NATIONALISATION OF LIFE INSURANCE

GOVERNMENT'S INTENTIONS QUESTIONED: NEW METHODS OF POLICY-MAKING

SINCE the leftward move in Government thinking began last autumn, policy has tended too much to originate not from public discussion, nor from popular demand, nor from the avowed programme of the Congress, but quite simply from inner circles in the Delhi Secretariat. Rumour leaks out that "the Government" is thinking of doing this, that or the other. Members of the governing party are often as ignorant of the truth of such rumours as are the public and the Press. Frank discussion of the supposed policy cannot begin until a Bill or other official statement of intention is placed before the country, and by then really frank discussion is hardly possible because the Government stands committed and cannot easily withdraw. This process of government is neither fair nor wise. There is no suggestion that it is not democratic in the formal sense, because the bright ideas that originate in Delhi's back rooms cannot pass into law without due process of examination and debate. But on matters of wide social and economic policy, the discussion and debate should precede the formulation of ideas, not follow it. The reverse order of events is natural with such legislation as the Finance Bill, though even then the Finance Minister has lately confessed how handicapped he is by the necessity to draft the Bill without the assistance of public co-operation. A method that has disadvantages even in the sphere where it must be used, should not be extended to other departments of legislation where it is quite unsuitable.

There is an example ready to hand, and an important one. Does the Government intend to nationalise insurance? Now, there has been no public demand for such a measure, and it forms no part of the known programme of the governing party. Indeed, the policy resolutions of the Congress touching on nationalisation in general appear definitely to preclude it. So, the Indian electorate should be entitled to conclude that no such measure is contemplated. But in fact there are very strong rumours that the Government (which in this case must mean a very small number of policy-makers and their advisers) are "thinking about" nationalising insurance. Further, there are quite specific reports that what is being thought about is the nationalisation of life insurance, in contrast to general insurance, and that matters have already reached the stage where thought is being given to what must be done about foreign life offices, which obviously cannot be treated in a nationalisation law quite the same way as Indian offices. It is curious, use the mildest expression, that an issue of so much moment should be dealt with in detail without any sign of public demand for or interest in the proposal. Officials do not toy innocently with ideas and then abandon them: while discussions proceed in Delhi, convictions harden among a small number of policy-makers and the general public remains ignorant and unenlightened. Is this process of "thinking about" nationalised insurance going to issue in a Bill that will be hurried through Parliament, under the description of "conquest of a strategic point in the socialist economy"? If it does, the forms of democracy will have been observed but the principle of free examination of public policy will have been disregarded.

*

The Imperial Bank case is fresh in memory, with the extraordinary blunder in regard to foreign branches, to illustrate the hazards of hasty nationalisation. In fact of course, nationalisation of the Bank had been demanded by at least a section of opinion over a long period of years, and in this contrasted with the case of insurance where there has been no such demand. Questioned on this latter subject, Mr. Deshmukh

has said several times that he is considering nationalisation of insurance, though further enquiry usually elicited the observation that the Government considers just about everything. If current reports on the amount of thought given to nationalised insurance are true, then this reply is little more than evasive and the Minister owes the country a statement on what he is thinking about nationalised insurance. That the subject has reached a point where it deserves to be taken very seriously is shown by Mr. A. D. Shroff's speech at the New India Assurance meeting last week. This chairman's address was mostly given over to rebutting arguments in favour of nationalisation of insurance, and we are inclined to assume that Mr. Shroff would not waste his breath dealing with mere rumours and whispers. Half the cat is now out of the bag but until the public has seen all its stripes, discussion will be handicapped.

*

Mr. Shroff was keenly aware of the difficulty of criticising a proposal which he knows is being seriously considered but which has never been frankly admitted. Thus he said, "As far as we have been able to gather, no authentic pronouncement has been made clarifying the objective behind the idea of nationalising the industry. The only indication forthcoming so far is that insurance, along with banking, being 'basic' to the national economy, is a fit subject for nationalisation". Mr. Shroff had then to proceed to deal with arguments which have not been put forward by anyone in authority but which he guessed would be put forward by an advocate of nationalised insurance. The reader of his speech, who is also familiar with the trend of Government thinking today, cannot avoid the uncomfortable feeling that some of the arguments Mr. Shroff takes to be conclusive against nationalised insurance would be taken by some Ministers and officials as exactly arguments in favour of nationalised insurance. For example, the perfectly true statement that Indian insurance is doing a great job in collecting savings and can in the near future expect to mobilise more savings, seems to Mr. Shroff to be a reason for leaving well enough alone. We agree. But some members of the Government, we guess, would see in this an excellent reason for taking over the insurance companies because they argue that if national planning is limited by a shortage of funds, then the thing to do is to annex an industry that is now successfully collecting funds and which will henceforward collect more. The airlines were nationalised ostensibly because they were not doing their job well enough: insurance becomes a candidate for nationalisation because it does it so well.

This raises a point of general interest, apart from the particular case of insurance. The Government is not willing to say that nationalisation will be the penalty for industrial inefficiency, because that would amount to saying that public money will only be used to buy "dud" business. On the other hand, it cannot afford to have it believed that nationalisation will be the "reward" for high performance and will be a great disincentive to industrial progress. That some such belief is already abroad is shown by the fear in the stock markets that the private steel companies will be nationalised if they make steel more cheaply than the Government-run mills five years hence. We are less concerned with whether this fear is well-based or not, than with the fact that it exists, for this shows that nationalisation is coming to be regarded as a danger that will confront any concern that does well and expands its business.

The effects of such a belief among business men could be thoroughly pernicious. It is important that the Government state clearly that as long as any industry does its work so well that State management would bring no obvious improvement, then it is safe from nationalisation. The airlines nationalisation could be explained as an attempt to increase the efficiency of an industry that was admittedly in difficulties—although the difficulties were in part of Government's own making, and the increased efficiency is not in sight yet. The Imperial Bank case could be explained as an effort to direct banking funds to a field of endeavour where they had not so far played a large part. On this view there would be absolutely no case whatsoever for nationalisation of insurance.

What improvement could the State aspire to bring to this industry? Firstly, to be candid, it might bring quicker and more uniformly honest treatment of policy-holders, for the history of Indian insurance is not free of blemish in these regards. But it can, and should, do these things by means of its control over the private companies, which is already absolute. There is no call to nationalise the whole industry to improve the manners of a few units, which are in any case being weeded out by Government control and private competition. Besides, it would require complete ignorance of bureaucratic methods to imagine that Government management of insurance would better the service at present provided to policy-holders by the great majority of private companies. Mr. Shroff has properly dwelt at some length on the unsuitability of official methods to a business where the whole idea is to sell a service to people who think they do not need it.

The suggestion that the State could make some better use of insurance funds than is now made of them has so far not been put forward publicly, and indeed it could only come from someone who knew nothing of the control over the investment of insurance moneys. Mr. Deshmukh has been reported as saying that Government loans would not benefit, and to be sure they would not for more insurance money is now invested in gilt-edged bonds than is good for the country's future. Some siren voices with heavy Delhi accents have begun singing a song to private industry about how the State would invest more insurance funds in industrial stock than the companies do now, but this is highly improbable. An industrial concern would prefer to have less money from a private insurance company than more money from a State organisation with a virtual monopoly over investment—the State's interest in business is already extensive enough. This bait is not worth rising to, and is only offered by officials as a debating point when private industrialists point out that they rely for much investment support on the insurance offices. It is totally unlikely that investment in private enterprise would be maintained, let alone increased, if the State took control of life funds. If the Government genuinely wants to see more life funds being invested in private enterprise it has only to relax the restrictions of the present law, or simply to make a suggestion to the companies, much as the Reserve Bank occasionally makes recommendations to the banks about the quality of bank advances. Nationalisation is in no sense indicated.

*

Before the debate about nationalisation of insurance goes any further, it might be convenient if one of our Ministers, who from time to time think out loud at public meetings, would thus ruminate on the possible use of life funds that the Government could make which is not now being made by private life insurance companies. He would need to mention uses that were consistent with the interests of the policy-holder and consistent with the need to attract more savings to insurance. He would need to point out some diversion of these funds that is not possible, without nationalisation, under the regulations now in force. Until the Government's mind is made clear to the public, critics are arguing in the dark; and until the matter has been freely discussed the Government is toying with a plan whose implications it cannot fully understand.

Without Prejudice

TRAVELLING HAMPDEN LOSES HIS CLAIM

INCONVENIENCE DURING RAIL JOURNEY NOT COMPENSATED

(FROM OUR LEGAL CORRESPONDENT)

EVERY now and again there emerges from the generally dull pages of the law reports the case of a village or city Hampden, the man of inflexible principle, who, come rack come rope, is prepared to go to any constitutional lengths to enforce his lawful rights. It is always a delight to come across one of these candidates for modified martyrdom. They are a curious type: nearly always men of education and culture, schoolmasters, ecclesiastics and, strange to say, fairly frequently, lawyers, but hardly ever a commercial man, who generally has not the gift of martyrdom and is not minded to perish in needless danger. Not that these gentlemen actually do perish: they are really not martyrs but exhibitionists and the fancied grievance for which they are quite honestly prepared to suffer a good deal of inconvenience, expense and genuine hardship is more often than not quite trivial. Though "strict principle is all his cry; for here he stands to die", his real idea of principle is to make himself a nuisance to other people, especially the duly constituted authorities. The illustrious or notorious exemplar John Hampden was himself, in spite of his genuine convictions, a self-advertising exhibitionist who wasted the time of 12 judges in an attempt to resist payment on principle of a perfectly lawful tax "upon such grounds", as the learned Clarendon put it years later, "and reasons as every stander-by was able to swear was not law."

The writer has come across quite a number of these mentors of principle. One was an eminent headmaster of a famous and venerable West Country school, an urbane and kindly scholar remembered with respect and affection by all who knew him. This gentleman had a dispute with his equally respected landlord over a matter of dilapidations. The facts were quite simple. It was clear to everyone except the potential victim of injustice that he was quite in the wrong and had not a forensic leg to stand on. It shows the regard in which he was held that the governors of the school who had at first looked upon the whole affair with considerable amusement, offered themselves to pay the whole amount when it became a matter of a law suit; the plaintiff also, as a sporting gesture and a generous one at that, offered to split the difference and accept half his just claim. Both offers were spurned, the former with a stirring homily on the proper use of school funds; and the headmaster de-

fended the case in person—it is odd and illustrative of the exhibitionist behind so many of these cases that these pseudo-martyrs quite often disdain to be legally represented—and the judge, as was inevitable, passed a decree for the full amount claimed. His Honour very wisely and very kindly refused leave to appeal to the High Court.

Now this gentleman thought and hoped that he could refuse to pay and would thereupon go to jail. The iron had entered into his soul and he wanted nothing so much as to be incarcerated in a debtor's prison. To his great indignation nothing of the sort happened, and this is the stage at which the writer, than a raw youth, appeared on the scene. To stop any breach of the peace he was sent with the bailiff who was to levy execution and who, he remembers, seized, *inter alia*, a grandfather clock and a billiard table, thus reducing the sublime to the ridiculous. The defendant then capitulated, or appeared to. He said he would pay but, rather to our surprise because we knew that he was well to do, he asked for a week's time to enable him, as he put it, "to raise some money". The phrase should be noted for the headmaster was a scrupulously honest man and he meant what he said literally word for word. Some money. The week's time was, of course, readily granted. And punctually to the minute he appeared at the plaintiff's solicitor's office with a couple of husky men carting substantial crates. He had indeed raised "some" money. The contents of the crates which with great complacency he opened were some 125,000 farthings. Alas, he was informed that copper coins are only legal tender to the extent of 40 shillings, and, much mortified, he paid over a cheque and carted his coins off again. All this from a notable scholar, a former Faraday Fellow of St. John's College, Oxford, whose Honours course was Logic and Philosophy.

The writer could write a lengthy monograph on cases of these pinchbeck martyrs and has indeed been himself numbered amongst their noble army. There was the Case of the Very Reverend Canon of St. Paul's Cathedral, Calcutta, a gentleman well remembered with love and respect by all who knew him, who rather than pay a paltry fine for nonproduction of his driving licence was prepared to immolate himself on the altar of principle and go to jail. There was also the case of the hospital matron who wished to do the like in lieu of paying a Latrine Tax, she having no latrine but sanitary arrangements. This lady in fact never did pay the tax and might indeed have gone to prison had not a kindly and embarrassed Police Sergeant, after a spirited harangue from the matron, decided to mark the summons to show cause, "gone away; address unknown". These are really cases of temporary insanity, or, putting it more mildly, cases of the balance of the mind being disturbed. No one is immune. Nor is the victim, in after life, in the least ashamed of his performance. On the contrary, he is proud of it. The writer himself

remembers with aplomb his own infamous persecution, attending two hearings in a Magistrate's Court, employing a learned advocate and spending many roubles in defending a charge, for which he was most unjustly convicted and fined Rs. 5, of refusing to pay a licence for a pi-dog which he did not own but which had adopted him. The recollection still rankles after many years.

And that brings us to the latest Indian case upon the subject. It differs, however, from the average case of this kind in that Mr. Nivas Mal was really, exposing a genuine public grievance, namely the disgraceful overcrowding on Indian trains and the apparent absence of any legal remedy to the passenger. This gentleman was travelling from Darbhanga to Howrah in a second class compartment. At Darbhanga, not overcrowded unreasonably. At Darbhanga, though there were seats for 12 only in the compartment, there were 15 passengers in it, all of whom had duly paid for second class tickets. Mr. Nivas Mal wedged himself in amongst these other passengers and prepared to endure a moderately uncomfortable journey to Calcutta. But at the very next station a large party of military men entered the compartment. It was the hottest part of the year and an uncomfortable situation became, Mr. Nivas Mal opined, an unbearable one. He might have been willing to make the best of a bad job, and of being pushed around and having his corns trodden upon, had the new entrants been bona fide second class ticket holders. But observing that they were all "other ranks" he suspected they were not.

With that pathetic contentment which one finds to be an extraordinary characteristic of the railway traveller in India, the other passengers took no action at all. But this particular passenger was not made that way. Far from it. He summoned the travelling ticket examiner and requested him to check the tickets of the soldiers. The function of a ticket examiner is, one assumes perhaps mistakenly, to examine tickets. This particular examiner refused to examine, from which we may fairly take it for granted and indeed, it was later not denied, that the military men did not possess second class tickets, or warrants. This impertinent refusal was, one imagines, the last straw, and Mr. Nivas Mal from that moment assumed in the spirit the buff of a jerk of John Hampden deceased. He filed a suit for damages against the Union of India not forgetting to include as a co-defendant the non-co-operating ticket examiner. "I'll learn 'em", said he in effect and admires him for it. As is almost invariably the case with these self-immolators, it was not money he was after—he claimed only Rs. 50 as damages—but the exposure of a real grievance for the benefit of the public, not unmixed with personal resentment and, perhaps, with the desire to shine forth with the halo of the public benefactor.

The trouble, however, was that he had sustained no real damage, beyond inconvenience, annoyance and a certain amount of discomfort. So his Rs. 50 claim could be based only on damages "on account of great overcrowding which resulted in trouble and inconvenience." The trial judge found for him and passed a decree for the amount claimed with costs. This was most unfortunate for Mr. Nivas Mal. It had been far better for him if he had lost his case, for the Union of India and the ticket examiner appealed to the High Court of Patna, and the Rs. 10 or so originally expended on a second class railway ticket now looked like running into four figures, if he contested the appeal. But our man of principle was not perturbed at this prospect. He did contest the appeal and employed pleaders to do the spade work and eminent counsel, Mr. Ramswar Misra, to argue it; and for this piece of public spirit and pluck, one auditor at least respectfully doffs his hat to him.

But it was all in vain. Perhaps not quite all though, since we, the travelling public, now know that we have no remedy at all in such a case, unless (and even that is doubtful) we have sustained material damage. In convenience and discomfort are of nothing worth. Passengers must suffer; it is the badge of their tribe. The High Court allowed the appeal and set aside the decree, holding that "assuming that overcrowding in certain circumstances may amount to actionable negligence by the railway, the plaintiff has still to prove that the negligence resulted in some damage or injury to him. Mere inconvenience is not enough."

[Union of India v Shri Nivas Mal. 42. A.I.R. (Patna). 282 1955 (June)]

EXPERIMENTAL REACTOR

Sir John Cockcroft, Director of the Atomic Energy Research Establishment at Harwell, described as the "nuclear physicist's dream" the high power experimental reactor being built in the North of Scotland. In time, he said, it would enable the theoretical maximum of power to be extracted from uranium. Sir John was addressing the Institute of Civil Engineers in London and he reminded his audience that the same reactor could also be described as "the engineer's nightmare" since the size of the core was so small. 100 megawatts were being produced from so small a core, engineering difficulties were bound to result. Already with the present reactors the heat equivalent of 10,000 tons of coal could be produced from one ton of uranium. With the new, water-moderated reactors which would soon be built the heat equivalent of perhaps 100,000 tons of coal would be produced from one ton of uranium. That was only the beginning. He wanted to see the heat equivalent of a million tons of coal being produced, from the same amount, perhaps by the use of "breeder" reactors.

A DITCHER'S DIARY

tion for its somewhat neurotic reaction to Mr. Nehru's policies. It is odd that the two men behind these Nehru-phobic newspapers are both noble lords who have climbed to eminence with the friendship of Sir Winston Churchill. The protector has outgrown his protégés, who have moreover lost contact on this point with much of their reading public. There are, to be candid, probably many people in Britain who think that Indian intervention in international affairs has been less fruitful than its self-appointed British apostles pretend, and who think furthermore that India has responsibilities to peace nearer home than in East Asia or Europe. This is a point of view that we need not accept but in any case it is not downright disreputable. What is disreputable is the jeering, nasty tone in which my lords Beaverbrook and Bracken choose to publish it. Fortunately these cranky peers can ease their spite without any danger to Indo-British friendship, because Indians know that in Britain even rich men can say what they like. The only people who would be really wounded would be men who had no experience at home, in their own country, of a free Press. I remember Hitler demanding—and getting—an apology from a Commonwealth Premier about 1938 because H. G. Wells called him a "madman" in a newspaper article. And Reuter has just reported Mr. Krushchev as complaining whiningly to an American diplomat: "There is much talk in your Press by responsible people, official people, non-official and even irresponsible people, every kind of people. They pay little attention to what we say". Poor old Krushchev. Having never known a free Press, he cannot conceive that in any country worth living in, even perfectly doty people are allowed to blow their silly heads off in print.

A Wall Street wit has offered the definition: "An investor is a disappointed speculator". Perhaps that is excessively cynical, but books on the subject of investment are bought and read with a suspicious eagerness. "Hunches" have made fortunes for many successful financiers, but the ability to exercise what they call "judgment" is given only to the few. The run-of-the-mill operator on the stock markets has to rely on a careful perusal of company reports, a study of how markets are moving both generally and sectionally, news of future developments and a mass of other detail, in deciding his investment. To this type of person a new book by Mr. A. G. Ellinger which carries the title *The Art of Investment* (Bowes and Bowes, price 15s.) will prove valuable, for it is concerned with giving guidance about the things worth studying. I know people in the business world who have a childlike faith in the infallibility of what I believe are called "cycle" charts. According to them, the peaks and depressions on these charts are an indication of the periods when one either buys or sells certain securities or shares, on the general principle of getting in at the bottom of the market and getting out at the top. Mr. Ellinger offers no such simple formula for making money on the stock market, for he holds the view that charts of prices and other indices cannot tell the investors when and what to sell. Curiously enough, however, he does suggest that charts can be a valuable aid to even the smallest of investors. "The things which we can see being done in the charts that cover the London market," he writes, "are often data of a more reliable kind than the things that one hears being said in Throgmorton Street". Share prices do not go up or down by pure chance and the pattern of share movements in the past can tell us a lot about

what may happen in the future. He sets out a theory of price movements which he has tested in practice since the end of the war, and indicates where it has failed. Readers of this book may not make a share market fortune, but it could save them from losing one; and since the author eschews market jargon it is readily comprehensible by the veriest tyro. My own humble contribution to the education of the investor would be to recall Lord Keynes's remark: "All the stockbrokers on Wall Street would be millionaires if only they didn't get so much inside information."

The "interpretation" of architecture is a game of which I have no expert knowledge, though I notice it is becoming more popular. This week, for example, I read a piece on bogus classicism in architecture "as a mask of the totalitarian state" where the author saw some significant resemblance between the pretentious masonry thrown up by the Nazis and the depressing stodge of Soviet Russian buildings. Elsewhere—in a book on the economy of backward countries actually—I came upon an effort to prove that the flash ultra-modern style of Brazilian apartment-houses was an expression of something or other that happens in underdeveloped economies. Being thus armed with a little knowledge, when I opened yesterday morning's *Amrita Bazar Patrika* and read that Calcutta was soon going to have a series of massive "skyscrapers", I felt that this news contained some meaning, if only I could disentangle it. I haven't yet. Of course I am perfectly well able to interpret the fact that the West Bengal Government, which does not have enough money to build another hospital or clean up a few streets, can nevertheless build itself the tallest building in Asia to use as a spare secretariat. ("Only 600 feet shorter than the Empire State Building," a local paper said. The Empire State is 1,248 feet high.) But interpretation should be more subtle. The demolition of a Maharajah's palace on Chowringhee, and its replacement by a 22-storey commercial building is no doubt symbolic of the passing of petty princelings and of the expansion of the Indian insurance business. That famous thoroughfare will in a few years' time have fewer houses with elephant porches and more piles with lifts, air-conditioning, and hot and cold revolving doors. But until that far-off day when every building in Chowringhee is a skyscraper, or a skyscraper to use the *Amrita*'s more fetching name, the view from the Maidan will be grotesque. A 22 storey structure next to a mossy old house where Macaulay might have dined will provide ample scope for the interpretation of architecture but it will look rather odd. The frontage on to the park now has a certain uniformity and I understand that the latest big building put up there was deliberately designed to preserve it. Still, while land prices around Dalhousie Square are so fabulously high, business will inevitably spread its particular form of architecture down Chowringhee, and even around the corner into Theatre Road. Whether it should be allowed to put up skyscrapers in Moira and Loudon Streets is another matter, however, for this is the heart of a residential area. Half a dozen big offices in that area, and someone will suggest running a tram line along Loudon Street and double-decker buses along Wood Street, and then we shall have a city that consists of a slum dotted with skyscrapers.

Having only lately received assurances from the Tokyo Government about pattern piracy, Lancashire will be disappointed to read the following heading in a Japanese trade paper:

Company Meeting

THE NEW INDIA ASSURANCE COMPANY, LIMITED

MR. SHROFF ON NATIONALIZATION OF INDIAN INSURANCE

Summary of Mr. A. D. Shroff's speech at the 36th Annual General Meeting of The New India Assurance Co., Ltd., held in Bombay on 29th June, 1955.

"Insurance business is essentially international in character, and its free development depends on the promotion and maintenance of international peace", observed Mr. A. D. Shroff, addressing the 36th Annual General Meeting of The New India Assurance Co., Ltd. In this context, he referred to the easing of the international tensions, towards which India's Prime Minister had made a significant contribution.

Apprehensions of a major world recession have been fortunately set at rest, by a distinct upturn in the United States business activity. During 1954, the Government of the U.K., the U.S., West Germany and a number of other countries continued the use of the flexible monetary weapon with a view to stabilising or stimulating activity. In the U.K., the policy of Incentive and Discipline followed by Mr. Butler has struck a responsive chord and the economy has gained a momentum, which, though occasionally hampered by labour troubles like rail and dock strikes, is unprecedented in recent British history.

The picture of the national economy, in the 4th year of the First Five Year Plan, was generally one of sustained progress and overall stability. Mr. Shroff, however, referred to the shift in Government's economic policy towards a socialistic pattern of society, and deplored a possible further encroachment on the Private Sector, more so, when the Private Sector had fully vindicated itself as evidenced, among others, by a record rise in industrial and agricultural production, respectively, of the order of 40 and 20 per cent, during the First Four years of the Plan. He wished that the Industrial Policy Resolution of 1948 had been allowed to run its allotted span of 10 years.

The pattern of the price picture, as it had developed between pre-Korea and now, was disturbing, Mr. Shroff also referred to the rigidity of Government's monetary and industrial policies. For example, the money supply with the public had risen by only 6 per cent, during the last 5 years, as against the tremendous increase in industrial and trade activity. The unbalancing of price levels appeared to indicate a fundamental imbalance in the economy, particularly as the price parity between manufactured goods and primary products had been upset. Productivity, in manufactured goods, was the essence of the Problem. In this connection, Mr. Shroff drew Government's attention to the able plea made by Mr. J. R.

D. Tata, while addressing the Annual General Meeting of the Tata Iron & Steel Co., in favour of rationalization.

Describing the Report of the Taxation Enquiry Commission as a "patchwork, in parts, which may do more harm than good", Mr. Shroff criticised those recommendations of the Report, which suggested a steep progressive increase in direct taxation and a ceiling on net personal incomes. Referring to a recent study of tax structures in various countries, Mr. Shroff pointed out the undue heavy load of tax on the upper middle income groups in India—the group on whom rests the sole responsibility of motivating the Private Sector. In view of Governmental policies, towards a reduction of taxes in the U.S., the U.K., Germany etc., the need for a more liberal taxation policy in this country stood out in marked relief.

Nationalization

The recent references to nationalization of Insurance Industry in India, in Government quarters and elsewhere, Mr. Shroff observed, cannot but harm the cause of Indian Insurance. An objective appraisal of the issues and stakes involved in the proposal to nationalize Insurance would require a consideration of the basic facets of the Industry. These are :

- the social and economic purposes, underlining the proposal to nationalize;
- the adaptability of the industry to nationalize;
- the performance of the Indian Insurance Industry;
- the ability of the industry relatively to a state-owned one to fulfil the national objective of optimum production, and
- experiences of other countries, in regard to nationalization.

Underlining these vital questions, were the two requisites of successful conduct of insurance business, namely,

- the creation and stimulation of the insurance habit, and
- the building of a vast field force.

Discussing the two main classes of Insurance, namely, general insurance and life assurance, Mr. Shroff said that general insurance business is highly complex, technical and essentially international in character, and, as such, was the least amenable to nationalization. It was a necessary adjunct of free

and active foreign trading. Servicing and prompt settlement of claims were the hall-marks of success of private general Insurance. Indian general insurers have succeeded in planting their flag in as many as 50 countries, earning a net premium of about Rs. 77 crores in respect of foreign risks, as against Rs. 77 crores in respect of risks situated in India. Nationalization of General Insurance will greatly prejudice the position of Indian Insurers abroad. In this context, Mr. Shroff also referred to the British Labour Party's proposal, in 1949, to nationalize Industrial Assurance, which the party was obliged to revise, possibly because of complexities involved in general insurance.

Life Assurance, although mainly domestic, bristled with problems equally complex and basic. The Life Assurance coverage sold to the public was essentially a personal one, and tailor-made, to fit individual requirements. The product Life Assurance sold was an intangible one—future security. Further, in India, Insurers have to combat against negative factors like, ignorance, lack of thrift and lack of insurance habit.

Governmental essays in nationalization, such as the Postal Life Assurance, had a comparatively poor record. For example, in the case of the U.K., the Postal Life Assurance had to be closed down in 1928 because of poor volume of business. Governmental efforts in numerous other countries, where State Insurance has been tried, have not succeeded, because State enterprises sell only security, and not both security and service.

A further argument against nationalization of insurance is that it was essentially a co-operative institution, where 92 per cent of profits were passed on to policyholders. Thus, private insurance came very much close to a nationalized one.

The case against nationalization is strengthened by achievements of Indian Insurers, which were most encouraging. Their business turnover, since the war, compared favourably with that in the U.K., U.S.A., Canada and other highly developed countries. On the other hand, the Indian Postal Life Assurance had increased its business only by 16 per cent during the decade ended 1952, as against an increase of 214 per cent in the Life Insurance business of Indian Insurers.

Most important of all is the fact that Indian Life Assurance Companies were rapidly expanding their business in foreign countries, their premium income from outside India having increased 3 times during the period 1946-53. No other industry, in the country, possessed as effective technical know-how as the Indian Insurance. The foreign associates of Indian Insurers have freely drawn on the technical know-how acquired by Indian Insurers, with the result that a tremendous amount of goodwill exists for Indian Companies abroad.

In view of such remarkable achievements, the Indian Insurance Companies are well poised for fulfilling bigger objectives, which await them. Our calculations show that a huge life business potential of the order of Rs. 8,000 crores exist in the country. Substantial as our progress is, it is nothing compared to that in more advanced countries. Our Life Assurance Premium is a meagre Rs. 1/5 against Rs. 106 in the United Kingdom, and Rs. 327 in the United States. The Per Capita Life Assurance in India is Rs. 25 against Rs. 8,365 in the United States; Rs. 6,647 in Canada; Rs. 1,840 in the United Kingdom; and Rs. 2,544 in Australia. The total Life Assurance of business in force in India is less than 10 per cent of the national income, as against 95 per cent in the United States; 108 per cent in Canada; 51 per cent in the United Kingdom; and 47 per cent in Australia. The target of Rs. 8,000 crores to be achieved in 10 years' time, would mean only a policy of Rs. 1,000 per family, or a premium of about Rs. 50 per year, per family.

In the light of these facts, Mr. Shroff requested Government to consider, whether they would be in a position to measure up to such potentialities, particularly in view of their commitments under the Five Year Plan.

In spite of the above arguments, Mr. Shroff added, if Government are still of the opinion that State-owned enterprises are necessary for the fulfilment of the national objectives, then a better course for them would be to start new State-owned units. This suggestion was in no way a challenge to the State, but fitted in well with Government's declared policy of not disrupting the existing successful units through nationalization as in the case of the Steel Industry.

Reviewing the results of New India's operation during 1953, Mr. Shroff observed that the total premiums earned by the Company in the General and Life Departments reached a new high level which is a little short of Rs. 10 crores. Out of this, the premiums in the General Department amounted to Rs. 4.37 crores—an increase of Rs. 47 lacs over 1953, and the profit inclusive of interest earnings at Rs. 34.1 lacs were 7.8 per cent of the premium income.

Progress in the Life Department has been phenomenal. Net sums assured during the year amounted to Rs. 43.42 crores showing an increase of Rs. 23.51 crores over the business for 1953. From 1st March 1954 Life Premium rates were reduced by New India which stimulated a large demand for life assurance. The total premium income during the year amounted to Rs. 5.62 crores and the interest income net of tax Rs. 78.5 lacs.

The Triennial Valuation Report ending 31st December 1953 shows a handsome surplus of Rs. 1.57 crores from which Rs. 11.6 lacs has been credited to Shareholders' Account. A bonus of Rs. 14 per thousand on Endowment Assurance and Rs. 16 on Whole Life Assurance was declared during the year. Policyholders can look forward to still higher bonuses if the present rate of progress continues.

The Life Department celebrated its Silver Jubilee during the year. Sir Benegal Rama Rau presided at the celebration which coincided with the opening of the new Administrative Office Building at Ville Parle.

The Board recommended a dividend of Rs. 2/8 per share after making adequate provision for taxation and other reserves. The total funds of the Company now stand at Rs. 30.58 crores. Mr. Shroff expressed the hope that the shareholders will approve the conservative policy of the Directors in order to provide increasing security to the widening clientele.

Since the publication of the Report, he added, the Company has acquired a controlling interest in Bombay Fire and General Insurance Co., Ltd., which is expected to widen our activities and connections.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

LOAN EASILY SUBSCRIBED

Wednesday, 6th July.

THE second series of National Plan Bonds, 31½ 1965, were fully subscribed by 1 p.m. Monday, when the loan was closed. Subscriptions totalled Rs. 103.65 crores and of this sum conversions amounted to Rs. 57.87 crores. Thus the loan has taken about Rs. 46 crores of cash off the markets. Some part of the Reserve Bank's holdings of the loan will be used to compensate shareholders in the Imperial Bank; this may require about Rs. 12 crores. Therefore the Government has not obtained very much new money, and it may approach the market again later in the year with a more ambitious loan when the State Government have raised their own separate loans. To date the only State Government to give any hint of its intentions in this regard is the Madras Government.

After being easier last week, credit conditions became tighter while the loan was open for subscription. The money markets are still feeling the effects of this diversion of funds, and conditions are fairly tight. The interbank call rate quotes 8½ per cent.

Only small export bills and remittance have been reported in the exchange department. The rupee-dollar rate quotes Rs. 480-12.

Silver ruled firm on good support. The price advanced from the previous week's level of Rs. 159-12 to Rs. 159-15, quoted to-day. The rate for forward delivery was quoted at a discount of 3 annas. The price was unchanged at 78½d. in London and at 90½ cents in New York.

Gold was easier and the price declined from Rs. 95-12 to Rs. 94-2. The sovereign at Rs. 60-14 showed a loss of 6 annas.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills which were opened on Tuesday, 5th July, 1955, totalled Rs. 2,40,00,000. The average rate of acceptance increased from Rs. 2-8 to Rs. 2-8-1 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent were allotted approximately 6 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 11th July, 1955. During the week ended 1st July 1955 Government of India Treasury Bills for Rs. 31,62,75,000 were sold in favour of the Reserve Bank of India.

An increase of Rs. 1.93 crores in notes in circulation to Rs. 1,312.72 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 1st July, 1955. The total note issue was up by Rs. 21 lakhs to Rs. 1,341.30 crores. Notes held in the Banking Department consequently fell by Rs. 1.72 crores to total Rs. 28.56 crores. Deposits of the Government of India rose by Rs. 1.13 crores to Rs. 58.96 crores as did other Government accounts by Rs. 1.13 crores to Rs. 12.34 crores. Balances of commercial banks declined by Rs. 8.38 crores to Rs. 46.14 crores while investments rose by Rs. 8.65 crores to Rs. 46.55 crores. These occurred probably because of the Central loan. Balances held abroad dropped by Rs. 2.07 crores to Rs. 61.86 crores. Other loans and advances rose from Rs. 26.80 crores to Rs. 37.20 crores, of which advances to scheduled banks against usance bills increased from Rs. 16.71 crores to Rs. 22.42 crores. These advances totalled Rs. 142.03 crores since 1st January, 1955. Ways and means advances were shown at Rs. 91 lakhs (Rs. 80 lakhs).

The statement of the position of scheduled banks for the week ended 24th June, 1955, discloses Demand and Time liabilities at Rs. 602.56 crores (Rs. 12.35 crores on account of borrowings from banks) and Rs. 396.74 crores (Rs. 3.70 crores) compared with Rs. 594.23 crores (Rs. 13.2 crores) and Rs. 393.97 crores (Rs. 3.32 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 16 lakhs and Rs. 4.37 crore to Rs. 34.27 crores and Rs. 52.45 crores, respectively. There is a rise of Rs. 61 lakhs in investments to Rs. 346.56 crores. Advances and bills discounted at Rs. 809.81 crores reveal a fall of Rs. 2.70 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.7 percent and 61.0 percent against 8.3 percent and 62.0 percent.

GILT-EDGED RECOVER EARLIER LOSSES

SELECTIVE ENQUIRY FOR INDUSTRIALS

London, 6th July.

PRICES in the London stock markets lost further ground on small selling and lack of support until immediately prior to the weekend, when a recovery was staged following the Government's denial of recent sterling devaluation rumours. Gilt-edged securities rebounded from their previous weakness and the rest of the market followed their lead. The recovery continued after the weekend, although business remained small and selective. The end of the six-week-old dock strike assisted the improvement and the satisfactory end-June gold reserve figures also helped. The Chancellor of the Exchequer's warnings on the economic situation were counterbalanced by these favourable influences. The rise was most notable in the gilt-edged market, which more than recovered the losses sustained earlier. Bear-covering was the main reason for the increase, but there was a little investment buying also. Industrial equities followed the lead of gilt-edged, but the rally did not go so far as to recoup all previous losses. Renewed demand did not reach the very high levels of a fortnight ago and was more selective. Engineering and electrical issues were the chief beneficiaries although prices in most industrial groups joined in the rally. Good company news helped individual issues. The foreign bond market remained subdued throughout and only small movements were recorded on balance. Japanese attracted a selective demand and German municipal bonds

were firmer. Rails received little attention. Dollar stocks were mostly higher under Wall Street's influence. Gold shares failed to continue their recent revival and business was small and selective. Compared with the previous levels, most movements were adverse. Coppers lost ground but rallied later on Continental buying. Other base metals were selectively firm. The feature of oils was the strength of Burmahs which reached a new peak. Other oils moved somewhat erratically. Teas attracted very little attention and recorded small mixed movements on balance, but rubbers responded to the fresh advance in the commodity price.

The Money Market

The money market had a generally comfortable week and only on one day was there a serious setback. This was on Thursday when the banks were "window-dressing" for their half-yearly balance-sheets. Heavy withdrawals created an acute shortage, which was only covered by borrowing a fairly large amount from the Bank of England. Despite some help from the authorities, money loans on that day were bid up to 4½ percent, but after the turn of the half-year the situation improved, with loans cheapening to 2 percent. Banks took the opportunity of increasing their portfolios, with 3-7/8 percent quoted for September. Applications for Treasury bills totalled £383,780,000, of which £290 million were allotted at an average rate of 79s 4.87d compared with 79s 4.53d in the previous week. This week, £280 million are offered. The Bank of England return for the week ended 29th June showed notes in circulation about £3 million lower at around £1,782 million, while bankers' deposits were about £1 million higher at around £246 million.

New York Stock Exchange Tradings

The New York Stock Exchange in the first half of 1955 did the largest business since 1930 and the

industrial average reached a new all-time peak. Turnover for the half-year comprised 359,688,156 shares, compared with 238,806,601 shares in the same period of 1954.

Currency Convertibility

The North American economic recovery may speed up Europe's drive towards currency convertibility, according to a U.S. Federal Trade Department official. The view was based on the fact that although the United States and Canada suffered an economic recession in 1954, Europe was not affected and in fact was able to reduce import restrictions on trade with dollar area countries. The process had continued with further significant liberalisation methods over the past year. "Europe offers to many competitive Canadian exporters a market that promises greater stability than at any time since the war."

Sterling Devaluation Rumours Denied

With confidence strengthened by the Government's denial of sterling devaluation rumours, the pound made headway in all the main centres on 1st July. In fairly active dealings, sterling gained 1/16th in terms of the U.S. dollar to \$2.78-19/32. Continental currencies moved in sterling's favour, rallying somewhat later as conditions became quiet.

Hongkong Gold Market

The Hongkong gold market was featureless, with price movements very narrow. It opened steady, eased to a low of £250½ last Thursday but rallied again to £251½ at the week-end. Carry-over changes were 145 cents in favour of sellers. Official offtake was 3,010 taels, and unofficial 15,430 taels. Arrivals in Macao totalled 45,000 ounces while forward contracts were fixed at \$ (U.S.) 37.75.

U.S. Business Loans

Loans to business by leading New York city banks increased by \$11 million in the week ended 29th June, the Federal Reserve Bank reported. Commercial, industrial and agricultural loans reached a total of \$8,085 million, compared with \$7,648 million a year ago.

Western Union Capital Issue

The Western Union Telegraph Company plans a 1,041,393-share common stock offering to stockholders to raise construction money. Western Union said that it would make the offer to stockholders at the rate of one new share for five of 250 cents a common held on record on 22nd July.

General Container Corporation

The St. Regis Paper Company and the General Container Corporation have announced jointly that holders of more than a majority of General's outstanding stock have agreed to grant St. Regis options to acquire their shares in exchange for St. Regis common stock. The holders of General's capital stock would receive 2-3/8 shares of St. Regis common for each share of General.

Company Merger

The Crown Zellerbach Corporation and the Gaylord Container Corporation have reached an agreement in principle regarding the proposed merger. The consolidation provides for an arrangement under which Crown will offer to exchange two shares of the presently authorised, but unissued, Crown common stock for three shares of the outstanding Gaylord stock.

Vegetable Oil Market

Quite a strong demand developed at times during the past week for linseed oil both in the U.K. and the Continent, with prices soaring by another £8 a ton to their highest level since July, 1953. At the close, however, buyers were inclined to pause and there were signs of some reselling. Indian crude for July-August shipment held for £111½ and August-September for £12. Castor oil firmed. Offers to Europe were scanty and most shippers increased their price by 30s to 40s a ton and even more. Indian B.S.S. for July-August shipment in drums was quoted at £97½ and Commercial tended to rule firmer at £88 c.i.f. Spot supplies in the U.K. remained scarce. The few sellers were asking much higher prices for coconut oil and a much stronger market prevailed with business more active. Compared with the previous week Straits in bulk for July-August shipment advanced by 30s to £92 with buyers offering about 10s under this. Ceylon spot in Rotterdam was reported to have made up to £93 in bulk with July-August held for £93 on resale. Active demand developed for Indian crude groundnut oil at the beginning of the period and July-August Rotterdam got up to £109½, or £5 above the previous limits. At the close, there were sellers at £110 in bulk with business back to £109 c.i.f.

OUTPUT OF COAL DURING MAY

The output of coal in collieries in India decreased to 3,175,335 tons in May, 1955, from 3,230,006 tons in the previous month, according to official statistics released by the Chief Inspector of Mines. Despatches of coal, however, amounted to 2,743,546 tons in May as against 2,692,508 tons in April. Coal stocks at pitheads increased from 4,065,786 tons at the beginning of the month to 4,096,646 tons at the close of the month. During the month under review, 841 collieries were reported to be working with an average daily employment of 337,441 workers. Output per man-shift was estimated at 1.08 tons for miners and loaders, 0.58 ton for all workers underground and in open workings and 0.37 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 14.01. Coke plants at collieries and elsewhere produced 341,264 tons of hard soft and other kinds of coke during the month and despatched 140,910 tons.

Stocks and Shares

GENERAL IMPROVEMENT ON SPECULATIVE SUPPORT

ENGINEERING SHARES LEAD ADVANCE

Wednesday Evening.

THE market has continued to improve and higher prices can be reported over a wider front than last week. But the advance is still reliant on professional support and the outside investor is not willing to put his weight behind it until the uncertainties associated with Mr. Nehru's return from Russia have been resolved. Speculative shares have made the best gains, with Indian Irons well out of line at Rs. 35-15. Other engineering shares in prominence were Jessops at Rs. 48 and Richardsons at Rs. 20-6. In both cases because of special support. Coal shares have improved, with the speculative Burrakurs at Rs. 14-10. Encouraging dividends have been announced during the week by groups of jute and tea companies.

The new loan is nominally quoted at the issue price.

Details of the week's trading follow.

As was anticipated, the second series of 31½ National Plan Bonds 1965 was quickly oversubscribed, cash subscriptions amounting to approximately Rs. 45.75 crores which can be regarded as satisfactory, indicating that there is still a fair amount of investible funds for the right type of issue. Because of the new loan, trading in other sections of the gilt-edged market was rather dull and business was of a retail nature. Three percent Conversion Loan 1966 improved slightly to Rs. 80-10 to close with sellers at Rs. 80-9 while non-terminable paper was marked back to Rs. 80-1 owing to payment of the half-yearly interest. In short-dated issues, 2½% 1955 was easier at Rs. 99-13 and both 3½s 1957 and 1958 were unchanged at Rs. 99-11 and Rs. 99-8 respectively. Amongst medium-dated loans, 3½% National Plan Bonds improved slightly to Rs. 98-12 while 3½% National Plan Bonds 1964 continued on offer at around Rs. 99-12. Both 3½s 1963-65 and 1964 were marked up to Rs. 94-4 while 4½% 1960-70 was taken at around Rs. 101-10. Long-dated issues were steady with 3% 1966-68 in demand at Rs. 91-4 and 5% 1970-75 at Rs. 87-3.

Provincial Loans were quotably unchanged but at the close, there were a few sellers of 4½ issues standing at a substantial premium.

There was a very good demand for selected jute and miscellaneous preference shares but with sellers holding off, business was difficult to complete. Amongst jutes, Anglo-India were done at Rs. 121, Auckland 5½ were crossed at Rs. 96-8, Bally were marked at Rs. 104, Gourepore at Rs. 105-8 and Albion at Rs. 112. In the miscellaneous group, Associated Hotels were done at Rs. 63-12, British India Corporation at Rs. 138 Calcutta Electric at Rs. 12-10 and Chrestien Mica Industries at Rs. 65. Dalmia Cement fully-paid were better at Rs. 98, Indian Iron & Steel changed hands at Rs. 109 and Indian Standard Wagon were scarce at Rs. 141-8. Jardine Henderson were crossed at Rs. 79, Jessops were taken at Rs. 175-12 as were Martin Burn at the same rate. New Victoria came to hand at Rs. 3, Rohtas Industries 7½ at Rs. 126 and the 'B' at Rs. 67.

In the banking section, United Commercial were steady at Rs. 43-8 as were Punjab National at Rs. 44-8; United Bank of India 'D' Shares were unchanged at Rs. 4-7.

The only transaction reported in the railway section was in Delhi-Rohas which improved to Rs. 12-4.

Kesoram provided the outstanding feature in the cotton section improving from Rs. 15-4 to Rs. 16-3. Cawnpore Textiles were maintained at Rs. 9, as were Elgin at Rs. 18-10. Dunbar were transacted at Rs. 206, New Victoria at Rs. 1-5 and Swadeshi Preferred Ordinary were steady at Rs. 9-6.

Business in coal shares was very lively the features being Amalgamated, Burrakur, Bengal, Katras, Jheriah and South Karanpura. Burrakur improved steadily from Rs. 13-4 to Rs. 14-10. Amalgamated improved from Rs. 23-4 to Rs. 24-5 and Bengal from Rs. 520 to Rs. 530. Katras Jheriah recovered to Rs. 54 and South Karanpura rose from Rs. 11-14 to Rs. 12-4. Amongst others, Central India were steady at Rs. 7-15, East Indian at Rs. 31-5 and New Beerbhoom at Rs. 22-4. Although no business was reported in Karanpura Collieries shares, there were buyers at Rs. 125 against a previous quotation of Rs. 102. Business was reported in Western Bengal at Rs. 7-5 and Talcher at Rs. 4-2.

The satisfactory dividends announced by the Bird & Heilgers Group of Mills for the half-year ended March, 1955 (details given below), had little effect on jute shares which, as usual, were languid.

	Half-year ended 31-3-55.	Half-year ended 30-3-54.
Kinnison	7½	5½
Lawrence	5½	4½
Auckland	6½	2½
Dalhousie	3½	1½
Dandowne	5½	1½
Union	5½	5½
Standard	1½	1½
Northbrooke	7½	7½
Naihati	Nil	Nil

Howrah receded steadily from Rs. 32-2 to Rs. 31-8.

Here is a table showing the more important price movements:—

	Opening Rs. As.	Closing Rs. As.
Auckland	147 0	153 0
Anglo-India	218 0	219 0
Budge-Budge	185 0	182 0
Champdany	172 0	177 0
Kamarhaty	204 0	204 0
National	34 12	34 11
Naskarpara	17 0	17 12
Orient	190 0	190 0

Business in the electric supply shares was on a very restricted scale. Calcutta were dealt in at Rs. 15 and Patna at Rs. 13-2.

Samastipur provided the feature in the sugar section improving from Rs. 14-2 to Rs. 15-2. Carew were marked at Rs. 11-10, Champaran at Rs. 13-14 and Durbhanga at Rs. 16-10. A fair parcel of Dyer Meakin Breweries changed hands yesterday at Rs. 6-4 and Ramnugger were marked at Rs. 27-4.

The engineering section was active during the week, the special features being Textile Machinery, Jessop & Co., Bhartia Electric Steel & Braithwaite & Co., Indian Iron & Steel fluctuated between Rs. 34-15 and Rs. 35-7 up to yesterday but flared up today to Rs. 35-13. There was a good enquiry for Britannia Engineering at Rs. 34 and Bhartia Electric Steel were marked at the higher rate of Rs. 15-12 x.d. (Dividend Re. 1 per share against As. 12). Braithwaite rose from Rs. 25 to Rs. 25-14 and Jessops spurted from Rs. 38-12 to Rs. 47. Richardson & Cruddas moved up from Rs. 19 to Rs. 20-7 to close at Rs. 20-4. Textile Machinery were 12 annas better at Rs. 22-12 and Burn & Co., were quoted at Rs. 274. Indian Galvanizing were easier at Rs. 23-12 but Kumardhubi Engineering and Marshalls were steady at Rs. 12-15 and Rs. 7-12 respectively.

Paper shares were outstanding in the miscellaneous section. Bengal improved to Rs. 70-8 and Paper Pulp to Rs. 30-6. Titaghar were taken at Rs. 45-8 but at the close there were sellers at Rs. 45. Orient Paper were steady at Rs. 29-8 as were Shree Gopal Paper at Rs. 15-14. Sone Valley Portland Cement were knocked down from Rs. 7-14 to Rs. 7-8 following the announcement of a lower dividend distribution of 4 annas per share but later recovered to Rs. 7-11. Dalmia Cement met with keen enquiry and improved steadily to Rs. 15-9. There was a good enquiry for insurance shares including Concord at Rs. 14-10. New Asia-tic at Rs. 6-10 and Ruby General at Rs. 9-12. India General Navigation were quoted at Rs. 92-8 and India Steamship at Rs. 7-14. Port Shipping were steady at Rs. 14-6 and Alkali & Chemical rose further to Rs. 18. Angelo Bros. were marked at

	(+) Rs. 1062 lakhs

Quantitative control is now openly used to give protection to industries. This method has several objectionable features. In the case of new or unprotected industries, the system does not give the consumer any opportunity to express his viewpoint. It is, moreover, undemocratic as it vests the power to determine the necessity for and quantum of protection in a few individuals of the Commerce Ministry and thus provides a convenient method of bypassing the Tariff Commission.

The other objection against the system is even more fundamental. In India, prices have fallen by 24.2 percent between 31st March, 1951, and 28th May, 1955. Between these two dates, food articles have declined by 33.3 percent, industrial raw materials by 40.6 percent, semi-manufactures by 13.7 percent, and manufactures by 6.2 percent. Prices of agricultural produce have thus had a steeper fall than those of semi-manufactures and manufactures. Apart from labour costs which are higher in the case of manufactures, there is another factor, free competition, which has brought down agricultural prices to their normal level. In fact, all the efforts of the Government at present are directed towards holding up agricultural prices.

In a recent communication to the Planning Commission, the Minister of Food and Agriculture, Mr. Ajit Prasad Jain, stressed the need to stabilise agricultural prices in order to ensure that "the terms of trade as between the agricultural and industrial sectors do not turn sharply against the former. All our plans will be completely upset and targets will remain unachieved unless we are able to take adequate care of agricultural prices. Even now there has been a serious fall in the prices of agricultural commodities, which is causing very great anxiety in the countryside. I am afraid the position may be even more serious during the second five year plan period unless we take adequate and effective steps from now. Buffer stock operations or open market purchases and sales of agricultural commodities in a strategic manner is not only the key to the problem of stabilising agricultural prices but also the general price level in the country."

It may be added that it was the Food and Agriculture Ministry which deviated from the basic structure of the price policy outlined in the first five year plan. The system of a controlled economy was liquidated by the late Mr. Rafi Ahmed Kidwai. Controls are, however, still retained in the case of manufactured goods, and are keeping up their prices. It is the uneven competition of a controlled economy with a free economy which has produced disparities between the price levels of agricultural and manufactured articles. Because of free competition coupled with imports, the consumer has regained his right of selection in the case of agricultural commodities, but this is denied to him in the case of manufactured goods.

The anxiety in the countryside is not so much about the fall in agricultural prices as about manufactured articles being beyond the cultivator's reach. The Ministry of Food and Agriculture has launched operations to prevent agricultural prices from falling below a certain level. What is needed is to bring down the prices of manufactured articles. One method of doing this is to restore the free economy in manufactured goods also.

Retired High Court Judges

Another amendment of the Constitution is envisaged here. It will seek to remove the ban on judges of High Courts resuming practice after they retire from the Bench. It is expected that the removal of this ban will widen the field for selection of High Court judges. Retired judges might be permitted to practise in the Supreme Court or before High Courts other than those in which they were judges.

Industrial Programme for Second Plan

Outlines of the industrial programme under the second five year plan will be considered by the Central Advisory Council of Industries at its sixth meeting to be held here on 22nd July, 1955. The Minister for Commerce and Industry, Mr. T. T. Krishnamachari, will preside. The Council will also consider the annual reports of the Development Councils for different industries set up under the Industries (Development and Regulation) Act. The procedure for the appointment of Chairman of the Reviewing Sub-Committee of the Council, will be considered. The Council will appoint two members on the Reviewing Sub-Committee to fill the vacancies caused by the resignation of Mr. B. M. Birla and Mr. G. M. Mackinlay.

The report of the Engineering Capacity Survey Committee will come up for consideration at the Council meeting. Notice regarding the development of a number of important industries prepared by the Ministry of Commerce and Industry will be discussed at the meeting. These industries are iron castings (including pipes), automobiles, bicycles, sewing machines and calcium carbide. The question of prices of industrial and agricultural commodities raised by a member of the Council, Mr. Ch. Ram, is also likely to be discussed at the meeting.

The Steering Committee for Industries, set up by the Planning Commission will meet here a day earlier, on 21st July.

Committee on Synthetic Oil Project

An Export Committee on the synthetic oil project has been constituted by the Ministry of Production. Dr. J. C. Ghose is the chairman of the committee, which includes Dr. J. W. Whitaker of the Fuel Research Institute, Dr. A. Nagaraja Rao, Chief Industrial Adviser, Dr. A. Lahiri, Director, Fuel Research Institute, Dr. M. S. Krishnam, Director, Geological Survey of India, Dr. Hussain Zaheer, Director, Central Laboratories and Mr. A. B. Guha, Chief Mining Engineer, Ministry of Production. As already reported, the Government has entrusted the preparation of project reports to Messrs. Lurgi-Ruhrchemie of Germany, Koppel of Essen, Germany and M. W. Kellogg of the U.S.A. The Export Committee will scrutinise the project reports and select one of them for implementation. It is anticipated that the report of the Export Committee will be made to the Government by March, 1956.

Heavy Electrical Equipment Project

The Expert Committee on the heavy electrical equipment project has made its report to the Government of India, selecting the project reports of the British Company, the Associated Electrical Industries and the German company, Siemens, for further discussions in order to select one of them to commission the project. The Committee consisted of Messrs. S. A. Gadkary, Power Consultant, Planning Commission, N. N. Iengar, G. Chandy, P. C. Kapur, K. N. Ranga Rao, M. Hayati, S. S. Kumar and Dr. B. D. Kalekar. The Government's decision will be known shortly.

Steel Mission to Russia

The list of personnel of the Indian Steel Mission to Russia has been finalised. As already reported, it will be led by the Production Secretary, Mr. S. S. Khera. The other members will be Dr. B. D. Kalekar and Mr. M. N. Dastur of the office of the Iron and Steel Controller; Messrs. S. K. Nanavati, N. Chakrabarty and T. V. S. Ratnam from Tata; Mr. Samar Sen Gupta from the Indian Iron and Steel Company and two others. Mr. N. R. Reddy will be Secretary of the Mission, which is expected to leave for Russia by the end of July. The Mission will await the return of the Prime Minister to New Delhi on 13th July to get a briefing based on his Russian tour. It is expected to meet the Russian technical team now in India in order to study data on steel production in general and on the Russian steel plant in particular.

Steel Selling Prices Raised

The internal selling price of steel was raised by more than Rs. 20 a ton last week. Steel prices are controlled and have been on the increase, rising from Rs. 353 a ton on 1st July, 1952, to Rs. 393 a ton on 22nd September, 1953, and Rs. 400 a ton on 27th March, 1954. The domestic production of 1.3 million tons is inadequate to satisfy the growing demand, to meet which 37,000 tons of steel were imported in 1954 at prices very much higher than Indian prices. To subsidise the imports, an Equalisation of Steel Prices Fund has been created to which the difference between the retention prices and the selling prices is credited. The revised steel retention prices, as already reported, are Rs. 383 a ton. The difference between the revised steel selling price, namely Rs. 420 a ton, and the retention price, Rs. 383 a ton, is Rs. 37 a ton; this will be credited to the Steel Prices Equalisation Fund. The current production of 1.3 million tons of steel will contribute roughly Rs. 46 million to the Fund.

Several factors have persuaded the Government to raise prices. Firstly, the new policy of uniform retention prices will reduce contributions to the Steel Prices Equalisation Fund. Hitherto, the difference between the retention and selling prices has been Rs. 15 a ton. Secondly, in view of the planned expansion of output to 6 million tons by 1961 the Government feels that it should step up internal consumption by importing larger quantities of steel. It has already booked orders for 600,000 tons and might import one million tons more if prices are reasonable, say Rs. 450 a ton. But it is not prepared to buy steel at Rs. 600 a ton at which rate some purchases were recently made. Japan, amongst others, has been offering steel to India. Thirdly, it is expected that the cost of production at the new units will be higher and it is time the Indian consumer got accustomed to higher prices. Lastly, world prices of steel have gone up, necessitating a rise in internal prices also.

Reforming Election Procedure

Two bills amending the Representation of the People Act are ready and will be brought up before the next session of Parliament for enactment into law. The bills, inter alia, will seek to streamline the election procedure and bring it into line with the procedure in Britain. It is proposed that, on the model of the Queen's writ calling upon the people to elect the new Parliament, a writ should be issued in India, following which definite duties for nomination, scrutiny and election of candidates on an all-India basis should be fixed. Some provision for holding elections in the winter months in the hills is also envisaged. By this method it will be possible to reconstitute the new legislatures by the middle of February to enable them to discuss their budget before the financial year began.

London

U.K. DOCK STRIKE ENDS

GOVERNMENT WORKS TO IMPROVE INDUSTRIAL RELATIONS

(FROM OUR LONDON CORRESPONDENT)

THE dock strike, which ended this week, had dragged on for six weeks. The effect on the country's economy, and in particular on the export trade, has caused serious concern in all quarters; so much so, that after Cabinet consideration of the problem the Minister of Labour, Sir Walter Monckton, decided to intervene. The hold up of exports had reached critical levels—car exports were halved and overseas assembly plants for cars, bicycles and motor cycles were being closed down for lack of components—and industry in general was occupied in preparing for the Treasury a comprehensive picture of the losses which the strikes were involving. In this connection the loss of goodwill may prove to be the most serious. The effects of that will continue to be felt for a long time. Apart from Sir Walter's intervention forward docks dispute, the Government is pressing forward with its efforts to find some common ground between employers and the trade unions for the improvement of relations generally and especially for the prevention of unofficial strikes. The formal contacts established by Sir Anthony Eden in the last couple of weeks are now to give way to less formal discussions, with the Minister of Labour and his Chief Conciliation Officer, Sir Wilfred Needen, taking the initiative. Both sides of industry are anxious to co-operate as far as possible, but the negotiations must inevitably take a long time.

These troubles came at a particularly unfortunate time, for the latest figures released by the Treasury disclose that industrial production is not only increasing month by month but that the pace is quickening. The provisional index of industrial production has again been revised in an upward direction, for March from 140 to 141 and for April from 130.131 to 132. In April last year the figure was 124, so there has been a rise of about 61 percent. If manufacturing alone is compared the rise is about 8 percent. The May figure is provisionally estimated at 137.138 for all industries, against 133 in May, 1954. That represents a rise of less than 4 percent, but this year's figure was affected by the Whitsuntide holidays, which fell in June last year. When these figures are corrected for seasonal variations, as is done by *The Manchester Guardian*, the March and April figures both become 135 and the provisional estimate for May no less than 139, which is a rise of nearly 10 percent over May, 1954. Expansion at that rate could well resolve the conflict between internal expansion and external solvency and obviate any need for further fiscal and monetary measures to counter inflationary dangers.

That represents, however, an over-simplification of the situation, and is not likely to be realised. Manpower and capacity problems must be taken into consideration, and in both these respects there is little to spare. As for the credit squeeze, an indication that official advice to the banks to be more selective in making advances is to be found in a letter from Lord Aldenham (Westminster Bank) and Mr. D. J. Roberts (National Provincial), respectively Chairman and Deputy-Chairman of the Committee of London Clearing Bankers, to *The Times*—a procedure which has occasioned quite a flutter in Lombard Street. After noting that it is the Government's policy "to restrict the total volume of credit in order to curtail internal demand," the signatories express the hope that bank customers "will understand that the present stringency is a matter of public policy and will co-operate with the banks by keeping their credit requirements as small as possible."

Trade Restrictions Condemned

The Government has been placed in rather an awkward position by the Monopolies Commission's report on restrictive trade agreements such as the collective boycott, exclusive dealing, aggregate rebates, and the enforcement of agreements by private tribunals. The Commission did its job thoroughly enough, contacting 290 associations covering 19 groups of industries, and considering 164 statements describing practices within its terms of reference. The views it expresses, therefore, cannot be lightly disregarded, even if the Opposition and Liberal M.P.'s did not press, as they certainly will, for some effective action. In releasing the report the Government made no disclosure of its views, but the subject must be debated in Parliament ultimately, and meantime careful consideration will have to be given to it.

Briefly, the agreements considered are divided into six broad categories, as follows—(1) Collective discrimination by sellers (without any corresponding obligation on the buyers); (2) Collective discrimination by sellers in return for exclusive buying; (3) Collective adoption by sellers of a policy of maintaining resale prices or imposing other collateral obligations on the buyers; (4) Collective discrimination by sellers to enforce resale prices or other contract terms; (5) Collective discrimination by buyers (without any corresponding obligation on the sellers) and (6) Aggregate rebates. Seven of the members, including the Chairman, Sir David Cairns, after examining separately the arguments advanced in favour of each type of arrangement, conclude that all of them in some degree restrict competition. Though in special circumstances the use of some of them at any rate, may be justified, in general they operate against the public interest. They suggest that these practices should be generally prohibited.

by legislation, though exceptions might be granted in accordance with certain well-defined rules.

The remaining three members—Sir Thomas Barnes, Mr. Brian Davidson and Professor A. L. Goodhart—dissent on a number of points. They say that the evidence put before them did not justify so sweeping a condemnation as is contained in the majority report. They state that they are not prepared to say that the "referred practices" are in general injurious to the public interest and they do not favour prohibition. On the other hand, they say that they would be prepared to accept the alternative (considered but rejected by the majority) that all the arrangements and agreements should be put into writing and registered with the Board of Trade.

Transport Commission's Loss

British Railways have just reached agreement with the unions on the mileage rates to be paid to footplate men, the effect of which will be to add a further £700,000 a year to the wages bill. On the other hand, it completes the negotiations concerned with the recent strike. Simultaneously, the British Transport Commission report for last year has been published, recording a deficit of nearly £12 million, compared with a surplus of over £4 million in 1953. The accumulated deficit, after three deficit years, then three years of surplus, and finally another deficit, since nationalisation is now £39 million. In the present year, according to Sir Brian Robertson, another deficit is "inescapable". The 1954 deficit of £11.9 million is largely the result of inflation. Costs, and particularly wages and salaries, have risen faster than fares and charges could be increased. A fall in net traffic receipts of London Transport of about £2 million was due almost entirely to a delay of nine months in obtaining permission to raise fares. A decline of £18 million in the net traffic receipts from British Railways was due, as to £4 million to the time lag in raising freight charges early in 1954, and as to £12 million by further wage increases during the year for which no compensating additions to charges had been made by the end of 1954. Another reason was loss of traffic. On British Railways, while long-distance travel increased, short-distance travel declined. London Transport road and rail passenger services carried 3 percent fewer passengers. The total of passenger journeys on the commission's road and rail services was 7,611 million, a fall of 1.3 percent on 1953.

Road Haulage Disposal

Meantime, of the 24,569 vehicles so far offered for sale by the Road Haulage Disposal Board, 15,008 were sold by 28th May—4,903 in the six months to that date. The total number made available under the Transport Act, 1953, was 25,500. Giving these figures in its report for the six months ending in May, the Board says the point has now been reached where, in respect of all but a small proportion of these vehicles, offers for sale have been made, plans for offers determined, or disposal by other means agreed.

Some 4,000 vehicles in the parcel and small goods organisation of British Road Services have been made over to a company the shares of which will be offered for public tender in October, and with the approval of the Minister of Transport and Civil Aviation, a special arrangement has been agreed on for the disposal of some 2,000 vehicles engaged on contract hire. Some 400 of the remainder are engaged on collection and delivery work for the railways, and the Transport Commission proposes to ask the Minister to exempt these from the disposal fleet.

Cotton Commission's Final Year

In the last 12 months before it went into liquidation the Raw Cotton Commission made a profit on its operations of £3,777,918, against a loss of £22,416,633 in the previous twelve months, and reduced its deficit to £7,032,502. During the year its unsold stocks were reduced from 771,000 bales to 186,000 bales, and since then they have contracted further, to 54,000 bales. The liquidation appears to be proceeding smoothly, and before long, no doubt, the stock will all be disposed of and nothing will remain of the Commission's activities.

The experiment in centralised buying and distribution of raw cotton, however, has in some respects been rewarding, for the Commission's reports, and traders' recollections of its activities, contain much information and comment which can be of considerable value to the cotton industry and to all who are interested in the marketing of commodities and the supply of raw materials to users. One especially interesting feature is that the Commission began its operations in 1948 with a reserve fund of nearly £31 million which represented the profits made by the Cotton Control from its operations in the commodity, which had begun in 1942. It ended with a deficit of £7 million in 1954, after it had operated for 80 months, and after centralised buying had been in operation for a total of 149 months. This suggests that if its operations had been ended earlier or if they had been continued longer, the net result need not necessarily have been a loss.

Burmah Oil Progress

Two important developments in the Burmah Oil Company which have taken place since he made his annual statement earlier this month were reported by Sir Kenneth Harper at this week's meeting. Fresh appraisal of the gas reserves at the Sui field showed a figure of four million cubic feet, compared with a reserve estimate of 24 million cubic feet at this time last year. Moreover, the latest figure does not include the reserves of the newer field at Uch. These, Sir Kenneth said, look like being substantial though not so big as Sui. The Chairman had less cheerful news on Pakistan Petroleum Ltd. This company has met with a temporary setback at its test well near Sylhet in East Pakistan. At about 7,800 ft. high pressure gas was encountered and fire raged for five days, destroying a good deal of equipment.

Madras

MADRAS APPROVES OBJECTIVES OF SECOND PLAN

CALL FOR SHARE OF BIG INDUSTRIES

(FROM OUR MADRAS CORRESPONDENT)

THE Tamil Nad Congress Committee, at its latest session, passed a resolution on the second five year plan. The resolution was seconded by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. It stated: "This Committee approves of the enunciation of the main objectives of the second plan as: (1) The raising of the standard of living of the lower income groups and (2) the elimination of unemployment to the maximum degree and in the earliest possible time. To achieve these objectives, the Committee commends (a) the rapid development of large-scale and basic industries, the State taking initiative wherever necessary and possible, and (b) extensive development of small-scale and home industries spread over the entire country organised on decentralised and co-operative lines and accompanied by the provision of marketing facilities, the training of technicians and an improvement in the technique of artisans and the type of their products. As the second plan is to be a 'People's Plan,' the people taking a proper share in its formulation, the Committee recommends that it should be broad-based, fulfilling the social needs of every locality in such matters as housing, health and education, and recommends that in the second plan there must be a concentration of power schemes in South India, that all available and possible sources of electric power be found and organised and in particular the possibilities of the Neiveli lignite project be fully exploited. The Committee also requests the Madras Government to urge the Central Government to locate some of the proposed major large-scale and basic industries in Tamil Nad."

Mr. T. T. Krishnamachari, the moving spirit behind the resolution, said that the impression that the South was being neglected in the matter of the second five year plan was utterly wrong. If there were not big industries in the South, the reasons had to be sought not big capitalists either. Although there were rich people with landed property or wealth, there were not many who could command the large capital required for big industries. The Union Minister continued that he attached great importance to the development of electricity. He appealed to people in Tamil Nad not to think in terms of North or South in connection with the five year plan. The plan, he said, would embrace the needs of the country as a whole, and the South would have its due share of industries.

The cautious speech of the Union Commerce Minister suggests, by implication, that Madras can expect only a modest share of the new industries to be started under the second plan. Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, is understood to have told the State's officials that it was for the Union Finance Ministry to indicate to them the outlines within which to work out their plan proposals. Although the various departments have outlined schemes and proposals expected to cost in all about Rs. 400 crores, there is now pessimism in the air. According to one authoritative estimate, the maximum figure for the second plan would only be double the first plan's outlay of Rs. 80 crores. It is also learnt that the Union Finance Minister gave some such rough idea when he was in Madras last month. The Madras Finance Minister has taken the stand that there is no further scope for taxation in the State and that, therefore, loans and subsidies from the Centre are absolutely necessary for the industrial development of "backward" Madras. The Deputy Chairman of the Planning Commission appears to have told the State Government that execution of long over-due land reforms is a condition precedent to Central assistance for the State's industrialisation.

Mr. Krishnamachari Defends Factory Industry

In another speech at Madras, the Union Commerce Minister referred to official and non-official statements to the effect that only through cottage and small-scale industries could economic prosperity for the country be achieved. But he himself was not able to understand in what precise way they hoped to bring about the fruition of their desires. In this connection he criticised Dr. Mahalanobis's suggestion that factory-made goods should be taxed in order to encourage the sales of handicrafts. People of this way of thinking, the Minister continued, did not realise that if this were done, the prices would rise and this in turn would defeat their purpose, as owing to increased prices people would be unable to buy. Mr. Krishnamachari, referring to the concessions given to handloom products recently, such as the setting apart of a percentage of production in certain varieties for the handloom industry, said that it only had the effect of increasing the prices of both the millmade and the handloom products with consequent lesser purchasing power for the consumers. It would take some six or seven years for Dr. Mahalanobis to achieve something in the direction, and by that time the plan period would be over.

Mr. B. N. Banerji, Member (Excise), Central Board of Revenue, said that the Government envisaged decentralisation of large units of powerlooms in the country into smaller ones consisting of not more than four looms each. It was the intention of the Government to assist the weaver to own

the means of production. The Government, he said, did not want to encourage entrepreneurs who owned large units of powerlooms—units which were of a capitalistic nature—although they produced cloth as good in quality as that produced in mills and the cost of mill cloth was 30 to 40 percent more a square yard than powerloom cloth. Mr. Banerji did not explain if the decentralised weaver-owned powerloom units could produce cloth cheaply.

There is obviously a lot of confused thinking on the subject of small-scale industries. It would, therefore, be refreshing to know the views of Dr. A. Krishnaswami, a member of the Union Parliament from Tamil Nad. Our thinking on the subject, he says, has been static and conditioned by a preoccupation with traditional village and handloom industries. These were most important in the pre-industrial period. But with the growth of manufacturing industries, there is enormous scope for the development of small-scale industries of a new pattern, to act as feeders to large-scale industries and cater to local demands. The traditional industries have had their day and they should not be artificially bolstered up.

A Ceiling on Incomes

Dr. A. Krishnaswami has also something refreshing to say on the subject of a possible ceiling on personal incomes. Referring to the statement of the Panel of Economists that "the acceptance of the idea of a ceiling on land must logically lead to the acceptance of the parallel concept of a ceiling on all personal incomes for the urban and industrial sectors", he says that the ceiling on landholdings has no logical relation to the ceiling on personal incomes. How? Land is a stock while income is a flow. A ceiling on stock leads to the stock remaining with the State even though it has suffered a "sea-change". But a ceiling on flow, which is what income is, might only lead to the flow ceasing altogether. The services which result from an individual's efforts will appreciably diminish, and independent professions which bulk large in our society will not have the incentive to expand. A doctor, when he finds that a ceiling has been placed on income by the State, instead of working for ten months in the year, may only work for three or four months at the most. Similarly, enterprising engineers, musicians and artists who make high income will not have the incentive to work, once the ceiling limit has been reached. The result will be that the services which society obtains from them will diminish in magnitude and quality. This is equally true of entrepreneurship which is an essential service even in a socialist society; the supply of this service will tend to diminish with a ceiling on incomes and what is worse, this decline in supply will be of such an insidious character that it will corrode the efficiency of our system. Once the ceiling is reached, efficient managers will not have a tendency to keep a check on costs, and this will lead to a maldistribution of resources which we wish to avoid, particularly in the formative years of our planning. Where the incentive of higher earnings is taken away, society will have to provide for other goals as in Soviet Russia in order that individuals may give of their best. To put a ceiling on incomes and create opportunities for individuals, as in Russia, to obtain better housing space and more real income is after all an indirect way of increasing incomes. But such concessions will have to be given by the bureaucrat; the bureaucrat and the politician obtain an accession of power to dole out gifts and patronage, all of course in the name of the State. Dr. Krishnaswami seems to have hit the nail on the head.

News Briefs

The Union Government has sanctioned a scheme for extension service in Guntur District of Andhra State for improving the quality of fluecured tobacco. It is hoped that as a result of this effort, there will be a real improvement in the quality of Guntur Virginia tobacco and that the country would not again be faced with the problem of disposing of large quantities of low-grade tobacco.

Mr. W. S. Massey, said in his speech at the annual meeting of the Nilgiri-Wynaad Planters' Association, that he feels that there is no justification for a pessimistic outlook in respect of the tea industry. He thinks, however, that methods of distribution need investigation and overhaul and that any methods of restriction imposed to bolster up or maintain price levels will be impossible, as they were many years ago.

Coffee plantation circles in Madras, while welcoming the decision of the Union Government to abolish the export duty on coffee of Rs. 21 a cwt., point out that this abolition will not substantially benefit either growers or exporters unless the Union Government allots higher export quotas. It is also pointed out that during 1954 India's coffee production rose to the record level of 29,500 tons, besides the carry-over of 7,600 tons from the previous season. The Government permitted a total export of about 10,000 tons for 1954, while the internal market absorbed only about 21,500 tons.

The Madras-Ramnad Chamber of Commerce has submitted a memorandum to the Union Minister for Commerce and Industry urging the Government to permit liberal export of yarn, which would help to stabilise local prices. It is pointed out that export of 10 percent of the mill production will not at all affect the supply of yarn to handloom weavers.

The Madras Government has just promulgated an ordinance to give protection to certain classes of tenants in municipal towns—tenants who have constructed dwellings on land belonging to others and who are now under the threat of eviction through the courts. The ordinance extends the operation of the Madras City Tenants' Protection Act, 1921, to the municipal towns of Madurai and Tiruchirappalli.

Bombay

INDIAN INSURANCE LEADERS MEET

NATIONALISATION FEARS DISCUSSED
(FROM OUR BOMBAY CORRESPONDENT)

THE annual general meetings of the General Insurance Council and the Insurance Association of India during the past week were among the events which highlighted the problems of the insurance business in the country. The inauguration of the Federation of Insurance Institutes in Bombay by Sir Cowasjee Jehangir as a memorial to the late Mr. J. C. Setalvad for his great services to the cause of insurance was also one such event. Four important insurance units in India—the New India Assurance Co., the British India General Insurance Co., the Industrial and Prudential Assurance Co. and the New Great Insurance Co. of India—held their annual meetings during this week; the Indian Insurance Companies Association also had its annual meeting last Friday.

At the inaugural meeting of the Federation of Insurance Institutes, Mr. C.R.C. Gardiner, first President of the Council of the Federation, gave a brief history of the development leading to the establishment of this body. Messages were received from Dr. S. Radhakrishnan, Vice-President of India and Mr. Morarji R. Desai, Chief Minister of Bombay. The Vice-President said that the people in the country were getting more insurance minded and there was, therefore, increasing scope for young men and women to make a career in this industry. Mr. Desai praised the Federation's decision to provide facilities for practical training to those already in the line and for the spread of knowledge about insurance amongst the general public.

Addressing the fourth annual meeting of the General Insurance Council (Tariff) of the Insurance Association of India, Mr. B. K. Setalvad expressed his gratification at the Taxation Enquiry Committee's endorsement of the insurers' plea for higher tax-free reserves and at the agreement of the representatives of the Department to exclude amounts set aside as "Catastrophic Reserves" against earthquakes, floods and other such natural calamities while computing loss ratios. He advised the insurers fully to utilise these relaxations for the purpose of building up reserves. He felt that although the administrative machinery set up to implement the Code of Conduct in the various regions had been functioning for two years, things had not improved and the scramble for business continued. He also added: "If all of us had dealt fairly with each other and not gone after business without any thought of the terms on which it can be obtained or its desirability, the insuring public or the middlemen would not have been in a position to dictate terms to us or to go over our heads to the Government". Mr. B. K. Setalvad was elected chairman of the Council for three years ending June 1958. Mr. H. Mercer was elected vice-chairman. The following are the committee members: Messrs. R. M. Desai, T. K. Desai, K. C. Desai, M. G. Mody, T. S. Muthuswamy, M. D. Smart, G. H. Thakore, E. Gillander, B. J. O'Shaughnessy, C. N. Reed, H. A. Whittle and M. A. Wilkinson.

Mr. A. D. Shroff, chairman of the New India Assurance Co. Ltd., while addressing the general meeting of the company, characterised insurance business as essentially international. Mr. Shroff said that its very development depended on the promotion and maintenance of international peace. The apprehension of a major world recession, entertained in some quarters, had been fortunately set at rest by a distinct upturn in U. S. business activity and the successful efforts of the Governments in the U. K., U.S.A., West Germany and a number of other countries which used a highly flexible monetary weapon for stabilising or stimulating economic activity. In this context he pointed out significantly that the policy of simultaneous incentive and discipline followed by the British Chancellor of the Exchequer had yielded the desired result, and the British economy had gained a momentum which, though occasionally hampered by labour troubles, was unprecedented in recent British economic history. Looking nearer home, Mr. Shroff observed: "The picture of the national economy in the fourth year of the first five year plan, was generally one of sustained progress and overall stability." Referring however to the shift in the Government's economic policy towards a socialistic pattern of society, he feared a possible further encroachment on the field of the private sector. The private sector, he said, had fully vindicated itself by demonstrating a record rise in industrial and agricultural production, rising respectively of the order of 40 and 20 percent, during the first four years of the plan. He wished that the Industrial Policy Resolution of 1948 had been allowed to run its allotted span of 10 years.

Coming to some specific economic issues, Mr. Shroff expressed his dissatisfaction with the price pattern as it had developed between the pre-Korean war period and now. This Mr. Shroff attributed to the rigidity of the official monetary and industrial policies, which had resulted in the money supply with the public having risen by only 6 percent during the last five years, against a tremendous increase in industrial and trade activity during this period. The lack of balance in the price levels of agricultural products and consumer goods produced by industry, according to Mr. Shroff, appeared to indicate a fundamental disharmony in the economy. Productivity in manufactured goods, he said, was the essence of

the problem and he drew the Government's attention to the need for a more candid and sincere acceptance of rationalisation in industry.

The submission of the Matthai Commission report was a major economic event during the year, which also came under Mr. Shroff's scrutiny. He described it as a "patchwork in parts, which may do more harm than good," and he criticised specifically those recommendations of the Report which suggested a steep progressive increase in direct taxation and a ceiling on net personal income. Referring to a recent study of tax structures in various countries, Mr. Shroff pointed out that the load of tax on the upper middle income groups in India was unduly heavy for the group on which rested the sole responsibility for motivating the private sector. In view of governmental policies towards a reduction of taxes in the U.S.A., the U.K., Germany, etc., the need for a more liberal taxation policy in this country was all too obvious.

Danger of Rationalisation

Replying to the proposal for the nationalisation of insurance Mr. Shroff was easily at his best; he deprecated the recent references to this subject in Government quarters and elsewhere and observed that they could not but harm the cause of Indian insurance. Making an objective appraisal of the issues and the stakes involved in the proposal, he laid down the following five basic aspects of the question as requiring close consideration: (i) the social and economic purposes underlying the proposal to nationalise; (ii) the adaptability of the industry to nationalisation; (iii) the performance of the Indian insurance industry; (iv) the ability of the industry relatively to a State-owned one to fulfil the national objective of optimum production; and (v) experiences of other countries of nationalisation. As a basis for this study, he stressed the two requisites of conducting insurance business, namely (i) the creation and stimulation of the insurance habit, and (ii) the building of a vast field force. General insurance business was highly complex, technical and essentially international in character, and, as such, was the least amenable to nationalisation. It was a necessary adjunct of free and active foreign trading. Servicing and prompt settlement of claims were the essence of success of private general insurance. Indian general insurance had succeeded in extending its business to as many as 50 countries, earning a net premium of about Rs. 7.5 crores in respect of foreign risks, as against Rs. 7 crores in respect of risks situated in India. Nationalisation of general insurance was, therefore, bound greatly to prejudice the position of Indian insurers abroad. In this context, Mr. Shroff also referred to the British Labour Party's proposal, in 1949, to nationalise industrial assurance, which the party was obliged to revise, at the time of the recent election, possibly because of complexities involved in general insurance.

Coming to life assurance, which he conceded was mostly of a domestic nature, he pointed out nevertheless that it bristled with problems equally complex and basic as general insurance. His main emphasis here was more on the fact that the coverage sold to the public was essentially a personal one and had also to fit individual requirements. On the other hand, what was sold to the public was an intangible product—future security. In addition to this, insurance in India was made more complex by having to combat negative natural factors like ignorance, lack of thrift and lack of insurance habit. He emphasised the comparatively poor record of official efforts to enter the life assurance field and cited the case of the U. K. where the Postal Life Assurance had to be closed down in 1928 because of the poor volume of business. In numerous other countries, such efforts had failed because such enterprises could sell security only and not both security and service. Mr. Shroff also pleaded that with 92 percent of profits going to policy holders, life insurance was essentially a co-operative institution and as such came very close to a nationalised industry.

Dealing with the question from another side, Mr. Shroff tried to examine whether there was any justification for nationalisation on the ground that the industry had failed to perform the service expected of it or to develop and extend to the fullest possible extent under the prevailing circumstances. Mr. Shroff claimed that the case against nationalisation was strengthened by achievements of Indian insurers, which were most encouraging. Their business turnover since the war compared favourably with that in the U.K., the U.S.A., Canada and other highly developed countries. On the other hand, Indian Postal Life Assurance had increased its business by only 16 percent during the decade ended 1952, as against the increase of 214 percent in the life insurance business of Indian insurers. Most important of all was the way in which Indian life assurance companies were rapidly expanding their business in foreign countries, their premium income from outside India having increased three times during the period 1946-53. In addition to all this, no other industry in the country possessed such effective technical know-how as insurance. The foreign associates of Indian companies had freely drawn on the technical know-how acquired by Indian insurers with the result that a tremendous amount of goodwill existed for Indian companies abroad.

Potentialities of Insurance

This did not mean that Mr. Shroff was complacent about what insurance in India had achieved. He claimed that in view of the past record, the Indian insurance companies were well poised for fulfilling the bigger objectives, which awaited

them. "Our calculations show that a huge life business potential of the order of Rs. 8,000 crores exists in the country. Substantial as our progress is, it is nothing compared to that in more advanced countries. Our life assurance premium is a meagre Rs. 1.5 as against Rs. 106 in the United Kingdom and Rs. 327 in the United States. The per capita life assurance in India is Rs. 25 against Rs. 8.365 in the United States; Rs. 6.647 in Canada; Rs. 1.840 in the United Kingdom; and Rs. 2.544 in Australia. The total life assurance business in force in India is less than 10 percent of the national income, as against 95 percent in the United States; 103 percent in Canada, 51 percent in the U. K. and 47 percent in Australia. Even the target of Rs. 8,000 crores to be achieved in 10 years' time, would mean only a policy of Rs. 1,000 per family or a premium of about Rs. 50 a year per family". In the light of these facts, Mr. Shroff requested the Government to consider whether it would be in a position to measure up to such potentialities, particularly in view of its commitments under the five year plan. As an alternative, however, in case the Government was determined to have a State-owned enterprise in this field, he suggested that the Government might start a few State-owned units to begin with but should not disrupt the existing units.

Support for Mr. Shroff.

Mr. Modi who supported Mr. Shroff's case against nationalisation in his presidential address to the Indian Insurance Companies' Association was at a loss to understand the underlying object. He, therefore, presumed that it would either be to acquire control over the funds of insurance for safeguarding policy-holders' interests or rendering better service to the insuring public. In this connection, Mr. Modi maintained that the present law was quite comprehensive for safeguarding shareholders' interests and wondered why the Government should single out life policy-holders for the purpose of acting as their trustees or guardians when there were so many projects and plans before the authorities for improving the lot of the common man. Mr. Modi, therefore, suggested that the Government's energies should better be concentrated on the successful and timely implementation of these projects instead of being dissipated on the taking over of insurance from private enterprise which had handled the task efficiently and economically. He also pointed out that insurance was not one of those industries which had grown up as a result of protection over a considerable period demanding sacrifices from consumers as in the case of several other industries. Insurance had achieved its present position without any direct assistance from the State and, though he appreciated the benefit derived from the Government business placed with the Indian Insurance Companies Association Pool, he maintained at the same time that "it is not from this small business that the present structure of Indian insurance has arisen." Regarding the future, Mr. Modi believed that the "insurance business in India is young compared with insurance in the more advanced countries of the West. It has nevertheless made rapid strides during recent years. Activities have not been confined to a beaten track, and efforts are constantly being made to provide comprehensive insurance service to meet the varied and growing requirements of the country. India is a vast country with a vast population. Schemes for economic development are bound to result in a gradual improvement in the general living standards of the people. This should give ample opportunities to insurance companies for increasing their business. Indian insurance companies have also great opportunities for developing their business in the neighbouring countries with whom, thanks to our Government's policy, friendly ties have been established. Recently, our Controller of Insurance had made a trip to Australia and New Zealand to study the working of insurance business in those countries. I welcome such contacts but it would have been far better if the Controller had associated with him some members of the trade to enable him to make a proper appraisal of the business conditions. I have also yet to come across one single instance of a representative of Indian insurance having been included by Government in trade delegations". Mr. Modi also pointed out that a stage had been reached when they had got to make up their mind as to whether they wanted only a few big companies to operate in the country or whether the business could be handled also by medium and smaller size units and pending the settlement of the question, he appealed particularly to the larger units "to make the fullest use of the re-insurance facilities available in the country during the transitional period by placing a substantial share of their surpluses with Indian offices before seeking cover elsewhere".

The Chairman of the Industrial and Prudential Assurance Company, Mr. Velji Lakhamsi, also had something to say in his speech at the annual general meeting of the Company on this subject. Referring to the various recent ministerial pronouncements regarding nationalisation of insurance, he observed that "the Government has got the powers under the Insurance Act to appoint an Administrator to take over the administration of insurance companies where the business is conducted in a manner likely to be prejudicial to the interests of the policy-holders and they have exercised these powers in a few cases. It is not understood what would be the further advantages in nationalising insurance companies. If it is the purpose of getting funds for the development plans, I can say with confidence that we in the insurance industry have given whole-hearted support to Government loans as also to loans guaranteed by Government".

Jute

RAW JUTE PRICES MAINTAINED

NEW SEASON'S ESTIMATES PROBABLY OVER-OPTIMISTIC

WHILE the majority of Calcutta mills continues to view the present raw jute market with bearish sentiment sellers, on the other hand, subscribe to no such ideas and continue to resist all attempts to reduce prices. It is admitted that on the surface the new crop reports point to the possibility of a bumper crop, or shall we say, a crop far in excess of last year; but then last season the total availability of raw jute was barely enough to satisfy the industry's demands. The majority of reports have used this figure as their basis for calculating the present crop, and this has given the new season's estimates an inflated appearance. The fact that the basic standard used was probably the smallest for several years has been completely forgotten. Thus in reality, although the amount of jute available in the new season will be far greater than last year, the increase is not likely to be excessive to the extent of causing a glut in the manufacturers' raw material. By adopting their present attitude, buyers are in danger of putting the market up against themselves, as there is a distinct possibility that later in the season there may be such a demand for jute by those mills which have delayed their purchases in the hope of a fall in price, that the natural laws of supply and demand will operate, followed by inflationary tendencies.

Overseas buyers in the gunny section have appeared to be apathetic towards the Calcutta goods markets over the past few weeks, resulting in depressed conditions. Mills have been keen sellers for all constructions right up to the end of the year, and in some cases into next year, but there were no takers. Even local shippers, who are known to be carrying a heavy bear account, have shown an interest even at lower rates, and the only business done has been inter-bazaar transactions of a speculative nature. Real goods business has been conspicuous by its absence, as a result of which prices were nominal, and the market tended to be weak. Hessians have again been neglected, and recent events in the Argentine have made themselves felt in the Calcutta markets by the cancellation of shipping instructions. This caused a further recession in rates, and provided further proof, if any was necessary, that hessian stocks would show a substantial rise for the month of June.

The heavy goods section of the market has again been dominated by speculation in the local fatka markets, and prices have fluctuated within narrow limits, with real goods rates nominal in the absence of business. Rumours that the duty on jute goods was to be withdrawn gained considerable credence during the week and at one stage prices rose about Re. 1 on the strength of it. In the absence however of even an official denial, rates dropped back in spite of the efforts of a few operators to whip up some enthusiasm by further speculation. Business was of necessity restricted this week with the closing of the market last Thursday for the Banks' annual closing, and also the complete stoppage of all American markets on Monday for 4th July celebrations. It is always some time before markets settle down to normal routine after holidays, and when two occur in one week, there is very little opportunity for any business to be transacted.

THE JUTE MARKETS

Manufactured Goods. The market was officially closed last Thursday for the annual closing of the Banks, but fatka operations continued and rates were pushed back, but had recovered by Friday morning to open slightly higher than last week's closing rates. B Twills were unchanged for the ready and October-December shipment periods and were quoted at Rs. 106 and Rs. 100-8 respectively, but intermediary deliveries showed an improvement of 8 annas. In the hessian section, 40" 10oz rose by 2 annas for ready delivery to Rs. 41-8, but the forward position was unchanged at Rs. 40-8 a 100 yards. Rumours regarding the withdrawal of the duty on jute goods caused a rapid advance in heavy goods and by Saturday morning B Twills had shot up Rs. 1-8 a 100 bags in all deliveries. Only a minor reaction was observed in the hessian section, rates advancing a further 2 annas. Markets were dull over the weekend and, with the American markets being closed on Monday, there was no change in the quoted rates. During the day, however, speculators got busy in the inactive market, and by continual selling pressure, forced down rates: B Twills lost Re. 1 in all deliveries to be quoted at Rs. 106-8 and Rs. 101 a 100 bags respectively for the near and forward positions. Hessians lost about 4 annas and forward positions dropped to the previous lowest levels of Rs. 41-6 for ready delivery and Rs. 40-8 for October-December shipment. There was no overseas interest for any fabrics during the week, and quotations can be regarded as nominal in the absence of business.

At the close the market is unchanged. Opening quotations on Wednesday morning were as follows:—

	Ready	July	July-Sept.	Oct.-Dec.
Ra.	Ra.	Ra.	Ra.	Ra.
40" 8 oz.	33-10	33-10	33-10	33-12
40" 10 oz.	41-8	41-8	41-8	41-8
B Twills	106-8	106-8	106-8	100-12

	108	108	107	102
Heavy Cees (Plain)	134-8	133	131	126
A Twills	118	118-8	118-8	115
Liverpools	111-8	109-8	108	102-12

Raw Jute. Buyers in the raw jute markets have shown little enthusiasm this week for buying jute, being governed by the inactive conditions of the goods market. Very few definite buying indications were given out, and mills preferred to pick up odd lots at cheap rates for both old and new crop jute. In spite of the lack of business, the market tended to rule firm, although business by distressed sellers and the few who hold bearish ideas, was always possible at below the quoted rates. In the old crop section, buyers are still having difficulty in procuring the assortments they desire, the majority of offers being for middle quality jute. A fair amount of old crop is on offer, but sellers are reluctant to cut their rates. Mill interest in quick delivery jute slackened during the week, but any offers of low quality jute found eager buyers. New crop reports from all agencies continued to exert a certain amount of influence on buyers, and with bearish views prominent, there was little hope of any large-scale transactions taking place. It is generally agreed that mills, with a few notable exceptions, are well enough stocked to carry them over until their early new crop purchases arrive, but in resumé of business done there appears to be a large hiatus covering August-September-October shipments, and it is in this transition period that mills may experience supply difficulties. The majority of contracts have been done for either July-August shipment or October-November-December shipment, and with transport facilities stretched to the limit it may be difficult to obtain jute for that period if purchase is delayed too long.

Quotations for new crop jute have shown no alteration throughout the week, and opened at last week's closing level of Rs. 25 a maund for Upper Assam. Bottoms for August-September shipment. In the absence of buying interest these prices could be considered as nominal, and sellers in most cases were open to bids. In the old crop section however, prices were more static and sellers less amenable to counter offers, and Upper Assam Bottoms were quoted throughout the week at Rs. 27 a maund for July delivery.

Business done during the week was on the small side, and consisted of Dhuri-Northern at Rs. 27 to Rs. 28 a maund basis Bottoms for July delivery, and Local Northern at Rs. 27 to Rs. 27-8 a maund for quick delivery. Small lots of Daissee, Mesta were done at Rs. 25 to Rs. 25-8, and Bimli F.A.Q. for the same price for July-August shipment. A small lot of Pakistan Northern was also done at Rs. 27 a maund basis Bottoms for ready delivery ex-local godown.

In the new crop section business was done in Dhuri-Northern jute at Rs. 27 to Rs. 27-8 for guaranteed July-15th August shipment, and in Upper Assam jute at Rs. 27 a maund for guaranteed July shipment. Small lots of Dhuri jute were also done at Rs. 23 a maund for October-November shipment. New Crop Daissee was done at Rs. 23 to Rs. 24 a maund basis Bottoms for October-November shipment, and Daissee White at Rs. 26 to Rs. 26-8 for August shipment.

In the Pucca bale section the only business reported was in old crop N. C. Cuttings at Rs. 106 to Rs. 112 a bale for ready delivery ex-Calcutta godown.

At the close the market is unchanged but sellers are looking for higher prices. Opening quotations on Wednesday morning were as follows:—

	Landed at mills Rs. a maund			
	Basis Bottoms		New Crop	
Indian Jute.	Old Crop	July	25-8	Aug-Sept.
Lower Assam	27-8	"	25	"
Upper Assam	27-8	"	25-8	"
Northern	27-8	"	"	"
Local Northern	27-8	"	"	"
Local Pacing	27	"	"	"
Daissee Ex Sheoraphuli	29	"	25	Oct.-Nov.
Daissee White	"	"	26-8	August
Bimli	26	for F.A.Q.	22	Oct.-Nov.

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rate for white jute.

There has been little activity in the local Cossipore markets during the week due to mills withdrawing their support for quick delivery jute. Imports have improved slightly and wagon arrivals have averaged about 20 a day. There has been very little alteration in prices, and at the close Kishanganj jute is quoted at Rs. 28 a maund for garat quality. Reports from the Daissee growing areas this week are encouraging, and prospects in the Northern areas, which meantime are mainly Daissee white jute, are favourable for early delivery. There is an acute shortage however of steaming water, and more rain is required to fill up the tanks and ditches. In the ordinary Daissee and Mesta areas, germination in many districts has

been very poor, but in the main the crop is healthy and averages about 4 feet in height. The areas under Mesta are calculated to be about 60 percent.

Mofussil:—Indian upcountry markets have been dull and idle over the week with very little business passing. Old crop imports are negligible, but new crop arrivals in Dhuri and the surrounding areas have increased considerably, and it is estimated that delivery against all early delivery contracts will be completed well within the shipment period. Harvesting is proceeding rapidly in the lowland areas and it is thought that most of it will be gathered in before the flooding due to the recent rise in river levels can take effect.

In Pakistan, new crop imports into Narayanganj have remained steady at about 3,000 maunds a day, but the quality of recent arrivals is reported to be poor due to insufficient steeping water at the time of cutting. Recent rains, however, have improved the situation, and arrivals from the present harvesting are expected to be excellent. The markets are steady with an upward tendency brought about by the increased demand for new crop jute, and prices have advanced about Rs. (P) 1 a maund. Business has been done in B. Bottoms at Rs. (P) 15 to Rs. (P) 16 a maund and in C. Bottoms at Rs. (P) 14-8 a maund for July delivery.

INDIAN JUTE CROP REPORT

In their sixteenth crop report for the current Indian season covering the week ended 2nd July, Messrs. Sinclair Murray & Co. Ltd., say that favourable weather conditions continued in most areas with the exception of Orissa where further sunshine would help to promote the growth of plants. Lowland harvesting operations are continuing in Assam and it is estimated that approximately -2/- of the crop has so far been cut. River levels are generally normal although in Assam they are still above normal but are now slightly lower than at this time last year.

DANPUR: Weather conditions have been mainly wet and a spell of sunshine would now help to promote growth and assist weeding operations. Plant condition is satisfactory although in some areas there has been slight insect damage but this is so far not serious. Plants range in height up to 4ft. 6in. The river level is normal for this time of the year.

JAIPUR ROAD: Report not received.

COSSIMBAZAR: Weather conditions have been very favourable with light showers and spells of sunshine. The standing crop continues to make very good progress and the condition is very satisfactory with plants ranging in height up to 4ft. 6in. The river level is normal for this time of the year.

RANAGHAT: Light rainfall was experienced but now heavy rainfall is essential to provide sufficient steaming water for the early sown lowland crop which will shortly be ready for harvesting. Weeding operations are going on where necessary. Plant condition is still satisfactory although there has been some insect damage but this should be alleviated with the heavy rainfall experienced over the week-end. Plants range in height up to 4ft. 9in. The river level is normal but slightly lower than at this time last year.

NOWGONG: Weather conditions have been very favourable with a spell of hot and dry weather during the first half of the week and good general rainfall at the latter end. The standing crop is making satisfactory progress and harvesting operations are proceeding in the lowlands. It is estimated that -2/- of the crop has been cut up to date. The river level fell steadily and is now 3ft. lower than last year at this time although this is still higher than normal for this time of the year.

PALASHBARI: Weather conditions were mainly hot and dry with the exception of one good shower of rainfall and this has been very favourable for the progress of the standing crop and has allowed highland weeding operations to proceed freely. Harvesting is going on in the extreme lowlands but the amount cut is negligible. Plant condition is satisfactory and the plants range in height up to 6ft. 3in. The river level fell steadily and is now 2ft. lower than last year at this time but this is still above normal for this time of the year.

DHUBRI: Excellent weather conditions were experienced with bright sunshine and scattered showers. Plant condition is very satisfactory and the plants range in height up to 7ft. 6in. Harvesting operations are going on slowly due to a fall in the river level but it is estimated about -2/- of the crop has been harvested up to date. The river level fell and is now 2ft. lower than this time last year although this is still above normal for this time of the year.

FORBESGANJ: Weather conditions were mainly dry with good spells of sunshine but little rainfall and this has been beneficial to the growth of the standing crop. Plant condition is healthy and the plants range in height up to 4ft. 6in. Some harvesting has been reported in the extreme lowlands but the amount cut so far has been negligible.

DAISSEE DISTRICTS: Weather conditions have been favourable with moderate rainfall and sunshine. Condition of young plants is satisfactory and they range in height up to 5ft. Weeding operations are going on where required. The river level is normal for this time of the year.

Rainfall	For the week		Total from Rainfall	
	1953	1954	1st July, 1955	over the week-end

N.B.—As a basis of comparison last season's rainings have been taken as -18/-.

PAKISTAN JUTE CROP REPORT

In their seventeenth crop report for the current Pakistan season covering the week ended 2nd July, Messrs. Sinclair Murray (Pakistan) Ltd., say that alternate rain and sunshine has been experienced which has allowed the crop to make further satisfactory progress. Harvesting of the lowland crop is now in full swing. River levels continue to rise slowly but are for the most part slightly lower than last year at this date. Imports of new crop are small and consist mainly of low weedings.

NARAYANGANJ: Weather has continued favourable with alternate rain and sunshine. Condition of plants is satisfactory and they range in height up to 6ft. 3in. Harvesting of the lowland crop is now well in hand. The river level is now 1ft. 6in. lower than at this time last year.

DACCA: Weather conditions have remained favourable with alternate rain and sunshine which has allowed the crop to make satisfactory progress. The condition of plants is very good and they now range in height up to 6ft. Weeding in the highlands is going on where necessary and good progress has been made with the harvesting of the lowland crop. The river level has continued to rise slowly but is still 3ft. lower than at this time last year.

CHANDPUR: Alternate rain and sunshine has been experienced during the past week which has been beneficial for the crop. Condition of plants continues to be satisfactory and they now range in height up to 7ft. 3in. Weeding operations are complete and harvesting of the lowland crop is going on slowly. The river level has continued to rise during the past week and is now 5ft. 3in. higher than at this time last year.

NIKILIDAMPARA: Weather conditions have continued favourable with alternate rain and sunshine. Condition of plants is satisfactory and they range in height up to 7ft. Harvesting of the lowland crop is now complete and a little progress has been made with the midland crop. The river level has risen 1ft. and is now at the same level as at this time last year.

SARISHABARI: The weather has continued favourable with alternate rain and sunshine and the crop is making very good progress. The condition of plants is reported to be healthy and they now range in height up to 7ft. Harvesting of the lowland crop is going on steadily though slower than expected due to a slight fall in the river level. The river level has fallen 6in. during the past week and is now 2ft. 9in. lower than at this time last year.

SIRAJGANJ: The weather has been favourable with alternate rain and sunshine. The condition of plants is satisfactory and they range in height up to 7ft. 6in. Weeding of the highland crop is going on

where necessary and the harvesting of the lowland crop is now in full swing. The river level has risen 1ft. 3in. during the past week but is still 2ft. lower than at this time last year.

NAKALIA: The weather has been hot and dry and unfavourable for the growth of the midland and highland crop. More rain is required. Condition of plants is still satisfactory but lack of rain may stunt their growth. Plants range in height up to 6ft. 6in. Harvesting of the lowland crop is going on steadily. The river level is steady but is still lower than at this time last year.

BHANGOORA: The weather during the first part of the week has been hot and dry but rain in the latter half has been beneficial for the crop. Condition of plants continues satisfactory and they range in height up to 7ft. Weeding in the highlands is going on where necessary and the harvesting of the lowland crop is going on on a small scale. The river level has risen 1ft. 6in. during the past week but is still 1ft. lower than at this time last year.

Rainfall	For the week	Total	Rainfall
1955	1954	from 1st Jan. over the	1954 Week-end

N.B.—As a basis of comparison last season's sowings have been taken as -16/-.

PAKISTAN'S RAW JUTE EXPORTS

At the end of the jute year on 30th June, there was no carry-over of raw jute in Pakistan. Total exports from Pakistan during the year were 5 million bales—only 100,000 bales less than in the previous year. Although the exact amount of foreign exchange earned is not known, according to preliminary calculations, Pakistan has earned about Rs. 55 crores. Jute export policy, which will be announced shortly, is expected to make provision for fixing a minimum price. The East Pakistan Chief Minister, who has arrived in Karachi, has stated that he will discuss all aspects of the jute industry with the Central Government. The United Front Party, to which he belongs, is committed to ensure a fair price to cultivators. The export price check which is in force will continue to operate this jute year to ensure a better price to growers.

GUNNY SHIPMENT STATISTICS

The following are the total nett figures of manufactured jute goods shipped from Calcutta during the month of May 1955 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	3,440.4	27,219.1	30,659.5
Short Shipped	39.5	819.8	859.3
May 1955 (Nett)	3,400.9	26,399.3	29,800.2
April 1955 (Nett)	1,129.0	21,777.4	22,906.4

	Sacking		
Gross	44,309.9	956.6	45,266.5
Short Shipped	2,148.3	Nil	2,148.3
May 1955 (Nett)	42,161.6	956.6	43,118.2
April 1955 (Nett)	30,002.6	902.6	30,905.2

June Statistics

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 30th June, 1955	2,408.6	17,480.8	19,889.4
1st to 31st May, 1955	3,440.4	27,219.0	30,659.4

	Sacking		
1st to 30th June, 1955	28,525.8	1,080.1	29,605.9
1st to 31st May, 1955	44,309.7	956.6	45,266.3

DE-PLANING IN AN EMERGENCY

Trials began recently with representative types of aircraft to find out how long it is likely to take passengers to leave an aircraft in the various circumstances that might occur in an emergency and to see whether improvements in design, or in methods of evacuation, are possible. Similar trials have been held in the United Kingdom before, but not on a systematic plan. The trials will extend over several months and are being organised by the Ministry of Transport and Civil Aviation in conjunction with the Air Registration Board. Aircraft firms and airlines are co-operating in making aircraft available and supplying air crews and technical help. Arrangements are also being made for the trials to be filmed so as to provide a permanent record which can be analysed.

The aircraft will remain on the ground and it is hoped that there will be enough volunteers from the Ministry staff as "guinea-pig passengers" for each test to be representative of the normal load of inexperienced air travellers. Most of the trials will take place during the winter months, when aircraft can more readily be spared. The initial trials were made with a de Havilland Comet which was made available for use at London Airports before being handed over to the Ministry of Supply for research. There were two minor mishaps in which one man suffered a bump and a woman sustained bruises.

Calcutta Markets

PRICES RISE FURTHER IN TEA EXPORT SALE

AT Sale No. 5, held on 4th and 6th July, offerings in the Export auction consisted of 34,885 packages, which included some quite attractive and flavoury Second Flush Assams with tip. There was a very strong and general demand for all descriptions. Commons and Low Medium advanced by 2 to 4 annas per lb., while the better liquoring Mediums were 4 to 6 annas dearer. Brown Doors Fannings were only 1 to 2 annas dearer while Darjeeling teas generally sold above valuations. Good tip teas fetched prices well in excess of brokers' valuations, while C.T.C. Assams advanced by 1 to 3 annas, particularly the Fannings.

Quotations

	1955 Rs.	1954 Rs.
Clean Black Pekoe	2 15 0 to 3 0 0	
Plain B.P.	2 5 0	50.84
Medium Assam B.P.	2 7 6 to 2 8 0	
Best C.T.C. Assam B.P.	2 14 0 to 2 15 0	

At the Internal sale, offerings of Dusts consisted of 6,700 packages of New Season's teas and 570 packages of Old Season's. There was a very strong and excited demand for all descriptions. The strongest feature was the black leafy Dusts from all districts suitable for the Middle East, which were from 8 to 12 annas dearer. Doors and Medium Assams were 2 to 4 annas stronger and those with quality were from 4 to 6 annas dearer and sometimes more. C.T.C. Assams were from 4 to 6 annas dearer, while Darjeelings were irregular although the small powdery Dusts with flavour were sometimes dearer. The poorest sorts were from 1 to 3 annas dearer.

	1955 Rs.	1954 Rs.
Medium Doors Dust	2 4 0 to 2 5 0	2 1 0 to 2 1 6
Medium Assam Grainsy	2 7 0 to 2 8 0	2 2 0 to 2 2 6
Dust	3 8 0 to 3 4 0	2 8 0 to 2 9 0

Offerings of other grades consisted of 650 packages, of which 80 were Old Season's teas. There was a fair demand and prices advanced irregularly by 2 to 4 annas. The 57 packages of Green Tea on offer met with fair demand.

FREIGHT RATES KEEP FIRM

THE firm tone of the market is still maintained but the amount of business fixed has been on a limited scale mainly due to lack of tonnage. Two vessels have been secured for coal from Hampton Road to the Continent at the lower rate of 60s 6d but this is mainly due to there being only a limited number of stems available for prompt loading. Tonnage is required for grain from Churchill St. Lawrence Range and Gulf loading areas to various destinations. Australian charterers also require vessels for U.K. and Continental ports. Indian ore charterers are quoting orders to the Continent, Japan and the United States but no business has been reported. The amount of Time Charter orders circulated is still not very great but vessels that are fixed are securing very firm rates.

SUGAR MARKET

During the week ended 6th July, sugar sales in the Calcutta market averaged 2,500 bags a day. Arrivals were 2,000 bags daily, and stocks totalled 400,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 29-14 for ordinary grain and Rs. 30-10 for big grain. Forward delivery sugar sold at Rs. 29-14 and Rs. 31-10 for ordinary grain and big grain varieties respectively. Ex-mill delivery rates ranged from Rs. 28-2 to Rs. 29-6 for standard grades of sugar. Business was limited.

LINSEED

A very firm undertone prevailed in the market last week and the local demand exceeded the supply; price levels advanced further and goods were scarce owing to poor arrivals and firm advances from the centres. Despite keen enquiries from crushers trading was on a small scale. Activity in the oil section was keen and prices advanced to higher levels owing to good demand from both local and overseas buyers. Latest quotations were as follows: July-August Rs. 19-8 a maund.

HIDES AND SKINS

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 28th June and 4th July, 1955)

Cowhides: Wet salted (Ord.) 4,000 pcs. on the basis of Rs. 11-12 to Rs. 12-4; Wet salted (Slaughtered) 14,200 pcs. on the basis of Rs. 13 to Rs. 25-8. **Goatskins:** Wet salted (Daissee, Killed) 39,700 pcs. on the basis of Rs. 225 to Rs. 250 and Rs. 325 to Rs. 350; Assam-Dinajpur-Murshidabad 5,200 pcs. on the basis of Rs. 250 to Rs. 295; Patna 6,200 pcs. on the basis of Rs. 215; Muzafferpore (heavy) 350 pcs. on the basis of Rs. 320.

Bazaar Stocks

(4th July, 1955)

Cowhides: Wet salted 1,27,500 pcs. **Goatskins:** Wet salted (Daissee, Killed) 34,000 pcs.; Muzafferpore - Pakur - Patna - Purneah - Kisenanganj 4,52,000 pcs.; Assam-Dinajpur-Murshidabad 1,10,000 pcs.

SHELLAC MARKET FIRM

During the week ended 5th July, the market opened quietly and ruled firm during the rest of the week. The range of quotations was as follows:

Pure Buttonlac	Rs. 141 value; 145 buyers; 149 value.
Lemon No. 1 Shellac	Rs. 136-8 buyers; 142 done and buyers; 145 buyers.
Lemon No. 2 Shellac	Rs. 131 to 140 buyers.
F. O. Std. 1 Shellac	Rs. 126 to 135 basis done and buyers.
Pure TN Shellac	Rs. 120 to 125-8 buyers.
4% I.T.N. Shellac	Rs. 137 value; 122-8 to 125-8 buyers.
No. 1 Kusmi Seedlac	Rs. 131 value; 134/135 buyers.
No. 2 Kusmi Seedlac	Rs. 127 to 132 done and buyers; 133-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 123-8 to 130-8 buyers.
Fine Bysaky Seedlac (C. P.)	Rs. 120 to 127 done and buyers.
Ordinary Bysaky Seedlac (C. P.)	Rs. 113 to 121 buyers.
Under 3%	Rs. 57-8 to 60 buyers!

Shipments during July until the 2nd were 4,116 packages comprised as follows: Shellac 2,570 packages; Seedlac 1,195 packages; Buttonlac 51 packages; Other lac products 300 packages.

Plantation Topics

LONDON TEA SALES

AT last week's London tea sales the 69,555 packages on offer realised an average price of 3s 7.6d, against 3s 7.70d in the previous week and 4s 8.46d a year ago. Results obtained by some of the companies are given below:

	No. of Packages	Average per lb.
Amalgamated	1,044	3/6
Anglo-Ceylon	389	3/10 1/2
Assam Frontier	1,032	3/11
Bagra-cote	421	2/11
Budla Beta	366	3/11 1/2
Central Provinces	944	3/11 1/2
Cons. Estates	499	3/11 1/2
Cons. Tea and Lands	2,059	3/2 1/2
Darjeeling Co.	180	3/7 1/2
Dekhari	683	3/9 1/2
Doom Dooma	1,296	4/
Eastern Assam	813	4/
Eastern Produce	924	4/5 1/2
Imperial Ceylon	222	4/6 1/2
Jhanzie	672	3/9 1/2
Jokai	2,169	3/9
Jorehaut	708	4/1
Lunuvu	1,086	4/
Majuli	652	3/10
Malayalam	575	3/5 3/4
Moabund	498	4/0 3/4
Nedem	641	3/2 1/2
New Dimbula	528	4/5
Nuwars Eliya	162	4/5
Pabbojan	504	3/9 1/2
Rajawalla	969	4/2 1/2
Scottish Ceylon	331	3/10
Scottish Tea and Lands	810	4/1 1/2
Standard	427	4/7
Tingri	522	3/8 3/4
United Planters	750	4/2
Upper Assam	348	3/10

U.K. stocks at 24th June amounted to 147.7 million lbs., against 94.9 million lbs a year ago.

COCHIN TEA SALES

At Dust Sale M, 590,000 lbs. were on offer. Demand was limited and prices were irregularly two to three annas lower except for the best liquoring high grown teas.

At Sale No. 13 on 28th June, a record quantity of just under 30,00,000 lbs. was catalogued but of this total 2,60,000 lbs. of reprints were withdrawn prior to the Auction. Nilgiri Teas generally showed a slight falling away in quality whilst that of other descriptions often showed a marked decline. There was a good demand, internal buyers again being active whilst exporters had more orders than of late. Best liquoring Nilgiris ruled firm to dealer, whilst others were fully firm except thin liquoring sorts which were slightly easier. Fannings grades in this category came to a very strong and much dearer market. All Medium, Low Medium and Lowgrown Broken and Fannings of clean appearance met with keen competition at fully firm rates, but stalky and fibrous descriptions were 2 to 3 annas easier. Black Leaf Middle East Broken advanced 1 to 2 annas whilst similar types of Fannings were the strongest feature of the market and prices advanced 3 to 4 annas and often more. Whole Leaf grades were again a strong feature and generally advanced 2 to 3 annas.

Quotations

	1955 Rs.as.ps.	1954 Rs.as.ps.
Low Grown Travancore	B.O.P. 1 7 6 to 2 5 6	
Medium	B.O.P. 1 10 0 to 2 6 6	
Anamallai	B.O.P. 2 0 0 to 2 8 0	
Best Liquoring Nilgiri	B.O.P. 2 7 3 to 2 11 3	
Black well made	O.P. 3 0 0 to 2 9 6	

The Export Quota market touched 7 1/2 annas last week, dropped to 6 annas at the week-end at which rate there were still buyers.

EXPORT TEA PRICE CUT

* The Government of India has issued a notification fixing the price of tea, for the purpose of determining the export duty, at Rs. 2-6-5 as against

Rs. 2-7-3 a lb. in force from 1st June, 1955. The export duty at this price will be 4 annas a lb. which means there will be no change in the existing duty.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 24-6-55 (Rupees a lb.)	Average for the period. (Rupees a lb.)
Sheet:		
No. 1	1.13	1.13
No. 2	1.11	1.11
No. 3	1.09	1.09
No. 4	1.07	1.07
No. 5	1.05	1.05
Sheet Cuttings 1	1.08	
Sheet Cuttings 2	1.03	

Crepe:

Water White	—	1.48
R.M.A. No. IX	1.43/45	1.44 1/2
R.M.A. No. 1	1.41/42	1.42
Crepe No. 2	—	1.40
Crepe No. 3	—	1.36 1/2

Scrap Crepes:

Sc. Crepe No. 1	1.23 Nom.	1.24
Sc. Crepe No. 2	1.15/20	1.18 1/2
Flat Bark	1.06/12	1.08 1/2
Sc. Crepe 3X	—	1.13

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 25.4 cents in respect of scrap crepe to the above market prices.

EMPLOYMENT SITUATION DURING MAY

The employment exchanges placed 16,331 persons in employment during May, 1955, the highest figure recorded since the middle of 1953. The number of vacancies in the public sector all over India notified to the exchanges during the month was the highest since the end of 1953. There was also some improvement in the demand for manpower from the private sector. The number of unemployed discharged Central or State Government servants continued to decline. Five States, notably West Bengal and Hyderabad, reported a definite improvement in the employment situation. The number of fresh registrants and of unemployed persons on the live registers of the exchanges remained unchanged. A district employment exchange was established at Rourkela in Orissa to assist the Hindustan Steel Limited in the recruitment of labour.

A special study regarding registrants in the engineering and medical professions showed that there were 582 engineering graduates and 528 engineering diploma-holders seeking employment at the end of March 1955. There were also 207 medical graduates and 259 licentiates registered with the employment exchanges for such assistance. Another study revealed that the exchanges were handling better paid and higher class vacancies than they did before. Whereas 47 percent of the placements in 1953 were in jobs carrying a salary range from Rs. 30 to Rs. 60 p.m., the percentage had declined during the period January to April 1955 to only 32. On the other hand, placements made in the salary group ranging from Rs. 61 to Rs. 100 had increased from 38 percent in 1953 to over 50 percent in 1955. Jobs carrying a salary of Rs. 101 and above had increased from 10 percent in 1953 to over 14 percent in 1955. Under the training schemes of the Ministry of Labour, 11,781 persons, including 560 women and 2,129 displaced persons, were receiving training at the different training institutes or centres at the end of the month. Besides, there were 96 instructor-trainees at the Central Training Institute, Koni-Bilaspur, and 21 women-instructor trainees at the Industrial Training Institute for Women, New Delhi. There were 536 apprentice trainees undergoing practical training in production work in Uttar Pradesh and West Bengal under the Apprenticeship Training Scheme for displaced persons.

[illegible]

(t) With option to redeem at 100/8% after 13 years

(2) Also redeemable out of a cumulative sinking fund

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

WEALTH AND STAGNATION IN THE MIDDLE EAST

U.N. SURVEY OF POSTWAR DEVELOPMENTS:

A STORY OF LOST OPPORTUNITIES

NO underdeveloped area has been more fortunate in its economic opportunities since the end of the war than the Middle East. And no underdeveloped area has made less of its opportunities. These opportunities lay in the postwar boom in what is far and away its leading product, oil. Vast fortunes have been invested, and made, in quadrupling the output of this mineral since 1945. Probably as vast fortunes have gone in the form of economic or military aid to an area which, because it has oil and because it lies at the "belly" of Russia, is of vital importance to non-Communist defence. Smaller, but nonetheless significant, sums have arrived in the wake of the Zionists' return to their homeland. But the point to notice is that this unprecedented inflow of wealth has created only pockets of well-being amidst an ocean of comparative stagnation. Feudalism, imperialism and endless factional conflicts have sapped the energies of peoples who centuries ago lost their best to the spreading desert. No doubt, some progress has been made; but this progress has borne little relation to the opportunities that have offered. Other economies, almost as narrowly based as the Middle East's, who have suffered much severer buffeting in international trade and have received much less in the way of foreign investment, yet are able to show signs of greater vitality.

These criticisms apply particularly to the oil areas of the south, such as Saudi Arabia and Iran; they are less pertinent in the north where Israel and Turkey, for instance, have a reasonably good record. At the risk of unfairness to some territories, they deserve nevertheless to be strongly emphasised in any general assessment of the Middle East. The reader needs to bear this in mind in studying the United Nations review entitled *Economic Developments in the Middle East, 1945 to 1954*, which has just been published. Because the U.N. is not concerned to describe the political and social factors that have restricted the economic development in the Middle East, the picture is rather flattering. To gain perspective, the impact of these factors would have to be carefully analysed; and achievements would have to be measured against potentialities, not against the miserable standards of ten, twenty or thirty years ago.

If this qualification is kept in mind, and it is a major one, the main conclusions of the U.N. review are likely to be a good deal less encouraging than they seem. It is stated, for instance, that during the postwar years the rise in national income of the Middle Eastern countries has been greater than their population growth, progress being more rapid since 1950. In recent years, it adds, the rate of advance has been accelerated and there is reason to believe that future progress will be more rapid, since it is proceeding with marked monetary and price stability and without imposing too great a strain on the balance of payments. A greater proportion of the national product is being absorbed by investment, and in some countries fundamental economic and social changes are helping to remove some of the greatest obstacles to development.

It is evident that progress has been far more rapid in the oil industry than in any other sector of the economy. Investment in this industry has risen from \$1,000 million in 1945 to \$2,200 million in 1954. Production of crude petroleum has increased from 35.6 million metric tons in 1946 to 135.6 million tons in 1954, raising the share of the Middle East from 9.4 percent of world output to 19.7 percent. The proved oil reserves of the area as a whole are now estimated at about 12,500 million metric tons, which represents an increase

of 240 percent over the 1945 figure. The share of the Middle East in world reserves has risen meanwhile from 40 percent to 60 percent. The most spectacular increase has been in Kuwait; it produced only 800,000 tons in 1946 but the 1954 figure was 47.73 million tons—more than any other single Middle Eastern territory. Refining capacity has also been expanded, but the report notes that on this point the relative importance of the Middle East has declined because the tendency is to build new refineries near the consuming centres.

The oil boom has not only brought enormous fortunes to the oil companies; the revenues of the producing territories have increased vastly, under the terms of payments in the concessionary agreements and with the adoption of the principle of equal profit-sharing. Direct revenues of the oil producing countries in the Middle East are estimated to have totalled nearly \$2,500 million between 1946 and 1954. Of this, approximately \$55 million accrued in 1946, increasing to an estimated \$700 million in 1954, and more than 93 percent of this latter figure has gone to Iraq, Kuwait and Saudi Arabia. In addition to these direct payments, local expenditures for payment of wages and purchase of materials has increased.

Progress in other sectors has been a good deal slower. Agricultural output in 1953 was just over 1½ times that of 1945-47, which in turn was slightly below the prewar average. The increase was mainly attributable to the extension of the cultivated area, and extension was made possible partly by greater mechanisation, partly by increased irrigation and in recent years by exceptionally favourable weather conditions. Yields per acre are only slightly above what they were before the war, and agriculture still depends very much on the weather. It is estimated, for instance, that of the increase in the output of grains in Turkey between the poor crop of 1948 and the record crop of 1953 some 43 percent was due to favourable weather and only 9 percent to improvements in rural methods and increased yields.

Industrial production has increased by rather more than 50 percent in the whole region. Most of the new industries, such as assembly of motor cars and tractors, chemicals, electric appliances and rayon, were established in Egypt, Israel and Turkey. In Iraq, Iran, Lebanon and Syria, consumer goods industries such as textiles, food processing and building materials were enlarged. Manufacturing and mining now account for 20 percent of the gross national product of Israel, 15 percent of those of Lebanon and Turkey, 10 percent of those of Egypt and Syria. Industrial growth has been mainly achieved by private enterprise but with various forms of State encouragement, including tariff protection, remission of taxation and preferential treatment in government purchases. Efficiency has been raised, but large sectors still continue to depend on protection for their survival. In regard to fiscal changes, the review notes that income tax has been introduced in almost all countries of the region. But direct taxation still accounts for only a small though increasing proportion of national income. This is partly because of inefficient collection, partly because of the distribution of national income and partly because of the lowness of rates.

Progress in the diversification of trade appears to have been almost negligible, and the review states that the continued dependence of the region on a very small number of export items renders it highly vulnerable to changes in world economic activity. After the end of the war, the increase in imports was swifter than in exports, and the

import surplus grew as a result. In the oil producing countries, the trade deficit was covered by revenues from oil. In Israel, Turkey and more recently in Iran, foreign aid played an important part. With the postwar increase in prices of basic commodities, the terms of trade of the Middle Eastern countries reached their most favourable point during the Korean fighting, but towards the end of 1951 there was a sharp break in prices and terms of trade deteriorated again. The composition of exports has shown little change in the postwar period. Excluding petroleum, over 90 percent of the region's exports continue to consist of cotton, grains and other agricultural products. On the import side, the most important changes have been the increase in imports of foodstuffs, where growth of population has outstripped the increase in agricultural production, and in capital goods. Imports of manufactured consumer goods show little or no increase. The direction of trade has returned to the prewar pattern except that the level of imports from the United States is higher. It is disappointing that intra-regional trade has been decreasing for several years and is now at a very low level. Even more disturbing is the fact that except in the major oil producing countries reserves of foreign exchange are inadequate to meet fluctuations in world trade.

Foreign investments in the Middle Eastern countries from 1944 to 1953, inclusive, have been estimated as follows, in millions of United States dollars:

	United States	Other	Total
Direct business investments ...	824	695	1,519
Portfolio investments (purchase of bonds) ...	140	10	150
Government grants and credits (including military aid) ...	1,098	452	1,550
Institutional remittances ...	533	71	604
	Total 2,595	1,228	3,823

BEST HALF-YEAR IN U.S. BUSINESS HISTORY

WARNING ON INFLATIONARY DANGER

THE First National City Bank says in its Monthly Letter on U.S. business conditions that the nation has just rounded out the best half-year in its business history, and is starting the second half-year not only with production, employment, purchasing power, and consumption at record levels, but also with bullish expectations perhaps more widely spread than at any previous time during the recovery. For a long time many business observers thought the figures turned in by the automobile, steel and housing industries were too good to last, and considered the outlook for the summer and autumn months correspondingly dubious. That attitude has not wholly disappeared, and finds some justification in the fact that the speed of the upswing is due to slow down. But the spread of recovery, its continuing vigour even in the lines mentioned, and the general course of developments during June, have swung the balance of opinion the other way. The automobile labour settlements which made such spectacular news early in the month have had a strong influence upon sentiment. On the one hand, they removed fears of a costly strike in a great industry, with effects extending to suppliers and producers of materials, and they established instead a pattern of gradual seasonal curtailment which is plainly less disruptive. At the same time, the terms of the new wage contracts have promoted inflationary expectations. The supplemental unemployment benefit plans granted by Ford and General Motors add nothing immediately to purchasing power, since the trust funds to be created cannot be drawn upon until 1st June, 1956, at the earliest. But they add to labour costs at once. With the wage increases and fringe benefits, they make up a total "package" of approximately 20c an hour, or about 10 percent of current basic wage rates. In varying degree, and over a period of time, other employers will have to grant increases. The higher wage costs will go around the circle. It is uncertain whether a steel strike will occur, but in any case steel wages will rise and steel price increases will almost surely follow. Thus costs of materials and parts, as well as of labour, will be increased.

In these circumstances it must be expected that purchasing agents will see reason to add to commitments, and that people generally will think this a good time to buy. Modest wage increases in times of high sales volume and rising productivity do not necessarily push prices up significantly, but increases which outrun possible gains in productivity are another story. There is no precedent for thinking that increases in wage costs as substantial as those now in the making can be absorbed without raising prices. To be sure, some time must pass before the higher wages move around the circle. The slower the movement proceeds the better, for there will be correspondingly more chance to absorb the higher costs through improved productivity. Moreover, there may be many cases in which increases cannot be passed on because competition will not permit and buyers will not pay the price. In such cases the squeeze must fall on margins. For these reasons the arrival of the new round of increases is being received with mixed feelings and varied estimates of its effects. The over-riding consideration, however, is plain. An influence for higher prices of manufactured goods, and hence a stimulus to more liberal forward buying and inventory accumulation, has been set in motion.

General business reports have added to optimism. Industrial production hit a new record in May and may have matched it in June despite "wildcat" automobile strikes. Employment in May reached a new high for that month. Capital expenditures are being stepped up; new plant and equipment purchases in the third quarter are expected to reach an annual rate of \$28,800 million, up one-eighth from the low first quarter and equal to the peak rate in 1953. An official forecast of the U.S. Departments of Commerce and Labour anticipates that construction expenditures will total \$41,800 million during 1955, or 11 percent more than in 1954. As offsets to the areas of expansion, little contraction is in sight, other than seasonal slackening and vacation shutdowns. In the automobile industry, to be sure, the curtailment may be more than seasonal in extent. Everywhere rates of gain must be expected to slow. Steel production, for example, rose 54 percent in the first seven months of recovery; strike or no strike, the period of low automobile operations may bring some curtailment. However, the size of unfilled order backlogs and the persistence of demand for steel have surprised those who earlier predicted a drop in operations to 70 or 75 percent of capacity during the third quarter. It is plain that nothing of the sort is in prospect.

This description implies that the recovery has reached a point from which it might take an unsound and eventually harmful turn, and that private and public economic policies should be re-

viewed with the object of checking boom tendencies and maintaining the stable prosperity which has been enjoyed up to this time. In one sense the news is too good. The danger is that the elements making for caution may have been weakened as the automobile and steel industries have performed better than expected, while on the other hand inflationary expectations have been promoted. At the start of 1955 most observers thought it would be a good year, but few expected it to be a record-breaker. Nevertheless, in the first quarter the aggregate output of goods and services pushed past the 1953 peak, and in the second quarter it advanced still further. The gross national product for the first quarter was at an annual rate of \$37,000 million, and the second quarter is tentatively estimated at over \$37,500 million. Thus, the first half of 1955 probably averaged 5 percent better than the same period last year and 2½ percent ahead of the previous record in the first half of 1953. Meanwhile the cost of living has been steady. The purchasing power of the dollar has held stable within a very narrow range (plus or minus 1 percent) during the past 2½ years.

Now the question arises whether the economy is to move into a period during which costs and prices will move up at a higher rate than physical output, substituting the illusion of inflation for genuine prosperity. Until recently there was sufficient slack in the utilisation of manpower, materials, and industrial capacity to argue convincingly against the possibility of inflation. With the return of production and sales to record levels, there is now less leeway. The labour reserve, as measured by unemployment, was down to 2.5 million in early May, or 3.8 percent of the labour force. The industrial work-week has expanded to an average of 40.7 hours, indicating considerable overtime work. Supplies of most metals are tight. These signs do not mean that the economy has reached the peak of its capacity—far from it. But in many lines a point has been reached at which it is difficult to expand output in answer to an increase in demand. The Bank concludes: "The high level of optimism and the heavy demand for labour and materials tends to lower resistance to wage demands or price increases. The stability of prices for nearly four years should not lull us into believing that price movements will continue to be minor. Now, more than ever, there is need for caution and forbearance."

BANKERS AND THEIR CUSTOMERS

QUESTIONS of principle have been raised by the latest turn in British monetary policy. When the authorities adopt a particular course of monetary action should they alone make that action effective or should they enlist the active co-operation of the banks? Should the authorities issue directives or should the banks themselves decide, according to their financial circumstances, how much and to whom they should lend? The problem has arisen as a result of the stricter monetary policy applied in British since January, or, rather, from the comparative failure of that policy in the first half-year of its operation. The authorities' approach to inflation was, it seems, theoretical rather than practical. They assumed that if money rates were raised and credit were restricted at its source the banks would, automatically, lend less. In the event, the banks continued to increase their advances to their customers. It can be said in defence of the authorities that they were not content merely to raise the cost of borrowing. At the same time they restricted their operations in the money market so that the discount houses had frequently to borrow from the Bank of England at full Bank rate and for the minimum period of one week. It was impossible to risk buying bills much below Bank rate (4½% over most of the period), and the discount on Treasury bills rose almost to 4%. Treasury bills became an attractive investment for business houses, and even for big individual investors. So the banks lost money from time deposits (the building societies, incidentally, suffered similar withdrawals), and the quantity of Treasury bills available to the banks was diminished by this "outside" competition.

It might have been assumed that the banks, with their liquid resources thus curtailed, would necessarily restrict their lending; for the banks, by tradition (and the tradition has this year been officially recognised), do not allow their liquid resources to fall below 30% of their deposits. But the banks have large holdings of investments, which, even though short-dated, do not qualify as liquid assets. They sold investments in order to fortify their liquid positions and were thus able to continue increasing their advances. It has been said that bodies such as the electricity and gas boards, under the Government's control, which are among the banks' biggest customers, were

largely responsible for the increase in borrowing from the banks. Their borrowings are normally converted periodically into long-term debts by issues of stock, from the proceeds of which their short-term debts are repaid. But the banks' sales of investments (in practice, the shorter-dated Government bonds) weakened the whole structure of Government securities, so that circumstances were inopportune for new issues. It is arguable, moreover, that the authorities were reluctant to see the advances to the public utilities repaid, because repayment would provide more resources for the banks to lend elsewhere.

Whatever the official intentions, the banks continued to lend more, until the whole policy of credit restraint was in jeopardy. By a fortunate coincidence, by the time when the growth of the banks' lending began seriously to disturb the Treasury, the banks themselves were worried by the attenuation of their investment portfolios. To a certain point, it is profitable to sell short-dated investments, which do not yield very much, in order to provide money for advances, which are the banks' most lucrative asset. But the prices at which these sales could be made had fallen heavily (partly as an automatic reaction to the rise in Bank rate, partly in consequence of the sales themselves), and substantial capital losses were involved in the procedure. It may be that, however belatedly, credit control would have restricted the banks' advances, without deliberate intervention from the authorities. But the authorities, foreseeing another period of deterioration in the balance of payments, intimated to the banks that deliberate restraint had become necessary. And at that point a new controversy arose. What precisely, is the function of bank-lending in a free economy? What is the power of the banks to restrain consumption and investment if they have the will to do so?

The authorities have not resorted to the detailed directives that were customary between the beginning of the war and the Conservatives' "new monetary policy". These directives were abandoned in 1952. The principle has been since then (it is still) that the quantity of credit shall be regulated "at the source" and the banks shall allocate what is available according to traditional banking practice. But the banks have become fearful of losing their customers' goodwill. They have no longer the courage to refuse, on their own responsibility, a request for an advance (or to demand repayment of an advance already granted). Instead they refer to "official policy" and to "the public interest", and appeal to their customers to impose themselves the restraints that ought, so the critics aver, to be forcibly imposed by the bankers. In the normal course of business, a banker judges his clients as credit-worthy or not according to the security that they can offer. The authorities, on the other hand, judge the quality of bank advances according to their effect on the economy—especially on the balance of payments. A credit with unquestionable security may be inflationary, whereas a credit with dubious security may directly assist production for export. There is a conflict of interest, and the respective critics of the authorities and of the banks have not resolved it. The only lasting solution, it seems, is to reduce governmental spending so that total demands on resources are no longer inflated. Otherwise, the banks will often act, as they have done in recent months, at variance with official intentions.

CURRENT COIN

Prospect for Containers.—Mr. H. Chiswell Jones, Chairman of the Metal Box Company of India, indicates some interesting prospects before the Indian metal container industry in his latest annual review. He points out that the company's fortunes are intimately linked with those of the middle classes, and measures which by design or effect reduce their purchasing power will adversely affect all the consumer goods industries it serves. Metal Box have been the pioneers of the small branded consumer package for foodstuffs, the increasing use of which is highly important if India is to make the most efficient use of her food resources. Of the total fruit and vegetable crop, amounting to several million tons, a considerable portion goes to waste. If a substantial fraction of this was canned, India's requirements of processed food containers could be raised from 6 million (compared with Japan's figure of 700 million) to as much as 1,000 million cans per annum—a fact that emphasises what tremendous savings could be achieved by a well-organised canning industry. He says it is gratifying to know that the development of this important industry is being considered for the second five year plan. But even a small reduction of consumer purchasing power would block progress and mean continued wastage of food. More generally, since the small pillar-proof consumer package must of necessity be slightly more expensive, it could lead to a return to the old insanitary bulk pack, undermining those efforts which must relentlessly be made if the quality of consumer

goods and their hygienic presentation is to be improved.

