On the heels of this comes the first overseas order for Britannias. Negotiations with foreign operators received a sharp check when Douglas brought the Seven Seas on to the market, since this enabled airline operators to postpone a decision on new types of aircraft—and particularly new engines—until more was known about their performance in service. Bristol is in the process of negotiating an order for five of the long-range Britannias from the Israeli airline, El Al. The importance of the order is not so much in its size as in the fact that El Al has a substantial network in Europe and the North Atlantic, and a strong patriotic appeal for Jewish passengers. The most pressing task before Bristol is to complete the development of the aircraft; the chairman of BOAC has expressed his disquiet with the progress of test flying in plain language and has not concealed his concern about the company's ability to meet its delivery dates. Bristol has plans to use four aircraft flying simultaneously to catch up on the test programme, but since some technical modifications have still to be done, it now seems unlikely that the Britannia can receive its certificate of airworthiness before September, and further delays would threaten the company's delivery dates for the entire Britannia series.

Shell Buys Petrochemicals

SHELL CHEMICALS is to buy Petrochemicals for £5 million, though £360,000 of that sum will be held back for a year to cover the cost of putting right any undetected defects in the complicated plant at Partington. The technicians of Shell have examined every inch of that plant. They know that it cost far more to build than was planned. They know of its painful teething troubles and its record of trading losses. They know that a plant built to-day to manufacture the same specialised products (notably ethylene glycol and styrene, neither of which Shell produces) would be different in parts of its design from the Partington plant. They know that further capital—an initial £750,000 and an unknown ultimate sum—will be needed to make the plant profitable. Yet they have recommended its purchase. That purchase must have seemed like manna from heaven to Finance Corporation for Industry which has fed £9½ million of capital into this expensive venture. Had the bid not come Lord Bruce and FCI would have had the choice either of sinking big further funds or winding up. The link-up with one of the oil giants provides the opportunity for integration, for new money and for using the research and development facilities that Shell possesses. The purchase should also commend itself to the employees of Petrochemicals who seem to be ensured of continuity of employment. Why does it commend itself to Shell? In addition to a useful tax loss Shell is buying personnel that are gold dust, a market for some of the products of its Stanlow Refinery and good industrial land for further development when Stanlow eventually

THE ECONOMIST, MARCH 5, 1955

becomes overcrowded. Moreover, Shell takes over on the basis of a capitalisation that is roughly halved. Profit making will be much less difficult.

The terms of the purchase agreement will recommend themselves to the junior stockholders, who are largely institutions. Generously, the Finance Corporation for Industry, which was facing a heavy loss on its investments in Petrochemicals whatever steps were taken to salvage that company, has agreed to some payment on the junior stocks. More than all that junior capital was already lost. The institutional stockholders, who have been consulted about the scheme, agree that the terms are remarkably favourable to them. The owners of the 90,000 preference shares will receive 4s. per £1 share and the holders of the 2,612,500 ordinary shares (of which FCI owns 550,000) will get 2s. per £1 share. On the second secured loan stock, of which FCI holds £2,396,400 out of £2,500,000 in issue, 10s. will be paid on each £1 stock. For all its holdings FCI will receive £4,352,935 and any part of the retained £360,000 that remains to be released at the end of March next year—in all a little more than half the outstanding debt to FCI will be repaid.

Airwork over the Atlantic

THE first British trans-Atlantic air freighter left London airport for New York on Tuesday morning to start a twice-weekly scheduled air cargo service between Europe and North America. The freighter belonged to Airwork, one of the leading independent airlines, and its departure marked a major achievement of the new civil aviation policy introduced two years ago, which offered new opportunities for independent airlines, especially in the field of air freighting.

Airwork has chosen to pioneer a route that may promise rich rewards, but is also among the most difficult and most competitive of the world's air lanes. Air freighting is in its infancy. Hitherto freight has been regarded largely as a make-weight for passenger-carrying aircraft; the shape of the cargo holds and the size of their loading doors have put strict limits to the freight that could be carried. Airwork has put on the North Atlantic routes aircraft planned for cargo only, and the mixed freight on the service's first flight included a cigarette-making machine, two George II chairs and three packing cases containing a "sequential image converter" for the American government's rocket proving ground. It is a typical sample of the freight that can be flown in aircraft designed for freighting.

Scheduled freight services must be made to offer special advantages over the cheaper surface transport. Airwork maintains that the higher carriage is more than offset by lower insurance, the elimination of port dues, other dock expenses and delays, and by the use of cheaper packing. Machines are already being carried by air lashed to the floor of freighters without any packing, just as cars are carried on air ferries. Airwork is also offering standard containers to air shippers that will cut packing charges (and in the case of clothing, probably eliminate them) and cut carriage because their weight is not charged to the shipper. It will take time to build up sufficient freight in both directions to make the service pay in competition with similar services already

operated by Pan-American and KLM; but Airwork's plans, both for moving the freight and for collecting it from a wide number of points in Europe and North America, have been engineered with skill and with a commendable dash of enterprise.

Output Rises More Slowly

INDUSTRIAL output rose again in January. Provisional figures show that production was about 4½ per cent higher than a year ago. But the pace of advance is still slowly declining. For 1954 as a whole the increase in industrial production amounted to about 6 per cent, with a 7 per cent advance in the first and second quarters, 5½ per cent in the third, and a revised 4½ per cent increase in the fourth quarter. The general trend of a slowly declining margin of increase must be expected, for the labour force is more than "fully employed" for the time of the year and plant capacity, under the present system of shift working, is almost equally extended. The prospect of progress this year depends therefore upon a further improvement in productivity and the speed with which new capacity is opened up and filled with a very moderate normal increase in the labour force.

On a crude measure, productivity last year appears to have risen between 4 and 5 per cent. It thus maintained the annual rate lost in 1951 and regained towards the end of 1953. With order books filling up at an impressive rate and much new plant and machinery recently installed—and more

on order—most industries are confident that they can achieve a similar performance in 1955, though the tightness of supplies of certain materials is worrying some of them. The full impact of the large increase in factory space that appears to have been planned last year, however, will not be felt before 1956 at the earliest. The Board of Trade granted in 1954 nearly twice as

new factories as in 1953, measured in working area. But the Board's preliminary information about the actual rate of building (these figures are liable to heavy correction as the returns are received) suggests that a start was made last year on only a third more factory space than in the previous year and completions were only a tenth higher. Similarly with machine tools; home orders have jumped by three-quarters since last July, but most of these tools will be delivered towards the end of this year or in 1956. The machinery and factory

equipment makers are enjoying record business now that most firms have realised that the bottom of the labour barrel has been scraped; the unemployment rate, which includes a large number of married women, is well under 1½ per cent and the number of notified vacancies still waiting to be filled almost equals the total increase in the civilian labour force during the whole of last year.

Profits from the Stores

PURSE-STRINGS were much looser last year. But the department and multiple stores attracted the customers more than the independent retailers. Sales by the department stores in money terms for all types of goods except food went up by about 8 per cent last year, compared with a increase of 10 per cent by the multiples and 5 per cent by the independent retailers. By far the biggest increases in sales reported by the department stores came from their hardware, radio and electrical departments. Those departments had to say "Me, too," on hire purchase in order to keep their share of an expanding market, and they said it effectively.

Years to January 31 (£,000s)	Harrods		Lewis's Investment Trust	
	1954	1955	1954	1955
Gross profit	1,984	2,321	4,498	4,815
Taxation	1,112	1,248	2,281	2,385
Net profit	664	741	1,437	1,545
Ordinary divs.	274	316	353	410
Ordinary divs. per cent	15	17½	32½	40
	Selfridge (Holdings)*		Lewis's*	
Gross profit	1,190	1,290	2,735	2,837
Taxation	561	622	1,405	1,435
Net profit	425	442	1,056	1,151
Ordinary dividends	144	168	210	365

* Wholly owned subsidiaries of Lewis's Investment Trust.

It is this general expansion in sales, particularly at the hire purchase end, that lies behind the higher profits just reported by two of the big department store groups. Harrods, trading largely in London but with subsidiary stores in other big towns, have reported an increase of about 17 per cent in gross profits. That increase was followed by a rise in the ordinary dividend, from 15 to 17½ per cent. Lewis's Investment Trust has reported a smaller rise—about 7 per cent—in its gross earnings, but it, too, has raised its dividend, from 32½ to 40 per cent. Its two wholly owned subsidiaries, Selfridge (Holdings) and Lewis's, Ltd., have both reported higher profits, but while Selfridge (Holdings), the London group of stores, has reported an increase of about 8 per cent, Lewis's, Ltd., whose stores are in the North and the Midlands, has managed a rise of only 4 per cent. The better trend in profits in the London area is in keeping with the regional pattern of retail sales. Sales of non-food goods in London and the suburbs have been just a little better than those in the North of England, while food sales have been noticeably better.

More Cars for South Africa

BRITISH, American and German motor manufacturers who supply vehicles to South Africa are hopefully regarding the recent increase of £4½ million in the total value of licences to be granted this year as the beginning of the end of licensing for the South African market. They hope the process may be completed in about 18 months, though they do not expect any change in the preferential duties for completely knocked down vehicles by which the Union ensures that its local assembly plants are kept fairly busy. Duties based on a ladder of values at present keep certain cars of medium price, for example, the Jaguar, right out of South Africa; but even if these duties are eventually modified, the Union is becoming a very price-conscious market.

The increase of £4½ million relates to completely knocked down vehicles and is expected to provide an increase of 40 per cent in the volume of last year's imports. But its main effect is expected to be felt in the second half of the year. The South Africa Government generally announces its quotas every six months, and the motor companies have some hope that it may be repeated in the following six months. Allocations to individual makers have not yet been fixed, but these are based roughly on past sales; and British makes accounted for over 50 of car registrations in 1953. The quotas are negotiated between the Government and the assemblers, and depend partly upon plant capacity. In this respect, individual manufacturers differ; Ford and Vauxhall, assembled in directly owned plants, each have a direct voice, while the British Motor Corporation, which so far is assembled in locally owned factories, at the moment has not.

It soon will have one. By May or June its new assembly plant at Blackheath, just outside Cape Town, will be turning out trial cars; by October, quotas permitting, it should be turning out 30-50 cars a day—all Austins at first. The Austin company decided upon the plant in 1949, built it by the end of 1953, and had it empty when import restrictions cut its quota of vehicles for the South African market. Sir Leonard Lord, speaking at Cape Town a fortnight ago, said that eventually BMC may bring together Austin and Nuffield assembly there; and that he is expecting that with the years South Africa will insist on a higher proportion of local manufacture than the moderate amount of local glass, tyres and trim that vehicles imported CKD now have to use.

SHORTER NOTES

The Electrical Lamp Manufacturers' Association has taken steps to meet criticisms of its operations by the Monopolies Commission. The sales quota system, arrangements for exclusive dealing, payments to distributors, and the use of the stop-list to maintain resale prices have all been dropped; lamp components will in future be sold to non-ELMA members at prices no higher than those at which they are supplied to members; and controlled companies marketing cheap lamps will not be used as fighting companies.

FOCUSING ON NEXT YEAR'S AIRLINER, MR. ARNOLD?

Mr. Arnold (busy news photographer) is himself a very tricky person to get in focus. No sooner here . . . he's got to be somewhere else . . . and fast. Of course he always gets there — by air; and he invariably flies British. Which is where next year's airliner comes in. For Mr. Arnold's fares are helping to put yet another British world-beater on the stocks. Helping to pay the men who design and build her; and helping BEA to send air line technicians to advise on the operational aspects. Mr. Arnold was one of nearly 2 million people who flew BEA last year. That's why British Civil Aviation is on top. And passengers who fly British this year — and next — are making sure we stay there.

Schism

The House of Crompton is a house divided, but not in the accepted sense of the phrase. From the original small company formed more than three-quarters of a century ago has sprung a mighty organisation with twelve different sections dealing with every aspect of electrical equipment and installation. But each section forms an integral part of the whole.

It is this close co-operation between sections that has gained for the Crompton Parkinson organisation the world-wide reputation it holds today. For when a new development in electricity has to be studied and pursued, the sections work together for the common good. The results are the fruit of an experience second to none.

When it comes to electrical equipment . . .

you've got to hand it to **Crompton Parkinson**

Figures given last week for Imperial Tobacco Company's annual turnover at wholesale prices including duty need correction. Imperial Tobacco's turnover exceeds £600 million, compared with about £850 million for the British tobacco trade as a whole.

★

This week's agreement between Skyways, Ltd., and Bibby Line, Ltd., is the fourth air-sea linking of the past two years. The capital of Skyways is being increased from £150,000 to £315,000, most of the new shares being taken up by Bibby, though it does not acquire a controlling interest. Of the earlier agreements, Furness Withy and Clan Line have interests (non-controlling) in, respectively, Airwork and what was formerly Hunting Air Transport, while P & O has a controlling interest in the holding company of the Silver City car ferry.

★

Depositors in the Post Office Savings Bank may now make withdrawals on demand up to £10. The previous limit of £3 had been unchanged since 1929. The amount that may now be withdrawn by the telegram service has also been raised, from £10 to £25.

Company Notes

ASSOCIATED ELECTRICAL INDUSTRIES. It was a safe guess for 1954 that higher profits would come from the giants of the electrical industry, which concentrate upon the production of capital goods but which have profitable interests in durable consumer goods in the home market. The shares came down in the slide in the market, but they did not suffer so badly as the more speculative counters, for investors knew the size of the dividend warrants from English Electric and Associated Electrical Industries, though not the full extent of the earnings.

Associated Electrical Industries fore-

	Years to Dec. 31, 1953	1954
Consolidated earnings :-		
Trading profit	13,674,000	15,023,000
Depreciation	1,249,000	1,466,000
Replacement reserve ..	1,377,000	1,404,000
Taxation	7,812,000	7,224,000
Net profit	3,219,000	4,753,000
Ordinary dividends	1,097,000	1,365,000
Retained by subsidiaries ..	1,433,000	2,368,000
Retained by Parent Co. ..	553,000	935,000

Ordinary stock at 68s. 6d. yields £4 2s. per cent.

shadowed a 14 per cent ordinary dividend for 1954, compared with the equivalent of 11½ per cent, when they made their successful offer for the Siemens ordinary shares, though the AEP's ordinary stock units offered in exchange for Siemens did not rank for this dividend. That forecast, and the announcement of a bigger dividend backed by increased earnings by English Electric, left investors in no doubt that AEI must have enjoyed a sharp increase in profits. Gross trading profits rose by a shade under 10 per cent—from £13,764,000 to £15,023,000. Out of that profit the directors have appropriated

to fixed assets replacement reserves as well as the statutory depreciation charge before striking the balance of net profits. But net profits have still risen sharply—from £3,219,000 to £4,753,000, thanks in part to the fall in the tax provision from £7,812,000 to £7,224,000. Income and profits taxes rose with earnings but there was nothing to find for EPL, which absorbed £1,340,000 in 1953. The new dividend is thus covered more than three times by net earnings, even after providing for depreciation on the replacement cost of fixed assets.

★

RUGBY PORTLAND CEMENT.

The building programme, the railway programme, the road programme, new equipment at Rugby and the opening of the Trinidad plant set Rugby Portland Cement last year along the road to the goal of a gross profit (before tax and after depreciation) of £900,000. Once that level has been passed, and provided that the gross ordinary dividend takes no less than £300,000 (as it surely will at that level of profit), dividends are payable on the "A" ordinary shares that were issued in November. In fact the group earned a profit of £720,921 after depreciation but before tax, which was about 14 per cent higher than the 1953 profit of £632,966. Net ordinary earnings, thanks in large measure to the cessation of EPL, expanded more vigorously by about 67 per cent from £186,241 to £311,696.

Mr Halford Reddish and his fellow directors have declared an ordinary dividend of 1s. on each 5s. share. The dividend is payable on a capital of

£1,000,000 as increased, first, by the exercise of £250,000 of ordinary share options and, secondly, by a one for three free scrip issue. The 1,000,000 5s. ordinary shares issued at 20s. each at the end of last year do not rank for this dividend. In 1953 a similar dividend of 1s. a share, plus a tax free distribution of 3d. a share, was paid on a capital of £500,000. This year £1,250,000 of ordinary shares will rank and there can be little, or no, doubt that the directors will be able at least to maintain the present rate of payments on the new capital. It was this conclusion—and a little thinking about the possibilities of current profits and hence the prospects on the highly geared "A"

	1953	1954
Consolidated earnings :-		
Trading Surplus	768,772	931,028
Depreciation	135,806	210,107
Gross profit	632,966	720,921
Taxation	425,000	387,500
Net profit	207,966	333,421
Preference dividends ..	21,275	21,275
Net equity earnings	186,241	311,696
Net ordinary dividends ..	55,000	110,000

shares in which ordinary shareholders, the employees and especially the executive directors all have an interest—which led to a rally in the ordinary shares to 29s. 6d. after an initial fall on the announcement.

★

OLDS DISCOUNT AND BOW-MAKER.

It was roses all the way for the hire purchase finance houses in 1954, with more consumer durables for the home market and better wage packets to pay the instalments. Loss ratios were tiny; but earnings were not, and in the summer the clouds of official disapproval dispersed and the doors of the banks and the issue market were thrown open. Two of the finance houses now produce the sort of figures that might be expected. Olds Discount of Nottingham show group

The Federal government of Rhodesia and Nyasaland has decided to proceed with the scheme for producing hydro-electric power from the waters of the Zambesi at Kariba Gorge, instead of the Kafue river scheme. The cost of the first stage, to produce 462 megawatts, will be about £54 million. Much of the power will be needed for the Rhodesian copperbelt.

★

The Transport Act, 1953, instructed the Transport Commission to sell 2,600 of the vehicles it operates on contract hire but made no provision for the automatic transfer of the traffic carried in these lorries. The Commission is hoping to overcome this difficulty by ending all its contracts as opportunity permits, thus enabling independent hauliers and the nationalised fleet to compete for new ones. As the vehicles are freed they will be sold "as chattels" in the second-hand market without "A" licences (no "A" licences are required for contract hire vehicles). Any new contract hire business the Commission obtains will be undertaken through a new company, called BRS (Contracts), Ltd.

profits before tax of £477,131 for 1954, against £358,072 in 1953. The net profit attributable to the parent company after tax was £205,795, compared with £129,851.

Olds was one of the companies that took prompt advantage of the lifting of the ban by raising its ordinary capital from £400,000 to £840,000. On that increased capital the final dividend is 15 per cent. The interim dividend of 10 per cent was paid on the old capital. The unchanged ordinary distribution for the year of 25 per cent therefore much understates the true benefits that shareholders have gained. They have also received free issues of one £1 5 per cent preference share for every 8 ss. ordinary shares held and one ordinary share for every two held. They have also enjoyed a 4 for 11 rights issue. The total amount to be distributed net to ordinary and preference shareholders of £106,700 (against £67,500) absorbs about half the available profit.

Just as the gates of the new issue market were shutting in the faces of the hire purchase finance houses, Bowmaker of Bournemouth slipped through. Permission has been granted to issue 916,666 new ss. ordinary shares as a free scrip issue apparently on a two for three basis and a further 708,333 at a price to be fixed on March 25th. The profit and dividend figures for the year ended October 31st follow the pattern of the hire purchase trade. Group profits before tax were £418,915, compared with £384,778, and the net figure after tax £180,091, compared with £143,660. The final dividend is 20 per cent, making 25 per cent for the year, compared with 17½ per cent in all for the previous year. Moreover a 5 per cent tax free cash distribution is promised out of the capital profit of £265,000 resulting from the sale of a subsidiary—Norcon Ltd.

BORAX CONSOLIDATED.

With no single word do the directors of Borax refer to the recent struggle for control of the company either in the report or in the accounts. The omission is excusable. The controversy was fully ventilated at the time. Again and again since then the chairman, Mr D. Abel Smith, has circulated shareholders with supporting statements underlining the value of the group's undertaking. And he has still to make his speech at the meeting on March 23rd. Shareholders nevertheless have the controversy still fresh in their minds and know what to look for in the accounts. They will seek support for the view that the deferred units are worth substantially more than £5.

There is evidence to support that view: the trading profit for the year ended September 30th is £1,712,834, compared with £1,385,539; this produces a group net profit after tax of £839,420 compared with £699,192. Not only is the figure rising rapidly but the total distribution for the year of 18 per cent, compared with 11 per cent, absorbs less than half the net profit. With the preference and preferred dividend and profits tax it takes £465,000. If the budget were to meet the special arguments of the overseas mining companies that they lose depletion allowances granted in overseas countries because of the severities of the British tax system, it would be possible to take an even more cheerful view of future dividend prospects. The consolidated balance sheet adds little to the earlier statement that showed the company to have net assets in the region of £14 million excluding its undoubtedly valuable mines. Borax is an exceedingly wealthy company with a varied and interesting prospect. Thanks, in part at least, are due to the share bidders for bringing the facts to light.

LONDON STOCK EXCHANGE

Next Account begins: March 16th
Next Contango Day: March 16th
Next Settlement Day: March 8th

The end of the old account witnessed a rally in Throgmorton Street from the trough recorded on the Thursday that Bank rate was increased. That day the *Financial Times* ordinary share index was down to 177.0. By the end of the account on Tuesday it had climbed back to 185.7. But with the new account came the news of the loss in the gold and dollar reserves. Hence, on Wednesday the index fell to 184.7 and on Thursday prices held steady in a narrower market. Gilt-edged continued to move up after the week-end, but the impetus gradually died away, and on the publication of the gold and dollar figure minus signs appeared once more in the gilt-edged list. The foreign bond market was rather quiet, but Japanese issues, both at the end of the old and the beginning of the new account, made a sturdy advance on the election results. Greek issues were also firm on renewed suggestions of a debt settlement.

Industrial equities took their cue from the gilt-edged market. These stocks followed the gilt-edged rally, but the most impressive increases were not recorded in industrials until Monday. After that this rally, too, lost its momentum. And on the first day of the new account net changes in prices were mostly small and usually downwards. The strongest advances in the rally were reported among the store, electrical equipment and steel issues. And, serving as a comment in itself on the hire purchase restrictions, the equities of the leading hire purchase finance companies were quite strong.

Oil shares moved up at the end of the old account. Shell led the way when buying orders came in from the Continent. And unlike other equities, the oil issues continued to go ahead when the new account opened. Rubber shares were firm at the end of the old account, and then turned dull on the fall in the price of the commodity. Tea shares remained quite strong. Renewed support from the Cape and the Continent brought about a brisk advance in Kaffirs and Rhodesian copper shares improved on the ending of the strike.

(1) From August 1952.

(1) From August, 1953, the index has been revised to show a more representative wheat price, and subsequently to ex-warehouse prices of H.C. electrolytic copper. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) Annual figures are based on unit values and are influenced by changes in the composition of trade as well as price movements. (4) Surveys made twice a year; annual figures relate to October survey. (5) Revised series based on Liverpool spot market prices, as from July 1, 1954.

THE MONEY MARKET

The market reduced its bid for 91-day Treasury bills on offer last Friday by 7s. 5d. to £99 1s. per cent, that is by close on 1½ per cent to 3½ per cent; the average rate of discount came out at 3½ per cent. The increase was larger than had been expected, so that after the tender commercial bill rates were raised by ½ per cent beyond the 3½ per cent quoted immediately after the Bank rate change. Total applications at last week's tender rose by £15 million to £381.9 million, and the market's average allotment of all bills—some 92-day bills were on offer on account of the incidence of Whit Monday—fell back from 60 to 50 per cent.

Demand for bills in Lombard Street has been stimulated by the high rates, despite the fact that credit has remained in fairly short supply. Most houses have had to make substantial repayments to the Bank of last week's "penal" borrowings, and on Monday indeed a few were obliged to seek further assistance at the new penal rate—despite moderate official help, given mainly indirectly through the banks. Some of the original loans were, however, still outstanding at the date of the Bank return, which shows that in the week to Wednesday last discounts and advances fell by £27.3 million; in the previous week they had risen by £44.3 million. Credit conditions turned slightly easier in the middle of the week and there was a keen demand for bills. April maturities changed hands at down to 3½ per cent and Mays at 3½ and 3½ per cent.

"The Legal & General actually saved my business"

"Did they, indeed — how?"

"Well, it's just a year now since the factory was burnt out and it'll be another three months before we're straight."

"I suppose it will be — but where do the Legal & General come in?"

"At the start, my dear fellow, right at the start! You see, I was fully insured with them against loss of profits and increased cost of working following a fire."

"And they've really seen you through?"

"Indeed they have, including help in fixing up temporary premises. You can rely on them. They have *all* my insurances — personal as well as business. In fact, we've had a 'family' association for very many years now."

THIS JAM WAS LETHAL

Four men descending from the top of a new 250 ft. chimney were riding on the platform of a materials hoist when it stuck for a moment and then suddenly dropped several feet. Two passengers were shaken off by the jerk and killed.

The hoist jammed owing to adjacent guides being of unequal thickness, and some slack ran out in the hoisting rope. The jam then cleared itself but the brake failed to hold the platform, and this ran free until the slack in the rope was taken up.

What Vulcan say about it...

Users of cranes and hoists seem unusually accident-prone. Safety regulations should therefore be prominently displayed and meticulously enforced. Only in a few strictly defined cases may anybody at all be conveyed on a materials hoist, and never more than two people.

Engineer-Surveyors from Vulcan Insurance not only test ropes, tackle and all the winding and braking machinery of the lifts and hoists they insure, they also give every assistance to engineers in safety education and in drafting notices to users. If you already know the pains they take over boilers you will surely welcome their attention to your lifts, hoists, cranes and indeed all the plant and machinery in your care.

THE MERCANTILE BANK OF INDIA

CONTINUED EXPANSION OF GENERAL BUSINESS

INDIA'S SUCCESSFUL YEAR

GOVERNMENT'S VAST DEVELOPMENT PLANS

SIR KENNETH W. MEALING'S REVIEW

The sixty-second annual general meeting of The Mercantile Bank of India, Limited, will be held on March 29th, in London.

The following is an extract from the statement by the chairman, Sir Kenneth W. Mealing:

The board's recommendations to shareholders for the sub-division of the "A," "B" and "C" shares and capitalisation of the sum of £420,000, being part of the balance standing to the credit of the reserve fund, were duly approved at an extraordinary general meeting held on September 7, 1954. The board also transferred £670,000 from inner contingencies account to the reserve fund and as a result the paid up capital of the bank is now £1,470,000 and the reserve fund stands at £1,750,000.

The expansion recorded last year in the bank's general business continued during 1954. The balance sheet total at £68 million is higher by £5 million. On the assets side there is an increase of £2½ million in the holding of Government securities, and bills receivable and loans and advances are higher by £1 million each. On the other side there is an increase of nearly £4 million in deposits.

At £194,324 the net profit is practically unchanged from that of the previous year and your directors recommend a final dividend of 7 per cent on the increased capital referred to in the above paragraph. If this recommendation is approved, the dividend for the year will be 14 per cent on the actual issued capital throughout the year. I trust you will agree the results of the year's working are satisfactory.

INTERNATIONAL AFFAIRS

The world situation has shown little change since I addressed you a year ago. The cessation of active fighting in Indo-China, resulting from the Geneva Conference, and the continuance of the cease-fire in Korea may, however, be counter-balanced by the continuing tension over Formosa and the small islands close to the China mainland occupied by the Chinese Nationalists. The fear of direct aggression in Europe appears, thanks to the increasing power of Nato, to have declined, but Seato, still to be ratified by the countries concerned, has not yet become a power sufficiently capable of withstanding aggression in South East Asia, so the situation is still not without anxiety in this area.

For the greater part of 1954 the economic situation in the United Kingdom progressed satisfactorily, although in the latter half of the year there were signs of incipient inflation. The continued weakness of sterling in terms of other currencies in the closing months of the year indicated that some deterioration in the country's economic position was taking place.

Since the close of the year, to rectify the situation the Bank rate has been raised on two occasions and is now 4½ per cent, the highest since 1932. Other steps have also been taken to stop the inflationary trend, increase exports, and maintain international

confidence in sterling. I have little doubt that these measures will prove effective.

The fears in the United States of America that a moderate economic recession might develop into a serious slump proved, as I surmised, to be unfounded, and the productivity of this great country both in agriculture and industry continues to increase.

INDIA'S SUCCESSFUL YEAR

The year 1954 must be regarded as the most successful for India in practically all spheres of activity, since independence. The Indian government, headed, and indeed dominated, by Pandit Nehru, has participated, and made its influence felt, in world affairs to no mean extent. Internally, the food situation has vastly improved, the working class cost of living has shown some recession, and trade and industry have enjoyed an active year. The first Five Year Plan came into existence in 1951 and is due for completion in 1956. Of an estimated outlay of Rs.2,249 crores, by March, 1954, only 40 per cent had been utilised. The full extent of the first plan may not be achieved, for the target is a high one, but much of it will be attained and a second Five Year Plan is now being framed. India has become alive to the fact that the present increase in population (something like 45 million new mouths to be filled, bodies clothed and employment found every 12 years) necessitates urgent steps to increase agricultural production and industrial capacity. To meet this situation the Indian Government have vast plans for irrigation, hydro-electric power, heavy industrial production, fertiliser plants and are now planning nation-wide rural and agricultural credit and banking facilities under the aegis of a state bank now in process of formation. The growing use of fertilisers by the agriculturists and the gradual spread of "family planning" are two important steps towards meeting the problem of increasing population. Whilst it is true that these great problems can only be adequately solved by vast measures which private capital and private enterprise are not, in India, capable of undertaking, thus necessitating government planning, promotion and finance, it would seem in the pronouncements made hitherto that private enterprise is only to be permitted to exist on the fringe of these developments and more or less on sufferance, instead of being encouraged to contribute as an active and welcome partner.

The implications of Communism do not appear to be appreciated at any level in India, and there appears to be little or no restriction on the spread of Communist propaganda. Whether and to what extent this licence is having undue effect will not become clear until the general election due to be held in 1956.

There is still great goodwill in India towards the United Kingdom and, providing British manufacturers can compete as to price and delivery, there is a definite bias in their favour.

PAKISTAN

The constitutional position in Pakistan is somewhat confused. It is clear that Pakistan

is passing, and probably will for some time, through a difficult political period before a genuine and reputable democratic system can again be set up in the provinces and at the centre.

The internal financial position of Pakistan appears to be sound, and very considerable industrial advances are taking place under the Pakistan Industrial Development Corporation.

Shortage of foreign exchange is, at present, a serious problem, but when American aid starts coming forward this should result in a considerable saving in foreign exchange which in turn will enable Pakistan to spend more of its own foreign earnings on consumer goods, thus bringing about a reduction in the cost of living. The food position is far more comfortable: indeed in 1954 Pakistan was a substantial exporter of rice and it is not anticipated that there will be any shortage of grains.

A settlement with India of the Kashmir problem seems no nearer than a year ago.

CEYLON

Ceylon's economic outlook improved considerably during 1954.

Nevertheless Ceylon's economy is too dependent on two or three main agricultural industries, a severe drop in the world prices of which can bring a serious economic depression to the island, which has to import a proportion of its foodstuffs. Prospects of foreign capital development are severely handicapped by the reluctance with which even temporary residence permits are granted even to citizens of other Commonwealth countries, as a result of the policy of Ceylonisation. There can be little doubt that this policy, if persisted in, can only result in the dis-investment of existing overseas capital in Ceylon and the prevention of any appreciable new overseas investments in the island, for capital will not go to or stay in any country which refuses it the right to appoint executive staff without discrimination.

BURMA

The state of emergency continues in Burma, although it seems probable that some progress towards restoration of law and order has been made in 1954 and it is believed that a reduction has taken place in the numbers of insurgents and Communists operating against the government forces.

Notwithstanding these difficulties, progress is being made in many directions.

MALAYA

Economically the year 1954 proved better for Malaya than appeared likely at the beginning of the year. The principal industry, rubber, recovered from 55.88 cents a lb. in January to 86.15 cents a lb. in December, whilst tin which in January fetched \$317.33 per picul finished the year at \$348.96, having reached an average of \$375 in July. As a result the value of exports is estimated to

M.\$3,400 million as compared with M.\$3,019 million during 1953, whilst estimated imports at M.\$3,100 million are lower by M.\$127 million, thus correcting the unfavourable trade balance of 1953. The year 1955 opened on a note of cautious optimism, but there are many difficult problems in the political and economic fields yet to be solved.

HONGKONG

The entrepôt trade of Hongkong has shown a slight further recession in 1954 partly due to the embargo on certain goods to China, partly due to increasing direct trade between China and the European Communist satellite countries, and partly due to the use of foodstuffs previously exported by China through Hongkong, for direct barter deals with other countries.

The value of exports totalled \$2,417 million and imports \$3,435 million. Nevertheless, the budgetary position appears to be sound and it is estimated that the revenue for the current year will slightly exceed expenditure. Taxation remains low, which is an undoubted inducement to the growth of new industries and business enterprise.

The expansion of local industries to which I referred last year has continued in 1954.

THAILAND

Although 1954 has been a difficult year economically, it has in other respects proved a progressive year. Closer association has developed with Burma and other free countries and the creation of Seato has engendered a feeling of confidence in spite of the events in Indo-China.

Although not a democracy Thailand should not prove a fertile ground for Communist infiltration. Provided Seato becomes effective, Thailand may well become a bulwark against the spread of Communism in South East Asia.

MAURITIUS

Notwithstanding the fall in world sugar prices, the principal industry of Mauritius had another successful year in 1954 and, thanks to the protection granted by the Commonwealth Sugar Agreement, should also do well in 1955 provided weather conditions are not adverse.

JAPAN

Japan's economic position continues to cause great anxiety. Drastic import reductions were imposed and exports have increased during the year, so that the balance of international payments has improved and foreign currency reserves have increased slightly. A policy of disinflation has been followed which has checked the upward spiral of prices but has also extinguished large numbers of small businesses and considerably increased unemployment.

The population (now some 88½ million) is rising at over a million a year, but Japan has only half the arable land and one sixth the pasture land of the United Kingdom, which has only 60 per cent of the population of Japan. Although Japan has a large industrial potential, much of it is 20 years out of date and costs of production are nearly 20 per cent higher than in the United States of America or United Kingdom.

Nevertheless, Japan must export in order to buy food and raw materials for her industries and she can only export in sufficient quantities if her costs and qualities are competitive, her trading practices are fair, and if the countries of the free world recognise the importance of assisting her through her present difficulties.

RALLI BROTHERS LIMITED

FACTORS AFFECTING RESULTS

MR JACK VLASTO ON SEVERITY OF COMPETITION

The annual general meeting of Ralli Brothers Limited will be held on March 29th, in London.

The following is the statement by the chairman, Mr Jack Vlasto, which has been circulated with the report and accounts:—

The accounts now before you are very disappointing in comparison with those of recent years. Of this, I gave some advance warning a year ago.

The main reason for the drop in earnings was the severity of competition. There was no major loss in any one section of our trading which could be held responsible and our merchandising turnover was slightly higher. The unprecedented floods in East Pakistan did, however, cost us £55,000 in damage to our jute stocks but, on the other hand, the profit figure benefited from substantial war loss recoveries—the last we expect—and the unfreezing of dividend amounts paid by our German subsidiary company in earlier years. We were fortunate, also, in nursing back to health a number of doubtful outstandings, thus releasing provisions made previously. Welcome as these windfalls were, it really means that the pure trading result was worse than the figure shows.

You will notice, under current assets, that stocks represented an appreciably higher value than last year. Our stocks of both jute and gunnies were larger but about half the increase was due to exceptionally large holdings of Uganda cotton, which have since moved off. While I attach no particular significance to this higher stock value, it is reflected in the reduction in investments and the absence of money at call for which, of course, the reduced outstanding under provisions for taxation is also partly responsible.

RALLIS INDIA LIMITED

Our great worry during the year was again the affairs of our associated company, Rallis India Limited. Owing to a variety of adverse factors and developments, rendered a great deal more difficult by the imposition of the restrictions on certain trading to which I referred in my last statement, the earnings of that company dropped from Rs. 9.98 million to Rs. 4.1 million and resulted in a loss of Rs. 5.2 million on the year, without charging depreciation of fixed assets. This, coupled with the continuing poor outlook, led the board of that company to the decision to close its Calcutta branch at the end of May, 1955.

It is less than seven years ago that we formed Rallis India Limited. Its career, which began with good results and high hopes, has been tragically affected in ways totally unforeseen. I trust that the steps taken by its board will eventually prove effective in restoring its fortunes. We have, nevertheless, felt it necessary to make a further substantial provision against the book value of our large investment.

THE OUTLOOK

Our current year is proving no easier, as regards merchandising, than its predecessor. Competition remains as severe as ever. The wave of prosperity enjoyed for so long by so many engaged in industry and some other

fields of business seems to have by-passed the international trader in the raw materials in which we deal. Since we can earn so little on each transaction, the only answer is to put through a larger number of transactions and, with this object in view, we are working to the limit of our capacity. We may, in fact, equal our record turnover of £65 million. With prices lower today than they were in 1951, the attainment of this volume of business would be no mean feat, though it will be assisted by a substantial turnover in Canadian wheat and coarse grains through the medium of our newly-opened branch in Winnipeg. All this has put great pressure on our staff all over the world and, perhaps, especially in London. We all greatly appreciate their willingness and hard work which is a great support and encouragement to the board in these difficult times.

Our subsidiary companies, as a whole, are doing a little better. The fall in sisal prices from last year's level is unwelcome to Ralli Estates of Tanganyika but The Maritime Shipping & Trading Company, with six vessels, aggregating 56,580 tons dead-weight, now in operation, is reaping the advantage of the higher tramp shipping rates. Berg River Textiles of South Africa should make a small profit, but its manufactures are still inadequately protected against imports.

Taken by and large, therefore, I hope we shall have a better year. If we don't, it will not be for lack of effort.

THE OMNIUM INVESTMENT COMPANY

MR H. C. DRAYTON ON BOARD'S SUCCESSFUL POLICY

The sixty-eighth annual general meeting of The Omnium Investment Company, Limited, was held on February 25th in London.

Mr H. C. Drayton (the chairman), who presided, said: For the year under review our gross income amounted to £257,000, an increase over the previous year of £38,000.

As regards the current year, you have the right to take up one new share in seven. If you cannot take those shares up you can sell them at a high premium on the Stock Exchange. It is a policy we have adopted since 1946 in this company, and it is interesting to look back and see how deferred stockholders have fared under that policy. If anyone had purchased £100 deferred stock at par in 1946 he would today hold, if he had taken up his rights, £154 of stock, showing a profit of £126. If, however, he had not taken up his rights on that £100 of stock when they were offered but had sold them, he would have realised a profit over the seven years of £25—he would have sold those rights for the sum of £25, which is approximately 3½ per cent per annum, with no deduction of tax, and his remaining £100 stock would have shown him a book profit in addition of £80.

This issuing of stock at par has the additional merit that it is broadening the basis of the deferred stock, and in your directors' view is helping to stabilise the dividend at the figure at which it now stands. It is our ambition that through thick and thin we shall always be able to pay you 10 per cent on the deferred. That may be, as the Americans say "sticking my neck out," but it is a hope, although I will not say whether we can do it.

The report was adopted.

ILFORD LIMITED

(Manufacturers of Photographic Materials)

TURNOVER AGAIN A RECORD

MODERNISATION POLICY CONTINUED

IMPORTANCE OF MAINTAINING AND INCREASING EXPORT TRADE

HONOURABLE JAMES P. PHILIPPS ON RAPID GROWTH OF BUSINESS

The Annual General Meeting of Ilford Limited will be held on March 23rd at the Ilford Gallery, 105-107 High Holborn, London, W.C.

The following is the address by the Chairman, the Honourable James P. Philipps, copies of which have been circulated for the convenience of shareholders with the report and accounts for the year ended October 31, 1954:

Ladies and gentlemen,—I am pleased to report that our turnover for the year under review was again a record in both the home and export markets. While our home sales showed a satisfactory increase on the previous year our exports were almost 20 per cent higher. The export figures would have been even better if October, which is normally a heavy export month, had not been adversely affected by the dock strike.

If we compare the years 1954 and 1946, we find that our business has grown rapidly since the war, the value of our turnover having increased about three and a half times. During these nine years the amount of new money injected into the business has been £4,167,000, of which shareholders have provided £1,353,000 in additional cash, while £2,814,000 has been ploughed back out of their taxed profits. During the same period we have had to provide for taxation approximately £5,700,000.

After taking into account the transfer in the previous year to reserve for replacement of fixed assets, our net profit this year is some 13 per cent higher. We therefore propose to bring the dividend distribution for the full year to October 31, 1954, up to 15 per cent on the increased issued Ordinary share capital, which is the equivalent of 22½ per cent on the old capital, as compared with the 20 per cent distributed last year.

From the balance sheet you will see that as a result of the resolutions passed at the Extraordinary General Meeting held on March 24th last, the authorised Ordinary capital of the company has been increased to £3,500,000 (divided into 14 million Ordinary shares of 5s. each) of which £3,400,000 (divided into 13,600,000 Ordinary shares of 5s. each) has been issued.

NEW MANUFACTURING CAPACITY

We have continued our policy of modernising our film manufacturing plant. We shall have more of the new machinery coming into production during 1955, and this will enable us to scrap some of our older plant which we should have liked to close down some years ago.

At the same time we are working on a plan to re-equip and modernise our plant for sensitising paper so as to bring this up to a comparable standard. We also have to provide additional laboratory, warehousing and despatch facilities, and during the next three years we expect to incur heavy capital expenditure on these projects.

AUSTRALIA

Three years ago we formed a subsidiary company in Australia, which has been en-

gaged in marketing and distributing our products in the Commonwealth. In my last address I mentioned that Mr T. M. Illingworth, our deputy chairman and joint managing director, had visited this subsidiary company, whose head office is in Melbourne. You will be interested to hear that, as that city is expanding rapidly, we have thought it advisable to purchase a freehold site at Notting Hill, which is about 12½ miles to the south-east of the centre of the city. This is an excellent site on an industrial estate, and while it is still uncertain as to the extent to which it will be advisable to manufacture in Australia, we intend to be in a position to maintain and extend our important trade by local manufacture, if this should prove desirable.

NEW PRODUCTS

It will be obvious from the progress made by the company since the war that its products are well able to compete in both the home and export markets. We are indeed proud of the quality of the materials we make, and our research laboratories are continuously working to improve them as well as to develop new products for new purposes. As you know, we manufacture a wide variety of light-sensitive materials, from the roll film used by the holiday-maker to the X-ray films so extensively used and valued in our hospitals, together with equipment, chemicals, and accessories for use with them. It is only possible for me to refer here specifically to two or three of these products. In the first place, from the point of view of speed, our HP3 plate is the fastest photographic material in the world today, and has held this position since it was first made available for the Coronation in 1953. This material has made possible many news pictures which would otherwise have been lost to the newspapers and news magazines.

Then the Ilford HP3 series of films and plates have long been recognised as one of the best examples of modern high-speed sensitive materials. We are introducing this year films of even higher sensitivity which will do much to maintain the Ilford reputation for producing the fastest films.

In a much less known field, we are manufacturing ever-increasing quantities of special plates and other sensitised materials to assist the nuclear physicist in atomic research. We have for some years given much attention to the production of these plates and we have succeeded in obtaining by far the largest share of this small but interesting market. Ilford nuclear plates are in regular use at almost every centre in the world where atomic research is carried on. They are used in the enormously powerful machines built to investigate the structure of the nucleus of the atom, and are also sent up to great altitudes in balloons to bring back data on the cosmic rays which continuously bombard the earth's atmosphere. As an illustration of the unusual character of some of these materials I would mention that we recently produced what was in effect a solid block of photographic emulsion 14½ in. by 10½ in. by 6 in. This weighed over 1 cwt and the value of the silver

it contained was £300. This was sent up by balloon in Italy to an altitude of nearly 20 miles under a joint venture of the University of Bristol and several Italian universities.

Last year I told you about our novel developing agent "Phenidone." During the past 12 months we have sold successfully several developer compositions based on this chemical. A very recent introduction is our "Microphen" developer which yields, particularly with HP3 film, a really remarkable combination of fine grain and high film speed. It will, I am sure, prove a favourite with miniature camera users all over the world.

COLOUR PHOTOGRAPHY

Last year we introduced colour prints from our colour film transparencies at the reasonable price of 2s. 6d. for a postcard size print. Our enterprise met with a remarkable response, and we had some difficulty during the year in meeting the demand. We are making considerable extensions to our colour print department for next season and we hope to provide a far more extensive service. It is generally conceded that the Ilford colour prints offer much better value than those hitherto available in this country. Although colour photographic materials make up a comparatively small part of our present turnover, their importance is likely to increase greatly in the future.

AZOFLEX

I have told you previously something about our Azoflex process for "semi-dry" copying of documents which we have introduced into ordinary office practice. This branch of our business is making rapid progress and looks like establishing very soon a leading position in this field.

WINTER PHOTOGRAPHY

For the last two winters we have spent considerable sums trying to persuade camera owners that photography is not of necessity a purely summer pastime. Modern films such as our HP3 for outdoors and flash techniques for interiors make photography in the winter simple and rewarding. Our pioneering effort has produced some results, but there is still a long way to go, and developments in other countries point the way to the possibilities. All-the-year-round photography, besides extending the pleasure of picture makers, would be of great benefit to the industry. The short concentrated season causes serious difficulties, particularly in the photo-finishing and dealer sections.

EXPORTS

Although rather less has been heard about the need for exports than in the years immediately following the war, the importance of maintaining and increasing the country's export trade is as vital as ever. As mentioned earlier, our export sales have again increased and this has been achieved in spite of keener competition. Our success is doubt-

less due to the policy we have followed for many years of constantly visiting the various markets and maintaining close contact with our overseas customers. As well as increasing our exports by nearly 20 per cent, in the last year we have maintained our position as the largest British exporter of sensitised materials. Since the end of the war our exports have exceeded £20 million in value, which I think you will agree is a substantial contribution for a company engaged in a comparatively small industry such as ours. In view of the increasing foreign competition, it is disturbing that our costs continue to rise largely due to factors outside our own control. It will require serious attention and a great effort from now on to keep our costs competitive with producers working in countries such as Western Germany, where the economy is less restricted and the rate of taxation much lighter.

All our staff and employees have again put up a magnificent performance in contributing their share towards these record production and sales figures, and at Christmas they received a substantial bonus. I feel sure, however, that you would wish me to take this opportunity of thanking them all once more on your behalf for their loyal co-operation both at home and overseas.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

ANOTHER RECORD YEAR

The one hundred and forty-first stated annual meeting of the society was held on March 1st in the society's head office, Edinburgh, Mr Alastair C. Blair, CVO, WS (chairman of the ordinary court of directors), presiding.

In moving the adoption of the report and accounts, which were taken as read, the chairman said:

As usual when industry is flourishing, new life assurance business has been transacted on an increased scale, and the society's new ordinary business, before deducting sums reassured with other offices, was over £13 million, the largest amount ever completed in any year of the society's history and a record figure for the ninth successive year. Our total new business, including new insurances and increases in existing insurances associated with group pensions business, was also a record, the amount after deduction of reassurances being over £16,800,000, an increase of £1½ million over the 1953 total. This record was achieved in spite of the fact that the contribution made by group business was smaller than in the previous year.

WITH-PROFITS PENSION SCHEMES

For some time we have felt that the most satisfactory arrangement for a group pension scheme would be on a with-profits basis, which should give the best value for money: in this view we were naturally influenced by the society's tradition and long experience as a leading with-profits office and we were pleased to be able to introduce a plan for with-profits schemes in June, 1954. When this with-profits plan was launched there was an immediate revival of interest in group pensions business and we have already completed many schemes on the new basis. This revival is hardly surprising because the cost during 1954 to those employers who chose a with-profits scheme was considerably less than it would have been under a without-

profits plan. Although, as you know, it is impossible to forecast future profits, we are confident that, backed by the same economy of management and sound progressive investment policy, the society's with-profits pension schemes will give as great and lasting satisfaction as its ordinary with-profits assurance policies have been doing for nearly a century and a half.

As a result of the increasing new business of recent years, our premium income has been rising steadily and last year reached a total of £7,360,000 which was more than £600,000 higher than in the preceding year. At the same time, in spite of rising costs, of which we are all too conscious in these days, our total expenses and commission measured against the larger premium revenue represented only 10.52 per cent as compared with 10.75 per cent for the previous year.

LARGER RETURN FROM INTEREST AND DIVIDENDS

The increased new business and premium revenue are not the only benefits which the society has derived from the higher activity and prosperity of industry. Another important consequence is the larger return we are able to show from interest and dividends. You will see from the report that our gross income from this source, before deduction of income tax, exceeded £4 million last year and represented a yield of £6 1s. 1d. per cent on our total assurance funds, as shown in the balance sheet, as compared with £5 13s. 9d. per cent in 1953. This substantial increase is mainly accounted for by increases in dividends on our large holdings of ordinary shares which we have built up with so much care over the years. The merits of investing part of our assets in a well-chosen portfolio of ordinary shares have been emphasised from this chair several times in recent years and the results of this policy have again taken tangible form in the further increase in income last year.

BALANCE SHEET

If you turn to the balance sheet you will see that the principal changes in the assets are an increase of almost £4 million in British Government securities, of about £2 million in preference stocks and an addition of £1 million to ordinary stocks and these changes fully account for the investment of the new money. At the end of 1953 ordinary stocks in the balance sheet represented about 30 per cent of the total assets but, as the prices of ordinary stocks were rising to very high levels during the year, we added only about £1 million—or roughly one-sixth of the increase in funds—and so at the end of 1954 the ordinary stocks appear in the balance sheet at rather less than 30 per cent of the total assets.

SUBSTANTIAL RESERVE AGAINST ADVERSE CHANGES

I should remind you that, as usual, the stock exchange securities stand in the balance sheet well below their market selling prices at December 31st. A year ago there was a handsome margin between the market values of our assets and the values at which they appeared in the balance sheet. Owing to the general rise during 1954 in the values of all stock exchange securities and especially of ordinary shares, our margin at the end of the year was much larger than it had ever been before. The recent fall in market values has naturally reduced this margin but it is still considerably greater than at any time before 1954 and the knowledge that there is such a substantial reserve against adverse changes in the future must give members much satisfaction.

The directors' report and the accounts as audited were adopted unanimously.

MANCHESTER SHIP CANAL COMPANY

SIR LESLIE ROBERTS'S ADDRESS

The ninety-seventh ordinary general meeting of the Manchester Ship Canal Company was held on February 28th, at Manchester.

Sir Leslie Roberts, CBE, the chairman, in the course of his speech, said:

The net revenue was £1,106,182, compared with £1,106,247 in 1953.

To this must be added £28,023, brought forward from the previous year. £586,476 must then be deducted for loan and debenture interest, and £135,000 has to be appropriated for taxation. The balance available for dividends and reserve thus amounts to £412,729.

Of this sum, £35,000 (as in previous years) has been appropriated to the reserve for contingencies; and it is proposed that out of the balance of £377,729 the following dividends, amounting to £350,068, should be paid: 5 per cent on the preference shares, 4 per cent on the ordinary shares, and that £27,661 should be carried forward to next year's account.

Receipts from tolls, ship dues, traffic rentals, towage, and sundry receipts exceeded those of the previous year by £732,000. Expenditure, on the other hand, rose by £707,000, of which no less than £670,000 was due to dredging.

The cost of dredging last year was £1,244,000, being more than twice as much as in 1953, and more than three times the amount in 1952. This enormous charge is by far the highest which has ever appeared for any item on the expenditure side of this account.

The total amount of provisions set aside out of the year's revenue was £478,000, being £41,000 more than in 1953. The total balance on these provision accounts now stands at £2,244,000, compared with £2,026,000 a year ago.

I have reminded you more than once that when the company, during the first part of its history, was struggling for existence it was impossible to make any provision for the eventual replacement of plant, machinery, and other assets which would inevitably wear out or become obsolete.

Consequently, during the last 15 years, one of our tasks has been to try and recover the lee-way lost during the long preceding period and to build up reserves which would enable us to replace our assets.

The size of these provisions is largely governed by the estimated cost of carrying out the programme of renewals and major repairs which we have before us as essential works during the next few years. When I tell you that, apart from the renewal of dredging and other craft, the list of essential works at present scheduled for the next few years totals £1,466,000, you will understand that the provision accounts need to be replenished each year.

Last year the cargoes which passed over our canal and docks rose from 12½ million tons, or a little less, to well over 16½ million tons, an increase of 30 per cent. The port may feel legitimate pride in the fact that for seven successive years it has broken its own records. Within that period traffic has doubled, and the dividend on the ordinary shares has also doubled. Of all the ports in the United Kingdom there are now only two which can show more impressive cargo figures than Manchester.

