bought, the parties arranged and the last posting dates noted. Christmas is always liable to degenerate into a nuisance, an expense and an unnecessary break in a comfortable routine, if we let it. Perhaps Dickens had the last word on that and I do not think we ought to forget what it was. Nobody is ever really spiritually the worse for Christmas, and there is no reason why we should not all be rather better. Quite a number of poor children certainly will be, when they see the toys which we have been able to buy them from *Capital's* Christmas Toy Fund. Not so many as we would have liked this year, but still a goodly number. And there is always the hope that things will be better next time. May I wish all readers of *Capital* a Merry Christmas and a wholly satisfactory New Year; to those who have given to the Toy Fund, I think I am entitled to express the same greeting on behalf of the many children whose Christmas morning will be the brighter for their generosity.

The Labour Party's choice of Mr. Gaitskell for its leader is not only a triumph of commonsense, it is also a welcome departure from the traditional habit of dispensing high office as a reward for faithful service. The Party seems to have overcome the sentimentality to which it is usually so prone and faced the fact that it needs a young man to conduct its affairs in a world where its established philosophy is beginning to look dangerously out of date. Mr. Gaitskell will not find it easy to lead his party into an era which has rejected nationalisation as an economic panacea, can scarcely remember what unemployment feels like, regards the unity of the working classes as so much cant, distrusts communism and is fast becoming more interested in motor-cars and television sets than in social security. Whatever Mr. Morrison's obvious talents might be, they are scarcely suited to this task, while merely to describe it is to prove that Mr. Bevan's genius lies in other directions. Mr. Morrison must have appreciated the wisdom behind the choice; his petulant resignation was not, therefore, in the best traditions of British party politics. The change which is taking place in Labour thinking is perhaps best illustrated by Mr. Attlee's acceptance of an Earldom. In the year 1955 he is prepared to defy the superstition that the ghosts of Kier Hardie and the Webbs keep all Labour peers awake at night; ten years ago he might not have done. I think he has made a wise decision; this scornful attitude towards titles, even when granted as rewards for merit, was never one of the more endearing features of early Labour thinking. But perhaps Mr. Attlee's best reward for his services to his country is the gratitude of the people of India. His part in the transfer of power will always stand as his most abiding monument. It is too early yet to say what Mr. Gaitskell's will be. But if he is able to weld all sections of his fractious Party into a united Opposition which can be depended on at all times to provide an alternative democratic Government, he may yet earn as important a place in British Parliamentary history as Mr. Attlee has done.

A DITCHER'S DIARY

Being myself a columnist, I have lately been trying to find out who was the first columnist of the British Press. Before I got very far, I chanced on a newly published book entitled *The Seven Editors* by that noted historian of British journalism, Mr. Harold Herd. In it he provides, amongst other things, a highly diverting portrait of the person I was looking for, the able and elegant Dr. John Hill. As England's first regular columnist Dr. Hill contributed to *The London Advertiser* and *Literary Gazette*, later *The London Daily Advertiser*, and filled a colourful, albeit a somewhat disreputable rôle in London's 18th century social life. This literary busybody, with his £1,500-a-year income (a considerable sum of money in those days), cut quite a dash around town with his coach and pair and made more foes than friends. He dabbled in a bewildering variety of subjects from botany, on which he managed to write an authoritative book in 26 volumes, to drama in tackling which he came a cropper. One of his contemporaries, quite appropriately, addressed him as "Pimp! Poet! Puffer! 'Potheary! Play'r!" Towards the end of his career, however, he could hardly maintain his style of living with his pen and he returned to his first profession of "Potheary" drawing upon himself the following barbed verse from a Grub Street wit:

Thou essence of dock, valerian and sage,
At once the disgrace and the pest of the age,
The worst that we wish thee, for all thy crimes,
Is to take thy own physic and read thy own rhymes.

If birthdays and anniversaries are occasions for reflection, now is the time to ponder the remarkable popularity which the Indian Statistical Institute has come to enjoy. I do not grudge the Institute its success; it has worked hard for it. But I often wonder if it is a good thing that so much attention be paid a body whose scientific function should be explorative and correlative, not policy forming. The Director, Professor Mahalanobis, has acquired personal fame on account of the influence he appears to have in New Delhi. There have been dark rumours too, about the political leanings of some of his colleagues, not all of which have been denied. But it is chiefly to its work on the plan frame that the Institute owes its place in the news. That is a pity, because it must have been among the simplest tasks that it has ever undertaken. If any reader with ten minutes to spare cares to sit down with a pencil and paper he can produce a plan which is at least as close to reality as the plan frame. It might take him a little longer to fill in the various details of expenditure. But even if he rushed it, he would have a fifty-fifty chance of being just as close to the mark at the end of the five years. The point I want to make is that the difficulty with plans lies in carrying them out not in drawing them up. Any reputation acquired solely on ability to do the latter is more a liability than an asset, because it is apt to be lost as easily as it has been gained. In the present enthusiasm for the purely technical, the fact that figures are only an aid to planning and not the whole story is too easily forgotten. I am all for good statistics and plenty of them, but they are no substitute for sound economic thinking. A community obsessed with figures is no more adapted to living in the real world than Gulliver's Laputans. The Statis-

tical Institute is a useful asset when it comes to putting India in touch with itself, but any suggestion that it has shown us how to remove unemployment in ten years and double the national income by 1971 is just plain nonsense.

I must confess that such terms as "decimal coinage" and "naya paisa" (if in fact that is to be the name of the new coin) still leave me somewhat confused. I suspect I am not alone, and I feel that the majority of the people of India, who have probably not yet given the matter a serious thought, will soon be joining me. Some people are going to do quite well at the change-over, but for the simple and unsuspecting it will be rather like playing poker for the first time—but without any chance of beginner's luck. When the two systems are working side by side 25 naya paisa will be the equivalent of 16 pice. Now, what is to be the rate of exchange? Obviously the bazaar merchant, the tax collector, the booking office clerk, and the motor-bus conductor are all going to round off to the next higher naya paisa. Simple folk will be quietly robbed. The answer would seem to be to decide a fixed rate of exchange between pice and naya paisa. An interesting way out is suggested in a printed letter which appeared on my desk recently signed by a Dr. M. S. Kirloskar. His scheme starts off with the assumption that the exchange value of the rupee will be maintained, at least for the time being. He then goes on to make 80 naya paisa—and not 100—the equivalent of one rupee. Another coin, which he calls a "nishka" would be given the value of 100 naya paisa and, as we see, will then equal Rs. 1. It will also be clear that four nishkas are equivalent to five rupees and eight nishkas to ten rupees—all very convenient. The smallest coins would rate as five naya paisa and four pice. In this way, he considers, there is much less chance of people being cheated. I am inclined to agree with him. After four or five years the Government should then, he suggests, revalue the rupee by 25 percent, so linking its value with the nishka. The rupee could then be withdrawn. Ten and five nishka notes would follow. It all sounds disarmingly simple. He adds the suggestion that the equivalent value in naya paisa be stamped on all rupee, eight anna and four anna coins, a step which would further discourage cheating. I am sure there must be some snags in the idea somewhere, but at the moment I cannot see any.

Air tickets to Russian cities are now on sale in British European Airways' booking offices. This is the result of an agreement between B.E.A. and the Russian airline Aeroflot.

Oh the rouble, yes the rouble
That lady clad in purdah
Is wooing western tourists
On the wings of B.E.A.

Now visitors to Moscow
Seeking caviar and vodka
Can relish them on Aeroflot
Served the Russian way

But a peep behind the curtain
Never does make certain
And the maiden's cheek is noted for its cold.
E'en with balalaikas strumming
When the steppe winds are blowing
It'll take more than Russian sturgeon
To make wary lovers bold

Company Meeting

THE GREAT EASTERN SHIPPING
COMPANY LIMITED

CHAIRMAN MR. A. H. BHIWANDIWALLA'S SPEECH

After welcoming the shareholders at the Seventh Annual General Meeting held at Bombay on 16th December, 1955, the Chairman, Mr. A. H. Bhiwandiwalla, made a poignant reference to the sudden death of Shri Navinchandra Mafatal, who had been "a pillar of support" to the Company from its early days. An abridged version of the speech is given below:

The working of your Company during the year ended 30th June, 1955 has yielded satisfactory results. The cargo lifted amounted to 5.54 lakh tons as against 5.16 lakh tons in the previous year, although the larger ships were employed in the overseas tramp trade to a much larger extent than ever before. The gross freight earnings, inclusive of charter hire receipts, increased by Rs. 38 lakhs, from Rs. 171 to Rs. 209 lakhs. This improvement was due to a favourable freight market and the addition of two ships to your fleet. The gross profit for the year, however, amounted to Rs. 30.34 lakhs as against Rs. 40.30 lakhs in the previous year.

The present market value of the fleet well exceeds its original cost of acquisition; a sum of Rs. 82 lakhs has been accumulated in the fleet depreciation reserve; liquid cash amounting to Rs. 50 lakhs is available for future expansion. These facts testify to the financial soundness of your Company.

One unit of the fleet was sold during the year, but orders have just been placed in Japan for a motor vessel of 12,080 deadweight tons as closed shelter decker, costing around Rs. 120 lakhs. With the addition of this new Japanese-built ship, the fleet will consist of 8 vessels with a total of 61,371 deadweight tons.

Hurdles Ahead

We are fully conscious of the keen desire of the Government as well as of the public that the Indian-owned tonnage should grow at a much faster rate. Nor need I assure that your seven-year-old Company, which has hitherto done its best in building up its own fleet, is only too eager to play its appropriate role in fulfilling this national aspiration. But the problem is far from easy. First of all, there are unusual difficulties at present in acquiring fresh tonnage. Practically all the world over, shipyards are fully booked with orders for the next two or three years, deliveries are unusually long, and prices have soared to record levels. Second-hand tonnage, too, is extremely scarce, with prices ruling abnormally high. Our own shipyard at Vizag has only a limited capacity to build and deliver ships; and even that capacity has been very seriously affected by long delays in construction.

On top of this, the problem of tonnage expansion encounters another stubborn difficulty, though of a different nature, namely, the lack of a stable, clear-sighted, dynamic shipping policy. Shipping is a highly capital-intensive industry—a 10,000 d.w.t. modern cargo vessel costs well over a crore of rupees, or as much as the entire capital of a fair-sized shore industry. Shipowners, as businessmen, can embark upon such large-scale capital outlay only when they are reasonably assured of the prospects of economic

ally working these floating factories. Until this condition is satisfied, the expansion of our shipping is bound to remain slow, as it has hitherto been the case.

Coastal Charters

The instability of official policy is illustrated by the decisions that were taken from time to time about the employment of coastal charters. In November 1954 a decision was taken to eliminate chartered tonnage from the coast, which became effective from the 1st of April. The tonnage position on the coast progressively deteriorated, it was soon found that Indian-owned vessels were no longer adequate to cater to the traffic. Accordingly, time-charters were again allowed, though at first in a piecemeal fashion. In October last the shipowners reached a unanimous decision that the ban on charters should be lifted for a period of two years subject to certain agreed safeguards. The Consultative Committee, at its last meeting held in Bombay on November 28, arrived at decisions, the net effect of which is to allow a substantial relaxation of the ban on charters. We are now painfully retracing the step that was hastily taken a year ago.

Resignation from Conference and INSOA and its withdrawal

You are no doubt aware that your Company, while building up its fleet, took a long view and acquired, whenever possible, large oil-burning units that could be economically employed in the overseas trade. In doing so, your Company had always taken it for granted that such units would be allowed freely to go overseas whenever opportunities occurred, although initially they could be licensed only for coastal trading. It was unthinkable that the Government could be averse to such a policy when it was so obviously conducive to the development of our shipping. Yet the ban on charters introduced last year was followed by a de facto ban on the overseas employment of our larger vessels so that these vessels, for all practical purposes, suddenly came to be treated as coasters, and nothing else.

You can well imagine the intolerable situation this unexpected development created for your Company. There was the immediate problem of meeting firm commitments for lifting sugar from the U.K. to India. What upset your Company most is the fact that, owing to the draft restrictions on the Hooghly, it is not possible to operate economically a vessel larger than 8,000 d.w.t. on the coast. Your Company has been fully alive to its coastal obligations as entailed by coastal reservation; and it has been ever ready to meet them to the fullest extent. But the obligation is to maintain adequate tonnage on the coast so as to carry a given quantum of cargo. Surely, it would be an unwarranted extension of the obligation to insist that all the cargo must be carried exclusively in owned vessels, even when this involves a 25 to 30 per cent waste of their carrying capacity.

For a time the prospects of your Company looked bleak, though for no fault of its own. In such a quandary your Company saw no other alternative than to submit, as a mark of protest against an unrealistic policy, notices of resignation from the

membership of the Indian Coastal Conference and the Indian National Steamship Owners' Association. This step, let me assure you, was only a measure of our desperation; it was taken only as a last resort, and with the greatest amount of reluctance. For, your Company fully appreciates the importance of wholehearted collaboration among the shipowners in order to build up a vigorous shipping industry for India. It is, therefore, a matter of great regret as well as of gratification to me that the other members of the Coastal Conference have now shown full appreciation of our point of view and have unanimously evolved a formula which, subject to certain agreed safeguards, will allow charters on the coast to supplement owned vessels and also to replace them in case they are transferred overseas. As soon as this understanding was reached, the notices of resignation were withdrawn.

Larger Issues

The question of coastal charters is directly linked with larger policy issues which I would like to touch upon, even if briefly. There can be no question about the objective that one hundred per cent of our coastal trade should be carried in owned vessels. It has our wholehearted support. But the moot point is how soon we can do so. Coastal self-sufficiency obviously depends on the rate of tonnage expansion. In dealing with this issue, we should remember several important considerations:—

First, our fleet, coastal and overseas combined, now consists of only 480,000 gross tons; the traffic has already gone up to 28.5 lakh tons; with the present slow turnaround of ships at our ports, we would need around 260,000 gross tons, or about 55 per cent of the present fleet. Would it be a wise policy to immobilise such a high proportion of our small fleet on the coast?

Second, the coastal trade itself is growing; and this trend will be accelerated when the second Plan, with its emphasis on basic industries, gets into its stride. Insistence on immediate coastal self-sufficiency will correspondingly reduce our capacity to expand in the overseas trade. Would it be wise to relegate, even if unwittingly, our overseas shipping to the status of a secondary objective and to go so slow with it, specially when both the public and the Government have been demanding more rapid progress in this field?

Third, at present we carry only about 5 per cent of our total overseas cargo. Is it the best policy for us to be one hundred per cent self-sufficient on the coast along with 95 per cent dependence on foreign vessels in the overseas trade? Should we not judge the issue, above all, from the angle of what course would maximise our earnings of freight and foreign exchange?

Fourth, our Government has been importing large quantities of bulk cargo which is carried almost entirely in overseas charters even at a time when the charter market is unusually high. How can we reconcile such complete dependence on overseas charters with the unwillingness to allow any coastal charters at all? Since coastal charters are, as a rule, appreciably cheaper than overseas charters, would it not be desirable to use Indian ships as far as possible for the ocean carriage of bulk cargo and to charter less ships for the purpose, even though we may need correspondingly more charters for the coast?

And fifthly, the reserved coast has been acclaimed as the nursery of Indian Shipping, and rightly so. Yet the concept of a nursery can be meaningful only when the coast is consciously utilised to help our shipping so that it may be better equipped to venture out of the sheltered waters. A wise shipping policy will, therefore, give every possible inducement to the shipowners to build up fleets of deep-sea vessels by using the coast as an initial support and to sail out of the coast whenever possible to meet the challenges on the high seas.

The present policy is pursuing a course that is diametrically opposite. Your Company, over the last year, has been repeatedly denied permission to employ its larger vessels in the overseas trade; they were tied down to the coast even when this entailed a serious waste of their carrying capacity. By pursuing such a policy are we not throwing away what could be the biggest advantage of coastal reservation and hindering, instead of helping, the growth of our deep-sea tonnage? Are we not thereby converting the coastal nursery into a coastal strait-jacket, and inadvertently nursing our infant shipping into a permanent weakness?

Uneconomic Coastal Working

The first and foremost task before an under-tonnaged country like ours is to build up its tonnage as fast as possible and to ensure, as best as possible, that the expanded tonnage will find gainful employment.

By far the most important factor that is now hindering a more rapid expansion of the coastal fleet is the precarious character of coastal working. Costs of operation have gone up all along the line, including prices of ships, stevedoring labour, salaries of floating as well as shore staff, bunkering; and, superimposed on all this, is the extremely slow turnaround of ships at our ports. Given the high costs of operation, a 10 per cent increase of coastal freights, as desired by the shipowners, would have been more than justified, especially since the freights have remained practically unaltered since May 1951. The Government, however, suddenly decided to intervene in this matter and, after holding it up for months, finally agreed only to a 5 per cent increase.

A good deal has been said in the past about the privileged position enjoyed by Indian shipowners in the reserved coastal trade. Let us not overlook the fact that the privileges do not include what is the inherent right of businessmen in other industries, namely, to adjust rates or prices to cover a rise in costs.

Dock Labour

The worst factor affecting the costs of operation is the dock labour situation that has been playing havoc with our shipping. For an 8,000 d.w.t. coaster, one day's extra delay at a port means a direct loss of Rs. 4,500 to Rs. 5,000. To this we have to add the extra port dues.

For more than a year Indian Shipowners, with a striking unanimity, have been drawing pointed attention of the Government to the crippling effect of port delays and have been pressing for effective remedies. The Dock Labour Enquiry Committee, which was appointed as a result, submitted its recommendations early in September. To judge from the brief press reports, the Committee has made balanced and constructive recommendations which, while fully safeguarding all legitimate interests of dock labour, should go a long way to restore healthy conditions at the ports and put an end to the ruinous delays. Yet up till now we have heard nothing about the decision to implement these recommendations. The over-riding urgency of the problem has long been recognised by the Government as well as the public. It certainly brooks no further delay. It is our ardent hope that the Government will soon come to grips with it and settle it satisfactorily.

Port Facilities

There is also a great deal to be done by way of improving the existing port facilities. Without up-to-date mechanical appliances for handling bulk cargoes, our ports will never be able to ensure sufficiently quick turnaround of vessels. Besides measures like better maintenance of equipment, better utilisation of godown sheds, etc., could immediately raise the overall efficiency of our ports. Such improvements ought to be effected, forthwith, since even if a piece-meal system is introduced, as recommended by the Dock Labour Enquiry Committee, the dock workers will be able to give the best possible output only when they are given better tools and greater facilities.

Rail-Sea Co-ordination

Lastly, for the future of coastal shipping, there is the all-important question of proper co-ordination between rail and sea transport. As you might recall, last year I had occasion to bring to your notice how our railways were increasingly cutting into the coastal trade, particularly into the coastal shipment of coal, and how this, in its turn, was weakening the very foundation of our coastal shipping. Since then the nature of the problem has changed—today the coast is faced with a shortage not of cargo, but of tonnage; the total traffic in the country has been growing; the railways, unable to cope with it, have already begun to pass increasingly more cargo to the coast; this trend will almost certainly be accentuated in the coming years. In fact, transport is fast becoming a major problem in our economy; on it will largely depend the success of our second plan.

In such a context it is particularly important to form a realistic estimate of the anticipated traffic and to allocate as much of it as possible to coastal shipping. This is undoubtedly the most important task before the Rail-Sea Co-ordination Committee which is now investigating this matter.

Tramp Shipping

For a rapid expansion of overseas shipping our best hopes lie in early and systematic development of tramp shipping. It is unfortunate that hitherto so little attention has been paid to such a vital matter. Talks of floating a Second Shipping Corporation with the primary object of promoting the tramp trade have been in the air for one whole year; but little headway has so far been made in this direction.