Progress of Saurashtra.—Before 1947, what is now known as the Part B State of Saurashtra was a small, semi-somnolent, picturesque but underdeveloped area in the extreme west of the country, whose only distinction was that the largest number of small States exercising varying degrees of powers and jurisdictions was packed within its narrow limits. The new State of Saurashtra has been taking long and rapid strides towards industrialisation since the advent of the order bringing it. scattered territories under one progressively-minded Government. The latest of these consists of a projected soda ash and caustic soda factory at Porbunder, a minor port on the Arabian Sea coast, with a daily production capacity of 200 tons. This new venture is expected to go into production at the end of 1956 or the beginning of 1957. With internal production standing at 56,000 tons and imports at over 40,000 tons in 1953-54 and with the full certainty of the demand rising during the period of the second plan, there is scope for the full utilisation of the production envisaged from this new venture. Porbunder is well suited for this purpose, both from the point of view of transport and raw materials. Besides being a minor port, it is an important railroad of the metre gauge system serving the State and linking it directly with the northern parts of the country and indirectly with the broad gauge system via Viramgam in North Gujarat. Porbunder also has plenty of salt and limestone, the two important ingredients for the production of soda ash. There are some unusual features about this new industrial project. Although some new capital is going to be issued for this purpose, no new company is being registered for running it. It is to be undertaken by the Jiyajerao Cotton Mills of Gwalior in Madhya Pradesh of which Messrs Birla Bros. are the managing agents. It appears that this textile concern has the necessary surplus funds for undertaking this new activity. A tax-free redeemable preference shares issue of Rs. 1 crore at 5½ percent is, however, being made by the original Gwalior concern to finance the industry. It is understood that this new issue has already been sanctioned by the Controller of Capital Issues and that the Government of India has also issued the necessary licence for the undertaking.

Increasing Prosperity of African Territories.—A study of the expanded commercial activities of seven African territories and the effects of the partial transformation of the economies of these territories from a subsistence production to production for trade has been published by the United Nations. Entitled *Scope and Structure of Money Economies in Tropical Africa*, the study describes the main features of the enlarged economies of these dependent territories in their present stage of development. The territories covered by the report are the Belgian Congo, the Gold Coast, Kenya, Nigeria, Northern Rhodesia, Southern Rhodesia and Uganda. The territories have in the last few decades experienced the effects of economic changes "which have profoundly affected their economic and social structure." One of the main characteristics of those changes "is the transformation of small-scale subsistence economies into exchange economies largely dependent upon trade in the world markets." In an earlier report on the subject, published last year by the U.N. Department of Economic and Social Affairs, the conclusion was reached that in the region as a whole the land and labour resources employed in producing for a market was from 30 percent to 40 percent of the total resources productively employed, the balance being applied to production for subsistence. Figures given in the study show that although Nigeria has the largest money economy, it has the lowest proportion per head of the population. The largest per capita money economy is shown by Southern Rhodesia and Northern Rhodesia. This is because of the nature of the economic development of these territories which is taking place largely through mining and dependent industries. Nigeria, Uganda and the Belgian Congo all show a comparatively low proportion of industrial to agricultural activity. Indigenous enterprise is predominant in Nigeria, Gold Coast and Uganda. In the remaining territories its contribution is relatively small. Indigenous enterprise is primarily engaged in agriculture, but in Kenya and Southern Rhodesia commercialised agriculture is predominantly non-indigenous. The importance of corporate enterprise differs throughout the territories and tends to be the greatest in those where mining and transport provide the greater part of the economic activity. Northern Rhodesia is outstanding in this respect with about 60 percent of the total income in the form of corporate profits. At the other end of the scale, Nigeria and Uganda have only about 5 percent of income in this form. Corporate profits represent about 30 percent of total money income in the Belgian Congo, about 20 percent in Southern Rhodesia, and between 10 and 15 percent in the Gold Coast. These profits are entirely accounted for by non-indigenous concerns. The share of the indigenous population in total money income is some 75 percent in Nigeria, about 65 percent in the Gold Coast, about 60 percent in Uganda, 35 to 40 percent in the

Belgian Congo, 20 to 25 percent in Kenya and Southern Rhodesia and about 10 to 15 percent in Northern Rhodesia. Saving per capita varies considerably from territory to territory and in each territory from year to year, according to the study. It amounted to \$6 in Nigeria in 1952, while in Northern Rhodesia in the same year it was more than six times this amount. The year-to-year variations are explained by the fact that saving is accounted for by a minority of non-indigenous inhabitants and by companies and public enterprises. Corporate enterprises are almost entirely non-indigenous, and their contribution to total saving was 70 to 80 percent in the Belgian Congo, about 65 percent in Northern and Southern Rhodesia, 30 percent in the Gold Coast. The importance of exports in the money economies of tropical African territories presents two aspects. First, production for export accounts for a considerable part of the geographical income varying from 75 to 85 percent in Northern Rhodesia, 50 to 60 percent in the Gold Coast and Uganda, 45 to 55 percent in the Belgian Congo, 25 to 35 percent in Southern Rhodesia and 20 to 30 percent in Kenya. Secondly, expenditure out of export income is a source of demand for domestic goods and services and is considered of the greatest significance.

Indo-Pakistan Trade.—India and Pakistan are currently negotiating a fresh trade agreement, for which a high-level Indian delegation has just left for Karachi. Trade relations between the two countries have unfortunately followed the see-saw course of political relations, despite the obvious economic advantages which would accrue to both from a freer and larger volume of trade. The artificially determined currency exchange ratio and drastic import restrictions by Pakistan have also contributed to its diminution. The total value of Indo-Pakistan trade dropped to Rs. 29 crores in 1954-55 against Rs. 181.1 crores in 1948-49, the year of devaluation. Indian exports to Pakistan suffered proportionately a greater decline than Pakistan exports during this period. In 1948-49, Indian exports to Pakistan were 16.9 percent of her total export trade, but they dwindled to a mere 1.6 percent in 1954-55. India will find it im-

possible to carry on normal trade with Pakistan in the teeth of a chronic adverse balance. It is to be hoped however that a spirit of realism and accommodation will characterise the deliberations of the present conference at Karachi. The Bharat Chamber of Commerce, Calcutta, presented a note to the Union Ministry of Commerce and Industry and the Government of West Bengal on the eve of the trade delegation's departure, making a number of useful suggestions as to how smoother and better trade relations between the two countries can be restored. In the first place, the Chamber suggests that a comprehensive trade agreement covering all connected matters such as payments and transport facilities, customs duties and regulations, facilities to banks and insurance companies, should be negotiated rather than a mere merchandise exchange agreement such as exists at present for jute and coal. Such an agreement will remove some of the present impediments to trade. Indian exporters have been experiencing difficulty in transferring funds from Pakistan arising out of current transactions, due to the extraordinary complexities of the exchange regulations of that country. Moreover, they often find it impossible to obtain a fair value for their goods due to arbitrary fixing of prices by the Pakistan Customs, irrespective of the price originally contracted for. Without a satisfactory settlement of financial accounts, trade will not be possible and the Chamber urges the Indian Government to get these difficulties removed. It pleads in this connection, for the provision of operational facilities to banks and insurance companies registered in either country. Another important suggestion in the Chamber's note is on the removal of trade restrictions between West Bengal and other areas of Eastern India and East Pakistan. It stresses the fact that freer and larger trade will not only promote tertiary employment in the regions concerned, but will also promote consumer welfare in East Pakistan. Provision for re-export facilities in the proposed agreement for such goods as used to be channelled through West Bengal to East Pakistan have also been suggested. Finally, the Chamber maintains that the trade should be handled by private agencies rather than Government.

Company Meeting

THE METAL BOX COMPANY OF INDIA LIMITED

Review by the Chairman—H. CHISWELL JONES

Sales

The general improvement I anticipated over the unsettled conditions in 1953-54 materialised. Notwithstanding the time lag between the country's increased economic activity and its translation into demand for our products, we were able to achieve an expansion of 10% on the previous year's sales volume. This increase was in no small part due to a vigorous effort to expand our sales and we took full advantage of the opportunities offered by the improved demand for packaged consumer goods.

Our fortunes are intimately linked with those of the middle classes and measures which by design or effect reduce their purchasing power will adversely affect all the consumer goods industries we serve. As you know, we have been the pioneers of the small branded consumer package for foodstuffs, the increasing use of which is highly important if India is to make the most efficient use of her food resources. Of the total fruit and vegetable crop, amounting to several million tons, a considerable portion goes to waste. If a substantial fraction of this was canned, India's requirements of processed food containers could be raised from 6 million (compared with Japan's figure of 700 million) to as much as 1,000 million cans per annum; a fact that emphasises what tremendous savings could be achieved by a well-organised canning industry. It is gratifying to know that the development of this important industry is being considered for the Second Five Year Plan. But, even a small reduction of consumer purchasing power would block progress and mean continued wastage of food. More generally, since the small pilferproof consumer package must of necessity be slightly more expensive, it could lead to a return to the old insanitary bulk pack, undermining those efforts which must relentlessly be applied if the quality of consumer goods and their hygienic presentation is to be improved.

The purchasing power of the public shows signs of remaining steady and, provided no serious economic crisis arises, I consider the prospect for the year is a continued expansion of sales.

Profit

The increase in sales, forecast at the time of my last Review, together with the strict maintenance throughout the year of the operational economies introduced earlier, resulted, as expected, in a better trading profit.

Although competition is keen, I have confidence that the upward trend of sales can be maintained and a reasonable profit level sustained.

Finance

The dividend on the Ordinary Shares has been maintained at 10% since 1951; the year in which the

Indian public acquired an interest in the equity capital.

Fixed Assets during the four periods ended 31st March, 1955, have increased by approximately Rs. 70 lacs, i.e. nearly 70%, and this substantial increase has been largely financed from profits retained in the business.

The Directors feel that it is reasonable for shareholders to expect some return on the additional finance they have thus provided for the Company's modernisation and expansion programme. With this in mind the Directors are recommending a final dividend of 7½% on the Ordinary Shares, making a total of 12½% for the year.

Raw Materials

In June last year we were informed that a crisis in tinplate supplies was likely to develop later in the year following a temporary shortage of steel bars and a considerable over-booking of orders by many consumers in anticipation of a scarcity. In consultation with the authorities, it was deemed necessary to import tinplate from America in order to safeguard our customers' supplies. With the help of our Associates abroad early delivery was obtained and the crisis averted.

Indigenous tinplate production is presently running below demand, but expansion plans are well advanced and, early next year, a substantial additional tonnage should be available. The present shortfall is being met by importation.

There has been no change in the price of Indian tinplate during the year.

As a result of continued expansion of local manufacture and packing of previously imported goods, our consumption of aluminium is increasing. For collapsible tubes we obtain satisfactory indigenous material and, though at one time last year there was a temporary shortage of supply, this has since been remedied.

However, the special aluminium sheet required for the production of pilferproof seals, screw caps, penicillin phials and general containers is not at present produced in the country to the required standard and finish and, from time to time, delay in obtaining import licences, coupled with a steadily increasing demand, has kept us on a hand-to-mouth basis. There appears to be a good case for either an increase in the quotas granted to established importers or placing the material on Open General Licence; representations have been made to Government.

Generally, costs of other raw materials remain steady but the new Excise duty will increase the cost

of coatings, lacquers and varnishes, paper for packing purposes and board for the manufacture of composite containers.

Industrial Relations

In Bombay and Madras relationships with our workers have been excellent throughout the year. In Bombay our Works' Committee has rendered most valuable service, acting as the vital link between Management and the main body of the Workers on day to day matters, whilst in Madras the position exemplifies the fact that excellent labour relations can be maintained given sound Union leadership and a responsible Works' Committee.

In Calcutta, I am distressed to report a deterioration which, shortly after the end of the financial year, resulted in the temporary closure of the factory.

Towards the end of 1954 the Union leadership passed into the hands of extremists—a dismissed employee was elected as Secretary of the Union and, through his instigation, a series of acts of indiscipline were staged including assaults on supervisory personnel for which the assailants were dismissed. A stay-in strike took place on March 30th and, notwithstanding that Conciliation proceedings were in progress, a further strike was called and took place on April 20th. It being clear that normal work could not proceed without an assurance that these acts of indiscipline would cease, the Company decided, for security reasons, not to resume work until a satisfactory undertaking of good behaviour was obtained.

The closure lasted for 18 days with consequent loss to the Company, its workers and its many important customers in the Calcutta area, whose patience and understanding is gratefully acknowledged.

We have always been willing to sit down with our employees and discuss their reasonable aspirations and representations, but, when attempts are made to coerce Management by threats, by restraint and by attacks on the staff, we have no alternative than to take such action as will ensure the safety of our employees and the protection of our property.

It is impossible for a large industrial undertaking to function in an atmosphere of worker indiscipline; yet, in the majority of cases those responsible are a mere handful of the total labour force. These irresponsible elements—themselves with little to lose for they are often paid by outside sources—lead the main body on with extravagant promises. Such situations, rarely, if ever, lead to any lasting benefits for the workers, and more often than not, to suffering and hardship.

The situation in the Calcutta factory is now much happier and I hope will remain so for a long time to come.

Developments and New Projects

Having successfully overcome the inevitable teething troubles inseparable from a new undertaking, full scale production of aluminium pilferproof seals for glass bottles commenced in Bombay in the latter half of 1954. This new development has been well received by bottlers throughout the country; a substantial demand is forecast and we now plan to manufacture in Calcutta as well.

The Technical Development Section are manufacturing the special machines required to apply these caps.

Owing to unforeseen difficulties over the lease, now settled, the opening of the small scale factory at Delhi was delayed; production has since commenced.

The Technical Research Laboratory at Calcutta has been completed and is expected to make a valuable contribution to the development of improved surface finishing materials. The Laboratory will work in close co-operation with indigenous manufacturers of printing inks, coatings, varnishes and lacquers, to attain agreed standards on an all-India basis, which should ultimately result in operational economies.

We have recently extended the agreement with our Technical Consultants, The Metal Box Company Limited, London, to cover all aspects of Flexible Packaging—a generic term covering bags, pouches, pockets, satchels or wrappers made from viscose or thermoplastic films such as polyethylene, or laminated combinations of these with paper or cardboard. Through our Consultants we will receive the benefit of technical knowledge and research in this promising new field, but so many varied developments are currently taking place in Europe and America that we are proceeding cautiously in order that we may obtain the benefits of the latest techniques and equipment.

The Mangalore factory has completed its first full year of operation and is working smoothly and successfully.

I referred in my last Review to the start we had made on the production of Industrial components. From the trade response it is clear that we are providing a valuable service, making it unnecessary for manufacturers to set-up specialised equipment for limited production of component parts which, in themselves are merely ancillary to their main production. We expect a steady expansion of demand in this promising new field.

Until recently collapsible tubes greater than one inch diameter had to be imported, but further extrusion and printing equipment covering a larger size range has been installed and we are now making all sizes of tubes presently required. The same equipment enables us to make larger sizes of rigid aluminium tubes. Machinery has also been installed to provide internal lacquering for products which react with aluminium and need this additional protection.

The new printing factory at Calcutta has been completed and is in operation.

Staff

Once again it is my pleasure to thank all the staff for their fine effort throughout the year. Their keenness, enthusiasm and loyalty to the Company has contributed in no small measure to the satisfactory results attained.

A DITCHER'S DIARY

stay at home devising ways to blow foreigners to bits. It's a curious world. Read the U.N. report on technical aid, and the earth seems a more sensible place than it has ever been before; read Earl Russell on the bomb, and it seems sillier than it ever was. Let us hope it is sensible enough to avoid both the bomb and Earl Russell's specious alternative of world government, which might indeed be better than the bomb, but not much.

A couple of weeks ago I mentioned here a sort of training course that is offered Britons about to leave for appointments in Asia and Africa, in which they learn about what is done and not done in the countries they will have to work in. A similar service in reverse is being undertaken, the *Times of India* reveals, by the Bombay University for Indians going abroad. Short courses are arranged by the School of Economics and Sociology in conjunction with the British Council in which students holding a ticket for Europe and the Higher Education are taught how "to mix with people, converse engagingly and conduct themselves in such a manner as not to cause embarrassment to themselves or others". If these things can really be taught in a few days, I can think of a number of Europeans who should look in at the School on their way through Bombay, for the arts listed are by no means the universal endowment of my countrymen. The *Times* continues: "Students are told how they must behave in the company of others, as also in their moments of solitude (!), where to stay, what to do in particular situations, and are even taught how to use fork and knife and other table manners. Eating soup noisily has been the cause of much embarrassment in the past." This passage offers to the flippant newspaper columnist infinite and comical possibilities for reflection, all of which I will sternly resist—though I must allow myself the observation that the aesthetes of the British Council must be in their element teaching young gentlemen how to eat soup without slurping. It is to be hoped that the Bombay course does not have the effect of sending young Indians abroad with any sort of inferiority complex, fearful of violating a mass of mysterious European sensibilities, because my impression is that the average educated middle class boy from this country need not be afraid that he is going to make himself unpopular abroad by being himself. In any case, while courses on "How to Behave while Abroad" are fashionable, India's Prime Minister might start one going in Delhi where he could dispense personal instruction to heads of governments on how to conduct thoroughly dignified and successful foreign tours.

Opinion, both official and public, has at last awakened to the administrative problems of the next five year plan—the scarcity, relative to high ambitions, of the men trained to do the job. It is not true that, given the money and the tools the men materialise out of thin air to finish the work, as the gorgeously prosperous stagnation of Burma and the Middle East shows. The Indian engineers who will meet tomorrow in Srinagar will have before them a memorandum on this very problem written by Dr. Sudhir Sen, who although now a shipping magnate has not forgotten the lessons learned by the Damodar Valley Corporation when he was its secretary. Dr. Sen points out that India is about to tackle a "construction plan" without a construction industry, which he says is like going to war without an army. Heavy industrial plant, multi-purpose dams and power projects are on the programme, but there are very few construction firms—in fact only one good one—to build them. The Government is muddling along with departmental

construction, but the failings of this system have been so plainly revealed in the last few years that no one can credit it with the ability to execute the next, and bigger plan. It is too readily assumed that the second plan will be easier than the first, just because it is the second, but Dr. Sen warns that on this matter "we are likely to start the second plan with heavier initial handicaps than was the case even with the first plan". This is because what little construction capacity the country has is now fully tied up—the private firms are booked up for years ahead and the building departments of Government will be some time yet chewing what they bit off in this plan. Dr. Sen's proposal is that there be formed one or two construction corporations, less than half Government and more than half private, which could work autonomously on commercial lines, contracting to do the major construction projects. They would concentrate equipment and skilled personnel, avoid the costly slowness of Government departments, borrow more easily, and farm out work to smaller private firms. I am unable to judge the merits of this plan, but it does sound like a rational approach to a very big problem that has so far had much too little attention.

Such clubs and hotels as take the *Spectator* should be careful not to leave lying about where visitors and guests might see it the latest issue, dated 8th July, for it carries an article by its editor, who is now in the United States, entitled "Down With Lunch". Mr. Walter Taplin is normally not the least bit bolshie, and is indeed a pillar of the Church and the Conservative Party, but some acquaintance with the quick and abstemious American business man's luncheon has soured him against the long, leisurely and liquid engagements that drag on into the middle of the afternoon in West End clubs. The whole piece is totally objectionable from the clubs' and caterers' point of view, but if library committees and stewards shrink from tearing out the whole page, they should at least excise with scissors the passage that reads: "When are we going to drop this nonsense about the business man's lunch? It's not much of an example to the factory workers, who only get an hour now but who may start asking for more, one day. It makes the stock grumbles about tea-breaks sound a little hollow when what happens in effect is that the boss takes all his tea-breaks in one piece and drinks gin instead of tea." I hope Mr. Taplin never makes the journey to India lest he discover that the Indian business man goes one better than the American and has no lunch whatsoever.

The printer informs me—in that particular tone he reserves for this late stage of the week's proceedings—that some 25 lines are required to fill this diary out to its accustomed length. The obliteration of such yawning blanks in the last hurried moments is one of the recurrent trials of newspaper production, and it is acutely felt in such places as this, where one cannot use the stratagems of the morning dailies—for example showing in some stirring reflection of Cicero that has just been written by a tired sub-editor, or reporting some quite mythical accident in which an unnamed man was run over by a bus "in the city". But my predicament is easy compared with that of the editor of a Canadian newspaper called the *Mirror*, of whom it is related that he discovered half an hour before deadline that there was a long and painful blank where his first editorial ought to have been. He extricated himself from this situation by printing in full and within quotation marks the editorial that had appeared that morning in a rival paper, the *Star*, and adding one indignant line at the bottom: "What does the *Star* mean by this?"

COMPLAINTS AGAINST INDIAN CHINA CLAYS

DISCUSSIONS ON QUALITY IMPROVEMENT

INCREASING consumption of china clay has encouraged exploration of the possibility of meeting demand as much as possible from indigenous resources which, according to geological opinion, are vast. During the decade to the year 1952, annual requirements of china clay rose from 61,200 tons worth Rs. 16,26,715 to 96,798 tons worth Rs. 36,57,459. Of this total, imports amounted to 3,172 tons valued at Rs. 3,79,030 in 1942. In 1952, they amounted to 10,835 tons, valued at Rs. 17,92,609. The value of imports in 1952 was thus nearly as much as that of domestic china clay, in spite of the vast difference in quantities.

It is the cost aspect of foreign china clay which has set the authorities thinking about the means by which imports can be reduced or stopped. The problem lies not in stepping up output—this is a rather easy matter—but in improving the quality of china clays produced at home. Foreign china clay is indispensable for certain consuming industries, particularly paper, which find the Indian material unsuitable.

The ceramic industry is the principal consumer of china clay but it is also extensively used in the paper, rubber, paint, pharmaceutical and textile industries. It is reported that the ceramic industry does not use much foreign china clay. The pottery industry is nearly half a century old, and the main incentive to its growth in the initial stages was the availability of good Indian china clay. But as it expanded and there was an increase in the demand for china clay from this industry as well as others, producers came into the field by the dozen. Their idea was only to produce as much china clay as the expanding demand required rather than take steps to refine the clay by scientific means and improve quality. Thus the paper industry cannot use the Indian raw material due to its very poor shade in the manufacture of white paper.

Principal Complaints

Besides, the principal complaints against Indian china clays have been:

- (1) No uniformity in the quality of supplies over long periods.

- (2) Higher percentage of granular impurities (ferruginous impurities and grit content).
- (3) Not always white in colour, generally they have a distinct yellowish tint. Sometimes the producers tone this yellowish tint artificially with dyes or colouring chemicals so that they may appear white.
- (4) Inferior in suspension properties, i.e. the Indian china clays have coarser grain size than the English china clays.
- (5) The non-ceramic consumers do not find Indian china clays of the requisite specifications, for which reason they have to import their requirements.

The Central Glass and Ceramic Research Institute arranged recently a discussion on the problems of china clay producing industries in which producers and consumers from all over India took part. A large number of papers were read by the scientists and technologists attending. Dr. Atma Ram, Director of the Institute, opened the discussions over which Mr. M. G. Bhagat presided. In his address, Dr. Atma Ram pointed out that the inferior quality of the Indian clays was due not to any natural cause, but to the lack of refining facilities and lack of care. "In connection with the question of preparing standards for clays," he said, "the Institute conducted detailed investigations on the samples of clays used at present and obtained through the All India Pottery Manufacturers' Association. In most cases, on further washing the samples showed considerable improvement indicating that the washing was not properly done. This was however not an isolated experience and was confirmed during the course of the investigations at the Institute. Before holding such a discussion it was considered necessary to collect information from the producers with regard to the methods employed by them and also from the consumers regarding their experience of the uses of Indian china clays. Accordingly, a questionnaire was issued to the producers and consumers. The response though limited was encouraging. The washing of china clays has been practised in a rather uncontrolled manner. I personally feel that even without employing elaborate and costly machinery it should be possible to effect appreciable improvement."

He recalled the example of the U.S. china clay producing industry at the time of the first world war. The U.S.A. had then to obtain most of its requirements from the U.K. and Europe as its domestic production was not of the right stand-

ards. But later science and co-ordinated efforts by all concerned worked together to remove the deficiency of the producing industry and today, said Dr. Atma Ram, the U.S.A. had not only become self-sufficient in china clays, but a very great advance had been made in the technique of mining and washing.

He next referred to what was being done in India to hold a thorough survey of the extent, resources including a detailed study of the extent, properties, methods of beneficiation, blending, etc. The Council of Scientific and Industrial Research is already conducting such a survey through the Geological Survey of India and the Central Glass and Ceramic Research Institute. The Geological Survey looks to the field part of the work, whereas the Institute is responsible for detailed examination of samples. Recently, the Indian Bureau of Mines has also started collaborating in this work.

Investigation of Fresh Deposits

Although the processes take time in a tropical country like India, the investigations have yielded satisfactory results. Already about 1,000 samples from different places have been subjected to preliminary examination and about 100 promising localities have been selected for detailed work. The policy of the Institute is to conduct the investigation up to pilot plant stage, so as to anticipate the difficulties that may be experienced by the factories in the use of supplies from new deposits.

China clay mines worked at present in India are mostly small which makes mechanisation difficult and expensive. Besides, in the absence of adequate knowledge of the nature of clays available mixing of good clays with bad ones has been the invariable practice with the result that quality has always suffered. It was the complaint of Mr. S. C. Deb, who is considered a pioneer of the pottery industry in India that ever since the beginning, "the business of china clay production has been in the hands of those who have never encouraged the use of proper scientific methods in their production." The producers made out a case against the high railway freight in which they also had the consumers' support. Due to the high railway freight, it has not been possible for the consuming industries in the north to use good china clays available in the south. As an immediate solution, it was suggested by Mr. Bhagat that a big china clay washing plant should be started on a co-operative basis in which most of the pottery workers should hold shares. This would not only help improve the quality, but would make for low cost as well. At present, the cost of the Indian clays is quite high and much better clay is available in other countries at a lower cost.

Facilities for Producers

The discussions produced a favourable impression on producers and consumers and a committee has been formed to chalk out a programme for remedying the defects in the existing production system. The ceramic industry which uses mostly Indian clays has products of a wide range—tableware (crockery, etc.), electrical goods (insulators etc.), sanitary ware (wash basins, commodes, etc.), stoneware (pipes, jars, etc.), hospital ware, tiles, fancy ware (flower vases, toys, etc.) and porcelain guides for the textile industry. The impurities in the Indian clays have been a constant source of trouble to this industry. If Indian ceramic products are to achieve the standards of British and other foreign products, it is absolutely essential that good quality clays must be available for manufacture. The Central Glass and Ceramic Research Institute is obviously offering all facilities in point of technical knowledge to the producers for improving the quality of their clays. The scientific papers read at the discussions will also provide useful guidance. The producers should not fail to take advantage of these facilities. The fact that the value of current imports of china clays is something like Rs. 20,00,000 should by itself provide a strong incentive to improvement.

How banking helps the FISHING INDUSTRY

THE seas around India's 2,900 miles of coastline are rich in fish. In the South of India, particularly, fishing is an important industry. It supplies food and many valuable by-products, some of which are exported.

In South India alone, the fishing industry employs over 1½ lakhs of people, and its catches are worth about Rs. 3½ crores every year.

Banking has greatly helped the growth of the fishing industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the fishing industry.

We at Palai are proud that so many leading fishing firms, and indeed important firms in every field of business and industry in South India, employ the complete banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Finance in India and Abroad

MONETARY DEVELOPMENTS IN 1954-55

RESERVE BANK'S REPORT ON CURRENCY AND FINANCE

THE Reserve Bank's Report on Currency and Finance for 1954-55 consists, as usual, of a brief survey of international economic developments in Part I, as a background for a detailed review of the Indian economy in Part II. It also contains a wealth of statistical material in the form of tables and graphs, setting out the data for the plan period 1951-52 to 1954-55.

According to the Report, the world economy in 1954, assisted by the lessening of international political tensions, gained in strength and continued to be relatively stable. Production was well maintained, prices were generally stable and the international payments position recorded a further improvement. The relatively mild "inventory recession" that took place in the U.S.A. between the summer of 1953 and the spring of 1954, was followed by a recovery, particularly in the last quarter of the year.

Monetary and credit policies continued to be flexible in several countries during 1954 as in the past few years, and tended to be liberal for the greater part of the year. Towards the end, however, and particularly in the first quarter of 1955, they were tightened in some countries with the emergence of inflationary symptoms. In the U.K., for instance, while monetary policy for most of the year was directed towards easing and cheapening bank credit, the Bank rate was raised twice within a month in January and February 1955 from 3 percent to 4½ percent—the highest rate since 1932—to correct the weakness of the pound sterling and the inflationary upsurge in the internal economy. In the U.S.A. also, the monetary authorities continued their policy of "active ease" until towards the close of the year, but with the moderate recovery in business conditions and the unprecedented boom in the stock market, the authorities moderated their policy by a shift from "active ease" to one of "less active ease".

Trends in Capital Markets

Trends in the capital markets in the leading countries generally reflected the internal economic stability and the prospect of continuing economic growth in those countries, rather than international developments and speculative activities. Gilt-edged ruled, on the whole, firm equities were buoyant and the new issue market was more active than in 1953. Budgetary policies in the advanced countries were generally directed towards increasing the tempo of economic activity, while, in the underdeveloped countries, they continued to reflect the need to raise larger revenues to finance development programmes in the public sector and at the same time to stimulate savings and investment. In the sphere of trade and balance of payments, economic developments in the U.S.A., along with the continuation of its defence and economic aid, led to an increase in the reserves of other countries, particularly of Western Europe and the sterling area. This strengthening of the foreign exchange position together with an improvement in the volume and balance of world trade enabled a number of countries, especially in Western Europe, to relax generally their restrictions on trade and payments, including some against dollar imports, and made the climate more favourable for further efforts in the direction of currency convertibility.

Indian Economy

Against the background of these international developments, the Report proceeds to review the major economic and financial developments in India during the year ended March 1955. Economic developments, the Report observes, were marked by a considerable expansion in industrial output, a substantial increase in money supply and a decline in prices along with an enlarged budgetary deficits, a small surplus on the external account and a better flow of savings. The growth in the budgetary deficits of the Central Government and the States indicated the quickened pace of developmental expenditure, which partly made up for the relatively slow progress in the preceding three years. Nevertheless, there was no evidence of an emergence of inflationary pressures and the economy made considerable progress during the year with a measure of overall stability.

Two disquieting features were the sharp fall in agricultural prices and the continued seriousness of unemployment. Over the year, while the general index of wholesale prices showed a decline of 10 percent, the group index for "food articles" fell by as much as 20 percent. The fall in agricultural prices may not continue indefinitely, for the supply position in 1954-55 was assisted by a run of three good monsoons, which followed the virtual elimination of controls over foodgrains early in the year. To some extent, the recent decline in prices appears to be a corrective to the earlier high levels; and a lower level of foodgrain prices provides a better base for rapid economic development. But a steep decline, such as tended to occur in some commodities, is liable to cause widespread distress, and, particularly if it is due to temporary causes, to lead to some avoidable distortions in the production pattern; it called for State intervention to smoothen extreme fluctuations in the prices of a few agricultural commodities. To meet the problem of unemployment, labour-intensive were added in 1953-54 to the original

five year plan, while during the year, special steps were also taken to stimulate the expansion of small-scale and cottage industries.

Rise in Industrial Output

Industrial production in 1954, the Report states, was 8 percent higher than in 1953, which was itself 5 percent higher than in 1952. Since the inauguration of the plan, industrial output has increased by about 40 percent. Among the factors contributing to the upturn during 1954 were greater availability of raw materials, better export offtake and continued improvement in labour-management relations. Agricultural output also showed a record increase in 1953-54, the estimated output of foodgrains surpassing the target fixed for the five year plan by nearly 4½ million tons. For 1954-55, total agricultural output is expected to be around the peak level reached in 1953-54.

In line with higher output, the need for larger private finance on the relaxation of controls and the increasing tempo of economic development, money supply, figures for which have been revised to take into account the circulation of Hali Sica currency, showed a substantial rise of Rs. 124 crores or 7 percent during 1954-55: in the previous year, it had risen by Rs. 72 crores. The increase stemmed mainly from two factors, namely, the Union Government's budgetary deficit and the growth in bank credit. Net borrowings by the Government from the Reserve Bank amounted to Rs. 104 crores; this along with the net decline in cash balances makes a total of Rs. 110 crores reflecting the impact of the budget deficit on money supply. Open market operations of the Reserve Bank, however, tended to curtail money supply to some extent.

During the greater part of the year, there was a general broadening of the demand for funds, which was met by banks without any undue strain on their resources on account of the appreciable growth in bank deposits as well as the larger volume of seasonal finance made available by the Reserve Bank. The expansion in the resources of the banking system would indicate that the post-partition trend of deposit contraction has probably given place to a new phase of expansion under the impetus of development expenditure and deficit financing. The decline in prices would indicate

that the expansion in money supply in 1954-55 was far from being inflationary.

State Bank

In the field of rural finance, a significant event during the year was the publication of the *General Report of the Committee of Direction of the All-India Rural Credit Survey*. As part of their integrated scheme of rural credit, the Committee recommended the establishment of a State Bank of India, to take over the Imperial Bank of India and certain State-associated banks. The Government accepted this recommendation and has since enacted the necessary legislation and set up a State Bank, which has in the first instance, taken over only the Imperial Bank of India. The State Bank will provide much more liberal and extensive remittance facilities and embark on a scheme of considerable branch expansion.

The capital market in India, the Report observes, reacted well to the general improvement in the economy. Gilt-edged ruled firm in spite of considerable borrowing by the Central Government, while the industrial share market was also buoyant for the greater part of the year. The new issue market experienced increased activity, the amount of consents granted by the Controller of Capital Issues during 1954 at Rs. 111 crores being the highest since 1948.

Government Finances

Reviewing Government finances, the Report states that during 1954-55, the budgetary position of the Central and State Governments showed a perceptible change from the previous year towards larger overall deficits, stemming from the rising momentum of expenditure in the public sector. In the revenue account of the Central Government, a deficit of Rs. 5 crores replaced a surplus of Rs. 8.5 crores in 1953-54, while in the combined revenue account of Part A and Part B States, the swing was wider still with a deficit of Rs. 33 crores instead of a surplus of Rs. 5 crores in the previous year. Excluding the net increase in receipts estimated under floating debt and adjusting for the net changes in investment reserves, the overall deficit of the Central Government in 1954-55 (Rs. 200 crores) was more than twice that in 1953-54 (Rs. 87 crores). In the case of Part A and Part B States, there was an adjusted overall deficit of Rs. 36 crores as against a surplus of Rs. 19 crores in 1953-54—a swing of Rs. 55 crores. For 1955-56, revenue deficits of the Centre and the States (after tax changes) are placed at Rs. 17 crores and Rs. 66 crores, and the adjusted overall deficits at Rs. 327 crores and Rs. 65 crores, respectively.

An event of special significance during the year was the submission to Government of the *Report of the Taxation Enquiry Commission*, which contains far reaching recommendations for widening and deepening the tax structure. A beginning in the direction of implementing the Commission's recommendations was made this year, with a provision for increases in taxation totalling about Rs. 13 crores in the Union Government's budget for 1955-56.

The balance of payments position showed a smaller surplus on current account of nearly Rs. 4 crores during the calendar year 1954 in comparison with Rs. 59 crores in 1953, but at a much higher level of trade. This sizeable reduction in the payments surplus was mainly a consequence of the larger volume of imports following the intensification of the rate of development, and occurred despite an 8 percent improvement in the terms of trade. Region-wise, while the surpluses with the sterling area (excluding Pakistan), the dollar area and the rest of the non-sterling area other than the O.E.E.C. were reduced, the deficit with O.E.E.C. countries widened further. With Pakistan, the last year's small deficit turned into a moderate surplus.

THE CALCUTTA MONEY MARKET

SUGAR ADVANCES STILL OUTSTANDING

Wednesday, 13th July.

ALTHOUGH conditions are fairly easy in the Calcutta interbank market, over the country as a whole money is still in good demand. The slack tendency which appeared at the end of the last month has not developed further, and to judge from the increase in scheduled banks' advances from the lower tender for treasury bills and from the higher treasury bill rate, money is somewhat tighter. The main single cause is the fact that sugar advances are even now only slightly below the peak. Offers from the mills has been poor, on account of competition from imported sugar. Sugar advances this year reached a record level, and although this money usually begins to flow back to the banks in May and is largely repaid by July, this year advances are still standing at a high figure. Finance required for the movement of grains is also considerable. In the interbank market the call rate quotes 3 percent. The exchange department has been exceedingly dull, with very few export bills sighted. Remittance has been fair. The principal exchange rates have not varied.

Tenders for Rs. 1 crore of 91 days Government of India Treasury Bills which were opened on Tuesday, 12th July, 1955, totalled Rs. 1,11,00,000. The average rate of acceptance increased from Rs. 2.8-1 to Rs. 2.4-5 percent per annum. Tenders at Rs. 99.5 percent were accepted in full and those

at Rs. 99.5-9 percent were allotted approximately 78 percent. Tenders for Rs. 1 crore of 91 days Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 18th July, 1955. During the week ended 8th July, 1955, Government of India Treasury Bills for Rs. 19,72,00,000 were sold in favour of the Reserve Bank of India.

Silver was firm and the price improved from the previous week's level of Rs. 159.15 to Rs. 160.14 quoted today. The forward rate was Rs. 160.15. The price was unchanged at 783d. in London and at 90½ cents in New York.

Gold was steady in sympathy with silver and the price advanced from Rs. 94.2 to Rs. 95.6. The sovereign at Rs. 61 showed a gain of 2 annas.

An increase of Rs. 8.92 crores in notes in circulation to Rs. 132.164 crores was the outstanding feature of the statement of Reserve Bank of India for the week ended 8th July, 1955. The total note issue was Rs. 51 lakhs lower at Rs. 134,79 crores. Notes held in the Banking Department consequently fell by Rs. 9.43 crores to Rs. 19.15 crores. Deposits of the Government of India and investments rose by Rs. 25.11 crores and Rs. 14.69 crores to Rs. 84.07 crores and Rs. 61.24 crores, respectively, due to the subscription to the new Loan. Other Government accounts and balances of commercial banks also increased by Rs. 5.33 crores and Rs. 73 lakhs to stand at Rs. 17.67 crores and Rs. 46.87 crores. Balances held abroad at Rs. 63.32 crores were about Rs. 1.46 crores higher. Other loans and advances increased from Rs. 37.20 crores to Rs. 41.69 crores, of which advances to scheduled banks against usance bills totalled Rs. 29.05 crores (Rs. 22.42 crores). These advances amounted to Rs. 157.78 crores since 1st January, 1955. Ways and means advances stood at Rs. 86 lakhs (Rs. 91 lakhs).

The return of the State Bank of India for the week ended 1st July, 1955, shows a drop of Rs. 6.58 crores in total deposits to Rs. 201.52 crores. Investments in Government Securities and other authorised investments are down by Rs. 56 lakhs and Rs. 3.38 crores to Rs. 89.01 crores and Rs. 7.69 crores, respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have increased by Rs. 1.37 crores to Rs. 116.97 crores. Cash and balances are, in consequence, shown at Rs. 9.83 crores or Rs. 6.54 crores less.

The statement of the position of scheduled banks for the week ended 1st July, 1955, discloses Demand and Time liabilities at Rs. 690.72 crores (Rs. 7.69 crores on account of borrowings from banks) and Rs. 397.91 crores (Rs. 3.73 crores) compared with Rs. 692.66 crores (Rs. 12.35 crores) and Rs. 396.74 crores (Rs. 3.70 crores) respectively in the previous week. Cash has risen by Rs. 1.32 crores to aggregate Rs. 35.59 crores, while balances with the Reserve Bank have fallen by Rs. 5.19 crores to stand at Rs. 47.26 crores. There is a rise of Rs. 3.90 crores in investments to Rs. 350.46 crores. Advances and bills discounted at Rs. 617.71 crores reveal an increase of Rs. 7.90 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.3 percent and 61.9 percent against 8.7 percent and 61.0 percent.

The INDIAN OVERSEAS BANK, LTD. made a profit of Rs. 9,60,571, including the amount brought in, for the half-year ended last June.

The BANK OF INDIA LIMITED made a profit of Rs. 37,60,437-2-6 for the half year ended last June. Adding Rs. 9,10,851-5-5 brought in there is Rs. 46,71,288-7-11. This sum the directors have disposed of as follows: payment of an interim dividend at twelve percent per annum which absorbs Rs. 15,00,000; carry forward Rs. 31,71,288-7-11.

The net profit of the INDIAN BANK, LTD. amounted to Rs. 9,15,888 for the half year ended last June. This together with the amount of Rs. 1,30,789 brought in totalled Rs. 10,46,677. Transferring Rs. 1 lakh to reserve fund, Rs. 50,000 to sinking fund, Rs. 3,90,000 to provision for taxes, Rs. 15,000 to building account, the directors propose to declare a dividend of 5% and a bonus of 1% leaving a carry forward of Rs. 1,53,673.

The HONGKONG & SHANGHAI BANKING CORPORATION has declared an interim dividend of £2 per share for 1955. Transfer from inner reserves to published reserve fund amounted to H.K. \$5 million, bringing the published reserve fund up to H.K. \$128 million which is equal to £8,000,000.

Our City Cable

STOCKS' STRONG START NOT MAINTAINED

London, 13th July.

THE stock market advanced strongly before the week-end, but profit-taking later brought some irregularity to most sections. A number of factors induced a more cautious attitude, including the substantial increase in coal price, the increase in local loan interest rates and the unfavourable June trade figures. Gilt-edged reacted after the week-end and lost a large part of their earlier gains. Industrial equities were firm before the week-end but later there was some reaction. Building issues were better on the Government's road construction programme. Foreign bonds were subdued for the most part but Germans and Japanese attracted small occasional demand. Rails were quiet but dollar stocks were firm in response to Wall Street advances. London gold shares were largely neglected and moved irregularly within narrow limits. Diamonds were dull but coppers and other base metals attracted buyers. Oils were higher on balance despite some profit-taking. Rubbers and teas attracted buyers from time to time with the former responding to the higher trend in the commodity price and the latter to the better trend at the auctions.

The Money Market

Easier credit conditions were maintained in the money market in the early part of the week but were sharply reversed on Thursday when the greater portion of the £20 million borrowed from the Bank of England in the previous week came to be repaid. Credit contracted sharply and although the market had arranged books to meet the shortage, it was greater than expected, and under pressure money rate of up to 4 percent were paid. Applications for treasury bills totalled £403,805,000 of which £280 million were allotted at the average rate of 7½ 4.60d compared with 7½ 4.87d in the previous week. This week £200 million are offered. The Bank of England return for the week ended 6th July showed notes in circulation about £13 million higher at around £1,795 million, while bankers' deposits were about £1 million higher at around £248 million.

U.K. Foreign Trade in June

The value of U. K. exports in June was £157 million, compared with £249,400,000 in May, according to the provisional figures issued by the Board of Trade. Imports during the month were valued at £293,900,000 against £290,300,000, while re-exports amounted to £8,100,000 compared with £8,300,000. The Board pointed out that the extent to which the railway and dock strikes affected imports and exports cannot be assessed. The figures for the next few months, it said, will continue to be affected by the strikes.

Egyptian Cotton Delegation

The Egyptian cotton delegation now in the U. K. is engaged in talks with the Bank of England, an official of the Egyptian Embassy in London stated. The object of these talks is to study British practice and regulations governing cotton futures trading with a view to harmonising them with the futures market in Alexandria. The mission is led by Mr. Hussain Zaki, the Egyptian representative with the Alexandria futures market. He is accompanied by ten other officials from the Egyptian Exchange Control and the Ministry of Finance and Economy. Next week the mission plans to visit Liverpool for talks with the Liverpool Cotton Association and others. Thereafter the leaders may fly to New York and to Washington to study cotton futures trading in the United States, the Egyptian Embassy official said.

Vegetable Oil Market

Indian linseed oil fell further with offers for end-year shipment placed at £108 c.i.f. Groundnut oil was higher, Nigerian and South African advancing to £117 c.i.f. forward shipment, following the news of a tender in the latter around that price.

THE INDIAN BANK, LIMITED

(Head Office: MADRAS)

have pleasure to announce the opening of their

CALCUTTA BRANCH

at

'KAMALA BHABAN'

P-8, BRABOURNE ROAD

on SATURDAY, the 16th JULY, 1955.

The Branch offers complete banking facilities INCLUDING FOREIGN EXCHANGE BUSINESS.

Agents & Correspondents throughout the world.

N. GOPALA IYER,
SECRETARY.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to April, 1955. Compared with March, the April indices for government securities and preference shares show rises of 0.1 point and 0.2 points, respectively.

There were decreases in jutes of 0.4 points, minings and oils 9.5 points, engineering 5.4 points, teas 18.3 points, and sugars 11.3 points, while increases occurred in banks 0.5 points, cottons 2.1 points, coals 9.6 points, cements 1.9 points, papers

13.9 points and miscellaneous 4.1 points. Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares declined by 1.6 points during April, 1955.

Stocks and Shares

SHARES ADVANCE FURTHER AFTER PAUSE: WEST BENGAL LOAN AWAITED

SPECULATIVE GAINS IN MANY SECTIONS: INVESTMENT SUPPORT FOR LEADING EQUITIES

Wednesday Evening.

AFTER a pause early in the week, the share market has advanced to new high levels mainly on speculative support. Indian Irons were Rs. 36-9 in the clearing and were quoted afterwards this evening at Rs. 36-14. There have been advances in other sections, often as a result of interested manipulation, but there has been good investment enquiry for such leading equities as Titagur Paper, Indian Paper Pulp, Imperial Tobacco and Indian Standard Wagon. A fair volume of business is passing.

The West Bengal Government is understood to be approaching the market for a loan of Rs. 5 crores, with a life of 12 years, bearing interest at 4 percent and offered at par.

Details of the week's trading follow.

Trading in the gilt-edged market was irregular and the volume of business was limited. There were sellers of the new loan at around Rs. 98-8. On the other hand there was a fair enquiry for other medium-dated issues with few sellers. Short-dated loans however were quiet. Amongst short-dated, 2½% 1955 eased further to Rs. 99-5 while both 3½% 1957 and 1958 were marked back by one anna to Rs. 99-10 and Rs. 99-7 respectively. In the medium-dated group, both 3½% 1963-65 and 1964 were taken higher at Rs. 94-5 and 2½% 1961 was in demand at Rs. 92-5. The 2½% 1962 loan firmed up to Rs. 93 and 2½% 1960 had buyers over at Rs. 95-4. The 3½% National Plan Bond 1961 and National Plan Loan 1964 were on offer at Rs. 99-11 and Rs. 98-11 respectively. In the long-dated group, 3½% 1966-68 was a steady feature at Rs. 91-6 with buyers over but 3½% 1970-75 was offered at Rs. 87-2.

As most of the State Governments are reported to be in the queue with new loans for the public, business in provincials was extremely dull, with little business passing. There were more sellers in evidence and prices were fractionally easier.

There was a good demand for selected miscellaneous preference shares but jute preference shares were fairly readily available. Among jutes, Albion were done at Rs. 112, Hooghly at Rs. 15-6 and Hukumchand at Rs. 113. Anglo-India were crossed at Rs. 121-12, Belvedere at Rs. 121 and Bengal at Rs. 92. In the miscellaneous group, Alkali & Chemical were done at Rs. 107-8, British India Corporation at Rs. 11-9 and Calcutta Tramways at Rs. 8-12. Dunlop Rubber 2½% were placed at Rs. 101, Indian Iron & Steel at Rs. 109 and New Victoria at Rs. 3-1. Rohtas Industries 7½% spurted from Rs. 126 to Rs. 136 while the 'B' were unchanged at Rs. 67-8.

In the banking section, Allahabad Bank were easier at Rs. 170, Hindustan Commercial were marked at Rs. 9, Punjab National Bank were steady at Rs. 45 as were United Commercial Bank at Rs. 45. United Bank of India 'D' shares were taken at Rs. 4-7.

In the railway section Arrah-Sasaram were quoted at Rs. 74 and Dehri-Rohtas at Rs. 12-6.

Kesoram and New Victoria were the features in the cotton section, improving to Rs. 17-15 and Rs. 2-1 respectively. Tonight's closing quotations are Rs. 17-6 and Rs. 2. There were sellers of Bengal Nagpur at Rs. 10-4, Cawnpore Textiles were better at Rs. 10-4 and Elgins at Rs. 19-6 on hopes of an early settlement of the Kanpur mill workers strike. Dunbar were steady at Rs. 220.

Selected coal shares met with enquiry including Bengal, East Indian, Equitable, Karanpura Collieries and Raneeunge. Burrakur fluctuated between Rs. 14-9 and Rs. 14-13 to close at the latter rate. Bengal were done at Rs. 530, Central India were steady at Rs. 8-7, East Indian at Rs. 31 x.d. and Equitable at Rs. 32-12. Karanpura Collieries on the publication of a satisfactory report were scarce at Rs. 125. Katras Jheriah were reported at Rs. 53-12, New Beerbhoom were steady at Rs. 22-8 as were Raneeunge at Rs. 12-6. Several deals were reported in South Karanpura between Rs. 12-14 and Rs. 13-4. Western Bengal met with some enquiry at Rs. 7-11. There was slightly better feeling in the jute section following the sharp reduction in sacking stocks held by mills at the end of June. Howrah fluctuated narrowly around Rs. 31-14 to close at Rs. 32. Here is a chart showing the price movements of a representative list of shares:—

	Opening 7-7-55.	Closing 13-7-55.
Anglo-India	219	222
Auckland	153	156
Barnagore	188	188-8
Birla	22-2	22-12
National	34-13	34-15
Presidency	7-3	7-9
Reliance	15-4	15-12

No transactions were reported in electric sup-

ply shares with the exception of Calcutta which were steady at Rs. 15-4.

In the sugar section, Carew improved from Rs. 11-10 to Rs. 12-8, Cawnpore were dull at Rs. 21-2, Ramnugger at Rs. 24-12 and Dyer Meakin Breweries were a shade better at Rs. 6-12. Darbhanga met with keen enquiry and improved from Rs. 17-4 to Rs. 19-4.

In the engineering section Indian Iron & Steel improved steadily from Rs. 35-14 to Rs. 36-10 to close at Rs. 36-9. Bhartia Electric Steel were steady at Rs. 16, Braithwaite at Rs. 26 and Indian Standard Wagon at Rs. 135. Britannia Engineering rose from Rs. 34 to Rs. 36-4 and Jessops fluctuated between Rs. 45-4 and Rs. 46-2. Kumardhubi Engineering were steady at Rs. 12-12, Marshalls at Rs. 7-10, Richardson & Cruddas at Rs. 20-8 and Textile Machinery at Rs. 22-1.

Titagur was one of the features in the miscellaneous section improving from Rs. 44-12 to Rs. 47-10; tonight's closing quotation is Rs. 47-5. India Paper Pulp were steady at Rs. 30-4 as were Orient Paper at Rs. 30-4. Dalmia Cement were higher at Rs. 15-12 while there were sellers of Sone Valley at Rs. 7-7. New Asiatic Insurance were steady at Rs. 6-8 as were Ruby General at Rs. 9-2. India Steamship fluctuated narrowly around Rs. 7-11. Alkali were steady at Rs. 17-12 as were Angelo Bros. at Rs. 20-3 and Balmer Lawrie at Rs. 161-12. Both Bengal Flour and Britannia Biscuits were scarce at Rs. 30-8 and Rs. 14-12. British India Corporation changed hands freely around Rs. 9-1. Dunlop Rubber were marked at Rs. 37-4 and Gillanders Arbuthnot at Rs. 13. Imperial Tobacco improved to Rs. 12-9 and Indian Aluminium rose sharply from Rs. 152-8 to Rs. 188. Indian Cables were steady at Rs. 29-11, Indo-Burma Petroleum improved from Rs. 152 to Rs. 164 as did Jardine Henderson from Rs. 117 to Rs. 123. Martin Burn were dealt in at Rs. 24-14 and Metal Box were scarce at Rs. 24-12. National Insulated Cables improved to Rs. 25-6 following the announcement of a scrip issue. National Tobacco were done at Rs. 11-8 and Shaw Wallace at Rs. 14-8. Rohtas Industries improved today to Rs. 29-4 against a quotation a week ago of Rs. 26-10.

Once again there was a good turnover in Indian Copper which improved from Rs. 4-14 to Rs. 5-2 to close at Rs. 5-0-6. Burma Mines were steady at Rs. 2-4 while Western Stockholders Investment were unchanged at Re. 1. Orissa Minerals were better at Rs. 26-12.

The volume of business in the tea section decreased considerably and towards the close, prices tended towards lower levels. Among Assam shares, Bateli were slightly better at Rs. 25-12 but Bishnauth after being done at Rs. 50-4 eased to Rs. 49-8, whilst Bormah Jan were easier at Rs. 23-8, Dhelakhat at Rs. 18-12, East India at Rs. 32-12 and Methoni at Rs. 25-8. Brooke Bond had sellers at Rs. 18-4 whilst Dufflaghur were unchanged at Rs. 47-8. Brahmaputra after being marked up to Rs. 13-12 had sellers at the close at Rs. 12. Tezpor lost a point to be quoted at Rs. 38-8. Among Doars scrip, Banarhat were done at Rs. 660, Birpara at Rs.

in Rs. 51,848 and meeting other changes there is 1,66,286. The dividend is higher at 35% against 20%, leaving a carry-forward of Rs. 61,286. The crop declined from 535,334 lb. to 480,636 lb. but the average sale price rose from Rs. 2-5-3 to Rs. 2-13-11 per lb. Estimates for 1955 are for a crop of 580,000 lb. at a cost of Rs. 8.80 lakhs.

The profit of the UNITED FLOUR MILLS COMPANY rose from Rs. 1,932 to Rs. 1,80 lakhs for the half-year ended last November. Bringing in Rs. 11,059 and making other adjustments there is Rs. 2,05,350. Taxation absorbs Rs. 68,000 (nil). Machinery replacement reserve gets Rs. 75,000 and dividend equalisation account Rs. 15,000. The dividend has been raised from 5% to 12½%, leaving Rs. 16,100 to be carried forward.

The NEW CENTRAL JUTE MILLS COMPANY made a profit of Rs. 7,24 lakhs for the half-year ended last December, against Rs. 7,59 lakhs in the previous half-year. Taxation absorbs Rs. 3 lakhs (Rs. 3,10 lakhs). Bringing in Rs. 24,459 there is Rs. 5,00,110. The ordinary dividend has been declared at Rs. 5 per share (Rs. 12 per share) but the ordinary capital was meanwhile increased by Rs. 21 lakhs by a bonus issue. The carry-forward is Rs. 3,01,610. The modernisation scheme of the mills is making satisfactory progress.

The profit of the DIMAKURI TEA COMPANY is Rs. 1,29 lakhs higher at Rs. 5,76 lakhs for the year ended last December. Transferring Rs. 1,75 lakhs

(Rs. 1 lakh) to reserve, bringing in Rs. 43,918 and making other adjustments there is Rs. 2,03,160. The ordinary dividend has been declared at 60%, including an interim of 10%, compared with 45% in the previous year. The output rose from 644,904 lb. to 649,108 lb. and the average sale price from Rs. 2-5 to Rs. 2-14-1 per lb. Estimates for the current year have been made for a crop of 660,000 lb. at a cost of Rs. 10.74 lakhs.

Messrs. Tata Industries Limited, managing agents for the TATA IRON AND STEEL COMPANY LIMITED, report that the total approximate production of iron and steel at the steel works at Jamshedpur during June 1955 was: pig iron 91,700 tons; steel ingots 80,990 tons; semi-finished steel for sale 17,200 tons; and finished steel 45,400 tons.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago (the last named being shown in parenthesis and will not be given where such a quotation is not available).

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

CREDIT RESTRICTION OF LIMITED SIGNIFICANCE

AS was expected would be the case, the return of the Conservative Party to power has been quickly followed by the announcement of many developments to be undertaken by industrial companies, a tendency further stimulated by the cessation, temporary although it may be, of major labour troubles. A warning issued by the principal banks, and believed to be inspired by the Government, that customers are expected to help in reducing inflation by restricting their applications for credit facilities has caused a certain amount of indignation. It is thought, and not without a certain amount of truth, despite statements to the contrary, that effective pressure in this direction can only be exercised against the small man (and even there it will probably be too unpopular to be pursued to extremes). Little, it is held, is likely to be said to the big capitalist, who, in any event, has his own special ways of raising credit. Although his actions, through financial institutions or the Stock Exchange, ultimately means a call upon the banks, that step is at too advanced a stage of proceedings, and at the end of too many complexities, for any restraining action to be made then. Nor is it clear how far the Government, with its agreement in the policy of maintaining full employment, would really wish him to be checked. This latest warning against credit expansion is, in fact, little more than a gesture, limited in significance by various stubborn facts, not the least of them being that local authorities throughout the country are still borrowing money hand over fist for the carrying out of improvements of one kind and another.

Synthetic Rubber and Rayon

The rise in the price of natural rubber to the highest figure for well over three years has given a renewed fillip to projects for the manufacture of synthetic rubber. The companies principally concerned with these enterprises are the Imperial Chemical, Monsanto Chemicals and the Distillers. The last named concern produces synthetic rubber

through its subsidiary, British Geon at Barry, in Wales. It is also associated with the British Petroleum Company which, through its own subsidiary, is now to engage in manufacture of the Buna form of rubber. A capital expenditure of £8 millions is mentioned as an initial outlay, but some of this money is to be for the production of petroleum, chemicals. It may be remarked that the Distillers is engaged in the production of synthetic rubber for specialized industrial purposes, and not for general uses, such as tyres.

The annual meetings of the two principal British rayon producers, Courtaulds and British Celanese, have been held and much of interest was forthcoming at both. Courtaulds have now consummated their big co-partnership scheme, by means of the creation of £2 millions of shares for purchase by employees on special terms. The chairman of each company spoke confidently of the future of the man-made fibres industry, and emphasized that vigorous research policies were being pursued. Sales of rayon staple have been limited only by capacity to produce. Industrial uses of rayon staple and of nylon are steadily increasing. Both companies are now giving attention to tri-acetate fibres. These fibres were first produced as long ago as 1914, but they have only recently been developed commercially, as a result of it becoming realized that they can have many properties lacking in ordinary acetate fibres, notably in their resistance to chemicals and weather. In fact, tri-acetate fibres, although they are cellulosic in origin, come, in some respects, near to nylon and "Terylene" and can be manufactured more cheaply than these. The British Celanese also announced the advent of "Celon", a new type of nylon, claimed to be of great interest to spinners, both for 100 percent spun yarns, and also for blends with other fibres. It is obvious that the manufacturers of man-made fibres have a great advantage in their ability continually to produce new types of fibres to meet specific needs. Presumably, it is not impossible to modify natural fibres in their growing so that they become virtually new kinds. Not much has been heard lately of positive achievements in this direction, but it may be noted that the chairman of Fine Doublers and Spinners has spoken enthusiastically of "Magnolia", a variety of cotton developed in Mississippi, which com-

bines high inherent strength with fineness and moderate staple length. This variety is being used by the company which, by the way, has been carrying out a good deal of machinery reorganization. Among the measures taken is the replacement of much doubling machinery by the latest type of cotton spinning plant, which will greatly increase the Company's capacity to consume its own by-products from the cotton spinning mills.

The Art of Documentation

The annual report of the Patent Office for 1954 is robbed of much of its interest by the fact that it is disclosed that there is an arrears of unexamined specifications amounting to no less than 25,829. Man's inability to keep abreast of the enormous demands which the progress of civilization makes upon filing, documentation, etc. has been evidenced in numerous directions lately. One of the most striking confessions was that of the British Museum, regarded as a model of administration, which admitted to being a quarter of a century behind-hand in an important field of its catalogues. Perhaps deliverance from this impasse will come one day through some adaptation of the electric computers. If not, many a flower of invention or other theoretical masterpiece of technical or verbal ingenuity seems doomed to obscurity. The Patent Office Report, so far as it goes, springs no surprises. There is the usual crop of freakish devices. Serious endeavours are most pronounced in aviation, electronics, engineering generally and chemicals.

Nuclear Energy for Industry

Literature on nuclear physics continues to grow and a fair amount has been published on current industrial developments. It is difficult, however, to find much that is new in the way of applications within industry itself, though many laboratory experiments have been of an industrial nature. The emphasis has been upon "technological irradiation", and, in this direction, the experts have permitted themselves a certain amount of prophecy. Thus, it has been said that radiation sterilization may in time render refrigeration superfluous. Lines of investigation now being followed at the Harwell Atomic Energy Station include the use of radiation for increasing the heat resistance of plastics and for the speeding up of chemical processes. The placing of further structural orders by the United Kingdom Atomic Energy Authority has caused several powerful firms to set up departments to specialize in this form of engineering. Prominent among them are the Metropolitan Vickers Electrical Company and the English Electric Company. The great boiler making firm of Babcock and Wilcox, which has been connected with nuclear engineering from the start, is widening its field, and, in some directions, is collaborating with the two other companies named. Researches are being undertaken with regard to nuclear marine propulsion.

Titanium and Pharmaceuticals

Heightened activity is being displayed in the exploitation of titanium, especially by the Imperial Chemical Industries and Laporte Chemicals. The industrial uses of titanium, a widely distributed metallic element are important, among them being as a de-oxidizer for special types of steel, a fire retardant in processing fabrics, a diminisher of susceptibility to corrosion and for various employments in the aircraft industry. The Imperial Chemicals is developing a new process for the manufacture of titanium products and general advances have been made in the metallurgical problems connected therewith. An indication of the amount of research into pharmaceutical chemicals that is now proceeding is to be found in the statement by Boots Pure Drug Company that more than 3,000 drugs have been experimented with during the past six years in an endeavour to find a remedy for worms in animals. Success is now claimed, with a resultant considerable gain to agricultural economy in particular. Sales of pharmaceutical chemicals show no sign of a setback—indeed, both home and export trade in these during 1954 expanded by 25 percent. Some twelve thousand products are named systematically in the latest edition of *British Chemicals and Their Manufactures*, the official handbook of The Association of British Chemical Manufacturers. A feature of interest is the substantial increase recorded in the number of manufacturers of leather chemicals, and leather dyes and stains. Another sharp increase is in the manufacturers of antiseptics, disinfectants and fungicides.

Grass as a Foodstuff

Contentions that grass is one of the most neglected of raw materials have been long heard, including the claim that if grass were properly processed man could live upon this alone. Those who made these remarks have been set down as extremists—and perhaps they were. But the whole question is now taking a scientific aspect. Scientists are reaffirming that nature is often shockingly wasteful and that one of the most urgent needs is to "by-pass" her. Milk, so it is said, can be produced without the cow's aid, and by the treatment of grass. As a matter of fact, the liquid so far produced by the treatment of grass does not bear much resemblance to milk as we have hitherto known it, but it has been used for feeding animals without, at least, any ill effect being caused. Whatever the merits of this particular innovation, there is clearly scope by the aid of modern scientific methods, for a less uneconomical use of the vegetation of the world, both in the direction of a higher percentage of extraction of constituents used as raw materials and of a rescuing of those which at present are merely thrown or poured away as waste.

New Delhi

PLAN ALLOCATIONS FOR SMALL INDUSTRIES

NATIONALISATION OF SHIPPING MOOTED

PENDING the report of the Karve Committee appointed to prepare the second five year plan for cottage and small-scale industries, discussions have been held here on the demands made by the Khadi and Village Industries Board, the Handicraft Board and the Silk Board. The Khadi and Village Industries Board has demanded Rs. 346 crores, the Handicrafts Board Rs. 30 crores, and the Silk Board Rs. 6.7 crores—a total of Rs. 362.7 crores against the provision in the plan frame of Rs. 200 crores for cottage and small-scale industries. Following are the provisional allocations:

	Rs.
Khadi and Village Industries Board	60 crores.
Handicraft Board	7 "
Silk Board	3 "
Rural Arts and Crafts in the Community Project Areas	15 "
Handlooms	25 "
Small Scale Industries	30 "
For credit facilities to small entrepreneurs	40 "
	180 crores.

The report of the Karve Committee is expected in September.

Shipping Target

The tentative proposals of the Transport Ministry for the second plan are also available. Speaking at the annual meeting of the Indian National Steamship Owners' Association last month, the Transport Minister, Mr. Lal Bahadur Shastri, gave a broad outline of the shipping plan. The Study Group, said the Transport Minister, had envisaged a net addition of 72 ships totalling 4.45 lakh tons gross at an estimated cost of Rs. 80 crores; the private sector would contribute Rs. 10 crores, the balance being advanced by the Government. He was confident that the target of six lakh tons gross would be reached by the end of the first plan period, and with 4.45 lakh tons in the second plan period, India would have a total tonnage of over one million by 1961. The Study Group had suggested a target of 400,000 tons gross for coastal trade and another 500,000 tons for adjacent trades during the next five year period against the present tonnage of 250,000 or 300,000 tons gross. At the end of the first five year plan India's overseas tonnage is expected to reach 280,000. The second five year plan envisages a net addition of 37 ships totalling 270,000 tons gross to this fleet.

Some comments are available. As reported earlier, the Government is not satisfied with the position of the shipping industry. It will have invested nearly Rs. 100 crores in the industry by 1961, in addition to the expenditure incurred on development of port facilities, and on the subsidy given in the form of cargo and ships made available to the shipping companies at concessional prices. As against this, in many a case shipping is one item in the business of a managing agent.

A similar issue arose in the case of air transport. Ultimately, the Government decided to nationalise the industry rather than advance loans and give subsidies to the nine air companies. If the Government had to advance Rs. 70 crores to build the merchant fleet, it could invest Rs. 10 crores more and own the fleet. These issues are being examined here. Meanwhile, a tentative decision has been taken to appoint one common official Director on the Board of every shipping company taking loans from the Government. This Director will be a sort of liaison officer and will keep the Government posted about the day-to-day working of the companies.

The first five year plan for lighthouses was for Rs. 200 lakhs, of which a sum of Rs. 120 lakhs was expected to be spent by the end of the first plan. The rest will be carried over to the second plan. Works costing Rs. 400 lakhs have been included in the latter and it is expected that Rs. 480 lakhs will be spent during this period. The expenditure involved will be met partly from the proceeds of light dues and partly from loans to be advanced by the Central Government.

The latest estimate for major port development in the second plan period is Rs. 56 crores, of which Rs. 20 crores will be the carry-over from the first plan and the balance of Rs. 36 crores will be for fresh schemes.

Responsibility for the development of minor ports rests primarily with the State Governments which have not yet formulated their plans. An officer on special duty has been appointed to assist maritime states to prepare their plans. These investigations are expected to take two years and development works are likely to start in the third year of the plan. It is proposed to make a provision of Rs. 5 crores in the second plan for the development of minor ports. The amount will be spent mainly in investigation work. Any further requirements of the maritime State Governments will be included in their own plans.

The Delhi Road Transport Authority and the State Governments will need money to continue the programmes for nationalisation already under-

taken by them. Their plans are expected shortly.

In consultation with State Governments and Central Ministries, a six year plan for the development of tourism has been drawn up. The plan begins from April 1955. The first part of the plan, covering the first three years, will cost Rs. 7.26 crores. Data for the second part of the plan are being collected from State Governments and other authorities. It is expected that the total cost of the six year plan will be in the neighbourhood of Rs. 15 crores.

The total mileage of the national highway system is about 14,000, including the missing links. It is proposed to consider the inclusion of additional roads in the national highway system in the second five year plan. The additional mileage may be 1500 or so. The expenditure ceilings and approximate physical targets proposed for inclusion in the Central sector of the second five year plan are as follows:

	Rs.
National Highways	60 crores.
Other roads	44 "
Total	104 crores.

There is also a proposal to include Rs. 17 crores for loans to State Governments. The suggested ceiling for inclusion in the States' sector of the plan is Rs. 225 crores.

Optimism About I.A.C.

A brighter future for the Indian Airlines Corporation is envisaged here. In fact, the Corporation has done better than was expected. The actuals for 1954-55 have reduced the losses by nearly Rs. 10 lakhs. The revised estimates for 1954-55, it will be recalled, placed total earnings at Rs. 680.60 lakhs and expenditure at Rs. 780.26 lakhs, which together with interest charges of Rs. 15.93 lakhs placed the year's deficit at Rs. 115.59 lakhs. Actuals for the year ending 31st March, 1955 were as under:

	Rs.
Revenue	674.79 lakhs
Expenditure	764.56 "
	(—) 89.77 "
Add interest	(—) 15.93 "
Deficit	(—) 105.70 "

The Corporation's 1955-56 budget discloses a deficit of Rs. 194.84 lakhs as under:

	Rs.
Revenue	762.62 lakhs
Expenditure	937.46 "
	(—) 174.84 "
Add interest	(—) 20.00 "
Deficit	(—) 194.84 "

The deficit has thus increased by Rs. 89.14 lakhs—from Rs. 105.70 lakhs in 1954-55 to Rs. 194.84 lakhs in 1955-56. It is explained that because of the further concessions announced by the Communications Minister over the head of the Corporation, the pay bill has gone up by Rs. 53 lakhs a year. The operational losses on *Heron*s are placed at Rs. 25 lakhs; Rs. 11.14 lakhs are accounted for by an increase in engineering personnel and their training. This is a drab picture of a nationalised industry. It is based on the existing fleet and traffic. The future is linked up with the modernised aircraft, orders for which have already been placed.

The Corporation decided to purchase seven *Viscounts*. They were to operate on all the trunk routes, on night air mail services and on international services between Bombay-Karachi, Bombay-Colombo and Calcutta-Rangoon. Eighteen months' delay in reaching the final decision has deferred the delivery date for *Viscounts* from November 1955 to December 1957.

In the altered circumstances, the Corporation, with the prior approval of the Government, has decided to purchase five *Viscounts* and three *Skymasters*. The latter are for immediate delivery, the idea being to cater for the increased traffic under the second plan. The three existing *Skymasters* have already been modernised at an estimated cost of Rs. 40 lakhs. The Corporation, with its fleet of six *Skymasters*, will be able to double the passenger carrying capacity on trunk lines. It is proposed to operate *Skymasters* on the night air mail service as also on Delhi-Bombay and Delhi-Calcutta or Calcutta-Bombay services. Three *Skymasters* are estimated to cost Rs. 1.03 crores and five *Viscounts* Rs. 2.86 crores.

It is expected that an increase in air traffic of 30 percent will result in the first year in a loss of Rs. 14.67 lakhs on the new service operated by six *Skymasters*. A further increase of ten percent in air traffic in the second year will turn the deficit into a surplus of Rs. 2.6 lakhs. An increase of ten percent in the third year will yield a surplus of Rs. 20 lakhs. At this juncture, *Viscounts* are expected to join the fleet of the Corporation. Thus, *Viscounts* will, from the very start, operate on a surplus basis, provided the second five year plan is implemented according to schedule and increases traffic by 50 percent in three years' time.

Fares and freights on night air services will be increased by the Corporation from 15th July more or less to the level of the day services. Fares on certain routes of the day services will also be slightly increased. At present fares and freights on the night services are slightly less than on the day services. This is in accordance with the recommendations of a committee appointed by the

Corporation to rationalise its fare and freight structure. The increases are expected to yield an additional income of Rs. 18 lakhs per annum to the Corporation. From 15th July, the evening air service between Delhi and Bombay will cost as much as the morning service, that is, Rs. 175. At present the fare by the evening service is Rs. 35 less. As regards freight, the committee has pointed out that they are low on the night services and by increasing them to the level of the day services there will be better mobility of freight between places served by the day and night services.

Civil aviation is regarded as the second line of air defence and is generally subsidised. Not so in India, where it has to take its stand along with industries in the private sector. Its last advantage of cheap labour has now been eliminated; unlike the international airlines, petrol is subject to taxation and the petrol and wage bills constitute 60 percent of its expenditure. There can hardly be any scope for economy.

With the minor exception of "leave liability" involving a claim of Rs. 21 lakhs, the issue of compensation has now been settled.

Talks on Meher Award

The General Secretary of the Transport and Dock Workers Union, Mr. P. D'Mello, had a three-day conference with the Union Transport Ministry, when the Meher Award was discussed. The Award is already the subject of an appeal before the Appellate Tribunal and the conference held here was largely intended to explore the possibility of an out-of-court agreement on the basis of the Award. The Tribunal, it will be recalled, prescribed piece-rate wages in order to ensure the requisite output by labour. It was made clear that the workers must accept the basic principle of the piece-rate system as a condition precedent to any out-of-court settlement. The Government will on no account, accept any scheme which does not guarantee maximum output by labour. Mr. D'Mello has returned to Bombay to consult his colleagues.

Health Minister on Hospitals

At its meeting in May the National Development Council agreed that "Measures for training of personnel needed for the implementation of all parts of the second five year plan should be given high priority and should not wait for the preparation of the second plan." State Governments are already engaged in considering their requirements for different categories of technical personnel needed for carrying out their programmes. There is one other class of personnel which would not appear directly in many individual development schemes, but which will be needed in large numbers in various fields of work connected with the second plan, namely, administrative personnel.

As planned development proceeds, the range of duties undertaken by the Central and State Governments increases correspondingly. Administrative personnel are required not only for duties connected with the normal administration, but also for extensive duties relating to development. The National Extension Service has made a large call on the available administrative personnel and during the second five year plan the problem will assume a large magnitude. In particular, in fields in which technical personnel are not available in sufficient strength, State Governments often find it necessary to appoint senior administrative officials. The problem of expansion of administrative personnel cannot be met to any extent through contract appointments or appointments for short periods, as it takes a considerable period of time to train an administrative officer and to develop in him the necessary judgement and understanding of men for dealing with situations as they arise. It therefore becomes necessary to expand the permanent cadres at different levels. This has to be done, not so much from the point of view of specific requirements for the implementation of particular programmes, as from the general proposition that the progress of national planning entails at least a proportionate increase in administrative personnel.

The Central Government also depends to a large extent on personnel drawn from the States both in the Indian Administrative Service and from other administrative services. Indeed, the Central Government attaches considerable importance to obtaining personnel with experience in the States, as this has a bearing on the practical administration of the Plan both at the Centre and in the States. In other words, the expansion of State cadres for administrative services would not only enable State Governments to undertake their development more successfully, but is a matter of considerable importance to the Central Government.

Administrative personnel will be needed in larger numbers at the level of the Indian Administrative Service and the State Administrative Service and at other levels, such as of Block Development Officers, Tahsildars, Naib-Tahsildars, Mamlatdars, etc.

There are several aspects to the problem to be considered, including:—

- i) the present strength of each of the cadres mentioned above, and estimates of strength needed during the second five year plan, both in the aggregate and in terms of annual intake;
- ii) examination of the present sources from which personnel in these cadres are recruited and whether additional steps are needed to expand the base for recruitment;
- iii) methods of recruitment now followed and whether any changes are needed; and

Permanent Low-Cost Homes— BUILT TO LAST WITH ACC CEMENT

For a copy of our latest publication "40 DESIGNS", giving plan and perspective of different types of low-cost houses, please write to The Concrete Association of India, Bombay Mutual Building, Calcutta-1.

Price Rs. 1-8-0 postage as. 10.

With concrete hollow-block walls, concrete floors and roof your house will have the three essentials of the perfect house—**Economy**; because its first cost is moderate and upkeep is negligible; **Firesafety**; because concrete cannot burn; **Durability**; because of its inherent structural strength.

iv.) the present methods and period of training and whether any changes are needed to with larger numbers.

The Planning Commission has asked the States to review the problems of administrative personnel for the second five year plan on the lines suggested above.

Centre's Health Plan

In view of the controversy over hospitals in Calcutta, the views of the Union Health Minister, Rajkumari Amrit Kaur, on the plan frame should be read with interest. She says: "While the need for increasing the number of trained health workers of different categories is imperative, the manner in which these are to be pressed into service is a matter which requires due consideration. What I have in mind particularly is the condition and the needs of the rural areas which must necessarily receive the highest priority. Lacking as our villages are in the basic requisites for health, their first need is for clean water to drink, clean surroundings to live in, protection from communicable diseases and wholesome and adequate nourishment. Even if these elementary requirements can be provided on a universal basis, a considerable improvement in the health conditions of the rural population can be legitimately expected to result within a short time. National health programmes have so far been conceived on this basis, but owing to paucity of funds only a beginning has so far been made. The water supply and drainage scheme, the malaria, tuberculosis and leprosy control programmes, the maternal and child health services are all examples of the preventive approach to the health problem which my Ministry has sponsored from the beginning.

"All these tasks are of such magnitude that our maximum resources must be concentrated towards tackling these problems and nothing should be allowed to come in the way of the achievement of these objectives in the shortest possible time. It is, therefore, of paramount importance that the preventive approach must not only be sustained in the second plan period but actually multiplied manifoldly. This must be on a wide front and the outline of the plan of my Ministry, which is under preparation, is intended to represent this approach. It is not suggested that programmes other than these of the types referred to above should not receive consideration, but the question is one of approach and priorities.

"With regard to the number and quality of existing hospital facilities, while it is true that, as compared to modern standards, these facilities in general are far below the desired level, yet a mere numerical increase in the number of beds without a concomitant improvement in the standard of service will not carry us very far. A great deal remains to be done to improve the standard of service provided by the existing hospitals, particularly those in the rural areas, before any large-scale expansion of hospital beds can be usefully undertaken.

"It must be clearly understood, therefore that while undertaking any programme of expansion of hospital facilities, full account must be taken of the need for the improvement of existing hospital facilities and of the maintenance of an improved standard in respect of such new hospitals or additional beds as may be brought into use. At the present time, the hospitals and dispensaries in rural areas are, for the most part, very understaffed and ill-equipped. They subsist on a pittance which makes the rendering of any rational and effective diagnostic and therapeutic service well-nigh impossible. It seems well worth emphasising, therefore, that the expansion of hospital beds must be accompanied simultaneously by an improvement in the tone and quality of service, as an increase in numbers by itself at the present level of efficiency cannot be considered a real advance. If this condition is satisfied, as it should be, the target aimed at must be reached, if not exceeded.

Output of Doctors

"There has been a steady increase in the output of doctors in recent years, so much that the outturn of graduates from medical colleges has almost doubled in the last eight years. If their number is assumed to be about 70,000 in 1956, the target of 90,000 by 1961 implies a total increase of about 25,000 allowing for wastage, losses, etc. The present rate of production may be expected to yield about 15,000 to 16,000 thus leaving a shortfall of about 10,000. To cover this gap, the most practical step in my opinion will be the starting of new Medical Colleges. Provision is, therefore, being made in my Ministry's plan for assisting the States to start at least 10 new medical colleges. While I am fully aware that the resultant increase from this measure in the number of doctors will not be effective until 1961, the matter is one of urgency because it will make expansion of health services in the third plan much easier. Maximum assistance should therefore be made available by the Central Governments to the maximum number of State Governments or other agencies proposing to start new medical colleges.

"In this connection it may be pointed out that even though the doctor-population ratio is far below the optimum, yet this factor by itself is not likely to fetter the implementation of any of the schemes in the plan. It is only a relatively small proportion of the full strength of qualified doctors who are on the payrolls of the Government and local authorities. A fair percentage of doctors practising in urban areas may be considered under-employed. Until and unless this sorry state of affairs is remedied—and it can be remedied if only the States will give a decent wage to fully trained medical personnel—the production of

more doctors may even create still further unemployment amongst this class. An increase in the number of doctors will not, therefore, succeed by itself in setting right what is essentially a problem of maldistribution. As stated, if adequate remuneration, satisfactory housing conditions and proper facilities for professional work of a good standard are provided to doctors in rural areas, manning of the growing health services from out of the currently available manpower should not offer any serious difficulty.

"The question of introducing a new class of health worker for the rural areas—the health assistant or auxiliary health worker—has been the subject of discussions and debate between the Central and State Governments and at meetings of the Central Health Council for some time. There is considerable diversity in the views held both with regard to the need and utility of such workers as well as to the scope of their functions. While some States have expressed themselves against the schemes for various reasons, others have indicated that they do not need such workers in their health services and only less than half the number of States are agreeable to train and employ such workers. The Planning Commission, while endorsing the scheme, have limited the scope of the health assistant's work to preventive activities only, thus reducing his usefulness considerably in comparison to what was originally intended. The utility of the new category of health worker is therefore questionable and it would not be desirable, even if it were possible, to introduce this scheme on a countrywide basis. It is considered that a beginning may be made only in those States which have accepted it. This would make it possible to turn out about 500 health assistants every year, so that in the second plan period we can count on having about 1500 such workers. This will be far short of the targets indicated in Prof. Mahalanobis's note.

"What is stated above is only in relation to a health assistant with two years' training. The role to be played by the four-year trained assistant mentioned in Prof. Mahalanobis's note, is not clear. Without going into a detailed consideration of the many aspects of this question, I am of the opinion that the training of a health assistant with a four-year course is not called for. If the intention is to revive the old licentiate class, such a step will be opposed to the sum total of the trends and policies advocated equally strongly by the official and non-official agencies alike through the last two decades. Even if a change in policy in this matter were to be accepted, it is extremely doubtful whether the rural areas will be benefited to the extent anticipated and it will certainly not help to any great extent in speeding up the production of doctors. I repeat that the solution lies in the immediate employment of all the available man-power in doctors. The Centre may well subsidise the salaries of this personnel."

Burmah-Shell and Fertilisers

The Burmah-Shell Company has offered to instal a fertiliser plant to manufacture sulphate of ammonia from surplus gas and fuel oils, "provided satisfactory terms are arranged with the Government of India." In the alternative, the Company is willing to sell the surplus gas from its oil refinery.

The Fertiliser Production Committee, it will be recalled, has selected Bombay as one of the sites for a new fertiliser plant, on the assumption that gas would be available from the Stanvac Refinery. The Committee has also suggested a larger unit at Bombay, if surplus gas at reasonable prices were available from the Burmah-Shell Refinery.

Burmah-Shell's offer, which is under examination here, raises an important issue, namely whether new fertiliser units should be in the private sector. Indications are that a fertiliser unit of 72,000-86,000 tons capacity in terms of nitrogen would be set up on the recommended site at Neiveli. Negotiations for locating a unit at Bombay will soon be opened with the oil refineries.

China Buys Pakistan Cotton

China has purchased 60,000 bales of cotton from Pakistan as against 6,000 bales from India, at prices higher than those paid to India, it is learned.

New Oil Refinery

A French Company, Krebe, has offered to instal a fourth, one to one-and-a-half million ton oil refinery at Bhavanagar, in Saurashtra. The crude oil will be obtained from Iran, the Government which has also offered to invest Rs. 4 to Rs. 5 crores in the undertaking. The capital investment is estimated at Rs. 10 to Rs. 12 crores, almost half of which, it is proposed, will be subscribed by one Mr. Dinshaw and his friends. The French Company has offered to subscribe Rs. 1 crores. The proposal has the backing of the Saurashtra Government and is under examination here.

Steel Mission to Russia

The Indian Steel Mission, headed by the Production Secretary, Mr. S. S. Khera is now expected to leave for Russia on 4th August. The terms of reference for the Mission are being drafted.

National Development Corporation

A meeting of the Board of Directors of the National Development Corporation will be held here early next month to discuss several important schemes, blueprints for which have been prepared.

Factory Shoe Freeze Urged

Khadi and Village Industries Board, it is learned, has demanded the freezing at their existing level, of the production of footwear by the organised sector, including Bata. The issue is under examination by the Planning Commission.

London

MR. BUTLER ON RECOVERY OF BRITISH TRADE

WARNING OR ASSURANCE?

(FROM OUR LONDON CORRESPONDENT)

IT is difficult to judge what Mr. R. A. Butler intended to convey to the National Advisory Council on Industry when he addressed the members of that body at the Treasury the other day—whether to reassure or to warn? Looking back over the four months since the Bank rate was raised to 4½ percent the Chancellor found some satisfaction in the way things had gone, for he had not expected dramatic results. He found "at least some grounds for concluding that the position had been held." The excessive rate of expansion of imports had slowed down, the volume of money, which had been rising for nearly two years, had fallen, and there were "certain signs" that the upsurge in personal consumption, notably of household goods, had been checked. The Chancellor admitted that the pound had been under considerable pressure in the foreign exchange market, but explained that the recent strikes had undoubtedly affected foreign sentiment. Mr. Butler was by no means entirely happy over the balance of payments. Exports have been rising steadily this year, and at last imports are showing some signs of falling, but Britain's share in world trade has been declining gradually. Our recovery, he held, would depend upon our success in carrying out two policies—the restriction of credit in order to curtail demand at home, and the sale at competitive prices of goods available for export. "We must ensure that the growth of the economy does not take place at the expense of the exports needed to sustain that growth. That means that demand at home must be narrowly watched and credit control and the other measures restricting demand must be applied with the courage and resolution that the situation requires."

The City took more notice of the reassurances than of the warnings, but it was fairly obvious that a further turn of the credit screw was impending. Bank loans, far from falling since the Bank rate was raised in February, have gone on rising. Total advances by the banks rose between February and May by nearly £95 million to a peak of £2190 million. Loans to borrowers classed as "personal and professional"—the small borrower—went up by £8 million to £401 million, but the nationalised industries recorded the biggest rise of over £40 million. Unless the larger borrowers can be controlled the total of bank advances cannot very well be kept down, and action to that end was indicated recently.

Cuts in Bank Loans

It is now learnt that a request has been made to the banks by the Chancellor of the Exchequer, through the Governor of the Bank of England, to reduce their overdraft facilities to customers. The banks, in their turn, have issued fresh instructions to their branch managers to keep strictly within the lending limits imposed by head offices. Apparently no hard and fast rules will apply to loans to ordinary business and personal borrowers, each case being judged on its merits against the background of the character of the applicant and the purpose of the loan. It must be assumed, however, that all existing overdrafts for "less essential" purposes, such as buying a motor car or the like, will be reduced, while fresh applications of this nature will be refused. Even where businesses can offer ample security they may find increased overdraft facilities for expansion projects hard to obtain. The general object of the latest banking exercise is to prevent any fresh increase in the overdraft total. This latest turn of the money screw is aimed at curtailing unessential demands in the home market. It is thus part of the Chancellor's policy of restraining domestic demands to help reduce Britain's import bill and free resources for the export drive. Until now the banks have adjusted their position to Mr. Butler's "credit squeeze" by selling gilt-edged investments. By these sales, which have run into scores of million of pounds in recent months, they have been able to meet customers' demands for loans without impairing their own liquid position. To-day, with gilt-edged prices at a lower level the banks are reluctant to make further sales. The Chancellor is also anxious to prevent any fresh decline in the gilt-edged market.

Fall in Gold Reserves

The need for endeavouring to speed the processes of the credit squeeze—which has worked slowly so far—is evident in the gold and dollar reserves position at the end of June. At \$2,680 millions, the total has fallen by \$6 millions during the month. Taking into consideration such factors as the rail and dock strikes, the rumours of sterling devaluation which were current after the O.E.E.C. Council meeting on 10th June, and that American defence aid was down to the lowest figure of the year, the decline was not as steep as had been expected. Allowing for U.S. defence aid of \$10 million, the receipt of \$12 millions from the May E.P.U. settlement, on the one hand, and for payment of \$8 million quarterly instalment on the Canadian interest-free loan and \$2 million to E.P.U. creditors on the other, the sterling area had a residual deficit of \$18 million last month. This compares with a deficit of \$47 million in May, \$9 million in April, \$28 million in March, and \$107 million in February. The gold and dollar reserves are now almost exactly equal to the holdings at the end of February, when they had dropped steadily for eight months to \$2,681 million, so the position is, as Mr. Butler so often points out, "being held". On

the other hand, the first half of the year is usually the sterling area's best season for earning dollars. Furthermore, tourist expenditure on the Continent is around its highest level about this time. Last month we had a deficit of £7 million with the E.P.U. against surpluses in May and April of £8 million and £22 million, respectively, and half of this will have to be settled in gold this month. While the overall position is probably better than we had any reason to expect, and therefore there is no cause for panic, it is only too evident that the danger of a crisis is still just around the corner.

Cost of the Dock Strike

The dock strike ended last Monday and, as in the case of the railway strike, the participants are, if anything, worse off than they were before in spite of their claim that they have scored a "moral victory." In point of fact, the controversy between the T.U.C. may now be in a better position to seek one if the unions are agreeable to play their part and the members are willing to co-operate. The striking dockers are estimated to have lost something like £10 millions in wages, and are now hard at work—at overtime rates, of course—trying to clear the congestion at the docks and recoup what they can. The cost of the six weeks' stoppage to the nation as a whole is much more difficult to assess, though the housewife has already said it reflected in many of the prices she has had to pay on her shopping rounds, and she is likely to find this will continue for some weeks.

In the industrial sphere the repercussions will be even more prolonged. The cost of imported raw materials rose by over 3 percent in the six weeks, and this trend will persist, with the further possibility that freight rates may be raised to cover the risk of similar stoppages to vessels in British ports in the future. The hold-up in supplies, both of finished goods and raw materials, has added to costs, and production schedules have been upset. So far as exports are concerned, the effects of the hold-up in dockside warehouses on the quality of goods has yet to be measured, and the disappointment to regular customers is expected to cause a severe loss of future business. To illustrate these points a spokesman for the Association of British Chambers of Commerce gave the example of a firm importing timber which had not been able to unload a part cargo of timber from Canada. The timber had already crossed the Atlantic three times, and each time the importer had had to pay an extra £10 per standard for the shipping space its goods were occupying. Another firm had had £500,000 worth of wool held up in the docks and had had to curtail production accordingly. Others had had to pay extra transhipment dues for goods diverted from strikebound British ports before they could get their cargoes. The spokesman knew of one firm which was still waiting to fulfil orders for £30,000 worth of piecegoods, the piecegoods themselves were still at the docks and the firm was disposed to expect that future trade might fall by as much as 50 percent.

Freedom for Sugar

The Government has decided to restore the greatest possible freedom to the sugar trade and facilitate the reopening of a terminal market in London. The necessary legislation is contained in the Sugar Bill, and the operation of the scheme is explained in a White Paper entitled *Future Arrangements for the Marketing of Sugar*. The difficulty of freeing the import and export of sugar from controls has been that the Government has undertaken to buy every year more than 1½ million tons of Commonwealth sugar at a negotiated price and from 600,000 to 700,000 tons of sugar from home beet growers at a guaranteed price. Both the negotiated price and the guaranteed price were above the world price, which meant that if controls on import were lifted without safeguards our obligations were likely to be broken. To get over this difficulty it is intended to set up a small Sugar Board which will have the statutory duty to buy at the negotiated price the sugar which the Government has contracted to buy under the Commonwealth sugar agreement. Then, without handling the sugar itself, the Board will resell it in the country of origin at the current commercial price to refiners and other traders. This will allow all trade in sugar imported into this country to be conducted on a world price basis subject to the normal pressures and fluctuations.

On present price levels the Board will obviously incur a deficit on all its transactions. These deficits will be met by the proceeds of a surcharge levied on all sugar entering this country's internal market. The surcharge will not only be levied on raw sugar, but also on sugar products manufactured abroad. This will offset the advantage that foreign manufacturers would otherwise have. As for home-grown sugar beet, the Board will make deficiency payments to the British Sugar Corporation to make up any difference. These arrangements for a surcharge assume that the negotiated price is above the world level. If the position were reversed, the Board would make a surplus and these circumstances no surcharge would be collected. The rate of any surcharge will be prescribed by an Order made by the Minister of Agriculture. The White Paper explains that the effect of the surcharge will not mean an addition to the existing internal price of sugar "but will merely operate as an alternative device for averaging prices." It is pointed out that traders will be able to handle sugar on a free market and it will be possible for the London terminal market to be opened again.

Uttar Pradesh

U.P.'S PROBLEM OF URBAN HOUSING

SOLUTIONS RECOMMENDED BY OFFICIAL COMMITTEE

(FROM OUR LUCKNOW CORRESPONDENT)

THE State Government's Housing Committee has recommended the creation of a Housing Board and a Housing Finance Corporation with an authorised capital of Rs. 5 crores to overcome urban housing shortage in the State. The Corporation will raise funds by issuing shares and debentures, raising loans and receiving deposits. To start with, the issued capital will be Rs. 2.5 crores, divided into 250,000 shares of Rs. 100 each. The State Government will contribute 51 percent and the remaining will be subscribed by co-operative societies, insurance companies, banks and local bodies. Contributions can also be made in the shape of land. The Government would guarantee repayment of the principal and a dividend of 4 percent on shares. The rate of interest to be charged by the Corporation will not exceed 5½ percent. The loans would be for a period of 30 years or less to suit the convenience of borrowers.

The housing shortage in U.P. cities at present is estimated at 220,000 units and a sum of Rs. 140 crores would be the minimum requirement for meeting the shortage. The proposed Corporation will give money only to those possessing land or to housing co-operative societies. In order to provide an element of compulsion the Government proposes to impose a levy on landowners who leave housing sites vacant. It has also been suggested that in future no Government bungalow should have grounds exceeding 1½ acres. As regards private bungalows, such an imposition is considered unnecessary as it is felt that the Estate Duty is already forcing the big landed gentry to get rid of their surplus grounds and buildings. Indeed, in the view of the Housing Committee the Estate Duty is responsible for the reluctance of the moneyed classes to invest their capital in house building, although an incentive is being offered by the removal of rent control on newly built houses. U.P. has been one of the major beneficiaries of the Centre's subsidised housing scheme under the first five year plan but since the latter has expressed a wish to reduce the amount of the subsidy, the formation of a Housing Finance Corporation, as in Bombay State, is being undertaken.

Suggestions on Sales Tax

In a memorandum submitted to the Sales Tax Enquiry Committee, the Merchants Chamber of U.P., Kanpur, has suggested that if the Sales Tax Act is amended on the lines indicated by the Chamber, the annual yield would go up to Rs. 12 crores from Rs. 5½ crores, realised at present. The Chamber points out that unlike income tax, there is hardly any plausible incentive for the business man to evade the sales tax unless he is made to do so by the faults inherent in the system. "The sales tax authorities must, therefore," says the memorandum, "rely more and more upon the innate goodness of human nature and prescribe methods and manner of assessment and collection in the straightest, simplest and easily understandable ways." The Chamber has also urged the appointment of liaison officers in the Sales Tax Department as in the Income Tax Department. It has listed 16 articles including newspapers, electrical energy, milk, meat, salt and fresh vegetables for exemption from sales tax and a list of 78 articles for single-point tax. As regards the multiple-point system of taxation, the Chamber endorses the recommendation of the Taxation Enquiry Commission that the levy under this system shall not exceed 1½ percent under any circumstances. Despite initial administrative difficulties, the Chamber has urged the Government to give the recommendation a trial on condition that there is no departure from the principle of low rates. The memorandum says: "The multiple-point system to be equitable, successful and progressive must

be based on very low rates with very few exemptions so that the contribution to the Exchequer may be broad-based and that only a few are not made to bear the burden beyond their capacity while the vast majority of population with a relatively lighter burden is let off."

Search for Minerals

The U.P. Government has requested the Geological Survey of India to carry out a mineral survey of the Mirzapur district with a view to determining the possibility, if any, of starting heavy industries near the site of the multi-purpose Rihand dam. The Survey has also been asked to conduct similar investigations in the area to be submerged by the Rihand reservoir. These two proposals form part of the U.P. Government's list of items for inclusion in the Geological Survey's field programme for 1955-56. Another proposal asks for investigation of reported mineral occurrences in Garhwal and Almora. In Naini Tal, gold and iron ore deposits are reported to exist in the vicinity of the Sona river which is also said to be furnishing a small quantity of gold dust. The Ramganga river is also auriferous for a short distance below its junction with the Sona. There are indications of the presence of lignite near Ramnagar, close to Haldwani. Alum is traceable in different parts of Kumaon while gypsum is found in Eastern Chhakhata. The State Government considers that all these areas deserve a thorough survey. Soapstone which has a number of industrial uses is reported to be found in Lalitpur in the Jhansi district while red and yellow ochre deposits that may prove useful for the paint industry have occurred in the Banda district.

Move to End Labour Strike

Despite inferences to the contrary, the general impression now about the Kanpur textile strike is that it is destined for a tame finish sooner rather than later. The emphasis of labour spokesmen recently has been on the record duration of the strike—it began on 2nd May—rather than the issues on which the strike was started. According to the Chief Minister, Dr. Sampurnanand, the Government is not committed to the Narendra Deva formula or any other formula and though the Government is willing to help bring about a settlement, the primary responsibility for a settlement rests with labour itself. However, it is interpreted as a good sign that labour leaders have at last thought fit to open negotiations with the Chief Minister on whom a deputation waited last week in Naini Tal. The hopeful trend of events is indicated by the statement issued by three labour leaders, including Mr. Ganga Sahai Chaudhary, president of the Suti Mill Mazdoor Sabha which has sponsored the strike, on their return from Naini Tal. "The real significance of the interview with the Chief Minister," they say, "lies in the fact that direct contact between the representatives of the textile workers and the Government has been established and the stalemate broken. Our discussions, held in a cordial atmosphere, covered a wide range of issues raised by the strike. The discussion was of an exploratory nature and it would be premature to make any speculations at this stage. However, the fact that the discussions will continue and a wider deputation of the Suti Mill Mazdoor Sabha will meet the Chief Minister at Lucknow on 11th July indicates a hopeful atmosphere."

IMPROVEMENTS IN LIFE INSURANCE BUSINESS

SOME ARGUMENTS AGAINST NATIONALISATION

(By N. T. Raju)

RECENTLY, much criticism has been levelled against life insurance companies and the manner in which they have been conducting their business. Some of this criticism is based on ignorance of the basic issues involved and some is deliberate exaggeration. The publicity given to certain provisions of the Code of Conduct framed by the Life Insurance Council by way of Press advertisements, and subsequently to the reduction of premium rates and its examination by the Life Insurance Council, might have created the impression that all is not well with the business and that malpractices are being tackled by a Government determined to set matters right and protect the helpless policyholders. The atmosphere created by the general trend of Government policy and attitude towards the private sector might have helped such an unfavourable impression.

It cannot be denied that some companies might have adopted methods which are questionable. But for a proper appraisal of the situation all aspects of the problems have to be taken into account. In spite of certain shortcomings, life offices have written a record volume of new business in 1954. The four largest companies wrote business which was only slightly less than the total new business in the country in the previous year. This would not have been possible without vigorous effort. The success in 1954 was not exceptional; life business developed rapidly during

and after the war years. The rise in money incomes has no doubt helped. But to propagate the idea of life insurance in a country where literacy is poor and to attract surplus incomes into life policies is an achievement for which life offices deserve proper appreciation.

New life business in 1943 was no more than Rs. 74 crores but by 1953 it rose to Rs. 155 crores. During that period the business in force increased from Rs. 378 crores to Rs. 962 crores. Such phenomenal development in an economically backward country imposes great stresses and strains on established methods of transacting business. The main allegation against insurance companies has been that new business is being procured at a high cost and that the methods employed are often unfair. Suggestions are also implicit that elaborate machinery is necessary to ensure that offices work along the right lines—that, instead of labouring so hard to control companies and thus protect the interests of policyholders, nationalisation may be an obvious remedy.

Nationalisation no Solution

In spite of many drawbacks, life offices have brought the business to a high level of activity within a comparatively short period. Without the drive that goes with private enterprise and competition which is the prime mover of improvement and efficiency, life insurance would have been far behind what it is at present. Fortunately we have two large companies managed by the Government and we also have the Postal Life Insurance owned by the Government, so that the relative performances of private and public management become comparable. Even after four to five years of the "governmental touch," Empire and Jupiter report high expense ratios, the former much in excess of the statutory limits; a majority of similar companies in private hands are more economically run.

In Postal Life Insurance, premium rates are low and premiums are collected by payroll deductions. Thus it is extremely attractive to Government employees, to whom alone it is open. Though the individual limit to life cover was raised to Rs. 20,000 as long ago as 1932, new business was disappointingly low in spite of a rise in the number of Government employees. In 1931 it was Rs. 150 lakhs and by 1952 it was Rs. 227 lakhs. As is well known, life insurance is sold, not bought. Low premium rates alone are not enough. People have to be canvassed, convinced, persuaded or even prevailed upon to purchase life insurance. In the absence of a positive effort on the part of offices or the Government to sell more life insurance progress will necessarily be slow. Whatever the other advantages of nationalisation, the present rate of growth is likely to suffer.

The backbone of the business is the insurance agent and it is desirable in the interests of the business to improve his lot. The annual turnover of the agencies is extremely high. This is to some extent due to the indiscriminate appointment of agents. Sometimes agencies are created in the name of the insured or his near relatives to secure for them the benefit of the heavy new business commission on own-policies. As soon as the purpose is served, these agencies die or remain inactive. The Life Insurance Council can help life offices and the standard of the business by regulating the recruitment of agents so that only capable people enter the field. A limited number of agencies will enable a satisfactory income per head.

As a measure of stabilising the agency force some sort of provident fund or pension may be provided for, to which the agent contributes jointly with the insurance company while he is working, so that he may feel secure about his retired life.

Expense Control

An obvious drawback in the existing expense limitation for life offices is that first year and renewal expenses are separately restricted but they are not defined nor are they required to be segregated in the accounts. Therefore the limitation is in effect applicable to overall expenses. If first year and renewal expenses are rigidly defined in the Insurance Act and their treatment in the accounts properly audited, the present vexatious restrictions on the commission payable to agents and the employment of intermediaries and elaborate efforts to ensure their observance can be dispensed with.

Nowadays the privileges and conditions attached to life policies are not identical for all offices. Though they are broadly similar, important variations do occur. It would be preferable to prescribe the minimum privileges which every policy should contain though more favourable conditions may be allowed as for instance in the New York State insurance laws. Such a course would promote better understanding of the value and utility of life cover and it is especially desirable in a country where life insurance is still in its infancy. In particular, the practice of issuing policies excluding life cover in the event of death due to a specified cause may be mentioned. Exclusions on

death from first pregnancy in case of female lives and from hernia in case of those subject to that ailment are of common occurrence. The importance of the exclusion may be overlooked or under-estimated by the insured at the time of obtaining the policy. As the practice of offices differs in such cases, it may disappoint the dependants and sometimes give the impression that they have been defrauded.

Actuarial Standards

In conclusion, there is the desirability of stipulating minimum actuarial standards for premium rates and valuations. If the minimum standards are periodically formulated by the Department of Insurance, the financial soundness of offices can be ensured and timely action will be possible in the case of those which are unable to come up to the mark. Any extravagance in expenses or generosity in bonus distributions or writing of business at undesirable rates of premium would be an impossibility. Had there been such provisions in the law, the recent controversies regarding high expenses, rate-cuts and fancy bonuses would not have arisen at all and the business would have spared the criticism which, rightly or wrongly, has been directed against it. Such provisions would also have made for a sounder financial position in more offices than at present. They would have prevented some offices from shielding their real position by the adoption of a less stringent valuation basis in determining their liabilities.

With the suggested improvements life insurance business will be better able to make steady progress along sound lines. Nationalisation may solve some problems but it is likely to affect seriously the growth of the business as well as the efficiency with which it is conducted and thus prove to be ill-conceived on balance.

Jute

GUNNY STOCKS AND THE DELAYED ARGENTINE SHIPMENTS

EFFECT OF FLOOD REPORTS ON FIBRE PRICES

THE jute markets have been influenced by various factors, not the least of which was the publication of the mills' stocks of jute goods for the month of June. The exceptionally large increase of 8,000 tons in hessian stocks was not unexpected and had been predicted from early in the month when many shipping instructions for goods destined for the Argentine were cancelled due to the political unrest in that country. Then, again, many mills are making Hessians to stock against the Argentine order, most of which will only be shipped during the July-September period, and these goods, which have actually been sold, have boosted the stock figures until they bear very little resemblance to the true state of affairs. In reality the hessian section of the market is in a fairly healthy position and the abnormal rise in the stock figures should not be treated with alarm, even though at the present level they are the highest since April 1953.

In the other section, sacking, a decrease of 6,800 tons brought mills' stocks of heavy goods down to 46,100 tons, which is the lowest figure recorded this year. Here also the outlook is encouraging as mills are fairly well sold over the next few months, and are not likely to have to place unsold goods to stock. The overall stock position shows an increase of about 1,400 tons, but these figures should show a material change once shipments to the Argentine recommence.

Another factor that precipitated a rise in the goods market was the news of heavy flooding in Assam. This had a decidedly bullish effect, even though the jute growing areas were little affected by the floods, and speculators grabbed the opportunity to push prices up. Heavy covering took place in the fatka markets from Thursday, and continued unabated until the week-end. Over this period, operators succeeded in forcing rates up about Rs. 40 a ton for near delivery heavy goods, and Rs. 35 a ton for Hessians. Unfortunately there was no overseas interest to support this rise, and foreign buyers were content to sit out and wait for prices to fall. Mills were unable to take advantage of the higher prices ruling as not only was there no real business coming in, but the price of jute also rose by about Rs. 40 a ton and the ratio between goods and raw material was unchanged. After the week-end when news was received that the flood waters were receding with no apparent damage to the jute crop, weak holders began to unload at the higher rates, and with the scarcity of buyers, rates yielded a lot of ground and a weaker sentiment prevailed.

Pakistan Underquotes India

Reports emanating from London indicate that in the near future India will have to cope with very severe competition in the world markets from her neighbour, Pakistan. It is reported that in many fabrics, but mainly in Twills and Heavy Ceers, Pakistan's quotations for early shipment are in some cases Rs. 3 to Rs. 4 below those of Calcutta. At the present time this does not constitute a grave danger: the quantities on offer are of necessity small, as Pakistan does not yet have a very large surplus after the internal demand is satisfied. This surplus, however, will increase rapidly once Pakistan's expansion programme begins to bear fruit, and in the not too distant future India may find herself being priced out of the market.

News from all the Indian jute growing areas continues to be favourable, and in the lowland areas harvesting is in full swing. It is estimated that about 25 per cent of the lowland crop has already been gathered in and marketed, and imports into the main baling centres are increasing daily. The floods in Assam, which gave rise to a certain amount of anxiety as regards the jute crop, appear now to be subsiding with no apparent damage. There are ready buyers for all imports, and good prices have been offered for early delivery jute to be placed against high-priced contracts for July shipment. The market has been kind to speculators so far, and contracts entered into some time ago for early shipment are now showing a good return.

THE JUTE MARKETS

Manufactured Goods: The announcement of the mills' stock figures at the beginning of the week had an immediate effect on the gunny markets, and at the opening on Thursday last B Twills shot up Rs. 2 in the near positions and Rs. 1-4 for forward shipment. In the hessian section, although stock figures here did not at first appear to be encouraging, prices also rose about 6 annas in all sections. Opening quotations were Rs. 108-8 and Rs. 102 for ready and October-December shipment respectively, and Rs. 41-12 and Rs. 40-14 for 40in 100z Hessians for the same delivery periods. Heavy speculative activity took place in the fatka markets and bear covering pushed ready B Twills up a further 8 annas on Friday morning, but all other deliveries were unchanged, as there were no buyers for forward goods. Activity continued to be confined to the near speculative positions and during Friday a large operator began a heavy buying campaign on the strength of the Assam flood reports. Prices advanced sharply and by

Saturday morning ready B Twills were quoted at Rs. 110-8 and October-December shipment at Rs. 103-8, both prices being Rs. 1-8 up on the previous day. The hessian section responded in sympathy and ready 40in 100z advanced 10 annas to Rs. 42-6, but the forward section, in the absence of any business, only improved by 4 annas to Rs. 41-2 per 100 yards. These prices subsequently proved to be the top of the market, and at this stage heavy goods was showing an increase of over Rs. 40 a ton, and Hessians about Rs. 35 a ton. Unfortunately mills could not take advantage of the higher prices, as overseas buyers refused to follow the rise and stayed completely out of the market. The only business done then was of a speculative nature and inter-bazaar transactions throughout the week-end kept the market steady. On Monday, after a steady opening, slightly lower than the previous closing rates, prices began to fall back in the absence of any overseas support, and also on the news that the flood waters in Assam were receding and the river levels dropping. By Tuesday morning B Twills had lost Rs. 2 in both the near and forward positions and hessian 6 to 8 annas. An easier tendency prevailed due to selling pressure from weak holders. Overseas buyers continued to remain out of the market, but towards the close on Tuesday speculators again took an interest and heavy buying activity in fatka steadied prices considerably.

At the close the market is slightly better due to speculative covering. Opening quotations on Wednesday morning were as follows:

	July	Aug.	Sept.	Oct.	Jan.-
				Dec.	March
40 in. 80z.	34-6	34-6	34-2	33-2	32-2
40 in. 100z.	41-14	41-14	41-8	40-12	39-12
B Twills	108-8	107-8	105-8	101-8	98-8
Heavy Ceers					
(Plain)	109	108	106-8	102	99
A Twills	135	133-8	131	127	123
Liverools	121-8	121-8	120-8	116	112
Cornacks	109-8	108-12	107	103-8	99-8

Raw Jute: For the greater part of the week there has been very little interest shown in the raw jute markets, business before the week-end being confined mainly to some small lots of Old Crop jute for quick delivery. Buyers were taking little or no interest at this stage for early delivery New Crop jute, and any indications given were for shipment in the October-November-December period. Sellers were not keen to do business for these delivery dates and the market was dull and inactive. Towards the end of the week the raw jute market steadied in sympathy with gunnies and a small quantity of business was reported done on the rise. Raw jute prices kept pace with the improvement in the goods market and a very steady undertone developed up to the week-end with sellers reserved. The amount of jute on offer was cut down considerably, and a bullish sentiment prevailed. After the week-end the market was slightly easier in sympathy with the goods market, and a large mill group came out to buy a fair quantity of New Crop jute for near delivery. Sellers were inclined to be reserved for this period as the buyers insisted on guaranteed delivery, and it is understood that the full quota was not purchased. Business continued into Tuesday on a much restricted scale, and although conditions were inclined to be easier sellers withdrew from the market. The flood situation in Assam has had a certain amount of influence on sellers' attitude during the week, but reports from the jute-growing areas indicate that no damage has been done to the crop. Sellers of Pakistani jute showed a reluctance to do more business towards the close due to reports that the authorities were not passing E.P.C. forms and had tightened up restrictions. Over the week mills in general have been out of the market and have not followed the rise, and appear to be content to wait for prices to fall.

Quotations for Old Crop jute opened on Thursday last 8 annas up on the previous day's closing rates, and Ordinary Assam Bottoms were quoted at Rs. 27-8 a maund for July shipment. Prices advanced daily by 8 annas until they reached Rs. 28-8 on Monday morning. There was very little buying interest in this section and only small business was concluded for quick delivery. Towards the close an easier sentiment prevailed and rates began to drop back.

New Crop jute came in for a certain amount of interest during the week, and rates advanced Rs. 2 a maund, from Rs. 25 a maund to Rs. 27 a maund for August-September shipment. Sellers were reserved and although good business was done in Pakistan Northern Jute, the quantities each seller was willing to put up was small.

Old Crop business done during the week was on a very restricted scale, and mainly for quick delivery. Ready bills of lading were on offer for Dhubri-Northern jute and these changed hands at Rs. 28 a maund basis Bottoms. Business was also done in the same category for delivery ex Calcutta at Rs. 27 to Rs. 27-8 a maund. Low quality jute was also in good demand and Daisee Bottoms were only sold at Rs. 30 and Rs. 30-8 a maund for July delivery. Fair business was also done in Daisee Mesta and Bimili at Rs. 25-8 to Rs. 26 for one month's delivery. A small quantity of Pakis-

tan Jat Bottoms only was done at Rs. 31 a maund for one month's delivery ex local godown, and Pakistan Northern at Rs. 27-8 a maund for the same delivery.

Only small business was done in Indian New Crop Jute, Dhubri-Northern changing hands at Rs. 25-8 to Rs. 27 for Aug-Sept. shipment, and Upper Assam at Rs. 25 for Aug-Sept. shipment and Rs. 24-8 for October-November shipment. More interest was shown in Pakistani jute. In the pucca bale section Jat Cuttings were done at Rs. 105 for 15th August shipment, and Rs. 90 a bale for August-September-October shipment.

At the close the market is unchanged with sellers inclined to be reserved. Opening quotations on Wednesday morning were as follows:

Landed at Mills Rs. a maund basis Bottoms.		
Indian Jute:	Old Crop.	New Crop.
Lower Assam	28-8 One month	27 Aug-Sept.
Upper Assam	28	26-8
Northern	28-8	27
Daisee ex Sheoraphuli	30	27 Oct.-Nov.
Daisee White		27 August
Daisee Mesta	26-8	22 Oct.-Nov.
Bimili	26-8	22

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rate for white jute.

Rs. a maund basis Bottoms		
Pakistani Jute:	New Crop.	Shipment
Jat	28	Aug-Sept.
District	27-8	
Northern	27	

Cossipore markets have been quiet over the week and demand for quick delivery jute has fallen off, although some business was done in low quality fibre for immediate delivery. Imports are very small and in spite of the lack of business the market has ruled quietly steady in sympathy with the Calcutta jute and goods markets. At the close Kishenganj jute is quoted at Rs. 28-3 a maund for garsat quality. From the Daisee growing areas comes the report that all districts are requiring rain. In the Northern Daisee white fields, the steeping tanks and ditches are practically empty, and in many areas they have had to stop cutting due to the lack of steeping water. In other areas rain is required to promote growth, which is very far behind compared with the same time last year. General estimates indicate that the crop will be much larger than last year, but the excess quantity will be almost entirely mesta which is likely to be in the region of 70 per cent of the entire crop.

Mofussil: There is very little to report from the Indian upcountry markets but prices are steady and sellers reserved due to the food situation and the better markets in Calcutta. New Crop imports into the Dhubri agencies are being maintained at about 3000 Mds. a day, and all arrivals have found ready buyers against early delivery contracts. Harvesting in the lowland areas is well in hand, and river levels, although high, are lower than at this time last year. At the close New Crop quotations in Dhubri are based on Rs. 25 a maund basis Bottoms.

In Pakistan the markets are steady but have not followed the rise of the Calcutta markets due to the increase in New Crop imports. Sellers are keen for business and they appear to be fairly well sold. Imports into Narayanganj are now in the region of 6500 maunds a day, mostly in loose jute form, and there are ready buyers for all imports. At the close latest quotations in Narayanganj are as follows:-

Pucca Bales (New Crop):		
	Rs. (P)	
a bale, Kutcha bales.		Rs. a maund.
Mill Firsts	103	Jat Bot 17
Export Firsts	65	" B. Bot 15-8
Dacca Tossa 4's	116	" C. Bot 14
Dundee Tossa 4's	102	" X. Bot 12
Output Tossa 2/3	94	
" 4's	83	
Narayanganj Cuttings	53	Tossa is quoted Re 1 higher than White jute.

INDIAN JUTE CROP REPORT

In their seventeenth crop report for the current Indian season, covering the week ended 9th July, Messrs. Sinclair Murray & Co. Ltd., say that weather condition continued favourable during the week although some areas, particularly in Assam, could do with further bright sunshine while other areas could do with more rainfall to provide steeping water for early sown plants which are now matured and ready for harvesting. Harvesting in Assam continues apace and it is estimated that 74% has been cut in this state so far and there appears to be no inadequacy of steeping water. Condition of the standing crop is everywhere satisfactory with the exception of some West Bengal districts where insects have caused some slight damage to younger plants. The river levels in all areas are normal with the exception of Assam where they are still above normal for this time of the year although week-end reports show that the levels are declining slowly after the week's rise.

DANPUR: Weather conditions have been favourable with alternate rain and sunshine and the general condition of the crop is satisfactory with plants reported to be very healthy. Plants range in height up to 5ft. and some earlier sown plants are nearing maturity. Weeding operations are going on where required. The river level has risen considerably during the week and is now slightly higher than at this time last year.

JAJPUR ROAD: Weather conditions during the past week have been favourable with alternate rain and sunshine. Further spells of strong sunshine would be beneficial to promote growth of the standing crop and assist weeding operations in the midlands and highlands. Plant condition is reported to be very healthy and the plants range in height up to 4ft. 6in. The river level is about the same as this time last year.

COSSIMBAZAR: Weather conditions have been very favourable with good rainfall during the major part of the week but more rainfall is still required to provide adequate steeping water for early sown plants.

which are nearing maturity. Weeding operations are going on where necessary and the condition of plants is generally healthy and they range in height up to 5ft. 3in. The river level is normal for this time of the year.

RANAGHAT: Light rainfall was experienced during the week and further heavy rainfall is urgently required to promote the growth of the standing crop, to destroy insects which are causing slight damage to young plants and to provide sufficient steeping water for early sown plants which are nearing maturity. Weeding operations have been completed in all areas. Plant condition is not altogether satisfactory due to some insect damage but they range in height up to 5ft. 3in. The river level is slightly lower than at this time last year.

NOWGONG: Weather during the past week was mainly showery but towards the latter end, dry and hot weather was experienced which was very beneficial and further spells of sunshine would assist growth of the standing crop. Weeding operations have been completed and due to a sudden rise of

river levels, harvesting operations in the lowland has been carried on freely and it is estimated to date that nearly 74% of the crop has been cut. The standing crop is progressing satisfactorily and plants range in height up to 6ft. 6in. During the early part of the week, the river rose rapidly but during the latter part of the week receded somewhat and is at present at the same level as last year at this time and this is only slightly above normal.

PALASHBARI: Showery weather was experienced during the first part of the week but latterly it was hot and dry. A further spell of bright sunshine would enable cultivators to complete weeding operations in the highlands and assist harvesting of the lowland crop. Weeding operations were suspended due to excessive rainfall but should be completed early next week if weather conditions permit. Lowland harvesting is going on and it is estimated that about 27% of the crop has so far been cut. Plant condition is satisfactory and the plants range in height up to 6ft. 9in. The river level rose rapidly during the week but at the week-end receded somewhat and is still 2ft. 6in. higher than last year at this time and this is 7ft. higher than normal for this time of the year.

DHUBRI: Hot and dry weather conditions have prevailed which has been favourable for the standing crop and for harvesting operations. Harvesting has been going on freely on the lowland following the recent rise of the river and it is estimated that about 44% of the crop has been harvested up to date. The condition of the standing crop is very satisfactory and plants range in height up to 8ft. The river level has risen steadily during the week and is 9in. lower than last year at this time but this is about 2ft. higher than normal for this time of the year.

DAISSEE DISTRICTS: Weather conditions were cloudy with moderate rainfall. Plant condition is satisfactory and they range in height up to 5ft. 6in. Weeding operations are going on where required. It is anticipated that harvesting of early sown white jute will start fairly soon as some plants are reaching maturity but more rainfall is required to provide adequate steeping water.

FORBESGANJ (BIHAR): Report not received.

Station	For the week 1955	For the week 1954	Total 1955	Rainfall over the week-end

PAKISTAN JUTE CROP REPORT

In their eighteenth crop report for the current Pakistan season, covering the week ended 9th July, Messrs. Sinclair Murray (Pakistan) Ltd., say that there is little change from last week's report as the weather has remained favourable in all areas and the crop continues to make very satisfactory progress. Harvesting of the lowland crop is nearing completion and in some districts a start has been made in the midlands. River levels continue to rise slowly but are still lower than at this time last year. Imports of new crop have shown a slight increase but still consist mainly of low weedings.

NARAYANGANJ: The weather has been very favourable with rain and sunshine. The condition of plants is satisfactory and they now range in height up to 6ft. 9in. Weeding operations have been completed and harvesting of the lowland crop is expected to be completed in the next few days. The river level is now 2ft. 6in. lower than at this time last year.

Dacca: The weather has been very favourable with alternate rain and sunshine. Plants are healthy and are growing well; they now range in height up to 6ft. 3in. Weeding operations have been completed. Harvesting is progressing slowly in lowland areas and it is estimated that 74% of the crop has been cut up to date. The river level during the week has remained steady and is 3ft. 9in. lower than at this time last year.

CHANDPUR: The weather has continued favourable with alternate rain and sunshine. The condition of plants continues to be satisfactory and they now range in height up to 7ft. 6in. Harvesting of the lowland crop has been going on very slowly during the week and it is estimated that 76% of the crop has been cut so far. The river level is 2ft. 6in. higher than at this time last year.

NIKLIDAMPARA: The weather has been favourable with alternate rain and sunshine. The condition of plants is satisfactory and they range in height up to 7ft. 6in. It is estimated that 75% of the crop has been harvested but due to the steady river levels, cutting has been suspended. The river level has been steady during the week and is now 1ft. lower than at this time last year.

SARISHABARI: The weather has been favourable with rain and sunshine. Plants are healthy and range in height up to 7ft. 3in. Harvesting of the lowland crop has been going on steadily and it is estimated that 73% has been harvested to date. The river level has risen 1ft. 6in. but it is still 1ft. 3in. lower than at this time last year.

SIRAJGANJ: The weather has been favourable with rain and sunshine. The condition of plants continues satisfactory and they range in height up to 7ft. 9in. The river level has fallen 1ft. during the past week and is now 3ft. lower than at this time last year. Harvesting of the lowland crop is going on steadily.

NAKALIA: The weather has been favourable with alternate rain and sunshine. The condition of plants remains satisfactory. Cutting of the lowland crop is complete and cutting has already commenced in the midlands. The river level continues to rise slowly but is still lower than at this time last year.

BHANGOORA: The weather has been favourable with alternate rain and sunshine. The condition of plants is satisfactory and they now range in height up to 7ft. 6in. Harvesting of the lowland crop is going on slowly. The river level registered a fall in the early part of the week but has since risen approximately 6in. and is now 2ft. lower than at this time last year.

HESSIAN STOCKS UP, SACKING DOWN, IN JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of June, 1955 as follows:

Description	30th June, 1955 (Lakh Yds.)	31st May, 1955 (Lakh Yds.)
Hessian Cloth and Bags	19.43	48.415
Standard Hessian	15.92	42.419
(Included in above)		
Sacking Cloth and Bags	10.07	45.943
Standard Sacking	8.44	37.785
(Included in above)		
Rope, Rope, Twine, etc.	1.398	1.189

Total reported stocks of manufactured goods held on Government Account.

Description	1 June, 1955 (Lakh Yds.)	26 June, 1955 (Lakh Yds.)
Sacking Cloth	1	26
Hessian Bags and Cloth	1	24
and Canvas	5	105
Sacking Cloth and Bags	7	219
Rope, Rope, Twine, etc.	Nil	Nil

Summary

THE FOREIGN JUTE MARKETS

DULL CONDITIONS UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THE jute markets are monotonously quiet and all are complaining of a lack of interest. Business is reduced to a minimum in yarns and cloth and agents for raw jute shippers find matters extremely slow. Only a small lot or two on spot occasionally changes hands and the shipment market for either old or new crop is idle. This is normally a quiet time of the year, but this time it is extremely so. Buyers of jute cloth and bags have been out of the market for quite a while now and spinners and manufacturers are being compelled to restrict their production and a number of firms are working only four days a week. Others are paying off employees, but this is a less satisfactory way of reducing output, because of the possibility of losing jute trade workers. All the mills and factories in Dundee and district will be closing down on 22nd July for two weeks' annual holiday with pay, reopening on Monday, 8th August.

In the raw jute end of the trade, it is a case of stalemate here. Sellers find it difficult to interest spinners in the absence of business in yarns. Quotations are unchanged daily and they are nearly all at the minima—Mill Firsts £90, Mill Lightnings £80, good Daissee-2/3 £90, and grade £80, crack Tossa-2/3 £110 and grade £99, with Tossa-4 at £100 and £89 respectively, all c.i.f. U.K. Buyers of all jute trade commodities are unwilling to purchase their requirements for delivery any distance ahead. They cannot forget that there is to be a very big yield of jute from this year's crop in Pakistan, estimated at anything from 7,000,000 to 7,500,000 bales, while India is expected to grow another 4,000,000 bales at least. It is felt that the weight of the crops by the end of the year will result in lower prices, but, of course, there is no guarantee of this coming off, as Pakistan may be strong enough to withstand all attempts to break the minimum prices.

Engineering and Transport

MANUFACTURE OF HEAVY DUTY COMMERCIAL VEHICLES

PROGRESS OF ASHOK LEYLAND LTD.

ASHOK MOTORS LTD.'s association with Leyland Motors Ltd., the largest exporters in the world of heavy commercial vehicles, for the purpose of developing the progressive manufacture in India of Leyland vehicles and diesel engines has entered a new phase. On 27th May, Ashok Motors Ltd.'s shareholders passed resolutions providing for the reconstruction of the Company and the change of its name to Ashok Leyland Ltd. At the same time, provision was made for a large increase in capital, strengthened by a considerable infusion of British capital from Leyland Motors Ltd., and for the appointment of a joint Board of British and Indian directors.

Subject to satisfactory progress in a manufacturing programme approved by the Government of India, Ashok Leyland Ltd. claim that they will be the only builders and distributors in India of diesel-engined vehicles with a gross rating of 20,000 lbs. and over. The Indian company will introduce and, if necessary, develop suitable types of vehicles solely for the Indian market. At first, it will concentrate on the production in stages of the Leyland Comet goods and passenger models which have proved so successful in operating over rough or unmade roads and in climatic conditions of high heat-moisture.

Vehicles of this type comprise the bulk of Indian orders which have increased in recent years to an annual total of over Rs. 2 crores. But heavier type Leyland chassis are also in use in India, and recent orders have included 94 Tiger and Royal Tiger models, 125 of the new Worldmaster bus chassis, and 85 Titan double-deck vehicles from Calcutta, Madras and Bombay. Leyland vehicles are used by many other major operators in India, including nine State Transport concerns which already have in service fleets varying from 100 to 250 Leyland machines.

Planning of the first stage of production has reached an advanced stage and the installation of machine tools and equipment in the factory at Ennore will commence in October, 1955. The first batch of machine tools, jigs and special fixtures to be installed will have an approximate value of Rs. 13 lakhs. The installation of factory equipment will be continuous and it is expected that by 1956 the Company will have installed plant of a total value exceeding Rs. 50 lakhs. At the same time, commencing in about 12 months' time, there will be progressive extension of the factory buildings, the first stage of this extension probably necessitating the present covered area being more than doubled. At the present time the factory buildings cover about three acres.

A considerable amount of British capital has come from Leyland Motors Ltd. Under an agreement which will be executed in the near future, Leyland Motors Ltd. are committed to investing Rs. 36 lakhs in Ashok Leyland Ltd., before any additional Indian capital will necessarily be invited. In relation to the present paid-up capital of the Company, Leyland Motors Ltd. will then have subscribed approximately 40 percent of the total capital. Thereafter, Leyland Motors will continue to invest in Ashok Leyland Ltd. up to a limit of Rs. 80 lakhs. But investment additional to the initial Rs. 36 lakhs will be subject to Indian capital being subscribed in the proportion of 60 percent Indian to 40 percent Leyland investment. That is, it is proposed that after reaching the point at which their investment represents 40 percent of the total capital, this percentage shall be maintained up to the point at which Leyland Motors Ltd. have made their total investment of Rs. 80 lakhs.

Capital Investment

The agreements covering the arrangements for capital investment will be subject to the approval of the Government of India. The initial purchase of machine tools and other equipment to the value of approximately Rs. 13 lakhs is being met by Leyland Motors Ltd., representing an immediate investment in the capital of Ashok Leyland Ltd. as part of the initial investment of Rs. 36 lakhs. Orders have already been placed for this equipment. Handled through the Leyland shipping division the first of the machines are being created for shipment to India. Meanwhile the tooling-up of the first batch of components to be manufactured by Ashok Leyland Ltd. is already in progress. Arrangements are also being made for an interchange of personnel between Ashok Leyland Ltd. and Leyland Motors Ltd. Skilled planners and shop engineers will be seconded to India, and Indian technicians will attend an intensive course of instruction at the Leyland factories so that when they return home they will eventually take over the running of the Indian plant.

The initial scheme prepared by the Leyland Group for progressive manufacture in India was submitted to the Government of India by Ashok Motors Ltd. in December, 1953. This was officially approved in March, 1954. Implementation of the manufacturing programme was, however, seriously retarded by unexpected difficulties. During 1954, various visits were made to India by Leyland executives as well as a team of technicians under the leadership of Mr. F. W. Grimshaw, General Works Engineer. During its tour of all industrial centres in India, the team was able to assess the country's production potential in all industries ancillary to the development of automobile manufacture.

SKF

SELF-ALIGNING ROLLER BEARING PLUMMER BLOCKS FOR SUGAR CANE CUTTERS

ADVANTAGES:

- No attention during the whole working season.
- No complicated cooling systems.
- Lubrication with grease only once before the working season.
- Considerable saving in power.

HIGH SPEED CANE CUTTING KNIVES AT SARASWATI SUGAR MILLS

The SKF Double Row Self-Aligning Roller Bearings installed 15 years ago have given trouble-free service during this time without any attention other than being cleaned and re-packed with grease at the start of each crushing season.

BRITISH TEXTILE REVIEW

SUBDUED BUT STEADY

OTHER people's troubles are only a negative solace when one is in trouble one's self. However, the British cotton industry feels that its loss of trade abroad is not so reprehensible when competitors' trade is diminishing also. The Cotton Board's latest quarterly statistical review shows that international trade in cotton piecegoods declined by about 10 percent in the first quarter of 1955, compared with the fourth quarter of 1954, so reversing the increase of that quarter. The big dock strike of last November deferred some of Britain's exports from the one quarter to the next, so that Britain went counter to the general trend, but the underlying trend of trade this year has evidently been downward—and there have been more dock strikes.

The difficulties of freeing international textile trade were exemplified in Japan's months-long tariff negotiations at Geneva, which yielded remarkably meagre results. The American Government's efforts to arrange concessions aroused no more enthusiasm in the British than in the American cotton industry, for Lancashire has already lost much Commonwealth trade through the trade agreements between the sterling area and Japan. Declarations that further restraints on Australian imports were not contemplated and that the existing restraints would be relaxed as soon as possible caused no exuberance here, where a more urgent question is how much trade restraints will cut off before they are relaxed. However, there have been some indications that the British trade with Canada, severely reduced this year, will have some share in the Canadian recovery—if that recovery is confirmed. The home market here is steady but still not expanding as might be hoped from the growth of consumers' spending in general. It is, however, felt that if trade recedes, as in 1951-3, textiles will not suffer as much as they suffered then. In textiles and a few other goods, the main element in that recession was the reduction of stocks, in consumers' homes and in the pipelines of trade. Stocks were more or less restored in 1954, but only to normal, not to the inflated levels of 1950-1. It is, moreover, to the growth of trade in durable, not in "soft", consumer goods that official policy is now opposed.

Broadening Interests

Some interesting processes of adaptation are proceeding in the textile industries. Lancashire can do little to influence the American cotton-price policy, and the British Government cannot, even if it would, accede to the cotton and wool industries' demands for protection against mounting imports of cloth from, respectively, India and Europe. But the material bases of the industries can be, and are being, adapted to the more competitive circumstances. More than a generation has passed since the cotton industry began to use rayon, and the growing use of synthetic fibres in the wool industry is familiar. Alongside these changes in materials employed are changes in the types of product and in the methods of selling them. Whatever may have happened in the apparel trades, the expansion of industry has expanded

the use of industrial textiles—for workers' clothing and for such products as motor tyres and conveyor-belts. (Factories have been built specially to provide for the motor industry.) Textile firms are extending further, right outside of the textile range. Bleachers' Association (as revealed by the chairman, Mr. P. L. Wright, last month) is now concerned with laundering and dry-cleaning, chemical cotton (for explosives), plastic sheeting, leather, paper, paint, and other goods not normally related to textiles.

In distribution, the manufacturing and the selling functions are being more closely integrated. N. Corah (St. Margarets) is a well-known case of a clothing firm that manufactures largely to the specifications of a big retailer, Marks and Spencer. Those businesses are not financially related; but Great Universal Stores, a vast retailing group that has manufacturing subsidiaries (especially in the furniture industry), has lately acquired Rylands, a big textile firm with manufacturing and merchandising interests. None of these developments, individually, can profoundly change the textile industries, but they represent, in the aggregate, a gradual change that will stabilise those industries and, probably, establish for them a permanently expanded turnover.

More Problems

Bleachers' Association is still, of course, engaged primarily in finishing textiles. In that capacity it is concerned not only with home-produced cloth but also with imported grey cloth. The chairman drew a sharp distinction between imports of such cloth for home consumption, which he described as "an alarming danger", and imports for processing and re-export, which he described as "acceptable, and even desirable". The chairman of Fine Spinners and Doublers, Mr. W. T. Winterbottom, uttered a timely reminder that rayon had not avoided the adversities suffered by the natural-fibre industries. Prices for spun rayon yarns, he said, had fallen so low that even the most efficient mills could earn little or nothing for interest and depreciation; thus production of 100 percent spun rayon yarn has been reduced to 1.7 million pounds a week from 2.4 million pounds a week in 1954.

The rayon industry is multifarious, and one section of it can prosper while another languishes. Companies as big as Courtaulds and British Celanese cover a wide range, but not exactly the same range. There is, therefore, nothing remarkable in the fact that in the year to end-March last Courtaulds' profit rose from £19.0 million to £20.7 million while in the 53 weeks to early-April British Celanese's profit fell from £4.1 million to £3.3 million. More significant, perhaps, is the fact that both companies have raised their dividend to 10 percent, Courtaulds from the equivalent of 8 percent, British Celanese from the equivalent of 9 percent. The industry has its problems, but its leaders remain confident. The wool industry has to adapt itself to a wage increase of 6 percent (compared with 10 percent demanded) which came into effect late in June. In an industry which has difficulty in adapting the prices of its products to the prices of its materials, the increase in costs will not be easily borne. It will, however, bring some compensation if it checks the drift of workers from the industry, which has lost more in the first half of this year than in the whole of 1954.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.6 percent to 346.1 during the week ended 25th June, 1955 as compared with 343.9 for the previous week. The index was higher by 1.5 percent relative to the corresponding week of the previous month but was lower by 8.5 percent than that of a year ago. The average for the month of June 1955 stood at 342.9 as compared with 342.0 for May 1955 and 381.6 for June 1954. The index for Foodstuffs rose by 2.1 percent to 290.8 due to an increase in the prices of dal arhar (+ 8%), wheat (+ 6%), rice at Vijayawada and gram at Hapur (+ 5% each) and gur at Mozaffarnagar (+ 4%). The price of tea, however, showed a fall of 3 percent. In the case of Industrial Raw Materials, lower prices of manganese ore (average export prices) (-18%), groundnuts at Cuddalore (- 7%) and raw cotton (- 3%) contributed to a fall of 0.8 percent to 389.9 in the group index despite an advance in the prices of rapeseed (+ 8%), groundnuts in Bombay (+ 5%), linseed and gingellyseed at Bombay (+ 4% each), castorseed and lac (+ 3% each) and copra (+ 1%). The Semi-Manufactures index moved up by 0.8 percent to 332.6. Items which showed noticeable variations were: gingelly oil (+ 13%), groundnut cake (+ 9%), mustard oil (+ 7%), groundnut oil in Bombay and gingelly cake (+ 4%), castor oil and linseed oil (+ 3% each), groundnut oil in Madras, buffalo hides, brass, coconut cake and coir yarn (+ 2% each), copper (- 4%) and petrol (- 3%). An increase in the prices of jute manufactures (+ 1%) raised the index for Manufactures from 369.3 to 369.5. The Miscellaneous group index witnessed a fractional rise from 365.3 to 365.7 as a result of an increase in the prices of cashewnuts at Mangalore (+ 4%) and black pepper in Calcutta (+ 1%).