In the near future we shall not only need new money, but additional borrowing powers.

The report was adopted.

ABBEY NATIONAL BUILDING SOCIETY

SIR HAROLD BELLMAN ON A NEW RECORD OF SERVICE

The annual meeting of the Abbey National Building Society was held on February 25th at the Wigmore Hall, Wigmore Street, London, W.1.

Sir Harold Bellman, DL, JP, LLD, chairman of the society, in moving the adoption of the report and accounts, said:

During the year, the society's assets passed the two hundred million pound mark, the actual figure being £213,461,000. This is a clear indication of the nation-wide status of the society—of the confidence felt by discerning investors and appreciation of the service given to borrowers. It should not be necessary to emphasise to you who are familiar with the society's long record that this is a natural and unforced growth, reflecting the development of our services to meet the requirements of savers and home owners for upwards of a century.

The total assets increased during 1954 by £32,278,000. The society's activities as a whole reflect this expansion. The amount lent in 1954 on mortgages secured almost exclusively on residential accommodation rose to £43,177,000, against £38,362,000. This, too, constituted a new record of service to assist home ownership. The board maintained its customary prudent standards in regard to all mortgage proposals.

This high level of activity would not, of course, have been possible without a substantial stream of new savings. The total during 1954 from members and depositors reached the record figure of £51,166,000. Meanwhile, the society's general financial position continues to be satisfactory. Trustee investments and cash rose from £23,478,000 to £31,402,000 at the end of 1954, thus constituting a definite element of strength. It will be noted that the market value and the book value of the society's investments in British Government securities on December 31, 1954, substantially coincided. The stocks concerned, of course, are all dated securities and if held to redemption would show an appreciable surplus. The reserves and carry forward increased to £8,351,000 and are, in the opinion of the board, adequate for their purpose. The fundamental strength of the society lies in the care and discrimination with which the lending policy is carried out.

Taxation continues to weigh heavily upon the society, our liability under this heading during the past year amounting to the very substantial sum of £2,381,000. On the other hand, the management expenses, on a proportionate basis, declined further during the year and stand at a level which, in view of the service afforded is evidence of economical administration.

Throughout 1954 the rate to investing members was maintained at 2½ per cent (depositors 2 per cent) free of liability to income tax. At the same time, the mortgage rate remained at 4½ per cent per annum. These rates are regarded as right and proper by building societies throughout the country.

That our current policy is essentially right is clearly the strong conviction of the considerable body of our members, now totalling over half a million.

There has recently been no lack of advice to building societies from without, and this, so far from resenting, we welcome. It has ranged over not only interest rate variation but the policy of maintaining reserve ratios, the extension of the mortgage repayment period and an increase in the normal loan percentage. From one influential quarter came the hint that if difficulties arose through this liberalisation of their services, the

societies might fall back upon the public purse. These exhortations have been heard with a measure of respect, but without conviction.

I have already referred to the fact that the society received during the past year a record volume of new savings. The revival of personal saving in the last year or so has been one of the most cheerful signs of the times. There has no doubt been a return of confidence in the value of the currency—a confidence which we should do all in our power to preserve. It is also to some extent a reflection of the country's remarkable prosperity, with the national economy at full stretch. A great deal of overtime pay is being drawn in our leading industries and elsewhere, and earnings generally are at a high level. Despite some increase in the cost of living, there is evidence that large numbers are exercising thrift. This is reflected in the figures of our friends in the National Savings movement, as well as in other quarters. There are, perhaps, some puzzling features in this comparatively rapid re-emergence of personal saving, but whatever the explanation, the result is eminently satisfactory and suggests that one of the characteristic elements of the British character still prevails. Your board would like to feel confident that children and young people are being encouraged to look ahead and be fortified for their future with building society membership. It proposes to pay attention to this important aspect in the current year.

I have discussed the housing position at some length at recent annual meetings, and there is little more I need say on the present occasion. The past year saw a total housing output in Great Britain and Northern Ireland which is indeed satisfactory and which confirms those who suggested that we could not have a high level of local authority output of houses for letting, combined with a much improved volume of output of houses for sale. Needless to say, we welcome the increased provision of houses for sale, and doubtless this will continue at a high level during the present year.

That the society is playing its full part in financing the provision of new houses is demonstrated by the fact that in 1954 we lent nearly £15 million to purchasers of new houses. Every one of these homes provided new accommodation without increasing the heavy burden of subsidy imposed on the taxpayer and ratepayer, a liability which now totals £65 million annually payable over many future years. I make no apology for reminding you again that these new dwellings built for sale by private enterprise will represent a substantial unencumbered asset to their owners within their lifetime, whereas houses provided for letting by local authorities will remain a burden on the shoulders of our own and succeeding generations.

The expansion in the society's activities during 1954, following a period of vigorous growth, made heavy demands upon all who serve the society. I should like to pay tribute to the co-operation of my colleague the deputy-chairman, Mr Stanley C. Ramsey, whose technical knowledge is of particular value to the society now that private house building and estate development have assumed larger proportions. To the managing director, Sir Bruce Wycherley, 1954 has necessarily been a year of strenuous activity and increasing responsibility. He has met this situation with characteristic energy and resource. I am sure all members will desire to congratulate him upon completing a distinguished term as president of the Chartered

Institute of Secretaries. The joint general managers and secretary have also been called upon to render exacting service and we are grateful to them. The society's staff as a whole has necessarily been involved in this widening activity and I am gratified to have this opportunity of acknowledging their efficient co-operation. There is an excellent team spirit among our staff throughout the country, and this is an asset of no small value to the society and its great membership.

Our branch offices, now numerous and carefully placed to afford a nation-wide service, helped to ensure the maintenance of a high standard of personal attention. Our branch managers have made notable contributions to our progress.

With this background of loyal service upon which we can count, the society faces with confidence whatever demands the future may have in store.

In the regrettable absence through indisposition of the deputy-chairman, Mr Stanley Ramsey, I call upon the managing director to second this motion.

SIR BRUCE WYCHERLEY'S REMARKS

Sir Bruce Wycherley, MC, FCIS, managing director, in seconding the adoption of the report and accounts, said:

The accounts which have been laid before you today doubtless convey some indication of the strenuous conditions under which our staff worked during the past year. By virtue of being in close touch with them from day to day, I was able to appreciate their readiness to shoulder new tasks and to discharge their duties with exemplary willingness. In particular, a special burden fell upon those in the more senior positions, and we are much indebted to them for the way in which they accepted these additional responsibilities.

I would re-emphasise the fact that an increased volume of business has been transacted without a corresponding increase in the costs of administration, as a result of which our management expenses, on a proportionate basis, again declined. This should further increase our sense of obligation to the society's staff.

Although last year's figures represented new records in the society's history, I desire to say with renewed emphasis that the setting up of new records is not our major aim. We seek to extend our service wherever we may legitimately do so and always provided the canons of prudent management are observed. It does not follow, however, that progress will continue indefinitely on the lines of the past few years. The history of building societies suggests that after a period of rapid growth, there quite often follows a pause for stocktaking and consolidation, and whenever the time comes for that consolidation, whether this year, next year or whenever it may be, your board may be depended upon to act as circumstances require. We should not and will not force progress, and while offering the best possible service, we shall have due regard to the basic principles which have guided building society development in the past and which have proved themselves through every variety of economic experience.

The building society's essential task is to marry caution and enterprise, and we believe the Abbey National represents a happy union in this sense. At all events, we shall do nothing to the one which is to the detriment of the other. The report was adopted.

CARRERAS, LIMITED

UNJUSTIFIABLE RATE OF TOBACCO DUTY

The fifty-first annual general meeting of Carreras, Limited, was held on February 24th in London.

Sir Edward Baron (chairman and managing director) in the course of his speech said: I regret that the results disclosed are not as good as anticipated. The profit and loss account shows that the income from investments is somewhat higher than a year ago and I hope that this item will show a progressive increase as time goes on. Our Canadian company continues to make excellent progress and we have just received an increased dividend from that source.

The balance of profit available for distribution, after providing for dividends at the same rate as last year, amounts to £114,423, and this has been added to the carry forward which now stands at £310,038. The fixed assets reserve now stands at over £1 million.

Group Profit and Loss Account: The carry forward in the accounts of the subsidiaries has risen by nearly £200,000, which is entirely attributable to the Canadian company, whose rapidly expanding trade necessitates the major proportion of its profit being ploughed back into the business. We look forward to the time when we shall have a larger income from this investment.

EVENTS OF THE YEAR

Our export trade, both direct and through our subsidiary and associated companies, has been well maintained, despite the difficulties and problems, due to local political and economic factors, which we are always encountering. We constantly endeavour to exploit new fields and enlarge our existing export business, and our various brands rank high in all the territories in which they are sold.

Dealing with the home trade, the position until the closing months of our financial year was that business continued to be quite good and our production expanded. However, the further rise in the cost of leaf used to maintain the high quality standard of our brands, which we insist on upholding, and the increased cost of many other items, including labour, inevitably resulted in a reduced profit margin.

The allocation of dollars on a revised basis in 1954 for the purchase of leaf tobacco created a new situation for the industry. The effect of this was an intensification of competition. Within the past month the principal manufacturers have informed the distributors that all restrictions on the supplies of cigarettes have been removed, which has thrown the distributive side of the trade into a state of uncertainty.

ONEROUS TOBACCO DUTY

A feature that has to be taken into account is the imminence of the next Budget. Representations have been made from time to time to the Government by all sections of the trade for a reduction in the present unjustifiable rate of tobacco duty. I can only repeat, and in the strongest possible terms, that I regard it as essential both for the future of the trade as a reasonably prosperous industry, giving full employment, and for the continued maintenance of the revenue that the tobacco duty should be reduced by a substantial amount.

The whole crux of the problem lies in our position in the home trade. If, after the Budget, our sales show the upward trend

LEEK & MOORLANDS BUILDING SOCIETY

A RECORD YEAR

The ninety-eighth annual general meeting of Leek & Moorlands Building Society was held on February 28th at Leek, Staffs.

Sir Ernest Johnson, JP (the president), in the course of his speech, said: The past year has produced record results. The total assets of the society now exceed £29 million, an increase in the year of £3,339,000.

During 1954 striking progress was made in nearly all sections of our economic life. Economically the country is in a satisfactory position, although of late there has been, and still is, an inflationary tendency.

The basis of any sound economy can be expressed in one word—"thrift." By saving regularly not only are we helping ourselves by creating a "nest egg" for the future, but we are playing a vital part in the economic life of this country. By increasing personal savings we would assist also in increasing the chances of tax remissions in the next Budget. I feel that one of the great deterrents to any tax concessions is the fact that by conceding them the result would be to increase the purchasing power of the taxpayers. At a time when the need is for restraint in personal spending and an increase in the volume of our exports such a course would be imprudent.

The introduction of the tripartite guarantee, whereby the Government, the local authorities and the building societies agreed jointly to guarantee excess advances, has been welcomed throughout the country.

CHAIRMAN'S ADDRESS

In moving the adoption of the report and accounts, Councillor Gilbert Tatton, the chairman, said: You will observe that the amount due to shareholders has increased by £2,800,000. This is the highest ever. Depositors' balances have also increased by over £400,000 and the two accounts together record a total increase of £3,230,000.

We have endeavoured to preserve a fair balance between borrower and lender, and the rate of interest allowed to shareholders during the year was 2½ per cent and to depositors 2 per cent. Income tax on the interest has been paid by the society.

Turning now to the mortgages account, the sum advanced during the year of £5,541,000 is a record in the history of the society.

A good deal has been made in the press lately of societies offering thirty and thirty-five year repayment terms. When it is realised that the public are being told that the monthly payments are less, it is often overlooked that although they may be less they are for a much longer time, and the net result over-all is a tremendously added burden of interest charges. I believe it to be in the best interests of the nation and of the individual to repay the mortgage in as short a term as possible.

DEPUTY-CHAIRMAN'S REMARKS

Seconding the motion, the deputy-chairman, Mr F. Leslie Davenport, JP, said: I really cannot understand why some further concession cannot be made in the way of stamp duties on house purchase transactions.

Surely if the thrifty individual provides a home for himself at no cost to the nation, and thereby saves the local councils from having to provide one for him with the subsidy attaching thereto, then in equity such individual is entitled to a remission of stamp duties at the very least.

The report and accounts were adopted.

which our efforts and the quality and reputation of our brands should deserve, we shall naturally achieve some measure of recovery, although as I see the general situation at the moment I cannot be optimistic about the final results for the present year.

In the meantime, however, you can rely upon us to go on maintaining and improving our business by every means in our power, bearing in mind that our goodwill has always been high and that we have on the market in their respective price categories tobaccos and cigarettes which are fully equal to anything marketed by our competitors.

The report was adopted.

GOLD COAST MAIN REEF

The twenty-first annual general meeting of Gold Coast Main Reef, Limited, was held on February 24th in London.

Major General W. W. Richards, CB, CBE, MC, chairman, presided, and the following are extracts from his circulated statement:

The increase in profits, which has been a feature of operations for the past few years, was maintained throughout the year ended June 30, 1954. At £83,919, the previous year's profit was exceeded by £2,297. Dividends, aggregating 7½ per cent, less tax, absorbed £45,967, and taxation £52,251. The balance of £16,878 has been carried forward.

Some features of interest in operations are:

(a) **Bondaye.**—The drive north from the Bondaye 16th Level towards the Ariston boundary was continued for another 1,340 ft. The object of this drive is to explore at that depth the downward extension of the ore shoots in the Ekotokroo Section. The East reef was exposed in the drive and assayed 18.90 dwt per ton over a width of 17.8 in.

(b) **Tuappim.**—The shaft in this section has been sunk to below the 14th Level, and at this level the good values encountered above have been found to continue and improve.

(c) **Ekotokroo.**—614 Drive North gave a payable length of reef for 205 ft, averaging 11.87 dwt per ton, over a width of 40.3 in. 714 Drives North and South gave a payable length of reef for 205 ft, averaging 10.52 dwt per ton, over a width of 23.5 in.

The ore reserves, at June 30, 1954 (including ore in pillars), were computed at 340,831 tons, averaging 8.62 dwt per ton over a width of 67.9 in.

The report and accounts were adopted.

WILLIAM BEARDMORE & COMPANY, LIMITED

ANNUAL GENERAL MEETING

The annual general meeting of William Beardmore & Company, Limited, was held on February 25, 1955, at the offices of the company in Glasgow, when Mr J. G. Girdwood, CBE, CA, chairman of the company, presided.

Resolutions adopting the report and accounts for the year ended October 2, 1954, and authorising the payment of the dividend on the ordinary stock were passed.

The retiring directors (Dr A. S. MacLellan, Sir William Wallace, Mr P. M. Thomas and Mr J. M. Mowat) were re-elected.

THE SOUTH WEST AFRICA COMPANY

The annual general meeting of The South West Africa Company Limited was held on February 24th in London, Mr J. E. W. Lomas (the chairman) presiding.

The following is an extract from his circulated statement:

The profit on the year's working before allowing for taxation is £180,938. The balance carried forward was £24,750, and we have also available £35,250, being total provision made in prior years for excess profits levy, which is not required. This makes a total of £88,470 after allowing for taxation on profit and profit distributions for

the year and the transfer of £44,000 to stock contingency reserve.

It is proposed to pay a dividend of 2s. 6d. per share, less income tax, which will absorb £36,562, leaving £51,908 to be carried forward, as against the £24,750 brought in.

In the circular letter to shareholders on June 25th last, reference was made to the question of the provision of further working capital. Since the issue of the circular letter in question more work of an exploratory nature has been carried out both on the lower levels of our Abenab West Mine and by means of diamond drilling on the tin/tungsten occurrences at our Brandberg West property. In each instance these have afforded encouraging results.

As we are not as yet able to estimate with

any degree of accuracy what our capital commitments are likely to be in respect of plant for dealing with the lead and zinc sulphide ore and for an increased production of tin/tungsten, we are proposing to hold over for the time being consideration of plans for raising fresh capital.

In seconding the motion for the adoption of the report and accounts, the managing director, Mr L. G. Ray, ARSM, MIMM, gave the meeting an up-to-date review of the company's present and projected mining operations in South West Africa generally, and particularly in relation to the lead/zinc sulphide ores at their Abenab West Mine—the most recent information about which was encouraging—and the tin/tungsten property at Brandberg West.

The report was adopted.

THE EASTERN BANK LIMITED

The Transfer Books and Register of Members will be Closed from March 22 to April 5, 1955, both days inclusive. By Order of the Board.
C. L. MANNING, Secretary.
2 and 3 Crosby Square, London, E.C.3.

NEW COLLEGE, OXFORD

The present Bursar will shortly retire and the College is proceeding to the election of his successor. It is anticipated that the appointment will be part-time. The closing date for applications is June 1, 1955. Further particulars may be obtained from Dr G. R. Y. Radcliffe, New College, Oxford.

A YOUNG Industrial Consultant (33) in the £2,500 bracket is seeking a change. He is at present serving an international company in a senior capacity in under-developed regions of the Middle East, and many functions of industrial consultancy, he is able to present corroborated results and impeccable testimonials. Scotland calls for English Goods

THE DEMAND for consumer goods in Scotland has kept pace with the steady rise in Scottish prosperity. In the last five years over 500 new factories have been built. In 1953 a record number of new houses was built—39,548. Production, employment and wages are up. And sales drives, backed by advertising in the Daily Record, are earning quick returns.

Key to Scottish market

Many English producers are missing sales in Scotland owing to lack of intensive effort. National advertisers need on-the-spot support in Scotland. The fact that 1,370,000 Scottish adults never read an English national morning newspaper proves this conclusively. (This figure is drawn from the I.I.P.A. readership survey.) The Daily Record is the key to the rich Scottish market. With 900,000 readers every day, the Daily Record is the largest circulating, completely Scottish national morning newspaper.

You reach an assured and profitable market when you advertise regularly in the...

The Big Six

The well-dressed man spends time as well as money on his clothes. For him, time spent in looking through the six John G. Hardy speciality cloths is a pleasure—as well as a sartorial duty. He wants to compare the rugged pure wool tweed of 'Hardithorn' and 'Hardilaine' with the silky luxury of 'Sheltie'. He wants also to feel for himself the resilient strength and toughness of the famous 'Alsport'. Perhaps he'll decide finally on the popular new 'Hardiwear' worsted, but almost certainly he'll have a second look at the Irish Homespun. Ask to see these fine cloths (they're known as the John G. Hardy 'Big Six') at our showrooms or on extra-large bunches at your own tailors.

A clean soft dry towel for every pair of hands

How does the Towelmaster work?
A pull. Here's a length of laundry-fresh towel, enough and to spare for a really good dry. And as you pull, the used portion automatically winds into a separate compartment of the gleaming white Towelmaster cabinet. Nothing more efficient. Nothing more hygienic.

How much does the Towelmaster cost?
5/- per roll of towelling. Minimum usage only one roll per cabinet per week. Installation is free. Maintenance is free (two or more cabinets). No replacement charges. In fact there are no other charges whatsoever.

How much is the Towelmaster worth?
Those few shillings give 180 pairs of hands an honest-to-goodness dry. Benefit staff and visitors alike. Give you 45 yards of goodwill. And what an infinitesimal price to pay for a clean bill of health!

What are your particular needs?
We'll be glad to discuss them—without obligation.

ADVANCE

"BROOMWADE" is best, Master Bonniface!

There's *another* way of compressing air, Master Bonniface; the "BROOMWADE" way. "BROOMWADE" Air Compressors operate pneumatic tools to drill, pump, rivet, grind, ram, fettle, bore, hoist, spray, chip, scrub, polish, caulk, shear, tamp . . . (Now we're as much out of breath as you are, Master Bonniface.)

"BROOMWADE" Pneumatic Equipment is built to meet *your* requirements.

"BROOMWADE" offers you:—

- Expert technical advice on all your compressed air problems.
- Complete world-wide after-sales service by works trained personnel.
- Low initial cost—early delivery.

"BROOMWADE"

Air Compressors and Pneumatic Tools are used in most Industries

AT LAST - THE TRUTH ABOUT

WINGATE

by Leonard Mosley

"His friend informed him that, so far as anyone in Cairo knew, Wingate had fallen in his hotel and injured himself."

"Nonsense. It is not true. I took a knife and cut my throat."

★ ★ ★

"No lights except from the fires started when petrol caught alight, or the flare of acetylene lamps as the surgeons started to work cutting, sewing, and amputating . . . no sound except the splinter of wood, the puny sounds of men crying for help, and the steady kwark-kwark-kwark of the watching bullfrogs."

★ ★ ★

"They were a remarkable sextet. One was a millionaire sheep farmer whose legs were so bowed from a lifetime on horseback that he could

not walk, and was always given first priority when mounts were scarce."

★ ★ ★

"Eventually Haile Selassie said: 'You go first, Colonel Wingate. And let us hope my people recognise which one of us is their Emperor.'"

★ ★ ★

"At other times he stayed in Ein Harod, reading the Bible, singing hymns, learning Hebrew, scratching his naked body. When he did put on his uniform he was so untidy that the British soldiers would look at him in stupefaction. But he never lost a battle."

★ ★ ★

"He drove animals until they dropped; and then, as in Ethiopia, built fires under their bellies in an effort to make them get up, or, as in Burma, cut them up and ate them."

IN TEXTILES

The WHOLESALE helps the RETAILER

THE infinite variety of goods in the shops that sell Textiles* is made possible by the work of the Wholesaler. Through his warehouse and travellers, the Wholesaler offers the Retailer, for quick delivery, the pick of the products of many factories, not only in this country, but abroad.

This centralized service saves the Retailer time and money. It eliminates the need to visit scores of manufacturers. It simplifies his book-keeping. What is more, the Wholesaler gives the Retailer helpful credit.

The Retailer who buys from the Wholesaler is pursuing a sound economic policy.

(*Clothing, hosiery, drapery, millinery, footwear, soft furnishings, floor coverings and haberdashery).

This is the **THIRD** of a series of four announcements describing how the Textile Wholesaler helps the Manufacturer, the Retailer and the Nation.

A Poem in Pigskin

At Bury in Lancashire a small band of craftsmen is expressing an age-old tradition . . . in beautifully stitched and hand-finished briefcases which combine the capaciousness of a conjurer's hat with a handsome 'note-case' slinness.

This particular poem in pigskin has an inside story which is common currency among travellers in five continents . . . a 17" x 11½" briefcase* with two interior foolscap compartments and zip-sealed section for overnight things. Capacious exterior zip pocket for newspapers, books, etc. English lever lock and fittings of solid brass. All leather handle.

In golden tan or Autumn tan pigskin at 12 guineas; golden tan, brown or black smooth polished hide or natural coach hide at 9 guineas. (*17" x 14" models, 1 guinea extra.) Matching zip folio cases size 16" x 10½" available separately at £4.10.0d., £2.15.0d., and £3.0.0d. respectively. Post free and tax free in U.K.

*Special vouchers to any desired value can be sent direct to any address on behalf of customers wishing to make gifts of Unicorn products.

(U.S.A. orders and enquiries: Sterling International, 225 Kearny Street, San Francisco, Cal.).

Complete satisfaction guaranteed or purchase price refunded immediately. Obtainable at the Unicorn Showroom, 39, Burlington Arcade, London, W.1. Telephone Hyde Park 8939, or by post from our works:

To make the office a better place to work in

Efficient management depends to a large extent upon knowing in detail what is going on in a business. A problem frequently posed in the office is how best to concentrate and present up-to-the-minute facts. Over the course of years, Roneo have been able to provide many answers to this question — and one of the simplest and best is the Roneo Visual Chart, which can be made to present, at a glance, the facts that *you* know *you* need.

FROM PAKISTAN

A New Airline...

KARACHI VIA CAIRO
UNDER 16* HRS

— Fastest Time Ever! —

Business men! Here's a new, faster, more luxurious air service to the East—at no extra cost. By applying the latest advances in airline servicing and management technique to the most reliable commercial aircraft in the world, new Pakistan International Airlines bring to East-West air travel a trans-Atlantic standard of luxury aloft. Every Friday P.I.A.'s specially fitted Super-Constellations fly *above the weather* from London to Karachi via Cairo in just 15:50 hours flying time*—substantially less time than ever before. The return flight, leaving Karachi on Tuesday, takes only 17:50 hours in the air—still the fastest West. Moreover, P.I.A.'s domestic network serves both West and East Pakistan, India and Burma; its booking facilities cover all points East. P.I.A. flies faster—you fly more comfortably. For full details see your local Travel Agent.

The Fall-Out

THERE is a grim humour in the thought that this week's explosion in the Labour party nominally arose from an entirely bogus argument about the exact circumstances and the precise provocation that, in Mr Attlee's view, would justify the dropping of a hydrogen bomb. Mr Bevan now has the answer to his rhetorical question of last week: there are occasions when even the most peaceable of Labour leaders will swing over from unsuccessful deterrence to possibly suicidal assault. But neither he nor anybody else will find it easy to analyse just what it was that set off the big bang, or what damage is yet to be done by the "fall-out."

What on earth made the Shadow Cabinet do it? They cannot have acted purely out of pique, although indignation against Mr Bevan is widespread and very understandable; professional politicians never wholly surrender calculation to bad temper. Nor, if there is a calculation, does it seem likely to be simply one of improving their chances in the election by throwing overboard an electoral Jonah. Mr Bevan is a liability, true enough—there must be at least a million potential Labour votes to whom he is a bogeyman. But two facts tell against this interpretation. First, if the Labour leaders were bent on reassuring the floating voter, they would hardly take a public step towards Bevanism at the same time as they expel Mr Bevan—not only, as a cruel Tory has said, throwing him out into the snow but stealing his trousers as well. Yet that is exactly what Mr Attlee has done in putting down a motion of censure calling for immediate three-power talks—which, as Mr Attlee must know even if his left-wingers do not, is as irresponsible as it is impracticable.

Secondly, the time-table is all against the theory of an electoral calculation. For the expulsion will have to be fought through the Parliamentary Party and the National Executive and confirmed by the next Party Conference, which is not due to meet until the autumn.* The Shadow Cabinet have started a process—and must have known they were starting a process—which will keep the party in a turmoil of acrimony for six months. Unless Mr Attlee had a written promise in his pocket from Sir Winston Churchill that there will be no dissolution this year, he must have had some object in mind other than victory at the polls.

The only way in which sense can be made out of the Shadow Cabinet's decision is therefore to assume that it is based on intelligent despair rather than intelligent optimism. The Shadow Cabinet must be acting in the belief that it cannot win the election and be thinking of what will happen after defeat—just as Mr Bevan has been doing (it now seems obvious) for some time past. Twice within the last year—immediately after the 1954 Budget and immediately after the recent increase in Bank rate to 4½ per cent—there has been a moment when Labour politicians thought they had reason to believe that the tide of political fortune might be about to turn in their favour. On each occasion Mr Bevan has moved at once to quench the optimism. On

the first occasion by his intervention about Seato and now by his vociferous abstention about the hydrogen bomb, he has hurled a deliberate and disruptive challenge at the party's leader in the House. On neither occasion has the substance (as distinct from the very rude manner) of his disagreement with Mr Attlee been at all clear. The conviction may therefore have taken root in the Shadow Cabinet that Mr Bevan does not want Labour to win the next election; after all, on any intelligent appraisal of his situation as the heir-not-yet-presumptive, another five years of Opposition would serve his personal prospects and policies best.

This, stripped of all complications of personal rancour (and those complications exist), is the most likely background to the decision to seek Mr Bevan's expulsion from the party. Mr Attlee may have decided that, with Mr Bevan sowing havoc whenever havoc most hurts, another five years of Opposition are likely to be Labour's lot in any event. But he has seen an opportunity of making Mr Bevan responsible for the coming defeat. When the election has been lost and the inevitable inquest is held, Mr Attlee intends to be the coroner, and the verdict will not be against "a person unknown." On these premises—and, it would seem, on these premises alone—the Shadow Cabinet has come to an understandable decision.

But is it the right decision? On the very narrow front on which Mr Attlee seems to have decided to fight—a clash over personalities and not over principles, a battle for the Labour party's body and not for its soul—it very well may be. Mr Bevan's prospects of succeeding to eventual leadership of the Labour party must have been dimmed by the Shadow Cabinet's determination to give him a bad name, even more than by its almost incidental determination to hang him. If Mr Attlee can keep his footing through the guerilla war that will rage across the left in the next few weeks and months, Mr Bevan may be destined to go down in Labour mythology as the man who lost the party the election of 1955 or 1956. None of the previous rebels from any party who have been successfully resurrected to power in this century, including Sir Winston Churchill and Mr Bevan himself, have had to carry this heavy cross of blame. A year hence it may seem quite logical to write off Mr Bevan as the sort of man who will finish his political career—thanks to the magnanimity of future Prime Minister Gaitskell—on the leftist benches in the House of Lords.

But it will be very much more surprising if it will by then be equally logical to write off Bevanism as an emotion. About one-third of the present Parliamentary Labour Party, and a much larger proportion of party workers in the constituencies, are committed to that emotion; Mr Attlee himself panders to it every time he strikes at Mr Bevan. Some of the dissidents may follow their leader into the wilderness; others will almost certainly remain within the party in the hope of

THE ECONOMIST, MARCH 12, 1955

taking over the role of leader of the left. Indeed, there may be a growing proportion of Labour MPs for the left wingers to lead. Just as the aura of irresponsibility that has so long been attached to Mr Bevan's name has frightened many voters of the centre from siding with the Labour party in the country, so it has frightened many Labour MPs with leftish instincts—such as Mr John Strachey—from siding with Bevanite policies in the party. If Mr Attlee succeeds in his motion for expulsion, that barrier to irresponsibility may be removed. It has been very difficult in these last few years to prevent Labour policy from being perverted by Leftish irresponsibility even when, by being organised in a "group," it could be branded as rebellion. But with Lucifer out of the way, dealing in brimstone may become almost respectable.

★

Moreover, Mr Attlee's own position must be weakened by his sudden resort to the cane. It is just conceivable that the party conference may refuse to follow him. In that event he would no doubt be given the opportunity to compromise; but, after this week's plunge, he would look an impossibly bedraggled figure crawling back to shore, with the "keep calm" group's comforting arm around him. And if he wins (as is much more likely) he will leave a great deal of resentment behind, even among those who vote to sustain him. Nobody can be sure which way, within the party, the fall-out of this explosion will go. The only thing reasonably certain is that it will look like the shadow of a big cigar.

The pity is that in all this acrimony there is so little thought for principle. If Mr Bevan's various quarrels with the leadership of the party have been on matters of principle he has never succeeded in explaining what they are; they have always sounded like the merest quibbles. Nor do the leaders object to Mr Bevan's policies nearly as much as they do to Mr Bevan. Even now it cannot be seriously contended that anything he said last week merited capital punishment. The case against him lies in the single accusation that he puts his personal future above the party's.

"There is tears for his love; joy for his fortune; honour for his valour; and death for his ambition." It is a cry that has swayed an excited meeting of moody plebeians for a very short period once before. But it is not a cry that can easily establish a new set of principles for a democratic and responsible left. As Labour enters its week of the long knives, many of its MPs will be looking over their shoulders in the fear—probably the exaggerated fear—that a snap election now could decide their party. Mr Attlee himself should be looking forward, past the present struggle over Mr Bevan as a man to the much more important—but, one hopes, more democratic—struggle over Bevanism as the Labour party's policy. Unfortunately, there has been little sign, in the past week, that he is eager to do so.

THE ECONOMIST, MARCH 12, 1955

Formosa Turning Point?

NEITHER Sir Anthony Eden's statement in the House of Commons on Tuesday nor Mr Dulles's television broadcast has done much to resolve the Formosa dispute. But both have helped to clarify the positions which London and Washington are gradually taking up as they grope for possible solutions, and there is probably less difference between them than has generally been supposed. That is to the good. Hitherto the Communists have scored not only from their own unity but also from western divisions. The difference, at all times, has been less between the governments than between the public opinions. It has been politically difficult for Mr Eisenhower to be moderate and sensible, and for Sir Anthony Eden to show any firmness at all. If American opinion seemed to be too ready for a shooting war in the Far East, British opinion has not been ready at all for a war of nerves.

Sir Anthony Eden, to his credit, saw what was happening, as several of his statements last autumn are on the record to prove. What can be brought against him is that, seeing as he did the danger of so wide a divergence, he has done so little to persuade the British public to see what there is to be said on the other side. There are still three propositions about the Chinese problem that would receive overwhelming assent from British opinion. The first is that the retention by the Chinese Nationalists of the offshore islands of Matsu and Quemoy is militarily nonsensical, politically wrong, and an obstruction to a peaceful settlement in the Far East. The second is that there can be no solution until the United States abandons the fiction that the Nationalist regime is the rightful government of all China. The third is that, while there may for a time—and perhaps for a long time—have to be "two Chinas," there is no strategic or other reason for ruling out the ultimate reunion of Formosa with the mainland, if that is the wish of the inhabitants of the island.

There are, of course, variations on the British theme. On the left, Mr Attlee's desire to get rid of Chiang Kai-shek has continued to dominate the Labour view; on the right, the Government's closest supporters know well that anything approaching a withdrawal of American support from Formosa is at present politically out of the question. But every one of the three main points in the British conception cuts clear across the apparent lines of American policy, as expounded by the Eisenhower administration under the watchful eye of American public opinion. As a result, it has become a recent feature of Anglo-American relations that the two governments are markedly less far apart than the bulk of their two publics.

At first sight the speeches this week of Sir Anthony Eden in the House of Commons and Mr Dulles over

American radio and television networks are strikingly different in tone. The key to both lies in the use of the word "force," though in different senses. The essence of Sir Anthony's remarks was that force should not be used; that the governments on both sides of the Formosa Straits should accept the principle of a cease-fire as a prelude to any discussion of a settlement; and that, unless they did so, the consequences would be grave. Mr Dulles, on the other hand, reminded the Communists that, if force were used in the Formosa Straits, the United States and its allies could bring much more of it to bear than the Communists; he hinted at the possible employment of tactical atomic weapons and by implication at the fact that they could be exploded against a Communist invasion force at sea, without necessarily raising the critical issue of an atomic attack on the mainland.

But Mr Dulles was careful not to commit himself on the defence of the offshore islands of Quemoy and Matsu, maintaining only that the American guarantees to Formosa and the Pescadores did not automatically confine American defence measures to those particular islands themselves. Besides thus claiming local freedom of action, he repeated what he had said at Bangkok, that for military purposes the Chinese Communist front should be regarded as a whole. "If," he said, "the Chinese Communists engaged in open-armed aggression, this would probably mean that they have decided on general war in Asia"; in that case, they would have to take into account the several defence treaties which the United States has signed in the West Pacific, and would be confronted "with tasks at the south, centre and north . . . which would strain their inadequate means of transportation."

★

The view in Washington is that American policy has hardened during the past couple of weeks, and if this were so it would connote a widening of the gap between the two allies. But when the current statements of British and American official policy, including President Eisenhower's on Wednesday, are boiled down to their essentials, only one fundamental divergence emerges and even that is by no means certain. While Washington is still careful neither to confirm nor to deny that American forces would be used to help defend Matsu or Quemoy, London is categorical in its view that no peaceful settlement is possible that does not envisage an evacuation of the Nationalist forces from the coastal islands; indeed for the Government to say less would be to diverge too far from the attitude of the country as a whole.

So long, however, as any differences of approach

remain between London and Washington, the hope will be that nothing will happen—neither a conference nor an outbreak of fighting—to compel hard and fast decisions. Fortunately, as Sir Anthony Eden emphasised, while there has been too little progress to warrant attempting to hold a conference at this stage, there has equally been a modest slackening of tension on the spot. It is already something gained that the Communists have not so far tried to attack Matsu or Quemoy, and that the Nationalists have been persuaded by the Americans to abandon their raids against the mainland and to evacuate the Tachens.

Seen in this light, there is now a more encouraging undertone of co-ordination between British and American day-to-day pronouncements than there has been in the past. Leaving aside the specific question of the offshore islands, both regard a cease-fire as the essential preliminary to any further negotiation. And it is possible to regard the latest Eden and Dulles statements as complementary to one another. On the one hand, Sir Anthony was re-emphasising the British official view that there can be no sudden or complete solution to the Formosa problem, while at the same time holding out an olive branch to the Communists if they care to take it. On the other, Mr Dulles was warning Peking of the dangers of war, while also emphasising that neither the Americans nor the Nationalists would start it. In Delhi, Sir Anthony Eden found Mr Nehru much more willing than might have been expected to try to use his good offices with the Chinese, if both sides would give some prior indication of their willingness to renounce the use of force. In Taipei, where Mr Dulles was flanked by American service advisers during his recent discussions with Marshal Chiang Kai-shek and Dr Yeh, the Nationalist Foreign Minister, there were many hints of a gradual American reappraisal. The Nationalists were in fact considerably worried by the evidence that American thoughts were running in the direction of a possible compromise, which would involve the evacuation of Quemoy and Matsu and acknowledgment of the existence of two Chinas in return for a cease-fire and stabilisation of the situation in the Far East.

Against this background, it is certain that time will be required before even as provisional a settlement can be achieved over Formosa as those that were reached in Korea or Indo-China. Admittedly time could provoke impatience as readily as the intention of reaching agreement by peaceful means. But some pressure is always needed before the essential realities of a situation will be accepted, and if the present period of acute tension can be passed it may prove in retrospect to have been a turning point.

That it should do so will depend, however, on every party involved facing certain facts that they regard as disagreeable. British public opinion will have to be brought to accept the absolute necessity of understanding and in the last resort supporting the American point of view and the appalling consequences that would

follow if, in the last resort, America were not given the support that it has a right to expect from an ally. The Indians, as the spokesmen for free Asia, will have to admit and act on the knowledge that no settlement can be engineered to which the Chinese Nationalists are not a party. The Nationalists themselves will have to become reconciled to the fact that they will never get back to the mainland and that the offshore islands are therefore a useless millstone round their own necks. The American people, as well as their government, will have to admit the reality of two Chinas rather than one, with the ultimate corollary that the Peking regime is in due course admitted to the United Nations. And, above all, the Chinese Communists will have to acknowledge that they cannot capture Formosa without a general war. At one time these were all tall orders. But it is some measure of the encouragement that may be derived from the events of the past month, that nearly all seem less remote than they were.

Death of the Tsar

The death of Nicholas in this crisis of affairs is beyond doubt an event of the greatest moment. But it is of consequence that we should not exaggerate the influence it is likely to exert on the prospects of peace or war, nor mistake the direction and nature of that influence. Our great enemy is dead; but our cause is not therefore won; nor is it at all less important that we should win it. . . . The truth is . . . that the European, enlightened, or German party in Russia . . . do not desire to surrender the original object of the war. They desire peace because they see that "the pear is not ripe." They blamed Nicholas, not because they deemed him wrong, but because they deemed him premature. . . . The gradual absorption, the ultimate conquest, of the Ottoman dominions is the policy not of Nicholas only, but of all Russia—not of one man or one sovereign, but of the whole Empire. This is the permanent, unchanging universal purpose of the Muscovite nation. Now, is it with this PERMANENT policy we are at war, or is it not? Did we take up arms to say to Russia: "You shall not have Constantinople in 1855," or "You shall not have Constantinople ever?" If the former, there will be no difficulty in making peace, and no reason why we should not make peace at once; for Russia sees that she is baffled for the present, and is quite prepared *reculer pour mieux sauter*, and will probably consent to any terms that do not practically and obviously involve an abandonment of her grand, central, national idea. If the latter, we shall be able to come to terms with Alexander no easier than with Nicholas. . . . The whole matter will turn upon the interpretation which shall be given to "the cessation of Russian preponderance in the Black Sea." . . . The question lies in a nutshell. Can Russia consent to be incapacitated from carrying out her traditional and ingrained policy? . . . Can Great Britain terminate a contest, which has done little but unveil her weak points and her rusty weapons, by a treaty which shall only postpone to a future and probably less convenient period the unsettled controversy of today? With these reflections in our mind we have great doubts, even under the altered circumstances, whether Russia can yet accept the only terms which the Allies can offer.

The Economist

March 10, 1855

The Diamond Coast

A COMMISSION of inquiry has been appointed to investigate the recent riots in Freetown, the capital of the colony of Sierra Leone, and those events are now *sub judice*. But the background to the bloodshed in this quiet little tropical city, with its Victorian relics of the suppression of the slave trade, lies in the extraordinary situation that has developed in Sierra Leone's diamond industry. News of this has been reaching the world's press in snippets during the past year, and this week the problem was aired in Parliament; but the whole remarkable story has hardly yet been taken in. Diamonds have reproduced in this once-backward colony an African version of the Californian or West Australian gold rushes—with overtones of international crime and international politics. Sir Percy Sillitoe, formerly of MI5, has announced his plan to create an organisation for combating the illicit diamond traffic; and though he referred mainly to thefts from diamond mines, he was almost certainly thinking largely in terms of the rapid growth of an entirely illegal mining industry, with a selling organisation to match in Sierra Leone.

Twenty-five years ago, Sierra Leone, which consists of a small coastal area administered as a colony and a hinterland the size of Scotland administered as a protectorate, was a poor country subsisting mainly on exports of palm kernels and a little alluvial gold. With some difficulty the sluggish colonial government was galvanised into setting up a geological survey department, which was hurriedly axed with the onset of the depression; but in its few years of life it located enormous deposits of hematite and—in one of the remotest parts in the hinterland—diamondiferous areas. A Minerals Ordinance was introduced, and a monopoly of diamond mining was granted to the Sierra Leone Selection Trust, an offshoot of the Selection Trust group, which agreed to pay the colonial government a royalty and income tax together amounting to 45 per cent of net profits. The output of diamonds was not disclosed in the trade returns; and the only indication of the industry's contribution to Sierra Leone's welfare was a figure in the budget for mineral royalties and company income tax. Secretive though they have been, there has been no suggestion that either the government or the company have acted improperly. It was known that the diamond money was the largest contribution to the always indigent colonial Treasury.

No primary source, or pipe, of diamonds was ever located. The diamonds were, and are, found scattered in the gravel of the elaborate river system which carries the run-off from the mountains that divide the coastal area from the basin of the Niger. An area of 400 square miles round Yengema, in which diamonds had been proved, had to be more or less sealed up; and there the Selection Trust removed the overburden, washed the gravel, and carried the concentrate to a central plant that extracts the diamonds—winning at least 97 per cent of the mineral value of the earth treated, and getting probably 90 per cent of the stones present.

It was some time before the Africans realised the value of the stuff they dug. Thefts in the washeries were at first small. But this situation had begun to change even before the war. Some of the Lebanese traders began to add illicit diamond buying as a profitable, if risky, sideline to their business. It was impossible to

search workers with the same thoroughness as at Kimberley, for West African colonial policy is not *Baaskap*. But the real difficulty arose when the company had trained Africans so well that they started to go potholing for diamonds on their own account. The area was vast; a police and espionage network was created to counter the potholers; bitterness grew; tribal authority weakened; "strangers," men from other tribes who had ruined their land by overcropping or were fugitives from Chiefly justice, began to arrive.

The war, by raising the price of diamonds, by introducing more Western ways, and an influx of Western morality at the ports livened matters further. The Lebanese began to perfect their organisation of go-betweens who bought diamonds from the potholers; around their capacity to corrupt even the police, Mr Graham Greene constructed the plot of his book, *The Heart of the Matter*. Yet the illicit trade remained relatively small in terms even of Sierra Leone's diamond income.

But since the war, there have been new developments. The price of diamonds, both gems and industrial stones, has risen much further. Modern armaments require diamonds, and Russia has become a considerable buyer in the world market for illicit diamonds. It became convenient for the Lebanese of West Africa to set up their own supply-line to Beirut as a market for buyers from behind the Iron Curtain. Money began to

pour into Sierra Leone (though not into its Treasury), and corruption spread.

Meanwhile, the idea of a cash economy was also spreading fast under the territory's development plans; tribal discipline weakened further; population expanded and pressed on soil resources; a class of landless men, adventurous and undisciplined, grew. In 1951 a new constitution was introduced, giving partial self-government; and in 1954 the African ministry dismantled the efficient para-military police formation that had been built up in the protectorate (which, it should be recalled means the hinterland, as distinct from the colony), and handed law and order there over to the Freetown police. It is not too much to say that there is now almost no police in the remoter areas of the protectorate. And then, in 1953, Africans, potholing far and wide beyond the Selection Trust's proven area, began to find diamonds all down the Sewa-Bafi confluence of rivers.

★

It suddenly became clear that huge areas of Sierra Leone's complex river-system were diamondiferous. Thieving in the Selection Trust's own compound became totally unimportant compared with the snowballing output of a huge illegal private enterprise diamond washery. Today passengers on the cranky little railway can see the potholers at work as the train crosses the rivers. But the greater part of the industry is in secret places. The value of its output is believed to be well above that of the Selection Trust itself—perhaps £2 million a year. Between 10,000 and 30,000 "miners" are at work, sustained by an army of suppliers and an organisation for selling and smuggling the product abroad. The monopoly is smashed—probably beyond repair.

It does not follow that Sierra Leone is getting much good out of this access of wealth. For a diamond marketable legally for £100, the Lebanese buyer gets £90 on the black market; he pays perhaps £25 for it; of which go-betweens get fully £20, the "miner" perhaps £5. Nor is that all. For potholing ruins the deposits by picking the eyes out of them, so that winning the lower-value stones becomes uneconomic. African miners may get 50 per cent of the diamond value out of a pit driven into the gravel, but over an acre or so pitted illegally they win only 25 per cent; yet they so mix overburden and gravel that the cost of winning what remains rises (so the Selection Trust say) to uneconomic levels. An asset worth at least £1½ million a year to the territory for 25 years if mined in an orderly way (on the basis of proved reserves) is being ruined in a few years of wasteful production, to the ultimate impoverishment of a poor country and the enrichment of a few men who, in most cases, are not citizens of Sierra Leone or even of the Commonwealth.

Further, farmers are leaving their land to dig for this new cash crop; neither food nor exports are being produced on the scale planned. The price of rice is going up in the towns (at Yengama, for example, it is £8 10s. a bushel, far above the world price). Sierra Leone has even imported palm oil.

★

It is not going to be easy to find an answer. The African Ministers must take account of African opinion, which backs the potholers. Figures for the monopoly's operations came out after an African ministry took office. These showed that the average value of its diamond production in 1951-53 was £1,300,000 a year. It is a simple deduction from the company's tax payments that net profits are about £1,000,000 a year—a staggering contrast to the economics even of highly profitable iron ore production. Under the old agreement the Selection Trust paid £450,000 of such profits to the Treasury; under a new agreement of March, 1954, it will pay £600,000. In return for this payment of 60 per cent of net profits it received an assurance that illicit mining would be suppressed by police action; the administration would like this to happen. But it has not happened, as Mr Hopkinson admitted to the House of Commons this week; and now Mr Siaka Stevens, Minister of Mines and Commerce, is thinking of legalising the "private sector" on the Sewa River, in the way that has been done in the Gold Coast. African miners would be licensed but might have to sell to a central buying agency.

Who, however, in the present state of the Sierra Leone administration, in process of being Africanised, would operate and police any such scheme? The illicit buyer could still buy against the agency, and have the competitive advantage of not paying income tax. The destruction of a national asset would go on. The inefficiencies of Gold Coast African production are well known—but the Gold Coast's deposits are not nearly as valuable as those of Sierra Leone, where the proportion of big gem stones is far higher.

From all quarters of the world not-too-scrupulous operators are trying to buy the diamonds that are seeping through this breach in the defences of the world diamond organisation. The newly-opened Accra diamond market is certainly handling some of the traffic. It may not seriously threaten the world diamond price, since it is probably well under five per cent of annual supply; but it represents huge losses to the monopoly. And whether or not a private monopoly is an adequate means of realising Sierra Leone's diamond wealth—or the diamond wealth of any country—the long-term interests of its African peoples are being prejudiced. It would not be surprising if some of those responsible for policy were half hoping that the African finds will be quickly worked out, and that Sierra Leone will prove less diamondiferous than present indications suggest.

Belgium and the Wider Horizon

ALL too often, in recent public discussions of the Paris agreements on Western European Union, the points of view of the smaller countries involved, notably the Low Countries, have gone unnoticed. It has, in particular, been taken for granted that these countries—which ratified the now defunct European Defence Community before anyone else—would automatically favour the less rigid structure of Western European Union. It is true, of course, that Holland, Belgium and Luxembourg are overwhelmingly in favour of bringing Federal Germany into the Western European defence system; but they have their own views on the best method of achieving this end. It is important that these views should be understood and taken into account, if for no other reason than that the strategic position of these countries is vital to the West's defences. Belgium, specifically, lies athwart the main supply route to the British armies in Germany. The British base at Antwerp is the Tel-el-Kebir of the army on the Rhine. In addition, the concentration of heavy industry in Luxembourg and in the southern Belgian provinces is almost as tempting a plum for a potential aggressor from the East as the Ruhr, of which these areas are an appendage.

But the strategic factors, important though they are, are not the main reason why the viewpoint of the Benelux countries should be respected. As equal partners in Nato and in the proposed Western European Union they are entitled to have their voices heard. Moreover, everyone who regards the EDC, the coal-steel pool and Western Union merely as steps towards a larger objective—the ultimate integration of Western Europe—must now look to the Benelux group of countries as the standard-bearers of the "European" movement. It is worth while to consider the reasons for their particular zeal.

Why the flame burns so strongly in Holland was discussed in *The Economist* of December 18th. Similar factors and arguments underlie the attitudes of Belgium and Luxembourg. The Red Army lies uncomfortably close across the thinly garrisoned North German plain, and twelve German divisions in the western alliance could be a highly significant addition to the security of these small countries. Few Belgians have any illusions nowadays of being able to hold off an attacker by their own efforts. The belief that the Ardennes afforded a natural line of protection was finally exploded in December, 1944, by von Rundstedt's offensive, the tenth anniversary of which evoked considerable comment. But why are the Belgians and their Luxembourg neighbours, unlike the French, willing to overcome their apprehensions of a rearméd Germany—apprehensions which are deeply felt in the two countries? Their war-time experience of the Germans, the unprovoked attack on their neutrality, the humiliating and brutal occupation, are still vivid in their memories—as was shown by

the passions generated during the recent controversy with Spain over the activities of the former Nazi collaborator Degrelle.

Yet it is not hard to identify the real reasons for the contrast between the French attitude and that of Belgium and Luxembourg. One is the state of internal politics in the Low Countries. Belgium and Luxembourg have both enjoyed relatively stable government since the war; despite proportional representation and, in Belgium, the distractions of the "royal question," both have had the good fortune to be ruled either by single-party governments with strong majorities or by stable coalition governments. In Belgium, M. van Houtte's Christian-Social government had been in office for three years when the elections of last April were held. The swing then brought back into power the Socialist-Liberal coalition under M. van Acker, and restored M. Spaak, the champion of European integration, to the office of foreign minister. In Luxembourg government changes are phenomenally rare, and M. Bech, the distinguished elder statesman of European politics, has been foreign minister longer than most people can remember; he is now prime minister too. This continuity and stability of government have undoubtedly played a part in shaping a consistent attitude in Belgium and Luxembourg towards the German problem.

★

At least of equal importance is the economic factor. Belgium and Luxembourg have been joined since 1921 in a close economic union, and since 1945 both have by successive steps strengthened their economic links with the Netherlands in Benelux. But in spite of some remarkable progress, particularly in the last eighteen months, not even the most ardent supporters of the Benelux idea believe that it is a final answer to the economic problems of the Low Countries. They realise that their opportunities for further expansion and their true protection against the buffeting of adverse world trends can be found only in closer co-operation, or better integration, with larger units.

Though this goal is still far off, both Belgium and Luxembourg can look back on the past eight years with justifiable pride in their economic progress. Belgium wears its prosperity on its sleeve. Brussels is still the brassiest, most ostentatiously prosperous capital in Europe; and behind this facade there is much solid achievement. Industrial production in 1954 was 20 per cent higher than in 1950. Last year Belgium shared in the general expansion of production in Western Europe, though rather less conspicuously than its neighbours. Unemployment, a persistent problem, was higher in the earlier part of 1954 than at any time since the war, but fell sharply later in the year.