According to the best available estimate, the total dry cargo in our overseas trade amounts to 13.5 million tons. Of these no less than 5.7 million tons were carried, in 1953-54, by tramp steamers. It has been estimated that, in the same year, 524 tramps entered our ports, but other than Calcutta which would no doubt account for another couple of hundred tramp ships, 519 were foreign tramps. Of these 524 tramps, 519 were foreign-owned; only the balance of 5 carried the Indian flag.

These figures, rough and ready as they are, reveal a pathetic situation. What justification could there be for such an overwhelming dependence on non-Indian tonnage in our tramp trade? And what role Government is the largest single shipper in the country and controls several million tons of dry cargo, what could be more logical than to build up our tramp tonnage to carry, as far as possible, our own cargo?

All advanced maritime countries have developed liner and tramp trades, and both these wings of shipping are flourishing side by side. All that we need to do is to follow their example and pursue, in the same spirit, the same policy of co-existence between the liner and the tramp.

Letting out Indian Ships

A de facto ban has recently been imposed on letting out Indian owned cargo vessels on a time-charter basis to non-Indian parties. Yet two-way time-chartering is an integral part of shipping, especially of the tramp trade; at times this is particularly useful in covering business risks; besides, long-term chartering out of ships at favourable rates can directly stimulate tonnage expansion since it widens the opportunities for gainful employment of vessels and also enables a shipowner to plough back booked profits on a planned basis rather than depend on uncertain profits from trading, which may or may not come true; for all these reasons it has been extensively resorted to by other maritime countries. There is no reason why the same freedom should not be allowed to Indian shipowners, subject to whatever reasonable conditions may be found necessary to prevent any dislocation of regular trades.

Tanker Trade

Our overseas trade includes 3.5 million tons of petroleum and petroleum products. In addition, it is estimated that about 18 lakh tons of refined products from the Oil Refineries will need to be distributed in coastal tankers. The Indian fleet does not contain a single tanker, whether for the overseas or the coastal trade.

The Government recently assured the shipowners that in view of the peculiar hazards of the tanker trade, they would be prepared to grant special concessions to those who would be willing to venture into it. Should this inducement fail to produce the desired effect, the Government will themselves go ahead and acquire a couple of tankers. In any case since the tanker trade has hitherto been completely neglected, it would be very desirable to acquire immediately some tankers, second-hand if necessary, so that an early start may be made in this line of business.

Hindustan Shipyard

Last year I had occasion to refer to the relatively high cost of ships built at the Hindustan Shipyard. As I then remarked, the principle of the U.K. parity price, as applied to Indian-built ships, in effect means

that Indian shipowners are required to give a part-subsidy to the Shipyard when, in fairness, the entire subsidy that might be needed by our young shipbuilding industry, should come direct from the Government. I am glad to note that this matter is now seriously engaging the attention of the Government, and I hope that a satisfactory formula will be worked out soon. Since the price of ships will directly affect the competitive position of our shipping, it is important that the shipowners should be allowed to acquire tonnage at competitive prices.

A Second Shipyard

The question of starting a second shipyard in India has been blessed by the Government in principle. Early steps in this direction would appear to be not only desirable, but very necessary. Unless the capacity of our own shipbuilding industry is substantially raised, our ability to expand the merchant fleet will, in all likelihood, be seriously affected. Besides, on a long view, the comparative advantages of this industry lie definitely in favour of India. With our low-cost labour and low-cost steel there is no reason why, after another decade or so, India should not be able to produce ships at costs well below those of the Western countries.

Equity Capital

Hitherto coastal reservation and liberal Government loans have been the two main props of our shipping policy. These were historic steps without which it would have been impossible for our shipping to show anything like the progress it has made during the last few years. But it would be unrealistic to assume that this is all that our shipping needs. The rate of progress is still far too slow; and it can be speeded up only when we are able to evolve a more comprehensive and more adequate shipping policy. Coastal reservation has to be supplemented by mea-

sures that would ensure economic working on the coast.

Besides, all over the world shipping has been developed with the help of large-scale risk-bearing equity capital. In India it has to make-do with interest-bearing Government loans which carries the liability for repayment within a prescribed period. Such loans, welcome as they are in the prevailing circumstances, cannot take the place of equity capital. Here is a grave deficiency that our industry is faced with. It can be partially remedied if, as proposed by the shipowners, profits when ploughed back into the industry, are exempted from taxation. There is no doubt, however, that equity capital on a substantial scale can be attracted into the industry only when the Government, through appropriate measures, makes it possible for the shipowners to earn a fair return on the capital. For, only then will the investing public feel sufficiently confident about the future of the industry and will be willing to invest their savings in it.

Conclusion

Today we stand on the threshold of historic developments. The second Five-Year Plan, with its emphasis on basic industries and its bold targets, is now in the offing. Our economy, thanks to the far-sighted policy courageously pursued by our Government in many fields, is now marching from strength to strength. We, as shipowners, do not want to lag behind in that march. It is no longer enough for us to dream of high tonnage targets; the time has come when we must do our best to realise them. Our most pressing need today is a more adequate and more imaginative shipping policy directed to tackle the problems mentioned above. Such a policy, I have no doubt, can greatly speed up our progress and will hasten the day when India will be able to take her rightful place among the maritime nations of the world.

The crude oil that comes

out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery—and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil—in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil—the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

REINSURANCE CORPORATION PROPOSALS

THE BASIC CONDITIONS FOR EFFICIENT WORKING

By A. C. Guha Roy

AN integrated national reinsurance market is a natural sequence to well-developed direct insurance business. In India, since the very beginning, the direct market in both the life and the general field made balanced progress, its ramified reinsurance requirements being provided mainly by professionals overseas. The question of having a reinsurance company cropped up time and again, but because of many handicaps and difficulties no progress could be made. The Government of India proposed a reinsurance corporation some time after independence. But the pressure of more urgent problems led to deferment of the proposal. The question has again arisen following consideration by the Department of Insurance of "gains" and "drains", meaning generally the import and export flow of insurance. The revenue account of "gains" and "drains" is reported to have led to the view that insurance is an import for which the country has to lose foreign exchange. A reinsurance company is thought to be some corrective to this situation. So far there has only been an exchange of ideas on the subject between the Government and insurers. According to a Press report, the capital of the proposed corporation will be Rs. 3 crores, the Government contributing two-thirds and Indian insurance companies the balance. The original idea was to have an authorised capital of Rs. 2 crores and a paid-up capital of Rs. 1 crore. It was then proposed to open the entire share capital to Indian insurers, the Government contributing, if at all, a small amount. Foreign insurers operating in India, although quite willing to make a subscription, have not, it is understood, been accepted as subscribing partners.

Official Misconceptions

These tentative proposals lead one to the view that perhaps in official circles there is some misconception about the nature, character and the constitution of a reinsurance company. The nature and character of reinsurance are well known. It is based essentially on the theory of spreading the risks. Some single risks are so large that no one insurer can prudently accept the whole for his net account; so it is spread over the market. Reinsurance is thus a stabiliser, promoting balanced results among ceding companies. The true function of reinsurance is to dispose of surplus risks; but that does not mean the disposal of merely bad risks. The reinsurance portfolio over a period of years must balance to enable the reinsurer to continue in business. With a view therefore to avail of the services of a reinsurer through periods of stress and strain, the ceding company must be prepared to give away a certain part of its premiums to the reinsurer and to surrender its surplus profits in good years so as to be able to recover losses in bad. Over a period of years, on balance, it must be prepared to forgo a profit which it might have kept for itself, this being the reward of the reinsurer which it must earn in return for the liabilities it has assumed. By this service it enables the ceding company to maintain even results.

It is not necessary for the constitution of a professional reinsurer that its share capital should be subscribed by direct writing companies in the country. Even if they do so to assist capital formation, it does not follow that they will be bound to cede or that the reinsurer will be under any obligation to accept business from them. The primary test for cession is the terms on which reinsurance can be done. For the reinsurer the test is the character of the account and an assessment of the management of the company. If participation in share capital entails the mutual obligations of cession and acceptance, such participation should be discouraged. These two are entirely separate and in the interests of both should be kept as such. The decision of the reinsurer should not be influenced by considerations other than those relating to its trade.

Emotional Approach

Likewise, there is hardly any logic in barring foreign companies operating in India from participating in share capital. The approach here, it is feared, is largely emotional. The total holding of foreign companies can be limited to a specified figure. Likewise, participation on behalf of any one Indian company or its associates and subsidiaries requires to be controlled. No one group interest of direct companies should have the facility to control the policy of the corporation. This is necessary because the chain of interest of the direct company and the reinsurer is too closely interlinked. The constitution must not be such that one is able to influence the working of the other.

It has been suggested that there should be no compulsion apart from the moral obligation to cede business to the reinsurance company. There should equally be no condition binding on the reinsurer to accept business thus proposed apart from the moral obligation, if any. Foreign companies operating in India, had they been allowed to subscribe to the funds, would certainly have had obligations to cede business. Their obligation now to cede business to the proposed reinsurance company—in whatever moral garb it may be clothed—will arise as a corollary to their trading on equal terms with Indian companies in this country, and because of their allegedly large and disproportionate reinsurance overseas.

No Political Influence

A professional reinsurance company functions best when it is free from political strings. Thus its share capital should be open to subscribers in the country where companies, Indian or foreign, may or may not contribute. The current proposal of the Government subscribing two-thirds reduces the proposed corporation almost to a Government department. The desire of the Government of India to enlarge the scope of the public sector, following its professed emphasis on socialisation, is understandable. It may also have in view the difficulties of obtaining such a large amount by public subscription. But it has possibly misunderstood the technique of reinsurance, which, unlike a steel plant, is not confined within the national borders. It is a trade, and is largely international in character. The proposed reinsurance corporation, by its very nature and to fulfil its basic purpose, must trade outside India. Even if it is assumed that it will absorb a part of all Indian reinsurances by compulsory cessions, the corporation, for its own security, must seek at least catastrophe cover outside. That will be extremely difficult to obtain. The Pakistan Reinsurance Corporation could ultimately get it at Lloyd's, the company market overseas being unresponsive to a State-sponsored organisation. In free countries, professional reinsurance is a "free" trade managed as a private enterprise. Any Government projection of this kind is viewed with suspicion and considered an encroachment on the preserve of private trade. A responsive and complementary cover to stabilise a reinsurance corporation of this sort is regarded as an acquiescence in State enterprise. That is resented by reinsurers everywhere. Therefore, the projection of the Government of India as an entity in the world reinsurance market—largely private enterprise—is not likely to be supported. The unwritten and invisible "trade union" of the reinsurance market is of significance.

International Character

A professional reinsurance company is essentially a profit-making organisation selling service to ceding companies through bad and good years. It must thus be able to stand by companies in lean years. To balance the loss in bad years of Indian business the reinsurer must have business elsewhere. Therefore a reinsurance company cannot, by its very nature, be national. The losses in a particular region will have to be balanced by good turnover in other parts of the globe. Catastrophes happen; the Bombay dock explosion early in the last decade or the riots of 1947-48 in India would have affected for years the accounts of a professional reinsurance company confined within the borders of India. It is, therefore, essential for the reinsurance company to average its trading accounts by trading in various parts of the world. There is hardly any scope for a predominantly Government concern to find the desired market. There may be some hope of obtaining business in Asian countries, but Asian business, apart from Japan, lacks stability. It will not be prudent for a new concern to be involved in accounts in countries lacking political and economic stability. But Trading in communist areas may be possible. Therefore, not be prudent to hazard such a course. Therefore, whether communist reinsurance can provide the Indian reinsurance corporation with the necessary cover remains uncertain. In any event, it may unless the Indian reinsurance company is a private enterprise, many difficulties are likely to be faced which will not be capable of easy solution. A professional reinsurer has to have infinite patience, and has to get accounts by slow and steady competition with established concerns stabilised for years all the world over. It is a very difficult task, and will be still more difficult for a State-sponsored concern.

Private Enterprise

All these points suggest that the correct course for India would be to sponsor a reinsurance company as a private enterprise under Government supervision with its share subscription open to the general public. It is not necessary to have a paid-up capital of Rs. 3 crores. The original idea of having a paid-up capital of Rs. 1 crore should suffice. Insurance companies may be specially requested to make a subscription up to any amount they may choose, but voting rights should not exceed 10 percent of the paid-up capital for any company. For the purpose of facilitating subscription, it may be desirable to classify the shares as approved securities in terms of the Insurance Act. If it is feared that foreign participation will be taken to control, the total holding of all foreign insurance companies operating in India may be limited to, say, 25 percent with voting restricted as above. The necessary subscriptions can, it is anticipated, be raised in this manner with such subscriptions as may come from the general public.

If there is no response on these terms either from insurers or from the public it will be fairer to reinsurance as a whole to defer the scheme rather than to have one with the Government as partner. The difficulties in trading are well known. There is a vast pool of experience overseas from which we can draw our lessons. In the matter of actual working, a reinsurance company modelled on British lines should be eminently suitable for India.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

OFFTAKE OF FUNDS QUICKENS

Wednesday, 21st December.

CONDITIONS in the money market show steady seasonal improvements in demand. Requirements on account of cotton and grains have been the main feature in the market, but the needs of the sugar industry have also played an important part. Funds are still in demand on account of raw jute. Money continues tight in the interbank market, with the call rate unchanged at 31 percent. It is reported there are borrowers over-extended. The market for export documents has been featureless again this week. Remittance has been in fair demand. Sterling is unchanged and the dollar rate remains at Rs. 477.

Silver was quiet and the price declined from the previous week's level of Rs. 171-12 to Rs. 170-14 quoted to-day. The rate for forward delivery was quoted at Rs. 171-2. The London price declined from 76d to 77d. The price of foreign silver in New York remained unchanged at 90½ cents.

Gold was dull in sympathy with silver and the price fell from Rs. 94-15 to Rs. 94. The sovereign at Rs. 60-14 disclosed a loss of 14 annas.

The statement of the position of scheduled banks for the week ended 9th December, 1955, discloses Demand and Time liabilities at Rs. 615.68 crores (Rs. 12.15 crores on account of borrowings from banks) and Rs. 422.35 crores (Rs. 6.21 crores) compared with Rs. 618.56 crores (Rs. 14.33 crores) and Rs. 423.33 crores (Rs. 6.86 crores) respectively in the previous week. Cash has risen by Rs. 35 lakhs to aggregate Rs. 34.46 crores, while balances with the Reserve Bank have fallen by Rs. 7.23 crores to stand at Rs. 57.28 crores. There is a drop of Rs. 93 lakhs in investments to Rs. 393.52 crores. Advances and bills discounted at Rs. 603.90 crores reveal an increase of Rs. 2.55 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.8 percent and 58.2 percent against 9.4 percent and 57.7 percent.

The return of the State Bank of India for the week ended 9th December, 1955 shows a rise of Rs. 1.43 crores in total deposits to Rs. 222.57 crores. Rs. 1.43 crores in Government securities and other investments are down by Rs. 67 lakhs and Rs. 25 lakhs to Rs. 109.03 crores and Rs. 9.23 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.73 crores to aggregate Rs. 96.84 crores. Cash and balances are, in consequence, shown at Rs. 24.87 crores or Rs. 4.81 crores less.

The return of the Reserve Bank of India for the week ended 16th December, 1955, showed a fall of Rs. 82 lakhs in notes in circulation to Rs. 1,350.05 crores while the total note issue rose by Rs. 30 lakhs to Rs. 1,359.04 crores. Notes held in the Banking Department therefore increased by Rs. 1.12 crores to Rs. 8.99 crores. Deposits of the Government of India and other Government accounts improved by Rs. 5.96 crores and Rs. 1.47 crores to Rs. 60.14 crores and Rs. 7.46 crores, respectively, while balances of commercial banks at Rs. 57.93 crores showed a decline of Rs. 1.94 crores. Balances held abroad rose by Rs. 1.62 crores to Rs. 71.17 crores and investments at Rs. 50.54 crores showed little change. Other loans and advances increased from Rs. 26.45 crores to Rs. 29.68 crores, of which advances to scheduled banks against usance bills totalled Rs. 7.15 crores against Rs. 7.05 crores. These advances amounted to Rs. 211.51 crores since 1st January, 1955. Ways and means advances stood at Rs. 5.11 crores (Rs. 3.79 crores).

During the week ended 16th December, 1955, Government of India Treasury Bills for Rs. 18,41,75,000 were sold in favour of the Reserve Bank of India.

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during October 1955, amounted to Rs. 1,284 lakhs as compared with Rs. 1,363 lakhs in the corresponding month of the previous year. The following comparisons should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 968 lakhs as against Rs. 1,025 lakhs, export duties for Rs. 304 lakhs as against Rs. 303 lakhs and land customs and miscellaneous for Rs. 12 lakhs as against Rs. 35 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,109 lakhs as compared with Rs. 900 lakhs. During the seven months, April to October, 1955, the grand total of gross customs and Union Excise Revenue realised was Rs. 17,789 lakhs as compared with Rs. 14,836 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 7,081 lakhs as against Rs. 7,130 lakhs, export duties for Rs. 2,117 lakhs as against

HE FLEW TO
LONDON
BY **TWA**

Says Ramnath Kapur, "Excellent personal service during my recent flight. Your highly efficient personnel were extremely courteous."

*Mr. Ramnath Kapur, Director, Rix Ltd., Airlines Hotel Ltd.

TWA serves over 80 cities in four continents, carries more than 40 lakhs of passengers annually aboard the world's largest fleet of Constellations. These vast resources are

at your personal service when you fly TWA. Serving the people of India... the people of the world... TWA operates the world's finest airline.

Mr. Kapur, one of Bombay's leading hoteliers, knows good service. He enjoyed TWA's superlative service on his most recent visit to Europe.

*Mr. Kapur flew via Cairo, Rome, Geneva and Paris.

For full information, prompt helpful service, see your Travel Agent or nearby TWA Ticket Office.

LONDON FINANCIAL LETTER

IMPORTS NOT YET STABILISED

By Air Mail.

MR. R. A. BUTLER, as Chancellor of the Exchequer, summed up the failure of 1955 when he reminded a business meeting that in the first 11 months of the year the value of imports rose 16 percent but the value of exports rose only 9½ percent over the respective levels of the same period of 1954. It was never supposed that the credit-squeeze would promptly and dramatically affect exports. The policy was admittedly restrictive in its early stages, and if it had worked as intended it would have stabilised, or even reduced, imports. But demands at home continued to absorb increasing quantities of imported goods, at prices, moreover, which were still inclined to rise towards the year-end.

The strength of commodity prices is, however, a reminder that the problem cannot be assessed in terms of U.K. payments, without regard to the finances of the other sterling countries. A familiar conflict is working again. In 1954 it was largely European demand that fortified commodities. In 1955, the upsurge of American business has partly negated the efforts of European countries to stabilise their costs. Britain's own payments problem is thus more difficult to solve. But the sterling area's payments problem becomes more manageable when American demand for sterling commodities is strong. It cannot be said that the fates

have been against the sterling area in the struggle for solvency in 1955. However, American demand, which is thus an element of both embarrassment and strength, is a precarious basis of recovery. No-one in America or outside it knows how long the boom there will last. A cutback of production in the motor industry would change the whole situation. And it is the motor industry that is the vulnerable spot in Europe's economy also.