EXPORT POLICY FOR MANGANESE AND IRON ORES FOR JULY-DECEMBER, 1955

The Government of India has reviewed the export policy for manganese ore and iron ore from the ports of Madras, Visakhapatnam, Masulipatam, Kakmadra and Bombay in the light of available rail transport capacity and the conditions obtaining in the international market. Movement of ores from Bellary-Hospet (metre gauge section) for shipment through Madras port will continue to be regulated on a quota basis. Established ship-owners and mineowners who have not made any shipments at all since 1st July, 1954, will not be given export allotments.

LONDON TEA SALES

AT last week's London tea sales the 70,522 packages on offer realised an average price of 3s 8.36d a lb. against 3s 7.59d in the previous week and 4s 7.55d a year ago. Results obtained by some of the companies are given below:

	No. of packages	Average per lb.
Amalgamated	1,056	3/5 1/2
Anglo-Ceylon	375	4/1 1/2
Assam Frontier	867	4/0
Attaree Khat	701	3/6 1/2
Bargacote	234	3/2 1/2
Budla Beta	516	4/4
Central Provinces	960	4/1 1/2
Chulsa	702	3/1 1/2
Cons. Estates	552	4/
Cons. Tea and Lands	3,539	3/4

I.C.T.C.'S DIRECTORY ON TOBACCO INDUSTRY AND TRADE

The Indian Central Tobacco Committee has just brought out a Tobacco Directory, containing an interesting chapter reviewing the career of the tobacco industry in India and giving valuable information on production and export possibilities. It also contains a highly useful article on the progress of research under the Committee and the economic results of various researches conducted at the Committee's Research Institute and Stations, with suitable illustrations and charts. The Directory contains about 30,000 names and addresses of wholesale dealers, commission agents, manufacturers and exporters of different varieties of Indian tobacco and their products, prominent tobacco growers, tobacco associations and co-operative societies, importers of Indian tobacco in different countries, Indian Government trade representatives abroad and trade representatives of foreign Governments in India. These have been arranged alphabetically under classified headings, with comprehensive State-wise and variety-wise indices. Copies are obtainable from the Secretary, Indian Central Tobacco Committee, 38, Mount Road, Madras on payment of Rs. 10 a copy with Rs. 2 extra for postage. A commission of 20 percent will be given for a bulk order for 10 copies and above.

COCHIN TEA SALES

At Sale M held on 5th July, a total of just under 600,000 lbs. was catalogued. There was a rather limited demand for most descriptions at rates which were generally an irregular 2 to 3 annas easier and withdrawals were heavy. Poorer residual Dusts met with some competition at about steady rates but better made sorts where sold, declined 2 to 3 annas. Black Leaf Middle East types were generally easier but highgrown descriptions came to a fully firm market.

The Export Quota market advanced sharply over the week-end from 6 1/2 annas to 8 annas but subsequently it dropped to 7 annas. Internal Sale No. N will be held on 19th July.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers Association:

	Closing Prices on 1-7-1955 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.13	1.13
No. 2	1.12	1.11 1/2
No. 3	1.11	1.10 1/2
No. 4	1.10	1.09 1/2
No. 5	1.09	1.08 1/2
Sht. Cutts. 1	1.12	1.12
Sht. Cutts. 2	1.07	1.07
Crepe:		
Water White	—	1.52 1/2
R.M.A. No. IX	1.47/49	1.48 1/2
R.M.A. No. 1	1.44/46	1.45 1/2
Crepe 2	—	1.41 1/2
Crepe 3	—	1.37 1/2
Scrap Crepe:		
Sc. Crepe No. 1	1.28/30 Nom.	1.28
Sc. Crepe No. 2	1.20/25	1.22 1/2
Flat Bark	1.12/17	1.14 1/2
Sc. Crepe 3X	—	1.18

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 25.4 cents in respect of scrap crepe to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following is a summary of crop and weather telegrams received for the month of June, 1955:

Upper Assam: Weather generally seasonable but hot and dry in Sonari and Doom Dooma; monsoon rather scanty in Dibrugarh, red spider blight lifting in North Lakhimpur; outturn last month about normal to good; immediate prospects fair to good.

Central Assam: Weather seasonable but rainfall deficient in Jorhat and Moran; outturn last month about normal; immediate prospects fair to good.

Lower Assam: Weather seasonable; outturn last month about normal to good; in Nowgong the outturn to date is considerably over last year; immediate prospects fair to good.

North Cachar: Weather seasonable; red spider blight lifting but severe in North Cachar; outturn last month about normal to good but considerably under last year in North Cachar; immediate prospects generally fair.

South Cachar: Weather seasonable; red spider blight lifting but severe in Chutla Bheel; black rot prevalent in Hailakandi; helopeltis prevalent in Hailakandi and Lunglei; outturn last month poor to about normal; immediate prospects fair.

Eastern Dooras: Outturn last month about normal; outturn to date slightly under last year; weather seasonable; red spider blight severe and has caused loss in crop; some looper; immediate prospects fair.

Western Dooras: Weather seasonable; crop prospects generally are favourable; the outturn to date is slightly under last year.

Darjeeling: Outturn last month poor; immediate prospects bad; weather seasonable; thrips severe generally.

Tera: Outturn last month below normal; rainfall for the month normal; crop prospects generally are unfavourable; outturn to date below normal; red spider increasing.

NORTH INDIAN TEA CROP A LITTLE AHEAD OF LAST YEAR

Latest estimates suggest that the Indian tea industry's crop regulation schemes are progressing satisfactorily. The North Indian tea crop totalled 115.3 million lbs. till the end of June this year, which was 2.1 million lbs. more than in the same period of 1954 but 2.3 million lbs. below the corresponding average for the last three years. Until end-April, the 1955 crop was substantially ahead of last year, but a big drop in May 1955 output reversed the lead. The lead has now been regained, but is not great. To the extent that it induces sobriety at the auctions, where some grades have fetched prices even higher than last year, it is welcome. Tea is not likely this year to be able to console, or encourage, itself with the thought that coffee and cocoa prices are exorbitant.

Books and Publications

EARLY ENGLISH ENTERPRISES IN INDIA

The English Factories in India—Vol. IV (New Series): The Eastern Coast and Bay of Bengal. By the late Sir Charles Fawcett (Oxford University Press, Price 50s net).

We reviewed in these columns last August Volume III (New Series) of *The English Factories in India*, covering the same septennium, 1678-1684, as the present Volume IV, for the factories in Bombay, Surat and the Malabar Coast. The Oxford University Press deserves to be congratulated on continuing this ambitious project under the patronage of Her Majesty's Secretary of State for Commonwealth Relations. The original series of 13 volumes (pp. 5185) covered the period 1618 to 1669, and was designed to be a calendar of documents in the India Office. It was edited by no less a historian than Sir William Foster. Subsequently a new series was started when, in November 1933, Sir William retired and Sir Charles Fawcett became editor. For this work, Sir Charles was admirably equipped by his study of the history of the early English connection with India. While refraining generally from personal judgments, he has given the essential facts of life and work in the English factories with judicial care and clarity. In this new series, following the wishes expressed by the Government of India, India Office records are treated in a less detailed manner than before. Instead of giving extracts from, and précis of, the principal documents in turn, the contents of the record are digested in a readable account of the main events in each year. The death of Sir Charles in 1952 prevented the completion of his task of preparing the present volume for the press, and the work has since been shouldered by Patrick Cadell.

Aurangzeb was the Mughal emperor at Delhi during the seven years covered by the present volume. But the power of the emperor was crumbling, and new forces were springing up in all parts of the country, particularly in the south and the east. Central control over the administration of a far-flung empire, which could never be adequately achieved with the imperfect communication system of those days, was daily losing its grip over the country. This raised many complications for the newly arrived English trading community. There was often no one authority whose *firman* could be relied upon either to confer or to remove particular privileges or impediments to trade for a defined period or over a defined area. This is illustrated by the very considerable efforts which were necessary, the large number of

people who had to be given presents, including a few who helped themselves to whatever came their way, to secure concessions relating to export and import duties in Bengal. No sooner were these concessions obtained, pressure was put on factories nearby for presents despite Aurangzeb's *firman*.

But greed and rapacity were no monopoly of the Indians of those days. Reading the volume one constantly comes across instances where the Council was constrained to reprimand its servants severely for unfair practices, and even to dismiss some. But there are occasionally bright spots—men with vision and the zeal of a missionary. One such was Streynsham Master—the Chief of the Fort St. George Agency during 1678-81. He had a zeal for reforms. He established a Court of Judicature in Madras on the lines of the one in Bombay. The foundation of St. Mary's Church was laid, and the building was completed in two years with voluntary contributions. In 1678 regulations were made for the conduct of the Council's business and the keeping of various registers, including one for the private trade of the Company's servants (earlier, Langhorn had resisted the introduction of this register during his governorship); for having the town cleaned by scavengers paid by levy of a conservancy tax; against the keeping of gaming houses in the Hindu town; for the licensing of taverns and the sale of alcoholic liquors; and for the good Government of the Company's civil and military servants. Provision was made for the punishment of offences by officers and soldiers against Indians. A new post of Market Superintendent was created to prevent frauds in weights and measures.

With all these, however, Master was dismissed by the Company in 1681. The main reason for the Company's displeasure was his treatment of Job Charnock, but it also resented his "scornful excuse of (his former) unmannerly passages", and his concluding that he was usually right, and so "running upon the same rock, on which his predecessor split, which if (he) had been as well versed in history as he is in the vain ostentatious pomp of India, he would never have been guilty of". Master was also disliked for having so burdened the Company with motions for increased salaries or allowances to its servants that "he hath turned our stomachs against" the Agency.

The financial fortunes of the factories were subject to wide fluctuations—arising from the most varied causes. One such which dogged the Madras agency was its quarrels with its chief merchant and his successors. Those were rough days, and parties to a quarrel could not be expected to shrink from delivering rough blows to each other. If the merchants damaged the Company's trade, the Company struck back with imprisoning the offenders. Interlopers caused much anxiety and the English had to bribe many people to enlist their help in ousting them—but often without much success.

In Bengal, as in most of the preceding eight years, the history of this period is largely taken up with internal quarrels among the Company's servants, and external pressure put on the factories by Governors and other Mughal officials in order to make them pay customs duties, as had been ordered by Aurangzeb in 1676, contrary to the Company's long-established freedom from such demands. Owing, perhaps mainly, to internal dissensions, the Bengal factories were replaced under the Council at Fort St. George in 1684.

Before concluding we feel we must make a few general remarks. It is not clear what class of readers the Series aims at. The research worker will no doubt find the book invaluable, but perhaps only as a first step in his work, and as helping him to draw up an excellent bibliography. He must go to the original sources on which the Series depends. The general student of history will find in it much more than he can cope with, in spite of the excellent style and method of presentation. The intelligent lay reader will be frightened by the sheer bulk of the work. Perhaps its most immediate use will be made by the advanced students, the intermediate class between the ordinary students and the research workers. But then the cost of acquiring a set is prohibitive not only for the individual, but for the majority of colleges in this country. Can the publishers find a way of reducing the cost, perhaps by the issue of a cheap edition subsidised by the sale of the present almost de luxe one? But then somebody is bound to be subsidising even the present one. So where do we start from?

* * * * *

The T.U.C. and Communism. Trade Union Congress. (3d. Pages 11).

The T.U.C. pamphlet explains the stand of the British trade unions against Communism, and their steps to resist Communist infiltration and influence in the unions. The T.U.C.'s objections to Communism are political and moral. In the first place, Communists resort to bad trade union practices. Secondly, they are not a political party in the "normal sense", as their primary loyalty is to Moscow, which makes them work very often against national interests. The pamphlet exposes some of the Communists' hypocritical practices—the phoney peace campaign, one standard for Russia and a very different one for non-Communist countries. It explains why Arthur Deakin stood firmly against any move to bring the W.F.T. U. and I.C.F.T.U. together. Exchange of trade union delegations is another aspect of the Communist peace propaganda abroad and hate campaign at home on which the pamphlet comments at length.

VERY STRONG DEMAND IN TEA EXPORT AUCTION

IRREGULAR TREND IN DUSTS

AT Sale No. 6, held on 11th and 12th July, offerings in the Export auction consisted of 28,700 packages, which included some useful second flush invoices. There was a very strong demand for nearly all descriptions and the market continued to strengthen as the sale progressed. Stylish BPS's were in less demand than in previous weeks and sold below valuations. Clean plain teas opened 1 to 2 annas dearer and closed from 2 to 3 annas above last rates. According to quality Medium BOP's and BP's were 1 to 3 annas dearer while the best CTC's sold at high rates but were some times slightly under valuations. Stylish Leaf teas were once again in strong demand and were 2 to 3 annas dearer, whilst the more grainy Fgs. were the strongest feature of the sale. High prices were paid for some of the tippiest teas on offer. Darjeelings with flavour and style sold quite well.

Quotations			
	1955		1954
Clean Black Pekoe	Rs. 3-2		
Plain B.P.	Rs. 2-7-6	2-7-3	
Medium Assam B.P.	Rs. 2-9 to 2-10	2-9 to 2-10	
Best CTC Assam B.P.	Rs. 3 to 3-2	3-2 to 3-4	(Nom.)

Offerings of Dusts consisted of 7,870 packages. There was a good general demand and prices for nearly all descriptions advanced irregularly from 2 to 4 annas a lb. the powdery teas being the strongest feature. CTC Assams were the weakest feature of the sale and although some higher prices were realised, these sold generally from between 2 to 3 annas below last rates. There was also less demand for the poorest descriptions, which were weaker.

Quotations			
	1955		1954
Medium Doars Dust	2 7 to 2 8	2 1 6	
Medium Assam Grainy Dust	2 9 to 2 11	2 2 to 2 3	
Best Assam CTC Dust	3 1 to 3 2	2 8	

Offerings of Other Grades consisted of 736 packages. There was a fair demand at about last rates but the 48 chests of Green Teas on offer received less support than in the previous week.

FREIGHT MARKETS ACTIVE

U.S. COAL BUSINESS STRONG FEATURE

THE North American coal business still dominates the market with many more voyages arranged and there is still a good enquiry. Grain requirements are good and an interesting feature is charterers' willingness to accept tankers for the carriage of grain on gross terms. Vessels are required for River Plate to the Continent, the U.K. and Italy. There is also a fair demand from the North Pacific. In the East, Indian ore trades remained quiet but there was a good enquiry for Japan. There is an enquiry out for a July-August cargo of Milo from Bombay to the U.K. American time charterers still require period tonnage but British Lines are not showing interest for delivery in the U.K., probably due to their being unable to judge their requirements which have accumulated due to the recent dock strike.

SUGAR MARKET

During the week ended 13th July, sugar sales in the Calcutta market averaged 3,000 bags a day. Arrivals were 3,500 bags daily and stocks totalled 380,000 bags. Rates for ready and forward sugar ex-Kantapur delivery were Rs. 30-8 for ordinary grain and Rs. 31-8 for big grain. Ex-mill delivery rates varied between Rs. 28-8 and Rs. 29-3. The market experienced a shortage of ordinary grain sugar.

LINSEED

After a very firm opening values declined appreciably towards the middle of the past week but regained some of their losses towards the close. Trading was fair and some speculative buying by bazar parties resulted in an uncertain trend in the market. Crushers purchased fair quantities owing to a fairly good demand for oil. The oil market was active and shippers were covering fair quantities earlier in the market at lower price levels; there were at present keen sellers at higher levels but buyers appeared very cautious as these prices were out of parity with overseas markets. Latest quotations were as follows: July-August Rs. 18-8 a maund.

HIDES AND SKINS

The market in skins ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 5th July and 11th July, 1955)
Cowhides: Wet salted (Slaughtered) 12,800 pcs. on the basis of Rs. 13-8 to Rs. 25.
Goatskins: Wet salted (Dressed, Killed) 63,260 pcs. on the basis of Rs. 24-0 to Rs. 32-5 and Rs. 33-5 to Rs. 34-5; Assam-Dinajpur-Murshidabad 23,500 pcs. on the basis of Rs. 17-5 to Rs. 27-8; Purneah-Kissenganj 1,700 pcs. on the basis of Rs. 27-0; Pakur-Patna 500 pcs. on the basis of Rs. 20-0; Muzaffarpore (Heavy) 200 pcs. on the basis of Rs. 32-5.

COMPANY AND PUBLIC NOTICES

THE KARPURA COLLIERIES LIMITED

NOTICE is hereby given that the Thirty-seventh Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company Chartered Bank Buildings, Calcutta, on Monday, the 1st August, 1955, at 10-45 A.M., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 28th February, 1955, declaring the Dividends recommended by Directors, electing a Director, appointing Auditors, and for transacting any other ordinary business of the Company.

Managing Agents.

Calcutta, 6th July, 1955.

BEFORE THE RAILWAY RATES TRIBUNAL AT MADRAS.

(Public Notice under Rule 17 of the Railway Rates Tribunal Rules, 1949.)

Complaint No. 1 of 1955.

The Juggilal Kamlatpat Jute Mills Company Limited	... Applicant
1. The North-Eastern Railway	... Respondents
2. The Union of India	

Whereas the applicant abovenamed has complained that the station-to-station rates quoted for Raw Jute in full pressed bales from certain stations (34 stations in all) in Bihar and Assam areas to Kanpur Anwarganj have been enhanced from time to time and that the rates in force from 1-7-1955 are unreasonable and has prayed for rates, on the basis of what the applicant mills were able to operate from 1932 until 30-9-1948, or alternatively on the basis of the rates introduced from 1-10-1948 from stations in the Bihar area.

And whereas it is thought that there are numerous persons who are not on record but have the same interest in the proceedings as the applicant or respondents above-named;

This public notice is, therefore, given under Rule 17 of the Railway Rates Tribunal Rules 1949, so that any person who so desires may petition to the Tribunal for leave to intervene on the side of the applicant or the respondents in the said case, prior to, or at the time it is called for hearing, setting forth the grounds for the application and the position and the interest of the petitioner in the proceedings.

To any decision given by the Tribunal after this Public Notice, explanation (vi) to section 11 of the Code of Civil Procedure, 1908 shall apply.

Given under my hand and the Seal of the Tribunal this 6th day of July, 1955 at "Adyar House", Adyar, Madras.

Sd. J. B. RAO.
Secretary,
Railway Rates Tribunal.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

ENCOURAGING PROSPECTS AT THE GENEVA CONFERENCE

POLITICS AND IDEALISM IN THE SEARCH FOR AN ASSURED PEACE

WE can be certain that the Big Four conference in Geneva will be a success, a success in the way so many international conferences since the war have not been. It will not break up in open disagreement and propagandist recrimination, because the participants know that they cannot afford to let it do so. After the event, there will of course remain a multitude of unsolved problems, but the public throughout the world has been prepared for this by warnings from their leaders that Geneva will not, cannot, settle the accumulated discords of a decade. But this will not make the success any less real. In a world that lives in dread of the hydrogen bomb, a mere demonstration of sincerity and civility between nations and a general willingness to submit disagreements to further examination and negotiation will be success enough for the time being. There is no hope among reasonable people that the conflict of national policies and ideologies will be entirely liquidated this week or even this century; that is not what the world asks. All it wants is that such conflict be moderated as entails the danger of war; and that it be publicly confessed what we all know, that demands can no longer be pressed to the limit because the limit is the bomb that makes nonsense of all demands and their requital.

Not so long ago the awful consequences of a possible failure to agree were an argument against a Big Four meeting. Now we see that they are the only guarantee of a useful outcome. Like a man who will not go to his doctor because he knows he will be told he has a cancer, the world has been postponing this meeting for four years; but when such a man eventually submits, it is in the knowledge that something must be done about it and that, the first step taken, he must accept what follows. The leaders of the four Great Powers have now taken this step, and the conclusion of the Geneva conference will tell us not whether they intend to go ahead, but how quickly and by what stages. The renowned duplicity of the Russians in international negotiation is no argument against this view, for the deepest duplicity is no obstacle to recognising the world's present dilemma. The Russians after all know as much about the terrors of atomic bombs as any of us, for they have made and exploded them. There is much evidence that the Russian leaders are double-dealers, but none that they are lunatic. Comparisons with the Nazis and with Munich—comparisons which President Eisenhower has had drawn for him often enough in recent weeks—are to that extent irrelevant. One is free to believe that faced with the same dilemma of co-existence or non-existence, even the Nazis in 1939 would have chosen a different course—and to the degree that that belief is unwarranted it is because Hitler was quite simply mad, in a way the Russians are not.

Not that the suspiciousness and caution with which the Americans have approached this meeting are out of place. They are not, even though other Western opinion has been irritated and distressed by their more extreme manifestations. Exactly because everyone feels that the conference must succeed, it will be open to the Communists to press for concessions advantageous to themselves, concessions that the West cannot afford to make. Politics does not cease even at such solemn gatherings as Geneva, and in dealing with Russian politics the West will need all the calm manoeuvres that has been urged upon it. "Appeasement" is probably a misleading word to apply in advance to any concession offered by the West to the Communists, for it recalls the appeasement of Hitler which served only to bring war nearer. Granted a general recognition of the impossibility of open warfare between the Power blocs, appeasement cannot have that danger now.

But it might bring nearer renewed peaceful subversion, by which means the Russians have won most of their victories since 1945. War for the Prussians of the last century was simply a prolongation of policy by other means; peace for the Russians today is simply a prolongation of military policy by less expensive means. So an agreement to avoid war

THE EUROPEAN MARKET

SCOPE FOR EXPANSION OF BRITISH EXPORTS

IT was seen as a rather serious defect of the Marshall Plan, and of the Organisation for European Economic Co-operation in particular, that the countries of Western Europe were mainly competitive, not complementary. How, it was asked, could one integrate countries which were competing as buyers of food and materials and competing as sellers of manufactured goods? One of the outstanding developments of the past few years has been the growth of trade and industry in the West European bloc, and a remarkable element in this growth has been the exchange of goods within the bloc itself. Although it cannot form a unit as nearly self-sufficient as the United States, because it does not produce a corresponding proportion of primary goods, it has shown that there is unexpected scope for export trade between countries of approximately similar economic structure.

In Britain, the Credit Insurance Association has lately published a survey entitled *Selling in Western Europe*. Its conclusion is that Britain could sell much more in that area if her exporters would develop the market with a firmer purpose. "There is a new spirit in Western Europe", it states. "The area is now expanding with a vigour almost equal to that of the New World." Remarking that it would be a pity if Britain failed to take advantage of this situation, it adds that "many European business men are far more optimistic of the chances of increasing sales of British products in their own countries than are British exporters". Surveys of this kind revert inevitably to the familiar "problem" of Germany's recovery. For German industrialists decided years ago that their best medium-term prospects lay in the neighbouring western and northern countries rather than in the distant territories that required long credits—although those were not entirely neglected. Inevitably, too, such surveys raise the question—though it is not overt in the Credit Insurance Association's study—whether Britain has been wise in directing so much of her export effort to the countries of the Commonwealth.

Another comment on the export position, with special reference to Germany, and also Japan, was made recently by Britain's Chancellor of the Exchequer. Mr. R. A. Butler had to remark that since Germany and Japan had re-emerged as major competitors in the export markets Britain's share of international trade had steadily declined. In the first nine months of 1954, he pointed out, Britain's share was 21 percent; in the next six months it was less than 20 percent. Last the decline should sound too small to be disturbing, he added: "A loss of 1 percent... would mean a loss of about £100 million a year". The direction of trade may account for this relative decline in an expanding world market. Between those comparative periods economic development was particularly rapid in Western Europe and also in North America, but it was more hesitant in the sterling countries. (The one Commonwealth market where British exporters have been conspicuously unsuccessful this year, compared with last, is Canada—a dollar market.)

Evidence on the competing power of the various European industries is conflicting. Mr. Butler quoted O.E.E.C. statistics as suggesting that since 1950 labour costs in manufacturing had been stationary in Germany, had risen by an annual average of 2.3 percent in the U.S.A., and had risen by twice as much in Britain. The increase in British wage rates has been especially sharp in the current year. For more than a year, moreover, British industry has suffered from a deficiency of labour, while competing countries have still been able to draw on reserves of labour. In Germany, however, these reserves are now nearly exhausted. Germany is also losing the advantage of unused steel-making capacity, which resulted from the temporary recession of trade before the upsurge. The full employment of Germany's productive capacity seems to offer a good opportunity to Britain to expand her trade in Europe, if she is sufficiently interested. It is an area that accounted for the greater part of the increase of 7 percent in international trade last year; but it is an area where British exports increased by little more than £100 million between 1951 and 1954 and where German exports increased by £400 million in the same period. Strange as it may seem, West Germany itself is one of the most promising markets for increasing British exports; and the possibilities there include domestic appliances, textiles, and other consumer goods which Britain can supply more plentifully than capital goods. All the "sophisticated" European countries have, indeed, something of value to offer to each other as their standards of living rise.

It must be recognised, however, that the West European countries have been producing durable consumer goods in increasing quantities and that

the West European market as a whole is not insatiable. The Germans have shown themselves aware of the traditional direction of their trade towards the east, and they have been encroaching on British "preserves" in India and other sterling countries and in the Commonwealth's dollar country, Canada. In the sterling countries, moreover, the East European countries, which are rapidly developing their industry (and are negotiating imports of substantial quantities of food in consequence), are steadily extending their interests. Britain was represented, but only modestly, at the recent Polish trade fair at Poznan. It may be desirable soon to promote trade with Eastern as well as Western Europe, as Germany has been doing. These trends and possibilities suggest that the course of international trade may undergo significant changes. Any big exporting nation that can keep its manufacturing costs and the design and quality of its products, in line with its competitors' can find outlets in various regions which have not hitherto seemed to offer much promise. It is, apparently, no longer necessary to concentrate on a particular category of products or on particular areas of export.

CURRENT COIN

Jiyajeerao Cotton Share Offer.—Some Birla companies these days are intent on diversifying their interests; the Jiyajeerao Cotton Mills Ltd. intend to branch off into soda ash manufacture and for this purpose are offering one lakh 5½ percent tax-free cumulative redeemable preference shares of Rs. 100 each at par. The shares are proposed to be redeemed at par on 31st December, 1965. As approved investments under the Insurance Act, they will interest insurance companies. The whole issue has been underwritten, and 60,000 shares have already been arranged for subscription. The company proposes to establish a plant at Porbander with a manufacturing capacity of 100 tons of soda ash and 75 tons of caustic soda a day. A large proportion of India's requirements of these commodities have hitherto been imported, and demand is rising. The Saurashtra site is a good one as both salt and limestone will be easily available.

Refugee Rehabilitation.—Refugee rehabilitation in India has been accomplished with varying degrees of success. But from the point of view of socio-economic conditions of refugees, the results are certainly far from satisfactory. Surveys of two refugee townships by the Delhi School of Economics—Tripuri and Rajpura—on behalf of the Union Ministry of Relief and Rehabilitation and at the instance of the Prime Minister of India, reveal facts which support this view. The surveys, though just published, were conducted in the year 1952, but it is unlikely that any material change as to the facts has occurred meanwhile. It is, rather, likely that employment conditions have worsened as a good proportion of the jobs found by refugees were of a casual or temporary character. Of the 3,462 able-bodied males living in Rajpura township, containing a total of 15,000 inmates, 1,885 or 54.0 percent were either unemployed or had "employment of a somewhat precarious character" and of those employed 35.4 percent expressed dislike for their new jobs and 26.6 percent accepted them indifferently. In Tripuri township with five to six thousand inmates, 33.7 percent disliked their present jobs and 33.7 percent were psychologically indifferent. The average income per family in Rajpura was Rs. 69 and in Tripuri Rs. 72.8, very much below what the refugees claimed their income was in Pakistan. Of the occupational classes, agriculturists in particular almost disappeared, merging with other occupations including casual labour; the trader class also declined. These two classes together formed by far the largest proportion of the refugees. Professionals and services category did better, but their proportion to the total was small. Dr. V. K. R. V. Rao, the Director of the School, who is responsible for the analysis and final examination of the data collected through the surveys of the two townships, concludes that the unsatisfactory character of the rehabilitation of the refugees in new occupations is entirely due to the fact that the ambitious scheme to build Rajpura as an industrial township failed to materialise due to motor and power difficulties. It has to be a commercial and trading centre by its location and character. He has therefore recommended the establishment of small-scale industries with active official assistance and encouragement. In Tripuri, which is not a self-dependent industrial and commercial township but a residential one, the problem is obviously different. Dr. Rao makes no recommendations in this case.

Ship Values.—An examination of the latest available information with regard to new and

second-hand ship values indicates that both are rising, and it is not surprising to find that *Syren and Shipping's* half-yearly survey of the second-hand market contains no mention of Pakistan and only one of India—the purchase of a small vessel of 549 gross tons built on the Continent in 1942 from its United Kingdom owners. On the other hand, Greek, Finnish, Dutch, and Colonial (especially Hong Kong) buyers are unusually keen, with the result that a real shortage of ships for breaking-up has developed and the rate for these has advanced from £8 10s. to £10 per gross register ton with demand still in excess of supply. Second-hand ship values, and the volume of sales as well, depend to a large extent on the freight market. Generally speaking, freights have been on the up-grade since early this year, and the prospects are that they will continue that way through the autumn and winter. In consequence, the price of war-built tonnage of the "Empire" type has risen from around £200,000 last November to nearly £300,000 today, with motor-vessels fetching as much as £435,000. Even older tonnage is finding purchasers. The cost of building new ships has also risen sharply in the past six months and is now at a new peak, which makes it all the more surprising that Indian shipowners have been placing quite substantial orders for new vessels with Continental shipyards in recent months. The half-yearly calculation of *Fairplay* puts the cost of building a standard 9,500-ton diesel-engined ship at 30th June at £665,000, or £40,000 more than at the end of last year and £115,000 more than at the end of 1951. On this journal's statistics shipbuilding costs remained steady during 1953 and 1954, and now they are going up again. The wage increase in March to shipbuilders and engineers is one reason, but the revival in orders has also brought higher prices for sub-contracted work. It sees no prospect of an early halt in the rise of shipbuilding prospects, and adds that "the prospects of fixed prices have disappeared again both in this country (Britain) and on the Continent, where prices of new tonnage have also hardened".

Investment Policies.—So far Britain is concerned, the bigger investors appear to be altering their policy. The Miners' Pension Fund, which has securities worth £21 million now and expects the figure to grow to ten times that size, has recently decided that in future a smaller proportion of its funds will be held in gilt-edged and more in real property and in debentures. The Management Committee proposes raising the target for real property from 8 percent to somewhere around 13 percent of its total holdings, and to increase debenture holdings by 2½ percent to represent 17½ percent of the total. To an investor paying no income tax, real property investments represent an understandable attraction with yields of 8 percent or more. Moreover, they are found to be less liable to being adversely affected by inflation in the general economy. A similar trend away from fixed-interest stocks was revealed by Mr. J.W.J. Leven, the retiring Chairman of the British Insurance Association when he addressed the annual meeting recently. He disclosed that members of the Association increased their holdings in equities from £478 million at the end of 1953, or 12½ percent of total insurance investments, to £584 million at the end of last year, or 14 percent. Not all of that increase can be accounted for by the rise in prices. Total investments of British companies, according to Mr. Leven, rose from £3,816 million to £4,146 million during 1954, of which more than £400 million was invested in Commonwealth and foreign Government and other securities. Altogether, more than a third of the funds is in British companies, while the proportion in gilt-edged securities has dropped from 39.2 percent in 1947 to 30.6 percent at the end of 1954.

International Tin Agreement.—Little has been heard of the International Tin Agreement, planned in Geneva in 1953, for some time. Just recently, however, the prospects of it coming into force before the end of this year have been improved by the acceptance of the scheme by France's Lower Chamber, for if the Upper Chamber also approves, the 333 minimum consumer votes would be assured. On the producer side Malaya, Nigeria, Bolivia and the Belgian Congo have already ratified the pact to give 721 votes in favour. Indonesia, with 213 votes, may well do so before the end of the summer. That country's attitude appears to have undergone a change lately. Her agreement with the United States for the delivery of 8,000 tons of tin concentrate came to an end in June, and was temporarily extended pending a decision on the future of the Texas smelter. The latter is to continue operation for another year, but in spite of this decision it is understood that Indonesia now favours the international scheme rather than a bilateral contract. In the interval since the scheme was planned the world market has moved towards near equilibrium in the matter of supply and demand, which would mean that any purchases for the planned buffer

pool, especially with the Texas smelter continuing to operate, might in fact work against the stability of prices, which it is the purpose of the scheme to maintain. It will be remembered that it proposed a price control range between £640 and £880 a ton, with the pool as a buyer if the price dropped below £720 and a seller if it rose above £800. The present market price is around £728, or at a level at which the pool would not operate. But suggestions have already been made that the maximum price should be reduced to £800, but that would hardly be acceptable without a similar raising of the minimum level. If that were to happen the pool would be forced from the start to enter the market. The situation is finely balanced at the moment, and the next developments will be awaited with interest by all the interested parties.

Japan and G.A.T.T.—Not knowing exactly what Japan hoped to get out of her recent participation in the tariff negotiations conducted in Geneva during the session of G.A.T.T., it is impossible to say whether her delegates were satisfied or disappointed at the outcome. She certainly secured no new outlets for her textile products, mainly because Britain, France and Belgium, the three countries with African possessions, were absent from the protracted negotiations. In all, seventeen countries carried on discussions over about six thousand tariff items with the Japanese delegation, and six of these—Sweden, Norway, Denmark, Finland, Canada and Italy—took advantage of the American readiness to offer concessions on the United States tariff in return for concessions granted to Japan. Theoretically they secured a benefit worth \$250 million, but in practice, of course, the administration can only honour these concessions, which to a large extent cover luxury items, after they have been approved by Congress. Political, rather than economic, considerations lay behind whatever success Japan achieved at Geneva, though it was quite widely appreciated that from the point of view of a possible revival of Japanese unfair business practices it was safer to have Japan in G.A.T.T. and subject to collective retaliation measures. For the rest, what kept the negotiations going was the feeling that unless Japan got a fair chance in world trade she will be an easy prey to Communist manoeuvres from China and the Soviet bloc countries. The Americans, in particular, made a point of emphasising that 40 percent of Japan's pre-war trade had been accounted for by the Chinese mainland, Manchuria and Korea, whereas today those markets had a share of well under 10 percent. Another factor which is worrying the Americans is that Japan's annual deficit is reaching the \$1,000 million mark.

World Bank Lends More.—The World Bank set a new high for lending by making loans totalling \$409.6 million in the fiscal year ended 30th June, 1955. This compares with the previous high of \$324 million lent in the 1954 fiscal year. Altogether the Bank has now made 124 loans totalling some \$2,325 million in 37 countries. The increased rate of Bank lending was particularly marked in the last three months, when seven loans amounting to \$155.2 million were concluded for a variety of development programmes and projects in Europe, Asia and Latin America. The largest of the new credits—and the largest single loan the Bank has made for economic development in Europe—was a loan of \$70 million to the Cassa per il Mezzogiorno, the Italian governmental agency administering a broad development programme in south Italy. Of this, the Cassa will spend \$20 million to help construct irrigation works on the Catania Plain in Sicily, will re-lend \$20 million to private Italian firms for building new factories in Sicily and on the mainland, and will re-lend \$30 million for electric power stations in south Italy. In northern Europe, the Bank lent \$25 million to Norway for the importation of capital goods needed to maintain Norway's economic progress. A special feature of this loan was that the private U.S. investment market joined the World Bank in a combined lending transaction to provide Norway with \$40 million in all. Reflecting the increasing interest of private capital in the World Bank's operations was the fact that private investment institutions were associated with all loans made during the last quarter. Apart from the Norwegian transaction, direct participations by private investors during the period amounted to about \$9 million; British banks took part of a Rakistan loan; U.S. banks participated in the loans made in Italy, Austria, Colombia and Peru.

Technical Assistance in 1954.—The United Nations Expanded Programme of Technical Assistance to Under-developed Countries hardly lived up to its name in 1954, according to the report of the administering Board which is now under consideration by the Economic and Social Council. Far from expanding, expenditure on the three main forms of assistance—experts, fellowships and equip-

ment—was some \$2.7 million less. Total expenditure fell from \$17.8 million in 1953 to \$15.1 million last year. The explanation for this state of affairs is given thus: "In meeting the legislative requirement that earmarking should initially be based on the most conservative estimates of contributions likely to be available, and that supplementary earmarkings should be made as and when the receipt of contributions justified them, the Board was unable to prevent this recession." Nevertheless, it is emphasised that the "general outlines" of the scheme were maintained, and its range and variety even increased. Progress has also been made in improving both the financial management and administrative procedures, and there will be general satisfaction that new methods of allocating and planning programmes are to be put into effect, on a country-by-country basis instead of on the previous basis of a fixed percentage allotted to each of the participating organisations, which has created many anomalies. It is obvious from what the report has to say on the subject of finances that the Economic and Social Council was right last year in approving the resolution restricting allocations. "Events in the past year," says the report, "have clearly illustrated the difficulty of carrying out what is, or should be, an essentially long-term programme on the basis of year-to-year financing." Just how difficult is evident from the fact that although contributions pledged by Governments for 1954 amounted in all to \$25.3 million, or \$2.5 million more than for 1953, the payments actually made were extremely tardy. Only one-third of the total had been collected by the end of June, and at the beginning of the final quarter of the financial year almost one-half was still outstanding. The report goes on to point out that the past year's experience has shown that account must also be taken "of the late date at which certain important pledges are actually announced," which it rightly describes as "an even more serious and unpredictable dislocation than the normal time-lag between the announcement of pledges and the completion of the necessary legislative processes." In these circumstances the Board can hardly be blamed for having had to reduce the level of technical assistance given to the requesting countries, and it is to be hoped that one of the outcomes of the present discussions on this report will be a more satisfactory arrangement for letting it know what basic and additional funds will be made available to it, so that plans can not only be initiated but can also be carried out in accordance with some sort of schedule.

The London Equity Boom.—By mid-year the London Stock Exchange had lost some of its sparkle, but it had already achieved an astonishing recovery after the setbacks of February and March. The tightening of credit was the main reason for that earlier reversal. After a period of hesitation, confidence revived in May in anticipation of the outcome of the general election, and when the Conservatives' success was confirmed the advance gained strong impetus. Through most of strike-ridden June industrial ordinary shares rose from peak to peak, and the turnover of shares expanded in proportion. That period witnessed, perhaps, the consummation of the boom, though not, it seems, the completion of the rising trend that began in the middle of 1952. Also in the middle of 1952 the value of Government securities began to rise, after a decline that had continued, with only minor interruptions, since the beginning of 1947. The recovery, however, continued for little more than two years: since the later months of 1954 the value of Government securities has almost continuously declined. Investors—not only individuals but also industrial companies and institutions such as insurance companies and pension funds—have coldly calculated that there is no benefit in fixed-income securities in a period of inflation and that ordinary shares can withstand the impact even of stricter credit. To buy Government securities is to invest in the outmoded past; to buy ordinary shares is to invest in the promising future. Even ordinary shares must, however, be related to some idea of an appropriate yield and to underlying assets. The most popular industrial shares—which are those which have attracted most American and European buyers—are now yielding considerably less than the longer-dated Government stocks, and their prices can be justified only on the assumption that dividends will be considerably raised within the next year or two. Some observers are not confident enough of the trading prospect to be sure of such an increase. Yet even they are mostly convinced that ordinary shares in general (there are, doubtless, exceptions) are intrinsically worth their present prices, and more, because of the inflation of the assets which they represent.

It is on this aspect of the boom that recent studies have been focussed. Of particular interest is a statistician's analysis in *The Investors' Chronicle* which relates the rise in the prices of shares to the rise in the prices of goods. As the range of shares is vast and the variety of goods almost infinite, such a comparison can be no better than

approximate, and this statistician had to perform great labours to make even an approximate calculation of the percentage rises in shares and goods since the pre-inflation era, before the beginning of the war. (There are various indices of prices, but they are not comprehensive enough to satisfy a conscientious statistician.) The result of this study was an estimate that average prices of goods and services in Britain had risen about 200 percent above the average prices of 1933-39 while the rise in prices of ordinary shares on the same basis was about 125-150 percent. And the conclusion was that, temporary and relatively minor setbacks intervening, the rise in ordinary shares had still a long way to go before their prices were fully adjusted to the fall in the value of money during and since the war. The statistician omitted one important element that would have supported his argument, the "natural" increase in the value of ordinary shares resulting from reinvestment of profits. No company can permanently distribute all its profits, for it must provide for depreciation of its assets. In fact, most companies retain much more than is needed for that purpose, and many of them have financed big expansions entirely by such internal saving. (This saving by companies is one of the biggest elements in the total of national saving.) Thus, whereas a ton of steel is the same thing in 1955 as in 1939, and even a motor car has not changed fundamentally between the years, the ordinary share of a particular company may represent much more, in real terms, in 1955 than in 1939. Values of shares should take account of this underlying change, apart from the change in the price level. What is remarkable is not that share prices have risen so fast since the beginning of 1954 but that they rose so slowly before them. As *The Financial Times* has recently remarked, "the general economic changes of 18 years have been reflected in the change in equity share values of 18 months." Informal dividend limitation (tacitly withdrawn some years ago) is only a partial explanation of the delay. The true explanation is that investors have only recently perceived—and then more by instinct than by reason—that the real value of assets has been inflated over many years, that inflation of all values is being and will be reflected in dividends (which are, after all, the principal inducement to buy a share), and that ordinary shares are the investor's only protection against the continuing decline of the value of money. One cannot overlook the element of speculation that intrudes on these more respectable factors whenever prices are rising strongly. The prospect of a capital profit in a few months (or even weeks if one's choice is lucky) that would take as many years to accrue in the form of dividends is not easy to resist, and it has attracted into the stock market many people of small means who would have been wiser to stay out of it. (Some of them had unhappy experiences earlier this year.) Buying of shares on credit is not, however, done in large volume in London, and the setbacks that inevitably occur when prices have risen too fast and profits are encashed do not reveal any fundamental instability.

The Government, whose credit in the market is declining, and which is embarrassed by the market's display of inflation, would gladly see the trends reversed. But the inflation to which the market is responding is still that of the past rather than the present. The rise cannot be permanently checked unless inflation itself is halted. The boom has run into some difficult patches recently, but setbacks are restrained by the virtual certainty that while inflation persists the rise in share values—representing rising profits and appreciating assets—must, in the main, continue. On the other hand, the downward course of the gilt-edged market has been checked by the belief that the banks will cease selling stock and, perhaps, by a little official assistance to prepare for new gilt-edged issues; but investors who believe that inflation is being used as a means to prevent a slump, and that it will thus continue indefinitely, are not interested in securities that yield a fixed monetary return, representing a depreciating real income. After months of delay, the rise in ordinary share values is having its natural effect, attracting new issues. The immediate effect of these issues is to blunt the edge of the share boom, for they attract money that is seeking investment to provide money for subscription. The delayed effect of the issues is to blunt the instrument of credit-control, for companies that cannot get enough accommodation from the banks may satisfy their needs through the new issue market. Both these effects will be mitigated, of course, if more money is saved; and an investment analyst, Miss Margaret Rix, writing in *The Director*, has estimated that, over a fairly long period, there may have been about £50 million a year more money seeking investment in shares than new issues of shares. Perhaps the most interesting new issue of the year is one which—and there lies its significance—is not through London at all but is in the form of a sterling loan: the Anglo-American Rhodesian Development Corporation's £2½ million 15-year loan raised in Holland—because at current interest rates the London market is too dear.

THE Railway Corruption Enquiry Committee refers in its report to a "general atmosphere of corruption, dishonesty and sharp business practices". By "general" the Committee means outside the railways, in Indian society at large. It thinks this atmosphere is relevant to any effort to understand the prevalence of bribery and crookedness among railway workers. Indeed it would be relevant, for we would have no right to expect railway officials to be little angels if the rest of us were shameless scamps. But are we? Is there a general atmosphere of sharpness, dishonesty and corruption abroad in India today? Every age is wont to flagellate itself as having fallen away from the grace of its fathers, and business morality is like *Punch*: not as good as it used to be, and never was. So we must discount a good deal of any such general indictment. But when that is done, I think there is still room to argue that there has been a decline in very recent years, or at least that fraud and peccancy are more brazen than they were. And they are more brazen because they more often go unpunished. The law is broken, everybody in town knows, echoes of it get published in the papers—and nothing happens. Meantime in Delhi, our legislators go on making more laws for more people to break with impunity. To take the case of the most important law Parliament will have to consider in the session that begins on Monday, the Company Law: a massive, intricate, crippling and arbitrary piece of law is presented to Parliament while a few crooks go ahead infringing the provisions of the old law and prosper at it. I always understood that the way to stop laws being broken was not to enact other equally fragile laws, but to punish lawbreakers. Perhaps I'm old-fashioned.

Mr. Nehru was asked straight out in Delhi on Tuesday whether after (and, it was implied, because of) his trip to Russia, "we can expect an extra dose of socialism". This query put in words, perhaps a little crudely, a thought that has been troubling many minds for weeks past, and not least during the tumultuous welcome given the Prime Minister in Moscow. Mr. Nehru's reply was reassuring, for he dwelt on the differences between India and Russia that made necessary a quite dissimilar approach to planning. Indeed on the day previous, speaking at an AICC reception, he had cautioned against imitating other countries; even though India might learn this or that, she could not adopt their methods wholesale. This was, and remains, a significant observation, for I take it to be a diplomatic way of saying that what Mr. Nehru saw in Russia will not do for India. What is more, I have the idea that Mr. Nehru had told the Russian leaders just that while he was still in Russia. I get this notion from the fact that Marshal Bulganin last Saturday, on the eve of his departure for Geneva, released a blistering criticism of Soviet economic planning, complete with denunciations of junior ministers who must already be packing their bags for Siberia. At that time, on Saturday, Mr. Nehru had said nothing publicly in India about the possible uses of Russian planning techniques and for all we knew here he was going to say that they were the answer to all India's difficulties. Marshal Bulganin evidently knew otherwise, or he would have chosen another time to indulge in that vicious denunciation of colleagues which in Russia passes under the curious name of "self-criticism". As every shipper knows, you do not declare your goods unfit for human consumption just when they are being unpacked by a foreign importer. So the upshot of my quite putative reconstruction of the case is that throughout all the clapping and waving that marked Mr. Nehru's journey through Soviet Russia he retained a healthy scepticism about everything he saw and

A DITCHER'S DIARY

heard, that his hosts realised that they had not sold any economic pups and that India is henceforward not to be unduly influenced by Russian example. None of which is very surprising for India's Prime Minister is not, as the Italians say, *nata ieri*.

The views of tea garden workers on how to grow tea are rather melancholy—briefly: "to hell with everybody, we'll do it ourselves". One employer, it seems, is as bad as another except that their fellow-countrymen are worse. The Plantation Workers' Federation, affiliated to INTUC, has submitted a memorandum to the Assam Planning Board in which it invites a plague on everybody's house and ends up with a comical suggestion about running the industry with the workers' provident funds. British employers get a trouncing because they are leaving India: "They are anxious to remove as much money as they can to their own country, and continue here only to complete this process of transferring the capital". (Those hard-working gentlemen along the Brahmaputra will be interested to hear that they are not planters but liquidators.) This "indiscriminate sale of tea gardens" should be stopped, a proposal that the Swadeshi League will not find very patriotic. Indian employers are no better than their British confreres: "Everybody knows at his own cost what a native garden means, and we find nothing to be elated over in the increased Indianisation of the industry". The memorandum recalls an earlier pamphlet on this question where Indian tea planters were accused of "a mad hunger for exacting maximum within minimum of time, without caring for the life and health of the plant or upkeep of the soil". The Indian Government is no use either: "We have a taste of State-management of tea industry... our experience in this is rather discouraging". Tripartite control, by capital, labour and Government, is no answer, because the employers are too vain to co-operate: "The Indian sector is not expected to be up to mark in this regard". A solution to this knotty problem is made possible by the recent amendment to the Constitution which enables the Government to annex other people's property and no back-answers: several estates should be taken over on the cheap, and then given to the workers to manage co-operatively. Working capital will be provided by provident funds and thereafter, by an undisclosed process, the workers will proceed to buy up the whole Assam Valley. Before the Federation goes further with this brilliant scheme, they should ask a few trade unions whether their members would care to invest their provident funds in working capital for tea gardens run by their colleagues.

Dibrugarh has withstood its annual trial by water, thanks to the protective works undertaken before the snows began to melt in Tibet, though the town must continue its southward retreat out of harm's way. Sadiya, on the other bank upstream, is a much less important place economically but it is good news that it has escaped the obliteration with which it was threatened, for it is as pretty a township as one could wish for and the gateway to one of the most fascinating tracts of this varied land. Alas, it is a gateway that is now closed to all foreigners and most Indians for it leads to the umbrilic of Asia, where India, China, Burma and Tibet meet. This region of snow peaks and jungles, scarred by earthquake and flood, is seldom in the news, but this week a Bombay paper claims to know that unhappy things are going on "behind

the purdah" that veils all the north-east frontier tracts. Perhaps, but I think the political significance of such events is exaggerated. It is just the old story of men who live in the hills disliking and mistrusting men who live in plains and valleys. To them it makes very little difference who governs in far off Delhi, and it matters less whether such governors are Hindu or Christian: the hillmen are just again the lot. As long as so-called political unrest continues, and as long as Peking pretends to be uncertain about where China ends and India begins, I suppose this region will remain shut off from all but officials. Among the latter nowadays there appear to be fewer of the type of old I.C.S. officer who took an intelligent interest in the region and told us what little we know about it. When calmer days return, it is to be hoped that study of India's wonderful north-east will revive, and that tourists and hunters and other such harmless busybodies will be granted access to an area that has lately been the preserve of missionaries and Communists, neither of whom have any taste for regional history and culture. India's north-west has always been regarded as the more "romantic" land approach to the sub-continent and much attention has been paid by archeologists and Hollywood to the route followed in past centuries by Aryans, Greeks, Pathans and Moghuls. No one cares for the other great portal of India, the north-east through which came wandering the Ahoms and other peoples who populated the Assam Valley, and the Mongol races who gave Bengal its characteristic stamp.

"Eden To Be Spokesman of Western Powers"—*Hindustan Standard*, Monday.

"Eisenhower To Lead Western Powers"—*Statesman*, Monday.

The *Amrita Bazar Patrika* gave nothing away but has possibly put a small side bet on M. Edgar Faure.

I should not be impolite in this way about our local newspapers' coverage of the Geneva conference, for they are doing us prouder than is their wont. The *Hindustan Standard* has sent Tarapada Basu across from London, the *Statesman* has kept Prem Bhatia in Europe after his tour with Mr. Nehru, and the *Amrita*—after one blank day when it appeared that it would do nothing—has sent that enterprising journalist Kamallesh Banerji up from Paris. Banerji has so far shown his talent by doing what few journalists at Geneva will be able to do, getting an interview with one of the B.G. Four. It is very proper that there should be a plethora of Indian journalists at this peace conference for (if we are to believe what journalists themselves tell us) their role is sometimes almost as important as the principals'. A British journalist, famous as a foreign correspondent in his day but now dead, used to tell the story of how he personally prolonged one of the 1919 peace meetings by four days. He met Lloyd George, Clemenceau and Wilson when they emerged to announce the end of their discussions. "Have you explored every avenue?", he asked them. They confidently replied that they had. "But have you left no stone unturned?", he pressed. They looked at one another and slowly agreed that they had done that too. "But have you beaten every thicket?", he demanded triumphant. They ruefully confessed that this they had omitted, and went back to carry on their talks for four days more. So you see, a foreign correspondent has considerable responsibilities and it is reassuring that Calcutta's best are on the job in Geneva.

THE DITCHER.

turning oil
into petrol

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery—and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil—in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil—the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

THE JIJAJEERAO COTTON MILLS LTD.

(Incorporated under the Gwalior Companies Act I of Sanat 1963)

SHARE CAPITAL:

AUTHORISED:

5,25,00,000/- divided into 3,50,000 Ordinary Shares of Rs. 150/- each.

2,00,00,000/- divided into 2,00,000 Cumulative Redeemable Preference Shares of Rs. 100/- each.

7,25,00,000/-

ISSUED & PAID-UP:

4,63,65,300/- divided into 3,09,102 Ordinary Shares of Rs. 150/- each.

4,63,65,300/-

There are no Founders' Management or Deferred Shares.

LOAN CAPITAL:

The Company has no Debentures, Mortgages or loan capital outstanding.

ISSUE OF 1,00,000 5½% CUMULATIVE REDEEMABLE PREFERENCE SHARES OF Rs. 100/- EACH.

The whole Issue has been underwritten and of which 60,000 Preference Shares have already been agreed to be subscribed, which will be allotted in full.

40,000 Preference Shares of Rs. 100/- each, payable Rs. 25/- per share on application and Rs. 75/- per share on allotment, are now being offered for public subscription.

TERMS AND CONDITIONS OF ISSUE:

The Preference Shares confer the right to a fixed Cumulative preferential dividend @ 5½% per annum (tax free) on the capital for the time being paid up thereon and in any year in which for any reason whatsoever, there is no taxable profit of the company and the dividend is distributed on the Preference Shares, in such year the company will pay the tax on such dividend. The Preference Shares will be redeemed at par on the 31st December, 1965. The Company will give 12 months' notice before the aforesaid date of redemption and interest will cease to accrue on the said shares with effect from the date of redemption, so notified.

The Preference Shares carry the right in winding up to repayment of the capital paid up thereon together with the payment of arrears of the said preferential dividend before any return of capital is made on the Ordinary Shares, but do not confer any further rights of participation in the profits or assets of the Company. The Preference Shares do not confer on the holders thereof the right to attend or vote either in person or by proxy or by attorney at any General Meeting or to any notice of meeting. The Company is at liberty upon any further increase of capital to issue new shares with any preferential, deferred, qualified or special rights, privileges or conditions attached thereto. But it is not proposed to issue any debentures until the present issue has been redeemed. The said Preference Shares shall be redeemable in accordance with the provisions of Section 105B of the Indian Companies Act, 1913.

1B, Old Post Office Street, Calcutta.

BANKERS:

MESSRS. UNITED COMMERCIAL BANK LTD.,
MESSRS. THE BANK OF BARODA LIMITED.

REGISTERED OFFICE:

P.O. BIRLANAGAR, GWALIOR.

HISTORY AND BUSINESS:

The Company was registered in Gwalior as a public Company on the 9th August, 1921 and started the manufacture of cloth in the year 1923. It made steady progress and declared its first dividend in the year 1929. The dividend was steadily increased until 1948 when the Company was able to issue Bonus Shares of Rs. 10/- each to the holders of one Ordinary Share of Rs. 10/- each. The whole issue was then consolidated to make the face value Rs. 150/- for each Ordinary Share. Starting on a modest scale the Company has built up for itself an important place in the textile industry of the country. While the main manufacturing activities of the Company are spinning of cotton yarn and manufacture of cloth and hosiery, the Directors of the Company are of the opinion that the time has now arrived to extend the Company's activities and they have accordingly decided after a careful survey to undertake the manufacture of Soda

Ash and Caustic Soda at Porbunder in Saurashtra. The Company's Plant will be installed at Porbunder and will have a capacity of 100 tons of Soda Ash and 75 tons of Caustic Soda per day. The total consumption of Soda Ash in the year 1954/55 was approximately 1,42,000 tons of which 94,000 tons were imported. The consumption of Caustic Soda during the same period was 77,000 tons of which 49,000 tons were imported. The consumption is expected to further increase substantially by the end of the Second Five Year Plan. Porbunder offers a good site for a Soda Ash Plant as it has the twin advantage of having both salt and limestone, the principal ingredients, in abundant quantities and easy transport to the consuming centres. Part of the production of Soda Ash will be used for the manufacture of Caustic Soda in which field also at present the imports predominate.

Purpose of Issue:

The proceeds of this issue will be utilised towards setting up of the Soda Ash Plant of the

Company at Porbunder. The necessary licence has been obtained from the Government of India and negotiations are in progress with the Saurashtra Government for the acquisition of suitable land and with foreign manufacturers for the purchase of plant and machinery. The Saurashtra Government have promised all possible help and are expected to supply power at a very reasonable rate.

Approved Investment:

The Preference Shares are an approved investment for Insurance Companies under Section 27A of the Insurance Act.

Underwriting and Brokerage:

The whole issue has been underwritten and the Directors are satisfied that the resources of the underwriters are sufficient to discharge underwriting obligations.

The Company will pay brokerage at the rate of one per cent to the recognised brokers or Bankers on allotments made in respect of the application for Preference Shares bearing stamp of such brokers or Bankers.

The underwriting Commission payable by the Company to the said underwriters is 1% on the nominal value of the Preference Shares.

Inspection:

The copy of the Prospectus, Memorandum & Articles of Association, the Consent Order of the Controller of Capital Issues, Licence from the Central Government, to set up a Soda Ash Plant, the Original Report and Certificate of Company's Auditors as set out in the Prospectus and also the Contracts referred to therein may be inspected at the Registered Office of the Company at Birlanagar, Gwalior, during office hours until the subscription has been closed.

General:

The subscription list will open on the 18th July, 1955 and will be closed on 25th July, 1955 or earlier as the Directors may decide.

The application forms for Preference Shares may be obtained from and should be sent duly filled in and completed either to the Registered Office of the Company at Gwalior or any branch of the United Commercial Bank Ltd., or the Bank of Baroda Ltd., accompanied by payment in accordance with the instructions given thereon. The amount may be paid either in cash or by cheque or draft.

In case no shares are allotted, the amount received on application will be refunded and where the number of shares allotted is less than the number applied for, the balance of the application money will be refunded to the applicant.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

EASIER MONEY, FEWER BILLS

Wednesday, 20th July.

MONEY conditions are rather less stringent. Sugar advances are falling, though more slowly than usual. In the Calcutta interbank market the call rate quotes 2½ percent, with lenders over.

It has been another dull week in the bill of exchange department where, in spite of good tea export auctions and jute goods shipments, very few bills have been sighted. Remittance has been in the usual moderate demand. Sterling remains weak with the spot dollar quoting near the floor. The rupee-dollar rate accordingly remains at Rs. 480-12.

Bullion was quiet in the absence of support. Silver declined from the previous week's level of Rs. 160-14 to Rs. 160-8 quoted today and the rate for forward delivery was the same. The price was quoted at 78½d. in London and at 90½ cents in New York.

Gold ruled quiet in sympathy with silver and the price dropped from Rs. 95-6 to Rs. 94-8. The sovereign at Rs. 60-9 showed a loss of 7 annas.

Tenders for Rs. 1 crore of 91 days Government of India Treasury Bills which were opened on Tuesday, 19th July, 1955, totalled Rs. 1,91,50,000. The average rate of acceptance fell from Rs. 2-8-5 to Rs. 2-8-0 percent per annum. Tenders at Rs. 99-6 percent were allotted approximately 94 percent. Lower tenders were rejected. Tenders for Rs. 1 crore of 91 days Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 25th July, 1955. During the week ended 15th July, 1955, Government of India Treasury Bills for Rs. 22,77,50,000 were sold in favour of the Reserve Bank of India.

A fall of Rs. 10.79 crores in notes in circulation to Rs. 1,310.85 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 15th July, 1955, but the total note issue rose by Rs. 99 lakhs to Rs. 1,341.78 crores. Notes held in the Banking Department consequently increased by Rs. 11.78 crores to Rs. 30.93 crores. Deposits of the Government of India fell by Rs. 2.33 crores to Rs. 81.74 crores, while other Government accounts rose by Rs. 2.38 crores to Rs. 20.05 crores. Balances of Commercial Banks increased by Rs. 5.40 crores to Rs. 52.27 crores. Balances held abroad were Rs. 1.04 crores higher at Rs. 64.36 crores. Investments were slightly lower at Rs. 61.21 crores. Other loans and advances declined from Rs. 41.69 crores to Rs. 35.45 crores, of which advances to scheduled banks against usance bills totalled Rs. 24.14 crores (Rs. 29.05 crores). These advances amounted to Rs. 163.59 crores since 1st January, 1955. Ways and means advances were Rs. 80 lakhs against Rs. 86 lakhs.

The return of the State Bank of India for the week ended 8th July, 1955, shows a drop of Rs. 2.12 crores in total deposits to Rs. 199.40 crores. Investments in Government Securities are down by Rs. 82 lakhs to Rs. 88.19 crores, while other authorised investments remained unchanged at Rs. 7.69 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 1.11 crores to aggregate Rs. 115.96 crores. Cash and balances are, in consequence, at Rs. 13.91 crores or Rs. 4.08 crores higher.

The statement of the position of scheduled banks for the week ended 8th July, 1955, discloses Demand and Time liabilities at Rs. 593.87 crores (Rs. 9.93 crores on account of borrowings from banks) and Rs. 399.59 crores (Rs. 3.93 crores) compared with Rs. 600.72 crores (Rs. 7.69 crores) and Rs. 397.91 crores (Rs. 3.73 crores), respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 1.22 crores and Rs. 1.55 crores to aggregate Rs. 34.37 crores and Rs. 45.71 crores, respectively. There is a rise of Rs. 8.09 crores in investments to Rs. 358.55 crores. Advances and bills discounted and purchased at Rs. 616.38 crores reveal a drop of Rs. 1.33 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.1 percent and 62.0 percent against 8.3 percent.

The profit of the BANK OF BARODA LIMITED, including Rs. 2,70,301-15-5 brought in, amounted to Rs. 15,85,999-11-0 for the half-year ended 30th June, 1955. The directors have resolved to declare an interim dividend of 10% per annum to absorb Rs. 5,00,000, and to carry forward the balance of Rs. 10,85,999-11-0.

According to the return received in the Department of Commercial Intelligence and Statistics, the total gross sea and land customs revenue collected in the Indian Union during May 1955, amounted to Rs. 1,275 lakhs as compared with Rs. 1,217 lakhs in the corresponding month of the previous year. The comparison in the following should be taken to refer to that of the current figures with those of the corresponding period of the preceding year. Of the total customs revenue collections, import duties accounted for Rs. 1,016 lakhs as against

large scale. In recent weeks, however, conditions in the market have been much less stringent: borrowing from the Bank has been much less frequent and in much smaller amounts. Yet in these recent weeks the banks have been pressed to restrict their lending to businesses and individuals. Credit has become easier for some purposes, tighter for others.

This anomaly exemplifies the difficulty of applying restraint by means of an instrument which, as related to modern conditions, is still experimental. The authorities intended to restrict both the demand for credit (by raising interest-rates) and the supply of it (by curtailing the liquid basis of bank-credit); but demand remained as strong as ever, and supply—as represented by the banks' advances—was enabled to increase by sales of investments. Stringency in the discount market raised bill rates to the point where Bank rate itself might be forced still higher; and sales of gilt-edged investments raised the long-term rate of interest to the point where the Government's own financing was impossible to negotiate on reasonably favourable terms. The advantage of such a further rise in Bank rate was questionable, and the disadvantage of such a move—in that it would further depress the value of Government securities—was obvious. So the pressure on the discount market was relaxed, even though this pressure had been an important element in the restraint of credit. (It had, especially, drawn money out of the banking system into Treasury bills.)

The position in this second half of the year is not at all as envisaged when the Chancellor of the Exchequer took spectacular action against inflation last February. On the Stock Exchange the boom in ordinary shares was checked for a few weeks; in trade and industry (with one or two exceptions, such as furniture and gas appliances) it was not checked at all. The economy was "over-extended"

at the beginning of the year; it was "over-extended" still in the middle of the year. There had been some evidence in the meantime that the pressure was easing, but it did not add up to a change of trend. There had been some evidence, too, that the balance of payments was correcting itself, and when the June figure for exports showed a slump that increased the visible deficit from £33 million (in May) to £129 million it could be said that the rail and dock strikes had caused a temporary setback, but that imports were actually increased slightly in June suggested ominously that credit-control was even less effective than had been believed.

The banking world can only wait and watch, somewhat apprehensively, the race between the forces of inflation and the forces of control.

Our City Cable

EXTENSIVE GAINS IN STOCK MARKET

INDUSTRIALS SELECTIVELY BETTER: OILS AND SHIPPINGS UP

London, 20th July. PRICES advanced on the stock market during the past week after a rather dull start. The buying was selective but values steadily improved and recorded extensive gains compared with previous levels. The warning by the Chancellor of the Exchequer on the need for restraint in home consumption had little effect. The outstanding performance was of oil shares, which were active and strong in very large turnover. Prices recorded substantial gains with the buying touched off by the increase in fuel oil prices. Demand was encouraged further by favourable comment on the oil industry's prospects. Gains in oils extended to over 10s, with many of the leaders having touched new peaks before reacting slightly on profit-taking. Gilt-edged were an uncertain market and, with sentiment influenced by renewed fears of dearer money, prices eased. Japanese and Germans were in demand in the foreign bond market. Industrials went ahead on a selective demand and fresh peaks were established by many issues. Shipping shares were prominent, aided by the improvement in freight rates. Steel shares lost ground. Gold shares were out of favour and prices drifted downwards for lack of support, although a better tendency developed after the week-end. Coppers made fresh headway and other base metals were firmer where changed. Rubbers responded to the fresh advance in the commodity, while the tea share market also moved up, buying here being encouraged by the better trend in tea prices at the auctions.

The Money Market

The volume of credit in the money market was restricted during the past week although an improvement developed in the later stages. The first three days were very difficult. The authorities had to provide funds whilst the market itself had to borrow small amounts on Bank rate terms. This helped and Bank borrowing were on a progressively diminishing scale as the credit supply steadily improved. By the end of the period, more comfortable conditions prevailed, with loans easing from 4 percent to 3½ percent. Bill business was not very extensive, with September and October bills mostly dealt in at 3-15/16 percent and later at 3-29/32 percent. Applications for Treasury bills totalled £393,360,000 of which £260 million were allotted at an average rate of 79s 4-8/16 compared with 79s 4-8/16 in the previous week. This week £240 million are offered. The Bank of England return for the week ended 13th July showed notes in circulation about £20 million higher at around £1,815 million, while bankers' deposits were about £8 million higher at around £255 million. Fine trade bills were unchanged.

Activity on Wall Street

Foreign bonds, particularly East Europeans, featured the bond market in the past week, stimulated by the Big Four conference. Russian Imperials extended the recent advance on the American Stock Exchange to a new high but eased later under profit-taking. Polish Nationals and Warsaw 4½ percent and 7 percent also moved to new peaks. Kreuger and Toll 5 percents, representing Hungarian bond holdings, advanced two points but the gains were later cut by half. Otherwise, German Governments were mixed following their recent strength and industrials scored good gains ranging up to six points for the United Steel Works. Activity in Denmark, Italians and Norwegians was light with changes fractional. Australians showed minor variations, while a number of Japanese issues were in demand, with Tokyo City advancing nine points on the sale of two bonds. In the South American list, Brazilian 3½ percent were higher by one to six points, while the active Chile 3 percent held steady. In the domestic list, convertibles eased slightly after earlier firmness with the exception of American Telegraph and Telephone which advanced to a new high. Speculative rails were mixed, while World Bonds were neglected.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 13th July shows gold stock \$1 million higher at \$21,679 million. Foreign deposits rose by \$67 million but foreign investments fell by \$18 million. The Federal Reserve purchased \$99 million of bills and \$1 million of bonds but sold \$4 million of Government securities held under the repurchase agreements. The total of discounts and advances fell by \$96 million to \$503 million, while the excess reserves of member banks rose from \$238 million to \$669 million. Their daily average of excess reserves rose from \$217 million to \$734 million, while their daily average borrowings fell by \$3 million to \$632 million. Business loans of the New York City banks rose by \$10 million to \$7,957 million, compared with a fall of \$54 million to \$7,541 million a year ago.

U.S. Burlap Consumption and Stocks

Burlap consumption in the United States amounted to 75,200,000 yards during June—an increase of 1,800,000 yards over the preceding month, according to trade figures. The consumption compared with only 61,200,000 yards in the same month last year and was at the highest level since last September. June consumption brought the total for the first six months this year to 409,100,000

yards against 376,700,000 yards in the same period of last year. Stocks of burlap, spot and afloat, declined to 252 million yards from 261 million yards at the end of May and compared with 198,800,000 yards at the end of June last year. Spot stocks totalled 156,900,000 yards compared with 154,400,000 yards a month before, while afloat dropped to 95,100,000 yards from 106,600,000 yards a month earlier.

Reaction to Tea Auction Report

The news that the Indian Government's Tea Auction Committee has recommended a gradual transfer of auctions of Indian tea from London to Calcutta came as no great surprise to London traders. Many of them were reluctant to comment on the practicability of the proposal. Some pointed out that, as far as was known, suitable warehousing facilities did not yet exist in Calcutta to handle larger quantities of tea. They also wondered if India would weather the slump in prices such as occurred earlier this year and which resulted in large unsold stocks of tea in Ceylon. Some confusion prevails over the amount involved in India's proposals. North Indian tea production last year was around 514 million lbs. but only about 162.3 million lbs were auctioned in London on garden account.

Tea Price Prospects

The Financial Times maintains that there are reasonable grounds for looking now to a period of greater stability in tea prices. The activity of dealers suggests that grocers may be buying more confidently. Commenting on some of the tea growers' problems, it says: "Growers have been made to realise the fact that on a falling market poor quality teas have been practically unsaleable, while there has always been a market for quality teas. While producers would be as reluctant as anyone to see a recurrence of a price rise on last year's scale, which can only bring a reaction inimical to their interests, it is to be expected that

they will continue to concentrate on quality rather than quantity."

U.K. Tea Stocks

U. K. tea stocks in London and provincial warehouses on 8th July totalled 127,444,680 lbs., against 132,170,720 lbs. a week previously. Deliveries during the week amounted to 10,357,710 lbs., against landings of 5,631,670 lbs. The total quantity afloat on 8th July was 22,132,756 lbs., including from Calcutta 6,692,200 lbs., Ceylon 3,650,556 lbs. and Colombo 11,790,000 lbs. The average price realised at the auction during the week was 46.42d a lb against the previous week's 44.36d and 55.09d in the corresponding week of last year.

Rubber Remains Firm

Although some decline from the recent high levels would have aroused no surprise in the rubber markets, there was by contrast a continuance of the firm and rising trend. Continental and trade buying were a feature of trading, while professional buying in the United States accentuated the advance. Traders attributed the advance also to the continued scarcity of offers of July shipment rubber from the East. Some traders believed that the technical position which developed in June shipment might be extended into July. Sole crepe was very quiet throughout the week and held steady at 41d though traders thought that the very best quality would probably fetch 42d.

A.E.I. Capital Expansion

The capital of Associated Electrical Industries is to be increased to £35 million by the creation of seven million unclassified shares of £1 each. Of these, 1,100,000 would be issued as ½ percent "B" cumulative preference shares to Siemens Brothers, 10 percent preference stockholders, if the offer by the company of two Associated "B" preference for every Siemens 10 percent preference plus 5s in cash is accepted. There is no intention at present of making a further issue of shares.

Stocks and Shares

MARKET CLOSES ON EASIER NOTE

Wednesday Evening.

THE share market has taken a distinct pause and is now rather delicately poised. The professional manipulation and speculative buying of the last two weeks have left it overbought and heavy. There has been no substantial selling yet, but many weak holders are anxiously awaiting news of the Tata Iron and Steel dividend. All speculative issues have fallen back and there has been a contraction in the volume of business.

Details of the week's trading follow.

* * * * *
There was a further contraction in the volume of business in the gilt-edged section during the past week. There was a certain amount of selling in order to obtain funds for the new State Loans which are expected early next month and in the absence of any real support, prices tended towards slightly lower levels except in the case of medium-dated issues. The 3% Conversion Loan 1986 was quoted at Rs. 80-8 with sellers rather than buyers and 3% Non-terminable paper was stagnant at Rs. 80-1. In short-dated loans, 3% 1957 was on offer at Rs. 99-10 as was 3% 1958 at Rs. 99-7. Among medium-dated loans, 3% 1959-61 eased to Rs. 97-15 and both 3½% 1961 and 1964 were lower at Rs. 99-10 and Rs. 98-10 respectively. The 3½% 1965 Loan was traded at around Rs. 98-7-6, half an anna below the issue price, but 3% 1963-65 was fully steady at Rs. 94-6 and 3% 1964 was taken at Rs. 94-5. The 2½% 1961 loan turned sellers at Rs. 92-5 and 2½% 1962 changed hands at Rs. 93. In the long-dated section, 3% 1963-68 improved to Rs. 91-7 but closed with sellers at this price while 3% 1970-75 was unchanged at Rs. 87-2.

As mentioned in these notes last week, State loans were extremely dull in view of the forthcoming new issues expected shortly and prices were marked down. For example, 4% U.P. Loans eased by three annas to Rs. 100-6 and 4% West Bengal Issues were on offer at the lower rate of Rs. 100-6. The 4% Bombay State Loans were marked down to Rs. 101-5.

Selected preference shares continued to be in short supply. Among jutes, transactions were reported in Lansdowne which were taken at Rs. 116-8 and Fort Gloster 1st which were crossed at Rs. 127. Among miscellaneous issues, Associated Hotels changed hands at Rs. 63-8, Bengal-Nagpur at Rs. 116 and Calcutta Electric at around Rs. 12-10. Indian Iron & Steel were done at Rs. 109-8, Indian Standard Wagon were crossed at Rs. 142-8, Railis were taken at Rs. 56-12 and Shaw Wallace at Rs. 84-8. Rohtas 1st after being taken up to Rs. 139 turned sellers at Rs. 138 while the 'B' were quoted at Rs. 70.

In the banking section Hind Bank were steady at Rs. 28-8, Hindustan Commercial were dealt in around Rs. 10 and Punjab National improved from Rs. 47 to Rs. 48-8. United Bank of India (D) shares had buyers at Rs. 4-12. United Commercial were dealt in between Rs. 44 and Rs. 45-8.

A solitary transaction was reported in the railway section in Dehri-Rohtas at around Rs. 12-15.

* * * * *
Kesoram was the outstanding feature in the cotton section improving from Rs. 17-8 to Rs. 19 but later reacted to Rs. 18. Bengal-Nagpur were transacted at Rs. 10-4, Bowreah at Rs. 262 and Cawnpore Textiles were steady at Rs. 10. There were sellers of Elgins at Rs. 18-14 and New Victoria were steady at Rs. 1-12.

Coal shares were fairly steady with Burrakur at one time improving to Rs. 14-14; later sellers appeared and the price reacted to Rs. 14-5. Bengal were done at Rs. 525, Central India were steady at Rs. 8-5, East Indian were marked at Rs. 31 x.d. and New Beerbhoom at Rs. 21-10. Raneeungee were quoted at Rs. 12-4 and South Karanpura at Rs. 12-8. Talcher were reported at Rs. 4 and several transactions were recorded in Western Bengal at around Rs. 7-10.

Little interest was shown in the jute section and prices tended to lower levels. Howrah moved between Rs. 31-14 and Rs. 31-10 to close at Rs. 31-10. Here are the week's representative price movements:—

	Opening 14-7-55	Closing 20-7-55
Anglo-India	226 0	224 0
Barnagore	190 0	190 8
Birla	22 9	21 0
Naskarpara	18 0	18 0
National	35 8	34 8
Presidency	7 9	7 4
Reliance	16 0	15 14

Business in electric shares were of a retail nature. Bareilly were quoted at Rs. 15, Patna at Rs. 13-3 and several deals were recorded in Calcutta Electric at around Rs. 15-4.

Durbhanga, on rumours of a bonus issue and a change of management, was the outstanding feature in the sugar section improving from Rs. 19-2 to Rs. 22, but reacted at the close to Rs. 20-8. Bel-sund were dealt in at around Rs. 11, Carew at Rs. 12-10 and Dyer Meakin Breweries at Rs. 6-12. New Savan were steady at Rs. 7-4 as were Ram-nugger Cane at Rs. 25-8. Samastipur were quoted at Rs. 15-4.

There was a large turnover in Indian Iron & Steel shares during the week with the price

fluctuating widely between Rs. 36-2 and Rs. 37-2 to close at Rs. 36-6. Braithwaites were dealt in at Rs. 26 and Britannia Engineering improved from Rs. 36-8 to Rs. 38. Textile Machinery improving to Rs. 22-8 dropped to Rs. 21-5. Indian Galvanizing were done at Rs. 23-12, Indian Standard Wagon at Rs. 135-8, Kumardhubi Engineering at Rs. 12-14 and Marshalls at Rs. 7-8. Richardson & Cruddas closed easier at Rs. 20 while Jessop & Company were steady at around Rs. 46-8.

* * * * *
In the miscellaneous section, Bengal Paper were steady at Rs. 71, India Paper Pulp at Rs. 30-2 and Orient Paper after touching Rs. 30-12 eased to Rs. 29-14 at the close. Titagur after rising to Rs. 47-8 turned sellers later at Rs. 45-12. Sone Valley were marked at Rs. 7-8, New Asiatic Insurance at Rs. 6-8 and Ruby General at Rs. 9. Several deals were reported in Indian Steamship at around Rs. 7-12 and Assam Saws were offered at Rs. 5-2. Angelo Brothers were in demand and rose from Rs. 20-7 to Rs. 21-12. Bengal Flour were steady at Rs. 30-8, Balmer Lawrie were dealt in at Rs. 160 and Britannia Biscuits were popular at Rs. 15-12. British India Corporation were unchanged at Rs. 9, while Dunlop Rubber were steady at Rs. 37-8 and Gillanders Arbuthnot at Rs. 14-4. Hoare Miller were quoted at Rs. 7-8 and Imperial Tobacco on rumours that the Company may come within the purview of Section 23A of the Income Tax Act rose from Rs. 12-8 to Rs. 13-13 to close at Rs. 13-6. Indian Aluminium after surging to Rs. 190 turned sellers at Rs. 187. Indian Cables were easier at Rs. 29-12 while Indian Wood Products were steady at Rs. 38-12 and Indo-Burma Petroleum at Rs. 162. Jardine Henderson were better at Rs. 123, Martin Burn were steady at Rs. 24-10 and Metal Box at Rs. 25-6. National Insulated Cables fluctuated between Rs. 25-4 and Rs. 27-8 while National Tobacco were steady at Rs. 12. Rohtas Industries after improving to Rs. 30 reacted at the close to Rs. 28-14. Shaw Wallace were dealt in at around Rs. 14-8.

In the mining section Indian Copper eased to Rs. 4-15 while both Western Stockholders Investment and Burma Mines were unchanged at Re. 1

Indian Railways buy annually railway equipment worth Rs. 25 crores from abroad. The Railway Equipment Committee is now examining this problem and will suggest measures for India to become self-sufficient in railway equipment.

The Show-room in Calcutta displays samples of railway equipment and stores which are not manufactured or inadequately manufactured in India and which are of particular use to Eastern Railway and Chittaranjan Locomotive Works. It affords the industrialists an opportunity to examine these stores readily and it will help them make proposals for manufacturing these items indigenously.

RAILWAY EQUIPMENT SHOW-ROOM

14, Strand Road, Calcutta

To open on Friday, July 22, 1955
Weekdays 10 A.M. to 4 P.M. Saturdays 10 A.M. to 1 P.M.

Issued by
EASTERN RAILWAY AND CHITTARANJAN LOCOMOTIVE WORKS

We reproduce below the accounts of the MACNEILL & BARRY group of jute mills for the half-year ended last March. Ganges raised the ordinary dividend, while Gourepore and Nudda paid the same distribution. The sale of oil mill assets

and Rs. 2-4. Orissa Minerals were steady at Rs. 26-12.

In the absence of any fresh enquiry tea shares have once again been a very dull market with little business passing. Among Assam shares, Baghmari were slightly better at Rs. 31 as were Brahmaputra at Rs. 12-2 and Dibrugah at Rs. 30. Brooke Bond after being marked up to Rs. 19-8 closed slightly easier at Rs. 19-6 whilst Dhunseri had sellers at Rs. 35, Grob 'A' at Rs. 43 and Met-honi at Rs. 26. Ledo were asked for at Rs. 31 and Murphulani Preferred Ordinary at Rs. 47-4. Rajgarh appreciated sharply to Rs. 57-8 but Tez-pore had sellers at Rs. 37. Of the Doonars scrip Banarhat and New Doonars were on offer at Rs. 658 and Rs. 695 respectively as were Hantapara at Rs. 370, Hasimara at Rs. 47-12 and Rajabhat at Rs. 37. Ranicherra were done at Rs. 29-8. Of the remaining shares Pussimbing were unchanged at Rs. 15-12, Lackatoorah eased slightly to Rs. 23 whilst Jay Shree were a feature advancing to Rs. 15-2. New Chumta lost five points to be quoted at Rs. 37 whilst New Terai were unchanged at Rs. 37-4.

The working of GILLANDERS ARBUTHNOT group of tea companies for the year ended last December produced excellent results. BETJAN'S profits rose by Rs. 832 lakhs to Rs. 12 lakhs. The dividend has been raised from 20% to 100%, including an interim of 15%, and a bonus of 35%. General reserve gets Rs. 2 lakhs (Rs. 80,000), and plant and machinery reserve Rs. 1 lakh (nil). The carry-forward is Rs. 68,794, against Rs. 61,395 brought in. The crop rose from 7,749 maunds to 8,331 maunds, and did the average sale price from Rs. 2-4-11 to Rs. 3-11-7 per lb.

There is an increase of Rs. 6-38 lakhs to Rs. 12-01 lakhs in the profit of GAIKHHATA. The dividend is up from 20% to 70%, including an interim of 10%, and a bonus of 20%. General reserve receives Rs. 2 lakhs (Rs. 75,000), and plant

of Gourepore is almost completed, and a loss of Rs. 2-05 lakhs has been offset by a transfer of Rs. 2 lakhs from general reserve. Plans have been drawn up to modernise the mills and steps have been taken to expedite the delivery of machinery.

and machinery improvement reserve Rs. 1 lakh leaving a carry-forward of Rs. 78,467 (Rs. 63,786). The crop fell from 11,398 maunds to 9,534 maunds but the average sale price rose from Rs. 2-1-7 to Rs. 2-15-4 per lb.

The profit of ANANDA-BAG increased by Rs. 6-20 lakhs to Rs. 9-30 lakhs. The dividend is raised from 25% to 80%, including an interim of 15% and a bonus of 25%. General reserve is allocated Rs. 1 lakh (Rs. 75,000), and plant and machinery reserve Rs. 1 lakh, leaving Rs. 77,477 to be carried forward (Rs. 72,998). The crop rose from 5,969 maund to 6,474 maunds, and the average sale price was higher at Rs. 2-3-5 against Rs. 3-10-7 per lb.

JUTLIBARI raised its profit by Rs. 7-08 lakhs to Rs. 10-13 lakhs. The dividend has been declared at 35%, including an interim of 10%. General reserve is allocated Rs. 1½ lakhs (nil), and plant and machinery improvement reserve Rs. 50,000 (nil), leaving Rs. 97,186 (Rs. 58,941) to be carried forward. The crop rose from 8,159 maunds to 8,174 maunds, and the average sale price from Rs. 2-3-4 to Rs. 3-9-4 per lb.

ARCTUPORE raised its profit from Rs. 1-65 lakhs to Rs. 2-01 lakhs. The debit balance has therefore been reduced to Rs. 3,36,155. There is again no dividend. The crop totalled 3,613 maunds (3,393 maunds) and the average sale price was Rs. 2-7-11 against Rs. 1-14-1 per lb.

MACNEILL & BARRY LTD., made a profit of Rs. 37-39 lakhs for the year ended last March, compared with Rs. 28-41 lakhs in the previous year. Bringing in Rs. 5,49,296 and making other adjustments there is Rs. 43,42,316, of which taxation absorbs Rs. 16-75 lakhs (Rs. 13 lakhs). Harbour boating replacement reserve gets Rs. 2-21 lakhs (nil) and general reserve Rs. 2 lakhs (nil). The dividend is the same at 7½ percent, leaving a carry-forward of Rs. 6,21,756. The directors disposed of the company's holding of shares in Kettlewell Bullen & Co., Ltd. at a satisfactory figure. The profit on this transaction has been carried to capital reserve. They also disposed, since the end of the trading year under report, of certain of the company's holdings in the agency tea companies at satisfactory rates.

Providing Rs. 8 lakhs (Rs. 6-94 lakhs) for taxation, the net profit of PARRY & Co., Ltd., rose by Rs. 1 lakh to Rs. 11-29 lakhs. Bringing in Rs. 1,31,468 there is Rs. 12,60,750. Capital reserve absorbs Rs. 20,000 and general reserve Rs. 3 lakhs (same). The ordinary dividend is the same at 15%, leaving a carry-forward of Rs. 1,90,750.

The INDIAN COPPER CORPORATION, LTD., raised its profit by £487,400 to £898,382 for the year ended last December. Bringing in £76,278 there is £974,660. The dividend has been raised from 10% to 25%, including a bonus of 10%. Taxation absorbs £264,395 (£150,312). General reserve is doubled to £150,000. The carry-forward is £111,715. It is stated that 8,800 long tons, including 4,290 tons of copper ingots were despatched against 7,583 tons, including 3,879 tons of copper ingots. Despatches of kyanite ore for sale from the Khar-sawan quarries amounted to 12,012 tons compared with 9,032 tons in the previous year. During the year the Bihar State Government refused to grant a renewal of the lease in spite of the option clause included in it, and instituted a civil suit against the Corporation for damages and for eventual ejection from the leased area. The Corporation has filed a counter suit against the Bihar State Government for specific performance under the Civil Procedure Code to compel the Government to grant a renewal of the lease.

Without Prejudice

THE RESPONSIBILITIES OF AN AUCTIONEER

PROTECTING INTERESTS OF VENDOR AND BUYER

(FROM OUR LEGAL CORRESPONDENT)

THIS is the latest reported decision on the law relating to auctioneers and is of some practical importance to members of that profession and those who deal with them; and, for that matter, to those who deal through any agent with the sale and purchase of land. Where this case is helpful is that it elucidates the legal relationship of the auctioneer to the buyer and seller respectively when the auctioneer conducts a sale by auction of land on behalf of the seller. Of course, that position may be stated clearly in writing or orally by the auctioneer himself at the sale before the auction is begun, in which event both parties would be bound by it. But this is not normally done. The usual practice is for the auctioneer to advertise the coming sale, and in the advertisement prospective purchasers are referred to the vendor's solicitor and to the auctioneer himself for copies of the conditions of sale. At the appointed time and place—we are dealing only with the sale of land, not goods—before "putting up" the various lots in turn, these conditions of sale are read out by the vendor's solicitor or the auctioneer, and after the lot has been "knocked down" the purchaser is taken aside and signs the contract of sale which incorporates the conditions of sale. But those conditions are part of a contract between the vendor and purchaser only; the auctioneer is not a party to that contract and therefore *prima facie* is not himself personally liable for its terms.

What we want to get at is the precise legal position of the auctioneer, and his duties to the vendor

and purchaser after the auction. Of course he is an agent. But an agent for whom, for the vendor or the purchaser or both? When you employ an auctioneer to sell your land by auction it is you, the vendor, who pay him his expenses, commission and all his charges, it is to you that he looks and to you only that he looks for instructions or orders, and apart from fraud or misrepresentation he has to obey them. He has, so to say, no independent existence at all. He is in fact your agent. But is he your agent only? Suppose you and the purchaser fall out and the auctioneer has it within his power to do or to refrain from doing some act the doing or omission to do which will be disastrous to one side or the other, what is he to do? He takes a deposit, say, from the purchaser, or earnest money in part payment. A large sum, 10 percent of the purchase price. You the vendor, let us assume, though God forbid that it should be so in fact, are what it known colloquially as a downy bird, a somewhat shady wight. The moment the contract is signed you instruct the auctioneer to pay over to you the earnest money. The purchaser is aware of this. He does not object; he says neither aye nor nay. But mark, he will say later and say truthfully that he trusted the auctioneer to look with equal diligence after him as purchaser as he did after you as vendor. You know well that there is a flaw in the title and that trouble is brewing. The auctioneer trusts you and he pays over the money to you. Your next address and the abode of your cash are the Hebrides from whence you do not propose to return. The purchaser having no one else to sue, goes for the auctioneer for damages.

The whole point at issue is whether the auctioneer, as your agent, had to obey your orders and pay over to you money which, as such agent, he held on your behalf, or whether he was agent for the purchaser too and had to use proper professional skill to protect his interests as well as yours. An auctioneer who undertakes the management of business committed to his charge thereby impliedly represents that he possesses the skill and that he will exhibit the care and diligence ordinarily possessed and employed by qualified members of his profession. But to whom does he give this implied guarantee and who can enforce it against him? If it were a case of a solicitor or a doctor or an architect or a chartered or incorporated accountant, one would answer without much hesitation "the client and no one but the client". But an auctioneer is in a peculiar position. Certainly the purchaser is not his client; the purchaser neither employs him, gives him his instructions nor pays him. Nevertheless, the auctioneer does act in a double capacity; and, whether good law or not, it would surely be monstrous if a firm of auctioneers whose gross negligence had caused injury to a purchaser were entitled to sit back calmly and say to him, as was once said to a gentleman who wished to avoid personal liability under a contract into which he had entered, by a return of the deposit paid in silver: "What is that to do with us? She thou to it".

The solution really is simple. True it is that the purchaser is not the client of the auctioneer and therefore the latter owes no duty whatsoever to him as a client. But (unless the contract of sale provides, or the auctioneer himself expressly stipulates before he accepts the deposit, that he does so solely as agent for the vendor, in which event—apart from absolute fraud by the auctioneer or to which he is privy—if he pays over the deposit to the vendor he will be under no liability at all to the purchaser) he may be responsible in another way. And that way is, as agent. In regard to the deposit, the auctioneer is the agent of both parties and there lies the solution.

Now for the latest illustrative case. The facts were simple. Six plots of land were sold by an auctioneer, on behalf and under the instructions of the owner, by public auction. Two of these plots were purchased for Rs. 13,800 and at the auction the purchaser paid Rs. 3,425, one-fourth of the price. Later he claimed that he had been induced to purchase the plots by misrepresentations both by the owner and the auctioneer. They had, he alleged, made him believe that the land was not subject to any restrictions for constructing buildings or to liability to paying revenue which representations turned out to be false; wherefore he sued both the vendor and the auctioneer for the return of his deposit. He won his case against both parties in the trial Court. Both defendants appealed and the decrees against them both were confirmed. From that point, the vendor dropped out of the proceedings, he having, it seems, migrated to Pakistan. The auctioneer, however, appealed again, this time to the High Court and it is his liability or non-liability as auctioneer with which we are now concerned and which is of importance to the profession and the public. The grounds of appeal which the auctioneer sought to raise in the

High Court represent a risk which at some time or another every practising auctioneer is almost certain to run up against. This is what he said in effect: "Not being a party to the fraud I am not personally liable. The advertisement for the sale was published in strict accordance with instructions given to me by my client, the owner of the land. I had no personal knowledge of the correctness of the statement made in the advertisement, nor was it my duty as an auctioneer to ascertain before publication of it the truth of what I was told by my client, the seller."

One would like to have seen a clear-cut decision on this line of defence alone, i.e., whether an auctioneer who has not profited himself in any way by the fraud and was quite innocent of it must nevertheless pay up out of his own pocket in respect of a deposit which he has bona fide made over to his client. Unfortunately, the auctioneer raised this point for the first time in the High Court and his defence in the two lower Courts had been a blank denial that there had been any misrepresentation at all. The two defences were, the High Court held, inconsistent. You "cannot approve and reprobate, allege certain facts and in the same breath deny all knowledge of them", said Bilgrami J. in the High Court. So the auctioneer had to stick to his original line and he lost on it.

All the same Bilgrami J. and his colleague went out of their way to deal with the more important issue. Their lordships relied mainly on English decisions. "We think that an agent guilty of fraud cannot be permitted to escape personal liability on the ground that it was his principal and not he who has benefited by such fraud. . . . It is true that an agent, if the money paid is paid under a mistake and he has paid it over to the principal, is not personally liable, but this is no defence when he is a party to the wrong or fraud. . . . "An agent," yes. But what about an auctioneer? He, it seems, has to bear a greater burden of liability. Why? That question and its answer reveal the whole crux of the matter. The reason is that as regards a deposit he is no longer the sole agent of the vendor but is the agent of both parties. His lordship proceeded: "Apart from this general rule (just quoted) an auctioneer's position is that of a stakeholder and an agent both of seller and purchaser, and consequently he is to a greater extent personally liable for the deposit he receives. In *Edwards v Hadding*, an auctioneer had received the deposit and paid it over to the vendor. The sale could not be completed for want of title. It was held that he was personally liable though he had paid over the money to the vendor because it was his duty to hold the deposit over till the recession or completion of the contract."

Another interesting point. When does the auctioneer cease to be agent for the seller only and become agent for both seller and buyer? Immediately after the auction. "The result is that even in the absence of fraud on his part, the auctioneer is personally liable to the purchaser for the deposit received from him, even though he had paid it over to the vendor because his position is that of a stakeholder who is not expected to pay the deposit over to the vendor before the sale is completed and he becomes an agent after the auction, of both the vendor and vendee. . . ." The auctioneer's appeal was dismissed with costs.

[A.I.R. 1955, (June). (Hyderabad), 150.]

INDUSTRIAL DISPUTES DURING 1954

There were 3,372,630 man-days lost during 1954 as against 3,384,608 during the previous year. Although the number of disputes resulting in work stoppages increased from 772 in 1953 to 840 during the year, the number of workers involved on an average and the man-days lost was smaller. There was, however, no material difference in the average duration of disputes which remained only 7.1 percent in 1954; the figure in 1953 was 7.2 percent. More than 64 percent of the disputes which ended during the year lasted for five days or less. Only 5.6 percent of the disputes lasted for more than a month. There was no nation-wide or industry-wide dispute during the year. Among the States, West Bengal accounted for nearly 75 percent of the total time lost, the figure being 812,770. There was a marked fall in time-loss in the States of Bihar, Bombay, Madhya Pradesh and Madras, which recorded an improvement in the labour situation. There were 82 cases of lock-outs during the year as against 56 in 1953. The lock-outs accounted for nearly 30 percent of the total time-loss. The largest number of lock-outs, 55, was in West Bengal. The highest time-loss, 637,134, during the year was in the paper and printing industry. The number of disputes on account of grievances relating to personnel was 296—the highest, followed by those relating to wages and allowances, which was 240.

New Delhi

WORKERS' ROLE IN RUNNING INDUSTRY

SOME IDEAS ARISING FROM MR. NEHRU'S TOUR

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister's return from his European tour has been the main event in New Delhi. Mr. Nehru has been indicating his reactions to what he saw in Communist countries, where discipline and partnership of workers in industrial units were impressive features. No one can deny the need for discipline in this country. Mr. Nehru has evidently been impressed by the Yugoslav system of giving workers a share in the management of industry, but this brings up the old issue of self-government in trade unions. As matters stand, trade unions are dominated by professional labour leaders, who have had no connection with industry as such. The old saying that self-government is no substitute for good government, applies well to trade unions. It is a matter of some regret that even old trade unions are run by "outsiders". One school of thought in New Delhi regards this as a form of exploitation of workers. It is felt that there would be greater peace and harmony in industry if professional labour leaders were eliminated from trade unions. The suggestion becomes much more important in the context of the workers' demand for a share in management. Before such a demand is considered, it is necessary to know who will have a share in the management—the workers themselves or their professional leaders. In coming weeks, some clarification of the issue is envisaged.

New Bills for Parliament

Twenty-three new Bills are tentatively planned for the summer session of the Lok Sabha commencing here on 25th July. Three of them are to replace Ordinances. There are 26 pending Bills, some of which will have to be disposed of during the session. Of the new Bills, two are to amend the Representation of the People's Act; they seek to streamline election procedure. Except for the Copyright Bill, which is to be referred to a select committee, all the 22 new Bills, it is believed, have been put down for disposal during the session.

Terminal Tax on Passengers

The Government of India has accepted the Taxation Enquiry Commission's recommendation to levy a terminal tax on passengers travelling by rail to all centres of pilgrimage and to cities with a population of over 500,000. A Bill to this effect will be placed before the coming session of Parliament, it is learnt. The Commission said: "One of the varieties of terminal tax is that levied on passengers to pilgrim centres. This is popularly known as 'pilgrim tax' and is levied in a number of pilgrim centres all over the country. A demand has been put forward on behalf of local bodies and supported by State Governments that pilgrim taxes should be extended to places of pilgrimage generally, and in particular to all such centres of pilgrimage as are called upon to provide various civic amenities to large visiting populations. We support the proposal. We also consider that a terminal tax at a low rate on long-distance passengers—the limit might be, say, 150 miles—is a suitable way of obtaining for the municipalities concerned some contribution from the visiting population which makes use of the amenities provided. Such a tax would, of course, have to cover all the main forms of transport and would, therefore, have to be levied under a concerted scheme, by the State on passengers travelling by road (particularly by bus or car) and by the Union on rail-borne and other passengers. We recommend that, for the benefit of the municipalities concerned, a co-ordinated terminal tax of this type should be levied in cities with a population of over 500,000."

Another Bill to be sponsored by the Government during the coming session seeks to amend the Prevention of Corruption Act, 1947, in order to make offences under Sections 162, 163 and 164 of the Indian Penal Code cognisable. These three sections relate to (a) taking gratification in order, by corrupt or illegal means, to influence a public servant; (b) taking gratification for exercise of personal influence with a public servant; and (c) punishment for abetment by a public servant of offences defined above.

Other new Bills which the Government is expected to introduce in the coming session include the following: the Young Persons (Harmful Publications) Bill; a Bill to provide for the control of prize puzzle competitions; three Bills to replace ordinances passed recently, namely the Abducted Persons (Recovery and Restoration) Continuance Bill, the Industrial Disputes (Appellate Tribunal) Amendment Bill and the State Bank of India (Amendment) Bill; a Bill to provide for the accounts of certain authorities and bodies to be audited by the Comptroller and Auditor-General or by any person appointed by him; a Bill to amend the Indian Tariff Act to provide for the grant or continuance of protection to certain industries on the recommendation of the Tariff Commission; a Bill to empower the Indian Institute of Technology, Kharagpur, to award degrees; the Copyright Bill; a Bill to amend the Chartered Accountants Act so as to empower the Central Government to recognise foreign qualifications for purposes of enrolment in the Institute of Chartered Accountants of India; a Bill to provide for the formation and regulation of a corporation for the development and warehousing of agricultural produce and for connected matters; Bills to amend the Indian Cotton Cess and Indian Coconut Committee Acts; a Bill to provide for the establishment of a Judicial

Commissioner's court and other courts in Manipur; a Bill to amend the Part C States Law Act so as to provide for the extension of certain Acts to the State of Manipur; a Bill to amend the Electricity (Supply) Act in order to remove anomalies and difficulties which have come to notice in the working of the Act; a Bill to amend the Industrial Disputes Act so as to provide for the adjudication of industrial disputes and for certain other purposes; two Bills to amend the election law in the light of the experience gained by the Election Commission as well as by the Government during the past few years; a Bill to make provision in regard to certain offices of profit under Article 102 of the Constitution; and a Bill to provide for the establishment of a corporation for Faridabad.

The Hindu Succession Bill is likely to come up before the Lok Sabha early in the Session. Notices sent to the Lok Sabha Secretariat by private members indicate that Goa will figure prominently during the coming session in questions and adjournment motions.

Railway Needs Under Second Plan

Following is the breakdown of Rs. 1,500 crores demanded by the Railway Ministry for the development of railway facilities during the second plan period:

1. Rolling stock	Rs. 467 crores
2. Workshops, running sheds, plants and machinery	Rs. 65 crores
3. Line capacity works	Rs. 195 crores
4. Electrification (1,800 miles)	Rs. 130 crores
5. Track renewals	Rs. 125 crores
6. Staff welfare and quarters	Rs. 50 crores
7. Bridges, new rehabilitation	Rs. 45 crores
8. Signalling works	Rs. 40 crores
9. Amenities to rail-users	Rs. 15 crores
10. Safety works	Rs. 10 crores
11. Expansion of stores depôts	Rs. 10 crores
12. Expansion of goods sheds, terminal stations, transhipment points	Rs. 10 crores
13. Training schools	Rs. 5 crores
14. New lines (3,000 miles)	Rs. 195 crores
15. Increase in stores balances	Rs. 100 crores

Talks on Industrial Planning

A meeting of Steering Committee on industrial planning will be held here on 21st July. The Member of the Planning Commission, Mr. K. C. Neogy, presiding. The meeting will review the progress of the existing industrial units under the administrative control of Central Ministries and will discuss new schemes for the public sector. For the purpose of planning, industries in the private sector have been divided into two categories—those

whose development could be mapped and assisted by the Government and those which could safely be left to private enterprise. The reports of panels or of development councils on industries in category one will be placed before the meeting. The Planning Commission has already completed its discussions with the relevant interests in regard to the planning of industries in the second category; the results of these proceedings will also be placed before the Steering Committee.

Indian Claims Against Japan

With the arrival of the new Japanese Ambassador, it is hoped that pre-war Indian claims against Japan will be settled soon. The Indian claims are almost four times those of Japan against India, it is learned. The main snag is over the rate of exchange of the yen. Japan has offered to meet these claims at the present rate of the yen, which is 1/50th of its pre-war value.

Labour Expert for Planning Commission

The Joint Secretary to the Labour Ministry, Mr. K. N. Subramaniam, has been appointed to the Planning Commission in the same capacity. He takes up his new appointment on 21st July. Mr. Subramaniam has served in the Labour Ministry for over six years and has become an expert on labour problems.

Manufacture of Industrial Machinery

Major developments in the field of manufacturing industrial machinery in India are envisaged here. The Government has already approved of units to manufacture jute machinery in India in collaboration with Mackies of Belfast, and Fairbairn and Lawson. A team of Vickers, headed by Lord Knollys, is expected here by 25th July to negotiate a deal for cement machinery plant. Negotiations are in progress to start units to manufacture sugar machinery. The Government is planning to start a printing machinery plant in India. The State-owned National Development Corporation, due to meet here next month, will finalise these and other schemes.

Indo-Pakistan Trade Talks

The L. K. Jha trade delegation left for Karachi last week for trade talks. New Delhi is not enthusiastic about the outcome. There is considerable instability in the Pakistan Government and talks are taking place only because they were fixed a month ago. The primary object is to ease trade along the Indo-Pakistan borders, particularly the Assam and Bengal borders, in commodities which do not enter into trade with other countries. Such commodities are pan, bidis and oranges from India, and the necessities of daily life from Pakistan for

'DULUX'
the finest finish for all forms of transport

The most durable finish for all forms of transport, 'Dulux' is extensively used by Transport Operators throughout the world. 'Dulux' is manufactured in India to suit Indian climates and is being used by Transport authorities in all parts of India. 'Dulux' has a great reputation on which you can rely.
Also in the same range of finishes are:
'DUCO' Car Finishes
'NECOL' Industrial Finishes

tribal people on the Indo-Pakistan border. It is a human as well as a political problem, the solution of which have been pending since partition. Pakistan, for reasons of its own, has refused to settle it.

Talks on Election Procedure

The Election Commissioner convened a meeting on 18th July of four all-India parties recognised by him to discuss the dates for the next general elections and the two amending Bills to the Representation of the People's Act which are proposed to be enacted during the forthcoming session of Parliament. The select Committee on one of the Bills, which was subsequently withdrawn, suggested a summary procedure for deciding what should be done about candidates whose applications were rejected on scrutiny. The committee opposed the present procedure of long-drawn election petitions in such cases after the election had taken place. The jurisdiction of the Supreme Court is the main snag in any summary disposal of election petitions following the rejection of a candidate at the scrutiny stage. The holding over of an election, as has been suggested, might cause large-scale delays in deciding the issues, because no one could enforce summary proceedings in the Supreme Court. One method is to terminate the jurisdiction of the Supreme Court and make the verdict of the Election Tribunal final.

Cast Iron Pressure Pipes

No correct estimate of the demand for cast iron pressure pipes is available at present. It is, however, common knowledge that the demand for pipes for water supplies is large and schemes have been delayed or kept in abeyance because of the shortage. Lately, Hume pipes have come into use to meet a portion of the demand. Even so, it is understood that there is a wide gap between supply and demand. It is learnt that the Health Ministry has estimated requirements of cast iron pipes at Rs. 7 crores in value corresponding to 1,68,000 tons. Taking into consideration the requirements of other agencies, the demand during the second plan period is bound to be very large. The two main units which are manufacturing cast iron pipes are the Indian Iron and Steel Works at Kulti, and the Mysore Iron and Steel Works at Bhadravati. Their ultimate capacities, after the contemplated expansions, would be 82,000 tons and 26,000 tons per annum respectively. In addition, there are other smaller units with a total installed capacity of 15,400 tons per annum. Licences have been issued to Messrs. Ramakrishna Basic Industries Corporation Ltd., Madras, for putting up plants with capacities of 10,000 tons, 5,000 tons, and 5,000 tons at Tiruvattur, Tinsukhia (Assam) and Hyderabad (Deccan) respectively. These are expected to come into production during 1956. The total installed capacity of the existing units and the new units already licensed would, therefore, be 1,43,000 tons per annum.

Demand for Steel Castings

The demand for steel castings comes mainly from the Indian Railways and it is estimated as under:

	Total steel castings per annum.
Chittaranjan Loco Works	7,000 tons
New wagons	6,000 "
New coaches	1,000 "
Telco's own	3,500 "
Replacements	2,500 "
Total	20,000 tons

Telco is putting up a modern steel foundry with a capacity of 6,000 tons per annum. It will supply 200 tons of steel castings a month to the Chittaranjan Loco Works and use the balance itself. The next industry using large quantities of steel castings is cement. Its present annual demand is estimated at 1,500 tons. In the manufacture of machinery parts for industries like cement, sugar and paper is undertaken, the demand for steel castings will increase. The total demand under items other than the railways may not exceed 10,000 tons per annum. It therefore seems desirable to have a total productive capacity of about 30,000 tons a year. There are at present eight units manufacturing steel castings, excluding the ordnance factories. Only the Kumardhubi Engineering Works and Burn and Co. utilise the full capacity of their furnaces. All the other firms use part of the metal from the furnace for manufacture of steel castings and a major portion for manufacture of steel ingots for rolling.

The actual production figures of these eight units which have a total capacity of 15,460 tons per annum are given below for the years 1952, 1953 and 1954:

1952	4,927 tons
1953	10,327 "
1954	13,260 "

Licences have been granted for seven units during 1953 and 1954. They will have a total capacity of 14,540 tons per annum. The total capacity of the existing units and the seven new units for which licences have already been granted would amount to 30,000 tons per annum. Since there are already eight units manufacturing steel castings and seven new units have been licensed during 1953-54 for meeting an estimated demand of 30,000 tons per annum, there seems to be no case for the issue of licences to any more small units. It is however suggested that a big unit capable of casting single pieces of 17 to 18 tons in weight should be set up either in the private sector or in the public sector, so that a variety of industries could be started in India without involving heavy investment in capital equipment. Even in the case of the Chittaranjan locomotive production

programme, castings of 16 to 17 tons a locomotive will be needed. Apart from this, India will be needing heavy castings for the tank project, the earth-moving equipment project and the heavy machine tool industry. In the case of big crawler tractors and earth-moving equipment, single castings could weigh as much as 18 tons. In the case of heavy machine tools like loco-wheel lathes, single castings could weigh as much as 5 to 7 tons.

The requirement therefore is, not a large number of small units but at least one big unit of a capacity of somewhere about 15,000 tons, and equipped to cast single pieces of up to 15 to 18 tons. It is suggested that if Tatas could be persuaded to increase their capacity from 6,000 tons to about 15,000 tons, or a new unit set up in public sector either at Chittaranjan or somewhere else under the auspices of the National Industrial Development Corporation, it could not only take care of the requirements of 7,000 tons of the Chittaranjan workshop, but could also help other industries. If a steel foundry of a capacity of 15,000 tons is established, it would take care of the requirements of the Chittaranjan Workshop and 3,500 tons requirement of Telco's production programme while the remaining 4,500 tons could be supplied to various heavy industries proposed to be established in the second plan. From a study of the working of steel foundries, it is noted that only those which are of very small capacity and are not able to produce good quality castings are left with idle capacity. Big steel foundries capable of producing good quality products are heavily booked with orders.

Manufacture of Calcium Carbide

The establishment of the manufacture of calcium carbide on sound lines is important for India. Equally important is its production at as low a price as possible. Calcium carbide is produced in very large quantities in Norway, Sweden and Canada. India's imports are principally from these countries. The current c.i.f. price of calcium carbide is Rs. 400 to Rs. 500 a ton. Calcium carbide carries an import duty of 31½ percent *ad valorem*, and the landed cost of the materials is Rs. 600 to Rs. 650 a ton. Indigenous production of calcium carbide was considered a war necessity and postwar assistance was assured to the industry to facilitate development during the war in 1942. Two small units each of 1,000 tons per annum capacity, have come into existence since 1947—one at Tirunelveli, Madras State, and the other at Kottayam, Travancore-Cochin State. The first unit has been experimenting with local limestone and wood charcoal, and the second unit with coconut charcoal and sea shell lime. Neither of them has succeeded in establishing regular production so far. Their total annual production has been less than 100 tons.

A third unit of 10 tons a day capacity has been erected by the Birla Jute Manufacturing Company, Calcutta. This plant has been under construction since 1950 and commenced operations only in November 1954. The power required for the plant is obtained from the company's own thermal station. Limestone for making lime is hauled from Sylhet in Assam; and coke from the Government Collieries at Giridih in Bihar. As the coke is not of the required purity, it is blended with charcoal. The present production of the plant is 7.5 tons a day. The cost has been estimated at Rs. 1,000 a ton. The firm has made a request that the present import duty of 31½ percent on carbide be raised to 125 percent in order to protect it from imports. The matter is being examined separately.

The present annual demand for calcium carbide is of the order of 8,000 tons. At present its use is confined only to the production of acetylene for welding and lighting purposes. Two applications have so far been received. They are from: (i) Mr. I. H. Safran for an 8 tons a day unit at Bombay, and (ii) from the Raja of Bobbili, in Andhra State, for the manufacture of 24,000 tons a year of calcium cyanamide. Fifty tons a day of calcium carbide will be required for this purpose.

Manufacture of Sewing Machines

Sewing machines and bicycles are two major industries which have developed side by side during last three or four years. The latter started manufacturing parts and component first and now small units are showing interest in the assembly of complete cycles. In sewing machines, the industry assembled imported parts and then started manufacturing parts and components to replace imported parts. The approach to development in the cycle and the sewing machine industry was diametrically opposite. The sewing machine industry, on a small scale, has shown considerable progress in recent years. There are as many as 306 units, mostly in Punjab, as will be seen from the following figures:

Name of place	No. of small scale units Registered	Unregistered	No. of workers.
Ludhiana	30	220	4,000
Ambala	1	—	30
Moga	1	—	38
Jullundur	2	8	400
Goraya	1	—	25
Amritsar	1	—	50
Batala	2	—	60
Bassi (Pathana)	—	—	—
PEPSU	2	12	400
Calcutta	1	—	45
Total	41	165	5,035

In addition, nearly 800 workers living in the suburban villages of Ludhiana and Jullundur produce sewing machine parts with the help of treadle lathes and hand presses. The total num-

ber of workers engaged in this trade on a small scale is 6,000. According to estimates 95 percent of the parts manufactured by the small-scale industries go into the assembly of complete machines. Till now, the replaceable parts, namely friction parts, have been imported. It may be added that the production of complete sewing machines must tally with the sewing machine bodies manufactured in India. Here are the figures of machine bodies produced by small scale industries:

M/s. C. R. Auluck and Sons, Ludhiana	1,100 per month.
M/s. Pancer Mechanical Works, Ludhiana	600 per month
M/s. Rita Mechanical Works, Ludhiana	350 per month
M/s. Lucky Engineering Works, Ludhiana	350 per month
M/s. Ashoka Mechanical Works, Ludhiana	700 per month
M/s. Taluja Sewing machine Company, Ludhiana	450 per month
M/s. Bachan Singh and Sons, Ludhiana	400 per month
M/s. Kartar Singh and Sons, Ludhiana	400 per month
M/s. Lyallpur Mechanical Works, Ludhiana	150 per month
M/s. Agni Hotri, Ambala	150 per month
M/s. Shakti Sewing Machine Coy., Goraya	250 per month
M/s. New Bijli Foundry, Batala	500 per month
Different factories in Batla	400 per month
Different factories in PEPSU (Bassi Pathana)	700 per month.
Different factories in Hapur (U.P.)	400 per month
Different factories in Delhi	600 per month
Total.....	7,700 per month

The total number of parts in a sewing machine are 106 (excluding the wooden table and machine cover). Of these, 95 parts are being manufactured by small-scale industries and only the following 11 are being imported:

1. OSC. rock shaft.
2. Face Plate.
3. Arm side cover.
4. Bobbin Case.
5. Needle Bar.
6. Pressure Foot.
7. Link with stud.
8. Sqr. Rollers.
9. Thread take-up lever.
10. Shuttle.
11. Shuttle carrier with spring.

Problems facing the small scale industry are:

1. Very weak financial position, particularly among the lowest strata of the industry consisting of 300 small units, employing 3,500 workers.
2. Poor equipment and accommodation on a rental basis, which do not provide stability.
3. Lack of supply of raw materials of proper specifications.
4. Small units do not finish parts but supply parts in raw condition, so the major part of the profit goes to parties who finish them.
5. Lack of technical facilities needed in a decentralised system of production.

Conference on Power Alcohol

Measures to step up the production of power and industrial alcohol will be considered at a meeting of Central and State Government representatives convened by the Ministry of Commerce and Industry towards the end of this month. The production and utilisation of power alcohol, which is mixed with petrol, have been steadily increasing since 1950. Production during the first four months of this year was one million gallons a month, but it is felt that its production should be increased further. The meeting will also consider the cost of production of power alcohol in the States and ways of ensuring continuity of production. Measures to increase the use of alcohol for industrial purposes will also be considered. Industrial alcohol is a basic chemical required in the manufacture of organic chemicals and corresponds in the organic field to the position occupied by sulphuric acid in the inorganic chemical industry. Secretaries of the Department of Industries and Excise Commissioners of States, where the Power Alcohol Act has been enforced, will attend the meeting.

London

GREAT OPTIMISM ABOUT INDUSTRIAL EXPANSION

SIGNS OF INFLATION MULTIPLYING

(FROM OUR LONDON CORRESPONDENT)

THE belief that British industry has some years of expansion before it is apparently so strongly held in the City that few developments on the economic front seem to give it cause for second thoughts. So far as the Stock Exchange is concerned, equities not only continue to be in demand but go on rising in price. There must be a halt somewhere, and it will probably come in the not too distant future, for although the basic stability of the economy remains fairly satisfactory, there are increasing signs that inflationary trends are multiplying both in number and variety. The Bank of England note circulation rose by just over £20 million last week to a new all-time high record of £1,815,398,000, and there are still two weeks to go before the bulk of the holiday demand for money will have been satisfied. The banks, it is true, have stopped selling securities in favour of restraining advances, but it remains to be seen what they will do with the money they get back from the gas industry, whose offer of £100 million of Gas Stock attracted comparatively little public support and was taken up to about 90 percent by Government departments. Mr. Butler denied in the Commons that the repayment of overdrafts by the nationalised industries would mean that bank credit would be more freely available to other borrowers—but he implied at the same time that he was not responsible for the new attitude they were adopting in this respect although he welcomed it. That the Government is both anxious and, indeed, determined not to relax the credit squeeze is only too evident. Interest rates in the public sector have been increased by the Treasury, and Mr. Thorneycroft has turned down the appeal of the furniture industry for some relaxation of the hire-purchase restrictions on furniture. The Chancellor of the Exchequer has promised another statement on the economic trend when he has more up-to-date figures on personal consumption. It will be surprising if he does not find that internal demand is reaching a level when it will have a serious impact on the balance of payments situation.

Strikes Affect Trade

The foreign trade statistics for June show the effects of the railway and docks strikes in a startling manner. Exports suffered more than imports, for it was obvious that unloading of cargoes from vessels in the queues would be given priority over loading, and many ships must have left British ports empty to seek cargoes elsewhere. Exports declined £90 million, or over 33 percent, from the April-May average to total £157 million, bringing the second quarter's total 12 percent below that of the first quarter and 3 percent below the second quarter of last year. Exports to the dollar area were particularly heavily affected, their total value being only £17 million, or more than a third less than in April and May. June exports to the United States were worth £11.4 million, 19 percent less than the April-May average. Exports to Canada dropped to £6 million, less than half the average rate of exports in the previous two months. The accumulation of exports at the docks will soon be cleared with overtime working, so figures for the next few months will be unrepresentative. The long-term consequences of the hold-up may not be seen until much later in the year.

Imports, by contrast, totalled £294 million in June, or only 3 percent below the April-May average, to give an average for the quarter of £360 million. That is 10 percent below the first quarter average, so the April-May improvement as a result of the credit restriction policy was not completely dissipated, but it was 6 percent higher than the comparable figure for 1954. On the half-yearly comparison the 1955 import bill is 14 percent up on 1954. Re-exports in June were almost unchanged at £8 million, so the excess of imports over exports, or the adverse trade gap, was no less than £129 million, compared with an average of £48 million in April and May and £77 million a month in the first quarter of this year. Despite this phenomenal rise, the second quarter's average monthly deficit works out at £74.8 million, but that is over £23 million worse than in the same quarter of 1954, and is particularly unfortunate at a time when a definite improvement was in prospect.

Peace in Industry Plans

The damage which these frequent stoppages cause to the country's economy is being more widely appreciated in all circles, and not least of all by the more responsible trade union leaders. They are co-operating in the Government's efforts to find a way to avoid strikes except in the last resort. Discussions are still proceeding, but it is understood that the outlines of what may prove to be an acceptable plan for ensuring industrial peace are now emerging. Legislative action has been rejected all round, and what is under consideration is a declaration of certain basic principles for industrial relations which could be embodied in a document to which trade unionists and industrialists would subscribe. These principles aim at securing a "pause for reflection" before strike action. The desirability of such a step, it will be remembered, was stressed by Sir Walter Monckton in the recent debate in the House of Commons. The first principle would be that in no circumstances should a strike or lock-out be declared until all the established machinery for negotiation, including arbitration, had been exhausted. The second would comprise an undertaking that the Ministry of Labour should be notified a reasonable period in advance of a strike or lock-out. This

would enable the Minister to take any conciliatory action he thought desirable before the disputants had taken up positions from which they would find it difficult to recede without loss of "face." The third would set up an agreed procedure, less cumbersome than that of the court of inquiry, by which the basic facts of an industrial dispute could be impartially established. Though none of the precepts would have statutory force, if both employers and unions subscribed to them it is felt that they would be a powerful restraining influence. Any violation of the agreed principles of conduct would prejudice the case of a party to an industrial dispute. This policy would undoubtedly be associated with a firmer line by trade union leaders and employers in the face of unofficial strikes.

Whether the labour rank and file would accept this solution is quite another matter. Recent developments hardly encourage the hope that they will. The dispute between the N.A.S.D. and T. and G.W. unions is by no means over even though the strikers have returned to work. At the current conference of the latter union a resolution to campaign for a 40-hour week was carried against the advice of the union leaders, one of whom went so far as to suggest that what the men really wanted was not a 40-hour week but merely more overtime pay. Shipyard workers have threatened to boycott shipowners who have repairs carried out at German yards, where the labour works harder. And in many industries fresh claims for wage increases are only a question of time.

Coal Problems

Miners' delegates at their recent conference were up in arms at public criticism of that industry, although output is falling badly in areas this year. They suggest a number of measures to restore the prestige of this nationalised industry, including that of allowing coal prices to find their economic level and relieving the National Coal Board of the loss sustained on imported coal. They also seek more pay, but are not concerned with suggesting how output might be raised. More coal from our own mines would solve many problems, and the whole question will be debated in Parliament this week, though the Minister of Fuel and Power, Mr. Geoffrey Lloyd, is already under fire from all sides. His position is an unenviable one, for the demand for power is rising every day and the means of supplying it economically—especially with atomic power still a long way off—is woefully inadequate.

Meantime, expedients to counteract the worst effects of the coal shortage are being adopted. The price of coal is to go up sharply by an average of about 13s. 6d. a ton to offset part of the N.C.B. losses. The Government is also being driven to

reduce exports of coal—despite its importance in trade negotiations with certain other countries—so as to reduce the amount of coal that has to be imported and thus relieve the strain on the balance of payments. The cost of imported coal this year is likely to be around £80 million. But each expedient creates fresh problems. The rise in coal prices will react on the cost of living—gas and electricity are both to cost more in the near future; any rise in the cost of living will increase wage claims; and they in turn will add to the inflationary spiral.

Transport and Monopolies

Two important debates were held in the House of Commons last week. The first, on the report of the British Transport Commission, produced an interesting hint from Mr. Boyd-Carpenter that the Government was reconsidering one aspect of its policy for denationalising the road haulage industry. The change will leave the B.T.C. with its 8,000 lorries employed on the main trunk services, which, according to the Minister of Transport, "have developed and now render an efficient service to industry." A statement was promised before the three-month summer recess, which is expected to provide for a holding company or companies to operate the lorries on the main trunk services. These would continue in competition with private enterprise on equal terms. The introduction of a measure of competition into road transport is held to have fulfilled the Government's main objective in the Road Transport Act.

The second debate was on the recent report of the Monopolies Commission on restrictive practices, and Mr. Thorneycroft, President of the Board of Trade, explained the Government's intentions. It has decided to adopt a middle course, rather than to accept the extremes defined in the majority and minority reports of the Commission. It proposes to set up a new body, a tribunal which is to decide whether any particular practice should be permitted or forbidden. Any suspected arrangement would have to be registered, and after that the traders operating it would be called upon to show why they should be permitted to go on with it. The onus would be on the traders.

Burmah Oil Company

In our 7th July, 1955, issue there occurred a printing mistake leading to the statement: "Fresh appraisal of the gas reserves at the Sui field showed a figure of four million cubic feet, compared with a reserve estimate of 2½ million cubic feet at this time last year." This should read: "Fresh appraisal of the gas reserves at the Sui field showed a figure of four million million cubic feet, compared with a reserve estimate of 2½ million million cubic feet" etc.

SOUTH INDIAN STATES'
SECOND PLANMADRAS HAS MOST AMBITIOUS
DEVELOPMENT PROGRAMME

(FROM OUR MADRAS CORRESPONDENT)

THE Governments of the four South Indian States—Madras, Travancore-Cochin, Mysore and Andhra—have finalised, or are in the process of finalising, their draft second five year plans to be submitted to the Planning Commission. None of the drafts appears to accord with the Planning Commission's instructions that the plan of a State should only be about double the size of its first five year plan. All the South Indian States are aiming too high, and it might not be surprising if their draft plans are pruned to manageable proportions. Of all the plans in question that of Madras is the most ambitious. The draft plan, as finalised by the State Government, envisages an expenditure of about Rs. 350 crores, exclusive of the Neiveli Lignite Scheme and other schemes which are to be financed entirely by the Union Government. The major items of proposed expenditure are:

Heads of Expenditure	(Rs. Crores)
Large and Medium Industries	40
Small-scale and Village Industries	40
Education	45
Agriculture, Animal Husbandry, etc.	36
Irrigation and Power	33
Community and Rural Development Projects	22
Medical and Public Health Schemes	22
Water Supply and Drainage Schemes	23
Roads, Waterways, etc.	20
Handloom Industry	9
Town-planning and Slum Clearance	9
Co-operation	9
Housing	6
Local Development Works	4
Loans to Local Bodies	10
Scheduled Castes and Tribes	10
Miscellaneous Welfare Schemes	12
Total	350

The industrial development programme of the Madras plan provides for starting several new undertakings, in the public sector or the private sector, as might be decided ultimately. Among these are a ceramic factory at Neiveli, utilising the clay deposits in the upper layers of the mining area; a glass factory; a paper factory utilising the wood pulp of blue gum and other trees available in the Nilgiris; and a factory for producing ammonium sulphate. An aluminium factory is also proposed in the Salem area where plentiful bauxite deposits are available. Other enterprises proposed are a soda ash factory, an electrical goods factory, a pilot project for a soft iron undertaking in Salem, manufacture of heavy chemicals and expansion of sugar and cement production. The provision under the head "Industries" includes schemes for aid to private industrial concerns of the order of Rs. 15 to Rs. 20 crores. Of the Rs. 45 crores proposed for "Education", upgrading of teachers' salaries would alone cost Rs. 18 crores. The Madras Corporation's plan for the improvement of the city under the second five year plan would cost Rs. 12.3 crores, of which Rs. 4.9 crores is to be claimed by way of grant and the balance by way of a loan.

Steel Plant Demand Dropped

Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, appears to have prevailed upon the Madras Government to drop its demand for an iron and steel plant in Tamil Nad. At the same time he has taken on himself the task of speaking against the "popular" demand for an iron and steel plant here. Some of his recent utterances were very frank. He appealed to the people in the South not to press for starting heavy industries like iron and steel "for the sake of prestige". This might cost them crores of rupees and would actually give employment only to a limited number, whereas if they went in for engineering industries they might give employment to thousands. In this connection he announced that the Government of India had plans for the establishment of three iron foundries and forge-shops and that one of them would be in South India. Incidentally, he urged the people not to be shy of investing capital in new industries. The Congress, he said, stood only for a socialistic pattern of society, which mere-

ly meant providing a greater scope for employment, and not for socialism as such. It was socialistic in the same way as the Labour Party in Britain. Rationalisation, he said, was indispensable for increasing output, and there was no use labour's opposing it. But he agreed that rationalisation should not result in unemployment and hardship for labour in the shape of additional workload and that whatever profit accrued from rationalisation should be shared with it. He appealed to labour to have confidence in the Government's rationalisation policy which would be enforced only under such conditions.

Malayalees' Claim

The Malaya Pradesh Congress Committee has put in a strong plea for special attention to Kerala in the matter of industrialisation in view of the heavy density of population and acute unemployment in that region. The Committee wants to have 11 major industries started. They are ship and boat-building, a paper mill, a rubber factory, electrical goods manufacture, a machine tool factory, a caustic soda and bleaching powder plant, a sugar factory, a railway coach building factory, a hardware factory, the manufacture of Ayurvedic medicines and a cycle factory. The Committee has also proposed a wide variety of minor and cottage industries. That the Malaya Pradesh Congress Committee should have advanced this plea is not altogether surprising because the Madras Government's industrial schemes are overwhelmingly concerned with Tamil Nad, the major linguistic constituent of Madras State.

Travancore-Cochin's Plan

The Government of Travancore-Cochin has nearly finalised its draft plan. It is recognised that the shyness of local initiative in the matter of industrialisation is mainly due to lack of investible funds in the State. In such a context, it is felt that industrialisation would not progress if left entirely to the private sector. The type of industries reserved for the public sector like heavy industries cannot often be located in the State on account of its deficiency in basic raw materials. The Government has therefore decided to draw up plans for consumer goods industries and conduct all investigations necessary in that direction, including technical link-up with foreign producers.

A number of industrial schemes have been provisionally drawn up for the second plan. Seven new industries, estimated to involve a capital outlay of Rs. 5.6 crores, are proposed to be started. These new industries are: a sheet glass factory, a factory for the manufacture of aromatics from lemon-grass oil, a synthetic corundum (artificial stones) factory, a rubber tyre factory, a starch and glucose factory, a sand limes bricks factory and a hardboard factory. The rubber factory, the ceramic concerns, the minerals factories and the shark liver oil factory are the chief Government-owned concerns which are to be rehabilitated and expanded at a cost of Rs. 86 lakhs. Fertilisers and Chemicals (Travancore), Cement Factory, Travancore-Cochin Chemicals, West Coast Fisheries and Electro-Chemical Industries are the five Government-aided concerns which are to be expanded at a cost of Rs. 7.8 crores. The T.-C. Government has also requested the Union Government that the Rs. 20 crore heavy electrical goods factory, proposed to be set up under the second five year plan by the Centre, should be located in Travancore-Cochin. It may be recalled that the Madras Government too has pressed its claims in this connection. The T.-C. Government also intends to move the Union Government for locating a ship-building yard at Cochin. In the public sector, the Central D. D. T. Factory would come into existence in this State soon. The programme for handlooms would cost Rs. 2.5 crores, that for coir Rs. 1.6 crores and that for small-scale industries Rs. 10.6 crores.

Mysore's Schemes

The Mysore Government has under consideration 14 new irrigation schemes for the second five year plan period. Two major schemes, now under execution, are to be completed during the period. All these together are expected to cost about Rs. 35 crores, of which the Bhadra Project on which about Rs. 4 crores has already been spent will account for an additional Rs. 11 crores. Minor irrigation works like restoration of tanks and construction of new tanks will cost Rs. 6.8 crores. In the field of power generation, top priority is to be given to the Honnemaradu hydro-electric project involving a total outlay of Rs. 39 crores, of which Rs. 23 crores will be spent during the second five year period. The Tungabhadra hydro-electric works would also be taken up jointly with the

Andhra Government and the Bhadra Project, which is a multi-purpose scheme, would generate 40,000 k.w. of power during the period. An expenditure of Rs. 11.5 crores is visualised for road development and communications.

Andhra's Projects

The Andhra Cabinet has just finalised the size of the State's Plan involving an outlay of about Rs. 200 crores. The planned outlay of Rs. 30 crores in the next five years on the Nagarjunasagar (Nandikonda) Project on the Krishna is not included in this overall estimate. The State Government is apparently hoping that this big multi-purpose project, estimated to cost Rs. 80 crores, would be treated as a Central Government scheme. The State's Deputy Chief Minister thinks that this should be so, because the Project would benefit not only Andhra and Hyderabad States but would benefit the whole of India by increasing food production. In reply to the Andhra Chamber of Commerce, the State's Industries and Planning Minister said that it was not possible to raise the target to Rs. 300 crores and that it might be difficult eventually to stick to the figure of even Rs. 200 crores. Andhra, he said, was already facing a cumulative deficit of about Rs. 10 crores, and by the end of the plan period, the deficit would mount to Rs. 50 crores. The State's industrial programme contemplates an outlay of about Rs. 16 crores, including the provision in the co-operative field. An investment of Rs. 43 crores in the private sector is expected by the Government in the second plan. Andhra also wants the proposed heavy electrical goods factory—a Central project—to be located within its borders. According to the Industries Minister, the Union Government has proposed to start a steel fabrication plant at Visakhapatnam to meet the needs of the Caltex Refinery and the Hindustan Shipyard.

Revenue Deficit

The Budget of the Andhra State for 1955-56 estimates revenue at Rs. 21.98 crores and expenditure on revenue account at Rs. 25.64 crores, leaving a deficit of Rs. 3.66 crores. To make up the deficit, the State's Finance Minister has proposed additional taxation measures which include enhancement of the water rate, increase of wet land assessment, imposition of an additional single-point tax on the sale of fine and super-fine mill cloth and precious stones and imposition of ryotwari rates of assessment on inams which now pay only nominal quit-rents. A sum of Rs. 14.13 crores is allotted for capital expenditure in the last year of the first five year plan, of which Rs. 6.63 crores is for electricity schemes. The targeted first five year outlay of about Rs. 70 crores will have been largely reached by the end of the budget year. As for the second plan, the Finance Minister, while expecting a certain measure of assistance from the Centre for irrigation, power and investment projects, thinks that expanded social services would have to be sustained by the revenues the State itself can raise. The Andhra Government has, by and large, taken up a modest and reasonable stand on the second plan although the needs and potentialities of Andhra State in the matter of economic development are considered immense.

Nationalisation of Gold Mines

The Management of the Kolar Gold Field Mining Companies has been apprised of the Mysore Government's policy to nationalise the gold mining industry. The management has agreed to continue the development and expansion activities of the mines in the normal way until the future set-up on the fields is finalised.

ALL-INDIA FINAL ESTIMATES OF
SUGARCANE, 1954-55

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, Government of India, the all-India final estimate of sugarcane, 1954-55, puts the current year's acreage and production at 3,932,000 acres and 54,648,000 tons of cane as against the partially revised estimate of 3,498,000 acres and 43,873,000 tons of cane respectively for 1953-54. This shows an increase of 434,000 acres or 12.4 percent in area and 10,775,000 tons of cane or 24.6 percent in production over last year. Expressed in terms of gur, production is placed at 5,546,000 tons during 1954-55 and 4,464,000 tons during 1953-54. An increase in acreage and production of sugarcane has been reported by almost all the major sugarcane growing States; it is, however, more marked in U.P. and is due mainly to the high prices of gur, better seasonal conditions and better irrigation facilities during the current year as compared to last year. Slight decreases have been recorded by Andhra, Madhya Bharat and Mysore. The production estimates for 1953-54 and 1954-55 in respect of West Bengal, except for Darjeeling district, are based on the results of random sample crop-cutting surveys.

LIGHT SODA ASH IMPORTS

Under the import policy for July-December, 1955, imports of light soda ash are to be canalised through importers/distributors nominated by the Government of India. The Government has now invited offers for the supply of light soda ash from dollar or soft currency areas. The offers should reach the Chief Controller of Imports in New Delhi on or before 15th August, 1955. The price quoted should be on the basis of c.i.f. Indian port in Indian rupees or pound sterling for a long ton of 2,240 lbs. The total requirements are 10,000 tons of light soda ash to be shipped for delivery in October, November and December, 1955. The minimum quantity for which supplies will be acceptable is 1,000 tons.

Engineering and Transport

RISE IN WORLD FUEL OIL
PRICES EXPECTED

CARIBBEAN EXPORT RATE RAISED

A GENERAL rise in world fuel oil prices is expected to result from the recent decision of the Shell Petroleum Company and the Esso Export Corporation to increase the Caribbean export price of fuel oil by 15 cents a barrel. It is not yet known whether Middle East fuel oil prices will be raised, but it is expected that the rise in the United States and the Caribbean will be followed in other regions of the world, says a report in *The Financial Times*.

The price of Bunker "C" fuel oil, the basic Venezuelan heavy fuel oil used both by shipping and industry, has been raised to \$2.10 per barrel of 42 U.S. gallons, f.o.b. Curacao and Aruba. The increase is equivalent to 7s 6d a ton. The rise in this "posted price," at which the exporting companies are prepared to sell oil, follows an increase in prices earlier on the U.S. Atlantic seaboard. The supply position of fuel oil has tightened as a result of rising demand both in the United States and Europe, to which the coal shortage has been a contributory factor. When the price of Bunker "C" fuel oil was last raised, in February, by 10 cents a barrel, it was followed by a general rise in world fuel oil prices. It was not, however, reflected in U.K. inland price schedules and was absorbed by distributors.