However, the comparative stagnation of new investment is a genuine problem. The Belgians have been tending to take out the fruits of their prosperity in increased consumption and higher living standards rather at the expense of modernising and re-equipping their industries. One result has been the steady shrinkage of Belgium's balance-of-payments surplus, until in 1953 it disappeared. There was some recovery in 1954, and with the aid of the valuable contribution of the Belgian Congo the deficit of the previous year was reduced to small proportions. With ample gold and exchange reserves behind it, the Belgian franc remains one of the soundest and most freely convertible currencies in Europe, and the government has seen no reason to turn its back on the liberal import policies which have been practised ever since the war. Parallel developments have taken place in Luxemburg, but there everything centres on the iron and steel industry, and the general stagnation which settled on all western European coal and steel producers in 1952-53 caused the Grand Duchy considerable difficulty.

The solution to these economic problems is twofold. It lies first in the expansion of markets, for the home demand is patently not big enough to sustain a considerable growth in the national income. For this reason both countries actively support such organisations as Gatt and the European Coal-Steel Community. Secondly, a solution depends upon the modernisation and re-equipment of industry and agriculture. The Belgian government has already taken steps to encourage

productive investment by means of subsidies, tax exemptions, and other incentives. Moreover, every incentive is offered to foreign investors to attract their capital both into the home country and into the Congo. The government is itself showing enterprise in tapping foreign capital markets. Recently a \$30 million bond issue was floated on Wall Street, the first issued there by a European government since the war. Simultaneously a loan of \$20 million was obtained from the World Bank. Both sums will be used for developing transport and waterways, notably by the construction of the huge new King Baudouin lock at Antwerp. In addition, as a practical outcome of the Benelux union, the Amsterdam capital market has been opened once again to the Belgian government and industry.

By such means Belgium and Luxemburg are trying to overcome their basic problems—smallness and comparative poverty in natural resources—by drawing on the financial resources of other countries and by modernising their industries and exporting the products, many of which are renowned for their high quality. At the same time Belgium is carrying out an extensive and costly development plan in the Congo which will pay useful long-term dividends. But a large question mark hangs over all these projects. What happens if world economic trends turn traitor? Here too, as the Belgians no less than the Dutch see it, the only safety lies in size. This is the basic economic reason behind their crusade for European integration; and it reinforces their inclination towards an effective European defence system.

Notes of the Week

An Execution is Arranged

IF Mr Bevan had not caught 'flu, he would now be out of the Parliamentary Labour Party. This is the simplest answer to those who believe that this expulsion cannot really be going to happen. Nothing could have saved Mr Bevan if the crucial party meeting had been held on Wednesday as originally planned; for when the news of the Shadow Cabinet's decision leaked out on Tuesday, Labour MPs were thrown into complete confusion. The "Keep Calm" group stampeded wildly, and it could not possibly have organised its usual compromise movement in time for a meeting on Wednesday morning.

The delay caused by Mr Bevan's illness gives the peace-makers a chance to get to work, but without much hope of

success. Mr Attlee himself is to move the proposal to withdraw the whip from Mr Bevan at next week's meeting of the Parliamentary Party; if the party rejects the motion, Mr Attlee and the whole Shadow Cabinet will resign. Wisely, Mr Attlee will base his case neither on technicalities about voting nor on differences about policy, but on the simple question of loyalty. This is a word that always sets the Labour geiger counter working overtime. The assembled MPs will almost certainly agree to deliver Mr Bevan's head.

The next stages will be more tricky. The Parliamentary Party's decision will be reported to the National Executive; and Mr Bevan's enemies on that body—they include the big trade union leaders—are already honing their axes, ready to lop him off the Transport House tree as well. An attempt will no doubt be made to prevent any vote in the Executive from taking place; but the probability is that this will not succeed, and that before the end of the month

Mr Bevan will have been voted out of the Labour Party as a whole. This expulsion will then have to be confirmed at the annual conference in October, and the summer will be made hideous by the cries of the pressure groups. The Bevanites will use all their influence in the constituency organisations and the Left Wing unions to try to turn the tables on Mr Attlee at the conference; and up to October at least—unless the leaders agree to a proposal to call a special party conference earlier—it seems clear that Labour will be a sitting target for a snap election.

Arthur's Seat

NOMINATIONS were closed last week for an office of the greatest national importance. Mr Arthur Deakin, who has been General Secretary of the Transport and General Workers' Union since 1946 and a dominant figure at Labour Party conferences for an only slightly shorter period, is to retire on November 11th. His power within the union has not rested solely upon his personality; as the national executive of the TGWU is a lay one, and as all its officials other than the general secretary are appointed instead of elected, that power is virtually enshrined in his union's constitution. His successor will not only inherit this constitution—which was originally tailored to fit Ernest

The Unions and Mr Bevan

MR BEVAN'S chances of avoiding expulsion from the Labour party have not been improved by the news that his final appeal court—the party conference—is being packed against him in advance. Mr Deakin has announced that the Transport and General Workers' Union is raising the number of members on which it is affiliated to the Labour party by another 165,000. Mr Tom Williamson is expected to follow suit and increase the National Union of General and Municipal Workers' affiliation by 250,000. This means that the two big general unions will together poll 415,000 more votes than they did at Scarborough.

Just how crucial are these extra votes can be seen by reference to the ballot for the treasurership last year, which gave a clear picture of Mr Bevan's personal following. He finished 2,300,000 votes behind Mr Gaitskell; but this defeat would have turned into a majority of 300,000 if he had won the 620,000 votes of the Amalgamated Engineering Union and the 685,000 of the miners. He was unlucky not to get the engineers, and will almost certainly do so this year; he has already, therefore, been concentrating on winning the decisive miners' votes. But now even if he were to get the miners' support,

which is admittedly unlikely, his 300,000 majority would be wiped out by the extra 415,000 from the general unions.

The fact that Mr Deakin and Mr Williamson can suddenly produce so many extra votes illustrates a peculiar feature of the financial relationship between the unions and the Labour party. In the average union all members who do not contract out from the political levy pay one shilling a year to the

THE BIG UNIONS' VOTES IN 1954

	Thousand Votes	
	Labour Party	TUC
Transport and General Workers	835	1,259
Engineers	620	810
Municipal and General Workers	400	790
Mineworkers	585	669
National Union of Railwaymen	327	378
Shopworkers	327	339
Electrical Trades Union	120	212
Woodworkers	123	196
Agricultural Workers	71	135

Note:—The Mineworkers affiliate more than their TUC membership, apparently by including their turnover of members during the year.

union's political fund. The union must then pay sixpence a year to Transport House for each member affiliated to the Labour party, but it does not have to affiliate its whole membership. It may receive 300,000 shillings, but only want to pass on 200,000 sixpences, keeping

Bevin—but also, as is explained in the inset below, an important influence over more than 1,250,000 votes at the Trades Union Congress and a round million votes at the annual conferences of the Labour Party.

The left-wing of the Labour party and the Communists have thus a common interest in trying to ensure that a general secretaryship of such importance does not fall into the hands of another right-wing leader. None of the six candidates who are to contest the election is a Communist, since the union's rules prescribe that no Communist can hold office. But there is at least one of the six who is said to be in favour of rescinding that rule, and so opening the gates to the infiltration that is the Communist party's declared aim. He is Mr Charles Brandon, secretary of the union's London region, and also chairman of the London Labour party. A mild man himself—and reputedly a Stracheyite in domestic politics—Mr Brandon repudiates Communist friendship; but he will probably get it none the less, as well as plenty of votes from his own region. Four of the other six candidates are likely to be also-rans. The real struggle therefore seems to be developing between Mr Brandon and Mr Jock Tiffin, who is widely regarded as Mr Deakin's man and who is as firmly on the side of moderation (except against Communism) as Mr Deakin himself. This election will come too late to have any effect on the present Bevanite crisis; but it will have a very important effect on the course of British trade unionism—and on the maintenance of the gains that both trade unionists and the country have inherited from Mr Bevin and Mr Deakin—during the years ahead.

the rest for its own political activities. As union practices vary, and as there is a certain coyness about revealing how many members "contract out," exact estimation of this stifled vote is difficult. But a comparison of the voting strengths of the main unions at last year's Labour party and TUC conferences suggests that the miners and the leftish shopworkers are fully affiliated; that the Electrical Trades Union, the engineers and perhaps the National Union of Railwaymen (all pro-Bevan) may have some votes in hand; and that the big general unions, even after affiliating another 415,000, will still have some sizeable reserves.

The morality of these manoeuvres may seem questionable—although it should be said that the main impetus behind the move for increased affiliations was financial, and that the way in which the direction of the union's block votes is determined is no less democratic than the way in which a few constituency activists can arrange to throw to the left thousands of inactive constituency members' votes. But the immediate implication is that the unions' votes seem destined to bar Mr Bevan's way, whether he is trying to move up the party ladder or to prevent himself being thrown off it.

The Saar as Stumbling-Block

THE Saar problem, as relentless as the Eumenides, has thrust itself forward again to bedevil the atmosphere on the eve of the final parliamentary debates on Western European Union in both France and Germany. Was this inevitable? The problem itself is genuine and all too familiar; but the heat now being generated is essentially artificial. Last October, after hard bargaining, M. Mendès-France and Dr Adenauer signed an agreement on the "Europeanising" of the territory which offered France as much as it could hope for, yet did not require Germany to abandon the Saar for all time. At the New Year the French Assembly approved these terms; and last month Dr Adenauer steered them through the *Bundestag*. If the Saar has now, at this late stage, again become a bone of bitter contention, it is not at the wish of either of the two governments. Both are beset by critics, not only of the opposition but also within their ruling coalitions, who see in the Saar dispute a perfect means of arousing nationalistic feeling.

The new chain reaction started when, in the *Bundestag* on February 25th, the harried Chancellor was driven to declare not only that the October agreement did not imply the permanent detachment of the Saar from Germany, but also that it would make obsolete the earlier assurances from Britain and the United States that they would support France's case for detachment. Yet the sparks did not fly at once. The *Quai d'Orsay* even added confirmation to Dr Adenauer's first statement by recalling that the October agreement provides for a further referendum in the Saar at the time of the final peace treaty. But the pressure mounted inexorably on both sides of the Rhine. A full week after the Chancellor had spoken, Herr Hoffmann and other ministers of the autonomous Saar government came to Paris, and after hearing their views, France's new foreign minister, M. Pinay, issued a flat contradiction of Dr Adenauer's reference to the British and American assurances. The chain reaction then accelerated; German representations in Paris reaffirming the statement in the *Bundestag* were countered by a still stronger declaration which proclaimed France's intention of writing the proposed Saar statute into the peace treaty.

Thus, by the beginning of this week, both governments had been forced into more rigid attitudes than either had sought; and Britain and the United States, too, were deeply embarrassed by the clamour that had arisen, particularly in Paris, for a precise restatement of their position. This demand took parliamentary shape on Monday, when M. Vendroux, General de Gaulle's brother-in-law, formally proposed that the French upper house should not debate the Paris agreements until the British and American attitudes had been officially clarified. It must be hoped that M. Faure will succeed in resisting this demand, much as he needs Gaullist support, for London and Washington cannot publicly redefine their positions—except in such cautious terms as Sir Anthony Eden used on Wednesday—without sharpening the controversy. Essentially this is a crisis of confidence, not a dispute over practical and immediate issues. In both France and Germany, ultra-nationalists and opponents of Western Union have deliberately focused on distant and hypothetical possibilities, diverting attention from the encouraging amount of agreement already reached

THE ECONOMIST, MARCH 12, 1955

about the Saar's immediate future. To tamp down, rather than thrash out, a sterile controversy over issues that cannot possibly be settled at any early date must be the best hope of preventing an eleventh-hour catastrophe for the whole project of Western Union.

Arab Leaguelet?

EGYPT has induced two other Arab states to join with it in announcing a new Arab military and economic plan. Jointly with the Syrians and the Saudis, it has this week issued a communiqué on "strengthening the Arab structure" by means of a joint military command to supervise training and war industries, a common Arab currency, a joint Arab development bank and an Arab economic council. If some concrete organisation emerges from these plans (all of which the Arab League has had on its agenda before now) the three countries will have Iraq to thank for shaking them out of years of lip service to praiseworthy aspirations.

The prospect of their fulfilment has hitherto been remote because of an unwillingness to pool funds as between states swimming in wealth from oil and their poor neighbours: now, an added handicap is the flimsiness of the foundations on which Egypt's shrunken league is built. One of them is mere pique with Iraq—a qualification for belonging to the new federation is to be public repudiation of the Turco-Iraqi pact; another is Egypt's own preference for ruling a clique, however small, rather than playing second fiddle in some larger group. Even the third article of faith, hostility to Israel, is flimsier than it might be, for the Egyptians have been basing their propaganda on the baseless tale that the Iraqis have acted as they have done because they intend to make a separate peace with Israel. Iraq has given not the slightest grounds for such an accusation.

With the Saudis, the success of these Egyptian arguments was obvious; Saudi Arabia traditionally supports any manoeuvre that lessens Iraq's shadow. With Syria, success was less of a foregone conclusion, but became surer after last month's change of government. Two of the three main parties in the present Syrian coalition—the National Party and the Socialist Ba'ath (Renaissance) party—are pro-Egyptian, and anti-western, respectively. But the majority whereby it holds office is not large, and many Syrians are averse to quarrelling with their two largest neighbours.

Lebanon and Jordan, although personally wooed for days by Major Salem, have yet to make up their minds about the case he put. But it would be a surprise to see either fall victim to his glib tongue.

Peers from the People

LABOUR has reacted boorishly to the Government's belated step in the direction of reforming the House of Lords. Lord Jowitt, after being mildly co-operative when the matter was last raised in January, this week indicated that after "soundings" in his party he felt that he must retreat again into the familiar Labour prejudice: he does not want the House to be made to look

THE ECONOMIST, MARCH 12, 1955

more democratic, for fear it might then become more active. Not only did he refuse to enter any talks, but he threatened at best criticism and at worst outright opposition. This was doubly disappointing, for as a gesture to Labour's doubts Lord Salisbury promised that legislation (which is now definitely to be put in hand) will deal only with composition, and not with the issue of powers on which Labour is so sensitive. Inevitably Lord Salisbury refused to say that the powers of the Lords would never be altered, for no Government can be expected to pledge itself to eternity.

Discussions will now take place between the Government and the Liberals. But with Labour standing aloof—quite apart from the time factor—there is unlikely to be much further activity in this Parliament. Nor can the topic easily be made into an election issue, for the ideas outlined by Lord Salisbury were too vague to be really controversial. Although insisting that the hereditary principle must retain some place in a reformed Lords, he pictured a House in which a limited number of hereditary peers—chosen perhaps by their fellows—would be joined by a number of life peers, "Lords of Parliament." How these life peers might be nominated Lord Salisbury did not suggest, nor did he commit himself about the introduction of lady peers. It still seems to be assumed, incidentally, that if Mr Smith becomes a Lord of Parliament, he should be called Lord Smith—although he can remain plain Mr Smith if he becomes a Lord of the Admiralty; it might be a help towards getting the right sort of people—especially from the left—if titles were not thrust upon any of these new members of the Upper House who do not want them.

Lord Salisbury was right to emphasise the importance of a fair proportion of younger peers and to accept the principle of peers being paid. But it was disheartening to find the peers following the dubious lead of the MPs and preferring the idea of a "subsistence allowance" to a straight salary. A reformed House of Lords will get away to a bad start if it adopts this evasive dodge.

London Pride—and Realities

AFTER a frustratingly long delay, during which successive Ministers waded through 7,000 objections, the London County Council plan has now received official blessing. The Minister of Housing has confirmed all the main features of the plan, which the LCC had set forth with unusual precision (hence the objections). But he has included a number of modifications, some trivial (such as his curious objection of modifications, some trivial (such as his curious objection of modifications, some trivial (such as his curious objection inspired by a commendable feeling for the city's splendour—notably his insistence that a worthier setting should be designed for St Paul's).

Mr Sandys's main amendments, however, show a certain ability to duck his own responsibilities while pursuing impeccable planning principles. He insists that the charm and character of Hampstead, Blackheath, and Dulwich should not be spoiled through more intensive building. He gently chides the LCC for not providing additional open spaces in the congested boroughs rather more quickly. His

largest adjustment is to cut down the area zoned for industry and commerce by 380 acres, on the perfectly sound argument that office and industrial building—the main cause of London's congestion—must be checked. Finally he hints that the LCC ought to spend rather more money on buying up old, vacated industrial sites—to prevent their reoccupation by incoming firms.

These are mostly desirable adjustments, but they expect too much of a local authority. The over-concentration of employment in London, from which all the LCC's headaches spring, is essentially a national problem. The Minister has slightly added to these headaches—about housing and open spaces, for instance—without promising effective relief. His adjustments cannot of themselves stop the possibility of an enormous increase in office employment, particularly in the City; and while they may slow up the relocation of badly sited firms, they will make it little easier for the LCC to prevent new industries from entering London or to pay for industrial dispersal. These are matters that only the Government can tackle, and Mr Sandys's excellent principles will make sense only if they are a prelude to such action. But are they?

Balkan Pact's Second Birthday

THE Balkan Alliance seems to be suffering from a slight malaise. This rather marred its second birthday, which has just been celebrated by a meeting of the Greek, Turkish and Yugoslav foreign ministers in Ankara, but it need not be regarded too tragically. The three countries were brought together by their strong mutual desire for protection against Soviet aggression. But having duly concerted plans to deal with this, they can hardly avoid the strains and stresses caused by such apples of discord as Cyprus, nor can they be expected to bring smoothly into line their differing outlooks on the international scene. Marshal Tito has recently returned from a trip to neutral India and Burma apparently more convinced than ever that blocs are wrong and independent "active co-existence" is right. Mr Menderes, on the other hand, has recently returned from a Middle Eastern tour designed to encourage the formation of a regional defence organisation that would have close links with the West. Thus the Turks (and the Greeks) continue to have no inhibitions about the military basis of the Balkan pact, while the Yugoslavs have turned somewhat coy about this and prefer to emphasise the economic and cultural aspects of the alliance.

But there is no reason to suppose that the foundations of the Balkan Alliance are being shaken by Yugoslav second thoughts; and in that case there is everything to be said for widening the basis of the alliance by closer economic collaboration and by setting up, as the three foreign ministers have just agreed to do, a tripartite consultative assembly. The Yugoslavs, however, will have to be careful that in their efforts to fit together all the pieces in the jigsaw of their foreign policy they do not destroy that basis of mutual trust and confidence without which any alliance is useless. It is encouraging to find that Marshal Tito seems to be conscious of this; in his speech to the Yugoslav National Assembly this week he was careful to draw attention to the military as well as the economic and cultural aspects of the Balkan Alliance.

Truth from Pontecorvo

PROFESSOR PONTECORVO'S brief encounter with the press was more revealing than it was meant to be. It had, of course, been assumed ever since his furtive departure from Harwell that he was serving the Soviet government, either voluntarily or as a result of blackmail or bribery. The professor tacitly confirmed this "slandrous speculation" at the exact moment that he sought to deny it. But he offered no explanation why he had been kept in hiding for over four years, or why he was suddenly produced like a rabbit out of a hat at this particular time; his audience was left to assume that such was the normal way of life for a Soviet scientist engaged on strictly peaceful research. His bland refusal to admit that Russia was developing any atomic weapons was downright ridiculous. So was his attempt to dodge the question, when asked whether his research might not ultimately serve warlike ends, by saying that the Russians had built the world's first atomic power station and that this "answered the question of direction."

Had the professor not read his *Pravda* that very morning? It had repeated Mr Molotov's recent boast that the Soviet Union had been "so successful in producing the hydrogen bomb that the United States has found itself lagging behind in some respects." Indeed, it is now a recurring theme in Communist propaganda for domestic consumption that the Soviet bloc leads the world both in nuclear and in conventional arms. What does that leave of the professor's argument about "direction"?

It is fairly obvious that his sudden *début* among the Moscow state puppets was timed to check the growth of mutual confidence on atomic matters between the United States and Britain, rather than in hope that his appeals would affect many scientists in the free world. The arguments he addressed to them held no water. Instead, the men who organised his appearance merely confirmed what was already generally believed: that Russia operates a lavish atomic energy programme that is not revealed in its budget, being in fact so secret that even to share in its less warlike aspects involves disappearing from the world: and that in Russia the wise scientist airs no doubts and asks his masters no questions. Professor Pontecorvo and his new comrades are unlikely to support the American nuclear scientists' proposal for an inquiry into the global effects of test explosions, for Marshal Bulganin has already rejected out of hand all idea of a general moratorium on tests. The Soviet scientist, as the professor portrays him, is a songless bird in a heavily gilded cage, accepting a country house, VIP treatment, and a secret £9,000 award in return for the surrender of his professional scruples and his independence of thought. It is a chilling self-portrait.

Realism in the ILO

IT would be a great pity if the mere presence of the Russians within the International Labour Organisation were to disrupt or paralyse the organisation. Fortunately, the ILO's governing body took steps last week to avoid this.

THE ECONOMIST, MARCH 12, 1955

It had before it a proposal for an inquiry into the possibility of amending the ILO's constitution so that workers' and employers' delegates who are not truly independent of their governments are excluded. The proposal was, of course, aimed at the Communist delegates, whose presence at recent ILO conferences masquerading as genuine representatives of workers and employers has aroused deep resentment. But trade unions that are not genuinely independent are not only to be found east of the iron curtain. The strict application of such an amendment would strike in some unexpected directions and could cause a major crisis in the organisation.

After lengthy discussions the governing body prudently decided to take no action on this proposal, but instead to call for an independent inquiry into the extent to which employers' and workers' organisations represented in the ILO are free from government domination and control. A hasty and ill-considered amendment of the ILO's constitution has thus been avoided. Moreover, the results of the inquiry are likely to be salutary if not altogether welcome in some quarters.

Action on another proposal, which was also primarily aimed at the Communist bloc, was postponed until May. The workers, supported by the employers, wanted a committee appointed to continue the work of the UN-ILO *ad hoc* committee on forced labour which produced an excellent and exhaustive report nearly two years ago. The government group, however, felt the proposal to be unwise, especially as machinery for dealing with forced labour practices does already exist. Its chief objection, however, was that an attempt to bring pressure through the committee on Communist governments to abolish forced labour would not only be wholly ineffective but might badly misfire. The Communists would simply ignore whatever the committee might do or say about their forced labour practices, while encouraging and engineering largely frivolous complaints against the "imperialist" colonial powers. Forced labour quite rightly arouses strong feelings; but it does no good, and may do positive harm, to be unrealistic about what can be done to stop it.

The Meaning of Treason

THE mood in which the House of Commons accepted Mr Philip Bell's motion to introduce a new Treason Bill was understandable; his Bill would make treasonable the giving of aid and comfort to the enemies of the United Nations when British forces are involved. But strong feelings do not necessarily make good law, and a private bill is hardly the right vehicle for changes of such fundamental importance. Mr Silverman's speech in opposition to the motion contained many false analogies, and seemed motivated by strong feelings over the rightness or wrongness of British intervention in Korea. But there are several respectable reasons for looking askance at this bill. The future of the United Nations is unknown and to make the assumption that it will constantly be facing enemies in the field with the forces of signatory nations is going too far. Equally, there is a very real difficulty about amending the law of treason to cover all cases in which, if British troops are in action, it could be a capital offence to give aid or com-

PROGRESS IN ELECTRONICS

Despite its innumerable applications, the magnet is still popularly associated with its use as a navigational aid. This is perhaps not surprising when one considers that the earliest experiments in magnetism were connected with the compass and its use in navigation.

It is said that the Chinese were using a form of lodestone compass in B.C. 2637, but the experimental study of magnetic direction finding devices really began in A.D. 1000 and reached something of a milestone in the 16th century with the work of Dr. Gilbert, who was physician to Queen Elizabeth.

It is only within the last twenty years, however, that revolutionary advances have been made in navigational aids. Radar was, of course, the most important of these advances and it owed its successful development to the invention of an electronic tube known as a magnetron, and this device, in turn, depended for its efficiency upon the "Ticonal" permanent magnet—an alloy having great field strength, stability and uniformity.

Mullard's work in the field of magnetic materials has been particularly outstanding. In addition to "Ticonal" permanent magnets, two other materials now in quantity production are Magnadur, a non-metallic permanent magnet, and Ferroxcube, a non-metallic H.F. core material. These materials are contributing to important developments in other electronic applications such as television receivers and line communications equipment.

Progress in magnetic materials continues, and through this the future may well see developments of equal significance to those which have gone before.

it has not made any of the experiments in adapting existing warships for missile delivery that the American Navy has made. On these and many other points, Opposition speakers scored direct hits. The responsibility for the delay in starting missile production lies more with the previous Government than with the present one; but the present Government has not done well. On the design and delivery of naval aircraft the critics also had things very much their own way.

The possibility of reducing the period of national service was talked out in Parliament. Both sides agreed that a larger regular army was desirable, but as Mr Head incontrovertibly argued that large increases of pay would cost the country a great deal and—less convincingly—that they would not raise the Army's strength above its average figure over the last few years, the Army's future was left almost in exactly the equivocal position revealed in the White Paper. Mr Head will improve conditions, but everything else will cost too much—yet he produced no estimate of the comparative costs of alternative courses of action. It cannot be said that on this, as on the other questions, the debate elicited satisfying answers to vital questions. Like the White Paper itself, they were couched mainly in the future tense.

European Brown Study

WHEN the Economic Commission for Europe meets in Geneva next week for its annual session, it will have before it the reports of some eight committees, but, as usual, the taking-off point for its central debate will be the "Economic Survey of Europe" for the past year, prepared by its secretariat. In the survey of 1954 there is no undercurrent of the zealous conviction that made some of its predecessors more stimulating and controversial; but at least the authors have laid aside the mantle of gloom in which they have previously been wont to wrap themselves when examining the health of Western Europe. The stagnation which, in previous years, they saw wherever they looked appears in retrospect to have been rather a series of distinct but overlapping setbacks, following the Korea boom, first in textiles, then in engineering products, and somewhat later in coal and steel. The strong increases in production and trade that have characterised Western Europe since mid-1953 are described, perhaps rather grudgingly, as "the normal resumption of an upward trend after the recessionary tendencies in particular fields have worked themselves out."

When the scene shifts to Eastern Europe the whole tone of the survey switches, as is now customary, from one of economic analysis with no punches pulled to one of flat description with the really awkward questions left unasked. The authors can do little except recite national plans and piece together guesses about whether targets have been hit or not; and the frequent references to greater emphasis on consumption as a new motivating force in the Soviet sphere now strike strangely on the ear. But an illuminating picture is sketched of the radical change in Eastern Europe's trade pattern since the war. Today trade within the region accounts for four-fifths of the total, and the position of the Soviet Union is dominant, with China now emerging as its most important trading partner.

If the 1954 survey has any message to give, it lies in the emphasis which, as last year, is placed on problems of development, and particularly on the need for governmental action to reduce regional disparities within countries, with France as a specific example. Several dying misconceptions about the techniques involved are knocked on the head, and some sound points made as to the ingredients of a development programme. But the authors recognise that in this field there are few opportunities for international action. It must be for the member governments to decide how fruitful further ECE investigations of the subject can be.

Two Legs Good, Four Wheels Better

HERR GROTEWOHL, the prime minister of Eastern Germany, has bought at the Leipzig trade fair six ciné-cameras, at a total price of £1,000, and a "red, low-built British sports car." This is frivolous, bourgeois stuff. When Herr Grotewohl takes to the road (in corduroy cap and hound's-tooth sports jacket?) the reaction of the hard-pressed people of Eastern Germany must resemble that of the inhabitants of Animal Farm when they first saw the crates of beer being carried into the farmhouse for the pigs.

There have also been murmurings among French Communists at the revelation that their general secretary, M. Maurice Thorez, is living in a £28,000 villa, bought from party funds, next to the Aga Khan's property outside Cannes. Party headquarters quickly explained that this involves no personal privilege, but that "it was in obedience to a party decision that Comrade Thorez agreed to live in a southern villa." In the past there has been head-shaking among French comrades over the size and magnificence of their leaders' limousines, but the answer to that was that a democratic Renault or Citroën would not carry the necessary weight of armour plate. There is, however, an incongruous flavour about red, low-built sports cars and villas on the Côte d'Azur. A Marxist twist is being given to Veblen's theory of conspicuous consumption.

Equal Pay for Teachers

LAST week brought victory to the National Union of Teachers (two-thirds of whose members are women) after thirty years' struggle in the cause of equal pay. Until last year the local authorities' panel of the Burnham Committee had consistently rejected equal pay, not only in practice but in principle. But now that the Treasury has agreed to the gradual implementation of equal pay for women civil servants, the teachers were bound to be offered a broadly similar scheme.

If the Burnham Committee's constituent associations ratify the proposal and the Minister of Education sanctions it, equal pay for teachers will be introduced in instalments over a six-year period from May 1st this year to April, 1961. Its total cost when completed is estimated at about £17 million a year for the whole country, of which local authorities will have to find about 40 per cent. Together with higher salaries for advanced work, this is certain to have repercussions on fees in independent schools, most of which pay mistresses little if anything above the Burnham scale. It will presumably also affect fees in those girls' schools that get a direct grant from the Ministry—and that have hitherto been in a favoured position compared with boys' schools, since the direct grant is £28 5s. per pupil, whether for a boy or girl.

The announcement was not received with unqualified jubilation in the teaching profession. The National Union of Women Teachers is "highly indignant" that women teachers should have to wait another six years before the scheme is fully operative. Schoolmasters, on the other hand, apart from some in the National Union of Teachers, may be theoretical justice in their claim that the schools, long run mean that men will be paid less than they would otherwise have received. This is probably true; and there may be theoretical justice in their claim that the schools, like the universities and the armed forces, should pay occupational family allowances—preferably from central funds rather than from the rates, lest married men should find it more difficult to get jobs.

Copperbelt Cross Currents

TWO months ago it looked as if there might be a head-on clash between the European miners on the Northern Rhodesian copperbelt and the companies that were pressing them to agree to a measure of African advancement to skilled jobs. Rhodesian Selection Trust had given notice to terminate the agreement that enforces the industrial colour-bar. Then the African mineworkers struck *en masse*—not against the colour bar, but for an all-round increase of wages. The European mineworkers declared this object legitimate, and undertook not to do African jobs. A week or two later they changed their minds, and with their aid and that of non-union African labour the companies kept production going. The Europeans then voted, if narrowly, in favour of some scheme of African advancement, and the Selection

Trust withdrew its ultimatum. The African strikers kept good discipline, but finally, under the guidance of an English trade unionist, Mr Ronald Williams, gave way. The companies, with the advancement agreement almost in their pockets, and with law and order intact, thought to calm the whole situation by taking back the striking Africans, whom they had dismissed, on their old conditions.

Now, however, there is an upsurge of protest from the white mineworkers. The cry has gone up that the companies have handled the Africans with dangerous weakness, and there is a call for a new ballot on the subject of advancement—to reverse the earlier decision. If this went through, the situation would be restored to the deadlock of last December—when, convinced that if labour relations were to be safeguarded advancement must be pushed through, the Selection Trust gave notice to terminate the labour agreement, even breaking with Anglo-American to do so. It is, however, probable that the outcry among the white unionists comes from the section of them that has been opposed to advancement all along. It was their desire to see the African union smashed that led to white miners doing some African jobs.

It is to be hoped that the more liberal white mineworkers will stand firm, even though the discipline and solidarity of the Africans may have frightened them too. For the moral of the tangled story is that industrial relations are hardening fast on lines of black-white animosity. This would be the worst possible outcome; the very one that the companies are anxious to prevent. Only by creating a ladder of African advancement, putting meaning into professions of partnership, can it be prevented. But the copperbelt disputes have revealed an attitude on both sides that is far from propitious.

The Concentrated Press

THIS year will see the centenary of the repeal of the newspaper stamp duty, one of the most important events in British newspaper history. It made the penny daily possible and gave a tremendous fillip to newspaper demand. In a lecture to the Manchester Statistical Society this week Mr A. P. Wadsworth, editor of the *Manchester Guardian*, traced the emergence of the complex modern newspaper from the tightly crammed news-sheet of a century ago.

In Britain the choice of newspapers is comparatively limited—fewer dailies are published than, for instance, in Mexico—but they are read more widely than anywhere else in the world. Although the small size of the papers means that newsprint consumption per head of population is relatively small, the daily circulation of morning and evening papers (615 per 1,000 people in 1952) far exceeds that of any other country. The average circulation of each paper is as much as 254,000; in the United States it is less than one-tenth of that.

The accompanying chart shows the remarkable way in which a few national dailies in this country have captured the mass market. In 1800 no paper had a daily circulation of more than 5,000; in 1855 none had more than 50,000. Today the circulation of one—the *Daily Mirror*—is

approaching 5 million. Mr Wadsworth, at the end of his researches, finds that "on the whole it is not a picture." He deplores the passing of the day—

5 CIRCULATION whole-hearted millions of readers for his open-minded approach. The book stands out as an important contribution to the theory and technique of inflation. *Financial Times*. 30s. net

The Urban Leviathan

GREAT CITIES OF THE WORLD: *their Government, Politics and Planning*. Edited by W. A. Robson. Allen and Unwin. 693 pages. 63s.

THE idea behind this book is an excellent one. It is that the world's largest cities throw up problems, political and administrative, which cannot be subsumed under the conventional title of "local government." The relation of a capital city to its central Government has always posed some delicate issues, and the old dictum that "Paris is France" has its modern near-equivalents in many countries. But the distinctive modern problems of big city politics, services, and organisation are of recent origin—the product of a stupendous and rapid massing of populations in a few giant urban centres. The population of Greater London exceeds that of fourteen European countries, that of New York city alone (the metropolitan area is far larger) surpasses all but five of the 48 States, and in most advanced countries the principal city contains from 10 to 25 per cent of the national population. Fabulously quick growth has added one and a quarter millions to Los Angeles county in the last decade (the same increase as for all Australia), and has brought such Asian cities as Bombay and Calcutta well past the two million mark.

Professor Robson and his collaborators thus had a rich mine to explore. The book consists of a long introductory essay by the editor, followed by individual studies of twenty particular cities, nine of which are national capitals. Their selection has been partly governed by the problem of finding suitable contributors. The list includes nine European cities, three in the United States, two in Canada, two in Australasia, two in India, and two in South America; Berlin and Tokyo had unfortunately to be omitted because their government was distorted by the presence of occupying forces, and no author could be found to essay an African or Chinese city. The majority of the world's larger cities are covered, along with one very much smaller—Wellington, in New Zealand, whose inclusion can be justified because it provides a useful study of metropolitan growth in its infancy.

The editor has tried hard to persuade the contributors to follow a uniform approach, by asking each to describe the form of government, the politics, and the town planning (or lack of it) of his city. This arrangement is of great value

to the student of comparative public administration, although the treatment of politics and town planning in the various studies is very uneven. From the viewpoint of the more general reader, the interest of the studies varies widely. Those authors who dive straight into administrative and political machinery make heavy reading; whereas those who have attempted to relate their city's problems to its history, people, and general character have produced some fascinating studies—notably Professor Tugwell on New York, Sr Rios on Rio de Janeiro, and Mr Wildschut on Amsterdam. One major difficulty is to bring the problems of a big city to life within a framework of 40 or 50 pages, and it is no insult to the present book to suggest that it confirms the need for more full-length studies such as Mr Robson's own "Government and Misgovernment of London."

With one exception, all the studies dwell on the dismal condition of big city government. In some cities the main problem is political corruption and the inefficiency of the municipal service; in others it is functional inadequacies and the disorganisation of local government. The apparent exception is Moscow, of which Messrs Hookham and Roger Simon provide an account that manages to be both very informative and very naive. Otherwise the situation is summed up in the editor's conclusion that "The great city is struggling along with an out-of-date structure vainly trying to grapple with mounting difficulties."

In his general essay, Mr Robson puts particular emphasis upon the failure of big cities to expand their boundaries and the emergence of the "metropolitan area" or "conurbation" (the names used respectively by the United States and United Kingdom Census), with its bewildering number and variety of separate governmental units, as the real urban entity of today. For instance, New York City with its eight million inhabitants is much the largest local government unit in the world, yet it still covers only a small part of a rapidly expanding "metropolitan area" containing several hundred municipalities. All over the world there have been numerous attempts to set up a new form of metropolitan government, with a novel distribution of functions, with no success at all until the recent passage of the Metropolitan Toronto Scheme. It is a pity that the essay on that city does not set out more fully the causes and prospects of this interesting experiment.

One-Volume Lincoln

ABRAHAM LINCOLN: *the Prairie Years and the War Years*. By Carl Sandburg. Cape. 776 pages. 45s.

CARL SANDBURG's six-volume life of Lincoln, the first two volumes of which appeared in 1926, is the most moving and poetic of the many books on that enigmatic President. It is poetic, not in the sense of being ornate or romantic, but in its imagination, its understanding of the divided human heart, its vivid pictorial quality when dealing with Lincoln's youth on the frontier. Not only is Mr Sandburg an authentic poet; he also grew up in a small town in Illinois when the first-hand memory of Lincoln was as alive as is the memory of George V in England today. It is no wonder that his book has a rare quality; nevertheless, there were two drawbacks to the original six-volume version.

First, it was too long—especially the last four volumes which dealt with Washington and with the Civil War seen from the White House. Here the author's boyhood in Illinois was of no help, and his insight was less acute when dealing with diplomatic and military history than when dealing with the troubles and uncertainties of a young pioneer.

Second, the volumes were planned and for the most part written just before the recent flowering of Lincoln scholarship—before it was possible, working from secondary sources, to distinguish reliably between legend and fact. The long-withheld Lincoln papers have now at last been opened; a new edition of the works has made the earlier edition look shoddy; brilliant special studies have shown that many of the old fables were untenable. It has been a question, not so much of lighting up the canvas as of removing from it layer after layer of misleading colours which had been put there by worshipful amateurs. Mr Sandburg wrote just too soon to take advantage of this picture-cleansing.

Neither of these criticisms, however, applies to the new one-volume edition. The book has been cut from about twenty-five hundred pages to about seven hundred and fifty. The freshness and the special awareness of the poet remain; the detail which has been lost is better left to the monographs of professional scholars. And before preparing this new edition Mr Sandburg steeped himself in all the latest studies of Lincoln. If he still retains an affection for some of the more pleasing myths, he at least makes it clear that he knows the arguments which can be brought against them.

Ann Rutledge is an example. Little is known about her, but much has been imagined. In 1926 Carl Sandburg made Ann's untimely death a major tragedy of Lincoln's youth and the explanation of an almost Baudelarian morbidity. "The rain and the storm shan't beat on her grave," Lincoln is said to have cried on a bitter November night; "I

can't bear to think of her out there alone." And we are told that when he recovered from this loss "he was a changed man keeping to himself the gray mystery of the change." So far as we know this is all fantasy: the brain-child of the mythopoeic citizens of New Salem where Ann Rutledge lived became engaged to a man other than Lincoln, and died suddenly while her fiancé was absent. Yet Mr Sandburg, who clearly knows what the rude hand of research has done to the shadowy figure of Ann, cannot quite give her up. He retells the story in terms of "probably they formed some attachment"; "possibly they loved each other"; "there seemed to have been an understanding"; "no one later seemed to know." This is harmless and un-misleading, and in fact it adds to the very great charm of the book. No author has ever been more in love with his subject than Mr Sandburg. If a local rumour about Lincoln appeals to his imagination, he feels (perhaps rightly) that it must contain a grain of truth.

The most important short scholarly book on Lincoln, which includes all the new material, is by Benjamin Thomas and was published in 1952. Endearingly, in his bibliography, Carl Sandburg writes: "I told him [Thomas], 'If or when I get written or published a one-volume Lincoln, I hope and believe the two books will stand on the Lincoln shelf as good companions supplementing each other.'" This is precisely what they do: for the poetry, Sandburg; for the prose, Thomas; for the truth, both.

Ruler of Bulgaria

ALEXANDER VON BATTENBERG. By Egon Caesar Conte Corti, translated by E. M. Hodgson. Cassell. 330 pages. 30s.

THE history of the House of Battenberg is full of colour and incident. They came to the fore at a time when a country's ruler might be selected casually by representatives of the great powers during an evening's entertainment. They were uncommitted, cosmopolitan, personally attractive, and obvious candidates for a diplomatic marriage or a vacant and difficult throne. This is how Prince Alexander was sent to Bulgaria, a new state which emerged out of the Congress of Berlin in 1878. It was not an easy post, for in Bulgaria the interests of Russia, Austria and Turkey most directly conflicted. Alexander managed to stay for seven years, pulled this way and that in the criss-cross of Balkan politics, until he was removed by revolution.

It is a severely political theme, and the attempt in this book to work in some love interest as sugar coating is not successful in combination. Nor does the personality of Alexander come through properly in the round. He seems to have been an interesting character, with some oddities of personality, and to have been capable of arousing

great affection. Yet his views seem shallow and starchy. So often he was spineless, tactless and politically naive. His position inevitably made of him a lonely, misunderstood person. The setting is right for human tragedy, but he was not the man to make it tragic on the grand scale.

This impression may have arisen because the writer keeps too much on the surface of events, with too much oversimplification of motives, and too much concentration on the trivial, the incidental and the coincidental. This is history seen in black and white, without showing any critical sense over its sources, and always taking the published statements of diplomacy at their face value. Bismarck is a stereotyped villain, without *nuances*; Alexander is a hero without blemish.

A number of interesting questions are left over: for instance, what was the extent of Bulgarian nationalism and what were the forces that upset the Battenberg dynasty in 1886? One wonders whether Alexander's private aim was not to defy his patrons and become Tsar of a Greater Bulgaria, and perhaps in doing so he had the interests less of Bulgaria than of the House of Battenberg at heart.

Quills and Arrows

LAW AND DISORDERS.

By C. K. Allen.

Stevens. 169 pages. 10s. 6d.

THIS is a collection of essays, mostly reprinted from the *Spectator*, written by a lawyer of independence of mind. The tradition of legal humour is not very old, as traditions go, but it is modestly established. Lawyers are professionally obsessed with words; to them words can become terms of art, be labelled and given exact meanings, regimented and set in patterns as rigid as a crystal. Legal humour flourishes on inversion. There is the inversion of applying the heavy solemnity of legal phraseology to the simple situation; but lawyers also tend to be ponderous, and to spin the trivial into a true divertissement, in the manner of a *Times* fourth leader, is often beyond their powers. But there is also the inversion of applying the legal form to an idea, to a custom or to a deep-seated myth, and from that may come true irony. Then the pen of a lawyer may leave a deep and abiding mark in the mind.

Sir Carleton Allen has a reputation as a critic of the apparatus and methods of the modern state. Like all good lawyers he is concerned over freedom and free will, over individual responsibility and individual justice, over the pretensions of the bureaucracy and all that apathy may let slip to the encroachments of life by regulation. Not all the essays in this volume are concerned with this theme or use irony as an implement. Since the lawyer is so close to life (although he may see it through a professional lens) a well arranged account of almost any legal action is unlikely to be dull. In this collection there is the story of the per-

sistent litigants, William Shedden and his daughter Annabella, which is both fantastic and pathetic. But more than half of the articles reprinted here are a continuation of the battle between the lawyer, who starts with the individual, and the civil servant, who starts with the principle. 'Brave New Jelly,' for instance, is an account of the bland arrogance of the civil servant who not only believes that he should define in parliamentary language when a jelly should set but also imagines that he can find words adequate to the task. It is more than good fun; it is well-directed ridicule, and the angry, uneasy laugh forced from the reader is the author's best reward. Nor does Sir Carleton turn a blind eye to his own profession. Few lawyers will read 'Nobody Loves Us' without some protest, and a few may go on to ask themselves why they protested.

If there is a criticism to be made it is that the author is not sufficiently indignant. Urbane comment on the transient case leaves no shadow and does not deserve to be given a fourth dimension in time. Anger can make irony hurt, and if the just are not prepared to hurt the unjust they should keep out of the lists.

The Arctic North

UMIAK!

By D. W. Gillingham.

Museum Press. 222 pages. 16s.

THE Eskimos use the word Umiak, meaning a boat. They may mean by it a blunt, bulky boat made of seal skin. They may equally mean a steamship with icebreaker bows.

Canada's Arctic North is the land of the Ice Age. Its people have moved within a man's memory from the ivory age of the walrus tusk harpoon to the steel age of the rifle and the steamship, and on into the air age. By the turn of the century, in the great "poor man's rush," 100,000 men from all over the world beat their way to the creeks of the Klondike to take out 100 million dollars worth of gold. Now aeroplanes, bringing the emissaries of the great companies, alight like birds where gold or uranium has been found. It is the day of the rich man's rush. But these ages have not supplanted each other; they exist within each other in this great silent wilderness. And behind the sorties in search of precious metals, or the northern manoeuvres of Canadian armed forces, there is the work-a-day life of scattered groups of men in trading posts, police posts and mission posts whose tenuous contact with the outside world is by sea.

The writer grew up in a Vancouver that Joseph Conrad might have described, its waterfront life unchanged since the Klondikers blew their winnings there. He signed on with the *Baychimo*, a steamship of the Hudson's Bay Company. That voyage was in 1925, and the big ungainly vessel was the first steamship, and only the third ship in history, to enter the North West Passage from the westward. This is the

THE ECONOMIST, MARCH 12, 1955

story of their ship during the six years when the ice allowed her its sufferance and she plied to the northern posts that lie on the frozen rim of the world, landing men and stores, and running south with their harvest of furs. But the ice-fields have a strength which no vessel can withstand, and a demon unpredictability which no instrument can foretell. Her turn came in 1931, when the ice closed in on her and her crew fled ashore for their lives. She did not sink immediately like a broken egg shell. The ice, as if to vaunt its captive, carried her hither and thither, and in the ensuing five years she was seen many times, till the ice grew tired of her and released her to her grave.

The author tells his tale with great charm, behind which is the longing for the simpler, sturdier age of the North when he first knew it. But the fundamentals of existence have not changed there. The bulk of supplies must come in by ships and the ice pack still has the last word.

Jumbled Portugal

PORTUGUESE PANORAMA.

By Oswald Blakeston.

Burke. 224 pages. 18s.

"ON a Portuguese holiday," writes the author, "things should be rather jumbled and holidayish." Evidently a man of principle, Mr Blakeston has given his book these two characteristics. Paraphernalia would be a better description of the result than panorama. This chatty, readable tourist's tale contains all the superficial elements in Portuguese life (though one would not divine that from the odd little index, which is perhaps best dismissed as an intentional joke that did not come off). *Fado* singing and padded bullfights, the steep hills to which the Lisbon trams cling apparently by their eyebrows, the tartan trews of the Nazaré fishermen, the tower of Belem and *vinho verde*, they are all here.

Mr Blakeston has discovered that Oporto goes early to bed and that most Portuguese churches are overpowering but alike: these are certainly two pieces of information worth passing on to other intending visitors. He and his travelling companion were enterprising enough to break away from the Barchester English of Praia da Rocha and drive out to Cape St Vincent along the windswept road past the crouching fig trees; and they were fortunate enough to be invited to the *Circulo Eça de Queiroz*, though Mr Blakeston might have repaid that hospitality more graciously than by tersely dubbing the author whom the club commemorates "a Portuguese Zola." But his political judgments are as sweeping and jejune as his account of the British club in Lisbon is charitable. He is, of course, unlucky in following so closely in Mr Sitwell's literary footsteps. It may be assumed, however, that Mr Blakeston is not a contender for serious honours, but seeks only to offer some easily read, and easily written, entertainment.

THE ECONOMIST, MARCH 12, 1955

THE STORY OF THE R ROBINSON GROUP

Connoisseurs of fine printing

Small Victorian boys noisily 'swapping' cigarette cards did not know that they were collectors of some very fine examples of early colour printing. Cigarette cards began as illustrated stiffeners for paper packets of cigarettes. Robinsons of Bristol printed many colourful and now valuable series, perhaps the most famous among the earlier ones being 'V.C. Heroes of the Boer War' for Taddy's. Cards, almanacs, posters and showcards, led to colour printing for packaging, in which field Robinsons

are today among the leaders. Beginning in 1844 with the supply of wrapping paper to grocers, the business had grown to embrace the manufacture of paper bags, and folding cartons and boxes. Many more innovations were to follow—multi-wall paper sacks, and highly specialised packs for every conceivable purpose.

In these and other developments, Robinsons have led the way, and today are one of the largest groups in the world specialising in packaging and colour printing.

"Soonest", said the company secretary, "that means you'll be flying TWA, my lad... that means there won't be any need for you to change airlines between here and Los Angeles... you'll stay..."

... in TWA's good hands all the way. They do all the worrying about arranging through flights for you... their knowledge of America makes it easy for them... it'll save you a lot of time and trouble."

It did, too... as soon as I boarded their Constellation—they've got the largest fleet of them in the world—everyone in TWA seemed to be working for me... I was in a hurry...

... but TWA looked after me so well I nearly forgot how urgent the job was (better not tell James that). It's really wonderful what TWA's brand of comfort can do for one's morale... In fact...

... when I arrived at Los Angeles, I felt completely calm, collected and rarin' to go... good thing I was... James and I had a pretty hard selling job to do for those contracts we wanted.

Coming home? We knew exactly what we were going to do... as I told James, "Can't think why we ever flew any other way. Let's hurry back TWA—it'll give us time to relax."

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Is Deterrence Enough?

Washington, D.C.

THIS year, for the first time, both London and Washington are conducting their examination of defence within the same frame of reference. The British Government's decision that, in the words of the Defence White Paper, "increasing emphasis must be placed on the deterrent," that is offensive in air power and nuclear weapons, aligns its basic strategic concepts with those of the United States. The increasing American preoccupation with air and civil defence, intensified by the terrifying statistics about radio-active fall-out released by the Atomic Energy Commission last month, places the continent in the same physical predicament as the island. But there is still a considerable difference in the tenor and purpose, for the question to be determined in London seems to centre on the amount of deterrent force that should be gradually imposed upon a framework of conventional weapons. Many planners and politicians in Washington, on the other hand, worry at the spectacle of the United States's steadily expanding strategic and military commitments in Asia while the eventual military strength that can be deployed there is being gradually reduced.

The American debate is not exactly a new one: it has been going on for nearly two years—ever since the present Joint Chiefs of Staff assumed office in August, 1953, and began to revise the American defence establishment in the light of the Korean armistice. The main elements of their revision, with the one exception of the steady and continued expansion of the Strategic Air Command, were subjected to serious and responsible criticism as they became apparent. The steady withdrawal of American divisions from Korea began to cause alarm, not only in the United States Army, but in Japan and the Philippines as soon as it became clear that no compensating central or mobile reserve of American ground forces was going to be built up elsewhere in the Pacific. The theory of "the immaculate war," that indigenous forces belonging to the Asian and other allies of the United States would henceforth provide the ground troops while the United States provided only their air and naval support, has been heavily criticised by many Americans. They have felt that to allocate the dirty jobs to Asians while retaining the clean ones for Americans would create psychological divisions sufficient to split any of the existing Far Eastern collective security pacts wide open.

This policy, of which Mr Dulles and Admiral Radford were the principal architects, was stated explicitly by the former in his broadcast report on his recent Asian journey. "For military defence," he said, "we shall rely largely upon mobile allied power... We shall not need to build up large

static forces at all points and the United States contribution will be primarily in terms of sea and air power."

The new element in the continuing strategic debate in Washington is that the situation in and around Formosa exposes the Radford-Dulles plan of primary dependence on the deterrent value of mobile air and naval forces using nuclear weapons to the severest practical test at a time when the President seems finally to have accepted it but Congress has not. In all the explanations which have been given as to why the United States cannot demand that the Nationalist Chinese forces evacuate Quemoy and the Matsu islands, and can give no public and specific answer to the question whether it will support them if they are attacked, the necessity of maintaining morale on Formosa has been accorded high priority. The majority opinion within the National Security Council is that if the Nationalist forces were asked to accept the affront to their hopes implicit in such a withdrawal, on top of the evacuation of the Tachens and the end of their dream of an American supported assault on the mainland, they might very well defect to the Communists.

★

The minority argument—that of General Ridgway and the United States Army—is that if the United States still had enough ground forces in being and in the Far East to commit two American divisions to the defence of Formosa and the Pescadores, this problem of Nationalist morale would not arise in anything like its present acute form. As Mr Joseph Harsch wrote in the *Christian Science Monitor* on February 16th: "There is a real doubt whether the policy of denying Formosa to the Chinese Communists can be sustained in the absence of such a commitment of United States ground troops... Here is plainly a case where the army can keep the peace by depriving the Communists of a chance of obtaining a prize without war. This is General Ridgway's strongest argument." Similarly, the impressiveness of Mr Dulles's main presentation to the Bangkok conference in which he stressed the interaction—like fingers of a hand—of Seato, the Nationalist forces on Formosa, the twenty South Korean divisions and the potential military strength of Japan as deterrents to aggression, was somewhat marred by the simultaneous collapse of civil order in Cambodia. The army's argument is that a "fire brigade" of mobile American ground forces, as a supplement, not an alternative, to deterrent forces, can help prevent such crises of confidence among Asian and Middle Eastern governments

which are under Communist pressure in a way that ships and aircraft can never do.