One major difficulty throughout the year has been to assess how much deflation was needed to restore a balance—or, rather, to provide a surplus for investment abroad. Despite the persistence of the boom this year, there are still people here who believe that deflation will be almost automatic next year, no matter what policy is followed; because schemes for new factories have already diminished, orders for machinery are correspondingly less insistent, and trade in durable consumer-goods—the category especially restrained by control of hire-purchase—is already encountering difficulties. But there are still shortages of labour and of coal and steel. Shortage of those material items may be a cushion to moderate a recession, for substantial quantities of them have to be imported, at heavy cost in dollars, and production of them at home could be maintained, without imports, even if demand were reduced; and the saving of dollars would considerably ease the pressure on payments.

It can now be seen that the boom was stronger than the authorities supposed; also that the restraints worked more slowly than the authorities intended. The latest quarterly analysis of bank advances is revealing, for it shows that the maligned public sector accounts for most of the substantial reduction of the total in the August-November quarter by £234½ million to £1,960½ million, while the restriction of credit to the private sector was relatively trifling. The decline in the volume of commercial bills and acceptance credits has also been significantly slight, merely counteracting the increase between November 1954 and March 1955. There is no doubt that some people unable to obtain, or to increase, bank overdrafts have been able to satisfy some of their needs by commercial bills or acceptance credits.

Critics assert that bank-credit and substitutes for it cannot be effectively controlled unless the authorities have the courage to restrict demand for credit by really high interest-rates and to reduce the liquidity of the banking system by active "open market" policies in the money market. It has also been suggested that the monetary mechanism itself needs tightening up (for instance, by formalising the banks' liquidity ratios and compulsorily raising them when credit is too plentiful). The results of the past year's policy do not show clearly what ought to have been done differently, but they do show that the authorities have still much to learn in the management of money in the changed conditions of the post-war era. How much has been learned, and whether the new knowledge will be applied successfully in the coming year, are open questions.

Reviving a Controversy

It is an interesting thought that the principal alternative to Mr. Butler in the arrangement of the new Government's portfolios in 1951 was Mr. Oliver Lyttleton. Lord Chandos (as he is now) has since moved back into industry, and in that independent position he comments occasionally on matters of high finance, with the authority of one who might have been Chancellor of the Exchequer. Lord Chandos has reopened a question which some people believed to be closed. He has denounced the present policy of "slavish adherence to a fixed rate of exchange", arguing that those who believe in the price-mechanism (as Mr. Butler does, explicitly) should allow it to work in the foreign exchange market—exchange rates being the most important of all economic indices. He favours, in other words, a "floating pound", which could be, he believes, a strong and convertible pound.

It may be recalled that the Government's apparent intention to allow the pound to "float", even within strict limits, caused heavy sales and deferment of purchases of sterling last summer, on the assumption that if the currency could move freely it would move downward. Not until the Chancellor assured the world that the exchange rates would be neither relaxed nor altered was confidence restored and the pound able to recover. An interesting point is that Lord Chandos has little faith in the power of monetary policy to maintain the purchasing-power of money. But the value of money has declined more in this country than elsewhere in the past year or so; and the tendency of such a relative change is to weaken the currency's external value. It may seem that fixed exchange rates are needed, if only to enforce discipline in economic behaviour.

The Parliamentary Secretary to the Finance Minister said in reply to a question that India had provided technical assistance to eight countries of south and south-east Asia, including experts and training facilities, during the last four years of the operation of the Colombo Plan. India's total commitment in regard to technical assistance to other countries in the region under the Technical Co-operation Scheme of the Colombo Plan was Rs. 1 crore. The expenditure four years ending 31st March, 1955, was Rs. 20,27,265. The present scheme, he added, extended up to 30th January, 1957.

CHOICE OF PROCESSES AT THE ROURKELA STEEL PLANT

POINTS FOR THE GOVERNMENT'S CONSULTING ENGINEERS TO CONSIDER

By Sir Padamji P. Ginwalla

BETWEEN 10th and 13th December, two very important statements were made in Parliament, one by the Minister for Iron and Steel and the other by the Production Minister. The Minister for Iron and Steel informed Parliament that the Government had taken the very necessary and welcome step of appointing its own Consulting Engineers to advise it. The appointment should have been made at least three years earlier; however, "better late than never". He also stated that tenders had been invited by the German group (apparently before the appointment of the Consulting Engineers) for the coke ovens and blast furnaces for the Rourkela iron and steel plant. I hope that the tenders have been sent to the Consultants for scrutiny and assessment. This task will be all the easier for them because they have in their possession the prices for the blast furnaces and coke oven batteries required for the I.I.S.C.O. extensions.

The German group is acting in a dual capacity—first as an interested supplier of plant and machinery made by itself or its associates, or countrymen in West Germany; and also, not unlike the seller of a horse vetting it for the buyer, as the Government's Consulting Engineers. On more than one occasion I have pointed out in my contributions to the Press and in informal correspondence and conversations with some important Olympians that however honest a party acting in such dual capacity may be, he will be the judge in his own cause, a principle which is only to be stated in order to be condemned. No genuine seller of machinery can be expected to respond to any tenders called for under such circumstances for the

obvious reason that he cannot under normal circumstances hope that the judgment of such Consultants will be in his favour. Parliament was not told, if the Minister was correctly reported, whether any *bona fide* outsiders had tendered. Now that the Government has appointed its own Consulting Engineers, who are neither manufacturers nor sellers of machinery, public interest demands that global tenders should be reinvented by the Government's Consultants and the merits of the relative tenders judged by them. This procedure should be followed in the purchase of every other main or auxiliary unit of the plant. It must be borne in mind that this is a project which involves the investment of some Rs. 150 to 180 crores before the plant can be brought into economic operation, and the public is therefore entitled to claim that every reasonable step be taken by the Government to ensure that it is purchased in the cheapest market. It should be open to the Consultants, of course, as makers of machinery to send in their own tenders to the Consulting Engineers. This may entail some more delay. But even the greatest "old man in a hurry" sometimes considered it the better part of statesmanship to submit to it in the national interest.

Manufacturing Process for Ingots

The second statement was made by the Minister for Production. It was to the effect that the Hindusthan Steel Company had decided to adopt at Rourkela for the manufacture of ingot steel the L. D. Process, though the Minister for Iron and Steel had stated a day or two earlier that its adoption was still under consideration. The Minis-

ter for Production then went on to say that for this reason his Ministry was considering the erection of a fertiliser plant for the manufacture of about 70,000 or 80,000 tons of nitrogen.

The L. D. Process, described briefly and in non-technical terms, makes the steel ingots from hot metal and scrap in basic converters or vessels into which oxygen is injected from the top without any further treatment of the steel so made at a later stage in the open hearth or the electric furnace. The process was invented and has been patented in Austria. It has been worked there in two plants since 1953. It is stated that it has also been adopted in one plant in the United States and in another one in Canada since then. I am not competent to pronounce any judgment on the metallurgical value of the process which I am prepared to admit, may have worked well, and produced good ingot steel in other countries under very different conditions from our own. It is indeed premature to claim that a process which has been worked on a reasonably economic scale only since 1953 has already been proved such a success that it may be adopted by any country irrespective of the conditions of its raw materials, particularly the quality of the pig iron, which in its turn is determined by the chemical and physical components of its principal raw materials, viz., iron ore, coal, coke, limestone, dolomite, manganese, etc. It is admitted that though pig iron has been manufactured in India on a fairly large scale for over 50 years, its composition has never approached in important respects the close specifications required and apparently attained in Austria, and perhaps in the U.S.A. and Canada. Similar drawbacks attach to its principal raw materials, which I have named above.

Economic Advantages

These considerations apart, we are concerned, as also the Government should be, with the answer to the question whether from the economic point of view this process has any decisive advantage in the works costs of ingots primarily by comparison with the works costs already attained in this country by the orthodox processes. By "works costs" I mean the costs of manufacture, exclusive of all overhead charges, such as depreciation, return on investment, interest on working capital, selling charges, etc.

December 22, 1955.

In order to get a satisfactory answer the public will need some enlightenment on the following points:

1. Have the Consulting Engineers, who have been only recently appointed, had an opportunity, and have they been asked by the Government to examine carefully any estimates that may have been made of the works costs by the German group? If they have been asked to do so, have they reported that they were convinced that the costs were so far below those attained already in India as to justify the adoption unconditionally of this process? Are they also satisfied that the process can be worked economically with the raw materials available at present, or newly discovered ones not yet proved by use in actual manufacture?

2. According to the latest published Report (1953) of the Tariff Commission, the works costs of Tata's basic hot metal used in the manufacture of steel were estimated for the period ending March 1954 at less than Rs. 63 a ton. The actual at present may not be appreciably above this figure. How do the estimates of the works costs of the hot metal to be produced at Rourkela compare with this figure? This is a crucial point, as the L. D. Process uses more hot metal and scrap a ton of ingot than some of the orthodox processes.

Works Costs

3. Are the works costs of the ingots to be produced by the L. D. Process below about Rs. 110, which in the same report appear to have been taken by the Tariff Commission as the works costs of the Duplex open hearth ingot at the Tata Works, whether the entire output at Rourkela is produced by the L. D. Process, or the bulk of it by that process and the remainder by the O. H. process? I should be very much surprised if in favour of the Duplex process were not substantially in favour of the Tata Duplex O. H. ingot. Even taking into account the almost obsolete open hearth plant on which about one-third of the total production of one million tons of ingots is made, the average as estimated by the Tariff Commission of the old open hearth, Duplex Open Hearth and the electric ingots amounts to Rs. 125 a ton. How do the estimates of the average works costs of the ingots to be produced by the L. D. Process exclusively, or mainly by that process and partly by the O. H., compare with these costs? When the Tata Company's new open hearth plant comes into operation the average costs may be below even Rs. 110, the present costs of the Duplex Open Hearth ingot, assuming that in the meanwhile there is no increase in the prices of raw materials, should be freight, etc. The Consulting Engineers should be instructed by the Government to investigate the estimates and to report whether they were definitely satisfied that the estimates made and that the L. D. ingot had been correctly made and that the costs were so substantially below the figures that I have given that the process could be profitably adopted. The public are entitled to ask for such an examination and report by the Consulting Engineers. The question I am now discussing is not whether the process will succeed or fail, or whether if it fails it may even be possible to scrap it and substitute for it another plant to work the orthodox processes at some expense. The question is that we should have a substantial advantage in the works costs as well as a reasonable certainty that no production will be lost on our process is being developed in this country or if existing or yet unworked raw materials, or if eventually it fails wholly or partially. We are in no position at present, when we are so much in need of all the steel that we can get, to undertake the slightest risk, or play with our limited financial resources.

Present Producers' Views

4. Is not the Government aware that both the major existing producers of steel have, after a very careful and thorough investigation and discussion in Austria, rejected its adoption mainly on economic and partly on technical grounds for their extensions? Even in Mysore, the process has been rejected on economic grounds. I understand, in favour of the small open hearth and the electric furnaces for the production of ingot steel. When the major plants which have been producing the cheapest steel in the world for many years have rejected the process, the Government should produce overwhelming evidence to justify the sellers of a new process on the advice of the consultants and on the short experience in two other countries where conditions are quite different. The fact that it has been adopted in one or two works in Canada or the United States is no proof of its success from the economic point of view, for the works costs in these countries, judging by the notoriously high prices at which steel is sold, must be so high that the mere prospect of a reduction in them might be sufficient inducement to them for its adoption. In the United States, for instance, the selling price of basic pig iron alone was of the order of Rs. 240 (\$53) a ton—less than Rs. 100 lower than the average retention price for steel of the Tata Iron and Steel Company. This price was current in the U.S.A. about two years ago. Since then, the prices of iron and steel have risen appreciably. Compared to Rs. 240 in the U.S.A. the works costs of basic pig iron, as I have stated, were less than Rs. 63 a ton at the Tata Works, and the retention price, including all overheads and the profit, only about Rs. 110, according to the Tariff Commission's Report of 1953.

Percentage Comparisons

5. Further it has been claimed that the operation costs of the process are about 60 percent of those of the open hearth or the Duplex open hearth process. Talking in percentages is often very misleading. If the works costs in America, Canada, West Germany or even the U.K. are taken into account or if in the German estimates the costs of the orthodox processes are inflated, it is

possible that the costs by the L. D. Process may be of the order of 60 percent. The question then is whether the estimates made by the German group for the purpose of comparison of the cost of the ingots by the orthodox process are reliable and are expected to be 60 percent of the process costs of the Tata Duplex O. H. ingot. On this point also the Consulting Engineers should be asked to give their opinion. They have for their guidance the works costs of the existing units, the estimates made by the British Mission of the costs of the Duplex open hearth ingots at Durgapur, and possibly the estimates made by the Russians for the straight open hearth, and, above all, their own knowledge and experience extending over many years of the manufacture in India of iron and steel. It is only by investigation on these lines that satisfactory results can be obtained. Has the Government asked the Consulting Engineers to carry out and report the results of such an investigation?

Capital Costs

6. It has been claimed that the capital costs of the L. D. plant a ton of production are also of the order of 60 percent of those of the open hearth or the open hearth and the Duplex plants combined. Here again the Consulting Engineers should be asked to compare with the German estimates those prepared by the British Consortium for Durgapur, prepared by the Russians for Bhilai, by the Tata Company by their extensions and by the Consulting Engineers themselves for the I.I.S.C.O. extensions and for other new plants in the U.K. and elsewhere recently. It is only in this way that it may be reasonably possible to judge that the capital costs asked for by the German group may not have been placed so high as to make the cost of the L. D. process plant 60 percent of theirs.

Fertilisers

Very large quantities of absolutely pure (about 99.5 percent) oxygen are required for the L. D. Process. The oxygen is extracted from the atmosphere which contains both oxygen and nitrogen, in the proportion of about 1 to 3. I presume that the Minister of Production was referring to the manufacture of about 70,000 to 80,000 tons of nitrogen by the installation of a fertiliser plant to utilise the nitrogen which would otherwise escape into the air. It is impossible in the absence of the publication of the materials on which the proposal has been based to judge of its feasibility or advantage. We must first of all be satisfied that on its own merits the L. D. Process has a decisive economic advantage over the ortho-

dox processes so successfully and cheaply operated in India for many years and which are to be worked at Durgapur and Bhilai. In the meanwhile it will be futile to look upon the proposal to make nitrogenous fertilisers in the way suggested as anything more than a carrot dangled before the Government to bolster up and tempt it to agree to the adoption of a process of which the economics are probably regarded by the sponsors themselves as somewhat doubtful.

NEWLY REGISTERED COMPANIES

Steel Enterprises Ltd.—Director, Mr. B. K. Somani, 29, Strand Road. Business of iron mashers, steel makers iron and steel converters, etc. Capital Rs. 20 lakhs.

Biswanath Oil Mills Ltd.—Director, Mr. L. P. Das, 243/2D, Upper Circular Road. Business of Oil Miller and crush seeds and manufacture oil of all varieties. Capital Rs. 10 lakhs.

The Steel Mills of India Ltd.—Director, Mr. Rajkumar, 8, Alipore Avenue. To manufacture roll, re-rol, fabricate and dealing in iron and steel hardware, metal, tools, etc. Capital Rs. 5 lakhs.

Nadia Properties Ltd.—Director, Mr. Abani Ganguli, 100/1, Bhubendra Basu Avenue. To purchase, acquire any lands and buildings. Capital Rs. 5 lakhs.

Vishwakarma Constructions (Private) Ltd.—Director, Mr. B. P. Poddar, 31, Chittaranjan Avenue. Business of engineering, foundries, smiths, machinists, etc. Capital Rs. 5 lakhs.

Engineering Enterprises Ltd.—Director, Mr. S. Lal Mohita, 15-B, Netaji Subhas Road. Business of iron foundries, mechanical chemical and electric engineers. Capital Rs. 5 lakhs.

Engineering Developments (Private) Ltd.—Director, Mr. B. P. Poddar, 31, Chittaranjan Avenue. Business of managing agency. Capital Rs. 5 lakhs.

Sockieting Tea Co. Ltd.—Director, Mr. B. L. Newar, 23/24, Radha Bazar Street. To cultivate tea, coffee, cinchona, rubber and other produce. Capital Rs. 40 lakhs.

Bon-lamihary Anthracite Coal Co. Ltd.—Director, Mr. B. M. Agarwalla, Barahan, Burdwan. Business of colliery proprietors, coke manufacturers, miners, etc. Capital Rs. 5 lakhs.

Radhakrishna Bansidhar Ltd.—Director, Mr. D. P. Kedia, 21, Burtolla Street. Dealers in spices, kirana and catchue, etc. Capital Rs. 5 lakhs.

R. M. Chatterjee & Sons (Estate) Ltd.—Director, Mr. K. K. Chatterjee, 49, Sitanath Bose Lane, Salkia, Howrah. To acquire and take over land, buildings and properties, etc. Capital Rs. 5 lakhs.

Beaten, heated to 3,500° F —this oil won't give up!

How Gargoyle Lubricants protect diesel engines

TEMPERATURES in a diesel engine often exceed 3,000 degrees Fahrenheit. The flame generated in the engine cylinders, every time the fuel is injected, attacks the thin film of lubricating oil. This oil film is all that protects the cylinder walls from destruction.

That is why choice of the correct lubricant is vitally important. In India, as in so many other countries, Gargoyle Industrial Lubricants — famous for 89 years — are chosen to protect crores' worth of equipment.

Different diesel engines have different lubrication needs, and there's a right Gargoyle Lubricant for each. Backed by our experience, correct lubrication — with Gargoyle Lubricants — can help to reduce costs and protect machinery in your plant. For details, write to Standard-Vacuum Oil Company... Bombay, Ahmedabad, New Delhi, Lucknow, Calcutta, Madras, Secunderabad.

improving to Rs. 23; tonight's closing quotation is lower at Rs. 21-14. Indian Iron & Steel shares met with sustained selling pressure and the quotation receded from Rs. 41-3 to Rs. 39-4; tonight's closing quotation is Rs. 39-11.

In the miscellaneous section, Bengal Paper were marked at Rs. 125 ex-dividend against a previous quotation of Rs. 134 cum-dividend. India Paper Pulp receded from Rs. 24-14 to Rs. 24 and Orient Paper from Rs. 35-12 to Rs. 34-14. In contrast, Titagur Paper were steady at Rs. 47. Ashoka Cement were dealt in freely at around Rs. 10-9 and Assam Bengal at around Rs. 7-8. Dalmia Cement reacted from Rs. 15-8 to Rs. 15 as did Sone Valley from Rs. 8-10 to Rs. 8-3. In the insurance group, Hercules were crossed at Rs. 30-8 and a few transactions were reported in New Asiatic around Rs. 5-11. Calcutta Landing met with enquiry yesterday and improved from Rs. 14-4 to Rs. 14-15. India Steamship receded from Rs. 8-8 to Rs. 8-3 and India General Navigation from Rs. 136 to Rs. 133. Port Shipping were quoted at Rs. 16-12. Associated Hotels were crossed at Rs. 6-2 cum-dividend. Alkali & Chemical were a shade easier at Rs. 24-10 while Anglo Brothers were steady at Rs. 27-14. Assam Saws dropped from Rs. 6-4 to Rs. 6 and Balmer Lawrie from Rs. 214 to Rs. 210. Britannia Biscuits eased from Rs. 15-12 to Rs. 15-7 and British Burmah Petroleum from Rs. 4-10 to Rs. 4-8. British India Corporation reacted from Rs. 14 to Rs. 13-4, but later recovered to Rs. 13-10. Dunlop Rubber were neglected at Rs. 35 and Imperial Tobacco were lower at Rs. 14-12. Indian Aluminium were marked at Rs. 218 ex-dividend and Indian Cables were lower at Rs. 34-10. Indo-Burma Petroleum came back from Rs. 46 to Rs. 45. Indian Wood Products were fairly steady at Rs. 45-4 while Jardine Henderson were quiet at Rs. 110. Martin Burn reacted from Rs. 29-6 to Rs. 28-12. Metal Box were dealt in at around Rs. 26-6. National In-

sulated Cables were done at Rs. 22-8 and National Tobacco were subbed at Rs. 11-12. F. & C. Osler dropped Re. 1 to Rs. 16 and Rohas Industries were marked back sharply from Rs. 27 to Rs. 25-4. Contrary to the general trend, Shaw Wallace had ready buyers at Rs. 16-4. Clive Row Investments eased from Rs. 12-1 to Rs. 11-12. Walford Transport Ordinary were steady at around Rs. 21-12.