The price increases for heavy heating oils on the Atlantic seaboard are the result of reduced supplies at a time when demand is rising, U.S. oil industry sources state. A major factor in reduced supplies is the curtailment of imports by American companies. The Esso Standard Oil Company has increased the prices for such oils by from 8 to 18 cents, according to grade and place on the East Coast, and the leading competitive oil companies have followed suit. Under the new U.S. schedules Bunker "C" oil delivered by barge in New York Harbour will cost \$2.50 a barrel.

The increased demand for this type of oil is the result of the high level of activity by U.S. industry, it is stated. This comes at a time when the major international oil companies in America have been deliberately curtailing imports in response to an appeal last February by the President's Cabinet committee on resources policy. The committee recommended that the ratio of imports in 1955 be kept at 16 percent of domestic consumption, the actual ratio in 1954. The oil companies have been carrying out this policy. For example the Texas Company has been keeping imports at the 1954 level, though this was 13 percent under 1953. Industrial activity in the first half of 1954 was at a much lower level than this year, so that the cut in imports has created a shortage. To meet this some East Coast oil companies are having to go as far afield as California to obtain supplies. This has resulted in the price increase to meet additional costs.

GROWING USE OF RUBBER
IN ROAD-MAKING

REPORT OF U.K. BOARD

INCREASING use is being made of natural rubber in road-building in many countries, and the attitude of road engineers to rubber roads has changed remarkably in the last two years. This is disclosed in the annual report of the British Rubber Development Board. Last year, 108 stretches of rubberised road were laid in the United States and Commonwealth countries, including Australia, Britain, Malaya, New Zealand and South Africa. The report says that with the changed attitude of road engineers to the use of rubber, there is much promise for the future of this medium. Laboratory tests have shown the value of incorporating rubber into bitumen, and an advance has been made which is important for the Indo-Pakistani sub-continent and for all areas where considerable variations in temperature between the seasons occur. It is now possible to raise the "softening point" and lower the "brittle point", which means that one of the chief technical problems of incorporating rubber into bitumen has been solved.

Another advance reported by the Rubber Development Board affects the railways. Successful trials have been made in Britain with rubber railway pads. Inserted between the rail and the sleeper, these keep down vibration and so aid in cutting track maintenance costs. Further supplies of the pads have been ordered by British Railways, and experimental work is being carried on with rubber for ferrules, end posts, clip fastenings, and other items for use on the permanent way. These widening uses of natural rubber are seen as helping what is largely a Commonwealth product in its competition with the synthetic variety.

PORTABLE ROTARY AIR COMPRESSOR

A new design of portable air compressor known as the "Power Vane" Rotary—said to be the first of its type to be made in the U.K.—is now being produced by the Consolidated Pneumatic Tool Company (232, Dawes Road, London, S.W. 6). The compressor is similar in appearance

to the conventional machine often seen on the highways for operating road-breaking tools, but instead of compressing air by means of pistons working up and down in cylinders it works on the principle of a slotted rotor fitted with blades which rotate in a cylindrical housing. The blades take air in at one port, compress it in one revolution, and pass it out to a receiver. Air is compressed in two stages by arranging one large and one small compression chamber in line. Pressure is raised to 30 lbs per square inch in the larger chamber, and is then passed to the smaller one, from which it is discharged at a working pressure of 100 lbs per square inch. In comparison with the conventional piston type compressor, the advantage claimed for this new design is the reduction in size and weight and the elimination of parts that wear such as pistons, crank-shafts, valves and clutch. The compressor is being made in four sizes, delivering 120, 210, 365 and 600 cubic feet per minute respectively. All models are powered by Rolls-Royce diesel engines.

LEYLAND SALES UP BY £1½ MILLION

Sales of Leyland trucks and buses have increased by £1½ million in the first six months of this year compared with the first half of 1954. Overseas customers are now importing more Leyland vehicles than any other British or foreign make of heavy vehicles. This year's overseas orders have included £1 million worth of Leyland Octopus 8-wheeled trucks for South Africa alone.

RECLAIMING THE DESERT IN
PAKISTAN

In Pakistan virgin desert is being reclaimed with the help of more than 90 Massey-Harris wheeled tractors. Initially, it was planned to use very large crawler tractors to level the sand dunes. As the result of experiments, however, the wheeled tractors proved so successful that these are used both for levelling and for deep cultivation. The work is part of the Thal Development Scheme which calls for the reclamation of 2½ million acres of desert.

J.M.A. STOCK FIGURES FOR JUNE CORRECTED

The Indian Jute Mills Association states that a serious error has been discovered in the stock returns submitted to the Statistical Department by a member of the Association. The error affects the total stocks of sacking and of other qualities, and after a detailed investigation of the position the following are the corrected figures of the stocks of jute goods at the end of June, 1955:

Total Reported Stocks of Manufactured Goods at 30th June, 1955.		
	(Lakh Yds)	(000 Tons)
Hessian :		
Civil	18.43	48.4
Govt.	7	0.2
	18.50	48.6
Sacking :		
Civil	8.19	35.9
Govt.	7	0.2
	8.26	36.1
Others :		
Civil		2.9
Govt.		0.0
		2.9
Total		87.6

Having explained the manner in which this error came about, the member concerned has expressed great regret for the mistake and the Association would also apologise for any inconvenience which may have been caused by the reproduction of the incorrect figures in its published stock report.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th July, 1955	1,256.8	20,400.8	21,657.6
1st to 15th June, 1955	812.0	10,143.9	10,955.9
1st to 15th May, 1955	868.7	16,790.9	17,659.6
	Sacking		
1st to 15th July, 1955	21,149.6	111.8	21,261.4
1st to 15th June, 1955	12,071.3	437.4	12,508.7
1st to 15th May, 1955	27,056.3	822.8	27,879.1

INDIAN JUTE CROP REPORT

In their eighteenth crop report for the current Indian season, covering the week ended 16th July, Messrs. Sinclair Murray & Co. Ltd., say that weather conditions have not been unfavourable although variable. Generally speaking further rainfall would be beneficial in those areas where the crop has matured and adequate steeping water is awaited. The condition of the standing crop is satisfactory and harvesting operations have been carried on steadily, particularly due to the continued rise in river levels in Assam which are still above normal for this time of the year; elsewhere the river levels are normal.

DANPUR : Weather conditions have been favourable with alternate rain and sunshine. Weeding operations are nearing completion and condition of the standing crop is very healthy and satisfactory. Plants range in height up to 5ft. 6in. The river level has fallen slightly but is normal for this time of the year.

JAIPUR ROAD : Weather conditions have been very favourable with long spells of bright sunshine and this has been exceptionally beneficial for the promotion of plant growth and to allow cultivators to complete weeding operations in the low and midlands. Plant condition is very satisfactory and the plants range in height up to 5ft. 3in. The river level is about normal for this time of the year.

COSSIMBAZAR : Very favourable weather conditions have been experienced with alternate spells of sunshine and heavy rainfall but further rainfall is still required to provide adequate steeping water. The condition of the standing crop is very satisfactory and plants range in height up to 5ft. 9in. Harvesting has not started yet as more steeping water is required before this operation can be started in earnest. The river level is normal for this time of the year.

RANAGHAT : Weather conditions have been very favourable with heavy rainfall and this has improved plant condition and has checked further insect damage to plants. Plants range in height up to 5ft. 6in. More rainfall, however, is still required to provide adequate steeping water and although some harvesting of White Jute has started, the amount cut so far has been negligible. The river level is normal for this time of the year.

NOWGONG : Alternate rain and sunshine has been experienced and this has been quite favourable although a further spell of bright sunshine for a week would assist growth of the standing crop and enable cultivators to dry harvested jute ready for marketing. The condition of the standing crop is healthy and satisfactory and plants range in height up to 6ft. 9in. Harvesting of the lowland crop has been completed and it is estimated that -75/- of the crop has been cut up to date. During the first part of the week the river level fell but at the week-end the river was rising steadily and was 2ft. higher than last year at this time which is still well above normal for this time of the year.

PALASHBARI : Showery weather has been experienced and this has not been very favourable for the standing crop. A spell of dry and hot weather is required to promote crop growth and to enable cultivators to carry on with harvesting of the lowland crop. Plant condition is still satisfactory and the plants range in height up to 7ft. Weeding operations have been suspended due to excessive rainfall. Harvesting progress has been slow due to heavy rainfall but because of a sudden rise in the river level, operations are being carried on and it is estimated that about -35/- has been cut up to date. The river level fell in the earlier part of the week but towards the end of the week rose very suddenly and is now 4ft. higher than last year at this time which is well above normal for this time of the year.

DHUBRI : Very hot and dry weather conditions were experienced and this was most favourable for plant growth and for preparation of jute for marketing. Condition of the standing crop was very satisfactory and plants range in height up to 8ft. 3in. Harvesting operations are going on steadily and it is estimated that -75/- of the crop has been harvested up to date and that harvesting of the lowland crop has been completed. The river level has risen steadily but stands slightly lower than at the corresponding period last year and this is above normal.

DAISSEE DISTRICTS : Weather conditions have been mainly dry with only scattered rainfall in some areas. The condition of the standing crop is satisfactory and it is progressing well with plants ranging in height up to 6ft. Further rainfall is urgently required to provide adequate steeping water and harvesting of White Jute is still suspended although some plants have reached maturity.

Rainfall	For the week 1955	1954	Total from 1st any 1955	Rainfall over the Week-end
Danpur	3.31"	1.18"	15.69"	16.62"

N.B.—As a basis of comparison last season's sowings have been taken as -16/-.

PAKISTAN JUTE CROP REPORT

In their nineteenth crop report for the current Pakistan season covering the week ended 16th July, Messrs. Sinclair Murray (Pakistan) Ltd., say that favourable weather reports have been received from all districts and the crop continues to make good progress. Harvesting on the lowlands is complete and is now going on steadily on midlands as steeping water should now be ample. River levels everywhere register a rising tendency but are still below last year's levels at this date. Imports have increased but are by no means heavy and quality and condition are reported to be fairly good.

NARAYANGANJ : The weather has been wet but not unfavourable for the crop. The condition of plants continues to be satisfactory and the plants range in height up to 7ft. Harvesting of the lowland crop has been completed and that of the midland is now in hand. The river level is now 1ft. 6in. lower than at this time last year.

DACCA : Weather conditions continue favourable with alternate rain and sunshine. Plants are healthy and have continued to make satisfactory progress, they now range in height up to 6ft. 6in. Harvesting of the lowland crop is complete and is now progressing slowly in the midlands. The river level has risen 1ft. but is still 3ft. 3in. lower than at this time last year.

CHANDPUR : Alternate rain and sunshine was experienced which has been favourable for the crop. Plants continue to make satisfactory progress and now range in height up to 7ft. 9in. Harvesting of the lowland crop is near completion and it is estimated that -77/- has been cut to date. The river level is 3ft. higher than at this time last year.

NIKILIDAMPARA : The weather has been favourable with alternate rain and sunshine. The condition of plants is generally satisfactory and they range in height up to 8ft. The river level has fallen 2in. during the week and is now 1ft. 6in. lower than at this time last year. With the slight fall, cutting of the midland crop has been suspended and it is estimated that -75/- has been cut to date.

SARISHABARI : The weather has been favourable with alternate rain and sunshine. Plants are healthy and those of the midland crop range in height up to 6ft. Harvesting of the lowland crop is complete and a start has been made in the midlands. The river level has risen 6in. and is now the same as at this time last year.

SIRAJGANJ : The weather has been favourable with alternate rain and sunshine. The condition of plants is satisfactory and those of the midland crop range in height up to 7ft. Harvesting of the lowland crop is complete and is now going on slowly in the midlands. The river level has risen 2ft. and is now the same as at this time last year.

NAKALIA : The weather has been favourable with alternate rain and sunshine. The condition of plants continues satisfactory. Harvesting of the lowland crop is complete and cutting is going on steadily in the midlands. The river level has continued to rise slowly but is still lower than at this time last year.

BIHANGORA : The weather has been favourable with alternate rain and sunshine. Plants are healthy and now range in height up to 7ft. 6in. Harvesting of the lowland crop is complete and it is estimated that -74/- of the crop has been cut to date. The river level has continued to rise slowly and is now 1ft. 3in. lower than at this time last year.

Rainfall	For the week 1955	1954	Total from 1st any 1955	Rainfall over the Week-end
Narayanganj	3.72"	5.93"	35.51"	49.93"

THE FOREIGN JUTE MARKETS

VERY QUIET CONDITIONS CONTINUE (FROM OUR DUNDEE CORRESPONDENT)

ALL branches of the market have continued monotonously quiet. Raw jute shippers continue to offer freely from day to day at the minimum prices, though occasionally these have been varied by a £1 increase in the case of Mill Lightnings by several shippers, who have quoted £81 and £82 for July-August shipment, after business having been done at £80, the minimum price. There have been sales reported in Mill Firsts at £90, but there has been a report circulated by one firm that in Pakistan the minimum has been reduced to £88 for Mill Firsts only, all other grades to remain unchanged. No other firm has confirmation of this, and, naturally, it is not believed to be true. What benefit would Pakistan get from reducing the price for only one grade by £2 a ton, especially a grade that has been selling fairly freely at the recognised minimum of £90? Good marks of Daissee-2/3 are quoted at £90 and grade at £80, while crack Tossa-2/3 is at £110 and grade at £99, and Tossa-4 at £100 and £89 respectively, all c.i.f. U.K.

The Calcutta goods market is still under the influence of speculators and prices cabled here are still fluctuating. Heavy goods are holding their own at 177s for B Twills for July shipment, 175s August-September and 165s 6d for October-December, with 40in. 10oz. Hessians at 68s 3d and 70s 4d at 51s 9d, July-September, and 66s 3d and 50s 3d October-December, all f.o.b. Calcutta. A small business has been done with the Jute Control at round about these rates.

The approaching holidays in Dundee and district, extending from the evening of 22nd July to the morning of 8th August will be a welcome break for spinners, many of whom are in need of fresh orders to keep them going. Short time or stoppage of spinning frames is quite prevalent amongst them. The carpet trade has been slack recently and when that happens it adversely affects the spinning end of the industry in Dundee. A little improvement is noticeable at the moment. Prices are all firmly maintained on the basis of 14.48d a lb. for common 8 lb. cops and 8 lb. spools. An improved demand is made for the fine twists—2-ply 4 and 5 lbs. yarn. In the cloth end a good demand has lately set in for 40in. 9oz. Hessians for delivery before the end of September.

CALCUTTA TEA AUCTIONS IN JUNE

LATE APPEARANCE OF EXPORT DEMAND

DURING the first two sales there was practically no interest from exporters, but the local demand was very fair and better than had been expected. Later in the month the demand became more general, and prices advanced quite considerably, say Carritt Moran & Co., Ltd. in their monthly tea market review. Flavoury Darjeelings with attractive leaf appearance attracted fair competition, but the more ordinary kinds were sometimes difficult of sale, although they sold more readily in Sales Nos. 3 and 4. Well made whole leaf grades from all districts were in demand throughout the month, and stylish B.P.s. were a very strong feature selling at 6 to 8 annas above B.P.s. of the same quality. In Sale No. 4 there were some quite attractive tippy parcels which were keenly sought after and realised prices well in excess of expectations. There was a good demand for the better C.T.C. types, but the poorer liquoring kinds attracted limited interest.

As is usual early in the season, Darjeeling teas comprised a large percentage of the offerings. Leaf appearance was about average and on the whole, satisfactory, but first flush crop quality was barely equal to last year's production, although there were a number of invoices with attractive flavour. The offerings from Assam district were very small during the first part of the month, but in the last two sales there was a better selection. The teas on offer were mostly first flush of about average quality, but there were some bright liquoring invoices in Sale 4, and a few quite tippy lines. Doars teas comprised the bulk of the offerings this month. In the first two sales leaf appearance was fairly satisfactory, but cup quality was rather plain and ordinary. Little or no improvement in liquors was noticeable in later sales, but leaf appearance tended to deteriorate. The comparatively small offerings from Cachar district were mostly quite satisfactory and with few exceptions had good, black leaf appearance and sweet liquors.

Quotations

	1955-56	1954-55
	Rs. As. P.	Rs. As. P.
Sale No. 1 Plain B.P.	1 14 0	2 10 6
Sale No. 2 " "	1 14 6	2 10 0
Sale No. 3 " "	2 0 0	2 8 0
Sale No. 4 " "	2 2 0	2 7 3

Internal Sales

Leaf offerings during the month totalled about 3,800 packages, out of which 3,000 packages were of New Season's manufacture. The teas available were mostly inferior first flush grades and residue types. There was very little demand in the first three sales but in Sale No. 4 more interest was shown in the small quantity of tea available. New Season's Dust offerings totalled 11,500 packages and 3,000 packages of Old Season's tea also were catalogued. Because of the small quantity of tea available no Dust was catalogued in Sales Nos. 2 and 4. The market opened quietly and prices were generally below valuations except for Darjeelings and C.T.C. Dusts which were keenly sought after. In Sale No. 3 there was a stronger and more general demand, and prices advanced by 2 to 3 annas a lb. with Darjeelings and Middle East types often fetching 4 or 5 annas above valuations.

Quotations

	1955-56	1954-55
	Rs. As. P.	Rs. As. P.
Sale No. 1 Clean Common Dust	1 12 9	No Dust Sale
Sale No. 3 Clean Common Dust	1 15 3	2 0 9

Export sales up to No. 4 totalled 71,639 chests at an average price of Rs. 2-23 compared with 82,816 chests at an average price of Rs. 2-10-4 a year ago. Internal sales at 2,519 chests of Leaf and 10,305 chests of Dust (Rs. 1-9-5 and Rs. 1-15-9) go against 4,787 and 14,987 (Rs. 2-1-9 and Rs. 2-1-8) in the corresponding period of last year.

The price of Export quota strengthened as the month progressed until the last week when there was an easier tendency in evidence. During the latter half of the month, business was transacted at rates between 60 and 72 pies a lb., and thereafter the price rose more sharply to 93 pies a lb. Immediately before Sale No. 4 an easier tendency was noticeable and a quantity of business was conducted at 75 and 78 pies a lb. The estimated outturn for North India up to the end of June is 116.3 million lbs. as compared with 113.2 million lbs. last year, an increase of 2.1 million lbs.

Arrivals (in chests) in Calcutta warehouses during the period 24th May to 23rd June, 1955, with the corresponding figures of the previous year in parentheses were as follows: by steamer 128,131 (162,253), by rail 28,910 (49,554), and by air 12,582 (14,130), making a total of 169,623 (225,937) chests. Since the beginning of the season, 1st April to 24th May, 1955 arrivals have been: by steamer 155,324 (189,877), by rail 59,682 (72,900), by air 26,998 (28,092), making a total of 242,004 (290,869) chests.

LONDON TEA SALES

At last week's London tea sales the 70,622 packages on offer realised an average price of 3s 10.42d a lb., against 3s 8.36d in the previous week and 4s 7.09d a year ago. Results obtained by some of the companies are given below:

Calcutta Markets

PRICES RISE FURTHER IN TEA EXPORT AUCTION

EASIER TREND IN DUST SALE

AT Sale No. 7, held on 18th and 19th July, offerings in the Export auction consisted of 29,500 packages. There were fewer teas from Upper Assam and the selection generally was not equal to that of the previous week. There was again a strong general demand and prices were generally dearer. Plain B.P.s. advanced by up to an anna a lb. while Medium B.P.s. were from one to two annas a lb. dearer. The strongest feature of the sale were the O. Fgs. and P. Fgs. which advanced by from two to four annas a lb., while the best liquoring teas were from two to three annas a lb. dearer depending on quality. Tip was irregular and often dearer and flavoury Darjeeling sold well.

Quotations	1955		1954	
	Rs.		Rs.	
Clean Black Pekoe	3 4 0		2 11 6	
Plain B.P.	2 8 0 to 2 8 6	2 8 6		
Medium Assam B.P.	2 11 0 to 2 11 6	2 10 0 to 2 10 6		
Best CTC Assam B.P.	3 3 0 to 3 4 0	3 0 0 to 3 2 0		

At the Internal sale, offerings of Dusts consisted of 6,400 packages. There was only a fair general demand and the market opened 1 to 1½ annas below the previous week. Prices continued to decline and at the close were 1½ and sometimes 2 annas below last rates. Powdery types were once again more popular than grainy teas while there was less enquiry for black leafy Dusts suitable for the Middle East. CTC Assams were generally easier by 2 annas a lb. but a few good teas sold at Brokers' valuations.

Quotations	1955		1954	
	Rs.		Rs.	
Medium Doars Dust	2 6 0 to 2 6 6	2 2 0 to 2 2 6		
Medium Assam Grainy Dust	2 9 0 to 2 9 6	2 3 0 to 2 3 6		
Best Assam CTC Dust	3 0 0 to 3 2 0	2 8 0		

Offerings of Other Grades consisted of 800 packages. These were generally of poor quality and sold irregularly.

FIRM FREIGHT RATES RESTRICT TRADE

THE general tone is still very firm and owners are pressing for even higher rates, which appears to be restricting trade due to charterers' unwillingness to increase their rate any further. Coal fixtures are reported for contract and consecutive voyages going well into next year. These are not only to the Continent, but also for Italy and Japan. Grain requirements are on a moderate scale including enquiries for tonnage from American Atlantic and Pacific ports and the River Plate to the usual destinations. A certain amount of business has been done and is still available from India and it is probable that future rates paid will be on a higher basis than those last effected. It is interesting to observe that \$(U.S.) 4.05 has been paid to a Fort type vessel for five years' trading which shows that operators are expecting the firmness of the market to be maintained for some time to come.

SUGAR MARKET

During the week ended 20th July, sugar sales in the Calcutta market averaged 1,750 bags a day. Arrivals were 2,500 bags daily and stocks totalled 380,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30-12 ordinary grain and Rs. 31-10 big grain. Forward sugar ordinary grain and big grain sold at Rs. 30-8 and Rs. 31-8 respectively. Ex-mill delivery prices varied from Rs. 28-2 to Rs. 29-3. The market went dull.

HIDES AND SKINS

The market in skins ruled firm, while that of hides was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 12th July and 18th July, 1955)

Cowhides: Wet salted (Ord.) 8,000 pcs. on the basis of Annas 10 to Annas 11-6; Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 9-8 to Rs. 12; Wet salted (Slaughtered) 15,400 pcs. on the basis of Rs. 12-8 to Rs. 24.

Goatskins: Wet salted (Daissee, Killed) 53,500 pcs. on the basis of Rs. 210 to Rs. 275 and Rs. 312-8 to Rs. 345; Assam-Dinaipur-Murshidabad 26,900 pcs. on the basis of Rs. 155 to Rs. 265; Pakur-Patna 3,900 pcs. on the basis of Rs. 150 to Rs. 200; Muzafferpore-Patna 49,200 pcs. on the basis of Rs. 225 to Rs. 232-8.

Bazaar Stocks

(18th July, 1955)

Cowhides: Wet salted 1,13,000 pcs.

Goatskins: Wet salted (Daissee, Killed) 34,000 pcs.; Assam-Dinaipur-Murshidabad 1,10,000 pcs.; Muzafferpore - Pakur - Patna - Purneah - Kissenanj 4,12,000 pcs.

THE MARKETING SYSTEM FOR NIGERIAN PRODUCE

PROTECTION FOR PRODUCERS AGAINST PRICE SLUMPS

(FROM A NIGERIAN CORRESPONDENT)

ON 5th April, 1954 in Nigeria legislation was enacted for the establishment of three marketing boards to handle the country's exportable surplus of oils, oilseeds and cotton, thus culminating a process initiated several years earlier. The Cocoa Marketing Board, the first of Nigeria's produce marketing boards, was set up in 1947. It took over the responsibility for the marketing and export of Nigerian cocoa from the West African Produce Control Board, the war-time organisation set up within the Colonial Office to arrange for the purchase and disposal of the exportable surpluses of cocoa and oilseeds from the West African territories. The considerable surplus which the West African Produce Control Board had held in trust under the declared policy of the U.K. Government for the producing communities became available to the new Nigerian Board. The formation of additional marketing boards to handle oils, oilseeds and cotton was the logical sequel and their establishment in April 1949 marked the completion of the transfer of responsibility for the marketing and overseas sale of the Nigerian export crops from H.M. Government in London.

The West African Produce Control Board ceased to exist and the accumulated profits from its operations in Nigerian oils and oilseeds passed to the two new Nigerian Oilseeds Boards—the Palm Produce Board and the Groundnut Board. The Cotton Marketing Board set up under the new legislation similarly assumed full responsibility for the marketing and export of Nigerian cotton, a function hitherto performed by the British Cotton Growing Association on behalf of the Raw Cotton Commission in the United Kingdom. The new Nigerian Constitution has given the Nigerians a greatly increased share in the affairs of Government. As will be seen, the marketing board system, as it has developed in Nigeria, is based on the active participation of the Nigerians at all levels of the extensive organisation.

Function of the Boards

The general function of the Cocoa Board is defined in the Ordinance sanctioning that Board as follows: "It shall be the duty of the Board to secure the most favourable arrangements for the purchase, grading, export and marketing of Nigerian cocoa and to assist in the development by all possible means of the cocoa industry of Nigeria for the benefit and prosperity of the producers". The other three marketing boards exercise a similar general function under their Ordinances for their respective crop industries. More specifically, the primary purpose of all four boards is to promote economic security in the producing areas by maintaining stable producer prices within each season and, as far as possible, over a longer period of years. Their secondary, but not less important purpose, is to provide funds for the economic development of the areas of production and for scientific research.

The principle of price stabilisation has been described as a means of providing a "buffer" between the producer and the international market which will protect him from short-term fluctuations of world prices and allow him a greater stability of income. The prewar commercial system whereby produce was purchased for export by commercial firms operating independently and on their own account, did not and indeed could not provide any substantial measure of security for the producers. The sudden price fluctuation of the inter-war period caused uncertainties and risk to the firms themselves and hardship to the primary producers. The operation of the control measures introduced during the war showed that an orderly marketing system could be built up as part of the post-war commercial system which would at the same time safeguard the interests of the producing communities and the economy of the country as a whole.

Subsidy for the Producers

The Boards inherited substantial funds from the operations of their precursor, the West African Produce Control Board, and have since sought to conduct their own operations to the best advantage of those whose interests they exist to promote. They aim at maintaining their reserve at a level which will permit them to pay reasonable producer prices, having regard to world market prices and economic considerations in Nigeria, and which will moreover permit them to support the producer prices by subsidy should they be forced to sell their produce on unfavourable terms. They could not hope to maintain Nigerian prices above world price levels indefinitely, but might do so with beneficial results until the latter recovered. Each marketing board consists of three Nigerian members conversant with the crop industry with which the board is concerned, and three official members including the chairman. The other two official members are the Director of Agriculture and the Director of Marketing and Exports, who are members of all the four boards. In the case of the Cotton Marketing Board, the Financial Secretary of the Northern Region is also a member. The system is related to crop and not regions, but the bulk of the crops handled by groundnut and cotton boards are produced in the Northern Region and it is usual for these boards to meet in the North.

Each of the Boards is advised by a representative committee (designated Advisory Committee in the case of the Cocoa Board) and the marketing board and its committee of advisers together constitute the policy-making organisation for its particular crop industry. The Cotton Board is advised by two committees as it handles the cotton produce of the Northern and Western Regions. The boards, under the relevant Ordinances, are bound to consult their advisory committees on all matters connected with the purchase and grading of the produce, and the committees are widely representative of the crop industry in question and well equipped to furnish the necessary advice. The membership of each committee is predominantly Nigerian and includes representatives of the producers themselves and of the middlemen buyers. Close liaison with the marketing board is ensured as one or more Nigerian members of the marketing board sit on the Representative Committee.

Traders' Co-operation

The marketing boards have not sought to displace with the prewar commercial system of purchasing export produce; it is part of their purpose to incorporate this system in a more widely-conceived structure. It is the policy of the boards to employ the existing commercial channels wherever this can be done with advantage. All the four boards have accordingly continued the procedure adopted by the West African Produce Control Boards and have appointed as licensed buying agents; firms and traders engaged in the produce trade. The Boards define the functions which they require their licensed buying agents to perform and remunerate them on an agreed basis; their continued service depends on their performance according to prescribed standards. The ready co-operation which the boards have received from the commercial firms, long-established in the Nigerian produce trade, is a satisfactory feature of the operation of the system.

Nigeria's economy stands in need of capital and technical knowledge which overseas enterprises can provide and the hope may be expressed that the orderly and stable conditions which the boards are endeavouring to establish in the country's economy will lead to an increase, rather than to a diminution, of the investment of foreign capital in Nigeria. It has been mentioned that the system provides for the participation by the Nigerians in all its activities and indeed, Nigerian firms and traders are playing an increasingly important part in the purchase of produce on the board's behalf. It is the policy of the boards to encourage the entry of local enterprise into the produce trade. Various measures have been introduced to assist the small concerns, a number of whom have made encouraging progress. The boards at the same time require all their licensed buying agents to reach and maintain certain well-defined standards of commercial efficiency. Insistence on these standards obliged small concerns seeking appointment as licensed buying agents or desiring to retain their appointment, to improve the standard of their organisations: in this way the system provides something in the nature of a training ground for small firms.

System of Buying

The boards' licensed buying agents purchase the produce at gazetted buying stations in accordance with marketing instructions of the boards and at not less than the minimum ex-scale price fixed by the board for the season. They are responsible for all handling and storage up to the point at which the stocks are taken over by the boards, the actual arrangements varying according to the commodity. Cocoa and palm kernels are generally taken over on delivery on board ocean vessels; groundnuts on delivery into transit sheds at the port; and palm oil on delivery to the Buil Oil Plants. Cotton seed which is ginned in Nigeria is taken over by the Cotton Board on delivery into the ginneries of the British Cotton Growing Association. To perform the large amount of secretarial and executive work involved in the day-to-day administration of the boards' affairs, a new department of the Nigerian Government, the Department of Marketing and Exports was formed in 1948 to act as the boards' executive organisation. The Marketing and Exports Department, besides implementing the boards' decisions provides a useful link between the Government and the marketing boards.

Selling Company

The produce of the boards, purchased by the licensed agents, tested for quality, weighed, documented and shipped by the executive organisation, is sold overseas by the boards' own subsidiary selling company, the Nigerian Produce Marketing Company Limited. This company, whose share capital is owned by the four boards, has its offices in London.

In accordance with the Cocoa Board's selling policy, Nigerian cocoa is sold by the company on the open market to buyers in most European countries and large sales are also made to countries in the dollar area. An important additional function performed by the London company on behalf of the boards in Nigeria is the reservation of shipping space. This is done by the company on the basis of forward estimates of availability of produce for shipment supplied by the executive organisation in Lagos.

To review comprehensively and in detail the performance of the four marketing boards up to the present time would need enormous space. It may however be said in the summing up that as a result of the almost uninterrupted upward movement of the world commodity prices since the boards were established, all four have attained considerable financial strength and can face the future with confidence in their ability to withstand even seriously unfavourable selling conditions, should such conditions arise.

COMPANY AND PUBLIC NOTICES

NEW CHUMTA TEA COMPANY, LIMITED.

THE Annual General Meeting of Shareholders of the above-named Company will be held at the Registered Office of the Company, No. 6, Church Lane, Calcutta, on Friday, the 12th August, 1955, at 12-15 P.M., to receive the Directors' Report, pass the Accounts for Season 1954, declare a Final Dividend and elect a Director and an Auditor, and also to transact the following Special Business, namely, to consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"That the provisions of the Memorandum of Association of the Company with respect to its objects be altered and extended by striking out the existing Clause 3 of the said Memorandum of Association and substituting in place thereof a new Clause 3 being that contained in the document submitted to the meeting and marked "A", and for the purpose of identification subscribed by the Chairman thereof."

The Share Transfer Books and Register of Members of the Company will be closed from the 6th August to the 12th August, 1955, both days inclusive.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred, Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

SUPPLIERS OF A WIDE RANGE OF INSULATION MATERIALS AND REFRACTORIES

DANGERS IN THE COMPANY LAW AMENDMENT BILL

CRIPPLING MANAGING AGENCY: NEED FOR CENTRAL STATUTORY AUTHORITY

THE new Companies Bill which will be before the Lok Sabha in the session just begun will regulate joint stock enterprise in India through the most important years of the country's development. It is essential that it should be designed to encourage the growth of enterprise and to assist its smooth working. But the 1955 Bill promises neither of these things. The Associated Chambers of Commerce of India have placed before the Government their views on the effect that some of the more important provisions will have on companies generally. The chief criticism centres, quite rightly, on the way in which the new Bill has departed from the Company Law Committee's recommendations and the previous intentions of the Government as expressed in the 1953 Bill. It is pointed out that the proposals for the amendment of the law, which these documents embodied, went to the practical limits of supervision and regulation to close all loopholes against malpractice and dishonesty, and that anything beyond that limit would "seriously jeopardise joint stock enterprise, its efficiency, its initiative and its management". That the new Bill does go beyond those limits is clear enough. So far beyond, in fact, that the question is raised whether the Government has really considered the full implications of some of its proposals, and, if it has, whether indeed it wishes this particular form of management to survive at all. Impracticable ideology has been allowed to creep into the proposed legislation to the detriment of efficient industrial and commercial management in the private sector.

Whatever the Government's intentions towards joint stock enterprise in general, its plans for the managing agency system in particular are now clear enough. They are, briefly, "progressive elimination"—and are therefore in direct contravention of the unanimous findings of the Company Law Committee. The cumbersome methods by which the ensuing Act promises to be administered can only result in loss of time when decisions are called for and therefore a loss of efficiency all round. These make up the burden of the Assocham criticisms, together with such important points as the commencement of the Act, the maximum remuneration of managing agents, secretaries and treasurers, and the form and content of balance sheets and profit and loss accounts.

Possibly the most serious consequence of the Act in its present form will be the crippling of the managing agency system. Apart from a few doctrinaire critics, all parties are agreed that the system is indispensable to the industrial development of the country; they can quote the considered words of Mr. Deshmukh and Mr. Krishnamachari in their support. The economy of technical and managerial skill which managing agency achieves will be lost to the country and this is bound to be reflected in industrial costs. So will the numerous other ways in which industry and commerce are to be stripped of the advantages of the system. Companies will be unable to acquire financial aid for risky ventures unless the banks are prepared to adopt lending policies hitherto considered rash. Companies will lose the prestige, both with investors and customers, provided by the name of a secure and respectable managing agent.

The managing agents themselves, in the form the Act would leave them, would be subjected to control over the number of companies they would be allowed to manage and to detailed interference in their own working. Weak companies, and those separated from their managing agents, would become easy meat for the cornerer; the new Bill provides for a permanent open season for speculators. The system of secretaries and treasurers can hardly fill the gap left by managing agency. If the institution is to be crippled the country will lose

its most important asset in the private sector at a time when the strain of expansion will be greatest. If it is no longer realistic to plead for a reprieve for the managing agency system, for at least so long as it takes for director-management to acquire firm roots in India, there remains the hope that the Government will exercise the greatest discretion in the use of its powers under the Bill.

The provisions of Clause 197—that the total managerial remuneration of a director-managed public company, including the salaries of the managing directors and managers, must fall within the overall limit of 11 percent of the net profits, subject to a minimum inclusive managerial remuneration of Rs. 50,000 per annum where profits are inadequate, or simply non-existent—can scarcely have been fully grasped by the Government. It is not difficult to see what effect this provision could have on such companies at all stages of development. In new companies, where the profit is inevitably small for a number of years, the managing director would share with other directors a mere Rs. 50,000 a year. The employment of a competent and qualified man would obviously be impossible. The salary of management would become almost completely dependent on the performance of the business and would therefore be indistinguishable from commission, which has disadvantages as a means of remuneration. Capital outlay for expansion would be heavily discouraged. The fluctuations of industry would mean that the salary of individuals could not be accurately determined until well into the following year when the profits of the company became known.

THE STATES APPROACH THE MARKET

THIS year's State borrowing plans, although the largest yet, are not over-ambitious. The total capital required, Rs. 35.75 crores, compares with a figure of Rs. 28 crores, the target aimed at the last time the States approached the market on their own account in 1953. The number of States which applied was the same as now, that is ten, with the difference that Andhra and Hyderabad have replaced Travancore-Cochin and Madhya Bharat. In far less favourable market circumstances, and without the benefit of two years of heavy deficit financing, the loans were then comfortably achieved; some were over-subscribed. There is every indication that the same will happen this time. Interest at the rate of 4 percent is to be paid on each loan and the issue prices range from Rs. 99-0 for Bihar, Hyderabad, Mysore and Saurashtra, to Rs. 99-8 for Andhra, Madhya Pradesh and Uttar Pradesh. Rs. 99-12 for Madras and Rs. 100 for Bombay and West Bengal. The last four States together account for about Rs. 24 crores out of the total. The market has been favourable for loan capital for some time now thanks partly to the accumulating effects of deficit financing, the various uncertainties which surround large-scale investment in equities and of course the recent preparation which it has undergone to

ensure the success of the Centre's new 3½ percent (1965) loan. State loans are at the moment in fair demand; those floated in 195

equities now have for the cautious investor. The moderate manner in which the Centre and the States have approached the market this year is an encouraging sign that the needs of private industry are being borne in mind.

AMSTERDAM CHALLENGES LONDON

TWO WORLD FINANCIAL CENTRES FIGHT FOR LEAD

WHEN the Anglo-American mining group formed the Anglo-American Rhodesian Corporation in June to aid the economic development of the Rhodesia-Nyasaland federation, with the intention "to raise money in other parts of the world", London expected an important new loan issue. The issue was duly announced a few weeks later; but it was to be made in Amsterdam, not London. There is, of course, a great deal of American finance in southern Africa, but the territory is in the sterling area, of which London is the natural financial centre. That the money—£2½ million in this case—should be raised in Europe elsewhere than in London seemed to confirm suggestions that London was losing its position, and the alternative chosen seemed to confirm suggestions that Amsterdam was the centre that was superseding London. Such ideas have been discussed particularly in New York, but they have been heard also in Europe—including London.

London is not at present unduly apprehensive. It has been noted especially that this Rhodesian loan is in sterling. Is it not a remarkable demonstration of confidence in sterling that Dutch investors can be asked to take up a loan whose principal and interest are payable in sterling, with no "gold clause" or other form of guarantee against depreciation of the currency? (It is also, perhaps, evidence that there is more transferable sterling available than has been assumed in London; but that holders of this sterling are willing to invest it in a sterling loan rather than convert it into dollars at only a small discount is, surely, a sign of confidence.) That the loan has gone to Amsterdam instead of London may be simply a matter of interest-rates. It would be impossible, in the present state of the London market, to issue (at 98½) a loan of this character bearing interest at 4½ per cent. For intending borrowers, indeed, London has become one of the least attractive capital markets in the world, and Amsterdam one of the most attractive. Since the rises in Bank rate in London in January and February attention has been focussed on internal credit, especially bank credit. But the rise in interest-rates in the stock market affects external finance. That financial business is being diverted from London may be regrettable in principle, from the authorities' point of view, but there is no doubt that in practice they approve the diversion. One purpose—though not the main purpose—of raising Bank rate was to stimulate the inflow of capital into London and to check the outflow of capital from London. So far this purpose has been achieved more effectively than the main purpose, to restrict internal credit.

The fact remains, however, that Amsterdam, having raised its status as a centre of short-term credit, is steadily improving its position as a long-term lender. It was largely through Holland that sterling commodities were "shunted" to the dollar area—so by-passing London's financial markets—when "cheap" sterling was available for the purpose. Various commercial transactions between the sterling area and the Continent of Europe, that would normally be financed by acceptance credits in London, have more recently been financed by Dutch banks. Now the Rhodesian loan—not, of course, an isolated instance—comes as a reminder of Holland's ability to do the more permanent financing that has long been associated with Britain. Let it be said that the City of London regards these "encroachments" as entirely legitimate and proper. Finance ought to be freely competitive, even if trade must still, over much of its range, be restricted. But it is not surprising if the City of London, and the British Government, are wondering rather anxiously how far the process will continue.

It is frankly admitted in London that in many respects the Dutch economy is healthier than the British. Britain is now paying for what many critics regard as a major error of financial policy, the excessive easing of credit after the restrictive phase of 1951-52, and for the reluctance to reverse this error in 1954, when its effects were already apparent. One result of this confusion is a gold reserve which, relatively to commitments (including those of the outside sterling area), is much smaller than Holland's. So Holland can contemplate a rise in imports without alarm, whereas in Britain it has been necessary to take hasty—and not obviously effective—action to restrain such a rise. So money rates, still low in Amsterdam, have risen sharply in London. These are important differences, but still, relatively, short-term. More important is the question whether Holland is permanently reasserting a

superiority over Britain in international finance. This question takes us back into history. The Dutch were in the international banking business long before the British—indeed, when the Bank of England was founded, late in the 17th century, Dutch finance provided much of its capital. The Dutch bankers' skill, acquired over the centuries, has sharpened in the complex financial conditions of the modern postwar world; thus London has few, if any, technical advantages.

The rivalry between London and Amsterdam is friendly, but it is also serious. It is no secret that the British Government aspires to restore London to its financial eminence of the prewar era, or at least to an appropriate modern counterpart of that position; and this aspiration is a matter not simply of prestige but also of finance in a more restricted sense—the invisible income from financial services. Convertibility of sterling is essential to such a plan; yet the British Government has often lagged behind the Dutch in the approach to convertibility. It can be predicted that, unless Britain's economy is strengthened by more rigorous restraints on inflation (or Holland's economy unexpectedly deteriorates), Amsterdam will continue to gain business from London.

CURRENT COIN

Workers in Management.—The idea of the worker participating in the management of the company in which he is employed is by no means new. Isolated examples of it are to be found in almost every industrialised country. The fact that it is not more widespread, in spite of the ease with which arguments can be quoted in its favour, is a reflection on the difficulties it involves. These difficulties are not always easy to recognise, but now that the project seems to be gaining support in India, as one more move towards a Welfare State, it is just as well that they would be rooted out and given careful consideration. In his broadcast on 22nd July, Mr. K. K. Desai, Union Labour Minister, said: "I feel that the time has come for providing for workers' participation in management and that a proper scheme should be worked out for implementation during the second plan period. Facilities should also be made available to workers to acquire and hold shares in the establishments so that many of them may come to have personal stakes, however limited, in the operation and success of the undertaking." There are of course many advantages of workers' participation. The fact that the worker identifies himself with the management and therefore tends to take a more responsible attitude towards the firm's operation, is only one of many. Reduction in labour turnover is another. A weakening of the powers of the trade unions to create mischief is a third. On the other hand, the loss of trade union power can be driven to a point where the unions are unable to perform their proper functions of safeguarding the worker's interests; stake in management is not necessarily a knowledge of it, and the fact of the worker holding a few shares does not necessarily mean that he will always be free from victimisation and unfair treatment without the trade union at his back. Reduction in labour turnover can also act towards preventing mobility and therefore operate to the detriment of industry as a whole. Unless the worker is properly and honestly represented on the board of management, there is no guarantee that his views will be considered. Workers' participation in management and a financial stake in the company are not all clear-cut advantages and it has yet to be proved that the worker is willing to accept the fluctuations in fortune which shareholding inevitably involves. Without this willingness to accept the ups and downs, which are so large a part of the function of management, companies will tend to become rigid and the degree of monopoly will increase. For this reason the only real successes which workers' financial participation have enjoyed has been in very large companies where fluctuations in the various branches of the activities can be cancelled out and profit can be fairly easily predicted. Above all, workers' participation must depend on workers' education, because without that essential condition the worker would soon become as much subjected to abuses from his representatives on the board as he now considers himself to be from the management. The problem bristles with difficulties, in India even more than in advanced industrial countries.

Industrial Policy.—Restating the Government's industrial policy before the Central Advisory Council of Industries last week, Mr. T. T. Krishnamachari, Commerce and Industry Minister, declared that, broadly speaking, the Industrial Policy Statement of 1948 still held the field. It was the emphasis on the different aspects of that policy that had now been clarified. Industries included in the public sector would be the definite obligation of the State, and development in those industries by establishing new units would undoubtedly be the responsibility of the State. The rest of the field continued to be open, as it was in 1948, for private

enterprise to develop and expand. But, Mr. Krishnamachari pointed out, this did not mean that industries not in the public sector were the exclusive preserve of private enterprise. If the entrepreneur showed no enterprise, the State would have to take the initiative itself. It could not take the risk of overall planning being jeopardised because no one else was prepared to take on a particular line of production. This consideration applied with special force to key industries. Mr. Krishnamachari declared that there could be other reasons why the State might have to enter a field of production falling within the private sector. If State agencies developed a new process, the exploitation of the process might well be undertaken by the State. There might be fiscal considerations also. In many countries, the manufacture of tobacco was a Government monopoly, purely on revenue considerations. It was neither correct nor reasonable, according to the Minister, to consider that the private sector and the public sector were two water-tight compartments, and the State could not trespass into the former or that it could not invite the co-operation of private enterprise for industries in the public sector. "Such a rigid line of demarcation," he added, "does not exist in our thinking and unless I am mistaken there is no Government in the world which works on the assumption that it is precluded from entering into particular fields of production."

The Minister felt that even when the State did not enter the private sector as a producer, its responsibility for supervising and, if necessary, controlling it remained. While private enterprise naturally worked for profit, "it is equally important to realise that acquisitiveness is a social menace that Governments cannot ignore." Mr. Krishnamachari did not view with favour the concentration of wealth in a few hands, and added that there were few countries which had such contrasts between the levels of income of the poor and of the rich as India. While the solution of this problem lay in raising the income of the poor, and the main attack was on poverty rather than wealth, the State had to ensure not only greater production of wealth but also its equitable distribution. The limitation of resources and the ambitious nature of planning made it necessary to ensure that there was a careful husbanding of resources and that they were canalised into fields most essential for national development. The private sector must therefore accept regulation by the State, according to Mr. Krishnamachari. "In fact, such regulation exists even now and the Government can claim without exaggeration that its regulatory powers have not been used to the detriment of the legitimate interests of the private sector."

Devaluation Rumours.—Rumours about the devaluation of the pound sterling are current on all occasions when Britain faces an economic crisis. With the exception of 1953, these crises have occurred at regular two-year intervals since 1947. It was only in 1949 that the rumours were found to be true and on that occasion the evidence in favour of once-for-all devaluation, based on post-war price parities was overwhelming. On the other occasions, when the crises were as bad and often worse than the present one, no devaluation took place and no sober assessment of economic facts suggested that it would. The same would appear to be true this time. The long-term value of the pound sterling, on considerations of which the exchange value should be fixed, is reasonably stable. The present crisis has arisen through a short-term inflation within the British economy which resists all the efforts for a cure made by the Conservative Government, based on liberal theories of the economic regulation. Action is required to damp down this inflation. It will be of no assistance to the British economy to devalue the pound sterling and therefore increase it. As our London correspondent points out on another page, over the last two years the rise in Britain's industrial costs has been of an order of 3 or 4 percent. During the same period, which included almost a year of recession, the corresponding figure for the United States was between 2 and 3 percent. Britain's costs are admittedly out of line, especially when compared with those of Germany which have remained relatively stable in the last three years, but they are not so far out of line as to justify such a drastic step as a devaluation yet. It is likely that the rate of increase in the United States will catch up and that in West Germany is now likely to grow due to the fact that the economy is bordering on full employment. Mr. Butler has announced that British Government policy will "continue to be the maintenance of the exchange parity of 280 to the £, either in existing circumstances or when sterling is convertible". Although too much importance can never be attached to Finance Ministers' speeches when devaluation is being discussed, Mr. Butler does seem to have committed himself very firmly not only to the maintenance of the present value of the pound under controlled conditions, but also under the more dangerous conditions of convertibility. Mr. Butler must have great faith in the pound to do that.

Efficiency Under Nationalisation.—The case of the nationalised Indian airlines provides an

example of what happens to efficiency under State management. The Indian Merchants' Chamber has devoted a small but commendable brochure to this example, with adequate statistical data. A very depressing picture of the state of the airlines' efficiency emerges. The measure of deterioration in operational efficiency and standards is to be found not only in mounting financial losses, though by themselves they provide a sound enough criterion for efficiency, but also in the degree of utilisation of aircraft, and the load of passengers and freight carried. There have also been complaints about the conduct of the staff, flight safety and general service. These things have been exactly as the Air Transport Enquiry Committee had warned in its own commendable report, aimed against the move to nationalise air transport which was then pending. The words of the Committee are worth repeating here: "The operational efficiency of private companies has been uniformly good. An outstanding example of operational and business efficiency under a system of private management, is afforded by Air India International which in the second year of its operation has, we understand, been able to break even and show a small profit. With nationalisation, which will mean a drastic break away from the existing organisation of the industry, there is likely to be, we fear, sudden drop in efficiency." The drop in efficiency has occurred in every conceivable direction. Financially, the loss shot up to Rs. 80,42,000 in 1953-54, the year of nationalisation, (1st August to 31st March) from Rs. 12,07,000 for the full year 1952 when air transport was privately operated. In 1954-55 (1st April 1954 to 31st March 1955), it rose to Rs. 1,15,59,000. According to the budget estimates for 1955-56, it may increase to Rs. 1,94,84,00,000 during the year. Operationally, the utilisation of freight aircraft particularly has fallen. The utilisation these days, as the brochure points out, is reported to be less than 2,000 hours as against between 2,500 and 3,000 hours an aircraft a year in pre-nationalisation days; consequently the total volume of freight carried has fallen. There has also been a decrease in the number of passengers flown. In 1952 i.e. before nationalisation, the number was 434,480; in 1953 the nationalised air services carried only 403,992 and in 1954, some 420,000. It is unlikely that the number will improve, considering that fares have been increased for passenger services from 15th July, particularly in night services which probably carry the bulk of the passengers. These increases range from 22 percent to 43 percent in various routes. The freight rate has been raised to Re. 1 from As. 8-2 a lb. which should certainly discourage freight traffic. In the circumstances, one wonders whether nationalisation has brought any benefit to the Indian people at all, when they are being called upon to subsidise ever increasing losses. Besides, private enterprise in this country understandably feels apprehensive about the Government's industrial policy, when it is remembered that the Industrial Resolution of a few years ago, left air transport out of the nationalisation pale.

Pakistan's Economic Problems.—Pakistan's major weakness is that her economy is very narrowly based. Jute and cotton are the chief products, they account for 80 to 90 percent of her foreign exchange earnings, and she thus becomes highly susceptible to fluctuations in international trade. Writing in *The Financial Times*, Sir Percival Griffiths points out that her balance of payments position since birth has been unsatisfactory. Wide fluctuations have taken place, and in only two years has a surplus been achieved. One of these years was 1951, when the Korean boom was at its peak. The other was 1953, when imports were drastically reduced as the nation was threatened with bankruptcy. Things have gone better since, but the fundamental dependence on jute and cotton has not changed appreciably yet. There is reason to believe that it will gradually do so in years to come. For the time being, Pakistan has decided to restrict imports mainly to essential goods, and to diversify her economy by industrialising as rapidly as she can. Many think that she is trying to industrialise too rapidly. Sir Percival apparently subscribes to this view, and says that foreign exchange is being used for development projects on such a scale as to leave insufficient for the maintenance of existing industries while at the same time importation of goods which may be regarded by some as semi-luxuries and by others as necessities has had to be drastically curtailed over a prolonged period. This has had an inflationary effect in certain sections of the economy, though it is perhaps masked by the fall in agricultural prices. No less disturbing is the tendency of the Pakistan Government to be niggardly in its control over the remittance of profits. The prospective entrepreneur is also discouraged by the fact that the formalities involved in starting a new enterprise are formidable and lengthy. To obtain sanction for a capital issue may take six months; machinery is not normally allowed to be imported as part of the capital of the foreign company; there are endless arguments about royalties; and it is often found that although the first application for an import licence for raw materials is dealt with

sympathetically, subsequent applications meet with a different fate.

Increased Indian Rubber Production.—There has been a steady increase in the production of natural rubber (dry) in India during the past few years according to the 28th edition of *Indian Rubber Statistics*, recently renamed *Rubber in India*, brought out by the Directorate of Economics and Statistics, Ministry of Food and Agriculture. During the year 1952, the output of rubber rose to 36 million lbs. as against 31.83 million lbs. in 1950 and 32.03 million lbs. in 1951. The increase was due mainly to an increase in the area under rubber cultivation. The area tapped during the year was 111,117 acres as against 104,460 acres in 1950 and 104,505 acres in 1951. In India, Travancore-Cochin is by far the largest producer of raw rubber accounting for about 85 percent of the area under rubber plantations. The State of Madras comes next with about 12.5 percent of the area while Mysore and Coorg together contribute nearly 2.5 percent. India, however, produces less than 2 percent of the total world production of this commodity. The consumption of natural rubber in India during the year was 47 million lbs. Over seven million lbs. of rubber were imported, mainly from the Straits Settlements and Ceylon.

Industrial Disputes in May.—There were 72 cases of fresh disputes during May, 1955, according to the provisional statistics of industrial disputes released by the Labour Bureau, Government of India. The number of workers involved in 71 cases was 25,014. Compared with the previous month, the number of disputes starting during the month and the number of workers involved registered a rise. The statistics do not include the figures for the general strike in the textile industry in U.P. for which the relevant figures were not available. The number of disputes current at any time during the month was 96. Of these, 95 involved 34,442 workers and the man-days lost in 92 cases were 173,801. The number of disputes current at any time during the month and the number of man-days lost declined, but the number of workers involved increased as compared with the previous month. The average duration of disputes current at any time during the month was 5.0 days as compared with 10.2 days in April. There were seven lock-outs during the period involving 7,378 workers and accounting for a time-loss of 46,011 man-days. Five of the lock-outs were in West Bengal and one each in Bihar and Bombay.

Seventy disputes terminated during the month under review. Of these, 55 lasted for not more than five days each and two for more than 30 days each. The causes of disputes in 20 cases were wages and allowances. Grievances relating to personnel accounted for 15 disputes while retrenchment and other causes led to six and 18 disputes each. The workers achieved complete or partial success in 23 cases. In 19 cases, they were unsuccessful. The result was indefinite in 26 cases. Among the States, West Bengal recorded the highest time-loss. Next in order were Bihar, Bombay, Andhra, Madhya Pradesh and Madras. Compared with the previous month, all the States except Andhra and Bihar showed a decline in time-loss. Among the industries, time-loss in plantations appreciated. In mining and quarrying, the time-loss was slightly more than that in the previous month. In the manufacturing industries and in the individual industries, namely, cotton mills, engineering, iron and steel and other manufacturing industries, the time-loss decreased. In the group transport, storage and communications, there was a slight increase in time-loss. In the industry group construction, there was no time-loss while in electricity, gas, water and sanitary services and commerce, it was negligible. The industry group miscellaneous recorded less time-loss as compared with the previous month.

Holding Coffee Prices.—The Indian Coffee Board announces that it has observed from the Commercial news column of the *Hindu* of 22nd July, 1955 (page 3) that a feeling is current in trade circles that coffee prices are bound to rise if substantial quantities are not released by the Board at the pool auctions and that the ruling coffee prices in the local market are Rs. 240 to Rs. 242 a cwt. for Plantation A, Rs. 195 for Arabica Cherry Flats and Rs. 165 to Rs. 166 for Robusta. This, the Board considers, may give room for an unnecessary misgiving about the stocks available and the trend of coffee prices. The average price of Plantation A at the pool auctions in July was only Rs. 220-12 a cwt. although a few lots were bid at Rs. 227-11 a cwt. and a stray lot sold at Rs. 229-12 at the Mysore auction on 13th July, 1955. In the cases of Arabica Cherry Flats and Robusta Cherry Flats, the average pool auction prices for the current month have been Rs. 182-11 and Rs. 152-9 respectively. Reports received from Mangalore show that the wholesale market price on 20th July, 1955 in Mangalore for Plantation A was Rs. 223 to Rs. 225 a cwt., and that in Coimbatore was Rs. 224 to Rs. 225. Stocks are adequate, and there will be no further allotments for export. Taking into consideration normal requirements and the need to keep minimum necessary stocks for carryover to meet eventualities steady quantities will be offered for sale in each month.

EASTERN RAILWAY

TENDERS

Tender No. CS5/55/K6/19(55) is invited by the Controller of Stores, Garden Reach, Calcutta—23 for sale of Waste Paper and Punched Hollerith Cards from the Garden Reach, Shimlari and Calcutta Offices of the Ex: B. N. Rly. during 1-10-55 to 30-9-56. Tender form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta—23 (PG Section) on remittance of Rs. 2/- by Money Order (not refundable) in case of Mofussil Firms and on production of Cash Receipt from the Asstt. Chief Cashier, Garden Reach, Calcutta—23 by Local Firms. Earnest Money Rs. 500/- in cash. Valid Income Tax Clearance Certificate must accompany the tender. Closing date 19-8-55 at 12 noon.

ELECTRIFICATION ON EASTERN RAILWAY

OFFICIAL REVIEW OF SCHEME

SINCE 1914 a number of investigations and surveys relating to Calcutta's Suburban traffic and electrification have been made, but since electrification demanded heavy capital expenditure, lack of funds precluded any progress, according to a brochure issued by the Eastern Railway. In 1939 when it had almost been decided to go ahead with the scheme, World War II intervened. Calcutta's suburban traffic is at present carried mainly by the four main broad gauge routes terminating at Howrah and Sealdah. Arriving at these stations, the suburban population has to proceed to places of work in the city by either tram or bus. The internal transport system of the city itself has reached saturation point and it is not possible to increase the number of buses or trams without seriously affecting the speed and safety of traffic. The present facilities of suburban transport are not such as to encourage the city-dweller to move into the suburbs. It is obvious, therefore, that a dispersal of population can be effected only if the suburban traveller is assured of a quick, cheap and reliable mode of transport from his residence to his place of work. As an alternative to an underground railway, which was at one time suggested but eventually abandoned, the feasibility of a Circular Railway round the city of Calcutta has been investigated. The Circular Railway will make it possible for suburban trains now terminating at Howrah and Sealdah to be brought into the city of Calcutta.

The proposed Circular Railway will be approximately 21 miles long, with the majority of the tracks existing either as part of the Eastern Railway or of the Calcutta Port Commissioners' Railway. Apart from a mile which has to be lifted on trestles, the main work on this section will be to bring the tracks up to the requisite standard, connecting them for short distances and providing electric equipment.

A detailed investigation of the problems of suburban electrification in the Calcutta area has revealed that the maximum advantage in electrifying a section of the railway line can be obtained only when all trains on a particular section are operated by electric traction. In view of these considerations it has been decided that the electrification of the Calcutta area should comprise all services and not suburban traffic only.

Electrification of Main Lines

The operational and maintenance costs of the fixed electric equipment and rolling stock are considerably less than those under operation by steam. The real disadvantage of electric traction lies in the cost of overhead equipment and substations required for transmitting power to the locomotives, which constitutes a very substantial portion of the total cost of an electric traction scheme. The cost of this equipment does not vary appreciably over wide ranges in traffic density and, therefore, the cost of service on this account per unit of traffic density varies inversely with the density of traffic. On the other hand, the haulage costs per unit of traffic density, which increase directly with traffic density, will be less for electric traction than those under steam traction. A point will be reached when the saving in haulage costs will equal the cost per unit traffic density of the fixed equipment under electric traction. Any further increase in traffic density will result in lowering the combined costs of fixed equipment and haulage in favour of electric traction. A detailed analysis of the conditions in and around Calcutta has shown that for any traffic density in

excess of 4.23 millions trailing ton miles a running track mile per annum on a double track route, electric traction will be more economical than steam. Throughout the Howrah-Moghalsarai section, the traffic density is much higher than the minimum required to justify electrification.

For many years the total traffic via Moghalsarai has surpassed the capacity of this section necessitating the diversion of the overflow over the longer route via the Main Line. The increase in capacity resulting from electrification will enable the overflow of traffic as well as all the additional traffic likely to offer in the foreseeable future to be moved by the shorter route. This prospect makes the proposed electrification even more attractive on financial grounds. The electrification of this section is, however, not to be judged on financial grounds only. On the basis of the traffic estimated during 1962-63, the combined line capacity of the Grand Chord and the Main Line under steam traction will be wholly inadequate and the alternatives open to the Administration are (i) the construction of an additional track between Gomoh and Gaya and additional works between Gaya and Moghalsarai to increase line capacity under steam traction, or (ii) change over from steam to electric traction. Alternative (ii) will cost less and ensure an attractive return on the capital invested.

Financial Results

The estimated gross outlay for the electrification of the suburban sections of the Calcutta area is Rs. 45.11 crores, the Circular Railway Rs. 6.32 crores and the Main Line Rs. 25.76 crores. An analysis of the comparative costs of operation, maintenance and depreciation under steam and electric traction for the traffic expected in 1962-63 shows the following savings under electric traction work:

Suburban Sections	Rs. 2.6378 crores.
Circular Railway	
(Proposed)	Rs. 0.2925 "
Main Line	Rs. 2.5697 "

As there is no passenger traffic at present on the Circular Railway, the savings referred to above are the estimated earnings when this section is opened for passenger traffic. These savings, expressed in percentages of the gross outlay, indicate a return of 5.85 percent for Suburban Sections, 4.63 for the Circular Railway and 10.06 for the Main Line. The following table shows the gross earnings on account of the additional traffic which is expected in the event of electrification of the sections and the corresponding net earnings on the Suburban and Main Line sections.

Section	Additional gross earnings (in lakhs of rupees)	Net earnings (in lakhs of rupees)
Suburban Sections (Suburban passenger traffic only)	245	191
Grand Chord Section (Asansol-Moghalsarai all traffic)	674	599

Taking these earnings into consideration the return works out to 9.64 percent for the Suburban Sections and 24.9 percent for the Main Line.

Apart from the handsome return on gross outlay, electrification of certain sections of the Eastern Railway is expected to release a large number of over-age steam locomotives. At present, on the Eastern Railway there are approximately 530 steam locomotives which have completed their normal life and are awaiting replacement. In addition, a large quantity of coaching stock used on suburban services has passed its normal life. Then, there is the saving on account of the non-purchase of goods wagons which will not be required on account of the quicker turn-round and also due to the fact that loco coal will no longer be required for steam locomotives on the sections electrified. There will be substantial savings in engineering works as well because electrification will usually render unnecessary works designed to increase line capacity. Ignoring the savings under this particular head, a conservative estimate of the expenditure that will be avoided on rolling stock alone is Rs. 33.54 crores on the Suburban Sections and Rs. 21.90 crores on the Main Line section.

Total Cost

The total cost of electrification of the suburban areas and the Grand Chord line up to Moghalsarai will be approximately Rs. 77.19 crores. It is expected that if the funds are made available, the work can be completed in five to six years. Covering a total of 2,190 track miles, the Project has been divided into a number of sections. The work on each section is complete by itself and can be taken up independently of others. The sections have been so arranged that the cost of each is within reasonable limits. The electrification of the section Howrah-Burdwan via Bandel and the Tarakpur Branch, which has already been sanctioned at an estimated cost of Rs. 11.85 crores, covers a length of 262 track miles.

TRIBUTES to the soundness of India's fiscal regime have come in the past week from two authoritative and unofficial sources, the Bank of Egypt and Dr. Franz Pick, the currency expert. Dr. Pick was launching the new edition of his black market yearbook, under the more staid title of *Pick's Currency Yearbook*, at a Press conference in New York. He said that the Indian rupee has been gaining strength since the currency realignment of 1949, until its black market value is now within five percent of the official parity. (Just for comparison, Pakistan's rupee is illegally dealt in at a discount of 35 percent.) This improvement has taken place despite the considerable volume of black market trade in Indian rupees, which he estimates at \$500 million a year; and despite, we might add, such leaks as the Persian Gulf gold smuggling racket. Dr. Pick calls this "an amazing achievement" and says that India's rupee could easily become one of Asia's leading currencies when convertibility is restored. Indeed it is an amazing achievement, and we who know at first hand the immense effort that has been made in this country to rehabilitate refugees and promote development are even better placed to appreciate its magnitude. The Bank of Egypt has ranked a number of countries according to the expansion of their circulating currencies since 1949, and it places India in the best behaved group who have increased their note issue by less than 20 percent. This group includes such respectable nations as the United States, Switzerland, Holland, Belgium and Denmark. The middle group, who have boosted their currency by 20 to 45 percent, includes Britain, Canada and New Zealand. The currency reprobates who have printed notes ad lib are countries like Australia, Italy, West Germany and France—France of course taking the bun, for she has doubled hers in five years. This sort of classification needs a lot of qualification, naturally, before we can draw any conclusions about inflation. But in India's case, since we know there has been a substantial rise in industrial and agricultural output in these years, we can properly assume that this is one of the best governed countries, fiscally speaking, in the world.

Soon after India's disappointment at not having the India Office Library transferred from London, comes an opportunity to demonstrate interest in the preservation of another library of great historic value. This is the Serampore College collection, part of which was shown at Belvedere lately. At that time I commented here on the high quality of Carey's printing at Serampore, and it appears that the College has a collection of several lakhs of such books which must not only tell the story of the birth of Indian printing but also of the birth of the modern literatures of Eastern India. This is surely a treasure worth preserving and I can only assume that an appeal is now being made to the public for funds because an appeal to the Government has been made and has failed. The sum required is so pitifully small—a mere twenty thousand rupees—that it gives some Indian industrialist of liberal temper the chance to put his Government to shame by subscribing the whole lot. After all, we shall have no moral case for claiming libraries abroad if collections in this country are let must and moulder. That is just what is happening to the extraordinary set of books and antiquities now in the care of the impoverished Asiatic Society of Bengal. I heard an Indian scholar the other day complaining that any gimcrack "cultural mission" of dancing girls and tabla-wallahs can get a lakh of rupees for a trip to Mongolia and Bolivia, but the Asiatic Society cannot obtain the small subvention required to preserve its collection. Obviously politicians will only be concerned with cultural matters when there is a question of national

A DITCHER'S DIARY

prestige; it is up to private persons of means to display a more enlightened attitude.

I am quite sure no "private person of means" in India will ever die worth Rs. 400 crores. No one has that much money now, and the Government of India, quite properly I suppose, has made it impossible for anyone to accumulate it in the future. But that is believed to be the size of the fortune left by that mysterious character Gulbenkian who died in Lisbon some time ago. "Believed to be", because no one knows for sure; obviously when you have so much money, you are likely to be up or down a crore or two from day to day. He has amply justified in his will the accumulation of his fortune: he has left the greater part of it, including his vast art collection, to create a Gulbenkian Foundation. This Foundation should soon become as famous as the Rockefeller Foundation on which it is to be modelled, for it is to be used for charitable, artistic, educational and scientific purposes to benefit people of all nationalities. We are in a mood to think that no good can come out of Portugal, and it is perhaps unfortunate from India's point of view that this great trust is to be administered under Portuguese law. But Gulbenkian hoped that the chief trustee would be Lord Radcliffe, a man familiar with and much interested in this country—it was he who presided over the Punjab and Bengal boundary commissions after independence. Lord Radcliffe cannot for the time being take up that position, for he is debarred from such work by his post as Lord of Appeal, but he may relieve himself of the latter responsibility in order to administer the Foundation later. You may think that no private fortune, however great, would be of much assistance to India, but those who know how much good has come from the Ford and Rockefeller Foundations in recent years will hope that the Gulbenkian Foundation will bring as much benefit to us.

Laymen discussing vaccination are apt to commit egregious blunders, but encouraged by such eminent and wilful personalities as Rajaji and C. B. Shaw they will probably always lay claim to greater knowledge of the subject than medical experts. And the nauseating experience of the United States with Dr. Salk and his wretched polio vaccine will provide material for anti-vaccinators for a generation to come. Shaw's stand on the rôle of bacteria in the causation of such diseases as tuberculosis I always thought was sensible, although deceitfully expressed. He appeared to know very well that germs cause the disease, but he feared that if politicians got the idea that they only needed to kill the germs with wonder drugs, they would do nothing about the bad living conditions, poor diet and worry that also greatly contributed. Which is quite true. There is a class of politician who would cheerfully vaccinate everybody against tuberculosis, and then leave them to live the miserable existence that otherwise breeds disease. Rajaji's stand I find harder to follow. His evidence that BCG vaccination causes conditions as bad as T.B. is slender to say the least. But from what I have heard elsewhere, I think he has something when he says that the Indian Government is placing altogether too much reliance on this vaccine. Before the World Health Organisation set to work vaccinating everyone in sight, I understood that BCG was harmless but totally ineffectual, except as an indication of whether people had once been exposed to infection. The Salk affair is in another class, and is surely one of the most depressing performances of modern science. The marriage of commercialism and medical research, or rather

the total prostitution of science to the advertising stunt experts, that produced this shameful episode will not be forgotten or forgiven for a long time. A British doctor wrote last week that the facts are just being sorted out but that it is already clear that this wonder drug was extremely dangerous. He adds: "The remarkable fact is that so few cases of paralysis followed the use of Salk's vaccine. The number of casualties might have been multiplied ten or a hundred-fold." Even before the vaccine had been adequately tested in the United States, some directions on how to prepare it were ceremoniously handed over to the Indian Health Minister, Rajkumari Amrit Kaur. While she keeps up her duel with Rajaji about the BCG vaccine, I hope the Rajkumari has put the Salk recipe where it belongs: on ice until some scientist who has not signed a contract with a TV network has tested it properly.

There is a story to the effect that the fabrication of the famous Dacca muslin ceased because British troops, under instructions from jealous Lancashire, went to Dacca and cut off the weavers' thumbs. If that were true, there might be some point in the Khadi Board's decision to revive the production of this cloth in modern India. However it is not true. Dacca muslin, like the Arni muslin once made in Madras Presidency, was killed by the mills, which well over a hundred years ago could already make material just as light in texture but considerably less expensive. In other words, the craft, like literally thousands of other human activities, was overtaken by the progress of industrialism. The manufacture of *Kasidas*, a muslin embroidered with silk, lingered on in Dacca much later because the mills could not compete, but it too died out between the wars—I think because of a change of taste and style in Turkey, which was its biggest market. So hand-made muslin belongs to the ages, and any effort to restore it now would be on a par with arty-crafty experiments in reviving illuminated manuscripts or faddish propaganda about the "fair Roman hand" in an age of printing presses and typewriters. The Indian Government's policy in support of the handloom industry in general can be criticised as reactionary but it does make sense economically: the handlooms exist and lakhs of people will lose a livelihood if they are idle. That is one thing. But to allow a general policy of that sort to become a refuge for all sorts of dreamy cranks who want to revive skills long since dead because they have been replaced by superior skills, would be quite another matter. I once met a man who was somehow related to the dancer Isadora Duncan, and who wore sandals and long hair, made his own paper, printed his own books, wrote his own music and ate nothing that had any taste to it. He was, in brief, nuts. Such people exist in every society and usually they do no harm. But when a Government launches a consciously archaic policy because it is in some ways necessary, they cluster around Ministers like flies around a honey pot, each seeking some public money for his own craze. That stern realist Mr. T. T. Krishnamachari has just announced that he has joined the handloom bandwagon and I do not blame him; but he should equip himself with a forty-foot pole to keep the "back-to-Vedic-India" lunatic fringe off it.

John Betjeman has just unearthed a sample of Noel Coward's wit that has remained too long unknown. Coward was writing to Lawrence of Arabia when Lawrence was an aviator in the RAF, with the number, familiar to readers of *The Mint*, "RAF 338121". Coward opened his letter with: "Dear 338121 (may I call you 338 ?)".

SHARP DROP IN LONDON STOCK MARKET

INDUSTRIALS AND OILS WORST HIT

London, 27th July.

A SUBSTANTIAL advance was recorded in equity shares prior to the week-end on renewed buying, but a sharp setback was sustained before the Chancellor of the Exchequer's statement on the economic situation on Monday. Although the statement was less severe than had been anticipated, there was only a partial recovery subsequently, and for the time being at least the fire appeared to have gone out of the market. The sharp setback on Monday was the worst since Bank rate was changed in February this year. The hardest hit were industrials and oils, the recent strong favourites. Gilt-edged eased sharply throughout the week and Mr. Butler's statement had no effect on this market at all. Compared with the previous levels, prices are up to three points or more lower. The improvement in sterling which followed the Chancellor's statement has not been reflected in gilt-edged. Foreign bonds were subdued but Japanese and Germans, particularly the potash issues, met some support. Rails attracted little attention but dollar stocks improved in sympathy with Wall Street. A revival in gold shares pro-

vided the main feature of the mining sections. They came into favour as the rest of the market slumped, and although the best prices were not always held prices were higher on balance. Coppers moved irregularly, but other base metals, especially tins, were firm. Oils boomed prior to the week-end but sustained some substantial losses in Monday's sharp decline. Rubbers and teas gained ground early in the period, reflecting the improvement in the prices of the commodities, but they too followed the downward slide of the market on Monday.

The Money Market

Credit continued tight last week with the authorities' never-failing pressure on the market. When demand showed signs of outstripping supply, most houses were forced into the Bank. On Wednesday last the position was aggravated by the fact that it was "making up day" for the banks and some houses found themselves in the Bank for larger sums than usual. Only on Friday last was there some relief, and as the result of a good outflow of funds, banks were balanced for the first time without official help. Business in bills was restricted, although some October dates changed hands at 3½ percent. Applications for Treasury bills totalled £361,415,000, of which £240 million were allotted at an average rate of 79s 4.98d, compared with 79s 4.88d in the previous week. This week £240 million are offered. The Bank of England return for the week ended 20th July showed that notes in circulation rose sharply by about £30 million to £1,845 million, but bankers' deposits

were about £10 million lower at around £245 million.

Platinum Price

Leading U. K. platinum suppliers are now quoting the metal at £29 a troy ounce instead of the range of £27 to £29 recently. The reason for a single price is that Russian offers at lower prices have subsided. For the same reason, palladium was quoted at £7½ a troy ounce against £6½ to £7½ previously.

Stock Market Prospects

The Investors' Chronicle market newsletter writes that formerly cautious brokers now feel compelled to join in the bullish tide of the London Stock Exchange, but industrialists are less complacent, being more impressed with the rise in coal and other costs. These might affect export prices, and could squeeze company profits and dividends in a way which might undermine market buoyancy. The Chancellor does not seem to intend raising Bank rate but he must do something. The success of the Geneva talks would enable him to cut defence spending and national service which would be decidedly disinflationary. The outlook for the next few months suggests extreme selectivity. The big progressive companies can withstand a change of climate but trailing yields on shares vaguely connected with electronics or atomics must be getting suspect.

U.S. Federal Reserve Return

The U.S. Federal Reserve Return for the week ended 20th July shows gold stock \$2 million higher at \$21,681,000. Foreign deposits declined by \$10 million while foreign investments rose by \$3 million. The Federal Reserve system made no purchases or sales of Government securities. Total discounts and advances rose by \$67 million to \$570 million, while excess reserves fell by \$150 million to \$519 million. Business loans of the New York City banks fell by \$30 million to \$939 million, while their daily average borrowing fell by \$55 million to \$7,486 million. Their daily average excess reserves declined by \$149 million to \$585 million compared with a fall of \$330 million to \$302 million a year ago.

Burlap Steady in New York

Burlap values in New York moved narrowly during the past week but the undertone was steady. Domestic demand is steadily improving, as is evidenced by the June consumption figures, which totalled 75.2 million yards, an increase of 1.8 million yards over May. Improved Calcutta advances had a stabilising effect, while the revised Calcutta end-June sacking stock figure was a supporting factor. The U.S. Department of Commerce reports that raw jute imports during May were 5,324 tons, compared with 4,290 tons in April and 4,519 tons in May a year ago. Pakistan supplied 5,228 tons, Thailand 75 tons and India 21 tons. Imports of jute butts in May were 716 tons compared with 594 tons in April and 488 tons in May a year ago. Pakistan accounted for 507 tons, India for 154 tons and Belgium for 55 tons.

Rubber Production and Consumption

Figures issued by the International Rubber Study Group show that world production of natural rubber in May was 25,000 tons below consumption, but in the year ended 31st May output was still slightly in excess. In May, production totalled 135,000 tons and consumption 160,000 tons. But in the period from June 1954 to May 1955 production amounted to 1,817,500 tons while consumption was 1,815,000 tons. The Study Group's estimate for 1955 puts production at 1,845,000 tons and consumption at 1,830,000 tons.

Quicksilver Prices

Spanish and Italian quicksilver producers have no intention of cutting their prices and there are no serious reasons for them to be concerned over offers at lower levels by Mexico and Turkey. This was stated by a spokesman of one of the two leading Italian quicksilver producing companies. The spokesman said that the Mexican offers are of limited importance to the world market as they relate to small quantities for forward delivery. Mexican quicksilver "cannot make the market." He dismissed Turkey's production as "not very important" and unable to affect the world market.

Vegetable Oil Market

Generally slow conditions prevailed for most oils with buyers said to be uninterested. Coconut oil, Straits, in bulk, tended lower on paucity of interest at £91½ c.i.f. for July-August and August-September shipments. Coconut oil was idle, with Indian crude higher at £112½ c.i.f. for July-August shipment to the Continent. Kardiseed oil was easier with Indian crude at £107 c.i.f. for July-August shipment. American linsed oil was slightly easier at £95 c.i.f. for July-August while Argentine and Uruguayan were also easier at £95 c.i.f. July.

Ceylon's Tea Export Restrictions

Tea trade quarters say that the effect of Ceylon's decision to reimpose quantitative restrictions on tea exports to London is unlikely to be felt for at least two months. Although it is difficult to forecast the effects it is unlikely that tea prices in London would increase. If the increase did follow, it would be restricted to the best quality Ceylon teas.

U.K. Tea Stocks Down

U. K. tea stocks in London and provincial warehouses on 15th July totalled 123,646,600 lbs, against the previous week's figure of 127,444,680 lbs. The total amount to be landed on 15th July was 15,699,750 lbs. Deliveries during the week were 11,359,150 lbs, while landings in the same period were 7,561,070 lbs. The total afloat on 15th July was 22,698,840 lbs, including: from Calcutta 8,626,200 lbs, Chittagong nil, Coochin 2,552,640 lbs and Colombo 10,820,000 lbs. The average price realised at the auctions during the week was 49.19d, in the previous week 48.42d and in the corresponding week of last year 55.92d.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

GREATER ACTIVITY IN BILLS

Wednesday, 27th July.

CONDITIONS in the money market continued quiet, with little demand from any source. In the Calcutta interbank market the call rate has fallen to 2½ percent and there are lenders over.

There has been a great deal more activity in the bill of exchange department this week, chiefly due to the belief in some quarters that sterling may be devalued in the near future. Gunny bills have made the best showing. Remittance has been in fairly good demand. Sterling has strengthened slightly and the rupee-dollar rate has shaded to Rs. 480½.

Silver was quiet and the price dropped from the previous week's level of Rs. 160-8 to Rs. 159-7, quoted to-day. The rate for forward delivery was quoted at Rs. 159-4. The price in London advanced from 78½d. to 78 5/8d. The price of foreign silver in New York was unchanged at 90½ cents.

Gold ruled steady and the price increased from Rs. 94-8 to Rs. 95-8. The sovereign at Rs. 60-8 was 2 annas higher.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 26th July, 1955, totalled Rs. 1,91,50,000. The average rate of acceptance fell from Rs. 2-8 to Rs. 2-7-10 percent per annum. Tenders at Rs. 99-6-3 percent were accepted in full and those at Rs. 99-6-0 percent were allotted approximately 57 percent. Lower tenders were rejected. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 1st August, 1955. During the week ended 22nd July, 1955, Government of India Treasury Bills for Rs. 15,67,00,000 were sold in favour of the Reserve Bank of India.

Declines of Rs. 13.47 crores and Rs. 12.86 crores in the total note issue and notes in circulation to Rs. 1,328.31 crores and Rs. 1,297.99 crores, respectively, were outstanding features of the return of the Reserve Bank of India for the week ended 22nd July, 1955. The contraction in currency was adjusted by reducing foreign securities by Rs. 15 crores to Rs. 637.04 crores by a transfer to the Banking Department. Balances held abroad consequently rose by Rs. 15.26 crores to Rs. 79.62 crores. Deposits of the Government of India and other Government accounts declined by Rs. 2.12 crores and Rs. 1.15 crores to stand at Rs. 79.62 crores and Rs. 18.90 crores. Balances of commercial banks at Rs. 53.34 crores showed a rise of Rs. 1.07 crores. Other loans and advances fell from Rs. 35.45 crores to Rs. 25.40 crores, of which advances to scheduled banks against usance bills totalled Rs. 14.55 crores (Rs. 24.14 crores). These advances amounted to Rs. 169.54 crores since 1st January, 1955. Ways and means advances were shown at Rs. 83 lakhs (Rs. 80 lakhs).

The statement of the position of scheduled banks for the week ended 15th July, 1955, discloses Demand and Time liabilities at Rs. 602.58 crores (Rs. 11.49 crores on account of borrowings from banks) and Rs. 402.05 crores (Rs. 3.73 crores) compared with Rs. 593.87 crores (Rs. 9.93 crores) and Rs. 399.58 crores (Rs. 3.93 crores) respectively in the previous week. Cash has decreased by Rs. 60 lakhs to aggregate Rs. 33.77 crores, while balances with the Reserve Bank have increased by Rs. 4.04 crores to stand at Rs. 49.75 crores. There is a rise of Rs. 8.63 crores in investments to Rs. 467.18 crores. Advances and bills discounted at Rs. 610.34 crores reveal a drop of Rs. 6.04 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.3 percent and 60.8 percent against 8.1 percent and 62.0 percent.

The return of the State Bank of India for the week ended 15th July, 1955, shows a rise of Rs. 2.66 crores in total deposits to Rs. 202.06 crores. Investment in Government Securities and other authorised investments are up by Rs. 6.13 crores and Rs. 11 lakhs to Rs. 94.32 crores and Rs. 7.80 crores respectively. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have decreased by Rs. 4.24 crores to aggregate Rs. 111.62 crores. Cash and balances are, in consequence, shown at Rs. 17.67 crores or Rs. 3.76 crores higher.

The following is a statement of the cash balance of the Central Government on the last day of April, 1955:

(1) At the Reserve Bank of India in India	Rs. 54,61,30,000
(2) At treasuries in India	2,03,34,000
(3) In England (Sterling converted at 18d. the Rupee)	2,66,50,000
Total	59,31,14,000

Afghanistan has become a member of the International Monetary Fund and the International Bank for Reconstruction and Development. The quota of Afghanistan in the International Monetary

Fund is \$10,000,000 and its subscription to the capital stock of the Bank is 100 shares with a total par value of \$10,000,000. Fifty-seven nations are now members of the Fund and of the Bank. Admission of Afghanistan brought the total of members' quotas in the Fund to \$8,738,000,000. The total subscribed capital of the Bank is now \$9,038,000,000.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during June 1955, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	47	185
Western Pakistan	42	6
Other Countries	Negligible	2
	89	193

Total trade amounted to Rs. 282 lakhs. Re-exports and trade in treasure were nil. There was thus an adverse balance of trade amounting to Rs. 104 lakhs.

it's a **BIG** job...
prospecting for oil

Crude oil is not found everywhere in the world. Here and there it may occur in rocks that were once at the bottom of ancient seas and lagoons. But finding an old sea-bed is no guarantee that oil will be discovered there; that can be decided only by drilling a test well.

In some areas, likely clues to buried rock conditions may be found on the surface of the earth, but where surface features are absent as in the Assam Valley, the search for oil possibilities is aided by geophysical surveys.

Three different methods of geophysical surveying for oil are being employed by the Assam Oil Company to "feel" for suitable

rock conditions under the Brahmaputra's thick blanket of Alluvium.

By aeromagnetic, gravity and seismic surveys, scientists can form a picture of the type, depth and attitude of buried rock layers.

But none of these can point to oil—even if it is there. The scientists, after studying the results, can only say—there may be oil there. The only absolute way of finding out is to drill a test well. Frequently the answer then is—no oil. The prospector must try again elsewhere... and so the search goes on, in the hope that India's petroleum requirements may be supplied to an ever increasing extent from her own resources.

Stocks and Shares

BULLS REMAIN IN FULL CONTROL OF STOCK MARKET

INDIAN IRONS TOUCH NEW HIGH AT CLOSING

Wednesday Evening.

THE share market has remained firm throughout the past week, and at the settlement today the price of Irons was Rs. 38-1, which is the highest for some considerable time. The market appears to be taking its strength from a strong bull support for Indian Irons, which were quoted after hours up to Rs. 38-8. The comfortable gap between today's price and the price of the last closing has put money into operators' pockets and confidence has been boosted. Occasional sags in prices have been taken up immediately and the market appears fairly strong technically. There are shoals ahead for the market during the coming month in the shape of the Companies Bill and possibly the Stock Market Regulation Bill, but at the moment it would appear that little short of a serious political development or some adverse Ministerial statement could shake confidence. Investment demand is fairly good. Securities remain in good demand and debentures are hard to get.

Details of the week's trading follow.

There was rather more activity in the Gilt-edged section and this was attributable probably to the easier conditions prevailing in the money market. There was a fair enquiry for medium-dated loans by institutional investors and prices tended to harden. Three percent Conversion Loan 1946-86, however, was a dull spot and was unchanged at Rs. 80-8 as was 3% Non-terminable Paper at Rs. 80-1. There were no price changes in short-dated issues. Three percent 1957 and 1958 were quoted at around Rs. 99-10 and Rs. 99-7 respectively. In the medium-dated group 3% 1959-61 recovered to Rs. 98 and 3% 1961 was taken higher to Rs. 99-11. 3% 1964 was fully steady at Rs. 98-10 while 3% National Plan Bonds 1965 firmed up to Rs. 98-8. 2% 1980 was a strong feature at Rs. 93-3, and 2% 1962 had buyers over at Rs. 83. Long-dated loans were rather neglected and prices were unchanged.

Provincial loans were dull with sellers predominating and prices were marked down further. For example, 4% Madras Issues lost further ground and were quoted at the close at Rs. 100-10 and 4% Bombay Issues were also easier at Rs. 100-4. The lower prices were due to the announcement this week of new State Loans, details of which appear elsewhere in this issue, on more attractive terms.

Selected Preference shares were still in short supply but jute Preference shares were not so difficult to obtain. In jute, Hooghly were transacted at Rs. 15-6 and Anglo-India were crossed at Rs. 120-12. Amongst miscellaneous issues Associated Mining changed hands at Rs. 32. Indian Standard Wagon at Rs. 142-8 and British India Corporation at Rs. 138. Calcutta Electric were done at Rs. 12-10. Indian Iron and Steel at Rs. 108-8, Indian Rubber at Rs. 99-8 and Jardine Henderson at Rs. 79. New Victoria were steady at Rs. 3-8 as were Rohtas Industries 7% at Rs. 138 and the 'B' at Rs. 69.

In the banking section Hindustan Commercial were marked at Rs. 10. Punjab National Bank were steady at Rs. 49 and United Bank of India 'D' shares at Rs. 4-12.

Once again the only share dealt in in the railway section was Dehri-Rohtas at around Rs. 13.

In the cotton section Kesoram were steady at Rs. 18-4 as were Cawnpore Textiles at Rs. 10. Elgins were marked at Rs. 19-6 and New Victoria at Rs. 1-12.

There was a noticeable contraction of business in the coal section. Burrakur fluctuated between Rs. 14-6 and Rs. 14-14 to close at Rs. 14-1. Amalgamated came to hand at Rs. 24-8. Bengal were marked at Rs. 529. Bhalgora were done at Rs. 7-10 and Bharat Collieries were steady at Rs. 8-15. Several deals were reported in Central India between Rs. 8-4 and Rs. 8-9. Hurriladih were taken at Rs. 20-12 and Katras Jheriah were crossed at Rs. 53. New Beerbhoom were steady at Rs. 21-12 as were Raneeunge at 12-2. South Karanpura were transacted at Rs. 12-10 and Seebore at Rs. 27-14. Talcher were steady at Rs. 4-2 while West Bengal were unchanged at Rs. 7-8. Karanpura Collieries rose today from Rs. 123 to Rs. 130.

Following the firmness of the jute goods market there was a revival of interest in the Jute section after a considerable period and a number of shares recorded gains as will be seen from the following table:—

	Opening 21-7-55	Closing 27-7-55
Anglo-India	Rs. 224	Rs. 237
Auckland	150	158
Budge-Budge	184	191
Champdany	173	181
Howrah	31-10	32-8
Kinnison	200	210
Lawrence	157	165
Shree Ambica	15-12	17-8

The only share dealt in in the electric supply section was Calcutta Electric at around Rs. 15-4.

In the sugar section, Balrampur were marked at Rs. 10-4, Belsund were steady at Rs. 10-12 while Carew were easier at Rs. 12-9. Cawnpore were wanted at Rs. 21-12 and Darbhanga, after receding to Rs. 20, recovered at the close to Rs. 21-5. Champaran were dealt in at Rs. 31-12, New Savan at Rs. 7-7 and Samastipur at Rs. 15-3.

Once again there was heavy speculation in Indian Iron and Steel shares with the market in the firm grip of bull operators, and Indian Iron touched a new high of Rs. 38-4; tonight's closing quotation is Rs. 38-1. Indian Galvanizing were done at Rs. 23-10, Indian Standard Wagon at Rs. 135-8 and Jessops were steady at Rs. 47-2. Kumardhubi Engineering were marked at Rs. 12-14, Marshalls at Rs. 7-10 and Richardson & Cruddas at Rs. 20-4. Textile Machinery were steady at Rs. 22-8.

In the miscellaneous section Bengal Paper were in demand at Rs. 72 and India Paper Pulp changed hands on several occasions at around Rs. 30. Titagur Paper were slightly lower at Rs. 46 while Orient fluctuated between Rs. 30 and Rs. 30-12. Sone Valley were transacted at Rs. 7-8, Concord of India Insurance were steady at Rs. 14 and New Asiatic at Rs. 6-12. Deals were reported in India Steamship at Rs. 7-12 and Port Shipping at Rs. 14-4. Angelo Bros. were a feature and improved by Re. 1-8 to Rs. 23-4. Assam Saws had sellers at Rs. 5-2 and Bengal Flour were crossed at Rs. 30. Balmer Lawrie were done at Rs. 160 and Britannia Biscuits were steady at Rs. 16. British Burmah Petroleum were quoted at Rs. 4-5 and there was a

STATE BANK OF INDIA

Successors to the Imperial Bank

Security for generations to come

On July 1, 1955, the State Bank of India came into existence, taking over the business of the Imperial Bank. It offers you all the services you require and expect.

You will continue to benefit from the guidance of experienced officers, and your business will receive the same personal, completely confidential attention that has been given in the past.

Not only have we inherited the sound banking traditions of a century and a half, but we have also inherited the public goodwill that has been so marked since 1806, when our first constituent bank was founded. And our policy, as always, will be guided by this ideal—to further your interests and those of the entire nation, now and in the years to come.

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

sudden spurt in B.I.C. from Rs. 9 to Rs. 9-10 followed by a reaction to Rs. 9-5. Calcutta Tramways were quoted at Rs. 16, Dunlop Rubber steady at Rs. 37-12 and Gillanders Arbuthnot continued to be popular at around Rs. 13-10. Business was reported in Indian Cables at Rs. 29-12. Indo-Burma Petroleum recovered from Rs. 157 to Rs. 161. Jardine Henderson were steady at Rs. 123-8 as were Metal Box at Rs. 25. National Tobacco were easier at Rs. 11-14. Rohtas Industries hovered around Rs. 29-4 and Shaw Wallace met with investment enquiry at Rs. 14-8.

In the mining section a large parcel of Indian Copper changed hands on Saturday last and the price improved to a new 1955 high of Rs. 5-6; to-night's closing quotation is Rs. 5-3. The difficulties being experienced by the mica industry were reflected in the price of Christien Mica Industries which receded to Rs. 9-7. Burma Mines were unchanged at Rs. 2-3 as were Western Stockholders Investment at Re. 1.

The tea section has once again been dull with very little business passing.

Among Assam scrips, Baghmari were unchanged at Rs. 30-4 as were Dufflaghur at Rs. 47-8, and Grob 'A' at Rs. 43-4 while Sapoi were easier

at Rs. 30-8. Gillapukri were better at Rs. 46-8 and Brooke Bond had buyers at Rs. 20-8. Ledo were done at Rs. 28-4, Tezpore at Rs. 37-4 and Tyroon at Rs. 47.

Of the Doars shares, Banarhat were unchanged at Rs. 655 as were Hantapara at Rs. 364 and Nagasore at Rs. 306. Hasimara were better at Rs. 48-6 as were Ranicherra at Rs. 28-14.

Of the remaining shares Gelle had buyers at Rs. 22, whilst Soom were done at Rs. 30-8 x.d. Hattikihira at Rs. 28-14 and Jaysree at Rs. 14-8. Gungaram were taken higher at Rs. 450.

The Governing Director of the Indo Corporation Ltd., which is the managing agent of BATHGATE & COMPANY, LTD., has proposed reconstruction of the capital structure of the latter company in a circular letter to shareholders. The par value of the ordinary share will be halved to Rs. 5. The cumulative preference shareholders will forgo arrears of interest from 1947 but they will receive interest at the higher rate of 5% instead of 4½% from the current year. The reconstruction of capital is deemed necessary to restore credit of the company by reducing the debit balance of Rs. 22.19 lakhs. This will assist the management to nego-

tiating a loan from the Indian Finance Corporation or the State Finance Corporation. In view of the large debit balance, the cut in capital which has been proposed is likely to improve the position of the company.

THE NORTH-WEST COAL COMPANY made a profit of Rs. 21,605 for the half-year ended 31st March, 1955. This is slightly higher than that of the previous half-year. The dividend has been declared at 6½ percent against nil. The carry-forward is Rs. 13,249 (Rs. 8,676). Raisings totalled 58,577 tons (52,902 tons) and despatches 65,074 tons (66,580 tons).

Bringing in Rs. 2,045, setting aside Rs. 98,829 for depreciation and repairs and meeting other charges, there is Rs. 17,801 of the CALCUTTA LANDING & SHIPPING CO. for the half-year ended last October. The dividend is the same at 4 annas per share, leaving a carry-forward of Rs. 2,176.

THE WEEK'S TRA'SACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available.)

Mr. Krishnamachari was inaugurating the sixth meeting of the Central Advisory Council for Industries. No one has ever doubted the good faith or intentions either of the Prime Minister or according to New Delhi reports, saw Mr. Krishnamachari's speech before it was made, or of the Commerce and Finance Ministers. But neither the Prime Minister nor the Commerce Minister can bind unknown successors to their policy. If apprehensions are expressed, they are largely regarding the "unknown successors of the Prime Minister who, having been armed with authority given by the Fourth Amendment, might prescribe compensation which is tantamount to confiscation." Even under the present set-up, responsible Ministers and others holding high office in the Congress organisation often make declarations which shake confidence.

The Indian entrepreneur, having intimately known many members of the Congress Party, is no longer perturbed by the occasional outbursts of some. The threat of a socialistic pattern of society did not create convulsions in the stock exchanges. Prominent members of big financial groups attended the meeting of the Central Advisory Council and expressed confidence that the private sector would be able to raise all the resources necessary for achieving investment and production targets under the industrial programme for the private sector in the second five year plan. This was in spite of the warning given by the Commerce Minister that "acquisitiveness is a social menace that governments cannot ignore and we do not view with favour the concentration of wealth in a few hands. The State has to ensure not only greater production of wealth but also its equitable distribution." The foreign investor is not in the same category and needs more tangible assurances. This is evident from the negotiations for an investment guarantee treaty between India and the U.S.A.

The Commerce Minister replied to statements that the Fourth Amendment and talk of a socialist pattern of society had frightened away private enterprise. He disclosed that since August 1954 as many as 377 licences had been issued on the recommendations of the Licensing Committee. Of these, 105 related to the establishment of new undertakings, and the rest related to applications for substantial expansion in existing undertakings, the production of new articles by them, change of location, etc. Of the applications approved by the Licensing Committee, 52 related to sugar, 54 to cotton textiles, 42 to iron and steel, 42 to silk and art silk and staple fibre textiles, seven to machinery used in industry, eight to machinery and equipment for the generation, transmission, etc., of electricity, 20 to pharmaceuticals and drugs, 22 to heavy chemicals including fertilisers, 19 to bicycles, 17 to glass and ceramics, 14 to vegetable oils, 10 to automobiles, six to radio receivers, five to cement, seven to soap, four to ferro-manganese and the rest to the other scheduled industries. A Sub-Committee of the Council, under the Chairmanship of Pandit Kunzru, held a meeting on 28th January and reviewed 502 applications which had been dealt with by the Licensing Committee during the period October 1953 to November 1954.

The draft outline of the second five year plan prepared by the Ministry of Commerce and Industry was discussed by the Council. It envisages a total outlay of Rs. 750 crores. It is considered possible that of this total the Government may provide Rs. 100 crores. This assistance may be available in the form of certain projects being taken up by the National Industrial Development Corporation, assistance to private industries by the Corporation and direct assistance by the Government. The investment estimates relate to investment expenditure exclusive of expenditure on maintenance and normal replacement, but in the case of the cotton textile industry the total provision of Rs. 100 crores includes Rs. 33 crores expected to be spent on modernisation. It is expected

An investment-output ratio of approximately 100:120 is obtained from industries other than iron and steel for which plans have been prepared. If cotton textiles are excluded, the ratio is 100:110, the ratio for cotton textiles being 106:60. The investment-output ratios have been calculated as the relation between the investment in fixed capital and gross output. They are, therefore, not comparable with other ratios calculated on the basis of contribution to national income from the sector concerned, or "value added" as understood in the Census of Manufactures. The ratios relate to new units established on the economic basis and working on the number of shifts usual in the industry concerned. They will be useful in indicating the turn-over that can be expected from a certain volume of investment, a measure taken into account by business men. The level of gross output that can be expected from planned investment is also significant in relation to the study of problems of money supply and prices.

The employment estimates take into account only the direct permanent employment in the units concerned after the period of construction is over. Employment during the construction period and

The Pioneers of Progress!

 From the time of Edison's invention of the first incandescent lamp, the G. E. Scientists have continued to contribute to the world of science, new facts, new discoveries and new theories. The list of their many and diverse contributions is long—hundreds of scientific and technical papers include the works of Charles P. Steinmetz, William D. Coolidge, C. G. Suits, Willis R. Whitney, and Irving Langmuir, regarded the world over as being among

the greatest authorities in their respective fields.

Under the leadership of these great scientists, the products of General Electric have grown in quality and their wide diversification.

The work of G. E. Scientists never ends. From their future work will come new discoveries... new developments to benefit the expanding electrical age and the infant atomic age... to enrich the modern civilization with new and better products.

Dr. Willis R. Whitney

The progress of various industrial undertakings in the public sector under the control of Ministry of Production and the future plans for their development were also made available to the Central Advisory Council of Industries. It was stated that there are 11 existing State collieries, which are administered departmentally. No new collieries have been opened up by the State in recent years. Work has been started in the Korba coalfield in Madhya Pradesh, which is expected in a few years to yield annually three to four million tons. Annual production in the existing State collieries has been of the order of three million tons. The profit on the working of these collieries during

The Lignite Project

Investigations for mining the lignite deposits in South Arcot district (Madras State) are in progress. A Project Co-ordinating Committee was set up on 25th January, 1955 with five representatives of the Central Government and three representatives of the Government of Madras. The Committee has been asked:

- to carry over and complete all the investigations considered necessary, including those to determine the extent, situation nature of the lignite deposits, ground water conditions, etc. and other facts on the nature of lignite deposits and suitable methods for processing it; and
- to prepare for the Central Government's consideration a project report on the most economical and suitable scheme for mining and utilisation of lignite.

Messrs. Powell Duffryn Technical Service Limited, who had submitted to Government a preliminary project report, are carrying out drilling and pumping tests. So far, 11 bore holes have been dug to test the extent of the lignite deposits. The results of these tests broadly confirm the earlier exploration results and indicate that lignite seams vary from 28 feet to 65 feet. The project authorities have indicated that the drilling of the remaining bore holes and the installation of pumps will be completed by October 1955. The existence of ground water under pressure is the main problem. It is expected that pumping tests to assess the extent of pumping required and its cost will be completed by the end of February 1956. The consultants might take about two months to complete their final report and the Government will be in a position to arrive at a final decision shortly thereafter. The Government's tentative view is that it would be most appropriate and economical to have a continuation project to move lignite, use it for power generation and fertiliser production and also to process lignite in the form of briquettes for domestic fuel. One of the schemes put forward by the consultants, now under investigation, envisages the mining of 3.2 million tons of lignite annually to produce 211,000 k.w. of power to supply an ammonium sulphate fertiliser plant producing 200,000 tons a year and a briquetting plant to make 714,000 tons of lignite briquettes for domestic consumption as fuel. It is possible that in the light of the recent investigation of the Fertilizer Production Committee, the final decision may be to produce a still larger quantity of fertilisers.

Planning Commission's Review

Programmes of development for industries in the private as well as the public sectors under the second five year plan were reviewed by the Planning Commission's Steering Committee on Industrial Planning. Mr. K. C. Neogy, Member (Industry), Planning Commission, presided. Discussions covered shipping, ferro-alloy and tool steel plant, railway rolling stock production and the fertiliser industry. On the question of shipping expansion, the Committee was of the view that the possibility of including the construction of a second shipyard in the second five year plan should be examined, having regard to the substantial target of 500,000 G.R.T. for shipbuilding proposed. This question would be examined further at a meeting with the Ministry of Production proposed to be held on 16th August, 1955, to discuss the development programme for the shipbuilding industry.

In regard to the establishment of a ferro-alloy and tool steel plant under the expansion programme of the Mysore Iron and Steel Works, the Committee noted the conclusions reached by Messrs. Ramseyer and Miller and came to the conclusion that provision should be made for a ferro-alloy and tool steel plant during the second five year plan having regard to the large-scale programmes of development of capital goods industries envisaged. The Committee then discussed the planning of the fertiliser industry, and was of the view that the possibility of organising production on the basis of the by-product coke oven gas from the steel works should be explored.

In regard to stepping up production at the Chittaranjan locomotive factory and the integral coach factory at Perambur, the Committee stated that production should be organised, if possible, on a triple shift basis, or at least on a double shift basis in order to get the best out-turn from the capital investment. The scope for expanding production of locomotives at the Tata Locomotive and Engineering Works on the basis proposed by them, namely, 50 locomotives with 75 percent of indigenous components and 50 locomotives with 40 percent of indigenous components should be considered by the Ministry of Railways. It was noted that bulk orders of fewer varieties of locomotives in place of the existing practice would assist larger production to be achieved. In this context, there was a discussion on the desirability of operating the installed capacity of the industry on a three shift basis. The need to ascertain the point of view of labour organisations in this connection was emphasised. The view was also expressed that, apart from the reluctance of labour to work a third shift, there are certain other difficulties in the way of operating plants on a triple shift basis. Every endeavour will, however, have to be made to operate the productive equipment in different industries on a double shift basis.

London

CONTINUING INFLATION CAUSES ANXIETY

JUNE TRADE FIGURES DISCOURAGING

(FROM OUR LONDON CORRESPONDENT)

THERE can be little doubt now that the Government is seriously perturbed at the inflationary trends so noticeable in the British economy. Mr. Butler's credit screw has now shaken the boom on the stock exchange, where repeated warnings have been disregarded. The July issue of the Treasury's "Bulletin for Industry," for instance, drew pointed attention to the heavy burden which the industrial expansion is placing on the balance of payments; to the large additional imports of coal and steel needed this year and their effect on shipping freight rates; to the shock created by the June trade figures which, though they may have been upset by the dock strike, still disclose that exports must be expanded to offset the rising import bill. Can that be done in the face of rising costs? The article shows that since 1950 labour costs per unit of output in Germany have remained about stationary; in the United States they have risen 2 to 3 percent a year; and in the United Kingdom they have risen about twice as fast as that, and appear to be rising still.

This warning has been reinforced by others. The cost-of-living index rose by three points last month to 150, the highest figure since the index was introduced. Vegetable scarcities are given as the explanation for this big jump—a rise is usual about this time of the year—and higher road and rail passenger fares have also contributed, but it must be remembered that the higher cost of coal has yet to be reflected in the index, so that on this occasion the seasonal rise may not in fact adjust itself. Another adverse pointer is the Board of Trade's index number of basic material prices. After falling in each of the three preceding months, this rose in June by 1.4 percent, and at 151 was back to the March level. Higher prices for raw rubber and copper were only very slightly offset by lower prices for raw jute. On the other hand, the June terms of trade were slightly encouraging, even though it may mean extra effort on the part of exporters in meeting foreign competition. The index number of import prices remained unchanged at 103 for the third successive month, whereas that of export prices rose by one point to 102. The ratio between the two improved from 102 to 101.

Another Turn of the Screw

In the face of all these developments, it will be particularly interesting to see what the Chancellor of the Exchequer has to say when he makes his promised statement on the economic situation in the House of Commons next week. It is generally anticipated that he will announce a tightening of hire purchase restrictions on certain classes of goods, especially cars, with television sets and radios also likely to be affected and even the domestic equipment sales of the nationalised gas and electricity industries. The initial down-payment of 15 percent which now applies may be raised by regulations to 33 1/3 percent. A further rise in the Bank rate—and it would probably have to be to 6 percent to prove effective—is not entirely ruled out, but would almost certainly be left as a last resort in view of the possible adverse effect it might have on the foreign exchange position. An autumn Budget is another possibility if it becomes really necessary, though no decision in this respect has yet been taken. It is practically certain, however, that a Miscellaneous Financial Provisions Bill will be introduced later this year to effect administrative changes which would have been incorporated in this year's Finance Bill had it been of normal size.

Pending his statement the Chancellor has been at some pains to stave off awkward questions in Parliament. He was quizzed this week on the future of the pound sterling. With regard to convertibility, the three conditions which must precede the move—"credit, a sound internal policy, and widening of the boundaries of trade"—still stand. None of them has yet been fulfilled, so obviously convertibility is still a matter for the future.

Tackling the Coal and Steel Problems

Meantime, several expedients are being adopted to overcome what must be the principal problems—inadequate supplies of coal and steel. Mr. Geoffrey Lloyd, the Minister of Fuel and Power, successfully survived the critical debate with regard to the former in the House of Commons. He outlined a policy which anticipates the maintenance of coal output by further mechanisation, meeting the ever-increasing demand by at first a greater use of oil instead of coal until 1960, and thereafter by using atomic energy. As immediate aids to fuel economy he referred to the increased price as a powerful incentive, but in addition is going to abolish the loan limit on fuel-saving measures. To meet the criticism of increasing coal imports he reported that exports would be "sharply reduced" next year, bringing a corresponding reduction in imports, and anticipated that the gap would be filled within a period of five years. The whole of this policy, however, is a long-term one. The real problem, however, is that coal output so far this year is more than 3 million tons down on 1954. Exports are also down, by 1,660,000 tons, while imports have risen by nearly 53 million tons.

The steel situation is not perhaps quite as desperate, but is nevertheless causing anxiety to users. Here also imports play a large part, for on them depends the maintenance of uninterrupted

working in many industries. To ensure this the Board of Trade has agreed to an extended period of duty-free imports. A new order suspends until 18th March, 1956, the duties on a wide range of iron and steel products, most of which, including tinplate and tinned sheets, are already suspended from import duty until 18th September of this year. In the case of cold-rolled steel sheet of a value of less than £80 a ton the suspension is extended until 18th September, 1956. To ensure adequate supplies of ferro-manganese to British steel makers the Government has also decided to suspend the duty on blast-furnace ferro-manganese until 18th March of next year. It is likely, however, that British steel prices will rise by something like £2 a ton following on the recent increase in the price of coal, so even though supplies may be ensured the engineering export industries will find themselves hard pressed to hold their present prices.

Anti-Dumping Legislation

The President of the Board of Trade, Mr. Thorncroft, accompanied by his Minister of State, Mr. Low, met the Lancashire group of Conservative members one afternoon last week for a talk on the textile industry. The meeting was by way of a preparation for the President's meeting with the Cotton Board in London this week. Mr. Thorncroft told the Lancashire Tories that the Government's anti-dumping bill would appear after the summer recess and would follow the lines of anti-dumping legislation in other countries and be aimed at goods of which the price was either subsidised by the Government of the country of origin, or was below the domestic selling price. He also reported that a most careful check had been made in Hong Kong by Customs officers and others on the origin of textiles exported from that Colony to this country. As a result the Board of Trade was convinced that these textiles were made in the Colony and were not transhipped from Japan.

The President had no great comfort to give about the price at which the United States would release surplus cotton. He assured his visitors that the British Government had made the most emphatic and persistent representations to the United States administration in favour of a statement of intentions that would remove the present uncertainty, and of the establishment of some system which would prevent the same kind of uncertainty recurring in future years. Nothing more could be done.

Ship Output Improves

Work is being speeded up in Britain's shipyards, giving quicker deliveries, it is revealed in Lloyd's Register of Shipbuilding Returns. Output improved greatly in the past three months, with 19 more ships being launched than in the first quarter of the year and five more being completed. There was a slight decrease, 62,612 tons, in vessels

being built, but more were for abroad than in the previous three months, being 36.7 percent of our output. Norway and Panama continue to be our best customers. There is a slight fall throughout the world in the demand for oil tankers, but there are indications of an increase for cargo ships. Britain still leads the world with 338 ships of 2,081,574 tons building, or 34.12 percent of world output. Germany retains second place with 255 ships of 752,030 tons, or 12.33 percent. While Germany showed a greater increase in shipbuilding in the second quarter, Britain began, launched, completed and continued to sell more abroad. Germany's biggest customer is Britain, with 11 ships.

According to the figures of the Shipbuilding Conference, Britain had 150 ships on order for abroad, yielding £125 million, at the end of June. This, it is said, greatly exceeds the small orders placed elsewhere by certain British owners. Our yards are generally booked for at least two years, with total orders valued at £525 million.

Tea Topics

There have been several items of interest for those interested in the tea trade. The first of these deals with tea imports into this country, which for the first five months of this year were 230,791,000 lb. against 213,613,000 lb. in the same period last year. Out of this, total imports from India and Ceylon were 181,351,000 lb. against 185 million lb. a year ago. The increase has, therefore, come entirely from the other countries. Pakistan, Nyasaland, Portuguese East Africa and other foreign countries have more than filled in the gap left by India and Ceylon.

The second item has caused some concern to shareholders here in Pakistan tea companies. It was the announcement that three tea estates in the Buchanan group which have made record profits are unable to pay dividends because the Pakistan exchange authorities have made difficulties about remittances of currency to Britain. Even the profits for 1953 have not yet been remitted, due to "continued difficulties experienced with the Pakistan Exchange." One company is Baraora (Sylhet), whose profit is up from £123,000 to £200,000, and the others are a smaller company—Novanara—showing a profit rise from £68,000 to £87,000, and Doloi. All three are deferring dividend declarations for 1954. It is understood, however, that negotiations are now being conducted which give hope that a solution will be forthcoming within a few months.

The third item concerns the sale by the Assam Company of two outlying tea estates for a sum of £575,000. The Assam directors say they will decide what to do with the money when it has been received and remitted to Britain. And they add that they do not intend to sell any more estates.

4 PER CENT. STATE GOVERNMENTS LOANS 1967

(1) Government of Andhra	Rs. 250 lakhs	Issue price	Rs. 99 8 0	per cent.
(2) Government of Bihar	Rs. 150 lakhs	Issue price	Rs. 99 0 0	per cent.
(3) Government of Bombay	Rs. 600 lakhs	Issue price	Rs. 100 0 0	per cent.
(4) Government of Hyderabad	Rs. 200 lakhs	Issue price	Rs. 99 0 0	per cent.
(5) Government of Madhya Pradesh	Rs. 100 lakhs	Issue price	Rs. 99 8 0	per cent.
(6) Government of Madras	Rs. 700 lakhs	Issue price	Rs. 99 12 0	per cent.
(7) Government of Mysore	Rs. 275 lakhs	Issue price	Rs. 99 0 0	per cent.
(8) Government of Saurashtra	Rs. 200 lakhs	Issue price	Rs. 99 0 0	per cent.
(9) Government of Uttar Pradesh	Rs. 600 lakhs	Issue price	Rs. 99 8 0	per cent.
(10) Government of West Bengal	Rs. 500 lakhs	Issue price	Rs. 100 0 0	per cent.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 16th AUGUST, 1955 AND CLOSE ON 31st AUGUST, 1955 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

Each loan will bear interest from 1st September, 1955. Interest from the date of application to the 31st August, 1955 inclusive, will be paid to the applicants at the time of issue of new securities at the rate of 4 per cent. per annum on the nominal value of the loan applied for and accepted.

Subscriptions will be in the form of cash/cheque in respect of all the loans.

3% Bombay Government Loan, 1955, 3% Madras Government Loan, 1955 and 3% Madhya Pradesh Loan, 1955 will be accepted at par and 5% Mysore Government Loan, 1955 at Rs. 100-8-0 for conversion into the new loan of the Government concerned; interest on the securities of the respective loan tendered for conversion will be paid upto and including the 15th August, 1955.

Applications for all the loans will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Bangalore.

Applications for any particular loan other than Hyderabad and Mysore Government loans will also be received at branches of the State Bank of India and at Government Treasuries and Sub-Treasuries within the State issuing the loan as indicated in the relevant loan notifications. Applications for West Bengal Government loan will not be accepted at Treasuries and Sub-Treasuries.

In the case of Hyderabad Government loan applications will be received at branches of the Hyderabad State Bank and at Government Treasuries and Sub-Treasuries in the Hyderabad State. For Mysore Government loan applications will be received at branches of the Bank of Mysore Ltd. and at Government Treasuries and Sub-Treasuries in the Mysore State.

N.B.—Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Uttar Pradesh

THE COST OF THE KANPUR TEXTILE STRIKE

RATIONALISATION PROSPECTS

(FROM OUR LUCKNOW CORRESPONDENT.)

THE textile mills of Kanpur have started working again after 80 days of strike and life in the industrial metropolis of Uttar Pradesh has returned to normal. The strike was called off on the basis of an agreement on 14 points evolved in the course of negotiations between the Chief Minister and a deputation of the Suti Mill Mazdoor Sabha which had sponsored the strike. These points included the appointment of a committee to assess the workload and other cognate issues and for considering every scheme of rationalisation submitted by either party on its merits, suitable joining time, no retrenchment, no victimisation of workers returning to their jobs, the re-examination of the nine-hour shift question and the reconsideration of other demands submitted in the strike notice. These demands, it may be recalled, relate to the fixation of minimum basic wages for workers, scheme of retirement gratuity, irrecoverable suspension allowance, attendance allowance for substitutes, etc. The decision of the committee to be appointed will be applicable to all mills, including those where rationalisation is already in force.

For a time it looked as though the negotiations would break down because of a difference of interpretation put on the 14 points, especially that relating to victimisation, by the employers, but the Suti Mill Mazdoor Sabha has obviously been satisfied with the clarification given by the Labour Commissioner. A resolution adopted by the General Council of the Suti Mill Mazdoor Sabha calls the terms on which the strike has been called off as a "glorious victory", but a statement issued by the Chief Minister, Dr. Sampurnanand, makes out that labour has gained nothing by the strike inasmuch as the situation now does not materially differ from that which obtained after the tripartite conference in Naini Tal last year.

Dr. Sampurnanand's statement says in part: "Government are announcing the appointment of a Committee with Mr. Bindbasni Prasad, retired judge of the Allahabad High Court, as chairman, to go into the question of rationalisation in terms of the principles evolved and agreed upon at Naini Tal last year. Rationalisation of the pattern envisaged at Naini Tal has quite properly been accepted by all parties. These principles, it will be apparent to anyone who will approach the question from an unprejudiced angle, are comprehensive enough to cover all matters incidental to and legitimately connected with rationalisation. The committee will comprise representatives of industry and labour in equal numbers. It would be desirable that the committee should arrive, as far as possible, at unanimous decisions but any questions that cannot be settled by mutual agreement will be decided by the Chairman and his decision

will be final." The Chief Minister has paid a warm tribute to the rôle played by the I.N.T.U.C. in countering the strike while the Suti Mill Mazdoor Sabha, without mentioning the I.N.T.U.C. by name, has referred to "disruptive forces" seeking to wreck labour unity. The names of the members of the Committee have not been announced but it is clear that labour representatives will not be drawn exclusively from the leadership of the Suti Mill Mazdoor Sabha. It is the Sabha's contention that any rationalisation scheme which ignores the managerial, marketing and financial aspects of the industry cannot be called real rationalisation but Dr. Sampurnanand regards this wider problem as something which has to be tackled on an all-India basis.

The strike, which started on 2nd May and lasted for 80 days, caused a total loss of about Rs. 7 crores to labour, employers and the Government. The striking workers have lost more than Rs. 1 lakh a day in wages. The textile mills in Kanpur normally produce cloth worth about Rs. 5 lakhs a day and on an average pay excise duty of about Rs. 50,000 a day to the Union Government. The textile industry in Kanpur pays nearly Rs. 3 crores as income tax. The Kanpur Electric Supply Administration, a State-owned undertaking, has suffered a loss which may run into several lakhs. The voluntary unemployment of tens of thousands of workers has affected general trade in Kanpur.

Talks on Sugar

Problems of the sugar industry and of sugarcane growers were informally discussed at a tripartite conference here early last week. The consensus of opinion was that the cane crushing season for 1955-56 should start on 15th October, a month earlier than usual. The factory owners, however, demanded that in that event there should be a reduction in the price of cane as crushing before the cane is fully ripe will result in lower yield. The millowners also expressed the fear that in view of the over-production in the past year, the carry-over would be more this year. They therefore demanded a guarantee that, as in the case of wheat, the Government would purchase the extra stocks at the fair price of Rs. 28.7 including excise. In the alternative they asked for an assurance that if the price of sugar went down, the Central Government should make purchases at the above rate. The Central Government, which was represented at the conference by Mr. A. P. Jain, did not share the apprehension of any large carry-over.

In 1954-55 an all-time record was established in U.P. and in the country for sugar production. Cane crushed in U.P. amounted to 256 crore maunds against 15.4 last year and 24.5 in 1951-52, the last record. The production of sugar in U.P. alone was estimated at 9 lakh tons as against the whole country's production last year of 10 lakh tons. The production in the country as a whole for 1954-55 amounted to 16.5 lakh tons. In addition to the domestic production, 4 lakh tons were imported from abroad. The main reason for increased supply of cane to the sugar factories is believed to be the low price of gur. The other factors were a slight increase in the average yield of cane an acre and some addition to the installed capacity of the industry. In consequence, while during the earlier part of the season sugar fetched a good price, later in the year, owing to excess production and a drop in consumption because gur was cheaper than last year, sugar prices registered a decline. The view was expressed at the conference that the price of sugar should remain decontrolled as in the last three years, but the Government at present seems to be considering whether its policy of reserving 25 per cent of production for release at a price notified by the Central Government, if the price becomes unreasonably high, should continue. The Government is also considering whether the partial control on the movement of sugar should not be liberalised.

With regard to the fixation of the cane price for 1956-57 the recent trends in sugar and gur markets and the position of cane in relation to other crops have been so uncertain that it is considered difficult to visualise the conditions that will exist 18 months hence. Further, there is no reliable data on the basis of which the cost of cane cultivation may be made applicable to the whole of the State or even to large tracts. Cane growers are naturally averse to any proposal for scaling down prices which, in their opinion, must bear close relation to sugar prices. On the other hand, the general fall in agricultural prices indicates that sugarcane might find it difficult to survive the trend in isolation. Representatives of growers, however, argue that precisely because other agricultural prices have fallen, the lot of the kisans should not be made harder by a cut in cane prices also.

The underlying fear in U.P. and Bihar, that their present lead in sugar production may be stolen by other areas geographically better situated, was voiced by the Chief Ministers of both States at the meeting of the Joint Sugar Control Board in Ranchi which followed the tripartite conference in Lucknow. U.P.'s Chief Minister, Dr. Sampurnanand, appealed to the Union Government to keep in view the effects on U.P. and Bihar of the Centre's policy of giving licences for new sugar mills in other parts of the country. The Union Minister for Agriculture, Mr. A. P. Jain, however, conveyed the assurance that the Government of India actually wanted more sugar factories in U.P. As regards plans for future development, it was officially stated that so far, excepting eight factories which had submitted their development plans offering nearly Rs. 10 lakhs for tubewells, roads, etc., the others were keeping silent. Growers' representatives have suggested that instead of asking the mills for charity, one anna more should be added to the growers' price and the receipts should be earmarked for a development fund.

Jute

JUTE AGRICULTURAL RESEARCH

NEED FOR GREATER ATTENTION TO METHODS OF PREPARING FIBRE

IN these notes some weeks ago, stress was laid on the necessity of directing research towards the production of jute strains giving higher yields of fibre per green weight. There is also another aspect of the matter. Much time, labour and money is being spent on the production of varieties yielding higher quality fibre, but it is questionable if that is necessary.

In the past generation there has been a great improvement in the quality of jute grown in the districts which are still in India. Twenty-five to 30 years ago, Murshidabad jute was sold as "jungli" and Calcutta mills could hardly be persuaded to touch western Purnea jute "even with a barge pole". Nowadays the jute from these districts is easily marketable. Partly, of course, that is because the mills are now using it from sheer necessity and, partly, because the improvement in mill machinery facilitates the use of lower grade fibre. To a considerable extent, however, it is because the quality of the fibre produced in these districts has greatly improved.

In these circumstances, it would be interesting to enquire what has brought about this improvement. In our opinion, the chief reason is the spread of knowledge of better methods of preparation of the fibre after the plants have been harvested. In the old days, the bulk of the produce of crop in these districts was spoiled because the plants were retted in muddy water which ruined the colour and the quality of the fibre. Sufficient care was not taken in the washing of the fibre after retting and when it reached the mills it contained a large amount of mud and dust which resulted in loss of weight to the mills. In other districts, where the retting and washing was done in cleaner water, no effort was made to wash away loose leaf, and the jute, though of good colour, contained masses of particles of bulk leaf which dropped its market value straightaway. We do not say that these defects have been eliminated but their prevalence has been much reduced. It would seem, therefore, that the improvement in the fibre of jute grown in the districts formerly described as "jungli" is largely due to the spread of knowledge of better methods of preparing the fibre after harvesting. An intensified campaign of instruction in this subject would, we think, have great possibilities.

Tanks for Retting

Some appreciation of the importance of retting and the supply of good retting water was indicated in the report of the last Jute Enquiry Committee which proposed that the Governments of the various States concerned should subsidise the excavation of new tanks and the re-excavation of old ones. It has not been possible to find out what has been done in this matter over the States as a whole, but a survey covering about 2,000 square miles of West Bengal revealed only some half a dozen old tanks being re-excavated and no new ones.

We have dealt with this matter at some length because, unlike the matter of producing more fibre per plant, we think it has not received enough attention. Most research has been directed towards producing bigger plants and higher grade fibre. The latter should in fact receive least attention. If the fibre produced at present receives proper treatment during and after retting, it will serve all the purposes for which the mills in India require it. Year after year the highest grades of fibre are the most difficult to sell and usually have to be sold off at a discount to get rid of them. Even today when mills' stocks of raw material are low, it is only low quality they want. Their stocks of the higher qualities are sufficient, and merchants and dealers are holding stocks of good qualities for which they cannot find buyers. Why, then, waste money trying to produce stuff which is not in demand? Why not spend the money in giving the growers in backward districts more instruction in better methods of cultivation and preparation of the fibre so as to supply the industry with the class of fibre it needs—not something which is already a glut on the market. What is required for general production is a crop yielding 75 per cent to 80 per cent bottom quality. To spend money trying to produce fibre suitable only for specialised goods for which the demand is a trifling percentage of the total is sheer waste.

SPECULATION DOMINATES GOODS MARKETS

THE trend of the jute markets over the past week has been governed by speculation, rumour and counter rumour. Rival factions have been very active in the fatka market and a keen battle between bears and bulls resulted in heavy goods prices jumping Rs. 40 to Rs. 60 a ton according to delivery. The accent, of course, has been on the speculative ready B Twill position, and the pressure has been so great that the parity between B Twills and heavy Cees has undergone a complete change. Under normal circumstances ready and

forward shipment plain heavy Cees are quoted at a premium of about Re. 1 a 100 bags over B Twills, but after the weekend ready B Twills were at a premium of nearly Rs. 5 over Cees, while in the forward position the normal parity was maintained. The squeeze in the ready position, although partially expected due to the nearness of the July settling date, was brought about mainly as a result of bears covering their sales on account of the very low sacking stock position. Other fabrics in the sacking section along with hessians were completely neglected and thus a false market was created as all other quotations were inflated in sympathy. Local shippers and overseas buyers remained completely out of the market, and very little real goods business was transacted. Calcutta mills were unable to reap any benefit from the high prices ruling, as apart from the fact that only a few had ready stocks to sell, the majority of enquiries never reached the manufacturers, but were absorbed in the bazaar.

In the hessian section, the market has ruled firm in sympathy with sacking. Shipments of hessian are still improving, but this cannot be regarded as a bullish factor, as the greater portion of these shipments consist of the backlog against cancelled shipping instructions in previous months. The increase in American hessian consumption last month, along with the fall in stocks, has not revealed any increase in American interest, but it is most unlikely that the United States will show its hand whilst present prices prevail. In the meantime it is again reported that Pakistan has done business in several centres, mainly East and West Africa, at prices considerably lower than those quoted by India. Reports from consumers indicate that the quality of the goods sold are infinitely superior to anything that India can produce at an equivalent price, and provided that the present standard is maintained, Pakistan will have no difficulty in disposing of any surplus goods she may wish to offer.

Floods in Jute Districts

From the jute growing areas come reports that flooding has occurred due to the recent heavy rains. River levels in many districts are now reported to be higher than the highest levels reached during the peak of the flooding last year. It is not anticipated however that there will be very much damage to the jute crop as in most of the lowland areas harvesting has been completed. In spite of this, news of the floods has had a considerable influence on the Calcutta jute markets, and sellers have become very reserved for early delivery jute, and in many cases withdrew from the market completely. With the possibility of communications being disrupted on account of the floods, Calcutta mills have, in many cases, expressed concern regarding the delivery of their early purchases. These may look good on paper, but in the present circumstances buyers would rather have the jute in their godowns, and this has brought forth a spate of enquiries for quick delivery jute, either ready ex-Calcutta or Bills of Lading. Sellers, however, who have any stocks or have jute afloat, are very reserved and prices quoted have been well out of line with mills' ideas and only small business was done.

THE JUTE MARKETS

Manufactured Goods: The finished goods market opened on a steady note last Thursday with sacking recording a small advance and hessians unchanged. Ready B Twills were quoted at Rs. 111 a 100 bags and October-December shipment at Rs. 103-8. 40" 10oz hessians, although neglected by overseas interests, had a steady undertone and quotations were based on Rs. 42-6 for ready delivery and Rs. 41 for October-December shipment. Heavy speculative covering in the near sacking positions caused ready B Twill rates to advance rapidly and by Friday morning quotations were Rs. 1-8 higher than the previous day. There was no interest in the hessian section and prices were unchanged for all deliveries. The squeeze in the sacking section continued due to the nearness of settling day and the shortage of ready goods, and prices advanced steadily. Overseas buyers did not follow the rise and remained completely out of the market, leaving the way clear for speculators. The latter were not slow to take advantage and heavy speculative activity over the weekend forced ready B Twills up by Rs. 2-8 a 100 bags, and Monday's opening quotations were based on Rs. 116-4 for ready delivery and Rs. 106 for October-December shipment. Hessians advanced in sympathy and 40" 10oz. was quoted at Rs. 43 and Rs. 41-8 a 100 yards for the near forward positions respectively. Mills were keen sellers at these rates but there were no buyers, and the only business transacted was inter bazaar speculative exchanges. At this stage the market was completely in the hands of speculators who manipulated it through wide fluctuations to create an entirely false impression of the true state of affairs. Reports of flooding in the Assam jute growing areas gave operators a further excuse for activity and very steady conditions prevailed.

At the close the market continues to rule steady and opening quotations on Wednesday morning

were as follows:—

	Ready	August	Sept.	Oct.-Dec.	Jan-March
	Rs.	Rs.	Rs.	Rs.	Rs.
40" 8oz.	35-4	35-4	35	33-14	32-12
40" 10oz.	42-14	43	42-14	41-12	40-8
B. Twills	115-12	113-6	110-4	105-12	102-3
Heavy Cees					
(Plain)	111-4	113-4	111-4	106-8	103
A. Twills	139	138	136	132-8	127
Liverpools	127-8	127-8	126-8	121-8	116-8

Raw Jute: There has been a very steady tendency in the raw jute markets throughout the week under review, and prices have shown a steady rise. Early in the week, in sympathy with the improved finished goods market, raw jute ruled steady and sellers were inclined to be reserved. Calcutta mills began to show a fair amount of interest for jute both in the forward and near positions, but their eagerness for business only strengthened sellers' ideas and the amount of business put through was negligible. Prices continued to rise, but in spite of this mills' interest showed no signs of slackening, and after the weekend, at more or less the peak of the market, they were keen buyers. The main interest centred on ready delivery Old Crop jute, either ex-Calcutta or ready Bills of Lading, but sellers were not willing at this stage to release their holdings. The news of heavy flooding in Assam, even though the jute areas were not affected to any great extent, had a very bullish influence on sellers, who, anticipating breaches in rail and road communications, preferred to bide their time and "cash in" on any temporary shortage that may result from the transport delays. Both buyers and sellers are showing concern over the possibility of their jute contracts not being fulfilled as a result of transport difficulties, especially as many of these carry a "guaranteed delivery" clause, and sellers stand to lose considerably due to cancellation of contracts and presentation of market difference bills. Mills, on the other hand, are liable to be held to ransom should they have to purchase ready jute to tide them over the delay and thus the vicious circle continues.

New Crop raw jute rates have shown a steady advance over the past week, and Ordinary Assam Bottoms, after opening unchanged on Thursday last at Rs. 26-8 a maund for August-September shipment, had risen Re. 1 a maund by the weekend. Heavy buying pressure coupled with the very firm goods markets over the weekend pushed rates up to Rs. 28-8 by Monday morning and the market was very firm. Reports of flooding in Assam caused sellers to be very reserved and although there was a fair amount of buying interest on the market only small business was reported.

During the week business concluded in Old Crop jute was very small, and was mainly confined to low grade jute. Jungli Mesta was done at Rs. 27-8 a maund basis Bottoms and Daissee Mesta at Rs. 26-8 a maund, both for one month's delivery whilst Bimbi was purchased at Rs. 27 a maund for F.A.Q. for July-August shipment and July delivery ex-Calcutta. In the pucca bale section Pakistan Jat Cuttings were done at Rs. 110 to Rs. 115 a bale for ready delivery and ready Bills for Lading, while ropes were done at Rs. 124-8 a bale and H. J. at Rs. 122-8 a bale also for ready delivery.

A fair amount of business was done in New Crop jute and a wide range of deliveries was covered. Dhubi-Northern jute was purchased between Rs. 28 to Rs. 30 a maund basis Bottoms for

guaranteed August shipment, at Rs. 26-8 a maund for August-September shipment and towards the end of the period at Rs. 27-4 for October-December shipment. Upper Assam jute changed hands at Rs. 26-12 for the same shipment and Purnea jute at Rs. 26 a maund basis Bottoms for August 15th September shipment.

In Pakistan jute small business was done for Pakistan Northern at Rs. 27-8 to Rs. 28-8 a maund basis Bottoms for August-September shipment. Jat Cuttings were also done at Rs. 100 a bale for August shipment, Rs. 95 a bale for August-September shipment and Rs. 90 a bale for August-December shipment in equal monthly quantities.

At the close the market is very firm as a result of the floods in Assam. Prices have advanced a further eight annas a maund on Wednesday morning. Opening quotations were as follows:—

Landed at Mills. Rs. a maund Basis Bots.		
Indian Jute.	New Crop.	Shipment.
Lower Assam	29-9	August-September
Upper Assam	29-9	"
Northern	29-8	"
Daissee—ex Sheoraphuli	28	October-November
Daissee White	30	August-September
Daissee Mesta	24-8	October-November
Bimil	25 for F.A.Q.	"

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rates for White Jute.

Rs. a maund Basis Bots.		
Pakistan Jute.	New Crop.	Shipment
Jat	30-8	August-September
District	30	"
Northern	29-8	"

There is very little to report from the local Cossipore markets, although mill interest in ready delivery jute has kept the market firm. Imports are very small and sellers are placing these to stock in anticipation of a rise in price. At the close Kishanganj jute is quoted at Rs. 31 a maund for garat quality. Reports from the Daissee areas are encouraging as far as the Daissee and Mesta crops are concerned, where recent rains have been beneficial to the standing crop. On the Sheoraphuli side plants range from four to five feet in height, and have not been affected by insects to the same extent as the plants on the eastern side of the river. In the Bongaon/Baduriah areas the plants are a little further ahead and are progressing favourably. The Daissee White Crop in all areas is being held up by the lack of steeping water, especially in the Chakdaha/Ranaghat districts, and the crop will probably be later than anticipated. Initial imports of Daissee White are reported to be immature and gummy and to contain a considerable amount of moisture.

Mofussil: Reports of flooding in many up-country areas have made all markets very firm. Sellers are very reserved and after an initial spurt at the beginning of the week business was at a standstill. Imports improved at the opening and in Dhubri rose to about 12,000 maunds a day, but towards the close had dropped to around 8,000 maunds a day. In the lowlands harvesting is almost completed, and the floods are not expected to cause very much damage. Latest quotations in Dhubri are based on Rs. 28 a maund basis Bottoms.

In Pakistan the markets are very firm and tend to excitement following the advances in the Calcutta markets. Demand for early jute is increasing and covering against July contracts is pushing prices up. Imports are increasing daily in all receiving centres and in Narayanjanj average about 20,000 maunds a day, of which 17,000 is loose jute and the balance baled. Harvesting of the lowland crop is almost completed, and work on the midlands is well in hand. Over the week loose jute rates have advanced about Re. 1 a maund, and latest quotations available in Narayanjanj are as follows:—

Pucca Bales (New Crop).		Katcha Bales.	
Rs. (P)	a bale.	Rs. (P)	a maund.
Mill Firsts	104	Jat Bot	18-8

" 4's	85	higher than White	
Narayanjanj Cuttings	63	Jute.	

INDIAN JUTE CROP REPORT

In their nineteenth crop report for the current Indian season, covering the week ended 23rd July, Messrs. Sinclair Murray & Co. Ltd., say that weather conditions have been mainly favourable for the progress of the standing crop and to provide steeping water in those areas where jute is ready for harvesting. In Assam, however, excessive rainfall was experienced which has held up harvesting operations in some areas and preparation of jute marketing. River levels have been normal in all districts with the exception of Assam where they are still above normal for this time of the year. Weeding operations have been completed everywhere.