Whether the Formosa crisis will have any effect in reversing the Administration's decision to cut down the size of the army and to rely primarily upon indigenous forces in Asia is doubtful. It would mean a major reversal of slowly formulated judgments. In theory, a Democratic Congress might decide to rescind the reductions in the allocation of men and money to the army in the current budget. But the course of last year's debate suggests that there are enough Democrats in the Senate who will vote with the Republicans on this subject to give the Administration a majority. The impression is that the Democratic leadership will register sufficient doubts about the present policy to stand well with future historians, without precipitating a battle with the Administration on an issue where the latter is on the politically popular side.

★

But Formosa has had one useful effect in that it has forced the Administration to redefine Mr Dulles's policy of "massive retaliation." In his broadcast, Mr Dulles showed that he was aware how much harm the threat of this policy had done to America's position in the eyes of Asian opinion. Massive retaliation has been superseded by a formula known as "measured retaliation," or, as Mr James Reston puts it "the punishment will fit the crime, only double." In Far Eastern terms, one may presume that a bombing and naval raid on Formosa means the destruction of Chinese mainland ports and the complex of airfields south of Shanghai; an attack on Quemoy means the destruction of the jet airstrips, shipping and gun positions from which it is supported. This refinement represents a notable restraint on the views of men like Admiral Radford, who believe that the Chinese Communist military potential should be destroyed sooner rather than later. It does nothing, however, to answer the question whether the United States, in the light of the consolidation of Asian opinion as represented by the forthcoming Bandoeng conference, would in the last resort dare to use its nuclear weapons. Great or relatively small, its strategic planning in the Far East is becoming increasingly dependent on them.

The Politics of Taxation

MR SAM RAYBURN, the Speaker of the House of Representatives, is a shrewd politician. He knows that the Democrats must re-assert themselves as the party of "the little man" if they are to beat President Eisenhower in the next election. In the President's Message on the State of the Union, moreover, Mr Rayburn detected a hint that the Republican Administration might propose a cut in individual income tax in 1956, just before the Presidential campaign. "Mr Sam" decided to strike first: to a Bill continuing the present 52 per cent corporate income tax level and extending present excise rates on liquor, automobiles, petrol and cigarettes for another year, he added a rider providing for a cut of \$20 in everyone's personal income tax for 1955. Such a cut would take some 5 million people off the federal tax rolls altogether and would soothe

THE ECONOMIST, MARCH 12, 1955

those voters who disapproved of the recent raise in pay voted for itself by Congress. Under Mr Rayburn's firm generalship, the amended Bill passed the House of Representatives by 210 votes to 205.

The Administration sprang into outraged action and denounced the proposed \$20 cut as a piece of wanton politics which would reduce federal revenue by some \$2.2 billion a year. The Democrats riposted by pointing out that the Administration had cut taxes by \$7.4 billion last year and that the benefits had gone to stockholders on dividend income. It was now "the little man's" turn to share in national prosperity. Mr Humphrey, the Secretary of the Treasury, argued that last year's cuts had been designed to broaden the tax base by stimulating investment and production. The battle was fought out before the Senate Finance Committee and the latter heard Mr Leon Keyserling, formerly chairman of President Truman's Council of Economic Advisers, testify that rising unemployment and economic "slack" made an even larger tax reduction desirable. Nevertheless, the committee rejected the amended Bill by 9 votes to 6. Instrumental in this rejection were two of the most respected Democratic leaders, Senator Byrd of Virginia, chairman of the committee, and Senator George of Georgia. Both of them put their conservative convictions before party loyalty and political tactics. It is expected that the Senate as a whole will reject the Bill by anywhere from six to twenty votes.

But that does not mean that "Mr Sam" is beaten. If the Senate turns down the Bill, it must be thrashed out in a joint House-Senate conference to which Mr Rayburn will send representatives of his choice. Moreover, if the stalemate can be dragged out until March 31st, the Treasury will be in serious trouble for the present corporate and excise taxes will have expired and it will face a loss of \$2,800 million next year. The Administration may have to choose between that loss and the loss involved in Mr Rayburn's amendment. So far, the President has made it clear that he will veto the Bill if it contains the \$20 cut and that he will not be frightened by the "time squeeze." But some form of compromise appears to be in the making. The Democrats do not wish to risk a serious internal split and the Administration cannot let itself be portrayed too long as a spoil-sport.

Oil for the Lamps of Asia

THE entire pattern of American foreign aid has been shifting east of Suez since 1952. In that year, Europe received 75 per cent of all military and economic funds. This year, the Far East is to receive 55 per cent and it is estimated that in the fiscal year 1955-56, 75 per cent of total aid and 60 per cent of non-military funds will go to Asia. The actual figures will not be disclosed before the Administration presents its foreign aid programme to Congress in April, but Mr Stassen's visit to seven Asiatic countries and the Bangkok conference have focused attention on what America is proposing to do.

It is well known that Mr Humphrey, the Secretary of the Treasury, and Mr Stassen, the director of the Foreign Operations Administration, an agency scheduled for extinc-

A door with a difference

For modern interiors in offices, showrooms, shops, hospitals and restaurants; for doorways through which the traffic is brisk and businesslike, specify Pilkington's "ARMOURCAST" doors. They are made from $\frac{3}{8}$ " Toughened Rough Cast glass, 78" x 33" or 78" x 30", fitted with hinges and locks in Bronze Metal Antique finish. Non-standard sizes to order.

PILKINGTON'S

"ARMOURCAST" Glass Doors

For further information on the use of Glass in building, consult the Technical Sales and Service Department at Pilkington Brothers Limited, St. Helens, Lancs., or Selwyn House, Cleveland Row, St. James's S.W.1. Telephones: St. Helens 4001 Whitehall 5672-6. Supplies are available through the usual trade channels.

tion on June 30th, have not seen eye to eye on the problem of aid to Asia. Mr Humphrey feels that the ultimate safety of the west depends on American domestic prosperity. He is a stern advocate of a balanced budget and he is not convinced that large-scale monetary aid to underdeveloped countries does anything but demoralise the recipients. Mr Eisenhower is one of his best listeners and many congressional leaders incline to similar views. Mr Stassen, on the other hand, feels that the fight against Communism in Asia has reached a critical stage and that the United States cannot hope to bolster up its allies and keep its friends without a policy of swift and massive economic aid. It is thought that Mr Dulles shares Mr Stassen's anxiety.

A compromise appears to have been worked out between the Treasury and the FOA. It calls for the expenditure in Asia of about one billion dollars, some \$200 million of which will be incorporated in a special fund to be used on a "regional basis," in projects involving two or more Asian countries. It is not yet clear how the projected American aid is to tie in with the Colombo Plan and the conference of Afro-Asian nations meeting in Indonesia in April may want to re-examine the whole programme. Finally, it is by no means certain that Congress is prepared to appropriate the money. Old-fashioned but direct military co-operation, as is taking place between American officers and native troops in Vietnam, seems more to its taste.

Taking Wall Street's Pulse

SECURITY prices on Wall Street, which have continued to break new ground despite the uncertainties of the London market, received their first significant setback this week. By Tuesday evening, the prices of some stocks had dropped by as much as \$5 to reach their lowest level for the current session. For this reverse, certain investors point an accusing finger at the investigation now being carried on by the Senate Banking and Currency Committee at the

request of Senator Fulbright, into the state of health of the stock exchanges.

Public hearings, which started a week ago, have so far been concerned mainly with comparisons between 1955 and 1929. Senator Fulbright wanted to know whether "the wheel of history was about to make a full turn." Mr Keith Funston and Mr Edward McCormick—presidents, respectively, of the New York Stock Exchange and the American Stock Exchange—testified to the soundness of the present boom and expressed their personal belief that it would continue. However, these reassurances faded somewhat when Professor Galbraith, of Harvard University, told the committee that he saw "unhealthy elements" in the boom and urged the government to increase the present 60 per cent margin required on stock purchases to 100 per cent. Another aspect of the enquiry which cast its shadow on Wall Street was the committee's decision to investigate the impact of defence orders on the price of certain stocks. Senator Fulbright has asked the Defence Department for a list of 100 companies; aircraft issues led the way in Tuesday's decline.

Senator Fulbright has already found several points he wishes to pursue further: he is suspicious of stock market tipsters, such as Mr Walter Winchell; he wants to know more about the use of inside information by officers, directors and large shareholders of publicly-held companies; and he questions the ethics of promotional campaigns by the exchanges to persuade the small man to "buy a share in American industry." In this connection it has been pointed out that there are today seven and one half million stockholders in the United States and that nearly one-third have earnings of less than \$5,000 a year and only one quarter earn more than \$10,000.

The congressional enquiry is being pursued in a suitably light-hearted and "friendly" manner and should not seriously disturb the tempo on Wall Street. However, it is unfortunate that at a time when investors are particularly sensitive such an investigation should be conducted so publicly and so near to the headlines. Moreover, not all the members of the committee are proving themselves altogether up to the complexities of their subject; at one point in the proceedings a self-styled "amateur investor" came to the rescue of the bewildered Senators with some simple explanations on how stock indexes worked. At least Senator Fulbright has discovered one important point. "Who does make money on the stock market?" he asked. Mr Funston replied: "The people who own the stock that goes up."

The Risks of Security

LAST week, the Administration finally took a few timid steps towards meeting the mounting criticism of its internal security programme. A number of recommendations were submitted to President Eisenhower by Mr Brownell, the Attorney General, and were immediately accepted. Henceforth, any government employee threatened with dismissal on grounds of alleged disloyalty will be given a detailed statement of the charges against him. The security officers of his department will interview the suspected em-

ployee and give him a chance to clear matters up at once. Hearings before security boards must henceforth be attended by legal officers, and when two government departments disagree in their findings, the case must be submitted to the Justice Department. Finally, efforts will be made to produce government witnesses to testify against the accused "so long as production of such witnesses would not jeopardise the national security."

This latter point is crucial and has been brought into urgent focus by a case now pending before the Supreme Court. It concerns Dr John Peters who was dismissed in 1953 from his post as special consultant to the Public Health Service. Dr Peters challenged the constitutionality of his removal on the ground that he was not allowed to confront hostile witnesses and that this violated the due process of law. Dr Peters's brief appears to have struck uneasy chords in the Justice Department itself. Nevertheless, and in spite of the new recommendations, Mr Brownell has asked the Supreme Court to dismiss the case. He claims that the removal of a federal employee is a discretionary executive function to which due process does not apply. He urges, moreover, that national security would be imperilled if the government were compelled to reveal the identity of its undercover informers and agents. But there are those who point out that dismissal from government service may impair a man's ability to earn a living in any other job and that due process of law must be observed where "property" is involved. The Supreme Court's decision will affect the whole procedure of loyalty investigations.

The case of Dr Peters is not the only one to have aroused impassioned and critical attention. The recent dismissal of Mr Wolf Ladejinsky by the Department of Agriculture, followed by his appointment to the Foreign Operations Administration, revealed the bewildering lack of unified standards and principles in the government's security programme. In Congress, Senator Humphrey of Minnesota, and Senator Stennis of Mississippi have introduced a resolution to establish a bi-partisan commission on government security. The Senate's Civil Service Committee, headed by Senator Johnston of South Carolina, has been voted \$150,000 to conduct a "full and complete investigation" of the loyalty programme. Thirdly, the New York City Bar Association, with a grant from the Ford Foundation, is conducting a detailed study of 200 "risk firings."

The fact that these inquiries are meeting with increasing public support is due, in large part, to the spectacular turnabout of several government informers in recent weeks. Among the outstanding cases are those of Mr Harvey Matusow, who now claims that he has been lying before congressional committees for years, and that of Mrs Marie Natwig. This middle-aged and obviously unstable woman had made circumstantial allegations about supposed prewar associations with the Communist party of Mr Edward Lamb. The latter is a wealthy proprietor of newspapers and radio stations in Pennsylvania and was applying to the Federal Communications Commission for an extension on one of his licences. Mrs Natwig attributed her derogatory statements against Mr Lamb to coercion by the FCC's principal lawyer. No sooner had she been ruled out of the case than Mr Lowell Watson, who, like Mr Matusow, was one of the Department of Justice's "accredited informers," announced that he too had testified falsely against Mr Lamb. Thus, in the course of a single week, it was possible to scrutinise in the flesh three

representatives of that exceedingly powerful and normally anonymous class, the authors of "derogatory information" on whose basis so many government employees have been dismissed. No wonder the incensed Attorney-General is seeking to obtain more expedient and rigid laws against perjurers and has already begun proceedings against Mrs Natwig in order to discredit her recantation.

While no one denies the need for protection against subversion, and while any government is entitled to regard public service as a privilege rather than a right, neither of these shopworn arguments can excuse the infliction of heavy penalties on the mere word of anonymous and often unstable informers. Although the civil servant has the right to a hearing before a board recruited from outside his department, this appearance of judicial procedure has, up to now, been mostly sham. Moreover, the civil servant is often out of work for upwards of a year waiting for his case to advance, and even if the decision is favourable, holding out the prospect of reinstatement and back pay, it may be disregarded by the head of the department. So far, there has been no provision for central review and the new recommendations do not provide for one except in the case of inter-departmental conflict.

It would be difficult to imagine a system more calculated to produce acute frustration and a sense of injustice. The criterion that no one should be kept in government service whose presence is not "clearly compatible with national security," could—if literally interpreted—eliminate practically anyone. Mrs Natwig and Mr Matusow may yet atone for their sins by helping to discredit the system which made these sins possible and remunerative.

The Consumer is for Burning

New York

A REPORT that ignores the impact of atomic energy on the future pattern of fuel consumption can scarcely claim to have formulated a "national fuel policy." And one which pays the merest lip service to the interests of consumers, merits the charge of catering unduly to those of fuel producers. This is the general impression given by the release, two weeks ago, of the long-awaited report of the Presidential Advisory Committee on Energy Supplies and Resources Policy—a distinguished group of seven cabinet officers, including the Secretaries of State, Defence and the Treasury.

Three groups of producers stand to benefit most from this influential document. In the first place, the committee concludes, without giving its reasons, that price regulation and control of the 4,000 independent natural gas producers by the Federal Power Commission is not in the public interest—a decision which contradicts the findings of the Supreme Court last June upholding the legality of federal control. The wind is now set fair for the introduction of a Bill to give effect to this recommendation but it is expected to encounter strong opposition from the representatives of the heavy gas-consuming states; Senator Estes Kefauver of Tennessee has already castigated the committee's report as a "weasel-worded" sacrifice of consumers. Moreover, the President has made it clear that he has not yet made up his mind on the issue.

In the name of both the coal industry and domestic oil producers, the committee emphatically supports the voluntary limitation of foreign oil imports, with an implied threat of congressional action if this regulation is not observed. Such a policy is in blatant contradiction to the committee's virtuous call for an end to currency discrimination by foreign countries against American coal. Moreover, the limitation of oil imports would bring little relief to the coal industry which irrevocably lost its most important markets when the railways switched to diesel-burning locomotives and domestic consumers turned to natural gas. The committee had, however, some more practical suggestions with which to regale coal producers: that the railways should be asked to reduce the present profitable level of freight rates on coal; that coal exports should be subsidised to offset the higher shipping costs which result from the requirement that 50 per cent of all foreign aid shipments be carried in American vessels; and that federal agencies purchasing coal should assist in stabilising the domestic market. But on the underlying problem of the industry, which is the necessity of reducing costs through increased mechanisation, and on the need for research into the more efficient utilisation of coal the report has little to say.

Viva Señor Nixon!

IN the past twelve months, the Caribbean area has been plagued with unrest. Civil war in Guatemala was followed by political assassination in Panama and by a miniature invasion of Costa Rica by forces trained and equipped in Nicaragua. These events have left a legacy of tension in many of the small republics, particularly in Honduras. Washington has watched events with some anxiety because the Caribbean area, with its vital strategic positions and its widespread economic inequalities, is a classical breeding ground for extreme nationalism and even Communism. Special importance was attached, therefore, to a four-week tour of the ten Caribbean nations which has just been carried out by Mr Nixon, the Vice-President of the United States.

Mr Nixon's powers of tact and diplomacy were severely tested during his trip. In El Salvador he discovered that most of the population either believed that President Roosevelt was still in the White House or wished he were. In Nicaragua, President Somoza propelled his guest through a blood-curdling exhibit of weapons supposedly captured from Costa Ricans. In the Dominican Republic, the Archbishop of Santo Domingo saw fit to express the hope that Mr Nixon would soon return as President of the United States. Nevertheless, Mr Nixon returned to Washington with a number of concrete suggestions. Principally, he urged the countries of the Caribbean and Central America to form a regional coalition, thus expanding the present Organisation of Central American States. Mr Nixon promised that he would press for completion of the Texas to Panama section of the Pan American Highway that is intended to link Canada to Argentina. He also pledged his support for speedy aid to Guatemala and for a reconsideration of the Cuban sugar problem.

Even as the Vice-President was making his tour, the

THE ECONOMIST, MARCH 12, 1955

first Inter-American Investment Conference met in New Orleans. Sponsored by the city's International House and Time-Life International, it was attended by nearly 800 American and Latin American businessmen and was inaugurated by a special message from President Eisenhower. The purpose of the conference was to interest United States investors in some 350 Latin American projects requiring more than \$250 million. During the conference, a group of financiers announced the creation of a multi-million dollar trust fund to channel money to approved Latin American enterprises. The conference itself will try to meet annually and will be represented in New Orleans by a permanent Bureau of Inter-American Investment.

SHORTER NOTES

The 300,000 faculty members of private colleges and universities, whose present annual salaries range from \$3,000 to \$15,000, have been offered a collective salary increase of at least \$50 million by the Ford Foundation. Universities receiving a Foundation grant for salary rises will be asked to increase the sum on a percentage basis, from funds obtainable from other sources, and according to their own financial situation. The objective of the new Ford programme is to achieve a higher level of education by making the academic profession more financially attractive to qualified personnel.

★

The Federation of American Scientists has expressed its concern over the potentially harmful effects of nuclear tests. It has called upon the United Nations to undertake a study of the problem of radioactive contamination. The Federation is urging the UN to obtain scientific opinions on the biological and genetic effects of radiation on human beings and to make recommendations as to the procedures required to avoid exceeding the danger threshold.

★

After discovering a potential airfield and base sites to lay the foundation for future explorations and research on the Atlantic side of the Antarctic continent, the USS Atka is returning home from its voyage "half-way around the world." As a result of this survey, the United States hopes to establish several outposts in the Antarctic which will form part of a world-wide network of observation stations during the International Geophysical Year, 1957-58.

The fourth major bank merger within the last half-year has been approved by the directors of the National City Bank and the First National Bank of New York. The shareholders of First National will receive from National City \$550 a share for the 300,000 shares outstanding. The new "First National City Bank," with deposits of \$6.2 billion, will still be second in New York to the proposed Chase Manhattan Bank.

THE ECONOMIST, MARCH 12, 1955

What's the next move?

A recurring industrial problem — and one where *THE FINANCIAL TIMES* is of great help. Sound decisions demand the right background, and decisions are unquestionably easier for the executive who regularly reads this important newspaper. He is well-informed on facts and figures, and well-advised by authoritative writers on the possible future course of events. Recognised as the daily newspaper of industry and commerce, *THE FINANCIAL TIMES* supplies a wealth of vital information—carefully marshalled for quick reference—and absorbing articles and comments on many industrial subjects. What's your next move? Order a regular copy of *THE FINANCIAL TIMES* today, and make certain of getting wise counsel.

AT NO EXTRA COST

Fly to Bermuda
ON YOUR TRIP TO NEW YORK

At no extra cost you can fly to Bermuda, via any international airline, on your first class fare to New York.

So when business is over in New York, enjoy a holiday in Bermuda. You can travel light—buy clothes, even rent or buy sports equipment in Bermuda. Remember, you'll be in the sterling area. Bermuda is only three hours from New York, and there are frequent daily flights. Bermuda's sunny days, sandy beaches for loafing, sports and pleasant social life will do wonders for you.

New Leaf for Ethiopia

FROM A SPECIAL CORRESPONDENT LATELY IN ADDIS ABABA

PERHAPS the salient feature of Ethiopia is that it is nobody's business but its own. The Conquering Lion of the Tribe of Judah, Elect of God, is comparable in modern history only with the Tsar of Russia or the Sultan of Turkey, who, had they held their thrones, might have enjoyed the same opportunities as the Emperor Haile Selassie. The Ethiopian autocracy is as yet unimpaired by western constitutional accretions. Somehow, the country has skipped the epoch of democracy; a fact which makes this land of about 15 million inhabitants a real curiosity—something as foreign to contemporary Africa as it is to Europe, eastern or western. In its splendid isolation, it is quite impervious to the cold war. From a stay in this rare atmosphere the visitor emerges soothed and invigorated, so long as he has been trying to do business there.

business there.

Ethiopia is evolving, not through the transplantation of European political institutions, but as a result of modernising improvements brought about by imperial decree. There is not only no legislature, but also no real deliberative cabinet. All important matters are under the direct control of the Emperor, who is flanked by his Minister of the Pen, a kind of Grand Vizier and secretary-in-chief. Only two or three other ministers have real power. There is no evidence that the parliament established by the constitution of 1931 will, in the near future, become anything more than the dead letter it now is. Haile Selassie is generally interpreted as seeing himself as an absolute ruler by divine right, who has in his generation the special task of reorientating the youth of his country. Before the Italian conquest, only a few hundred young Ethiopians had completed their education abroad, and of these almost all were executed by the Italians for their alleged part in the attempted assassination of the Viceroy, Marshal Graziani. Therefore the problem of building up a class of Ethiopian modern administrators which would gradually supersede the

present effete *notables* has had to be tackled entirely afresh.

The way in which the Emperor has set about this problem well illustrates his political mentality. Although no foreign power—not even the Soviet Union, which languishes in its dim legation—is making any determined effort to secure large influence in Ethiopian affairs, the Emperor has, it seems, no intention of tempting them to do so. Thus it is a French Canadian Jesuit who has been appointed rector of University College, the nucleus of Ethiopian higher education, which was established in 1950. About two-thirds of the staff of the college are French Canadians and the remainder are Polish, or Russian exiles with a small British and American contingent. But the language of instruction is English. The aim of University College is, of course, partly to impart western techniques and methods of organisation; but also it is designed to lead the students to a better understanding of their own tradition. In this double role the Jesuit direction, which is formally debarred from religious indoctrination and works in close harmony with the French-speaking Emperor, is very sensitive to the creative potential of Ethiopian intelligence. Upon the success of the college the success of the whole modernisation programme

depends, for until there are young Ethiopian administrators, it must remain a fragmentary affair in the hands of foreign advisers.

Among these, of course, frustration tends to prevail, as in other underdeveloped countries; the Ethiopian administrative aristocracy has a genius for crossing wires with the experts who are hired to help them. One of the chief lessons that private investors have learned is that Ethiopia, in spite of its rich economic potential, is an expensive place in which to operate because of the high rate of man-hours required to deal with its authorities. Nevertheless, some foreign enterprises seem to be making the grade; among them, for instance, the Dutch-managed sugar plantation at Wonji and

an Israeli firm of cattle-dealers which is pioneering the export, via Djibouti, of meat which it buys on the hoof in remote places from startled proprietors who have hitherto kept livestock for prestige reasons and rarely used a bank-note. To this and other agricultural fields the government, plus the Point Four authorities, are planning to attract foreign concessionaires.

The scope for agricultural development in the central province of Shoa is almost boundless, for the land, which is rich and fairly accessible, could become a granary for the Middle East. In other large areas of Ethiopia which are badly served by roads the farmers know only subsistence agriculture. Transport costs tend in general to prohibit agriculture for market. These obstacles are being steadily, if slowly, tackled by the Development Bank of Ethiopia which is fed partly by loans from the International Bank, amounting to \$E8.5 million since 1950.

It must be said that the capital outlay made by the Ethiopian government has been rather small in relation to the improvement in its revenue. In the four years of a coffee boom which reached its zenith in August, 1954, revenues have been increased by about 35 per cent and expenditure, including development expenditure, only by about 10 per cent. As development expenditure is running at only about 17 per cent of total expenditure, the young Ethiopian with a foreign degree in economics is far from satisfied.

But Ethiopia's major postwar event is the coffee boom. In the autumn of 1949 the world price of coffee doubled within a few weeks, and after some years of steadiness rose by a further 50 per cent during 1954. This has meant a five-fold increase of the value of Ethiopia's coffee exports and the doubling of their volume. Even after a decline in world prices, the industry is still earning well. Its response to the increased demand was remarkable in view of the fact that most of the coffee was harvested wild or else forest-cultivated by very primitive methods. In the last few years the wild crop has been about worked to a standstill and it is now probable that only the planting of new trees can increase production further. For this the growers require both financial aid and technical assistance.

Prosperity Through Coffee

Coffee exports now represent nearly sixty per cent of Ethiopia's total exports and the coffee export duty is thought to have provided as much as \$E9 million out of a total revenue of about \$E100 million in the financial year 1952-1953. At a time when world coffee production is exceeding consumption by one million bags, such dependence upon a single crop may be dangerous, unless Ethiopian producers pay much more attention to selection and grading. As things are, the traveller in the coffee-growing districts of the south-west sees evidence enough of prosperity among the working people as well as the proprietors; women in bright new cottons, sewing machines, shoes, and corrugated roofs replacing thatch. It is significant, however, that the coffee boom which entailed a considerable increase in purchasing power, has not driven up prices as a whole.

Ethiopia is really still basking in a kind of Indian summer of Italian colonialism. There are just enough roads and lorries for the necessary minimum of internal trade; there are just enough buildings to provide a fair amount of public amenities, at least in Shoa. There are villas, garages, hotels and Pompeian public baths for the rich

and the foreign advisers. Italian is still the *lingua franca* and the sole European language understood by Ethiopians outside the intelligentsia. Yet the Italian veneer, which, it must be recognised, gives a delightful finish to the Amharas' fine manners and kindly nature, is bound to wear off soon. To speak Italian was itself perhaps the greatest innovation ever made by a race jealous of its customs and distrustful of change. What is evident to the visitor is that the ruling Amhara race has an ancient way of life that has not yet been seriously challenged by anything which Ethiopia has imported. How, in purely Ethiopian terms, will the Emperor bring about the changes which he wishes to see? How, for instance, will he overcome the allergy of the educated against learning jobs that entail putting on overalls? Once during a display of some agricultural machinery the Emperor was informed that the young man who was sullying his hands in order to demonstrate performance and maintenance was a university graduate. "What I need as an exhibit here," said the Emperor, "is not that tractor; it is that young man."

Two Years Without Stalin

THE second anniversary of Stalin's death evoked no lamentation from Moscow radio last week—although in all the satellite capitals paeans of praise for the dead "leader of genius" went up. There is no question of his being deliberately stripped of honour in his own country; if there was, Warsaw and Budapest would not have dared to praise him. It is more probable that the present Soviet leaders were anxious not to evoke his memory too plainly at a moment when it is uncomfortably lively. For Stalin's ghost walked the Kremlin last month when Malenkov was publicly humbled.

Indeed, the history of Russia in the past two years can be largely written in terms of the conflict between those who argued that the Stalinist political structure and production pattern were outworn, and those who held that little could be changed with impunity. Immediately after the old despot's death, the stage seemed set for rapid changes. His heirs, led by Malenkov and Beria, facing a population which obviously hoped that the changes would be pleasant ones, switched into reverse the "vigilance" campaign launched during Stalin's last months of life, and heartened the public with much talk of civil liberties, peace, and plentiful food and household goods. The Jewish doctors were exonerated, their torturers in turn denounced, and the anti-semitic wave curbed. An amnesty for minor and non-political offenders was proclaimed, and a new legal code promised. Beria, the supreme policeman, warned his subordinates to watch their step; Beria, the Georgian, had an obvious hand in the check to the "Russifiers" in minority areas. And, at a decent interval, the satellites also began to adopt the new course.

The conservatives, however, were quick to point out the dangers, and the difficulties with supplies that followed the relaxing of discipline were strong arguments for them to use. The June rising in Eastern Germany doubtless clinched their case and brought the first phase of the post-Stalin era to an end. Beria was the first victim of the swinging pendulum. Much of the popular applause that

greeted his fall was genuine enough; how many Russians would see a setback for a reform movement in the execution of the head of the dreaded MVD? The army's reward for its share in his removal was to be freed of the grip of the security services. Soon afterwards Khrushchev was officially named First Secretary of the Soviet Communist Party. He had in fact headed the secretariat since Malenkov was forced to leave it, "because of pressure of work," only a fortnight after Stalin's death; and he had thus been able to imitate Stalin in filling key Party posts throughout the country with his own men. But Khrushchev's followers won no final victory when Beria was overthrown. Malenkov, dexterously changing horses in midstream, retained not only the premiership but also a

wide degree of command; and the silent struggle continued.

Beria had gone, but not all the new policies of the first phase had gone with him. True, the promised legal code was now forgotten; but it was evidently still felt that living standards must be quickly raised. In a major speech in August, 1953, Malenkov promised a "sharp rise" in the supply of consumer goods "within two to three years." He did not, as is now implied, belittle the importance of heavy industry but he argued that the mighty Soviet state could now afford to do more for its people. It was an indirect attack on the niggardly Stalin who had kept the purse strings too tight. Soviet propaganda now dwelt on household equipment and television sets, instead of plugging heavy industry in the name of "vigilance" and dogma. At the same time, Malenkov announced new incentives for the farmer. Khrushchev lost no time in climbing on to this bandwagon with promises to revive livestock production and improve food supplies. As time went on, Khrushchev stole more and more of the limelight, particularly in regard to the popular topic of food; he revealed the grain shortages and began the present hectic drive to "conquer virgin lands."

But the very necessity for that drive showed how little fruit the 1953 agricultural policy had borne. Last year, with poor harvests, food shortages were felt throughout the country. At the same time the state planners, needing directives for the new five-year plan, complained that durable consumer goods, especially housing, were proving a dangerous competitor for scarce resources. At this point Khrushchev's faction evidently made a decisive stand against the policy of quick plenty, and gained the upper hand. During the second half of 1954 a violent press campaign was launched against the "vulgarisers of Marxism" who put their main emphasis on consumer goods. Soon after-

wards, Khrushchev declared that the building of factories must take priority over housing. The battle was won, and when he and Bulganin set off for Peking in October they were probably already Russia's new leaders.

There will long be dispute about the interplay between foreign and domestic policies in this obscure drama. It is arguable, on the one hand, that Stalin's first successors, both more nervous than him and more imaginative in their dealing with the outside world, linked their plans for an easier life at home directly to their diplomatic strategy; that their triumphs in the latter field were the creation of the "Geneva mood" and the French rejection of the EDC last summer; and that the swift appearance of the Western European Union plan on the heels of the EDC enabled the Khrushchev school to claim that the western alliance could not be disrupted by blandishment, and that armaments and heavy industry must not be jeopardised to please the consumer.

But the logical links in this chain can be challenged. Malenkov first brandished the Soviet hydrogen bomb at the very moment when he gave his pledges to the consumer. He sent Molotov to Geneva to compromise, but, earlier, to Berlin to stonewall. He cut the 1954 defence budget, at least on paper, but his successors now claim that Russia caught up with America in regard to nuclear weapons during Malenkov's premiership. It can likewise be argued that the present disenchantment of the Soviet consumer is necessitated by a genuine failure to establish an adequate heavy industrial basis for agriculture and light industry; and that a new wave of propaganda, for domestic consumption, about external threats is needed to persuade the public to take its disappointment quietly. And there is no doubt that the budget presented in February, with its emphasis on armaments and heavy industry, was at least in part a contribution to the campaign against Western Union; or that the new government is already showing itself as capable of making friendly gestures abroad as the old one.

Meanwhile the new structure of the Soviet leadership must be regarded as provisional. The army, as always at moments of stress, has gained new ground; Marshal Zhukov is now defence minister, and Bulganin's appointment as premier implies a compromise between army and Party. Khrushchev is rid of his greatest rival, but he does not yet occupy Stalin's vacant seat. A new period of struggle seems inevitable. But the post-1953 "thaw" has left its mark. Each time a leader is dismissed, not all his policies go with him; and the victors in turn develop new divisions. The policies of Beria and Malenkov were popular because of the people's inarticulate aspirations towards freedom and wellbeing, and if Khrushchev intends to silence these

"Motor Business"

aspirations he must revive the theme of "the fatherland in danger" and the "vigilance" campaign. Soldiers, however, tend to come off best in a period of sabre-rattling, and Zhukov will not be sent back to Odessa as easily as Stalin sent him after the war. Two years after Stalin's death the problems of the succession and of Russia's future course seem as unsettled as ever, and as obscure.

Mr Deshmukh's Budget

FROM OUR CORRESPONDENT IN INDIA

MR DESHMUKH, the Indian Finance Minister, has budgeted from success; and the success is not the less great because he has been modest about it. Last year he took a big chance. He decided that if he had to choose between fulfilling India's five-year plan and deficit finance, he would take deficit finance. The pundits were doubtful, but he plunged nevertheless; and, aided by an excellent monsoon, he has been triumphantly vindicated. Of his capital expenditure, in 1954-55, £156 million is being met by created treasury bills; yet currency in circulation has gone up by only £57 million; the balance of payments in 1954 was £3 million in surplus, and both wholesale prices and the cost of living dropped considerably—wheat, for example, by 16 per cent. The government has been rewarded for its concentration on agricultural development. There has been the food and the cloth to mop up extra purchasing power; and in the countryside the proportion of produce going into the market for money has been going up steadily as increasing output moves the peasant further above the subsistence line. There is a genuine need for an expanding money supply; and in India this comes mainly from the government, not from the banks. Demand deposits went up only three-quarters as much as currency in circulation.

In 1955-56, therefore, Mr Deshmukh is giving the country a larger dose of the same medicine. This year's deficit finance is to be £239 million. This is rather over half the size of the ordinary revenue budget, and nearly twice as much as Mr Deshmukh expects to get from net borrowing and foreign aid together. But it is well under half the total amount which is to be spent on the plan. The Centre alone is spending, or lending for others to spend, £432.5 million on capital account, and to that one has to add the very large amounts being spent on development out of revenue—such items as schools and hospitals, which bring in no tangible return. Total expenditure on the plan in the coming year may well approach one-third of the total planned for the five years. There is not only more money to be spent, there is more capacity to spend it as organisations are expanded and technicians trained. Indeed, the increases in the backward states are positively spectacular. And the increases are being obtained soundly, by steadily pushing ahead on every priority front from steel to irrigation, and from electric power to railways.

All of this has not been obtained without a considerable increase in taxation. Except for higher taxes on agriculture in Madras, and the betterment levies on newly irrigated land which are being introduced in half a dozen states, no new taxes are being levied by the states. These are at the

THE ECONOMIST, MARCH 12, 1955

Centre; they will produce £19 million and are only a first instalment. Mr Deshmukh has recently received the report of his Taxation Enquiry Commission, and he has made it clear that he intends in due course to accept more of their recommendations; he was limited this year by time.

Already, however, one can see a pattern in Mr Deshmukh's taxes. The "socialistic pattern of society" to which the Congress recently so enthusiastically pledged itself means in India economic equality above all; so earned income relief is to go or be reduced on the larger incomes, air-conditioned railway fares have gone up, the supertax limit has been moved down from £1,875 per annum to £1,500 per annum and perquisites, entertainment allowances and compensation for losing a job or a managing agency are to be taxed; for a senior salaried businessman this may easily mean a quite ruinous increase in tax; Mr Deshmukh is clearly prepared to go a long way to meet the demand that there should be a ceiling placed on all incomes.

Nevertheless, there are not enough rich in India for them to be able to pay for development alone. The poor must also bear their share; and this they are going to have to do through excises—a policy begun by Sir Jeremy Raisman in the early war days. This year's instalment includes a sharp increase in the taxes on cotton cloth and sugar, and new excises on such everyday items as woollen cloth and electric bulbs. At the same time, these excises are used to protect employment in the cottage industries. Mill-made cloth pays, handloom cloth is subsidised; sugar pays, gur does not; and cottage matches have had their excise reduced. It is a waste of resources; but with unemployment the opposition's major stick, it is, temporarily at least, perhaps inevitable. Finally, Mr Deshmukh has carried a little further four policies he has now been pursuing for some time; first raising duties and reducing quantitative restrictions; second, adjusting export duties to what the traffic will bear; third, putting imported raw materials as far as possible on the free list; and fourth, and most important, however the consumer is squeezed, the encouragement of industry; there is to be an investment allowance of 25 per cent in addition to ordinary depreciation and losses may in future be carried forward indefinitely.

German Socialists and Democracy

FROM OUR SPECIAL CORRESPONDENT IN BONN

IT would not be too much to say that the fate of Germany's new-born parliamentary democracy hangs on the decisions that are now being made by the Social-Democrat and Trade Union Federation leaders. The question is—will they accept the fact that the *Bundestag* has voted for ratification of the Paris treaties? Will they, as Dr Adenauer hopes, co-operate in setting up the new army, and ensure that it will protect the democratic state in the troubled times to come? Or will they continue to rouse public opinion against the army, with demonstrations, unofficial plebiscites and other appeals to "the people"?

One thing is certain. The Communist call for united

THE ECONOMIST, MARCH 12, 1955

"I'll give eighty-two million!" says Father Thames

THE HUGE FORD FACTORY AT DAGENHAM uses 82 million gallons of Thames water every day—enough to float a battleship. Why this enormous quantity? ... mainly for the Blast Furnace and the big Power House. For FORD make their own iron, produce their own electricity. What does this mean to you as a user of motor transport? It means higher quality at lower costs. The unique siting of the Dagenham Factory

affords the benefits of waterborne transport of raw materials and finished products—saving in costs both ways—and the advantages of cheap and abundant water for producing iron and electricity at lowest cost. These large fundamental savings in overheads are passed on to you, the user of Ford products. "Ford '5-Star' Motoring—the best at lowest cost" is not a mere claim: it is a fact, based on facts like those above.

"Taken!" say

FORD

of Dagenham

FORD PRODUCTS — THE BEST AT LOWEST COST

From hand-to hand-to hand-to mouth!

In the reign of the first Elizabeth, a perfect complexion was a rose of very real worth. For, alas, most ladies were marked, to a greater or a lesser degree, with unsightly blemishes. The reasons? Perhaps the most important was that their foodstuffs, being passed from hand to hand, were exposed to the manifold infections that swept through the land like ravening wolf packs.

Now those 'good old days' are gone. Thanks

to modern packaging our food is protected to a degree unknown to our ancestors. And over half the packaging board produced in Britain is made by Thames Board Mills. So the higher our standard of living rises, the greater the demand for "Thames Board" and "Fiberite" cases. Vital indeed is the part that Thames Board Mills play in the nation's economy.

Thames Board Mills Limited

THE LARGEST MANUFACTURERS OF BOARD AND PACKING CASES IN BRITAIN

PURFLEET, ESSEX AND WARRINGTON, LANCs

"THAMES BOARD" for cartons, boxes, bookbinding, etc. "FIBERITE" Packing Cases in solid and corrugated fibreboard.

action outside parliament to overthrow the Bonn régime has been rejected. Revolution hand-in-hand with Herr Ulbricht is not on the Socialist or trades union executive's programme. The TU federation issued a statement after the Bundestag's ratification of the treaties stating that it would not advocate political strikes. And the Social-Democrat chairman, also rejected an alliance with the Communists.

So far so good. But the Social-Democrat party executive has not paid the tribute to parliament that might have been expected of it. It has not told the German public that the verdict of its elected deputies is final. Certainly, the process of ratification is not yet complete: the SPD can point out that the upper house has still to vote, and the Saar might still throw everything into the melting-pot again. But the moment is already passed when the Socialists could have immensely strengthened the prestige of democracy by bowing to the vote in the lower house. Instead, the party executive is reported to have decided on a policy of continued opposition for the time being. The published announcement stated that the party considered the Bundestag vote was not of immediate practical importance (*unaktuell*) until all countries had finally ratified the treaties, and that it would continue its campaign against them with all constitutional means. Demonstrations against rearmament will not be organised from the centre as before, but local party activity, it is said, will be allowed wherever the public seems in the mood to demonstrate. And the party will not positively support the army, until such time as it is convinced beyond all doubt that agreement with Moscow on German reunification is out of the question. As the party believes in holding conference after conference with the Russians, it is hard to say when, if ever, this moment will be reached.

"Adenauer Must Go"

The excuse of the Socialists for this attitude is that there is opposition to the Paris treaties among the people in any case, and they can canalise it into a non-Communist channel. That may be so. But it is evident that the SPD and Dr Adenauer's Christian-Democrats are both manoeuvring. The Socialists warn that, without their positive support for the army among the workers, morale will be so low that it will be very little use as a fighting force. In any case, ask the champions in all the parties of reunion-before-rearmament, what is to give the West German soldiers the will to die? Artificially fostered hatred of the East German army? The question is hard to answer unless it can be argued that the German army will never be called upon to prove its valour. The Christian-Democrat party leaders undoubtedly realise the value of a blessing on the new force from the working-class party and the trade unions. And it is possible that they might some day secure it if the SPD is not rushed. The dust raised by the ratification debates will settle; and in a mood of disappointment with Mr Molotov much might be possible.

There are some moderate Social-Democrat leaders who would consider a "grand coalition" with the Christian-Democrats. But their price is not only talks with the Russians, but—"Adenauer must go." It is the Socialist opposition's present price even for a bipartisan foreign policy. But there seems no grounds for expecting Dr Adenauer to resign. Health will not be a reason; he is again extraordinarily robust, physically and mentally. On present form it seems as if he will outlive many politicians

a generation younger than himself. And a man with a mission never gives up of his own free will.

Australian Labour Puts Back the Clock

FROM OUR CANBERRA CORRESPONDENT

FOR the first time for several years, left-wing forces are now dominant in the Australian Labour party. This is the result of the election of a new State executive in Victoria, and of behind-the-scenes manoeuvres in other States. Right-wingers will be hopelessly out-voted at the biennial Federal conference which begins in Hobart on Monday and is the supreme governing body of the party. The turning point in the struggle to control the conference came when the State executives in Western Australia and Tasmania instructed their delegates to the conference to support the Federal executive's stand in Victoria. The latter had ordered the election of a new Victorian executive after hearing charges that the old one was dominated by "The Movement," a politically active offshoot of Catholic Action.

All the bitterness within the party welled up at the conference which elected the new Victorian executive. A minority of unions and a majority of Victorian Labour party branches boycotted the conference, leaving it in the hands of 27 "rebel" unions which contain some of the most rabidly left-wing elements in the party. Those "moderates"—notably the Victorian Premier and Deputy Premier, and officials of the Australian Council of Trade Unions—who had been won over to support the conference, found themselves powerless to avert complete domination of the new executive by the rebellious industrial wing of the party, which immediately made no bones about the fact that it would order the political wing how to behave.

Steamroller Tactics

The moderates and political realists who sponsored or supported the use of the steamroller in Victoria got more than they bargained for, and now realise that they themselves are under the dominance of a group of union officials supporting socialist policies at home and a "soft" foreign policy; a combination that wins little support from Australian electors today. It is a matter of indifference to most of the professional union leaders whether the political Labour party wins elections. Severe electoral losses, in fact, could help them by eliminating a number of their opponents among the Labour politicians. So they can be expected to pursue an uncompromising "Bevanite" policy whatever the political consequences.

Although the left-wing victory is most complete in Victoria, the Federal conference is expected to complete the demolition of right-wing policies and will probably strongly re-state the socialist objective. Undoubtedly politicians supporting "The Movement" committed indiscretions and excesses in Victoria, but the outcome of the struggle has been merely to break one outside influence and replace it with another. But the only new social thinking in the Labour party since the war has come from the right wing. Unfortunately for the Labour movement, the new Victorian conquerors have not been content to restrain their opponents while admitting their contribution to hitherto fossilized Labour thought; they have preferred to put the clock back.

The Consequences of Andhra

FROM OUR DELHI CORRESPONDENT

THE overwhelming victory of the Congress party in India's linguistic state of Andhra is chiefly due to two factors that would seem at first glance to be bizarrely remote from the lives of Andhra's 21 million rice-growing peasants. One was the fall of Mr Malenkov, the other an article in *Pravda* praising Mr Nehru. Yet both of these proved to be manna from heaven to the hard-pressed Congress "united front" in India's first straight political tussle between the Congress and the Communists.

Andhra is little more than a year old; it was grudgingly carved out of the State of Madras to satisfy the Telugu-speaking people, but failed to include all of them. Its brief political history has been unsavoury, with constant opportunist shifts of allegiance among the leaders, including Congressmen. The Communists held 40 seats in the dissolved Assembly of 140 and were the most cohesive and disciplined group. In the new Assembly, which has been enlarged to 196 members, they will have only 15 members, while the Congress party will have 119—or 146 with the "united front." As late as last November, Mr Nehru announced that the Congress party would not take any other parties as allies in the forthcoming elections. In December, however, he changed his mind and formed a hurried alliance with the Praja (People's) party and Krishikar Lok (Peasants) party, some of whose leaders had until then been denouncing the Congress party as "a dunghill full of worms." The "united front" thus formed approached the elections barely united and poorly organised; the Communists on the other hand were full of confidence.

Mr Nehru Perplexes

Matters were not much improved by Mr Nehru's hurried visit to Andhra. His most important meetings as usual drew large crowds, but many people defiantly carried red hammer-and-sickle flags. Those who did not, and who were quite prepared to show more positive disapproval of Communism if given a lead, were dampened and perplexed by the Prime Minister's seemingly ambivalent attitude. On the one hand he deplored the Communists' "methods," which he condemned as "reactionary"; but on the other he declared that "personally I like Communism." Fortunately the day was partly saved for the Congress by the Communist leader, Mr P. Sundarayya, who responded to Mr Nehru's "soft" line by denouncing him as "a traitor." This alienated from the Communists a good many voters whom Mr Nehru himself had caused to waver the other way.

Shortly afterwards Mr Nehru departed for London for the Commonwealth conference, leaving the election campaign in Andhra in the charge of Mr S. K. Patil, the Bombay Congress chief. In Bombay in recent years the Communists have lost ground as rapidly as they have been gaining it in some other places; and in Andhra, Mr Patil lost no time in applying the anti-Communist tactics which he has made familiar in Bombay. Blandly ignoring the Nehru "line," he attacked the Communists both in India and in Russia and China as well as the whole creed of Communism. In village after village, speaking far into the night from makeshift bamboo platforms garishly lit by hurricane lamps, Mr Patil sternly preached the lesson that the atrocities which

THE ECONOMIST, MARCH 12, 1955

Indian Communists had perpetrated in this very region only a few years before were not simply localised incidents but sprang from the nature of Communism as such. He never hesitated to mention Russia and China by name, or to dwell on the number of leaders purged and people butchered in those countries.

Out of this cloud of oratory, of a kind to which Mr Nehru had got people quite unaccustomed, the abrupt "resignation" of Malenkov fell on the Communists like a thunderbolt. The aptness of the event probably startled even Mr Patil; but he lost no time in making the most vigorous use of it. The Communists' discomfiture was completed by a leading article in *Pravda* which, with small regard for the Communists' chances in Andhra, lavishly praised those domestic policies of the Indian government on which the Indian Communists had concentrated all their energies with accusations of "fake Socialism" and "rotten bourgeois reactionarism." The Congress party gleefully printed several hundred thousand translated copies of the *Pravda* article and distributed them among the voters of Andhra.

The significance of the Andhra elections is twofold. First, local issues (on which the Congress record was bad, little or nothing having been done for the progress of the infant and backward State) were entirely submerged by international ones: the voters of Andhra were virtually asked to pass judgment on Russia and China. Second, the voters, the vast majority of them peasants and a large minority of them landless, responded astonishingly once they were given a bold, clear, unambiguous lead.

It now seems probable that the Congress party and its anti-Communist allies would, despite a late start, poor organisation and a dubious local record, have won the elections even without the aid of *Pravda* and Mr Malenkov's fall. The *Pravda* article did not convince the voters that Nehru was right because *Pravda* said so, it convinced them that the Indian Communists were liars who did not enjoy even the support of their foreign mentors; and the fall of Malenkov convinced Andhrans that Patil was right when he said India did not want the only kind of government that Communism had so far been able to devise.

But the extent of the Congress victory and of the Communist defeat in Andhra strongly suggests that Indians, not in Andhra alone, have been suspecting such things for some time, and that this is why the bold open onslaught on Communism has paid off such handsome political dividends. That onslaught appears to have been made regardless of Mr Nehru's advice, in his absence, and possibly at severe upshot, which must give enormous encouragement to those Indians who, daring official black looks, have been arguing that the "soft" approach to Communism is wrong.

Continuous Performance

'EVERYTHING FLOWS, NOTHING IS STILL' said the Greek sage Heraclitus 2,500 years ago—but he might have been speaking of an I.C.I. chemical plant today. One of the main lines along which chemical manufacturing is developing is in the introduction of continuous processes to replace production in batches. This line of development is also being followed, of course, in other, more familiar fields. Just as the smooth surge of power from the jet engine is replacing the supply of little 'packets' of energy by the piston engine, so in modern chemical plants the continuous transformation of raw materials into finished products is replacing the batch by batch methods of yesterday. In these developments, I.C.I. is playing a pioneering part.

There are still certain products where so many different varieties of material have to be specially made that 'batch' production is unavoidable but, whenever possible, I.C.I. has introduced continuous processing, and most new plants—such as those now operating or under construction on the great new site at Wilton, in North Yorkshire—are designed to operate 60 minutes in every hour, night and day. One outstanding example is the new Wilton plant for making an important synthetic resin for the plastics industry. This resin used to be made in a series of stages; today, the finished product emerges on a conveyor belt in a continuous stream. A process of this type places heavy demands upon the designers of special instruments and automatic controls, because these devices are the very crux of the operation. But the skill and experience of I.C.I.'s engineers and instrument experts has been equal to all eventualities, and the latest I.C.I. plants set new standards for efficiency in production.

JOHANNESBURG:
It was the discovery of gold on the Witwatersrand in 1886 which brought about the transformation of Johannesburg from a vast plain covered with tall grass into a modern commercial centre with its skyscrapers, wide streets and great department stores. In that year a Mr. Oosthuizen, part-owner of a farm at Langlaagte, invited two prospectors to go over his land and look for gold or other metals. In a brief affidavit issued subsequently, one of the prospectors expressed the opinion that from his long experience as a gold-digger he thought the land was a payable goldfield. The accuracy of this report has been amply confirmed over the years, for since that date over 500 million ounces of fine gold, valued at more than £3,000,000,000, have been produced on the Rand.

Business men who require information on current commercial conditions in the Union of South Africa are invited to get into touch with our Intelligence Department, 54 Lombard Street, London, E.C.3. Up-to-date reports from our branches in Johannesburg and elsewhere are readily obtainable on request.

BARCLAYS BANK D.C.O.

Spanning the East

Branches of The Chartered Bank of India, Australia and China under British management directed from London are established in most centres of commercial importance throughout Southern and South Eastern Asia and the Far East. At all these branches a complete banking service is available and, in particular, facilities are provided for the financing of international trade in co-operation with the Bank's offices in London, Manchester and Liverpool, its agencies in New York and Hamburg and a world-wide range of banking correspondents. In London and Singapore the Bank is prepared to act as executor or trustee.

THE BUSINESS WORLD

House Loans through the Roof

THE building societies always emphasise that their interest rates are not closely linked to Bank rate. Their reasons are obvious. There are nearly 1,900,000 mortgage borrowers, with an average debt of barely £850, and interest and repayment on that debt is a matter of long-term family budgeting. Most mortgages are now in a form that allows interest payments to be varied, but it would be irritating to the borrower and prejudicial to the lender if they were subject to frequent variations in interest cost.