In the mining group, Burma Mines were unchanged at Rs. 2-8 and Western Stockholders Investment were steady at Rs. 1-2. Metal Corporation recovered from Rs. 11-14 to Rs. 12-5. Karanpura Development dropped from Rs. 22 to Rs. 21 and Orissa Mineral were quoted at Rs. 24-14. Chrestien Mica Industries receded sharply from Rs. 19-8 to Rs. 17-15 with sellers over. Indian Copper fluctuated between Rs. 7-2 and Rs. 7-6 to close at Rs. 7-4.

Tea shares were again neglected and prices declined still further on persistent selling. Today however there was a slight improvement in sentiment. Of the Assam shares, Bishnauth, Brahma-pootra and Brooke Bond were marked back further from Rs. 38-8, Rs. 11-6, and Rs. 20-2 to Rs. 35, Rs. 10-4 and Rs. 19 respectively. Brooke Bond however recovered today to Rs. 19-10. East India were sold down to Rs. 20-12 as were Grob "A" to Rs. 40-8, whilst Jutibari changed hands at Rs. 27-12. Ledo were Rs. 2-8 lower at Rs. 24 and Nagri Hills declined by four points to Rs. 52. Murphulan Preferred Ordinary changed hands at around the previous rate of Rs. 33. In the Doora section, Banarhat and Hantapara were called down to Rs. 335 and Rs. 265 respectively. Carron were sold down to Rs. 195 and Hasimara were fully four points easier at Rs. 34-4. New Doora had sellers at Rs. 295 as did Ranicherra at Rs. 20 and Huldibari at Rs. 33-8. Of the remaining shares, Longview changed hands at Rs. 13, as did Nagri Farm at Rs. 27-12. Singtom were crossed Re. 1

higher at Rs. 7, whilst Sungma were slightly easier at Rs. 19-8. Petrakola were marked at Rs. 161 ex-dividend and after a considerable period business was recorded in Kodala at Rs. 32-8. Arcuttipore declined to Rs. 12-6. Central Cachar were crossed at Rs. 101 and Baitakhal were easier at Rs. 10. Gungaram had sellers at Rs. 320 and Jayshree were weak at Rs. 11-10.

The BRITANNIA ENGINEERING COMPANY made a profit of Rs. 11.90 lakhs in the works department for the year ended last December, compared with Rs. 8.51 lakhs in the previous year. The profit of the agency department fell from Rs. 80,769 to Rs. 39,788. Transferring Rs. 21 lakhs (same) to machinery reserve and bringing in Rs. 1,17,796 there is Rs. 2,86,319. The dividend has been maintained at 15% to absorb Rs. 11 lakhs, leaving a carry-forward of Rs. 1,36,319.

The profit of GILLANDERS ARBUTHNOT & COMPANY rose by Rs. 11.84 lakhs in the works department for the year ended last March. Bringing in Rs. 1,58,072 there is Rs. 3,21,881. Taxation absorbs Rs. 12.44 lakhs (Rs. 7.79 lakhs). Contingencies reserve gets Rs. 4 lakhs (Rs. 3 lakhs) and superannuation fund Rs. 3 lakhs (Rs. 50,000). The ordinary dividend has been raised from 7½% to 14%, leaving Rs. 1,51,360 to be carried forward.

The directors say that its Pakistan subsidiary has made further substantial progress by recording a profit after taxation of Rs. 4,06,063 during the year under review, compared with Rs. 1,39,719. In consequence of this satisfactory result, the debit balance of Rs. 2,36,487 has been converted into a credit of Rs. 1,69,576. As trading conditions in Pakistan continue difficult, this balance has been retained in that country and no part of it has been included in the parent company's accounts.

The working of the MACNELL & BARRY group of collieries for the half-year ended last June produced satisfactory results. The dividend of Hurridadih has been raised while that of Equitable maintained. The directors say that the Government has recently announced its desire

PRE-HOLIDAY DULLNESS IN STOCK MARKETS

GILT-EDGED AND INDUSTRIAL EQUITIES EASE

London, 21st December.

THE stock markets were unsettled prior to the week-end but turned dull subsequently under the influence of the approaching holidays and of reminders that the credit squeeze was still in operation and was likely to be continued for some time. Little selling developed, but the underlying tendency was easier. The uncertain trend in Wall Street, political developments in the Middle East and further consideration of the November trade figures all made for caution, with buyers holding off generally, although there was selective support for certain issues. Idle conditions persisted in gilt-edged. Due to the lack of interest and business, prices inclined easier to record widespread small falls compared with previous levels. The recent Corporation issues, however, moved up on consideration of fact that there are to be no further such issues this year. The firmness of German potash bonds on foreign buying was the main feature of the foreign market, but otherwise there was little interest or change in foreign bonds. Rails moved irregularly, while dollar stocks fell back sharply under Wall Street's influence, though they steadied later. Industrial equities ended easier, though selective buying brought a number of firm spots.

The miscellaneous leaders lost ground, and shares with an American following, such as Bowaters and Borax, were particularly affected by the fall in New York. Steel shares were active, but movements were mixed. The new Consett Iron shares established a small premium in first dealings. Dorman Long reflected disappointment over an unchanged dividend. Hawkers were a good feature on further consideration of the results. Business in the gold market was at a very low level, but the tone was not unsatisfactory and small gains were scored prior to the week-end. These were fairly well maintained subsequently. The rest of the December dividends, although satisfactory, had little effect on the shares concerned. Coppers went ahead, helped by good dividends and an advance in the metal price, but tin shares lost some of the previous week's gains. Other base metals attracted little attention. The

fall on Wall Street brought lower prices for oils, although Canadian Eagle were a good feature. Rubbers inclined easier despite the bright outlook for the commodity, while tea shares were out of favour and easier where changed.

The Money Market

The very comfortable credit conditions of the previous week continued last week. While there was a contraction in the early stages, the volume of funds was swollen by the repayment of bank loans by the Electricity Commission from a £47 million call on the latest Electricity Stock and by the disbursement of Education money. Funds then became abundant, with the authorities intervening to mop up the surplus. No special factors will be at work this week, and credit is expected to tighten, with money moving up to 4 percent, as compared with an average of 2½ to 3 percent last week. Applications for £220 million of 91-day bills totalled £286,395,000 and were allotted at the average rate of 81s 5.22d, against 81s 4.35d in the previous week. Applications for £60 million of 63-day bills were £78,620,000, and were allotted at the average rate of 82s 0.67d, compared with 81s 6.69d in the previous week. This week, offerings are £280 million of 91-day bills. No 63-day bills are offered. The Bank of England return for the week ended 14th December, showed that notes in circulation rose sharply by £42 million to £1,870 million, while bankers' deposits dropped to £239 from £249 million.

Activity on Wall Street

Convertible bonds eased slightly during the past week in moderately active trading reflecting the uncertain trend of Wall Street. American Telephone and Telegraph 3½ percent 1967 eased while a majority of the huge new issues were turned in for conversion into common stocks of the company. Bethlehem Steel 3½ percent 1980 and Radio Corporation of America 3½ percent 1980, were also lower. Government obligations were generally steady over the counter market, with a fair amount of business being done. World Bank issues were neglected and motionless. Active among rails were Milwaukee Road 5 percent which eased slightly and Chicago and North Western which improved fractionally. Foreign bonds were rather quiet. Greek 6 percent and 7 percent were most active, rising sharply on Monday but easing later. Germans were steady to firm as were Italian Credit 3 percent 1977. Italian Public Utility 3 percent, however, eased. Australians were fully steady, while Japanese 6½ percent eased slightly. South Americans were inactive, with the chief feature a decline in Chile 3 percent.

U.K. Repayment of N. American Loans

For the fifth year running, Britain will pay on 31st December instalments of interest and principal on the North American loans which she raised in 1946 and spent in 1947. The total payment on 31st December will be nearly \$176 million. She will have to pay about the same amount at the end of every year for the rest of this century to pay off the whole debt. Of this year's payment, only \$70,600,000 is repayment of the capital of the loans, while more than \$105 million is interest. The loans originally totalled \$5,557 million. In the five years since payments started in 1951, Britain will have paid \$916 million on them. But only \$338 million of the total will have been repayment of capital, all the rest being interest. Paying \$915 million in a debt of \$5,557 million, Britain still owes \$5,219 million and has to pay it off along with the interest.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 17th December shows gold stocks unchanged at \$21,689 million. Foreign deposits declined by \$7 million to \$434 million, and foreign investments increased by \$67 million to \$3,625 million. The Federal Reserve purchased \$163 million worth of bills and \$3,400 million of certificates, but sold \$3,234 million of notes and \$141 million of U.S. Government securities previously held under repurchase agreements. Total discounts and advances declined by \$414 million to \$564 million, while excess reserves of member banks increased by \$57 million to \$301 million. The daily average of excess reserves increased by \$20 million to \$499

million, while average borrowings declined by \$54 million to \$878 million. Business loans of New York City banks increased by \$8 million to \$9,061 million, compared with a decline of \$9 million to \$7,558 million in the corresponding week a year ago.

Hongkong Gold Steady

The Hongkong gold market was steady last week, with sentiment aided by higher prices at Far Eastern centres. The opening was sluggish at \$ (HK) 253½. The price then climbed a little but subsequently declined to a low of \$ (HK) 253½. The market turned steady on Thursday, reaching a high of \$ (HK) 254½ in the final session. The firmness of the U.S. dollar influenced the upward trend. Carryover charges were 60 cents in favour of buyers. The official offtake was 2,060 taels and the unofficial offtake was 26,900 taels. Arrivals totalled 30,000 ounces, and forward contracts were done at \$ (U.S.) 37½ c.i.f. Macao.

U.K. Antimony Consumption

The consumption of antimony metal and compounds in terms of antimony metal in the U.K. was 509 tons in October as against 187 tons in September, according to the British Bureau of Non-Ferrous Metals Statistics. The use of oxides other than for white pigments was 96 tons against 81 tons, while miscellaneous uses rose to 29 tons against 15 tons. Antimonial lead used other than for batteries accounted for 44 tons against 34 tons, while the use of oxides for white pigments was slightly higher at 137 tons against 134 tons. Consumption for batteries fell to 169 tons from 185 tons and the use for bearings was four tons lower at 34 tons. The total consumption of antimony in scrap showed a sharp recovery in October at 386 tons from the low level of 194 tons to which it fell in September.

Higher Dundee Jute Wages

As a result of discussions in Dundee, the Jute Wages Council has agreed that minimum wages be increased by 5 percent. The increase is expected to be effective from about the end of February. Over 15,000 workers will benefit. The award represents an increase on the minimum rate of 6s 5d a week in the case of adult males and 4s 5d for females. The wages of juveniles will be increased on a percentage basis.

Reaction to Loom Unsealing

The decision of the Indian Jute Mills Association to unseal some 1,500 looms is not likely to have any effect on jute goods or raw jute prices in London, according to trade sources there. U.K. imports of jute goods from India are contracted by the Board of Trade and the amount of goods produced in Calcutta is not likely, therefore, to cause any alarm, according to these sources. It may have some effect on the Continent, where imports are free. Raw jute traders in London think it unlikely that the increased demand for raw jute arising from the decision will affect raw jute prices at exporting centres to any great extent. The Indian mills at present consume about 5,600,000 bales of raw jute annually, and the increased activity would add only about 160,000 bales to this demand. The net effect is likely only to impart a slightly steadier tone to the London market.

London Rubber Easier

Liquidation in Eastern centres induced easiness in the London rubber market at the beginning of last week, and values gave way further under poor demand. Minor rallies occurred on a little outside buying, a few trade orders, mostly for lower grade rubber, and covering. But the market lacked drive. Towards the close a renewed tendency to sag was checked by improved New York advices and sellers adopted some reserve. With a further loosening of the recent tight position for nearby rubber, early deliveries were 3½d a lb cheaper, while forward deliveries lost 4d. Although only occasional small orders were current for sole crepe, supplies were not excessive and holders adhered to their quotations of 43d a lb for 1½ inch smooth No. 1 on the spot.

Vegetable Oil Market

Linseed oil ruled firm with active business reported to Continental ports at rising prices but U.K. buyers were inclined to await the outcome of today's American C.C.C. offer of 11,000 tons. The Continent was buying April delivery at \$277/278 net terms per metric ton and sellers are now wanting \$280. Indian oil on the United Kingdom market was holding at £119 c.i.f. January/April arrivals. There were small offerings only of groundnut oil and prices ruled firmer with £111½ sought for December/January and January/February shipments. Castor oil ruled firm on marked reserve of Indian shippers, B.S.S. oil being placed up to the region of £115 cost and freight in drums January/February against £113 previously. Coconut oil was tending to be dearer but European buyers were not inclined to follow. Copra was generally stagnant and the rates barely changed. Groundnuts were fully steady with attempts to raise Nigerian prices, while bold Bombay H.P.S. groundnuts were marked up to £87 c.i.f. February/March.

Tramp Freight Rates Fall

The U.K. Chamber of Shipping index of tramp freight rates recorded a sharp fall in November to 135.5, compared with 148.9 in October. Marked declines were recorded in the majority of sub-indices, with sugar dropping to 146.8 from 187 and grain to 143.8 from 155.2. Charter rates also fell to 135.5 from 151.2.

Offerings at London Tea Auctions

At the London auctions on Monday, offerings totalled 34,917 packages of North Indian and Miscellaneous teas. Coloury teas were in demand and Fannings advanced. Clean well-made descriptions were about steady, while liquoring sort ruled irregular. Plain Broken Pekos was indicated nominally at 42d a lb against 41½ previously.

New Delhi

ECONOMICS OF THE AMBAR CHARKHA

THE PATTERN OF SAVING FOR DEVELOPMENT

(FROM OUR NEW DELHI CORRESPONDENT)

THE fortunes of the textile mill industry are hanging in the balance, due to the intensity of the blitzkrieg launched by the Gandhian wing of Congress during the past week. The Ministry of Commerce and Industry has been directed to suspend the licensing of spindles either for replacements or for new installations, pending a decision on the Ambar charkha. It is believed that at least three Ministers, with a body of Congress backbenchers, waited upon the Prime Minister to obtain this directive. After staging demonstrations both inside and outside Parliament House, the Gandhian wing discussed the economics of the Ambar charkha at a meeting of the Congress Parliamentary Party on 5th December, the object being to create a monopolist position for it. The Prime Minister presided, and, according to uncontradicted reports, he linked employment with production. The published version appears to omit this reference. The speech of the chairman of the Khadi Board, Mr. Vaikunth Mehta, invoking the vocal ghost of Mahatma Gandhi in support of the Ambar charkha, and an article by Mr. of the Ambar charkha, and an article by Mr. Shriram Narain on its economics were also published. The speeches of the Finance Minister, Mr. C. D. Deshmukh and the Commerce Minister, Mr. T. T. Krishnamachari, however, have not been published. This gave the other side of the case at the meeting of the Congress Parliamentary Party, held on 5th December. The Finance Minister, particularly explained that the Ambar charkha would need a subsidy amounting to Rs. 30 crores to a year or Rs. 150 crores in five years. He left it to the Congress Parliamentarians to decide whether to have the Ambar Charkha at the cost of some social service provided in the second plan period. According to still uncontradicted reports, the Prime Minister felt that there was a limit to subsidies, particularly where the country had to confine the size of the plan within the limits of its own resources. Meanwhile, a meeting of the Village Industries Board extended its support to the Karve Report, which means virtually to Ambar Charkha.

Subsiding Khadi

On Thursday, 15th December the President of India paid a visit to Gramodyog Bhavan in New Delhi, where he announced that instructions had been issued to replace "all the traditional furnishings with Khadi." During the current year alone, Rs. 350 lakhs in grants and 100 lakhs in loans have been provided to subsidise the manufacture and sale of khadi. Notwithstanding all these inducements, khadi continues to remain unattractive even to the people in the countryside.

Technical Progress and Unemployment

The question of the supply of consumer goods is also connected with the problem of economising in the use of capital and increasing the availability of employment opportunities. The Karve Commission report was discussed in this context by the Panel of Economists; and the general view that emerged was that while the solution to the problem of unemployment had to be found through the entire scheme of investment proposed in the plan, there was a case for preventing further technological unemployment by regulating the pace of technical progress in selected industries. In technical progress in selected industries. In relative costs between one level of technology and another, and generally to ensure that the efficient methods that could be used within the existing establishments were encouraged. There could be no question of freezing techniques but in the whole approach to this question should be in terms of the most efficient utilisation of manpower. A representative of the Khadi and Village Industries Board mentioned in this connection that the Board was not thinking at all in terms of stagnant techniques and that it was prepared to recommend the adoption of the most efficient techniques available, consistent with a decentralised mode of production. Most members of the Panel were also of the opinion that there were limits to any policy of subsidisation or even of differential excises. It was suggested by some members that unless the Government was prepared to undertake the marketing of the products of large-scale and competing small-scale industries, it would be difficult to attain the twin objectives of avoiding unemployment on the one hand and promoting technological development on the other.

The Plan and its Resources

The Panel of Economists held its three-day meeting here during the week. An official release, at the conclusion of the sessions, emphasised that the economists had expressed their individual views and "no attempt was made to formulate conclusions acceptable to all members." Dr. K. N. Raj, for example, is reported to have referred with approval to the slow movement of rail transport in Soviet Russia and Communist China and wanted its adoption by India. The picture of the plan and its resources placed by the Planning Commission before the Panel disclosed the following—

Financial Resources for the Second Five Year Plan.

Source	As now proposed	Plan frame estimates.
1. From current revenues at existing rates	350	350
2. Additional taxation	450	350
3. Railways	150	200
4. Provident funds and other debt heads	250	
5. Loans from the public and small savings	1,200	1,000
6. External assistance	800	400
	3,200	2,300
7. Deficit financing	1,200	1,000—1,200
8. Balance to be made good either from internal or from external sources.	400	800—1,000
Total size of the plan	4,800	4,300

The detailed examination of the financial position of the Centre and of the States that has been undertaken since the plan frame was published, has confirmed the estimate at Rs. 350 crores. "It must be mentioned, however," says the Planning Commission "that in working out this estimate, provision has been made by way of estimated expenditure for only minimum increases under non-developmental heads, including Defence, Administration and for the maintenance of social services at the level expected to be attained by the end of 1955-56. All expansion in social services will figure in the plan, but a careful watch over non-developmental expenditure will be necessary in order to obtain for the plan the estimated amount of Rs. 350 crores from existing revenues. Should this type of expenditure increase markedly or should there be losses in revenues on account of any acceleration in the Prohibition programmes of State Governments, the resources available for the plan under this head will correspondingly decrease." It may be mentioned here that the implementation of the developmental programmes of the Centre and of the States will itself raise the level of current receipts in the course of the next five years. These arise by way of fees or sale proceeds or repayment of loans made in the early part of the plan, and may add up to Rs. 100 crores. There will, however, be additional interest payments to be made in respect of the large programme of fresh borrowing envisaged in the plan period. These two items, it would appear, will more or less balance receipts as well as disbursements, being of the order of Rs. 100 to Rs. 120 crores.