DANPUR: Very favourable weather conditions were experienced with alternate spells of light rainfall and sunshine. Plant condition is very satisfactory and the plants range in height up to 7ft. Some harvesting has been reported on a negligible scale in areas where it is required to transplant paddy. The river has risen steadily and is the same level as at this time last year.

JAIPUR ROAD: Weather conditions during the past week have been very favourable with alternate rain and sunshine. Plant condition is very satisfactory and the plants range in height up to 5ft. 9in. The river level is slightly higher than at the same time last year.

COSSIMBAZAR: Very favourable weather conditions have been experienced with alternate rain and sunshine and in particular sufficient rainfall has supplied adequate steeping water. Some early

harvesting has taken place and it is estimated that 7/6 of the crop has been harvested so far. Condition of the standing crop is very satisfactory and plants are healthy, ranging in height up to 6ft. The river level is normal for this time of the year.

RANAGHAT: Moderate rainfall was experienced but heavy rainfall is still urgently required to benefit the standing crop and to provide steeping water. Some harvesting has, however, been taken in hand and it is estimated 7/6 of the crop has been cut so far in this area. Plant condition has improved and further insect damage has been checked. Plants range in height up to 6ft. The river level is slightly lower than at this time last year.

NOWGONG: Very wet weather was experienced and this has not been favourable for the standing crop or for harvesting operations. Hot and dry weather is urgently required to promote growth of standing plants and to enable cultivators to prepare cut jute for marketing. Due to excessive rainfall, harvesting operations in the midlands have been suspended but harvesting of the lowland crop has now been completed. Plant condition is not satisfactory although further rainfall may be detrimental to their progress. During the first half of the week, the river level rose steadily but latterly fell again steadily and is now the same level as last year at this time, which is above normal for this time of the year.

PALASHBARI: Favourable weather was experienced and weather conditions were mainly hot and dry. The condition of the standing crop is very satisfactory and continued spells of hot and dry weather would be beneficial. Harvesting operations have been going on freely and it is estimated that about 5/7 of the crop has now been cut and also that harvesting of the lowland crop has been completed. Midland crop harvesting is progressing steadily. During the first part of the week, the river level rose steadily but latterly has receded but is still 4ft. higher than last year at this time which is well above normal for this time of the year.

DHUBRI: Weather conditions have been favourable with alternate rain and bright sunshine. Plant condition is very satisfactory and the plants range in height up to 8ft. 6in. Harvesting operations have been going on steadily and it is estimated that 7/6 of the crop has been harvested up to date. The river level has fallen during the week and is now 6in. lower than last year at this time.

DAISSEE DISTRICTS: Weather conditions have been favourable with good showers of rainfall and occasional sunshine. Plant condition is healthy and the plants range in height up to 6ft. 6in. Harvesting of white jute in the extreme lowlands is proceeding slowly but more rainfall is still required to provide adequate steeping water before harvesting can be undertaken on a general scale.

Rainfall	For the week		Total		Rainfall over the Week-end
	1955	1951	from 1st 1955	any 1951

N.B.—As a basis of comparison, last season's sowings have been taken as -161%.

PAKISTAN JUTE CROP REPORT

In their twentieth crop report for the current Pakistan season covering the week ended 23rd July, Messrs. Sinclair Murray (Pakistan) Ltd., say that although heavier rainfall has been experienced in almost all areas, the weather has not been unfavourable for the crop. A spell of dry sunny weather would be beneficial and would allow cultivators to prepare for marketing the jute already cut and retted. The condition of plants is satisfactory and they range in height up to about 7ft. in midlands. Rivers continue to rise slowly and cutting in midlands is going on freely.

NARAYANGANJ: The weather has been wet for the most part but not unfavourable for the crop. Condition of plants continues satisfactory and they now range in height up to 1ft. 6in. Harvesting in midlands is going on fairly freely and the river level is about the same as last year at this time.

DACCA: The weather has been favourable with alternate rain and sunshine. The general condition of the standing crop is reported to be good and plants range in height up to 6ft. 6in. Harvesting is going on freely in the midlands. The river level has risen 1ft. 3in. during the week but is still 2ft. lower than at this time last year.

CHANDPUR: The weather has been favourable with alternate rain and sunshine. The condition of plants is satisfactory and the plants range in height up to 7ft. in the midlands. Harvesting of the midland crop is well in hand and the river level is 2ft. 6in. higher than at this time last year.

NIKLIDAMPARA: The weather has been favourable with alternate rain and sunshine. Condition of plants is satisfactory and they range in height up to 8ft. 3in. Harvesting of the midland crop is going on slowly and it is estimated that 7/7 has been cut to date. The river level has risen 1ft. and is now 3in. lower than at this time last year.

SARISHABARI: The weather has been favourable with alternate rain and sunshine. Condition of the crop is very good and harvesting in the midlands continues steadily. Plants range in height up to 6ft. 6in. The river level has remained steady and is now 8in. lower than at this time last year.

SIRAJGANJ: The weather has been wet and now some dry weather would be beneficial. The condition of plants remains satisfactory and plants of the midland crop range in height up to 7ft. 3in. Harvesting of the midland crop is going on freely and the river level has risen 6in. and is now the same level as at this time last year.

NAKALIA: The weather has been favourable with alternate rain and sunshine. The condition of the crop is satisfactory. Cutting of the midland crop is going on slowly and it has been estimated that 7/9 has been cut to date. The river level has continued to rise slowly but is still lower than at this time last year.

BHANGOORA: The weather has been favourable with alternate rain and sunshine. The condition

of plants is satisfactory and they range in height up to 8ft. Harvesting of the midland crop is going on steadily. The river level has risen 9in. and is the same level as at this time last year.

Rainfall	For the week		Total	Rainfall

N.B. As a basis of comparison, last season's sowings have been taken as -161%.

U.S. CONSUMPTION AND STOCKS

U.S. burlap consumption continued to increase during June. At an estimated 75 million yards, the total for the first half of this year is 409 million yards compared with 375 million yards (commercial use) for the same period last year—an increase of about 8 percent. Last June, the estimated consumption was only 61 million yards. U.S. burlap stocks, which have been increasing over the past several months, were 9 million yards less at the end of June than they were at the end of May. At an estimated 252 million yards, 157 million yards were spots and 95 million yards were floats. Appearing below are two tables which include the June figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

THE FOREIGN JUTE MARKETS

BUSINESS CONTINUES QUIET

(FROM OUR DUNDEE CORRESPONDENT)

THERE was still no change last week in the raw jute position and shippers continued to offer regularly at the minima for practically all grades. Some sellers were asking £1 to £2 more for Mill Lightnings and there were Mill Hearts at £73 10s for new crop, August-September, but buyers were refusing to pay more than the minimum rates of £80 for the Lightnings and £70 for Hearts, c.i.f. U.K.

Mill Firsts of good quality were obtainable at £90 and crack Daissee-2/3 at the same figure, with crack Tossa-2/3 at £110 and grade at £99, and Tossa-4 at £110 and £89 respectively, c.i.f. U.K.

A few small transactions were reported with spinners here. Business in jute yarns was still slow, but prices remained firm and unchanged. Spinners generally have sufficient orders on hand to keep them employed to the end of September, but there were one or two who were looking for business.

Manufacturers looked fairly well occupied with business for two to three months yet, but conditions generally were quiet. Prices ruled very firm at 12.48d for 10 oz. and 10.23d for 8 oz., a yard. Lord Barnby was asking in the House of Lords the other day when removal of control would take place in the jute trade. Lord Macroft (Home Under-Secretary) told him there was no control of U.K. jute manufacturers. The only control which remains is the centralised buying of Indian and Pakistan jute yarn and jute goods, and until an alternative method of safeguarding the U.K. jute industry can be worked out Lord Manfield would be unable to announce plans for the removal of these centralised purchases. He could not give any indication when it would be possible to introduce alternative safeguarding methods.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August, 1939=100) advanced by 1.3 percent to 354.7 during the week ended 9th July, 1955 as compared with 350.1 (revised) for the previous week. The index was higher by 4.0 percent relative to the corresponding week of the previous month but was lower by 6.7 percent than that of a year ago. The index for Foodstuffs advanced by 1.7 percent to 304.0 due to an increase in the prices of gur at Muzaffarnagar (+16%), gram and tea (+10% each), rice (+3%), wheat and coffee (+2% each). The prices of jowar (—17%) and sugar (—1%), however, were marked down. Higher prices of gingellyseed (+24%), groundnuts at Cuddalore (+18%), rapeseed in Bombay (+17%) and at Kanpur (+9%), castorseed (+12%), lac (+7%), manganese ore (average export prices) (+6%), raw cotton (+5%) and copra (+3%) raised the Industrial Raw Materials index by 3.5 percent to 412.8 as compared with 398.7 (revised) for the previous week, although the prices of linseed (—6%), rapeseed in Calcutta (—2%) and groundnuts in Bombay and raw silk (—1% each) showed declines. Prices of gingelly cake (+22%), castor oil in Calcutta (+11%), gingelly oil (+10%), mustard oil (—8%), copper in Bombay (+3% each), sheepskins (+5%), groundnut oil and zinc (+3% each), coconut oil (+2%) and goatskins and brass (+1% each) moved up while the prices of buffalo hides (—16%) cowhides (—12%), linseed oil (—4%) and copra cake (—3%) were marked down, and as a result the index for Semi-Manufactures recorded a rise of 0.6 percent to 331.6 as compared with 329.7 (revised) for the previous week. A rise of 0.2 percent to 370.6 as compared with 369.9 (revised) for the previous week in the index for Manufactures was brought about by an increase in the price of jute manufactures (+2%). The Miscellaneous group index remained almost unchanged at 567.8 as compared with 568.0 (revised) for the previous week due to the fact that a fall in the prices of betelnuts at Bangalore (—5%) and chillies at Patna (—4%) was almost neutralised by advances in the prices of dalda (Vanaspoti) (+4%) black pepper at Cochin (+3%) and cashewnuts at Quilon (+2%).

RECORD COMMONWEALTH WOOL CLIP

AUSTRALIA'S FOUR MILLION BALES

IT is estimated that the amount of Australian wool to be received into brokers' stores for disposal in the 1955-56 season will be 4,016,000 bales, the largest weight of current clip wool ever offered by Australia in a season. In announcing this figure, the National Council of Wool Selling Brokers of Australia and the Australian wool-growers' Council estimate that the clip will comprise 78 percent merino and 24 percent crossbred wool. Receipts into store in the individual States are expected to be: New South Wales, 1,401,000 bales; Queensland, 600,000 bales; Victoria, 1,093,000 bales; South Australia, 475,000 bales; Western Australia, 382,000 bales; and Tasmania, 65,000 bales. After consultation with the Bureau of

Agricultural Economics, it is jointly estimated that total Australian wool production in the coming season will be (in terms of greasy equivalent) 1,331 million lbs, compared with 1,288 million lbs in the 1954-55 season. The total for the coming season comprises 1,219 million lbs of shorn wool (including crutchings), 38.5 million lbs of dead and fellmongered wool, and 73.5 million lbs of wool exported on sheepskins.

Record Production in New Zealand

Record wool production is reported from New Zealand, the total quantity sold during the season just ended having passed the million bale mark for the first time. The actual figure, according to Mr. F. H. Mullins, secretary of the New Zealand Woolworkers' Association, was 1,002,863 bales, compared with 941,320 bales in the previous season. The gross sum received for the 1954-55 season, more than £70,000,000, was the second highest on record, and the average price of just over 49d was the third highest. The average price was a little lower than in 1953-54,

but the wool cheque was larger by nearly £4,000,000 because of the greater weight of wool offered.

S. Africa's Clip Heaviest for Twenty Years

South Africa's wool clip realised £58,833,245 in the 1954-55 season, announces the South African Wool Board. This is the fourth highest figure on record, being exceeded only by £90,800,000 in 1950-51, £64,200,000 in 1953-54, and £60,500,000 in 1952-53. More than one million bales of wool were sold during the season—the heaviest clip for 20 years.

INDIAN IRON ORE OUTPUT IN MAY

The output of iron ore in India decreased to 351,160 tons in May, 1955 from 381,128 tons in the previous month, according to official statistics released by the Chief Inspector of Mines. Returns received from 73 mines during the period show despatches totalling 2

United Planters	806	4/6

COCONUTS AND ARECANUTS PRODUCTION CAMPAIGN

For meeting the increasing demand for coconuts and arecanuts both from industry and the consuming public, the Union Ministry of Food and Agriculture has launched a campaign for increasing yields of these crops on the lines of the paddy and sugarcane promotion drives undertaken previously by this Ministry. As against an annual requirement of 32 lakh maunds of arecanut,

India produces 22 lakh maunds, with the result that nearly Rs. 30 million's worth of arecanuts are imported every year. Similarly India imports annually nearly 60,000 tons of copra seed and oil. Steps are being taken by the State Governments of Madras, Bombay, Travancore-Cochin, Assam, Mysore, Saurashtra, West Bengal, Orissa, Andhra and Coorg, where these crops are mainly grown, to popularise improved agricultural practices including adequate and timely manuring. Information on better cultivation methods is being made available to the growers by the distribution of instructional pamphlets through Agricultural Department officials and village level workers.

COCHIN TEA SALES

At Sale No. 15, 24 lakh lbs were on offer. There was a good general demand and prices were about steady for everything except fannings, which were dearer, and whole leaf, which tended easier. Demand was strong for good quality.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing Prices on 15-7-55	Average for the period
Sheet:		
No. 1	1.26 1/2	1.26 1/2
No. 2	1.23 1/2	1.23 1/2
No. 3	1.20 1/2	1.20 1/2
No. 4	1.10	1.10
No. 5	1.09	1.09
Sheet Cuttings 1	1.16	1.16
Sheet Cuttings 2	1.11	1.11
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.62/66	1.64 1/2
R.M.A. No. 1	1.59/62	1.60 1/2
Crepe No. 2	1.56-1/2	1.56-1/2
Crepe No. 3	1.52-1/4	1.52-1/4
Scrap Crepe:		
Sc.Crepe No. 1	1.32 Nom.	1.32
Sc.Crepe No. 2	1.24/29	1.26 1/2
Flat Bark	1.14/20	1.16 1/2
Sc.Crepe 3X	1.21	1.21

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 25.4 cents in respect of crepe to the above market prices.

Calcutta Markets

IRREGULAR TREND IN TEA EXPORT SALE

DUSTS MOSTLY EASIER

AT Sale No. 8, held on 25th and 26th July, offerings in the Export auction consisted of 41,400 packages. The quantity sold in this sale was the largest so far this season. There was again a useful selection of teas from Assam on offer but Doars teas generally showed a decline in quality. There was less demand from internal buyers and prices for most Low Medium and Plain teas declined by 1 to 1 1/2 annas a lb. Best CTC teas sold well, but the inferior types were easier. Fannings of all descriptions were in stronger demand than the B.P.'s and B.P.S'. Whole Leaf grades were keenly competed for and stylish sorts sold often above valuations, while the best tippy teas also sold well. Darjeelings with flavour sold well but the plainer sorts were 2 to 4 annas easier.

	Quotations 1955	1954
Clean Black Pekoe	3 2 0 to 3 4 0	2 13 0
Plain B.P.	2 7 0 to 2 7 6	2 9 6
Medium Assam B.P.	2 9 0 to 2 9 6	2 11 0 to 2 12 0
Best CTC Assam B.P.	3 3 0 to 3 4 0	3 2 0 to 3 10 0

At the Internal sale, 10,600 packages of Dusts were on offer and this was the largest Dust sale so far this season. There was much less demand than in previous weeks and very few buyers were operating. Prices declined from the commencement by 1 to 1 1/2 annas a lb. As the sale progressed the market eased further and prices were generally 2 to 3 annas below last rates. Commons and Doars were 1 to 1 1/2 annas easier throughout the sale while Medium Assams, which opened 1 to 1 1/2 annas easier, fell by 2 to 3 annas a lb. below last rates. There was less demand for powdery Dusts and prices for these declined more than for other sorts. C.T.C. Assams were generally the weakest feature and were irregularly 2 to 4 annas cheaper. There were very few Darjeeling teas on offer.

	Quotations 1955	1954
Medium Doars Dust	2 5 0 to 2 5 6	2 1 6 to 2 2 0
Medium Assam Grainy	2 7 6 to 2 8 6	2 3 0
Dust	2 14 0 to 3 0 0	2 8 0
Best Assam CTC Dust	2 14 0 to 3 0 0	2 8 0

About 1,200 packages of Other Grades were on offer, and generally there was a better selection than in previous weeks. The market followed the same trend as in the Export sale and prices were generally from 1 to 3 annas easier.

LIMITED ENQUIRY IN FREIGHT MARKETS

N. AMERICAN COAL CHARTERING ACTIVE

THE general market is still slow with only a limited amount of enquiry, but North American coal charterers are fixing tonnage for the end of the year and well into next on contract, consecutive and single voyage basis and still have plenty of cargo to be chartered. These orders are not only to the Continent and the U.K. but also to Italy and Japan. Little business is available for grain although tonnage is still required for early positions. Two fixtures have been concluded for East Coast Australia to the U.K. at 130s while West Australia paid 120s to the U.K. North Pacific rates remain steady. Eastern markets are quiet but a vessel was fixed from Vizagapatam to U.S.N.H. at \$ (U.S.) 15.15 f.o.b. end September shipment of ore. Charterers are understood to have fixed tonnage from Mormugao to the Continent at 85s for three voyages commencing September. Three Liberty type vessels have been fixed on time charter for 13 to 14 months' trading followed by three seasons' Canadian trading at \$ (U.S.) 3.15 with delivery on the Continent.

SUGAR MARKET

During the week ended 27th July, sugar sales in the Calcutta market averaged 2,500 bags a day. Arrivals were 2,500 bags daily and stocks totalled nearly 300,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 30.9 for ordinary grain and Rs. 31.8 for big grain. Forward delivery sugar sold at Rs. 30.8 for ordinary grain and Rs. 31.8 for big grain. Ex-mill delivery rates varied between Rs. 28.2 and Rs. 29 for standard grades of sugar. Mill business was restricted.

HIDES AND SKINS

The market showed little change. Stocks were less than in the previous week.

Bazaar Sales (Between 19th and 25th July, 1955)

Cowhides: Wet salted (Ord) 10,000 pcs. on the basis of Annas 9 to Annas 10-6; Wet salted (Ord) 55,000 pcs. on the basis of Rs. 9 to Rs. 12; Wet salted (Slaughtered) 15,600 pcs. on the basis of Rs. 13 to Rs. 25.
Goatskins: Wet salted (Daissee, Killed) 71,100 pcs. on the basis of Rs. 185 to Rs. 265 and Rs. 325 to Rs. 345; Assam-Dinajpur-Murshidabad 36,300 pcs. on the basis of Rs. 235 to Rs. 260; Purneah-Kisen-ganj 1,500 pcs. on the basis of Rs. 230; Patna-Pakur 35,450 pcs. on the basis of Rs. 180 to Rs. 205; Muzafferpore-Patna 66,300 pcs. on the basis of Rs. 215 to Rs. 235.

Bazaar Stocks (25th July, 1955)

Cowhides: Wet salted 1,02,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 16,000 pcs.; Assam-Dinajpur-Murshidabad 1,57,000 pcs.; Muzafferpore-Patna - Pakur - Purneah - Kisen-ganj 1,30,000 pcs.

New Delhi, 21st July, 1955.

ANGLO-INDIA JUTE MILLS CO. LD.

NOTICE is hereby given that the Seventy-seventh Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, 31, Netaji Subhas Road, Calcutta on Wednesday, the 17th day of August, 1955, at 11-45 A.M. for the following purposes:—

1. To receive the Report of the Directors, and to pass the Audited Accounts for the half-year ended 31st March, 1955.
2. To declare dividends.
3. To transact such other competent business as may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 8th to 17th August, 1955, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all Shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board of Directors,

DUNCAN BROTHERS & CO., LD.,
Managing Agents.

Calcutta, 27th July, 1955.

BHARAT NIDHI LIMITED

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Constitution Club, New Delhi, on Wednesday, the 31st August, 1955 at 3-30 P.M. to receive and adopt the Directors' Report and Audited Accounts for the year 1954, to declare dividend at 6% (less Income tax) on Preference Shares and at 5% (without deduction of Income tax) on Ordinary Shares, to elect a Director and to appoint Auditors and fix their remunerations.

Share Transfer Books of the Company shall be closed from the 16th August, 1955 to 31st August, 1955—both days inclusive.

Dividend would be paid to the registered Shareholders as on 31st August, 1955 or their mandatories. Holders of scrip under blank transfer are requested to send in their shares for registration in the books of the Company as early as possible.

By Order of the Board,
J. B. JAINI,
Manager.

48, Daryaganj,
Delhi, 22nd July, 1955.

THE MANGALORE ELECTRIC SUPPLY CO. LTD.

S. B. INDUSTRIAL DEVELOPMENT CO. LTD.,
Managing Agents.

12, Old Court House Street,
Calcutta, the 11th July, 1955.

JESSOP AND COMPANY, LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of JESSOP AND COMPANY, LIMITED, will be held at the Registered Office, 63, Netaji Subhas Road, Calcutta, on Friday, the Twenty-sixth day of August, 1955 at twelve o'clock noon when the following resolutions will be proposed as specified, that is to say:—

1. (As an Extraordinary Resolution).

THAT the Capital of the Company be increased to Rs. 3,00,00,000 by the creation of 65,000 new shares of Rs. 100 each and 11,50,000 new shares of Rs. 10 each.

2. (As a Special Resolution).

THAT the Articles of Association be altered in manner following:—

(a) In Clause 105, the word "nine" shall be substituted for the word "seven" at the end thereof.

(b) The following clause shall be substituted for the existing clause 135:—

135. The Directors may elect a Chairman of their meetings, and determine the period for which he is to hold office. If no Chairman is elected, or if at any meeting the Chairman is not present within fifteen minutes of the time appointed for holding the same, the Directors present shall choose some one of their number to be Chairman of such meeting.

Dated the Eighteenth day of July, 1955.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63, Netaji Subhas Road,
Calcutta.

Company Meetings and Dividends Declared appeared on page 116.

THE BRITANNIA BISCUIT CO., LTD.

NOTICE is hereby given that the Sixty-fourth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, 15, Taratala Road, Alipore, Calcutta, on Friday the 12th August, 1955 at 11 A.M. for the following purposes:—

- (1) To receive the Directors' Report and to pass the audited accounts for the year ending 31st March, 1955.
- (2) To declare the Final Dividends recommended by the Directors.
- (3) To elect Directors in place of retiring Directors.
- (4) To appoint Auditors and fix their remuneration.
- (5) To transact any other business as may properly be brought before the Meeting.

The Transfer Register will be closed from the 11th August to 18th August, 1955 both days inclusive.

By Order of the Board,
A. P. CHANDA,

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

DEVALUATION AND THE JUTE EXPORT DUTIES

A NEW CHAPTER IN INDO-PAKISTAN RELATIONS BEGINS

A BETTER week's work has been done in Delhi and Karachi since Sunday than for many a long year. The reversion of the official Pakistan exchange rates to a level bearing some relation to the actual value of the rupee, and the abolition after 39 years of the export duties on Indian jute goods, are achievements of fiscal prudence that deserve the highest praise. It is easy to say on such occasions that good would have been better had it been earlier, or even that the harm now undone should never have been done at all. But no one has at his command all the facts required for such a judgment in the present instances. In regard to the devaluation of the Pakistani rupee, we would not care to deny that our neighbour derived some benefit from not following the rest of the sterling area in 1949. Not that officials in Karachi can claim much credit for this, because they did not foresee, any more than Sir Stafford Cripps did, that war would break out in Korea the next year. The higher value of Pakistan's rupee during the Korean boom meant that she got much more out of the increase in world demand for primary produce and out of American stockpiling than any other member of the sterling area. She was lucky and no one begrudged her her good fortune, though her friends would wish that she had made better use of her windfall. But the Korean boom was petering out at the end of 1951, and early in 1952 came the commodity slump. Pakistan has gained precious little since then from her over-valued rupee. She has 26 months gains to weigh against three years of perpetual difficulty. It was during these latter trials that Karachi put out the story that the higher value of the currency would be maintained as long as machinery was being imported, but that it would be abandoned as soon as exportable surpluses of textiles were available. This was the most tenuous of rationalisations; economic development does not fall so neatly into phases in which various values of the currency are required. But if the theory was faulty—and was probably not intended to be taken seriously anyhow—at least it does accord with the fact that the rupee has been devalued at a time when Pakistan is really in sight of her aim of capturing foreign markets for her nascent industries.

Similarly with the Indian duties on jute goods exports. They served a purpose for a time, and one would have to be very wise to know just when they ceased serving any purpose and became an unmitigated hindrance. For 30 years, from 1916 to 1946, they provided the Indian exchequer with useful revenue from a trade that could well afford to bear the charge, because during all those years India had a near-monopoly in the world jute industry. Later, and especially during the great scarcity of goods and during the Korean boom, they had an anti-inflationary function, for the good effects of which one should not look to the jute industry itself but to the soundness of the Indian currency and the relative stability of prices in general. Those benefits, though great, were short-lived, or rather they were soon to be countered by damages whose extent we yet cannot measure. Competitive manufacturing industries were nursed along in other countries under the protective umbrella of India's self-imposed disadvantage, and trade was constantly haunted by uncertainty about when the duties would be reduced. Now the uncertainty is ended in the only way it could be, by total abolition of the tax; and Indian mills are left to face their young competitors in Pakistan and elsewhere free of any fiscal disability.

Devaluation in Pakistan obviously raised at once the question of competition between Indian and Pakistan jute goods in overseas markets, and the speed with which Delhi abolished the duties suggests that it saw this question as the most important aspect of the case. But we are optimistic enough to draw attention to another feature. It is

not so important whether India or Pakistan is better off as a producer of jute goods relative to the other, than they were last week. There is the supreme fact that jute goods as such are better off. The most serious result of the travails of the jute industry since 1947 has been, not that one producer was taking markets previously served by another, but that jute goods of no matter what origin were losing in relation to other forms of packing. Some of these losses are irrevocable, such as the inroads of bulk handling where large sums of capital have been invested in doing without jute bags, and since it is commonly public capital, it will not be readily written off. Other losses can be made good and, better than that, the market for jute cloth can be greatly expanded. We do not pretend that it is a matter of indifference whether these gains and recoveries are made by India or Pakistan; we would all very much like to see them made by the Indian mills, which in any event do already exist whereas much of Pakistan's capacity is still on paper. But the point is that both countries now have a common interest in seeing that the world gets more jute goods at lower prices, and that it does not contract any new habits in packaging.

Rivalry and competition between India and Pakistan over jute and jute goods did not begin this week with devaluation of the Pakistani rupee. It has been going on since Pakistan was born, for one of the first actions of the new State was to impose an export tax on raw jute. But hitherto this rivalry has had the effect of starving the world market of jute cloth, of making the raw material artificially expensive by taxes, and of making goods artificially expensive by export duties and locally scarce by direction controls. As

SELLING MORE TEA IN INDIA

IT is altogether a natural collection of feelings which has prompted the Indian Government's decision that a larger proportion of the North Indian tea crop must, in future, be auctioned in this country. The change may increase employment here and should secure for India more of the financial benefits which accompany the marketing of a big foreign exchange earner. At the same time it will probably make little difference to the large international tea market in London. In its recently published report, the Committee on Tea Auctions was explicit in its recommendation: "It is our unanimous opinion that, for a variety of reasons, the enlargement of auctions in India should not be postponed any further". It remained only for the Government to decide when the project, which has in fact been under consideration for a number of years, should finally be put into effect.

In making its recommendation the Committee supported the views of the Ad Hoc Committee on Tea, set up by the Government in 1950, that nothing should be done seriously to distort the economic pattern of the tea market. There is probably little need to fear that this will result from the Government's present moderate proposals for restricting teas sent to the London auctions to a total of 140 million pounds for the current season. The quantity of tea auctioned in India has been increasing steadily over the last few years and there is every reason to expect that it would have gone on doing so even without interference from the Government. Habits were obviously changing anyway; the enforced reduction of about 27 million pounds in the quantity of tea sent to London this season compares with a fall of 42 million which occurred last season with the normal development of the Calcutta market. The Government has wisely decided to move slowly with its plans and has

long as matters went on in this manner, both countries were cutting their own throats because jute and jute cloth are their respective principal exports. Now they will compete with a contrary effect: each will seek to make jute and the cloth manufactured from it as cheap and as plentiful as it can. Competition of this kind will be beneficial to India, even if Pakistan does succeed in taking markets from the Calcutta mills, as long as the world consumption of jute fabric is being expanded. The worst that is to be feared in this direction is that Pakistan should make modest and economical additions to her productive capacity while India restores a modernised industry to full working strength, both as regards loomage and hours. This is in contrast to the worst that was to be feared under the old arrangement: that jute goods as such should lose their world market to substitutes and bulk handling. In the new situation it is worthwhile recalling a suggestion we made on this page several years ago: that India and Pakistan should co-operate in such matters as research on increased fibre yields and new uses for jute goods, and publicity for jute manufactures in foreign markets. Work of this nature is now being done by the Indian Government and jute industry, but it is worth considering whether international co-operation in jute might not bring the same benefits as it has in tea.

The effects of the devaluation on other sectors of Indo-Pakistani trade are more difficult to predict because so much of it has for years past been financed through the exchange black market. That shame is now ended and the mutual benefits will be considerable if there is a genuine desire to increase trade across the borders. There is no reason to suppose that Pakistan will not co-operate to that end; her performance in the last six years is no guide because she has been for much of that time defending an indefensible currency and has judged trade proposals otherwise than on their merits. Free trade with India will be to the immediate benefit of the Pakistani currency because it is traditionally heavily favourable to Pakistan. One does not have to hold any extreme views about the effect of economic relations on political thinking in order to see that a new chapter has now opened in the short and sorry history of Indo-Pakistani brotherhood. In several of the main departments of economic activity they will henceforth be keen competitors, but competition at its keenest is preferable to the ill feeling and spite of the last six years.

adopted as a matter of policy the Committee's recommendation that the auction of some Indian teas should still be permitted to take place in London, at least for the time being. Although the fact has probably had little to do with the decision, it is just as well to remember that tea has been an explosive political issue in Britain as recently as last February, and it will be worth taking trouble to avoid any hasty move which might be misinterpreted as a device for increasing prices. Another factor which justifies caution is the shortage of storage facilities available in Calcutta. It would be unfortunate if a burst of enthusiasm resulted in the present facilities being so overloaded that teas were actually spoiled. The policy announced by the Government last week fortunately makes this unlikely.

The chief reason the Committee recommended that the London auctions should not be completely closed to Indian teas is the growers' obvious need for an alternative market. London is an international centre and the price obtaining there is more likely to reflect world demand conditions. Furthermore, without the possibility of disposal through London the price of teas in India may become influenced by other than economic considerations. The diversion of teas from the London market must be expected to have certain disadvantages. Many of the smaller dealers may be deprived of business and in order to maintain their livelihood will no doubt turn to India's competitors for their supplies. With African teas now becoming available in larger quantities there is the very real danger that these will now gain a competitive benefit. That is a risk which is discounted in some circles. But the Committee has pointed out that

were diverted to Colombo has led to a sharp reduction in their demand. The report notes that "the import of tea from Ceylon into the U.K. has during the last two years gone up by a much smaller margin than the rate at which consumption in Britain has increased". Ceylon might be able to afford to lose some of the British market; certainly India cannot and a careful watch should be kept during the next few years on whether the diversion of auctions is having this effect. The Committee has suggested that a greater proportion of teas than at present planned for may eventually be auctioned in Calcutta and that in fact the situation should be reviewed in a couple of years' time. That would seem to be the best way of handling a policy which will inevitably mean some inconvenience and adjustment for the operators in what remains India's most important market.

One of the chief inconveniences facing a London buyer who will be forced to operate in India will be that of finance. The Committee has gone into this point carefully and has concluded, after consultation with the Indian Banks Association and the Exchange Banks in London and Calcutta, that bank credit can easily be made available to mitigate what strain may arise. The Committee has recognised that the expenses of bank credit will force some of the smaller buyers out of the market altogether. Its conclusion is that this "will have to be accepted as a regrettable and inevitable consequence". There is still something to be said for avoiding the concentration of buying power in a few very large concerns. The report dismisses the possibility that it will be easier for the bigger parties to control the price level and points out that most of the small buyers will presumably continue to operate in the London market. It is to be hoped for the success of the experiment that this optimism is well founded. At least the Committee is right when it says that the adjustments required of the big buyers should present them with few problems.

★

The over-riding importance of the warehouse question has been dealt with at great length in the report. An immediate planned expansion in the capacity available in Calcutta is recommended on the assumptions that an increase in Calcutta auctions will slow down the average turnover of chests in storage, that the North Indian crop is likely to increase during the next few years and that the ceiling of teas permitted for sale abroad will eventually be increased to 20 percent of the total crop. These recommendations take into account most of the foreseeable incidents which could lead to an increase in the tea requiring storage. It will be worthwhile to ensure that warehouse capacity is adequate to meet all possible emergencies, otherwise the prices on the expanded auctions will be affected. The problem is not solely one of accommodation. There is the likelihood that teas will be affected by climatic conditions if kept in Calcutta too long, especially during the wet weather. The Committee's recommendations that storage space be equipped with humidity control apparatus may be expensive to implement but should save a great deal of waste and inconvenience. Improved transport facilities for teas to and from the warehouses are also a necessity if bottlenecks are to be eliminated. The problem of warehousing requires a concerted plan in which all possible contingencies are allowed for. Such a plan would pay handsome dividends in the long run. Fortunately this problem is restricted to Calcutta. The Cochin market is adequately equipped, so the Committee finds, even if all South Indian teas are sold there.

The Committee has emphasised the importance of making the change-over with as little disturbance as possible. If this can be done there seems little reason why India should not gain all the advantages (if indeed they do exist) of having a larger proportion of her teas auctioned in her own markets without incurring any of the disadvantages. The next few years may see greatly increased competition in tea and an efficient and satisfactory market is essential if India is to maintain her position. It is probably unfortunate that the encouragement of the Calcutta auctions is to be achieved through Government control instead of by the natural operation of market forces which, it appears, might have attained the desired goal just as well. Restrictions may not be appreciated abroad if the trend towards more liberal markets continues throughout the world. The decision to leave the maintenance of the ceiling to the voluntary efforts of the trade is a wise one and if it is possible to drop legal limits in the near future and permit normal market forces to carry on then so much the better. It is now clear enough that the enforced transfer of a large section of the Ceylon tea auctions to Colombo has put up the price of these teas and their competitive position is suffering. India cannot afford to ignore this fact. If any reminder were needed that there are other contenders for the British tea market it must surely have been given by this week's devaluation of the Pakistani rupee. Any indiscreet or inefficient handling of the auction problem would now be a gift to the Pakistani growers.

PREPARING FOR ISTANBUL PROSPECTS FOR A CONVERTIBLE POUND

BRITAIN'S latest economic correctives are a necessary preparation for the annual meeting of the International Monetary Fund at Istanbul in September. It will be embarrassing for Mr. R. A. Butler, the Chancellor of the Exchequer, if he has to report that the sterling area is less prepared for convertibility of currencies than the major European countries. But this latest turn of the restrictive screw does not mean that Britain will be able to declare herself ready for convertibility of sterling. The first task was to restore short-term confidence in sterling. It had been the subject of persistent rumours (even including a date, 1st August) that devaluation below the lower limits, \$2.78 and the equivalents in other currencies, would soon be permitted. There is no doubt that the British authorities were favourably inclined some months ago to the idea of a "floating pound", free to find its "natural" value by the action of supply and demand, officially controlled only by such purchases and sales as the Exchange Equalisation Account might think fit. This idea was later modified to a widening of the margins: at present two points on either side of dollar-parity, they might be extended to, say, four points. And it was assumed that if sterling were free to depreciate to that extent it would do so.

This proposed widening of the margins was, however, specifically related to a convertible pound. When Mr. Butler said in his statement of 25th July that the Government did not contemplate "any further forward move on the exchange front" until "hard work and consolidation" had strengthened the home front, he was saying in effect that there would be no change in the basis of the currency for a considerable time. It is established at \$2.80, with two-point margins. In the ensuing debate on his new measures the Chancellor confirmed this rate: his policy, he said, was "the maintenance of the parity of \$2.80 to the pound, either in existing circumstances or when sterling is convertible". The idea of a "floating pound" was thus officially rejected; and the parity of the "fixed pound" was to remain unchanged. But it must be pointed out that there was no reference to the margins limiting the movement of the currency away from parity in day-to-day dealings. The idea of widening them has not been formally abandoned. Why is the British Government so reluctant to commit itself to fixed exchange-rates? Why did it ever consider a "floating pound"? Why, having been compelled by apprehensions abroad to abandon that idea, is it still unwilling to commit itself for the future to rates as rigid as they are now?

★ ★ ★

There is only one answer to these questions. Britain's inflation has not been overcome; furthermore, the Government does not intend to overcome it completely. To establish and maintain an exact balance between inflation and deflation is, in practice, impossible; deflation would mean some measure of unemployment of labour and other resources; full employment is a basic tenet of British politics; therefore, inflation—as slight as possible but still perceptible—must continue. The Government may, of course, miscalculate: deflation may prevail despite intentions. But if it is intended to maintain a slow inflation there will always be a risk of temporary strain on the external value of the currency, which can then be steadied only by drawing on the gold reserve until careful corrective action has eased the pressure. We are witnessing at present another instalment of this corrective action—more restraints on hire-purchase trade, because last February's restraints were ineffective; requests to the banks to restrict their lending, because the authorities' indirect control of credit was working too slowly; moderation of capital investment, because export of capital goods especially has been hindered by inflation at home. But we cannot yet see—and even at Istanbul in September the Chancellor will possibly not yet know—whether these restraints and the previous ones are sufficient to the immediate task.

Mr. Butler has reiterated his conditions for convertibility of sterling—a strong internal position; some external credit in case of temporary need; freer trade, especially between the dollar and the non-dollar countries. Some people say that this last condition is evasive, put forward as an excuse, to shift from Britain to America the responsibility for delays. The second condition is virtually fulfilled: it is almost certain that a credit would be available if the governments concerned agreed to make their currencies convertible. The first condition is not fulfilled, and progress towards the position of strength is distressingly slow. The discussions at Istanbul will of course be valuable, but it is unlikely that they will result in a positive move towards convertibility—if only for this reason, that Britain is not yet prepared for it. How much longer must we wait? The problem is fundamental. Gradual inflation is not compatible with stable exchange-rates. There is inflation in

other countries, too; but some of them are also sterling countries. The contrast between the rise in British prices and the stability of American and German prices since the beginning of 1952 is so pronounced that the London Economist had recently to remark: "We do not live in an inflationary world. We live in an inflationary country." The Economist (writing just before Mr. Butler's latest statements of policy) concluded: "When we have mastered our money and tamed it to perform its functions dutifully...then and then only can we expect our external arrangements, be they fixed or floating, to work satisfactorily." The prospect at Istanbul does not, then, appear very bright.

ADMINISTERING THE NEW COMPANIES ACT

THE leading article in last week's Capital discussed some aspects of the new Companies Bill, among them the recommendation from the Associated Chambers of Commerce that a Central Statutory Authority, as suggested in the Company Law Committee's 1952 report, should be set up to administer the Act when it comes into force. Later, the Government announced its intention of creating a new department within the Ministry of Finance, to be known as the Department of Company Law Administration, which, among its other responsibilities, will be charged with this task. This new department began work last Monday and it appears that this is to be the Government's last word on the matter. That is a pity because the recommendations of both the Company Law Committee and Assocham have by no means been met. This department will have neither the power nor the expert technical knowledge to steer the country's industrial and commercial companies through the maze of the proposed legislation with sufficient imagination and dispatch. It is probably not wrong-headedness on the Government's part which has prompted this decision; it is more likely to be simply the lack of candidates suitable for staffing a central authority. The minimum requirements would be, say, a retired High Court Judge with special experience in dealing with company affairs, at least two senior accountants with long and varied experience in industrial and commercial matters, a couple of eminent and retired business men with a desire to be socially useful, a company lawyer with wide experience and a few other men with expert business and wide general knowledge who might include an economist and perhaps a professional manager. The difficulty of attracting men of such calibre is seldom realised, but in India at the moment it is probably insuperable.

The alternative of an over-worked civil service department is not a particularly attractive one. The new organisation is to be responsible for "joint stock companies, including company law and investment administration, capital issues control and chartered accountants" (though presumably accountants qualified under the rules of other professional organisations will also figure in the Indian economy) "stock exchanges and finance corporations, including the Industrial Finance Corporation, the Industrial Credit and Investment Corporation and the Rehabilitation Finance Administration". This is a formidable list of duties for any department. It is inevitable that the all-important individual cases which will arise under the new Act can expect nothing better than strictly routine treatment and no doubt a great deal of delay. The department cannot hope to be expert in the intricate problems which will arise under the administration of the Act, especially in the early stages. Its senior personnel will presumably be career civil servants with little or no practical experience of company problems, and will be subject to all the comings and goings which are a feature of their profession. With the very best of intentions on the part of the Government and the department it is inevitable that routine will prevail if anything is to be done at all and that when the exception arises it will be dealt with arbitrarily. The decision to set up new department is not a good omen for the efficient administration of the cumbersome controls which the Companies Act will bring into being.

CURRENT COIN

Progress of I.C.I.C.—In his address from the chair at the statutory meeting of the Industrial Credit and Investment Corporation in Bombay last week, Sir Ramaswami Mudaliar claimed that the Corporation had made "a promising start". A large number of applications have been received for financial and other kinds of assistance. Many of them are from small-scale, even cottage, industries, and show that the purposes of the I.C.I.C. have not been properly understood. While no inflexible and invariable rule can be established regarding what applications are to be dealt with, it is intended normally to deal with medium and large industries in the private sector, "whether they are applications for new industries to be set up or for the expansion of existing industries." The Board of the Corporation has already offered

to provide substantial financial aid for two propositions—one for a new industrial venture and another for the expansion of an existing industry. It has also agreed to assist a number of smaller projects. Twenty other promising proposals are being discussed, and are expected to be dealt with very shortly. Sir Ramaswami pointed out that the Corporation is naturally interested in the plans which the Government has for industrial development in the private sector and which it regulates through licensing and capital control systems. The increase of employment is one of the main objectives of the Government, and in view of the comparative immobility of labour, possibilities of regional development will be given greater importance. It is also the aim of industrial development to reduce unemployment among the educated, and the Corporation will function with these background factors in mind. The Corporation, according to Sir Ramaswami, is not interested in mere money-lending; its ultimate objective is to promote and develop industries in the private sector. Thus, while adequate security and competent personnel are two of the principal considerations in dealing with applications, they are not by any means the sole criteria. One of the objects of the Corporation is to furnish, or to help obtain, advice and assistance regarding managerial, technical and administrative matters; this is the fundamental point of difference between it and purely financing corporations.

Communist Currencies.—The currencies of the rouble bloc, covering one-third of the world's population, were not on the agenda of the Geneva Conference. But these Iron Curtain units have rather unrealistic values and will have to undergo substantial adjustments before their countries can enlarge their trade with the Western countries. The August issue of Pick's World Currency Report publishes the following table:

DOLLAR PREMIUMS BEHIND THE IRON CURTAIN

		Free Market		
		U.S. Dollar Value		Premium
		Official	Unofficial	In Percent
China	Yuan	2.46	4.90	100%
Hungary	Forints	11.74	54.00	360%
Rumania	Lei	6.00	29.25	387%
U.S.S.R.	Rubles	4.00	20.50	413%
Bulgaria	Leva	6.00	38.00	459%
Czechoslovakia	Korunas	7.20	44.50	518%
East Germany	Ostmark	2.22	23.40	954%
Poland	Zlotys	4.00	80.00	1,900%

All of these units have undergone many official reductions of value and most probably could not survive any restoration of free transferability.

* * * *

Stores Purchase Policy.—The main recommendation of the Stores Purchase Committee is that the scope and functions of the Central Purchase Organisation be increased. The Committee feels that the system of centralised purchases should be continued, and certain specialised stores which are at present procured by departments should be progressively transferred to the Central Purchase Organisation. Purchases for industrial and other statutory corporations should also be made through the organisation. In the case of imported stores, the Committee would like the Government to go further: it thinks that port trusts, larger municipal corporations and State Governments should be persuaded to buy through the Director-General of Supplies and Disposals. Emphasising the need to evolve a special purchase procedure to facilitate industrial development, a general price preference of 15 percent for indigenous products over imported goods is recommended, higher preference of up to 25 percent or even more being allowed in special cases. In buying imported stores, it is urged that due weightage should be given to offers with a larger proportion of indigenous components. Consistent with the requirements of safety, relaxation in specifications and standards to suit technical limitations in indigenous production, particularly in cottage and small-scale industries, is proposed. For the products of cottage and small-scale industries, the Committee suggests a price preference of up to 25 percent over those of large-scale industries, a higher preference being permitted on merit. Cottage industry products, it adds, should be bought in preference to small-scale industry products, and a price preference of 2 percent be given to offers from co-operative societies. An important recommendation of the Committee is that industries in the private and the public sectors should be treated on a par where Government purchases are concerned.

* * * *

Capital Formation in India.—The Working Paper prepared by the National Income Unit of the Central Statistical Organisation in collaboration

with the economic wing, Ministry of Finance, which the Union Finance Minister placed before Lok Sabha lately shows a steady rise in net domestic fixed capital formation over the period 1948-54, with the exception of the year 1952-53. The value was Rs. 446 crores in 1948-49, Rs. 524 crores in 1949-50, Rs. 589 crores in 1950-51, Rs. 672 crores in 1951-52, Rs. 659 crores in 1952-53 and Rs. 716 crores in 1953-54. Expressed as a percentage of national income, these figures were respectively 5.2, 5.8, 6.2, 6.7, 6.7 and 6.8. It is significant that capital formation has responded remarkably well to the rise in India's national product. The Taxation Enquiry Commission, one of whose members was Dr. V. K. R. V. Rao, a well-known expert on Indian national income, also noticed an identical trend in capital formation in this country, but the Commission's estimates of capital formation were lower. For instance, according to the Commission's estimates the total value of capital formation in 1953-54 was Rs. 660 crores, while the C.S.O.'s estimates place it at Rs. 719 crores. There is obviously a notable difference, but the Working Paper considers its estimates "fairly close" to those of the Taxation Enquiry Commission. The Paper also treats "Defence Capital Outlay", which forms a considerable proportion of Union expenditure, as "consumption expenditure", that is, buildings, transport equipment, machinery and other equipment meant for military use do not form part of national capital. Because these accoutrements do not fulfil any productive purpose, the above classification is probably justified. Investment in stocks has not been included either. The working paper explains this omission as being the result of insufficient statistical material and admits that the estimates as a whole are therefore incomplete. But if these estimates are to be completed by including the figures relating to investments in stocks, it necessarily follows that the figures for capital formation as a whole will rise. Capital formation in both the public and private sectors has risen—proportionately a little more in the former than the latter. In 1948-49, net capital formation was Rs. 154 crores in the public sector and rose to Rs. 227 crores in 1953-54; the corresponding figures for the private sector are Rs. 292 and Rs. 443 crores. In the latter sector, "Construction" recorded a striking rise in 1953-54 to Rs. 123 crores as against a mere Rs. 39 crores in 1948-49 in urban areas. In

Without Prejudice

A CHARGE OF MURDER
LACK OF INTENTION AS A
DEFENCE

(FROM OUR LEGAL CORRESPONDENT)

ASSUMING again his role of imaginary jurymen, the reader is invited to try the issue joined and a true verdict give according to the evidence in the following cases of homicide; bearing in mind throughout three considerations. The first is what constitutes murder. It is—put shortly—the unlawful killing of a person with malice aforethought, or in the words of that great jurist of old time, Lord Chancellor Coke, often quoted in this column, “where a person of sound memory and discretion unlawfully killeth any reasonable creature in being with malice aforethought either express or implied”. The second is “motive”, and the third is “intention”. It is not proposed here to enlarge on the definition of murder; to do so would take up many columns; what you mainly have to do in the jury’s retiring room is to use your commonsense about it. From a strictly legal point of view proof of motive is not essential for establishing a charge of murder where the facts are clear. But from a practical point of view it is very essential indeed; for except where an accused has been caught virtually red-handed in the case of a killing completely without motive, juries will, however strongly the judge may press upon them that proof of motive is not essential, take the bit between their teeth and bolt off on their own, obstinately refusing to convict on the capital charge, and bringing in a totally illogical verdict of manslaughter instead. And good luck to them for so doing and long may they continue the practice, says this deponent. All the same, as a jurymen you should bear in mind that the legal interpretation of the word “motive” in criminal cases is not quite the same as its dictionary or colloquial meaning. It is looser and wider and consequently motive can be more easily fixed on the accused. In its dictionary and everyday use it involves proof that I had a specific and demonstrable cause for doing an act, in the absence of which I would not have done it. For instance when I, being an office boy, abstracted my employer’s cash I did so because of the demonstrable fact that I could not take home to my mother my wages, having expended the same at the races, without

pilfering their equivalent from the office till. Wherefore I did so pilfer. There you have motive both in a legal and colloquial sense. But in criminal law the net is spread wider by the deliberate use of vague and general language. Purposes or ends or objects are not necessarily essential. Motive in its legal sense has been defined as “a general term signifying any element of consciousness which prompts an agent to a decision, a mental force exerting pressure or tension.” If you in the jury box are a psychiatrist you will no doubt understand this. If you look upon it, as the writer does, as meaningless jargon, you will use your commonsense, which after all is what you are on the jury for.

And, to clear the course, a word or two about “intention”. Murder must be intentional. But again the legal meaning is much vaguer and looser than the ordinary meaning. It is not necessary to prove purpose, a mind previously resolved. In law a man is presumed to intend the natural and probable consequences of his own acts. For example, let us say a thief is being chased by policemen. He turns round and fires a pistol at the group of them. One of the policemen is shot dead. Now it may be that the thief did not intend to kill anyone but merely to frighten off his pursuers and escape. That was his intention. But no one can read into another man’s mind, and that will not be the intention which the law will attribute to him. It will hang him for murder. For when a man uses a deadly weapon like a pistol in such a fashion the presumption against him is that he intended to cause death.

This is the case you are asked to consider. Mrs. Dhapu was and no doubt still is a respectable young woman happily married to her husband Rama. If she had a fault it lay perhaps in a tendency to be a trifle “near” in financial matters. She did not like dispensing cash unnecessarily. There was but one little apple of discord in the conjugal garden and that was the fact that whereas Dhapu had two young daughters, she had no son; and Dhapu greatly desired a son. Dhapu was a religious woman and she pondered these things in her heart. Time passed and still no son and no pregnancy. Dhapu and her husband went on a visit to her father and in his village was a temple of Ramdeo, known as Ramdeo, of which the Pujari and Bhopa was and at this present is not, one Pema, a divine of considerable local renown.

The young wife’s cogitations and prayers inspired her to seek out Pema with her husband and to ask his spiritual guidance and intervention in the eventual production of a son. Now it is well known from time whereof the memory of man runneth not to the contrary that in every form of religion the celestial powers, when their aid is invoked by human agency, have to be propitiated by sacrifice; and that sacrifice invariably and rightly takes the form of a contribution to the material benefit of the pious human agent. In short the wheels have to be greased. In pursuance of this reasonable understanding Dhapu and her husband undertook that if she had a son they would pay the sum of Rs. 25 to the deity, to be received by Pema, the Bhopa of the temple. It was—it will be noted—not to be a cash down transaction and was on the principle of no son no payment. In addition, and on the same understanding, the young couple undertook on the arrival of a male child to give a feast to the whole village. The Bhopa’s aid was effective and the son was in due time born. Then unhappily Dhapu’s economical mind began to operate as a result whereof she declined to pay the deity Rs. 25. Nevertheless, to satisfy her conscience she made the cleric a lesser donation which was a coconut. It is, perhaps, not altogether surprising that Pema did not regard this as a satisfactory substitute, nor is it recorded in the report that the promised feast was ever given. And there, in regard to subsequent happenings, you have “motive”.

Dhapu had a brother named Uda, and he was to be married. The Bhopa was invited to the wedding but not unnaturally he declined the invitation as the parsimonious Dhapu was to be there. Nevertheless, he appeared to bear no malice and to have forgiven Dhapu being, apparently, mollified by the fact that after further consideration of the economic position Dhapu had intimated that on the child attaining the age of five the Rs. 25 would be forthcoming. But Ladu was not to attain the age of five. On the third day of the arrival of the marriage party a messenger from Pema, one Teja, called at Dhapu’s house and handed her something neatly tied up in pink cloth which he said, as was later proved, truthfully, was a present for her from Pema; he added the information that the prasad was gur. This was a half truth. The gift was indeed gur, but gur heavily mixed with dhatura. Dhatura is a poisonous plant akin to bella donna. It is a strong narcotic and in minute quantities is useful as a specific for complaints like asthma, neuralgia and the like. In larger quantities it is a deadly poison, the patient relapsing into unconsciousness from which he cannot be roused, and dying. Ladu, by this time a sturdy boy, ate some of it and Dhapu ate the remainder. Both mother and son became unconscious. Dhapu recovered. Ladu did not and died in hospital. Dhatura seeds were found in his vomit and he died from dhatura poisoning, the dhatura having been administered through Pema. There you have the case for the prosecution with the significant addition that when Pema was arrested dhatura seeds were found upon him. The defence was an alibi. The Bhopa said in effect, like Pooh Bah, “I wasn’t there.” The alibi broke down completely and also by the High Court later. There is the case. As a jurymen what is your verdict? Personally one would have thought that this was a clear case of murder and perhaps you will too. But it was not. Though the High Court agreed with the trial judge and jury that “it could not be unknown to him that administering the dhatura seeds in the gur was likely to cause the death of the person eating the gur” and though the little boy did eat and in consequence died, yet the theory was accepted that Pema had no intention to cause death and that his motive was “only to cause unconsciousness so that he might be called in as a Bhopa and by curing Ladu acquire reputation as a Bhopa.” This on reflection is by no means as fantastic as it may sound. In the famous case of Dr. Crippen, Sir Edward Marshall Hall, K.C., refused the brief for the defence because Arthur Newton, the prisoner’s solicitor, had committed him in the police court to the defence that Crippen had not administered poison to his wife at all. Marshall Hall’s theory was almost identical with the one accepted in Pema’s case. Mrs. Crippen was poisoned by hyocine. Like dhatura it is a deadly poison obtained from a poisonous plant. But in small doses it is a narcotic and used in nervous and hysterical cases. Dr. Crippen was a tiny harmless looking little man, an ideal witness. His wife was a large dominating woman incessantly importunate in her sexual demands on him. Marshall Hall’s case would have been—and he sincerely believed it to be the true explanation—that Dr. Crippen, to secure a quiet night’s rest, himself gave her what he thought was a soothing dose and by mistake overdid it and gave her a fatal one. The defence might well have succeeded. Anyway it was the only hope; and that hope was gone through Arthur Newton’s defence that no hyocine had been administered at all by the doctor. Crippen was, you might say, hanged by his solicitor. Returning to Pema, he got off with a five years’ sentence for causing death by a rash and negligent act.

[42. A.I.R. (Ajmer) 1955 (July) 48.]

In a written reply to a question by Mr. K. C. Soudia in the Lok Sabha today Mr. T. T. Krishnamachari, Minister for Commerce and Industry, said that the total amount deposited in the Steel Equalisation Fund up to 31st March, 1955, was Rs. 48,14,95,815. He added that the Fund was instituted on 1st February, 1943. Replying to a further question, he said that the total receipts into the Fund during the four years, 1951-52 to 1954-55, were Rs. 28,71,18,509 and expenditure from it Rs. 21,23,15,564.

A DITCHER’S DIARY

our newspapers print nothing that could not have been written by Mr. Krishna Menon. I shall give an example.

The example is Tito’s Yugoslavia. Since the exchange of visits between the heads of the Indian and Yugoslav Governments, not a breath of honest reporting has appeared in the Indian Press about that country—least of all from the tribe of journalists who were actually in Belgrade lately with the Prime Minister. Of course India’s connection with Yugoslavia is a valuable one, and the Nehru-Tito stand on some issues has been productive of good. But that is no reason for forgetting to mention that a lot of things have gone wrong in Marshal Tito’s country lately, and specifically that many of those things would be highly repugnant to Indian sentiment if Indians were told about them. Victor Meier, for instance, reports in the latest *Swiss Review of World Affairs* that the pomp, ostentation and waste of the Belgrade rulers are putting the old royal household in the shade: “An uninterrupted round of journeys and visits, sumptuous banquets and balls have in recent months characterised the life of Yugoslavia’s ruling class. Against this whirl of luxurious festivities, the everyday political life of the impoverished Socialist country stands out in stark contrast”. Costly and showy Government offices are going up, while the housing situation deteriorates; inflation has taken away 30% of the value of wages in a few months; 60% to 70% of a Yugoslav budget goes on food; and meanwhile “the organisation of the Yugoslav Communists even today has the character of a political conspiracy which must defend itself daily against a hostile majority by intimidation and terror”. Did our journalists not notice these things, or did they think we in India would approve of them? I have quoted a Swiss journalist purposely, because what is consistent with the rigid Swiss notion of neutrality would not presumably offend India’s. Unless I have grossly misunderstood Mr. Nehru’s foreign policy, there is nothing in it that says our newspapers have to be nice about Communists and sarcastic about democracies.

It is not always inability which prevents an indigenous manufacturer invading a market held by importers; quite often it is ignorance. The fact is proved by an exhibition of railway equipment now being held in the Indian Railways’ showrooms on Strand Road. This display has its counterparts in Bombay and Madras, the idea behind them all being to encourage Indian industries, large, small, or medium-sized, to supply items of railway equipment at present either partially or wholly imported. Everything possible has been done for the prospective manufacturer’s convenience. Each exhibit is clearly labelled with a brief description of what it is, its specifications, its drawing number and, in the case of those in Calcutta, the annual requirements of the Eastern Railway and the Chittaranjan Locomotive Works. The total requirements for all the railways in India can be obtained from the secretary of the Railway Equipment Committee in New Delhi. I was struck by the number of apparently simple items which still have to be imported; obviously manufacturers on the lookout for opportunities are not such dedicated students of the import lists as they used to be. The railways’ exacting requirements probably discouraged many firms in the past. But nobody can blame the railways for that and this gesture is not meant to suggest that these standards are to be relaxed. There may be patent difficulties in the way with some items, but these should not prove too trouble-

some. And any manufacturer who wants further information or advice can have it. The main thing is that the least enterprising industrialist can now get some idea of what items are wanted and what the demand for them is; if he cannot summon the initiative to find out the rest for himself he does not deserve to make money. The idea seems a good one and it can obviously be extended to other large purchasers besides the railways; I heard it suggested that the same might be done for telephone and telegram equipment and for marine stores.

Who owns industry? Who are the people who own shares in capitalist enterprise? A full answer to these important questions would be very difficult to obtain. But the very fact that they are hard to answer suggests that the popular myth about a few tycoons owning most of big business is not true. The Metal Box Company in the United Kingdom a few months ago published some figures on its shareholding which were the subject of much interested analysis in the London Press, and now the chairman of an Indian company has provided us with figures that permit of useful deductions. Mr. K. G. Milne, in his address to the Bombay Suburban Electric Supply Limited last week, after showing that most of his shareholders and directors were Indian, went on to give the following breakdown of the size of shareholdings: 23% of the shareholders own between Rs. 100 and Rs. 500 of the shareholding; 45% own from Rs. 600 to Rs. 2,500; and only 7% own over Rs. 10,000. By any standards, Rs. 2,500 is a very small amount of capital for an individual to own, yet 68% of this company’s shareholders have no greater interest than that. Of course, there is the obvious objection that these individuals might hold shares in other companies, so that their total capital is larger. But even if they had a similar stake in nine other companies (which would be a very unusual way to distribute a small investment), they would still have no more than Rs. 25,000—a sum that a small clerk would regard as a modest patrimony. By middle class standards, an investment of Rs. 10,000 would not be regarded as large; it certainly would not bring its possessor within the fold of wicked capitalists. And yet 93% of Mr. Milne’s shareholders have less than that amount invested in his company. It is quite consistent with Mr. Milne’s figures that the 7% who own more than Rs. 10,000 each might in fact own most of the capital; that looks to be unlikely on the figures, but information about the average holding in each group would have been very useful. Mr. Milne pointed out that most of the 7% were institutional investors, whose capital or other funds would in turn be owned by a host of small people. So whichever way we look at it, any fiscal measure that affected the Bombay Suburban would affect far and away mostly small people of relatively modest means. Our politicians do not always understand this; certainly during the debate on compensation for Imperial Bank shareholders, some quite grotesque ideas about investors were trotted out in the Lok Sabha. I think more company chairmen should contribute to popular education on this subject by giving similar analyses in their annual statements. The accounts department in any public company is already overworked, I know, but some calculations on the distribution of shares and the average size of investments would be very interesting material for the chairman’s address. Eventually the truth might leak out, even in Delhi, that just about everyone has an interest in Indian industry, even if indirectly, and that most shareholders are little men of no wickedness or influence whatsoever.

THE DITCHER.

Company Meeting

BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED

"SPEECH OF THE CHAIRMAN
MR. K. G. MILNE"

The following speech was delivered by Mr. K. G. Milne, Chairman of the Bombay Suburban Electric Supply, Ltd. at its 26th Ordinary General Meeting held in Bombay on 29th July, 1955.

Gentlemen,

Sales of energy have gone up by nearly 24% in the year under review. Last year the increase was almost 23%. When it is considered that this substantial increase has been made possible by a limited relaxation of certain types of restrictions, even though stringent controls are still applicable to demands for New Industrial Power supplies, which in the main are not yet sanctioned, one cannot help but ponder on how much greater your Company's growth would have been had an unrestricted supply of power been available for distribution. Further these figures of increase reveal the magnitude of the pent up, and as yet unsatisfied demand for electricity in the Bombay Region, and consequent on this, the arresting effect which has been imposed during recent years, on the economic growth of the area. I make these remarks in no spirit of destructive criticism, and even less in that of the "I told you so" attitude. My purpose is to stress again the vital necessity of adequate power supplies being made ready for economic development always in advance and never in

arrears of needs, if our cherished hopes of rapidly raising the standard of living are to be realised. I also want to emphasise the importance of drawing the correct conclusions for the future from past experiences.

The news which came just after your last Annual General Meeting that Government had finally decided to permit Tatas to instal a further 50 MW of power plant at their projected Trombay Thermal power station, came as a momentous relief to the worst of our anxieties for the future; but of course the earliest that this Station could go into production to relieve the present shortages would be about October 1956.

Meantime it has been suggested recently that with the commissioning of all three sets at the Government owned Chola Power Station, more power would be available to industries both new and existing. I fear however that at the most such extra releases would have to be confined to special hours for the time being, as it is understood that the working of certain parts of this Power Station continues to be unsatisfactory.

On the 6th November, 1954 we welcomed the formation of the Bombay State Electricity Board, with Mr. M. H. Hasham Premji, an experienced and successful businessman, as its Chairman. I feel this to have been a notable, though too long delayed, step forward.

We do not think that we can be accused of any narrow vision with regard to our own arrangements to perform and extend the work we have to do, namely to provide steady and reliable distribution of all the power which our customers would like to have, to the extent we can procure it for them. The effect of our Six-Year 1948-54 Development Plan is now being very beneficially felt. We are in a position to cater for load much in excess of that which can at present

be released by the authorities, and furthermore to take on additional consumers with a relatively lower rate of annual capital expenditure on the Transmission system. The Distribution system continues to be expanded concomitantly. During the year under review, 25 new Sub-Stations were added and the transformer capacity of 12 existing Sub-Stations was reorganised. Further capacitors were added, as those installed last year brought about a considerable improvement in the overall power factor of the system, with a corresponding saving in costs.

Suburban Development

The Company thus continues its contribution to the progress and development of the Suburbs, now even reaching out as far North as the village of Bhayander. Unfortunately the standard of Municipal street lighting in most parts of the Suburbs still leaves a good deal to be desired and this has been the subject of adverse comment in the Press from time to time. We have no doubt that the Greater Bombay Municipality and the other authorities whom the Company is privileged to serve are well aware of the position, and will in the near future provide the necessary funds in their Annual Budgets to enable the street lights to be improved into line with modern standards. It will be of interest here to mention that a Technical Officer of your Company has been deputed to make a special study of street lighting developments abroad, so that we may make available the very best possible advice at all times.

Looking towards wider issues, I would like to repeat to you what I have already said elsewhere, namely that I myself see no reason to think that either the recent amendment to the Constitution or the projected new Companies Bill holds out any special threat to Electricity Undertakings such as yours, subject however, I must now add, to there being no more drastic changes introduced into the Companies Bill by the Parliament which is about to begin debating it.

There is I think still reason to hope that the "standard rate" of return will soon be upgraded, though I have yet to see the Bill which we were told was to be introduced into the present Session of Parliament. The question of our being allowed to create a Deferred Taxation Reserve is, I understand, also part of the considerations before Government in connection with this Bill.

There are some facts about this Company which I have been urged by shareholders to disclose, in order to assist in removing misconceptions. In the first place 91.7% of the share capital of your Company is held by Indian Nationals, as are the majority of seats on the Board of Directors. Over 80% of the share capital of the Agency Company is held by Indian Nationals, and again the majority of Directors are Indian gentlemen widely known and highly respected.

In the second place I would say that of the total number of shareholders of the Company, 23% own between Rs. 100 and Rs. 500 of the share capital, and 45% hold from Rs. 600 to Rs. 2,500. Only 7% own over Rs. 10,000, and of these, institutional investors (that is to say other companies also having many small holders) comprise almost the whole. I would commend the serious study of these figures by those concerned with the formation of new legislation and controls, in respect of joint stock enterprises and organised industry within the private sector, for they are true not only of our own Company, but of the general pattern of large concerns operating under free enterprise. What would be revealed by such a study is that far from there being an undue concentration of economic power, the truth is that the weapons of production are owned by a large and continuously increasing cross section of society, which is exactly as it should be in a democratic country poised for a vigorous advance of industrial expansion.

Union Demands

Seven demands were made on the Company during the year by the Union, including for enhanced wages, and bonus for the 3 years 1950-51, 1951-52 and 1952-53. As no settlement could be reached, these questions have been referred to the Industrial Court for arbitration. The subject is now sub judice, so I will not dwell any further on it. The Union have more lately also made a claim for enhancement of dearness allowance.

The Staff has continued to work for the maintenance of a high standard of service, and our thanks are as usual due to them for their efforts. I am pleased to report that it has been possible to give them a bonus this year amounting to a little over one month's basic salary.

During the year the scope of application of the Employees' State Insurance Act to your Company has been enlarged. Facilities afforded to the staff under the Act appear to be as yet somewhat unsatisfactory, but it is hoped that they will improve.

I have to report with deep regret the death of the Company's Doctor, Dr. Joseph D'Lima, who had been associated with the Company for many years.

Coming now to the Accounts which are before the meeting, you will be glad to know that the results have been obtained without passing on to our consumers any part of the additional 15% surcharge on the cost of power which was introduced by our Bulk Suppliers from 1st April 1954. With regard to Additional Income Tax we are hopeful of settling the issue in the Courts before very long, but I fear that any settlement of the question of shareholders' gross-up of dividends may still be a lengthy matter. The Matthal Commission commented and recommended on both these problems in their Report, which you have doubtless read.

The statutory necessity to make allocations to the Consumers Benefit Reserve and the Tariffs and Dividends Control Reserve this year, amounting to Rs. 69,933 each, has made it necessary to withdraw Rs. 19,500 from the Equalisation of Dividends Reserve in order to maintain the dividend this year. This kind of position could only be remedied if the Electricity (Supply) Act were suitably amended to increase the somewhat too early yet to draw final conclusions that you are satisfied with the Directors having recommended a final dividend of Rs. 4 per share, making 7% for the year, which is the same as last year.

I now propose that the Directors' Report together with the Audited Statement of Accounts made up to 31st March, 1955, be and the same are hereby approved, adopted and confirmed.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

EASY CONDITIONS PREVAIL

Wednesday, 3rd August.

MONEY has become cheaper and more plentiful throughout the country. Funds are gradually flowing back to the banks from the sugar industry, and no fresh borrowers have appeared. It is now assured that the State Government loans later in the month will be well received. In the Calcutta interbank market the call rate quotes 2½ percent, with lenders over; the rate is 2 percent in Bombay.

It has been a quiet week in the bill of exchange department with rather more tea bills passing. There has been no visible reaction to the devaluation of the Pakistani rupee or the abolition of the jute goods export duties. Sterling is fairly steady and the rupee-dollar rate quotes Rs. 480-4 T.T. selling.

Bullion was steady. Silver advanced from the previous week's level of Rs. 159-7 to Rs. 160-12, quoted to-day. The rate for forward delivery was quoted at Rs. 160-8. The price in London increased from 78½d. to 79d. The price of foreign silver in New York was unchanged at 80½ cents.

Gold was steady and the price rose from Rs. 95-4 to Rs. 95-8. The sovereign at Rs. 60-12 showed a gain of 3 annas.

The statement of the position of scheduled banks for the week ended 22nd July, 1955, discloses Demand and Time liabilities at Rs. 603.59 crores (Rs. 11.16 crores on account of borrowings from banks) and Rs. 406.39 crores (Rs. 4.02 crores) compared with Rs. 602.58 crores (Rs. 11.49 crores) and Rs. 402.05 crores (Rs. 3.73 crores), respectively in the previous week. Cash has declined by Rs. 39 lakhs to aggregate Rs. 33.38 crores, while balances with the Reserve Bank have advanced by Rs. 2.54 crores to stand at Rs. 52.29 crores. There is a rise of Rs. 1.25 crores in investments to Rs. 368.43 crores. Advances and bills discounted at Rs. 604.47 crores reveal a fall of Rs. 5.87 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.5 percent and 59.8 percent against 8.3 percent and 60.8 percent.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 2nd August, 1955, totalled Rs. 2,17,00,000. The average rate of acceptance fell from Rs. 2-7-10 to Rs. 2-7-9 percent per annum. Tenders at Rs. 99-6-0 percent and above were accepted in full and those at Rs. 99-5-9 percent allotted approximately 6 percent. Tenders for Rs. 1 crores of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 8th August, 1955. During the week ended 29th July, 1955, Government of India Treasury Bills for Rs. 19,13,75,000 were sold in favour of the Reserve Bank of India.

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of September and October 1955 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from 16th August and 16th September 1955 respectively.

Interest falling due in September:

2½% 1976
4% 1960-70
3% Con. Loan 1946
3% V. L. 1957
3% U.P. 1961-66
3% U.P. 1960
3% Madras 1956
3% Bombay 1956
3% Madhya Pradesh 1956 and 1964
3% Madras 1960
3½% West Bengal 1962
3½% U.P. 1962
3½% Madras 1962
3½% Bombay State Devl. 1962
3½% Madhya Pradesh 1962
2½% U.P. 1961
2½% Madras 1961
Interest falling due in October:
3% 1966-68
3% 1970-75
3½% N. P. Loan 1964
4% Hyderabad State Devl. 1963.

Holders of the loans are advised to lodge their holdings well in advance of the due dates to facilitate delivery of their securities and interest warrant(s) on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

The return of the State Bank of India for the week ended 22nd July, 1955, shows a rise of Rs. 3.44 crores in total deposits to Rs. 205.50 crores. Investments in Government Securities are down by Rs. 32 lakhs to Rs. 94 crores, while other authorised investments are up by Rs. 35 lakhs to Rs. 8.15 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have fallen by Rs. 2.15 crores to aggregate Rs. 109.47 crores. Cash and balances are, in consequence, shown at Rs. 16.62 crores or Rs. 1.05 crores less.

TREASURY BILL MATURITIES

Issue Date	Maturity Date	Amount (000's of Rs.)	Average Acceptance Rate

MONETARY FACTORS IN PLANNING

THE ROLE OF BANKING

By R. M. Mitra

MODERN economic planning is not a newly devised method of economic salvation. It is not even necessarily an expression of a new concept of the State's economic rôle. With the growing complexity of economic activities, the economic policy of the State has naturally developed increasing intricacy and "planning" may be an apter name to suggest the complexity of the problems involved in formulating State policy. A note of falsetto in our approach to, or expectations from, the promised series of five year plans, should not therefore be allowed to increase confusion. It would be disastrous to regard planning as a simple process or routine application of fixed economic doctrines.

The entangled character of the issues arising in a progressively complex economy is perplexing. Small-scale industry has no obvious ground for competition with highly efficient large-scale industry, but is considered an economic necessity as a source of employment and a means of distributing purchasing power. Yet, although small-scale industry seems to fit in with the idea of a decentralised economy, any attempt to protect it against competition from large-scale industry will intensify centralised control and regulation. A developing economy requires larger investment in capital goods industry and consequently more savings and less consumption, but expanding money income promotes higher consumption among people with unsatisfied demands.

It is an economic truism that money is not a factor of production or wealth, but is a mere instrument to bring about a co-ordination of the factors of production and channels of distribution. Yet, it is a sad example of the conflicts generated by scientific progress that money threatens to become itself the prime determinant of production and distribution. The tentative "draft plan frame" which is now engaging anxious consideration seems to reflect the confused impact of these involved issues and conflicting forces.

The objectives formulated in the draft plan frame comprehend both targets of production and extents of mobilisation of monetary resources. These objectives purport to be based on assessments of available resources of men and materials, and of consumption and investment needs. The plan frame assumes that factory production cannot secure adequate utilisation of man-resources (employment) during the period of the second plan. It proposes, therefore, to make a more elaborate and organised use of labour-intensive hand industries for production of consumer goods, and at the same time, to set up capital-intensive heavy industries and other economic and social overheads which will promote efficiency of production in the hand industries on the one side and facilitate smooth and progressive collaboration between hand-industries and factory establishments, on the other side.

The assumptions made and figures presented in the plan frame have given rise to grave doubts. It is not certain that the emphasis on heavy industries is properly conceived and will not lead to inflationary effects. It has yet to be proved that the artificial supports proposed for hand industries will not destroy enterprise and initiative. Doubts have been felt as to whether targets for heavy industries should be fixed simply on the basis of available material and labour resources and assumed needs of capital goods or stimulated demands, and not related to a process of back-calculation of the needs of consumer goods industries operating at required levels of consumer demand.

Targets and Assumptions

The plan frame sets the following targets of production in the heavy industries: six million kilowatts of electricity, 60 million tons of coal, 300,000 tons of synthetic petrol, five million tons of steel, 40,000 tons of aluminium, 3.5 million tons of manganese ore, 10 million tons of cement, and heavy machinery to fabricate industrial plant involving a monetary investment of Rs. 240 crores. The other targets of production involve a 20 percent increase in agricultural and allied products, a 67 percent increase in over-all mining and factory production (i.e. including heavy industries), a 40 percent increase in hand industry products and construction, and about a 23 percent increase in transport, commerce, trade and other ancillary and targets imply that the monetary habits of people must so change that savings can increase from about 7 percent to 9 or 10 percent of national income, that taxation can increase its demand from about 7 percent to 9 or 10 percent of national income, that deficit financing of the order of Rs. 200 crores per annum may not cause uncontrollable inflation and lastly that more than 60 percent of the estimated five-year savings of Rs. 5,600 crores can be allocated to the public sector without resort to harmful regimentation or otherwise straining the economy. Fulfilment of the targets is estimated to result in a rise in national income from the annual rate of growth of 2.5 percent to 5 percent, or, expressed in absolute figures and without adjustment for the results of adventitious factors, from Rs. 10,800 crores in 1955-56 to Rs. 13,700 crores in 1960-61 as against from Rs. 9,190 crores in 1950-51 to Rs. 10,800 crores in 1955-56.

It need not be doubted that resources available in the country both in men and materials are reasonably sufficient for the building of the heavy industries and other economic overheads envisaged

in the plan frame. It is also pretty clear that consumption requirements of the vast ill-fed, ill-clothed and ill-housed population, are large enough to absorb any conceivable increase in consumer goods that may be brought about by the consumer goods industries, howsoever expanded, under the influence of the enlarged economic overheads. Yet, these indisputable economic facts do not support a simple process of augmenting the traditional five-fold factors of production in arithmetically calculated proportions, and creating monetary supply of a correspondingly increased volume.

Investible Surplus

The West Bengal scheme as elaborated by Dr. B. C. Roy seems to show a greater sense of realism. It recognises that while increased production creates increased demand, possibilities of increased production are limited by the extent of the available investible surplus. It would, however, have helped better understanding of the scheme if the underlying principles were brought out in clearer terms. The mechanism of production in the modern economy is a process of monetary payments in wages, salary, interest and rent. These payments are made in cash and do not consist in supply of the actual needs of the income-receivers. Now if production yields some goods and services which money-receivers do not want and does not bring forth in adequate quantity those goods and services which money-receivers do want, then there will be an inflationary scramble for the goods and services in short supply and little scope for effective utilisation of those which money-receivers do not want. That portion of money-income which seeks acquisition of interest in capital goods may be said to represent "investible surplus". In a country with low standards of consumption, a larger money-income will stimulate larger demands for consumption goods; and it may be a long time before these demands are satisfied and money-income takes an interest in investment.

Thus the West Bengal scheme seems to be based on a realisation of the fundamental defect of Say's law, which ignores the fact that though production may create demand, goods and services which are produced may not be those for which demand arises. Curiously enough, however, the operative suggestions of the scheme itself ignore this need demand in both urban and rural areas. The scheme assumes that any and every product of hand industries will find indiscriminate demand in rural areas (though not in urban areas) and that the products of factory industries will find similar demand in both urban and rural areas. The scheme seems to suffer from a further defect in overlooking the point that money-income flowing from the capital-intensive heavy industry may pass into the hands of people with higher incomes and whose demands for consumption goods may therefore be inelastic. As regards the central proposition of the scheme that "back-calculation" on the basis of investible surplus should determine the size of heavy industry and development expenditure, there seems to be scope for further exploration of Keynes's theory of the "multiplier", especially in a community with a large unsatisfied consumption demand plus unequal distribution of money incomes. It would appear that the scheme seeks to limit increase in the production of consumer goods to the extent of utilisation of idle installed capacity and wants expansion of installed capacity to follow and not to precede increase in the investible surplus, because it fears that the time-lag between expenditure on expansion of installed capacity and availability of correspondingly increased consumer goods will result in the misbehaviour of money with unhealthy effects on prices and the cost of living. But this reasoning, though ideally sound, does not take full account of the fact that where the source of consumption demand and the destination of money-income are not the same, the time-lag if properly anticipated may not produce the apprehended evil results.

Dynamics of Planning

It is necessary to understand the dynamics of economic forces to be able to appreciate the fundamental weakness of the pattern of planning that has been unfolding in this country and elsewhere. No process of back-calculation or prospective preparation can be perfect in assessing present or future purchasing capacity and consumer preferences (as distinguished from consumers' needs in mere physical terms). No plan for the capital goods industry can, therefore, ensure the coincidence of the emergence of increased productive capacity and the readiness to utilise it for increased production of consumer goods. No planning, again, can fully anticipate the future course of technological advance and thus provide against the expanded productive apparatus being rendered useless. As for the monetary aspect of the task, even if it were possible to collect tax revenue and raise public loans sufficient to cover the contemplated development expenditure in the public sector, and yet to encourage further monetary savings of adequate quantity to meet the requirements of the private sector and even if it were thus possible to avoid deficit financing through the issue of ad hoc securities or creation of credit by the banks, the intractable and imponderable antics of money would still require to be guarded against. It is the psychological forces of "preference" and "expectation", rather than the available stock of legal or bank-money, that determine the amount of work performed by a unit of money, and also how and in what direction the quality of such work will be influenced by movements of money at differently accelerated rates.

This may seem to call in question the whole raison d'être of planning, whether of the Mahalanobis or of any other brand. But it would be foolish to ignore planning or policy-making as inspiring principle and inescapable impulse

every modern society. The real difficulty arises in distinguishing between on the one hand the regulative, and on the other hand the instructive and exploratory rôle of a plan. In a communistic form of society, the regulative rôle may be widened to direct the forces of "preference" and "expectations" in accordance with the requirements of the plan. A democratic community values satisfaction of psychological forces above that of material needs, and further believes that in the long run even higher material prosperity will be more broadly and securely based in an atmosphere of psychological freedom than under conditions which tend to atrophy initiative and enterprise. Planning in a democratic society will, no doubt, formulate physical objectives and set them as a pattern of economic endeavour, but will so fashion its regulative weapon that "preference" and "expectations" may operate with reasonable freedom.

If, therefore, the free forces of market formation of prices, propensity to consume, liquidity preference, and other such manifestations of "preference" and "expectations" are to be allowed to operate, planning has the dual task of assessing physical resources and requirements, and of protecting the productive and financial organisations from the disturbing effects of the free forces behaving in an unexpected fashion. It is the progressive efficiency of necessary protective expedients that will be the measure of efficacy and soundness in planning. Investigation of questions relating to methodology of production and adequacy of physical resources, the suitability of factory or hand industries as employment-potential, and other problems now occupying the attention of economists and planners will be a continuing process, and will yield different results in

different economic and social climates and with different premises and different approaches. But, meanwhile, the relative position of the different parts of the economic organisation has to be maintained in equilibrium. Here, money emerges in its supreme rôle in the modern economy.

When, as a result of miscalculations or changes in taste or other conditions, goods and services meet with ineffective demand, the operative efficiency of the economy can be maintained and its disruption prevented, only if the exchange-value of such goods and services (measured in terms of the purchasing power of money) remains unimpaired. In an expansive economy, there will be a continual process of adjustment, and every such adjustment, as J. M. Clark says, will "take time and involve uncertainties, errors and losses". It is the task of planning to counteract the effects of such uncertainties, errors and losses on the operative efficiency of the economy.

Banking in Planning

The report of the All-India Rural Credit Survey Committee indicates a healthy awareness of the fundamental needs and the true character of sound planning. But the recommendations made by the Committee, and the practical measures suggested for their implementation, seem to have been vitiated by the mistake of assuming that equilibrium of the whole will be maintained if only a part is held in balance, and also of ignoring the importance of private initiative and individual enterprise. It seems necessary, therefore, to review and revise the measure suggested and partly adopted, in implementation of the recommendations of the Committee. In this connection, Keynes's observations provide useful guidance. "It is not the ownership which it is important for the State to assume";

it is still necessary to ensure "free play of economic forces" to obtain an efficient use of the factors of production, but measures should be devised to secure "an adjustment between the propensity to consume and the inducement to invest". It is not improbable, however, that Keynes's idea of "effective demand", which he sought to realise through adjustment of consumption and investment, may require a more direct approach to his problems of "wasted resources" and of unbalance between wealth and "the aggregate of positive individual savings", than he apparently contemplated. It is interesting to note that the rise in national income in England of about 16 percent during the years 1951-53 was accompanied with a 2 percent increase in money supply but an increase in the cost of living of about 12 percent; whereas in India during the years 1951-55, national income is reported to have increased by about 10 to 12 percent, accompanied by a rise in money supply of about 5 percent but a decline in the cost of living of about 12 percent. Similar unpredictable results show themselves in matters of retail sales, consumption and savings. It appears that the real explanation for such inconsistent movements lies in the turnover of money and the character of such turnover.

It is hoped that a properly conducted examination of the principles and assumptions underlying the "draft plan frame" will lead to fresh consideration being given to the shape of the economy that may emerge from the Gorwala Committee's "integrated scheme" comprising the State Bank and "State-partnered" co-operative banks. It may ultimately be found, for all one knows, that a more comprehensive and thoughtful planning of the banking system is the key to the planning of the modern economy.

A.E.I. (India) Ltd. are proud of the part they are playing in the electrification of the Howrah-Burdwan main line of the Eastern Railway.

This contribution to the electrification of India's railways follows a worldwide contribution to railway electrification by the A.E.I. Group of Companies for over half a century.

A.E.I. (India) Ltd. will supply the entire electrical equipment all manufactured by Metropolitan-Vickers Electrical Co. Ltd., England and A.E.I. Mfg. Co. Ltd., Calcutta, for thirty-four Three-Car Multiple Unit Trains and two spare Motor Coaches which are being supplied by Jessop & Co. Ltd., Calcutta.

A.E.I. (India) Ltd. will supply indoor equipment for all the six main line Traction Substations and all the four Track Sectioning Cabins on the Howrah-Burdwan main line. This includes twelve Pumps Steel Tank Rectifiers totalling 32,000 kW and seventy-six High Speed Circuit Breakers all manufactured by the British Thomson-Houston Co. Ltd., England.

A.E.I. (India) Ltd. will supply one hundred Automatic Colour Light Signals and twenty-five Electric Point Machines in addition to other signalling equipment all manufactured by Metropolitan-Vickers—GRS Ltd., England.

INDUSTRIALS AND OILS EASE IN STOCK MARKET

GILT-EDGED BETTER AFTER BUTLER'S STATEMENT ON STERLING

London, 3rd August.

THE stock market was quieter before the Chancellor of the Exchequer's statement on the economic position and the state of sterling. There was a fairly good recovery after the statement, which was not as severe as had been expected, although industrial equities and oils were lower on balance. Gilt-edged benefited from the Chancellor's remarks on sterling and the consequent improvement in rates. Prospects of tighter credit conditions had a delayed effect on the market and brought a lower trend to industrials and oils. Oils reacted heavily, and although prices were above their worst, substantial falls were recorded on balance. Foreign bonds made a generally good showing, with Germans and Japanese issues in demand. Dollar stocks moved erratically under the lead of Wall Street. Kaffirs were easier, with some sharp falls on the removal of any prospects of sterling devaluation. Coppers were irregular, and other base metals moved within narrow limits. Tea shares were subdued but rubbers gained ground.

The Money Market

It was another very difficult week in the money market and the credit squeeze intensified following a virtual demand by Mr. Butler that banks reduce advances. Discount houses had an uncomfortable time in their search for accommodation, and the fact that many had repayments to make to the Bank of England as a result of the previous week's borrowings increased the pressure. The authorities came forward in smoothing out operations, but market houses were compelled to pay as high as 4 percent for night money, while even 4½ percent was mentioned at one time. Shortage of funds kept business in bills at a low ebb, and where this took place October dates changed hands at 3-15/16 percent. Applications for Treasury bills totalled £344,205,000, of which £240 million were allotted at an average rate of 7½ 5/8d compared with 7½ 4/8d in the previous week. This week, £240 million are offered. The Bank of England return for the week ended 27th July shows notes in circulation about £15 million higher at around £1,860 million, while bankers' deposits were about £5 million lower at around £240 million.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: Although the Chancellor's statement was rather an anti-climax, the stock exchange is less exuberant. Either the new medicine will work or it will have to be reinforced. Neither would be bullish for the short run but the Chancellor's insistence that the economy is fundamentally sound strengthens the opinion that good equities should be retained. For a little while, the market is likely to be quieter but this will be useful to consoli-

date the gains made since the general election. The markets will emerge with strengthened foundations from which to forge ahead.

Activity on Wall Street

In the foreign bond market during the past week, German Nationals attracted renewed buying interest, advancing up to one point or more, with many selling at the best levels of the year. United Steel Works issues continued to move sharply ahead but on small turnover. Greeks and Serbs were under light pressure and registered fractional losses. On the American Stock Exchange, Russian Imperials developed firm tendencies following some early price shading. Danmarks, Italians and Norwegians attracted little trading interest. Japanese issues were mostly lower. A number of Brazilian 3½ percent and 6½ percent moved up by one point. Chilean 3 percent 1963 were usually slow but finished the week fractionally higher at \$45. U.S. Government obligations eased, led by long-termers, where new 1955 lows were established. The marking down in values reflected lack of investment interest coupled with the tightening of money rates; major New York City banks boosted rate charges of brokers and dealers on co-lateralised loans from 3 percent to 3½ percent. Investment quality corporates were also shaded. Convertibles were irregular on smaller turnover and largely followed the security market trend. Rails were generally mixed, while World Bank activity was confined to small sales in 3 percent 1972 and 3½ percent 1981 at slight price concessions.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 27th July shows gold stock unchanged at \$21,681 million. Foreign deposits rose by \$4 million while foreign investments fell by \$35 million. The Federal Reserve system purchased \$94 million worth of bills and \$108 million of Government securities under repurchase agreements. Total discounts and advances fell by \$21 million to \$549 million, while excess reserves of member banks rose by \$58 million to \$577 million. Their daily average of excess reserves rose by \$12 million to \$597 million, while their daily average borrowings rose by \$93 million to \$395 million. Business loans of New York City banks rose by \$60 million to \$7,455 million a year ago.

U.S. Money Review

Demand for credit continued strong in the first half of 1955, the Federal Reserve Board reported in its monthly bulletin. Total bank loans increased by about \$4 million—a record for any first half-year. Of this, an increase of over \$2,000 million was accounted for by bank loans to business, which showed the biggest rise for any first half-year since the end of the war. Suggesting that its two 1955 increases in stock margins have had some effect, the Board reported that the rate of loans by banks and brokers on securities other than Government declined during 1955.

More Orders for Jute Industry

An improved tone was noted in jute yarns and cloths during the past week, with both spinners and manufacturers entering more orders. These will cover them fairly well up to the end of September. Buyers were not keen to purchase for later deliveries, although there were no indications that raw jute prices would fall. Quietly steady business was done with Dundee spinners before the mills closed down on 22nd July for the holidays. Most of the mills are reopening on 8th August. Meanwhile, producers are still of the opinion that a change in yarn and cloth prices is necessary to compensate them for the wage increases granted recently and totalling 6½ percent.

Tea Auctions in London

Tea traders were reluctant to comment on the Indian Government's latest decision to restrict the quantity of North Indian tea for the London auctions this year to 140 million lbs., against 167 million lbs. last year. But it was felt in some quarters that a progressive transfer of tea auctioning of Calcutta eventually must increase the quantities bought at the Calcutta auctions by the U.K. One outcome of the curtailment of North Indian tea for auction in London may be to stimulate demand for British African tea, the total quantity of which entered for home consumption in 1954 was nearly 25 million lbs.

Platinum in Fair Demand

British Commonwealth platinum in the U.K. continues to be quoted by the two leading suppliers at £29 a troy ounce. Demand for the metal is said to be appreciable, mainly on industrial account. For marginal requirements, imported material is reported around £31 to £31½ a troy ounce. The more buoyant tone of the market reflects the lack of offerings from Russia, but how long it will be before that country "turns on the tap again" is problematical, dealers say.

Rubber Prices Rise

Rubber prices moved on to fresh high ground for the year last Wednesday. Forward settlement house positions met very strong demand, with January-March bid up to 37d a lb. compared with 35½d at the opening. Rubber for August shipment by mid-afternoon was nearly 1d a lb. dearer at 38½d c.i.f. Traders attributed the renewed demand to further reports of Russian buying orders, coupled with the general scarcity of offers from the east, where prices are currently somewhat above the London parity.

Stocks and Shares

MARKET IN CHEERFUL MOOD

BOOMLET IN JUTE SHARES

Wednesday Evening.

TWO dramatic announcements in quick succession on Sunday and Monday—the devaluation of the Pakistani Rupee and the Government of India's decision to abolish the existing export duties on jute goods—were hailed by market operators, and in unofficial trading on Tuesday there was a substantial all-round increase in jute share prices in particular.

The Stock Exchange was open only for three days during the period covered by these notes, namely, Thursday, Friday and Monday. Last Saturday was a Bank holiday, the market was closed on Tuesday as a mark of respect to the memory of the late Mr. C. C. Agarwal who was the only surviving founder of the Calcutta Stock Exchange. Wednesday is another holiday on account of the Rakhi Purnima Festival.

Details of trading during the three-day period are given below:—

The gilt-edged market ruled steady although there was no great increase in the volume of business. The 3½ Conversion Loan was unchanged at around Rs. 80-8 with small business passing, while the 3½ Non-terminable Paper was stagnant at Rs. 80-1. Retail business was reported in short-dated loans and there were no price changes. Medium-dated and there were no price changes. Medium-dated loans continued to be asked for with 3½ 1959-61 being marked up by 2 annas to Rs. 98-1 possibly due to the approach of the interest payment date (15th August). Both 3½ 1961 and 1964 met with good enquiry to close with sellers at these prices. The 3½ 1963-65 loan was better at Rs. 94-5-6 but 3½ 1964 was offered at Rs. 94-5. The 2½ 1960 loan was in strong demand with no declared sellers, while 2½ 1961 improved to Rs. 92-6 cum voucher and was later quoted at Rs. 92-4 ex voucher. In the long-dated group, 3½ 1966-68 found sellers at Rs. 91-7 but 3½ 1970-75 met with enquiry at Rs. 87-2-6.

Provincial loans were an extremely dull market and practically no business was reported. There was a small enquiry for existing 3½ issues but 4½ Loans were on offer with few price changes, with the exception of 4½ Madras issues which were marked down further to Rs. 100-8.

Selected miscellaneous preference shares continued to be enquired for, but sellers were not forthcoming. There was also a fair demand for good jute shares. The only transaction reported in jutes was in Hukumchand at Rs. 114. Amongst miscellaneous preference shares, a small lot of Allahabad Bank changed hands at Rs. 132. Calcutta Electric were done at Rs. 12-12. Calcutta Trams at Rs. 8-11 and Indian Iron at Rs. 10-9. Indian Standard Wagon were marked at Rs. 14-8 and there were buyers of Karanpura Collieries at Rs. 64. New Victoria came to hand at Rs. 3-5, Rohtas Industries 7½ were crossed at Rs. 139 and the 'B' at Rs. 70. Star Paper were quoted at Rs. 82.

United Commercial featured in the banking section improving from Rs. 47 to Rs. 48. Hindustan Commercial were marked at Rs. 13-12, Punjab National Bank were crossed at Rs. 48-12 and United Commercial Bank of India 'D' shares were steady at Rs. 4-12.

In the railway section, Dehri-Rohtas were dealt in at around Rs. 12-14.

With the exception of Dunbar which were steady at Rs. 245, cotton shares were dull. Cawnpore Textile were offered at Rs. 9-8, Elgins were marked at Rs. 19-6 and Jayshree at Rs. 6. Kesoram were easier at Rs. 17-14, New Victoria were quoted at Rs. 1-11 and Swadeshi Preferred Ordinary at Rs. 9-2.

Coal shares were fairly steady with Burrakur being reported in the unofficial market on Tuesday up to Rs. 15-6 against an opening price of Rs. 14-11. Similarly, Bengal were quoted today at Rs. 540 against a quotation of Rs. 529 last week. Other transactions reported during the three-day period under review were Amalgamated at Rs. 24-8, Borrea at Rs. 29-4 and Central India at Rs. 8-6. Katras Jheriah had buyers at Rs. 52-8 but sellers were scarce. Equitable came to hand at Rs. 33. New Beerboom were done at Rs. 21-12 and New Manbhoom at Rs. 10-4. Several transactions were reported in Raneegunge at Rs. 12-6, South Karanpura at Rs. 12-12, and Western Bengal changed hands at Rs. 7-8.

Jute was undoubtedly the outstanding section and we give below a chart showing the opening and closing prices during the official period of trading together with Tuesday's unofficial rates; in order to illustrate the sharp recovery which has taken place in this section following the announcement of the devaluation of the Pakistani rupee and the total removal of the export duties on jute goods:—

	Opening 27-7-55.	Closing 1-8-55	Tuesday's kerb rates.
	Rs.	Rs.	Rs.
Anglo-India	235	239	255
Barnagore	194	198	208
Birba	20 13	21	22

Champdany	180	184	202
Ganges	102	104	111
Howrah	32	32 8	33 12
National	35 8	36 8	38 8
Union	204	268	285

Electric supply shares were fairly steady although the volume of business was small. Benares changed hands at Rs. 19, Calcutta Electric were better at Rs. 15-7 and Jubbulpore were done at Rs. 15-2. Patna changed hands at Rs. 13-4 and United Provinces were crossed at Rs. 161-8.

There were no special features in the sugar section. Balrampur were marked at Rs. 10-8, Carew at Rs. 12-10, Dyer Meakin Breweries at Rs. 7 and New Savan at Rs. 7-4. There were sellers of Durbhanga at Rs. 20-8 and Shree Krishna Gyanoday were better at Rs. 18-2.

As usual, there was a large turnover in Indian Iron & Steel shares with the price fluctuating widely between Rs. 38-3 and Rs. 39-4 (a new high); Tuesday's unofficial quotation is Rs. 38-9. Braithwaites were steady at Rs. 25-12, Burn & Co. at Rs. 281 and Indian Galvanizing at Rs. 23-12. Indian Steel & Wire Fully-Paid Ordinary were taken at Rs. 82 and Jessops were easier at Rs. 46-12 while several deals were reported in Kumardhubi Engineering at Rs. 12-12. Marshalls were marked at Rs. 7-8, Richardson & Cruddas at Rs. 20 and Textile Machinery were better at Rs. 22-11.

The features in the miscellaneous section were Bengal Paper and Angelo Brothers, the former improving to Rs. 73 and the latter to Rs. 24. Indian Paper Pulp came to hand at Rs. 29-12. Orient Paper fluctuated narrowly around Rs. 30-8, Shree Gopal were steady at Rs. 16-6 as were Titaghar at Rs. 46-6. Sone Valley changed hands at Rs. 7-8, New Asiatic Insurance improved to Rs. 6-12 and Concord were done at Rs. 13-12. Bengal Assam Steamship were marked at Rs. 143 and Calcutta Steam Navigation at Rs. 108. India General Navigation were steady at Rs. 96, India Steamship fluctuated around Rs. 7-10 and Alkali & Chemical were taken at Rs. 17-8. There were sellers of Assam Saws at Rs. 4-14, Bengal Flour were marked at Rs. 29-12 and Balmer Lawrie at Rs. 161. Bararee Coke were steady at Rs. 21-8 as were British India Corporation at Rs. 9-2. Imperial Tobacco dropped from Rs. 13-12 to Rs. 13-5 as did Indian Cables from Rs. 29-12 to Rs. 29-4. Calcutta Trams were marked at Rs. 16-6 and Indo-Burma Petroleum changed hands at Rs. 160. Other transactions included Midnapore Zemindari which improved to Rs. 39-8, Rallis at Rs. 37, Shaw Wallace at Rs. 14-8 and Tide Water Oil which were steady at Rs. 16. Business was reported in National Insulated Cables Old shares on an Ex-Rights basis at Rs. 17-12 and the New shares at Rs. 16-4. Rohtas Industries on the announcement of a Rights issue in the proportion of one for one subject to sanction from the Controller of Capital Issues were marked up to Rs. 30-10 from an opening quotation of Rs. 29-9.

In the mining section, Indian Copper were steady at Rs. 5-3 and there were buyers of Orissa Minerals at Rs. 27-4.

There has been little change in the tea section during the week under review and the volume of business was negligible. Among Assam shares, Basmatia were better at Rs. 57-8 as were Bishnauth at Rs. 49-4 and Dhelakhat at Rs. 18-12. Brooke Bond accounted for the bulk of business in the section and at one time were taken up to Rs. 23-12 to close easier at Rs. 23. Dibrugarh had sellers at Rs. 28-12 as did East India at Rs. 31-8. After being nominally quoted at Rs. 340 for some time, Hoolungoree were taken up to Rs. 370 while Ledo were unchanged at Rs. 28-8. Namburnadi eased slightly to Rs. 23 while Raigarh were better at Rs. 57. Teen Ali had sellers at Rs. 43 and Tezpor were marked down to Rs. 46-12. From the Doars area, Banarhat on the announcement of a dividend of 120% jumped to Rs. 700 while Hasimara were better at Rs. 48 and Ranicherra unchanged at Rs. 28-4. Jaybirpara lost ground to be quoted at Rs. 53-8. Of the remaining shares, Gielle were asked for at Rs. 22-8, Central Cachar at Rs. 130 and Hattikhira at Rs. 28-12. On the announcement of Pakistan's devaluation of her rupee, there was a slight enquiry for a few Pakistan scrips, and Dauracherra were taken up to Rs. 16-8 whilst Patrakola were marked higher at Rs. 202 and New Samanbagh at Rs. 22-4.

Providing Rs. 4 lakhs (same) for depreciation and Rs. 1.25 lakhs (Rs. 3½ lakhs) for taxation, the profit of the ANGLO-INDIA JUTE MILLS COMPANY amounted to Rs. 5.80 lakhs for the half-year ended last March. Bringing in Rs. 1,47,643 there is Rs. 7,27,465. The ordinary dividend is the same at Rs. 5 a share. Machinery and replacement reserve receives Rs. 2 lakhs (nil), leaving a carry-forward of Rs. 1,41,421.

The METROPOLITAN INSURANCE COMPANY issued policies of Rs. 10.28 crores for the year ended last December. The expense ratio declined from 14.91 percent to 14.59 percent. The life assurance fund increased from Rs. 4.69 crores to Rs. 5.72 crores.

new methods of raising loans and mobilising savings." The Finance Minister did not suggest a reduction in the size of the plan in the public sector to less than Rs. 4,300 crores.

The Finance Ministry, it will be recalled, had estimated the available resources for the second five year plan at Rs. 3,000 crores, inclusive of Rs. 1,000 crores of deficit financing. As indicated last week, these estimates have now been raised to Rs. 3,500 crores, of which Rs. 200 crores will be the result of "some stretching". The estimates include Rs. 1,000 crores of deficit financing. This availability of resources is based on the assumption that all other things will remain equal and that there will be no increase in non-development expenditure. But prohibition, on which some Congressmen appear to stake their reputation, would upset the equilibrium. It might cost over Rs. 200 crores, which someone would have to pay.

The planners have also assumed an unchanged Defence Budget. In the nature of things, the Defence Budget might mount up, further reducing the availability of resources. Why a huge gap of Rs. 2,000 crores, including Rs. 1,000 crores of deficit financing, should be left hanging in the air is not disclosed. It may be that, on the basis of the experience of the five year plan, India's capacity to spend money is known. It may be that the façade of "Iron Curtain" economists and physical planning, tending to regimentation, might create such apprehensions among Americans as to stir them to save India's democracy at any cost. Could this be the explanation for abandoning the traditional pattern of sound finance?

Mahalanobis Attacks Administration

Professor P. C. Mahalanobis has obviously been losing ground here. The Commerce Minister, Mr. T. T. Krishnamachari, has succeeded in driving his coach-and-four through the Mahalanobis framework for heavy and household industries. There was talk of resources, but none of "physical planning", at the last meeting of the Standing Committee of the National Development Council. Professor Mahalanobis, in any case, appears to be perturbed and has launched an anti-administration crusade. He declares that "the administrative difficulties inherent in the existing Government machinery are likely to prove the greatest obstacle to the success of the second five year plan. It is likely that the second plan might collapse on account of the administrative rigidity."

Meanwhile, Pick's *Currency Yearbook* states that the Indian rupee is one of the soundest currencies in the world today. "Bombay is the world's third largest gold trading centre after Paris and London. The New York free market never deals in the Ceylon rupee. The Pakistan rupee is worth only 65 percent of its value in the world's free market." This is an unsolicited tribute to the Indian administration. Another tribute is the readiness of European and American private enterprise to invest money in India.

Professor Mahalanobis, however, is not alone in his anti-services attitude. The late Sir Shanti Sarup Bhatnagar held, and Mr. S. K. Dey holds, similar views. The economic benefits of a chain of national laboratories and of the countrywide community projects have still to be appraised in detachment away from the tom tom of publicity. Professor Mahalanobis' anti-administration crusade, however, raises some fundamental issues.

REVENUE :
The Indian Tea Industry contributed to the National Exchequer Rs. 19 crores as export duty, and over Rs. 3 crores as central excise duty in 1954-55. Besides, it contributed large sums by way of State income tax, agricultural tax, road tax and certain imposts.

No other drink refreshes you so much, yet costs so little as **TEA**

The Government should provide the fullest opportunity for the Administration to place its viewpoint before the public. It is no secret that the views of Professor Mahalanobis are not shared even by Members of the Planning Commission, of which Professor Mahalanobis is a "de facto" member. In fairness to the public, the Members of the Planning Commission should be invited to express themselves freely and frankly.

Nehru's "Next Jump"

The Prime Minister, speaking before the National Development Council on 6th May, stated that he was greatly excited about the tremendous adventure, the mighty problem of developing the country. He suggested that they should consider their problems in that spirit, prepare the ground for their next jump and not stop. The Deputy Chairman, Sir V. T. Krishnamachari, had then envisaged a plan of about Rs. 3,750 crores in the public sector, adding: "It is not possible to go below these targets. To what extent it is possible to exceed them is a matter for judgement." Fully imbued with the psychology of the "next jump", State and Central Ministries produced plans totalling Rs. 12,000 crores. They outbid Professor Mahalanobis. The Union Education Ministry produced an "incomplete" plan to cost Rs. 1,330 crores. Central and State Ministers have been going about making bold pronouncements and raising hopes amongst an unwary population that a millennium awaits it in the next five years. The expression "crores" has almost lost its meaning and become equivalent to annas.

Bombay State came up before the Planning Commission last week for approval of its plans. As could be expected, its estimates had to be drastically reduced to fit into the availability of financial resources. This was resented by the spokesmen of the Bombay Government who, according to lobby reports, wanted some explanation for raising hopes by inviting States to plan from below. Some members of the Planning Commission, it is further learned, were willing to accommodate Bombay by accepting its plan without any modification. It was, however, pointed out that such a step would make the Commission accord similar acceptance to all other plans, thereby raising the plan outlay to over Rs. 12,000 crores. In other words, it would mean the end of all planning and the end of the Planning Commission itself.

Unemployment Insurance

A small working group consisting of representatives of the Ministries of Labour, Finance, Commerce and Industry and the Planning Commission was constituted in August 1954 to make a preliminary study of the problem of unemployment insurance. The working group has suggested an unemployment insurance scheme broadly on the following lines. To ensure uniformity, the unemployment insurance scheme should be a Central one applicable to the whole of India and it should be integrated from the very beginning with the existing social security schemes, namely the Employees' State Insurance Scheme and the Provident Fund Scheme—all under one unified central administration but with provision for decentralisation of administrative functions. For this purpose, all these three schemes should, as far as possible, be made coterminous.

The scheme should apply only to persons who are already employed and not to those who are seeking employment. It should cover in the first instance persons whose total monthly remuneration does not exceed Rs. 400 and who are engaged in:

- factories using power and employing 20 or more persons;
- mines under the Mines Act, 1952; and
- shops and commercial establishments covered by the Shops and Commercial Establishments Act.

There should be provision in the scheme for its extension to plantations and other categories of workers later. But it cannot be applied to employees in seasonal factories, apprentices, domestic servants, casual workers and agricultural workers. The cash benefits to be paid under the scheme should be about 50 percent of the wages (including dearness and overtime allowances) for a period of 13 weeks in a year, subject to compliance with certain conditions regarding waiting period, qualifications etc. In addition to cash benefits, steps should be taken by the Government to provide employment exchange facilities and training centres.

It is difficult to estimate the incidence of unemployment and calculate the cost of the scheme in view of lack of past experience and necessary data. The cost may be roughly estimated at 3 percent of the total wage bill. This should be met by contributions from the employers at the rate of 2 percent of the wage bill and from the employees at 1 percent of the wage bill. The contribution of the State should be limited to the provision of employment exchange facilities, as also the cost of administering the cash benefits.

The contributions from employers and employees may be recovered along with the contributions payable under the Employees' State Insurance Scheme. The local offices of the Employees' State Insurance Corporation can be utilised for the payment of cash benefits. Where a local office of the Corporation is not available, the responsibility of disbursing unemployment benefits may be entrusted to the employment exchange if it exists. The lay-off benefits provided under the Act will have to cease. Retrenchment benefits may be continued on a voluntary basis by any employer.

London

MR. BUTLER'S PLAN TO CURB OVERSPENDING

BALANCE OF PAYMENTS AND GOLD RESERVES CAUSE ANXIETY

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer "jumped the gun" by making his statement on the economic situation on Monday, 25th July instead of on Tuesday, 26th July which was good tactics for it enabled the House of Commons to debate the subject before rising for the summer recess. He outlined five means by which he hoped to curb overspending and explained that this had become necessary because the balance of payments situation was giving cause for concern and the gold reserves were declining again. The new measures, briefly, are (1) A letter to the Governor of the Bank of England calling on banks to achieve "a positive and significant reduction" in advances, and a request to business firms to "slow down investment not of the greatest national urgency"; (2) A drive for special economy in Government overseas expenditure; (3) An appeal to local authorities to hold back schemes for capital expenditure as far as they can, which will be reinforced by a stricter ministerial attitude in approvals for plans of local authority capital investment; (4) Postponement or slowing down of capital expenditure projects by nationalised industries; and (5) An increase from 15 percent to 33½ percent in initial deposit on hire purchase transactions for cars and motor-cycles, radio and television sets, gramophones, cameras, refrigerators, washing machines, vacuum cleaners, and gas and electric fires. The watchword for the moment, we were told, is: "All who can must try to spend less in order to save more." Mr. Butler also took advantage of the opportunity to quash rumours of sterling devaluation which had led to recent heavy selling of sterling in international markets.

The announcement, as it was presumably intended to do, produced immediate results. The chief effect was a massive reversal of the speculation against sterling, but whether this will persist long enough to bring back all the dollars which must have been spent in supporting the exchange market recently (and in particular to affect the July figures of the gold and dollar reserves) remains to be seen. The Stock Exchange "boom" also suffered its first break since the substantial shake-out which followed the raising of the Bank rate last February. Here again the permanency is open to some doubt, for it will depend on how the Chancellor's new measures work out in practice. They are certainly powerful enough to stabilise the economy if they are pursued diligently, and it may be taken for granted that Mr. Butler has learnt the lesson that an unadulterated policy of incentives and expansion can lead to too great an upsurge of confidence, and in those circumstances it is difficult to make monetary restraint work. Provisional returns for bank advances in the first three weeks of July show a drop of over £34 million for the ten banks whose statements are available, and the "squeeze" had not then begun. Provisional figures just issued show that in June the index of industrial production dropped—for the first time since the beginning of 1954. The June figure is estimated at 137-138, compared with a revised figure of 139 in May and 141 in April. The May figure is six points higher than in May last year, although this year the Whitsuntide holiday fell in May whereas it fell in June in 1954 and the index figure for that month was 128.

The Question of a Crisis

It would have been surprising had the Opposition spokesmen during the Commons debate not laid emphasis on the fact that the country was facing an economic crisis, for which state of affairs they virtually held Mr. Butler personally responsible. No less surprising would it have proved if the Chancellor had not firmly rejected such a reading of the situation. "It would be wrong," he said, "to regard the situation we are facing as one of crisis at all." He elaborated on the steps that he proposed, and it transpired that more or less all capital programmes already announced for both local authorities and the nationalised industries would in general go on. The investment plans for coal mines, nuclear power, oil-conversion and railway modernisation would continue in full, as would the school and hospital building programmes already announced and the Minister of Transport's road development programme, save that this would be reviewed in the autumn, while house building would be limited to a figure of 300,000. Mr. Butler was also more specific on the future of sterling and confirmed the policy of maintaining the pound at an exchange parity of \$2.80 "in existing circumstances or when sterling was convertible." He claimed, moreover, that there was already evidence that the Government had found the right balance in its proposed measures and reaffirmed his confidence in the fundamental soundness of the country's economy.

The only real heat in the debate arose over the question whether the Chancellor was right or wrong in contending that industrial unrest was largely responsible for our present difficulties. The Opposition held that the difficulties were apparent before the dock strike occurred and Mr. Butler was only seeking an excuse for the failure of his policy, but the Chancellor pointed out that in fact the situation was actually showing improvement before the strike occurred and asserted that the country must realise that we could not afford to hold up export trade. Although the debate took place on the motion for the adjournment of the

House, the Opposition took the unusual course of forcing a division on their motion, with the result that it was defeated by 290 votes to 231, a Government majority of 59.

Proposals for Avoiding Strikes

The problems of industrial relations, and particularly the use of the strike weapon, continue to attract considerable attention. The quarterly meeting of the National Joint Advisory Council on Industry this week was presented with a list of Government ideas on the subject by Sir Walter Monckton. Some of the proposals are unique. One calls for an industrial Code of Conduct—a kind of pact on human relations in the factories. Another calls for a review of public payments to strikers—such as National Assistance to strikers' families and refunds on income-tax to men on strike. The Minister of Labour put his suggestions (he insisted they were only "suggestions") to the fifty-odd representatives from all sides of industry, who agreed to consider them and to call a smaller meeting in two months' time to decide what action to recommend. It was decided right away, however, that "the solution to the problems will not be found by way of general legislation," which has the effect of ruling out many of Sir Walter's more unorthodox suggestions. What seems likely now is an extension of voluntary agreements between unions and employers. These could involve such Government suggestions as:—More general education on the nation's economic problems; improvements in joint consultation and the speeding up of negotiations on pay and conditions; extension of voluntary arbitration schemes to industries where no such facilities exist; more profit-sharing and co-partnership schemes; and improved methods for dealing with inter-union disputes and recognition problems.

Two hours before the N.J.A.C. meeting, the T.U.C. General Council took a decisive step to strengthen its own authority to intervene in disputes, which is strictly limited under Rule 11 of its constitution. Encouraged by the success which has attended recent efforts to resolve the disputes in the railway and docks strikes and the earlier printing stoppage, the Council has altered Rule 11 to allow it to intervene before negotiations have broken down. This change has still to be approved by the Trades Union Congress at Southport in September, and there may well be unexpected opposition as the unions are very jealous of their rights and their independence.

Ceylon Tea Export Restrictions

The decision of the Ceylonese Government to reimpose restrictions on tea exports to the London auctions from 1st August, announced in Colombo last week, may cause best quality Ceylon tea to become dearer in England. The effect on prices may not be evident for two months. A spokesman for the Tea Trade Committee, interviewed on the subject, said that the restrictions were not on quantity but in respect of the best quality Ceylon tea only. Tea spends from two to two and a half months on the water before reaching England. "The reimposition of restrictions is a nuisance step, but not a vital one at this moment. It can lead to a tricky situation if it is going to result in a shortage of good quality Ceylon tea. It could happen." Tea buyers in London say that Sir John Kotelawala, Prime Minister of Ceylon, made it quite clear on his visit to England that he thought the price of tea could only be reduced if it were auctioned in Ceylon.

Pakistan Remittances

The difficulties experienced by Pakistan tea companies in remitting profits to this country, and their consequent inability to declare dividends, have arisen simply through administrative delays and not through actual blocking of funds. The State Bank of Pakistan agrees in principle that reasonable profits, excluding actual capital, should be remitted. But it insists on being fully apprised of companies' total assets in the country from 1947 up to date. To companies operating in several countries this present a formidable accounting problem. It appears that remittance applications by tea companies for 1953 amounted to £676,000 and for 1954 are expected to approach £2 million. The opinion held here is that at least a portion of the total of the 1953 applications could be allowed to be remitted without embarrassment to Pakistan and would be a welcome gesture, for many tea companies are experiencing some difficulty in securing bank advances to cover essential expenditure here quite apart from paying dividends. It is probable that representations will be made to the Pakistan Government, both through the High Commissioner in London and directly in Karachi. Representatives of the Pakistan Tea Association here are willing to fly to Karachi for negotiations. The problems of the tea companies are part of a general difficulty facing many firms in Britain. Basically the problem is one of Pakistan's balance of payments, for in addition to heavy defence expenditure she is also endeavouring to expand her economy very quickly. Imports in this respect have been heavy and her cotton and jute exports have been unable to cover their cost.

Brevities

Pakistan is to join the International Finance Corporation which is being established by the World Bank. She is the first Asian country to do so. Her share in the \$100 million subscribed capital is \$1,108,000. The latest steel denationalisation offer, of the Debenure stock and Ordinary shares in Hadfields, the Sheffield specialised steel makers, achieved a quick success. The lists were open for only five minutes and the offer of the Ordinaries so heavily over-subscribed that a ballot proved necessary.

Madras

EXPANDING INDIA'S EXPORTS TO S.E. ASIAN COUNTRIES

TRADE DELEGATION LEADER'S IMPRESSIONS OF TOUR

(FROM OUR MADRAS CORRESPONDENT)

THE President of the Andhra Chamber of Commerce, Mr. J. V. Somayajulu recently led a non-official trade delegation to South-East Asian countries and to Japan. He has just outlined the scope for developing India's export trade with these countries. The share of India in the total imports of Malaya and Singapore, he says, is only 3½ percent, and there is considerable scope for increasing its trade with that country. The commodities that can be marketed in larger quantities there are:—fruits and vegetables, jaggery, confectionery, tea, spices, vegetable oil, essential oils, leather manufactures, paper and paperboard, cotton yarn, handloom and mill textiles, apparel, floor coverings, glassware, pottery, light engineering goods, scientific apparatus, machinery and millwork, aluminium ware, brass, copper and stainless steel wares, electrical goods, fountain pens, denatured spirit, coffee, plastics, bakelite, sewing machines, radios, agricultural machinery, soap, drugs and chemicals, lamps and lanterns, paints, enamels and varnishes. Even khadi can find a good market; so can boiled rice, parboiled rice, beaten rice and parched rice in Malaya and Singapore.

Although there is a heavy import duty on raw tobacco and manufactured tobacco, there is still some scope for developing trade in this line too. There is at present only one cement factory in Malaya, which does not meet the country's needs. India may consider exporting cement from her surplus zones. As the gypsum requirements of this factory are being met by imports from distant countries, Indian exporters can also explore possibilities of exporting this raw material to Malaya. Penang and Singapore are free ports where almost all items are allowed free entry with the exception of liquor, arms and ammunition and tobacco and a few other articles. People in this area are accustomed to the Western type of goods with the finest finish and packing and as such Indian exporters will have to give special attention to quality, finish, packing and publicity. Above all, publicity should be in Chinese, Malay and Tamil rather than in English. Mr. Somayajulu suggests that Indian exporters should participate in the fairs and exhibitions periodically held in the area and also try to organise an exclusive exhibition of Indian products and merchandise at least once in two years.

Trade with Philippines

Dealing next with the Philippines, Mr. Somayajulu says that India supplies only 0.5 percent of the imports of that country. The Philippines requires a lot of materials for nation-building activities. At present, trade relations between the Philippines and the U.S.A. are governed by the Bell Trade Agreement under which all goods of U.S. origin enter the Philippines free of duty and exchange restrictions. There is a move for amending this agreement in order that the preference given to the U.S.A. be reduced by stages. The Philippines is faced with exchange problems just like any other country in South-East Asia. India should, therefore, try to import some articles like Manila hemp and rope, copra and coconut oil from the Philippines so as to balance the trade. As the price of Philippine sugar compares favourably with that of Indian sugar, India can also import some sugar till such time as she attains the position of an exporter in this commodity. In the matter of exports to the Philippines, apart from jute goods and textiles, many items of consumer interest can find a market there as in Malaya. Indian merchants in the Philippines command great respect in society, and the present atmosphere is quite conducive to trade, says Mr. Somayajulu.

Indo-Japanese Trade

Although India's exports to Japan amounted to Rs. 24 crores in 1953-54, there appears to be considerable scope for increasing the volume of trade between that country and India. It would be possible for India to increase her exports of iron ore to Japan if better transport and shipping facilities are ensured. This position holds good in the matter of manganese ore, mica, chrome ore, kyanite ore, magnesite and barytes, all of which have a good market in Japan. Salt is another item the exports of which to Japan can be increased. Thailand is a powerful competitor to India at present. India is exporting about Rs. 1 crore worth of salt annually to Japan. As it is, the price position is not favourable. The c.i.f. price in Japan is more or less equal to the wholesale price of salt obtaining in India. Indian salt manufacturers should attempt to reduce costs and improve quality. Salt and tobacco are handled by monopoly corporations in Japan. It should be possible for Indian exporters of these two commodities to expand their market in Japan provided they make a proper approach and maintain standards. Japan is at present importing baled jute from Pakistan and a small quantity from India for manufacturing jute goods. There is a market for Indian-made curry powder, curry-paste, cashewnuts, coffee, rosewood and cotton waste also. As Japan is in a position to supply machinery and iron and steel goods, increased trade between the two countries would prove beneficial to both, says Mr. Somayajulu.

Hongkong also offers scope for exports. Besides the articles India is already exporting, fine textile goods, stationery, fountain pens, tinned food, perfumes and toilet requisites, soap, fine hosiery, essential oils, etc., can also be exported advantageously. Chinese business men handle a major share of the business in Hongkong as in Malaya, and Indian exporters can push their goods in collaboration with one or two leading Chinese business men.

Thailand and Burma

Thailand's imports from India represent 13.4 percent of her total imports while her exports to our country constitute just 7 percent of the total. There is at present a market for almost all Indian manufactures in Thailand. But the foreign exchange position stands in the way of our free exports to that country. The present position seems to be that unless India imports more goods from Thailand she cannot export her goods to that country in increased quantity. Referring to Burma, Mr. Somayajulu says that India's share in the foreign trade of that country is 34 percent of imports and 18 percent of exports. India is now exporting a wide variety of goods to Burma; trade in almost all the items can be developed with a little more drive on the part of Indian manufacturers and exporters with the collaboration of the importers in Burma. As regards Indonesia and Indo-China, Mr. Somayajulu thinks that there appears to be ample scope for India to develop a good market in those countries for her manufactured and semi-manufactured goods especially consumer goods.

Payments Problem

In conclusion, he thinks that India is likely to be confronted with one or two problems when she makes a serious effort to expand her export trade with different countries in South-East Asia. Most of these countries have an adverse balance of trade with India. There is a desire on the part of almost all these countries to balance their trade with each country by exporting as much as they import in terms of monetary value, as they are not having enough surplus of foreign exchange resources. As these countries produce a large number of commodities which India is producing at present, there is likely to be great difficulty in balancing trade with each country in this region. At the same time, it is clear that India is now in a position to supply a large variety of articles. Another important problem is the rigidity of Indian manufacturing costs which are comparatively high on account of various internal factors. If Indian products are to retain and expand their export markets, it is necessary to rationalise our industrial technique. As, however, it may not be possible to change the existing structure of industry in view of the prevailing local circumstances, it may be advisable for the Government to differentiate the industrial units that cater direct to export markets and permit them to rationalise their production by introducing up-to-date techniques, concludes Mr. Somayajulu.

Export Trade Guarantee

It may be recalled that Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, said last month that the Government of India had under consideration a proposal for an export trade guarantees scheme for the opening of new markets and strengthening of old ones. The Government, he said, was thinking in terms of a sort of a trade insurance scheme. They had made a study of methods adopted in the U.K. The draft proposals would soon be formulated for the trade interests to examine. The export promotion councils recently established for a number of commodities represented only the first step, for the mark of such councils on goods gave an assurance of quality to foreign buyers. These methods, however, would have to be supplemented by some kind of an export credit guarantee and aided by a better-informed and better-staffed trade organisation in the various countries to which India exports. Referring to India's bilateral trade agreements with countries where trade is in the hands of the State, Mr. Krishnamachari thought that it might be necessary to create some kind of organisation for developing trade with these countries. But in so doing, he said, the Government would have to see to it that both the collection of exportable articles and the distribution of imported articles were left in the hands of existing private channels.

Direct Taxation

The Committee of the Federation of Indian Chambers of Commerce and Industry, at the end of its meeting at Bangalore, has issued a Press communication which states: "The Committee has decided to address a communication to the Union Government on the recommendations of the Taxation Enquiry Commission as they are not in agreement with a fundamental aspect of the Commission's approach to the problem of direct taxation. The Commission seems to believe that an individual, as an income-earner, may be taxed heavily, but as long as incentives are given for investment in the form of special concessions, no ill-effects will accrue on the inducement to save and invest. It is on this basis that the Commission proposes very high rates of taxation in the higher brackets, and thinks it necessary to make suggestions such as compulsory levy and surcharge or a virtual ceiling on incomes above a certain level. This approach is contentious. Firstly, no inducement to invest will succeed unless there are savings which could be invested. Secondly, it is only when the rate of taxation on incomes is relatively low that an individual can afford to take risks and invest in new ventures. Thirdly, it is basically the individual who saves out of his post-tax income and who constitutes the backbone of the capital market for private industry. To the extent that his financial position is weakened, other palliatives can only have limited effect on reviving the capital market."

ROHTAS INDUSTRIES LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Company will be held on Tuesday, the 30th August, 1955, at 11-30 a.m. at the Registered Office of the Company at Dalmanagar for the purpose of considering and, if thought fit, passing with or without modification the following resolutions as Ordinary Resolutions:—

(i) RESOLVED that subject to the consent from the Controller of Capital Issues, the Issued Capital of the Company be increased from Rs. 2,20,00,000 to Rs. 3,34,00,000 by issuing 11,40,000 Ordinary Shares of Rs. 10 each.

(ii) Further Resolved that after the aforesaid consent the said 11,40,000 Ordinary Shares be issued on the following terms and conditions and subject to the following rights and in the manner hereinafter appearing:

(a) Such shares be offered at par to the holders of existing 11,40,000 Ordinary Shares on the Register of Members of the Company on the 30th day of August, 1955, (with the right to such holder to renounce in favour of his nominee or nominees approved by the Board) in the ratio of one new Ordinary Share for one existing Ordinary Share held by such holders respectively (with option to such holders to apply for allotment of which shall be in the absolute discretion of the Directors) and such offer shall be by notice specifying the number of shares to which the holder of the existing Ordinary Shares shall be entitled to and limiting the time within which the offer, if not accepted, shall be deemed to be declined with liberty to the Directors, from time to time, to extend the time for acceptance of the offer as aforesaid either generally or in respect of any particular holder or holders.

(b) The full amount of Rs. 10 per share shall be payable with the application.

(c) The said new Ordinary Shares shall for all purposes rank *pari passu* with the existing Ordinary Shares of the Company save and except that the new Ordinary Shares shall not confer on the holders thereof the right to any dividend on Ordinary Shares declared in respect of the accounting year of the Company ending on 31st October, 1955, but shall entitle such holders to all dividends on Ordinary Shares declared for future accounting years of the Company in proportion to the capital for the time being paid up on such shares.

(d) The Directors be and are hereby authorised and empowered to allot the said shares accordingly and to dispose of shares taken up by holders of the existing Ordinary Shares or remaining undisposed of to such persons whether shareholders of the Company or not, and upon such terms and conditions and in such manner as the Directors may think fit.

(e) For the purpose of giving effect to this Resolution, the Directors be and are hereby authorised to prescribe the forms of application and renunciation and other documents in respect of such new Ordinary Shares and to give such other directions or do such other act as they think fit including settling any question or difficulty that may arise in regard to the issue and allotment of the new Ordinary Shares.

The Transfer Books of the Company will be closed from 25th August, 1955 to 30th August, 1955, both days inclusive.

New Delhi, 23rd July, 1955.

THE CHAMPDANY JUTE COMPANY, LIMITED.

THE Directors at a Board Meeting held today decided to recommend to the Shareholders in General Meeting the payment of a dividend at the rate of 8% per annum for the half-year to 31st March, 1955.

A notice calling a General Meeting for 6th September, 1955, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

Calcutta, 29th July, 1955.

Books and Publications

Bombay Cotton Annual 1953-54. Compiled and Published by C. M. Parikh. (Price Rs. 4. Pages 276).

This is the latest issue of the annual, published under the authority of the East India Cotton Association Ltd. It is the usual compendium of all matters relating to every branch of the cotton trade. Statistical tables of crops, exports, imports, prices, stocks and consumption make it an indispensable source of reference for all those interested in the business.

COAL COMPANIES

O Po. F. and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LIVING WITH ATOMIC ENERGY
THE POWER REVOLUTION AND BACKWARD ECONOMIES

THE opening of the "Atoms for Peace" conference in Geneva had something of the aspect of a religious revival. It expressed some experience, a great deal of wishful thinking and even more optimism. It would be a boon to mankind if our fuel problems were solved, but it would not automatically mean a world of plenty, or even a world better than the one we have at the moment. It is admittedly not the job of the scientist to point this out to us; he can rightly claim that his function is merely to outline what is in store and leave it to the statesman, the politician, the industrialist and the man-in-the-street to decide what they are going to do about it. It is a pity that scientists sometimes give a contrary impression. By ignoring the social and economic aspects, which are not their concern, they do tend to give the impression that the millennium is just around the corner. The Salk affair was typical of the way in which the word of the scientist, shorn of its qualifications and limitations, is all too readily distorted by the kind of enthusiasm which makes accurate and efficient application next to impossible. If the nations can bear these facts in mind much benefit should accrue from the Geneva conference. After all it is not only startling but gratifying to know that the world now has unlimited fuel resources and may soon have inexhaustible power at its disposal. It is also good to know that scientists from both sides of the Iron Curtain can put down their projects for annihilating one another and can sit down to discuss how their achievements should be used for the good of mankind instead of his destruction. Brighter prospects seem to be ahead.

The impact of unlimited atomic power is bound to produce many changes in the world's present economic and political structure. The development of a variety of sources of power has already broken the industrial supremacy of the large coal producers. The mobility of power has also helped to spread industrialisation until even in this pre-atomic age the fact that a state or region has no fuel resources of its own is no insuperable barrier to its economic development. The truth behind this should become even more obvious with the development of atomic power. The problems of moving fuel—political difficulties apart—will be considerably simplified. The benefits for those underdeveloped countries at present faced with the prospect of building and maintaining a power system which is bound to be expensive because of a shortage of indigenous fuels, are not difficult to foresee. For the developed countries the benefits are probably no less. Britain's case

number of Indian-made components as they become available and their prices are usually higher than the imported items. Most important of all for the long-term future of the motor-car industry, there is the present drift towards socialism. The unfortunate manufacturer is now caught between the Scylla of his own undertaking to make a progressively larger proportion of his vehicles in India and the Charybdis of an increase in taxation and regulation throughout the country. It is time the Government asked the question whether a motor-car industry on the lines of those in the United States and Western Europe is a practical proposition in a socialist pattern of society such as it has in mind. The industry at present existing in the Soviet Union is maintained for strategic reasons and obtains its subsidy from the Government and the nationalised industries who are almost its only purchasers at the uneconomic prices it is forced to charge. If this is to be the case here the manufacturer must reconcile himself to forfeiting the rich prizes which come from operating efficiently in a larger free market and certainly to remaining indefinitely outside the export markets. Worst of all, the greater part of the Indian public will have to face the future without those elements of better living, motor-cars and an efficient road transport system.

COMPETITIVE BANK RATE ADJUSTMENTS OTHERS FOLLOW BRITAIN'S LEAD

SOME monetary authorities are doubtless thinking back rather wistfully to the times when a "built-in" mechanism corrected disharmonies between one country and another—when gold flowed in or out and credit expanded or contracted automatically. They do not say that an orthodox gold standard is feasible in modern conditions, but they are aware of the shortcomings of the "managed" system that has replaced it. Regulating credit in a manner appropriate to the restraint or stimulus needed at any particular time can never be better than approximate, because no country has completely up-to-date information on even its own economic position, and it is still less informed on other countries'. When the British authorities imposed new restraints late in July they knew that the gold and dollar figures for that month would be particularly bad; but they did not know what effects had resulted already from their earlier restraints or would result from them soon; nor did they know that in various other countries short-term interest-rates would be raised early in August. Assessing the need on such inadequate data must be largely a matter of guesswork. It is now apparent that the double rise in Bank rate in Britain in January and February this year, from 3 percent to 4½ percent, exerted a strong impetus towards "dearer" money in other countries. In northern Europe, central Europe, the Near East, the overseas sterling area, even the United States, Bank rates have been raised this year; and even where there has been no change in Bank rate other "short" money rates have tended to rise, because demand for financial services has been diverted from centres where the cost of these services is high to those where the cost is lower, and increased demand in the latter pushes up rates there.

But the rise in rates outside Britain is not, of course, simply a reaction to the rise in Britain. (Denmark, indeed, restricted and raised the cost of credit some months earlier than Britain.) Other countries are, or fear that they will be, troubled with inflation, and they resort to the same method of restraining it. It is this element in the international position that makes forecasting, and therefore monetary policy, peculiarly difficult. Britain imposed restraints because she was importing too much and exporting too little. Her inflation had been more rapid than her main competitors'; if they had inflated as much her restraints would have been unnecessary, or at least less urgent. Counter-inflationary actions in other countries are diminishing the effects of the British restraints. The widespread rise in interest-rates, so far from being, as it appears superficially, a co-ordinated policy, is in effect competitive. "Dearer" money, wherever applied, tends to restrict domestic demand, both for goods made locally and for goods made abroad. Its other purpose, to stimulate exports (by squeezing out goods that a restricted home market cannot absorb) is, of course, frustrated to the extent that other countries are restricting their domestic demand. And this difficulty is doubly serious for Britain, as custodian of the sterling area's monetary reserve, because restrictions in non-sterling countries affect demand for the overseas sterling area's primary goods as well as for Britain's manufactured goods.

The latest restraints in the United States—somewhat similar to Britain's, though less severe—are not obviously necessary—as are the British and in varying degrees those of continental Europe. The percentage of unemployed workers in the

United States would still provide, by British standards, an ample "reserve"; and there is no sign of a general scarcity of goods there, in relation to the demand for them. However, the American authorities interpret the tendencies—especially the deliberate expansion of stocks of materials and the expansion of consumers' demand arising from wage-increases—as inflationary, and they have acted before the situation becomes difficult to control. The American authorities' anxiety to control inflation is not, like the British, concerned with the balance of payments: the danger is that the boom, if not controlled in its earlier stages, will overreach itself and fall into a slump. Precautions against this danger must be approved in Europe and the sterling area (although they suffered surprisingly little from the last American recession); but restraint on American demand at this time, when Britain especially is striving to sell more to the dollar area, is inopportune. Also, to the extent that American costs are deflated and American deliveries are improved, American goods will compete more strongly with British goods in the world market.

Mr. R. A. Butler, Britain's Chancellor of the Exchequer, said some weeks ago that Britain had been spared the worst results of her inflation by the counterbalancing inflation of other countries, but that Britain's inflation had more recently exceeded theirs. The problem, in fact, is comparative, so far as external trade is concerned. The efficacy of counter-inflation is, therefore, likewise comparative. When the British authorities tried to bring their own inflation into line early this year they did not know that other countries would apply restraints before Britain's had time to take effect. The latest British restraints have been imposed with no sure knowledge of the effects of these other restraints abroad. It may be necessary to apply yet further restraints in Britain; and other countries may emulate such action. The policy of restraint would then become competitive—if it is not so already. There is now, perhaps, a real danger that wise precautions will exceed their purposes. Inflation, whether national or world-wide, ought to be restrained. But too many restraints, simultaneously or in succession, with little knowledge in advance of their effects, could damage the basis of trade.