Building societies acknowledge that in the longer run their charges must conform to general movements of interest rates. Unlike the local authorities, who can relend money borrowed long-term from the Public Works Loans Board at fixed rates, the societies borrow short money from their shareholders and depositors and lend long money to their mortgagors. Only by modifying their interest scales, both paid and charged, can they cover the opposed risks of not having the money they need or of having more of it than they can use. To anyone who doubts that the rate of interest works, the experience of the Halifax last year surely proved it. From the beginning of October to the beginning of this month the Halifax was charging a general 4 per cent on mortgages while other societies were charging

4½ per cent. Four of those months come into the Halifax accounts for the year ended January 31st, yet the Halifax, which has rightly prided itself on its liquidity, has in the year seen £3.2 million of its liquid assets absorbed and its ratio of cash and trustee securities to total assets fall from over 18 per cent to under 15 per cent. The demand for 4 per cent mortgages was overwhelming, and borrowers had to be drastically

rationed while savings for investment were more than usually easy to attract. The Halifax is a great and growing society—the biggest in the world and one of the strongest with a reserve ratio still above 5 per cent of total assets—but it had to step quickly back into line on interest rates, not only raising its mortgage interest to 4½ per cent but giving shareholders a rise from 2½ per cent net to 2½ per cent. Bank rate provided a convenient opportunity for second thoughts.

The episode of rate reducing is now over. There remains the question whether a new era of higher building society charges is about to begin. If the higher Bank rate heralds a long period of dearer money, building society interest rates will have to move up too. The societies provide one of the great fields for investment, holding between £1,600 million and £1,700 million of the public's money. But if they do not keep roughly in line with other forms of investment they will

not continue to draw their quota of public savings.

The problem is not how to comply with changes in the long-term trend of interest rates but how to distinguish them from the shorter fluctuations that can be, and should be, disregarded. A school of thought exists among building societies, as elsewhere, that the recent Bank rate increases will be transient—a gesture to stiffen sterling, presently to be forgotten. It is easy to dispose of such arguments: if dearer money does not produce an effect it will not have done its work; it would then have to be maintained if not reinforced.

It is not easy to rebut the more serious argument that the societies are under no pressure to take an immediate decision. The movement is strong enough to wait a few months to see which way the real trend lies. That view, as Sir Harold Bellman's recent speech shows, is strongly held in the Abbey National, and it is held in other societies too. The year 1954 was one of unprecedented activity in house building, and the societies financed a larger share of that growing total: policy favoured the unsubsidised owner-occupier house in preference to the subsidised council house, and the Macmillan arrangement joining the Treasury and the local authorities with the societies to make larger advances possible, assisted that policy. Yet the societies took that extra demand in their stride. Liquidity on the average increased, even while unprecedentedly large advances were being made. The percentage of liquid

assets to total assets for the whole movement rose from 14.2 per cent to 14.8 per cent.

House building should remain active but it cannot indefinitely expand at the rate of the last few years. The trend of house prices is downwards and the margin in price between the new house and the existing house with vacant possession is narrowing. There are always some societies that could use more money but some of the big ones are beginning to think more about where the new mortgage business is to come from, and less about the flow of funds that investors will provide. If

Bank rate had not risen schemes for restricting the inflow of investment money might soon have been needed. At December 31st the Woolwich Equitable was 18.4 per cent liquid, compared with 15.0 per cent a year earlier, the Cooperative Permanent 15.4 per cent, against 14.2 per cent, and the Abbey National 14.7 per cent, compared with 13.0 per cent. The right policy now is to remain liquid, to keep new mortgage business to a figure well within the limits of resources, and to stop chasing records. Special reasons exist for maintaining high liquidity ratios this year. Reserves have grown less rapidly than total resources, and they are now on the average less than the 5 per cent of total assets recommended by the Building Societies Association. Part of those reserves should be considered earmarked against the fall in gilt-edged securities since the last balance sheet dates notwithstanding some skilful handling of gilt-edged portfolios. Moreover, the movement holds some money—temporary surpluses of trading companies are a typical example—which cannot safely be regarded as permanent.

Yet some societies do not relish the growth of liquid funds that barely earn their keep and there are signs of energetic efforts to open up new business. One of the most energetic is the Cooperative Permanent, which has recently been advocating a revision of the law governing building societies, to allow them to do business outside this country. That would involve amendments of Acts of Parliament dating back to the 1870s. The Cooperative is also offering mortgages for up to 35 years' duration. On newly built and other small modern houses the Woolwich Equitable has followed suit up to 30 years' duration. The extension in the length of the mortgages is open to criticism. It does not fit in with the curb now applied to credit sales elsewhere, nor can it be offered without a considerable increase in total payments by an owner-occupier. The borrower of £1,000 for 35 years saves £1 12s. 9d. per month in his payment compared with the borrower for 20 years, but he knocks off only £12 of the debt in the first year compared with £32, and over the whole period of the loan he pays out in interest and capital £468 more.

If building societies decide to hold their interest rates at 4½ per cent on mortgages and 2½ per cent net on shares until they can see which way money rates in general are moving, no harm and some good will have been done. Demands for mortgages will remain high. Building society mortgages costing 4½ per cent will be more competitive with local authority mortgages now costing about 4½ per cent than they were before March 1st when the local authorities using Public Works Loans Board money usually charged 4 per cent. The inflow of money into the societies may be checked if other types of investment become more attractive. But the movement is liquid enough to risk such a check and if some of the societies with idle funds see those funds evaporate they may feel less itch to indulge in the more debatable forms of mortgage hunting.

Multiples for the Million

THE chairman of a large chain of stores is said to have put one of his managers through this catechism:

"Do you like your site?" "Yes, sir."

"Do you like your staff?" "Yes, sir."

"Do you like your windows?" "Yes, sir."

"Do you like your stocks?" "Yes, sir."

"Then it must be you. You're fired."

Apocryphal though that anecdote is, it sums up the getting methods of the multiple furnishers, drapers and tailors and the men who run them. Hard-working and ruthless they have to be for they are building the new empires of hire purchase. They seek the weekly shillings of the newly wed for a dining room suite, of the milkman for his new Sunday suit and of the typist for her summer dress. Prices are much higher than before the war, and few have nest eggs to pay cash down to equip their homes. Wages are high, employment full, and the demand for yet more new houses convinces the managers of the multiples that the market and their enterprises will go on growing for years. The new hire purchase controls have not much disturbed this thinking. Some of the multiples have had to stiffen their credit terms, notably by requiring a uniform 15 per cent deposit instead of trimming that deposit to the financial standing of the customer. But these controls hit first the marginal trader, who sought custom by the easiest credit terms, and the multiples can afford to smile at them—but not to relax.

The feature of the growth of the multiples is its versatility. The groups, through their subsidiaries, sell everything for the home, from the fancy hatpin to the veneered cocktail cabinet. Small independent traders still hold the bulk of the trade but two groups dominate: Great Universal Stores and United Drapery Stores. The retail structure of these two chains differs. (The accompanying chart illustrates that structure but it has no pretensions to completeness.) United Drapery Stores prefers to sell its wide range of goods across the counters of numerous department stores, but it also runs a door to door retailing business. Apart from its multiple tailoring interests it does not penetrate far into manufacture. Great Universal Stores does, even though it has sold off some of its manufacturing subsidiaries. Its retail outlets are usually individual chains of stores concentrating upon one type of goods, but it is adding to the number of department stores it owns and, through other subsidiaries, does an extensive mail order business.

Take-over follows take-over, bid counters bid, as these two chains continue to grow. Their recent growth can be illustrated by the book value of their fixed assets:

	Great Universal Stores	United Drapery Stores
	End-March	End-January
1952	£15,200,563	£2,959,993
1953	£15,618,875	£3,044,874
1954	£17,896,971	£6,076,583

The chains claim that they do not have to scout for prospective sellers of businesses. They are known to be in the market and the sellers come to them hat in hand. Why do the independents sell out? They may be feeling the pinch of competition, perhaps finding it difficult to finance their hire purchase sales cheaply enough. Many of them are family businesses threatened by the death duty axe. In others the founder of the firm may not feel sure about the business ability of the next generation. The chains certainly turn away more offers than they receive. And unlike some other share-bidders their intention is to buy the business in order to build it up and run it. If, as they often do, they take out the windfalls from property values that is only incidental.

What, then, is the impetus behind the growth of the credit multiples? It is not simply property values. An expanding market would explain new entrants but not the amalgamations into ever bigger groups. Economies of large-scale vertical and horizontal integration are the answer. The aim of multiple trading is not to expand retail profit margins, but to collect all the margins that are going—including wholesalers' and sometimes even manufacturers' margins—into its own kitty, to rely on easy payments to make the sales and on heavy sales to swell total earnings. At the manufacturing end, for instance, Great Universal Stores holds a tight control on prices, margins and quality through its ownership of furniture workshops and clothing and drapery factories, and just simply by being the biggest buyer of furniture in the country. The multiples are big enough to secure the keenest terms from manufacturers. An independent draper has made their point:

The intractable problem is not meeting the chain store mark up, but the economies of much larger orders than we prefer to put down, tailored into a machine production geared to much longer runs than before the war. While we place seasonal orders and pay the overhead, the excess capacity is available to the long runs of the multiples and chains at little above prime cost.

The heavy guns of Rego and Town Tailors, rivalled by those of Joseph Collier and Montague Burton, in one shopping centre can batter the trade of the independent clothier. The multiples can sell off shops in a particular locality where their group is too heavily represented. Or they can convert them to sell different goods by different methods; often they try to preserve some goodwill of the old business by keeping its trade name but they change its stocks and its policy.

Not less important for the groups (of whose trade over two-thirds is on hire purchase) are the economies of administration. The cost of inquiry, of booking and of debt collecting is reduced by a centralised organisation. Such a group also finds it easier and cheaper to finance

its hire purchase sales out of its reserves, or by borrowing from its own trade creditors or from the joint stock banks for its general purposes instead of discounting hire purchase paper with the specialist finance companies. The economic drive behind the growth of the multiples is compelling. But the compelling reason for their recent growth is the personal drive and ambition of the men who run them.

The success that these men and their creations have achieved turns on the careful choice of subordinates. Hard work is demanded but appropriate rewards are offered. The emphasis throughout the multiples is on selling. Hence in Great Universal Stores half the money a shop manager carries home with him is commission; that is the average. Not less important for success is the intangible goodwill of a hire purchase contract. The contract makes the contact. When a suite of furniture is nearly paid for it is easy to suggest the purchase of a new set of curtains. The paradox is that the hire purchase customer may thus be of more value to the multiple than the one who pays cash down.

Any further growth in hire purchase will almost inevitably be followed by a further extension of multiple trading. The men behind the multiples rely on such an expansion and on the continuation of their own process of buying up shops to preserve their empires in a trade where a newcomer needs only a little

capital to set up shop. Some day mere size and human limitations may prevent the men at the centre from controlling the tips of the tentacles. Then the limits of large scale distribution would emerge. That time is not yet; when it occurs will depend on the personality of the Wolfsons of another day. When an investor buys Great Universal Stores or United Drapery ordinary shares he puts his stake on a man as well as a business. The share registers of both companies bulge with investors taking small limited chances. There is only one large nominee holding in Great Universal Stores, controlling about one-fifth of the equity. The operation of that holding may temporarily disturb the Throgmorton Street price but ultimately the market price reflects the decisions of hundreds of small investors. "Gussies" is a volatile stock that attracts the speculator as honey does the bee. Even the smallest investor is tempted more by the chance of a capital gain than by income prospects. Hence it is that "Gussies" drop most quickly in a slump in Throgmorton Street and then, quite often, rally most quickly. Recently, that stock and the other multiple equities have been put to the double test of dearer money and the hire purchase restrictions. They did not emerge unscarred but they were not mortally wounded. There will be other testing times. But they will face them as equities grown out of a suspect adolescence into lively manhood.

Business Notes

Sterling's Recovery

MODEST but satisfactory progress has been made by sterling this week. The official rate has improved from \$2.78½ to around \$2.79½, and as far as can be discerned from the evidence of market activity, that recovery would seem to have occurred independently of any supporting operations on the part of the Exchange Equalisation Account. Indeed, there has been some, though very slight, evidence that the authorities have on certain days taken rather than given dollars and thus recouped a small part of the cost involved in last month's supporting transactions. The official market for sterling is beginning to feel the benefit of the appreciation in the rate for transferable sterling and of the consequent diminution in commodity shunting operations. At long last some dollars, representing the proceeds of sales of sterling tin to the dollar area, have made their appearance in the official market. Transferable sterling has again hardened this week, moving

interest arbitrage basis, therefore, sterling is flatteringly valued in the forward market. This may be due to the fact that no substantial amount of short-term money is being attracted to London by the relatively high rates. But American firms have been buying forward sterling against their future import commitments and some British engineering firms have been selling forward dollars, sometimes on extended delivery dates, in respect of contracts recently secured by them in the United States.

Almost as significant as the recovery of sterling in terms of dollars has been the similar movement in terms of the Deutsche Mark. As transferable sterling has strengthened so German marks have weakened—from 11.76½ when Bank rate was raised to 4½ per cent to 11.80½. This movement reflects the end of the substantial selling of transferable sterling on German account, which became such a marked feature of the free market last month. A large proportion of the liberated blocked or Sperr marks were in fact switched into dollars. This operation was effected in two stages, first by converting marks into sterling through the EPU mechanism, and then by selling the sterling against dollars in the free market. The conversion, in other words, has been effected largely on sterling's back and illustrates one of the leaks through which supplies of transferable sterling were being replenished in the early weeks of 1955. This nonrecurring burden on sterling must by now have largely spent its force.

Finding a Level

THE money machine works slowly, but it works. The first reactions of City markets to the big change in money rates that has occurred in the last few weeks are not necessarily a fair reflection of the ultimate consequences. The City has, however, begun to adapt itself to slightly longer range thinking during the past week. The air of buoyancy that surprisingly followed both Bank rate increases has disappeared in the gilt-edged market and even more noticeably in the industrial share market. In the industrial market the Stock Exchange settlement provided a special reason for restraint. That settlement (of the account that ended last week) covered a period of violently fluctuating prices and there were a few substantial losses to pay. Some selling of gold shares at mid-week looked as though it might be loss covering of that origin.

The result has been a downward drag in security prices. In the gilt-edged market, though a large number of small buying orders—presumably reflecting personal investment business—came in at the beginning of the week, prices and the volume of business have both since declined. The

up from \$2.75½ to \$2.76½. There has been some evidence of continued official intervention in this market though the scale of these operations can hardly be assessed since the market extends to the four corners of the earth.

In the forward market sterling in terms of dollars remains at a discount of about ½ cent for a month and ¾ cent for three months. The latter represents a discount in terms of the spot rate of exchange equivalent to about 1½ per cent per annum, a figure which is well below the bill rate differential between New York and London. With the Treasury Bill rate in New York at 1½ per cent and in London at 3½ the differential is 2½ per cent. On an

Financial Times Government Security Index declined fractionally each day in the first half of the week and on Thursday reached 97.84, a decline of 0.99 since the end of last week. The industrial index has fallen more rapidly; it reached 178.9 on Wednesday compared with 186.4 at the end of last week. On Thursday the all-round decline was fairly steep. Long dated gilt-edged falling half a point and nearly all industrial groups closing sharply lower, partly because the banks seemed to be adopting a stricter scrutiny of loans. The process of adjustment to dearer money is thus seen to be seeping through into a market that is far from active. Outside the market, in trade and industry, even the first effects of dearer money are barely visible. It must take a matter of months for some of those effects—for example, the impact on imports—to appear.

In that atmosphere it is difficult for issuing houses and brokers arranging new issues to decide how far they ought to adjust terms to meet the new situation. But they are trying. In addition to the Thomas Firth and John Brown offer one other issue has given an indication this week of how events are moving. A private placing has been arranged of £1½ million 4½ per cent debenture stock 1979/83 for Philip Hill Investment Trust at £98½. Here is a fixed interest security of medium length and good medium quality placed at a redemption yield of about 4.6 per cent. It is believed that had the operation been done at the beginning of the year, the rate of interest would have been 4 per cent and the price about £1 lower to yield about 4.2 per cent. That difference of around 8s. per cent in the redemption yield is a rough measure of what has happened so far.

Firth Brown Offer

INTO a new issue market barely settled after the Bank rate changes steps the Iron and Steel Holding and Realisation Agency with another steel company for sale. Next week it will offer through Hambros Bank (not through the consortium) the whole capital of Thomas Firth and John Brown, the former 82 per cent subsidiary of John Brown and Co. The offer consists of 5½ million £1 ordinary shares at 25s. per share and £3 million 4½ per cent redeemable debenture stock 1980/85 at £97½. The agency is retaining £575,000 in cash. The sale will thus be one of the agency's more profitable operations. Thomas Firth and John Brown was nationalised for £8,631,000 in Government stock, and no fresh capital has had to be found for it. So the profit—subject to the costs of this offer—will be £1,744,000.

This is also the first occasion on which the agency has offered a steel Debenture stock to the public, though some of the institutions have been keen to obtain a slice of the prior charges to mix with the ordinary stocks they have bought. The price of £97½ to give a redemption yield to the latest date, of about £4 13s. per cent, has obviously been trimmed to the new level of interest rates sufficiently to make it attractive. The ordinary stock with an estimated well covered 8 per cent dividend offers a yield of 6.4 per cent and takes a middle position in the range of steel yields. It looks fairly priced compared with the identical yields currently obtainable on United Steel and John Summers and 5.9 per cent on Whitehead Steel Co.

John Brown and Co. are not reacquiring their former majority interest in the company, and that decision rebounds to the advantage of the shareholders of that company who receive preferential consideration along with the former minority shareholders and the former debenture holders of the Firth Brown company. Conventional underwriting has been used—not the method of making underwriters make firm applications—but underwriters have been required to underwrite in blocks consisting of both ordinary shares and debenture stock. The public, when the lists open (and close) on Thursday, will be under no such compulsion. The ordinary shares (10s. on application) and the Debenture stock (£25 per cent on application) can be separately applied for.

The offer has to test the market in conditions that are still uncertain, but it has much to commend it. Thomas Firth and John Brown is a maker of stainless special steels of high reputation. And it is a company that will not need to come to market again for capital in the near future. A £3 million development programme is in hand, but the company expects to finance the whole of it out of retained earnings.

Debate on Cotton

THE debate on the cotton industry revealed nothing that was new, nor did it bring to Lancashire the promise of early action. But it may have helped to put the industry's problems into perspective, and for that Government spokesman, rather than the Opposition, can take the credit. Imports of cheap Indian cloth may be injuring the spinning and weaving sections of the industry, but restriction of such imports will not solve the industry's main problem which is to increase exports in the face of competition from low-cost producers and high tariffs. The answer to that must rest mainly with the industry itself. The Government could give some help by reducing—if not abolishing—the purchase tax on cotton textiles. That would encourage the production of the higher quality goods in which the industry's export prospects are brightest (it would also reduce the advantage that the present fiscal system gives to wool and wool mixtures), but quality is not the sole touchstone; a few firms have a large export trade in textiles that are cheap enough to escape purchase tax at home, and which succeed abroad by innovation of design and style.

On the question of imports of Indian cloth, the President of the Board of Trade, Mr Thorneycroft, rightly dismissed Mr Harold Wilson's suggestion of a central purchasing agency that would have the sole right to import yarn and cloth and would restrict imports into the home market of goods based on "unfair" competition. Mr Wilson argued that this would not conflict with Britain's international obligations, and cited the Jute Control as a precedent. Yet that control, a legacy of wartime, is blatantly protectionist in character and has always offended the spirit of these obligations. As Mr Thorneycroft emphasised, any action that might be taken should be taken openly. And as restriction would be bound to have international repercussions, the Government is plainly right in refusing to be jostled into hasty decisions. It is now awaiting the outcome of the discussions that Ministers, including the Prime Minister, are to have with the Cotton Board, probably next week.

Hire Purchase Controls

THE monthly figures of hire purchase contracts for February issued by HP Information reach to the end of the period in which hire trading was uncontrolled. The figures (from which industrial machinery has been dropped because the returns were known to be incomplete) show a great stride forward particularly in motors and motor cycles. From March onwards the figures will begin to reflect the reimposed physical controls, dearer bank money and the policy outlined by Lord Aldenham, President of the British Bankers Association, to member banks this week. The banks are advised: (1) to grant no addition to the credit lines already outstanding in favour of hire purchase finance houses, and (2) not at present to consider hire purchase finance business from new customers. Notably the decision of the banks does not involve cutting back the credit facilities that the finance houses already enjoy.

Source: H.P. Information.

With the single, but perhaps significant, exception of a plea from the National Association of Retail Furnishers to the President of the Board of Trade, the comments on the new controls by the traders affected have been mild and mostly favourable. Mr Eric Gamage, the chairman of Gamag-s, described the new controls as "quite right." He obviously felt that abuses would be curbed, but that reputable traders were hardly affected. Mr W. A. Olds, the chairman of Olds Discount Company, told shareholders that he thought the new controls equitable and likely to produce a good effect. He criticised the removal of all controls last July. By way of contrast the retail furnishers are appealing to the President of the Board of Trade to make the minimum initial deposit 10 per cent instead of 15 per cent, disclosing that 10 per cent was the figure the association recommended to the trade when controls came off furniture in 1952.

The basic assumption in the utterances of all these traders and financiers is the same:—that they, being cautious traders, will not be hurt by the new controls, or that if they are it must be due to some mistake in the order. That assumption may be right; a large part of the hire purchase field may escape almost unscathed. But if the traders are right, then government policy must be ineffective. A control cannot both be effective and hurt no one. That is part of the case against specific controls.

A Little Back from Brazil

ARISE of 1 per cent in the dividend of the Bank of London and South America that has paid a steady 6 per cent for many years, almost a promise from the chairman, Sir Francis Glyn, that it will be possible to maintain the higher rate, and the slight cheer that remittances from South America (specifically excluding Argentina) are a little better than a year ago, are the main features of the accounts of the Bank of London and South America. The profits are not higher; they disclose a tiny fall from £395,860 in 1953 to £393,681 last year, and though banks may hide their true figures, it is unwritten law that they do not conceal the trend; the true net profit must have been slightly down. Clearly the answer is to be found in the changes that have taken place in Brazil and to a less extent in Chile. There the exchange has broken, but it has been possible to get profits out at a price.

In 1953 the bank took the first strain of the break in the Brazilian exchange. Assets that had been frozen at 52.70 cruzeiros to the £ became unfrozen at a rate that year of 144 to the £. In 1954 the rate broke further to 210 cruzeiros to the £. It may be inferred that the bank was able to remit its profits at those rates, and that its disclosed profit has borne a large part of the inevitable strain of writing down the current assets in Brazil to cover the exchange depreciation. Without that writing down the profit would evidently have looked much more rosy. The extent of what has had to be written off is naturally not disclosed, but the total assets are down from £161.1 million to £134.8 million and the writing off in Brazil, Chile and Paraguay more than accounts for that fall. It follows also that no such heavy writing down is to be expected to recur. The Brazilian exchange may break further; the bank may lose on the exchanges still more of its remitted income. But in terms of balance sheet assets it has much less left to lose in Brazil, Chile and Paraguay.

For the British business man in the South American market Sir Francis Glyn has two good hints. He does not believe that the new and more liberal attitude of Argentina towards fresh foreign capital will itself attract much foreign capital to a country that has so long regarded it with suspicion. A real improvement in economic conditions is wanted there. On credits for South America, Sir Francis is not among those who believe that the British exporter of capital goods is still inadequately served. The charge that medium term financial assistance was lacking has, he feels, been refuted.

Gatt into OTC?

THE marathon conference on the review of the General Agreement on Tariffs and Trade which opened in Geneva last October, has come to a somewhat disappointing close. Hopes of re-writing the agreement into a "super-Gatt," which were expounded so vigorously in some of the opening speeches—and in particular in that of Mr Peter Thorneycroft—were quickly doomed. Attempts to reinforce the clauses relating to quantitative restrictions on imports and thus to secure trade rules that would make the world safe for convertibility, were undermined by the diversionary endeavours to secure various waivers from the basic provisions of the Agreement. The two principal "waiverers" were the United States and the United Kingdom; and in the face of their tactics it is hardly surprising that the attempt to strengthen Gatt should have been a failure. Both waivers were in effect granted. The United States will have the right to continue to impose quotas on imports of those agricultural products the prices of which are being supported by the Administration. That waiver was granted despite the vehement opposition of countries such as Canada and Denmark. With this example before them the other contracting parties of Gatt could hardly be blamed for seeking their own favourite waivers rather than toughening the agreement.

The United Kingdom waiver will enable wider margins of preference to be granted to colonial produce. It has been sought under the guise of the provisions made in Gatt for the protection of industries in underdeveloped countries. Such countries are allowed to protect industries by putting tariffs or other obstacles in the way of imports of the particular goods in question. It would, however, hardly help the West Indies, for example, to put a protective tariff against the import of citrus fruit. The waiver in effect regards the United Kingdom market as part of the domestic colonial market for the goods in question and therefore to make it possible for the United Kingdom to increase the preferences on such colonial produce as citrus fruit, tobacco, and cigars, although Article I of Gatt would deny such new preferences.

The text of the new Gatt is to be issued in ten days' time. It will probably be little changed other than in Article 18, which deals with the under-developed countries. These countries will probably be given *carte blanche* to do what they wish in the matter of infringements of the basic Gatt code, though they may have to justify such infringements from time to time. The revision of the Agreement has also produced a proposal for setting up a new international organisation, to be known as the Organisation for Trade Co-operation which will have the responsibility of administering Gatt. In future, therefore, adhering countries will no longer be "contracting parties" of Gatt but members of the OTC. United States membership of this organisation will have to receive Congressional sanction. Reports from Washington seem to suggest that grave doubts are harboured concerning the willingness of Congress to do for OTC what it refused to do for ITO—the International Trade Organisation whose elaborate charter agreed at Havana was not ratified by Congress.

Television Merry-go-Round

THE structure of one of the four commercial television programmes contractors has undergone a drastic change. The Associated Broadcasting Development Company, which was founded by Mr Norman Collins and which is to provide programmes from the London transmitter during the weekend and from the Birmingham transmitter on week days, has gone into partnership with one of the unsuccessful applicants, the company formed by Mr Prince Littler. The capital structure of Associated Broadcasting Company is an issued £770,000 in 675,000 "A" ordinary shares of £1 each, 75,000 ordinary shares of £1 each and 400,000 1s. deferred shares, together with £750,000 of 6 per cent loan stock 1960/63. One-third of this loan stock is convertible at par into "A" ordinary shares, which gives it a speculative flavour. The latest date, 1963, is chosen because the proposed licence extends only until 1964 and for the very reason that it is short it has been found easy to place with City institutions.

Commercial television is an untried industry in Britain; estimates of earnings must be based largely on hypothesis, but it is hoped at some future date to go to market for a quotation. Control, then, must not be for sale through the market. Voting control is therefore reserved for the £75,000 of ordinary capital and this is not transferable without the consent of the ITA. As a placing operation the stockbrokers arranging the placing, Messrs W. Greenwell and Co. and Joseph Sebag and Co., have placed the shares in parcels of 10 ordinary and 90 "A" ordinary. They have placed into some strong hands. Mr Littler (including the Warburg interest) takes 250,000 shares. Other shareholders, since national papers are ruled out, are believed to include Iliffe Press, Westminster Press as proprietors of Birmingham papers, Pye Radio and Associated Electrical Industries. The ITA has agreed to transfer the licence originally offered to Mr Collins's company (which ceases to exist) to the new enterprise, but it is significant that Mr Littler's company, known as the Incorporated Television Programme Company, will continue to have a separate existence as programme producers for all four contractors. The principal objection to employing this company as programme contractor when it originally applied for a licence was that through its contracts it had a partial monopoly of entertainment talent. The new agreement implies that ABC will not have an exclusive claim to this talent.

Good Year for Eastern Banks

THE annual statements of the chairmen of the Eastern exchange banks always make good reading both for the layman and the expert in the Asian economies; this year the banks' accounts make good reading for their shareholders too. The Chartered Bank of India has made a straight increase in its dividend, from 14 to 15 per cent; and the Mercantile Bank of India and the National Bank of India increased their distributions through last year's capitalisations of reserves, the effective distribution (on the 1953 capital) by the Mercantile Bank being from 14 per

cent to 16½ per cent and by the National Bank from 16 per cent to 18½ per cent. The Eastern Bank and the Hongkong and Shanghai Bank merely maintained their dividends, but the latter has made a scrip issue of one-for-four, to rank for dividend in 1955.

The more liberal dividend policy appears to have been soundly based. The three exchange banks that have already published their accounts report a revival in activity, reversing the decline suffered in 1953. The Chartered Bank and the Eastern Bank also report increases in net profits, whilst the Mercantile Bank shows only a fractional fall. The banks have by now made good much of their loss of business in China by expansion in other parts of Asia; in China itself good progress is reported in winding up, though the chairman of the Chartered Bank, Mr Vincent Grantham, states that an indication has been given that China will "welcome the participation of British banks in the finance of external trade."

Good progress among the free Asian countries there certainly has been. The higher prices of tea and rubber have helped Ceylon and Malaya; quickening development in India, along with the creation of the new finance corporations, augurs well for the future of banking there, and the banks do not appear unduly worried lest that future should not be for them; Mr Grantham finds the decision to establish a State Bank of India, with its own nationwide system of branches that will in the process absorb the Imperial Bank of India, merely "interesting to note." Over Pakistan there is understandably much concern about political instability; but all five exchange banks joined with the International bank last year in granting a loan to the Sui Gas Company for the transmission of natural gas.

Competition from German Shipyards

ATTENTION was drawn to the strong competitive position of German shipyards by the launching on one day last week of two tankers of 38,000 tons deadweight each and of one passenger liner of about 10,000 tons gross—the first ship of its type to be built in Germany since the war. These three vessels are all for export, the tankers for Liberian registry and the passenger liner for Israel under the reparations agreement. Last year German shipyards launched 268 ships of 963,114 tons gross, compared with 253 ships of 1,408,874 tons in the United Kingdom; but the German total for export was 94 ships of 520,695 tons, compared with only 79 ships of 481,825 tons in Britain. By the beginning of this year Germany had risen to second place as a shipbuilding country, accounting for 13 per cent of the total tonnage of merchant ships under construction in the world, compared with 36.5 per cent for Britain. Although ten years ago German shipyards were derelict, they are now producing a much larger volume of new ships than ever before the war.

The remarkable increase in German shipbuilding capacity since the war is due mainly to two factors. The complete destruction of the German yards enabled them to be re-equipped entirely with new plant and laid out to take the best possible advantage of modern methods. Less

palatable is the fact that their shipyard workers are prepared to work much longer hours, and to work the three-shift system round the clock with a minimum of restrictive trade union practices. Nor, it seems, are they obsessed with the fear that by stepping up output they are going to work themselves out of a job. On the contrary, their ability to guarantee early delivery dates enabled them to obtain the giant's share of the orders for dry-cargo ships placed recently, including three out of four refrigerated cargo liners ordered by a British company. In fairness it must be acknowledged that British shipbuilding productivity is also improving, and that many British yards are prevented from offering early delivery because of the surplus of orders booked in earlier years and still to be worked off; and in view of the continual pressure for higher wages in the engineering industry they can scarcely be blamed for hesitating to commit themselves to fixed-price contracts for performance so far ahead. The Germans, having built up their order books again, are no longer so ready to offer fixed prices nor so free to promise early delivery. But they have put themselves in a strong competitive position which will test British yards in coming years.

Penny at the Pump

COMPETITION at the petrol pumps shows signs of increasing. Petrol prices generally were increased by ½d. a gallon in January in obedience to movements of prices in the Gulf, but opportunities for buying petrol at a discount appear to be growing. The attention recently attracted by the plans of Mr Cyril Kieft, who is primarily a manufacturer of racing cars and machine tools, to set up a local chain of pumps might equally have been directed on the activities of some of the oil companies themselves. Mr Kieft distributes petrol and diesel oil in the Wolverhampton district, and by concentrating his operations in a small area offers petrol for 1d. a gallon less than the big distributors. Neither he nor the other small distributors over the country who sell at prices lower than those charged by the big oil companies appear to get special terms from their suppliers; the difference in price comes out of their own margins.

Mr Kieft can probably get up to 400,000 gallons of commercial petrol and diesel oil a year on a long-term contract from the Lobitos refinery at Ellesmere, which refines Peruvian crude primarily for making lubricants and has some motor spirit and fuel oil as by-products. It does not produce any premium petrol, and Mr Kieft's plans for getting a regular supply of premium petrol were based on contracts with one of the larger companies not all of whom have found it easy to dispose of the tonnage of premium grades that they have available. These plans may have received a set-back since they became widely known, because oil companies do not like to give open support to price competition between distributors however marginal the quantities involved. But the fact remains that, quite apart from the bulk discounts given to big fleet users who are driving hard bargains with the oil companies in certain districts, some motorists who are good regular customers

are able to get discounts; the amount seems to vary from 1d. to ½d. a gallon. The biggest distributors do not believe that price differentials as small as this can have any significant effect, but they may make a substantial difference to the smaller oil companies who are finding competition in the premium market increasingly difficult.

Turbo-alternators Under Stress

Two of the four 100 MW turbo-alternators that a British firm had built for a Toronto power station suddenly and mysteriously failed within a few days of each other last April after two years' service. The manufacturer immediately informed the British Electricity Authority (which was using similar sets), other British turbo-alternator makers, and certain consulting engineers. An exhaustive investigation was started to discover the reasons for these failures, which had features in common with breakdowns previously experienced by another manufacturer. Sir Claude Gibb, chairman of C. A. Parsons & Company, Ltd., the firm concerned, has given at a recent meeting of the Institution of Mechanical Engineers a full and frank account of these mishaps and their origin; it is a most commendable example of adding lessons learnt from bitter experience to the fund of engineering knowledge.

The cause of the trouble at Toronto was metal fatigue—an ill-charted phenomenon that received much publicity in the Comet accidents. The points of failure in these turbo-alternators were the end-bells, which support the end turns of the rotor windings. These are now made from non-magnetic austenitic steel—a combination of non-ferrous materials—instead of magnetic low alloy steel, and are produced by sub-contractors using cold working methods. Despite the special step-by-step forging technique employed, some residual stress is produced, varying from bell to bell and from forge to forge. In addition, ventilation holes drilled in these end-bells to reduce the temperature in the set when it is running resulted in a high local concentration of stress and seriously weakened them. The third contributory factor was the stress cycle caused by shutting down and restarting the machines. Manufacturers were aware of these troubles and had allowed what were thought to be wide safety margins, but subsequent tests showed that the fatigue strength of drilled non-magnetic end-bells could in practice be much shorter than earlier calculations revealed.

The industry has drawn the conclusion that ventilation holes and all other forms of stress raisers must be avoided. Recent experiments, moreover, have shown that it is possible to reduce the residual stress in non-magnetic end-bells, and BEA has found a way of curtailing the temperature fall during a shut-down period. Another series of tests by BEA showed that some of its alternators were suffering from stress corrosion which can be caused by condensation when the end-bells are stationary. Although this did not contribute to the Toronto breakdowns, these bells have since been removed from BEA's service, and steps are to be taken to control temperature and humidity in places used for the storage of turbo-alternators.

Tanker Freight Rates Fall

THE seasonal rise in oil shipments to Western Europe and the Atlantic seaboard of North America usually brings good rates for tanker owners, and they have been able to fix tonnage this winter much more favourably than at any time in the past two years. But the re-opening of the Iranian oilfields has at times led to some very wide and rapid fluctuations in these rates. At one time Persian Gulf fixtures, at scale rates plus 50 per cent to 60 per cent, were between 30 per cent and 40 per cent above those from the Caribbean. In the last few weeks, however, much more tanker tonnage has become available than charterers have needed, and voyage rates fixed from both oil exporting

areas have dropped. The Persian Gulf rate has fallen like a plummet to scale flat. The Caribbean rate, also for end-March and April loading, has dropped to scale rate plus 10 per cent, and is expected to fall further. The peak demand for spot tonnage is now almost over, but there are grounds for believing that summer rates this year will not fall as far as they did last year, when July shipments were fixed at scale rate minus 47½ per cent.

All this activity has been confined to voyage charters. The time charter market has almost ceased to exist. No real business has been reported since November when Shell renewed some old charters and fixed a few fresh ones. With the uncertainty created by this heavy see-sawing in the voyage market, neither tanker-owners nor charterers have been willing to make period contracts. But, since it may be difficult for charterers to depend entirely upon voyage-to-voyage fixtures, tanker-owners expect to see some revival in time charters before very long.

Rotating Raw Wool

THERE are two ways of stockpiling wool. One, as practised in this country, is to keep a stock of raw wool that can be drawn upon in an emergency for the production of fabrics for military and other essential purposes. The American way is to give priority to the Army's need for

RONALD MORRISON & CO. LTD. EDINBURGH

The sleeping baby test

WAIT till your baby is asleep; then put it in the back seat of your car. (If you haven't got a baby, borrow one.) Now fill up with Shell with I.C.A. and go for a drive. Try ticking over, driving slowly, accelerating, cruising. Don't, of course, brake violently, swerve sharply, or hoot loudly. Above all, don't sing, though the way Shell makes your car behave may easily make you want to.

Assuming well-surfaced roads and good springs, the baby will stay asleep. This means that Shell with I.C.A. makes your car run more smoothly.

Why? Two main reasons. The I.C.A. in Shell prevents pre-ignition, which is the main cause of engine roughness. At all speeds your engine turns over more smoothly and more quietly. This means better performance and longer engine life, too.

Secondly, Shell has better "mixture distribution". This means that an exactly equal amount of petrol vapour enters each cylinder on the induction stroke, so each piston is driven with exactly the same force. Your engine runs as smoothly and efficiently as it can.

the most powerful petrol you can buy

cloth, and he has the advantage that cloth will keep indefinitely if properly stored, and that the disadvantage that military needs may change. The British method gives flexibility, but the stock has now come over to prevent deterioration. The time has of course to start rotating the British stock, and the Board of Trade has sensibly followed the policy adopted when the stock was acquired: the quantities to be bought and sold will be stated publicly well in advance, and its operations will be conducted through normal market channels.

The entire stock of about 100 million lb (clean basis), or roughly 500,000 bales, will be replaced during the next seven to ten years, and the British Wool Federation will again act as agents. The wool to be rotated will be sold in London, the first sale probably being in May, and the new wool will be bought in the Commonwealth auctions, as was the original stock. The maximum quantity replaced in the first year ending March, 1956, will be only 30,000 bales. A particular grade in the stock—about half of which is merino and half crossbred wool—will not necessarily have to be replaced by exactly the same grade.

Both the buying and selling will be spread over the year, though it will not be possible to ensure that the two operations are always in step, for the London and the Dominion markets are not always operating at the same time. Naturally there is no intention of trying to operate in the markets at the most favourable moment; that would break the rules, and it is also unnecessary. The object is simply to sell at prices that cover the cost of replacing wool. Plainly the operation is designed to minimise the disturbance to the market, and there is no reason to think that it will be harmful. The quantities likely to be rotated in any single year are negligible in comparison with a world production of about 2,500 million lb clean and with the Commonwealth's own production of about 2,000 million lb. Rotation will not be a negligible factor on the London market, however, where the turnover is some 300,000 bales a year, but buyers may welcome the opportunity of obtaining more spot wool there.

Mixed Blessing in Cotton

THE maze of regulations governing the disposal of surplus American commodities has frequently proved the despair of officials in Britain and other receiving countries. The regulations cut across normal commercial practice, but as laws of Congress they cannot be modified in substance, and the American Administration, with one eye on Capitol Hill, is reluctant to give way on matters of detail. At present Whitehall is unhappily digesting the implications of a transaction that clearly ought to help the cotton industry, but would compromise government policy. It arises out of the recent American aid agreement with Pakistan, one part of which covers the supply of surplus commodities. Pakistan evidently did not want American raw cotton and is taking cotton textiles to the value of \$20 million instead, hard though it may be to see how cotton textiles come within the definition of "surplus." The United States, which does not normally sell cotton textiles to Pakistan, is anxious to avoid treading on the toes of the traditional exporters to that market. America has therefore agreed that the textiles shall be made in "third" countries

to which raw cotton of the same value will be shipped. Tenders have been opened by the Pakistan government, and Lancashire has submitted bids for the textiles that it is best fitted to supply.

Here the troubles begin. If Lancashire exporters are successful, someone must take delivery of the raw cotton, find buyers for it, and pay the exporters out of the proceeds. The British government, having turned its back on state trading, would be most reluctant to assume any responsibility for these transactions, and no doubt it hopes that raw cotton merchants and the exporters would jointly take responsibility. The value of the textiles will naturally be higher than their raw cotton content, so some cotton will be left over. How could the government satisfy the Americans that this part of their gift had not merely reduced Lancashire's normal purchases of American cotton? Another snag is that half the raw cotton must be shipped in American vessels. The government accepted that condition when it bought surplus American coal for sterling, but it could not do so again and expect any protests against this disputed form of flag discrimination to be taken seriously. Yet if it does not accept the 50 per cent rule, Lancashire would claim that its own interests were once more being sacrificed for the interests of other British industries.

Rio Tinto Down Under

CABBAGES at Rum Jungle fetch 7s. 4d. a lb. Shares in the uranium mines in the Northern Territory and other areas of Australia have fetched equally fantastic prices on the City stock exchanges while the geiger counters cluck in the back of beyond. The average grade of uranium ore is higher there than in South Africa. In the Union uranium production lives on the back of gold mining; in Australia uranium comes first and the other minerals mined with it are side dishes to the feast. But the ore, occurring in local pockets, varies in grade, and even with guaranteed prices for the uranium it is uneconomic to mine some ore bodies in these inaccessible and inhospitable areas unless a treatment plant is put up on the spot.

Only faint echoes of the Australian uranium boom reach this country. One came to the City recently, when Rio Tinto put some of its negotiations with the Australian producers on view. These negotiations, together with its interests in the Algom Mines in Canada, show that Rio Tinto, having sold off most of its Spanish properties, is becoming interested in uranium in the Commonwealth on a large scale. But it is picking its way forward with care. It first made an attempt to secure a stake in the Alligator-Sleisbeck uranium field in the Northern Territory, with the ultimate intention of building a treatment plant there. That approach failed when Rio Tinto's proposals were turned down by Northern Uranium Development and Uranium Development. Those two mines were satisfied to send their ore to the Rum Jungle treatment plant, a hundred miles or so away. Another producer, North Australian Uranium, was prepared to go along with Rio Tinto, but this company had announced earlier that it would be uneconomic to send its ore for treatment at Rum Jungle. The inference, presumably, was that the ore was of a low grade, but a treatment plant for that mine alone was out of the question.

Having failed in one direction, Rio Tinto has succeeded in another a long way to the south-east in the Mount Isa-Cloncurry area of Queensland. There it has bought a controlling interest in Mary Kathleen Uranium; it will assume the direction and financing of the exploration and development programme. Australasian Oil Exploration, which will provide much of the technical aids, will have a 39 per cent interest, and Walton McConachy Vendors, representing the original prospectors, a 10 per cent interest in the venture. If, as is hoped, the ore reserves justify further development, Rio Tinto will be prepared to put up the money, probably running into millions, for the erection of a treatment plant and ancillary equipment.

No Potash from ICI

IMPERIAL CHEMICAL INDUSTRIES has abandoned its plan to exploit the vast Yorkshire potash deposits which were expected to provide enough home-produced potassium chloride for fertiliser production for 200 years. Early surveys suggested that the deposits could be won in the same way as salt, by dissolving the potassium salts in water and pumping them to the surface. Seven years of experiment and £400,000 spent have shown that the process would not work satisfactorily and, faced with the alternative of mining the deposits at a depth of 3,500 to 4,500 feet, ICI have pleaded ignorance of mining techniques and withdrawn.

Whether new plans will be made to mine the deposits depends on the value of a home source of potash. There is no difficulty in obtaining as much potash as the fertiliser industry requires from Western Europe; France and Germany between them supplied most of the half million tons imported last year at a round figure of £15 a ton. Both Fisons, who would have been the principal customers, and ICI have already embarked on one expensive venture designed to replace imports of sulphur with home-produced sulphuric acid. It would not be surprising if it was decided that the cost of deep-mining the potash, which is now the only way of getting the deposits to the surface, outweighed the cost of importing the whole of the country's potash requirements.

Wholesalers in a Backwater?

THE surge of buying in the home market has largely passed the wholesalers. Until late in 1954, the value of their sales was little higher than in the preceding year. Trade has recently improved as retailers ran down their high stocks of textiles; in January the value of sales was nearly 6 per cent higher than the year before. But if this improvement is compared with the expansion in retail sales, which for last year as a whole showed increases of about 10 per cent for the big shops, it seems that a good deal of the extra trade has missed the wholesalers. Their turnover seems to be closely linked with that of the independent retailers. It would be wrong to think that the independents are steadily losing business to the big shops—they have captured a big proportion of the boom in

household goods and in radio and television. sales—but they have not done so well in clothing sales, where the competition of the multiples has been the most dominating feature in the retail market for more than two years.

The good results shown by the department stores have largely been due to the big expansion in sales of household goods, on which profit margins are attractive, and competition from the multiples negligible. Their high made it possible to cut margins on those goods where competition from the multiples has made the most serious inroads, and the evidence suggests that sales in the household departments are continuing much as usual. There is little that the wholesalers can do under circumstances like these to capture more trade. The multiples do not deal with them, and their turnover depends on the level of clothing and textile sales by other retailers who do. When many retailers are anticipating a wave of price cutting in Lancashire, they will probably be inclined to keep their textile orders to a minimum.

SHORTER NOTES

British overseas trade in February—a short month—was in slightly better balance than in January. Exports amounted to £233.0 million fob, re-exports to £9.0 million and imports to £309.5 million cif; the trade deficit fell by £5.9 million to £67.5 million. The average value of exports (excluding re-exports) in the five months from October, when the dock strike began, was 2½ per cent higher than in the same months of 1953-54, whereas the October-January average had been slightly below that of the same period a year ago.

British Overseas Airways Corporation is expected to show a net profit for the financial year that ends this month, the fourth successive year in which the corporation has paid its way. For 1953-54, BOAC reported a gross profit of £2 million and a net surplus of nearly £1 million after payment of interest and tax. This year's profit is expected to be smaller; the grounding of the Comets in April having cut the corporation's capacity by a quarter.

Steel production exceeded the annual rate of 20 million tons for the first time last month, and pig iron output was also a record. But supplies are still very tight. The industry now expects that about one million tons of steel products will have to be imported this year, twice as much as it previously thought.

Cocoa prices have weakened further; Accra cocoa for March-May shipment is now about £322 a ton compared with £410 a ton at the end of January.

The rate of wool consumption in the British wool industry rose slightly in January and was 1½ per cent higher than in January, 1954; consumption in topmaking, however, was still 2½ per cent less than a year ago, but woollen consumption was 9 per cent higher.

Company Notes

J. SEARS (TRUE-FORM BOOT). Mr Charles Clore so changed the structure of J. Sears last year, turning it from a boot and shoe company into a holding company for his interests, that a direct comparison between the profits of 1954 with those of 1953 is of little value. So far that matter is a direct comparison of dividend payments. The new J. Sears is to pay a dividend of 100 per cent for 1954; in 1953 the old J. Sears paid a dividend of 50 per cent. And the directors of the company intend to make a 400 per cent free scrip issue so as to consolidate the 1s. ordinary and "A" ordinary shares into 5s. units.

The preliminary results, subject to audit, of two of the principal subsidiaries show that Mr Clore's interests are doing well. The boot and shoe company, Freeman Hardy and Willis, reports a gross profit of £978,000, compared with £720,000. It is this company which has to bear the cost of the new rent rolls, following the freehold-leasehold transactions. Thus this new profit is struck after charging £250,000 for rents on properties sold and leased back after February, 1953, but before charging £116,000 for interest and rents payable to the holding company. The company is paying a tax free dividend of 20s. per share, against 14s., and making a special distribution which will absorb £920,312 from the revenue reserves of the boot company; so far as that distribution accrues to J. Sears it will be added to the company's capital reserves. The other company, Bentley Engineering, which controls the hosiery machine manufacturers, Mellor Bromley, reports a profit of £1,635,000 (compared with £1,163,000) and effectively increases its dividend from 12½ to 25 per cent. For what the comparison is worth, J. Sears made a profit (including pre-acquisition profits of £1,559,000) of £3,200,000; in 1953 the company returned a profit of £1,131,000.

STORE PROFITS. Three of the smaller department store groups, A. W. Gamage, John Barker and Bentalls, have recently announced their dividends and trading results for the year to January 31st. Each of the dividends disappointed the market and the prices of all three ordinary stocks were marked down. Some investors had hoped for a dividend of 30 per cent from A. W. Gamage. They received 27½ per cent, compared with 25 per cent in 1953-54. Some looked for something more than the maintained dividend of 22½ per cent declared by John Barker. And after a 400 per cent free scrip issue some had anticipated a bigger increase in dividends from Bentalls than the effective increase from 20 to 25 per cent actually made. Yet investors had been correct in seeing that bulging pay packets, easy credit, and higher consumer spending

must spell higher profits from all three companies.

All these three department stores trade in London and its suburbs; their results strengthen the impression that trade in the metropolitan stores was a little brisker than in the provincial centres. Of the three, the biggest increase in profits—of 17 per cent, from £341,477 to £400,531—has been reported by the Kingston store, Bentalls. A. W. Gamage comes next with an increase of nearly 12 per cent, from £333,341 to £372,969. John Barker has been able to manage an advance of only about 7 per cent, from £678,795 to £724,553, and it is the only one of the three not to pay a higher dividend.

BRADFORD DYERS. A cut in the final ordinary dividend from the equivalent of 7½ per cent to 6 per cent brought down the price of the £1 ordinary stock units of Bradford Dyers from 29s. to 26s. Hopes had been kindled last September by the increase in the interim payment, but the final, making 10 per cent for the year, leaves the total distribution effectively unchanged from the 15 per cent distribution made in 1953 before the 50 per cent scrip issue.

There is a reason for the directors' caution. The net profit available to the parent company is down from £552,191 to £419,608. Outwardly at least the setback in profits seems to have arisen in Britain. The trading profit of the parent company and its British subsidiaries has fallen from £1,672,135 to £1,415,344 while profits of the overseas subsidiaries have gone up from £725,385 to £834,614. This is the exact reverse of 1953. But this simple division between British and overseas profits may not tell the whole story, for about 40 per cent of the output of the Association's British factories is for export. Thus it may be that the decline in profits on the home front reflects the disappointing performance of British textile exports. The sudden drop in the price of the Association's stock units showed that investors had misjudged the immediate situation; they now yield 7.7 per cent.

DORMAN LONG. The financial year of Dorman Long had ended but its accounts for that year had not been audited when its ordinary shares were offered to the public in November. Commenting on these recently published accounts, Sir Ellis Hunter can now welcome the resumption of "the association with shareholders . . . a much healthier relationship" but the prospectus itself has stolen most of his thunder.

Last year the group spent about £5,800,000 on capital account, completing the second stage and just beginning the third stage of the development programme. The largest of the projects now in hand is the installation of rolling mills

at Lackenby to balance the new steel making capacity of the group and to produce universal beams, structural sections and billets. That installation is the largest single item of the estimated bill of £33½ million for the final stage of the programme. Hence, it is not surprising that outstanding capital commitments stand in the accounts as at October 2nd at £13,952,000. Once this stage has been completed, the group's "integrated capacity" will be increased by about 25 per cent though the number of employees will go up by only about 500.

	Oct. 3, 1953	Oct. 2, 1954
<i>Cons. balance sheet:—</i>		
Gross fixed assets	22,504,587	28,148,551

<i>£1 ordinary stock at 26s. 3d. yields 6 2s. per cent.</i>		

The course of trade while Dorman Long is completing this enormous programme should be favourable. On the structural engineering side of the business, for example, Sir Ellis tells shareholders that "orders on hand will ensure steady employment for many months, reflecting the confident view of the future of industry generally." Similarly, the bridge building subsidiary is "handling a larger volume of work than for several years and by far the greater part of this lies overseas." And the railway and road programmes in this country should offer an opportunity to that subsidiary at home.

LEYLAND MOTORS. Leyland Motors in the year to September 30th exported about half its total output. That was a record for the company and an

	Years to Sept. 30, 1953	1954

<i>£1 ordinary stock at 12½s. 3d. yields 4 19s. per cent.</i>		

achievement as yet unmatched by any other commercial vehicle maker. The directors have thus good reason for being more interested in the state of overseas markets than most. These markets are highly competitive, but Leyland's salesmen were seen in every part of the world last year, including Russia and China. Here too is the origin of Mr C. Basil Nixon's comments on the necessity of designing and building a dual range of vehicles, one for the home market and one

for overseas. Batch production like this adds to costs and trims margins, and these may already have been squeezed by last year's wage increases and the reduction of some selling prices. The volume of sales abroad, however, was going up and at home the rate of sales improved steadily as the year progressed. Before the end of the year "urgent measures" had to be taken to speed up production.