Additional Taxation

In the plan frame papers, additional taxation of the order of Rs. 350 crores was taken as the minimum necessary for maintaining the present proportion of taxation to national income and it was hoped that a considerable part of the gap was expected to be made good by the more specific review of the possibilities of taxation that has since been undertaken, it appears that the target in this respect cannot reasonably be placed above the level of Rs. 450 crores. In be placed at this figure, the recommendations of the Taxation Enquiry Commission have been taken into account and it has been assumed that steps will be taken in this direction as from the first year of the plan. The recommendations of the Taxation Enquiry Commission do not in all cases indicate the rates to be adopted and the phasing of taxation programmes. One cannot, therefore, in precise terms the total receipts from fresh state in precise terms the total receipts from fresh taxation if all the recommendations of the Commission are implemented. It is felt, however, that a target of Rs. 450 crores from fresh taxation that will involve a degree of effort slightly larger than was envisaged by the Taxation Enquiry Commission. The estimates of additional taxation which the States have envisaged so far, amount to Rs. 160 crores. It appears now that an additional Rs. 100 crores on their part will be necessary to bring effort on their part will be necessary to bring up that total to Rs. 225 crores. In other words, the total of Rs. 450 crores to be raised from additional taxation will imply an equal effort—Rs. 225 crores—on the part of the Centre and of the States.

The Railways' Contribution

The railways will now be required to contribute Rs. 150 crores to the financing of the plan. In the plan frame, a composite figure of Rs. 200 crores was adopted in respect of railways and miscellaneous funds. A closer scrutiny of the likely level of receipts under provident funds and other debt heads indicates that about Rs. 250 crores can be regarded as a fair estimate of resources that can be secured under this head. The receipts likely to be in the provident funds at the net accumulations in the provident funds at the Centre are estimated at Rs. 17 crores and for 1955-Centre are Rs. 6.6 crores. As against this total of 56 at Rs. 6.6 crores, it is not unreasonable to assume Rs. 23.6 crores, it is not unreasonable to assume a total of Rs. 150 crores under this head for the second plan period. In addition, Rs. 100 crores can be taken credit for in respect of the recoveries of loans and advances made by the Centre and by the States. In regard to the railways, the latest assessment of the trend in receipts and working expenses shows that, with vigilance in regard to the latter, about Rs. 100 crores can be found by the railways at the existing level of rates and freights;

it should not be difficult to add to this another Rs. 50 crores by selective modifications of the rate and freight structure in the period of the plan. This effort on the part of the railways is indeed the minimum required of them in the context of the relatively large outlay which is being sanctioned for them.

Saving for Development

Given the limitations in an underdeveloped economy of taxation either as such or by way of profits of Government enterprises, it becomes necessary to make a correspondingly greater effort by way of borrowings from the public. Receipts from borrowings cannot therefore be conceived as estimates or 'projections' showing what would accrue to public authorities more or less automatically. They are rather to be regarded as targets which must be achieved through the offer of suitable incentives, more effective institutional arrangements and the creation of a new psychological approach to saving for development. It is in the light of this consideration that credit has been taken for a sum of Rs. 1,200 crores against item five, an increase of Rs. 200 crores over the plan frame estimates.

The average level of net receipts by way of market loans from the public has in the last two years been around Rs. 100 crores. The capital market is much more responsive now than it was in the early years of the first plan. This improvement may be expected to continue and a target of Rs. 700 crores of public loans for the next plan period is probably not over-optimistic. It is to be remembered on the other hand that there are maturities in the next plan period of about Rs. 430 crores and the task of raising net loans of the order just mentioned represents, in terms of gross borrowing, a programme which is fairly ambitious, particularly in the context of a brisk demand for funds for investment in the private sector.

The record of small savings in the first plan period has been encouraging. The collections under this head went up from a level of Rs. 33 crores in 1950-51 to Rs. 54 crores in 1954-55 and are expected to be around Rs. 60 crores in 1955-56. Even so, a target of Rs. 100 crores a year on an average by way of small savings for the second plan period is on the high side. Given an intensification of the small savings drive and sufficient follow-up at the district and sub-district levels, the target can be attained. To some extent contributions through public borrowing programmes and small savings are interchangeable, so long as it is borne in mind that the total of borrowings under both these heads should aggregate Rs. 1,200 crores.

Deficit Financing

The total of resources mentioned so far amounts to Rs. 2,400 crores. The problem is to find another Rs. 2,400 crores. The plan frame had put forward an estimate of Rs. 1,000 to Rs. 1,200 crores as a more or less safe limit of deficit financing; the Panel of Economists had suggested that Rs. 1,000 crores should be regarded as the maximum permissible. It has been accepted that any serious emergence of inflationary pressures should not be permitted and that the objective of "development, with stability" should constantly be kept in mind, while it is agreed that some amount of deficit financing is not only inescapable but necessary for promoting expansion in an under-developed economy. The definition in advance of a quantitative limit is difficult in a matter like this, but Rs. 1,200 crores is about the utmost that can be taken credit for under this mode of financing. Deficit financing is, of course, a way of getting at domestic savings; it does represent a forgoing of current consumption on the part of the people for the financing of the plan. The fact that a fair amount of reliance has to be placed on deficit financing is a reflection of the difficulty of increasing the coverage of taxation before some progress is made in development itself. It is this fact which necessitates the taking of a measure of risk with the relatively easier but potentially more dangerous mode of raising real resources, namely, deficit financing.

External Assistance

The question then is to what extent the resources that can be mobilised internally for the implementation of the plan can be supplemented by external assistance. Clearly, this is not a field in which an estimate can be made either in terms of past trends or in terms of one's needs. In the plan frame a tentative figure of Rs. 400 crores was adopted. Further external assistance was not ruled out since there was avowedly a gap of Rs. 800 to Rs. 1,000 crores to be made good. In the estimates as they are now being presented, the suggestion is that provision be made for external assistance of the order of Rs. 800 crores. As will be argued later, supplemental resources from abroad will be necessary in order to balance the external account even after providing for a reasonable subtraction from the country's foreign exchange reserves. In the first plan period external assistance available for the plan averaged Rs. 40 crores a year. As compared with this an average of Rs. 160 crores a year represents a very big increase. But in view of the size and pattern of the plan, assistance of this order is required.

Taking all the resources into account there still remains a gap of Rs. 400 crores to be covered. It is not possible to envisage at this stage any domestic or external resources to fill this gap and there is little gain in attempting to arrive at an

arithmetical balance in respect of financial needs and resources extending over a five year period. It is difficult, on the other hand, to cut down a plan which has already been pruned at successive stages; it would involve again a protracted process of readjustments and re-allocations. A five year plan is not after all a list of commitments for a five year period all of which will be entered upon right at the outset. There are many uncertainties to be taken into account, and there is need for a continuous review of resources and of ways and means of augmenting them. One might also make allowance for the fact that a measure of shortfall in expenditure cannot altogether be ruled out when the implementation of the plan is to be undertaken by a large number of agencies within the public sector.

Finance for State Plans

A word may finally be said regarding the financing of State plans. Of the total expenditure of Rs. 4,800 crores, about Rs. 2,220 crores represents the expenditure to be incurred by State Governments. The revenue resources of State Governments are, as is well known, far below requirements. The examination undertaken in the Planning Commission in consultation with the State Governments shows that in the second plan period State Governments will be able to find about Rs. 100 crores for the plan from existing revenues. It is proposed, as mentioned earlier, that States should undertake further taxation totalling Rs. 225 crores. The lines along which this effort can be made have been worked out to a considerable extent in view of the Taxation Enquiry Commission's recommendations, and a target of Rs. 160 crores of additional taxation has already been accepted by the State Governments. It should not be difficult to raise a further Rs. 65 crores or so over the five year period.

Expenditure in the Private Sector

In the plan frame an investment expenditure of Rs. 2,200 crores in the private sector was envisaged. It would now appear that the requirements of the private sector might be somewhat larger, say, Rs. 2,300 crores. The broad break-up of this expenditure may be indicated as follows:—

	(Rs. crores)
1. Industry and mining	550
2. Plantations, transport and electricity undertakings	100
3. Agriculture and rural industries	200
4. Construction	1,050
5. Working capital in trade and industry and miscellaneous items	400
Total.	2,300

The major items of investment in industry and mining have been explained earlier. For private transport, plantations and electricity undertakings, detailed plans are not yet available, but Rs. 100 crores appears to be a reasonable provision. Investment in the rural sector, monetised and non-monetised, adds up at present to a sizeable total, but the estimate of Rs. 200 crores set out above relates only to monetised investment. Construction, including housing, (monetised) is at present probably of the order of Rs. 170 crores. On an average, an investment of Rs. 210 crores a year under this head for the second plan period cannot be regarded as excessive. Finally, a provision of Rs. 400 crores of additional investment in working capital in trade and industry will probably be called for, considering the increase in the volume of production and in economic activity.

Taking the public and private sectors together, investment in the economy over the second plan period should work out at Rs. 6,100 crores (Rs. 3,900 crores in the public sector and Rs. 2,200 crores in the private sector). It will be observed that whereas in the first plan the ratio of public and private investment was as 50:50 in the second plan it works out at about 62:38.

The Pattern of Saving

The overall position that emerges from the review so far is that the public sector will have no public savings (surplus on current account) available to itself for financing the investment programme proper. With the increases in taxation that have been proposed, it (namely the public sector) will just be able to meet its current expenditures, including the expenditure of Rs. 1,000 crores on plan schemes in the revenue account. The entire investment of Rs. 6,100 crores, therefore, depends upon private savings and external resources. As will be seen in the next section, the implementation of the plan in the public and private sectors will require import surpluses of the order of Rs. 100 crores over the plan period. If the required external resources of this order are forthcoming, the contribution of savings will have to be Rs. 5,000 crores. Savings of this order from within the economy presuppose a stepping up of the rate of saving from the current level of about 6 percent of national income to an average of 8½ percent of national income for the period of the plan. Or, to put it in another way, the rate of saving will have to go up from the present level of 6 percent to a little more than 10 percent by the end of the second plan period. This implies, if national income goes up by about 25 percent over the plan period as postulated earlier, an incremental rate of saving of between 20 percent to 25 percent. In a country with the living standard of the majority of the population near the minimum, this order of effort is difficult, especially if the new incomes to be generated are to be widely

sions as to savings and consumption, rates of development comparable to those achieved either in more highly developed countries or in countries with a different institutional pattern.

The overall picture, it will be seen, has not taken into account the proposed subsidy of Rs. 150 crores on the *Ambar Charkha*, the potential loss which would be incurred by Prohibition, estimated at Rs. 200 crores, and any excess in defence expenditure, which in the second plan period is placed at Rs. 300 crores. The outline of the plan will be discussed by the Union Cabinet on 4th and 5th January; by the Standing Committee of the National Development Council on 6th and 7th January; by a cross-section of the Members of Parliament on 12th, 13th and 14th January and by the National Development Council on 20th and 21st January.

Site for Electrical Equipment Plant

Experts of the Associated Electrical Industries, Limited and officials of the Government of India have commenced the first stage of their country-wide tour for the selection of a site for the proposed heavy electrical equipment plant. Associated Electrical Industries are technical consultants to the Government of India for setting up the factory. During the first part of the tour, the experts will visit, among other places, Rourkela in Orissa, Barka Khana in Bihar, Durgapur in West Bengal and Naini in Uttar Pradesh. They are expected to return to New Delhi on 24th December, when they will examine the replies of State Governments to a questionnaire issued by the Production Ministry on the location of the proposed factory. The other half of the tour will cover further potential sites in different States.

Under the agreement signed between the Government of India and Associated Electrical Industries on 17th November, the location of the factory is expected to be decided by the third week of February 1956. The Government of India will take the final decision on the site after examining the experts' report.

Personnel Training

The experts on tour are: Mr. A. Paterson, Mr. C. H. Smith, Mr. S. G. Michallat and Mr. H. C. Hardy (Associated Electrical Industries); Mr. S. A. Gadkary, who was convener of the Heavy Electrical Project Enquiry Committee and Mr. A. H. Azad (Ministry of Production). Two other experts of Associated Electrical Industries, Mr. F. Bateman and Mr. J. K. Adams, and Mr. B. K. Mitter of the Ministry of Production have also begun a tour of technical training institutes and heavy industrial units to examine the prospects for the training of technical personnel required for the factory. During their present tour, the experts are expected to visit among other places, the Bengal Engineering College, Sibpur, the College of Engineering and Technology, Jadavpur, the Calcutta Technical School, the Indian Institute of Technology, Kharagpur, the Bihar Institute of Technology at Sindri, the Engineering College of the Banaras Hindu University and the Ministry of Labour training centre at Banaras. They will also visit the Associated Electrical Industries factory at Calcutta, the Ishapore Ordnance Factory, the Cossipore Gun and Shell Factory, the Tata Iron and Steel Works, the Indian Iron and Steel Works, the Maithon Dam and other works of the Damodar Valley Corporation, the Chittaranjan Locomotive Works and the Railway Workshop at Jamshedpur.

Private Capital Formation

The total investment on gross fixed assets formation in the private sector during 1951-56 is now estimated at about Rs. 330 to Rs. 340 crores as against Rs. 383 crores on new projects, replacements and modernisation envisaged in the first plan. The largest investments are likely in cotton textiles (Rs. 80 crores) petroleum refining (Rs. 50 crores) and iron and steel (Rs. 49 crores), followed by engineering industries, heavy and light (Rs. 25 crores), chemicals, fertilisers, pharmaceuticals, dyestuffs and plastics (Rs. 15 crores), cement (Rs. 18 crores), paper (Rs. 11 crores), sugar (Rs. 15 crores), electric power generation (Rs. 20 crores), jute textiles (Rs. 15 crores), rayon and staple fibre (Rs. 8 crores), and others (Rs. 24 crores to Rs. 34 crores). The shortfalls in investments have occurred principally through (a) the unfavourable conditions which obtained generally in the first two years, (b) the change in the size of the plant and the construction schedule in F.A.C.T. expansion at Vishakapatnam, (c) delay chemical pulp scheme envisaged under the plan. Broadly speaking, the lag in investments was in industries requiring heavy investments and with comparatively low profit margins. No positive agency like the National Industrial Development Corporation which came somewhat late into the field, existed in earlier years for giving the required financial support.

As regards investments on replacements and modernisation, progress has been on the whole satisfactory except in the case of the sugar industry. Considerable arrears have still to be overcome before the old established industries will be able to maintain their competitive position in the years to come. A recent survey of the state of the machine tool industry in engineering establishments conducted by the Development Wing of the Ministry of Commerce and Industry disclosed considerable replacement arrears.

jective has been broadly fulfilled. Major industries in the category in which production targets have been achieved are cotton textiles (mill sector), sugar and vegetable oils. An increase in production from unutilised capacity as well as from significant additions to production capacity, has been secured more or less in accordance with the targets in cement, paper, soda ash, caustic soda and other chemicals, rayon, bicycles and certain other industries. Due to the non-fulfilment of the investment programmes already referred to, production has fallen short of the targets in aluminium and nitrogenous fertilisers. A second group of industries to have suffered shortfalls includes several of the light engineering industries (namely radios, batteries, electric lamps, hurricane lanterns) due to inadequate domestic demand. In certain others, production has remained at a lower level compared with the targets, due to reduced export demands (jute manufactures) and low demand from indigenous industries catering for exports (plywood for tea chests). Production of superphosphate and glassware did not exceed 50 percent of planned output. Taking however a general view of the results achieved, it may be said that the performance has been satisfactory on the whole. This has been due in no small measure to improvements in the availability of raw materials, and to the assistance given by the State through appropriate adjustments, fiscal and commercial, in accordance with requirements at different periods; namely protection to nascent industries, revision of import and export duties, quantitative restriction of imports, etc.

Industrial Plants and Machinery

Compared with the consumption levels of mineral and agricultural raw materials estimated for 1955-56, it is now expected that crude petroleum requirements would be considerably in excess in the last year of the plan because of the petroleum refineries going into production earlier than scheduled. Significant shortfalls are expected in rock phosphate, jute, iron ore and glass sands consumption due to lower production levels in the consumer goods industries.

Considerable experience and skill have been acquired during the first plan in the construction of industrial plants and the production of capital goods. A new blast furnace and a contact sulphuric acid plant were almost completely designed and fabricated in the private sector during this period. As regards progress in the manufacture of industrial machinery, it is estimated that the value of the output of different items of textile machinery produced in the country increased from about Rs. 4 crores during 1946-50 to about Rs. 11 crores during 1951-56. In the manufacture of cement machinery, beginnings have been made with the production of some components within the country. Of the jute mill machinery, production of spinning machinery was started recently by one of the engineering works. In the field of electrical equipment, the output of two important items, electric motors and transformers, is estimated to have risen in value from Rs. 110 lakhs in 1950-51 to about Rs. 325 lakhs in 1955-56. The output of locomotives in the private sector is expected to reach 50 units in 1955-56, valued at about Rs. 3 crores, from practically negligible numbers at the commencement of the plan. The value of output of indigenous machine tool industries is expected to rise to Rs. 1 crore as compared with Rs. 40 lakhs in 1950-51; new types of machine tools have also been produced. The capital goods sector may be said to have just emerged from the teething stage of its development and gained sufficient experience to undertake a bigger rôle under the second five year plan. Plans have been formulated by some leading entrepreneurs for taking up the development of more complex items of plant and machinery in technical collaboration with foreign firms.

Outlay on Heavy Industries

In the public and the private sector, the overall investment on the creation of additional production capacity in capital goods, producer goods and consumer goods industries under the second five year plan is expected to be as follows:

		(Rs. crores).	
	Public Sector	Private Sector and NIDC	Total
Capital goods	43.0	75	118
Producer goods	516.0	310	826
Consumer goods	15.0	140.0	165
	574.0	525.0	1,099

The first two categories of industries are normally classified as heavy industries and it will therefore be noted that investment on heavy industries will be about 85 percent of the total outlay. The investment in consumer goods industries totalling Rs. 155 crores, is higher than the target proposed for this sector in the draft plan-frame. The increase has been mainly due to the higher levels of production and capacity envisaged in the cotton, textiles, sugar, paper and newsprint industries. The revised targets for these industries are based on studies carried out after the publication of the draft plan-frame.

CORRECTION

In our New Delhi Letter appearing in the issue of *Capital* dated 15th December 1955, page 790, column three, paragraph three, the authority planning to set up an Oil Commission has been wrongly referred to as the Ministry of Production instead of the Ministry of Natural Resources and Scientific Research.

London

SIR ANTHONY ANNOUNCES CABINET CHANGES

MR GAITSKELL BECOMES LEADER OF THE LABOUR PARTY

(FROM OUR LONDON CORRESPONDENT)

THE House of Commons will have quite a "new look" when it reassembles after the Christmas recess. The chief contributing factor will, of course, be the reconstructed Cabinet, about which I gave some inklings last week. The new Foreign Secretary is Mr. Selwyn Lloyd who takes over from Mr. Harold Macmillan, now Chancellor of the Exchequer. Sir Walter Monckton, formerly Minister of Labour now becomes Minister of Defence, and Mr. Ian Macleod takes Sir Walter's previous post. The Earl of Selkirk succeeds Lord Woolton as the Chancellor of the Duchy of Lancaster, and Mr. R. A. Butler, formerly Chancellor of the Exchequer, becomes Lord Privy Seal and Leader of the House of Commons. Less important appointments include Mr. Nigel Birch as Minister of Air, Mr. Patrick Buchan-Hepburn as Minister of Works, Mr. John Boyd-Carpenter as Minister of Pensions and National Insurance, Mr. R. H. Turton as Minister of Health, Mr. Harold Watkinson as Minister of Transport and Mr. Aubrey Jones as Minister of Fuel and Power.