INDUSTRIAL COMMUNITIES' HUMAN PROBLEMS

THE plans for the Duke of Edinburgh's study conference on the "Human Problems of Industrial Communities within the Commonwealth" are nearly complete, and it is hoped that all the applications for membership will have been examined and the final selection made by the end of the year. There will be 280 delegates altogether—90 from the United Kingdom, about 135 from the other countries of the Commonwealth, and 55 from the Colonial territories. Next July these delegates—all of them young people (between 25 and 45) actually engaged in industry—will spend three weeks in Britain as the guests of the 50 British industrialists and trade-union officials who, under the presidency of the Duke of Edinburgh, comprise the conference Council. Most of the time they will be in Oxford, listening to papers on various aspects of the "human problem," debating them and studying them in a number of small groups.

Each group will consist of fourteen members and in the middle of the conference it will go on an independent nine-day study tour starting in a selected town or city and ending in London. The centres to be visited include Birmingham, Bradford, Bristol, Cardiff, Derby, Dundee, Glasgow, Hull, Leeds, Liverpool, London, Manchester, Newcastle, Norwich, Sheffield, Southampton, Stoke-on-Trent, Swansea and Tees-side. The details were explained at a Press conference in London recently given by Sir Harold Hartley, Sir Miles Thomas and Mr. C. J. Geddes. Sir Miles said that he was growing "more and more impressed" by the value the conference would have, particularly as it was planned to avoid "pious resolutions" and concentrate on "free and frank discussion." What specific subjects and problems the conference will deal with appears to be a little vague at the moment, although answers to direct questions made it clear that while "race relations in industry" would be discussed, wage levels would not. The conference Council, from the very beginning, has been strongly opposed to touching matters which come within the "normal scope of industrial negotiation." As one of the conference officials put it: "How workers spend their wages will certainly be studied, but not how they bargain for them."

Outside these self-imposed limits, the field seems to be wide open. The outline programme states that the conference will conduct a practical study of the human aspects of industrialisation, "particularly those factors which make for satisfaction, efficiency and understanding both inside industrial organisations and in the everyday relations between industry and the community around it." The delegates will come from the managerial, personnel and welfare, and workshop sides of industry.

All proposals for membership will be made first by the person's firm, trade union, or other organisation. These will then be examined by an advisory council of industrialists and trade unionists in the country concerned, and passed on for final selection to the conference Council. This system will not apply in the Colonies, however, where the advisory councils will not contain trade unionists. Trade-union representatives from these territories will be chosen by the Trades Union Congress, after consultation with union leaders in the various Colonies. The object of this seems to be to ensure that only "responsible" Colonial trade unionists come to the Duke of Edinburgh's conference.

The conference will open on Monday, 9th July, with an address by the Duke of Edinburgh. On Tuesday the subjects of the introductions will be "The Impact of Industrialisation" (Sir John Maud), "The Varying Pattern of Industry—A General Survey" (Lord Citrine), "The Human Problems of Industry" will be discussed on Tuesday and Wednesday from various angles by Mr. A. B. Waring, Mr. J. M. Campbell, Sir Alfred Roberts, Mr. J. Crawford and Mr. W. A. Grierson. On Thursday Dame Florence Hancock and Sir Henry Pilkington speak on "Everyday Relations of Industry and the Community Around It." The conference then breaks up into study tours, and on returning to Oxford on 22nd July will hear a sermon by the Archbishop of Canterbury and an address from Sir Harold Hartley on "The Two Partnerships—Man with Man and Man with Nature." Group meetings will then prepare reports on the study tours and there will be discussions on overseas problems, the introducers of which include Mr. R. K. A. Sardinier from Nigeria, Mr. W. J. Bennett (Canada) and Mr. J. R. D. Tati (India). Sir Charles Norris will wind up the conference and the Duke of Edinburgh will preside at the farewell dinner on 27th July.

CURRENT COIN

New Tax on Tea.—The West Bengal Government's decision to impose a tax on tea entering the Calcutta, Howrah and 24-Parganas areas must have come as a shock to the producers. Coming so early in the season, before the market for this year's crop has had time to take shape, there is bound to be the fear in the mind of the grower that the whole burden is going to fall on his shoulders. From the way prices slumped at the end of last season it seems highly likely these fears will be realised. This tax represents yet another imposition on an activity whose prospects for the future are now by no means clear. The "curse of prosperity" seems still to be with the industry even though that prosperity is now no longer assured. A tax on tea to be auctioned in Calcutta, exempting the quantity consigned for sale in the London market, is bound to encourage the fear on the part of the foreign buyer about the true purpose of diverting a large portion of the auctions to Calcutta and to leave him with doubts about the future course of prices. This may be permanently damaging for the popularity of the North Indian product. Tea is already bearing a large burden in the shape of taxation and welfare benefits. Since then the market position has deteriorated. This fresh imposition has obviously been made without any consideration for the international position of the North Indian industry. If this practice of piling up taxes is allowed to develop there seems no limit to the damage which can be done to any export commodity, and of course to the general internal price level.

Dhrangadhra Chemical's Issue.—The Dhrangadhra Chemical Works Ltd. is offering the public 60,000 cumulative redeemable preference shares at the par value of Rs. 100 each; the interest on them is 6 percent, tax-free, and subscription lists opened on Monday. The money is proposed to be used for establishing an undertaking in Tinnevely district, Madras, to manufacture soda ash and caustic soda. Both chemicals are in short supply, and it is thought that the production of the new undertaking will be sold mainly in South India. The company has the right to redeem the shares at par between 10 and 15 years after the date of allotment. Insurance companies are likely to be interested in buying them, for they constitute an approved investment under Section 27A of the Insurance Act. The company is also offering the present shareholders 43,000 new ordinary shares of Rs. 100 each. It made a net profit of Rs. 8,42,664 during the year ended 31st March, 1954, and paid a dividend of 12 percent.

The American Boom.—The July business reports again present a picture of great strength and activity, says the First National City Bank of New York in its monthly letter on U.S. economic conditions. In years when business is less active than it is now and stocks of goods are abundant, the customary summer vacation shut-downs are apt to be lengthened a little, to build a backlog for more regular operations later on.

Nothing like that has appeared this year. Nor have strikes and heatwaves had much effect on aggregate industrial output. In most industries strong current buying, on top of substantial unfilled orders, is keeping plants under pressure. Automobile assemblies have shown less tapering off than many expected, and the same is true of steel mill operations. Chairman Blough of the United States Steel Corporation stated on 26th July that in some instances the pressure for deliveries "is as great or greater than it was a month ago." Retail sales are running strongly and construction activity is maintaining its record pace. For the month of June, the seasonally adjusted Federal Reserve index of industrial production set a new high record at 139 (1947-49=100). Difficulties in measuring "normal" seasonal curtailment frequently cause erratic fluctuations in this index in July and August. It seems plain, however, that the "summer slump" this year is little if any more than a flattening out of the upward movement. While August and September will bring the moderating influence of automobile shut-downs for model changes, few now expect the changeover to have a seriously depressing effect. The markets reflect record levels of business, the best corporate earnings reports in four or five years, and bullish opinions of the prospect. More persons are at work than ever before in the nation's history and they are turning out an unparalleled volume of goods and services. People are receiving record-breaking incomes, both before and after taxes, and are spending them freely. At the same time business men are going ahead with capital expenditures, and purchasing agents see more reason for reaching out than for shortening commitments. Belief that a rise in industrial costs and prices is under way originated in the automobile labour settlements in June. It has been confirmed by the rise in steel wages and prices in July. Throughout the metal-working industries manufacturers will have to pay more for their own labour, more for their raw materials, and more for purchased parts and components. Prices of a few other industrial materials, notably rubber, have moved up strongly. These developments have impressed not only industrial buyers, but the consumer goods markets as well. Potential purchasers of automobiles and other consumers' durables, for example, are on notice that prices may be marked up. It would be remarkable if buying were not stimulated accordingly.

Iron and Manganese Ore Export.—Mr. S. C. Bose, Honorary General Secretary of the Orissa Chamber of Commerce, has made out a case for greater participation in iron and manganese ore export trade by the mine-owners, in a memorandum submitted to the Chairman of the Planning Commission. His grievance is that established shippers whom he calls "middle men" enjoy a disproportionately larger share of the trade because the present export policy favours them. In support of his case, he quotes statistics of the ore exports from the port of Calcutta to show that the big rise that has occurred since 1947 is due to the mine-owners' participation in the export trade, and he goes on to argue that if India is to maintain her export markets abroad, positive State assistance should be given to mine-owners who have the necessary technical personnel at their command to maintain and raise the level of exports qualitatively and quantitatively. Mr. Bose also makes a plea for developing the mineral economy of Orissa, which supplies 90 percent of the ore exports through the port of Calcutta, through a scheme of assistance to mine-owners, such as special facilities at the ports and specially reduced railway freight rates for the transport of iron and manganese ores. The mine-owners, his argument runs, can exploit and develop the State's vast mineral resources so that not only can the problem of unemployment in Orissa be solved, but also one of the definite objectives of the second five year plan, that is, the development of mineral industries as a basic source of production can be simultaneously fulfilled. All these however are not central to his memorandum; the main point is that mine-owners must have a bigger slice of the export cake solely "on the basis of production." The Ministry of Commerce and Industry which regulates the export trade through the allocation of quotas to both mine-owners and shippers, wants to encourage mine-owners as new-comers in the field. But it is the impossible physical problem of transport that has stood in the way not only of newcomers obtaining a larger share than they do already, but also of an increase in the overall level of exports. Rail transport capacity for carrying ores to the Calcutta port from the mines is only one lakh tons a month and unless this capacity can be increased there seems very little that can be done about Mr. Bose's grievances and suggestions. Besides, replacing the established shippers by the newcomers may prove risky for the export trade, where experience, contacts and organisation are very important. Mr. Bose's suggestion that a mineral export promotion council should be established deserves serious consideration.

CORRESPONDENCE

JUTE AGRICULTURAL RESEARCH (TO THE EDITOR OF "CAPITAL")

Sir,

While I agree with your jute correspondent that it is a waste of money to carry on research for the production of finer qualities of jute, I must challenge his statement that what is required in Indian mills for general production is a crop of 75% to 80% Bottoms. It is true that these are the percentages of Bottoms which mills ask for when making their purchases, but what they expect to get and do get under the name "Bottoms" is really Middle quality according to the guarantees agreed on between the I.J.M.A. and the Government of India. In other words the mills have lowered the price of jute to the growers by forcing up the standards. What are today called Middles are really Tops and most merchants are holding stocks of them and of even finer jute for which they cannot find buyers. As your correspondent has asked why waste money trying to produce finer quality, when the fine quality already produced cannot find a market?

Yours etc,
A. C. GREGORY

Calcutta, 8th August, 1955.

its periodical surveys of trade in capital goods. The latest of these, which analyses engineering exports of eleven leading countries in eighty separate markets over the past five years, is of special interest in view of the concern that is being caused over the future position of British exports in this sphere. Once again the main feature of this annual review is the continuing growth in German exports of capital equipment. While British shipments last year of mechanical and electrical equipment rose modestly and American exports fell back, overseas sales by Western Germany rose by a further 14 percent. But the most important point made by the Association is that exports of engineering equipment by Eastern Germany have now become substantial. Western Germany's return to the world's engineering markets in the past three years can be seen in the following table:

	COMPETITION IN ENGINEERING EXPORTS (£ million)			
	1954	1953	1952	1951
United States	918.2	957.9	913.1	78.0
United Kingdom	577.9	569.8	579.9	72.0
Western Germany	506.5	442.5	393.1	89.0

The Association comments that "if engineering exports from the United Kingdom and from Western Germany continue in 1955 to move as they have in the recent past it may be that the lead which the United Kingdom has held since the conclusion of hostilities will be further diminished." It is even possible that Western Germany may draw level with Britain. But when one is told that Eastern Germany's engineering exports to the rest of the Soviet block in 1953 were put at between £250 and £285 million by the Economic Commission for Europe, it becomes clear what a united Germany would be capable of. While the figures show that Western Germany's main engineering markets are Holland, Italy, France and Belgium, and Britain's are Australia, South Africa and India, they also show that in no fewer than 23 overseas markets German engineering exports rose while British exports fell in 1954. In five of these markets the same trend was already visible in 1953.

World Banking.—The International Bank for Reconstruction and Development recently reported a net income of \$24.7 million for the fiscal year ended 30th June, 1955, compared with \$20.3 million for the preceding fiscal year. This income was placed in the Supplemental Reserve against losses on loans and guarantees, and raised the Reserve to \$121.5 million. Loan commissions amounted to \$13.3 million and were credited to the Bank's Special Reserve, increasing that Reserve to \$62.3 million. Total reserves at the end of the fiscal year were \$183.8 million. Gross income, exclusive of loan commissions, was \$58.5 million, compared with \$50.0 million in the preceding year. Expenses totalled \$33.8 million; they included \$26 million for interest on the Bank's bonds, \$1.2 million for bond issuance and other financial expenses and \$6.6 million for administrative expenses. The Bank made 20 loans in 14 countries totalling the equivalent of \$409.6 million during the year, bringing total loans commitments at 30th June to \$2,324.1 million. The loans were made in Australia (1), Austria (2), Belgium (1), Ceylon (1), Colombia (3), East Africa (1), El Salvador (1), Finland (1), India (2), Italy (1), Mexico (1), Norway (1), Pakistan (1) and Peru (3). Disbursements were \$274.2 million, compared with \$302 million during the preceding year. Cumulative disbursements to 30th June amounted to \$1,679.7 million. All repayments of principal due during the year were made, and some borrowers made payments in advance. A total of \$144.9 million was paid by borrowers. By 30th June a total of \$201.7 million had been repaid by borrowers on all Bank loans.

OFFICIAL CLARIFICATION OF BUDGET TAX PROVISIONS

DECISIONS ON PERQUISITES AND ALLOWANCES: RULING ON THE DEVELOPMENT REBATE

(FROM OUR NEW DELHI CORRESPONDENT)

THE following decisions are announced by the Central Board of Revenue on some of the provisions of the Finance Act, 1955, and the amendments made to the Income-tax Act.

(1) *Higher first slab exemption for married individuals.*

The expression "married individuals" includes widowers as well as widows. Whether a person is married or not should be determined with reference to the position on the last day of the relevant "previous year."

(2) *Earned income allowance.*

For the assessment year 1955-56 full relief up to one-fifth of earned income subject to a maximum of Rs. 4,000 will be given only if the total earned income does not exceed Rs. 25,000. If the earned income exceeds Rs. 25,000, relief admissible will be reduced by one-fifth of the excess over Rs. 25,000. Thus if the earned income is Rs. 30,000 the deduction for earned income relief is Rs. 4,000 minus one-fifth of the excess of Rs. 5,000 over Rs. 25,000, namely, Rs. 3,000 only. This new basis of earned income relief will not apply to salary incomes earned during the year ended 31st March 1955, but will apply for deduction of tax at source under Section 18 on salaries payable during the current year [vide Section (6) of the Finance Act, 1955.]

If in any particular case for the assessment year 1955-56 there is earned income both from salaries and from sources other than salaries, the earned income allowance will be computed first on salaries on the old basis and then on other earned incomes on the new basis, the amount of relief due on the latter being limited to the difference between Rs. 4,000 and the relief calculated for the salary income.

(3) *Section 4(3) (VI) of the Income-tax Act:*

The exemption under Section 4(3) (vi) in respect of any special allowances or benefit will be available from the assessment year 1955-56 only to the extent of the actual expenses incurred by the assessee out of the sanctioned amounts. Generally speaking, where the specific allowances are reasonable with reference to the nature of the duties performed by the assessee and are not disproportionately high compared to the salary received by him, no attempt will ordinarily be made to call for details of expenses actually incurred by him with a view to disentitling him to some extent from the exemption. An enquiry will, of course, be justified and will be made in cases where the allowances are *prima facie* unreasonably high.

(4) *Section 4(3) (VI): Exemption of passage moneys.*

Under this clause the exemption of free or concessional passage is available only if the employee proceeds abroad on home leave to his home country; journeys to any other foreign country, as also separate mid-term journeys of wife and children unconnected with the home leave will not be covered by the exemption.

The rules for regulating the exemption are now under consideration and will be issued shortly.

(5) *4(3) (XIV): Exemption of foreign technicians.*

The word "technician" must be understood in its ordinary significance, namely, as having reference to production or manufacture or other industrial arts or sciences, in contrast to the purely administrative and accounting matters of business. It is not, however, necessary that the person concerned should actually be operating a particular machine or physically engaged in a particular type of work in which he is proficient. Even if he is employed as a consultant on matters pertaining to

his field of technical knowledge or practical experience he would be regarded as a technician.

Perquisites Defined

(6) *Section 7: Perquisites in cash and in kind.*
Explanation (1) to new section 7 secures that with effect from the assessment year 1956-57, all benefits whether convertible into cash or not will be included in the total income of the employee under the head "salary". The condition that the salary receipts in cash should exceed Rs. 18,000 does not apply to director-employees at all, and in case of other employees, it applies only to benefits or amenities contemplated in Clause (iii) of the Explanation, and does not apply to other perquisites mentioned in the Explanation. If an employer pays a sum in respect of an obligation which should have been paid by the assessee, that sum will be included in the assessee's total income even if his total salary in cash falls short of Rs. 18,000.

Similarly, the amount spent by an employer in connection with the education of his employee's children will be included in the total income of the employee under item (iv) of the Explanation even if his salary in cash is less than Rs. 18,000.

While strictly speaking the value of all benefits can be taxed, it has been decided that the value of the following amenities need not be included in the total income of the recipient:—

(i) provision of ordinary medical facilities to the employee or his family free of charge.

(ii) re-imbursement of such medical expenses to the employee after they are incurred.

(iii) payment by the employer of the wages of a gardener and other servants employed for the proper upkeep of the house, belonging to the employer which is in the occupation of the employee.

(iv) provision of refreshments during office hours on the office premises.

(v) provision of recreation facilities for groups of employees (the facilities should not, of course, be restricted to a selected few).

The value of the following types of perquisites will be included in the total income if the salary in cash exceeds Rs. 18,000 in ordinary cases and regardless of this limit in the case of director-employees.

(i) provision of free boarding, the employer himself meeting the expenses incurred in this connection.

(ii) the value of free transport for private use.

(iii) provision at the cost of the employer of holiday trips to the employees or to the members of their families other than passages for home leave covered by the exemption in Section 4(3) (via).

It is impossible to give an exhaustive list of all benefits and amenities likely to be given to employees nor is it possible to lay down a hard and fast rule regarding the manner in which the value of the benefits in kind should be determined. The nature and extent of the amenities provided and the locality in which they are provided will all be factors having a bearing on the valuation, apart from such information, as the employers themselves can furnish from their accounts of the expenses incurred by them on behalf of the employees. It is not the intention that a meticulous appraisal of each and every benefit or amenity is to be made. Generally, it should be possible for these matters to be settled by the Income-tax Officers on a broad basis in agreement with the assessee.

As regards rent free quarters, the old practice of computing their value at 10 percent or 12½ percent of the salary according as the accommodation is furnished or unfurnished will be continued provided that the fair rent for the accommodation is not in excess of 20 percent or 25 percent, the Income-tax Officer will be in order in computing the value of the rent free accommodation at a percentage higher than the 10 percent or 12½ percent as the case may be. For the purpose of computing the salary on which the percentage is to be calculated all regular amenities provided by way of monetary payments (excepting amenities as are to be excluded from the taxable perquisites under these instructions) shall be included in the term "salary". Entertainment allowance in respect of which the assessee is entitled to the deduction under Section 7(2)(iii) will not be included, but in the other cases such allowances also will be so included in the term "salary" for the purpose of evaluating the value of rent free quarters.

The value of the benefit or amenity referred to in the Explanation 1 will be included in the total income only if it is actually granted or provided to the employee. In cases, where the employee waives the benefit due to him under the contract of service, the value of the benefit not enjoyed will not be included in the total income.

Compensation receipts in connection with termination of employment.

Whatever may be the consideration on the basis of which the lump sum payment is made to the employee if it is given at or in connection with the termination of the employment, it is to be treated as profit in lieu of salary and included in the total income. The assessee can, however, apply to the Central Government for relief under Section 60(2) of the Income-tax Act in respect of such inclusions.

Deductions out of salary income: expenditure on the purchase of books.

Except in the case of a journalist or an employee doing literary work, the deduction of Rs. 500 in respect of books is not permissible in respect

(Continued on page 176)

A DITCHER'S DIARY

Indian readers as are interested in these subjects may be depended upon to look at *Quest*, but may I be presumptuous enough to bring it particularly to the attention of such foreigners as have been looking for an intelligent and intelligible Indian review, and who may have been disgusted so far to find that the magazine press in this country traditionally offers a choice between conformity and scurrility?

The work done in India by people from Commonwealth countries other than Great Britain is not generally known. They are few, but their importance is out of all proportion to their numbers. An analysis of the activities of the 1,000 or so Canadians who live and work here has been prepared by their Government, and it illustrates the point very plainly. Most of them—650 in fact—are missionaries and their families, the diversity of whose useful employments must leave them very little time for direct proselytising. The Canadian Catholics work with Catholics from other countries, so their contribution can less readily be assessed in national terms. But the Canadian Protestants run twenty general hospitals, five lazarettos, five orphanages, thirteen middle schools, twelve high schools, one university college (in Indore) and hundreds of village schools. Their schools are not for Christians only; the Canadian Anglicans, for example, have a girls school in Palampur in the Punjab where there are only thirty Christians out of 250 pupils. The missionaries do not limit their educational work to teaching children the elements of grammar and mathematics. Miss A. C. Munro from Winnipeg, who has lived for 35 years with the Saora tribals in Orissa, has devised a Saora alphabet and is now writing the first book in it, a translation of the Bible. The Canadian Catholics are working on a problem that must be of the highest interest but of whose existence I confess I had never thought: they are Indianising not only the personnel of their missions but also the very liturgy, church music, religious arts, festivities and customs of Roman Catholicism. By harmonising Catholic art and liturgy with indigenous traditions they aim, I take it, to ensure that the Indian Christian is not culturally denationalised. Then there are about 100 Canadians in commerce and industry, of whom the biggest colony are the 25 at the Stanvac Refinery in Bombay, whose managing director, Mr. William Williams, is himself a Canadian. The immense economic contribution that can be made by a handful of Canadians is illustrated by the Indian Aluminium Company, which is of Canadian affiliation in the sense that it has connections with Alcan and has a Canadian managing director, Mr. J. W. Cameron—but of its 2,722 employees in India only three are Canadians. I have left out of account all temporary visitors like "experts", soldiers and diplomats, and have spoken only of men and women who come from Canada to make a life work here. Their services to this country are substantial enough (and so obviously free of any countervailing interference with Indian affairs) to entitle their Government to say, "Together with the 2,500 Canadians of Indian origin in Canada, they are ambassadors of goodwill between India and Canada."

Is your In tray always fuller than your Out tray? Do papers pile up on your desk faster than you can get through them? Do your poor eyes find it impossible to keep up with the mass of print that passes before them? There are a variety of things I could recommend for this condition, from Horlicks to a holiday, but what I in fact recommend is that you take yourself to the Quick Reading Centre in Victoria Street S.W. where for the modest fee of 75 guineas you will be taught to

absorb print faster than the 350 words a minute which is probably your poor best now. After 14 sessions of ninety minutes each, you will be able to read a whole lot of things that are not worth reading much more quickly, say at the rate of 600 words a minute. Some business houses in England are running their own hurry-up courses for executives who have to read a good deal; I.C.I. has one. Others send senior staff along to the Quick Reading Centre in batches of seven (£500 for the lot). They are put before a magic lantern which illuminates phrases for exposures falling from one-tenth to one-hundredth of a second, and thus learn to identify them "in one flash of comprehension". I suppose this is all quite sensible. Some people just do read more slowly than others, and might value learning how to get a move on. But it reminds me of Charlie Chaplin's *Modern Times*. If Chaplin had known of this technique, he could have shown the boss being submitted to nerve-wracking "get-moving" training scarcely less demanding than the quick-eating machine devised for the workers' lunch-break.

The roads are evidently getting dangerous when motor car drivers begin fixing safety belts on their front seats. The American Ford will henceforth have safety belts as optional equipment on all models, and Chrysler will be offering a set of belts for the front seat at Rs. 240 a pair. There must be some more comfortable way than this of ensuring that one is not precipitated through the wind-screen—driving moderately and not hitting anything, for instance. With safety belts motoring will become as intricate a ritual as it was when the conductor of a horseless chariot donned gloves, goggles and a crash helmet before unleashing his machine at a furious fifteen miles per hour. Nothing so much unnerves an aeroplane passenger as the adjustment of a safety belt before a take-off, while on the one occasion when I was commanded to put on my belt in the midst of a flight 19,000 feet over the ocean I instantly decided that I was done for. I should certainly decline to accept a lift in a motor car from a driver who first stubbed out his cigarette, snapped on a safety belt and then crouched white and thin-lipped over the wheel. To have a motor car accident must be very unpleasant, but to think of having one every time one sets foot in a car would be intolerable.

An easy way to make motoring in a city safer for everyone is to ban the use of horns, klaxons, hooters et hoc genus omne. Such bans have been enforced in other cities, usually with the intention of reducing noise and the strain on nerves. The contribution to road safety is an unexpected but important result. Paris last year introduced a total ban on klaxons in all parts of the metropolis, and angry motorists at once forecast that there would be a terrible increase in accidents as a consequence. In fact, in the twelve months of silence that has just been completed road accidents in the city have slumped from 13,400 to 8,500 and road deaths from 218 to 166. This considerable improvement took place despite an increase of 160,000 in the number of cars on the roads. The Calcutta police introduced a similar ban here a few years ago, but it was never meant to cover the whole city and was thus ineffective. A driver who has hooted his way from Cossipore to Chowringhee cannot suddenly mend his manners when he gets to Park Street. Besides, even in the favoured areas where silence was required, the enforcement of the rule has been quite neglected and the impatient driver can perform a horn obligato to the traffic lights with impunity. I confess it is difficult to do without a hooter entirely in a city where one of its essential uses is to rouse traffic policemen from the deep slumber which point duty seems to induce.

THE DITCHER.

WORLD EXPERIENCE IN COKE OVEN CONSTRUCTION

Since building England's first by-product coke ovens in 1881 Simon-Carves have gained over 70 years' experience in both hemispheres. In the last ten years alone Simon-Carves have received thirty-seven contracts (nineteen of them repeat orders) for coke ovens in Britain, India, the United States, South Africa, France, Spain, Switzerland, Denmark and Finland. These plants comprise over 1680 ovens with a total throughput of 29,000 tons of coal per day, and amongst them are the latest and finest plants for India's great steelworks. In India more than 3 million tons of coal are carbonised every year in Simon-Carves coke ovens.

Simon-Carves maintain a resident engineering staff in India, and in the execution of contracts materials of Indian origin are used to the maximum extent, which may represent up to 60 per cent of the contract value.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS.

A formal Prospectus dated 26th July, 1955, has been prepared and filed with the Registrar of Companies, Saurashtra, Rajkot.

"Consent of the Central Government has been obtained to this issue of Capital by an order, of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

"A licence has been obtained from the Central Government for the establishment of a new industrial undertaking for the manufacture of soda ash by the Standard Solvay Process of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

The Shares of the Company are officially quoted on the Native Share and Stock Brokers' Association, Bombay.

The Subscription List will open on 8th August, 1955, and will close as soon as the Directors may decide, but so that it shall remain open at least for 7 days thereafter.

DHRANGADHRA CHEMICAL WORKS, LIMITED

(INCORPORATED UNDER THE DHRANGADHRA STATE COMPANIES ACT, 1939)

AUTHORISED CAPITAL		ISSUED CAPITAL	
	Rs.		Rs.
2,00,000 Ordinary Shares of Rs. 100 each	2,00,00,000	21,500 old Ordinary Shares of Rs. 100 each	21,50,000
1,00,000 Preference Shares of Rs. 100 each	1,00,00,000	43,000 new Ordinary Shares of Rs. 100 each	43,00,000
		60,000 6 per cent. (tax-free) Cumulative Redeemable Preference Shares of Rs. 100 each	60,00,000
	3,00,00,000		1,24,50,000

SUBSCRIBED & PAID-UP CAPITAL

21,500 old Ordinary Shares of Rs. 100 each	21,50,000
--	-----------

The said 43,000 new Ordinary Shares of the face value of Rs. 100 each have been offered to the existing shareholders.

NOW OFFERED

The said 60,000, 6 per cent. (tax-free) Cumulative Redeemable Preference Shares of the face value of Rs. 100 each are now offered to the Public for subscription payable at par in the following manner:—

- Rs. 50 per share payable on application.
- Rs. 50 per share payable on allotment.

The new Ordinary Shares will qualify the holders to participate in the dividend proportionately both in respect of time and amount paid from the date of allotment and the new Preference Shares to be issued will qualify the holders to a fixed right to dividend at the rate of 6 per cent. (tax free) per annum from the date of the allotment.

APPROVED INVESTMENT

The Company is advised that the Preference Shares are an approved investment for insurance companies under Section 27A of the Insurance Act.

SPECIAL BENEFITS IN TAX

The Company is advised that exemption from Super-tax will be available under Section 56A (2) of the Indian Income-tax Act, on dividends payable to a Company in respect of any shares subscribed by it in the proposed issue of shares. New scrips will be issued with a distinguishing mark or a note to this effect on such shares subscribed by a company in order to facilitate the securing of exemption. The Company will be writing to the Central Board of Revenue for getting their confirmation.

MINIMUM SUBSCRIPTION

The minimum subscription upon which the Directors may proceed to allotment is subscription of 6 per cent. (tax-free) Cumulative Redeemable

Preference Shares in the Capital of the Company of the nominal value of Rs. 30 lakhs

Amount offered for subscription within two previous years	Nil
Amount issued otherwise than in cash within two previous years	Nil
Amount paid or intended to be paid to promoters within two years	Nil

RIGHTS OF PREFERENCE SHAREHOLDERS AND ORDINARY SHAREHOLDERS

The said Preference Shares (hereinafter called "the Preference Shares") carry the right to be paid a fixed cumulative preferential tax-free dividend at the rate of 6 per cent. per annum on the capital for the time being paid up thereon from the date of allotment. The Preference Shares, subject to the provisions of Section 105B of the Indian Companies Act, are redeemable at par at the option of the Company at any time after expiration of 10 years by 6 months' previous notice, but in no event later than 15 years from the date of allotment. The redemption may be whole or partial and if partial, shall be decided by lots drawn in that behalf. The Preference Shares carry a right on a winding-up to be paid all arrears of preferential dividend, whether earned or declared or not, down to the commencement of the winding-up and also to be repaid the amount of Capital paid-up or credited as paid-up on the Preference Shares held by them respectively in priority to any payment in respect of the Ordinary Shares, but shall not be entitled to any other rights in the profits or assets of the Company. Subject as aforesaid and to the rights of the holders of any other shares entitled by the terms of issue to preferential repayment over the Ordinary Shares in the event of the winding-up of the Company the holders of the Ordinary Shares shall be entitled to be repaid the amount of Capital paid-up or credited as paid-up on such shares and all surplus assets thereafter shall belong to the Ordinary Shares in proportion to the amount paid-up or credited as paid-up on such Ordinary Shares respectively at the commencement of the winding-up.

the country's requirement of soda ash and the deficiency is hitherto met by imports.

Soda ash is a basic raw material in industries like Glass, Silicate, Textiles, Paper, Bichromate, Soap, Ceramic, etc. over and above laundries and dyes who are the largest consumers.

Another equally important chemical is caustic soda which is also a basic raw material in industries like Paper, Textiles, Vegetable Oil Refining, Soap, Rubber Reclaiming, Petroleum Refining, Dye-stuffs, Aluminium and in various other small industries. Here also it is estimated that there is a gap between the present demand of the country and the indigenous production and the same is being met by imports.

These imports involve considerable strain on foreign exchange resources besides making the consuming industries and domestic consumers dependent on foreign markets for these very important chemicals.

The Tariff Commission has recently reported that according to the Planning Commission's programme of Industrial Development for 1951-56 the demand for soda ash and caustic soda is expected to increase to 155,000 and 90,000 tons respectively per year by 1955-56, on the basis of development envisaged in the consuming industries. Besides this, an additional quantity of 50,000 tons of soda ash will be required annually to manufacture 30,000 tons of caustic soda, by chemical process.

The second Five-year Plan envisages further planned development and the consumption of both soda ash and caustic soda is likely to go up still further. The Government of India is, therefore, anxious to see that there is corresponding expansion in the capacity of the indigenous units manufacturing these chemicals and with that end in view, has granted a Licence to the Company for the establishment of a new Industrial Undertaking in Tinnevely District in Madras State for the manufacture of these chemicals.

SITE

At present both the manufacturing units are located in Saurashtra. There is no unit in the Southern Peninsula producing soda ash and as such there is a ready available market for bulk of the production in the South itself.

This site is a suitable one particularly from the following points of view:

1. There is abundant supply of two of the three essential raw materials, viz., Salt and Coral Lime at economical rates.
2. Bulk of the production can be marketed in the South itself.
3. It is well connected by rail, road and sea.

DHRANGADHRA CHEMICAL WORKS, LIMITED.—Cont'd.

It may be mentioned that the Government of India, Development Wing (Chemicals), Ministry of Commerce and Industry, appointed a committee to investigate the possible sites in the country for the manufacture of soda ash and this Committee has recommended this as one of the sites.

PROCEEDS OF ISSUE

The proceeds of the issue together with necessary borrowings and Company's own resources will be utilised for meeting the expenditure for putting up the said new undertaking.

FINANCIAL INFORMATION

The working results of the Company for the last four years are as under:

Year	General Reserve	Depreciation Reserve	Dividend Equalisation Fund	Rehabilitation of Plant	Profit	Dividend Declared at the rate of
	Rs.	Rs.	Rs.	Rs.	Rs.	Per cent.
1950-51	15,65,000	20,47,344	1,86,000	11,41,885	15	15
1951-52	15,65,000	20,77,748	3,15,000	3,00,000	21,82,331	15
1952-53	15,65,000	26,77,742	4,40,000	13,00,000	11,40,208	12
1953-54	15,65,000	35,37,248	4,40,000	17,00,000	9,55,873	12

The following is a copy of the report of the Company's Auditors, Messrs. V. Sankar Aiyar & Co., Chartered Accountants.

Bombay, 15th June, 1955.

The Directors,
Messrs. DHRANGADHRA CHEMICAL WORKS LTD.,
DHRANGADHRA.

Dear Sirs,

We have audited the accounts of your Company for the three years ended 31st March, 1954 and report as follows:—

The profits of the Company for the three years were as set out hereunder and have been arrived at after charging all expenses of working and management and after making such adjustments as are, in our opinion, necessary:—

	Year ended 31st March		
	1952	1953	1954
Income—	Rs.	Rs.	Rs.
Sales	87,06,825	69,20,344	80,54,628
Own consumption of Soda Ash	2,20,928	2,63,042	2,08,356
Sale of Miscellaneous Articles	35,974	16,529	27,140
Recoveries on supply of Electricity	40,158	43,976	49,941
Closing Stock	5,80,426	13,75,574	14,80,332
Interest	24,703	29,543	69,195
Subsidy	1,03,240	37,556	7,900
Other Incomes and Receipts	1,362	—	—
	97,13,616	86,96,564	98,97,492
Expenditure—			
Opening Stock	7,22,392	5,80,426	11,92,241
Expenses incidental thereto including own consumption of Soda Ash, Trading and Administrative Expenses, Interest, Rebate, Royalty and Cess on Salt, Directors' and Auditors' fees and Managing Agents' Allowance and Commission	65,25,727	63,79,175	66,62,048
Bonus	—	3,13,997	2,44,898
Interest to Industrial Finance Corporation of India	—	24,932	1,59,794
Donations and Charities	30,854	32,623	20,711
Goods Lost in Transit and Loss on Sale of Assets	12,593	28,281	6,650
	72,91,566	73,59,434	82,86,342
Less: Transferred from Bonus Fund	—	—	2,25,000
	72,91,566	73,59,434	80,61,342
Profit Subject to Depreciation and Taxation	24,22,050	13,37,130	18,36,150
Less: Depreciation charged by the Company	3,30,204	3,00,653	9,93,486
Net Profit before Taxation	20,91,846	10,36,477	8,42,664
Add: Balance of Profit and Loss account from previous year as per audited accounts	90,386	1,09,732	1,13,208
Total (Subject to Taxation)	21,82,232	11,46,209	9,55,872
Appropriations:			
Provisions for Taxes	5,00,000	3,75,000	3,00,000
Bonus Fund	1,25,000	—	—
Dividend Equalisation Fund	1,25,000	—	—
Reserve for Rehabilitation of Plant	10,00,000	4,00,000	2,50,000
Provision for repayment of loan to Industrial Finance Corporation	—	—	1,00,000

We further report that the dividends paid by the Dhrangadhra Chemical Works Ltd. in respect of the three years ended 31st March, 1954, on its issued share capital were as follows:—

Year ended	Share Capital	Dividend rate	Amount
		Per cent.	Rs.
31-3-1952	21,500 Shares of Rs. 100 each	15	3,22,500
31-3-1953	21,500 Shares of Rs. 100 each	12	2,58,000
31-3-1954	21,500 Shares of Rs. 100 each	12	2,58,000

The above dividends were paid without deduction of tax and were paid out of current profits.

No accounts of the Company have been made up for any period subsequent to 31st March, 1954.

Yours faithfully,

(Sd.) V. SANKAR AIYAR & CO.,
Chartered Accountants.

PROVISION FOR APPOINTMENT OF MANAGING AGENTS AND THEIR REMUNERATION

Sahu Bros. (Saurashtra) Ltd. are the present Managing Agents of the Company and they and their successors in business, whether under the same or any other name or style expressly including therein any limited liability company which may acquire the goodwill of Sahu Bros. (Saurashtra) Ltd., under any scheme of reconstruction of that Company, shall continue and be the Managing Agents of the Company (unless they shall voluntarily resign that office) for the period of 20 years certain from the date of incorporation of the Company, viz., 28th January, 1939.

Unless and until otherwise mutually arranged between the Managing Agents and the Directors of the Company (subject to the provisions of the Act) the remuneration of the Managing Agents shall be the remuneration of Rs. 2,000 per month and (b) a (a) an allowance of Rs. 2,000 per month and (b) a commission of 10 per cent. on the net yearly profits of the Company after deducting working expenses, interests on debentures or other loans and after making provisions for depreciation of plant and machinery but before placing anything to reserve or other special accounts.

The Managing Agents may also in addition to their duties as Managing Agents of the Company as set forth and contained in the said agreement perform any other duties and work for the Company which the Directors may decide, and shall receive such reasonable and proper remuneration for such work as shall be from time to time agreed between the Managing Agents and the Directors, such remuneration being in addition to the remuneration provided for in the said agreement, provided however that so long as any moneys are due and payable by the Company to the Industrial Finance Corporation of India, the power given by this clause shall not be exercised without the previous consent in writing of the said Corporation.

SHAREHOLDERS' RIGHTS REGARDING VOTING AT MEETING

On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him, PROVIDED HOWEVER, that the holders of Preference Shares shall have no right to vote either in person or by proxy at any General Meeting by virtue of or in

pect of their holding of Preference Shares except that they shall have a right to vote only on resolution placed before the Company which directly affect the rights attached to Preference Shares—and for this purpose any resolution for winding-up the Company or for the reduction of its share Capital shall be deemed directly to affect the rights attached to Preference Shares or if the dividend due on such Capital or any part of an aggregate period of not less than two years preceding the date of the commencement of the meeting—and for the purpose of this clause dividends shall be deemed to be due on Preference Shares on the last date specified for the payment of such dividend in the Articles or other instruments executed by the Company even though no dividend has been declared by the Company on such Capital.

Any person entitled under the Transmission Article to transfer any shares may vote at any General Meeting in respect thereof in the same manner as if he were the registered holder of such shares, provided that seventy-two hours at least before the time of holding the meeting or adjourned meeting as the case may be at which he proposes to vote he shall satisfy the Directors of his right to transfer such shares, or the Directors shall have previously admitted his right to vote at such meeting in respect thereof. If any member be a lunatic, idiot or non-compos mentis, he may vote either by a show of hands or at a poll by his committee curator bonis or other legal curator and such last mentioned persons may give their votes by proxy.

Where there are joint registered holders of any shares any one of such persons may vote at any meeting either personally or by proxy in respect of such share as if he were solely entitled thereto and if more than one of such joint-holders be present at any meeting either personally or by proxy, that one of the said persons so present whose name stands first on the Register in respect of such share shall alone be entitled to vote in respect thereof. Several executors or administrators of a deceased member in whose name any share stands shall for the purposes of this Article be deemed joint-holders thereof.

RESTRICTION ON RIGHT TO ATTEND AND VOTE, ETC.

No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member and no member shall be entitled to be present or to vote at any meeting in respect of any share that he has acquired by transfer unless he has been the registered holder of the share in respect of which he claims to vote, but this regulation shall not affect shares acquired under a testamentary disposition or by succession to an intestate estate or under a bankruptcy or insolvency or liquidation.

RESTRICTION ON TRANSFER OF SHARES

The Directors may at their own absolute and uncontrolled discretion and without assigning any reasons, decline to register or acknowledge any transfer of shares.

RESTRICTION ON RIGHTS OF MANAGEMENT BY DIRECTORS

Except to the extent provided by the law there are no restrictions on the powers of management by the Directors of the Company.

COMMISSION OR BROKERAGE

The Company will pay brokerage and/or commission at a rate not exceeding Rs. 2 per share to recognised brokers or banks on allotments made in respect of the application bearing stamp of such brokers or banks.

INSPECTION OF DOCUMENTS

The Copy of the Prospectus, Memorandum and Articles of Association of the Company, Managing Agents' Agreement, the Licence for establishing the new industrial undertaking, sanction for the fresh issue of Capital, Certified copies of the Tripartite Agreement of the Company, Managing Agents and Industrial Finance Corporation and Deeds of 1-10-1952 and 30-6-1953 between the Company and the Industrial Finance Corporation and the original report and certificate of the Company's Auditors as set out herein, will be available for inspection during office hours on working days at the Registered Office of the Company until the subscription is closed.

APPLICATION FOR SHARES

Applications should be made on the form accompanying the Prospectus or any typed or printed copy thereof. The said form must be sent together with the necessary remittance to the Company's Bankers, Punjab National Bank Ltd., Bombay, and all its branches and offices OR Devkar Nanjee Banking Co., Ltd., Bombay, Dhrangadhra and all its branches and offices. All remittances not made in cash should be made either by Demand Draft or cheques drawn to the order of any of the aforesaid bankers. Wherever the aforesaid bankers' commission is payable for the collection of cheques, such commission shall also be paid along with the said remittance. Payments made by cheques by the applicants at their local branches of the Company's aforesaid bankers will be accepted at par. Any cheque not honoured when presented to the Bank shall not be deemed to be a payment. Where no allotment is made the moneys received on application will be returned without interest less remittance charges, if any. If allotment is made for a lesser amount than the amount applied for, the balance of the application moneys received will be utilised towards the amount payable on allotment on shares allotted and the balance, if any, will be refunded to the applicant, less remittance charges, if any.

Company Meeting

ORIENTAL GOVERNMENT SECURITY LIFE
ASSURANCE CO., LTD.

SPEECH BY SIR COWASJEE JEHangIR, BART

Presiding over the Eightieth Annual General Meeting of the Oriental Government Security Life Assurance Co., Ltd., held at the Head Office, Oriental Buildings, Bombay, at 4 P.M. on Wednesday, 10th August, 1955, Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., J.P., Chairman, referred to the resignation of Sir Purshotamdas Thakurdas since the close of the year under report and quoted 'in extenso' the Resolution passed by the Board while accepting the resignation in which the Board had placed on record the long and meritorious services rendered by Sir Purshotamdas to the Company during the 36 years he was a Director out of which for 22 years he served as the Chairman of the Company in recognition of which service his bust has been put in a prominent place in the Company's premises.

Continuing he said:—I have pleasure in presenting to you the Report and Accounts for the year ended 31st December 1954, a copy of which has been in the hands of the Shareholders and such of the Policyholders as had asked for one before the date of the meeting and may, therefore, I hope, be taken as read.

New Business more than Double

The New Business completed last year amounted to an all-time record of 1,24,476 Policies assuring a little over Rs. 47½ Crores which shows an increase of 46,201 Policies assuring Rs. 24 1/3 Crores as compared with the New Business of the preceding year. The Company thereby achieved the unique feat of more than doubling the volume of New Business during the last year. The average amount assured under a Policy also registered a significant increase of Rs. 3,837 as against Rs. 2,989 in the preceding year.

During last year, our total Premium Income crossed the Rs. 10 Crore mark, the actual figure being over Rs. 1,046½ Lakhs as compared with Rs. 952½ Lakhs in 1953 showing an increase of Rs. 93 2/3 Lakhs.

The Claims by Death last year amounted to a little less than Rs. 108½ Lakhs. The Claims by Maturity amounted to slightly less than Rs. 32½ Lakhs. The Company's Mortality Experience has registered a further improvement, the ratio of actual to Expected Deaths during the year being 37.0 per cent., as compared with 41.7 per cent. in 1953.

Renewal Expense Ratio registers improvement

The Expenses of Management last year amounted to 25.4 per cent. of the Premium Income as compared with 23.4 per cent. in 1953, showing an increase of 2.0 per cent. Practically the whole of this increase, 1.9 per cent., to be exact, is accounted for by the provision of Rs. 20 Lakhs made in the accounts for the liability in respect of future Gratitudes to Staff. The Renewal Expense Ratio for last year was 11.67 per cent., as against 14.40 per cent. for 1953 showing a decrease of 2.73 per cent.

As a result of the year's operations, the Funds of the Company increased to a little over Rs. 78½ Crores at the end of the year.

Demand for Policy Loans continued more or less at the level of the preceding year. The total amount of Policy Loans (excluding Automatic Premium Loans) standing on the Company's Books at the end of the year was a little over Rs. 592 1/3 Lakhs.

The Net Rate of Interest after deduction of Income-tax at the source earned on the Funds during 1954 was 4.12 per cent., as compared with 3.57 per cent. for the preceding year. The difference is mainly due to the fact that while in 1953 we received refund of Income-tax for one year, in 1954 we received refund for two years.

The Lapse Ratio improved from 5.5 per cent., in 1953 to 5.3 per cent., in 1954.

The year under report was the last of a Triennial period at the end of which the Valuation of the Assets and Liabilities falls to be made to ascertain the profits for distribution between the Shareholders and the Policyholders. The Valuation is now in progress and the results will be available shortly.

Policyholders' Directors

On 1st June 1955, the usual triennial Policyholders' Meeting in terms of Section 48 of the Insurance Act, 1938, was held and Messrs. Dabhabhai Vallabhbhai Patel, Pashabhai Patel and Chandrakant Chhotabhai Patel were re-elected Directors.

Mutualisation of the Company

Now a word about the idea of the Directors to mutualise the Company. As policyholders might be aware, an Extraordinary General Meeting of the Shareholders of the Company was called on the 15th June last when the Directors put before the meeting a scheme for mutualisation prepared by them which was after some discussion unanimously approved by the Shareholders. It was as far back as the year 1948 when the Directors felt that, looking to the large size of the Company at that time and also the rapid progress which it was making during the preceding few years, it would be desirable to mutualise the Company, thereby leaving its management entirely in the hands of the Policyholders. As I stated in my speech before the Extraordinary General Meeting above referred to, the Directors felt that although the share capital played a very important role in the initial stages of the Company, the time has now come when the Shareholders should be paid off and the management of the affairs of the Company should be left to such of the Policyholders as are elected by them. It is with that idea in view that the entire mutualisation scheme was considered in all its bearings by the Directors step by step with the result that we have now come to the stage when the scheme for mutualisation as put before the Extraordinary General Meeting and approved by them has been forwarded to Government. The scheme is being published in all the important newspapers of the Country and the Government of India are also publishing it in the Government Gazette. The scheme is thereby given the widest publicity possible and also any objections or suggestions are invited from interested parties and these should be addressed to the Controller of Insurance so as to reach him before 30th September next which gives as long a period as 2 months for Policyholders and Shareholders to send their objections or suggestions, if any, after careful consideration. The Directors gave their utmost and very anxious consideration to the vital question of holding the scales even between Policyholders and Shareholders. To have their hand further strengthened the figure of compensation putting before him what they had arrived at as fair compensation. He fixed the compensation at Rs. 8,800 after carefully going into all the aspects of the problem. This sum of Rs. 8,800 is what falls to be paid straightaway, but its payment will be deferred for or spread over a period of five years. Again, it is not and cannot be secured on any tangible asset of the Company but only on 15% of the emerging Surplus of the periodical Valuations of the Company. What is more important to consider is the fact that practically during all the years in the past the Shareholders had forgone a substantial part of the amounts that would have gone according to the Articles of Association of the Company to augment their dividends but which instead were allowed to augment the Policyholders' Life Assurance Fund. If the amounts the Shareholders had forgone in the past had been taken to a fund to their credit and invested, the amount standing to the credit of that fund itself would have provided a significant part of the compensation now sought to be paid to them. What is even more important to consider is the fact that the figure of Rs. 8,800 does not allow for any future increases in the dividend due to the progressively satisfactory functioning of the Company judging from how it has been functioning during the past few years.

Even from the date mutualisation is given effect to, the Debenture-holders' Directors will be reduced from the present number of 9 to 5. To enable the policyholders take over an increasing share in the management of the Company, there is a progressive number of Debenture-holders' Directors progressively diminishing further and the number of Policyholder Directors correspondingly increasing as and when Debentures are redeemed.

To avoid any sudden strain falling on the Surpluses of a few trienniums only the redemption of the Debentures is deferred for or spread over a period of years.

These are some, if not all, of the points to which the Directors had to give their careful consideration before deciding on the principle of mutualisation and also the quantum of compensation. I thought it best to go to the length I have done in explaining how the Directors' minds have been working for a few years in the past on this important question of mutualisation.

The advantage that would be secured by Policyholders once the Shareholders are paid off will be very great indeed. Apart from the fact that the entire management of the Company will pass into their hands there will also be a financial advantage in that there will not be any future liability, once the share are paid off, for payment of dividends and the entire Surplus would be available for distribution amongst Policyholders alone. Taking all these factors into consideration, I cannot but wholeheartedly recommend to the policyholders the acceptance of the scheme as forwarded to Government.

Nationalisation of Insurance

I now take up the highly vexed and topical question of Nationalisation of Insurance. In this connection, I cannot do better than quote fully what my predecessor in Office said at the time of opening of the Oriental Building, Ahmedabad, on 17th March 1953. Since this speech was not delivered before a meeting of policyholders and shareholders, I think it appropriate that his weighty words in this respect should receive your careful consideration:—

"It is surprising that in spite of the grim warning furnished so unequivocally by the nationalisation of the coal industry in the U.K. in the shape of diminished output per man and increased cost of raising, our ministers in power talk lightly of socialising or nationalising as applied to a business least fitted for nationalisation and whose progress depends upon research in the fields of intellectual activity which can be fostered only under conditions created by healthy competition as a private enterprise. I, therefore, cannot allow myself this occasion to pass without putting out most respectfully a warning to these advocates of socialism. 'Hands off those for whom we insure' are, normally widows and orphans'. I make an appeal to Ministers in power in all humility but with the utmost sincerity to be consistent in their policy declarations bearing in mind the great harm that will be done to the country's economy by inconsistent pronouncements of policy."

Since then, Chairmen of almost all companies have gone fully into the question and I cannot do better than say that I wholeheartedly agree with every bit of what has been said in this respect.

In my statement as Chairman at the Annual General Meeting of our Subsidiary, the 'Oriental Fire', I have already expressed my considered opinion regarding this disturbing development as it affects the future of Indian general insurance companies. I make no excuse for reiterating that I consider it a most retrogressive move and I am of the opinion that even the threat or rumour of nationalisation may be sufficient to damage the prestige of Indian companies in those overseas territories in which a number of us are seeking to establish ourselves.

(Continued on page 183)

THE PURPOSE OF ADVERTISING
EXAGGERATION AND BALLYHOO
DEPLORED

ADDRESSING the Advertising Luncheon Club in Bombay on 9th August, Mr. P. G. Rose, Manager, All-India Publicity Department, Burmah-Shell, said that the only legitimate purpose of advertising was to "make known". Exaggeration and ballyhoo had come in for public ridicule and was directly responsible for the rising cost of publicity. Mr. Rose recalled that when he spoke publicly on the same theme 17 years ago, he was severely criticised by his own clan, as, for instance, in the correspondence columns of the Times of India. Maintaining his earlier stand, he observed: "It is a sign of arrested development if I say that my views have changed very little over the intervening 17 years. I still maintain that the only legitimate purpose of advertising is to 'make known'. Those who spend money on advertising should consider the glib statement, 'if it sells the goods it's good advertising', and they should ask themselves how far they agree. For, in my opinion, it is the chief reason why advertising costs such a lot. Having proclaimed to the world, with as much drum-banging as possible, that advertising is out to sell and that it is to be judged solely on its success as a salesman, shall we be surprised that the world looks slightly sideways on its efforts, applauding its ingenuity but knocking a large discount off its statement?"

"That discount is paid by the advertiser. When the public says, 'I never read advertisements', up go our advertising costs. When they say, 'It's just an advertising claim', we pay. We pay and pay and pay for the high cost of securing the confidence of people who have learned to be wary. Debit this high cost to those advertising supermen who say, 'We will sell your goods' without asking or caring whether the goods are worth buying."

"Big Drum" Methods

While maintaining that the "big drum" methods, exaggeration, boasting and bellowing do produce some results, it was his contention that more "reasonableness" in publicity would pay bigger dividends and cost the advertiser less in order to obtain the long-term results that he expects. "Advertisers pay through their nose for high-pressure bullying methods that are so often employed by advertisers. There is proof of this every time you hear the man in the street express his opinion about advertising."

The phrase "an advertising racket" was all too familiar, Mr. Rose said. "The reason is not hard to find. You only have to look or to read many of the advertisements in the Press each day. It would be a useful experiment if those who wrote advertisements read them out aloud to themselves." He went on to say: "If you can recite one of your advertisements to a friend without feeling a complete idiot—that's something. If what you say makes him trust you and makes him feel he would like to buy your products—that's better still. In other words, let us be more reasonable in our advertising."

The Stunt Man

Mr. Rose concluded by saying that he would like to think that the stunt man was losing ground in the advertising business but there was little evidence of it. "It's an exciting business thinking up wonderful stunts to stun, shock or surprise people into buying things they don't want, but there are two catches in this system of selling: you always have to be finding fresh stunts—and more exciting ones at that—and you compete not on the goodness of your goods but on the cleverness of your Stunts Department. Good advertising should acknowledge a duty to the buyer as well as to the advertiser. It should aim not at stunning the buyer by ballyhoo but at making him understand the personality of an advertiser and set a true value on the advertiser and his products."

CORRECTION

CERTAIN errors, which appeared in paragraphs six and nine of the article *Monetary Factors in Planning*, published in last week's issue of *Capital* may have caused some confusion in the minds of readers. We print below the corrected versions of these two paragraphs:—

6th paragraph.

The plan frame sets the following targets of production in the heavy industries: six million kilowatts of electricity, 60 million tons of coal, 300,000 tons of synthetic petrol, five million tons of steel, 40,000 tons of aluminium, 3.5 million tons of manganese ore, 10 million tons of cement, and heavy machinery to fabricate industrial plant involving a monetary investment of Rs. 240 crores. The other targets of production involve a 20 percent increase in agricultural and allied products, a 67 percent increase in overall mining and factory production (i.e. including heavy industries), a 40 percent increase in hand industry products and construction, and about a 23 percent increase in transport, commerce, trade and other ancillary and secondary services. The financial requirements calculated to be necessary for achievement of the targets imply that the monetary habits of people must so change that savings can increase from about 7 percent to

about 11 percent of national income, that taxation can increase its demand from about 7 percent to 9 or 10 percent of national income, that deficit financing of the order of Rs. 200 crores per annum may not cause uncontrollable inflation and lastly that more than 60 percent of the estimated five-year savings of Rs. 5,600 crores can be allocated to the public sector without resort to harmful regimentation or otherwise straining the economy. Fulfilment of the targets is estimated to result in rise in national income from the annual rate of growth of 2.5 percent to 5 percent, or, expressed in absolute figures and without adjustment for the results of adventitious factors, from Rs. 10,800 crores in 1955-56 to Rs. 13,700 crores in 1960-61 as against from Rs. 9,190 crores in 1950-51 to Rs. 10,800 crores in 1955-56.

9th paragraph.

Thus the West Bengal scheme seems to be based on a realisation of the fundamental defect of Say's law, which ignores the fact that though production may create demand, goods and services which are produced may not be those for which demand arises. Curiously enough, however, the operative suggestions of the scheme itself ignore this need to match production and demand, when the scheme assumes that any and every product of hand industries will find indiscriminate demand in rural areas (though not in urban areas) and that the products of factory industries will find similar demand in both urban and rural areas. The scheme seems to suffer from a further defect in overlooking the point that money-income flowing from capital-intensive heavy industry may pass into the hands of people with higher incomes and whose demands for consumption goods may therefore be inelastic. As regards the central proposition of the scheme that "back-calculation" on the basis of investible surplus should determine the size of heavy industry and development expenditure, there seems to be scope for further exploration of Keynes's theory of the "multiplier", especially in a community with a large unsatisfied consumption demand plus unequal distribution of money incomes. It would appear that the scheme seeks to limit increase in the production of consumer goods to the extent of utilisation of idle installed capacity and wants expansion of installed capacity to follow and not to precede increase in the investible surplus, because it fears that the time-lag between expenditure on expansion of installed capacity and availability of correspondingly increased consumer goods will result in the misbehaviour of money with unhealthy effects on prices and the cost of living. But this reasoning, though ideally sound, does not take full account of the fact that where the source of consumption demand and the destination of money-income are not the same, the time-lag if properly anticipated may not produce the apprehended evil results.

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to June, 1955. Compared with May, the June index for Government securities reveals a rise 0.1 point, while that for preference shares shows a drop of 0.1 point.

There were increases in cottons 8.6 points, jutes 3.9 points, minings and oils 27.3 points, cements 1.5 points, teas 44.1 points, coals 9.7 points, papers 62.9 points and miscellaneous 6.2 points, while decreases occurred in banks 0.3 points, engineering 13.1

points, and sugars 5.3 points. Correlating all the factors the Capital variable yield securities index shows that the index for stock prices in the above classes of shares advanced by 7.9 points during June, 1955.

Stocks and Shares

PROFIT-TAKING AT CLOSE BRINGS SLIGHT REACTION

UNDERTONE STILL STEADY

Wednesday Evening. THE share market is shut today. Yesterday, after a week in which prices had been fully steady, there was some profit-taking and small scattered losses were recorded. This appears however to have been a technical readjustment and the undertone is still fully steady. Investment enquiry is on a small scale but persists. Details of the week's trading follow.

The Government security market turned easier and prices were marked down as a result of selling pressure. There was a substantial offering of Central Government loans in order to obtain funds to finance purchases of the new 4% State Loans, which will open for subscription on 16th August. The 3% Conversion Loan was easier at Rs. 80-7 with sellers over, and Non-terminable Paper was nominally quoted at Rs. 81-1. Short-dated loans were unchanged but there were sellers rather than buyers. In the medium-dated group, 3% 1959-61 buyers. The medium-dated group, 3% 1959-61 was marked around Rs. 98-1 but 3% National Plan Bonds 1961 relapsed to Rs. 99-10 sellers as did Rs. 93-2. The 3% 1963-65 was on offer at Rs. 98-6 and 3% 1963-65 was on offer at Rs. 98-6 and 3% 1964 at Rs. 94-5. The 2% 1961 was asked for at Rs. 92-4 and 2% 1960 had buyers over at Rs. 95-3. During the week the Reserve Bank raised their selling price for 2% Loan 1962 to Rs. 93-2. Long-dated loans were quiet with 3% 1966-68 quoted at Rs. 91-7 and 3% 1970-75 turned sellers at Rs. 87-2-6.

There was no improvement in provincial loans and 4% loans remained unchanged with sellers at the previous quotations.

Little business was reported in preference shares but, as usual, there were many more buyers than sellers. In jutes, a small lot of Anglo-India was placed at Rs. 116 x.d. and Dalhousie changed hands at Rs. 114. Howrah Mills 'A' were done at Rs. 118, Lawrence at Rs. 120-8 and Reliance were crossed at Rs. 115. Amongst miscellaneous issues, Dalmia Cement Fully-Paid were marked at Rs. 97 and the Partly-Paid at Rs. 36. Equitable Coal and Indo-Burma Petroleum were crossed at Rs. 118 ct. and Rs. 106 respectively. There were some buyers of Richardson & Cruddas at Rs. 91 and Rhotas Industries 'B' at Rs. 70.

In the banking section, Hind Bank changed hands at around Rs. 28-10, United Bank of India 'C' were done at Rs. 9-5 and the 'D' at Rs. 4-14.

In the railway section, several transactions were reported in the only share dealt in in this section, namely Dehri Rhotas between Rs. 13-4 and Rs. 14-10.

Amongst cotton shares, Bengal Nagpur improved from Rs. 8-12 to Rs. 9-2 while Kesoram were stagnant around Rs. 18. Elgins were crossed at Rs. 20. Jayshree were quoted at Rs. 6 and New Victoria were unchanged at Rs. 1-13.

There was some enquiry for selected coal shares which included Pench Valley, Borrea and Equitable. Bengal were absorbed at the higher rate of Rs. 540, Burrakur were quiet at Rs. 14-12, Central India were better at Rs. 8-7 and Borrea had buyers at Rs. 29. Pench Valley were crossed at Rs. 24-6, Equitable at Rs. 33-10 and Huriladih at Rs. 21-10. Business was done in New Beerbhoom at around Rs. 22, Raneegunge at Rs. 12-7 and South Karanpura were lower at Rs. 12-9. Western Bengal changed hands around Rs. 7-13.

Good business was reported in jute shares which moved from strength to strength during the major part of the period under review. Towards the close, however, there was mild profit-taking and prices finished slightly below the best. The following table shows representative price movements:-

	Opening (4-8-55)	Highest	Closing (9-8-55)
Anglo-India	254 c.d.	254 x.d.	250
Belvedere	239	244	240
Delta	284	295	295
Ganges	112	118	116
Howrah	33-12	34-8	34
India	173	185	185
Northbrook	27-8	29-8	29-4
Union	280	295	280

In the electric supply section, Calcutta were steady at Rs. 15-7 and Mozufferpore were quoted at Rs. 6, Jubbulpore were crossed at Rs. 18 to 14-4.

Sugar shares were a dull market and a few transactions were reported. Belsund were easier at Rs. 10-13 and Carew at Rs. 12-10. Durbhanga had sellers at Rs. 20-10 and Purtabpore were marked at Rs. 18-12. The solitary feature was Shree Krishna Gyanoday which improved from Rs. 18 to Rs. 18-11.

Indian Iron touched a new high of Rs. 40 under the influence of powerful bull support but closed easier on profit-taking at Rs. 39-3. Braithwaite were done around Rs. 25-10, Burn were steady at Rs. 288, while Textile Machinery soared to Rs. 26-12 but closed lower at Rs. 25-6. Indian Standard Wagon spurted to Rs. 142, Jessop improved further to Rs. 48-12 and Kumardhubi Engineering were

better at Rs. 13. Marshalls were offered at Rs. 7-10 and Richardson & Cruddas spurted from Rs. 20-7 to Rs. 22-8.

In the miscellaneous section, Bengal Paper had buyers at Rs. 73-8. Titagur improved from Rs. 46-4 to Rs. 47-4 and Orient Paper touched a new high of Rs. 32-12. Assam Bengal Cement improved to Rs. 8-2 and Dalmia to Rs. 17-6. Sone Valley were better at Rs. 8-7. India General Navigation were a feature improving from Rs. 96 to Rs. 116 but closed lower at Rs. 114. Alkali were marked at Rs. 17-8 and Angelo after improving to Rs. 24 turned sellers at Rs. 23-8. Barree Coke had buyers at Rs. 22 and Britannia Biscuits met with investment support at Rs. 16-2 x.d. British India Corporation were steady at Rs. 9-4. Dunlop Rubber came to hand at Rs. 37-6 and Calcutta Trams spurted from Rs. 16-7 to Rs. 18. Ganges Rope were transacted at Rs. 192 and Indian Wood Products were crossed at Rs. 40. Imperial Tobacco were easier at Rs. 13-5 and Indian Cables were marked at Rs. 29-2. Indian Paper Pulp on the announcement of a rights issue dropped from Rs. 30 to Rs. 27. Indo-Burma Petroleum improved from Rs. 178 to Rs. 188 to close at Rs. 185. Metal Box were done around Rs. 24-9 and National Insulated Cables Old were taken up to Rs. 19-12. Rhotas Industries moved up from Rs. 30-4 to Rs. 32-12 to close at Rs. 31-8.

In the mining section, Indian Copper was the outstanding feature with the price improving from Rs. 5-2 to Rs. 5-8. Western Stockholders were unchanged at Rs. 1-1 and Burma Mines at Rs. 2.

Once again the volume of business in the tea section was small although when shares changed hands they did so at slightly higher levels. Among Assam shares, Bishnauth were taken up to Rs. 49-6, Dhelakhat at Rs. 19-8, Jutlibari at Rs. 26-2 and Maud at Rs. 30. Bokakhat were unchanged at Rs. 25-8 as were Brahmaputra at

Rs. 11-12. A large volume of business was written in Brooke Bonds which were taken up from Rs. 22-4 to Rs. 23. Sapoi, on interested buying, were taken up to Rs. 40 from an opening of Rs. 31-12 as were Dhunseri from Rs. 33-8 to Rs. 37. Among Doosars shares, Banarhat were slightly easier at Rs. 698 as were Hasimara at Rs. 46-8, but Hantapara had strong buyers at Rs. 375 with sellers reserved. Of the remaining shares, Kaliti were unchanged at Rs. 9-8 whilst New Samanbagh had buyers at Rs. 23-4 as did Hansqua at Rs. 26-8 and Jayshree at Rs. 14-12.

The UNION COAL COMPANY made a loss of Rs. 36,218 for the half-year ended last December, against a profit of Rs. 6,862. The dividend has been halved to 4 annas per share, leaving a carry-forward of Rs. 47,938 (Rs. 68,861), after making other adjustments. Raisings fell from 42,779 tons to 35,835 tons, as did despatches from 39,759 tons to 35,945 tons.

The NAGRI FARM TEA COMPANY raised its profit by Rs. 3,70 lakhs to Rs. 5.66 lakhs for the year ended last December. Bringing in Rs. 38,731, transferring Rs. 1.75 lakhs (Rs. 25,000) to reserve and Rs. 50,000 to renewal reserve, and making other adjustments there is Rs. 1,97,999. The dividend is declared at 50%, leaving a carry-forward of Rs. 48,049. The crop totalled 435,016 lb. (372,742 lb.) and the average sale price rose from Rs. 2-2-9½ to Rs. 3-5-4½ per lb. Estimates for 1955 are for a crop of 440,000 lb. at a cost of Rs. 1-13-2½ per lb.

The profit of the SOOM TEA COMPANY LTD. amounted to Rs. 4.69 lakhs for the year ended last December, against Rs. 2.34 lakhs. The dividend is raised by 20% to 50%, including an interim of 30%. Transferring Rs. 1.05 lakhs (Rs. 85,000) to reserve and Rs. 15,000 to dividend equalisation account (nil), there is Rs. 36,064 (Rs. 22,714) which is carried forward. The crop was 289,738 lb. (267,892 lb.) and the average sale price was Rs. 3-12-3½ against Rs. 2-9-4½ per lb. Estimates for 1955 are for a crop of 280,000 lb. at a cost of Rs. 5.39 lakhs

The ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO. LTD. reports good progress during 1954. New business reached an all-time record of 124,476 policies assuring a little over Rs. 47½ crores. This represented an increase of 46,201 policies assuring Rs. 24½ crores over the previous year. The average amount assured under a policy rose to Rs. 3,837 from Rs. 2,889. Premium income totalled Rs. 1,046½ lakhs against Rs. 952½ lakhs. Claims by death and by maturity amounted to less than Rs. 431 lakhs, and the company's mortality experience improved further. Management expenses rose from 23.4 percent of the premium income to 25.4 percent, but almost the entire increase was accounted for by the provision of Rs. 20 lakhs for liability in respect of future gratuities to staff. The renewal expense ratio fell to 11.67 percent from 14.40 percent. The company's funds increased to over Rs. 78½ crores at the end of the year. Demand for policy loans remained at about the same level as in 1953, the net rate of interest rose and the lapse ratio de-

creased. The results of the triennial valuation are expected shortly.

The RELIANCE JUTE MILLS COMPANY made a profit of Rs. 2.52 lakhs for the half-year ended last March, compared with Rs. 3.14 lakhs in the previous half-year. Bringing in Rs. 18,873, there is Rs. 2,70,581. Depreciation gets Rs. 1 lakh (Rs. 50,000) and taxation Rs. 55,000 (nil). There is again no ordinary dividend, leaving a carry-forward of Rs. 45,581.

Messrs. Tata Industries Limited, managing agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the steel works at Jamshedpur during July, 1955 was: pig iron 94,900 tons; steel ingots 84,300 tons; semi-finished steel for sale 19,700 tons; finished steel 44,600 tons.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available).

SUBSTANTIAL FALLS IN STOCK MARKET

INDUSTRIALS AND OILS LEAD DECLINE

London, 10th August.

THE stock market suffered an all-round and substantial fall prior to the week-end because of the anti-inflationary moves throughout the world, but some recovery was staged later. Prices were well down compared with the previous levels, losses being measured in shillings in the industrial and oil markets. Gilt-edged rallied well after being marked down on the news of the £200 million Electricity 4½ percent issue, and losses were not large. The biggest sufferers in the slide were industrials and oils. Foreign bonds fell back with the rest of the market and Chinese issues lost some of their gains. Rails were mostly lower and dollar stocks were down in sympathy with Wall Street, which reacted following the increase in the Federal Reserve discount rates. Gold shares and base metals all lost ground, although the former joined in the recovery after the week-end. Rubbers receded despite the advance and subsequent reaction in the commodity price. Tea shares also declined lower, although business was limited.

Hongkong Gold Quiet

The Hongkong gold market experienced one of the quietest weeks for a long time, with prices fluctuating narrowly. Weakening from last Wednesday, values dipped to \$11K/251½ on Thursday, which was the period's low. Subsequent movements were small and the closing price was \$11K/252. Carryover charges were 40 cents in favour of sellers. There were no arrivals from Macao, while very small forward contract business was done at \$105.37½. Official offtake was 4,130 taels and unofficial 7,700 taels.

The Money Market

Credit stringency was less pronounced in the money market last week. Conditions, however, varied from comfort at the beginning of the period to acute stringency on Thursday, followed by a return of easier conditions later. Day-to-day money remained firm at 3½ to 4 percent. Credit had to be supplied by the authorities and the market borrowed from the central bank to a moderate

extent on Thursday. The continued dearthness of money was reflected in an increase of 1/32nd in the rate for last week's offer of Treasury bills, and the market raised its own buying rates by a similar amount. Applications for Treasury bills totalled £350,765,000, of which £240 million were allotted at the average rate of 80s 0/42d compared with 79s 5/08d in the previous week. This week £240 million are offered. The Bank of England return for the week ended 3rd August showed notes £3 million lower at £1,857 million, and bankers' deposits £24 million lower at £216 million.

Sterling Area Reserves

The sterling area's gold and dollar reserves fell by \$136 million during July to \$2,544 million.

Activity on Wall Street

Foreign issues were on the slow side in the past week. Germans were mixed. On the American Stock Exchange, Russian Imperials were considerably less active with prices shaded fractionally. Greeks 7 percent eased about two points, while 6 percents were a small fraction down. Denmark, Italians and Norwegians generally held steady. A number of Japanese issues were higher by a point or more. In the South American groups, Chile 3 percents lost slight ground. U.S. Government obligations extended their recent declines, led by long-termers where new 1955 loans were posted. The marking down in values reflected the general tightening of credit. The pressure was never heavy, with prices eventually developing a firmer tendency on investment support evidently attracted by favourable yields. Top quality corporates also eased, but the activity was slow. Convertible industrials and rails fluctuated irregularly following the trend in the stock market. A number of issues dropped about two to three points on Wednesday when share values suffered a sharp setback. World banks were neglected.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 3rd August showed gold stocks \$1 million higher at \$21,652 million. Foreign deposits declined by \$14 million, while foreign investments rose by \$43 million. The Federal Reserve sold \$55 million worth of bills and \$108 million worth of Government securities previously held under repurchase agreements. It also sold \$5,754 million of certificates but purchased the same value of notes. Total discounts and advances rose by \$397 million to \$946 million, while excess reserves of member banks rose by \$56 million to \$633 million. Their daily average of excess reserves rose by \$22 million to \$619 million, while daily average bor-

rowings rose by \$346 million to \$741 million. Business loans of New York City banks rose by \$84 million to \$2,083 million, compared with a fall of \$123 million to \$7,332 million a year ago.

Belgian Bank Rate Up

The raising of the bank rate by the National Bank of Belgium to 3 percent from 2½ percent was decided upon as a "preventive" measure against the steady contraction on the call money market which set in a few weeks ago, according to Brussels financial sources. A Bank official stated that there was really no inflationary position in Belgium comparable to the situation in the United States and the U.K. but "we wanted to sound a warning against such a tendency and indicate that we are closely watching it." The decision was taken after several weeks of increasing monetary circulation, as shown in the National Bank's bulletins.

Vegetable Oil Market

The recent apathy towards linseed oil continued last week. Sellers endeavoured to find a contacting valuation and conceded a further 66 to 67 a ton without achieving their objective. Reports that the Netherlands Government wished to dispose of its stocks had a dampening effect on demand although, it is learned, that the amount of linseed oil available was no more than 2,000 tons. Both in London and on the Continent, prices were largely nominal at £102 a ton for Indian crude in bulk. August to December shipment. Spot prices in the U.K. also tended weaker. After a quiet and somewhat easier tendency, the market for castor oil became steadier, with offers from India less readily obtainable. BSS remained unchanged at £99 a ton, in drums, cost and freight, and at £90 for commercial of good quality. Small quantities of BSS could be had on spot in London at £110 and commercial at around £108.

European Jute Mills' Problems

The European jute industries are studying the problems created by the recent decision not to change the minimum export price of Pakistan jute, together with the Indian decision to abolish export taxes on manufactured goods, it is learned in Paris. These decisions have caused some uncertainty in jute quarters, and a close study of the situation is being made to determine the effects on the European industry as a whole.

Pakistan Raw Jute Prices

Official representations are to be made to the Pakistan Government by the British Jute Spinners and Manufacturers Association following an emergency meeting of the Association's governing body who interrupted their holidays to attend a meeting where Pakistan's decision to maintain jute prices at the sterling minimum after the devaluation of her rupee was discussed. A spokesman said later: "The matter is under consideration and representations are to be made to the Pakistan Government. We cannot say any more at this stage." However, it is understood that all members of the Association will be consulted on the problem. Many of them are still on their annual holiday leave.

Investing in U.S. Companies

The Guaranty Trust Company has announced a new plan whereby foreign investors can hold shares in American companies in the form of bearer depositary receipts. The American securities will remain in deposit in New York while bearer receipts against them are held in Europe. The companies against which the Guaranty Trust Company will issue bearer receipts include the Aluminium Company of America, American Telephone and Telegraph, Eastman Kodak, Du Pont and United Steel.

London Quicksilver Market

The London quicksilver market remains uncertain. The Spanish and Italian metal for immediate delivery ex-warehouse London is still mentioned at £108 a flask. But traders state that it is largely unrepresentative of the spot market, as cheaper metal is always available, such as Mexican down to £95 a flask. Under such circumstances, dealers quote a wide range on spot from £95 to £108. The Mexican metal for shipment to the U.K. is currently indicated from £240 to £250 a flask c.i.f. Although Spanish and Italian quicksilver producers have recently stated that they have no intention of cutting prices, it is believed that some sales to Continental countries are being made at £95 a flask f.o.b.

Rubber Rises Sharply

Prices in the London rubber market continued to advance sharply in response to the rising trend at Singapore, and were finally 3½d to 5d higher on balance at the highest level since 1951. Although factory holidays limited interest in spot material, the forward delivery market was well supported by U.K. and Continental orders. A further narrowing of discounts for distant deliveries indicated that the sound statistical position was expected to continue during the remainder of the year. In relation to the extent of the rise, the temporary recessions were of only minor account and profit-taking was well absorbed. The market finally was quiet with values ¼d below the best. The sole crepe market remained quiet but only moderate supplies were available. Ordinary 1/8th smooth No. 1 on spot was valued higher at 45d a lb while holders of better selections indicated 47d.

New Synthetic Rubber Plant

Manufacturing facilities will be built by Goodrich Gulf Chemicals Incorporated to produce its man-made rubber which synthetically duplicates tree rubber. The pilot plant in Northern Ohio is expected to be in operation in about nine months time, according to the Company's resident.

New Delhi

CO-ORDINATION OF RAIL AND SHIPPING FACILITIES

RECOMMENDATIONS OF TRANSPORT PLANNING STUDY GROUP

(FROM OUR NEW DELHI CORRESPONDENT)

THE Study Group on Transport Planning, in its report on coastal shipping, has emphasised the need for rail-shipping co-ordination. It says that the five year plan laid down certain practicable targets for the development of the Indian shipping industry. According to these targets, at the end of the five year period the tonnage in the coastal trade should be about 315,000 G.R.T. and in the overseas trade 233,000 G.R.T., totalling about 600,000 G.R.T. The following table shows the position with regard to the progress made in coastal shipping since 1950.

TOTAL TONNAGE EMPLOYED ON THE COAST (BOTH OWNED AND CHARTERED) AND THE TOTAL CARGO CARRIED IN COASTAL TRADE DURING 1950-54.						
Year	Tonnage (Indian) Owned	Tonnage (Chartered) G.R.T.	Tonnage (Foreign) (Foreign)	Total	Total cargo carried by age of Indian and non-carried ships	Percent of Indian ships
1	2	3	4	5	6	7
1950	2,01,559	41,063	24,390	2,73,412	25,59,200	82
1951	2,17,202	6,938	7,541	2,31,681	24,42,250	96
1952	2,55,119	67,237	nil	3,22,356	26,07,810	85
1953	2,55,119	67,237	nil	3,22,356	26,07,810	100
1954	2,72,913*	53,403	nil	3,26,316	not known	100

(As on 10th October, 1954)

*This includes three vessels of about 15,000 G.R.T. which were employed not only on the coast but also in the Indian-Persian Gulf Trade.

Coastal trade is thus completely under Indian control. The target set in the plan is also expected to be fully achieved by the end of the plan period. Additions to the extent of 117,000 G.R.T. have already been made with the aid of Government loans and from the companies' own resources and another 61,000 G.R.T. are expected to be added by 1955-56. The loan so far given to the shipping companies for expanding the coastal fleet is Rs. 4 crores. A further sum of Rs. 4 crores is expected to be given during the plan period. These loans are given at concessional rates of interest.

Shipowners' Report

The extent to which provision should be made in the second plan for the development of coastal and overseas shipping has been recently examined by a Study Group set up by the Consultative Committee of Shipowners. In a report submitted to the Government very recently, the Group has come to the conclusion that the requirements of purely coastal trade will be met by a total tonnage of 400,000 G.R.T. during the second plan period. At first, this appears to be insufficient, but the group has had to bear in mind the fact that even the existing coastal fleet finds it difficult to obtain cargo. The coastal fleet finds it difficult to obtain cargo from principal commodities to be carried are coal from Calcutta to the South and West coasts, and salt from the West coast to Calcutta. As a general reluctance to use the sea route as the cost over it is of higher than the rail freight. In addition, the use of coastal shipping involves the payment of heavy port dues and considerable handling charges.

Shipping interests have also complained of competition from the railways. They point out that as a result of certain decisions taken by the Government and the railways, about 40,000 tons of bone meal and manure from Saurashtra ports and about 50,000 tons of salt from Kandla have been diverted from the sea to the rail route. They urged that such diversions seriously affect the economic working of shipping and cripple its financial strength. They further state that it is essential to take such effective steps as will ensure that cargo suitable for movement by sea on the coast is not diverted to the rail route.

Importance of Merchant Navy

"The shipping interests as well as the Government have invested large sums of money in coastal shipping. In view of this it is obviously desirable that both the existing and proposed additional tonnage should find economic employment on the coast and the interests concerned should be in a position to earn a fair return on the capital employed in business after meeting all expenditure including repayment of loan and interest charges and after providing for depreciation and reasonable reserves for expansion and replacement.

"In the same manner as an automobile industry has to be developed in the country as a necessity in times of war, it is absolutely essential to have a properly developed Indian merchant navy. Such a navy will not only help India's naval defence but will also be very useful in the transport of essential goods during an emergency. Coastal trade is the nursery and foundation on which a proper merchant navy has to be built up.

"The maintenance of adequate coastal shipping is also essential from the point of view of employment. Thousands of men are now employed by the coastal shipping industry including sailing vessels. Any measures that may be taken in a reduction in the volume of coastal trade in the country, will have considerable adverse effect on employment. As part of the five year plan, the Central and State Governments and the port authorities are spending over Rs. 40 crores to improve port facilities and to modernise the ports. Coastal shipping and coast-

ing trade contribute substantially to the revenues of Indian ports and the finances of the ports are likely to be affected adversely if coastal shipping is not fully utilised. For example, coal is the largest single commodity handled in the port of Calcutta and any diversion of coal to the all-rail route will upset the financial structure of that port considerably.

Diversion to Railways

"Just as the railways have sought and obtained protection against serious competition from road transport in respect of long-distance haulage, it is necessary to ensure that goods such as coal, salt and a few others which can economically be moved by the sea route are not diverted to the rail route. Coastal shipping rates are less flexible than rail-way freight rates as the mere vastness of the railway system enables adjustment in rates without seriously affecting the total revenue. Further, the cost of carriage by sea is also influenced by several factors over which shipping interests have no control, such as supply of railway wagons to the ports, port dues and wharfage charges, stevedoring and other labour handling charges which show an ever-increasing trend, slow turn-round in ports due to labour troubles, etc. The railways, on the other hand, can exercise a better control over factors influencing their cost structure. This comparative inflexibility itself limits the extent to which coastal shipping can be used in the country.

"Having regard to all these factors, we strongly feel that there should be a definite understanding between the railways and the shipping interests with regard to the traffic that should be left to be carried by the sea route or by the rail-coast-sea route. We would also urge that the railways should take due account of the plans relating to the Indian shipping industry in drawing up their own plans of expansion so that there may be no serious conflict of interests between the railways and Indian shipping. For instance, any decision of the railways to move all their own requirements of coal by the all-rail route will be a great blow to coastal shipping. While we generally believe that the user should have free choice in regard to the agency that he will utilise for despatching his goods, and would ordinarily be reluctant to recommend any official reservation of trade or commodity to different agencies, we do feel that it is desirable to adopt a policy of sharing the existing trade, in consultation with the railways, to ensure the growth of the infant Indian shipping industry. We are glad to note that the railways themselves are anxious and willing to discuss the measures necessary for achieving co-ordination."

Motor Vehicles Enquiry

The Ministry of Commerce and Industry has asked the Tariff Commission to conduct enquiries and make its recommendations on:

- (1) What should be the fair ex-works and selling prices of the various types of motor vehicles manufactured in the country, taking into account the present stage of their manufacture;
- (2) How the prices should be revised from time to time as more and more components begin to be produced in the country in accordance with the approved manufacturing programme of the various units.

In conducting the enquiry the Tariff Commission is requested to pay special attention to:

- (a) The extent to which and the manner in which the obligations of the several units under their approved manufacturing programmes have been discharged.
- (b) The further steps that would be necessary to implement them fully.
- (c) The difficulties, if any, in the way of the full discharge of such obligations in the future and how they should be removed.

Due to an increase in the price of steel and the pressure on the fabricating capacity of foreign manufacturers, there has been an increase in the price of imported components of automobiles, it is explained here. At the same time there has been an improvement in the models of Indian-made motor-cars. It is further alleged that the foreign manufacturer's rebate for a component charged for it, is much lower than the price charged for it. As an illustration, suppose the price of an engine in c.k.d. condition is Rs. 3,000 a unit, the rebate given for it, if it is not imported, is Rs. 2,000 a unit or less.

The Tariff Commission has been asked to see whether the price of Indian-manufactured components is equitable and fair. The issue is not of purely limited interest. As has repeatedly been emphasised in these columns, the success of the second five year plan will be determined to a large extent by coal and transport. But while the Government says it wants to provide cheap transport, the prices of automobiles are being raised. Further, the aim is said to be a socialistic pattern of society, but semi-monopolistic conditions are sought to be introduced in the automobile industry.

Low Demand

The views of the Study Group of the Planning Commission on the automobile industry are of interest: "Although the Tariff Commission had gone on the assumption of an annual demand of 12,000 cars and 12,000 commercial vehicles, the sales figures of 1953 show a very different story. The consumption of cars and trucks in that year amounted to below 6,000 and about 8,000 respectively. But even if this rate of consumption continues, there is no likelihood of the industry establishing itself on the basis of self-sufficiency. When, in an earlier chapter, we recommended as a reasonable and realistic target the absorption of about 10,000 to 12,000 trucks per annum during the next few years in

addition to those required for the replacement of over-aged vehicles and of the requirements for passenger buses, we had in mind the limits imposed by our assembling and manufacturing capacity in the country. There should be a concerted effort by the State and Central Governments to create conditions in the country which would enable the absorption of this number of trucks in the country during the next few years.

"The recognised manufacturers and assemblers have given as the main reason for the low demand in the country, the high rate of taxation, the licensing policies of State Governments and the fear of nationalisation. We have dealt with all these factors in detail earlier in this report and made suitable recommendations. We, however, feel that the industry is depending a little too much on Government effort to increase the demand. The Government have already readjusted the import duty on some of the components with a view specially to enabling a reduction in the price of motor vehicles. We understand that as a result of this the price of one or two makes of trucks has come down to some extent. We do not find, however, any substantial reduction in the price of cars. Even small cars are expensive and are beyond the means of all but a small fraction of the community. Experience in other countries clearly shows that both in the case of cars and trucks, the best market is provided by the private user. Public service vehicles are bound to be limited in number. With proper planning the automobile industry in India could certainly bring down the prices and thus create a greater demand which will benefit them also. A change in the system of marketing and distribution would also help in selling greater numbers of vehicles. For instance, we find that the dealers are allowed as high a margin as 25 percent in the marked retail price of cars and the dealers in turn offer a discount on this to the buyers. If the latter are shrewd and influential enough, they obtain a fairly substantial discount. It is very likely that the high retail price shuts out many potential buyers. We understand that the Ministry of Commerce and Industry have already taken action to bring down list prices.

"We agree that the railway freight rate for haulage by goods is not unreasonable. The remedy lies in providing covered goods wagons for the transport of cars. We understand that the Ministry of Railways are already considering the feasibility of earmarking a small pool of covered vans for the purpose of transport of cars from the manufacturing works."

Heavy Electrical Equipment Project

Another case of lobbying by a foreign undertaking was reported here last week. The Government, it will be recalled, decided to select one company from amongst three tenders, two British and one German, to commission its Heavy Electric Equipment Project. According to lobby circles, it selected Associated Electrical Industries, for the job. Scouting the decision, the Germans, it is alleged, revised their tender and offered "better terms". While the Government's decision has been postponed, an enquiry into the leakage of information to the Germans is also being suggested. A similar case of lobbying delayed the Government's decision on the purchase of Viscounts by nearly two years, resulting in loss of money and delay in the delivery of aircraft by two years.

Indian Delegation to World Bank & I.M.F.

The Governor of the Reserve Bank will lead India's delegation to the annual meetings of the International Bank and Monetary Fund, scheduled to be held next month at Istanbul (Turkey). The Finance Secretary, Mr. H. M. Patel, will be alternate leader. Mr. B. K. Nehru will be another member of the delegation. Unlike previous years, the Finance Minister is not attending the meetings.

Lok Sabha Discussions

The Lok Sabha was mostly busy in discussing the Civil Procedure Code Amendment Bill, which was sent to a Joint Committee last week. There was an inconclusive discussion on the Citizenship Bill. In between, a Bill to amend the election law and another to constitute a Press Registrar were introduced. The stage is now set for the disposal of the Company Law Bill. Meanwhile, the Congress Party has circulated a lengthy note to its members, explaining various provisions in the light of the Party's general policy. The Reserve Bank Bulletin for July also contains a report on the working of joint stock companies, which is bound to provide some ammunition for the critics of the managing agency system.

Plans for Handlooms

The All-India Handloom Board, which concluded a two-day meeting here last week, generally approved the draft five year plan prepared by the Board Secretariat under which a production target of 3,000 million yards of handloom cloth is to be achieved by the end of the second five year plan. The draft plan envisages an expenditure of Rs. 100 crores—about Rs. 60 crores in grants and Rs. 40 crores in loans. The major items of expenditure are Rs. 21.78 crores for providing working capital to weavers' co-operative societies, Rs. 15 crores for weaver members of co-operative societies and Rs. 19 crores for building weavers' housing colonies. Funds will also be provided for marketing depots and mobile vans, setting up of dye-houses, bleaching, calendering and finishing plants, supply of improved handlooms, standardisation and research. Over Rs. 1 crore has been provided for the conversion of factories of master weavers into industrial co-operatives.

The plan envisages that two-thirds of the total production of 3,000 million yards will come from the co-operative sector. Provision has been made

for the opening of 4,600 marketing depots in addition to 1,200 depots sanctioned in the past two years. Regarding rebates, it is expected that the scheme will be on a sliding scale, beginning at the rate of 2 annas in a rupee in the first year of the plan, and falling to half an anna a rupee in the fifth year. Thereafter the rebate scheme will cease to operate.

The Handloom Board also considered the question of credit facilities for handloom weavers' societies. The Reserve Bank has recently offered to provide finance to the handloom industry for production as well as marketing under certain conditions. Some members were of the opinion that there should be a separate industrial finance corporation for handloom as well as other small industries on the lines of the Industrial Finance Corporation at the Centre and in the States. Consideration of this question was postponed pending the report of a Committee which is now going into it.

Colombo Plan Talks

The Planning Minister, Mr. Gulzarilal Nanda, will lead the Indian team to the Consultative Committee of the Colombo Plan countries, meeting at Singapore from 17th to 22nd October. The officials of the Colombo Plan countries will meet from 29th September to 15th October. The conference will review the work done in various countries which get technical and financial aid. Added importance is attached to the Singapore meeting for it is expected to discuss the American Aid Programme for which purpose a conference of the Colombo Plan countries was held at Simla early this summer.

New State Bank Appointment

The Joint Secretary to the Ministry of Food and Agriculture, Mr. M. R. Bhide, has been appointed Joint Managing Director of the State Bank of India. His main task in the initial stages will be to open 400 new branches. He will take over his new assignment by the middle of August.

New Tariff Commission Chairman

The Vice-Chairman of the Indian Council of Agricultural Research, Mr. K. R. Damle, has been appointed Chairman of the Tariff Commission. He will take over his new assignment almost immediately.

Decision on Bank Award

The Bank Award, along with the Government's decision on it, is expected to be published by 15th August, it is learned.

Ganga Barrage Project

The Gokhale Committee on the Ganga Barrage Project has made its report to the Government and rejected as impracticable the proposed scheme for a navigational canal. The Central Water and Power Commission had prepared a project report which provided a direct perennial navigation route lying wholly in Indian territory. For this purpose it was proposed to revive the Bhagirathi river by diverting controlled supplies of water from the Ganga. A barrage across the Ganga at Farakka, about 20 miles from the confluence of the Bhagirathi, was to be constructed. The Gokhale Committee was set up earlier this year to examine this report and make recommendations about the suitability of the project. The Committee holds that there would not be an adequate water supply, particularly in summer, in the proposed canal to make them navigable. In other words, the principal assumption of the project has been rejected. The Committee is greatly concerned about the future of Calcutta as a harbour. With the Damodar and Mayurakshi projects nearing completion, the problem of the silting of the Hooghly is becoming a live issue. The Committee recommends the Ganga Barrage Project for the very limited object of maintaining enough water supply in the Hooghly to help push silt back into the sea. The report is now being examined here.

Armoured Vehicle and Aero-Engine Factories

The Defence Secretary, Mr. M. K. Vellodi, and his Financial Adviser, Mr. J. Dayal, are leaving for London on 14th August to purchase defence requirements. While in London, they will discuss with Leylands the proposal for setting up an armoured vehicle factory in India, the project report for which has already been submitted to the Government of India. The question of an aero-engine factory is also expected to come up for discussion during their stay, and the project reports of Rolls Royce and Bristol have been under examination here. An Indian team which examined the suitability of various aircraft for the Indian Air Force selected the lighter aircraft, *Gnat*, which, however, does not take the Rolls Royce engine. Another project report prepared by Bristol for an aero-engine to fit the *Gnat* has since been submitted to the Government.

Air Talks

Sino-Indian air talks have reached a crucial stage. India holds that without Peking or even Shanghai, it would be futile to operate an air service. China, on the other hand, has offered Canton. Should there be a favourable reaction to India's demand, a Chinese air mission is expected this fall.

The yearly review of the Indo-British air agreement is expected to be held in London this year, and an Indian delegation is being selected. The Indo-U.S. air negotiations are also expected to be resumed shortly. There are indications of an early revision of the Indo-Australian air agreement.

London

RESERVES DECLINE HEAVILY IN JULY

AUGUST PROSPECTS RATHER BETTER

(FROM OUR LONDON CORRESPONDENT)

THAT Mr. Butler did not act too soon in tightening up the credit screw and clearing the air about the future dollar parity of sterling is apparent from the \$136-million fall in the sterling area's gold and dollar reserves during the month of July, to reduce their total to \$2,544 million. This decline is the largest since February, 1952, when it was \$266 million, and some sweetening of the pill is provided in a Treasury spokesman's explanation that the pressure on sterling of which it was a reflection was already a matter of the past. To get the picture into perspective, it is necessary to allow for \$16 million received as defence aid from the United States, which was partly offset by \$12 million worth of tobacco made available for sterling; the gold payment of \$10 million to the E.P.U. in settlement of the June deficit; and a further \$2 million of E.P.U. debt repaid. The residual deficit in July therefore amounted to \$130 million, which compares with a figure of only \$18 million for June. The outlook for August is less gloomy, even though we have to meet a July deficit with E.P.U. of £25 million—the biggest since July, 1952—which will call for a gold payment of \$35 million. The after-effects of the rail and dock strikes may not be quite so severe on the balance of payments position, while the relief from "speculative" sales of sterling on the Continent and even some "bear" covering ought to adjust the position there.

In the long run, however, the success or failure of Mr. Butler's policy is going to depend on the severity with which he applies his measures for credit restriction and the extent to which this counteracts inflation. The eleven British clearing banks have drawn the attention of their several thousand branch managers to the Chancellor's request for a "significant" reduction in bank lending and called for their co-operation to achieve an overall cut of about 10 percent in outstanding debts and overdraft limits by the end of the year. No definite plan has been laid down, since customers engaged on defence or export work are to be treated lightly, while seasonal loans to farmers will not be reduced while the harvest is being brought in and sold. The overall reduction of some £200 million which the 10 percent cut implies is merely a target, and the branch managers are being left with considerable discretion as to how it is achieved. A further reduction will be made next year if it is still considered necessary.

The Credit Squeeze at Work

Meantime, the authorities must be interested in examining each successive indication that the credit squeeze is actually producing results. Perhaps the most obvious of these is the fact that the Stock Exchange "boom" has at last boiled over. The Financial Times index has moved back as much as 15 points from the peak figure in the past fortnight, and the greater stability which the absence of cheap credit for speculation should induce will be all to the good. Building societies are raising their rates, and the Agricultural Mortgage Corporation has just raised its interest rate for new loans by 1 percent to 5 1/2 percent. There are even signs that hire purchase activities are at last being affected. H.P. Information, which reports hire-purchase sales of motor-cars, motor-cycles and a number of other goods, still reveals sales at a new peak of 87,842 contracts in July—which could hardly have been affected by the latest restrictions—the bulk of the increase is confined to vehicles and other goods are still slumping, with television sets, radios, gramophones and radios definitely declining and household durables only about half the rate of a year ago with the exception of refrigerators and, of all things, electric fans!

One hard fact of the drain on the gold and dollar reserves which does not receive as much attention as it should is the inability of two of Britain's chief industries to produce enough for the production drive. In the first half of this year iron and steel imports totalled £39 million against under £16 million in the first half of 1954, while for coal the figures were even more striking at £33 million against £28 million. The respective movements in the reserves over the same periods, a rise of \$500 million in 1954 against a drop of \$82 million in 1955, are hardly surprising. What is surprising, however, is that these facts appear to carry little weight with the trade unions. The National Union of Mine-workers has just been asked by the National Coal Board to reconsider the possibility of importing foreign labour to reinforce the steadily declining manpower in the pits, but it is most unlikely that the leaders will be allowed to do so by their members, who in 1952 refused in certain areas to work alongside the Italians to whose recruitment the N.U.M. had agreed. The South Wales and Yorkshire areas have already expressed themselves against the proposal, contending that wages and conditions should be further improved to attract labour here, but disregarding the fact that miners are already among the best-paid workers in the country and that the industries to which miners are drifting are experiencing a similar labour shortage.

"Direct Action" in Lancashire

Lancashire has not abandoned hope that it will persuade the Government to do something about the imports of cheap foreign cloth, but the Cotton Board delegation which saw the President of the Board of Trade recently did not apparently get

anything more definite from him than the statements he had already made in Parliament. That, anyhow, is what one must presume from a new development which has occurred this week. One of the biggest groups in the Lancashire textile industry, the Amalgamated Cotton Mills Trust, Ltd., is to handle only fabrics produced by British workers. Announcing their decision in Manchester the directors said this "definite action" was being taken in view of the growing volume of overseas cloth arriving in Britain and an official statement read "as from this date no purchases of imported cloth will be made by them or any of their branches or subsidiaries." The group, with its subsidiaries, not only controls spinning and weaving mills but retail shop links. The chairman is Mr. Williams Pickles.

The announcement, coming at the end of a six months' period when cloth imports rose to a disturbingly high level, has been welcomed by Lancashire producers. One of the Trust's works is in Rochdale, where a campaign was recently launched to stop people from buying foreign cloth. An official of the Cotton Board expressed himself as delighted with the news, which follows similar decisions by big retailers at the end of last year, and hoped the example would be followed by others.

Lloyd's Underwriters' Accounts

The accounts of Lloyd's Underwriters for 1954 show that total insurance business reached a new peak, but that the increase over the previous year was slight. Thus for the second year in succession total new business at Lloyd's has remained almost stationary. New premiums last year amounted to £148 million, compared with £147.3 million in 1953, £146.9 million in 1952, and £128.1 million in 1951. The reason for this is that while motor, aviation, accident, fire and other types of business continued to rise last year, marine insurance fell back for the second year running. Details of new business done by Lloyd's Underwriters (excluding life assurance, which is small) are shown in the following table:—

LLOYD'S INSURANCE PREMIUMS					
	(£ millions)				
	1954.	1953.	1952.	1951.	1950.
Marine	61.1	64.6	68.0	60.3	53.0
Motor	6.7	6.2	5.9	5.1	4.6
Aviation	5.9	4.9	4.2	3.8	4.1
"All Other"	74.3	71.6	68.8	58.9	57.0
Total	148.0	147.3	146.9	128.1	118.7

All these figures are based on what are known as "first-year premiums." Accounts at Lloyd's are made up in three-year periods, a new one starting each year. This means that new business is reflected in the first year of a three-year account, but that further premiums are received on this same business in the second and third years. Claims, too, accumulate over the three years, often increasing sharply in the third year, especially in marine and aviation business. For example, the 1954 accounts show that new marine business of £68 million started in 1952, attracted further premiums of £26 million in 1953 and of £972,000 in 1954, and that claims on the same business amounted to £17.9 million in 1952, £23.9 million in 1953, and £43.8 million in 1954; in other words, that over this three-year account premiums of £95 million were partly offset by claims of £85.6 million. Over the same period motor insurance had total premiums of £64 million, aviation insurance brought premiums of £84 million and claims of £6.8 million, and "all other" insurance (mainly fire, accident, and general contingency insurance) produced premiums of £107.7 million and claims of £95.1 million. Thus aviation insurance business is rising steadily and also becoming more profitable.

Development Funds for Pakistan

The World Bank is to make a \$14,800,000 loan for port improvements at Karachi. This is the result of negotiations between the Bank and a delegation led by Mr. Ghulam Faruque, a prominent industrialist. Altogether, the Bank has approved five loans to Pakistan for a total of \$72 million, most of them for transport and power projects. The present loan is for 25 years at 4 1/2 percent. Amortisation starts on 1st June 1960. Total estimated cost of developments is \$28,600,000. Under half is to be spent locally. The balance supplied by the Bank's loan will be employed for imported equipment, materials and services. Meanwhile, moves are afoot in London to help in establishing an industrial development bank for Pakistan. This body would be able to raise funds in the world's principal capital centres for lending to private enterprise in the Dominion.

Hitch in Trade Talks with Japan

Trade and payments negotiations in Tokyo between Britain and Japan have been suspended temporarily. The two leaders of the British delegation, representatives of the Treasury and Board of Trade, flew back to London this week. The talks started on 23rd June. They were designed to reach a new agreement permitting a higher volume of trade. Existing arrangements have not proved satisfactory to the sterling area. Over the past 18 months, since the last agreement was signed, Japan has stepped up her sales to sterling countries. Her buying has not risen proportionately. Britain's attitude is that Japan should liberalise imports from the sterling area to level off the surplus which she has piled up in the past year. It is well over £100 million. Present arrangements will be extended until there is a new agreement.

Brevities

Jute Industries are to pay an interim dividend of 5 percent on the £1,050,000 Ordinary capital on account of the year to 30th September next. For the previous year there was a single payment only of 20 percent from earnings of over 80 percent.

Bombay

DELAYED MONSOON CAUSES SERIOUS ANXIETY

COTTON TRADE BUOYANT ON CROP AND EXPORT PROSPECTS

(FROM OUR BOMBAY CORRESPONDENT)

THE cruel and persistently truant monsoon in northern and eastern Bombay and the whole of Saurashtra, Cutch and Rajasthan, and the repercussions of the devaluation of the Pakistan rupee, have been the dominant economic factors in Western India recently. It has been a very anxious time for the Governments of Bombay and Saurashtra. North Gujarat, that is, the region north of the Narbada and the whole of Saurashtra, having had a huge deficit in the rainfall and a prolonged drought of about six weeks were virtually on the brink of severe famine until a few days ago. Fodder and water scarcity prices already come to the fore and foodgrain prices had almost doubled in most places. The *kharij* (monsoon) crops were withering and rice trans-plantation at most places had become impossible. The position was almost the same in some districts of East Maharashtra, that is, southern Bombay, which are traditionally scarcity areas. The Governments concerned were jolted severely out of their equanimity not only because of the heavy financial burden that a severe famine in these States would entail, but because of its cramping effect on their second five year plan.

Only last Thursday, Mr. Morarji Desai, Chief Minister of Bombay, inaugurating a three-day conference of the Collectors of the 28 districts in the State, called upon them to be prepared to take steps to relieve the resulting distress, if such a calamity arose. He asked of them after their return to their districts a complete picture about the rainfall and the crop position in their respective areas along with their draft schemes to give relief to the people in the affected areas. In fact, some relief measures had already to be undertaken in certain districts in North Gujarat during the last two weeks, especially for the relief of cattle.

The anxiety has however been relieved to a slight degree by stray showers in most of these parts with a little more liberal downpour in some fortunate patches. The relief is also due to the fact that there are good signs of the approaching monsoon in the skies. Even if there are better rains for the rest of the season (half of it has already gone), there will be disastrous scars on the economy of the regions as the *kharij* rice crop can now be considered as wholly lost. The output of other commercial crops such as cotton and oilseeds also might be affected considerably by the absence of rain during the first half of the season, though in the case of oilseeds good rain even in the second half might repair most of the damage. Foodgrains like bajri, jowar and maize have also suffered and, though the prices realised should be better, they will be neutralised mostly by poor yields. In some cases there will be fresh sowing and, if the course of the monsoon during the next eight weeks proves to be favourable, a good part of the damage might well be made good.

Buoyant Textile Markets

Except in a few cases, the markets have ignored the implications of the floods in the northern and eastern parts of the country and the drought in the western. Apart from the fact that it might mean higher taxation, industries in their present enthusiasm have been unmindful generally of the fact that reduced consumption is an inevitable result of the loss of purchasing power resulting from poor crops. While there is some justification for the steadiness experienced in the oilseeds market because of the paucity of rains so far, the textile industry, for instance, in its hey-day today has completely ignored all adverse factors including those arising from the inability of the rural areas to purchase cloth next year, as well as the severe competition which it will have to face the only from generously subsidised handloom production but from piecemeal Pakistan cotton, and Japan made from cheaper Pakistan cotton. The present position, of course, is very favourable for the industry. It has no unsold stocks. In fact, its production has been sold in advance, longer in some cases has been steady and The demand for piecemeal goods the coming weeks is expected to be brisk during the rates. The workers' with a slight stiffening of the rates. The workers' cost of living index on which is based the dearness allowance has come down slightly thus reducing the quantum of wages in some cases.

Against this, cotton prices have risen and if this break in the dry spell proves illusory prices will rise steadily though not steeply because of the world price trend, which is bearish due to the U.S. need to dispose of large quantities of its surplus stock accumulated against loans during last few years. Even then, with the inevitable fall in the cotton price in Pakistan and the expected easiness in the American export market for cotton, the main advantage which the Indian mills have enjoyed for long years from the availability of a considerably cheaper raw material would tend to disappear gradually and they will have to compete on equal terms against production from more efficient and up-to-date plants. Ordinarily all these factors would have weighed heavily with the textile counters in the Stock Exchange but the market is at present in a specu-

lative grip, and it has an eye centred mostly on the coming inflation as well as the new tendency on the part of textile units along with those in other industries to make more liberal distributions of profits, because accumulated reserves have begun to attract covetous eyes, and there are now fresh restrictions and impositions to be considered. With a bumper cotton crop, the export position might still be maintained. If the consumer demand continues more or less on the same scale within the country, which it is likely to do in spite of falling purchasing power, the speculators who have been pushing up prices of a large number of textile shares almost every week might get away with their otherwise misplaced optimism. There is, however, one thing certain about the textile industry in Western India. The results for 1954 will be considerably better than those for the preceding year. It may, however, be said in justice to those who prefer to go long that the result of the first half of this year both by way of production, production costs and exports as well as the prices realised so far is encouraging, though whether that will be maintained during the second half is uncertain.

Cotton Trade in Limelight

But more than equities, it is the cotton trade that has been in the limelight during the last week mainly because of the repercussions of the devaluation of the Pakistani rupee and the subsequent reduction in the export duty on cotton announced by the Government, apart from the seasonal outlook about cotton production in the country. Some 10 to 15 days ago the market was obsessed with over-production in the country and a fairly large carry-over which had been expected at the end of this season. This had a depressing effect on prices, which were subjected to a further decline because of the uncertainties regarding the U.S. policy on the disposal of its surplus cotton. It was feared then that there would be an immediate announcement of a generous subsidy for exports by the U.S. Government, which would reduce the demand for Indian cotton abroad and wipe out the gap between the prices of Indian cotton artificially restricted by Government control and the world prices ruling then. As the severity of the drought in the cotton areas of the country became more evident belying hopes of an increased crop next season, together with the absence of any official announcement on U.S. export subsidy, the sentiment in the market was reversed and prices were pushed up especially for the 1955-56 crop in the hope of a much reduced crop in the country as well as a revival in the demand for Indian cotton abroad. This metamorphosis in the sentiment, however, was short-lived and prices crashed in the wake of the devaluation of the Pakistani rupee. In fact, it is surprising that the cotton market had some early inkling of this event. The announcement nevertheless came with a bang on the market and as the Government of India was not as prompt in taking a decision on cotton as it was on jute goods, the market was under a terrible suspense for four days with everybody trying to unload. Late in the evening of Wednesday of last week came the announcement of the Government's reduction of the export duty on certain varieties of raw cotton including Bengal Desi, Mathias, Kalagin, Dholleras, C.P.I., C.P.II, Central India Desi, Omras, and all other varieties, up to and inclusive of 25/32 inches in staple length and from Rs. 125 to Rs. 50 a bale of 400 lbs. with immediate effect. This substantial reduction was greeted almost boisterously by the cotton market here, forgetting for the time being that the export formed a very small part of the total production of cotton in the country. Earlier during the period intervening between the announcement on the reduction of duty on jute textiles and that on cotton, the market had been very critical about the Government's attitude and had been preparing to make strong representations for relief to meet the competition which was bound to arise from the step taken by the Pakistani Government. As in the case of jute, the cotton trade and the cotton producer also have been satisfied with the quantum of reduction and it is believed that it would enable them to maintain cotton exports on a competitive level with Pakistan.

The market has still been rising since, ignoring the somewhat changed outlook as a result of the recent rains in the important cotton growing areas in Gujarat and Saurashtra. With its attention concentrated on exports at this time of the season, the market is now certain that the bulk of the unutilised export quotas of cotton would find ready buyers abroad within a short period. On the other hand, certain shrewd observers in the market point to the possibility of Pakistan also reducing its export duty from the present level of Rs. 90 a bale and, perhaps, this might bring a sobering influence on the market bulls. In this connection, the reaction of the East India Cotton Association, which has also made some constructive suggestions, is worth noting. In a telegram which the Association has sent to the Government of India, it compliments the Government on the timely action taken to adjust the cotton export policy to the devaluation of the Pakistani currency by a substantial reduction of export duty and adds: "Additionally, in the context of radically altered world situation regarding cotton supplies, likely increased competition from Pakistan and indications of intensification of export drive by America the Board considers of utmost importance Government announcing firstly no alteration export duty for the season, secondly, timely initial export quota for new crop, thirdly review export policy for additional quotas on specified dates such as mid-

dle February and every two months thereafter. Board considers these measures imperative to assure foreign spinners continuity of supplies enabling them give proper place to Indian cotton in their requirements. In view of the increasing Indian supplies and comfortable carryover position, Board stress the importance of the export programme."

Current Cotton Production

The dramatic nature of the events has diverted the attention of even veteran leaders like Sir Purshottamdas Thakurdas and Mr. Chimanlal B. Parikh, President and Vice-President of the E.I.C.A., exclusively to this aspect of exports, in spite of important internal problems facing both the cotton trade and cotton production in general. Sir Purshottamdas was gratified that the announcement was made at the right time when the new cotton crop would be coming to the market in the near future and would enable the producers to take the advantage of increased prices. Mr. Parikh, after characterising the announcement as a timely and welcome measure, gave it as his opinion that it would definitely go a long way towards expediting the disposal of India's surplus cotton at economic rates through exports. According to him, the current season's production would amount to about 52 lakh bales out of which 42 lakh bales would be consumed internally and about 4.5 lakh bales would be exported. This would leave a carry-over of about 5.5 lakh bales from the present crop, in addition to the 17 lakh bales which were brought forward from the last season, resulting in the comfortable carry-over of about 22.5 lakh bales. This balance would have been upset according to Mr. Parikh, if the export duty had not been reduced and an additional carry-over would have weighed heavily throughout the coming season on the prices of the new crop. What Mr. Parikh wanted was that the Government of India should follow this up by abolishing, or at least substantially reducing, the export duty on textiles for the devaluation of the Pakistani rupee had made it possible for India's competitors in world textile export markets to buy cheaper Pakistan cotton, adding that it would be difficult for India to retain her foothold in those markets unless the Government acted promptly just as it did in the case of jute and raw cotton.

It must, however, be remembered that the bulk of the cotton grown in the country is consumed and traded within the country itself. The export trade and the number of business houses engaged in it are limited and concentrated mostly in Bombay. The vast majority of cotton brokers in the forward market are disturbed over certain recent developments in the spot market affecting their business. It is reported that there is a move in the spot market at Sewree, which is one of the two wings of the E.I.C.A., to make non-transferable cotton delivery contracts which take place there, as distinct from the ordinary forward trading at the Kalbadevi wing, transferable delivery contracts. The members of the forward market wing are afraid that if this move materialises, much of the hedge business which is done in the forward market is bound to be diverted to the spot market. In fact, this led to a temporary closure of business last Thursday afternoon as an expression of the dissatisfaction of the brokers and jobbers in the forward market with the reported move. What has happened is that the E.I.C.A. Board has appointed a committee to prepare a scheme for making non-transferable delivery contracts subject to the clearing house, which would amount in practice to making the specific delivery contract into a virtual hedge contract. Even at present and during the last three years, there has been a tendency on the part of the operators in the forward market, (which is going through certain difficulties arising from the nature of the contracts and certain price differentials at the time of delivery amongst the authorities), to switch over their business to non-transferable delivery contracts at Sewree in the spot section and the business of this nature there has expanded considerably, considering the small turnover which takes place when these contracts come to be settled finally on maturity. If the move to make the non-transferable delivery contracts subject to settlement through the clearing house succeeds, it would not be much dissimilar from the ordinary hedge contract and may lead the spot houses as well as the outside investors in cotton to hedge their holdings in specific delivery contracts instead of in the futures market.

Bonus Pact Dissidents

An important development in the textile industry during the latter part of the past week, which has nothing to do with cotton as such or the position created by the threat to the standing crop, is the decision of 25 out of 63 member mills in the Ahmedabad Millowners' Association last Friday not to sign the five-year bonus pact arrived at between the representatives of the Rashtriya Mill Mazdoor Sangh and the Association. This has created an awkward situation for the President of the Association who had negotiated the pact after being duly authorised by the Association to do so and it threatens the smooth working of the industry in this important industrial centre just when the trouble over rationalisation at Kanpur is over. It is understood that, according to law, each individual unit in the industry is required to sign the pact and without repudiating it, these 25 units are believed to have declined to sign it pending certain details and clarifications regarding the terms which they have sought from the Association's Secretariat.

Uttar Pradesh

FLOODS GRIP THE U.P. COUNTRYSIDE

SMALL RIVERS ADD TO DISTRESS
(FROM OUR LUCKNOW CORRESPONDENT.)

UTTAR Pradesh has been hit by the worst flood within living memory. The State is really one stretch of vast plain surrounded by the Himalayas on the north, the Terai on the north-east and the Vindhya on the south and south-east. The whole plain is so flat that one may travel from one end of the State to the other without coming across the smallest hill or any rise even 700 feet above sea-level. The level nature of terrain makes the rivers flow slowly and amongst those which have contributed to the agricultural prosperity of the State are the Ganga and its tributaries—the Alakhananda, the Ramganga, the Gomati, the Ghagra with its feeders, the Sarda and the Rapti—the Gandak, the Yamuna, the Chambal, and the Betwa and the Ken and the Tons. In the past attention has been almost exclusively devoted to the big rivers, the smaller ones being considered comparatively safe. This year's terrible experience has come as a reminder to the Central Flood Warning Station that it is not enough to keep its gaze fixed only on the Ganga and the Ghagra.

Smaller Rivers

Incidentally, though the monsoon came two or three weeks earlier than usual; the regional variations have generally conformed to pattern, and at the very moment when eastern U.P. is fighting

for survival against flood waters near-famine conditions have occurred in some districts of western U.P. where there has been next to no rainfall. One reason for concentrating irrigation works in western U.P. is its scanty rainfall, whereas the eastern parts need no such artificial channels as they receive enough rainfall. A political twist is often given to this circumstance by persons desiring the dismemberment of the State into two parts. Usually the floods come after mid-August and the rivers affected are the Ganga, the Rapti, the Ghagra and the Gandak. This year, not only the floods came earlier but the rivers affected were some of the smaller ones as, for example, the Gomati, the Sai and the Tons. In the words of the Chief Minister, Dr. Sampurnanand, the authorities were thus caught unawares "materially, physically and psychologically." This version, however, does not square with the allegation that the breach of the 51-year old Molay bund which caused the inundation of Gorakhpore is "the biggest man-made tragedy in recent years." Attention had been drawn to its dangerous condition at least three months earlier, but no engineer turned up even to inspect the bund until it was too late. Another loud grievance has been the lack of boats to rescue men and livestock in the marooned areas. The Chief Minister has admitted that the scheme for construction of boats by Gaon Sabhas on subsidy basis has proved "an utter failure." Private owners of boats have made their pile while it rained, and how it rained! The normal rainfall in Faizabad in July is 11.91 inches, but this year it recorded 69 inches. Similarly, the normal rainfall in Jaunpur is 11.89 inches but this year it reached 3.18 inches. Basti had over 53.21 inches, very much above its normal quota.

Re-thinking Needed

The extent of the damage caused it has not been possible for any one yet to estimate with any degree of accuracy. The loss suffered by Bihar in last year's flood was estimated at Rs. 50 crores. The loss resulting from this year's floods, it is believed, far exceeds anything that Bihar or U.P. has suffered in living memory. A flood control organisation was constituted in the State last year and schemes costing Rs. 4.5 crores had been prepared by it. Of these, schemes costing Rs. 2 crores are already under execution, consisting mainly of marginal embankments and the construction of protective works like revetments, spurs etc. The entire flood control programme of Uttar Pradesh as originally envisaged was to cost as much as Rs. 46.52 crores and the State Government has asked for a Central subvention of Rs. 27 crores towards this project. The present experience of small rivers suddenly becoming turbulent has called for a re-examination of the old assumptions and the Irrigation Minister has declared that in future equal attention will have to be paid to raising the level of villages and the construction of embankments. A fatalistic sentiment seems to be growing that in the long run, shifting the low-lying portions of a town or raising the level of villages is a cheaper proposition than attempting to train or control the wayward rivers whose natural function is to fertilise the plains of India. It is said that if towns and villages could be shifted or raised higher than the highest flood mark, the flood need not be an unmixed evil inasmuch as they could help the fertility of the soil by adding a layer of silt. This would, of course, mean losing the kharif crop once in a number of years.

Development Loan

The Government of U.P. has decided to float a loan of Rs. 6 crores to finance its development schemes. The issue price is fixed at Rs. 99-8 for every Rs. 100 of the loan. The loan will have a currency of 12 years and will bear interest at the rate of 4 percent per annum. Subscriptions will be received from 16th August and closed on 31st August. The Government has announced that it reserves the right to retain subscriptions received up to 10 percent in excess of the sum of Rs. 6 crores—a modest imitation, it would appear, of the technique of Mr. C. Rajagopalachari who, when he was Chief Minister of Madras, appropriated the entire proceeds of a loan in excess of the amount asked for. On 31st March, 1955, the debt of Uttar Pradesh amounted to Rs. 9,377 lakhs, consisting of Rs. 1,076 lakhs representing the consolidated debt due to the Government of India, Rs. 5,012 lakhs taken from the Centre for development purposes, Rs. 825 lakhs for relief and rehabilitation schemes, Rs. 2,276 lakhs representing public loans floated by the State Government from time to time, Rs. 187 lakhs as U.P. Encumbered Estates Bonds and Rs. 1 lakh other loans. Apart from these, the State Government has also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 1,396 lakhs, the liability on account of which will be met by annual equated instalments from the extra revenue accruing from zamindari abolition over a period of 40 years. Sinking funds for all the public loans and the loans from the Central Government have been formed and the funds invested in Government of India securities. The assets of the Government are represented by the Ganga, the Yamuna and the Sarda canals, the State tube wells and the hydro-electric grid, electric supply undertakings and Government bus services in which Rs. 9,384 lakhs have been invested, besides the large number of roads and buildings for which no separate capital accounts are maintained.

Road Construction Schemes

The tentative road construction schemes of the U.P. Government under the second five year plan are estimated to cost about Rs. 35 crores. The schemes which are divided into two parts envisage the completion of 5,000 miles of new roads so as to provide 16,000 miles of metalled roads in the State at the end of the plan period.

FIBRE AND GUNNY MARKETS REGAIN CONFIDENCE

HESSIAN PRICES RETURN TO PRE-DEVALUATION LEVELS

THE initial excitement of the previous week's decrees having subsided, both the raw jute and the finished goods markets staged a recovery during the week under review. The losses sustained at the beginning of the month were partially restored as far as heavy goods were concerned, and surpassed in the case of hessian. Small American interest in forward Hessians and the improved shipping statistics over the month instilled some much-needed confidence into this section, and 40in. 100z hessian advanced beyond the pre-devaluation levels. In sacking, 75 percent of the loss had been made up by the week-end, but this was mainly due to speculative activity; overseas buyers took only small interest and were inclined to stay out of the market. They showed no inclination to follow the rise and much of the overseas business reported was only shipper covering at the lower levels. Local operators continue to hold optimistic views in spite of the fact that the present steady rise in rates is gradually nullifying the advantages gained by the withdrawal of the export duties.

It may well be, however, that their ideas have been strengthened by Pakistan's curious decision to maintain minimum prices for her jute exports in sterling. This, in effect, means that U.K. manufacturers have gained nothing from the devaluation of the Pakistani rupee. Special meetings were called in Dundee to discuss the situation, and the outlook was reviewed with concern, as with India abolishing the export duties she will be in a very advantageous position over the U.K. This situation has naturally caused a great deal of uncertainty in the home markets, and manufacturers have been reluctant to enter into any new commitments on the present basis.

Floods in East Pakistan

It is reported that the full weight of the floods in the Assam areas has now been passed on to Pakistan, and in Dacca the water level is several inches higher than at the peak of the flooding last year. All work has been brought to a standstill as many godowns are inundated, and communications have been interrupted. Imports have virtually stopped, and holders are reaping the benefit by demanding exorbitant prices for the small quantities of ready jute that are available. This has caused sellers to be very reserved for the near future, but jute is being offered freely, and at attractive rates, for forward delivery. At the present moment prices of Indian jute and Pakistan Northern are on a par, and Indian mills have purchased large quantities of the latter over the past few weeks in preference to the indigenous fibre.

In India the floods are gradually subsiding, but it is estimated that it will be at least another fortnight before conditions return to normal and work commences. Road and rail communications will have been severely disrupted and repairs will have to be carried out before jute begins to move again. The Daissee markets are steady as mills have taken fair interest over the week in the various categories of this fibre. High prices have been indicated and paid by certain mills for Daissee white jute "over the jetty", which are completely out of proportion to the present market rates. The majority of jute is reported to contain a very large percentage of moisture and early reports indicate that much of it is composed of immature jute and weedings. It is inconceivable that these mills should continue to support this mode of purchase, which invariably causes inflationary tendencies and leads to malpractices over which the mills have no control.

THE JUTE MARKETS

Manufactured Goods: The finished goods market continued to rule firm at the opening on Thursday last, and fairly heavy shipper covering ready B Twills rates to advance by 8 annas caused ready B Twills to advance by 8 annas in the forward position and in the absence of a business October-December B Twills recorded a drop of 8 annas to be quoted at Rs. 104-8. In the hessian section the position was reversed, and some small enquiries from the U.S.A. for forward shipment caused 40in. 100z. rates to advance 8 annas to Rs. 41-12 per 100 yards whilst the ready position gained 2 annas in sympathy to be quoted at Rs. 42-8. Prices fluctuated during the day because of speculation and shipper covering in the near positions, but the tendency was always upwards and a steady undertone developed. Rumours of a heavy goods order from China forced sacking rates up a further Re. 1 in all sections on Friday, and the anticipation of a drop in hessian stocks for July was the main factor behind the rise in hessian prices. At this stage all hessian fabrics had made up the losses incurred at the time of the devaluation of the Pakistani rupee. Speculative profit-taking at the high levels in the sacking section caused prices to ease slightly towards the close on Friday, but covering by shippers again steadied the market. Opening quotations on Saturday morning rose to Rs. 114-8 and Rs. 106-8 for the B Twill near and forward shipment positions. This was 8 annas and Re. 1 higher than the previous day's opening rates.

The hessian section ruled quietly steady in the absence of business and prices were unaltered. Speculation in the B Twill fatka market over the week-end caused heavy goods rates to drop about 8 annas a 100 bags on Monday morning, but the hessian section was steady due to good shipping statistics and prices in this section advanced 4-8 annas.

At the close the market is very much easier in the heavy goods section due to lack of overseas interest, and Hessians are down owing to the fall in hessian stocks not being as large as anticipated. Opening quotations on Tuesday morning were as follows:

	August	Sept.	Oct.-Dec.	Jan.-March
40" 8oz.	35	34-12	34	32-12
40" 100z.	43-8	42-14	41-14	40-14
B Twills	112	109	105-8	102
Heavy Cees	111-8	111	106	102-8
(Plain)	141-8	139	133	128
A Twills	127-8	126-8	120-8	116
Liverpools				

Raw Jute: Calcutta mills have indulged in steady buying over the past week, and the quantities involved have been larger than for some time. The bulk of the transactions have been for Pakistan jute which is being offered freely at the minimum prices, and is a more attractive "buy" than Indian jute at more or less the same rate. Sellers for the near positions, however, are reserved on account of the flood situation, but forward shipment jute is easier and there are keen sellers for all positions up to the end of the year. Calcutta mills, however, are not showing much interest in shipment after September, as they are confident that prices will show a considerable decline for later shipments once the full weight of the new crop is felt. Their main concern at the present moment is the near positions, and it is reported that several mills urgently require jute within the next two to three weeks to ensure full production. This has brought out a new feature in the purchase of jute. Buyers, in several instances, have been buying jute by the "flat-load" on a guaranteed delivery basis, thereby ensuring shipping space and quick-r delivery. In many cases, mills have adequate stocks to last them for some time, but their stock position is unbalanced, i.e. the bulk of the jute available is of a superior quality fit for hessian manufactures, low quality jute being in very short supply.

Raw jute rates showed no change at the opening on Thursday but an increase of 8 annas a maund on Friday brought Upper Assam jute to Rs. 27 a maund basis Bottoms for August-September shipment. Pakistan Northern jute also advanced to Rs. 27-8 a maund thus closing the gap between it and Jat jute to 8 annas a maund. This increase was entirely due to keen demand, and business transacted with Calcutta mills. There was no alteration in these rates for the rest of the period, but the market was very steady and sellers were reserved.

Good business was done over the week, but mills' purchases in the main were confined to the August-October positions. Indian Dhubri and Northern were done at Rs. 27 a maund basis Bottoms for August-September shipment, and 8 annas less for 1/2 September/1/2 October shipment. Fair business was done in Daissee New Crop jute and prices ranged between Rs. 25 and Rs. 26-8 for September-December shipment. Daissee White was done at Rs. 27 to Rs. 28-8 for August-September delivery.

The bulk of the business was done in Pakistani jute and guaranteed August shipment Jat jute was done at Rs. 28-8 a maund. Large quantities of Pakistan Northern jute was purchased and mills paid Rs. 28 to Rs. 28-8 a maund basis Bottoms for guaranteed August shipment, Rs. 27 to Rs. 27-8 for August-15th September and Rs. 26-8 to Rs. 27 for September-October shipment. The only other transactions in this section were for Jat Cuttings at Rs. 100 to Rs. 105 a bale for guaranteed August shipment.

At the close, in spite of the easier tendency of the goods market, raw jute is steady due to flood reports and continued interest from mills. Opening quotations on Tuesday morning were as follows:

	Landed at Mills.	Shipment.
	Rs. a maund Basis Bots.	
	New Crop.	
Indian Jute:		
Lower Assam	28	August-September
Upper Assam	27-8	"
Northern	26	"
Murshidabad White	26	Sept.-Oct.-Nov.
Daissee—Ex Sheoraphuli	26-8	"
Daissee Mesta	24	"
Daissee White	28-8	August
Bimil	25-8	Sept.-Oct.-Nov.

Tossa is quoted at Re. 1 to Rs. 1-8 a maund above the rates for white jute.

	Rs. a maund Basis Bots.	Shipment
	New Crop.	
Pakistani Jute:		
Jat	28-8	August-September
District	28-8	"
Northern	28	"

There is still nothing to report from the Cossipore markets and quotations are nominal in the absence of business. In the Daissee growing areas, recent reports indicate that the general situation has shown a vast improvement over the past week. Rains have made up the shortage of steeping water for the white crop and steady imports are reported in most areas. The ordinary Daissee and Mesta crops are progressing favourably and in many districts will be ready for harvesting at the end of this month.

Mofussil: Indian upcountry markets are at a complete standstill due to the heavy flooding reported from most areas. Although the floods are now subsiding, it will be some time before normal working conditions are restored. In the meantime quotations are nominal in the absence of business. In Dhubri these are based on Rs. 25-8 a maund basis Bottoms.

Reports from Pakistan indicate that river levels are rising daily, and already several sheds and godowns in the Narayanganj and Dacca areas are under water. Road and rail communications have been disrupted in many places, and although imports have been arriving freely over the week it is expected that these will drop off as the flood waters rise. Heavy demand for August shipment jute is pushing the market up and a firmer tendency prevails. Latest quotations in Narayanganj are as follows:

Pucca Bales (New Crop):	Rs. (P) a bale.	Kutch Bales:	Rs. (P) a maund.
Mill Firsts	145	Jat Bot	24-8
Export Firsts	100	Jat B. Bot	22-8
Dacca Tossa 4's	165	Jat C. Bot	20-8
Dundee Tossa 4's	129	Jat X. Bot	18
Output Tossa 2/3	123		
Output Tossa 4's	108		
Narayanganj Cuttings 85			

INDIAN JUTE CROP REPORT

In their final crop report for the current season, covering the week ended 6th August, Messrs. Sinclair Murray & Co. Ltd. say that weather conditions have been favourable although more rainfall is still required in parts of West Bengal to provide adequate steeping water. Harvesting operations have continued in most areas but in parts of Assam have been suspended owing to flood conditions prevailing. The condition of the standing crop continues to be excellent and outlook for this season's crop is estimated at -22/-, taking last season's crop on a basis of -16/-.

COTTON YARN AND CLOTH FOR PAKISTAN

LANCASHIRE NEGOTIATES ORDERS

NEGOTIATIONS are proceeding for the purchases of Lancashire cotton yarn and cloth which Pakistan is to make with the proceeds of the sale of the raw cotton which it has been granted under an American aid plan. Some orders have already been arranged provisionally, and the Lancashire firms are awaiting official confirmation from Pakistan, with the accompanying issue of the necessary import licences. Progress with the business is slow. For one thing, the United States authorities have stipulated that numerous formalities shall be observed and, for another, the large total sum concerned in the triangular arrangement and the various details of several kinds which have to be settled for each of the many individual transactions no doubt place a heavy strain on the administrative machinery in Pakistan. It now appears, however, that a start will soon be made with the placing of firm orders.

Prompt delivery appears to be more than usually important in this business. Mr. F. B. Arnold, the Senior British Trade Commissioner in Pakistan, told business men in Manchester the other day that the future attitude of many importers and distributors in that country towards Lancashire might become much more favourable if these orders were executed satisfactorily. The United Kingdom, it appears, was slower than some other countries, notably Western Germany, in reaching an agreement with Pakistan under which advantage could be taken of the purchasing power which the United States has put at that country's disposal. This slowness gave the impression in some quarters that British officials and traders were not particularly interested in doing business with Pakistan.

The total value of the orders available for British cotton yarn and cloth for Pakistan is some £1,750,000. Neither during 1954 nor 1953 did the cotton yarns and woven fabrics which Britain shipped to Pakistan reach a total of much more than £900,000, though in 1952 the trade was worth £6,604,000. In the first half of this year, moreover, the exports were valued at only £252,000, compared with £477,000 in the corresponding period of 1954. The decline has been much heavier in cloth than in yarn. In the circumstances a great many traders are anxious to secure some of the business. As Mr. Arnold pointed out, Pakistan's cotton textile

and other industries are being expanded very rapidly. There can be no great scope there for imports of coarse or low-quality cotton goods, but there should be for many years an outlet for some of the finer cloths, especially perhaps bleached ones. A rising standards of living may also increase the demand for goods of high quality in the medium range of counts and also for novelties and specialities of various kinds. These are the types of cloth which Lancashire is probably best fitted to supply.

NEW USES FOR RUBBER

With the increasing production of synthetic substitutes and the development of other materials which can replace it for particular purposes, rubber is a commodity which must be subject to innumerable ups and downs. The surest way of establishing some stability for the grower is to find new outlets for its utilisation. That this need is not being overlooked is apparent in the 1954 report of the British Rubber Development Board, for it records that marked progress was made last year in developing a number of newer markets for natural rubber. During the year over a hundred stretches of "rubberised" roads were laid in the English-speaking world alone, including 47 put down in the United States, 28 in the United Kingdom, and a number in the Dominions. The report refers in this connection to the attitude of the road engineer, which, it says, has changed markedly in the past two years. Rubberised playground surfacings have also aroused much interest.

During the year widespread trials were made in the United Kingdom with rubber rail pads. The pads, which are inserted between the rail and the sleeper, damp down vibration and help to reduce track maintenance costs. Further supplies of pads have been ordered by the railways, and experimental work has been carried out on rubber for ferules, endposts, clip fastenings, and other products for use on the permanent way.

The promotion of latex foam, especially in the furniture trade, has had some encouraging results, and there has been considerable progress in the use of rubber in unwoven fabrics. A natural rubber-bonded fabric for interlinings is now in commercial production in Britain. Attention has been given to a wide variety of natural and manmade fibres, including wastes from many sources, and it has been established that almost any fibre which can be satisfactorily scoured and carded can be used for the production of a rubber-bonded material.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base year ended August, 1939-100) declined by 0.7 percent to 356.5 during the week ended 23rd July, 1955 as compared with 358.6 for the previous week. The index was higher by 3.4 percent relative to the corresponding week of the previous month but was lower by 6.9 percent than that of a year ago. Foodstuffs declined by 1.7 percent to 312.5 due to a decline in the prices of rice at Patna (-6%), gur at Muzaffarnagar (-5%), wheat at Jabalpur and gram (-4% each), tea and salt (-2% each) and dal arhar and sugar (-1% each), despite an advance in the prices of wheat at Amritsar (+4%) and at Hapur (+2%) and bajra (+2%). Prices of manganese ore (average export prices) (-13%), cottonseed (-7%), castor-seed in Bombay (-5%), rapeseed and lac (-2% each) and raw wool at Kalimpong and coora (-1% each) showed declines while raw wool in Bombay (+1%), raw jute: Jat Middles and raw silk (+3% each), castorseed in Madras and groundnuts (+2% each) and linseed in Bombay (+1%) moved up and on the whole the index for Industrial Raw Materials recorded a fall of 0.1 percent to 407.7. The index for Semi-Manufactures also moved down by 0.4 percent to 329.8 as compared with 331.1 (revised) for the previous week. Items which witnessed significant variations were: Mustard oil at Kanpur (-8%) and at Patna (-2%), groundnut oil in Calcutta (-3%), castor oil (-4%), goatskins and coconut oil (-3% each), buffalo hides (-2%), groundnut oil in Madras and in Bombay and gingelly cake (+4% each), Linseed oil in Calcutta and copper in Bombay (+3% each). An increase in the price of jute manufactures (+1%) raised the Manufactures index by 0.1 percent to 370.9. Lower prices of tobacco leaf (-6%) and turmeric (-3%) in Calcutta, chillies at Patna (-6%) and black pepper at Cochin (-4%) brought down the index for Miscellaneous by 3.1 percent to 552.7. The price of cashewnuts at Mangalore, however, rose by 3 percent.