Expanded sales explain the latest increase in trading profits (from £2,997,498 to £3,135,383) but the narrowness of profit margins explains why the increase was modest. Additional production was achieved without adding to working capital. Indeed the total of stocks and debtors was reduced, with a consequent reinforcement of liquid resources. And since the end of the financial year the bank overdraft, already reduced in the course of the year, has been extinguished. The £1 million capital programme that Leyland Motors has in prospect will presumably have the first call on these cash balances, but the remarkable improvement in liquidity, coupled with the sharp advance in net profits from £771,297 to £1,056,311, must have some bearing on the directors' decision to raise the ordinary dividend from 25 to 30 per cent. That increase, the 100 per cent free scrip issue and the news of more deliveries in the current financial year may tempt investors to treat the directors' warning about future dividends as a homage to convention.

ASSOCIATED ELECTRICAL INDUSTRIES. The accounts of Associated Electrical Industries were drawn up before the acquisition of Siemens Brothers was completed. Hence, that purchase is not consolidated in the

group's assets. Even so, the net assets representing the preference and ordinary stockholders' interests in the AEI group topped £50 million last year. At over £48½ million the net assets attributable to the ordinary capital alone are more than double the figure (£22½ million) applicable seven years ago. One of the most significant figures in the accounts is the £7,863,000 of outstanding capital commitments; at the end of 1953 that figure stood at only £2,890,000.

The accumulation of assets has been financed in part by a steady expansion in trading profits. Last year they went up

from £13,456,282 to £14,758,811, and the ordinary dividend was raised from the equivalent of 11½ per cent to 14 per cent. The directors announce that yet another record in both the value and volume of production lies behind the increase in profits. They add—as a significant pointer to the future—that although foreign competition has grown even keener there was "a substantial increase in export orders last year." In 1953 they were able to report only that the level of export orders had been maintained.

LONDON STOCK EXCHANGE

Next Account begins: March 16th
Next Contango Day: March 16th
Next Settlement Day: March 22nd

INVESTORS began to have second thoughts this week. Equities had remained firm until the week-end, but after the week-end their prices began to drift down in the face of light selling in a quiet market. Turnover contracted. The heaviest falls came on Wednesday, when the market was unsettled by the overnight setback on Wall Street; on that day the Financial Times ordinary share index dropped from 184.0 to 181.3, having touched 186.2 just before the week-end. Equity prices began to drift downwards on Monday although gilt-edged prices remained quite steady. The Funds, however, were unsettled later and the shorts and short-mediums were marked down on the stringency in the money market. This weakness communicated itself to the long dated and undated issues. Similar conditions ruled on Wednesday and further declines throughout the gilt-edged list were recorded. In the foreign market buying of German issues continued immediately after the week-end but this demand soon dried up.

Net losses in the industrial market were not particularly heavy but the weakness in prices persisted. Store shares were marked down at first quite heavily on profit taking just before settlement day. Many of the other losses were reported in shares which were affected by the announcement of trading results and dividends. Electrical equipment and engineering issues were notably weak. Steel shares moved against the trend at first on the strength of Sir Ellis Hunter's statement to the Dorman Long shareholders, but later on these prices, too, fell away. Dollar stocks were all marked lower in sympathy with Wall Street.

The oil market was enlivened at the beginning of the week on vague reports of scrip issues pending from Royal Dutch and Shell; some of the buying of their stocks was reported to have come from America. But prices reacted and gains were wiped out. Rubber shares were quiet and tea shares were marked down on the fall in price of the commodity. Kaffirs rallied on Tuesday on Cape and Continental support but some weak selling brought prices down later.

Financial Statistics

EXCHEQUER RETURNS

For the week ended March 5th there was an "above-line" surplus (after allowing for Sinking Funds) of £21,913,000 compared with a surplus of £29,170,000 in the previous week and a surplus of £17,835,000 in the corresponding period of last year. This brought the cumulative account to a surplus of £510,130,000 compared with a surplus of £219,432,000 in 1953-54. Net expenditure "below-line" last week reached £21,412,000, bringing the total cumulative surplus to £542,296,000 compared with a deficit of £164,211,000 in 1953-54.

THE MONEY MARKET

The authorities are continuing their policy of keeping the money market on a tight rein. On four successive working days, from Friday last to Tuesday of this week, the market was "in the Bank"—though the total borrowing amounted to much less than that forced on the market in the four working days before the increase in Bank rate to 4½ per cent on February 24. Before the weekend the amount of penal borrowing was trifling and limited to only two or three houses; on Monday more houses were affected—some had seven-day loans to repay—despite a fair amount of official aid (given indirectly through the banks).

The credit squeeze kept demand for bills from the banks and other domestic buyers small for most of the week, whilst Continental and North American demands declined as premiums on forward exchange cover widened further. On Wednesday, however, a marked easing of credit in Lombard Street permitted moderate business in April and May maturities at 3½ per cent, and at 3¼ per cent in some May and early June bills.

The average Treasury bill rate at last Friday's tender rose by 3½d. per cent to £3 15s. 8½d. per cent (or just over 3½ per cent), but the rise was wholly due to lower bids by outside tenderers; the market itself maintained its bid at £99 1s. per cent, so that despite an increase of nearly £9 million in total applications (a good part of it on overseas account) the market's allotment also remained unchanged at 50 per cent.

ADMINISTERS NATIONAL SAVINGS

The equilibrist of Lombard Street...

Delightful as it might be to finance trips to the moon or devices for perpetual motion—would you do it with money entrusted to you for safe-keeping?

The investment experts of the Insurance Offices are sometimes criticised for not indulging heavily in so-called 'risk' investments. But the funds which they handle are, in the main, the savings of millions of policy-holders. These funds *must* be safely and shrewdly invested.

The Insurance Offices are really much more enterprising than their critics believe. They are by no means wedded to 'gilt-edged' for life. One third of their assets are invested in Industry: and in 'equities' alone £500 million.

In fact a happy balance is preserved between security and enterprise. Because Insurance funds are vast and safe, people trust Insurance. And only because people trust Insurance are the funds vast and safe. Insurance is being responsibly, resourcefully—yes, even creatively—handled by practical people with *your* interests in the forefront of their minds.

COMPANY MEETINGS

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

BETTER ECONOMIC OUTLOOK IN THE EAST

MR V. A. GRANTHAM'S SURVEY

The one hundred and first ordinary general meeting of The Chartered Bank of India, Australia and China will be held on March 30th in London.

The following is an abridgement of the statement by the chairman, Mr V. A. Grantham, circulated with the report and accounts for the year 1954:

INTRODUCTORY

Last year, when I addressed you, it appeared that the painful readjustment imposed on most Eastern economies by the collapse of the Korean war boom had on the whole been completed and that the future could be regarded with rather more hope. During the past year most of the primary products of the East have enjoyed steady markets, and tea and rubber prices in particular showed substantial increases towards the end of the year. Rice is in a special position for, although its price has fallen to the disadvantage of producing countries like Burma and Thailand, the vast populations elsewhere in South East Asia who depend upon it as a vital foodstuff have benefited.

With export earnings more assured, the economic outlook in the East has shown corresponding improvement. Japan, whose position a year ago was causing anxiety, has succeeded in restoring some measure of stability, and the Indian economy has made substantial progress. On the other hand, the situation in Indonesia continues to cause grave concern and, although the fighting in Indo-China is mercifully at an end, the task of rehabilitating the Vietnamese economy after so many years of war remains considerable.

The various development schemes which are intended to raise Asian living standards continue to make good progress and economic prospects in the East during the present year do not appear unfavourable.

SIGNS OF RELAXED TENSION

During the year under review there were signs that tension between the Atlantic countries and the Communist bloc was relaxing and that conditions were becoming more favourable to an expansion of international trade. The fighting in Vietnam was brought to an end almost at the moment when an extension of the conflict had become inevitable. The volcanic situation in Korea remained quiescent during the year and the People's Government of China displayed more willingness to restore normal diplomatic relations with the United Kingdom. The conference at Geneva, although it propounded no settlement of the clash of ideologies in Asia, did at least demonstrate that diplomacy can be better conducted by plenipotentiaries than by commissary broadcasters. The most significant, if most menacing, development during 1954 has been the shifting of the centre of gravity in world affairs from the Elbe to the Formosa Straits.

In some of the eastern countries there

persist political, social and economic problems which appear to be increasingly difficult to solve but in every land to which its establishment extends the bank is still able to make important contributions to the prosperity of its hosts by facilitating the international exchange of goods and services. Because the bank is peculiarly fitted and particularly well equipped to discharge this function it may be less exposed to nationalistic prejudice than other foreign enterprises engaged in purely domestic trade and industry in countries newly-emancipated and over conscious of their independence.

ADJUSTMENT AND ADAPTATION

Since nationalism was awakened in Asia, and this occurred quite a long time ago, the overseas organisation of the bank has undergone a protracted process of adjustment and adaptation. This process has been accelerated since 1945 and we can now begin to discern what will be the ultimate form of the bank's relations with the governments and peoples of the eastern countries.

It has never been possible for the bank to rest upon its laurels, since any failure to adapt itself to mutable world conditions and changes in the direction of international trade would have led to stagnation. Although the bank may again be able to participate in the financing of the external trade of China, the conditions under which it can be accomplished will bear no resemblance to those which obtained when our branches conducted a thriving general banking business in the former treaty ports. Almost a generation has passed since we were engaged in what was the most interesting and fascinating of all banking business, the operation of the Chinese silver exchanges, but in taking advantage of new opportunities for development presented to us since the end of the second world war we have not forgotten how important was the China field of operations.

It was important not only on account of its profitability but because it constituted a vital part of the international organisation of the bank as a whole. The consequences of our withdrawal from China will have been obscured from the stockholders by the expanding scope of the bank's activities in southern and south eastern Asia but your directors are persuaded that there must now be expansion in other directions and a start has been made by the opening of two branches in Aden, a development to which reference was made in my last statement.

COURT OF DIRECTORS AND GENERAL MANAGERS

Two years ago I intimated that Lord Colgrain, because of his advancing age, had found it necessary to retire from the court. Lord Colgrain died after a short illness in November last and it is fitting that I should again pay tribute to his character and to the statesmanship and qualities of leadership he displayed while presiding over the British Bankers' Association and the Committee of London Clearing Bankers during

the war. Lord Colgrain was a member of the court for thirty years and we shall always hold his memory in honour and affection.

In previous statements and at the annual general meetings of the stockholders I have referred with gratitude and admiration to the services rendered to the bank by its chief general manager. Early in January of this year the court of directors recorded their pride and satisfaction upon learning that Her Majesty the Queen had graciously signified her intention of conferring upon Mr Cockburn the Order of Knighthood. On January 15th Mr Cockburn retired from the chief executive post to which he was appointed in 1940 and my colleagues and I were very happy to elect him to membership of the court. The stockholders will be invited to confirm his election at the annual general meeting. Your directors have caused to be inscribed in their minutes a resolution recording their appreciation of the highly distinguished and professionally competent services rendered by Mr Cockburn during his tenure of the office of chief general manager, which coincided with a period of unparalleled difficulty and danger for our country and the bank.

Mr H. F. Morford, until recently deputy chief general manager, has been appointed chief general manager and your directors have every confidence in him as a worthy successor to Mr Cockburn.

Mr David Beath and Mr Stafford C. R. Northcote, who have served with distinction in the East and have lately undertaken extensive tours of inspection, have been appointed assistant general managers.

THE BANK'S BALANCE SHEET

As the result of an increase of approximately £17 million over last year's figure the total of the bank's balance sheet has once again exceeded £200 million. The increase, due in part to rises in world prices of tea, rubber, tin and other staple commodities indigenous to the countries in which the bank operates, is also a heartening indication that we are more than holding our own in the face of competition and despite the protective trading and exchange restrictions, particularly in the field of import control and licensing, which the governments of the countries concerned have had occasion to impose or maintain.

On the left hand or liabilities side of the balance sheet, current and other accounts, fixed deposits, bills payable and acceptances on account of customers show increases of £11,726,018, £3,370,412, £293,796 and £1,206,195 respectively. It will be seen from the assets side that nearly three-quarters of the increase in current accounts and fixed deposits has been employed in the purchase of bills of exchange and the granting of advances, which figures show rises of £3,411,530 and £7,488,627 respectively. Our holdings of cash in hand, at call and at bankers and our investments in Government and other securities (other than those lodged against our note issue) have also increased by £2,120,729 and £3,521,933 respectively.

It is, of course, essential that we should maintain the liquidity of our overall position, and in this there has been no material change, the ratio between cash and call money to our "demand and time" liabilities, excluding notes in circulation against which security has been lodged, being only fractionally lower at 18.54 per cent against 18.98 per cent last year.

The completion of a new office building in Singapore, coupled with the continued implementation of our programme for the provision of houses for our Eastern staff officers and the expansion and renovation of our bank premises generally, has given rise to an increase in the net figure for bank premises and furniture, after allowing for a further £200,000 written off, of £204,887.

PROFIT AND LOSS ACCOUNT

The net profits for the year amount to £723,147, an increase over those of last year of £29,349. Difficult working conditions have persisted, but our balance sheet testifies to rather better conditions generally, in addition to which working costs which have been rising each year are at long last showing signs of greater stability.

We paid an interim dividend in October last of 7½ per cent less income tax, absorbing £144,375, an increase of ½ per cent over the interim dividend of the previous year, and it is now proposed that, out of the balance now available, a final dividend of 7½ per cent less income tax should be paid, costing £144,375, making the total distribution for 1954 15 per cent as compared with 14 per cent in 1953.

We propose to repeat the allocations made in each of the past four years to the Pension Fund and Widows' and Orphans' Fund of £125,000 and £20,000 respectively. We have again applied £200,000 towards writing down bank premises and furniture account. It is proposed to transfer £100,000 to contingencies account as compared with £75,000 last year and to carry forward the slightly decreased balance of £392,910.

INDIA

It is encouraging to review the progress that has been made during the first three years of India's Five-Year Development Plan. Already there has been a substantial improvement in India's agricultural production and, although estimates vary, it is likely that production of food grains has increased by as much as 20 per cent. Two favourable monsoons have contributed substantially to this encouraging increment, but the extension of irrigation works and the improvement of peasant technique have already shown considerable effect and give ground for optimism in future years.

Although government investment in industry during the first three years of the plan has been well below schedule, Indian industrial output has increased by more than a third, an indication that the private sector of industry is playing an effective part in the country's economic expansion.

In practice it is improbable that the plan will be completed within the stipulated period, although the various projects in progress are likely to gather impetus in the next two years. This will to some extent save the Indian economy from the strain that would be imposed on it by a steep rise in development expenditure and incidentally render necessary a lesser degree of deficit financing. It is interesting to note the proposal which has been accepted in principle by the government, to establish a State Bank of India, the main object of which is to set up a nationwide system of branches and thus increase rural banking facilities.

A committee appointed by the Reserve Bank and presided over by Mr A. D. Shroff,

suggested that banks might endeavour to provide a measure of indirect long-term finance by subscribing to special institutions. This bank, in common with the other eastern exchange banks and in association with the Commonwealth Development Finance Company, Limited, and a number of insurance companies has subscribed part of the capital of the new Industrial Credit and Investment Corporation of India. The corporation should be able to make a considerable contribution to the financing of private industrial development in India and this bank's participation is an indication of our interest in Indian economic progress.

PAKISTAN

The past year has again been one of difficulty for Pakistan. In the early months the defeat of the Moslem League in the first provincial elections held in East Pakistan since partition was followed by labour unrest and rioting in that area, which seriously affected the jute and paper industries. Later, East Bengal suffered disastrous floods which caused extensive damage to the jute crop, and in September exceptionally heavy rain was followed by further floods in the Punjab.

Political instability and the strain on the country's exchange reserves imposed by the industrial development programme tended to cause anxiety, but the strengthening of the government in October and the announcement that United States economic aid to Pakistan would be substantially increased went far to restore confidence.

Last year, in reminding you that Pakistan has no coal, I suggested that the natural gas which had then been recently discovered might provide an important source of industrial power. This bank and five other eastern exchange banks have now joined with the World Bank in granting a loan to the Sui Gas Transmission Company, a transaction which is particularly notable as the first World Bank loan in which the British exchange banks have participated. The project has been jointly sponsored by the Pakistan Industrial Development Corporation and the Burmah Oil Company (Pakistan Trading) Limited, and it is pleasing to report that progress has already been made in laying the 350-mile pipeline from Sui to Karachi.

Burma.—In Burma, as in Thailand, the government organisation which had been entrusted with a monopoly of rice sales abroad was slow to react to the changed conditions in overseas markets. The policy of attempting to maintain high prices has only led to the accumulation of substantial unsold stocks, which are subject to considerable risk of deterioration while in store. While this surplus remains unsold, the country must forgo much-needed earnings of foreign currency, while the exchange reserves are being reduced at a rapid rate in order to finance government purchases abroad of capital goods and equipment required in connection with economic development schemes.

CEYLON

It is pleasing to report a progressive improvement in Ceylon's economic position during the past year. In 1953, the essential problem continued to be the adjustment of the country's economy to the new conditions prevailing after the collapse of the Korean war boom and the reduction of the trade deficit from the high level it had reached in 1952. Last year, except for a negligible deficit in June, the balance of trade was in Ceylon's favour month by month, and the external reserves, which in November, 1953, had fallen to their lowest level for a decade, rose throughout the year.

The main cause of this favourable trend was the advance in price of the island's main export, tea, and Ceylon tea producers have

been fortunate in that higher prices have coincided in their particular case with a record crop.

MALAYA

The year 1954, against the background of two particularly difficult years which preceded it, presents a happier picture for Malaya, for the country and its economy have benefited by an improvement in the security position and by a considerable increase in the price of rubber.

Final details of Malaya's overseas trade are not yet available, but it is reasonable to assume that the trade deficit for the full year will be smaller than in 1953. Rubber production rose by some 10,000 tons to 584,434 tons and, contrary to the expectation of many producers a year or so ago that there would be a substantial surplus production, world purchases of natural rubber have actually increased and more than set off the increase in production. This is an encouraging result, particularly when it is remembered that the last year in which Malaya enjoyed a trade surplus was in 1951 at the height of the Korean war boom. Further efforts to resuscitate the entrepôt trade have met with little success, but secondary industries are slowly growing.

During this coming year the prosperity of Malaya may be affected to a greater degree than hitherto by the production of the synthetic rubber industry, since GRS synthetic rubber is at present cheaper than the comparable grade of the natural product. The importance of this consideration was emphasised by the publication in October of the report of a mission, presided over by Sir Francis Mudie, which conducted an investigation into various aspects of the competitive position of the Malayan rubber industry. The mission concluded that, in order to lower production costs and so increase the competitiveness of the Malayan industry, replanting with high-yielding stock must be accelerated.

The mission's recommendations have aroused considerable controversy within Malaya and for the time being government has taken no decision but is awaiting the report of the World Bank mission, which visited Malaya early in 1954.

Interest in the tin industry during the year has centred upon the proposed control scheme, which provides for the establishment of a buffer stock. Though world tin production has tended to fall and consumption to rise, Malayan producers favour the scheme, in the expectation that it will give the industry the benefit of price stability. The Malayan government has published its arrangements for controlling production if and when the scheme comes into operation, but at present the agreement has not been ratified by sufficient of the signatory countries to enable it to be brought into force.

Production in Malaya of tin at 60,691 tons was the highest annual output recorded since the war.

The confidence this bank has in the future in Malaya is well exemplified by the opening of a second branch in Singapore, housed in a six-storey building recently completed in the Shenton Way development area.

North Borneo.—North Borneo has benefited from the rise in rubber prices during the latter part of last year, but increased prices have not so far led to a marked increase in exports, which have been running at much the same level as in 1953.

Sarawak.—Trade statistics for the whole of last year are not yet available, but it seems that they will not differ significantly from the figures for 1953, when there was a favourable balance

REPUBLIC OF INDONESIA

Observations upon the trend of affairs in Indonesia tend to become repetitive. I am not to be numbered among those who predict an early break up of the Republic, but I have again to report a further deterioration in its economy.

The deterioration during 1954 was probably greater and was certainly more obvious than in any of the preceding years and almost the only reassuring factor is that the balance of trade has turned in Indonesia's favour and foreign exchange holdings were appreciably higher at the end of the year than at the beginning. This is not to say that the hold-ings, even at the increased figure of Rp. 2,853 millions give grounds for complacency, for this improvement has only been effected by the most drastic import cuts and even now it is doubtful whether the country can trade without an adverse balance of payments. High world prices for rubber and tea inevitably lead to illicit tapping and plucking, with resultant smuggling and loss of exchange, whilst on the other side of the book the lack of essential consumer goods must eventually be remedied.

The factors I have mentioned combine to make the future of our branches in Indonesia far less promising than was expected when we, in the infancy of the Republic, so wholeheartedly and deliberately accepted risks we should hesitate to take in a more mature country in order to help Indonesia's new merchant class and administrators. It is to be hoped that the government will endeavour to come to grips with the many problems and abuses that now exist before it is too late.

THAILAND

Thailand has passed through an uneasy year and, notwithstanding the introduction of various expedients to halt the adverse trend in its balance of payments, imports exceeded exports by over 800 million ticals. The main reason for this disappointing result was that rice exports, which account for approximately half the country's foreign exchange earnings, have fallen year by year and in 1954 were at 1 million tons (plus 200,000 tons of rice flour), lower by about one-third than during the postwar peak year of 1951.

Little comfort can be taken from early estimates which placed the exportable surplus on the 1954-1955 crop at 750,000 tons only, to which of course must be added a carry-over from previous crops of 400,000-500,000 tons.

The real trouble has been a government policy which was gradually pricing the country's rice out of world markets and it has yet to be seen whether the terms on which the rice trade is now being returned to private dealers will prove sufficient inducement for merchants to shoulder the burdens imposed and yet work to increase sales in the highly competitive markets that exist today. As, however, the government has to take a realistic attitude towards its rice exports no realistic attitude towards its rice exports no doubt the recent regulations will be amended where necessary to ensure that their objective of increasing overseas earnings will be achieved.

VIETNAM

The coming of peace in Vietnam based as it was on the unfortunate partition of the country did not ease this bank's problems and, as indications to date suggest that there is unlikely to be any future for Europeans under the Viet-Minh regime, we have had to follow the example of others and close our Haiphong office. In any case, with the approach of the fighting towards Hanoi earlier in the year, we had already run down

our commitments. At one time it was thought that Tourane, close to the 17th Parallel and with a good natural harbour, might become an important centre of trade between the north and the south but an on-the-spot examination convinced us that potential developments did not justify our opening a branch there.

Our future in Saigon, although difficult to assess, may be more secure and promising than it seemed to be a short time ago. There are signs that Vietnam may achieve social and political stability, notwithstanding the necessity for its economy to be based henceforward mainly upon agriculture.

Cambodia.—Not the least important result of the withdrawal of the French from Indo-China has been the coming of national independence to the states of Cambodia and Laos. It was in anticipation of Cambodia having a separate government and becoming an important state in South East Asia that we took steps more than a year ago to establish an office at Phnom-Penh and I am pleased to announce that our branch there is now conducting full banking business.

THE REPUBLIC OF THE PHILIPPINES

For the last few years the finance department and the Central Bank have, by drastic control over imports, succeeded in maintaining the Republic's foreign balances at a figure of US\$300 million which is roughly equivalent to the note issue and it was very surprising to find a departure from this policy in the last two months of 1954, during which period the reserves were run down to US\$270 million, mainly by ex-quota allocations for textiles. These are the lowest published figures since the crisis year of 1949 and would cause more concern were the position not overshadowed by the favourable terms agreed upon for the renewal of the Bell Act, which should ensure such benefit to the Philippine economy that the future can be viewed with quiet optimism.

Our relations with the Central Bank are as always on a most proper and friendly footing and during the year it has been encouraging to find more latitude given by the central institution in carrying out its avowed policy of providing loans to commercial banks when necessary for refinancing purposes of an essential nature. Perhaps the greatest handicap bankers and merchants suffer in the Philippines is their inability to obtain forward exchange cover and the danger of this situation becomes more apparent during periods of lack of confidence in the peso. No doubt the re-appointment of Mr Cuaderno as governor of the Central Bank for another five years will, in view of his declared opposition to devaluation, stop the rumours that have been so rife since it became known that the right of veto of the United States President to currency changes was to be removed.

HONGKONG

Hongkong's total external trade in 1954 fell in value by 11 per cent from its level in the previous year. Trade with the China mainland decreased by approximately a quarter during the same period and it has apparently suited the Chinese authorities to conduct the bulk of their trade with the free world direct with the countries concerned rather than to use the entrepôt facilities of Hongkong. Meanwhile, the discontinuance from January, 1955, of special export licensing of British exports destined for Hongkong is a timely recognition by the authorities of the adequacy of the colony's security controls over trade with China.

An encouraging feature of Hongkong's economy is the continued development of local industry for, luckily for the colony, this offsets to some extent the fall of entrepôt

trade and the serious social problem posed by the great increase in population. Exports of locally manufactured goods now form 28 per cent of total shipments and the most important of the local industries, cotton spinning and weaving, has maintained a satisfactory level of sales abroad despite difficulties in markets such as Indonesia and Pakistan where shortage of foreign exchange has curtailed orders.

Our own faith in Hongkong is witnessed by the fact that we have completed our plans to rebuild completely our old office building there which has outlived its usefulness. Our new building should be one of the most imposing structures in Hongkong.

China.—During the year we have made good progress in winding up our affairs in China. It is quite clear that the People's Government of China will not permit the re-entry of European enterprise into China but, on the other hand, we have been given an indication that China will welcome the participation of British banks in the finance of their external trade, and our future policy will be adjusted to meet these changed conditions.

JAPAN

I mentioned last year that in order to curb the dangerous inflationary trend that was threatening the Japanese economy, the Bank of Japan had introduced a tight money policy. As was to be expected, this and other deflationary measures did not take effect for some months but a pursuance of the policy, notwithstanding a change of government, has resulted in a healthier state in the country's affairs. Month by month in the second half of the year exports exceeded imports and Japan closed the year with a favourable balance of approximately US\$100 million; a great improvement and in marked contrast to the deficit of US\$200 million during 1953.

This successful reversal of the adverse trend of the previous year is, however, on close examination, not so encouraging as one would hope for it has been achieved only by running down stocks and by resorting to various export-promotion devices and special trade systems such as link and barter. There is an obvious limitation to the use of artificial stimulants and any system such as that of bonus imports which necessitates producers charging high prices in domestic markets to recoup losses on overseas sales cannot fail to accentuate inflationary pressure.

The Japanese banks, although still under strain and perhaps carrying within Japan commitments greater than they themselves like to see, have with the assistance of the Japanese authorities made considerable headway in overseas business. The postwar era, in which the British banks underwrote the sterling trade of Japan, is practically at an end and from now on exchange banks in Japan like ourselves are going to find it more and more difficult to obtain lucrative business without undue risks.

CONCLUSION

I am encouraged to conclude upon a note of restrained optimism, bearing in mind that periods of economic stability in the East have been relatively few during the past hundred years. For a long time the bank was beset by recurring crises of confidence and unpredictable fluctuations in the world price of silver, but nowadays most of our difficulties arise from attempts to put into operation untried political and economic theories.

Notwithstanding the fragmentation of what were formerly unified trading areas of great extent into self-regarding national states, our branch organisation has been able to cross the new frontiers and, by facilitating international trade, to foster international understanding and goodwill.

HOOVER LIMITED

ANOTHER YEAR OF GREAT ACHIEVEMENT

PROGRESS IN THE HOME AND EXPORT MARKETS

STRONG FINANCIAL POSITION

WORLD WIDE REPUTATION FOR EFFICIENCY AND QUALITY

The annual general meeting of Hoover Limited will be held on March 31st at Perivale, Middlesex.

The following is the annual review which has been circulated to stockholders covering the year to December 31, 1954:

The year 1954 has been the most successful in the company's history. Both in turnover and profit we have far exceeded the record figures of 1953. The consolidated profit of £4,581,000 represents an increase of 49 per cent over 1953 and 187 per cent over 1952. Undoubtedly the last three years have seen a meteoric rise in the fortunes of this company.

There were two external factors in 1954 which helped enormously, the early announcement about purchase tax by the Chancellor of the Exchequer, and the withdrawal of hire purchase restrictions in July. Both announcements were well timed from our point of view as they were instrumental in maintaining the demand for our products at a high level throughout the year, thus enabling us to achieve maximum economies in the operation of our factories. The results just announced afford ample proof that the company has taken full advantage of the situation which developed during 1954, and all concerned deserve every congratulation.

THE HOME MARKET

Although the expansion of our business applies to both home and export sales, it is proposed first to review our operations at home.

Electric Cleaners.—Home sales of electric cleaners have increased by 35 per cent, and we continue to hold our dominating position in the electric cleaner market. The increase applies equally to our various models. Although, later on, reference will be made to the splendid work of our research department and the improved appliances which will result, we are still very proud of our existing range of electric cleaners, which enjoy a world-wide reputation for efficiency and quality.

Washing Machines.—This was the first full year of sales of our new Mark II washing machine and we are pleased to report an expansion of 42 per cent in the total sales of washing machines. The Mark I machine is still tremendously popular and sales of this machine have continued at a high level. Combined, the sales of these two machines continue to dominate the washing machine market.

Electric Polishers.—Business in our Hoover electric polisher has expanded along with our other lines, but turnover, considerable though it is, is relatively small in the home market compared with cleaners and washing machines. It is in the export field that the polisher has been most successful, especially in Australia, where polisher sales are often as high as cleaner sales.

Electric Steam-or-Dry Iron.—The Hoover electric steam-or-dry iron was not introduced until November, 1953, and we have made great progress limited only by our capacity to manufacture this new product. It must

be appreciated that a considerable amount of educational work had to be done, and still remains to be done, in order to accustom the British housewife to a different ironing procedure, but we are confident that those who have changed to Hoover steam-ironing would never go back to the conventional iron again. We believe that in the Hoover steam-or-dry iron we have found another winner and that as time goes on it will establish itself in the British market on a basis comparable with our cleaners and washing machines.

FHP Motors.—Our fractional horse-power motor business operated from Cambuslang, near Glasgow, has had a most successful year, sales in 1954 being more than double 1953. This is a most satisfactory result considering the tremendous competition in this field. Hoover motors have established a very good reputation for efficiency and reliability.

THE EXPORT MARKET

Conditions have been extremely satisfactory for expanding business in the home market during the year 1954. Conditions were not as favourable in our overseas markets. We have always fully realised the need to keep our exports at a maximum and have kept on full pressure to this end. But in the sale of domestic electrical appliances each country is a problem on its own and the changing conditions of some countries add to our difficulties.

EXPORT RESTRICTIONS

Over and above the normal marketing problems there are, of course, the overriding problems of import controls and exchange difficulties. It is frequently the case that as one country opens up its markets another imposes restrictions.

We look forward hopefully to the day when the only trade barriers which exist between countries will be reasonable tariffs based upon a liberal interpretation of the countries' requirements.

We already enjoy these terms in several countries, where we expect and meet a great deal of competition. In those countries where reasonably stable conditions prevail the plans we make and follow through have a good chance of success. The worst frustration that an exporter can meet is the inability to satisfy a market he has created for his products because a Government decides to restrict or stop imports. When, in addition, the products and methods of distribution are copied by local opportunist competitors, it is not surprising that many firms prefer to concentrate on the home market.

MANUFACTURE OVERSEAS

Like many other companies we have found it essential to manufacture abroad, and although up to the present time this is confined to two countries, viz.: France and Australia, undoubtedly the tendency will be to extend to certain other countries where we must either manufacture or probably lose our market.

Our operations in Australia have been very

successful in 1954. Our factory produces all the Mark II washing machines sold in Australia and now less than one-third of the total parts are imported from Great Britain. This does not mean that our imports from Great Britain are less on that account. The import restrictions have only been partially relaxed and we have taken full advantage of the import licences which have been granted to us. While we regret the need for these import licences, it is gratifying to know that our plans to manufacture in Australia have been completely justified by events. It is our intention to extend manufacture in Australia to other products, so that, gradually, we shall be in a position to satisfy most of the market's requirements on the spot.

During the past year we have extended manufacturing operations in France to include the cylinder cleaner and the dustette. In the past our sales operations have been considerably curtailed because our products consisted only of the standard model cleaner and the washing machine. This expansion in the number of products will undoubtedly improve the French company's prospects for development.

EXPORT DRIVE

Although we have been forced to manufacture in certain countries abroad, we realise that our main endeavours overseas must be in selling and wherever possible we have expanded our activities. New Zealand re-opened its doors to our products in 1954, and we have established a new company there, Hoover Sales & Service Limited, which is progressing very satisfactorily. The year 1954 was also the most successful of our South African subsidiary company. In both these territories conditions are improving and we are looking forward to even better things in 1955.

We have met very strong competition on the continent of Europe and have had to fight hard to maintain our position there. This we have achieved, and with our latest plans feel confident that we shall make progress in 1955. We are continuing to supply substantial quantities of our products to the American market and our total dollar earnings in the United States and Canada compare very favourably with past years.

It is indeed gratifying to know that despite all our problems in the export markets of the world, and in this short review only brief reference can be made to the major ones, we still sold 63 per cent of the total British exports of cleaners and 50 per cent of the total British exports of electric washing machines, both percentages in sterling value of exports. These figures do not include the sale of products manufactured overseas.

PLANNING AHEAD PRODUCTS AND PERSONNEL

Research and Development.—Since the war great strides have been made by our research and development department, not

only in the introduction of new products, but also in improving the quality of existing ones. Of necessity a large part of the work of this department is of a secret nature, but we are particularly pleased with their latest handiwork, our all-electric washing machine. It was introduced to the British market at the Ideal Home Exhibition and has already received a great welcome. We are sure that it will be equally well received in the overseas markets. Much care and thought have been given to the design of this machine and we believe that it will meet the needs of the housewife we are so anxious to serve. Our research and development department is located at Perivale and in recent months has been hampered by lack of space. This is being remedied by the provision of more accommodation which will afford the research department room to expand.

MANUFACTURING PROCESSES

Extensions are in course of erection at our High Wycombe and Merthyr Tydfil factories, as the increased production has required more and more space for efficient operation of our equipment.

Our production engineers continue to keep abreast of technological developments and are at present especially concerned with electronics. There is every indication that more and more of the purely automatic operations can be controlled electronically, thus eliminating the fallible human element. We believe that two great advantages will be derived from this development; the elimination of monotonous work and a considerable reduction in the cost of production.

THE HOOVER TEAM

While we have every reason to develop and acquire new processes, plant, equipment and buildings, we know that our finest investment is in our loyal team of employees. We try to show our appreciation in tangible ways by such things as adequate training plans, worthwhile incentive schemes, sporting and social activities, joint consultation and good working conditions.

The Hoover training plans provide for youngsters of 16 years and upwards to be trained as apprentices in our factories, offices and sales departments, and to acquire appropriate educational qualifications as they progress. For older entrants we have graduate apprenticeship schemes, under which they are trained as future managers, supervisors, engineers or technicians, as well as for a variety of other posts in the export, sales and administrative departments of the business. Great care is also exercised in selecting and training employees for the large variety of jobs throughout our organisation, to ensure that each employee is able to make full use of his or her aptitude and ability.

JOINT CONSULTATION

Much lip service has been given to joint consultation during and since the war, and too often it finishes just there. We, in Hoover, believe in joint consultation. We believe that our workers should be brought into discussions on problems which affect them; sometimes very important and sometimes relatively trivial problems, but all worth bringing forward for clarification or explanation. Our works committees and field and factory suggestion committees have provided a fine means of communication between management and factory and office staffs, field management and representatives.

During the year a further improvement has been made in our employees' free superannuation scheme. Previously only certain categories of the junior grades of supervision were able to increase their pension by a voluntary contribution. We have now ex-

tended this facility so that all members of the scheme can increase their pensions if they wish to do so.

THE FINANCIAL RESULTS

This year we have made a change in the method of presentation of our accounts, and it is hoped you will find these easier to read and understand. You will notice that the profit and loss account has been simplified and abbreviated. The balance sheets have also been changed to show the total of net assets after deduction of all liabilities and how these assets represent the capital employed. Detailed descriptions of items requiring further explanations are given in the form of notes.

Advantage has been taken of the improved cash position to purchase £1,200,000 tax reserve certificates but, for comparative purposes, these should be treated as

It has been a year of great achievement on the part of all concerned and, as a result, Hoover men and women everywhere have profited. The board is gratified to know that the company is in such a strong financial position that it has been able to increase dividends and will also be able to pursue vigorously its policy of expansion.

"A" ORDINARY SHARES

In August last year the board found it necessary to make the following announcement:

The directors are informed that there are persistent reports that a scheme of reorganisation of the share capital is under consideration on terms which would give each "A" share rights in excess of those attaching to each unit of ordinary stock.

The directors think it right to state,

THE DISTRIBUTION OF THE GROUP PROFIT
FOR THE LAST THREE YEARS

cash. Therefore, we have total cash and bank balances of £4,675,000 at December 31, 1954, as compared with £3,416,000 in 1953.

The consolidated profit of £4,581,000 was arrived at after deducting £878,000 for depreciation. This provision for depreciation compares with £716,000 for the year 1953. The total liability for taxation on these profits is £2,491,000. At the date of last year's balance sheet we had many outstanding tax problems, but now these have been cleared up and we are fortunate to be able to deduct £260,000 for tax reserve over-provided last year.

From the balance of £2,350,000 two further deductions have been made, viz.: the amount of £84,000, being the interest of outside shareholders, and £125,000 for profits retained by our subsidiary companies, leaving a balance of profit to be dealt with in the accounts of Hoover Limited of £2,141,000. We are left with a total of £2,992,000 available for distribution after adding £851,000, the sum brought forward from last year. A further transfer of £250,000 has been made to the general reserve of Hoover Limited, an increase of £50,000 over the amount provided in 1953. We have decided to transfer £100,000 to the reserve for employees' free superannuation scheme.

After making these appropriations of profit and deducting the dividends on the preference stock and the interim dividend on the ordinary stock, the final balance is £2,521,000.

INCREASED DIVIDENDS

The board have given careful consideration to the dividend they should recommend for the year 1954 and have decided upon a final dividend of 60 per cent less tax on each 5s. ordinary stock unit, making a total for the year of 70 per cent less tax. Based upon this distribution to the ordinary stockholders, the dividend payable under the Articles of Association on the "A" ordinary shares amounts to 6s. 0.5788d. less tax per share.

In spite of the increased distribution in the form of dividends there is a considerable increase in the revenue reserves and undistributed profits of the group carried forward viz.: £1,158,000

therefore, that there has been under review a scheme of reorganisation of the equity share capital for submission to both ordinary and "A" ordinary shareholders. There is no foundation whatsoever in the terms suggested in these current reports and should any proposals be put forward they would not result in the "A" shares acquiring rights more favourable than those attaching to the ordinary shares.

These rumours which were then in circulation were causing considerable speculation and wide fluctuations in the prices of the company's shares and it was to prevent this that the official announcement was made.

The "A" ordinary shares were issued nearly eight years ago as an additional incentive to directors and approximately 100 executives of the company. With the passage of time a considerable change has been brought about in the way in which these shares are held and a substantial proportion is now held by members of the public and this proportion is likely to increase as executives retire and sell their holdings on the open market.

Because of this, there is much to be said for simplifying the capital structure of the company and if, at a later stage, your board feel able to put forward proposals which they consider would be fair and acceptable to both classes of shareholders, they will certainly do so.

DISTRIBUTING TOTAL INCOME

The Government, as in past years, continues to take the bulk of our profits in taxation. We are indeed grateful that the excess profits levy has been discontinued, but the investment allowance granted in the 1954 Budget, although very welcome, will not give us any substantial relief until 1955. It should be borne in mind that most of our products are still subject to a high rate of purchase tax, and when this is taken in conjunction with income tax and profits tax it is found that 5s. 5d. in every £ received by the company is subsequently paid over to the Government.

In view of the big increase in our profits it is interesting to examine what happens to

each £1 of income received by the company. It is distributed as follows:

	s.	d.
Purchase tax	4	1
Income tax and profits tax	1	4
Wages, salaries and superannuation	5	5
Materials	4	10
General expenses, including depreciation, maintenance of buildings, rent, power, carriage, travelling, etc.	2	9
Ploughed back into the business ...	11	
Dividends	8	
	£1	0 0

It will be noted that the Government

receives in taxation as much as the wages and salaries of all our employees.

PURCHASE TAX

Although many years ago our Hoover electric cleaner might have been considered a luxury used by only the select few, our cleaners and washing machines are now sold to millions of British housewives and mothers who deserve relief from household drudgery. We believe that they should be made available to every housewife, and we intend to do everything we can to bring this about. Much as we would like a reduction in income tax and profits tax, we place in the forefront a demand for a reduction in purchase tax, the immediate effect of which would be to bring our labour-saving appliances within the reach of many more of the people who need them most.

TRIBUTE TO EMPLOYEES

The achievements of the company for 1954 have been phenomenal and much of the credit for this must go to the wise counsel of Mr J. A. Wykes, who unfortunately has recently retired from the Board because of ill health. All members of our loyal team of employees must be congratulated on their splendid efforts during the year. It has meant a great deal of hard work and overtime, and all have given of their best.

We have never been a company to dwell on the past but have always looked to the future to extend and enlarge our operations. The results for 1954 have set us a formidable target for the future but you may rest assured that we shall do our utmost to record still further growth of the company's activities throughout the world.

BRADFORD EQUITABLE BUILDING SOCIETY

MR J. R. SINGLETON'S STATEMENT

At the annual general meeting of the Bradford Equitable Building Society, the Vice President, Mr J. R. Singleton, in presenting the annual report and statement of accounts for the year ended December 31, 1954, gave the following report:

Before turning to the report and accounts for the year, may I express the deep regret of the Board at the loss which befell the Society in the death of the President, Sir Bernard Sugden. Sir Bernard had been a director of the Society for nearly fifteen years and President since 1948. To fill the vacancy thus caused, the Directors appointed Brigadier Sir A. Maxwell Ramsden.

You will be very glad to see our general manager, Mr Lumb, with us again this year. He found it necessary to undergo two operations early in 1954, from which he has made a good recovery. In May last Mr Lumb was elected chairman of the Building Societies Association. This is the greatest honour and compliment the movement has to offer, and I am sure we all shall his pride at this achievement.

TOTAL ASSETS

The total assets of the Society at December 31, 1954, were £28,491,000, being an increase of £2,859,000 on the previous year. The principal items making up the figure of total assets consist of mortgage balances £24,528,000, investments and cash balances £3,770,000 and office premises £162,000. On the other side of the accounts, shareholders' and depositors' balances amount to £26,905,000, an increase of £2,711,000, sundry liabilities and provisions £349,000 and reserves, including carry forward, £1,236,000.

The total number of open accounts at the end of the year was 66,001.

SHARES AND DEPOSITS

We have received during the past year a total of some £5,990,000 from savers and investors in share accounts and deposits, compared with the total of the previous year of £4,859,000.

Five thousand, three hundred and fifty-three new accounts in the investment departments were opened during the year, and the number of open accounts in these departments at the end of the year was 37,923.

MONTHLY SUBSCRIPTION SHARES

I am very glad to report that the regular savings department has continued to improve. We attach great importance to the development of regular savings, and I think we should remind ourselves that savings in this form are of high national importance.

MORTGAGES

During the year 4,482 new advances have been made. The total amount advanced was £5,756,000, an increase of £1,246,000 compared with the previous year. I am happy to state that the accounts are in a very healthy condition, and the directors have no anxieties or problems of any kind in this particular direction.

RATES OF INTEREST

Much has been written during the past few months regarding rates of interest paid to savers and charged to borrowers, and I think I ought to say that your directors have never been in any doubt and have wholeheartedly supported the recommendation of the Building Societies Association in maintaining their rates.

An important factor in fixing rates of interest is that such rates should maintain a reasonable stability over considerable periods of time. This has been a traditional policy of building societies and has contributed very effectively to their present-day popularity.

INVESTMENTS AND LIQUIDITY

The total liquid funds of the Society in Trustee Securities, Cash at Banks (including Post Office Savings Bank) and in Hand amount to £3,770,000, representing more than 13 per cent of the Society's assets. This is a slight increase on twelve months ago.

PROFIT AND LOSS

The balance of revenue profit for the year was £116,179 after providing for interest and bonus on shares and interest on deposits, and also for the society's liability for income tax and profits tax to the date of the balance sheet. There was added to that balance the

balance of the unappropriated profit brought forward from the previous year of £18,035, thus producing a total of £134,214. Of this, your Board recommends that £3,000 be appropriated to the Staff Superannuation Fund, £100,000 to the General Reserve Fund, £15,000 to Reserve Fund No. 2 for contingent mortgage loans and carry forward balance of £16,214 to next year.

Management expenses are steady at 10s. 11d. per cent of the total assets.

RESERVES AND UNDIVIDED PROFIT

The total reserves and balance carried forward (including Post War Credit Reserve) amount to £1,236,000.

Mr Fred Gresswell (director), in seconding the adoption of the accounts, reported the losses on defaulting mortgages where Society has had to realise the security have been the trifling sum of £1,403. It must, however, be borne in mind that during the year there has been full employment and strong demand for house property, conditions extremely favourable to building societies.

Coincidentally with the increase in the numbers of new houses, the Building Societies Association have made an arrangement with the Ministry of Housing and Local Government under which building societies are enabled to lend up to 95 per cent on prices up to £2,000 on houses built since 1918, and 90 per cent on prices up to £2,500 on all houses acceptable as securities. In the view of your Board, this scheme is meritorious, although objectors to it argue that small deposits may tend to keep up prices and also may result in some purchasers over-reaching themselves. The maximum period of repayment on this scheme is 25 years, which is a long time over which to undertake a fixed payment which should be a first charge on a man's earnings.

Recently a great deal of publicity has been given to the availability of loans of 95 per cent with guarantees by an insurance company, repayable over 35 years. This is really "never never," and calls for a reasonable examination. In home ownership there is obviously very much more involved than merely finding a small deposit and undertaking the smallest repayment liability. Many people today earn overtime and bonuses which are not necessarily permanent, and ought properly to be ignored by purchasers in determining the price to be paid for a house. Furthermore it must surely be the aim of every purchaser ultimately to own his home free of mortgage.

As a personal opinion I think the new scheme of a ridiculously long period of repayment is purely "catch penny" and it does the movement no good.

BANK OF LONDON & SOUTH AMERICA LIMITED

PROBLEMS OF TRADE WITH LATIN AMERICA

SIR FRANCIS M. G. GLYN ON STERLING CONVERTIBILITY

The annual general meeting of the Bank of London & South America Limited will be held on March 29th at 6 Tokenhouse Yard, London, E.C.

The following are extracts from the address by the chairman, Sir Francis M. G. Glyn, KCMG, circulated with the report and accounts for the year ended December 31, 1954:

The tenth anniversary of the end of the second world war falls this year, and the present occasion is a good opportunity to review what has been achieved in this country and in Latin America, and how our trade relations with these republics have changed during these ten years.

At the end of the war the United Kingdom was not only governed by numerous controls and restrictions designed to ensure the proper distribution of scarce resources, but was also heavily indebted to other countries—including several in South America—which had continued to keep us supplied with foods and raw materials at a time when we were unable to pay for these commodities by means of our normal exports.

IMPROVED POSITION OF EUROPE

Britain's return to an economy of comparative freedom and the achievement of a favourable balance of payments has been a slow process, but we can at last point to substantial improvements. Last year saw the end of virtually all government bulk buying, consumer rationing and the licensing of raw materials. A limited measure of sterling convertibility into dollars has been made possible with the re-establishment of the London metal markets, the Liverpool cotton exchange, and the freedom to trade in many other commodities, in conjunction with important relaxations of exchange control measures consisting in the arrangements for transferable account sterling and the revival of gold operations in London.

The fact that a fuller convertibility of sterling and other European currencies should have been seriously discussed on more than one occasion during the year, even though the debates may have been premature, is also a reflection of the improved position of Europe and the sterling area in relation to the dollar world. A certain amount of caution has been necessary on Britain's part because of this country's particular position in the sterling area.

As banker for the area, Britain cannot forget, in addition to her own needs, the demands of the other sterling area countries, whose desire to abolish discrimination against dollar goods could bring about an exodus of dollars from the pool which in the aggregate might prove inconveniently large.

A FEASIBLE REALITY

Where Latin America is concerned, it may be assumed that the advent of convertibility might lead to an increase in the volume of those republics' exports to Europe. Sales to the Latin American republics would remain as keenly competitive as ever, especially as the tendency, dating from the war years, to look automatically to the USA for their purchases still persists. This would result in a greater pressure on Europe's dollar resources.

Despite these and other reasons for caution, there is a real improvement in the economic resources of Europe which makes the con-

vertibility of sterling and several other currencies a feasible reality in the not too distant future. The European and sterling area countries are now less dependent on the dollar area for essentials such as wheat, cotton, coal, steel and many other commodities, and are better able to compete in dollar markets.

CONDITIONS IN LATIN AMERICA

There are reasons for hoping that where Europe and the sterling area are concerned the conditions for the success of convertibility can be achieved. When we turn to Latin America, however, we find that the progress we have made towards greater freedom of trade and exchange has been taking place simultaneously with a trend in the opposite direction in most of the more important Latin American countries.

This divergence has given rise to a number of difficulties in our trade relations which it is most important to overcome. The changes that have taken place in the Latin American economies and in our own, reflected by these divergent trends, have made present conditions quite different from those of 1947 when the adoption of convertibility for sterling, unsupported by any other European currency, proved unsuccessful.

The Latin American countries classed by the British Treasury as the dollar account group already enjoy convertibility, and would not therefore be affected. In 1945 several of the non-dollar account countries had substantial blocked sterling balances, accumulated during the war. The precipitation with which in 1947 some of them converted their sterling balances into dollars was a contributory factor in the suspension of convertibility in that first attempt.

Today the non-dollar account countries do not appear to have large sterling balances and would not therefore be in a position to exert an excessive strain on the sterling area's dollar resources.

THE ULTIMATE AIM

The ultimate aim of the movement towards convertibility and freedom of trade is logically the mutual convertibility of all currencies, and the growth of trade that ought in theory to result from the elimination of exchange controls. It seems unlikely that the countries which now exercise exchange control would be able or willing to introduce convertibility immediately after its adoption in Europe.

Fundamental changes are required in their domestic monetary and financial policies to remove or at least vigorously curb certain of the causes of inflation, such as excessive state expenditure and too easy credit. An entirely new approach to the question of exchange rates is also needed in many countries.

The existing exchange structure in several of the Latin American republics is the antithesis of what would be needed for the adoption of convertibility. Rigidly fixed rates which, because of the effects of inflation, are no longer realistic and consequently throttle the country's export trade and exchange-earning capacity; differential rates in various guises acting as a form of taxation on trade; and "free" rates that are either free only in name or, being available only for capital movements and services, fluctuate sharply and are equally unrealistic; these would have to be abandoned in favour of single, realistic, stable rates.

In conjunction with measures to check

inflation and to reduce production costs in industry and so lower protective tariffs, these reforms would go a long way towards improving the position of the Latin American countries, both domestically and internationally, even to the point of enabling them to make their currencies convertible and acceptable in international payments.

FOREIGN INVESTMENT

There is, of course, only one effective cushion against the painful effects of the over-investment inherent in a programme of rapid industrialisation and development, and that is massive foreign investment. It is an unfortunate fact that the immediate effect of an investment of foreign capital in, for example, an industrial undertaking in Latin America may tend to be inflationary, at least to the extent that it is confined to providing the equipment that has to be imported and does not cover the cost of locally available materials and services.

It is clear that discipline and reforms are needed most especially in curbing those inflationary factors that originate in domestic policies, and in reshaping the differential exchange rates that are no doubt a valuable source of revenue, but are restricting trade. There is evidence that the need for restraint is becoming more widely appreciated in Latin America, as is the fact that the assistance of foreign capital is essential for economic progress.

DIVIDEND INCREASED

Dealing with the accounts, the chairman said: We are for the first time showing the amount transferred to Legal Reserves in South America. Banking legislation in a number of countries requires that varying proportions of the profits earned be applied to build up Legal Reserves, but in most cases only until they bear a certain relation to the capital employed in those countries. While one effect is to increase the stockholders' equity in the Company, it is perhaps more important to view these Reserves as freely available in the first place to meet losses which may arise in the respective countries, thus relieving us of the necessity of covering any such losses out of the sterling Contingency Accounts at the Head Office. When allocations of profits for Legal Reserves are substantial—which they not infrequently are—your Board feels justified in reducing the appropriation for the Contingency Reserve.