On the Opposition side, too, there have been startling changes. As was generally expected, Mr. Hugh Gaitskell secured the clear majority which made him Mr. Attlee's successor as Leader of the Labour Party and of the Opposition. The only surprise when the ballot result was announced on 14th December was the fact that Mr. Herbert Morrison finished at the bottom of the list with only 40 votes, against 70 for Mr. Aneurin Bevan. Although Mr. Gaitskell devoted most of his speech of thanks to a tribute to Mr. Morrison's services to the party and appealed to him to continue as Deputy Leader, the latter has stuck to his decision to resign from that position. A successor will have to be found early in the new year, with Mr. Griffiths as favourite at the moment, while there will also be changes in the Executive Council and quite an extensive reshuffle in the Shadow Cabinet.

November Trade Shock

Britain's trade gap, measured by the excess of the cost of imports over exports, widened last month. It amounted to £70 million, compared with £52.8 million in October and £50.7 million in September. November exports at £262.2 million fell a little short of October's record total of £267.8 million, but were still the third highest monthly figure so far reached. The main factor in the widening of the trade gap was a rise in Britain's import bill from £333.4 million to £342.2 million. Although seasonal influences may have played in some part, the November figures showed that in spite of the credit squeeze and Mr. Butler's other disinflationary measures the import bill remains stubbornly high. Another slightly disappointing feature of the November returns is the fall in exports to the dollar markets. From the October peak of £33 million, sales fell last month to £28 million. To the United States sales dropped from £19.2 million to £15.5 million, and to Canada from £13.8 million in October to £12.5 million. This setback to our hopes that the trade unbalance was being corrected is a considerable disappointment, but an examination of the export show that we are holding our own fairly well in this respect. Over the period total exports have averaged £241.1 million a month, which is over 9½ percent above the corresponding average for 1954, while exports to the dollar markets show a 15 percent increase over the same period. The high level of imports is our main problem. The total increase here is in the region of 16 percent, and at least one-third of this increase is represented by imports of coal, iron and steel and non-ferrous metals, and some part by increased internal demand for consumer goods and services. So far, the credit squeeze is not producing all the results which were expected from it.

How the Squeeze Works

That the squeeze is working, albeit slowly, is brought out in the latest quarterly analysis of bank advances issued by the British Bankers' Association, but whether this is fast enough to satisfy the Chancellor of the Exchequer's requirements is open to doubt. At £1,980.7 million the November total of bank advances is down by £235 million from the August level. Of this cut, however, it is now disclosed that nearly £126 million is in the category of public utilities (other than transport). Loans to these utilities are down on the quarter from £207 million to £81.4 million. Elsewhere, the main impact of the squeeze has been on loans in the personal and professional group. Here the total is down from £397.7 million in August to £363.8 million in November, a reduction of about 8½ percent. The upward trend in loans to hire-purchase finance companies has also been halted and even reversed, having dropped from £45.1 million to just under £37 million. In the "other financial" group bank loans have fallen from £176.3 million to £169 million, and advances to stockbrokers are sharply lower at £8.8 million against £14.2 million. In the industrial field bank loans to engineering are actually slightly higher at £167.1 million, against £166.5 million, and there is a surprisingly large increase in advances to the food, drink and tobacco trades at £168.3 million against £154.2 million. On the other hand, the squeeze has brought a substantial contraction in bank advances

at £26 million against £35 million, other textiles at £40.8 million against £49 million, and in agriculture and fishing at £234 million against £242.8 million. Even the retail trade, whose bank facilities are normally increased with the approach of the Christmas season, shows a reduction in loans from £188.5 million to £183.1 million.

Full Payment on Dollar Loans

The Chancellor of the Exchequer announced in the House of Commons this week that the Government had decided to meet the full annual payments due on the United States and Canadian post-war loans at the end of this month. The amount due is £176 million, of which over \$105 million is interest and the rest principal. There had been some speculation on whether or not the Government would invoke the "waiver" clause in the Anglo-American Loan Agreement of 1945. This provides that the interest portion of the annual payment may be waived by the United States Government in any year when Britain is under heavy financial strain. But the detailed conditions that must be fulfilled before such strain can be "certified" are so complex and quite useless. Certainly the conditions laid down there would not have applied this year, as the British balance of payments would have to be in deficit for the average of the preceding five years. The decision to make full payment, when added to the \$4 million instalment of interest on the Marshall Aid loan, the quarterly instalment of \$7½ million paid on the interest-free Canadian wartime loan and the \$9 million paid in settlement of our E.P.U. deficit for last month, means that the gold reserve this month will be carrying a burden of over \$190 million and must therefore show a considerable further drop on 31st December.

Stabilising Prices

With the official index of retail prices showing a rise of two points to 154 on 15th November against 152 on 18th October and especially in view of the fact that contributory causes are increases in the prices of such non-seasonal items as coal, electricity, furniture and appliances, cigarettes and clothing, the need for action to hold the cost of living stable is urgent. The base date, for which the level was taken as 100, was 17th June, 1947. The figure was 150 on 12th July this year, 149 on 16th August, and 150 on 13th September. It is good to learn, therefore, that in the hope of checking the rising cost of "snowball" that will help to check the rising cost of living, all the makers of Portland cement have agreed not to raise the price of cement in the United Kingdom "until at least 30th June, 1956." Although the plaster board industry has been quick to follow this lead and give a similar undertaking, this action will receive general approval as representing a deliberate attempt to break the chain between steadily rising costs and the prices charged to the consumer and will at least help to cool

down the economic climate. Incidentally, it is the first practical response to the Government's appeal for all industrialists to make strenuous efforts to hold, or even reduce, prices wherever this is possible.

It would be over-optimistic to assume, however, that a similar policy of stabilising selling prices is likely to be adopted by the majority of Britain's leading industries. While in some cases there is scope for absorbing at least part of the increases in production costs at the expense of profits, in others the possibilities in that direction are limited. Margins of selling prices over costs are already small, and profits, although superficially large, are derived from a huge turnover. In these industries even a small contraction in margins could turn profits into losses. Three basic elements in the costs of British industry are wages, coal and transport. It looks as if further increases under these heads will have to be faced. It is hoped, nevertheless, that, following the cement industry's example, British industry will make strenuous efforts to avoid fresh rises in selling prices.

Price Fixing by Tyre Manufacturers

There is no reason to believe that the cement makers, as is being suggested in some quarters, were influenced by criticism of identical tenders and the Monopolies Commission's rather severe strictures on the price-fixing habits of the tyre manufacturers in its latest report, but there is no doubt that this report is more forthright than many of its predecessors. It has said flatly that the discussions on prices which take place between these firms tend to reduce price competition and are against the public interest. A majority of the Commission has gone even further and recommends that even the individual manufacturer should not be permitted to prescribe a resale price for his tyres. There is no suggestion that this industry is inefficient or that it has been exploiting the public; this makes the report all the more valuable and the judgment all the more sound. Public interest in the report has been whetted by the publicity accorded to the harsh enforcement of price maintenance by the manufacturers, and notably some of the ways in which they deal with garage proprietors who are willing to accept a lower profit margin to sell tyres below list price, and the fact that the tyre companies wanted parts of the report suppressed before publication.

In anticipation of the report the tyre manufacturers issued a statement in which they explain that British tyres are reliable, that their prices are reasonable, that technical progress is brisk, and that the maintenance of resale prices is in the interests of consumers. Most of these claims are justified and no doubt a further fuller reply will be made to the Commission's criticisms and recommendations.

NON-FERROUS CASTINGS

MARINE PROPELLERS

Marine Propellers in Manganese Bronze, to Lloyds, British Corporation, Bureau Verites or any other Inspection Authority's specification, machined, keywayed and balanced, are made in our Mechanised Non-Ferrous Foundry.

NEW RAW COTTON IMPORT POLICY WELCOMED

DEMAND FOR EGYPTIAN AND EAST AFRICAN GROWTHS EXPECTED
(FROM OUR BOMBAY CORRESPONDENT)

ONE of the biggest handicaps and uncertainties affecting the cotton textile industry and the marketing of the cotton crop in Western India was lifted last week, with the announcement by the Government of India of the import policy for raw cotton of staple length of 1-1/16 inch and above. To dispose of U.S. aid cotton, the Government said last May that only those importing U.S. cotton would be allowed to import long-staple cotton from Egypt and East Africa in certain proportions of their imports of cotton from America. Textile mills were reluctant to use American cotton partly because it was found to be costlier even after the subsidy and partly because they had got used to the Egyptian and East African varieties. Finding that this policy had failed to popularise the consumption of U.S. cotton, the Government gave it up. In a Press note last week it was announced that licences for the import of raw cotton of staple length not less than 1-1/16 inch from the dollar area would again be issued by the Joint Chief Controller of Imports, Bombay, as in the past, i.e., against prior sale to mills or on importers' account, on production of evidence of purchase from overseas suppliers. The Press note made it clear that the issue of licences for non-dollar areas would not be linked with the purchase of American cotton under the aid programme. It said that while the import of cotton of staple length of 1-1/16 inch and above from the U.S.A. would be allowed as before without making it a condition for the purchase of similar grades of cotton from non-dollar areas, no imports of raw cotton would be permitted from any other dollar area except the U.S.A.

The announcement was welcomed by the industry and the trade. Mr. Madanmohan R. Ruia, President of the Cotton Buyers' Association in Bombay, pointed to the pleasing feature that the facility of importing cotton on their own account had been restored to cotton traders. He believed that this would result in a freer and larger import of East African cotton by mills and importers. The Chairman of the Ahmedabad Millowners' Association expressed the gratitude of the industry there that free imports of the Giza-30 (Egyptian) and East African varieties by mills and importers would greatly benefit the textile industry, which had so far been compelled to use the more costly American cotton along with other varieties. He was glad that the Government had agreed to the request of the industry for a freer import policy. According to market reports since this announcement, there will be an increasing demand for Egyptian and East African varieties during the coming half year as current prices are attractive and the quality of the new crop is believed to be good. Mills, however, do not appear to be in a hurry to replace their stocks of imported cotton because the U.S. policy for surplus cotton is still regarded as uncertain. Any reduction in the price of U.S. cotton might mean a further reduction in the prices of Egyptian and East African varieties. As they are fairly well stocked for their immediate requirements, mills want to wait. While total imports of cotton during the current year are expected to exceed 500,000 bales, the import so far, judging by the licences issued, does not amount to more than 100,000 bales. The immediate effect of the new policy on prices of local varieties was somewhat bearish, but, since then, mills have been persistent buyers in the spot market as a result

of the increased turnover in the piecegoods markets, so prices both in the forward as well as in the spot market at present stand at the highest level achieved so far during the season. One of the reasons given for this unusual rise in prices is the disappointing quantity of fresh arrivals from upcountry centres, unlike in previous years.

Export of Cotton Waste

Another notification issued by the Joint Chief Controller of Exports here allows the free export of soft cotton waste, including slivers, rowing ends and bondas up to June, 1956. Licensing for these is to be done on shipping bills and will hold good for a period of 15 days or up to 30th June, 1956, whichever is earlier. Exports will be allowed to any permissible destinations, except Tibet and the Portuguese possessions in India. No announcement has so far been made with regard to hard cotton waste. It has been decided to allow the free licensing for export of woolen yarns up to the end of December, 1956 to all permissible destinations.

Prospects for Sugar

Reviewing the working of the sugar industry during the sugar year 1954-55, Sir Joseph Key, the Chairman of the Belapur Company Ltd., at an extraordinary meeting called to seek the approval of shareholders for an issue of bonus shares, considered the position as it emerged at the end of the year as satisfactory on the whole. He stated that both the cane crop and the production of finished sugar showed a considerable increase over the previous year—24 percent for cane and 56.8 percent for finished sugar on an all-India basis. Bombay, according to Sir Joseph, showed a 5 percent increase in cane production and a 34.7 percent increase in sugar production. This was made possible by a sharp fall in the prices of gur during the early months of the season, which led to a large diversion of cane supplies from gur to sugar manufacture. The stock position at the end of year was 561,000 tons, of which 487,000 lakh tons was indigenous and 74,000 tons imported. Sir Joseph estimated that the amount of foreign exchange sent on imported sugar during the year came to Rs. 36.79 crores. In spite of an increase in the excise duty, prices showed a decline of 10 percent to 14 percent.

Speaking about the future of the industry, Sir Joseph stated that if plans were fully implemented there would be in about two or three years a dozen sugar co-operative units in the whole of India. He estimated their output at 150,000 tons a year. By the end of the second plan the Government expected about 200,000 tons to be produced every year by these new co-operative sugar mills, the majority of which would be located in Bombay State. Considering that for an outlay of Rs. 75 lakhs on each factory with a crushing capacity of 800 to 1,000 tons, the bulk of the capital was to be provided by the Government and the Industrial Finance Corporation, which was controlled under Government control, Sir Joseph believed that these factories were as good as State-owned and signified the entry of the State in the sphere of sugar manufacture. He concluded his review with the remark that "the future holds out much promise for this industry and we can only hope that all will go well."

Coastal Shipping Problems

The lack of a far-sighted and dynamic shipping policy was discussed by Mr. A. H. Bhiwandiwalla, Chairman of the Great Eastern Shipping Co., when he addressed its annual general meeting last Friday. Mr. Bhiwandiwalla said that he was fully conscious of the desire of the Government as well as of the public that Indian-owned tonnage should grow at a much faster rate; but the problem was far from easy. There were unusual difficulties in acquiring tonnage as shipyards the world over were booked with orders for the next two or three years. Delivery periods were unusually long, and prices had soared to record levels. Second-hand tonnage was extremely scarce and prices were abnormally high. The shipyard at Vishakhapatnam had only a limited capacity to build and deliver ships. Mr. Bhiwandiwalla pointed out that shipping was a highly capital-intensive industry. A single 10,000 d.w.t. modern cargo vessel cost well over Rs. 1 crore, or as much as the entire capital of a fair-sized shore industry. Shipowners, as business men, could therefore embark on large-scale capital outlay only if they were reasonably assured of the prospects of working ships economically. Until this condition was satisfied, the expansion of shipping was bound to remain slow, as had been the case hitherto.

Referring to the controversy over the employment of chartered ships for coastal trade, Mr. Bhiwandiwalla stated that coastal self-sufficiency depended on the rate of tonnage expansion. He wondered whether it was wise to give the development if overseas shipping less importance than self-sufficiency on the coast. The first and foremost task before a country like India was to build tonnage as fast as possible and to ensure that the expanded tonnage found gainful employment on the coast as well as in the overseas trade. Among the factors which hindered rapid expansion of the coastal fleet, Mr. Bhiwandiwalla mentioned the precarious character of coastal working as the most important one. He pointed out that the cost of operation had gone up all along the line, including prices of ships, stevedoring labour, salaries of floating as well as shore staff, and bunkering; superimposed on all these was the extremely slow turn-round of ships at coastal ports. In view of the high cost of operation, Mr. Bhiwandiwalla

said that a 10 percent increase in coastal freights would have been more than justified, especially as freights had remained practically unaltered since May, 1951. He deplored the fact that after holding up this request over a long period the Government finally agreed only to a 5 percent increase. Mr. Bhiwandiwalla had some bitter things to say about dock labour. He stated that the worst factor affecting the cost of operation was the steep fall in the output of stevedoring labour since the introduction of the decasualisation scheme and the consequent delays in the turn-round of ships. Indian shipowners had been drawing the attention of the Government to the crippling effect of delays at ports. The Dock Labour Enquiry Committee, which was appointed as a result of this complaint, had submitted its recommendations, which were likely to go a long way in restoring healthy conditions at ports. But he had not so far heard about any decision of the Government to implement these recommendations. Mr. Bhiwandiwalla suggested that there was a great deal to be done to improve port facilities. Ports would never be able to ensure a sufficiently quick turn-round of vessels unless they were provided with up-to-date mechanical appliances for handling bulk cargoes.

High Prices of Automobiles

In a critical comment on the automobile industry submitted by the Western India Automobile Association last week to the Government of India, it was suggested that the high prices of vehicles manufactured in the country was causing concern to the public by putting the motor car beyond the means of all but the very rich. The Association stated that high prices reduced demand, and this affected the industry as well as general transport development. It suggested that bigger production resulting from higher demand would automatically solve a number of problems which beset the industry. The Association's memorandum stressed the fact that the demand for automobiles must be promoted by positive steps which would not only reduce initial prices but cut operational costs as well. Among the measures enumerated in the memorandum for stimulating demand were economies in the cost of production, exemption of motor vehicles parts and accessories from sales tax, exemption of tyres used as original fittings from excise duty, reduction in railway freight for new motor vehicles and concessions for writing off cost and maintenance expenses of motor vehicles in income-tax returns. The memorandum also suggested that the Government should provide good roads and bring down the price of petrol, besides reducing tax and other burdens on motor cars and commercial vehicles.

Electrical Undertakings' Worries

Electrical undertakings in Western India are worried by the State Government's directive that its consent will be necessary to declare dividends in excess of 3 percent until all arrears of depreciations are cleared off. Many of the industry's problems came up for review by Mr. N. C. Jhaveri, Chairman of the Association of Electrical Undertakings in the State, at its general meeting last week. Mr. Jhaveri believed that the Electricity (Supply) Amendment Bill, if enacted in the form in which it had been introduced in Parliament, would hamper development because it failed to provide for a fair return on investment. One of the provisions made it compulsory for undertakings to set aside stipulated amounts for the development reserve even when earnings were below the reasonable return on invested capital; this reserve would not be permitted to earn any return and was liable to be handed over intact to the purchasing authorities in the event of acquisition. This would mean that, as an undertaking expanded, its equity capital would get progressively watered down and this would not only prevent expansion but increase the difficulty of securing further finance for the undertakings for large-scale development. Mr. Jhaveri gave warning that between the period when the Trombay thermal station was fully loaded (in 1957) and the Koyana Project started (which was likely only after 1961) there would be a power famine in the Bombay-Poona area. Mr. Jhaveri criticised the composition of the Bombay State Electricity Board, which had a greater representation of officials than of non-officials. He pointed out that this was against the very concept of autonomous boards.

Penicillin from Pimpri

At the inaugural ceremony of selling the first consignment of penicillin produced by the Government factory at Pimpri near Poona, Rajkumari Amrit Kaur, Union Minister for Health, sold 148,000 mega units of bulk penicillin through token packages to the representatives of the pharmaceutical trade who were present on the occasion. Her first cash sale was for Rs. 47,000. She said that a number of schemes would be undertaken under the second plan to help the expansion of existing drug manufacturing units so as to double their production targets. Col. J. R. Dogra, Managing Director of the Pimpri factory, claimed that the penicillin manufactured there compared favourably with that produced in any other advanced countries and that it had successfully undergone tests at drug testing laboratories in America and the U.K. Col. Dogra revealed the fact that the capacity of the plant was being raised by another 60 percent which would enable it to meet the requirements not only of the country but also of several neighbouring nations. Plans to produce bacillin and to install a streptomycin plant were also well advanced.