WOOL RESEARCH CONFERENCE IN AUSTRALIA

The International Wool Textile Research Conference sponsored by the Commonwealth Scientific and Research Organisation with the co-operation of the Australian Wool Bureau will be held at three research centres operated by the C.S.I.R.O. It will open on 22nd August at the Physics and Engineering Laboratory in Sydney, and will move to the Wool Textile Research Laboratory in Geelong on 31st August, and then to the Biochemistry Laboratory in Melbourne on 5th September. An 800-mile tour of leading wool producing centres in Southern Australia is planned in conjunction with the conference. More than 100 wool research leaders from all parts of the world are expected to attend.

Objectives of the conference are: (i) to discuss recent developments in wool textile research and related sciences, (ii) to promote interest and activity in wool textile research among scientists working in associated fields, and (iii) to encourage the application of research results in the textile and clothing industries.

The amount of excise duty realised on tobacco used for the manufacture of biris during 1953-54 and 1954-55 was Rs. 10.30 crores and Rs. 9.25 crores respectively. Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, stated in the Lok Sabha today in a written reply to a question by Mr. Ibrahim that Mr. Guha added that manufacturers of biris were not licensed as such, but all wholesale dealers in tobacco, whether they manufactured biris or not, were licensed and the amount realised as licence fees from such dealers during the calendar years 1953 and 1954 was Rs. 14.10 lakhs and Rs. 13.47 lakhs respectively.

Plantation Topics

TEA EXPORT DUTY INCREASED

THE Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs. 2-9-9 a lb. as against Rs. 2-6-5 a lb in force from 1st July, 1955. The duty at this price will be six annas a lb which means an increase of two annas a lb. compared with the duty hitherto in force.

COCHIN TEA SALES

At Sale No. 16, 21 million lbs. of tea was catalogued. Demand was less and low medium broken were neglected. Fannings were two annas easier. Medium broken and fannings sold two to three annas lower. Better liquoring met with good demand but prices were irregular following quality. Orange pekoes were steady while flowery pekoes and pekoes were neglected.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

Sheet:	Closing prices on 29-7-55 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.251	1.271
No. 2	1.223	1.241
No. 3	1.191	1.211
No. 4	1.15	1.171
No. 5	1.14	1.151
Sheet Cuttings 1	1.25	
Sheet Cuttings 2	1.20	
Crape:		
Water White	—	—
R.M.A. No. 1X	1.82/85	1.783
R.M.A. No. 1	1.78/82	1.75
Crape No. 2	1.72	1.72
Crape No. 3	1.663	1.663
Scrap Crape:		
Sc. Crape No. 1	1.45 Nom.	1.421
Sc. Crape No. 2	1.40/43	1.381
Flat Bark	1.30/35	1.281
Sc. Crape 3X	1.33	1.33

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crape and 25.4 cents in respect of scrap crape to the above market prices.

SPEEDIER "AUTOMATION" FORESEEN EFFECT OF RECENT U.S. WAGE CLAIMS

GREATER expenditure on labour-saving machines will, it is thought, be the most probable outcome of the "lay-off" pay plans which are being obtained in the United States motor-car industry and sought in others, writes the *British Export Gazette*, basing its opinion on the observations of the *Wall Street Journal*. The *Journal* has observed that besides the workers currently employed in the industries in which the agreements are made, the greatest beneficiaries are likely to be the people who build factories and the equipment for them. It makes the point that there is a certain irony in the thought that "lay-off" pay will bring on more of the very automation against which the unions claim to be protecting their members. Firms like the Minneapolis-Honeywell Regulator Co. expect the swing to industrial automation to boost sales of factory control systems and that the high rate of home and commercial building will sustain for some time the demand for heating and air-conditioning controls. The Snyder Tool and Engineering Co. have announced an expansion programme designed to create one of the most modern plants in the United States for the production of automation machines, special machine tools, and machinery for the automotive, metal-working, pharmaceutical, chemical, food-processing and allied industries. Work has already begun on the expansion programme which represents a 50 percent increase in floor space for the manufacture of automation machines and

special machine tools and a doubling of floor space for the production of pharmaceutical and packaging machinery.

Whether or not the American manufacturers and commentators are correctly forecasting the outcome of the wage agreements, there is in any case an existing trend towards greater automation in America, and indeed, in other countries, including the United Kingdom. It is not easy to assess the dollar export possibilities for British firms which might result from this development, but American companies making products ranging from electronic equipment to automatic handling gear will be increasingly busy in the near future. Perhaps the most likely opportunity for U.K. industry as far as the trend in the U.S.A. is concerned is in the field of transfer machines where these are made up from standard units. The motor-car industry is a particularly big user of these machines, which act as links between one automatic process and another so that for long periods production carries on without any intervention on the part of an operator.

U.K. MOTOR INDUSTRY SETS UP NEW OUTPUT RECORD

SHIPMENTS ALSO ESTABLISH NEW HIGH

BY the end of June last even the recent rail and dock strike had not prevented British motor manufacturers from completely outstripping their previous half-yearly production record set up in 1954. Output details disclose that in the first six months of this year well over 100,000 more cars and commercial vehicles were made, bringing the latest all-time peak to 626,500.

During the rail strike itself it was, for motor factories, more than ever a case of the "produced aiding production", for augmented fleets of goods vehicles were then pressed into commission to carry vital supplies to British industry throughout the country. The overall figure for the six months also contained output levels of both classes of vehicles which were higher than ever before. Compared with January to June of last year the rate of car production had risen from one model every second to one every nine seconds of the working period.

The export scene for the half-year was overshadowed by the dock strike which began towards the end of May and continued into the beginning of July. Although manufacturers re-scheduled their export production to take every advantage of available shipping space, thousands of motor vehicles were unable to be consigned from the docks each week; many were diverted to the home market in order to maintain production and employment. This fact, and the growing influx of competitive models in the world's motor markets, makes it all the more surprising that the combined volume of car, truck and bus shipments up to the end of June, 278,000, was the greatest yet in any half-year period. The number of commercial vehicles shipped was a record in itself at 78,000. There is no doubt that the fight for sales has greatly intensified in many, and principally Western European, motor markets; British manufacturers are only too well aware that costs of production remain a vital problem if they are to maintain their sales. Although all the final figures have not yet been received from the industry's competitors it is clear that, despite the dock strike, Britain retains her world lead in car exports.

Success also rewarded the efforts of agricultural tractor manufacturers who, even if they were unable to force the export graph up to hitherto unrecorded heights, managed to export 58,000 machines 2,000 more than in the first half of last year.

ATOMIC ENERGY ADVISER TO WORLD BANK

World Bank President, Mr. Eugene R. Black, announced on 1st August the appointment of Mr. Corbin Allardice to the newly created position of atomic energy adviser to the Bank. Mr. Allardice left his post as executive director of the Joint Committee on Atomic Energy of the United States Congress to assume his new duties the same day. In announcing the appointment, Mr. Black said, "There is intensive work going on in several countries to clear away technical and other obstacles whose removal ultimately may make it possible for atomic energy to have wide applications in the generation of electric power and elsewhere. While no one can say where or under what circumstances these applications may become practicable, the subject has important implications for economic development and for the Bank. We have therefore created in the Bank the post of atomic energy adviser, so that we can be kept informed of any relevant developments and so that we will have the basis, when the time comes, for forming policies. We are extremely glad to have been able to appoint to this new position a person so well qualified as Mr. Allardice." Mr. Allardice has been associated with the United States atomic energy programme since 1946. He has been Executive Director of the Joint Committee since May 1953. Prior to that he had been assistant to the manager of New York operations for the United States Atomic Energy Commission, and was director of public information for that office. Mr. Allardice was born in Binghamton, New York, and is 34 years old. He graduated from Seton Hall University, in South Orange, New Jersey, in 1942. During the second World War, he served in the air arm of the United States Coast Guard, and saw duty as a patrol plane commander operating from bases in Greenland and Iceland. He is a director of the Nuclear Energy Writers Association, and a member of the National Association of Science Writers.

ASIAN MINING ENGINEERS AND GEOLOGISTS TO TOUR U.S.S.R. AND EUROPE

Thirteen experts in mining engineering and geology from Asia and the Far East left New Delhi last week on a 13-week study tour which takes them through parts of the U.S.S.R., the United Kingdom, France, the Federal Republic of Germany and the German Democratic Republic. The object of the tour, sponsored by the United Nations Technical Assistance Administration and the UN Economic Commission for Asia and the Far East (ECAFE), will be to show the group the latest developments in the fields of mining engineering and geology. Members of the group come from Afghanistan, Burma, Hong Kong, India, Indonesia and Japan. They include such officials as the Director-General of Burma's Ministry of Mines; the Superintending Geologist of the Indian Geological Survey; the Acting Director of Indonesia's Geological Survey; and the Director of the Geological Survey of Japan.

They will be met in Moscow by ECAFE's Executive Secretary, Dr. P. S. Lokanathan. After completing their tour, they will gather in Geneva to prepare a final report. The proposal for this tour originated at a discussion held during an ECAFE regional conference on mineral resources development in Tokyo in April 1953. A study group of lignite experts from Asia and the Far East, which visited Australia in October-November 1953, also recommended in its report that a similar study tour "to Europe, especially to countries like France, Germany, and the USSR, may be undertaken in the near future...."

Calcutta Markets

PRICES DECLINE IN TEA EXPORT SALE

GOOD GENERAL DEMAND FOR DUSTS

AT Sale No. 10, held on 8th and 9th August, offerings in the Export auction consisted of 64,000 packages, which was the largest quantity offered for Export this season. The market opened on an easier tone and weakened as the sale progressed. Commoner sorts were selling from 3 to 4 annas a lb. below last rates and there were heavy withdrawals for this type of tea. Better liquoring sorts met with fair demand and were from 2 to 3 annas a lb. easier, while Whole Leaf grades were slightly lower. Tippy teas were keenly competed for and generally sold above valuations. There was fair competition for Darjeelings.

	1955	1954
	Rs.	Rs.
Clean Black Pekoe	2 15 0	2 14 0
Plain B.P.	2 0 6	2 12 0
Medium Assam B.P.	2 4 0	2 13 0 to 2 14 0
Best C.T.C. Assam B.P.	3 0 0	3 6 0 to 3 8 0

At the Internal sale offerings of Dusts consisted of 19,000 packages, for which there was a good general demand. Commons, Dooars and the small powdery medium Assam Dusts were the strongest features and were irregularly dearer, while grainy medium Assams were firm to occasionally 1/2 anna easier. The very best CTC Assams were firm. The more ordinary sorts opened firm but eased as the sale progressed and closed irregularly 1/2 to 1 anna below last rates.

	1955	1954
	Rs.	Rs.
Medium Dooars Dust	2 2 6 to 2 3 0	2 2 6
Medium Assam Grainy	2 4 6 to 2 5 6	2 3 6
Dust	2 11 0 to 2 13 0	2 8 6 to 2 9 0
Best Assam CTC Dust	2 4 6 to 2 5 6	2 3 6

The offerings of Other Grades consisted of 3,800 packages, for which there was very little demand and withdrawals were heavy.

QUIET SPELL IN FREIGHT MARKETS

THERE is still a lull in activity but this is partly due to owners being unwilling to accept the lower rates which charterers are trying to obtain. Coal charterers have covered most of their requirements for the U.K. and Continent up to October. There is nothing new to report for grain business although cargoes to Japan are available for the latter part of the year. There are a number of grain orders for Australia but owners are holding off in order to keep rates at their recent levels.

Four Liberty type vessels have been fixed for ore from Vizagapatam to U.S.N.H. at the unchanged rate of \$15.50 for September-October loading. A number of vessels have been fixed in Japan at what are reported to be poor rates to various destinations which seems to indicate that Far East owners prefer to get their vessels fixed rather than wait for other markets to become more active to which they could ballast.

SUGAR MARKET QUIET

During the week ended 9th August, sugar sales in the Calcutta market averaged 3,500 bags a day. Arrivals were 3,500 bags daily and stocks totalled 300,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 31 for ordinary grain and Rs. 32-4 for big grain. Forward sugar ordinary grain sold at Rs. 31 and big grain at Rs. 32-4. Ex-mill delivery rates for standard grades of sugar ranged between Rs. 28-2 and Rs. 30-2. Business by mills was restricted. The market was quiet.

LINSEED

The market displayed a slightly firmer trend last week and prices were marked higher. Arrivals were very poor and ready goods scarce; crushers were rather reserved owing to the poor offtake of oil, and a very small turnover was recorded. The oil section was dull and shippers were operating very cautiously; there was little interest from overseas at prevailing price levels. Latest quotations were as follows: August Rs. 18-12 a maund.

HIDES AND SKINS

The market ruled steady. Stocks were higher in the previous week.

Bazaar Sales

(Between 3rd August and 8th August, 1955)

Cowhides:—Wet salted (Ord.) 5,600 pcs. on the basis of Rs. 11-3, Wet salted (Slaughtered) 14,500 pcs. on the basis of Rs. 14 to Rs. 25-8.

Goatskins:—Wet salted (Daissee, Killed) 12,500 pcs. on the basis of Rs. 180 to Rs. 265 and Rs. 325 to Rs. 400; Assam-Dinajpur-Murshidabad-Rajshahi 28,300 pcs. on the basis of Rs. 235 to Rs. 305; Patna 5,000 pcs. on the basis of Rs. 180 to Rs. 200. Muzaffarpore 3,000 pcs. on the basis of Rs. 225 to Rs. 235.

Bazaar Stocks

(8th August, 1955)

Cowhides:—Wet salted 1,49,500 pcs.

Goatskins:—Wet salted (Daissee, Killed) 78,000 pcs.; Assam-Dinajpur-Murshidabad 67,500 pcs.; Muzaffarpore - Patna - Pakur - Purneah - Kishanganj 1,50,000 pcs.

SHELLAC MARKET STEADY

During the week ended 8th August, the shellac market was quiet at the beginning and steady later. The range of quotations was as follows:

Pure Buttonlac	Rs. 150 buyers; 155 done and buyers.
Lemon No. 1 Shellac	Rs. 154; 156 done and buyers; 155-8 buyers.
Lemon No. 2 Shellac	Rs. 148 buyers; 150 done and buyers.
F. O. Std. 1 Shellac	Rs. 143 to 146-8 buyers.
Pure T. N. Shellac	Rs. 137 to 141 basis done and buyers.
4% I.T.N. Shellac	Rs. 130 to 132 buyers.
No. 1 Kusmi Seedlac	Rs. 149-8 value; 150 buyers.
No. 2 Kusmi Seedlac	Rs. 142 to 143-8 buyers.
Fine Bysaky Seedlac (Manbhum)	Rs. 138 buyers; 141 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 135 to 137-8 buyers.
Ordinary Bysaky Seedlac (C.P.) under 5%	Rs. 129 to 131-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 124-8 to 126 buyers.
Kireelac	Rs. 66 to 67 buyers.

Shipments during August until the 4th were 4,167 packages comprised of:

Shellac	2,630 packages
Seedlac	1,046 "
Buttonlac	144 "
Others	347 "

Champdany Jute Co., Ltd.	6-9-55	noon.
Mysore Spg. & Mfg. Co., Ltd.	13-9-55	4-30 p.m.
Industrial Finance Corporation of India	17-9-55	4 p.m.
Calcutta Tramways Co., Ltd.*	19-9-55	noon.

(E) Extraordinary General Meeting.

*Meeting will be held in London.

DIVIDENDS DECLARED OR PROPOSED.—Punjab

National Bank Ltd.—Rs 1-8 per share (Int): India Paper Pulp Co. Ltd.—7 p.c.; Durbhanga Sugar Co., Ltd.—15 p.c.; Kalasa Tea & Produce Co., Ltd.—15 p.c.; Peria Karamalai Tea & Produce Co., Ltd.—30 p.c. (I); Soom Tea Co., Ltd.—20 p.c. (I); Nagri Farm Tea Co., Ltd.—50 p.c.; Union Coal Co., Ltd.—2½ p.c.; Teen Ali Tea Co., Ltd.—50 p.c. (I); Ethelbari Tea Co. (1932) Ltd.—50 p.c.; New Doorga Tea Co., Ltd.—Rs.110 per share (I); Lackatoorah Tea Co., Ltd.—10 p.c.; Reliance Jute Mills Co., Ltd.—Nil (I); Mozufferpore Electric Supply Co., Ltd.—Nil; Mettur Chemical & Industrial Corporation Ltd.—3½ p.c. (I) (O); Dalmia Cement (Bharat) Ltd. (And Reduced)—10 p.c. (I) (D); Imperial Bank of India—Rs. 40 per fully paid share and Rs. 10 per partly paid share; Calcutta Tramways Co., Ltd.—4½ p.c. (I) (I).

O.—Ordinary Dividend.	In.—Interim Dividend.
P.—Preference Dividend.	I.—Less Income Tax
P.O.—Preferred Ordinary Dividend.	F.—Final Dividend.
D.—Deferred Dividend.	Cm.—Cumulative.

1 Less Tax at 8s 6d in the £

DANDIE DINMONT
SCOTCH WHISKY
ESTABLISHED 1882

Be sure — it's dandy!

A. ALEXANDER & CO. LTD., LEITH, SCOTLAND

SOLE IMPORTERS: PHIPSON & CO., LTD.

is dedicated to sharing and solving your production problems.
By supplying exactly the right machine for your job, Texmaco secures for you incredible economies in time and cost plus higher quality production all along the line.

TEXMACO

Boiler & Heavy Engineering Division • Ring Spinning and Drawing Frames

can meet your requirements in Smoke Tube, Marine, Water Tube and Locomotive Boilers, Flues, Mechanical Stokers, Economisers, Chemical and Pressure Vessels, Coal Handling Plant, Chimneys, Ductings, Cranes, Wagons and Rolling Stock, Penstock Pipes, Sluice and Spillway Gates for Hydraulic Dam Projects, etc.

are the products of extensive research and designed for improved yarn production in point of quality and quantity under varying mill conditions.

In addition to complete units a wide variety of spare parts and conversion material can be manufactured to required specifications.

address your enquiries to

TEXTILE MACHINERY CORPORATION LIMITED
BELGHURIAH, 24-PARGANAS,
WEST BENGAL.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O Po F and Dd indicate Ordinary, Preferred Ordinary, Founders' and Deferred shares respectively P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE FINAL SHAPE OF THE COMPANIES BILL

MANAGING AGENCY'S FUTURE: CHANGES IN
CLAUSE 197

IT may be some consolation for the anxiety and disappointment which the private sector still feels over some provisions of the Companies Bill to know that things would be a good deal worse if what seems to be an important part of Lok Sabha opinion were to have its way. The Bill has largely retained its identity as a measure based on fact rather than prejudice and has escaped becoming an instrument for the socialist pattern of society. That is a fact for which the country will find reason to be grateful in years to come when the damage caused by recent trends is more apparent. Otherwise the Companies Bill gives little cause for satisfaction, but if the powers it provides are used as sparingly as Mr. Deshmukh has hinted they will be, and something is done to emasculate Clause 197, the private sector will at least be able to survive. Judging from many of the utterances made in the Lok Sabha debate, this fact itself will conflict with the opinions of some members about the true purpose of company legislation.

The main argument Mr. Deshmukh put forward—that the Bill's chief purpose is to safeguard the interests of shareholders—carried weight. The Government's mistake lies rather in the way it seeks to attain this end. It is regrettable that a measure largely designed to correct abuses in a few companies should have become so studded with powers for frustrating the efficient working of all. It is unfortunate that the Joint Committee should have decided that the only way this cumbersome mass of legislation can be administered is through a Civil Service department; and equally so that the Government has agreed with it, instead of appreciating the probable consequences in advance, as it has managed to do with the absurd provisions of Clause 197. But Mr. Deshmukh's stubborn adherence to the spirit of the Bill in the face of irresponsible opposition was a welcome sign of the Government's determination not to be stampeded. If the ensuing Act is administered with equal regard for doctrinaire prejudice, the private sector, and therefore the nation, should be the gainer. The Government's stand on the managing agency question has also been maintained in face of extreme opinion. It is perhaps premature to infer from Mr. Nehru's suggestion to the meeting of the Congress Parliamentary Party that the proper attitude towards the managing agency is to mend it rather than end it, that the Government's view about progressive elimination has changed. Government spokesmen often have to throw their weight into the opposite scale-pan in order to maintain any balance at all. But mending is not exactly progressive elimination and when the more flattering tones which Mr. Deshmukh used about the managing agency system in the course of the debate are also considered, it appears the Government might be wondering if it has not gone too far in its eagerness to clear up a few abuses. It may be that the restrictions the system will have to suffer now will satisfy critics until the present unreasoned prejudices have melted away. Responsible Government thinking as expressed in the last few days gives some hope that this might be so.

The Bill still contains a number of provisions which will change the managing agency system very substantially and a great many more which will interfere with its efficient working. The restriction of the number of managed companies to ten will mean that many will be deprived of their managing agents at a crucial time in their existence. The managing agent itself will naturally choose the most profitable companies and these are unlikely to be the ones in greatest need of its services. It is questionable if the various financial corporations with their exacting standards of credit-worthiness can fill the gap thus created. Depriving certain industries of the managing agency service altogether is bound to retard their develop-

ment and therefore to contribute further distortions to the economy. The provision for making the appointment or reappointment of managing agents in certain other activities subject to Government approval introduces an arbitrary element into the smooth functioning of these industries which is likely to retard their progress. There seems no reason why managing agency, if it is regarded as respectable enough to exist at all, should not be able to function in all industries outside the public sector. To regulate so closely the continued working of managing agency in industries where it is permitted can only be damaging to their efficiency. The managing agency system certainly stands to have its teeth drawn by the provisions of the Bill; the question of greatest importance to economic development now is whether the functions of the secretaries and treasurers can repair some of the damage.

Given the quantity of resources available to managing agents throughout the economy, these will have to be spread over a smaller number of companies. In the scramble for the best units many important though risky ones are bound to be left out and it is precisely these which will experience the greatest difficulty in raising capital from the finance corporations. The spread of director-management will not be encouraged either even if the Joint Committee had not attempted to deal that system a fatal blow under the provisions of Clause 197. It may be the realisation that the Bill contains more to damage the economy than to damage managing agency itself, and that the system of secretaries and treasurers is unlikely to save the situation that has led Mr. Deshmukh and the Prime Minister to speak in warmer tones lately about the much maligned managing agency system.

The decision to relax the harsh provisions of Clause

AURI SACRA FAMES

THE protracted dispute between the Kolar Gold Field mining companies and the Mysore Government has now become a national issue and one of great importance to the future of the private sector. The State Government's method of settling the matter by nationalisation, in spite of the provision for arbitration in its agreement with the companies, is renewing the feeling in the mind of the private sector that the recent trends in legislation have now left it without any guarantees at all. The Central Government has lately tried to allay this fear, through the words of the Prime Minister and other prominent spokesmen, and this is no doubt one of the chief reasons why it is believed to oppose the move. The U. K. High Commissioner is reported already to have pointed out the effect nationalisation is likely to have on the confidence of the British investor. The fear is bound to spread to all other foreign investors and worst of all, to every person in India whose money is now, or might soon be expected to be, at the disposal of the private sector for development purposes. The decision to nationalise casts a reflection on the recent reassurances of the Central Government about the place of the private sector in the country's development programme. It also raises certain important questions for the Centre. For instance, is it really in a position to state, as it has been doing, that the private sector has an assured part to play in the economy of the country when apparently it exists only by courtesy of the State Governments, able to defy the wishes of the Centre when they think fit? Mysore has, of course, always had a tradition of State capitalism and does not lack confidence in its ability to run any industry it might take over; so it is not necessarily true that what the Mysore Government decides to do other State Governments will hurry to copy.

What of the Government's, and especially the Prime Minister's, assertions that scarce resources are not to be used to take over existing organisations when they are not particularly prosperous, as are the gold mining companies at the moment? The Mysore Government has decided that it is not getting enough out of the industry and most of the dispute arises from this fact. But there are other methods to hand by which the Government's grievances can be met. Instead, it has decided to nationalise, and apparently for no better reason than its impatience with economic fact as explained by the companies and its own opinion that it can get more out of the companies if it were to run them itself. There seems no reason why the considered policy of the Central Government, carefully formulated to encourage economic development within the new pattern it is attempting to create, should be flouted because a State Government has lost patience with the conventional means of negotiation. If there is uncertainty already about the Centre's true attitude towards the private sector there will be considerably more until it has shown its hand on this issue. For the Central Government the problem seems to be one of straightforward choice—who is going to be the master of industrial policy, itself or the States?

CURRENT COIN

Ashoka Cement Issue.—The announcement of an offer of equity shares in the firm of Ashoka Cement Limited is published on another page in this issue of *Capital*. A total of 300,000 ordinary shares of Rs. 10 each are being offered to the public at par to help raise money for the company's plant building programme. A site has been secured on lease from Messrs Rohtas Industries Ltd., at Dalmianagar in Bihar and, judging from the results of other cement factories in the neighbourhood, is expected to provide excellent advantages. Plant has been purchased and installation is in progress. The factory is expected to go into production in about six months' time. The company estimates that even on an average profit of Rs. 10 a ton with a normal annual production of 250,000 tons of cement it will be possible, after making requisite provision out of working profits for redemption of loan capital, to pay a fair dividend on the equity shares from the first year of operation. The Company was incorporated in May 1954 when equity shares to the value of Rs. 500,000 were taken up by the directors and their friends. A certificate of commencement of business was obtained in August of the same year. Since then further equity shares totalling Rs. 10 lakhs have been taken up by the directors and their friends. The Industrial Finance Corporation of India has sanctioned a loan of Rs. 50 lakhs against the 1st mortgage Debentures secured on the fixed assets of the company. The authorised capital of the company is Rs. 2,50,00,000 divided into 50,000 Preference Shares of Rs. 10 each and 20,00,000 equity shares of Rs. 10 each.

Indian Copper Corporation.—In his address to the thirty-first annual general meeting of the Indian Copper Corporation this week, the Chairman, Mr. K. R. Fettes, described the financial and operational results of the Company during 1954 as very satisfactory, in fact a record in the Corporation's history. This was due to the consistently high world price of copper throughout the year and also, to a certain extent, to reduced development expenditure. Improvement in the standard of production of rolled sheets was another contributory factor. Results for the current year so far have been satisfactory as world prices of copper are still high. But Mr. Fettes thought it unlikely that the trend would continue indefinitely.

Progress of Indian Cement.—In his address to the ninth annual general meeting of The India Cements Limited, which is published elsewhere in this issue of *Capital*, the Chairman Mr. P. Suryanarayana, was able to report the conclusion of a year of normal working and a satisfactory position for the company. A year's working at full capacity has resulted in a yield of net profit which is almost three times larger than that of the previous year, Rs. 18,58,311 against Rs. 6,37,234. A larger dividend has been declared for the ordinary shareholders and for the first time the deferred shareholders have been able to participate. The entire cement production was sold and transported in spite of bottlenecks and restrictions. The Chairman was able to tell shareholders that the company's expansion plans are well under way. Orders for the equipment required have been placed and the Industrial Finance Corporation of India has agreed to a loan of Rs. 30 lakhs. It is hoped that production will start on the expanded unit before June next year; full capacity is about 200,000 tons of cement a year. The decision to expand the output of the company has been made on the expectation of growing markets under the second five year plan. Mr. Suryanarayana stated that the company is already exporting between one-quarter and one-third of its output and that expanding markets are to be found throughout the South-East Asian region. Mr. Suryanarayana went on: "The bottleneck for export is lack of shipping facility. If we can get over this problem, we can certainly build up large markets which are ready for our cement in these South-East Asian countries". The Chairman referred to other transport difficulties facing the company, which were largely the result of competition for transport resources from agriculture and industry. The necessity of moving coal by sea instead of by rail was involving the company in an addition to cost of between Rs. 4 and Rs. 4-8 a ton of cement.

Protest against Tea Tax.—The Bharat Chamber of Commerce has addressed a communication to the West Bengal Government questioning the wisdom of the proposed tax levy of one anna a lb. on tea entering Calcutta and the neighbouring districts of Howrah and 24 Parganas. The State Government has brought forward a Bill, namely the West Bengal Taxes on Entry of Goods in Local Areas Bill, by which the above tax will be imposed after its enactment by the Legislature. The Chamber's protest is based both on economic and legal considerations. It points out that while the proposed tax is meant to bring in a handsome revenue to the State Exchequer, its harmful effect on the competitive strength of Indian tea in overseas markets is undoubted. In this connection it refers to the present price trends in overseas markets and to the devaluation of the Pakistan rupee which will help that country's exports to compete with Indian tea. As regards the legal basis of the Bill, the Chamber's communication draws attention to the various Constitutional provisions on State powers of taxation. It maintains that because most of the teas entering the areas concerned are meant for export and not for "sale, consumption or use therein" which alone would empower a State Government to impose such a tax under item 52 of the Second List of the Seventh Schedule in the Constitution the West Bengal Bill is unsound in law. The Chamber points out further that under Clause 6(2) of the Bill the 140 million lbs. of tea which will be consigned to the U.K. for auction in London this year will be exempt from duty and therefore the measure would in effect, amount to a discriminatory tax on tea exported by local shippers.

World Rice Production.—World rice production has expanded considerably in post-war years and in 1953-54, the production was one-fifth above the pre-war level. A lower level is indicated in 1954-55 estimates, but it is nevertheless likely to be above the pre-war average. India, Pakistan and Thailand were responsible for this marked rise in production in 1953-54; the total rice acreage for the year in India and Pakistan at 101,000,000 acres was nearly one-third above the pre-war figure and Thailand nearly doubled its pre-war acreage under rice. There was some increase in

Indonesia, the Philippines, Korea and Formosa, the acreage in other countries remaining the same. Despite this rise in the total output in India, there was no notable change in productivity which showed the average yield of 6.1 cwt an acre, as against 26.6 cwt for Italy, 25 cwt for Australia, 22.6 cwt for Japan, 14 cwt for the U.S.A., 8 cwt for Brazil, 7.6 cwt for Burma and 6.8 cwt for Thailand. The Commonwealth Economic Committee's review of world food grains production, which contains the above figures, discloses the fact that cooler countries are now obtaining yields markedly higher than those attained in tropical countries where rice is the staple food of the population. The higher yield in temperate and semi-tropical regions should be due more to intensive and better methods of cultivation and more widespread use of selected seed and fertiliser than milder temperature which is explained in the review as one of the contributory factors. There has also been a divergent trend in rice production and exports. According to the review, the volume of rice shipped in post-war years has been considerably smaller than formerly, and the countries which have suffered from the fall are the exporting countries of South-East Asia. Exports from this region before the war were 5,500,000 on an average representing three-quarters of the world trade, while in the post-war period there has been a continuous decline, the figures coming down to as low as 2,500,000 tons in 1953. The countries in this region such as Burma, Thailand and Indo-China, the economies of which are based mainly on rice exports, have therefore suffered a setback. Burma is now in serious financial difficulties due to a large exportable rice surplus at home. Her rice exports have remained at only one-third of the pre-war figures and even this level she now finds difficult to maintain. Thailand and Indo-China have been finding serious difficulty in disposing of their rice surplus as well, and India, which had serious food shortages only a few years ago and was an important importer of rice from the above countries, is herself now searching export markets for her surplus output.

Cashew-nut Industry.—India's cashew-nut industry is facing anxious days. Developments in the countries which supplied raw material for the Indian processing industry not only make the prospects of that supply more uncertain, but also pose the problem of competition in overseas markets. The processing plants in India are dependent upon outside sources, notably East African countries, for more than half of their raw cashew-nut requirements and imports at the current level have been running at between 60,000 and 70,000 tons a year. Indigenous production averages 50,000 tons. Together with imports, the total supply is barely enough to keep the plants working a mere eight to nine months a year. Most of the industry's products such as cashew kernel and shell oil—estimated at some 80 percent—are exported to the U.S.A. and the total annual foreign exchange earnings by these exports average between Rs. 10 and Rs. 12 crores. The present level of employment is considerable and obviously, the potential is still greater. Though absolute figures are not available, the rate of daily earnings at Rs. 2½ lakhs for all workers employed provide a rough index of the employment position in the industry. But this happy state of things may soon be jeopardised if prompt steps are not taken to strengthen its economic basis, which in the present situation, means quick expansion of cashew-nut cultivation in India. Portuguese East Africa has already been taking steps to develop its own processing industry so that supply of raw cashew-nuts from that source may start diminishing soon. Another East African country, Tanganyika, where cashew-nut cultivation is fast expanding, has also decided to process raw cashew-nuts for local consumption as well as exports. The latter country was an important source of supply of the raw material for the Indian processing industry and was also an importer of processed cashew kernel. All these point to a gloomy future for the Indian cashew-nut industry, unless prompt steps are taken in the meantime to forestall the impending danger.

Selling to Western Europe.—The Credit Insurance Association Ltd., of Great Britain has recently issued a publication entitled *Selling to Western Europe* which points out that Germany decided some time ago to concentrate its export drive on Western Europe where a great boom has been in progress for two years, at the expense of those overseas markets where orders could be "brought" only by granting generous credits. A recent United Nations survey showed that most of the increase of 7 percent in world trade last year took place in Western Europe. The Germans had noticed this trend in good time and obtained the largest share of the growing trade. Between 1951 and 1954 German exports to the rest of Western Europe rose by £400 million, whereas British exports to these countries rose by only £104 million. The report, which is

carefully and convincingly written, asserts firmly that there is ample room on the Continent for a considerable expansion of British exports. In fact, "many European business men are far more optimistic about the chances of increasing sales of British products in their own countries than are British exporters." The writer divides the Continental markets into three groups: those offering prospects of increasing British sales, those offering steady opportunities, and others which are at the moment less attractive to British exporters. The group which offers the best prospects, according to this report, includes Western Germany, Italy, Austria and France. In Western Germany, it suggests, not only industrial materials and equipment but consumer goods could be sold on a larger scale if British firms made the necessary effort, which would include more publicity and advertising. Exports to Italy, France and Austria could be increased if greater attention were paid to good representation; but the design and finish of many British goods are often criticised. British trading methods are not always up to the standard required. "Too many firms are still bent on selling what they have got rather than on making what they can sell." British firms, says the report, are usually poorly represented at trade fairs compared with their Continental European competitors. The quality of British products "compares favourably with that offered by competitors," but "design and colour in general often lack originality." Few complaints seem to have been made on British prices, though terms of payments are often unsatisfactory. Too many exporters expect payment on letter of credit or sightdraft. Finally, long or uncertain delivery dates are still a source of annoyance. The report emphasises that Western Europe is a market which justifies greater exploitation. That could well be the opinion of industrialists further afield than Britain who might find items to interest them in this publication, which is available from the Association at Staple Hall, Stone House Court, Bishopsgate, London, E.C.3.

Banking in the Middle East.—In his speech from the chair at the 66th annual meeting of the British Bank of the Middle East in London recently, Mr. D. G. M. Bernard emphasised the expansion which the Bank has enjoyed since pre-war days. Before the war it had only two branches, one at Baghdad and the other at Basra. It now has twenty branches and five sub-branches, and the financial results of such enterprise can be seen from examining the Bank's balance sheet which was published in last week's issue of *Capital*. The increase in the production of oil throughout the whole Middle East region since the war has provided adequate scope for expansion, and the Bank appears to have taken full advantage of this opportunity. One of the chief problems of such rapid growth was, Mr. Bernard pointed out, the provision of suitable office buildings and accommodation for the Bank's British staff. The result has been a large building programme, and the Chairman announced the construction of a fine new office building in Baghdad. With the more favourable political situation in the Middle East, the output of oil has expanded and promises to go on doing so. The continued prosperity of this region, with 62 percent of world's crude oil reserves, seems to be assured. A legacy of past disturbance, however, is the fact that the Bank still has no office in Iran. Commenting on the progress of the new branches in Bombay and Calcutta, Mr. Bernard stated that the decision to reopen in India had been justified. Both branches have played an active part in widening and increasing the Bank's activities. Mr. Bernard said: "They have developed close business connections with our branches in the Persian Gulf and achieved a notable participation in India's import and export trade with other centres also." The Bank has joined with other exchange banks in contributing to the Industrial Credit and Investment Corporation, which is designed to promote private industrial undertakings in India. Mr. Bernard noted the success of India's internal economic planning, especially in the matter of full production, but noted the burdensome income-tax and commented: "While some incentive is provided for new industrial developments, taxation on individuals, commercial undertakings and existing industries is very severe."

Coal Output in June.—The output of coal in collieries in India decreased from 3,174,749 tons in May, 1955 to 3,074,672 tons in June, 1955, according to official statistics released by the Chief Inspector of Mines. Despatches of coal amounted to 2,658,339 tons in June, 1955, as against 2,743,951 tons in the preceding month. Coal stocks at pitheads increased from 4,094,949 tons at the beginning of the month to 4,122,174 tons at the close of the month. During the month under review, 839 collieries were reported to be working with an average daily employment of 328,569 workers. Output per man-shift was estimated at 1.10 tons for miners and loaders, 0.59 ton for all workers underground and in open workings and 0.37 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 14.13. Coke plants at collieries and elsewhere produced 342,104

tons of hard, soft and other kinds of coke during the month and despatched 146,761 tons.

Decision on Reserves.—When the Madras Electric Tramways Ltd. decided in 1953 to close down, the workers put up a claim for a share in the Company's reserve fund and the Special Industrial Tribunal appointed to adjudicate this dispute upheld this claim by allowing 50 percent of the funds to the workers on the plea that "it was but legitimate that the workers should be allowed to participate in the reserve fund as the profits must have been earned with the workers' efforts as much as with the aid of the shareholders' capital and the ability of the management." In addition the workers were granted half a month's basic wages for every completed year of service with a maximum of six months' wages. Against this, the Indian Union as well as the management of the defunct Madras Electric Tramways Ltd. went in appeal to the Labour Appellate Tribunal of India in Bombay. The Government of India in its appeal against the lower court award urged that payment of compensation from reserve funds was illegal and the acceptance of such a principle would have serious repercussions on the capital structure of public limited companies. In rejecting the Special Tribunal's award, the Appellate Tribunal observed that profit-sharing schemes as such were still in a "nebulous state" in India, "resting on the

tentative report of a Committee not yet implemented by the Government" and held that neither in law nor in equity could a succession of workmen be regarded as partners entitled to participate in the reserve funds or the capital of the company at any time, much less the particular workers who happened to be employed in its closing years. In support of its finding, the Appellate Tribunal also quoted extensively from a number of decisions from various Tribunals, High Courts and the Supreme Court dealing with similar issues, notably concerning tramways and electric supply companies in Bombay, Calcutta, Kanpur and Shahrarapur and observed that it was an erroneous presumption that workers were entitled as of right to a substantial share in reserve funds, adding that "such a right has never been conceded, much less allowed, in the past." One of the reasons which led the Appellate Tribunal to come to this decision was the consideration that "employees are in a privileged position as regards their wages, salaries and dearness allowance, while shareholders are in a privileged position in regard to the distribution of assets. There is, therefore, no partnership in the real sense of the term between workers and shareholders," mainly because the labour force in a concern is an inconstant factor. Elaborating this argument, the Tribunal observed that "a labour force which contributes to the building up of the funds of a concern, is a succession of workmen, who toiled and took rest in death or retirement or who had the misfortune of being discharged. What justice is there where the claim is in essence a claim to share the fruits of others' labour by persons who happened to be in the employ of the company in the particular year in which its business is wound up? Those employees could in no sense be regarded as the representatives of the older generation of workmen." The Tribunal, therefore, came to the conclusion that it was only among the shareholders of the company that its property should be distributed and that employees as such were not members of the company who could participate in such distribution. The Tribunal, however, raised the figure for retrenchment relief from half a month's basic wages for every completed year of service subject to a maximum of six months' salary, as granted by the lower court, to half a month's basic wages for every completed year of service without any ceiling and rejected the company's contention that retrenchment relief and a share in reserve funds were distinct issues and must be considered separately. The Tribunal observed that in view of the losses to the workers following denial of their claim on the reserve fund, "we do not consider ourselves fettered from raising the quantum of the retrenchment relief granted by the lower court," although the workers had not asked for such enhancement.

LIABILITY FOR THE LOSS
OF GOODSTHE PORT COMMISSIONERS'
CASE

(FROM OUR LEGAL CORRESPONDENT)

WHERE, by an order of the Customs authorities, goods have been detained on the Port Commissioners' premises and in consequence of that order the owner is unable to remove them in spite of his readiness to pay full Customs duty and the goods thus remain against the owner's will, compulsorily in the custody of the Port Commissioners for more than three clear working days, can the owner successfully claim damages against the Port Commissioners for non-delivery, lost while in the Port Commissioners' custody? That was the interesting and important point recently considered by the Calcutta High Court in *Commissioners, Port of Calcutta v Ghasiram and others* (plaintiffs).

There were three cases, the first two similar as regards the material facts and the third with a substantial difference. We will consider the first two together and the third separately. Rule No. 2901 of 1953 was the first and it arose out of a suit on a claim for damages for non-delivery of three bags of betel nuts out of 79 bags of betel nuts which arrived in the port of Calcutta by S.S. *Shirala*. These bags were landed on 21st June, 1949 and Customs duty as claimed on the papers was paid. There was, however, an order by the Customs Officer for detention of 10 bags, and the remaining 69 bags were delivered to the owner on 30th June, 1949. The excess duty demanded by the Customs Officer was paid afterwards and there was an order on 18th July, 1949, releasing the remaining bags. But when the owner's agent went to take delivery of the 10 bags, delivery was given only of seven bags and three bags were not delivered on the ground that they could not be traced. Hence the claim for damages.

In the next case, which is really No. 3 but which we are lumping with No. 1 on account of the similarity in the facts, another plaintiff Yousuff Abdulla sued for recovery of Rs. 1,306 as damages for non-delivery of five bags of split betel nuts. One hundred bags of these nuts consigned to the plaintiff arrived at the Calcutta Port by S.S. *Eastern Saga* and were landed on the Port Commissioners' jetty on 12th July, 1950. Of these, 95 bags were delivered to the plaintiff on 25th July,

1950. The other five were not delivered. On 25th July Customs duty of Rs. 9,800 was paid by the plaintiff. The order of the Customs authorities on that date was: "Pass out of Customs control in part. Detain five bags." There was a further order on 25th August, 1950: "Pass out of Customs control in full."

Case 2902 will have to be considered separately. The suit was for the recovery of damages for non-delivery of four drums of coconut oil. Sixty-seven drums of coconut oil arrived in the port by S.S. *Ha Kang* on 29th September, 1949 and were landed on the Port Commissioners' jetty on 29th or 30th of the same month. The plaintiff did not take delivery of these at the port but instead instructed the Port Commissioners to despatch them by train to Bankura. Sixty-three drums were actually despatched; the remaining four were not; and when the plaintiff enquired about these he was told that they could not be traced. And in respect of this non-delivery he filed his suit for damages.

Well, there you have the three cases. The learned Small Cause Court judge found for the plaintiffs in all three. On appeal the Full Bench of the same Court affirmed these decisions and the Port Commissioners applied to the High Court for revision on the ground that the Courts below had erred in law in holding that Section 113(2) of the Calcutta Port Act did not exempt the Port Commissioners from liability. Now, before considering this sub-section it will be well to remind the reader that ordinarily the responsibility of the Commissioners for the loss, destruction or deterioration of goods is that of a bailee, subject to certain statutory restrictions. One only of these restrictions is concerned with the facts in these three cases and that is Section 113(2) which, except in certain events which did not exist in any of the three cases, limits this liability to three days from the time of landing. This is the sub-section: "If any owner without any default on the part of the Commissioners fails to remove any goods other than those stored in warehouses licensed under Section 16 of the Sea Customs Act 1878 from the premises of the Commissioners within three clear working days from the time of landing such goods shall remain on the premises at the sole risk and expense of the owner."

It was not disputed that the goods were not stored in any licensed warehouse, so here we have a clear cut issue. Were the Port Commissioners liable in damages for non-delivery of the goods or not? One would have appreciated an opportunity to peruse the judgments of the trial and first appellate courts which held that they were; but as they

are not available we have to be content with the references to them in the judgment of the High Court. We will for the moment leave out of consideration the third case in which the plaintiff had instructed the Port Commissioners to send off the goods by rail to Bankura; we will deal with the other two. Said Das Gupta J. (D. Mookerjee, J. concurring): ".....It is not disputed that the plaintiffs in these two suits failed to remove the bags for which damage is now being claimed within three days from the time of landing. The case was sought to be made that the failure to remove was due to some default on the part of the Commissioners. The learned trial court has remarked that for the failure to remove the plaintiffs were in no way liable. It is not necessary, however, to consider whether the plaintiffs are liable or not. The question that requires decision in considering whether the protection afforded by Section 113(2) will be available to the Port Commissioners, is first, whether there was any default on the part of the Commissioners which was in any way responsible for the owners' failure to remove any goods. The fact that the Customs authorities ordered detention and so, in spite of the plaintiffs' readiness to pay full Customs duty, the plaintiffs were unable to remove the goods might well justify the conclusion that the plaintiffs were not to blame for not removing the goods, but that would be no reason to find any default on the part of the Commissioners. It has to be remembered that the Customs officers are in no way the agents of the Port Commissioners and, if the Customs officers order detention, it is not open to the Commissioners to direct removal. When, therefore, as we find in these two cases, the real reason why the bags of betel nuts could not be removed was that the Customs officers had ordered detention, it must, in my judgment be necessarily held that the failure to remove the goods cannot be said to be because of any default on the part of the Commissioners. The failure to remove the goods in these two cases was without any default on the part of the Commissioners.....(and).....as the owners had failed to remove the goods within three working days from the time of landing, and as this failure was without any default on the part of the Commissioners and as these goods had not been stored in any warehouse licensed under Section 16 of the Sea Customs Act the Port Commissioners would be protected from liability as a result of the words: 'Such goods shall remain on the premises at the sole risk and expense of the owner.'"

So in these two cases the orders passed by the lower courts were set aside and the suits dismissed.

The facts in the third case were, substantially different. "As the goods were landed on 29th and 30th September, 1949 and the Customs duty was only paid as late as 8th October, 1949 the Port Commissioners would be exempted from liability if, on the plaintiff asking for delivery at the Port Commissioners' shed, the goods could not be traced. The fact however that the Port Commissioners undertook to despatch the goods to Bankura changes the position. As a necessary consequence of that undertaking the goods would not be removed by the plaintiff and if it could have been shown that the four drums were lost after three days had passed but before the plaintiff had paid the Customs duty and placed all other necessary documents in the hands of the Port Commissioners there would be scope for an argument that the loss having occurred when the goods were lying at the plaintiff's risk the Port Commissioners were not liable. If, however, the goods were in the possession of the defendant by reason of his having landed them—at the time all the necessary documents including the Customs clearance order were made over by the plaintiff to the defendant, so as to enable the defendant to remove the goods from the jetty for despatch by railway in accordance with the further contract—the defendant would be liable for the loss of the goods on the fresh contract for bailment. Whether the goods were in the defendants' possession at this time or had been lost earlier was a fact within the knowledge of the defendants. As no evidence has been adduced by the defendants about this we are bound to conclude that all the 67 drums were in the defendants' possession at the time the necessary steps for removal of the goods had been taken by the plaintiff by handing over the goods to the defendants and that the defendants' possession thereafter was not in consequence of their having landed them but because of their having taken delivery on behalf of the plaintiff for removal to Bankura by railway.....(and) the 67 drums were in the possession of the Port Commissioners when armed with the necessary documents it was in a position to clear the goods and that they must therefore be held to have entered into a new contract of bailment for these 67 drums. As four of these have been lost and though they were bailees they have not offered any explanation for the loss it must be held that the loss was due to their negligence." The judgment of the Courts below was affirmed.

Commissioners Port of Calcutta v Ghasiram 59. C.W.N. (25th July) 925 J.

NO PLANS TO START STATE-OWNED
RUBBER FACTORY

In reply to a question by Mr. V. P. Navar in the Lok Sabha today, Mr. Mahavir Tyagi, Minister of Defence Organisation, stated that the Government had no plans to start a State-owned rubber factory for the manufacture of essential rubber goods required for the Defence Services; and that the estimated value of rubber goods consumed in a year by the Defence Services was Rs. 60 lakhs.

BEING thoroughly convinced of the justice of India's case against the Portuguese, one is prepared to suffer inconvenience for the cause. But in common with most other people in Calcutta, I would have been happier about yesterday's minor inconvenience if the connection between it and the struggle for Goa had been more evident. I do not see why Indians should make life uncomfortable for other Indians because the Portuguese behave cruelly and stupidly. But there, I shall never understand these matters for I am no sort of a Gandhian. Just an ordinary, unregenerate, wicked Westerner, my reaction when the hirelings of an outdated Portuguese dictator killed a few dozen of my countrymen would be to recommend use of the army. I can well conceive Mr. Nehru's objection to that obvious and old-fashioned method of dealing with brutality. Quite apart from his attachment to the principle of *ahimsa*, there would be the discrepancy between India's practice and her precept. Marked discrepancy between the two at this delicate stage of the world's affairs might be fatal to India's useful position as a defender of peaceful negotiation. Her rôle in this sphere is already regarded with enough ill will in some places to ensure that any backsliding would be widely advertised. So, one is led to admire the firmness with which Mr. Nehru holds to his own teaching before a weight of national opinion that would pardon complete departure from it now in India's interest. In the space of a few sentences, I have involved myself in the illogical position of favouring the use of the army in Goa and yet approving the steadfastness with which Mr. Nehru declines to use it. I think a similar contradiction of sentiments is now troubling many Indian breasts, and this may account for some of the irrelevancy of expressions of national pride in the past week. What would be more damaging in the long run—for India to fall from grace as an apostle of peace, or for the country to continue being torn by impotent distress—I cannot pretend to know, but this is perhaps the question that will have to be decided in New Delhi before long. The case is not made any simpler by the circumstance that the natural, mainly reaction of a nation insulted is being exploited by political parties who welcome an opportunity to embarrass Mr. Nehru and to make his Government appear out of touch with popular feeling. It is certainly too early yet to say that the doctrine of non-violence has failed as a national policy in Goa, but enough has happened to show that a people that practises non-violence has to suffer intolerable exasperation when faced with an opponent who is prepared to act very harshly and very stupidly. I venture to suggest that non-violence has not yet been tried here against an enemy who quite lacks both decency and circumspection—though it might have been twelve years ago if events in Burma had taken a different course. The Western democracies, who are frequently chided in India for their indifference to the message of *ahimsa*, have several times in our generation had to face just such an enemy, so their little faith might be pardonable. But that same fact should prevent Western democrats falling for any false romanticism about "little Portugal" and "big India". The policy of a dictatorship, little or great, has the same character of recklessness and cruelty, and we saw it displayed on Monday in Goa. Does anyone imagine that if there were a vestige of freedom in metropolitan Portugal the Salazar régime would be able to persist in so coarse, and ultimately so silly, a policy?

The Sardar Patel Lectures which are to be broadcast annually over All India Radio are evidently intended to be something of an equivalent to the BBC's Reith Lectures, and it was natural that Rajaji, who combines wisdom with a playful wit, should have been invited to deliver the first on Sunday. He chose for his subject a theme that is as old as philosophy itself, "The Good Adminis-

A DITCHER'S DIARY

trator", a topic on which the first wise words were said by Confucius and Plato. Never shy of voicing an unpopular opinion, India's elder statesman threw a dart at the dogma of "uplift" as applied to backward castes and classes in the administration: "Short-sighted favouritism and concessions to produce contentment among classes and castes will be very short-lived, and will deteriorate into a constant pandering to intrigues and factions if we do not look to the real efficiency of the administration". He knows too much about these matters for me to challenge him, but when he comes to the relations of big business and the administration I think Rajaji subscribes to an illusion all too common in Delhi. He says: "The days of big business may be thought to be over, on account of the Congress resolution as to the pattern of society that Congress wants to build up. But in reality it is not the case. Big organisations are still wanted and will continue. High taxation and low net profits are no doubt deterrent elements for private enterprise. But though profits do not any longer accrue on the war-period scale, and though taxation is growing heavier and heavier with each budget, big business has its attractions still. As long as talent exists, there is a vocational call for big business to which men cannot say nay, profit or no profit, taxation or no taxation. Big business in that sense has an undying future. Big men will continue doing big things because they cannot help it". Now this must be a very comforting notion for administrators, the less polished of whom will take it to mean: "We can wallop the daylight out of Birlas and Tatas and Andrew Yule, but they will carry on because they're just made that way". There is some truth in it of course. Really big business is extraordinarily resilient, and adjusts itself to conditions that it previously denounced as intolerable. But there is truth too in the story about the straws and the camel's back. Very big businesses have folded up before today because administrators have acted on Rajaji's optimistic theory. Much more important however is the fact that the future may lie with firms that are not yet big enough to be resilient, but are still struggling and may be killed by Rajaji's "good administrator". A developing economy cannot afford to assume that today's giants have all tomorrow's answers, so it is no comfort that the big firms withstand shocks that snuff out new enterprises. A flood may not wash away the oaks, but it will dislodge all the acorns that would have provided the new forest.

The "village exchange scheme" that is being tried out in many West Bengal districts has been variously hailed as India's salvation and damned as economic primitivism. The second judgement would be much nearer the truth than the first; but even if it were completely true, that would not mean that the scheme was not worth sustained support. Desperate ills require curious remedies, and it is a change to see devoted development workers devising remedies on the spot without regard to the catch-cries and shibboleths that pass for economic discussion in the cities. But the first thing is to know what the scheme is and how it works. This is explained in a pamphlet called *The Village Exchange* by the man who has done most to promote it, Mr. Sushil Dey, West Bengal's Development Commissioner. Those who found the newspaper controversies about peasants exchanging lamp-stands for razor blades hard to follow, can now turn to this pamphlet for enlightenment. The advocates of the scheme are, naturally, and excessively, enthusiastic about it; balance is restored by publishing at the end of the booklet the observations of various economists, who suggest sundry difficulties and limitations. One of these economists said to me last winter that the one thing she could not understand about

Mr. Dey's scheme was why all its Indian critics got so angry—they seemed to feel that it was not merely mistaken, but actually morally objectionable. I supposed that this was because in India today we all want not just a wealthier economy but a more sophisticated one; not just a higher national income, but more jet planes, bill markets and industrial banks. In that sort of atmosphere, a man who comes along talking about barter in the villages is an offensive reactionary, even if his scheme works. Actually the exchange programme is not barter. It retains money as an instrument of calculation although it disregards money prices as a measure of effective demand. It is not so primitive after all, and much of the propaganda in favour of it in the villages consists in teaching Bengali peasants the elements of Adam Smith. By the same token, it is no almighty discovery that is going to transform the Indian economy. If a stockbroker happened to get an order from Mr. Banerji to sell one thousand Irons and spend the proceeds buying Titaghurs; and if he happened the same day to get an order from Mr. Nair to sell one thousand Titaghurs and spend the proceeds on Irons; and if the stock market happened to be shut (as it almost certainly would be in Calcutta)—then he could conceivably marry these dual orders and give one party a small credit. But he would not imagine that he had made a discovery that was going to put the stock exchange out of business, because the stock market has to be there to fix a price for the "barter" deal. If such a broker thereupon invited all his clients to meet him under a peepul tree to swap their shares, he would be sacrificing many modern conveniences, and in any case he would soon find that his customers were taking their differences in cash and had reverted to the full monetary system. This analogy suggests only the limitations—and the harmlessness—of the exchange scheme. We would need another analogy to bring out its undoubted advantages in an economy where money has lost some of its power to call forth productive effort. The important thing is that Mr. Dey and his team have found something that interests the peasant and sets him working and trading harder than he did before.

Echoing a fairly common complaint, I wrote here two weeks ago about certain political journalists who lick so many boots in public that they have attracted the charge of servility. One of them, who had elsewhere been attacked by name, replied under a pseudonym in *The Statesman* that he would have his critics know that the Government of India had a dossier on their activities. The implication that they had therefore better look out was so despicable a threat as not to seem worth noticing. But the same writer returned to the subject in last Sunday's *Statesman* with the complacent observation: "My remarks last week about little McCarthies have caused a disturbance in the expected quarters". So it might be as well to make plain that his threats have caused not the least disturbance in this quarter. Nor, I should think, have they done so anywhere else. I cannot think that any journalist in India would be dismayed by the prospect of being pipped on by "Vedette".

"The first night I got to Rome I went to a masked ball. The only Italian I knew was a hangover from the war: *Niente Tedesci* (no Germans) or *Molto Tedesci* (many Germans), and that wasn't much use at a masked ball. After midnight, when the masks were off, I went up to Gina Lollobrigida, gave her a sweet smile and said, 'Dove?', which I thought meant 'How do you do?'. But the way I said it, I'd said 'Where?', and so established a reputation for the Anglo-Saxons not being so backward as they're supposed to be."—Derek Bond, in *In Town Tonight*

THE DITCHER.

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS.

The Subscription List will close on Monday, the 22nd August, 1955 or earlier at the discretion of the Directors.

A copy of this Prospectus has been filed with the Registrar of Joint Stock Companies, Patna as required by Section 92(2) of the Indian Companies Act, VII of 1913. "Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them."

"A license has been obtained from the Central Government for the establishment of a new industrial undertaking for the manufacture of cement of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this license the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness in any of the statements made or opinion expressed in regard to it."

The Company is already on the official quotation list of Delhi Stock Exchange Association Limited and applications have been made to the Calcutta Stock Exchange Association Limited and The Native Share & Stock Brokers Association, Bombay for enlistment.

ASHOKA CEMENT LIMITED

(Incorporated under the Indian Companies Act VII of 1913)

AUTHORISED CAPITAL

Rs. 2,50,00,000

Divided into:—

50,000 Preference Shares of Rs. 100/- each.

20,00,000 Equity Shares of Rs. 10/- each.

ALREADY ISSUED & SUBSCRIBED:

1,50,000 Equity Shares of Rs. 10/- each.

PRESENT ISSUE:

4,50,000 Equity Shares of Rs. 10/- each at par of which 1,50,000 Equity Shares of Rs. 10/- each have been agreed to be subscribed which will be allotted accordingly.

Now the balance 3,00,000 Equity Shares of Rs. 10/- each are offered for subscription by the public at par and are payable as follows:—

Rs. 2-8-0 per share with the Application.

Rs. 7-8-0 per share on demand against offer of delivery of share scrips.

REGISTERED OFFICE

Dalmianagar, Dist. Shahabad (Bihar).

PROSPECTUS

The Company was incorporated on the 27th May, 1954 for the objects set out in the Memorandum of Association generally (a copy whereof is attached hereto) and in particular to produce, manufacture, purchase, sell and to deal in all kinds of cement, cement products, lime, limestone and to establish, maintain and work cement factories and other works.

The immediate plan is to set up at Dalmianagar in the State of Bihar a Cement Plant with a kiln capacity of 775-850 tons per day. In pursuance of this objective about 7 acres of land have been secured on 99 years lease from Messrs. Rohtas Industries Ltd., on a rental of Rs. 2,100/- per annum. Limestone deposits are abundant in the neighbourhood of Dalmianagar and judging from the results of the existing cement factories, the location provides excellent advantages.

Main plant and machinery have been purchased from Messrs. Fried Krupp Maschinen- und Stahlbau Rheinhausen, W. Germany. Installation work is in progress. The factory is expected to go into production in about six months. Even on the basis of an average profit of Rs. 10/- per ton at a normal annual production of 2,50,000 tons of Cement it is expected that the Company would be able, after making requisite provision out of its working profits for redemption of loan capital, to declare fair dividends on its equity shares from the very first year of operation. The Company has the advantage of a small capital base and low capital expenditure per ton of Cement.

It is well-known that in the years to come there will be progressively increasing demand for cement. The following table shows the present position in

respect of Ordinary Shares of a few cement companies.

Name of the Company	Face Value of Ordinary Shares, Rs. a	Market Quotation (Around) Rs. a	Dividend per cent per Rs. a face value
Associated Cement Cos. Ltd.	100 0	190 0	8.5
Dalmia Cement (Bharat), Ltd.	10 0	16 8	10.0
Sone Valley Portland Cement Co. Ltd.	5 0	7 8	7.5
Shree Digvijay Cement Co. Ltd.	100 0	205 0	8.5

The Directors do not propose to issue any further Capital until the Company declares a dividend on the present issue.

TAX BENEFIT

The Company is advised that companies' subscribing capital under this issue will be entitled to obtain exemption from payment of Super Tax as provided in Section 56A of Income Tax Act.

PREVIOUS ISSUES AND MINIMUM SUBSCRIPTION

The Company, incorporated on the 27th May, 1954, issued and allotted to the subscribers of the Memorandum and Articles of Association, Directors and their friends Equity Shares of Rs. 5 lacs. The Company obtained Certificate of Commencement of Business on 23rd August, 1954. Thereafter further shares of Rs. 10 lacs have been issued and allotted to the Directors and their friends. The Company has not carried any business except placing orders for machinery and acquiring land on lease. The Industrial Finance Corporation of India has sanctioned a loan of Rs. 50 lacs against the 1st mortgage Debentures secured on the fixed assets of the Company. The shares allotted and subscribed as aforesaid together with the loan of Rs. 50 lacs are in the opinion of the Directors sufficient to provide in respect of matters specified in Sec. 101(2) of Indian Companies Act in relation to the present issue.

PRELIMINARY EXPENSES

The preliminary expenses exclusive of brokerage are estimated to be not more than Rs. 50,000/-.

VOTING RIGHTS

No member shall be entitled to be present or to vote on any question either personally or by proxy for another member at any general meeting or upon a poll or be reckoned in quorum whilst any money is due from him alone or jointly with others to the Company in respect of any shares in the Company.

Every holder of an Equity Share not disqualified by the preceding Article or Articles and who has been duly registered in the books of the Company before the date of General Meeting shall be entitled to be present and to speak and vote at such meeting and when present in person shall have one vote on a show of hands and on a poll when present in person or by proxy shall have one vote in respect of every Equity Share held by him in the Company. The holders of Preference Shares shall not be entitled to any voting rights, but shall be entitled to be present at any meeting of the Company.

No member, not personally present, shall be entitled to vote on show of hands unless such member is a corporation present by a proxy or a Company present by a representative duly authorised under Sec. 80 of the Act, in which case each proxy or representative may vote on the show of hands as if he were a member of the Company.

The right to exercise the vote of a lunatic, idiot or a minor shareholder shall be exercised by his duly constituted curator, committee or other legal guardian. In absence of any such duly constituted curator, committee or guardian, if more than one person claim to exercise the right of vote, the Chairman of the Meeting will accept the vote of such person only as he may select in his absolute discretion.

Any person entitled under the transmission clause to transfer any share may vote at any gene-

ral meeting in respect thereof in the same manner as if he were the registered holder of such shares, provided that at least forty-eight hours before the time of holding the meeting or adjourned meeting, as the case may be, at which he proposes to vote, he shall satisfy the Directors of his right to transfer such shares unless the Directors shall have previously admitted his right to vote at such meeting in respect thereof.

If there be joint registered holders of any shares, any one of such persons may vote at any meeting either personally or by proxy in respect of such shares. If more than one joint-holders be present at any meeting either personally or by proxy, that one of the said persons so present whose name stands first on the register shall alone be entitled to vote in respect of such shares but the other joint-holders shall be entitled to be present at the meeting. Several executors or administrators of a deceased member in whose name the shares stand shall for the purpose of these Articles be deemed joint-holders thereof.

DIRECTORS' QUALIFICATIONS AND REMUNERATION

The qualification of a Director, other than an Ex-officio Director, shall be the holding of in his own name or jointly with any person whether beneficially or as a trustee for any Company or person or otherwise at least one share of any class in the Company.

The remuneration of the Directors shall from time to time be determined by the Board of Directors. At present the Directors have fixed Rs. 100/- per Director for attending each meeting.

The Directors shall be paid their travelling and other expenses (including hotel expenses) of attending and returning from meeting of the Board or Committee or Sub-Committee as fixed by the Board from time to time.

If any Director shall be called upon to go or reside abroad on the Company's business or otherwise perform extra services (which expression shall include work done by a Director as a member of any Committee or Sub-Committee formed by the Director) the Board may arrange with such Director for such special remuneration for such services, either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Board. This remuneration may be either in addition to or in substitution of the remuneration above provided, and the Directors shall be entitled to be paid any travelling or other expenses incurred in connection with the business of the Company.

BORROWING POWERS

The Directors or the Managing Agents (within the limit or limits fixed in that behalf by the Directors and subject to the previous approval of the Directors) may raise or borrow any sum or sums of money for the purpose of the Company and may secure payment or repayment of the same in such manner and upon such terms and conditions as may be prescribed by the Board and in particular by the creation of any hypothecation or charge on and over the Company's stocks, stores, book debts and other movable property, provided that the Managing Agents shall not exercise the power to issue any debentures.

Provided further, that the amount borrowed by the Company (exclusive of the amount borrowed by hypothecation, pledge or mortgage of the stock-in-trade, book debts and movable assets to the extent not exceeding the full value thereof) and outstanding at any one time shall not, without the sanction of the Company in General Meeting, exceed the issued capital plus Reserves of the Company, but so that no lender or other person dealing with the Company shall be concerned to see or enquire whether this limit is observed or not.

RESTRICTIONS ON TRANSFER OF SHARES

The Directors may, at their absolute and uncontrolled discretion, and without assigning any reason, decline to register or acknowledge any transfer of shares other than fully paid-up shares.

(Continued at top of next page)

ASHOKA CEMENT LIMITED—Cont'd.

(Continued from bottom of previous page)

RIGHTS IN RESPECT OF PREFERENCE AND EQUITY SHARES

The Preference Shares shall confer on the holders thereof the right to a fixed cumulative Preference Dividend as will be determined by the Directors at the time of their issue and shall rank both for capital and dividend in priority to Equity Shares, but will have no further rights to participate in the profits or assets. The Company may, by a resolution in the General Meeting issue Preference Shares, which are, or at the option of the Company are to be liable to be redeemed on a premium which will be determined by the Company in General Meeting.

No issue of Preference Shares is, however, contemplated for the time being.

INTEREST OF DIRECTORS

Directors are interested in the promotion of the Company as shareholders and to the extent of the remuneration payable to them as hereinbefore specified. Shri V. P. Jain is also Director of Rohtas Industries Ltd.

BROKERAGE

Brokerage at the rate of annas -4/- per Equity Share will be paid by the Company to Bankers, bonafide brokers and members of the recognised Stock Exchange in respect of all shares allotted against applications received bearing their stamp.

APPLICATION FOR SHARES

Application for shares may be made on the form accompanying the Prospectus or any typed or printed copy thereof or on the form which may be obtained from the Registered Office of the Company or its Branch Office at 11, Clive Row, Calcutta or from any of the branch offices in India of the following Banks:—

1. State Bank of India.
2. Chartered Bank of India, Australia and China.
3. The Punjab National Bank Ltd.
4. Allahabad Bank Ltd.

Application together with the necessary remittance for the shares applied for may be made at any of the above-mentioned places. In case of applications to the Company's offices direct, cheques drawn on any bank in India will be accepted at par. In the case of applications through banks, outstation cheques or drafts should include collection charges and all payments (not in cash) tendered to banks should be drawn to the order of the bank. Where no allotment is made, or where the number of shares allotted is less than the number of shares applied for, the full deposit or the balance of deposit, as the case may be, will be returned without interest.

The shares will be issued subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office or the Branch Office of the Company during office hours.

Company Meetings

INDIAN COPPER CORPORATION LIMITED

MR. K. R. FETTES' REVIEW

Addressing the Thirty-first Annual General Meeting of the above Company held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, the 17th August, 1955, at 11-30 a.m., the Chairman, Mr. K. R. Fettes, C.A., said:—

Accounts

As you will observe from the Profit and Loss Account, the Corporation has had a very satisfactory year, the result achieved being a record in the Corporation's history. This has been due to the consistently high world price of copper throughout the year and also, to a certain extent, to reduced development expenditure and an improvement in the standard of production of rolled sheets.

The profit for the year, before providing for taxation, depreciation and reserves, amounted to £398,382 as compared with £410,982 in 1953 when, as you will remember, results were seriously affected by a prolonged strike. The provision for taxation at £264,395 is lower than would normally be payable on such profits, the reason being that during the year we successfully fought an appeal in respect of the 1952/53 assessment which resulted in a refund of over £73,000.

Full provision has been made for Depreciation and it has also been deemed prudent to set aside £120,000 to cover the accrued liability of the Corporation for retirement gratuities which will be payable to workers under the new Labour legislation and also the cost of a new superannuation scheme for the staff, which your Directors consider to be essential in the best interests of the Corporation.

£150,000 has been allocated to General Reserve as against £75,000 last year, because, although the liquid resources of the Corporation are at present in a very satisfactory state, further heavy capital expenditure will have to be incurred during the next few years in developing the mine and possibly in sinking a new shaft should the results of present exploration of new areas prove successful. It will interest you to know that the new Circular Shaft which has recently been completed cost £330,000.

After making these provisions there remains a sum of £263,987 to which has to be added £76,278 brought forward from last year, giving a total of £340,265. Out of this, your Directors are pleased to be able to recommend the payment of a Dividend of 15% and a Bonus of 10% both free of Income Tax, absorbing £228,550 and leaving £111,715 to be carried forward to next year.

Results for the current year to date continue to be satisfactory as the world price of copper is still high, but it is unlikely that this price will be maintained indefinitely.

THE INDIA CEMENTS LIMITED

CHAIRMAN SRI P. SURYANARAYANA'S

SPEECH

The following speech was delivered by Sri P. Suryanarayana, Chairman, at the 9th Annual General Meeting of the India Cement Limited, held at 11/12, Second Line Beach, Madras-1, on 10th August 1955, at 11 A.M.

Gentlemen,

It gives me very great pleasure to extend a hearty welcome to you to the 9th annual general body meeting of this Company. The Balance Sheet and the Profit & Loss Account have been in your hands for some time past, and, with your permission, I will take them as read.

Before I commend the Balance Sheet and the Profit & Loss Account to your acceptance, I should like to make a few observations. Last time when we met here for the general meeting, I held out expectations to you of larger profits and bigger dividends. The Directors at that time also recommended an interim dividend for the year. I am extremely glad to inform you that my expectations have now been realised. Rs. 18,58,311/- for the year, against net profit of Rs. 6,37,234-8-0 in 1954 and Rs. 5,35,816-11-0 in 1953, after providing full depreciation as usual. The Company has for the first time had its normal working to its full capacity unaffected by any powercuts, and the Directors have been able to declare not only a larger dividend to Ordinary Shareholders, but also a dividend to the Deferred Shareholders are also participating in the dividends. I am sure you would agree that it is certainly a very happy position. The working of the Company for the current year, I am glad to say, is very encouraging.

I need not explain at any great length regarding the financial position and other aspects of the Company, as the figures in the Balance Sheet bear eloquent testimony to the strong, sound and stable position of your Company. The Company has so far depreciated the fixed block to the extent of nearly Rs. 46 lakhs. In spite of very many bottle-necks in the allotment of transportation and restrictions in the allotment of wagons, the entire cement produced has also been sold and transported. The sales for the year 1955 have been of the value of Rs. 1,09,06,771/- as against Rs. 71,51,986/- and Rs. 88,05,729/- for the years 1954 and 1953 respectively. Should the present conditions not change, we hope to have even better results next year.

Expansion Programme

At the last general meeting, I also told you of the expansion programme that your Directors had taken on hand. The expansion is well on its way. We have finalised the loan of Rs. 30 lakhs from the Industrial Finance Corporation of India. We have also placed orders for the equipments required. The construction of foundations has also been taken in hand; we hope to be producing on the expanded unit before June next year. Perhaps by the time we meet for the

Copper Leases—Operating Results

A detailed review of the year's operations is given in your General Manager's Report, which can be seen during office hours at the Company's Head Office. Production and despatches were satisfactory, and operating costs were reduced due to lower development expenditure and to increased efficiency in sheet production.

Development

As in the previous year lateral development has been restricted, but development in depth continues.

Ore Reserves

Although the estimated reserves now stand at 3,369,286 short tons as compared with 3,415,570 at the end of the previous year, this is not considered unsatisfactory in the circumstances. It is not expected that Ore Reserve tonnages can be increased until the development in depth has made sufficient progress to allow for the opening up of points of attack so that fresh lateral development may be started.

Sales

Although the price of copper fell after the re-opening of the London Metal Exchange in August, 1953, it recovered when the accumulated stocks in Chile were disposed of, and firmed still further as a result of prolonged strikes in Chile and other copper-mining countries. The demand for brass sheets, however, slackened, and we were unable to dispose of our full production. The average selling prices of the Company's products during the year were as follows:—

Copper Ingots	...	...	£233 per ton
Roller Brass	...	...	£230 " "
Y. M. Circles	...	...	£241 " "
Roller Copper	...	...	£288 " "

Kyanite

During the year Government relaxed the restriction on the export of this ore so that shipments improved by 3,300 tons. The average export price was again approximately £20 per ton.

Labour

The rivalry between the two Unions at the Mines and the Works continues, but there have only been departmental strikes of short duration during the year.

Taxation

In my address last year I referred to the preferential tax treatment granted to non-bedded mining companies in other countries, and expressed the hope that as a result of the case submitted to the Taxation Enquiry Commission they would recommend that such mining companies are faced with risks and uncertainties which do not apply to normal industries. Their recommendations, however, if implemented, would not in our opinion be of very material advantage to the few companies already established, and would not give that incentive which is so necessary if the non-bedded mineral resources of the country are to be adequately developed.

Staff

A very high standard of efficiency has again been maintained both at the Mines and the Works and our thanks are due to all members of the Staff for the excellent service they have rendered to the Corporation.

next general body meeting, the plant will be working to the full capacity of 2 lakhs tons of cement per year. Your Directors have taken up this expansion fully realising the implications involved. We have not gone into it in any haphazard or hasty way. You are all aware of the Second Five Year Plan, which is under preparation by the Government of India, under which tremendous industrial expansion has been envisaged. The First Five Year Plan has been directed towards power, land reclamation, irrigation and the Second Five Year Plan will be more of an industrial and transportation plan. A gigantic programme of industrial expansion has been planned and the allotment under this head is in the nature of Rs. 2,000 crores both in the public and private sectors as against Rs. 700 crores in the First Five Year Plan. In the Second Five Year Plan, 7,500 miles of new roads are expected to be laid. Consequently on the development of very many industries in the country, a large number of subsidised industrial housing schemes must grow up. We have also so many urban and rural housing programmes coming up. For everything that we have to do, cement is the basic material. There is, therefore, bound to be a very big consumption of cement during the period. All the cement that is now produced and that will be produced is bound to be consumed in our country.

Export Possibilities

We have also a very large potential market for the export of cement in the South East Asian countries. I have been recently in these countries and have seen what great shortage there is of cement in Burma, in Thailand, in Ceylon, in Pakistan and in very many other countries. The bottleneck for export is lack of shipping facility. If we can get over this problem, we can certainly build up large markets which are ready for our cement in these South East Asian countries. I am extremely glad to say that your Company is at present exporting about 25 to 30 per cent of its production. "Sankar" brand cement is very popular in Pakistan, in Ceylon and in other countries. Your Company being situated very near Tuticorin port is in a very favourable position for export. We have, therefore, great hopes of building up an export market also.

Second Plan Target

As a result of the First Five Year Plan, the production of cement has actually gone up from 1.6 million tons in 1948 to 4.4 million tons in 1954. It is expected that by the time we complete the last year of the First Five Year Plan, i.e. in 1956, the production of cement will go up to nearly 6 million tons. The target fixed for the Second Five Year Plan is 12 million tons. It is the desire of your Board of Directors to play the part expected of them in the development of industries, particularly of cement production in South India. South India, as you are aware, is backward in the matter of industrial development, and we must all do our best to fill up that vacuum.

Labour Welfare

I would also refer briefly to the relations that your Company has with the operatives. The relations between the management and operatives are very satisfactory. Recently, the Chief Minister of Madras laid the foundation stone for an educational institution for the benefit of the operatives in our Factory. We have planned to construct an up-to-date industrial colony for the operatives. We have already purchased about 200 acres of land and we are awaiting the orders of Government for the acquisition of about 200 acres of land for putting up the labour colony. When the colony is completed, it will be one of the most up-to-date and model colonies with all the amenities and conveniences required for the operatives.

Transport Bottlenecks

I must also refer on this occasion to the various handicaps under which your Factory is now working, particularly in the matter of transportation. You are aware that the demand for wagons and transportation facilities has increased largely owing to the increase in agricultural and industrial production during the last four years of the First Five Year Plan. We are unable to get the required number of wagons for moving the cement from the Factory to the consuming centres; and for the transportation of coal and other materials required for the Factory. On account of want of facilities for getting our requirements of coal by rail, we are now forced to bring all our coal requirements by the sea route, which is costing us about Rs. 4 to Rs. 4-8-0 more per ton of cement. You are also aware that recently the freight rates on the railways have been revised, particularly in the matter of freight to stations lying at a distance of 150 to 300 miles from the Factory, and this has resulted in our having to pay substantially more freight on cement despatches. We have made proper representations to Government in this matter. Government have proposed to appoint an expert committee to go into the freight structure on railways. As cement has to be marketed within a reasonable radius, this extra freight is causing an additional burden on the industry. I hope that a suitable revision of the freight structure will be made when the expert committee goes into the question.

I do not think I need detain you much longer. Before I close, I must tender my thanks to the administrative as well as the technical staff both at Madras and at the Factory for the willing co-operation and unstinted service they have given.

I now ask the Secretary to read out to you the Auditors' report. After that, if any of the shareholders have any questions to ask, the management will be pleased to answer them.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

STATE LOANS SUBSCRIBED

Wednesday, 17th August.

BANKS are closed today and business is at a standstill because of the hartal following the Goa killings. Monday was also a holiday for Independence Day, so there is little to report from the markets. The State Government loans opened yesterday and by this evening a majority of them were reported to be fully subscribed and some oversubscribed. During this period, credit naturally tightened and the interbank call rate firmed to 2½%.

The bill of exchange market has been very quiet, both as regards export documents and remittance. The principal exchange rates are unchanged.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 16th August, 1955, totalled Rs. 1,07,50,000. The average rate of acceptance fell from Rs. 2-8-1 to Rs. 2-8-0 percent per annum. Tenders at Rs. 99-6-0 percent were allotted approximately 93 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Monday, 22nd August, 1955.

A rise of Rs. 1.33 crores in notes in circulation to Rs. 1207.13 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 12th August, 1955. The total note issue was Rs. 15 lakhs higher at Rs. 1328.48 crores. Notes held in the Banking Department consequently fell by Rs. 1.19 crores to Rs. 21.34 crores. Deposits of the Government of India and other Government accounts declined by Rs. 1.69 crores and Rs. 1.44 crores to Rs. 75.02 crores and Rs. 9.44 crores, respectively, while balances of commercial banks showed a rise of Rs. 5.23 crores to Rs. 53.74 crores. Balances held abroad declined by Rs. 30 lakhs to Rs. 81.94 crores, and investments at Rs. 62.02 crores were Rs. 36 lakhs higher. Other loans and advances dropped from Rs. 19.58 crores to Rs. 18.75 crores, of which advances to scheduled banks against usance bills totalled Rs. 6.75 crores against Rs. 8.45 crores. These advances amounted to Rs. 172.95 crores since 1st January, 1955. Ways and means advances stood at Rs. 3.57 crores (Rs. 85 lakhs).

The return of the State Bank of India for the week ended 5th August, 1955, shows a drop of Rs. 5 lakhs in total deposits to Rs. 208.52 crores. Investments in Government securities are up by Rs. 33 lakhs to Rs. 93.38 crores, while other authorised investments are down by Rs. 1.20 crores to Rs. 9.75 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 72 lakhs to aggregate Rs. 106.79 crores. Cash and balances are, in consequence, shown at Rs. 15.07 crores or Rs. 3.89 crores less.

The net profit of the BRITISH BANK OF THE MIDDLE EAST amounted to £189,380 for the year ended last March, after providing for taxation, transferring to contingencies reserve and making other adjustments. An interim dividend of 4 percent was paid; the final dividend has been declared at 6 percent. Reserve gets £50,000 (same); bank premises £50,000 (nil). The carry-forward is £137,520 (£132,890).

Cash totalled £7,336,683 (£7,257,174). Investments were shown at £18,884,793.

The 3 percent Pakistan Loan, 1963 which opened for subscription in Pakistan on 14th July, 1955, and continued on tap was closed on 6th August, 1955. Preliminary figures indicate that subscriptions to this loan amounted to Rs. 5,34,52,400.

Stocks and Shares

LESS BUSINESS BUT STEADY UNDERTONE

Wednesday Evening.

IT has been a short trading week because of the Independence Day holiday on Monday and the hartal today. The trend has been steady and yesterday there was strong support for selected industrial equity. It is apparent that if confidence had not been affected by the Goa killings and the strikes and disturbances in Bombay, Patna and elsewhere, the stock exchange would have shown good progress. Indian Irons have been well supported in unofficial trading. A further measure of bull support is expected when the present unrest passes and the market reopens.

Details of the week's trading follow:

Government securities ruled quiet, and the volume of business reported was on a small scale. Sellers continued to predominate and prices were marked back further. The 3% Conversion Loan was easier at Rs. 80-6 and no business was reported in 3% Non-terminable Paper. In short-dated Loans, 2½% 1955 was taken at Rs. 99-12, while 3% 1957 eased to Rs. 99-9 and 3% 1958 was marked at Rs. 99-7 cum-voucher and later at Rs. 99-5 ex-voucher. In the medium-dated group, both 3½% Loan 1961 and 1964 were marked back to Rs. 99-9 and Rs. 98-9 respectively, but 3½% 1965 was firmer at Rs. 98-6 buyers. The 3% 1959/61 loan was quoted at Rs. 98-1 cum-voucher and Rs. 97-15 ex-voucher while 3% 1963-65 was on offer at around Rs. 94-6 as was 3% 1964 at Rs. 94-5. In an otherwise dull market, 2½% 1961 was a steady feature at Rs. 92-5 buyers and 2½% 1960 was asked for at Rs. 95-3, but 2½% 1962 was quieter at Rs. 93-1. In long-dated loans, 3% 1966-68 was on offer at Rs. 91-7 and 3% 1970-75 declined to Rs. 87-2. No business was reported in provincial loans and the undertone was extremely quiet owing to the flotation of the New 4½% 1967 issues. Prices, where changed, were easier.

Preference shares continued to be popular with investors but sellers were difficult to find. In jutes, small lots of Anglo-India changed hands at Rs. 116-8. Dalhousie came to hand at Rs. 114. Hastings at Rs. 104 and Hooghly at Rs. 15-6. Lawrence were done at Rs. 121 and Reliance were crossed at Rs. 115. Among miscellaneous issues, Alkali & Chemical were in demand at Rs. 107, Burn 6% at Rs. 122-8 and Duncan Brothers were crossed at Rs. 72-8. India General Navigation were marked at Rs. 82 and a few transactions were reported in Indian Iron & Steel and Indo-Burma Petroleum at Rs. 109 and Rs. 106 respectively. Shaw Wallace were crossed at Rs. 85. Tezpor Tea were reported at Rs. 13-4.

In the banking section, Hind Bank were marked at Rs. 28-8 and United Commercial Bank were required for at Rs. 49.

In the railway section, a small lot of Arrah-Sasaram was placed at Rs. 74, and Dehri-Rohtas changed hands on several occasions with the price improving steadily to Rs. 15-12.

Cotton textile shares were a dull market and little business was transacted. Elgin Mills were quoted at Rs. 19-13 and Kesoram fluctuated between Rs. 17-8 and Rs. 17-12. A small lot of Muir Mills changed hands at Rs. 119. New Victoria were marked at Rs. 1-12 and Cawnpore Textiles at Rs. 8-12.

Selected coal shares met with some enquiry, particularly Amalgamated at Rs. 25-2, Bengal at Rs. 545, Borra at Rs. 29, East Indian at Rs. 32-14, Katras Jherria at Rs. 53 and Panch Valley at Rs. 24-6. Burrakur fluctuated narrowly around Rs. 14-14 to close at Rs. 14-12.

Jute shares opened on a steady note, but towards the close there was some profit-taking and prices in most cases finished below the best. The outstanding features were Albion, Lothian and New Central which were marked up to Rs. 187, Rs. 537 and Rs. 185 respectively. Here is a chart showing price movements of a representative list of shares:—

	Opening	Closing
11-8-55	16-8-55	
Rs.	Rs.	
Agarpara	15-6	15-12
Albion	180	187
Anglo-India	243	241
Barnagore	214	210
Budge Budge	211	212
Chandpary	187	186
Delta	294	290
Kelvin	352	345
Kinnison	226	226
Lothian	510	537
Union	275	270
Howrah	32-2 c.d.	32-8 x.d.

Electric supply shares were in good demand with buyers of Benares at Rs. 19-6, Calcutta at Rs. 15-8, Jubbulpore at Rs. 14-2 and U.P. at Rs. 160.

With the exception of Shree Krishna Gyanodaya Sugar, which at one time were taken up to Rs. 20-4 (to close lower at Rs. 19-9), little interest was displayed in this section. Carew were marked at Rs. 12-12, Durbhanga at Rs. 20-8 and Dyer Meakin Breweries at Rs. 7-2.

In the engineering section, Indian Iron & Steel shares were steady at around Rs. 39; tonight's closing quotation is Rs. 39-2. The outstanding feature was Jessop & Company which rose from Rs. 47-12 to Rs. 50-8. In sympathy, Richardson & Cruddas moved up from Rs. 21-10 to Rs. 22-8.

Other shares in demand included Braithwaites at Rs. 25-12, Burn & Company at Rs. 286, Indian Standard Wagon at Rs. 146 and Textile Machinery at Rs. 26. Kumardhubi Engineering were easier at Rs. 12-6.

Features in the miscellaneous section were Indo-Burma Petroleum which were wanted at Rs. 183 c.d. c.r., Rohtas Industries at Rs. 32-8 and Concord of India Insurance at Rs. 14-8. Angelo Brothers were quiet at Rs. 23-4, while Indian Cables recovered from Rs. 29 to Rs. 29-10. Dunlop Rubber were wanted at Rs. 38 and Imperial Tobacco were fairly steady at Rs. 12-12. Metal Box were better with buyers at Rs. 25. India Paper Pulp were done at Rs. 27-4 cum-rights and there was investment enquiry for Titagur Paper at Rs. 46-8. Sone Valley Cement were better at around Rs. 8-5, while India Steamship were unchanged at Rs. 7-11. India General Navigation improved from Rs. 109 to Rs. 121. Jardine Henderson were marked at Rs. 125 and Martin Burn at Rs. 24-6.

In the mining section, good business was reported in Indian Copper Corporation up to Rs. 5-12 out the closing quotation was easier at Rs. 5-9. Burma Mines were a shade better at Rs. 2-2 while Western Stockholders were unchanged at Re. 1. Orissa Minerals were steady at Rs. 27-4.

The outstanding feature in the tea section was Brooke Bond which improved from Rs. 23-4 to Rs. 25-8. Tezpor were done at Rs. 36 cum the final dividend of Rs. 4 per share just declared. Gelle improved from Rs. 48-12 to Rs. 51 and small lots of Banarhat and New Doora changed hands at Rs. 694 and Rs. 695 respectively. Business in this section of the market, however, was mainly of a retail nature.

The ROHTAS INDUSTRIES LTD. has proposed to double the ordinary capital by issuing 1,140,000 ordinary shares to shareholders at the par value of Rs. 10 a share. Each shareholder will be entitled to apply for one share for one held.

The proceeds of the issue will be used to finance the modernisation and expansion plans of the company. The directors think that this will improve the working of the company, and they say that profits in the current year will be higher than last year. The company is already benefitting from the modernisation programme which has been completed.

There is a fall of Rs. 43,000 in the profit of the KUMARDHUBI ENGINEERING WORKS for the year ended last November. The dividend has been maintained at 8 annas per share. Allocations include taxation Rs. 2,85 lakhs (Rs. 4 lakhs), plant renovation reserve Rs. 1 lakh (Rs. 1.25 lakhs), tax contingency reserve Rs. 72,500 (Rs. 71,500) and development rebate reserve Rs. 56,700 (nil). A balance of Rs. 32,501 (Rs. 36,614) is carried forward.

The directors say that the shortage of steel continues to affect the output from the structural shop. The company is fully booked with orders until the end of 1957.

The INDIA STANDARD WAGON COMPANY produced excellent results for the year ended last March. The profit was up by Rs. 13.39 lakhs to Rs. 33.58 lakhs. General reserve gets Rs. 1 lakh (Rs. 2½ lakhs) and plant replacement reserve Rs. 12 lakhs (Rs. 3 lakhs). The taxation provision is Rs. 4½ lakhs higher at Rs. 14 lakhs. The ordinary dividend has been raised from 19% to 25%, leaving a carry-forward of Rs. 37,045 (Rs. 28,820).

The programme for the replacement, rehabilitation and modernisation of the plant is making good progress. The total cost of the scheme is estimated at Rs. 30 lakhs.

The profit of the BAGHMARI TEA COMPANY rose by Rs. 9.06 lakhs to Rs. 12.41 lakhs for the year ended last December. Bringing in a debit balance of Rs. 75,110, providing Rs. 3.72 lakhs for taxation (nil) and making other adjustments, there is Rs. 6,95,558. General reserve gets Rs. 3 lakhs (nil) and buildings and machinery reserve Rs. 1 lakh (nil). The dividend has been declared at 35%, leaving a carry-forward of Rs. 93,058.

The crop totalled 8,579 maunds (9,008 maunds). The average sale price rose from 31.26 annas to 49.94 annas per lb. Estimates for 1955 are for a crop of 9,700 maunds at a cost of Rs. 10.74 lakhs.

The JAYBIRPARA (DOOARS) TEA COMPANY made a profit of Rs. 7.17 lakhs for the year ended last December. This is Rs. 4.10 lakhs higher than in the previous year. Taxation absorbs Rs. 2.30 lakhs (Rs. 72,000) and general reserve Rs. 2 lakhs (Rs. 60,000). The dividend is higher at Rs. 6-8 against Rs. 2-8 per share, leaving a carry-forward of Rs. 1,02,212.

The crop was 6,080 maunds against 6,834 maunds and the average price rose from Rs. 2-0-9 to Rs. 3-6-3 per lb. Estimates for the current year have been made for a crop of 7,500 maunds at a cost of Rs. 8.92 lakhs.

The profit of the BORMAH JAN TEA COMPANY (1936) LTD. rose by Rs. 3.95 lakhs to Rs. 10.04 lakhs for the year ended last December. Bringing in Rs. 5,980, providing Rs. 3.71 lakhs for taxation and

BUSINESS DECLINES IN THE LONDON STOCK MARKET

ECONOMIC UNCERTAINTY HAMPER DEALINGS

London, 16th August.

THE stock market continued its recovery, after the recent sharp setback, until shortly before the week-end when prices reacted on the news of Monday's Cabinet meeting which apparently raised fears of further measures on the economic front. They lost further ground on Monday although the falls were comparatively small, but then developed a steadier appearance when no disturbing news materialised from the Cabinet meeting. The main point following the week-end was a sharp contraction in business when the number of bargains dropped markedly below 12,000—a very low total for Monday by recent standards. Disappointing trade figures contributed to the reaction. The contraction in business reflects current uncertainty regarding the economic situation. Very quiet conditions prevailed in the gilt-edged market, but prices were well maintained for the most part with recently issued Electricity 4½ per cent stock reaching a small premium for the first time. Foreign bonds went ahead but lost some ground later on profit-taking. Rails were neglected and dollar stocks were irregular. Industrials reacted at the end of the week and lost further ground before steadying. Selling dried up when cheap buyers appeared. Gold shares advanced until the week-end's general reaction. Oils recovered substantially.

The Money Market

Credit conditions during the past week re-

mained difficult, although the position was easier following the Electricity Commission's action in funding its bank overdrafts by a £200 million loan. Lists for the loan opened and closed on Thursday and created some disturbance in the short loan market. Later came the news that only 10 per cent of the application money was required to put the banks into a temporary excess of funds, and on Friday short loan conditions were very easy with day-to-day terms at 2½ per cent. Some of this money was used by the banks in increasing their bill holdings. Applications for Treasury Bills totalled £350,425,000, of which £240 million were allotted at an average rate of 80s 1.13d compared with 80s 0.42d in the previous week. This week £270 million are offered. The Bank of England return for the week ended 10th August showed that notes in circulation were about £23 million lower at around £1,834 million, while bankers' deposits were about £14 million higher at around £230 million. Fine trade bills remained unchanged.

Activity on Wall Street

In a dull market, German Nationals were marked down by fractions to a point or more, while among industrials the recent strong United States Works gave small ground. Italians were mostly lower by a point, although Milan 6½ per cent dropped nearly five points on one sale. The inactive Chile Government Railway 5 per cent added over one point to sell at \$147/8, a new 1955 high. South Americans attracted little interest. Japanese showed mostly fractional changes either way. U.S. Governments developed rallying tendencies following an early spell of softness, with the upturn described as technical. Quality corporates were slow, with little change in quotations.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 10th August shows the gold stock \$1 million higher at \$21,683 million. Foreign deposits rose by

\$30 million and foreign investments by \$17 million. The Federal Reserve made no purchases or sales of Government securities. Total discounts and advances fell by \$381 million to \$565 million, while excess reserves of member banks fell by \$260 million to \$373 million. Their daily average of excess reserve rose by \$51 million to \$670 million, while their daily average borrowings increased by \$107 million to \$848 million. Business loans of the New York City banks rose by \$80 million to \$8,163 million, compared with the rise of \$1 million to \$7,333 million a year ago.

Stock Market Prospects

The Investor's Chronicle market newsletter writes: The London stock exchange was obviously due for a correction. It had been ignoring many symptoms of coming discomfort. Disinflation is at last beginning to work and some investors probably want to liquidate part of their holdings to repay advances before their banks insist. The correction might go further, but not so severely as last week. The undertone is still strong and has been technically strengthened, and there are opportunities for selective investors. Inflation must be curbed but investors remain cheerful. With the prospect of a vigorously expanding domestic and world economy, many leading stocks look quite reasonably priced for the long term. Institutional money awaiting investment in equities could limit any fall.

Hongkong Gold

The Hongkong gold market lacked incentives last week with movements generally governed by traders' sentiment. Opening at \$(HK)252, values eased to a low of \$(HK)251 7/8, recovering to \$(HK)252½ at mid-week, with a high reached on Friday at \$(HK)253. The carry-over charges remained in sellers' favour at 68 cents. The official offtake was 2,790 taels, while unofficial offtake was 21,290 taels. Forward contracts were done at \$(U.S.)37½, while arrivals from Macao totalled 24,000 ozs.

Spanish and Italian Quicksilver

Although Spanish and Italian quicksilver producers are still quoting £108 a flask, ex-warehouse, London, it is understood that no sales are now being made at that figure. Market sources say that it bears no relation to the price at which quicksilver of various origins can be traded in on the spot, namely £94 to £95 a flask. It is believed that the Spanish metal has been offered down to these levels to meet competition.

Tea Production

The Pakistan and Indian Tea Associations in London announced monthly tea production in the major producing countries as follows: North India, July 79,600,000 lbs. against 77,700,000 lbs. in July last year; South India, June 14,300,000 lbs. against 11,400,000 lbs; Pakistan, June 5,400,000 lbs. against 6,100,000 lbs; Ceylon, June 24,000,000 lbs. against 31,500,000 lbs; and Indonesia, May 7,500,000 lbs. against 8,000,000 lbs.

Anglo-Egyptian Cotton Talks

The Egyptian cotton delegation has concluded its talks with the Liverpool Cotton Association and its studies of the mechanics of the Liverpool cotton market. It is understood that the discussions were mainly exploratory and no official Press statement will be issued. It is hoped that the Alexandria futures market will reopen on 26th or 27th September and that at the same time Liverpool will introduce a long-staple contract. Details of a draft of the futures contract will shortly be issued to members of the Liverpool Cotton Association for approval.

Sugar Export Quotas Reduced

The sugar export quotas of all countries participating in the International Sugar Agreement have been reduced by 5 per cent of the basic export tonnages following the meeting of the Executive Committee of the International Sugar Council in London. In a communiqué, the committee states that the total quota under the pact is 3,731,750 metric tons against 3,925,750 tons before. It has also been decided to redistribute quotas for 865,680 metric tons of sugar, surrendered by Czechoslovakia and Haiti, to other countries pro rata to their basic export tonnage.

Poor Demand for Linseed Oil

Very few buyers were found for linseed oil last week. The unimpaired state of the linseed crops in North America and the weakness of other oils contributed to their reserve. For most vegetable oils, easiness stemmed from the Continent. Linseed oil prices dropped another £4, making £10 in a fortnight, with re-sellers still endeavouring to make a market. BSS oil afloat to the Continent could be had at £97½, with sellers of October-December Indian for shipment at £98 in bulk c.i.f. Indian washed cotton oil for early shipment to the U.K. was reportedly sold at £104, while afloat parcels to the Continent were said to be available at down to £97. The market for groundnut oil was under the influence of conflicting news. Indian offers were only tentatively made owing to the increase in the export duty and the release of a further quantity of oil up to the end of October. There was talk of afloat re-sellers to the Continent at down to £107, with Western Germany the best buyer at £106 for August-September shipment. Burma, however, was reported to be a more active buyer while offers to the U.K. would have realised £109. Quiet conditions continued in castor oil and prices eased by as much as £2 a ton. Indian BSS August-September could be had at £98 and good quality commercial around £88 c.i.f. More interest was shown in coconut oil and although business was spasmodic prices were steadier at times. At the close, it was difficult to maintain the slight interim gains.

New Delhi

SECOND FIVE YEAR PLAN POLICY FOR COAL INDUSTRY

NEW INVESTMENT TO BE GUARANTEED IF APPROVED

(FROM OUR NEW DELHI CORRESPONDENT)

A POLICY has been tentatively approved for the future development of the coal industry. Although no immediate nationalisation of existing units will be resorted to, a "squeeze" will be operated in order to liquidate them entirely within measurable time. In other words it has been decided to nationalise the coal industry by stages. Firstly, all new development will be in the public sector. All areas lying surplus with existing units in the private sector will be taken over by the Centre, leaving a maximum not exceeding ten square miles with any one of them. This will need legislation which is at present being drafted. Secondly, terms of leases will be revised under a new set of rules, which will be published shortly, limiting the period of lease to thirty years "to begin with". Thirdly, it is proposed that the output of the private sector will be regulated or curtailed. As coal is a wasting asset, it is claimed that the private sector will exhaust itself in due course. This is the second five year plan blueprint for the coal industry.

As already reported the Coal Commissioner has placed the 1961 demand for coal at 60 million tons against the existing production of 37 million tons—three million tons in the public sector and 24 million in the private sector. It is proposed to expand the public sector in order to increase its production by 12 million tons at an estimated cost of Rs. 69 crores, exclusive of working capital. An increased target of 11 million tons is to be allotted to the private sector.

At the conference held here in June, the private sector wanted an assurance against nationalisation at least for the plan period ending in March 1961. The Government is neither prepared to give this undertaking, nor is it prepared to disclose its pattern of compensation in the event of nationalisation. All it is prepared to say is that it does not propose to nationalise existing units "for the present" but will give an assurance that any additional investment on the modernisation and expansion of coal production will be fully secured in the event of nationalisation, provided such investment is made with the knowledge and consent of the Central Government.

The possibility of obtaining technical aid and equipment from abroad for the public sector is also envisaged. The Khara steel mission, now in Moscow will, it is expected, explore possibilities in Russia. Germany and France with a view to obtaining assistance.

Labour in the Second Plan

A draft of the second five year labour plan is now available. It seeks to evolve an industrial democracy in India. According to one well known definition, democracy means Government of the people, for the people and by the people. In the Union Labour Ministry's industrial democracy, therefore, there is adequate emphasis on "by the workers". The draft has something harsh to say about "outsiders" in the trade union movement. "If a reduction in the number of outsiders is suggested, it is because a stage has now been reached when the advantages accruing to the trade unions by the advice and assistance of outsiders are more than outweighed by the disservice rendered to them by professional agitators." The suggestion now made in the draft is to reduce the number of outsiders from 50 per cent at present to 25 per cent. As an additional safeguard against outsiders, the draft, in elaborating the Labour Ministry's plan for giving workers a share in the management of an undertaking, stipulates that "no person may be nominated a director unless he has had at least ten years' continuous service in the establishment and that the same individual may not be continued a director for too long a period lest he acquires vested interests." The reactions of Members of Parliament to these provisions are not yet available. To many a labour leader, the proposals may be like an invitation to commit hara kari. Whether, as with the managing agency system, Members of Parliament are going to demand a definite time limit for the elimination of outsiders is also not yet known.

The draft is opposed to the multiplicity of trade unions operating in the same field and has urged the recognition of one union in an undertaking, having 33½ per cent as the minimum membership of the employees in that unit. "Such a union must have the exclusive right of representing all employees of the establishment or industry. The Union Labour Ministry is opposed to the "mushroom" growth of trade unions and has suggested tightening the provisions relating to the recognition of trade unions. In addition, it would like the Central Government to set up an inspectorate with statutory powers to inspect the working of trade unions.

There is a chapter in the draft devoted to industrial relations, but it does not make any fresh suggestions. Having provided the machinery for arbitration, the Ministry preaches the benefits of voluntary arbitration and joint machinery, the credit for which largely goes to Mr. Gulzarilal Nanda. The Ministry also holds that the inclusion of technicians' and workers' representatives on the board of directors will eliminate the capital-labour

tussle. "The worker-directors should, to begin with, be nominated by the appropriate Government in consultation with recognised unions or, in the alternative, employers might be encouraged to enter into agreements with the recognised unions".

State Undertakings

In regard to the public sector, the Labour Ministry has shown that it disagrees with sister Ministries on the enforcement of labour laws in State undertakings. It urges the managements of public undertakings not to seek exemptions from laws or ask for other concessions not freely available to the private sector. If the Labour Ministry demands perfect equality for the public and private sectors as far as labour laws are concerned, it should also help sister Ministries to enforce service conditions normally available in the private sector. Since nationalisation, the Indian Airlines Corporation has had to pay over Rs. 50 lakhs a year more for its labour bill. If the Labour Ministry demands higher and higher pay as soon as an industry is nationalised, thereby jeopardising the success of nationalisation itself, employer Ministries are also justified in seeking exemptions from certain labour laws. Here are the Labour Ministry's suggestions for arbitration tribunals:

"The responsibility for enforcing specific performance of an award requires, therefore, to be placed on a Standing Industrial Tribunal, to which it should be possible for parties to approach direct. The Tribunal should also be empowered to interpret the scope and meaning of the directives contained in awards as these are often found to be vague and give rise to industrial disputes. In respect of matters which are not recoverable in terms of money, the Tribunal should have the power to require the Government or some designated executive authority to get specific performance within a certain period. Suitable sanctions may have to be evolved in cases of non-compliance. To ensure respect for labour laws, it is also necessary to empower tribunals to try all cases under specified labour laws. At present the trial of offences under labour laws suffers from two defects: (a) there is very considerable delay in the trial of cases; and (b) the authorities to whom such cases go are inclined to treat violation of labour laws as a minor infraction of civil law. The punishments imposed in many cases are unjustifiably low. It is, therefore, necessary that such cases should be tried by judges who are in a position to appreciate the consequences of the contravention of labour laws. There should be a provision for appeal to the High Court.

Enforcing Legislation

"Employers and workers complain of inadequate enforcement of the rights conferred on them by the operation of legislation. This is because at present there is no adequate enforcing and prosecuting agency. It is, therefore, necessary that the Central and State Governments should build up an adequate agency for investigation and prosecution for violation of labour laws. These agencies should function directly under the Chief Labour Commissioner or the State Labour Commissioners, as the case may be. The agency should come into the picture only after a decision has been reached to take a particular matter to the court. This will guard against prosecution for minor technical breaches of the law."

The draft further says: "First, the worker is to be assured that higher production, which might result in declining prices, will not be followed by a lowering of wages. What is needed is that a tripartite wages board, as contemplated by the Fair Wages Committee, should immediately be set up. While there should be no appeal from the decisions of such boards, a Central Wages Board might be empowered *suo motu* to correct any perverse award after taking into account the overall wage situation. The second step necessary is to create an explicit link between additional effort and larger earnings. It is suggested that a directive be given to, or if need be even a statutory provision might be made for, the wage-fixing machinery to apply the principle of payment by results wherever feasible. A scientific system for this purpose involves time and motion studies to determine the proper workload, job evaluation and the proper setting of piece rates. It may be pointed out that, on the one hand, the system of payment by results will have to be supplemented by a guarantee of a minimum quantum of work and employment. On the other hand, there will be need to ensure that the system does not work to the detriment of the health of workers. For example, in the Netherlands national wages system it is provided that the earnings of an individual worker should not exceed the average wage by more than 25 to 30 per cent. In the alternative, piece rates could be worked out in such a way that they prove to be a disincentive after the worker crosses a safe maximum output. Before wages are fixed by wages boards, they should, if necessary, secure the services of experts to evolve a suitable system of payment by results if one is not already prevalent in the industry. It is necessary in this context to secure in advance a change in the attitude of certain sections of labour to the introduction of this

system. It may also be necessary to provide for bonuses to individual workers if they show proper care in the use of tools and other equipment and also for saving raw materials.

Dearness Allowance

"There have been persistent demand from labour that the dearness allowance or, at any rate, a portion of it, should be merged in the basic wage as has been done in the case of Government employees. It is now generally recognised that prices are not likely to go down to the pre-war level and that a total wage equal to the present basic wage is not likely ever to become applicable. Several benefits like pension, gratuity, etc. are based on the basic wage. It does not seem fair to relate these benefits to the pre-war basic wage rates. It may, however, be admitted that the task of merging dearness allowance in basic wage is difficult because dearness allowance is not paid on any uniform basis in private industry as is the case in Government employ. In some cases the amount of dearness allowance is fixed, in others a slab system is prevalent and in yet others it is linked directly with the cost of living. The cost-of-living indices in different centres again are by no means uniform. It is necessary to have a new and uniform series of cost-of-living indices for important centres in the country as a first step towards the evolution of a rational wage structure. At present, the different State series have their bases ranging from 1926-27 to 1948 and most of the family budget enquiries, on which these series are based, were conducted in the pre-war period. The method of calculation of indices also differs from State to State. The subsequent family budget enquiries undertaken in 1944 have not been used by and large for replacing the weights given to individual items in the State series. It is, therefore, necessary to take steps to conduct fresh family budget enquiries in an adequate number of centres and to evolve one or more uniform series of cost-of-living indices. A working party of the Central Statistical Organisation has suggested the holding of family budget enquiries and preparation of cost-of-living indices separately for working classes and middle classes in urban areas and for agricultural labour and household cultivating classes in rural areas. These proposals are suitable and should be taken in hand at an early date.....While State Governments should be closely associated with these enquiries and also with the subsequent machinery for collection and reporting of data, the actual preparation and publication of cost of living index series necessary for an all-India picture must be the responsibility of the Centre.

Wages Commission

"Simultaneously, steps should be taken for the appointment of a Wages Commission: (i) to consider measures that are needed to rationalise the present wage structure in so far as the basic wages and dearness allowances are concerned; (ii) to examine whether the existing wages system is consistent with the objectives of the contemplated socialistic pattern; and (iii) to recommend the steps necessary for automatic adjustment of wages. In arriving at its conclusions the Committee naturally assumed that increases in productivity resulting from better machinery and better individual effort should be shared by workers. It is also necessary to set up a Committee to go into the question of higher wages in private industry.

"From the side of management, there have been complaints that due to contributions to provident fund, social security, lay-off and compensation etc., their labour costs have gone up to such an extent as would undermine their competitive capacity in foreign markets. It is suggested that Enquiry Committees should be set up to begin with for three or four important industries. Each committee should consist of representatives of employers and employees, a cost accountant and an economist or an administrator with a prominent position unconnected with the industry, as Chairman. The Committee should examine earnings, expenditure, profits, dividends, labour costs and the manner of performance of the machinery, labour and management. An effort should also be made to study the working of the industry in other countries. A true and detailed picture of the economics of each industry will facilitate the taking of corrective measures against both labour and management. The setting up of such Committees should be one of the responsibilities of the Central Control Board proposed to be set up. Similar enquiries are also needed in the case of traditionally low wage industries. It is necessary in these cases to find out whether production methods are obsolete, whether the public is paying too little for the product, whether the profit element is too high or whether there are too many intermediaries appropriating the available resources.

Bonus and Profit-Sharing

"Next to wages comes the question of bonus or some form of a share in profits. In the absence of any statutory provision for calculation of bonus, the Labour Appellate Tribunal has evolved for itself certain broad rules for the purpose, but these have not worked satisfactorily. There is some measure of confusion even among tribunals as to the nature of bonus. Is it of the nature of a deferred wage calculated to narrow the gap between the wages paid and the living wage or is it of the nature of a share in profits? This confusion has affected the quantum of bonus awarded in certain cases and has caused discontent among labour. It has been a general complaint that provisions made for prior claims in the calculation of the available surplus are extravagant. In these circumstances, it seems necessary for the Government to take the responsibility for evolving a statutory scheme, which will, in effect, remove bonus or profit-sharing from the sphere of justiciable disputes."

AC.55/45

As for rationalisation, the draft says: "Even the critics of rationalisation would admit that in view of the existing conditions of Indian industry, with its increasing difficulties in continuing to keep a foot-hold in the external markets, and to some extent even within the country, some kind of rationalisation is inescapable. The experience of foreign countries shows that in the ultimate analysis in an expanding economy rationalisation is beneficial even to labour itself. This, however, does not imply that unqualified support can be given to rationalisation of industry in this country except when it is accompanied by proper safeguards for protecting the legitimate interests of workers. In deciding whether or not to permit rationalisation a favourable factor which should be given due weight by the Control Board is that the new machinery which is proposed to be installed is manufactured in the country itself as otherwise rationalisation will have the result of maintaining employment in foreign countries at the cost of unemployment in our own."

Retrenchment and Work Loads

"In considering the problem of rationalisation, employers attach great importance to two matters, namely (a) the assumption by workers of an adequate work load, and (b) the replacement of old and worn-out machinery by modern machinery incorporating the latest techniques and labour-saving devices. On the other hand, workers resist rationalisation on the grounds (a) that rationalisation will imply large-scale retrenchment and consequent unemployment, (b) that it will imply an increased work load, (c) that the major benefits of rationalisation are likely to go to the employer, (d) that in the process there is no guarantee that the industry will move towards giving a living wage to the worker and (e) that rationalisation will be confined only to the introduction of labour-saving machinery leaving untouched other ancillary but all the same equally important prob-

lems such as improvement in the methods of management and production, elimination of undesirable managerial practices, training of personnel, improvement of the quality of raw material, better standardisation and specialisation.

"It is obvious from what has been stated above, that apart from the formulation of a broad policy on rationalisation, which must, no doubt, be based on a mutually agreed formula between the parties concerned, the problem boils down to getting agreement over details after rationalisation has been accepted in principle. Points which will require to be settled at the level of the firm are apportionment of the work load, the extent to which wages ought to be increased in the event of increased work load, the extent of the machinery which is obsolete and requires to be replaced, stricter standards of control over the installation of new machinery, the retaining of retrenched workers and finding alternative jobs for such personnel. It is suggested that to tackle all these problems a high powered authority which may tentatively be named the Central Control Board should be created for each important industry or group of industries. Such an authority will be in a position to command the confidence of both parties and will go a long way towards securing the rationalisation of the industry without in any way compromising the vital interests of workers."

Composition of Board

The composition and functions of such an authority should be as follows. The Board should consist of a Chairman and two members. The Chairman should, in the case of the more important Boards controlling industries of national importance, be chosen from among the Ministers of the Central Government other than the Commerce and Industry, Production and Labour Ministers, as these Ministers will have to be responsible for evolving policies. One of the members should be a high court judge and the other a man of eminence

from public life, preferably one with a technical background who is not connected with the industry concerned. A Minister is essential for the Chairmanship of the Board dealing with vital industries, for that would ensure the closest liaison with the Government. Direct representation of employers and workers on the Board is out of the question. However, the Central Control Board should be advised by a Development Council of the type provided for in the Industries (Development and Regulation) Act. The Board should have the following functions:

1. To evolve a proper procedure for settling complaints made by either of the parties.
2. To conduct a survey of the technical requirements of the employer through competent persons.
3. To award special damages to a worker retrenched without its permission.
4. Where a scheme of nationalisation is likely to lead to retrenchment, to permit or to prohibit the contemplated measure on such terms and conditions as it may consider reasonable.
5. To devise correct work loads, to ensure that a higher work load is adequately compensated, to supervise and ensure that only the requisite amount of new machinery is brought in, to provide for the alternative employment of retrenched workers, to carry out periodical inspection of units with a view to watching the extent of care or neglect of the machinery and eventually, if the necessity arose, to take over the administration of mismanaged units.
6. To exercise most of the power of control mentioned in the Industries (Development and Regulation) Act.
7. Generally to act as the authority for carrying out the State's policies on the industry concerned.

For offices and industrial establishments Greater efficiency in cool working conditions

—with **Carrier**

self-contained air conditioners

WHEREVER a Carrier self-contained air conditioner is installed, the staff begin working better than ever before. The cool, noise-free atmosphere leads to greater efficiency; even a small increase in efficiency will pay for the cost of the Carrier in a couple of years!

You can change the action of your Carrier to suit the weather, to get extra coolness on hot days, extra dryness on damp days!

Works silently, cuts off noise

Your Carrier self-contained air conditioner works as quietly as a whisper. At the same time, since you shut windows and doors, it helps to cut off street noises, lets you work or relax in silence and comfort.

Cools better at less cost

Specially-designed coils and filters make your Carrier more efficient, help it to cool better at lower cost.

Circulates clean, filtered air

Your Carrier sucks in air in a steady stream, filters it, then spreads it gently and evenly. So you get an equally-cool temperature throughout — no dust, no unpleasant draughts!

Removes more moisture

Your self-contained Carrier not only lowers the temperature but removes moisture from the air — gallons of it! A new Humistat regulates the rate at which moisture is removed.

Remember — the Carrier self-contained air conditioner is remarkably compact, and takes up little floor space. The sale of these

units in India is backed by Voltas' unique after-sale service and their engineers' unmatched experience in the line.

VOLTAS LIMITED.

REACTION TO COMPANY BILL CHANGES

DEVELOPMENT COUNCIL FOR ART SILK INDUSTRY INAUGURATED

(FROM OUR BOMBAY CORRESPONDENT)

FOR the business community in Western India it has been a week of relief, anxiety and uncertainties, mostly derived from official announcements. The sense of relief originated first from the speech of the Finance Minister in the House of the People while moving the consideration of the Joint Select Committee's report on the Companies Bill, and his announcement that he would move an amendment empowering the Government to relax under proper safeguards the ceiling on the overall managerial remuneration of Rs. 50,000 in certain cases of proved hardship, where the companies had made no profits during the year. This in itself was of minor significance but the desire of the Government, which he expressed, to steer clear of the extremes in dealing with managing agencies, and some degree of deference which he showed for the views expressed by the Shareholders' Association, and his assurance that the Government's basic aim was one of encouraging and reasonably safeguarding private investments in fields not reserved for the public sector, while regulating them for the common good, went a long way towards reassuring both industry and commerce that they would receive a fair deal, if not a generous one, at the hands of the Government. Earlier reports from New Delhi had indicated that there was some difference of opinion amongst the members of the majority party in Parliament, which might ultimately lead to a further stiffening of the provisions of the Bill as it had emerged from the Select Committee, especially those on the investment of the reserves and other funds of public companies. The doubts which were created by these reports were more or less set at rest by the speeches of the Prime Minister and the Finance Minister during the debate in the House of the People, though all that this meant was a sense of relief rather than of elation or greater confidence in the future.

It might be said that the ground for this change in sentiment was well prepared earlier by the visit of Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, who came here for inaugurating the Development Council for art silk industry. Welcoming the Minister, Mr. Ramnath A. Podar, Chairman of the Council, stated that the appointment of the Council had a special significance in view of the important role played by this industry in the economy of the country and that the Council had been assigned important tasks of fixing the target of production, co-ordination of output by various units and improving the quality of art silk fabrics. Mr. Podar gave an assurance that the Council would develop the market for art silk and undertake the preparation of reliable statistics about the industry. At the same time, he sounded a note of warning to the industry that it was absolutely essential for it to produce standardised and quality goods in the country if they wish to compete in the export markets of the world. Mr. Krishnamachari said that he visualised immense scope for the Development Councils in the industrialisation of the country and that India was very well suited for the functioning of such councils. These councils, he added, would become the nucleus for enlisting the co-operation of the public and also the support of the various industrial units concerned at the same time seeking the co-operation of the workers in the particular industry for which the Council was formed. After referring to the various industries for which Development Councils had been set up, Mr. Krishnamachari observed that the Council for the art silk industry had to deal with all facets, beginning from the manufacture of the raw materials such as pulp for art silk to the production and marketing of the finished product of art silk fabrics, and expressed satisfaction that so far the two units engaged in the manufacture of yarn had shown good progress, hoping at the same time that many more units would be established before long.

Market for Art Silk

A point worth noting in the speech of the Commerce and Industry Minister was that he took up a stand which was unlike that of many members of his party who emphasised an attitude of austerity and were not loth to enforce it on the people through administrative and legislative measures. Replying to the criticism that the art silk industry was not really necessary in the present industrial set-up especially as the country had done without such fabrics for centuries, Mr. Krishnamachari asserted that "these people will have to understand that art silk makes the life of those who cannot afford finer fabrics a little more pleasant for them." He further pointed out that the handloom weavers were using art silk yarn to a considerable extent. Ultimately it was the cost of the fabrics that would decide sales and artistically designed fabrics at lower costs would find encouragement from the low income groups. Mr. Krishnamachari also faced the question whether this industry would affect the demands for silk fabrics. While admitting that there was some force in this argument, the Industry Minister observed that the position of the weaver was such that he had to make his cloth saleable to the consumer and that between the silk industry and the handloom

weaver the latter was more important and, in any case, the respective cost conditions made such comparisons odious. His advice to industrialists in general and those engaged in this industry in particular was to employ better techniques of propaganda for marketing their goods and he stressed the need for improving the quality of all goods made in the country.

It was his informal meeting with the Committee of the Indian Merchants' Chamber and his discussion with them on important questions relating to industrial policy and industrial development, transport bottlenecks, foreign capital, company law reform and managing agency system, foreign trade policy, encouragement of national services such as banking, insurance, shipping, etc., which was more important from the point of view of the business community than his inaugural speech at the new Development Council. There was a warm note of cordiality in the speech with which Mr. P. M. Chinai, the President of the Chamber, welcomed the Commerce and Industry Minister, which possibly owed its origin to the prompt and timely action taken by the Government at the instance of the Commerce and Industry Minister, in announcing the abolition of the export duty on jute manufactures and the reduction of the export duty on certain varieties of raw cotton, for which Mr. Chinai congratulated the Government. He emphasised the need for such periodical meetings between the heads of the Ministries dealing directly with economic affairs and the representatives of the various regional business organisations for an informal exchange of views on important questions affecting the economic development of the country. Mr. Chinai also expressed the appreciation of the Chamber at the rate of industrial progress in the country and satisfactory development in the sphere of foreign trade policy with special reference to the attitude taken by the Government on the application of quantitative restrictions under G.A.T.T. Speaking about the place of the private sector in the second five year plan, with which the minds of many business men were naturally pre-occupied these days, Mr. Krishnamachari stated that the plan frame was not still finalised and that suggestions and comments received from public bodies would receive careful consideration. After referring to the target of Rs. 750 crores which had been allotted for the private sector, the Minister reiterated his statement made at the last meeting of the Central Advisory Council for Industries on the place of the private sector in planned development and gave a further assurance that it was not the intention of the Government to stifle the private sector in any manner and that all industries in this sector would receive a fair deal at the hands of the Government. While dealing with this, he made an important announcement that the Government was contemplating setting up a common Board for bringing about greater co-ordination between units in the private and public sectors wherever these functioned together in the same industry.

Big and Small Producers

Another question engaging the minds of the business community these days is the relation between factory production of consumer goods and production by the village and cottage industry sector. In this connection, Mr. Krishnamachari remarked that special emphasis was laid on the latter especially in view of its employment potential, pointing out at the same time that any supplant of cottage or village industries would have its own limitations in view of the permissible price preference ranging from 12½ to 20 percent. In reply to a complaint with regard to the non-availability of operational data in respect of industries in the public sector, the Minister agreed to remove this lacuna in course of time. Among other subjects discussed at this meeting were transport bottlenecks, the control and management of shipping and the future of the cotton textile industry. With regard to the last, Mr. Krishnamachari is understood to have told the Committee of the Millowners' Association, Bombay, that mills would not be allowed to increase further the loomage as the additional production of cloth was to be allotted to handlooms. The Government would, however, reconsider the decision if handloom production could not keep pace with the requirements of the country. Answering the plea for the removal of the export duty on coarse cloth, the Minister is understood to have replied that the situation was being watched by the Government. It may be said that on the whole his utterances at the formal and informal meetings with industrial organisations and with the representatives of the Press created an atmosphere of restrained optimism which was subsequently dissipated by the news regarding the Indian Labour Ministry's suggestion of making it compulsory in each industrial unit to have 25 percent of the directors representing technicians and workers, subject to a minimum of two, as also of appointing a Wages Commission to formulate a statutory scheme on bonus and profit-sharing, in addition to examining the existing wage system and structure in the light of the socialistic pattern of society accepted by the Parliament. This was reflected in the slump which invaded the local stock exchange where prices gave way owing to selling pressure in all counters.

Transport Problem Discussed

The question of the transport bottlenecks experienced by commerce and industry in the booking of goods during the last six months was thrashed out in greater detail by the Committee and the Transport Sub-Committee of the Indian Merchants Chamber and the General Manager of the Central and the Western Railways which cover western, central and certain parts of southern

India. The President of the Chamber raised for discussion the various difficulties of railway transport such as non-availability of wagons and lack of booking facilities for long periods over both the railways and pointed out that the situation in respect of booking had become very difficult in the last few months, necessitating effective steps at an early date. On their part, Mr. M. N. Chakravarty, General Manager of the Central Railway, and Mr. P. N. Saxena, the head of the Western Railway, explained that both the railways had undertaken a number of works all over the line in order to increase transport capacity by 20 percent for the busy season beginning from last November. At the same time, they admitted that they were not in a position to meet the entire needs of transport of the part of the country served by them because of obvious limitations. About the administrative aspects, they pointed out that they were taking all possible steps to improve administrative efficiency so as to give better service to the users of the railways.

Import and Export Controls

A similar exchange of views took place between the Committee as well as the Import and Export Sub-committee of the Indian Merchants' Chamber and Mr. S. N. Bilgrami, Chief Controller of Exports and Imports, during the course of his visit to Bombay last week, regarding certain important matters in import and export trade control policies and procedure. One of the points raised by the Chamber's representatives was the opposition of the commercial community to the system of reserving imports through a Government-sponsored agency in respect of certain industrial raw materials, because it deprived the established trade channels of their traditional import lines and removed the element of healthy competition. Mr. Bilgrami explained that the Government had to do this in view of the reported difficulties experienced by industrial units in securing goods at an economic price and that it was restricted only to a few selected items. Among the difficulties of procedure, the Chamber made out a case that where the sale agency in a particular item was transferred by the foreign principals from one business house to another in this country, there should be provision for transfer of quota rights to the new agent, if there was an agreement between the old and the new agents, which was accepted by the Controller who observed that wherever there was such an agreement transfers of quota were agreed to by his Department as a matter of course. The Chamber also suggested the need for adequate co-ordination between the Import Controller and the Customs authorities for deciding the proper classification of articles in order to minimise the present hardships experienced by the trade in such matters where the views of the two Departments differed. The Controller assured the Chamber that already there was a system of holding meetings every week of the officials of the two Departments concerned to decide questions regarding classification of imported goods and instructions had been given to the officers stationed at the ports to decide such questions in the shortest possible time, where a reference was found to be necessary to the Ministry. The Chamber also stressed the need for simultaneous announcement of export policy at all port centres so as to avoid chances of discrimination between the exporters stationed at various ports and received an assurance from the Controller that the Government was alive to such a need and would take all possible steps to secure such simultaneous announcement.

Nationalisation of Insurance

One of the reasons for the more recent feeling of despondency in private enterprise has been the Government's complete silence on the question of nationalisation of insurance, in spite of a series of protests by various sections of the business community as a whole. The Chairman of each company at three annual meetings last week reiterated the various arguments against this move. In this connection, Mr. Mangaldas B. Mehta, Chairman of the Vulcan Insurance Co. Ltd., which held its annual meeting last Friday, made an important new point. According to him, it is argued by those who talk of nationalisation of the insurance industry that if this industry is nationalised it would eradicate unhealthy methods adopted in the field of insurance and secure for the development programme envisaged in the plan large sums. It is significant that the experience of concerns taken over by the Government shows that instead of the expenditure in these concerns being reduced it has gone up and the business of such concerns has not progressed as well as it could have if it were in private hands. In this connection, I would refer to the case of two big companies where the Government appointed an Administrator to carry on their business under the direction and control of the Controller of Insurance. From the published accounts of these companies it will be seen that since the Administrator took charge of the business of these companies, there has practically been no progress and the expenses are abnormally high. In the case of one of these companies, the renewal expense ratio of life premium ranges between 19 and 19½ percent against 15 percent allowed by law. Compared to the figures of other well established companies of equal standing, the new life business secured by these companies has remained static and there has been hardly any increase in the total life business in force. As regards the general business of one of these companies, the expenses are on the high side. In the fire department, which is the mainstay of indigenous companies transacting general insurance business, the percentage of expenses is abnormally high—about 50 percent higher than that of any well established Indian company of equal standing.

MORE WAGE DEMANDS FROM U.K. INDUSTRY

GOVERNMENT REVIEWS ECONOMIC SITUATION

(FROM OUR LONDON CORRESPONDENT)

THE calling of a Cabinet meeting for Monday, though ostensibly to dispose of routine business and to be attended only by Ministers in London or within easy reach of London, was sufficiently unusual so early in the recess to lead to the belief that one of its primary objects was to review the economic situation on the basis of a report from the Chancellor of the Exchequer covering the wages position and the continued inflationary pressure from new demands—both subjects are believed to be worrying him at the moment—and the adequacy or otherwise of the present measures to meet the situation. The announcement had the effect of calling a sharp halt to the City's all too rapid recovery from the sobering effects of the latest credit squeeze, and the process will no doubt be accentuated by the provisional trade figures for July. Some dampening down of the City's unbounded confidence and optimism would seem to be necessary to curb wage demands, for it is obvious that these will continue to be put forward so long as share prices keep rocketing upwards. Labour, it must be remembered, is in a strong position. At the end of June there were 22,890,000 people in civil employment, and on 11th July only 185,000 (including 19,000 temporarily stopped) unemployed; the lowest total since the war. In many areas employers are competing with one another for labour.

The railway and dock strikes in June and July created havoc with the movement of goods through the ports and have consequently rendered figures of imports and exports extremely difficult to interpret. The Board of Trade puts imports for July at £338.8 million and exports at £231 million, to give a trade "gap" of £107.8 million. This difference was less than the June figure of £128.9 million, but compares unfavourably with the monthly average of £75.6 million in the first half-year. Exports last month were £66 million higher than in June, but were still 4 percent below the average monthly rate in the first half-year. Imports were £44 million higher than in June, and as much as 7 percent higher than the average for the first six months. The Board of Trade have felt it necessary to explain that the figures do not give any clear indication of the trend of British trade because of the strikes and that it will be "some months" before the figures are free from this influence. A special analysis undertaken by its officials suggests that exports have been more affected than imports. The interval between the movement of goods and the recording of the figures is longer for exports than for imports, while the imports being largely bulk cargoes were more easily handled during the strike period when export goods could no longer be loaded. This suggests that the August export figures will be better, and that those for imports may prove that the July figure does not represent an expanding trend. The weakness of the July figures is apparent in exports to America. These totalled £30.3 million for July, the highest monthly figure since June, 1953, with the United States taking £15.6 million and Canada £14.7 million, against £11.4 million and £6 million, respectively, in June, and £12.9 million and £11.3 million in July of last year.

Labour's Unrealistic Outlook

In face of the uncertainties in the economic outlook it is difficult to appreciate the mental processes at work in the unions. Little more than a month has passed since the railwaymen secured a wage increase, but early next week it is likely that the British Transport Commission will be faced with a new wage demand for 370,000 members of the National Union of Railwaymen, which the support of the other railway unions is being sought. At the same time, the Confederation of Shipbuilding and Engineering Unions has also decided to seek a "substantial" increase, a 40-hour week without loss of earnings, the limitation of overtime working and three weeks' paid holiday a year. The rise in the cost of living is the main basis for these claims, though the engineers also bring in the increasing prosperity of the industry and the rising dividends, to say nothing of the threat to employment which they visualise from automation. Even if these two branches of workers received a 10 percent rise in wages the national wages bill would increase by something like £130 million per annum—and the repercussions on the cost of living would be inevitable. Nor do they pay much regard to the fact that although dividends and profits have risen in the boom conditions following after the war, wages have in fact risen even higher—but whereas if the "bubble" were to burst and profits and dividends disappear, the worker would not be prepared to go back to where he started. The unrealistic thinking of the bulk of the trade union movement, opposed to the apparently sane thinking of some of its leaders, just leave one aghast.

New Factory Buildings

As an indication of the country's expanding industrial activity, the latest issue of the Monthly Digest of Statistics provides graphic proof in the approvals secured from the Board of Trade for the erection of new industrial buildings and extensions. The second quarter of this year marked a new record figure with a total area of 29,523,000 square feet, against an area of 23,720,000 square feet in the first quarter, 21,217,000 square feet and

19,736,000 square feet, respectively, in the third and fourth quarters of last year, and 39,344,000 square feet in the whole of 1953. These figures include only new buildings and extensions with an area of over 5,000 square feet in manufacturing industry, so do not present the whole picture.

The latest figures show that in the first half of this year factory building plans were approved with an area nearly 80 percent greater than in the same months of 1954. Industrialists so far have been encouraged to embark upon expansion projects, and they may well have to think again, in view of Mr. Butler's latest request for cuts in capital expenditure wherever this is possible without affecting the export drive. The area of new buildings started in the first quarter of this year was no less than 35 percent higher than twelve months earlier. As the latest official figures for new industrial buildings started are always extremely conservative (because information is not completely building activity so far this year may well be higher than the Board of Trade has so far estimated. Details of new plans approved and of work started on industrial buildings are shown in the following table:

BUILDING NEW FACTORIES (Thousand square feet).

	Approved in period.	Started in period.
First quarter, 1954	14,446	9,425
Second quarter, 1954	15,483	12,591

Boycott of Foreign Cloth

Lancashire is considering, apparently quite seriously, taking a leaf out of India's book and adopting a *swadeshi* policy to overcome the threat of imports of cheap foreign cloth. Mr. A. R. W. Low, Minister of State at the Board of Trade, has been in Manchester for a meeting of the Cotton Board's Standing Conference on Overseas Trade Policy, but it seems unlikely that Government action will be expedited as a result of the visit. Meantime, there are fresh reports of mills working shorter shifts and even being obliged to close—and the reason given is loss of business owing to cheap cotton imports. The workers are getting more and more concerned, and the Legislative Council of the United Textile Factory Workers' Association has decided to ask for a meeting with the employers on the producing side of the cotton industry to discuss what further steps can be taken to bring the industry's difficulties to the notice of the Government and the public.

A number of cotton trade union leaders are known to be in favour of the idea of a campaign to persuade people not to buy the cheap imported cotton cloth—or articles made from it—which, it is claimed, is undermining the Lancashire industry. Something of this kind may well figure in the agenda for the meeting, either as a proposal for a joint appeal to unions and employers to their own workers or in the form of a more ambitious scheme to explain the industry's difficulties to the general public and to ask them to help it by boycotting foreign imports. Those who believe that a campaign of this kind will meet with a warm response have been encouraged recently by the action of cotton employers at Rochdale, who have urged their operatives to buy only cloth spun and woven in Britain, and by shopkeepers in a number of Lancashire towns who have started "Buy Lancashire Goods" campaigns of their own.

Jute Spinners Alarmed

An emergency meeting of the Dundee Jute Association held this week approved the despatch of urgent representations to the Pakistan Government. The spinners are seriously perturbed at the authorities' refusal to reduce the controlled sterling prices of jute after the devaluation of the Pakistan rupee. Rupee prices of jute in Pakistan have already risen by about a third. It is now feared that the Karachi Government will seek to skim off some of this gain by an increase in export duty. India's abolition of export duty on hessians means that Continental spinners are powerless to compete, and the Dundee spinners' export efforts are gravely handicapped.

Controversy over the price-duty question has overshadowed two other matters. One is Pakistan's new threat to suspend the export licences of any non-Pakistani shipper who fails to provide security against "malpractice," of which allegations are being renewed. The other is the severe flooding in Assam. This may affect the current season's crop so much as to justify the present price level after all.

Brevities

An Egyptian cotton merchants' delegation which has spent the past fortnight meeting members of the Liverpool Cotton Association, left Liverpool earlier this week having concluded discussions of a futures trading contract with them.

A joint organisation to be known as the Joint Non-Ferrous Scrap Committee has been formed by various representatives of the scrap trade and will have its headquarters at 21 Devonshire Street, London W.1. Mr. A. P. Hughes, Secretary of the Waste Trade Federation, has been appointed as secretary, and representatives of the National Federation of Scrap Iron, Steel and Metal Merchants, the National Association of Non-Ferrous Scrap Metal Merchants, and the Waste Trade Federation, will sit on the committee.

Madras

CENTRE PRUNES MADRAS PLAN

DRASTIC CUT LIKELY IN SOCIAL SERVICES EXPENDITURE

(FROM OUR MADRAS CORRESPONDENT)

THE Madras Ministerial delegation to the Planning Commission has just returned from New Delhi with the hope that the provisional figure of Rs. 200 crores fixed by the Commission for the State's second five year plan outlay might be raised by Rs. 25 crores. This amount is just 50 percent of the Madras Government's own expenditure targets. Although it is not possible now to say how the physical targets of the Madras plan will be revised when a number of draft schemes come to be eliminated, it is indicated that the targets for social services and not those of development services, may have to be drastically curtailed. The probable picture regarding industrial schemes has not fully emerged yet. The proposed physical targets in respect of agriculture, forests, irrigation, power and highways are likely to remain more or less the same.