On this basis, the adjusted profits for the year ended December 31, 1953, are £395,860, while those for the twelve months to December 31st last are £2,179 lower, at £393,681, which I feel should not be regarded as unsatisfactory, in view of the less favourable rates at which the profits in certain countries have been converted. Although nothing at all has been received from Argentina since mid-1951, the remittance position in general has improved slightly compared with a year ago.

We have felt able to recommend an increase in the final dividend of 1 per cent, making 7 per cent for the year, as compared with 6 per cent which has been paid since 1941. While the problems and difficulties we have to face have not diminished, the Board felt that the position of the Bank had been sufficiently strengthened over the past 14 years to allow a slightly higher distribution, and they hope that conditions will continue to enable this rate to be maintained in the future.

BRITISH TYRE & RUBBER COMPANY

MARKED INCREASE IN OVERALL DEMAND

The thirty-first annual general meeting of the British Tyre & Rubber Company, Limited, will be held on March 29th in London.

The following is an extract from the circulated statement of the chairman, Sir Graham Hayman: In keeping with the general upward movement in industry as a whole, there was a marked increase in the overall demand for the products manufactured by your group of companies during the year. The group profit before taxation for the year to September 30, 1954, amounted to £2,026,473, compared with £1,485,543 for the previous year. Taxation provisions required £1,104,899, leaving a net profit for the group for the year of £921,574.

Your directors recommend a final dividend of 11½ per cent, less income tax, on the ordinary stock, making the total distribution for the year equivalent to 15 per cent on the issued ordinary capital as increased on September 8, 1954.

The strong liquid position of the group has been fully maintained, and this is regarded as a desirable cover for the programme of development and extension which is being actively pursued.

The position of raw materials supply has been reasonably satisfactory. The low levels to which the price of natural rubber fell during 1953 persisted until the middle of the period now under review. Since then there has been a steady rise which has been accelerated during recent months. The price is now comparable with that ruling in the early months of 1952. The recent rise may be due to exceptional conditions, but if maintained it will constitute an appreciable addition to our costs. The possible influence of American manufacture of synthetic rubber on the consumption and price of the natural product cannot be measured until the proposed sale of the plants by the American Government to private enterprise has been concluded.

Considerable progress has been made in the use of synthetic rubbers and plastics, which have opened up new fields of application. It is my belief that there is still greater scope for the use of all forms of rubber, and, with this in mind, the company's programmes of product development have been accelerated during the year.

In previous statements I have referred to the desire of the National Coal Board to replace rubber conveyor belting by fire-resistant belting for underground work in the mines. This requirement has been met by the development of our "PLUVICOR" belting. The continuing progress of your company in this special field has been made in face of increased competition both from established manufacturers and new entrants to the conveyor belting field, and our special technique and long experience have enabled us to maintain our pre-eminent position in this sphere of our activities.

Our industrial rubber products division has been active in many directions, and there have been further satisfactory developments.

Our export business has been considerably greater in volume. The favourable trend persists in the current year against intense competition in all forms, and especially price.

During the current year the volume of business has been fully maintained and, providing no major setback occurs in our national economy, I feel we may confidently anticipate another satisfactory trading year.

THE INDIA RUBBER GUTTA PERCHA AND TELEGRAPH WORKS COMPANY

CONTINUED SALES EXPANSION

The annual general meeting of The India Rubber Gutta Percha and Telegraph Works Company Limited will be held on March 29th in London.

The following is an extract from the circulated statement of the chairman, Sir Eric C. Mieville, GCIE, KCVO, CSI, CMG:

Benefiting from the general improvement in business conditions throughout the country, the increasing demand for your company's products, of which I spoke a year ago, continued during the year under review. The group profit of the year, before taxation, increased from £216,572 in 1953 to £374,074 in 1954.

Other factors, beyond the expansion of sales, helped to bring about this improved result. Firstly, the market price of our raw materials at the close of the year was not such as to necessitate any write down in the value of our stocks, as was the case in 1953. Secondly, during the year, satisfactory progress was made towards the increased efficiency and greater productivity of the Silvertown factory.

The total provision for taxation in the UK amounts to £188,815, as against £110,771 in the previous year. The group net profit, after providing for tax, is £185,259. The dividends proposed are the same as last year, namely, the fixed dividend of 6 per cent on the preferred ordinary shares, plus an additional 2 per cent, and the fixed dividend of 6 per cent on the ordinary shares, plus an additional 3 per cent. With the amount of £222,182 brought forward from last year, the balance remaining to be carried forward will be £215,147.

The balance sheet shows a position of strength and liquidity, appropriate to the tasks that lie ahead of us in reconstructing and expanding the Silvertown factory and for the considerable additional expenditure necessary to continue the modification of our equipment and to provide new plant for our expansion programme. We are undertaking this reconstruction in the confident belief that the service which we render to industry generally is, and must remain, an important one. A major part of the effectiveness and success of Silvertown lies in its solution of the many problems which the services and industry as a whole traditionally bring to Silvertown, and which are always welcomed there. The special productions which result, although essential to the services and to the end-products of industry, are not as publicly known as our standard range of products which includes Silvertown PVC fire-resistant belting for coal mines, escalator handrails, anti-static and decorative flooring, stems for tobacco pipes, gutta percha and ebonite in many forms as well as Palmer Aircraft brakes and controls, tyres, wheels and X-ray testing for industry.

As to future prospects, I must tell shareholders that, although careful plans have been made to ensure that building operations will not impede the flow of production, it would be unwise to expect any increase in the volume of output as a result of reconstruction itself during the current year. Some real benefit, however, can reasonably be expected to accrue during the following year. Apart from this, trading prospects are at present encouraging and, always provided that there is no serious set-back in economic conditions generally, I feel that the results of the current year's trading may be expected to be satisfactory.

CABLE AND WIRELESS (HOLDING)

INVESTMENT INCOME EXCEEDS £1 MILLION

SIR EDWARD WILSHAW ON "A VERY SATISFACTORY PICTURE"

The twenty-sixth annual general meeting of Cable and Wireless (Holding) Limited, was held on March 4th in London.

Sir Edward Wilshaw, KCMG, DL, JP, LLD, FCIS (the governor) presided and, in the course of his speech, said: We have had a most successful year as the following comparative figures will show. Compared with the previous year our gross income from investments is up from £891,182 to £1,059,513—the first time we have passed the million mark. The total dividend is increased from 9 to 10 per cent and this increase is on a capital increased from £5 million to £5½ million by the free scrip issue of 1 for 10 made during the year. The value of the investments is up from £15,720,225 to £20,319,577. In total a very satisfactory picture.

When we last met I told you that we were taking steps to arrange for the ordinary stock to be quoted on the Stock Exchange on the basis of a £1 unit instead of, as previously £100 of stock, with a view to assisting the smaller investor. It is my opinion that the investment trust company is the most desirable medium in which the man of smaller means can, with confidence, invest his limited capital and obtain a reasonable return and a satisfactory spread over a large number of investments.

One of the companies with which we are associated has recently arranged for its ordinary stock to be quoted on the basis of a 5s. unit in lieu of on £1 of stock. This innovation will be watched with interest by your directors, and if the result is such that we feel it would be in the interest of stockholders or prospective stockholders, to follow suit you may be assured we will take a similar course.

THE OBJECTIVE—CONSOLIDATION

During the past five years everything possible has been done to achieve a 10 per cent dividend. I think now that the immediate objective must be to consolidate so that not only stockholders but also those who have worked so successfully in the stockholders' interests may look forward with confidence to the future.

It is generally agreed that an investment trust shareholding with a steady dividend record enjoys a higher investment status than a shareholding with a less steady record, and I am determined that the status of our stock shall be of the highest and that no increase in dividend shall be made unless we can be reasonably certain that the increased rate can be maintained. In accordance with my usual custom I make no general forecast as to the future, and the folly of attempting to do so is emphasised by the fact that two alterations in the Bank rate have already taken place during only the first two months of the current year. I am all in favour of orthodox methods for controlling inflation, regulating consumption and encouraging savings, and if these all-important factors are properly adjusted I have no doubt that it will be to the ultimate good of the community in general, and consequently of this company, whatever may be the temporary upset or inconvenience.

The report was adopted.

THE LAW DEBENTURE CORPORATION

A SUCCESSFUL YEAR

The sixty-fifth annual general meeting of The Law Debenture Corporation Limited was held on March 4th at Winchester House, Old Broad Street, London, E.C.2, Mr Robert R. J. Turner, OBE (the chairman), presiding.

The following is the statement by the chairman which had been circulated with the report and accounts for the year ended December 31, 1954:

The past year was a successful one for your Corporation, and revenue from all sources other than profits from realisation of securities showed satisfactory increases and was indeed greater than our estimates.

Investment income showed the largest increase of £13,262 due mainly to increases of dividends on some of the holdings of ordinary stocks and shares.

Commissions and fees increased by £2,985, largely due to increased underwriting commission, a fee received in connection with a capitalisation of reserves by a company for whom we act as registrars, and increased fees from the management of pension funds.

Fees from acting as trustees and registrars showed a welcome increase of £3,202, for which we are grateful to our friends who helped to bring us this work.

Office expenses increased by £4,095. This was due to expenditure of about £2,400 on alterations and improvements to our office premises and the remainder was due to expenses incurred in handling the increased business referred to above.

NET PROFIT AND DIVIDEND

The balance of net profit carried down shows an increase of £14,817 and amounted to £71,968; of this the board have transferred £20,000 to general reserve after writing off the discount and expenses relating to the issue of £150,000 second debentures and the capitalisation of reserves already referred to in the directors' report. They now recommend a final dividend of 10 per cent on the ordinary capital as increased by the capitalisation of reserves compared with 9 per cent on the old capital which was paid in 1953, leaving £625 to be added to the amount carried forward. In making this recommendation your board have been influenced by the fact that only a small return was received during the past year from the funds raised by the issue of £150,000 second debentures. They estimate that interest and dividends will show some further increase for the current year.

The valuation of the investments as at December 31, 1954, showing an appreciation of over £750,000, or 45 per cent, over book value is satisfactory, but this can be reduced as quickly as it has grown. Stockholders may remember that the appreciation was only £118,750, or 9 per cent, in December, 1952.

The policy of increasing the percentage of our funds invested in ordinary stocks and shares has been continued during the past year, and as can be seen in the directors' report, this now amounts to 66 per cent of the Corporation's investments, as compared with 53 per cent last year. For the present, £50,000 of the new money raised has been put into a medium dated Government stock.

I should once again like to pay my tribute to the staff for their part in what has been a successful and busy year.

The report and accounts were adopted and the dividend, as recommended, was approved.

THE CONSOLIDATED MINES SELECTION COMPANY LIMITED

MR A. C. WILSON'S STATEMENT

The annual report for the year ended December 31, 1954, and the statement by the chairman, Mr A. C. Wilson, have been circulated to stockholders.

The following are extracts from the chairman's statement: Markets have for most of the year remained very firm and we have had no difficulty in improving our cash position without recourse to stockholders. Whereas at December 31, 1953, we had a bank overdraft of £156,000, we now have £90,000 cash in hand or at call after paying out an interim dividend which absorbed £54,000. There has thus been an effective overall improvement in our strictly liquid position of £300,000.

Comparing the market value of our investments with the figure for last year there is an increase of £2 million. This is, of course, very satisfactory, but stockholders must remember that mining markets fluctuate from year to year and they should not therefore attach too much importance to this figure.

Your directors considered the question of increasing the cash dividend distribution but decided that this year they should be reasonably conservative and keep the total at 2s. 6d., although the bonus of 1s. paid last year has been consolidated into this dividend which, as far as we can foresee, is one that we should be able to maintain. Indeed, if our long term plans develop as we hope and believe they will, it should be possible to improve on this rate in the future.

CAPITALISATION OF RESERVES

In view of the strong position which has been built up, we feel that the stage has now been reached when we can make a small transfer from our reserves to capital. Your board decided, therefore, to recommend that £45,000 of our reserves should be capitalised and the resulting fully paid ordinary shares distributed to stockholders, against which £67,000 has been appropriated to reserve out of the profits for the year. In this way the total amount of our reserves will be maintained. We do not foresee difficulty in maintaining our 2s. 6d. dividend on the increased capital.

Whether it will be possible to repeat the issue and maintain the dividend in future years on the capital increased by any such issue must, of course, depend upon circumstances and for the time being it should be regarded only as a special distribution related to a period in which we have reaped substantial rewards from past restraint.

Finally, I should like to make reference to developments in the Orange Free State goldfield. The results reported during the year by certain of the mines were extremely good and justify the high hopes borne for the companies concerned. We have for some time had a substantial part of our capital invested in the OFS goldfield and, although we have already made very satisfactory profits out of certain of our participations, we have yet to receive any dividend revenue from present investments. Now that the mines in which we are interested are coming into production, the period of heavy capital outflow has passed and the monthly profits now being declared will soon be reflected in the distribution of dividends.

Copies of the report and accounts, which incorporate the full statement, are obtainable from the Company's office at 11 Old Jewry, London, E.C.2.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

ANOTHER SUCCESSFUL YEAR

The one hundred and twenty-fourth meeting was held on March 10th in Edinburgh. In the course of his remarks Mr Robert McCosh, WS, chairman of the board of directors, said: The Society has again had a successful year. Net new sums assured completed during 1954 after deducting re-assurances amounted to £4,738,476, more than £234,000 in excess of the previous year's total and constituted a record for the Society.

Associated with the results for life assurance, we have also achieved a record year in the amount of annuity business transacted. As a result of the attractive rates which we are offering for immediate annuities at present the purchase money received in 1954 was very substantially larger than in the previous year.

The life assurance fund has increased by over £1,800,000; this is the largest increase in the history of the Society, exceeding last year's record by over £800,000.

Turning to the other items in the revenue account, our interest income in respect of the life assurance fund has increased by more than £100,000. The gross rate of interest calculated on the life assurance fund was £5 14s. 11d. per cent in 1954 as compared with £5 8s. per cent in 1953. The corresponding net rates were £4 11s. per cent and £4 5s. per cent respectively. This means that we have earned in 1954 a margin of more than 2 per cent over the net rate which we assume in our actuarial valuation, all of which goes to provide a substantial amount of profit to the participating members in the shape of bonuses.

Claims paid during the year totalled £921,579, of which about two-thirds related to maturing endowment assurances; these are, of course, fully provided for in advance. Claims by death were about £28,000 in excess of those in 1953, but our mortality experience has again been very favourable. The results were about 50 per cent better than those expected by the tables on which we base our calculations.

Expenses and commission show an increase over last year. A considerable proportion of this increase, however, is due to the very substantial amount of new annuity business to which I have already referred.

The record increase in the Society's funds has presented problems in the matter of investment in a year which has seen considerable movement in Stock Exchange prices. The sums available have been spread between the major items in the assets side of the balance sheet, which shows increases of over £500,000 in British Government and British Government guaranteed securities, of nearly £200,000 in debentures and £400,000 in preference stocks, and of almost £700,000 in ordinary stocks and shares which for two or three years now have been the largest single class in the Society's investment portfolio.

The margin between the market value of the Society's investments in Stock Exchange securities and the amount at which they are entered in the balance sheet is much greater than last year, when indeed it was already substantial.

INTERMEDIATE BONUS 40s. PER CENT COMPOUND

The Society's intermediate bonus for 1953 and 1954 has been at the rate of 34s. per cent per annum. This rate was fixed at the

quinquennial investigation as at December 31, 1952, the date of our last declaration of bonus. Since that date, however, our interest rate has increased materially, and in view of the changed conditions the directors decided that the position should be reconsidered although only two years of the present quinquennium have elapsed. Full investigations have been made and the results, I am glad to say, have shown a very satisfactory position. It has accordingly been decided to increase the rate of intermediate bonus from 34s. per cent to 40s. per cent in respect of premiums payable after December 31, 1954. I would mention that this bonus, as in the case of the declared bonus, is calculated on the sum assured and existing bonuses. This increase will, I am sure, commend itself both to our members and to our agents.

The adoption of the report and accounts was carried unanimously.

OLDS DISCOUNT

EXTRACTS FROM THE CIRCULATED STATEMENT OF THE CHAIRMAN, MR WM. A. OLDS

The profit for 1954 is £474,180. Net profit, after tax, £205,795, an increase of £75,944.

Bonus Issues and Issues on Bonus Terms have been made several times and recently during the years:

	Ordinary Units	Basis
1946.....	@ 14/6	1 for 2
1948.....	@ 13/6	1 for 4
1950.....	Free	1 for 5
1951.....	@ 5/-	1 for 6
1953.....	@ 6/3	1 for 9
1954.....	July - Free	1 for 2
	Nov. - @ 12/-	4 for 11

And additionally in July, 1954, one £1 Pref. Share (free) for 8 Ordinary Units held.

A substantial increase has occurred in all our trading divisions, particularly those specialising in finance for Manufacturers' Plant and Equipment.

Our West Indies Subsidiary has paid an initial dividend of 7 per cent.

First impressions of the Treasury restrictions, just imposed, appear to be equitable and likely to produce good effect. It is a matter for profound regret that closer liaison seems impossible between Government Departments and our Associations to avoid such action as occurred when all controls were taken off Hire Purchase last July.

RECORD OF PROGRESS IN STAGES DURING LAST 7 YEARS

	Profit Before Taxation	Ordinary Dividend Paid (Net)	Profit Retained After Taxation
1948...	£138,579	20%	£27,500
1950...	185,317	20	31,855
1952...	282,273	22½	52,648
1954...	474,180	*	91,300

* 10% on £400,000, 15% on £840,000.

The above Ordinary dividend for 1954 represents 10.9 per cent (gross) on the Ordinary stock and reserves.

BIRMINGHAM CITIZENS PERMANENT BUILDING SOCIETY

ANOTHER £1 MILLION INVESTED

The annual general meeting of the society was held at the Imperial Hotel, Birmingham, on March 2, 1955. The chairman, Mr W. H. Madin, presided, and, in moving the adoption of the report and accounts, said:

The year under review is one which again records excellent progress. The total amount invested with the society from members and depositors during 1954 was £1,011,554 and after allowing for the withdrawals there is a balance of £4,221,140 due to share members, an increase of £362,577 and £1,128,535 due to depositors. Interest at the rate of 2½ per cent tax paid by the society has again been paid to the shareholders, equivalent where tax is paid at the rate of 9s. in the pound, to a gross return of £4 10s. 10d. per cent.

Advances during the year amounted to £1,196,085. The balance now due was £5,025,709, an increase of £427,771. Applications to finance new houses and from sitting tenants formed a substantial part of the mortgage advances. Investments in Government securities and cash at bank amounted to £506,006, which represents 9.1 per cent of the total assets. The profit and loss account shows a gross income of £233,249. After allowing income tax and profits tax £50,232, management expenses £28,295, and other outgoings, the net profit was £129,764, which, together with £18,999 brought forward from the previous year, has been allocated as follows:

Interest to shareholders	£100,480
Transfer to general reserve	20,000
Mortgage contingency reserve	9,243
Balance now carried forward	19,041
	£148,764

Total reserves and carry forward are £204,041. The assets now amount to £5,561,316, an increase of £509,135.

TWINING CROSFIELD AND COMPANY

TEA—EXPLANATION OF COST

The thirty-eighth annual general meeting of Twining Crosfield and Company, Limited, was held on March 8th in London, Mr H. W. Backhouse (chairman) presiding.

The following are extracts from his circulated statement:

I wish to refer with deep regret to the death of Mr C. T. Sidgwick, who was chairman from 1916 until December 31, 1952. His enterprise and integrity have left us an example which we shall always endeavour to emulate.

The group trading profit for the year 1954 shows the expected decrease. We were faced throughout the period with a constant and almost uninterrupted rise in the market price of tea. Our costs therefore were continually rising and although we increased the price of our proprietary teas, strong competition forced us to postpone the increases until too late to maintain a reasonable profit margin.

The business of tea distribution in this country is highly competitive. There are no rings or price fixing agreements and we all keep our prices down to the lowest possible

figure to meet competition. I do not regret this: the trade is healthy and vigorous and gives the consumer really good service. It is however rather disturbing to find that some journalists and politicians should have chosen to attack the tea trade on the grounds of profiteering at the expense of the general public.

The explanation for current high retail prices is simple. Tea is sold in the free markets of the world to the highest bidder and the price is determined by supply and demand. Demand is exceeding supply and in the twelve months ending October 31, 1954, the London Market price of common tea has risen from 3s. 4½d. per lb to 6s. 2½d. per lb. To the auction price of tea there must be added between 1s. and 1s. 6d. per lb. for blending, packing, distribution and retailing, and from these figures there is no escape, and our net profit on tea sold in the United Kingdom during the year is materially less than 1½d. a lb.

The report was adopted.

LEICESTER PERMANENT BUILDING SOCIETY

The one hundred and second annual general meeting of the Leicester Permanent Building Society was held on March 7th, in Leicester, Mr A. D. Carmichael, CBE (the chairman), presiding.

The following are extracts from his statement previously circulated to members:

The total assets of the society at December 31, 1954, were £36,123,702 and showed an increase over the previous year of £4,839,100.

Advances made on mortgage reached a record sum of £7,304,104.

Monies invested with the society, together with borrowers' repayments, amounted to £14,082,769.

Withdrawals, including capital and interest were £4,012,071.

Liquid funds amounted to £6,118,461.

Reserves and unappropriated profit amounted to £2,702,704.

NEW BUILDING ENCOURAGED

We have been pleased to see some welcome, sensible increase during the year in the building of houses for sale, and we have played an active part in encouraging this new building.

Of the 5,804 advances made by the society last year, 1,240 were for newly built houses, and this involved advances of over £2 million which represented 29 per cent of the total sum advanced by the society.

£200,000 TO RESERVE

During the last few years, the society has increased considerably its liquidity. It will be noted that a profit of £37,308 was realised on the sale of some investments, and that the market value of the society's holdings at December 31, 1954, was £174,538 in excess of the book value.

Our balance sheet is exceptionally strong, and those who place their money with us are well protected by adequate liquid resources, and by reserves of exceptional strength.

The appropriation account shows a total available of £912,944. From this sum £660,240 was paid to shareholders and £200,000 added to general reserve, leaving a balance carried forward of £52,704.

The report and accounts were unanimously adopted.

UNIVERSITY OF CAMBRIDGE

Applications are invited for the office of Reader in Industrial Management which has recently been established in the Department of Engineering. Forms of application and further particulars may be obtained from the Secretary-General of the Faculties, The Old Schools, Cambridge. The closing date for the receipt of applications is April 9 1955.

OPPORTUNITIES IN THE UNITED STATES FOR ENGLISH-TRAINED ELECTRONICS ENGINEERS

The Engineering Department, Electronics Division, of Westinghouse Electric Corporation has available a number of attractive situations to augment the engineers hired in England during 1953. Applicants must have professional standing in the Institute of Electrical Engineers or equivalent standing in the Institute of Radio Engineers.

Applicants for these positions should be over 25 years of age, with at least three years' experience in design or development in one or more of the following fields:—

Circuitry
Ground Radar
Communications
Computers
Filters
Antennas
Microwave Cavities and Plumbing
Missile Guidance Equipment
Navigation Aides

Plant is located in the outskirts of Baltimore, Maryland, in the beautiful Chesapeake Bay area, with splendid facilities for fishing and jogging. The mountains are but one and a half hours' drive away. Modern centrally heated flats in suburban surroundings are readily available.

Many opportunities for advanced education and for cultural pursuits are readily available in the Baltimore area. Generous relocation allowance is provided to help defray engineers' and their dependents' travel and shipping expenses.

To arrange for interviews in Britain at an early date with the Manager of the Electronics Division Engineering Department, address inquiry for application form to Mr F. S. Mabry, Westinghouse Electric International Company, 1-3 Regent Street, London, S.W.1. All replies will be treated as confidential.

ORGANISATION AND METHODS

A large firm has vacancies for qualified accountants with specialised experience of the installation and reorganisation of systems of accounting, including stores control and costing. There are also vacancies for qualified accountants wishing to acquire experience of system work. Starting salaries up to £1,500 per annum, according to qualifications and experience. Excellent prospects for advancement. Reply, giving full personal details, to Box 859.

CHAPPIE LIMITED, manufacturers of cat and dog foods, require the services of a man or woman graduate to undertake field and office control of the National Consumer Research section of their Market Research Department. An Economics or Sociology degree and/or knowledge of statistics, especially sampling techniques, would be an advantage. The work entails assisting in the selection of staff, draughting of questionnaires, organising the field staff, office routine, checking field work, and appreciation of findings.

Salary will be in the range £780 to £900 and the post also carries pension, life assurance and sickness benefits under a non-contributory social security plan. This post offers an excellent opportunity for a man or woman seeking first-class market research experience. Half the time will be spent in the office at Melton Mowbray, and the remainder in the field. Applications should be sent to the Personnel Officer, Chappie Limited, Melton Mowbray, Leicestershire.

LONDON CHARTERED ACCOUNTANTS have audit vacancy for recently qualified chartered or incorporated accountant. Commencing salary from £750, according to experience. Write, with full particulars, to Box No. 8438, c/o Charles Barker & Sons Ltd., 31 Budge Row, London, E.C.4.

THE B.Sc.ECON. DEGREE of London University is open to all without University residence. It is a valuable qualification for ambitious men and women engaged in accountancy, secretarialship, banking, finance, commerce, public services. Wolsey Hall (est. 1894) provides postal tuition of a high order for the three (in some cases two) examinations, at reasonable fees. More than 1,000 Wolsey Hall students have passed London B.Sc.Econ. (Final) exams, since 1925. Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P17 WOLSEY HALL, OXFORD.

THE FREER ECONOMY FACES ITS TEST. A major survey in the March issue of "The Banker" discusses the increase in Bank Rate and the new exchange policy in their wider context, explains why the measures were necessary and how they are intended to work—and enquires whether they will.

THE CONTENTS BILL of this issue of "The Banker" speaks for itself. Implications of 4½ per cent Money Regulator on Trial, Convertibility in Midstream, How Hire Purchase Has Grown, Economics in the Kremlin, America's Money Shows the Way, Montagu Norman, Banker-Designer (by Sir Gordon Russell), accompanied by all the regular features. Price 2s. 6d. from bookstalls or 72 Coleman Street, E.C.2.

ONE Senior and one Junior Statistical Clerk required. Some knowledge of balance sheets and of Stock Exchange practice required for the senior post, for which a man aged 45 to 55 would be suitable. For the junior post applicants should be aged 20 to 25 and have completed military service. A good secondary education is needed. Write the Deputy Editor, "The Economist," 22 Ryder Street, S.W.1.

EXPORT SALES MANAGER.—Man aged 30, who has understanding of a large number of Export Markets in which he has achieved successful sales results, now wishes to reside in U.K., and has ambition to obtain the post of Export Sales Manager, for which he feels his knowledge, energies and administrative ability are most suited. Available 1956.—Box 851.

THE CHARTERED INSTITUTE OF SECRETARIES.—Directors requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute, 14 New Bridge Street, E.C.4.

UNIVERSITY OF LONDON

The Senate invite applications for the Readership in Accounting tenable at the London School of Economics and Political Science (salary £1,500 — £1,550 — £1,800 a year). Applications (30 copies) must be received not later than April 19, 1955, by the Academic Registrar, University of London Senate House, W.C.1, from whom further particulars may be obtained.

UNIVERSITY OF BRISTOL

Applications are invited for the post of Investigational Officer and Clerk Accountant in the Department of Economics (Bristol II Provincial Agricultural Economics Centre, Newton Abbot, Devon). Candidates should possess a Diploma in Agriculture or an equivalent qualification. Salary scale:

Men: £325 x £20 — £505 x £25 — £650
Women: £300 x £15 — £345 x £20 — £505 x £25 — £530
with pay addition of 10 per cent to the first £500 per annum and 5 per cent to any amount above £500. Starting salary according to qualifications and experience.—Applications, giving the names of two referees, should reach the Registrar, The University, Bristol, 8, by March 19, 1955.

SUDAN GOVERNMENT

The Ministry of Education invites applications from suitably qualified candidates for the posts of LECTURERS or ASSISTANT LECTURERS in the following departments in the Khartoum Technical Institute:—

- (a) Building (1010)
- (b) Engineering (1012)
- (c) Commerce (1011)

Qualifications for (a) and (b) are a degree in Civil or Mechanical Engineering or equivalent, or qualified teaching experience in a Technical College. Teaching experience in a similar appointment would be an advantage. Qualifications for (c) are a degree in Economics or Commerce or equivalent qualification in Accountancy.

Applicants must be able to read, write and speak Arabic or English up to a standard which will enable them to carry out the duties of the post.

Candidates who are successful for (a) and (b) will be required to teach their subjects up to Ordinary National Certificate standard, and for (c) they will be required to teach their subjects, Accountancy or Economics, up to professional standards.

Appointment will be on short-term contract for a period of up to three years. Salary scale ranges from £E1,075 to £E1,675 per annum. Point of entry into this scale will be determined by age, qualifications and experience. A cost-of-living allowance which is reviewed quarterly is payable. Outfit allowance of £E50 is payable on appointment.

Further particulars and application form will be sent on receipt of a postcard only, addressed to The Sudan Agent in London, Sudan House, Cleveland Row, St. James's, London, S.W.1. Please quote the Department concerned and the number printed alongside, together with name and address in BLOCK LETTERS.

A NATIONAL MANUFACTURERS' TRADE ASSOCIATION requires an Assistant to train in all aspects of its activities with special emphasis upon labour relations. The position is a progressive one and can lead to an executive appointment. The initial salary will be attractive and progress will be fully rewarded. Candidates should be under 30 years and should have had a sound education, preferably to University level, and should possess either a professional qualification in economics or accountancy or have had some industrial management or work study experience.—Candidates should apply, giving full details of their age, education, qualifications and experience, to Box 860.

LEADING firm of stockbrokers requires ASSISTANT for Statistical Department. Age below 30, background of accountancy, economics or actuarial work, preferably but not necessarily having some investment experience. Interesting appointment with prospects. Write Box E.995, c/o 191 Gresham House, E.C.2.

A LARGE national advertiser in America shortly visiting this country, is interested in appointing an experienced British Market Research man to work in New York, with the particular duty of co-ordinating and advising on the consumer Research work which is carried out on his behalf in various overseas territories. It is expected that the successful applicant will have had a university education, some time as a responsible Research Executive, and be between 28-35 years of age. This is an unusual opportunity for a young Research specialist to work and mature in the American context.—Box 857.

A COMPANY of the highest standing converting flexible packaging materials invites applications from executives with thorough commercial experience in this field. The appointment will be that of Sales Manager in the first instance, but applicants should be of Board calibre and about 40-50 years of age. The salary would probably be not less than £3,000 p.a., with contributory pension benefits. Applications can be considered only from executives of the highest integrity and of proved management ability and record.—Applications should be sent in the first place to Kennedy, Ponsonby and Pridenex, Solicitors, 117A, Cheapside, London, E.C.2. Applicants who fear they may be replying to an advertisement from their present employers should mark the envelope "Not to be forwarded to (name of their employers)," in which case the application will be destroyed unopened.

EXPERT POSTAL TUITION

For Examinations—B.Sc.Econ., LL.B. and other external London University Degrees: Law Society; Bar; Accountancy; Banking; Secretarial; Civil Service; Commercial; General Certificate of Education, etc. Also many non-examination courses in business subjects. Write today for free prospectus and/or advice, mentioning examination (if any) or subjects in which interested, to the Secretary (G 9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

The Economist: Annual Air Subscription Rates

NEW ZEALAND — Near majestic Mt. Egmont lies New Plymouth, largest city of Taranaki Province. This scenic land is the world's largest exporter of dairy products and lamb, ranks second in exports of wool. Caltex is proud to be a part of this scene... glad to help an enterprising country take its place in the modern world.

PHILIPPINES — Not gun barrels... just a few sections of the miles of pipe for the new Caltex refinery at Batangas. This refinery shows the confidence of business in the ability and future of the Philippines. Working with Filipino engineers and craftsmen, Caltex enjoys the co-operation and goodwill so vital to such an immense project.

BAHRAIN — The contrast of old and new in this colorful shaikhdom is shown graphically here. The Bahraini's lateen-rigged dhow, Bahrain's traditional fishing and pearling craft, sails gracefully through the waters of the Persian Gulf. In the background we see a modern refinery and Sitra Wharf where tankers take on refined oil products for delivery to markets half-way 'round the world.

CALTEX serves the people of 67 lands

IN 67 LANDS—across half the world, through such developments as these, Caltex is able to supply better fuels and lubricants for industry, for agriculture and for motoring millions. These require a continual investment of funds and skills, backed by a faith in a better future for free nations.

WALLSPAN

**OUTER WALLS ARE THE QUICKEST WAY TO GET NEW
BUILDINGS INTO BUSINESS**

How Wallspan goes up so quickly. Wallspan is the logical way of constructing outside walls for modern multi-storey buildings.

Wallspan is a grid of aluminium alloy, formed of box-section vertical and horizontal members, which is readily bolted on the structure of the building. Into it are fixed windows and doors and the rest of the grid is quickly filled with any of a wide variety of durable, weatherproof panelling. You may, if you wish, get business going floor by floor as Wallspan goes up!

The panelling used can be any of a score of different materials in numerous textures and colours—glass, stone, metal, wood and many other substances.

Wallspan gives you more floor space. The weight of a modern building is carried by the structural frame, not the outer walls, which are merely protective and decorative and carry the windows. So the Wallspan grid need be no more than 5 inches thick with panels half that thickness. This means *extra* rentable space all round every floor: hundreds more square feet in any sizeable building!

And more warmth! The slender panels in the Wallspan grid can be constructed to provide up to 50 per cent better heat-retention than cavity brick walls. And maintenance is negligible. There's no pointing or painting. The walls can be washed down occasionally . . . by the window cleaners.

It will be well worth your while to discuss with your Architect the use of Wallspan in any new building you are planning—offices, factory, shop, stores, warehouse, school . . .

1 Fixing the vertical aluminium members—they are so light in weight that one man can easily handle the largest of them!

2 The grid is fixed—floor by floor.

3 This is how the panels go in . . .

4 . . . and are clipped into place by a neat aluminium beading.

Extensions to this building had to go upward owing to site limitations. Three floors have been added to the original single-storey office and these have Wallspan walls.

The elevation illustrated is 115 ft. 7 in. long and 27 ft. 9 in. high. The Wallspan grid carries aluminium framed opening casements and fixed glazing. The opaque panels are green Vitrolab.

This Wallspan framework was fixed in FIVE DAYS by a routine-strength Williams & Williams fixing team and without working overtime!

WALLSPAN CURTAIN WALLING

WILLIAMS & WILLIAMS

RELIANCE WORKS • CHESTER

You'll be using your building sooner—much sooner—if it has Wallspan walls!

In a specialist age it should be as natural to discuss floors with flooring specialists as to consult a lawyer about the Law. Increasing acceptance of this philosophy has encouraged Semtex to set up twenty well-placed branches staffed by flooring experts who are backed by an organisation which manufactures, designs, lays and maintains floors in all the most modern materials. These include Semastic Decorative and Vinyl Asbestos Tiles, Dunlop Rubber Flooring, jointless fleximer floorings, high-grade linoleum, cork tiles and flooring specifications to cover industrial needs.

You Save AUTOMATICALLY

"Air changes can be death to us," says Private Btu (the British Thermal Unit). "If you must open and shut doors please do it automatically."

FUEL EFFICIENCY PAYS

For example... Vehicle manufacturers in Bedfordshire were faced with low shop temperature and high velocity cold air winds due to continually open doors and air extraction in one of their buildings. The problem was solved by photo-electrically controlled doors and air lock systems, which eliminated the air currents.

Without the control system the maximum demand would have been 21 million Btu's and additional boiler plant would have been necessary. The most economical scheme without photo-electrically controlled doors and air lock systems would have required 6 million Btu's per hour at an estimated additional cost of £6,000 per annum. The capital outlay of £20,000 for the complete installation of photo-electrically controlled doors and air lock systems will be recovered in four years, and it will not be necessary to increase the boiler plant.

"Yes, he said I needn't take on extra staff after all..."

"YOU KNOW when our orders were going up and up? Our accountant told me we might have to take on more staff. So we decided to call in the Burroughs man. It couldn't do any harm and his advice was free... As it is, I'm more than glad. He went into the details with our accountant, then showed us how we could mechanize our accounting at low cost—and save a lot of overtime. He certainly knew his job..."

The Burroughs man is always at your disposal without cost. He is an experienced adviser on all accounting and

record-keeping systems, and well qualified to work with your accountant and auditor.

He has a complete knowledge of mechanized accounting. But he won't propose changing your accounting methods just to suit certain machines. Rather, after a full analysis of your problem, he will make proposals for a rapid, economical and workable solution.

If he does recommend a new system, he will prepare a detailed plan for it and help you get it working smoothly. He will make sure you continue to get full benefit from any Burroughs machine you install.

Whatever your business, large or small—if you have an accounting problem, the Burroughs man can help you solve it. Burroughs make the world's widest range of Adding, Calculating, Accounting, Billing and Statistical Machines and Microfilm Equipment.

Call in the Burroughs man as soon as you like—you're committed to nothing and his advice is free. You'll find the number of your nearest Burroughs office in your local telephone book. Burroughs Adding Machine Ltd., Avon House, 356-366 Oxford Street, London, W.1.

FOR EXPERT ADVICE ON BUSINESS SYSTEMS

CALL IN THE
Burroughs
MAN

One Burroughs man solved this problem. The Phonotas Co. Ltd. (weekly telephone cleaning and sterilizing service) have 80,000 separate accounts, and until recently, in London and in provincial offices, figures were copied by hand. As this led to errors and delays, they called in this Burroughs man, Mr. J. G. Winterbottom (left). He showed Phonotas how, with just two typewriter-accounting machines and two abbreviated-description accounting machines, they could halve their accounting time, and obtain up-to-date figures—all without extra staff.

DAVID BROWN and the MINING INDUSTRY

The David Brown Companies make important contributions to progressive mechanization in the Mining Industry. The list includes Haulage Gears for underground work; Winder Gears; and Turbine Gear Units. The guarantee of the quality of this vital equipment is that the resources and collective skill of the whole group of companies are behind every product.

Interlude

"It is a very pleasant interlude in a busy life to cross the Atlantic in one of these splendid ships." That was the verdict of a distinguished passenger on a recent voyage by a Cunarder. Music, dancing, cocktails, film shows, or a sheltered deck chair and a book from the library — the interlude can be as zestfully gay or as soothingly restful as you please. And with salt sea air to sharpen your enjoyment of the wonderful food, it's no wonder that it does you good to travel Cunard.

Comedy Pays Off

(in more ways than one)

Laugh and the world laughs with you! Never before was that old saying truer than it is today. And never has the world been in greater need of a good hearty laugh — for laughter and hate cannot live long in the same house.

A SMILE ON THE FACE OF THE WORLD

THE J. ARTHUR RANK Organisation has long realised the value of laughter. GENEVIEVE — that delightful film of the London-to-Brighton veteran car run — has left a trail of laughter throughout the world. The amusing misfortunes of Norman Wisdom in TROUBLE IN STORE (and now in ONE

GOOD TURN) have brought smiles to the faces of millions. Another of the Rank Group's series of comedies — DOCTOR IN THE HOUSE — has already been seen by over 17 million people in Britain and, last year, took more money than any other film at British box offices. By the end of 1954 it had grossed £500,000 in the United Kingdom alone, a record equalled only twice before. Now it is breaking more records round the world.

WEALTH AND HEALTH

First-class British comedies have enormous prestige value abroad. Not only are such films as GENEVIEVE, TROUBLE IN STORE and DOCTOR IN THE HOUSE long remembered with gratitude by those who see them; they reflect also the inner strength of a country which, in a world taut with fear and suspicion, can still laugh at its own institutions and idiosyncrasies.

Laughter can gather more tangible rewards too. Films like these Rank Group comedies mean big foreign-currency earnings, including those all-important dollars for Britain. Laughter, in fact, is just what the doctor ordered.

'DOCTOR IN THE HOUSE'

Included in the 'best films of the year' lists by seven British national newspapers.

'GENEVIEVE'

Included in the 'ten best films of 1954' lists by the New York Times, the New York Herald Tribune, the New York Sunday News, the New York Post and Time magazine.

'TROUBLE IN STORE'

Placed second among the top money-making films of 1954 in Britain by the Motion Picture Herald Poll.

THE J. ARTHUR RANK ORGANISATION LIMITED

There is a need in most businesses for a hand-operated adding/listing machine of reduced size and low in price - yet incorporating every advanced feature of performance and design. Such a machine is the

ALUMINIZED TUBES

reduce your
television costs

REPLACEMENT costs, particularly of the expensive picture tube, are an important consideration when you buy a Television set. That is why you should choose a set that is

fitted with an Ediswan Mazda aluminized picture tube. Ediswan Mazda aluminized tubes give brighter, clearer pictures than ordinary tubes. Thus the set can be operated with the brilliance control at a lower level, and the tube lasts longer.

In addition, ion burn—the cause of ugly brown patches on the screen; and ion bombardment—one of the most frequent causes of tube failure—are largely prevented in an Ediswan Mazda aluminized tube. It is worth your while to insist on an Ediswan Mazda aluminized picture tube—you get better pictures at lower cost.

WITHOUT ALUMINIZING

Without aluminizing, tubes waste half their light. To counteract this the brilliance must be increased and tube life is shortened.

WITH EDISWAN ALUMINIZING

Ediswan aluminized tubes have a mirror backing to the screen. All the light is thus thrown forwards, giving brighter, clearer pictures and extra life.

The Duchess eats off paper!

Yes she really does—those clean bright table tops we find in the world's gay places are made from sheets of specially prepared kraft paper treated with synthetic resins and pressed together. These are the laminated plastics now so widely used for wall panellings and furniture surfaces in ships, trains, bars, restaurants—and, of course, the modern kitchen. Beauty and virtual indestructibility in one! They are just one more example of how the famous Aylesford Kraft made by the Reed Paper Group contributes to the world's well-being.

Steady On Your Course

WHY is the air so full of anxious cries? Why have the habitual alarmists been joined by many normally level-headed people, in Britain, France and Germany? Fortunately one need not suppose that a collective neurosis has suddenly affected a vast number of people, ranging from leaders of the Left to familiar occupants of correspondence columns in august newspapers. If facts long known are now being discussed with a new anxiety, and decisions taken long ago questioned by men who had readily accepted them, the main explanation is the simple one that we are approaching another sticking point. Last week Italy gave its final approval to the Paris agreements on Western European Union, as Britain had already done. The approval of the Low Countries is not in doubt. The Germans have reached the final stage; the French upper house is due to begin its crucial deliberations next week (an article on page 1005 describes the background and the senators' inclinations). If favourable votes are secured, a new structure of unity and defence for Western Europe could begin to take shape before March goes out.

Nerves are inevitably taut. As the final moment of decision approaches, many people, in Britain and Germany as well as France, are tempted to imitate Lot's wife. Their hesitations are being skillfully encouraged by a barrage of Communist propaganda in which threats and blandishments alternate; and the whole drama is being played out under the shadow of the hydrogen bomb—which looms particularly dark to British eyes after the parliamentary debates on defence.

An unremarked feature of Monday's exchanges in the House of Commons was that both Government and Opposition started from the explicit premiss that a world war fought with hydrogen bombs would mean "the destruction of civilisation." Both motion and amendment declared that there could be "no victors." This is the common judgment in the free world. It is a logic which reinforces the practical impossibility of any aggressive war being launched by the West; and it may be argued, as Lord Henderson argued during the debate in the House of Lords on Wednesday, that if it were a universally accepted logic, the prospects of a general settlement of the major issues that divide the nations would be brighter.

It is perhaps the bleakest political phenomenon of the moment that the Communist regimes do not yet appear to accept this logic. Many people may be surprised to hear that. The limitless horrors of hydrogen war are a stock theme of Soviet propaganda for foreign audiences; to take one of many examples, a Moscow broadcast in Japanese last week quoted a Russian minister as saying that "the next war would not spare any country in the world—it would hit every nook and cranny." But at the same moment the Soviet domestic public was being told the exact opposite.

The Communist line for domestic consumption was set out in

measured terms in a major article in *Pravda* on March 5th, as follows:

Assertions about the possibility of the destruction of world civilisation if the imperialists unleash a third world war are theoretically erroneous and politically harmful. Such assertions suit only the warmongers, who hope to intimidate the people by atomic blackmail. . . . The camp of democracy and socialism is a formidable and indestructible force. If the imperialists unleash a third world war, the result will be the destruction not of world civilisation but of the rotten capitalist system.

This was neither an isolated nor a strikingly new pronouncement. The same dogma appeared in Mr Molotov's last speech to the Supreme Soviet, and of late there has been particular insistence on it, presumably reflecting a growth of doubt among the Soviet peoples. Thus, whatever Communists in the free world may say, their masters at home flatly condemn the "no victors" idea as heretical.

★

There is no satisfaction for the West in the detection of this barefaced trick. On the contrary, it is a deeply disturbing thought that the Soviet and satellite regimes should be cultivating among their peoples illusions of invulnerability such as Moslem fanatics used to promise their followers in a holy war. One need not hasten to conclude that the Soviet leaders really believe all that they say in this case, and that they might thus welcome war as a swift and final solution to their problem of destroying "capitalism." The present Soviet leaders can have few illusions that their regime would survive a world war.

The enduring danger that the free world faces is the vast mass of people whose minds are now sealed off from reality, who can apparently be brought to accept new masters and new slogans without question, and among whom hysterical fears and hatreds are ceaselessly propagated. The intensity of this indoctrination is hardly conceived in the West, and hardly conceivable. To record these ugly facts is not to rule out all possibility of reaching a settlement with the masters of the Communist world; but it points to the inescapable conclusion that any western position from which a settlement can be reached must be based on strength, and specifically on deterrent strength.

Soviet external policy in recent years has essentially been to prevent the West from creating that strength; an effort in which tactics have necessarily been varied, but without the least variation in the final aim. One of the most obviously logical tactics has been to dangle under western noses the idea that negotiation with Russia could remove the need for all painful girding up of loins, and to add the threat that if the girding up went too far negotiation would become impossible. It would have been flatly contradictory to this policy if the Russians had actually shown themselves eager to reach important agreements quickly. They have taken

care not to. In 1953 Mr Molotov stood off repeated suggestions of a conference on Germany until the end of the year, and when he eventually came to Berlin in January, 1954, he arrived stiff as a board, his brief case bulging with prepared impossibilities. In the summer of 1954, the Prime Minister revealed on Monday, it was not Mr Eisenhower that slammed the door on all idea of private and unconditional talks; the Soviet government had a clear offer of them, which it apparently chose to block by reviving the same propositions that had proved unacceptable at Berlin. It seems that the bus which the West is now accused of having missed during Mr Malenkov's reign had no driver.

A week ago, those who still fail to recognise the Soviet technique for what it is were provided with a fresh and unusually vivid piece of evidence—Mr Molotov's apparent concessions to the Austrians. Having barred their recovery of free statehood for so long, he now seeks not only to pose as the champion of their freedom, but also to make Austria a pretext for immediate four-power talks which would deal with Germany as well, and thereby again jeopardise the Paris agreements. If the Austrians, after serving as mouse to Mr Molotov's cat for so long, had been taken in by this new manoeuvre, they would have shown less understanding of Communist methods than the mainly illiterate voters of Andhra. But many people in the West still seem to see less clearly than the Andhra electorate. Will they take warning from the Austrian episode, or from the Prime Minister's revelations?

★

It was heartening to hear Sir Winston explaining on Monday that "talks at the highest level" must not be regarded as an end in themselves; and that such talks, if ill-timed or held in unfavourable circumstances, would raise false hopes and probably make matters far worse. By these words the Prime Minister did something to limit the damage already done by the mythology to which he had lent his authority. He went on to speak of the foolishness of risking divisions between the free nations; and here his position was all the stronger in view of the message which President Eisenhower had just sent to all the heads of governments concerned with the Western Union whose fate is about to be decided.

The President's message deserves the closest attention, and not least from those whose hesitations in regard to the proposed union are most lively. Admittedly Mr Dulles had already stated, at the London conference last September, the attitude that the United States was prepared to adopt towards Western Union; but Mr Eisenhower has not been content merely to reaffirm the American pledge of support in general terms. His message is remarkable for the precision of its wording, and its calm and measured tones suggest a much deeper understanding of European doubts and difficulties than did American utterances a

couple of years ago. The President declares his belief that the execution of the Paris agreements will make it possible to halt any attack on Western Europe "at the threshold." (General Gruenther developed this point on Tuesday with the straightforward argument that a German defence contribution made the difference between a defence concept aligned on the Rhine and a "forward strategy" that would provide defence for Western Germany.) But Mr Eisenhower has also taken pains to show his Administration's awareness of Europe's present unease. His message refers four times, discreetly but clearly, to fears of a rearmed Western Germany; it specifically pledges the United States to assist the proposed Western Union arms controllers to prevent "unjustified military preparations," and to regard as a threat to Nato itself any threat to the "integrity or unity" of the union "from whatever quarter" it may come.

Mr Bevan's Head

THE first round of the Bevan battle has gone to Mr Attlee; but by an alarmingly small margin. On the compromise amendment, his majority was only 14 out of a total vote of 262. What must have been even more alarming was to find that, with the compromise out of the way and every man compelled to face the plain choice between Mr Attlee and Mr Bevan, the majority was only 29. This makes it harder than ever to solve the mystery of what possessed the Shadow Cabinet at their fatal meeting last week. Either they were very ill-informed about the state of mind of their colleagues, or else their mood was even more suicidal than had been supposed.

For the figures of the voting on Wednesday make it perfectly plain how much harm has been done to the party, and how much more harm there is still to come. Whether the final result is win, lose or draw, the party is split. The closeness of the vote makes a compromise at the next stage—when the National Executive meets to consider Mr Bevan's expulsion from the whole party, not merely from its parliamentary fraction—at once more desirable and more dangerous. Had the leaders won easily this week they could have afforded to relent next week. But to falter now in pushing the affair through to its logical conclusion would be to concede the moral victory to Mr Bevan. So Mr Attlee and his colleagues on the right wing may be compelled by the very revelation of their weakness to go on urging the party to tear itself to pieces. What is more, though they can be reasonably sure that they have the majority of the fourteen million Labour voters on their side, they cannot, after this week's vote, be anything like sure that the Party Conference next October will support them. If they then allow the issue to become simply one of whether or not Mr Bevan should be expelled from the

Reassurances have never been more reassuring than this. Who, after reading Mr Eisenhower's words, can continue to depict the Paris agreements as a reckless venture that will upset the equilibrium in Europe and drag a reluctant alliance into aggression? Overwhelming evidence points in the diametrically opposite direction. Final ratification of the agreements will indeed create a new situation in Europe, but it will be a situation not more dangerous but less, a situation in which the strength and unity of the western world can be rallied to provide a basis for dealing with the Communist powers on more equal terms. There has been ample time for the jury to consider its findings. Only a swift and favourable verdict can now prevent further damage to the morale of the waiting peoples. At the moment their nerves are keyed up to jangling point; but if heads can be kept cool and brains clear for the next fortnight, all may yet be well.

★

party, quite possibly they will be beaten. Their tactic must be to heighten the quarrel and threaten that they themselves will go if they are not supported. If the question is not Bevan In v. Bevan Out but Bevan v. Attlee, victory is more sure. But it will also be more embittered.

The space that is being given to the affair by all the newspapers is a fair measure of the public interest. There is always an audience for a clash of personalities. But many members of the public, outside the Labour party itself, are sorely puzzled to know what to think about it. The Conservatives, of course, can simply rejoice. Rarely can a Government, approaching an awkward general election, have been presented with such a gift by their opponents, and Sir Winston Churchill—or perhaps one should already begin to say Sir Anthony Eden—would be less than human not at least to consider yielding to the temptation to dissolve at once.