Uttar Pradesh

THE PLACE OF TRANSPORT IN INDUSTRIAL DEVELOPMENT

MEASURES FOR U.P. ROADWAYS EXPANSION

(FROM OUR LUCKNOW CORRESPONDENT)

ADDRESSING a press conference in Lucknow last week, the Union Transport Minister, Mr. Lal Bahadur Shastri, put in a powerful plea against a too severe pruning of the railway expansion plan on financial grounds. "A look at the history of every industrialised country," he said, "shows that transport has played a key rôle in all planning for development. Transport is, in fact, the keystone of an industrialised economy." He claimed that the success achieved by the seven zonal drives to carry 10 percent to 20 percent more traffic during the busy season than during the corresponding period last year, had been encouraging. Comparing air travel to travelling in air-conditioned trains, Mr. Shastri said that in this country people still preferred to travel by train as this was more comfortable. The new fast air-conditioned trains proposed to be introduced from 2nd October 1956, would cut the travelling time from Howrah to Delhi, for instance, by 20 percent.

Mr. Shastri also announced the introduction of season platform tickets on a yearly, half-yearly, quarterly and monthly basis. The rates have been tentatively fixed at Rs. 20, Rs. 11, Rs. 6 and Rs. 2 respectively for the bigger stations and Rs. 10, Rs. 6, Rs. 3 and Re. 1 for other stations. He regretted that chain-pulling by passengers for the most trivial reasons had reached alarming proportions. In 1954-55 there were more than 40,000 incidents in which trains were thus brought to a halt. Other points made by the Minister related to the introduction of additional corridor trains on the same model as the ones now running between Howrah and Delhi and the provision of mobile cinema vans in railway premises for the instruction and entertainment of the travelling public. The report of the States Reorganisation Commission which was published after the Railway Board had drafted its plan-frame has thrown an additional burden on the railways inasmuch as the formation of large States like Madhya Bharat and Karnataka would call for a number of new lines connecting various parts of the State for administrative purposes. Mr. Shastri also revealed the fact that the lines between Mukerian and Pathankot were actually running at a loss due to the keen competition of motor transport. He said he had written to the Punjab Government drawing its attention to the situation.

Roadways Expansion Plan

The U.P. Government have declined to act on the suggestion of the Planning Commission that a roadways corporation be formed consisting of the railways, roadways and private operators or the railways and roadways alone, should private operators not wish to come in. In the view of the State Government, the nationalised roadways are already running satisfactorily as a department of the Government and the creation of a corporation is not necessary. Early this week the Standing Committee for Transport met in Lucknow and endorsed the roadways expansion plan. The total amount allotted to the State transport organisation under the second plan is Rs. 90 lakhs, of which Rs. 32 lakhs are a carry-over from the first plan. It is proposed to extend the fleet in age by 464 miles and add 101 buses to the fleet in the next five years. At present the State roadways have a fleet of 1,500 buses and cover 6,500 miles. Corruption of staff is the main grievance against the organisation. During the half-year ending 30th June, 1955, no less than 612 non-gazetted persons were dismissed or otherwise punished on charges of proved corruption. It is hoped that the embossing of all spare parts, including batteries, will prevent pilferage and the replacement by non-genuine parts in future. The issue of permits to private operators on routes not taken over by the Government will be liberalised, but in order to prevent the concentration of control one permit only will hereafter be granted to one family.

New Ventures

The Planning Minister, Mr. C. B. Gupta, has disclosed that the State Government might give financial help to an industrialist who has applied for permission to start a cement factory in Dehra Dun. In reply to a question in the Legislative Assembly, he also admitted that there have been applications from the private sector for the establishment of a paper factory in the Mirzapur district, provided the Government would extend concessions in the shape of reduced electricity rates and financial loans. A committee presided over by the Union Inspector-General of Forests is at present investigating the possibilities of setting up paper mills in various places. If the Committee reported in favour of Dehra Dun as a likely centre, Mr. Gupta said that the Government would then approach industrialists in connection with the proposals. The State cement production of 600 tons, in spite of its average daily production of 600 tons, has not come up to expectations. Although, in terms of the contract, the foreign firm supervising the factory is liable to pay compensation for failure to achieve full production, the Government

the firm cannot not be held liable for causes over which it had no control.

Interim Bonus for Sugar Workers

The 67 vacuum pan sugar factories of U.P. have been ordered by the State Government to pay to their workmen a sum of over Rs. 54 lakhs as interim bonus for the 1954-55 season. The interim bonus is payable to all persons who were employed during the 1954-55 crushing season and will be distributed in proportion to their earnings. The amount now paid will be adjustable against the final bonus on the basis of the award of the State Industrial Tribunal, Allahabad. The payment has to be made within three weeks of the issue of the Government order.

Small Savings Fortnight

Encouraged by the results of the last financial year, the State Government has decided to set aside a special fortnight for the purpose of popularising investments in the various small savings schemes. During the fortnight, all securities and funds of the various government departments will be examined and any amounts lying idle will be converted into small savings investments. The State Government's target for the current year's savings drive is Rs. 13.41 crores. This is the target it has fixed for itself as against the target of Rs. 4.5 crores fixed for it by the Government of India and which has already been exceeded by Rs. 1.25 crores.

THE EFFECTS OF THE LOOM UNSEALING MOVE

GROWING CONCERN AMONG FOREIGN COMPETITORS

THE I.J.M.A.'s decision to unseal 2½ percent of its loomage was the culmination of many weeks of speculation. Although in most quarters the decision was considered to be a foregone conclusion, and had been discounted many times over as far as prices were concerned, the announcement had the maximum effect on the market. The increase in tonnage that the move will provide is negligible when compared with the prestige gained in world markets, where Indian-made goods are now in great demand due to their cheapness compared with foreign manufactures. The long-term result of the increase in production of cautious though it is, will be to reduce the price of gunnies, a fact which foreign competitors have viewed with something like alarm. Even before this move, United Kingdom operators expressed misgivings at the ease with which India found markets for her goods due to the low prices she was able to quote. Pakistan's export minimum price has been a bitter blow to overseas concerns, and in the long run appears to have been the turning point on which India's wheel of fortune has revolved, and of which she has taken the maximum advantage. Despite a small increase in gunny stocks last month, the overall position is very satisfactory as they continue to be well below the production rate.

The increase in raw jute arrivals into Calcutta during November would appear to belie reports from upcountry of a shortage of imports. But all stations and receiving centres, without exception, have indicated that arrivals are lower for this time of the year than is usual. This is borne out by the very poor imports into the local Cossipore markets, by which the truth of upcountry reports can usually be judged. Last week, only a little over 300 wagons arrived, this being about 150 wagons less than the previous week and less than half the arrivals reported at this time last year. Upcountry prices, and those in the local markets, have naturally responded to this apparent shortage of jute, and in most cases quotations are well above the normal prices that have been offered to mills in Calcutta, causing sellers to withdraw offers. There does not appear to be very much improvement in the condition of the small arrivals, and several mills are reporting heavy godown losses on stored jute.

The recent increase in the price of Indian jute has cut down the price difference between it and Pakistani jute to what mills consider reasonable proportions. Consequently, a fair amount of interest has been shown in this section of the market. Business concluded, however, was smaller than the enquiries suggested, due to the deadlock regarding the method of payment. In response to their Association's instructions that all contracts for Pakistani jute should be paid for "cash against documents," sellers have insisted that the practice of reimbursement after the jute arrives in Indian water or territory should be discontinued. It is reported that most of the jute contracted for over the week was done on a C.A.D. basis to conform with the Association ruling, but it is also rumoured that many sellers have entered into private arrangements with the buyer, outside the contract, regarding methods of payment.

THE JUTE MARKETS

Manufactured Goods: There was a sharp increase in all sections of the goods market on Thursday last as a result of the I.J.M.A.'s decision to unseal looms. In sacking, B Twills jumped by Rs. 1-12 in the near positions, and Rs. 1-8 in forward delivery. December shipment quoted at Rs. 113-10, and April-June shipment at Rs. 108 a 100 bags. Hessian reacted in sympathy and 40in. 10oz. advanced 4 annas. December shipment stood at Rs. 40-9 and forward shipment at Rs. 39-8 a 100 yards. The main activity at this stage was of a speculative nature, and prices continued to rise throughout the day, until by Friday morning sacking rates were Rs. 1-8 over the previous day's opening quotations, and hessians had advanced another 8 annas. All sections were subject to violent fluctuations, but there was little real goods interest, except for forward shipment, where small shipper business was transacted. Towards the week-end a reaction set in, and Saturday's quotations indicated a quieter tendency with rates falling 8 annas in sacking and 4 annas in hessians. Spasmodic mill selling took place in various constructions but the quantities were not large enough to support prices and after the week-end, following mild fluctuations, the market again experienced similar setbacks as on Saturday. No business or mill interest was reported at this stage and by Tuesday morning prices in both the sacking and hessian section had dropped below the week's opening quotations. Thus heavy goods had fluctuated by Rs. 2 a 100 bags, and hessians by 12 annas a 100 yards.

At the close, the speculative ready sacking position is easier due to heavy selling pressure, but all other delivery periods, in both sacking and hessian, are steady and prices show a slight im-

provement. Opening quotations on Wednesday morning were as follows:

	December	January	January-March	April-June
	Rs.	Rs.	Rs.	Rs.
40in. 8oz.	32-4	32-4	32	31-8
40in. 10oz.	40-10	40-4	40	39-8
B Twills	112-12	111-12	110-8	108-4
Heavy Cees (Plain)	113-4	112-4	110-8	108-4
A Twills	136	136	135	131
Liverpools	129-8	128	126	121
Cornsacks	113	112-12	111-12	109-8

Raw Jute: The jute markets at the opening were influenced by the I.J.M.A.'s decision to unseal looms. Although this does not take effect until early January, markets reacted immediately. Raw jute rates firmed up overnight and sellers withdrew all offers. Heavy speculation in the goods market forced up gunny prices, which tended to carry raw jute with it but this section did not show heavy fluctuations. Upcountry markets continued to exert influence, and all sellers were nervous about new business, as the majority still had contracts to deliver for this period at prices considerably lower than the current rates. Reports from all receiving centres show that over the past week imports have been cut by half, and the prices ruling at these stations are, in all cases, not less than Re. 1 a maund above the parity of the prices proved a deterrent to further business, in spite of several tempting enquiries from mills. As a result, buyers turned their attention to Pakistani jute, which at the present price ratio with Indian jute was considered by many to be the more attractive proposition. Small business was done with one or two large mill groups, the difficulty in doing larger business being the difference in views held by buyers and sellers regarding the reimbursement clause. Over the week-end the market re-

maintained steady with only small business reported, but on Monday a reaction set in and easier conditions prevailed. The goods market fell away, and although jute was slow to follow, quotations were marked down by Tuesday morning and a dull trading session followed.

Quotations at the opening last Thursday were all marked up by 8 annas a maund, which brought Upper and Lower Assam and Northern Bengal jute to Rs. 27-8 a maund basis Bottoms for December-January shipment. Small mill interest was shown at this price, but sellers were not keen for business. It was not until rates advanced to Rs. 28 a maund that offers were given out in any great strength. Prices were maintained at this level over the week-end by continued mill interest, mainly in Pakistani jute. But by Tuesday, with the easing of the goods market, raw jute rates dropped 8 annas a maund and sellers withdrew due to the discrepancy between the upcountry and local rates.

A fair amount of business was concluded over the week, mainly Pakistani Jat at Rs. 28-8 and Rs. 29 a maund and Pakistani Northern at Rs. 28-8 a maund basis Bottoms for December-January shipment. Small lots of Dhubri were contracted for at Rs. 28 a maund, and a fair amount of Indian Northern at Rs. 27-8 a maund for December-January shipment. Daissee jute continued to be in good demand, but the quantities contracted for were small at Rs. 28 to Rs. 28-8 a maund, although large quantities were purchased over-the-jetty at Rs. 29 a maund basis Bottoms. Daissee Mesta was also done at Rs. 25 to Rs. 26 a maund for one month's shipment.

In the pucca bale section the only business reported was in Pakistani Jat Cuttings at Rs. 105 a bale for December-January shipment.

At the close, the markets are unchanged and quotations on Wednesday morning were as follows:

Indian Jute :	Landed at Mills, Rs. a maund Basis Bottoms.	Shipment.
Lower Assam	27-8	Dec-Jan.
Upper Assam	27-8	"
Northern	27-8	"
Masaidabad White	26-8	"
Daissee Ex Agency	28-8	"
Daissee Ex Cossipore	28	"
Daissee Mesta	25-8	"
Bimli	25-8	"
Local Packing	27-8	"

Tossa is quoted at Re. 1 a maund above the price of white jute.

Pakistani Jute :

Rs. a maund, Basis Bottoms.	Shipment.
Jat	29
District	28-8
Northern	27-8
Pakistan Cuttings	105

The Cossipore markets are very steady due to the very poor imports. During the week wagon arrivals struck another new low with a total of 315 wagons for a daily average of 45 wagons. Most of these wagons contained low quality fibre and the moisture content was exceedingly heavy. Sellers were very reserved and were only offering small quantities in spite of the fact that mill representatives continued to take an interest in all grades of fibre irrespective of price or condition.

At the close Kishanganj jute is quoted at Rs. 27 a maund for garsat quality. Similar conditions prevailed in the Daissee centres, where imports were practically negligible, causing rates to soar well above the parity of those quoted in Calcutta. Sellers are very reserved and are not even offering at higher levels. At the close quotations in Sheoraphuli are based on Rs. 26-8 a maund for garsat quality.

Mofussil: There is very little to report from the Indian upcountry markets due to the very poor imports. Sellers are reserved and business is at a standstill. Latest quotations in Dhubri are on the basis of Rs. 24 a maund for garsat quality.

The Pakistan markets have recovered over the past week, and rates are up by about Re 1 a maund. Demand has developed for loose jute, but imports have fallen off and sellers are asking high prices. In Narayanganj imports have dropped to about 18,000 maund a day, of which 15,000 maunds is loose jute. Latest quotations in Narayanganj are as follows:

Pucca Bales :	Rs. (P) a bale.	Kutcha Bales.	Rs. (P) a maund.
Mill Firsts	159	Jat Bot.	28
Export Firsts	134	Jat B. Bot.	24-8
Dacca Tossa 4's	196	Jat C. Bot.	21-4
Dundee Tossa 4's	145	Jat X. Bot.	19
Outport Tossa 2/3	127		
Outport Tossa 4's	106		
Narayanganj Cuttings	88		

Arrivals of Raw Jute

In November 1955, 783,380 bales of raw jute arrived in Calcutta and at mill stations. In the

corresponding month of last year, arrivals were 787,000 bales. Of the arrivals last month, 630,520 bales were of Indian origin and 102,860 bales were from Pakistan. In November 1954, arrivals from India amounted to 665,090 bales, while those from Pakistan totalled 121,990 bales. Thus, in November 1955, arrivals from India were up by 15,430 bales from last November, but those from Pakistan dropped by 19,130 bales making a total drop in November 1955 of 3,700 bales. Total arrivals in the current season now amount to 23,68,030 bales, made up of 17,65,070 bales from India and 602,960 bales from Pakistan. Compared with last season, arrivals from India are down by 76,120 bales, whilst those from Pakistan have increased by 168,480 bales making an overall increase this season of 92,360 bales.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th December, 1955	1,045.1	18,220.5	19,265.6
1st to 15th November, 1955	1,364.9	14,765.1	16,130.0
1st to 15th October, 1955	1,235.6	10,952.7	12,188.3
	Sacking		
1st to 15th December, 1955	23,531.1	144.9	23,676.0
1st to 15th November, 1955	23,678.8	655.6	24,334.4
1st to 15th October, 1955	14,949.9	688.1	15,638.0

THE FOREIGN JUTE MARKETS

QUIET BUT STEADY UNDERTONE

(FROM OUR DUNDEE CORRESPONDENT)

THE markets generally continue quiet in the jute industry, but there is a very steady undertone prevailing throughout all sections. No change is made in raw jute prices from day to day, and, though there are one or two instances where sellers are prepared to shade their terms by 10s a ton, this is not general. These sellers are not receiving any more business than others who are adhering to the fixed minimum rates. A few sales are reported in Mill Lightnings and Mill Hearts at £80 and £70 respectively for January-February shipment, c.f. U.K. There is not now the demand for float or dock material that there was some little time ago. Shipments are still late, however, and, naturally, those who are defaulting are being ignored by the spinners. At a meeting held last week in Dundee, the question of altering the batch for the various yarns was discussed. No result of the meeting has been given out. Both the spinners and manufacturers are very busy and the workers appear to be desirous of having a merry X'mas and a happy New Year. They are in almost full attendance and production has improved. Early delivery of most qualities of jute yarns is not easy to obtain. Rove is an exception and spinners would welcome orders, but the descriptions are well sold for delivery over the next two months and the value of common 8 lb. twist cops and 8 lb. spools is firm at 14.43d a lb. Twist and sacking yarns are comfortably off for orders.

Jute cloth and bags are in steady request, according to most manufacturers, but there are some, not the best makers, who could do with more business. Some widths and weights are much better sold than others. Prices are firm on the basis of 12.48d for 10oz. 40in. and 10.23d for 8oz., a yard, less the usual 3 percent discount for cash. Calcutta goods are decidedly firmer, but the advance is very irregular and sellers' prices vary greatly, from 61s 6d for 10oz. 40in. and 46s 6d for 74oz., December, 61s 3d and 46s 3d January, 61s and 45s February-March and 60s 3d and 45s 3d April-June, with "B" twills at 173s 6d, 172s 167s 6d and 166s for the respective positions of shipment, all f.o.b. Calcutta.

or going country bus?

By air or by road, you travel by oil. Oil in the form of fuel, oil in the form of lubricants.

If you take a tonga after dark there is oil (or there should be) in the lamps.

Just about the only way to travel without relying on oil is on horseback. Even then it's all Chowringhee to Colaba that some part of your kit—your breeches

or spurs—was manufactured with the help of oil.

You even travel on oil; for bitumen, a product of refining process, is widely used for road surfacing.

When you put out to sea you'll find oil ruling the waves from the engine room.

Aircraft in India, both jet and piston-engined, use the Burmah-Shell Aviation Service; private cars and public transport use fuel and lubricants supplied by Burmah-Shell. We oil the wheels in textiles and in the iron and steel industry. We supply bitumen for roads. In every major Indian port there is on tap the Bunkering Service operated by Burmah-Shell. Who says we're not—

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August, 1939-1900) declined by 0.1 percent to 364.5 (during the week ended 3rd December, 1955 as compared with 365.0 (revised) for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.4 and 1.2 percent respectively. The index for Food Articles, declined by 0.5 percent to 322.0 as compared with 323.6 (revised) for the previous week as a result of decreases in the prices of gur at Muzaffarnagar (-8%), rice and gram at Patna (-3% each) and dal arhar (-2%) despite increases in the prices of salt in Bombay (+17%), tea (+5%) and wheat at Amritsar (+7%) and at Hapur (+1%). The index for the Industrial Raw Materials stood at 421.6 as compared with 421.4 for the earlier week; the effect of higher prices of gingellyseed at Jhansi (-7%), raw silk at Bangalore and Cottonseed (+6% each) groundnuts at Cuddalore (+5%) and Copra (+2%) and of higher prices of raw cotton, was almost neutralised by declines in the prices of raw silk at Malda (-18%), castorseed (-17%), rapeseed in Bombay (-9%), raw jute (-6%), lac (-3%), groundnuts in Bombay (-2%) and raw wool at Kalimpong (-1%). The Semi-manufactures index advanced by 0.4 percent to 342.2. Items which showed significant variations were: zinc (-5%), buffalo hides (-4%) copper in Calcutta (+3%), mustard oil in Calcutta, coir yarn—ampongo superior and gingelly cake (+2% each) and copra cake (-3%). A fall in the prices of jute manufactures (-3%) brought down the index for Manufactures by 0.2 percent to 373.1, the prices of glass (+4%) and rayon and silk manufactures (+1%) were, however, marked up. Prices of black pepper (-3%) and turmeric in Bombay (-1%) declined while those of betelnuts at Bangalore (+2%) moved up. On the whole the index for the Miscellaneous group stood at 541.9 as compared with 542.4 (revised) for the previous week.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to November, 1955. As compared with October, the November Index for Food reveals a rise of 2 points, while those for Clothing, Miscellaneous and Fuel and

Lighting remain unchanged at 503, 282 and 239 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 2 points during November, 1955.