Some of the more important targets connected with these major heads are given below: In the sphere of agriculture, nearly 700,000 tons a year is the target for additional foodgrains production; an additional 1,000,000 tons in 1960-61 over the existing production of 3,500,000 a year for sugarcane; an additional 100,000 bales a year over the production of 300,000 bales expected in the current year for cotton; 3,000 at the rate of 600 a year for filter-point wells; 300 at 60 a year for tube-wells; 150,000 tons of ammonium sulphate to be distributed for food crops at the end of the plan period; 34,000 tons a year for super-phosphate; 200,000 coconut seedlings to be distributed at the end of the plan period. Under the head "Forests", the targets are:—Over 36,000 acres of forests to be planted with fuel trees; casuarina plantations—5,000 acres; soft-wood plantations—16,500 acres; teak and other hardwood—7,500 acres; wattle—9,000 acres; cashew—38,000 acres; pepper—25,000 acres; lac—production to be stepped up to 15,000 maunds a year.

Irrigation and Power

In the field of irrigation and power, 90,000 acres under existing projects will be completed in the second plan period and an additional 90,000 acres will receive irrigation under new projects; power generating capacity will be increased by about 300,000 K.W., and 2,500 villages will be electrified and electric connections given to 30,000 pump sets during the plan period. The targets in respect of roads and highways are:—190 miles of State high-roads and highways to be completed; 1,410 miles to be black-top surfacing; 5,000 miles of new roads to be formed; 120 major bridges to be constructed. The 5,000 miles of new roads are intended to give road connection to 6,500 villages with a population of 500 and more during the plan period.

What has been achieved under the first plan, it is interesting to compare with some of the above targets. In four years of the first plan, 244,000 tons of ammonium sulphate have been distributed, 1,717 tube-wells sunk and improvements effected to about 2,800 minor irrigation works. About 200,000 acres have been newly brought under irrigation; electricity projects have given 111,000 K.W. of additional generating capacity; electricity has been extended to nearly 2,400 villages and connections given to 25,500 agricultural pump sets. Some 25 miles of State highways have been cement-concreted and a black-top provided on 57 miles. Some 91 major bridges and 78 minor bridges have been constructed on these highways. Nearly 1,400 miles of roads have been newly formed and nearly 225 major and minor bridges have been constructed.

Andhra Plan Targets

Some physical targets of the Andhra State's second five year plan, the outlay under which is likely to be reduced to about Rs. 150 crores from the draft plan figure of Rs. 244 crores, are stated to be as follows:—Extension of irrigation facilities to an additional 775,000 acres; increase in power capacity by three times so as to raise per capita consumption from 10 to 20 units; additional foodgrains to be produced by the end of the plan period—900,000 tons. In Andhra also these physical targets in respect of agriculture, irrigation and power are likely to remain intact when the draft plan comes to be finalised. Two leading industrialists in Madras have expressed their views on proposals for the second five year plan. Mr. S. Anantharamakrishnan of the Simpson Group of industries thinks that labour should be assured of certain minimum wages and emoluments in every branch of industry so as to obviate strikes during the plan period. That would attract capital and encourage existing industries to undertake plans for expansion. Referring to the suggestion that a ceiling on dividends be fixed, he thinks that it would be acceptable to industry if it is limited to the plan period. Industrial expansion has been achieved in other countries largely by ploughing back profits into industries. Though industrialists and investors might not quite like the idea of limiting dividends, some such control is necessary in the interests of industrial development. Mr. Anantharamakrishnan further thinks that industries would have no objection to price control during the plan period provided that the enforcing authority does not adopt bureaucratic methods. He also thinks that it would be a good thing to give an "industrial rebate" to an

industry which puts up additional machinery and provides employment for more men and that new industries should be asked to pay a development tax.

Criticism of Plan-Frame

In a speech at Madras, Professor P. C. Mahalanobis confessed his "profound ignorance of economic theory". The speech and the confession have come in for criticism at the hands of Fr. Basenach of a local College. Fr. Basenach thinks that Professor Mahalanobis must know that the accepted theoretical framework now available for studying certain kinds of policy problems is quite inadequate. This framework, he probably thinks—and rightly so, according to Fr. Basenach—does not give a correct place to important factors in a problem, does not allow these factors to change or to be varied and does not permit examination of induced changes in the given data; the policies studied may have indirect, delayed, discontinuous, qualitative or long-range effects which escape analysis. Nor can it be denied that conventional economic theory fails to pose or analyse adequately basic problems in which psychological aspects bulk large, such as the spending decisions of consumers and business investors and the major processes of long-run economic change. Hence, ignorance of economic theory seems to be no hindrance to planning, and competence in statistics and expertise in handling the various tools of measurement in

economics may, according to Professor Mahalanobis, be trusted to deliver the right plan.

If it be granted that economic theory lacks sufficient realism and concreteness, can we, therefore, rely with greater confidence on econometrics and linear programming and input-output models for framing the right plan asks Fr. Basenach? It is the essence of econometric models, continues Fr. Basenach, that the set of precise economic relations they represent can be tested against factual data of the real world to prove or disprove their validity. But because of the inadequacy of statistical material and of known statistical methods, these econometric models cannot be immediately tested, and hence, despite the precise mathematical form of the equations, they are in the nature of deductions drawn from economic theory proper. The various tools of econometrics have not, as yet, proved sufficiently reliable to provide a major guide for policy decisions because of the inherent limitations on their power accurately to estimate the consequences of alternative courses of policy. In particular, the compatibility of "efficiency" with any degree of unemployment, mistaking accidental statistical uniformities for causal relationships, omitting variables which for various reasons cannot be included in an econometric model but the strength of which may be of crucial importance for devising a plan, and finally, the changes in the values of parameters and in the form of structural relations over time.

it's a **GREAT** job...

keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

ASSAM OIL COMPANY

does it all

Burmah Group of
Oil Companies

has been used since the end of last year. The jute spinning industry is now relying entirely on the indigenous production for its raw material. The Brazilian Government has taken steps to protect the local producers and no licences have been granted for overseas imports since the last shipments were received. Quality of the locally produced jute is below that formerly imported, but the finished product has not apparently suffered greatly thereby and enjoys a good market, primarily bags for coffee and grain. Stocks of jute and similar fibres were estimated at the beginning of this year at some 18,000 tons, about 65 percent of which was believed to be jute. Steps are now to be taken to encourage the export of Brazilian jute and to adjust the rate of exchange to make Brazilian fibre competitive in the world market.

THE FOREIGN JUTE MARKETS

PAKISTAN TO HOLD PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE markets appear to be awaiting further developments in the raw jute situation in Pakistan, but to most members there seems to be nothing to wait for. The Pakistan authorities have stated that minimum prices for the fibre would still prevail because they are determined that no reduction will be made. It is unlikely that there will be, when reports of some Continental spinners paying as much as £92 for Mill Lightnings are being circulated. A squeeze is still prevailing for Mill Lightnings and Mill Hearts for early despatch, but this will ease off in due course. Demand for raw jute is expected to be good enough to enable shippers to maintain their minimum rates for all grades and the general opinion is that they will be until the end of the year at least. Some Dundee spinners are bought in their raw material to the end of December, but others have been holding off in the hope of lower terms.

A meeting of the Association of Jute Spinners and Manufacturers was held in Dundee on 9th August. Matters were discussed in private and no statement was given out. It is understood that new prices may be issued to the industry in the course of the next few weeks which will include allowances for increased costs of production due to rises in wages, etc. Meantime, buyers in all sections of the trade are withholding their orders and offers of raw jute are made from day to day at the

Offers of Pakistan Hessians are made for August at 62s 6d f.o.b., but business was reported in Calcutta at 64s 6d f.o.b.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during July declined sharply and surprisingly so. Estimated consumption last month was off 19 million yards from June and was an estimated 3 million yards lower than July a year ago. U.S. burlap stocks declined an estimated 7 million yards during July notwithstanding the lower consumption. At an estimated 245 million yards, 155 million yards were spots and 90 million yards were floats. Appearing below are two tables which include the July figures—(1) based on member reports to the Textile Bag Manufacturers' Association and the Burlap & Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

Commodity Markets

BRITISH TEXTILE REVIEW

WOOL BETWEEN SEASONS

THE July series of wool sales in London established a moderately lower price-base (grossy merinos and fine greasy crossbreds were 5-7½ percent cheaper at the end than at the beginning), and futures prices for tops in the London terminal market have reflected expectations of further weakening of values in the finer range next season. The possibility of a more general weakening has revived demands for a crossbreed contract in the terminal market, where prices are based on merino 64s. Such facts might indicate a lack of confidence in the price-structure of wool, but they reflect only caution. Some observers believe that the caution is misdirected; that, with output and the consumption of the commodity now approximately balanced and next season's prospective expansion only slightly increased, even a moderate expansion of manufacturing activity might reveal that the recent hand-to-mouth buying had been mistaken. Activity in this country is still more noticeable in the woolen than in the worsted trade, but after months of adjustment, there are signs that the lowering of values in the finer section is beginning to stimulate demand. In the wool-textile trade as a whole the trend appears now to be gently upward, and some traders believe that this trend will gather strength as the latest restraints on hire-purchase contracts for durable consumer goods divert more buying-power to "soft" goods. Some manufacturers—especially those which have long-term arrangements with multiple distributors—are already working at full capacity and are accumulating orders. Firms with large export interests, on the other hand, still take a cautious view of the outlook.

Deepening Gloom in Lancashire

The tone of the cotton-textile trade presents a marked contrast. In the apparel sections despondency is general. Trade may not be quite so bad as the demands for prompt action suggest, but it is certainly unsatisfactory. The blame for this state of affairs is distributed among various causes. The deepest grievances of the past few months relate to overseas. The delay in formulating and declaring a policy for America's "surplus" cotton has been, from the British viewpoint, inexcusable; the resulting uncertainty on prices, right through the range, has been probably the worst of all impediments to business. Imports of Asian cloth threaten the basis of the domestic trade on which the cotton industry is now heavily dependent; but this is, at least a "natural" problem. Another unnecessary "artificial" problem is purchase tax. The President of the Board of Trade was asked in the House of Commons at the end of July if he was aware that one class of textiles entirely free of purchase tax—industrial cloth—had both a flourishing home trade and, therefore, a flourishing export trade. However, the wool industry, which was excluded from the concessions granted last April, has a much stronger grievance in respect of purchase tax. Whatever the reasons, the industry is losing labour, losing export trade, and suffering increasing competition at home. Inevitably, it is therefore reducing production—the output of yarns in the second quarter of this year was 27 million pounds (10½ percent) less than in the same quarter of last year. Exports of cloth are running at a level about one-fifth below last year's—and last year's total of 637 million square yards was much below the 709 million square yards reached in 1953. Now, on the import side, Hong Kong has been added to India as a major cause of anxiety. It exported more than 27 million square yards of cloth to this country in the first half of this year, compared with less than 5 million square yards in the same period of last year, and Mr. C. Henniker-Heaton, director of the Master Cotton Spinners' Federation, returned from an extensive tour of the East, has estimated that the figure can soon reach an annual rate of 120 million square yards. Beseet by these various problems, the industry adopts a defensive attitude. It demands some form of protection against imports from the Commonwealth—although the whole principle on which Britain imports from the Commonwealth would be modified if the demand were granted. And it insists that, whatever may be done to annul restrictive practices in other trades, the cotton industry must be exempt from the latest damning report of the Monopolies Commission and from the (much more cautious) action proposed by the Government. These restrictive practices—which, for instance, prevent yarn prices from sinking to the levels at which the most efficient mills could profitably produce them—are, of course, one reason for Lancashire's relatively high prices. Another reason is that Lancashire, unlike many of its competitors, has failed to reduce its costs by working double, or even triple, shifts, to make the maximum use of modern machinery. It is significant that not only Asian but also European countries—Germany, Holland, Belgium—have been encroaching on this country's export trade in cotton textiles.

Ahead in Research

When so much can be criticised, it is gratifying to learn—from the General Rapporteur's report to the OEEC Textile Productivity Conference at Ostend in July—that Britain is more progressive than other European countries in attempting to raise productivity by technical research, work-study, and simplification of methods. These efforts should gradually reduce costs, and so far as research is concerned, they will certainly change the character of many products. Progress in blending is especially significant. It is by no means confined to the newer fibres: viscose and

acetate are playing a leading part in this development, assisted by an important advantage in price by comparison with the newer fibres. Acetate staple is a relatively new type with promising applications in blending; and blends of acetate and viscose and nylon are providing the advantages of attractive texture with strong resistance. Such developments are matched by—indeed, combined with—new finishing processes. The June figures for production of man-made fibres (of all kinds) showed a reduction of 1½ percent from the level of May and were 5 percent below the peak reached in March. But the fine summer has had a noticeable effect on sales of finished goods in the retail market and production of all relevant textiles is now responding to the improvement.

WHOLESALE PRICE INDEX STEADY

THE official wholesale price index (base: year ended August, 1939=100) remained almost unchanged at 357.3 during the week ended 30th July, 1955 as compared with 357.2 (revised) for the previous week. The index was higher by 2.1 percent as compared with that of a month back but was lower by 6.0 percent than that of a year ago. The average for the month of July 1955 worked out to 355.6 as compared with 342.5 (revised) for June 1955 and 381.3 for July 1954. The index for Foodstuffs declined by 0.5 percent to 313.3 as compared with 314.8 (revised) for the previous week because of a fall in the prices of sugar and tea (—3% each), wheat at Amritsar and gur at Muzaffarnagar (—2% each) despite an advance in the prices of gram at Hapur (+5%), coffee (+4%), wheat and dal arhar at Hapur and bajra (+2% each). The index for Industrial Raw Materials advanced by 2.0 percent to 415.7 as a result of a rise in the prices of manganese ore (average export prices) (+13%), raw jute (+8%), cottonseed (+5%), groundnuts in Bombay and rapeseed in Calcutta (+2% each) and raw cotton, raw silk, linseed, castorseed and butan lac pure (+1% each) although prices of groundnuts in Cuddalore (—7%) and gingellyseed in Bombay, (—5%) were marked down. The index for Semi-Manufactures declined by 1.2 percent to 325.7. Items which showed noticeable changes during the week were: cowhides (—23%), buffalo hides (—7%), castor oil in Madras (—6%), sheepskins and coconut oil (—4% each), mustard oil (—3%), groundnut oil in Madras and Calcutta, linseed oil in Bombay and gingelly oil (—2% each), copra cake (+8%), groundnut oil in Bombay, copper and gingellycake (+2% each). Higher prices of jute manufactures (+2%) raised the index for Manufactures by 0.2 percent to 371.8 as compared with 370.9 for the previous week. The prices of dyestuffs, however, fell by 1 percent. A fall in the prices of chillies (—4%) and black pepper at Cochin (—1%) brought down the index for the Miscellaneous group by 0.2 percent to 550.9 as compared with 552.1 (revised) for the previous week; the price of cummin (jeera), however, moved up by 1 percent.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: Year ended August 1939=100)

EXPORT POLICY FOR GROUNDNUT OIL

The Government of India has reviewed the policy regarding export of groundnut oil and it has been decided to release a further quantity of groundnut oil for shipment up to the end of October, 1955, both by established shippers and crushers. Export allotments will, on application, be made by the licensing authorities at the ports to established shippers for a quantity equal to 7½ percent of their best year's exports. Exports by crushers will be allowed on the basis of shipments effected by them during the period from 1st February to 31st July, 1955. Crusher-exporters are advised to submit the necessary particulars to the port authorities for establishing their exports during this period. By a separate notification simultaneously issued, the Government of India has increased the export duty on Groundnut oil with immediate effect from Rs. 100 a ton to Rs. 150 a ton.

Calcutta Markets

SUGAR AND COAL FEATURE IN FREIGHT MARKETS

TIME CHARTERING ACTIVE

THERE is a better enquiry for coals from North America but only for later loading positions. Generally with the scarcity of early steamers all markets are quiet although the undertone is strong and owners appear confident that rates will remain at satisfactory levels for the rest of the year. There is a firm enquiry for sugar from Cuba to Colombo and charterers are still interested in tonnage to Japan; 160s has been paid again for sugar from Queensland to the U.K. but charterers' requirements are not filled for the present. Ore charterers have withdrawn from the market for Vizagapatam-U.S.N.H. and there is no news of any further business being concluded from Mormugao to East Coast India. The Time Charter section was fairly active and rates well maintained. A Liberty type vessel was fixed at 33s, delivery Ceylon, re-delivery Japan, for a trip via Red Sea Ports-East or West Coast India.

LINSEED

Easier conditions prevailed last week and there was a further marked decline in prices owing to lack of buying support from crushers resulting from the disparity between seeds and oil prices. Although ready goods were still rather scarce sellers were fairly keen; trading was rather small. The oil market was quiet and prices declined further owing to lack of buyers. Latest quotations were as follows: August Rs. 18 a maund.

HIDES AND SKINS

The market ruled dull. Stocks were less than in the previous week.

Bazaar Sales
(Between 9th August and 15th August, 1955)
Cowhides: Wet Salted (Slaughtered) 14,500 pcs on the basis of Rs. 13-8 to Rs. 25.
Goatskins: Wet Salted (Daissee, Killed) 51,200 pcs. on the basis of Rs. 230 to Rs. 275 and Rs. 325 to Rs. 395; Assam-Dinajpur-Murshidabad-Rajshahi 21,260 pcs. on the basis of Rs. 235 to 270; Purneah-Kissenganj 11,000 pcs. on the basis of Rs. 230 to Rs. 245; Patna 50,500 pcs. on the basis of Rs. 205 to Rs. 220; Muzafferpore-Pakur 12,000 pcs. on the basis of Rs. 230 to Rs. 235.

Bazaar Stocks
(15th August, 1955)
Goatskins: Wet Salted (Daissee, Killed) 53,500 pcs; Assam-Dinajpur-Murshidabad 70,500 pcs; Muzafferpore - Patna - Pakur - Purneah - Kissenganj 90,000 pcs.
Cowhides: Wet Salted 1,53,500 pcs.

BRITISH SHIPBUILDING BOOM

Although orders placed in British yards for new ships slackened last year, a revival began in the last quarter of 1954 and continued throughout the first six months of 1955. Latest figures issued by the shipbuilding industry's trade association show that at the end of June orders totalled £525 million. British shipyards generally were booked up two years ahead, with even longer waiting lists for some types of tonnage. Britain had orders from abroad for 150 ships, valued at £125 million, and these greatly exceeded the small orders placed elsewhere by some British owners. Mr. H. O. Brotherton in his presidential address at the annual conference of shipbuilding and engineering unions, which opened in Blackpool on 8th August, said there was no real justification for the cries of alarm raised over a small number of orders for new ships going to Germany. A long delivery was the price paid for a full order book. Shipbuilding, he declared, "is one of the industries in which, for quality of products, productivity, and value for money, Britain can still stand comparison with any country in the world".

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE INDIAN ECONOMY UNDER THE COMPANIES BILL

CONSEQUENCES OF LIMITING MANAGING AGENCY

IT is unlikely that the Companies Act (1955) will differ substantially from the Bill now before the Lok Sabha. Mr. Deshmukh has promised some improvement in Clause 197. But the debate has made it clear that any other adjustment is more likely to be to the detriment of companies than to their benefit. Now that the framework is reasonably clear it is possible to form some idea of the shape of the private sector in a few years' time. On the test of whether or not private enterprise will be able to do what is expected of it, the picture for the future is not a reassuring one. The Act will not destroy altogether, but it will change radically. It can be said now that these changes will be for the worse. The weight of regulation alone will ensure that progress is impeded. The uncertainty which will arise through the concentration of so much arbitrary power in the hands of a Government which will inevitably change its political colour from time to time, will be a serious blow to enterprise. The restrictions on managing agency threaten to deprive the private sector of its chief mainstay at a time when the system's services will be most needed. Perhaps worst of all, an era has opened in which the current tendency in some quarters to regard the business man as a social parasite is now embodied in important legislation. This point may not be regretted by those sections of the Lok Sabha in favour of turning company law into an instrument for achieving certain political ends which are already out-of-date in the rest of the world and may even be forgotten here in ten years' time. But the country may learn to regret that the honourable calling of business man is being debased. This aspect of the new Act promises to linger long after the private sector has made its adjustments to the rules laid down for it.

The new measure will add to the feeling that the private sector is permanently on probation. This will be damaging to the self-respect of the honest entrepreneur. It will also encourage the feeling among the less reputable that there is no future for honest money-making. Again, this might suit a few advocates of sentimental socialism, but it will damage the prospects for economic expansion. Incentive, it must be remembered, is the rock on which all pure socialistic systems, either sentimental or practical, have eventually foundered. The Act does not appear to be so far from a socialistic measure as Mr. Deshmukh would have his critics believe when it is realised how it is intended to cut down on the monetary incentive to honest and efficient private enterprise. There is little point in the Finance Minister's reference to the present state of the stock markets as indicating the investor's confidence in the future. The rise in share prices is still chiefly speculative and anyway it is reasonable to suppose that an investment boom of perhaps larger dimensions has been postponed for the last two years because of the uncertainties encouraged by Government policy. Whatever the Government may say to reassure the private sector it would have been better for confidence if the new Act had embodied fewer opportunities for meddling interference, especially when there is such an irresponsible popular clamour that they be made use of.

One of the largest question marks for the future is whether the benefits of managing agency can be retained when the operations of the system are curtailed. It can be said from the start that finance corporations, so long as they are run on sound business lines, will not adequately make up for the loss of promotion facilities. A large proportion of these, which would no doubt have been extended during the second five year plan, will now be lost. The risky type of enterprise, especially if it can only offer a delayed return, will suffer most. The public sector cannot be expected to fill these small but important production gaps. The Indian economy may have to reconcile itself to being permanently out of balance in some section or other and therefore chronically susceptible to large-scale fluctuations. In a speech in the Lok Sabha

last week, Mr. Tulsidas Kilachand, while clarifying his own Minute of Dissent to the report of the Joint Committee, pointed out that the Government had paid too much attention to emasculating the managing agency system and too little to devising what is to go in its place. This criticism is valid; the Act will leave the private sector without its chief source of risk capital. The stock markets cannot be expected to fill the bill without the guarantee of the managing agent, any more than the financial corporations will be prepared to. Even the security of a sound board of directors may be weakened in proportion to the use the Government makes of its powers for interfering with appointments and remunerations.

The secretary-treasurer alternative does not appear, from Mr. Deshmukh's words, to have been carefully thought out. Its one advantage appears to be that it will retain the economy of administrative resources which is admittedly one of the more important features of managing agency. But it will contribute little towards solving the promotional problems, except in those cases where the body acting as secretaries or treasurers is prepared to take a large financial stake in the company. Mr. Deshmukh does not seem to have taken sufficient account of the financing problem in recommending this alternative system. What he appears to have in mind is little better than an office bureau to which a company can apply when it has difficulty in recruiting administrative talent of its own, payment to be made on a commission basis. The fact that such a system, no matter how studied with graduates in business from Harvard, will be no adequate substitute for the varied facilities of a managing agent need not be stressed. If the services of the professional and the expert are now to replace tried and interested business experience over a large section of the private sector, sound and rapid development will inevitably be the loser.

Whether the Act will encourage director management is doubtful. Some increase in the popularity of this system was probably assured

THE PERILS OF PLANNING

THE debate on the second five year plan has brought out at least two dangerous perversions in current economic thinking. One is the concept of "physical", as opposed to "financial", planning. Another is the idea that consumer goods production should be increasingly concentrated in small and cottage industries, while basic materials are manufactured by large (and mostly State-run) units. Both are strongly criticised in a brochure issued this week by the Federation of Indian Chambers of Commerce and Industry, entitled *Second Five-Year Plan: A Comparative Study of the Objectives and Techniques of the Tentative Plan Frames*. In neither case are the arguments strikingly original; but they deserve nevertheless to be restated from time to time lest the shortcomings of the Mahalanobis school of thought escape notice in influential, not always informed, circles.

The brochure points out that physical planning has come "to acquire a certain shade of meaning whereby total comprehensive planning is implied. The protagonists of physical planning contend that

The Editorship of "Capital"

After this issue, Mr. Neil McInnes relinquishes the editorship of *Capital*. Mr. McInnes left *The Statesman* in 1950 to join *Capital* as Assistant Editor, and was appointed Editor in 1952.

Mr. George Barrell, who joined the staff as Assistant Editor in 1954, has been appointed to succeed Mr. McInnes.

anyway; the slow accumulation of business experience, the operations of the financial corporations and what natural advantages this method possesses would have ensured that. But the governing factor is business experience and the new Act will certainly make no contribution to it. The influence of Clause 197, unless eventually embodied in an entirely different form, will seriously discourage director management. It is in Clause 197 that the influence of current socialist prejudice is most pronounced. If the Clause were to find its way into the Act unchanged the private sector would experience great difficulty over a period of successive bad years. It was a pity that Mr. Deshmukh's solution is to put even more arbitrary powers in the Government's hands instead of rejecting the Clause altogether. Its operation is bound to bestow a competitive advantage on Government enterprise. This was another point brought out by Mr. Kilachand in the Lok Sabha debate. If the Government were forced to adhere to its own laws it might not be so eager to extend the range of its economic activities. The private has no need to fear comparison with the public sector on the question of efficiency or any other if it is allowed to compete under terms of equal advantage and disadvantage. As it is, the whole private sector will work under continual restraint and individual sections of it can be placed at a special disadvantage in competition with particular units of State enterprise through the controls and restrictions under which it has to work. The abuses to which such opportunities could give rise under a less scrupulous Government than the present one can easily be imagined. It may not be difficult in a few years' time for the exponents of socialism to point to the inefficiencies of the private compared with the public sector, brought about by sheer weight of legislation, in support of their pleas for more nationalisation.

The most encouraging thing about the Bill now before the Lok Sabha has been Mr. Deshmukh's insistence on the sounder purposes which underlie it. The Act is a formidable piece of legislation. It is not now but later that it will have its most serious repercussions on the economic life of the country: even later perhaps than 1960. It might have been better to have tolerated a few familiar abuses now so that rapid industrial expansion is not interfered with. Besides, as many of the Bill's critics have pointed out, it contains many opportunities for an entirely fresh crop of abuses which will not necessarily be improvements on their predecessors, from either an economic or a social point of view.

it is the real resources of an economy which matter and not the availability of finance." The dangers inherent in this line of thought are clear. "Total comprehensive planning" can hardly be fitted into a democratic political system, so what might possibly be done is to shunt the Government off by a back alley into totalitarianism. Legislators in New Delhi who are nowadays able to speak their minds freely, and sometimes irresponsibly, would do well to remember this. This sort of thinking also assumes an omniscience of some superhuman sort in the body or bodies responsible for planning. It assumes, for example, that when the experts say that in 1961 100,000 motor-cars should be produced, the decision will somehow turn out to be uncannily right, regardless of the fact that there may be no one left to buy motorcars apart from the army—and the blackmarketeers. At the root of all these ideas is often a sincere and laudable feeling that the misdirection or misuse of resources should somehow be prevented. It is true that in a relatively free economy, such as we have now, misdirection and misuse of resources does take place to some extent; but there is nothing to show that it is necessarily decreased by a network of stringent controls.

Advocates contend that the purpose of planning is precisely to prevent this misuse; that is undoubtedly true, but theoretical intentions and practical results have nowhere yet coincided. The disappointing result of the nationalisation and "planning" of India's air services provides a very good reason why the State interventionists should never bite off more than they can chew. In this country, no less than in others, one of the biggest factors in the making and execution of

good plans is the efficiency of the administrative machinery. Informed opinion in New Delhi is well aware of the shortcomings in this field, and the "total planners" diffidence in discussing it is disturbing. As long as the Government insists on giving direction to economic development, yet lacks the administrative wherewithal to do it efficiently, it could do worse than adopt the process of gentle encouragement and discouragement followed during the first five year plan.

In criticising the heavy reliance on small and cottage industries for producing consumer goods, the F.I.C.C.I. is joined by the Indian Chamber of Commerce, Calcutta. Serious doubts are expressed whether these industries will be able to meet the rising demand for consumer goods generated by heavy expenditure on basic industries. It is even more probable that the prices of the majority of these goods will rise because of the peculiar conditions attaching to small-scale production. The intention, one suspects, is basically to make consumer goods so expensive that demand for them is depressed to a level where it can be met by the limited output of small factories and village industries. In other words, the consumer will be made to subsidise the activities of a host of small, disorganised and inefficient producers. The dream that a nation's economic power can be based on a multitude of petty industries dotted all over the countryside springs primarily from a highly coloured view of Japan's growth during the past century. But the key factor in that growth is conveniently forgotten: that goods were produced cheaply and sold with an aggressiveness that no Indian industry, big or small, has yet been able to achieve. Large sections of influential opinion have yet to learn that rising production and falling costs are the only sure basis of a nation's economic prosperity. If the process is anywhere interrupted, stagnation is the most likely consequence.

INDIA'S FIVE YEAR PLAN FOR TOURISM

TARGET OF ONE MILLION VISITORS

WITHIN the past half century, tourism has become an integral part of Western economy. Britain, France, Italy and Switzerland each have several million visitors annually, and with Ceylon claiming a modest half million, India is awakening to a hitherto relatively unexplored potential source of income. In October, New Delhi will be the scene of the annual World Tourist Conference, convened by the International Union of Official Tourist Organisations. In an All-India Radio broadcast last week, Mr. O. V. Alagesan, Union Deputy Minister for Railways and Transport, expressed the hope that the conference would provide a much-needed stimulus to the development of tourism in India and outlined his department's five year plan, now under consideration by the planning committee.

Already the tourist branch of the Ministry of Transport distributes no less than six million pieces of tourist literature annually, and supports 13 tourist offices in India and three abroad. Yet tourist traffic for 1954 was a bare 39,333, bringing foreign exchange into the country to the value of Rs. 5 crores only. Emphasising the prestige which India's peace policy has gained for her, Mr. Alagesan stressed the value of augmenting it by attracting more visitors; his target, one million within the next five years. A survey of the country's resources in this field has been completed. Based on its findings, the Ministry envisages the establishment of 70 to 80 tourist centres in the vicinity of popular places of historical, archaeological, or scenic interest. Each one is to be endowed with hotels and rest houses, equipped with adequate transport services, approached by first class roads provided with rail and air connections wherever possible. Training courses for guides are already under way in the larger cities and it is hoped to provide the nucleus of a corps of "educated young guides who can speak many languages, whose knowledge of history and architecture should earn the respect of the tourist and in whom the tourist should find pleasant companions."

The basis, however, of a healthy foreign tourist traffic lies on the home front. Mr. Alagesan wisely qualified his plea for the attraction of sight-seers from abroad by saying that without the support of a travel-conscious public within the country, the venture is doomed to failure, and that there must first be a campaign for the encouragement of the home holiday market. Internal social tourism of this sort exists in France and to a great extent in Scandinavian countries. There the high standards obtaining are largely due to the demand created by the inhabitants themselves. The idea of a wide dissemination and interchange of peoples from various provinces is theoretically sound. If it could be put into practice it might prove a substantial contribution to a sympathetic understanding of other people's problems and a major step towards a solidly united India.

The programme under review is an ambitious one, but Mr. Alagesan skillfully evades any refer-

ence to its cost. If such a plan brings an increase in India's foreign exchange then some estimate of expenditure is desirable. So is an assessment of the potential number of travellers, and some attempt at an equation of costs; will the tourist traffic offset the large sums which will have to be expended to achieve even a modicum of the proposed comfort? In spite of the speed of modern air travel, India's very geographical position puts a check on the number of tourists who can afford to travel thousands of miles to see the Taj by moonlight. Climatic conditions impose still further limitations, so that foreign tourism at its height can only be seasonal. Tourist resorts, as such will be forced to depend heavily upon internal spending for the bulk of their revenue. But from where are the local tourists to be drawn? With modern aids to city dwelling such as air conditioning and so forth, the drop in the European population, plus heavier taxation, there is no longer the great exodus to the hill stations in the hot weather. Two-thirds of the local population is too poor to travel anyway, and of the remainder a large proportion certainly cannot afford to do so for pleasure. Subsidised holidays for workers, peasants, low-paid white collar employees and the youth of the country, is Mr. Alagesan's answer together with the provision of a large number of youth hostels in all important tourist centres and places of scientific and cultural importance. Yet another source of tourist traffic has been discovered in the pilgrim. The 2,500th anniversary of Gautama Buddha falls next year and a large influx of pilgrims is expected from neighbouring countries. It has been decided to improve road and rail connections leading to famous Buddhist centres in India and to build a number of rest houses, in the hope that this gesture will pave the way for regular pilgrimages from Buddhist countries.

It will obviously take time and money to achieve the Utopian conditions set out in the five year plan. In the meantime much could be done for the improvement of present conditions without incurring great expense. Perhaps some of the expenditure on premature publicity could be diverted into more practical channels. The wealthy, dollar-spending sightseer from across the Atlantic, lured by the enchanting bait of the glossy literature so lavishly dispensed by the Ministry of Transport, is all too often appalled by the food served on the railways, much of which he finds virtually uneatable; shocked by the lack of amenities on trans-India airfields, and bewildered at Indian Airways' cardboard box which is thrust upon him sans plate, fork or knife. The motorist's plight is little better. Roads are generally bad and signposted only on the rarest occasions. Should he be fortunate enough to find a garage for petrol, he will find car servicing a hazardous undertaking. The rest houses and dak bungalows, once so trim and well appointed are often mere shells of their former glory.

The gateway to India opens indeed on a treasure house of antiquity. In no other country is there to be found such diversity of race, tradition and customs. But the first essential for her exploitation as a tourist centre will be, not the building of fine hotels and the printing of shiny pamphlets or impeccable guides, but the measure of her ability to raise the general living standard of her peoples throughout the entire country.

CURRENT COIN

The Bank Award.—The report of Mr. Justice P. B. Gajendragadkar, who constituted the Bank Award Commission, was made public this week. There is now every hope that the eight-year-old dispute can be successfully brought to an end. One important factor pointing to this possibility is that the report upholds a good deal of the workers' claims, and they will now no longer need to threaten strike action to get what they have been demanding. This in itself will present some gain to the Indian economy because the dispute was a constant threat to peace and efficient working in the banking industry. Unfortunately the gain will be offset by the inevitable increases in bank charges which will be required to meet the fresh burden on costs. The Government will welcome an end to the dispute; it has never relished the unpopular position it had assumed of apparently opposing the workers' cause. The recommendations of the report are roughly on the lines of the original Sastry Award which the Government modified by statutory order in the light of its own judgments of the possible effect on the growth of rural banking. Whether the circumstances of that judgment have now changed is doubtful and it now seems that rural banking will have to develop on a much higher cost basis. The newly constituted State Bank may prove to be the chief sufferer because of its obligation to open 200 more rural branches in the near future. The report may be right in its inference that the banking industry, in its present financial state, is able to carry the new burdens to be placed upon it, but the conclusion has been arrived at without paying too much attention to the overall economic position of the country. The Government's action at least had this merit. The final outcome of the dispute will stand as an example of the disadvantages of national statutory wage fixing on the basis of

limited economic data. The progress of rural banking will now be impeded to some extent, if the Government's original assessment of the facts was correct. What the effect will be on individual banks, of some of which it was said that they would have to close down if the extra charges were imposed, will be made clearer over the next few years.

Empire of India Assurance.—Reviewing the activities of the Empire of India Life Assurance Co. Ltd. during the year ended last December, the Administrator, Mr. R. Varadachari, said that the period had been marked by controversies over rates, bonuses and staff insurance schemes. The last had been settled, but the effects of the other two would be felt in future years. Certain unhealthy features, which had hitherto been confined to general insurance, had now appeared in life insurance. The sudden reduction in premium rates by a big company created a very difficult situation for offices like the Empire of India. It took some time to work out the data and consider what to do, but it was clear that a similar reduction was inevitable if the company was to continue in existence. The revised rates were issued on 27th April, 1954, but for nearly two months before that the writing of new business was at a standstill. In issuing the revised tariff, field staff were strongly advised not to indulge in "the pleasure of rewriting as new business a large amount of business which we had already placed on our books at enormous cost". This seemed to have had some effect, according to Mr. Varadachari, but how long it would last in view of the "terrific competition" prevailing in the field was not known. The Administrator declared that the insurance agent should penetrate into the rural areas, but he would do so only if it was made worth his while. At present, the field force was concentrated almost entirely on urban areas and the whole-time insurance agent had become a rarity.

Postal Savings Bank Cheques.—The Rajya Sabha's amendment of the Negotiable Instruments Act to introduce the cheque system in the postal savings bank scheme in Bombay is a measure the wisdom of which can only be proved by experiment. Apparently, it is designed to minimise or remove the present inconvenience to the saver because of the tedious formalities he has to go through and because of which the postal savings scheme has proved less popular than it might be. It has long been feared that the introduction of a cheque system would give rise to various abuses and fraudulent practices in the countryside, some were suggested by members of the House in the course of the debate. The scheme however is being introduced in Bombay city only, on an experimental basis, and its extension to other parts of the country, particularly rural areas, will depend upon, as the Minister for Revenue and Defence Expenditure put it, the improvement of the personnel in rural post offices. The Government's policy, he said, was to appoint village teachers as village post-masters in consultation with State Governments. Furthermore, the Government was considering the issue of identity cards to account holders. These measures, if enforced thoroughly, appear effective safeguards against fraudulent practices, but it is hardly likely that the cheque system will enable the scheme to draw in any larger volume of savings in the countryside than it does already. Literacy is extremely limited in the villages and it is doubtful if most villagers are capable of learning how to use and trust a cheque system for some considerable time to come.

Food and Administrative Efficiency.—To a series of interesting, but outright propagandist, pamphlets, the Employers' Association of Calcutta has just added one on *State Trading in Food*. The subject is topical and important, for many people in Delhi think that the State should become a bigger and bigger bania, peddling fertilisers today, insurance tomorrow and jute goods the day after. This pamphlet is intended as a record of the waste and mismanagement that is found inevitably to accompany State trading. The results, in the case of food, are said to "have been very discouraging". Available resources have not been properly utilised. The consumer cannot claim that he was supplied with good quality foodgrains at favourable prices. The Central Government cannot claim that they purchased foodgrains in foreign countries at favourable rates. The State Governments cannot claim that they procured the maximum quantities possible and unnecessary imports were avoided. How can it be contended that an extension of State trading will help the Government to raise additional resources, in the shape of profits, for the prosecution of the second five year plan? There is an element of truth in each of the criticisms, although the data on which they are based is somewhat slender (that is not the fault of the Employers' Association). The fault, one feels, lies in the approach: the shortcomings of State

trading are sought to be shown up against a very flattering belief in the slick efficiency of private trading. Typical of this belief are statements such as: "Having regard to the fact that the private trade, in grains particularly, was always working on a small margin of profit (sometimes only gunny constituted the profit), it should be said that the issue prices, without attracting subsidies in any form, should not be more than 110 percent of the purchase price" (Italics ours). India has had enough experience of hoarding, profiteering and blackmarketing in recent years to know that for a lot of the time this simply was not true. In fact, the three words are hardly mentioned in the pamphlet, although they were the prime features of India's war and post-war food economy and the main reasons why State trading was introduced. We would be the first to join the Employers' Association in saying that the best thing that has happened to this country in the past three or so years is the success of Mr. Kidwai's policy of gradually decontrolling food. But at the same time one must recognise that circumstances have been favourable, as they were not before: domestic production has increased and imports are more easily available. A serious research effort on the enormities of administrative bungling on food cannot afford to ignore the moral failings of the banias who made that State trading necessary—even less so when those moral failings are still perennially seen in the sugar markets.

Motor Vehicle Taxes.—The Planning Commission's official study group is right when it states that a reduction in motor vehicle taxes would have a great psychological effect on the road transport industry. It would by no means solve the hauliers' problems and of this the study group is well aware. But it might convince them that they have a place in the transport system and that some effort to survive now will pay dividends in the future. The study group points out that the present system of taxes on vehicles is hopelessly complicated. It may take many years to clear up, and cause severe embarrassment to the country's transport system through the crucial period of the second five year plan. That is unless the Centre makes a bold move to produce a progressive policy out of the present muddle. With so much State Government and local authority interest now vested in the system this will not be easy. A start could be made with the study group's recommendation for a flat reduction of 20 percent in the total average taxation on motor vehicles. The study group is not sure how this could be done and contents itself with saying "once the principle is accepted, it should be possible to devise ways of achieving the result". Even more useful for the encouragement of road transport would be some assurance against nationalisation. If this cannot be given permanently, guarantees covering a few years would help. At the moment the States are restricting progress through their system of permits, designed to fill the gap until final decisions are made about nationalisation. The result is, as the study group notes, a permanent feeling of uncertainty damaging to the efficiency of existing operations and crippling when it comes to their extension. The study group recommends that the Central Government take power by legislation to regulate the inter-State movement of road transport vehicles. This would seem to be the quickest way out of the present unsatisfactory state of affairs. Reluctance to use road transport is probably a symptom of the poor condition of the industry. Individual truck owners are lacking in business methods, as the study group observes. Booking facilities are not easy to arrange when operators do not always know from one month to the next which routes they will be allowed to run. Unwillingness to pay compensation for loss of goods in transit may also be a symptom of the "hole in corner" methods owners have slipped into through excessive interference and uncertainty about the future. The study group's recommendations should serve as a reminder to the Government that India is embarking on a period of development without a satisfactory supplement to the railways. The two transport systems can be accepted as complementary. If the railways are still afraid of competition they would do well to consider the study group's suggestion that they themselves participate in road operations by joining State transport undertakings.

Japan Exports Less Cloth.—According to figures just released by the Japan Cotton Spinners' Association, Japanese exports of cotton piecegoods in the first half of this year fell to 498 million yards, against 649 million yards in the previous half-year and against 629 million yards in the first half of 1954. In the first half of 1953, however, the total was only 391 million yards. The chief destinations of the exports are shown, with comparisons, in the following table:

JAPANESE COTTON CLOTH EXPORTS (In million of yards)

	1955	1954	1953
United States	44.7	9.6	20.9
Indonesia	44.6	204.4	99.8
Australia	35.9	24.9	4.3
Siam	31.9	57.0	40.8
United Kingdom	30.8	10.7	26.2
Burma	30.4	24.8	13.8
British West Africa	28.6	14.3	12.2
Singapore	26.1	13.5	11.8
Persia	25.9	25.5	27.4
Holland	25.2	8.8	9.6
*Total	498.0	628.8	390.9

*Including other countries.

U.S. Economy Booms.—The U.S. gross national product—the annual output of goods and services—in the second quarter of 1955, was at an annual rate of \$385,000 million. This represented, according to a Commerce Department report, an annual rate of increase of \$27,000 million over the second quarter of last year. The report also said that fixed private domestic investment rose from the first to the second quarter by an annual rate of \$3,000 million to reach \$56,000 million. The major factor in this increase was business expenditures for plant and equipment. Expenditures for personal consumption, mainly in food, clothing and services, rose by \$5,000 million to an annual rate of \$250,000 million during the same quarter. Personal income was at an annual rate of more than \$300,000 mil-

lion, an advance of \$7,000 million over the first quarter of this year, most of the increase being in payroll disbursements. A joint report from the Departments of Commerce and Labour comments on the continued high level of building activity, both public and private. In July 1955, the report says, the value of new construction, public and private, reached a new monthly peak of \$3,967 million, compared with \$3,556 million in July 1954. Taking the first seven months of the year, from January to July 1955, total construction reached a record volume of \$23,079 million against \$20,286 million for the first seven months of 1954. Construction volume increased from June to July 1955 mainly because of expansion in private residential and commercial building and highway work. Total private construction in July reached a new high for the third successive month. At the level of \$2,774 million in July it was 4 percent above June 1955 and 16 percent higher than in July 1954. For the seven-month period, January to July, 1955, private construction amounted to \$16,538 million, compared with \$13,810 million for the first seven months of 1954. The chief factors contributing to the continuing American economic boom have been the growth in demand for all types of durable capital equipment and the consequent increased wage level throughout the country. This last, however, has promoted an alarming increase in instalment credit and the largest monthly rise on record, principally accounted for by deferred payments on motor cars and mortgages on house purchase. It is possible that the former may receive a natural check due to a temporary lapse in production during the introduction of the new season's models. But in the face of a deferred payments

Company Report

EMPIRE OF INDIA LIFE ASSURANCE
COMPANY LIMITED

THE ADMINISTRATOR'S REPORT

The following report was made by Mr. R. Varadachari, the Administrator in presenting the Revenue Account and the Balance Sheet of the Company together with the Auditors' Report for the year ended 31st December, 1954:—

The year has been an eventful one for the insurance world characterised by the rate-war, the bonus war and the staff insurance scheme war. The controversy regarding the last has now been set at rest but the repercussions of the other two are bound to be felt in future years. But so far as the present is concerned, certain unhealthy features, which had till now been largely confined to General Insurance, have made their appearance in the Life Insurance field also. The sudden reduction in the rates of premium by one of the big companies followed in a week by another company, created a very difficult situation for companies like the "Empire". It took us sometime to work out the necessary data and consider the course to be adopted, but it was clear that a similar reduction was inevitable if "Empire" was to exist. After a full consideration of the pros and cons, we decided to follow the lead of the other companies and issued the revised rates on the 27th April, 1954. For nearly two months before that, the writing of new business by the Company was practically at a standstill. In issuing the revised tariff, we advised our field staff very strongly not to indulge in, what the President of the Indian Life Assurance Offices Association described as "the pleasure of re-writing as new business a large amount of business which we had already placed on our books at enormous cost" and that we would be satisfied with the normal growth of genuine new business. This seems to have had some effect during the year 1954; but how long this will last in the face of the terrific competition prevailing in the field is not known! If the message of insurance, i.e., the thrift and savings movement, is to spread far and wide in the land, the insurance agent should penetrate into the rural areas and he will do so only if it is made worth his while. At the present moment, the field force is concentrated almost entirely on urban areas and the whole-time insurance agent has become a rarity.

As there is some misapprehension even in informed quarters about the "Government management" of the Company and its result, I wish to emphasize that the actual day-to-day working of its affairs, such as the procurement of new business, settlement of claims, etc., are almost entirely in the hands of the Managers and the field staff recruited from the usual actuarial and business circles and not from any Department of Government. The chief difference is that every effort is made to see that the Code of Conduct is observed in field appointments. We do not allow any intermediaries between the Branch Secretaries and the agent beyond what is permitted by the Code; but this is felt by our organisation as an unnecessary insistence upon the Code. As a matter of fact, even in some big companies, the hierarchy is Organisers, Inspectors, Divisional Superintendents, Branch Secretary and the underlying object of this can easily be imagined; even a few weeks back an Officer, who left the Company, wrote to some of our field-workers giving this hierarchy as that prevailing in his new company on that company's letter-head and offering them higher status and pay and less restriction than in "Empire". Another difference is that the Head Office in "Empire" frowns upon twisted business or any attempts to pinch men from other companies.

Government Management

In some quarters it is alleged that after the "Government management" came in, the expenses have increased but this charge is entirely baseless; on the other hand, it was during the period when the Company was under private management that the expense ratio had been steeply rising from year to year, though the general trend for other companies was downwards. The salaries and allowances of the top Officers in the Head Office used to amount to the average to Rs. 22,106 every month in the year 1950 but in the year 1954, this has been brought down to Rs. 8,111. Various other measures of economy have been introduced, but it takes time to feel the full effect of these. In the year 1949, the overall expense ratio was as high as 33.66 per cent. but during the year 1954 we have brought it down to 28.40%. The renewal expense ratio also has shown an appreciable reduction

from 21.38 per cent. in 1949 to 18.61 per cent. in 1954. The reduction would have been far greater but for certain extraneous factors. The graded scales of pay to the staff introduced in 1953 for the first time in the history of the Company and the increase in the dearness allowance increased the cost by over Rs. 80,000 per annum. To add to this, the cost of the law charges connected with the proceedings against the ex-directors, etc., is quite a big one and this has gone to swell the expenses. Though the Company is an old one, it has had to work during the last four years not only as though it was a new company beginning from scratch, but with the added handicaps created by the incidents which happened in the years 1950 and 1951 and which resulted in the action under Section 52A of the Insurance Act. Every effort is made by field-men of other companies to misrepresent the position of the Administrator as that of a Liquidator. The extent of the disruption of the organisation will be clear from the fact that, of the existing Inspectors, 75% are entirely new men taken after July, 1951. The same is the case in regard to the Branch Secretaries and the Officers at the Head Office. Considering these handicaps, the organisation has produced results during the year which should be considered quite satisfactory. In spite of certain deficiencies "Empire" can claim some achievements to its credit during the last four years—such as reduction in top heavy salaries, increase in the salaries of the subordinate staff, stabilising the finances, creating a big reserve of Rs. 116 lakhs to meet losses from bad and doubtful investments (very few companies in India would be able to do this) increasing the dividends to shareholders and the bonus to policyholders, and with all this, lowering the overall and renewal expense ratio.

It is, however, unfortunate that, without any reference to these facts, some persons connected with insurance, in their anxiety to espouse the cause of "private management" as against nationalisation, have thought fit to publish disparaging remarks about the performance of this Company as well as the Jupiter General Insurance Co., Ltd. I do not desire to enter into the controversy for or against nationalisation, but would leave it to be judged by more competent persons in an objective manner. But so far as these two particular companies are concerned, I would submit, in all humility, that an examination of their past history—their methods of business and investment, ratio of shares and hawking of the management rights and top heavy administration—as compared with the present position by any person, official or non-official, will not lend any support whatever to the cause of "private management". Such an examination will also show how difficult it is and how long it takes to rectify inherited wrongs and at what cost to the policyholder and to the general taxpayer. We all like comparison and competition, but the competition in the insurance business at present is neither fair nor equal.

The triennial Valuation as at 31st December, 1954, is in the final stage of completion. I am glad to say that from the preliminary calculations made, the hope which I expressed in my last report about a sizeable surplus has been amply borne out. The results of the Valuation will be published shortly and there is every prospect of an increase in the bonus to the Policyholders.

PROGRESS OF BUSINESS IN THE YEAR:—
New Business

During the year 14,897 proposals were received for assurances amounting to Rs. 4,80,01,000. Of these and others awaiting completion on 31st December, 1953, 11,887 proposals resulted in policies assuring Rs. 3,84,06,774, of which Rs. 8,19,500 was reassured. The new business after deduction of reassurances was accordingly Rs. 3,75,87,274 representing an annual premium of Rs. 20,04,744 and Rs. 7,458 by way of single payment.

Expense Ratio

The overall expense ratio in the year was 28.40% as against 28.55% in 1953 and 26.93% in 1952. The renewal expense ratio in the year was 18.61% as against 19.80% in 1953 and 19.63% in 1952.

Claims

Claims by Death during the year amounted to Rs. 19,32,760 representing an increase of nearly Rs. 11 lakhs over the figures of the previous year. The claims by maturity showed a decrease of nearly Rs. 51 lakhs over those of the previous year.

Income and Outgo

The income for the year amounted to Rs. 1,53,62,124 (after deduction of taxes at source), of which Rs. 1,19,77,645 was derived from premiums. The outgo amounted to Rs. 1,08,03,439. The excess of income over the outgo is Rs. 45,58,685.

Investments

The total assets have increased from Rs. 11,97,50,963 to Rs. 12,38,65,607. For reasons which have been explained in my previous reports, I have concentrated the new investments almost entirely in Government Securities. Since my taking over charge, I have up to date invested Rs. 2,48,51,397 in Central and State Government Securities, with the result that the total investment in Government Securities represents nearly 70% of the total assets. The investments made by the previous management have been under continuous scrutiny and every effort has been made to recover them: suits have been instituted in the Law Courts in a number of cases to recover loans advanced on the mortgage of properties during the years 1946 to 1950.

Rate of Interest

The net interest yield during the year comes to 3.32%. Credit for interest on mortgages taken to Court has again not been taken into account. Such interest will come into the account when realised.

The relations between the Management and the Staff were satisfactory. I have endeavoured to ameliorate the conditions of the staff to the maximum extent possible subject to the overriding interests of the policyholders and the imperative necessity of bringing down the renewal expense ratio. A regular graded scale was introduced for the first time by me and I have in view some more ideas of the lines on which further improvement is required. The interest of the staff has always been uppermost in my mind and, if they will bear with me a little longer I am confident of improving their conditions in an appreciable manner.

I wish to convey my thanks to all the Officers, the staff and the field-force for the good work done by them during the year, sometimes under discouraging circumstances. I am sure that the Company and its workers have a bright future.

A DITCHER'S DIARY

little or nothing to do with nationality? Indeed there is such a case, and it is that case that Capital seeks to present, in common with the other financial journals and a section of the daily Press. We present it not as peculiarly British, which it isn't, but as valid on its own merits, as economic rationality. Thus we will always be in substantial agreement with our many Indian friends and colleagues, and in substantial disagreement with a species of socialist politician no matter of what nationality. On the other hand, we are not hypocrites and do not dissimulate our British connection. We understand that there is no need to do so, because British capital, functioning under conditions laid down in Delhi, still has a part to play in free India's development. Of course, people who do not like what we say about this or that issue will always be able to claim that we are not defending economic rationality but sinister foreign interests. This charge usually crops up in quarters that happen to be as much opposed to Indian business enterprise as to any other. For example, Mr. Malaviya in this article says that we criticised the Mahalanobis plan because it would cut British profits, when in fact we were simply endorsing the criticisms of Dr. B. C. Roy, who is no more a lackey of British capital than Mr. Malaviya.

When all is said and done, and no matter how wide the area of agreement between Indian and British business men, there will remain something peculiar in the position of an old Indian institution like Capital that is popularly associated with a class of people whose status was fundamentally altered in 1947. Most of our friends recognise that peculiarity as well as we do. The obligations that flow from it were implied, suitably enough, by a former editor of Capital speaking in London lately on the last Budget. After offering a business man's criticism of that Budget, Mr. Geoffrey Tyson said: "I am afraid my talk has been a little on the gloomy side, but I would like to say that I, and perhaps all of us here, owe a good deal to India. Speaking for myself, whenever I feel in a hypercritical mood about India, I try to remember that any small success I may have attained personally is largely due to the opportunities which India gave me, and she must have given opportunities to thousands of others. One is greatly sustained by the extremely friendly relations which exist between ourselves and individual Indians. These are purely personal reasons why I want her to succeed, and I believe all of us want her to succeed in her plans, and if we do sometimes make criticisms, our goodwill is more abundant and stronger than our criticisms. All of us wish India well not only because she has come to occupy, by reason of the sophistication of her people and the quality of her leadership, an outstanding position in South Asia, but also because it is tremendously important to us of the free world that these great experiments in the field of planning and development should succeed by democratic means. So that anything I may have said this evening which suggests a carping or critical approach to the 1955-56 Budget is, I hope, leavened by the fact that we all of us wish India all success in her various planning projects in the future."

That fairly represents the most common spirit among British business men in this country, and it adequately describes the spirit in which this newspaper approaches Indian public issues. It would be tiresome, not to say embarrassing, to

preface every individual criticism with some such speech. And it would be unnecessary, because readers familiar with the continuing policy of the paper, as it finds expression week by week, can judge the case well enough for themselves. (I am well aware of course that there is another, smaller section of British and American opinion in India which hypocritically masquerades under a false and patronising Indian disguise, and which would be ashamed to admit, as Mr. Tyson does, that Westerners want to see India stay out of the Communist world, lest this be dubbed "McCarthyism". But such people scarcely count, and Indians quickly take their measure.) I have said so much to defend this newspaper from Mr. Malaviya's onslaught because of its unusual asperity and because it comes from the editor of the official Congress paper—not because I believe that the views he expresses are at all widely held by people familiar with Capital. I venture to assert that they are not, and certainly not by that large number of Indians whose notion of the place of private enterprise in the socialist state approximates to our own. Furthermore, though I reply to his attack, I do not deprecate it. It is welcome, and proper. I believe that there are such things as "sinister interests" at work in India, and where they are operating, they will only be exposed by the sort of hard-hitting journalism that Mr. Malaviya practises.

But hard hits are most effective when they are accurately aimed, and preferably not at an opponent who has been invented for the occasion. Mr. Malaviya provides unscrupulous controversialists with some pretty lessons on how to invent straw men. For instance he quotes these words from a Capital editorial: "...the fatuous remarks of certain other State Premiers, Mr. Morarji Desai, for example, who when shown the over-ambitious schemes of Prof. Mahalanobis, calmly called for a bolder plan". This passage, he declares, is an assault on "one of our most respected leaders". His readers would have no way of knowing that the missing words represented by three dots at the beginning are: "Dr. Roy has spoken candidly and wisely. West Bengal can take pride in the contrast between his level-headed comments and the fatuous, etc." Thus what was a fair comparison between the economic views of one "respected leader" and another is transformed by misrepresentation into a slanging of Congress leaders generally. This is much less than honest, and contrasts with the fairness we are used to in Indian political controversy. However, fair or not, this sort of spirited writing does at least serve to bring out the interests involved in a debate, which false politeness never does. Mr. Malaviya reveals what his interests are in his concluding words, when, speaking of British capital, he says: "This capital will have to beat a retreat. We want the process to be peaceful, with the minimum of harm and with the largest amount of good-will and adjustment. The scribes would have it the thirsty way". Now, the "we" in this passage can scarcely include the Congress Government, whose pronouncements on the subject of foreign capital have another sense altogether. Far from "beating a retreat", I had understood that there was a responsibility on British capital to adjust itself to new conditions, to a new tax structure, to the reform of company law, and to the socialist trend generally. While that process is in train, India's interests and her friends' will best be served by newspapers saying what they mean, in the most temperate language consonant with lucidity and openness. A newspaper that does not say what it means has much less excuse for its existence than one that occasionally says the wrong thing.

PRICES FALL ON STOCK MARKET

MORE ANTI-INFLATIONARY MEASURES FEARED

THE previous week's recovery on the London stock market proved to have been unsoundly based. Prices fell back steadily from the recovery levels, following persistent small selling on an unwilling market. Widespread and appreciable falls were sustained. The fall gathered momentum after the week-end as selling increased and buyers continued to hold off. The markets as a whole were much quieter than in recent weeks and the volume of business was small. The number of bargains marked fell to about 13,000. The setback in prices reflected the withdrawal of buyers in view of the obscure economic outlook and fears of further anti-inflationary measures. The possibility of a rise in bank rate induced further small but shady selling in gilt-edged, and extensive falls were recorded. Foreign bonds lost ground and dollar stocks moved irregularly. Increased selling and lack of support brought sharp losses in industrials where falls of several shillings were common. Gold shares lost ground, but coppers attracted support from time to time. Oils suffered several falls.

The Money Market

Easier conditions continued in the money market last week. Government departmental dis-

tributions and a call of some £40 million on the Gas stock helped swell cash resources and comfortable conditions prevailed. Day-to-day money varied between 2½ percent and 3½ percent, although higher rates were paid when the market was not quite sure of the position. There were indications that the credit situation would be less comfortable this week. Despite an increase in their short-term funds, the banks were not very keen buyers of bills. Applications for treasury bills totalled £380,085,000, of which £270 million were allotted at an average rate of 80s 1.28d compared with 80s 1.13d in the previous week. This week, £280 million are offered. The Bank of England return for the week ended 17th August showed notes in circulation £26 million lower at £1,808 million, and bankers' deposits £6 million lower at £224 million.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: The general sentiment on the London stock exchange at the moment seems to be a suspicion of the current prices mixed with an irrepressible instinct that they will still prove right. Symptoms of the continuing inflation strengthen the aversion to fixed interest stocks and also to liquidation. All that remains is the industrial equity. Many prices discount the future well ahead, but for the long-term investors, who will not panic at every routine Cabinet meeting, there is still some scope. Sooner or later, rather more interest will be taken in gold shares too, including the established producers. With investors and experts uncertain about the future, markets will remain highly sensitive but the main movement still seems to be in the right direction.

Italian Lire and W. Germany

The Italian lire will be included in the system

of free quotations of foreign currencies in West Germany as from 27th August, according to an announcement by the Bank Deutscher Laender. Parity and the upper and lower points of intervention are fixed as follows: (Italian lire a thousand) parity 6.72097 marks, lower limit 6.6707 marks and upper limit 6.7715 marks. Trading of the lire on West German foreign currency market, however, will be restricted to cash transactions. Forward dealings in other currencies of the multilateral exchange system with Italian banks or in Italian lire with other banks authorised to take part in multilateral foreign exchange trade will not be permitted.

U.S. Business Loans

Loans to business by leading New York banks for the week ended 17th August totalled \$8,286 million, against \$7,264 million a year ago. This increase was despite the recent increase in the rediscount rate of Federal Reserve banks. New York City banks continued to feel the shortage of loanable funds and their free reserves continued at a deficit. Free reserves represent their excess reserves less borrowings from the Federal Reserve. The deficit last week was \$111 million on an average day.

Platinum Firm

Demand for platinum from industrial users exceeds current offerings and the price structure continues firm. Dealers continue to quote up to \$90 for larger lots with no sales reported at the top figure, while sellers have been trading at \$88 to \$89. Primary sellers are still offering platinum to established industrial consumers at \$80 a troy ounce but supplies for this purpose are limited.

U.K. Tea Stocks

U.K. tea stocks in London and provincial warehouses on 12th August were 115,133,590 lbs, against the previous week's stocks of 116,832,540 lbs. Deliveries during the week totalled 10,121,760 lbs, the total amount about to be landed was 13,260,500 lbs, and actual landings were 8,422,810 lbs. The total afloat was 21,135,840 lbs, including from Calcutta 12,372,980 lbs, Chittagong 1,503,110 lbs, Cochin 1,816,000 lbs and Colombo 5,443,750 lbs. The average price realised at the auction during the week was 51.96d against 52.18d in the previous week and 60.10d in the corresponding week of last year.

Vegetable Oil Market

Linseed oil has yet to stabilise. The selling pressure from some quarters is still fairly prominent with buyers keeping well in the background. The past week has seen a further extension of the downward price movement by fully £5 a ton. Indian crude for current shipment in bulk at around £92 c.i.f. is now within £2 of the lowest figure reached in March. Buyers at the close were hardly above £91, with the Continent also providing scanty support. Castor oil was almost inactive and prices, after some attempts at steadiness, eased by £2 a ton on balance. Indian B.S.S. for September-October shipment was available at £88 a ton in drums, cost and freight. The fall in coconut oil has been more restrained on some Indian support for Ceylon oil. Nevertheless, values eased by 15s for Straits and 30s for Ceylon. There was talk that Rotterdam bought a fair amount of Philippine oil at a low price, but this could not be confirmed.

Rumanian Cement for Pakistan

The contract for the export of 60,000 tons of Portland cement from Rumania to Pakistan has been awarded in a three-cornered deal to the Lamel Trading Company, shippers, and export-import merchants of London. The contract is valued at £500,000. The tender originally was for 180,000 tons of cement valued at £1,500,000, but this was reduced at the last minute by the Pakistan Government. The cement will be supplied by Rumanian Cement Exports.

Liverpool Cotton Trading

The Liverpool Cotton Association's official spot values for Pakistan quality remained temporarily suspended last week. Imports from Pakistan totalled 300 bales, afloat 1,055 bales and forwarding to mills 1,251 bales. The general turnover included a fairly wide variety of growths, with shipment business chiefly in Sudans and Aden, and a small trade in Nigerian, United States, Mexican, Middle Eastern and African for spot delivery and shipment. Indian Broach had fair shipment business and a small spot turnover, with small shipment business in Oomras. Pakistan qualities, showed only a small spot turnover, buyers being unwilling to make fresh forward commitments pending an announcement regarding the export duty. Manufacturing sections of the industry were still experiencing slow conditions, but there was an increase in the number of enquiries for yarn and cloth since the Washington statement on cotton policy. On the export side, the position remained practically unchanged and was mainly concerned with replacement orders. A feature of the futures market was the substantial rise following the Washington statement on cotton policy. Further study of the statement, however, revealed a number of outstanding problems which were yet to be settled, causing a reactionary tendency with business still on a restricted scale.

Demand for Cloth

The announcement by Burlington Industries of a general 5 percent wage increase to its 40,000 workers in Southern Mills touched off covering in advance of a possible price increase. Buyers entered the market in force and millions of yards of 80 squares and several other cloth constructions were sold, together with good-sized quantities of 80 by 60 broadcloths. The danger of future Japanese competition was also cited as a factor. In print cloths, sales of bellweather 39 inch 80 squares were made at 19 cents a yard for only average

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

THE STATES ASK FOR MORE

Wednesday, 24th August.

MONEY was becoming easier, when the announcement that seven States are to make a second issue of their 4 percent 1967 loans, for a total amount of Rs. 11.75 crores, reversed the trend. Although lenders outnumbered borrowers today in the local interbank market, the call rate has stayed at 3 percent, and is unlikely to fall now until the States have got the extra money they are seeking. This second approach by the States to the capital market within a fortnight—including even those States that accepted all applications to their first loans—came as a surprise. But there can be little doubt that it is justified because most States could have obtained more money last week if the subscription lists had been kept open longer and if the period had not been interrupted by strikes and hartals.

A fair number of export bills were sighted last week, both tea and gunny documents. Since then, this section of the exchange market has been quiet, but there is a good demand for remittance. Sterling is steady and the local dollar rate quotes Rs. 480-12.

Silver ruled steady on increased demand and the price rose to Rs. 168. The forward rate was 4 annas lower. The price was unchanged at 78½d in London and at 90s cents in New York. Gold was steady in sympathy with silver. The price improved to Rs. 95-14. The sovereign was quoted at Rs. 60-12.

Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills, which were opened on Tuesday, 23rd August, 1955, totalled Rs. 1,31,00,000. The average rate of acceptance rose from Rs. 2-8-0 to Rs. 2-8-5 percent per annum. Tenders at Rs. 99-6-0 percent were accepted in full and those at Rs. 99-5-9 percent allotted approximately 56 percent. Tenders for Rs. 1 crore of 91-day Government of India Treasury Bills will be received at all centres up to the close of business on Tuesday, 30th August, 1955. During the week ended 19th August, 1955, Government of India Treasury Bills for Rs. 11,56,75,000 were sold in favour of the Reserve Bank of India.

A fall of Rs. 9.15 crores in notes in circulation to Rs. 1,297.98 crores was the outstanding feature of the return of the Reserve Bank of India for the week ended 19th August, 1955. The total note issue was Rs. 89 lakhs higher at Rs. 1,329.37 crores. Notes held in the Banking Department consequently rose by Rs. 10.05 crores to Rs. 81.39 crores. Deposits of the Government of India increased by Rs. 15.93 crores to Rs. 90.99 crores, and those of other Governments improved by Rs. 16.45 crores to Rs. 25.89 crores due to the subscriptions to the State loans. Balances of commercial banks at Rs. 51.80 crores showed a decline of Rs. 1.94 crores. Balances held abroad rose by Rs. 3.36 crores to Rs. 85.30 crores, as did investments by Rs. 36 lakhs to Rs. 62.38 crores. Other loans and advances increased from Rs. 18.75 crores to Rs. 33.38 crores, of which advances to scheduled banks against usance bills totalled Rs. 11.64 crores (Rs. 6.75 crores). These advances amounted to Rs. 179.46 crores since 1st January, 1955. Ways and means advances stood at Rs. 2.44 crores (Rs. 3.57 crores).

The statement of the position of scheduled banks for the week ended 12th August, 1955, discloses Demand and Time liabilities at Rs. 607.65 crores (Rs. 12.08 crores on account of borrowings from banks) and Rs. 409.24 crores (Rs. 4.01 crores) compared with Rs. 602.88 crores (Rs. 12.09 crores) and Rs. 410.41 crores (Rs. 4.86 crores) respectively in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 11 lakhs and Rs. 2.27 crores to aggregate Rs. 34.48 crores and Rs. 50.32 crores, respectively. There is an increase of Rs. 1.53 crores in investments to Rs. 371.44 crores. Advances and bills discounted at Rs. 598.53 crores reveal a drop of Rs. 3.63 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.3 percent and 58.9 percent against 7.1 percent and 59.4 percent.

The return of the State Bank of India for the week ended 12th August, 1955, shows a rise of Rs. 2.90 crores in total deposits to Rs. 211.42 crores. Investments in Government Securities are down by Rs. 1 lakh to Rs. 94.37 crores, while other authorised investments are up by Rs. 7 lakhs to Rs. 9.82 crores. Advances, including loans, cash credits and overdrafts, and bills discounted and purchased have declined by Rs. 2.50 crores to aggregate Rs. 104.29 crores. Cash and balances are, in consequence, shown at Rs. 18.83 crores or Rs. 3.76 crores higher.

The directors of the EASTERN BANK, LIMITED have declared an interim dividend of 3s a share less income tax at the rate of 8/6d in the pound.

The directors of the NATIONAL BANK OF INDIA LIMITED have declared an interim dividend of 7½ percent less income tax at 8/6d in the pound.

LONDON FINANCIAL LETTER

DEFECTIVE BRAKES

By Air Mail.

ALTHOUGH new restrictions were imposed on hire-purchase trade in Britain on 25th July and Mr. R. A. Butler was at the same time "re-questing" the banks to restrain their lending more purposefully, the Cabinet was anxiously discussing the economic position on 15th August—only three weeks later. The frequency of these discussions—whether Parliament is in session or in recess—is sufficient evidence that the authorities' actions to avert a crisis in the balance of payments were too slow or, being late, too weak. The Chancellor can justly state that there is no crisis, but nobody can yet be sure that the slither towards a crisis has been halted. And the margin between the economy and this threatening "odd-year crisis" has become perilously slender. There were crises in 1947, in 1949, in 1951. If the series were resumed in 1955 we should have to conclude that 1953 was missed only because the recovery from the troubles of 1951 was slow and, therefore, enduring, and because the recession of trade after the "Korean boom" had temporarily damped inflation.

Lessons are being learned this year, and learned painfully. One is that Britain, and therefore her currency, cannot maintain stability in a state of inflation, unless other economies are inflated equally—as they have not been recently. Another is that no policy can be, except by chance, correct unless statistical information is recent enough, and of wide enough scope, to show to what degree inflation (or deflation) has developed. The intention, apparently, was to allow mild, or "creeping", inflation to continue indefinitely, so that the economy would remain fully active in a permanent state of slight intoxication. In favourable circumstances such a policy might work for many years, until internal stresses caused cracking. In practice, however, it is impossible—anyway, on the basis of statistics available in Britain—to measure the degree of inflation in the present or even in the recent past. Naturally, official manoeuvrings become clumsy and ineffective when their circumstances are not clearly defined.

The Inflationary Gap

Some brave efforts have been made to fill the statistical gaps. For a firm of London stock-

Cool filtered water for office or factory

'Tushar' WATER COOLERS

— by the makers of the famous 'Crystal' air conditioner

A 'Tushar' water cooler increases staff efficiency, helps to improve quality of work — quickly pays for itself in goodwill

- **Instantaneous cooling:** Continuous supply of instantly cooled water at the touch of a button — no unhygienic refilling or storing
- **Filter:** A large and efficient built-in filter — easily replaceable
- **Two models available:** Model R-10, capacity 10 gallons per hour (180 cupfuls per hour); and Model R-40, capacity 40 gallons per hour (720 cupfuls per hour)
- **Easy to install:** Needs only a water supply, a drainpipe and an electric plug point
- **Economical to run:** Cools to the temperature you choose, then switches off automatically
- **Silent working—Anti-splash construction—Handsome design**

brokers Professor Victor Morgan has calculated that in the first half of 1955, compared with the first half of 1954, the combined demands of personal consumption, fixed capital investment, and increased expenditure on stocks, exceeded the increase in production by £240 million, and that a balance of supply and demand was struck by reducing governmental expenditure by £120 million and by a release of £120 million to the home market by deterioration of the external payments position. Items of expenditure are still tending to grow, but deterioration of the external position cannot be allowed to continue. On recent trends, Professor Morgan suggests, domestic spending might exceed domestic production by some £240 million in the second half-year; and "this amount, corresponding closely to the £200 million anticipated contraction in bank advances, represents the probable order of magnitude of the inflationary gap which the Chancellor has to close." The Chancellor's request was for a "significant" reduction of advances, and it was interpreted as meaning roughly 10 percent, or roughly £200 million. But both the gas and the electricity boards have lately arranged new capital issues which, though payments on them are spread over some months, should enable these boards to reduce their bank-debts by a substantial proportion of £200 million. Yet Professor Morgan is looking for a new reduction of stockbuilding as a consequence of the "credit squeeze", expenditure on stocks having increased, according to his estimate, by £180 million in the first half of this year, compared with the same period of last year.

In a material sense the correctives seem to rely mainly on this "credit squeeze": yet increases in the floating debt (and thus in the banks' liquid resources) to enable the Government departments to pay for the substantial amounts of gas and electricity stocks to which they subscribed could counteract much of the deflationary effect of the "squeeze". In a psychological sense what is apparently needed is a deflationary atmosphere, in which investment in stocks or plant would be discouraged by doubts whether such investment would be profitable, and in which wage-claims would not be so vigorously pressed for fear of unemployment. Mr. Roy Harrod, writing in *The Financial Times*, has blamed the business community for not responding promptly to the Chancellor's warning signals. But the business community is still inspired by the profit-motive and does not pretend to be otherwise. While it believes that its activities will be profitable it will pursue those activities, even if they are inflationary. Monetary policy has to perform two tasks: reduce the volume of money (or at least restrain its increase), and raise such doubt as will cause some projects to be deferred.

Alternative Sources

It is interesting to follow some of the devices

means whereby the simple intentions of last February have been evaded. The most obvious and important evasion (the result, it seems, of a misunderstanding) was the banks' selling of Government securities to enable them to continue increasing advances, which, according to intention, should have been reduced. Restraint of hire-purchase involved specified minimum payments in cash (lately increased) and repayment of the credit within specified periods; but people raised loans on their houses, by mortgage, and could thus without difficulty finance the purchase of even so expensive an item as a motor-car. The banks have now understood that they must reduce their advances to businesses and individuals; but various alternatives are being used, especially (where appropriate) by acceptance credit.

These leaks are being gradually stopped. The officially-instigated restraints imposed by the banks are bringing monetary stringency to the point where it affects demand for goods. Mortgage rates have risen, and, even so, loans secured on property are no longer freely available. The accepting houses have been requested not to grant credit required because a bank has refused it. Yet there will inevitably be some "loss of pressure" through evasive channels. How can an accepting house be sure that a request made to it does not come in the normal course of business? The banks may have ceased selling securities, but are there not many companies and individuals who can raise money by that means as an alternative to bank-credit—until the stock market becomes really weak?

Stocks and Shares

STRONG SUPPORT FOR SPECULATIVE COUNTERS

INDIAN IRON DENY RIGHTS ISSUE PLANNED: GILTS UPSET BY NEW STATE LOANS

Wednesday, Evening.

THOUGH there has been less activity in investment scrip, the bulls are in complete control of the speculative section of the market. Indian Irons have been strongly supported and today's clearing rate, at Rs. 40-7, gave the bulls a two-rupee margin over the last clearing. Despite a denial from the Indian Iron and Steel Company that it was not considering issuing rights shares—at least not yet—there was further support for Irons after hours. Jute shares were easier when the Pakistan export duty on raw jute was increased. Coal shares reacted on rumours of impending nationalisation, but recovered today on a ministerial clarification that nationalisation of existing collieries was not proposed. Indian Copper shares have been a very strong feature, having touched Rs. 6-8. Sone Valley has been taken to Rs. 9 on interested buying.

The decision of six States to approach the capital market for Rs. 11.75 crores more brought out sellers throughout the list of securities. This setback, however, is expected to be temporary.

Details of the week's trading follow.

The Government security market opened quiet but after the closing of the subscription lists of the principal State Loans the market recovered. Later, when reports were received that some States were contemplating fresh borrowings, sellers again appeared throughout the list. The 3% Conversion Loan 1956 continued quiet at around Rs. 80-5 with sellers rather than buyers and 3% Non-terminable Paper was nominally quoted at Rs. 80. In short-dated, 3% 1957 was better at Rs. 99-10 and 3% 1958 improved to Rs. 99-6. In the medium-dated group, 3% 1959-61 was marked at Rs. 97-14 while both 3½% National Plan Bonds 1961 and 3½% National Plan Loan 1964 recovered to Rs. 99-10, and Rs. 98-10 respectively. The 3½% National Plan Bonds 1965 were quoted higher at Rs. 98-8, but 3% 1963-65 eased to Rs. 94-5 and 3% 1964 was on offer at Rs. 94-4. The 2½% Loan 1961 was asked for at Rs. 92-5 and 2½% Loan 1960 hardened to Rs. 95-4. In contrast, 2½% Loan 1962 was easier at Rs. 93 with sellers at this rate. Among long-dated loans, 3% 1966-68 met with investment enquiry at Rs. 91-7 due to the approach of the interest date (1st September), but 3% 1970-75 was quoted at Rs. 87-2 with sellers over.

Provincial loans staged a recovery and the selling pressure eased following the over-subscription of the new State loans but, reports to the effect that certain States would again come to the market for further loans, depressed prices.

There was a keen demand for selected preference shares. Among jutes, Birla were taken at Rs. 103, Gouropore at Rs. 102-8 and Soorah at Rs. 113. In the miscellaneous group, Allahabad Bank were wanted at Rs. 132, a small lot of Birds Investments was crossed at Rs. 80-8, Calcutta Electric were done at Rs. 12-10 and Indian Iron and Steel were in demand at Rs. 109-8. Indo-Burma Petroleum were crossed at Rs. 107-8, Karanpura Collieries were marked at Rs. 65-4, New Beerbhoom were taken at Rs. 13-4 and Richardson & Cruddas at Rs. 89-8. A small lot of Shree Gopal Paper was crossed at Rs. 126-8.

In the Banking section, Allahabad Bank Contributory were marked at Rs. 170, Hind Bank at Rs. 28 and Punjab National at Rs. 48-8 x.d. United Bank of India 'D' shares were steady at Rs. 5-3.

In the railway section, Ahmadpur-Katwa came to hand at Rs. 81, Chaparmukh-Silghat at Rs. 47 and business was reported in small lots of Arrah-Sasaram at Rs. 75, Futwah-Islampur at Rs. 55 and Bankura-Damoodar at Rs. 59-12. Dehri-Rohatas were steady at Rs. 15-6.

The special feature in the cotton section was Elgin, which was in demand at Rs. 22. In contrast, Cawnpore Textiles were neglected at Rs. 8-12, Dunbar at Rs. 250, and Kesoram at Rs. 16-12. New Victoria were offered at Rs. 1-11.

After a steady start there was some nervousness in the coal section towards the close of business yesterday, following vague reports regarding nationalisation. The market, however, steadied up today when it was known that there was to be no wholesale nationalisation of existing collieries excepting, perhaps, the small uneconomic units in Bihar. The speculative counter in this section, Burakur, at one time dropped from Rs. 14-8 to Rs. 13-14 and subsequently recovered to Rs. 14-9. Bengal were strong at Rs. 550, East Indian were crossed at Rs. 33 and Karanpura Collieries were marked at Rs. 128. Parasea Collieries were taken at Rs. 11-6, Rancegunge Coal were done at Rs. 12-4 and South Karanpura at Rs. 12-5. Business was reported in Standard at Rs. 20-12, Union at Rs. 18 and several transactions were reported in Western Bengal at Rs. 7-10. The decision of the Pakistan authorities to increase the export duty on raw jute by Re. 1 per maund caused a slight setback in

jute shares. Here is a table showing the more important price movements:—

	Opening 18-8-55	Closing 24-8-55
Anglo-India	245	243
Barnagore	207	205
Champdany	183	182
Howrah	32-8	32-8
National	37-4	37-5
Nudea	56	55-8
Reliance	16	15-14
Union	250	247

Very little business was reported in electric supply shares. Calcutta Electric were taken at Rs. 15-6 and Patna at Rs. 12-10. Upper Ganges were reported at Rs. 14-15.

The outstanding feature in the sugar section was Durbhanga which spurred from Rs. 20-8 to Rs. 23 but the closing quotation was slightly lower at Rs. 22-8. Belsund were steady at Rs. 12-2, Balrampur at Rs. 11-4 and Carew were quoted at Rs. 12-14. Ramnugger came to hand at Rs. 27-14 and Shree Krishna Gyanoday were active at Rs. 19-8.

Indian Iron & Steel shares continued to be turned over in large quantities with the market still in the full control of bull operators, who confidently expect a small increase in the dividend which is due some time in November. From an opening price of Rs. 39-14, the shares steadily improved with minor reactions in between to Rs. 40-10. Tonight's settlement rate is Rs. 40-7. After hours there were buyers at Rs. 40-10. Braithwaites were in strong demand and improved to Rs. 28 as did Britannia Engineering to Rs. 42 cum-

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

Security for generations to come

On July 1, 1955, the State Bank of India came into existence, taking over the business of the Imperial Bank. It offers you all the services you require and expect.

You will continue to benefit from the guidance of experienced officers, and your business will receive the same personal, completely confidential attention that has been given in the past.

Not only have we inherited the sound banking traditions of a century and a half, but we have also inherited the public goodwill that has been so marked since 1806, when our first constituent bank was founded. And our policy, as always, will be guided by this ideal—to further your interests and those of the entire nation, now and in the years to come.

COCHIN TEA SALES

At Sale No. 17, approximately 1,100,000 lbs. of tea were on offer. There was a better demand, particularly for Medium grades. Enquiry was keen for all Fannings, particularly Middle East varieties and prices advanced. Good liquoring teas were strong but Whole Leaf types were neglected, especially flowery Pekoes.

COLOMBO RUBBER PRICES

The following prices have been issued by the Indian Rubber Board from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 12-8-55 (Rupees a lb.)	Average for the period (Rupees a lb.)
Sheet:		
No. 1	1.35½	1.27½
No. 2	1.32½	1.24½
No. 3	1.29½	1.21½
No. 4	1.15	1.15
No. 5	1.14	1.14
Cuttings No. 1	1.25	1.25
Cuttings No. 2	1.20	1.20

Crepe:		
Water White	—	—
R.M.A. No. 1X	1.78/82	1.89
R.M.A. No. 1	1.75/78	1.84½
Crepe No. 2	1.80½	1.80½
Crepe No. 3	1.72	1.72
Scrap Crepe:		
Sc. Crepe No. 1	1.35 Nom.	1.41
Sc. Crepe No. 2	1.22/32	1.34
Flat Bark	1.26/25	1.28
Sc. Crepe 2X	1.31	1.31

To arrive at f.o.b. Colombo prices add 31.4 cents a lb. in respect of rubber other than scrap crepe and 28.4 cents in respect of scrap crepe to the above market prices.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of July, 1955:

Upper Assam: Weather generally very wet; heavy rain with floods reported from Dibrugarh, Sonari and parts of Tingri; Outturn last month about normal to good; immediate prospects fair to good.

Central Assam: Weather generally seasonable; unusually heavy rain with floods reported from parts of Moran; immediate prospects fair to good.

Lower Assam: Weather generally seasonable but abnormally wet in Tezpur and Borsolia; outturn last month about normal to good, immediate prospects good.

North Cachar: Weather generally seasonable but abnormally wet in North Cachar; black rot prevalent in Happy Valley and in some districts of Lakhimpur; red spider blight lifting in most districts of North Cachar; outturn last month about normal to good; immediate prospects generally good.

South Cachar: Weather favourable; red spider blight lifting in Chutla Bheel and Chargola; helopeltis prevalent in Chutla Bheel, Hailakandi and Longai; black rot prevalent in Hailakandi and Longai; outturn last month about normal but considerably under last year in Chargola; immediate prospects fair to good.

Eastern Doonars: Outturn last month about normal and to date about level with last year; heavy rain with floods reported; red spider blight lifting black rot prevalent in some districts; immediate prospects fair.

Western Doonars: Weather wet; outturn to date slightly under last year.

Darjeeling: Outturn last month poor; immediate prospects bad; weather unfavourable; blister blight severe.

Terai: Outturn last month very poor; weather unfavourable; crop prospects improving; outturn to date below normal; red spider blight persisting.

U.S. TEA IMPORTS

A REPORT from the U.S. Federal Security Agency, Drug Administration, shows that the following teas passed into the United States during May 1955 with the corresponding figures for the previous year:

	Month of May 1955	1954	Comparative year to date 1955	1954
Black Teas				
Ceylon	2,950,430	6,746,324	15,926,307	25,061,033
India	3,372,399	3,914,643	21,952,492	24,348,064
Ceylon & India Blend	29,363	85,778	429,539	422,593
Indonesia	812,145	1,743,061	5,674,963	7,805,810

New Delhi

SANCTION FOR ALL BONUS ISSUE MOVES EXPECTED

ONE HUNDRED AND FORTY APPLICATIONS PENDING

(FROM OUR NEW DELHI CORRESPONDENT)

PENDING a decision on the recommendations of the Taxation Enquiry Commission relating to bonus shares, the Government of India has lifted the ban imposed on the issue of bonus shares on 11th August, 1954. About 140 applications for issuing bonus shares are pending. This they are all expected to be sanctioned. This move to restore the status quo is without prejudice to the decision the Government may yet take on the recommendations of the Taxation Commission.

Sodepore Glass Works Sold

The Industrial Finance Corporation has entered into a deal with a Japanese firm and sold it the Sodepore Glass Works for Rs. 62 lakhs. The Corporation will advance a loan of Rs. 62 lakhs to enable the Japanese Company to pay the sale price of the Works. The Japanese firm will repay the loan in annual instalments, along with the interest. In other words, the Sodepore Glass Works have been sold for Rs. 62 lakhs. Until June 1954, the Sodepore Glass Works Ltd. owed the Corporation Rs. 95,72,538 as principal and Rs. 7,56,284 as interest. A sum of Rs. 5,72,254 on account of interest for the year ended 30th March, 1954, was not included in the total outstanding in accordance with a decision of the board of directors of the Industrial Finance Corporation which said the interest was not likely to be realised, available security being insufficient for that purpose. In fact, no interest (which should have been about Rs. 50,000 a month) has been paid since 31st December, 1950. Apart from this not insignificant amount, certain expenditure ordinarily recoverable from the company was incurred by the head office of the Corporation and was debited to its charges account instead of being recovered from the company. In any case, one unhappy chapter is being closed in the hope that the new one will be better. On the assumption that the sum of Rs. 62 lakhs will be recovered, it seems that the Industrial Finance Corporation has suffered a loss of over Rs. 33 lakhs on the principal sum advanced to the Sodepore Glass Works Ltd.

Defence Production Board

As a first step towards the implementation of the recommendations of the Baldev Singh Committee's report, the Government has decided to constitute an autonomous Defence Production Board with Mr. Mahavir Tyagi, Minister of Defence Organisation, as chairman. One of the main objects of Mr. Tyagi's forthcoming visit to Britain and to some other West European countries is to study the working of defence production institutions. He will also explore the possibilities of securing the services of expert technicians for the proposed reorganisation of ordnance factories in India.

The Board, consisting of eight members, will have a Controller-General of Defence Production, who will be its administrative head and vice-chairman. To begin with, it is understood that Mr. N. N. Wanchoo, Joint Secretary to the Ministry of Defence, will perform the duties of Controller-General. The appointment will, however, be open in future to both civil and military officers. The other members of the Board will include a senior representative from each of the three Services, a senior representative of the Ministry of Finance (Defence), the Director-General of Ordnance Factories and the Scientific Adviser to the Ministry of Defence. A Deputy to the Controller-General may act as secretary to the Board. There will also be a committee associated with the Board consisting of representatives of the railways and other Government departments. Representatives of the private sector of industry will also be invited to attend meetings of the committee from time to time.

The constitution of the Board was felt necessary as the present system of managing ordnance factories is not considered suitable for effectively dealing with the production of defence stores. It is felt that unless the industrial character of the factories is fully recognised, no improvement in working can take place. The new Board will be vested with autonomous powers so that it can settle most of the problems without having to refer them to different departments or Ministries. Apart from its managerial rôle in relation to defence factories, the Board will perform two other important functions. It will co-ordinate research, development and design activities in the three Armed Services with defence production. In addition, it will secure effective liaison with civilian industry for meeting defence requirements both in peacetime as well as in an emergency. There will be liberal delegation of powers by the Defence and the Finance Ministries to the Controller-General and the Board; and by them, in turn, to the Director-General of Ordnance Factories and the superintendents of individual factories. Policy and other important matters will be disposed of by the Production Board and the Controller-General, the day-to-day administration of the factories being left to the Director-General of Ordnance Factories and his superintendents. The Board will meet once a month or more often,

if required. Only such matters as are not covered by the powers given to the Controller-General and the Production Board will be referred to the Government for orders.

Demand for Coated Abrasives

There are at present four organised units in India manufacturing coated abrasives with an annual rated capacity of about 80,000 reams. At a recent meeting, the representatives of the industry claimed higher individual capacities for their firms. It was, therefore, decided that the Development Wing of the Ministry of Commerce and Industry would undertake a survey of these factories in order to re-assess their capacity.

The existing demand for coated abrasives is estimated to be of the order of 80,000 reams and is met almost entirely from indigenous production. While a tentative figure of 120,000 reams was indicated as the probable demand by 1960-61, it was decided that a more accurate estimate could be worked out on the basis of the present requirements of various classes of consumers and the expected growth of each of the consuming industries. The Engineering Association of India and the Director-General of Stores have been requested to furnish data relating to the present consumption of coated abrasives by different consumers. It was further decided that the question of creating additional capacity should be examined later after an assessment of the anticipated requirements and the existing capacity had been completed. Generally, however, the representatives of the industry felt that the existing capacity was adequate to meet the anticipated requirements in the second plan period.

Manufacture of Motor Cycles and Scooters

At present, there is no firm manufacturing either motor cycles or scooters in India. Imports

of these items during the last four years are given below:

	Quantity (Nos.)	Value (Rs. lakhs)
1951-52	3,612	48.43
1952-53	2,403	37.11
1953-54	4,098	63.67
1954-55 (April-January)	2,055	25.76

These figures do not include defence requirements which are estimated at about 1,000 a year. The present annual demand is estimated to be about 5,000 motor cycles.

Messrs. Madras Motor Limited have been granted a licence to produce Royal Enfield motor cycles in collaboration with the British manufacturers. The scheme envisages the manufacture of complete motor cycles through a phased programme spread over five years. It is proposed to manufacture Royal Enfield in two sizes—150 c.c. and 350 c.c.—with a total installed capacity of 5,000 motor cycles a single shift a year. The capital structure of the firm is as under:

Authorised capital	Rs. 50.0 lakhs
Investment in land and buildings	Rs. 4.5 lakhs

Machinery and equipment Rs. 21.5 lakhs. The total capital so far invested by the firm is Rs. 26 lakhs. The machinery required for manufacture is being imported and production is expected to commence soon. The first batch of locally assembled motor cycles is expected to be on the market at an early date.

Scooters are not being manufactured in India at present, nor have they been introduced here in any considerable numbers. It is, therefore, not possible to estimate what the demand might be. Messrs. Automobile Products of India Limited, who

Only a thin film of oil protects these huge hydro-turbines!

How Gargoyle Lubricants are helping India's river-valley projects

AT INDIA'S river-valley projects, huge hydro-turbines turn ceaselessly to convert water-power into electricity. Only a microscopic film of oil protects the turbines and alternators from destruction; without it, they would grind to a stop—valuable equipment would be ruined!

That is why correct lubrication is vitally important. In India, as in so many other countries, Gargoyle Industrial Lubricants—famous for 89 years—are chosen to protect crores' worth of equipment.

There's a right Gargoyle Lubricant for each industrial need. Backed by our experience, correct lubrication—with Gargoyle Lubricants—can help to reduce costs and protect machinery in your plant.

For details, write to Standard-Vacuum Oil Company . . . Bombay, Ahmedabad, New Delhi, Lucknow, Calcutta, Madras, Secunderabad, Cochin.

Fly it...they'll buy it!
AIR-INDIA International

Great Eastern Hotel, Calcutta. Tel: 23-3314 & 23-3315

were formerly assemblers of motor vehicles, have recently been permitted to manufacture Lambretta scooters, in collaboration with Messrs. Innocenti of Italy. The programme of manufacture is to be completed in a period of five years and the firm expects to work economically with an annual demand of 5,000 scooters. The programme envisages the manufacture of scooters with an engine capacity of 150 c.c., 125 c.c., and 49 c.c. As a result of the discussions between the Government and the representatives of Messrs. Automobile Products of India, the latter have agreed to market the scooters at the lowest possible price.

To encourage the development of a bigger market for motor cycles and scooters, the import duty on complete motor cycles and scooters has been reduced recently from 47½ percent standard to 35 percent standard (or from 40 percent preferential to 27½ percent preferential). In the case of scooters, one more step has been taken by reducing the import duty on c.k.d. packs to 15 percent standard (7½ percent preferential), parts like wheels, handle bars, etc., being excluded from the purview of this reduction.

Expansion in Refractories

There are at present 32 units engaged in the manufacture of refractories, with a total annual installed capacity of 329,410 tons. The expansion programmes of six units and the installation of three new units were approved up to January 1955. When these schemes are completed, the installed capacity of the industry will go up to about 490,000 tons. The existing demand for refractories is of the order of 232,000 tons. This demand is met almost entirely from indigenous production, although small quantities of special varieties of refractories are imported. The iron and steel industry accounts for 65 to 70 percent of the total consumption of refractories. It is estimated that the annual replacement requirements of refractories by 1960-61 will be of the order of 600,000 tons, including 400,000 tons for the steel industry on the basis of a target of 6 million tons of ingots visualised for that industry.

It is pointed out that as a result of the programme for the construction of three new steel plants in the public sector and the expansion of the steel units in the private sector, about 600,000 tons of refractories will be required for constructional purposes during a period of about three years from 1956-57 onwards. These requirements will be in addition to the replacement requirements mentioned above. In view of the large quantities of refractories that will be required in the immediate future for the construction of steel works, it has been decided that the installed capacity of the refractories industry should be stepped up in the next two or three years to 600,000 tons; otherwise, it might be necessary to depend on imports of refractories for the construction of the new steel units. The shortage of refractories, it is noted, was mainly in the categories of magnesite and silica bricks, while there was probably adequate capacity for the manufacture of fire bricks. It is, therefore, suggested that capacity should be created mainly for basic and silica refractories.

Indianisation Returns

The number of Indians employed by foreign firms in India and paid Rs. 300 a month or more has increased by 17.4 percent, from 18,642 on 1st January, 1954, to 21,904 on 1st January, 1955. The number of foreigners employed by these firms has declined by 2.1 percent during the same period, from 7,750 to 7,587. All except about 190 firms have sent their returns for 1955. It is possible that these are firms in which there has been no change in the employment schedule since January 1954. This is being verified.

Working of Korba Coalfields

It has been decided that the Korba coalfields in Madhya Pradesh, previously reserved for working by and for the Central Government, should be worked on behalf of the Central Government and the State Government jointly. The question of taking over further areas for such working is being examined. The administrative and financial arrangements are being considered. Prospecting operations have already begun.

Washed Coal for Steel Plants

The Government has accepted the proposal that the steel plants should use washed coal, it is disclosed here. The intention is to set up coal washeries in the public sector if the required quantities are not available from the washeries set up by private collieries. The Government has already declared that the price of coal will be re-

viewed and adjusted suitably to cover washing costs.

Deshmukh Defends Managing Agents

The Finance Minister, Mr. Chintaman Deshmukh, stood his ground in Lok Sabha and did not give in over the issue of the managing agency system. Amidst interruptions even from members of his own party, he defended the Select Committee's report, the consideration motion for which was passed last Friday. The clause-by-clause consideration of the Bill will now commence. The Finance Minister replied to his critics by asserting that "after a 25-hour debate, I am convinced more than ever that the scheme put forward by the Select Committee is the best in the circumstances." With the second five year plan on its hands, the Government did not think it desirable to do away with the managing agency system in any part of industry, he added. He would wait till 1961 to see how the company law had worked.

Regarding secretaries and treasurers, the Finance Minister said: "They are nothing more than a competent body of corporate managers. They may have no financial stake in the company. The remuneration will be less than that of the managing agents. Most of the disabilities of the managing agents will apply to them. There are certain further disabilities which have been imposed on them—that is to say, they cannot nominate a director, they cannot have the right to purchase or sell goods except when authorised by a special resolution, and so on. Section 383 deals with this. There are three or four such disabilities and there are certain general disabilities. But there is a way out for those who have no finance or who do not wish to engage their funds on what they regard as unsatisfactory terms; for them it is open to say: 'All that we are out to do is to hire out the service of any willing person.' I see nothing wrong in allowing them to continue. It is my hope—and I believe it is shared by others—that in course of time we shall have a body of secretaries and treasurers who will not arise from the traditional class. It will be open to many of our bright young men to club together and to offer their services as secretaries and treasurers. All institutions take time to grow. I do not expect that the law will come into force much before April 1956 because we have to make the rules and perfect our administrative machinery and so on. That means that there is a period of only a little over four years. It is not too long a time in which to allow people to make up their minds as to what they will do.

Concentration of Economic Power

"There is another point. Perhaps I may take it up a little later when I come to the clauses—that is, in regard to the secretary and treasurer. There is no risk of concentration of economic power for the simple reason that he will have no power—no greater power than the managing director or the general manager. They are merely corporate managers. Therefore, the only phenomenon that you would like to guard against is the concentration of economic power in the hands of managing agents. There, I am free to concede a limited taint—a kind of token limit in the sense that we do not know what that taint is. It may mean a total paid-up capital of Rs. 50 lakhs or it may mean a capital of Rs. 50 crores. We do not know yet. All that we know is that many managing agents have expanded their domain—say, from 15 companies in 1945 to 30 companies in 1954. There are about five or six examples. Those managing agents will now have to do something in a hurry—either drop some of them or amalgamate or adopt any other course that may be open to them. This is the first indication of our desire to watch the situation and there will be four years in which we can watch it. Under the new department that we are to bring into being, we shall have perfected the machinery for collecting statistics of all kinds. I think there is already a law which enables the Commerce and Industry Ministry to collect almost any statistics concerning industry. If necessary, that law can be reinforced and strengthened. I have, therefore, no doubt that by August 1960 we shall be in full possession of all the facts in regard to the affairs of companies managed by managing agents as well as other forms of management. It would then be wise to take a decision which would further the interests of the country in a proper manner."

Mr. K. P. Tripathi: "Does it mean that before 1960 no action at all is contemplated?"

Mr. C. D. Deshmukh: "So far as notifying of industries is concerned, there is no limit. You may begin action tomorrow or in a year's time. It will take some time to investigate. After that, you will give three years, according to the provisions of the Bill. Even if you start investigation now, by that time the period of notice is over. I am assuming that in these three or four years no great changes will take place. I may also warn the House that with a big plan on hand, I doubt if, except for very strong reasons, the Government will come to the conclusion in the middle of the plan period that a certain industry should not have managing agents. That will all depend on how the plan goes and how the amended Bill works."

Mr. Gadgil: "Whether this particular industry exists or does not exist—that does not affect the plan."

Mr. C. D. Deshmukh: "That is my view and this is the best judgement of the Government as far as I understand. This is the judgement of the majority of the members of the House."

Mr. C. C. Shah: "Is there any provision in the present clauses relating to secretary and treasurer by which they will have no economic power or

financial control over the companies they manage?"

Buying Shares

Mr. C. D. Deshmukh: "I do not think there is anything to encourage it except that if the secretaries and treasurers choose to buy shares of a company, then it is open to them to have economic power. I say that you could not object to economic power purchased with consideration. We are referring to concentration of economic power otherwise."

Mr. C. C. Shah: "Is it not the same case with the managing agents? They had their controlling hand in the management and that is their economic power."

Mr. C. D. Deshmukh: "No, sir. The point is that the managing agents having any minimum holding in the managed company are allowed to have economic power over the company by virtue of the directors that they nominate. If they did not nominate directors, they would have no more power than on an individual basis. Men may capture economic power by other things than money. But so far as the scheme of the Act is concerned, there are no ways open to a manager or a managing director or the secretary or treasurer to acquire and concentrate economic power. He can only say: 'We are seven; it means we can take on a number of industries to manage'. Instead of one man we allow two companies to one man—the managing director here. It may be that there are, as I said, five or six talented people and they say: 'We can manage 10, 11 or 12 companies,' whatever may be the number. I see no danger in secretaries and treasurers being allowed to manage as many companies as they can having regard to the organisation of their particular group."

Mr. C. C. Shah: "May I put one more question? Is there anything in the present provisions to see that the secretaries and treasurers will consist only of persons who are men of technical competence and not financiers?"

Mr. C. D. Deshmukh: "I say that all the secretaries and treasurers are new hands. In other words, I am assuming that there are hardly any. There are very few in the south, I am told."

Mr. Natesan: "Am I right in thinking that the secretaries and treasurers are not going to take up financial responsibilities for concerns which they wish to take over?"

Mr. Gadgil: "If they are prevented from having any holdings, beyond a certain limit, in the shares, we can understand. If you say that there is no limit indirectly, what is happening through the managing agents will happen."

Mr. C. D. Deshmukh: "I really cannot understand this point. Is the honourable member saying that a man may buy 60 percent of the shares but he should not be allowed to have any voice in the management of the company because he is designed to be the secretary or treasurer? I do not accept the proposition that a person who buys shares should not have the rights that go with these shares."

Mr. Gadgil: "The genuine fear is that the very evils will be repeated in a different set-up."

Mr. C. D. Deshmukh: "They will be two different events. Here, as I say, we are dealing with his moral stake and a disproportionate voice in the management of the managed company. That phenomenon is not likely to recur under any other system."

Starting New Industries

The National Industrial Development Corporation, which is meeting here early next month, will consider ways and means of starting nine new industries, namely, carbon black, pulp, steel foundry, intermediaries for dye-stuffs, diesel engines, machine tools, fractional motors, ferromanganese and sulphur from pyrites.

Aid for Buying Ships

About Rs. 215.42 lakhs have been given to shipping companies so far in 1955-56 for the purchase of ships outside India, it is disclosed here. Of the total of Rs. 924.58 lakhs sanctioned during 1954-55, Rs. 496.42 lakhs have been drawn by the companies so far. Seventeen ships have been purchased or ordered for purchase from abroad since 1st April, 1954, with the aid of Government loans. Two ships each have been purchased from West Germany and Norway, one from Sweden and three from the United Kingdom. Orders for nine ships have been placed in West Germany.

Commonwealth Finance Talks

A Commonwealth Finance Ministers' Conference will be held at Istanbul on 10th, 16th and 17th September. The Commonwealth Finance Ministers are meeting at Istanbul to attend the annual meetings of the International Monetary Fund and the International Bank. As already reported, in the absence of Mr. Chintaman Deshmukh, Sir Rama Rau, Governor of the Reserve Bank, will represent India at these meetings.

British Steel Report

The report of the British Steel Mission has been received by the Government of India and has been accepted. Meanwhile, the head office of Hindustan Steel Ltd., has been shifted from New Delhi to Calcutta. The Russian designing expert has arrived here and has been holding consultations with the Iron and Steel Ministry.

Plans for Dye-stuffs

Imperial Chemical Industries are reported to be planning to expand their business in India further by manufacturing a wider range of chemicals and dye-stuffs. A German team of dye-stuff experts is already in India preparing blueprints for the dye-stuff industry. As already reported, an Italian team is expected shortly. The Government will thus have three projects reports to choose from.

London

STEPS TO CURB U.K. INFLATION

TOO RAPID STOCK ACCUMULATION

(FROM OUR LONDON CORRESPONDENT)

IF the Cabinet meeting earlier this week did discuss the economic situation, no indications as to its reactions have been made available to the general public. It is believed, however, that the Chancellor of the Exchequer has circumscribed all Government Departments on the need to cut down expenditure. Such warnings are almost routine these days, so it can only be presumed that Mr. Butler's report must have indicated that the measures he has already taken to meet the inflation danger should be given a bit more time to take effect. The difficulties inherent in assessing just how great is the danger are apparent from a most interesting survey of the position made by Professor E. Victor Morgan for a firm of London stockbrokers. To summarise this briefly is not easy, but the main findings would appear to be that industrial production in the first half of 1955 has been nearly 6 percent higher than in the same period of 1954, which should have provided additional resources of about £350 million. On the other hand, the current balance of payments in the past six months, and the terms of trade were about 3 percent worse, representing a cost of about £60 million. Professor Morgan estimates, therefore, that £120 million worth of resources has been released for the home market. He thinks personal spending has risen by about 5 percent in real terms, or £280 million at 1954 prices, and estimates fixed capital investment as being at least 10 percent higher and that stocks have been increased by something like £180 million. From these tentative estimates he draws up the following tabular picture of the situation:—

BALANCE OF SUPPLY AND DEMAND

First half, 1955, against first half, 1954
(at 1954 prices)

Increase in Resources	£m.	Increased use of Resources	£m.
From increased production	350	Personal consumption	280
From deterioration in foreign balance	120	Government expenditure	—120
		Fixed capital investment	130
		Increase in expenditure on stocks	180
Total	470	Total	470

Demand for consumption, therefore, exceeded supply by no less than £240 million, a balance only being achieved by reducing exports, increasing imports and the release of resources by Government. Even more interesting, however, is Professor Morgan's assessment of the future. For the second half of the year he does not expect any further growth in the external deficit, but if government expenditure is on the same level as in the second half of 1954 and if other items are allowed to grow at the same pace as in the first half-year, domestic spending would exceed domestic production by some £240 million in the half-year. "This amount," comments Professor Morgan, "corresponding closely to the £200 million anticipated contraction in bank advances represents the probable order of magnitude of the inflationary gap which the Chancellor has to close." Consumption normally grows faster in the second half-year than in the first and income tax reductions came into effect in July. But the rise may be checked by the hire-purchase restrictions, the pressure on personal overdrafts, and particularly by the recent tendency for prices to rise relatively to wages.

But the critical item is stocks. If stock accumulation has been as heavy as Professor Morgan suggests, an effective check on this would go a long way towards restoring equilibrium. He thinks that this is the main reason why the Government is insisting on a reduction in bank advances. If there is also some marginal slowing down in fixed capital investment, particularly in housing and public building, it should be possible to restore the balance in the economy without having to cause violent disturbances. But Professor Morgan emphasises that the credit squeeze will have to be effectively maintained; with rising interest rates abroad he thinks that a further rise in bank rate may well be necessary.

Wage Rises Outstrip Output

There remains to be dealt with one other danger—the increasing threat to our exports from competition. The biggest difficulty here is that wages are rising faster than production, and adversely affecting our competitive power in world markets. Over the last seven years the increase in wage rates has been much more than double the increase in industrial output. Figures published by the Treasury show that, compared with 1948, employers have been paying 5s. 6d. in the pound more to get the same return. Wage bills have risen by 54 percent and output by 20 percent, and the result, according to the Treasury, is an increase in labour costs "per unit of output" of 27 percent. Commenting on the figures, a spokesman of the Treasury said that they did not commit the Government, "but they do serve to illustrate a trend which the country should

understand. They may help to bring home the necessity of the Chancellor's present policies."

The statement, which is published in the Treasury's *Bulletin for Industry*, does not mention Mr. Butler's recent efforts to restrict inflation, but it starts with this stern warning: "The two main threats to British competitive power in world markets are excessive home demand absorbing goods that should be exported, and money incomes growing faster than output, causing costs and, therefore, prices to rise."

The returns for "manufacturing industry" which produces most of our exports are slightly better than those given for "the whole economy." Though the increase in wages has been higher than the average—60 percent between 1948 and 1954—the rise in output has also been higher—33 percent instead of 20. While it is admitted that the figures are subject to wide and varying margins of error and must be treated cautiously, it is stated that they are not so "rough" that they falsify the general trends. In view of these figures, the latest demands for fresh wage increases and improvements in working conditions acquire a new significance.

Money for the Commonwealth

The *Bulletin for Industry* also gives some new estimates of finance for Commonwealth development provided by the London market. While no Commonwealth or Colonial Governments have come to the capital market for new money so far this year (compared with total borrowings of £41 million in 1954, £43 million in 1953, and £38 million in 1952), private Commonwealth borrowings have continued. The Treasury estimates that authorisations for the raising of £25 million in this country were made in the first half of this year, compared with £48 million in 1954, and £40 million in 1953.

This year's figure includes such schemes as the large investment in Kenya, Uganda and Tanganyika by the East African Power and Lighting Company and the Dunlop Rubber Company's project in Nigeria. These figures, however, throw little light on the massive investment in the Commonwealth by British firms. The Treasury describes the amount of this private investment, which generally requires no official sanction, as "very considerable," and mentions the "large sums" invested by British-controlled oil companies.

Lagging Coal Output

The seriousness of the coal position is receiving increasing attention, and there is no lack of suggestions from various quarters as to how the problem ought to be tackled. The latest quarterly report of the Coal Board epitomises the situation by recording its biggest quarterly loss since 1952. In January, February and March its estimated deficit was £4,595,528. The Board would have made a small profit but for the need to import and subsidise several million tons of foreign coal. The Board's own collieries and opencast mines made a profit for the quarter of £5,899,472. This was more than swallowed up by a loss of £5,200,000 on the Board's trading in imported coal and the £5,150,000 that the Board must pay the Government as interest under the Coal Industry Nationalisation Act.

Continuing the tale of woe, the Ministry of Fuel and Power has announced also that coal output this year is now three million tons behind output on the corresponding date in 1954, with 2,070,100 tons already lost because of disputes between the miners and the Coal Board. The corresponding figure in 1954 was 765,200 tons. The Ministry also gives depressing news about productivity. Last week the output per man-shift, among face-workers, had fallen to 3 tons. The week before it was 3.083 and the average for the year to date is 3.262. For good measure, the Ministry has pointed out also that the miners are leaving the pits. There were 3,700 fewer men on the colliery books last week than in the corresponding week last year. The Ministry's figures show too that exports have fallen by about two million tons this year. The Engineering Industries' Association has drawn up and published a nine-point plan for dealing with the matter, but the final answer seems to lie with the miners themselves, and just how their opposition to all suggestions for relieving the situation is to be overcome no one has yet discovered.

Raw Material Prices Rising

One explanation of the increasing trend in Britain's import bill is provided by the rise in prices of raw materials, which must ultimately find its way into the cost of manufactured goods and add to the price spiral. Basic materials prices continued their rise last month. The Board of Trade index of 153.7 for July was 2 percent higher than June and 7 percent above July 1954. Main causes for the latest increase were the higher costs of raw rubber, up 21 percent, and of coal for carbonising, 17 percent higher. Aluminium, tin, copper and tungsten prices all hardened slightly, while raw wool and hides and skins were slightly easier. Indices of materials used in the mechanical engineering and the electrical machinery industries between June and July rose 1.4 percent and 1.2 percent, respectively. Higher prices for various iron and steel products, for most non-ferrous metals and their semi-manufactures, and for raw rubber, were almost entirely responsible.

Brevities

No change took place in the cost of living between 14th June and 12th July. The Ministry of Labour announces that on 12th July the Official Index figure, which measures changes in the average level of retail prices, was still 150, the highest since the index was introduced in June, 1947. On 17th May the figure was 147.

Bombay

FRESH SURCHARGE THREAT
BY U.S. SHIPPING LINESSUBSCRIPTION RUSH FOR
BOMBAY STATE LOAN

(FROM OUR BOMBAY CORRESPONDENT)

THE holidays of the previous week and the following long week-end were responsible for the fresh congestion of ships in the Bombay harbour, which did not clear until the middle of last week. It should not be difficult to imagine what effect such prolonged stoppage for six days out of seven would have had on commerce, apart from the loss involved in the turn-round delay of ships. The threat of a surcharge of 35 percent, on all goods has been revived once again, particularly relating to the traffic for the Bombay Port, by the foreign shipping lines having scheduled services to Bombay. It is learnt that a number of shipping concerns in the U.K. and U.S.A. have decided to press for this freight surcharge as a compensation against losses sustained due to the boycott of Goa-bound vessels by Indian dock workers, which has placed serious restrictions on the scheduled services. While it is admitted that the labour situation in the docks here and at other Indian ports has improved considerably since the surcharge was first mooted, this boycott has led to the holding up for several hours and sometimes for several days in Bombay of a number of foreign freighters during the last fortnight while the port and dock workers have refused to work on them on suspicion that they were either carrying cargo for Goa or planning to call at Goa after their departure from Bombay. The trouble was averted in most of these cases by the captains or the agents of the ships in the harbour giving a written undertaking that they neither carried cargo for Goa nor did they intend calling at that port. It may be recalled that the U.S. shipping lines have not withdrawn the proposal for levying a surcharge on freight to and from Indian ports finally, but have postponed the move each time for one month; the current period of postponement will last till 15th September. They now propose that this surcharge should come into effect from the middle of September. It is not known whether any official communication to this effect has been received by the Port Trust authorities here or by the Central Government. It is, however, understood that the Chairman of the Bombay Port Trust has already had prolonged talks with the leaders of dock workers on the implications of the boycott, as well as those of the proposed surcharge. It is also believed that the Director-General of Shipping was present at these talks.

Increased Railway Goods Traffic

The Central Railway authorities report an increase of 11.5 percent in the volume of goods traffic movement by their service during July, 1955. The Press note issued in this connection states: "With the daily average loadings on the broad gauge section of the Central Railway having risen to 2,195 wagons in July, 1955, against 1,967 wagons in July, 1954, an 11½ percent increase in the volume of goods traffic lifted has been recorded. Another heartening feature of the improved movement of goods traffic has been the stepping up of through-put even across the most heavily worked sections of the railway. The four most difficult sections, Bhusawal-Nandgaon, Nandgaon-Dhond, Bina-Bhopal and Balharshah-Kazipet, have all registered an increase in the traffic carried ranging from 10 percent on the Bhusawal-Nandgaon section to 20 percent on the Balharshah-Kazipet section." It also adds that "despite the handicaps of difficult building conditions in the monsoon, engineering and signalling works to

increase line capacity and remove bottlenecks are being pressed forward with all possible speed at stations, in yards and in workshops to ensure the 20 percent planned increase to be achieved by November next."

Success of State Loans

The Bombay State loan was over-subscribed before the end of the opening day, leaving many intending investors disappointed. This has left a good deal of dissatisfaction amongst the Stock Exchange circles and there was a demand for the re-opening of the loan. This has resulted in the Bombay loan now commanding a premium of about 10 annas percent. Perhaps the rapid success of the other State loans was due to the diversion of funds from intending investors in the Bombay loan to them. By the end of the week, all the 10 State loans were fully subscribed.

The subscriptions to the other State loans totalled as below: Andhra: Cash Rs. 4,83,09,300, Madhya Pradesh: Cash Rs. 1,11,37,200, conversion Rs. 33,47,300; Total Rs. 1,44,84,500; Mysore: Cash Rs. 2,77,15,300, conversion Rs. 75,87,600, Total Rs. 3,53,02,900; Saurashtra: Cash Rs. 2,60,62,800; Uttar Pradesh: Cash Rs. 6,77,62,000. West Bengal: Cash Rs. 5,58,30,800. It is announced that the subscribers to West Bengal and Uttar Pradesh loans will receive full allotment. All cash applications up to Rs. 5,000 to Andhra, Madhya Pradesh, Mysore and Saurashtra loans and conversion applications to Madhya Pradesh and Mysore Loans will receive full allotment. Subscriptions in cash for amounts over Rs. 5,000 to all the above four loans will receive allotment as follows subject to a minimum allotment of Rs. 5,000: Andhra 55 percent, Madhya Pradesh 70 percent, Mysore 80 percent, Saurashtra 85 percent.

This marked success of State loans amounting to Rs. 35.75 crores within a comparatively short time has led to the revision of several beliefs of economists and the business community in western India. One of the reasons attributed to this rush for subscription to State loans is the release of funds to investors in the shape of cash compensation for the Imperial Bank shares, but after making due allowance for this, the money market pundits are surprised at the number of applications and the amount involved, mostly from small investors. They were not prepared to grant earlier that private savings could ever rise equal to the loans, as the cost of living index had not shown any appreciable decline. It is also to be noted that funds are not being diverted from equities to the gilt-edged and the equity markets are very bullish. In Madras, for instance, the State Government is accepting applications to the maximum of Rs. 1 lakh only and that indicates that small investors have practically applied for the entire amount of Rs. 7 crores in issue. This may not be very true of Bombay, but even here it was evident that if the loan had not been closed so suddenly the response to it from individual investors would have been very great. This is claimed by some as proof of the fact that while there has been little net addition to employment, the real income of those already in employment as well as of the farmers must have increased considerably during the first five year plan period, to make such a response for official issues possible. There is a tendency here to criticise the framework of the second plan on the ground that the available resources have been overestimated. Such opinions are being revised not only because these loans have been so readily absorbed by the public, but because of the fact that it has hardly strained the money market. The gilt-edged market is not depressed in any way because of this heavy investment in new issues. On the other hand, it has encouraged some of the private units to contemplate the issue of not only fresh preference but even equity shares. The deposits

with the banks have also been consistently showing an increase. It is also being suggested that the Union Finance Minister should take a hint from the success of these State loans, and instead of resorting to fresh taxation, should secure his requirements through loans.

Mutualisation Controversy

The controversy regarding the mutualisation of the Oriental Government Security Life Assurance Co. Ltd., between its present and past chairman, has gone a stage forward with Sir Cowasji Jehangir, the present chairman of the Company addressing a letter to the Controller of Insurance, in reply to the points raised by the ex-Chairman, Sir Purshottamdas Thakurdas, about the question of eliciting the opinion of policyholders as a body on this scheme. Sir Cowasji writes in the letter: "The Directors of the Oriental Government Security Life Assurance Co. Ltd., have seen in the daily papers that Sir Purshottamdas Thakurdas has addressed a letter to you to which he has given considerable publicity. In this letter he states that the Directors have refused to refer their scheme of mutualisation of the Company to policyholders for their approval before submitting it to Government. Sir Purshottamdas continues that he understands that the Directors have stated that they are not bound to refer the scheme to policyholders under their Articles. The Directors must point out that there is no provision in the Articles for Mutualisation of the Company and therefore there could be no provision for or against submitting the scheme to the policyholders. It is Section 6 C of the Insurance Act which lays down the procedure by which a Joint Stock Insurance Company can convert itself into a Mutual Company, and in this Section there is no provision whatsoever for policyholders being consulted at any stage. The Scheme was, however, framed with the consent of the Policyholders' Directors who are on the Board to look after the interests of the policyholders. In the third paragraph of his letter Sir Purshottamdas appears to be rather confused. There is no question of the Directors sending out emissaries to collect proxies from policyholders in support of the scheme. As there will be no meeting, no proxies are necessary. The scheme has been given ample publicity in all the important newspapers of India and special attention has been drawn to the fact that any objections by shareholders or policyholders should be communicated to you for the consideration of Government."

Radical Land Reforms

The far-reaching measures of the Bill to amend the Bombay Tenancy and Agricultural Lands Act, 1948, which is to be piloted by the Revenue Minister Mr. B. S. Hirani in the Assembly, has been claiming the close attention of the members. The Bill seeks to vest the ownership of land from 1st April, 1956 in the tiller of the soil. There is a good deal of difference of opinion on the radical steps proposed to be taken on land holdings in the State even amongst the majority of the Congress Party Legislature members and many of the members from Gujarat as well as Karnatak are believed to be opposed to some of the extreme measures aimed at even small-holders who find it necessary to lease out their lands for some reason or other, instead of cultivating it themselves. They have asked for its postponement at least till the next session of the Legislature because the composition and the structure of the Bombay State itself might undergo a radical change as a result of the recommendations of the States Reorganisation Commission, whose report is likely to be submitted to the Government next month. A deputation representing about 50 Congress members from these two regions—Gujarat and Karnatak—is believed to have tried to persuade the Revenue Minister to postpone the introduction of this Bill till at least December, 1955. The State Government is understood to be firm in its decision to introduce the Bill in the present session, but it is reported to have agreed to refer it to a Select Committee so as to enable the public to have more time to study and understand its provisions. Bombay is not a zamindari State and the land belongs mostly, with a few exceptions, to small-holders. Apart from the grievance of registered land holders over the provisions of restricting any further transactions by way of lease or sale of land beyond what is called the economic unit, there is also a considerable amount of misgiving on the part of the sugar industry in the State whose distinctive characteristic is that it raises most of its cane requirements from lands either purchased or leased. This Bill would deal a death blow to the sugar factories' cultivation as these large plantations will come to be gradually broken up and the industry would have in future to depend for its cane supply on small cultivators. A deputation representing the sugar industry in the State is also believed to have met the Revenue Minister to acquaint him with the effect the passing of the Bill would have on sugar production in the State. The Council of the Deccan Sabha, which is a sister organisation of the Servants of India Society, has also in a resolution characterised this Tenancy Bill as both "uncalled for and ill-advised." The Council felt that the Bill would not succeed in attaining the objective of a socialistic pattern of society to any appreciable greater extent than the existing Act, because a majority of the tenants would not be in a position to purchase the lands which are at present leased to them by the holders. The Sabha has suggested that the State should itself acquire the ownership of land by paying landlords compensation in Government bonds and re-arrange the holdings in the way it is considered best to plan the growth of an agricultural economy.

Uttar Pradesh

SEVERE FLOOD DAMAGE
IN EASTERN U.P.APPOINTMENT OF COMMITTEE
ON RATIONALISATION ISSUE

(FROM OUR LUCKNOW CORRESPONDENT)

THE damage caused by the recent floods in eastern U.P. is now officially estimated at a statement laid on the table of the State Legislative Assembly, 22,000 villages, 6,000,000 acres of cultivated land and 8,000,000 people have been affected. The total number of house collapses is estimated at 350,000. Some 66 persons and over 2,000 heads of cattle lost their lives. The P.S.P. Opposition has suggested that these figures, appalling as they are, err on the side of under-estimation. It is inevitable that politics should get mixed up even with a natural calamity and as a matter of fact, the pronouncements of Government members have sometimes been self-contradictory.

After a survey of the flood-affected areas, the Chief Minister, Dr. Sampurnanand declared that the State Government could cope with the disaster without any Central help, while, the Minister for Planning and Industries, Mr. C. B. Gupta, after a survey of the Gorakhpore floods, stated that the disaster could be relieved only with Central aid. Then followed the Irrigation Minister, Mr. Kamalapat Tripathi, with a statement that as a result of the unprecedented floods, the whole fabric of the five year plan has collapsed. Prime Minister Nehru, who arrived on the scene subsequently administered an implied rebuke by categorically stating that there is no question of the plan being upset because the elements have misbehaved here and there. The curious part of these goings on was that the Minister for Revenue, Mr. Charan Singh, who holds the flood portfolio chose to remain completely silent.

Central Aid

The Chief Minister announced eventually in the Assembly that a grant of Rs. 25 crores by the Government of India for flood relief had been accepted gratefully. The State Government has itself decided to advance a short-term interest-free loan to agriculturists to the extent of Rs. 1.20 lakhs and another sum of Rs. 20 lakhs to non-agriculturists. The Government would forgo an interest of Rs. 20 lakhs on these advances. Remissions of outstanding Taqvi dues would cost the Government Rs. 30 lakhs. In order to provide gainful employment to the flood-stricken people, *charkhas* worth Rs. 2½ lakhs are to be distributed free. The urgent need for devising flood control measures in future served as a powerful argument for pressing U.P.'s case before the Planning Commission when the Chief Minister and his cabinet colleagues had discussions with the Commission in Delhi on the State's second five year plan. Flood control measures alone would cost the State about Rs. 4 crores and Dr. Sampurnanand is believed to have argued that this additional burden is too much for the State. He also urged the Commission to keep in mind the enormous size of Uttar Pradesh—113,490 sq. miles and its huge population of 63.2 million—in determining the allocations for this State. He further complained that none of the big industries in the public sector under the first five year plan was located in U.P. It does not seem that Dr. Sampurnanand has been able to persuade the Planning Commission to his point of view entirely. The total outlay proposed in the State's draft plan is Rs. 725 crores, and like other States it too has been asked to revise the estimates downward.

The Commission advised the State Government to tap fresh sources of revenue, pointing out that as it is, the incidence of taxation in U.P. is only 4 percent compared with 10 percent in Bombay. But the U.P. Government's view is that unlike Bombay, U.P. is mainly an agricultural State with few industries. The State-wide agitation against enhanced irrigation rates is still recent history and the Government, convinced that the climate was unfavourable for any additional taxation, had to withdraw it. It remains to be seen whether the Government will choose the line of least resistance or opt for fresh taxation for financing the plan.

Committee on Rationalisation

The personnel and the terms of reference of the Committee to inquire into the rationalisation of textile mills in Kanpur have been announced. A retired judge of the Allahabad High Court and now a member of the Labour Appellate Tribunal, Mr. Bindbasni Prasad will be its chairman. Other members of the Committee are: Mr. D. R. Bell of the British India Corporation and Mr. Munnalal Bagla of the Swadeshi Cotton Mills, representatives of employers; Mr. Kashi Nath Pande, Secretary of the U.P. I.N.T.U.C. and Mr. G. D. Bajpai of the Suti Mill Mazdoor Union, as representatives of the workers. The Assistant Labour Commissioner will be member-secretary. The Committee will examine the details of the various schemes for rationalisation submitted by the mills and in so doing, will take into account the decision taken on such points, by agreement or by awards of competent bodies, in other important textile centres of the country. A Gazette Extraordinary announcing the appointment of the Committee states that the proceedings of the Committee will not be impeded, impaired or rendered otherwise ineffective if one or more members become unavailable for any reason or at any stage. No work of the Committee is to be conducted in the absence of the

chairman. Decisions on substantive questions will be taken by the unanimous vote of the chairman and members of the Committee. In the absence of a unanimous vote, the decision of the chairman will be deemed to be the decision of the Committee. The seven mills whose rationalisation schemes will be inquired into are: Elgin Mills (B.I.C.), Kanpur Textiles (B.I.C.), Kanpur Cotton Mills (B.I.C.), Swadeshi Cotton Mills, Muir Mills, Atherton West & Co., and the J. K. Cotton Spinning and Weaving Mills. These seven mills, the Employers Association of Northern India, the I.N.T.U.C. and the Suti Mill Mazdoor Sabha will have the option to submit their proposals within a month. A copy of each of these proposals will be handed over to the opposite groups which will file their objections within seven days.

Sales Tax Law Changes

A proposal to amend the U.P. Sales Tax Act is before the current session of the Legislature. The statement of objects and reasons published along with the Bill says: "The U.P. Sales Tax Act, as it is worded, at present does not confer on the State Government the power to grant exemption from sales tax, or to levy sales tax at a reduced rate on particular manufactures of any goods. Such a provision is necessary to empower the State Government to grant concession to the new industries started for producing articles of national importance which are not so far manufactured in the State or are not produced in sufficient quantities. This concession when given will not only encourage the establishment of new industries but will also provide fresh avenues of employment."

The Government of India proposes to establish a coal washery at Bokro/Kargali to meet the requirements of washed coal for the proposed steel plant at Rourkela. Tenders have been invited for a washery with a capacity of 550 tons an hour.

U.S. COTTON EXPORT POLICY

LIKELY EFFECTS DISCUSSED

COMMENTING on the announcement of United States cotton policy, a London industrial correspondent writes: At long last the U.S. Secretary of Agriculture, Mr. Ezra T. Benson, has announced his plans for cotton exports for the current season. There is to be "no material change" in export policy. This is regarded as an assurance that subsidisation of exports will not be resumed at least until 1st August 1956. The announcement foreshadows, however, the sale abroad after the end of this year of low-grade cotton from the Government's stock at "competitive prices". The possibility of a U.S. export subsidy, the correspondent adds, has overhung the cotton markets for several months. Dealings in futures have been seriously hampered by the uncertainty, while many buyers of cotton textiles have hesitated to place orders because of the fear that a fall in world market prices of the raw material would depreciate the value of their purchases.

The futures markets have now to readjust themselves to the new circumstances. The process, which is likely to be rapid, may be painful, at any rate for some traders, but there will be widespread relief at the opportunity of operating once more and of looking ahead with some confidence. Traders in yarn and cloth also will welcome the return to conditions in which it is possible to plan their activities.

Price Factor

The correspondent continues: If, however, there is to be no subsidy, the possibility of a gradual decline in world prices of raw cotton must still be taken into account. Various influences are already tending to make prices ease, and these may be reinforced by the sale abroad of the Commodity Credit Corporation's stocks of low-quality cottons. The release of these stocks at prices below those at which their sale has hitherto been permitted, moreover, must now be regarded, in view of Mr. Benson's statement, as only the first step towards reducing the U.S. Government's price supports and towards putting the whole of the American crop in a more competitive position.

Concluding, the correspondent says that the trade in raw cotton has far too long been hindered by artificially-maintained prices and by restrictions on production and marketing, and in the long run nothing but good can come from a movement towards greater freedom.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended August 1939=100) declined by 0.3 percent to 356.3 during the week ended 6th August, 1955, as compared with 357.2 (revised) for the previous week. The index was higher by 0.5 percent as compared with that of a month ago but was lower by 6.6 percent than the corresponding week of a year ago. During the week under review, the index for Foodstuffs advanced by 0.8 percent to 315.7 due to an increase in the prices of dal arhar (+6%), gur at Ahmednagar (+4%), rice at Patna and sugar (+3% each) and wheat (+2%) notwithstanding a decline in the prices of tea (-7%), salt in Calcutta and gur at Muzaffarnagar (-2% each) and bajra (-1%). Lower prices of manganese ore (average export prices) (-13%), raw jute (-7%), groundnuts in Bombay (-6%), raw silk at Malda and copra (-5% each), linseed (-4%), rapeseed in Bombay, raw cotton and castorseed (-3% each) brought down the index for Industrial Raw Materials by 3.3 percent to 400.9 as compared with 414.6 (revised) for the previous week. The prices of raw silk at Banga-

lore and cottonseed at Amravati were, however, marked up by 5 and 3 percent respectively. The index for Semi-Manufactures moved up by 0.4 percent to 327.1. Items which recorded significant variations were: cow hides (+12%), goat skins (+8%), buffalo hides (+7%), sheep skins (+5%), mustard oil in Calcutta (+5%), at Kanpur (+3%) and at Patna (-2%), brass (+3%), copper (+2%), castor oil in Calcutta (-6%), linseed oil (-5%), groundnut oil, groundnut cake and gingellycake (-4% each) and zinc (-2%). The index for Manufactures stood at 371.5 as compared with 371.8 for the previous week; prices of jute manufactures fell by 1 percent. Higher prices of tobacco leaf (+5%), and chillies at Patna (+2%) raised the index for the Miscellaneous group by 1.7 percent to 560.7 as compared with 551.4 (revised) for the previous week. The prices of pepper black (-4%) and betelnuts at Bangalore (-3%), however, showed declines.

TECHNICAL ADVISORY COMMITTEE ON COST OF LIVING INDEX NUMBERS

A technical advisory committee on cost of living index numbers has been set up to consider the question of compilation of cost of living index numbers for middle classes as well as for other sections of the population, industrial working classes, agricultural labourers and cultivators. On examination of available data, it was found necessary to have family budget enquiries conducted for different classes concurrently and on uniform lines all over India with a view to deriving up-to-date weights and also to instituting an adequate price reporting system for constructing such index numbers. Plans are being accordingly drawn up in consultation with the Ministries concerned and States.

This information was given in the Lok Sabha recently by Mr. B. R. Bhagat, Parliamentary Secretary to the Finance Minister during question hour. Mr. Bhagat added that this programme was a long range one.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices by groups have now been brought up to July, 1955. As compared with June, the July Index for Food reveals a rise of 7 points, while those for Clothing, Miscellaneous and Fuel and Lighting remain

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100.

	Weights	GROUP INDICES											
		July, 1954	Aug., 1954	Sept., 1954	Oct., 1954	Nov., 1954	Dec., 1954	Jan., 1955	Feb., 1955	Mar., 1955	April, 1955	May, 1955	June, 1955
Food	53.6	447	417	453	452	448	444	438	434	430	430	433	446
Fuel and Lighting	4.4	239	239	239	239	239	239	239	239	239	239	239	239
Clothing	12.4	451	492	492	492	492	492	496	496	496	494	494	494

PAKISTAN INCREASES DUTY ON RAW JUTE

NO SURPRISE TO INDIAN MARKETS

THE announcement by the Pakistan authorities of an increase in the rate of raw jute duty of Re. 1, from Rs. 3 to Rs. 4 a maund did not come as a surprise to the Indian markets. This event had been anticipated, and indeed in many quarters was regarded as the logical conclusion to devaluation and India's withdrawal of the export duty on jute goods. This will have the effect, under current contracts, of making Pakistan jute dearer not only for India, but for overseas consumers also, and will further promote Pakistan's growing competitiveness in world markets. As far as India is concerned it may be a blessing in disguise, as over the past few months the jute industry in Calcutta has shown a marked preference for Pakistan jute, which, at a premium of only 8 annas to Re. 1 a maund over the indigenous fibre, was considered a much better buy. More interest may be shown now in Indian-grown jute.

The position with regard to the U.K. is rather obscure. This latest imposition, which, under existing contracts, will have to be borne by the buyer, coming as it does on top of devaluation of Pakistan's rupee, will have the effect of pricing her goods out of the market. The industry is still smarting under the blow dealt by Pakistan when minimum prices for export in sterling were unchanged after devaluation, and have expressed the opinion that prices are too high. What the industry's present attitude will be is a matter for conjecture, but it is unlikely that the trade will accept recent events without protest. New contracts entered into after 22nd August will not be affected as the increase will be shouldered by the Pakistani seller.

It is reported that over the weekend Pakistan again demonstrated the fact that she is not a force to be ignored in the export markets. It is understood that business was done with America to the extent of 20 million yards of hessian for forward shipment over a period of about six months, at a price well below that quoted by India. This came as rather a blow to Calcutta, as it was confidently expected that this enquiry would be absorbed in local markets, and indeed some speculators had already indulged in covering business against it. This is the second time within recent months that India has been cut out on an order, which although small, was large enough to restore some much-needed confidence to the hessian section. Calcutta markets showed a sharp reaction to this news on Tuesday and prices dropped 8 to 12 annas.

Pakistan Floods Subsiding

News from the flooded areas in Pakistan is encouraging and although large tracts of land are still under water, the river levels are dropping, and unless adverse weather conditions are again experienced it is only a matter of time before the position returns to normal. Imports into the main receiving centres are reported to be heavy, and with the full weight of the New Crop coming forward, prices have eased. Many shipments of jute from East Pakistan, however, are still held up for various reasons, and in many cases the final shipment date against guaranteed contracts has passed. This has caused acute embarrassment to many Indian mills which were relying on these early deliveries to fill the gap before their bulk New Crop purchases are shipped. The result of this is that buyers have had to resort to local markets, and over the past few days a fair amount of business has been done for very short delivery at premium prices, mainly for Indian jute ex-Cossipore. In spite of this, raw jute rates were easier towards the close, as more jute was put on offer, but mills were not very interested in forward shipment as they were waiting for a further drop, apart from the fact that the present gunny rates give them no incentive to do business.

THE JUTE MARKETS