COMPETITION IN NEW INDUSTRIAL AGE

THE DISTRIBUTION OF RESOURCES

AT an informal lunch at the House of Commons in London some weeks ago the Duke of Edinburgh took a lively part in a controversy whether scientists should make themselves intelligible to the general public. His opinion (that the attempt would be unrealistic) is less important than the fact that, at this time, such a discussion should occur at all. Britain has become acutely conscious of her science, especially of her lack of scientists. Some of them are being attracted to the United States by high salaries; and Lord Simon, in his recent annual report to the Court of Manchester University, described as "frankly frightening" the extent to which Britain was lagging behind the United States and Russia in the training of scientists and technologists. Yet the United States seems no less alarmed by Soviet progress in training. Admiral Strauss, chairman of the Atomic Energy Commission, said recently that unless America matched Russia's intensive effort to train scientists and engineers an already dangerous situation could become disastrous in less than a decade.

Mainly, these warnings are concerned not with defence but with industrial supremacy. And they are concerned not merely with the numbers and quality of technologists but also with the methods of using them. In another recent statement on the subject Dr. B. K. Blount, deputy secretary of the Department of Scientific and Industrial Research in Britain, criticised the separation of management and research; because managers did not clearly understand the scientific side and scientists did not clearly understand the industrial side, the possibilities of technological developments were not fully realised. In this respect also, both American and Russian methods are ahead of British. And Britain, according to Dr. Blount, is spending only about £300 million a year on research for industry and defence—about one-fifth of the corresponding amount spent by the United States, and also, incidentally, one-fifth of what Japan spends on armaments.

The Basic Problem of Power

A leading British industrialist, Sir Ivan Stedford, chairman of the extensive Tube Investments group, outlined in his annual statement to shareholders in November the picture of the new industrial age that the new technology was building. The first line of advance, he said, was the development of synthetic materials to replace and to supplement natural materials; in this respect Britain had long excelled. The second line of advance—perhaps the most spectacular—was the application of nuclear energy, and of the by-products of nuclear fission, to domestic uses; in this respect Britain was probably in the lead. The third line of advance was the development of automatic machines and instruments; in this respect (though Sir Ivan did not particularly emphasise the point) Britain is not keeping pace with either America or Russia.

Yet another authority, a scientist, Sir George Thomson, has lately written a book, *The Foreseeable Future*, which views developments even more broadly. Sir George is optimistic regarding the basic problem of power: he sees in uranium and thorium, reserves much larger than the equivalent reserves of coal, and practically inexhaustible power available from nuclear reactions (such as the fusion of the nuclei of light elements) on which scientists are now working; and he sees possibilities of producing oil synthetically from the carbon of limestone and the hydrogen of water—so we may continue to use the internal-combustion engine for longer than we had supposed. Sir George foresees that communication, within countries and between countries, will be greatly accelerated; but he is

sceptical of the material benefits of inter-stellar travel.

Exploitation of Natural Wealth

Mankind has, indeed, plenty to do on this earth before worrying about other planets. There are, of course, the underdeveloped countries awaiting proper exploitation; and there are immense resources of almost unexploited wealth both in and under the seas. Experts estimate that there is much more food available in the fish of the seas than in the animals of the land. Industries to use seaweed (the world's largest plants bigger than the tallest trees—grow under water), both for food and as material, are now established. Magnesium (used in light alloys) is now being obtained from the sea. New methods of prospecting for minerals under the sea have reminded us that geology is essentially the same whether the land is dry or is covered with water. Only a fraction of the resources of this earth is being used, and that fraction will certainly be much larger when power (especially the fusion-power of the hydrogen of the oceans) is abundant. These vistas of plenty are, we must suppose, for mankind in general. But in the coming decades we shall still be conditioned by the economies of scarcity, and the countries which can produce in relative abundance at relatively low cost will be the most successful in international competition. Profound changes are taking place at this moment, and they will be reflected in international economic relations a few years hence.

Relative Progress

With only temporary interruptions (which are not apparent at present), all countries are advancing as technology advances, but they are not all advancing in proportion. Western Europe, especially, perhaps, Britain, is experiencing a shortage of power, and for this part of the world nuclear energy will in the next decade or so do no more than counterbalance the advantage of the United States and the Soviet Union, which have relatively ample resources of coal, oil, natural gas, and water-power. The economic performance of Western Europe has been outstanding in the past few years, but all available resources of science will be needed to maintain its relative position in the next few years. The countries that are most successful in fundamental research will not necessarily be the most successful in industry and trade. It may be that Britain, America, Russia, are equally advanced in research into the atomic nucleus and in the practical application of the energy of nuclear fusion, which has been released in the hydrogen bomb; but in the simple commercial sense such developments as the Ferguson "system" of motor transport (whereby the British motor industry has a unique opportunity to re-establish itself) may have more practical significance within, say, 10 years.

NEW BRITISH AGRICULTURAL AIRCRAFT

THE Auster Agricola, claimed by its manufacturer to be the first aircraft in the world to be designed specifically for aerial topdressing (fertilising), has made its first flight. Although a few special agricultural aircraft have been designed, they have been used for study and have not been produced for commercial operation or in quantity. The Agricola is intended primarily for operation in New Zealand where it is expected that aerial topdressing is capable of increasing meat production by 50 percent in 10 years. At present, large-scale topdressing operations are confined to New Zealand, but the technique is being studied by other countries with the object of improving hilly pasture by spreading superphosphate and similar chemicals from the air, thereby improving the quality and quantity of grassland. This has already increased and improved pasture in New Zealand and has greatly enlarged output of meat and wool. Modified aircraft have been used for the purpose so far.

Special Features

The Agricola is a low wing cabin aircraft fitted with a 240 h.p. engine which gives it a take-off run of only 250 yards with a load weighing three-quarters of a ton. Special features should do much to commend this aircraft to the operator. The aircraft will normally be flown at about 50 ft. from the ground which may be hilly, and an excellent view from the cockpit is therefore provided. The cockpit is built round a stout triangular framework to protect the pilot if the aircraft turns over on the ground. In emergency, the whole phosphate load can be dropped in five seconds. Large diameter, low pressure tyres are fitted enabling the aircraft to operate from soft ground, and flying control cables are situated outside the fuselage to facilitate inspection. During lengthy topdressing operations, aircraft become covered in superphosphate, which, combining with moisture, to produce corrosive acids, could seriously damage the airframe. The Agricola is protected by special paints and dopes and the control cables are nylon covered.

Low Maintenance Cost

To keep down the cost of spares some parts on the aircraft, such as ailerons, elevators, and undercarriage legs, are interchangeable. Maintenance costs are low due to easy accessibility and simple construction. For example, the entire front part of the fuselage can be uncovered in minutes, thus simplifying the work of the ground engineer. The filler "trunk" into which the phosphate is dropped is positioned behind the cockpit, thus ensuring that no dust is blown on to the pilot's windscreen during filling. As a further safeguard, the cockpit canopy, when closed, completely seals the pilot off from the outside air. Sliding panels are provided for ventilation. Agricolas for aerial topdressing will be leaving the production line early in 1956, but built-in provision for spray tanks make this aircraft an attractive proposition for anti-locust and insect operations as well.

U.K. Tea Stocks

U.K. stocks of tea on 9th December amounted to 121.6 million lbs, against 111.6 million lbs a year ago.

COCHIN TEA SALES

At Dust Sale Y, the 7½ lakh lbs. on offer met with poor demand. The market was generally three to four annas easier and withdrawals were heavy.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

Sheet:	Closing prices on 9-12-55	Average for the period
No. 1	1.51	1.51
No. 2	1.48	1.48
No. 3	1.45	1.45
No. 4	1.21	1.21
No. 5	1.16	1.16
Sheet Cuttings 1	1.16	1.30
Sheet Cuttings 2		1.25
Crape:		
Water White		1.63
R.M.A. No. 1X	1.66	1.63
R.M.A. No. 1	1.65	1.60
Crape No. 2		1.53
Crape No. 3		
Scrap Crape:		
Sc. Crape No. 1	1.32 Nom.	1.30
Sc. Crape No. 2	1.25/30	1.26
Sc. Crape No. 3	1.14/22	1.17
Flat Bark	1.08/12	1.09
Sc. Crape 3X		1.22

To arrive at f.o.b. Colombo prices add 44.4 cents a lb. in respect of rubber other than scrap crape and 31.4 cents in respect of scrap crape to the above market prices.

EDIBLE NUTS CROP

Brisk trading is now seen in the cashew market. Processors are buying forward all the available supplies of African raw nuts at the record price of Rs. 875 a ton. The season's supplies from Africa are now estimated at about 90,000 tons compared with last season's 52,500 tons. If climatic conditions are favourable, indigenous production also will be higher in the season which begins in Cochín by April-May 1956. Last season's crop, both in India and East Africa, was exceptionally poor on account of unfavourable weather conditions. On account of the failure of some of the edible nuts crop abroad there is very good demand for cashew kernels from America, Britain and Europe. These countries are now buying forward cashew kernels at 50 cents (U.S.) a lb. (The highest price realised in 1955 was 52 cents).

INDIA'S LEMONGRASS

Agmarking of Indian lemongrass oil will commence early next year. The Central Government has established an office and laboratory in Cochín for this purpose. Mr. R. K. Malik of the Central Ministry of Food and Agriculture will be in charge of the establishment. Hitherto there was no such compulsory grading system and the Government has now introduced this in order to check adulteration. India's lemongrass oil production this season is estimated at the record figure of 1,000 tons. Some 600 tons have been exported so far out of this. As the arrivals and offtake now keep some sort of equilibrium, the price rules steady at Rs. 126-4 a dozen bottles on the Cochín market.

NORTH INDIAN TEA CROP REPORTS

The following is a summary of the crop and weather reports received from different districts for the month of November, 1955.

Upper Assam: Cold weather has set in and the season is practically closed. The season in Sonari will probably be a very late one. Outturn last month about normal to good. Outturn to date in Dibrugarh and North Lakhimpur considerably over last year.

Central Assam: Weather generally seasonable but unusually mild in Jorhat. The season has practically closed. Outturn last month in Moran good.

Lower Assam: Cold weather has set in and the season is practically closed. Weather in Tezpur hot. Outturn last month generally good.

North Cachar: Unusually heavy rain with floods reported from parts of Lakhimpur and Happy Valley. Helopeltis prevalent in Happy Valley and North Cachar. Blight in Lakhimpur not so severe. Outturn last month good.

South Cachar: Weather generally seasonable but abnormally wet in Chutla Bheel. Helopeltis prevalent in Haikandi but lifting in Chutla Bheel. Out-

turn last month about normal to good but poor in Chargola.

Eastern Doars: Outturn last month about normal. Outturn to date considerably under last year. Weather dry. The season will close about the normal time.

Western Doars: Immediate prospects good. Cold weather has set in, the season will close about the normal time. Outturn to date slightly under last year.

Darjeeling: Outturn last month about normal. Cold weather has set in and the season is practically closed.

Teral: Outturn last month about normal. Weather dry. Cold weather has set in and the season will close early. Helopeltis prevalent in North Teral.

OUTPUT OF IRON ORE

The estimated total output of iron ore in India increased to 331,263 tons in October, 1955 from 297,187 tons in September, 1955, according to official statistics released by the Chief Inspector of Mines in India. Returns received from eighty mines for the month of October, 1955, show despatches totalling 256,430 tons to the iron and steel plants and 94,046 tons to the export market. The reported stocks as at the end of the month amounted to 1,084,497 tons.

TEA AUCTION PRICES DROP FURTHER

VERY QUIET TONE IN EXPORT SALE

At Sale No. 27, held on 19th and 20th December, offerings at the Export auction consisted of 61,500 packages. Once again there was little or no demand from internal buyers and a very quiet tone prevailed. The little demand there was came from Exporters. Commonest and Common Broken were about 2 annas lower, while Low Mediums and Medium Broken were fully 3 annas lower. Fannings grades were the strongest feature, but were nevertheless 1 to 2 annas lower. The majority of the C.T.C. offerings were difficult of sale and many were withdrawn, but the very few really good lines sold well. Whole leaf grades were 3 annas lower, while Darjeelings received fair support at slightly lower rates.

Quotations	1955	1954
Clean Black Pekoe	Rs. 2 1 0	Rs. 3 12 6
Plain B.P.	Rs. 1 7 0	Rs. 3 9 6
Medium Assam B.P.	Rs. 1 9 0	Rs. 3 11 6
Best CTC Assam B.P.	Rs. 2 5 0 to 2 6 0	Rs. 3 15 6

At the Internal sale, the Dust offerings consisted of 18,300 packages, for which there was a fair demand. The strongest feature were the few black leaf teas suitable for the Middle East and these were generally dearer. Buying was very discriminating. Teas with poor leaf appearance and poor liquors were the weakest feature, being 2 annas easier and sometimes more. Only the very best CTC Assams were in demand and these were 1 to 2 annas easier, but the remaining offerings in this category were 2 to 4 annas below last rates and were generally difficult of sale.

Quotations	1955	1954
Medium Double Dust	Rs. 1 5 6 to 1 6 0	Rs. 2 0 0
Medium Assam Grainy	Rs. 1 7 6 to 1 8 0	Rs. 2 0 to 2 1 0
Dust	Rs. 2 2 0 to 2 4 0	Rs. 2 6 0
Best Assam CTC Dust	Rs. 2 2 0 to 2 4 0	Rs. 2 6 0

The Leaf offerings consisted of 3,000 packages, for which there was a fair demand at 2 to 4 annas below last rates.

RECORD RISE IN FREIGHT RATES

KOREAN PEAK EXCEEDED IN SOME TRADES

WITH markets rising steadily, record rates have been paid in the last week and the peak figures conceded during the Korean war period have been exceeded in certain trades. Wheat from West Australia to the U.K. was fixed for February and March loading at 17s which represents an increase of 2s 3d a ton over the rate paid during the Korean war. The North China-Continent market has also paid very high rates but much of this business is undisclosed. However, it is known that 1956 L.T.O. has been conceded recently. U.S. coal rates are slowly climbing back and 60s was paid for December. It is reckoned that at 72s American Flag tonnage can be economically operated in this trade and it will be interesting to see if any further "mothball" ships are recommissioned soon. Wheat from North Pacific to Bombay was fixed at \$(U.S.)23-50 and to East Coast India at \$(U.S.)22-25 one port, \$(U.S.)22-75 two ports discharge. Mormugao-Japan paid the higher rate of 106s for ore with February loading and there is a large unsatisfied demand for space to the Continent.

SUGAR MARKET STEADY

During the week ended 21st December, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals were 1,200 bags a day and stocks amounted to 115,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31 for ordinary grain and Rs. 32-12 for big grain. The market remained steady.

LINSEED

Firm conditions prevailed during the past week and prices advanced to higher levels. Trading was rather slack and arrivals from upcountry were on a small scale; sellers were reserved despite keen enquiries from crushers for ready as well as forward deliveries following a good demand for oil. An appreciable rise in prices was noted in the oil section and speculative enquiries for forward delivery continued; a fair demand from shippers resulted in some small trading. Latest quotations were as follows: December-January Rs. 21-10-0 a maund.

HIDES AND SKINS

The market in skins continued steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 13th and 19th December, 1955)
Cowhides:—Wet salted (Ord) 10,000 pcs. on the basis of Annas 9-6 to Annas 10-6; Wet salted (Ord) 24,000 pcs. on the basis of Rs. 9 to Rs. 10; Wet salted (Slaughtered) 14,000 pcs. on the basis of Rs. 12-8 to Rs. 25-8.
Goatskins:—Wet salted (Daissee, Killed) 50,600 pcs. on the basis of Rs. 235 to Rs. 245, Rs. 285 to Rs. 335 and Rs. 350 to Rs. 375; Assam-Dinajpur 34,900 pcs. on the basis of Rs. 255 to Rs. 315; Purneah-Kissengani 5,500 pcs. on the basis of Rs. 285 to Rs. 325; Muzafferpore-Patna 30,100 pcs. on the basis of Rs. 282-8 to Rs. 325.

Bazaar Stocks

(19th December, 1955)
Cowhides:—Wet salted 1,37,000 pcs.
Goatskins:—Wet salted (Daissee, Killed) 17,000 pcs. Assam-Dinajpur-Murshidabad-Jalpaiguri 53,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissengani 3,31,000 pcs.

SHELLAC MARKET DULL

During the week ended 20th December, the market was dull. The range of quotations was as follows:

Pure Buttonlac	Rs. 174 to 170 value; 172 buyers.
Lemon No. 1 Shellac	Rs. 176 to 173 value; 171 buyers.
Lemon No. 2 Shellac	Rs. 170 buyers, 168, 166-8 value, 165-8 buyers.
F.O. Std. 1 Shellac	Rs. 167 to 160-8 buyers.
Pure TN Shellac	Rs. 162 buyers, 160 to 155 basis done and buyers.
4% I.T.N. Shellac	Rs. 152, 150 buyers, 148, 145 value, 143 buyers.
No. 1 Kusmi Seedlac	Rs. 165 to 160-8 value.
No. 2 Kusmi Seedlac	Rs. 155 to 151-8 value, 150 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 153 value, 152 buyers, 146-8 value, 146-8 buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 148 buyers, 146, 144 value, 143 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 138 to 133 value, 134 done.
Ordinary Bysaky Seedlac (C.P.)	Rs. 133 to 127-8 value, 129 done.
Kireelac	Rs. 71 buyers.

Shipments during December until the 17th were 24,550 packages comprising shellac 13,685 packages, seedlac 6,624 packages, buttonlac 707 packages, others 3,534 packages.

COMPANY AND PUBLIC NOTICES

McLEOD & CO., LTD.

Notice of Interim Dividend.

THE Board of Directors of the above Company has sanctioned the payment of the following Second Interim Preferential Dividends in respect of the year ending 31st December, 1955:—

 Calcutta, 16th December, 1955.

DIESEL ENGINES FROM SCOTLAND

Before the end of this year the last of 20 Diesel hydraulic locomotives specially built for India's Western Railway will leave Glasgow, where they were built by the North British Locomotives Company. Thirteen of them are already in service in India. These Diesel locomotives were specially ordered because of the shortage of coal and the quality of water on the 170-mile rail line from Deesa to the new port of Kandla. They have a top speed of 55 m.p.h. Running on a metre gauge they are normally capable of producing 625 b.h.p., but have been derated to 605 b.h.p. to suit the atmosphere of high humidity in which they must operate. North British is but one of several companies engaged in work of India, Pakistan, and Ceylon. The Pressed Steel Company, of Cowley (Oxford), begins delivery early next year of more than 2,000 railway wagons; and Hurst, Nelson & Company of Motherwell (Scotland), has an order for other rolling stock for Indian Railways. At the same time, R. Y. Pickering & Company, of Wishaw (Scotland), is supplying more than 1,000 covered railway wagons for Pakistani railways.

P.A.A. PASSENGER MILEAGE

Pan American World Airways announced recently that it flew 742,332,000 passenger miles and 20,990,433 plane miles in the second quarter of 1955. This compares with 565,955,000 passenger miles and 17,799,854 plane miles flown in the first quarter of 1955 and 600,219,000 passenger miles and 17,740,772 plane miles flown in the second quarter of 1954.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.