But for non-party men and those who try to think beyond the next election, the matter is more difficult. Nor can it be simply shrugged off as Labour's own business, which other people need not mind. For the Labour party is Her Majesty's Opposition. Within a very short time it will be soliciting the votes of the whole public, and it is, in spite of everything, the only possible alternative government. The way it behaves necessarily affects the public interest. It is doubtful whether many outsiders to the party (the Communists always excepted) have much sympathy either with Mr Bevan as a person or with Bevanism as a philosophy. But without any such sympathy at all, it is still possible to feel doubts about a party system that imposes such

an extreme penalty for offences which are so difficult to define—and which, when defined, seem to be matters of personality and behaviour rather than of policy. It is virtually impossible nowadays for any man to pursue an active career in politics except as a member of one or other of the two big parties (Mr Bevan, with his firm base in Ebbw Vale, is one of the rare exceptions). What happens to free representative institutions if too high a standard of obedience, conformity and respect towards the Leader is exacted as a condition of membership?

There is, of course, plenty to be said on this issue in defence of the Shadow Cabinet. It is the British belief that to have a small number of cohesive parties is essential to the proper working of democracy, a belief that is hardened by observation of what happens in countries which allow their parties to split up too easily. But cohesion implies discipline, and discipline cannot exist without sanctions against those who offend against it. Any leader of any party who feels himself threatened by a rival has the right to ask his party to choose between them. These are sufficient reasons against any easy acceptance of the cry that democratic methods are endangered because Mr Bevan is sent packing. There is little evidence of any especial attachment by Mr Bevan and his friends to the rights of minorities. On the contrary, comparison with the practices of some of the constituency parties and trade unions that will vote for Mr Bevan next October makes Mr Arthur Deakin's use of his block vote seem as tentative as a curate's cough. A victory for the Bevanites would hardly be a victory for democracy. And yet the nasty taste left by the expulsion remains. Practices that would be harmless in a small band of insignificant sectaries are more dangerous when applied by one of the only two permitted parties. A closed shop in politics cannot be consistent with democracy, and it follows that the penalty of expulsion, if allowed at all, should be reserved for the most extreme cases. After this week, it probably will be.

So much for the constitutional proprieties. But there is another set of questions that Wednesday's vote also inevitably raises. Since it went out of office, the Labour Party has been performing the functions of an opposition very badly. It is not enough for an opposition simply to abuse the government; it is not doing its job properly unless it offers an alternative as realistic, as sensible, as consistent and as honest as the government itself. This Labour has certainly not done. So far from picking up support while out of office—which is the duty, as well as the self-interest, of oppositions—it has been steadily forfeiting it. In many men's minds the bitterest complaint they have against Labour is that it leaves them no alternative but to be Tories. It is the rarest thing nowadays to meet a thoughtful man or woman, untied by past commitment to either party, who professes any active desire to vote Labour. This is not because of any brilliance on the Tories' part. It is because the Labour party in Opposition, so far from working out a practical alternative to the Conservative

Government's policies, has lost even such realism and responsibility as it showed in office, and has been content to take refuge in mere emotionalism. How many practical suggestions have come from the Opposition in these three years that were anything more than, in foreign affairs, mere wishful thinking or, in home affairs, a desire to hark back to the siege economy of the war years in which Bevin and Cripps won their spurs?

*

How much has this sad abdication of responsibility been due to Mr Bevan's guerrilla sniping? To quite a large extent, without doubt. Had he not been there to pounce upon anything that looked like a weakening of doctrine (even if it also looked like common-sense) and to exploit it against the leaders of the party up and down the country, Mr Attlee and his closest colleagues might have had more energies left for the real business of an opposition. But does it then follow that Mr Bevan's departure from the party will improve matters? That is where doubts enter in. The right wing has used the manoeuvre of trying to undercut Mr Bevan by adopting his policy so often that it is difficult to credit them with much real desire to stand fast on responsibility. Moreover, what reason is there to suppose that Mr Bevan's ability to tempt the weaker brethren of the party away from their allegiance to their leaders will be any less now than it has been? His seat in the House of Commons is safe, and he has nothing now to lose in pursuing his attacks. The sheep may need just as much protecting from the wolf now that he will be free to roam all round the fold. And the head sheep may continue to think it the best policy to put on wolf's clothing.

When there are only two effective parties in the state—and with all respect to the Liberals, that is the position in Britain today—it cannot be a good thing for one of them to get into such a mess as the Labour party is now in. But the more the causes of its being in the mess are analysed, the clearer it becomes that there is only one way out. That is for the sensible men in the Labour party to start fighting Bevanism as well as Mr Bevan. By Bevanism is meant not the particular expedients that feature for the moment in the Bevanite propaganda; for they can, and will, change. What is meant is the whole attitude of mind that can find an answer to any problem in expropriation at home and anti-Americanism abroad. In its six years of office Labour mentally exhausted itself, and until it has thought out a new set of principles and policies, there is nothing to take their place but emotions, which the irresponsible and the unscrupulous will always handle more effectively than those who are trying to be honest and realistic. You cannot beat something with nothing. Mr Gaitskell's only chance of winning back that dissident 45 per cent of the party is to give it a new positive policy that will be less concerned with ditching Mr Bevan and more concerned with beating Mr Butler and Sir Anthony Eden.

Capital for the Professions

AT this season the Chancellor of the Exchequer is the target for many representations by interested parties for taxation relief. This year, however, one has been made which deserves particular consideration. Two weeks ago a deputation from the General Council of the Bar, the Law Society and the Institute of Chartered Accountants asked Mr Butler to take steps to implement the recommendations of the Millard Tucker committee in respect of retirement benefits for self-employed persons. The report appeared a year ago—too late, perhaps, for consideration in what was, in any case, a standstill budget; but if Mr Butler is considering tax concessions this year it is much to be hoped that he will think about the plight of the professions. As things are, taxation falls with unfair severity upon that section of the community which lives by fees rather than by salaries or wages: especially on those members of the free professions who conduct private practices.

They are not the least deserving nor the least productive. They stand for an attitude to life which is of the utmost value to the nation. They are, it is true, a diminishing proportion of the class which calls itself professional. Most lawyers, however, are still in private practice, a high proportion of accountants, half the architects and surveyors, all stockbrokers. Over 1,000 doctors practise entirely outside the national health service. Even among the professions which are almost wholly in salaried employ, there are significant minorities of private consultants—engineers, chemists and physicists, actuaries and so on—whose exceptional status, and the respect accorded it, indicate the importance attributed to independence in all professional work.

But this independence is becoming yearly harder to sustain. The salaried job is becoming the only professional career open to the young man with no capital and a normal desire for some security. From the outside, the remuneration of private practice may still seem good. But on closer examination it proves on average to be less attractive, and to carry with it many more cares and risks, than the salaried and, above all, pensionable job. Independence has increasingly to be its own reward; only the exceptionally able can make it pay better than—or even as well as—employment.

As an assistant in an existing partnership in, say, law or architecture or the City, the professional man's starting salary may be around £600; it will rise to perhaps £1,250 before he becomes a partner. As a partner, and between the ages of 35 and 60, he may earn £2,000 to £3,000 a year in fees; exceptionally, over £5,000. When he begins to think of retirement at 60, the value of his interest in the practice will be about two years' purchase of his gross annual income from it. Unless he can hang on—depriving the younger

men of their chance to make good—he will in fact have to retire about 65; he will then possess, for the support of his wife and dependants and his old age, whatever private fortune he began with 40 years previously, his savings (if any) and the capital value of his share in the practice, which in general may average £5,000 or so. When he is dead, there will be his life insurance. From the state he will get an old age pension, paid for at the self-employed rate—30 per cent more than the employed rate.

The crucial period of his life is between 35 and 60. In the past, this was the period when he gave his children a better-than-state education and professional training, and made provision for a dignified old age. Today, if his yearly income from fees is £2,500, and he has a wife and two children, his net income after taxation is under £1,800. Income tax law—and still more the application of it—tends to take a more stringent view of what are allowable expenses in the case of professional practices than in the case of businesses; thus the professional man's expense account will not much ease his cost of living. If his children win scholarships a means test will deprive him of most of the relief this would bring to his educational budget. Since he is not employed he must pay out of net income the cost of provision for a pension. He will save little; his main asset will be his professional goodwill.

*

How much will this be worth? He may have bought his share in the practice out of a small patrimony; but who is to buy it, and how? In the smaller firms the junior partners are faced with the problem of finding some thousands of pounds when a senior retires (as they will wish him to do). In the larger firms it is becoming usual for the junior partners to buy a fraction of the senior partners' interests every year. For those (inevitably a growing number) entering the profession without capital, this is the only way; it means that they must borrow on their prospects from a bank or assurance company against the collateral of a paid-up endowment policy. This cuts a big slice out of a net income of £1,800. It puts a literal interpretation on Bacon's dictum "I hold every man to be a debtor to his profession."

Thus in the future the most productive years of the professional man's life will rarely be free from financial anxiety; yet at the end the provision he will have made for his retirement, and for his wife and dependants, will be very small indeed. To live for more than five years after retirement will mean to enter a period of increasing penury, while his retired salaried colleague will maintain—within the limits set by inflation—his standards to the end. This is not a prospect to attract

newly-qualified men and women leaving the university (or who have qualified in a practice itself). In preference to a splendid independence leading to nothing but worry, they will take the salaried jobs in government or big business. The idea of taking up practice to contribute to the continuing professional tradition, to add to its body of skill and knowledge, will produce a shrug of the shoulders.

The Millard Tucker recommendations (which were reviewed in *The Economist* on February 20, 1954) promised to remove this disincentive to the extent of making it possible for the self-employed to have pension rights comparable with those of their salaried colleagues. They would permit each profession to set up wholly contributory funds, the contribution to which would be allowable as a deduction against taxable income. The provisions are elaborate, for they have to set an upper limit, and have to take into account existing and varied endowment insurances taken out by individuals; but the provisions of the general practitioners' pension scheme under the national health service are complicated for similar reasons—yet it was regarded as vital that GPs should end up with pensions comparable to those of salaried hospital doctors, if the institution of the independent family doctor was to survive. Since the Millard Tucker scheme is for all the self-employed, it would be eventually expensive—some £77 million a year to the Exchequer, but for the professions proper it would probably amount to a tenth of this sum. This indeed is the measure of the extent to which the self-employed have not participated in social security; and it would, of course, be largely offset by their additional contribution to national saving. It would remove taxation from increased contributions to pension funds, but place it on the larger income accruing later; at present the self-employed are taxed both ways and save correspondingly less. This is the

case that Sir Hartley Shawcross has put to the Chancellor on behalf of the professions: it is a strong one.

But though the Millard Tucker proposals would give the private practitioner greater security in old age, they would not meet some of the other difficulties in financing private practice which have arisen from steeply progressive taxation and the redistribution of income. Professional bodies ought perhaps to consider setting up funds for financing partnership transactions at a low rate of interest. Another suggestion which has been put forward is the amending of the Partnership Act to allow limited partners supplying capital to professional concerns to draw a share in the partnership profits in lieu of interest.

The professions must face the facts. Somehow a profession as a whole must replace the capital withdrawn each year on the death or retirement of its senior members. If the rising generation is unable to effect that replacement in the traditional way, the professions must devise new ways of attracting that capital—or accept the fact that their day is done.

That would be a bad day for the country. It would be a day when the intimate and fiduciary relationship between practitioner and client would come to an end; all dealings would thenceforth be with officials who would dole out their services with half an eye on the client and one and a half eyes on the clock, on promotion chances, and on departmental policy—and invariably according to a book of rules. The importance of maintaining an "independent sector" in the professions cannot be measured by mere numbers. There is but one umpire to 22 footballers and 50,000 spectators; yet the possibility of a game turns on him. The brass plate takes its place with Parliament and press as part of the defences of the liberty of the individual.

Soviet Stomach Trouble

FREQUENT alarms and disputations, abrupt changes of prescriptions and even of doctors have made it plain that something is seriously wrong with the stomach on which the Soviet system marches—that is, with Soviet agriculture. Since Stalin's death, the absorption of quantities of Argentine, Danish and Dutch foodstuffs by an economic body quite unaccustomed to such external supplies has caught the world's eye (for a time Russia was the third largest importer of meat and dairy produce); and the linking of Mr Malenkov's agricultural "sins" to his deposition, followed by the dismissal of ministers concerned with food and farming, has heightened the sense of drama. Against this background, the orders which Mr Khrushchev issued last week for the decentralising of agricultural planning have been interpreted in some quarters as a prelude to the

winding up of the whole Soviet system of collective farming.

Undoubtedly the countryside has always been the Achilles heel of the Soviet regime. The heel may not be as vulnerable as some western observers depict it; but it is a peculiarly embarrassing weakness for a regime which seeks not only complete independence from "capitalist" supplies but also the allegiance of peasant populations in backward countries. Soviet apologists can, of course, cite extenuating circumstances; after a civil war and two world wars, they might even claim it to be an achievement that the number of livestock is now not much lower than in 1913, and they can put on the credit side the increased proportion of wheat in total grain output and great increases in cotton and sugar beet. Their chief argument, however, would be

that collective farming has fulfilled its essential task: it has made it possible to extract from the countryside enough supplies for the industrialisation of the towns.

It can safely be assumed that nothing is further from the mind of the Soviet leaders than to admit the bankruptcy of planned collective farming, for that is an inherent part of the Soviet system, and to jettison it would amount to admitting the bankruptcy of the system as a whole. The *kolkhoz* cannot be so easily uprooted from the Russian landscape. The present measures represent not the dismantling of a broken-down machine, but an attempt to lubricate and keep in motion a machine that is groaning with the strain of its effort. Moscow no longer tries to deny that the machine is inefficient. Soviet leaders have lately been crying on the rooftops that agricultural supplies are failing to match up either to growing demand or to the planners' expectations, failing even to correspond to what has been invested in the agricultural sector. Article after article in *Pravda* denounces the "intolerable situation" in state farms, in fodder output and in stockbreeding, revealing countless errors and failures in both production and distribution.

The planners' problem is not merely to feed a rising population but specifically to ensure food for the mushrooming towns. Russia's rural population has remained roughly unchanged since 1913 at about 120 million people. But during the quarter century of the planned era, the urban population has risen by 50 million, and in the last five years alone by 17 million, of whom nine million represent the influx from the countryside. And a *muzhik* who has come to town is not only, in Khrushchev's words, "a food producer turned food consumer"; he is also apt to demand a richer and more varied diet. The promises made by Stalin's heirs in 1953 have whetted his appetite, and the relatively bigger price cuts of recent years have also added to the inflationary strain.

The countryside has also been a headache for Soviet leaders in more than a strictly economic sense. Its life as well as its production cannot be controlled, planned and ruled as can be done in the towns. It was no accident that Stalin, in his last pamphlet, dwelt on the need to eliminate the difference between "collective" property in the country and state ownership in the towns. The avowed aim is to bridge the gap, to uproot the remnants of private property and transform the peasants—now collective farmers—into agricultural workers. A step was taken in this direction, under Khrushchev's own guidance, in 1950 when some 250,000 collective farms were amalgamated into 93,000 larger units. In face of peasant resistance, however, the regime did not dare to proceed any further along the road towards "agro-towns."

Thus Stalin's successors were left with a dual task. They had to step up food supplies for the towns rapidly;

they were also determined in the long run to transform the countryside and tighten their control over it. Popular pressure, encouraged by the pledges made to the consumer by the new regime, rendered the first task so urgent that the second had to be pushed temporarily into the background. In the second half of 1953 Russia's new leaders admitted openly that the state of Soviet livestock was poor, and that dairy produce, meat, and even vegetables and potatoes were in short supply. Stalin's method of coping with such a situation and extracting surpluses from the countryside was to burden it with taxes and offer low prices. In their urgent need, his heirs applied the opposite remedy: they granted tax reliefs, reduced compulsory deliveries and paid higher prices. Soon afterwards, Khrushchev exploded another myth, that of Soviet self-sufficiency in grain. He insisted that the crop of coarse grains in particular would have to be greatly increased if his ambitious plans for livestock breeding were to be fulfilled, and "volunteers" were sent to "conquer land" in cold and distant Kazakhstan and Siberia, with strict orders to get some 30 million tons of grain within a few years.

★

At the beginning of this year, on the eve of Malenkov's sensational fall, these new policies had had little time to mature and the results were still very meagre. A slight improvement was claimed for livestock, while additional grain from the reclaimed land was barely sufficient to compensate for bad weather in other regions. As yet no great achievements can be claimed for the policy of incentives. Imports had to be continued and stocks run down still further; yet even this did not prove enough to counteract the inflationary pressure resulting from price cuts. The sequel was the classical one: shortages of meat and other foods, queues, and mounting discontent. Khrushchev's latest intervention must be seen against this background. His new formula, borrowed from American experience apparently without much consideration for climatic and other differences, is a gigantic, and highly dubious, expansion of maize cultivation for fodder. Both the policy of incentives and the drive eastward are to be continued as well.

Simultaneously Khrushchev announced a new concession which is elaborated in the decree published last week. Local authorities and individual collective farms are promised a little more elbow room. The central authorities will continue to determine regional contributions and each farm will still be faced with its minimum quota, but both farm and district will have a greater say in planning and will tend to benefit more if they overfulfil their tasks. It would be naive, however, to hail this measure as a major abandonment of centralised planning. It is significant that Khrushchev announced at the same time that control over deliveries will be exercised by the Machine and Tractor Stations,

which are in effect the state's outposts in the countryside. In fact, the strengthening of these bastions has accompanied every move of the tactical retreat. Khrushchev now has under his command about two million tractor drivers, mechanics and agronomists, who are independent of the collective farms and yet play a key role in them. Should he decide to call off the retreat, the 9,000 MTS would prove vantage points for a new offensive. A fresh attack on the property-minded collectives would also be facilitated by the development of the "virgin lands." There, in pioneering conditions, with no system of individual property to be eradicated, it is admittedly logical that the emphasis should have been put on state farms; but it is also obvious that their surpluses will strengthen the government's hand when it seeks to exercise new pressure on the old collective farms. Khrushchev may already have it in mind to call in this new Soviet world before long to redress the balance of the old.

His scope for manoeuvre, however, is limited. He

cannot relax the regime's grip much further without disrupting the whole system of planning, endangering supplies and courting a general collapse. Nor can he afford to launch an all-out offensive and risk a peasant upheaval in the present international situation. During the years of collectivisation Stalin used the foreign bogey merely as a pretext; his successors are well aware that a repetition of such an upheaval now could force Russia to capitulate on all fronts. Thus Khrushchev must tread cautiously within these bounds. To overstep them would be to endanger the whole regime, and even to approach them might lead to his being overthrown by more nervous colleagues. Yet how much progress can he achieve without straying from this narrow path? His abruptly changing diagnoses and remedies show signs of panic. The policy of incentives will not be made any easier by cuts in the planned output of consumer goods, since the Russian peasant, like any other, wants goods, not roubles. The situation is now undoubtedly critical.

Notes of the Week

If Eight Had Faltered . . .

EVEN for such a specialist in short-head finishes as Mr Attlee, the margin by which Labour MPs agreed to withdraw the whip from Mr Bevan was disconcertingly narrow. Mr Fred Lee's amendment that Mr Bevan should suffer no worse fate than a censure was defeated by only 138 to 124, and the official motion to withdraw the whip was then carried by 141 to 112. If eight of the votes against Mr Lee's amendment had gone the other way, Mr Attlee and the whole Shadow Cabinet would have had to resign. Some MPs believe that if Mr Bevan had chosen to frame his speech at the meeting in more conciliatory terms, this switch of votes would have happened. Nevertheless the Bevanites came out of the committee room in high fettle, and are now spreading the story that when the National Executive meets next Wednesday it will not dare to expel Mr Bevan from the party as a whole. The leaders will have made an uncomfortable bed for themselves if they do agree to hold back the Executive's hand. They will have given Mr Bevan just the freedom of action in the House of Commons that he has always sought, but without any of the penalties outside Parliament that nowadays attach to a politician who does not belong to one of the big machines.

Mr Attlee's personal part in the crisis has been odd. It has been widely reported that he had no enthusiasm for

withdrawing the whip, but that he accepted the majority view of his colleagues in the Shadow Cabinet. The fact that this story gained such wide credence, and was never denied by Mr Attlee, inevitably complicated the voting on Wednesday. Indeed it was only after a direct question from a lady MP (from the Bevanites' point of view, an unduly inquisitive lady) at the meeting that he agreed that he would resign if the voting went the wrong way. But it is rash to assume that there is an immediate threat to Mr Attlee's position as leader. Apart from his gift for survival, he is in the happy position of having no ready-made successor. Only a small minority of the small majority who voted for the Shadow Cabinet's motion on Wednesday would really wish to overthrow him to make either Mr Morrison or Mr Gaitskell king.

Dr Garbett and Gravesend

INTO another split in British politics, which could have much more serious consequences for the country than the Bevanite wrangle, there has stepped this week the saving grace of the Archbishop of York. He wished to God, Dr Garbett told the House of Lords on Wednesday, that hydrogen bombs had never been invented. But since they have been, the chief justification for making them is that

"they will provide a shield beneath which the work for peace-making will be continued." Dr Garbett has long been regarded as a man of the heart-searching Christian Left, and he has been bombarded by letters from those who had thought that he might become a leader of the body of Christian opinion that recoils in horror from defence through deterrence. It is of the highest importance that he has given a lead in the contrary direction.

For, as was inevitable, the hydrogen bomb has now been brought into domestic politics. After Mr Bevan had attempted—with disingenuous obscurity—to cash in on the emotional feeling against manufacture of the bomb, Sir Richard Acland, the Labour MP for Gravesend, has decided to put the matter to the test in a much more courageous and honest way. He is resigning his seat and will fight a by-election there, against both Labour and Conservative candidates, on the single issue that he opposes British manufacture of thermonuclear weapons. This could be the East Fulham by-election of the 1950s, and nobody can say how potent a force the pacifist vote at East Fulham was in starting the drift to Hitler's war. With due regard for Sir Richard's sincerity—but with regard also for the cause of peace—it is important that he should finish at the bottom of the Gravesend poll. But neither party should cosily assume that he will.

On Turkey's Eastern Flank

THE Turks are sadly disappointed about Sir Anthony Eden's influenza, not only because they are baulked of his visit for a second time, but because he was due at an opportune moment in their defence planning. Haunted as they are by a perpetual fear of Russian expansionism, security preoccupies their minds; for some years, they have felt comfortable on their western flank thanks to Nato, but nastily exposed on their eastern one. Now that their new pact with Iraq is ratified, they see prospects of remedying this defect, and they had hoped that Sir Anthony would propound views much like their own about how to make the remedy effective. In their eyes, their eastern flank will become safe only when one of their larger western allies joins the pact.

Sir Anthony's diplomatic problem is not so clear cut. He is confronted with an Anglo-Iraqi defence treaty that expires in 1957 and a situation in which Egypt, acting largely out of pique with Iraq, is trying to prevent other Arab states from joining the Turco-Iraqi group. There are two courses open to him; one (which might be christened the Dulles line because it has so often been advocated by American diplomats) is to leave Middle Eastern security arrangements to develop on local initiative, in the knowledge that no government there would dream of turning in any direction but westward for help with armaments. The advantages of this course are that arrangements spontaneously made tend to be firmer than sponsored ones, and are less open to the accusation that they are western imperialism in disguise. The alternative course is to add Britain's signature to the Turco-Iraqi pact, and by doing so to impart to it the strength the Turks desire—a strength that they believe will attract Arab waverers into its orbit.

Perhaps they are right, but the course they want has a disadvantage; it would furnish a wide range of would-be neutral parties in the Arab States and Iran with an argument that Britain is back at old tricks in new guise. It would be likely, therefore, to divide the educated élite of every country in the Middle East into two groups, one priding itself on realism about security, and the other preening itself on seeing through western machinations. Pacts so built have rickety foundations, and it might be best to let matters ride for long enough to enable the Egyptians and Arabs to sort out their muddled thoughts.

Austrian Check to Mr Molotov

THE Austrian government has refused to allow itself to be used by Mr Molotov as a bait for catching the prize German fish. Its reply to the flattering direct approach made from Moscow states that the Austrian peace treaty should be considered separately from the German question and that preliminary exchanges should take place to find out more about the new Soviet proposals. Mr Molotov had offered to withdraw occupation troops before a treaty was concluded. At last year's Berlin conference he had declared that the troops should stay until all was settled in Germany. But the demand made in Berlin was in itself new, so that its withdrawal now is not a genuine concession. And he still proposed that the conference of the powers should deal with both Germany and Austria and, moreover, that it should take place before ratification of the Paris treaties. All too plainly, the Russian purpose was to keep the conference talking until the whole plan for bringing Western Germany into Nato was dead and buried.

The conditions made by Mr Molotov for reducing the price he raised in Berlin were that the other treaty powers should join in a guarantee against any new *Anschluss* between Austria and Germany; and that Austria should not take part in a military alliance or allow foreign bases on its soil. Both these far-reaching stipulations had already been agreed to by Herr Raab, the Austrian Chancellor, and Mr Molotov no doubt hoped that the Austrian example might encourage the German government to follow suit, in spite of the great difference between the two countries. It appears that the Soviet rulers are concentrating on securing their most vital aim—the removal of American bases from Europe—and are using the tactics of direct approach to Austrians for the purpose. The manoeuvres over the body of Austria are not at an end; and it may well be that a future Federal German ambassador in Moscow would be just as cordially approached by Mr Molotov with proposals for neutrality as the Austrian envoy has been in the last few weeks.

Fair Weather Farmers

THE result of the annual review of agricultural subsidies, published as Cmd 9406 last week, is to increase the value of Exchequer guarantees to farmers by some £28 million a year. The settlement has so little relation to

economic realities that it can only be regarded as a pre-election gesture. The award is not—contrary to general assumptions—intended to compensate farmers for rising costs in the coming year; it is expected that these will be absorbed in various ways without any effect on farmers' profits. Instead it seems mainly intended to compensate farmers for the recent fall in their net income as a result of "quite exceptionally foul" weather. As such it will strengthen the farmers' assumption that—come rain, come fine—it is the Government's business to prevent their profits from falling. Certainly the endorsement of the settlement by the president of the National Farmers' Union came as close to a purr as that rugged protagonist will ever emit.

The details of the settlement are equally unfortunate. The fabulous pig guarantee is to be reduced by stages, but this year's modest bite is unlikely (in view of the rising cost of feedingstuffs with which the guaranteed price

* Up to 1952/53, subsidies represent Government trading losses in respect of home-grown food plus direct production grants; for 1953/54 and 1954/55 they represent estimates of the cost of the agricultural guarantees. Subsidies are for financial years beginning April 1st and income for years beginning June 1st.

fluctuates) to make much difference to its present cost of £60 million a year. Despite a slight fall in liquid milk consumption and a continued rise in production, milk prices will be raised—thus probably adding to the size of the surplus that will have to be sold at a heavy loss to manufacturers of milk products. About £11 million of the award takes the form of increased direct grants for calf-rearing, ploughing-up grassland, and the application of lime and fertilisers. This stimulus to home production is defensible; but, having given it, the Government is hardly wise also to increase substantially the price guarantees for oats and barley.

The Minister of Agriculture claims that his declared policy of reducing Exchequer commitments to agriculture is in no way altered, but merely deferred—presumably until after the election. Meanwhile, the cost of the Government guarantees is moving fast in the wrong direction—from about £200 million in 1953-54 to about £250 million for the year now ending, with the probability of a further substantial increase in the coming year. It is perhaps a little unfair to make a direct comparison between these subsidies—even now that they contain no consumer

element—and the level of farmers' net incomes in a year of bad weather. But the comparison is bound to be made. Its implication is that only about half a crown out of every £1 of farmers' net incomes (estimated at some £280 million for 1954-55) has been earned on the open market. The rest has been a straight gift from the taxpayer.

Local Gains for Tories?

THE County Council election campaigns are getting into full swing. The election for the London County Council takes place on March 31st; the polls in the other 62 counties in England and Wales will be held during the same or the ensuing week. It seems fairly certain that the elections will show some net gains for the Conservatives (whether parading under their own banner or the pseudonym of "Independents"); but it is going to be extraordinarily difficult to interpret how significant a pointer to general election prospects any such gains will be.

The outgoing county councils were elected in the early spring of 1952, at polls that showed about 350 net Labour gains of county council seats across the country. There was a great deal of argument at the time about how far these Labour gains showed that the Conservatives' popularity had fallen away during the first five months of economic crisis after their return to national power, and how far they merely reflected a recovery in Labour popularity from its nadir in 1949 (when the previous county elections had been held). For what they are worth, local analyses at the time suggested that London voters cast their votes in the 1952 LCC elections in very much the same proportions as at the general election of October, 1951; but, since Labour usually tends to get a smaller proportion of its voting strength to the polls in local elections than its opponents, this probably disguised some swing towards the left. In other parts of the country—especially Essex and unemployment-affected Lancashire—there was a more definite leftward trend. This confirmed the evidence of both the Gallup Poll and Parliamentary by-elections at that period (the nearest by-election to the county elections of 1952 showed a 2.7 per cent swing to Labour compared with the previous October).

If the Conservatives are now as popular as they were at the time of the general election in 1951—and most Conservatives tend to assume that they are at least that—then they can expect fairly substantial gains in these elections; although only if they are back to their peak popularity of 1949—which most people do not expect—should they recover the whole of the 350 net Labour gains of seats in 1952. The most interesting pointer from these elections may be how near they approach to this figure.

The Marginal Counties

IT is much more doubtful whether scattered Conservative gains of seats in the county elections will bring them control of many new councils. At the moment, only 12 of the 62 county councils have Labour majorities. Labour therefore has a relatively narrow front to defend. The

Conservatives also complain that a horde of new Liberal candidates are appearing at the most inconvenient places for them.

Only three of Labour's twelve councils—Lancashire, Staffordshire and Essex—are generally regarded as marginal; if the Conservatives and their allies should win back Lancashire, in view of present local difficulties, that would be a triumph for them indeed. In addition to these recognisably marginal counties there are three other Labour councils—Carmarthen, Northumberland and the West Riding of Yorkshire—that had anti-Labour majorities in 1949. Labour's main hope of gaining a council is in Middlesex, where it will need only a small additional turnout of its established voters in a few marginal seats. On the London County Council, Labour has been in control for twenty-one years—although it won a minority of the votes cast (but not of the candidates returned) in 1949. Thanks to Labour's successes in 1952, the Conservatives will have to win 27 additional seats if they are to capture this plum. It will be a clear sign of an unexpectedly strong swing to the right if they should manage to do so.

Marshal Aid for Khrushchev

AT each turning point since Stalin's death the Red Army has gained ground. After Beria's fall security control over it was relaxed and many military figures were raised in rank. When Malenkov fell the "political marshal," Bulganin, took over the premiership, handing over the ministry of defence to the army's hero, Marshal Zhukov. And now Zhukov has obtained the biggest distribution of marshals' batons for years. Last week, six generals were given the title of "Marshal of the Soviet Union" (the highest military grade), two were appointed marshals of artillery and two of the air force; Air Marshal Zhigarev was also promoted to the new rank of "Chief Marshal" of the air force.

This prizegiving is probably designed to reinforce the army's loyalty to the new leadership, while at the same time it is being used to reward past services, including the army's part in the struggle against Beria. Thus among the newly promoted are to be found Vassili Chuikov, who had lost his command in Eastern Germany during the early days of the new regime, and Kyril Moskalenko, who was head of the Moscow command at the time of Beria's arrest and is reputed to be a close collaborator of Khrushchev. But the fighting generals probably do not represent a monolithic group any more than the party or the MVD; Stalin used to play on their jealousies and rivalries with great success.

When Stalin appointed a number of new marshals towards the end of the war and immediately after it, his object was clearly to devalue the title of a Zhukov or a Koniev. There was then only one generalissimo, and he was supreme; now there is none in Russia, and the newly appointed Grand Marshal Mao Tse-tung is unique in the Communist world. But Khrushchev and Bulganin, having presented these glittering prizes to advertise their alliance with the military, might do well to ponder Machiavelli's old maxim: never enter into an alliance with anyone stronger than yourself.

The Link with Delhi

COMPARED with the period three years ago when the Conservative government first came to power, relations between London and Delhi have vastly improved. Then there was a not unnatural suspicion in the Indian capital that those Conservatives who had opposed the transfer of power—and the Prime Minister not least among them—would prove awkward and difficult to deal with; Mr Attlee and Sir Stafford Cripps had, after all, become peculiarly personal heroes in many Indian eyes. Now, however, Sir Anthony Eden's recent visit to Delhi has set the seal on a friendship which has grown closer and more genuinely cordial each year. And this has happened in spite of the way in which the two peoples have so often been pulled in different directions. India, with Mr Nehru as its special spokesman, has increasingly clarified its ideas about Asianism in the light of experience, and the passage of events has led it to express them with mounting force. Britain, compelled by the growing gravity of developments in the Far East as well as in Europe to recognise the logic of its alliance with America, has consistently had to sharpen the edge of realism in its Asian policy.

Sir Anthony Eden's visit to Delhi on his way back from the Bangkok conference appears to have had almost as much impact on Indian thought as Indian views have in the past had on the Foreign Office. The result has been that, although the British have sometimes sailed pretty close to the wind in provoking serious misgivings in America, they have also now had a marked success in putting the American point of view across in Delhi. And that is of real value. On the one hand, official Delhi is ready and willing to go on using what influence it can with the Chinese Communist regime in favour of a peaceful settlement of the Formosa issue on lines which do not simply involve Chinese Nationalist capitulation. On the other, the Indian press and public opinion have given Mr Dulles's several recent policy pronouncements the benefit of the doubt. For India, as the mirror of Asian opinion, to acknowledge both the realities of domestic American politics and the sincerity of the Administration's desire for peace is a definite step towards an easing of the tension in the Far East.

One Lesson from Yalta

THE manner in which the Yalta documents were eventually made public could hardly have been less happy. Apart from the obvious untimeliness of giving a full account of secret proceedings so soon after their occurrence, and the even more questionable action of issuing it in the face of the stated objections of interested parties, the abrupt and unexpected timing gave the fullest scope for the circulation of phrases ripped out of a context which was at first available only to a few people. Some of the hares thus started will probably never be caught.

Nothing would be more ill judged than a hasty attempt to reassess the Yalta decisions themselves on the basis of the

first scrappy reports of what seem to have been pretty scrappy records. But the mere appearance of the Yalta papers at this moment prompts one very relevant reflection. At that conference in early 1945 three heads of strong wartime governments were in a position to take sweeping decisions with every prospect of carrying them out unchallenged by domestic opposition or by smaller partner nations. A few months after Yalta, their armies bestraddled the globe; and whether the decisions they had reached were good or bad, the fulfilment of them was a relatively simple task. The Yalta type of negotiation is therefore utterly irrelevant today.

Today, no head of government in any one of the major nations could commit his country across a table, in Yalta, in Stockholm or anywhere else. Each would have to return to face highly critical opponents at home; each would have to pay a heed to the fears and feelings of smaller allies that was evidently felt to be unnecessary at Yalta. This applies equally to both sides of the iron curtain; in fact, in the present state of affairs in Russia it is virtually impossible to reconcile the "highest level" concept with that of "collective leadership" and with the obviously unfinished tussle for power in the Kremlin.

In the Air

THE debate on the Air Estimates was notable for a closely-reasoned but still inconclusive argument by the Under-Secretary of State for Air that Britain had better fighter defences than other countries (and would have still better soon); and for the reiteration by other members that there was no defence against the hydrogen bomb. Mr Ward refused to be drawn on the one point that decides whether or not fighter defence can do its job: the proportion of kills that the complex defences of today, and the still more complex fighter-and-missile defences of tomorrow, could expect to achieve. But he did emphasise—though it will probably soon be forgotten—that fighter defences are part of the deterrent. They limit the potential enemy's striking force to his latest bombers; force him to equip them all, or nearly all, with the most expensive weapons; and ensure that he faces the fact that, since a strong fighter defence puts quick victory out of reach, aggression is simultaneously suicide.

Whether the fighter wing of the deterrent is as good as Mr Ward made out is another matter. He accused Opposition members of doing untold harm to their country by denigrating it. He went bail for the Hunter as superior to any Russian or American fighter. He made an effective case for keeping Meteors and Vampires for the RAF as a weapon not only against diversionary raids or airborne landings, but as a check to the Russians using their large stock of obsolescent TU4s against Britain; and he flatly denied Mr Wyatt's suggestion that the Meteor's guns do not fire at 300 knots and over. But the Minister of Supply had to retrieve his gaffe about the American F86D, which is a single seat night fighter, such as he had rashly declared was unsuitable for the British climate. It seems that nobody wants the Americans to think that their squadrons of F86Ds, which are training here, are wasting their time.

Kenya—Progress and Anxiety

MR MICHAEL BLUNDELL, settlers' leader in the Kenya multi-racial government, felt reasonably sure in advance that if he submitted himself and his support for the Lyttelton multi-racial experiment to his constituents he would get a vote of confidence. He has been rewarded in the event, and doubly so by bringing in Mr Humphrey Slade to make the case against himself. But there is little doubt that if the roles were reversed Mr Slade would get a comparable majority for his bitter anti-government, racist policies from his constituents in the Kinakop. Moreover, when the vote was taken on the amnesty to Mau Mau it was narrow, even though Mr Blundell said it would be tactically effective in disrupting the forest gangs. It is too soon to suppose that the majority of settlers are rallying behind Mr Blundell, or reconciling themselves to Asian or African Ministers. They are definitely apprehensive about the coming Royal Commission report, and they will read the debate on colonial affairs in the House of Commons this week with gloom.

For, despite party differences, that debate revealed the broad support of British opinion for the British Government's policy in Kenya. The Colonial Secretary, in a comprehensive progress report on Kenya, showed that the Lyttelton policy was paying dividends. He pointed to the increasing attacks on the terrorists, the improving loyalist defences in Kikuyuland, and the start made with plans both for economic and psychological rehabilitation. He was enthusiastic about closer administration in the reserves. He promised a new approach to the condition of urbanised Africans, and implementation of the report of the committee on African wages. But he left largely unrelieved the widespread anxiety about "certain strictures made by judges and others with regard to judicial conduct in Kenya." Although the Kenya judges disagree with each other, reports of conduct repugnant to British ideas of justice or fair play continue to reach this country; they often lack chapter and verse, but usually imply that evidence is skilfully and co-operatively suppressed. Mr Blundell hinted that abuses by loyalist forces were part of the reason for offering a parallel amnesty to Mau Mau. In all this, far too little is known for certain, and the miseries of Africans awaiting screening, or living between the Mau Mau and loyalist forces, is still little understood. This is the dark side of the otherwise more hopeful Kenya situation. It cannot be ignored. It is to be hoped that the British Government will investigate the possibility of a full-scale juridical inquiry. It would be unpopular in Kenya, and it would make Mr Blundell's position still more difficult; but nothing less will ease the British colonial conscience.

Glut in the Deep-Freeze

AT a time when politicians clamour for cheaper meat, the butchers are largely unable to sell anything but the dearest. The housewife, who spends lavishly on every other kind of frozen food, is averse to frozen beef—even at prices one-fifth lower than under control, and at

little more than half the present price of home-killed. The meat importers, who are at their wit's end to find storage space, have had to ask Australian and New Zealand exporters to slow down shipments for the time being.

In part—but only in part—this resistance to imported meat may be due to a fall in its quality since the 1930s. Before the war about half of Britain's meat supply was imported, but the ratio of frozen to chilled beef was 1:3; today imports account for only about a quarter of total supplies, but the ratio of frozen to chilled beef is 15:1. The chilled beef came (and is just beginning to come again) mainly from Argentina, whose diminished contribution to Britain's table has been replaced by Australia and New Zealand. These dominions might do a little better if, in spite of their great distance, they chilled more of their meat instead of freezing it. But sales of such chilled beef as they already send suggest that only fresh meat is good enough for many British housewives under conditions of full employment.

Why this should be so is debatable. Perhaps memories of ewe mutton and other unpalatable frozen rations have something to do with it. The Ministry of Food clearly believes that the butchers are also partly responsible. In a letter addressed this week to their national federation, the Ministry suggests that butchers may be reluctant to handle frozen meat because it is more trouble, and—more important—that they have been inclined to level out their prices by squeezing the margin on fresh meat and raising it on imported meat. The price system is being misused to choke off demand for the very cuts that are most readily available. This is hard on the exporters overseas. It is also hard on the taxpayer, for it presumably means that some 66,000 tons of meat in the Ministry's store, accumulated under the bulk contracts, will have to be sold at a loss. The fuss of the last few days, however, will at least bring it to the housewife's attention that there is plenty of cheap meat about; and as supplies of home-killed meat fall in the spring and early summer, she may be more willing to give a frozen joint a trial.

A Governable France?

EXCLUDING the Communists, more than a quarter of the deputies in the present Assembly have at some time been members of the government. It becomes insulting not to have been a minister like everybody else." This striking illustration of France's notorious governmental instability appears in the introduction to the constitutional Bill presented last week by M. Paul Reynaud, the former premier. His purpose is to strengthen the proverbially weak executive, and the chief means proposed is to make dissolution automatic if a government is brought down within two years of its formation. The British system is, in fact, M. Reynaud's model, but, he argues, "each disintoxication must be progressive," and this limited stabilising device is the most that can be attempted for the moment.

Nobody will deny the inherent weakness of a French government or the ingenuity of M. Reynaud's proposals. Yet is there not some confusion in all these discussions between cause and effect, between the cart and the horse?

The principle of dissolution works smoothly in Britain, and the threat, in fact, seldom needs to be put into effect, because the whole system is based on the existence of two dominant and disciplined parties. In France, where, again with the exception of the Communists, the parties are as inchoate as they are numerous, the verdict of the electorate could prove no less confusing than that of the Assembly. Even if the threat of dissolution tended to crystallise small groups into two opposing blocs, thus providing a substitute for the two-party system, it would be extremely difficult to form a left-wing alliance without the five million Communist votes. The vagaries of the French political system can hardly be stopped with a stroke of the pen.

There is, however, a more practical obstacle to M. Reynaud's plan—Frenchmen's general suspicion of a strong executive. In a country still haunted by the ghost of two Napoleons, "Assembly rule" is the conscious choice of many left-wing republicans, who would even prefer some degree of anarchy to the danger of dictatorship. Above all, deputies seldom like to abandon their prerogatives, and it will be a miracle if M. Reynaud gathers in this Assembly the two-thirds majority needed for a constitutional amendment. Indeed, it will be quite an achievement if he carries through his preliminary Bill which seeks to make it easier to alter the constitution.

Troublemakers in Vietnam

A FEW weeks ago, it appeared that Mr Diem, the south Vietnamese premier, was beginning at last to turn the corner. The surrender of various sectarian army leaders, the launching of a land reform programme and the legal

COMMODITY PRICE INDICATOR

1952 = 100 MID-MONTH FIGURES

action taken against public figures for alleged corruption were all signs of his increasing authority. Since then, however, the centrifugal tendencies of the sects have again taken shape in armed insurrections. These outbreaks are perhaps inevitable, since they express the resentment of local chieftains at the prospect of losing their autonomy through the threatened integration of their lands into the national army, and at the loss of subsidies hitherto paid by the French. They are none the less a disquieting proof that the anarchic trends in the non-Communist south are far from cured.

It appears, however, that these outbreaks do not by any means amount to a civil war, as some newspaper reports have suggested. Minor clashes have occurred in the area just south of the 17th parallel reoccupied after its evacuation by the Viet Minh; but the 600,000 deserters in the region are in no sense a coherent force, and surrenders may be expected from time to time. A more serious threat comes from the neo-Buddhist Hoa Hao sect in Cochinchina. However, this week's news that Bao Dai, still in exile in Cannes, has turned down sectarian demands for the removal of Mr Diem, confirms the latter's hold on the premiership. With continued backing from the Americans and, at least in a negative sense, from Bao Dai, Mr Diem is temporarily unassailable. If the sectarian leaders can be persuaded to accept this reality, they may resign themselves to the inevitable loss of their autonomy; and only then can the south hope to become truly unified.

He Who Gets Slapped

MOSCOW's efforts to win back Yugoslavia reached a new peak last week when it firmly turned the other cheek to Marshal Tito's public strictures on its behaviour. In a speech to the Federal Assembly the Marshal had roundly declared that it was nonsense to say—as was being said behind the iron curtain—that the improvement in Yugoslav-Soviet relations was due to the Yugoslavs' realisation of the error of their ways and their efforts to make amends. He declared that Mr Molotov in his statement to the Supreme Soviet had “in a way echoed these mutterings,” and he issued a blunt warning that such manoeuvres could only cast doubt on the sincerity of Soviet policy and impede the process of “normalisation,” which in any case was difficult enough for the Yugoslavs “after all the insults we had to endure through no fault of our own.”

Marshal Tito may have calculated that this outburst would not only have a salutary effect in Moscow but would also help to blow away some loose and wishful thinking among his own followers. Moscow's reaction, however, was surprising and rather disconcerting. It was, first, to publish a summary of the speech without comment, and then to issue in *Pravda* a soothing commentary which blandly denied the existence of the statements of which Marshal Tito complained. The reason for this attitude is not far to seek. It is, in fact, given in the same *Pravda* article, which goes on to state with the greatest emphasis that the co-ordination of Yugoslav and Soviet efforts to safeguard peace and international security is of particular im-

portance. In other words, the Russians are determined to plug away at their plan to draw in the Yugoslavs as foundation members of Mr Molotov's familiar “European security” plan. And they have had the sense to see that a show of sweet reasonableness is their only hope of getting anywhere with Belgrade. *Borba*, however, has already bounced back like a rubber ball and while agreeing with *Pravda* that Soviet-Yugoslav relations should be improved, has taken it firmly to task for ignoring the “series of notorious, monstrous and impossible accusations against Yugoslavia” which came from Russia after 1948.

The Growing Productivity of Capital

IF any medals were awarded for bravery in parading economic statistics, Mr Colin Clark would be a much-decorated veteran. It is a pity that in interpreting them he sometimes seems to stand on his head. An extraordinary example occurred last week in his talk—which he called “The Declining Importance of Capital”—on the Third Programme of the BBC.

Mr Clark's figures suggest that at an early stage of industrial development a country's capital may have to increase at a faster rate than its current output can; but that in advanced countries—and he believes that this has been true of the United States and Britain for well over twenty years—an increase in capital stock is followed by a more than proportionate increase in output. This is not altogether surprising: build a railway across an undeveloped country, and in its early years it is likely to be less fully and profitably used than the London-Birmingham line. There are certain caveats that should be entered about Mr Clark's figures for the United States and Britain, but their main import is likely to be correct. In the advanced countries output probably has been expanding faster than capital in recent years: in other words, the marginal productivity of new capital has been going up.

So far, so heartening. But Mr Clark's next step is extraordinary. With a stationary labour force, he says, Britain cannot expect to go on increasing its output by more than two or three per cent a year—he himself believes that the increase will be much less. To achieve this arbitrarily assumed increase in production, Britain will need to add to its capital stock by less than two or three per cent a year, and it can do this by devoting less than five per cent of its national income to net investment. After providing for normal wear and tear (which, although Mr Clark does not point this out, now absorbs nearly 10 per cent of gross national product) Britain had better invest the rest of its savings in India and other undeveloped countries—where, on Mr Clark's showing, the immediate productivity of capital must surely be lower than here. If this was an ethical argument, it could be understood; as an economic argument it can be justified only by the assumption of an arbitrary ceiling to production increases, which—whatever its historical justification—the heartening capital figures (if they are right) should help to dispel in the future. Before this doctrine attracts wider currency, its basis should be understood. It is only because—in flat contradiction to his own statistics—Mr Clark believes in relative stagnation that he is opposed to investing in domestic success.

Finland's Creaking Coalition

THE uneasy coalition between Finland's two largest parties, the Agrarians and the Social Democrats, was running into trouble even before the strike of government employees broke out on Wednesday. In a recent parliamentary debate about the subsidy on butter a motion by a Social Democrat MP was unexpectedly defeated by 97 votes to 88, and a Social Democrat paper has attacked the Agrarians for voting with the right-wing opposition against their partners in office. The vote, in effect, urged the government to drop as soon as possible all the subsidies which it introduced last November. This would be anathema to the Social Democrats. It is significant that the Communists appear to have stood shoulder to shoulder with them in the voting on the butter subsidy.

On the face of it, the coalition is a union of incompatibles; the Agrarians speak for the farmers, the Social Democrats for the poorer townspeople. It has held together in office so far because the universal dislike of the Finnish Communists precludes a wholly left-wing grouping, and because many members of the right-wing parties mistrust the attitude which Dr Kekkonen, the Agrarian premier, displays towards Russia. But the two parties do not find each other very congenial bedfellows. Mr Veikko Vennamo, the assistant minister of finance and an outspoken Agrarian, has been saying sharp things about his Social Democrat colleagues, accusing them on one occasion of neglecting the interests of the farmers. Dr Kekkonen has long had his eye on the presidency, elections for which are due early next year; but other people do not share his enthusiasm, and there have already been rather wild suggestions that the 84-year-old President Paasikivi should be drafted for yet another term of office. The Social Democrats have arranged to select their candidate in June. Most important of all, the spring is bringing with it a heavy crop of wage disputes. Despite the government's success in keeping down the cost of living by means of subsidies and cuts in purchase tax, 23 more collective work agreements were denounced at the end of last month, and something like 80 wage claims are now outstanding. Many Social Democrats are going to find their loyalties tugging in different directions over this issue.

No Roast Pigeons in Budapest

THE Hungarian Communists have just completed another round in their long drawn out struggle over power and policies. For some time it has been a safe guess that Comrade Nagy was getting the worst of it in his duel with Comrade Rakosi; last week the central committee of the party uncompromisingly confirmed this. Mr Nagy owes his eclipse to two things. In the first place, what should have been a triumphant progress down the “June road” of 1953 has turned into a dismal fiasco. Industry and agriculture continue not merely to stagnate, but even to slow down, and the people seem as unwilling as ever to put their shoulders to the wheel; Mr Nagy is accused of creating an atmosphere of complacency “in which one waits for the roast pigeon to fly into one's mouth.” In the second place—and this is even more important—the

Hungarian premier seems to have forgotten his duty to the party. He is accused of denying and belittling the party's “magnificent victories”; and in organising the new People's Patriotic Front he has forgotten that—in the words of the central committee—“the most important thing in the work of every mass organisation is to make sure of the party's leading and directing role.” This is what comes of trying to enlarge the popular basis of a Communist regime.

The central committee does, it is true, maintain that the “new course” economic policy introduced in June, 1953, was “correct” and continues to be the official policy of the party; in the committee's view, all it now proposes to do is to correct “right-wing deviations” from this policy. This argument may be theoretically sound, but it will deceive nobody. What matters is the practical implication of the shift in emphasis away from light and towards heavy industry. Lip service is still being paid to the needs of the consumer and the importance of helping the private farmer; but collectivisation is again to be pushed ahead (albeit “primarily by enlightenment”) and in the second five-year plan, to begin next year, heavy industry is to have clear priority. Mr Nagy may, indeed, have failed to strike a proper balance between light and heavy industry; but it is very unlikely that Mr Rakosi will do any better.

Migration to America

There arrived in the United States in 1854, according to a return lately laid before Congress, 460,474 persons, of whom 49,000 were from Great Britain and 101,606 from Ireland—total from the United Kingdom 150,606, against 206,000 from Germany, 13,000 from France, and 13,000 from China and the remainder various. This return takes no notice of the number of persons returned from the States, and latterly, as we have already recorded, the number is considerable. Though it is probable that an additional number of Irish reaches the States through Canada, not included in this return, still the fact is certain that the number of Germans now annually arriving in the States exceeds the number of Irish. The latter begin to be wanted at home: the alterations lately made in property in Ireland will speedily permit that country to advance very rapidly. . . . There is plenty of land yet uncultivated, or incompletely cultivated, in Germany—plenty of available means of industry and life in every part of Europe; but the manner in which the soil is appropriated, and political and commercial restrictions imposed on almost every kind of business, are moral obstacles to the people making use of the physical advantages of their situation. Many of the moral disadvantages under which the Irish laboured are removed; others are in course of removal; and their own progress will ensure an increased power to remove them. . . . It is rather curious . . . to find the German States carefully educating their people to make them good Republicans. In this, however, lies another source of improvement for the States. The better educated quiet Germans will probably make at least less heated politicians than the Irish; and, as the Germanic element of their society increases, the world will hear less than at present of the wild policy which sometimes characterises the Americans. Our war, too, will probably operate to prevent the Irish from emigrating in such numbers as heretofore to the States, which will make the emigrants from the Continent more welcome.

Letters to the Editor

Hire Purchase Controls

SIR—In your issue of February 26th you argue that specific controls are a retreat from principle. There is always a strong case against trying to do by specific controls what can be done by a general cut which would avoid administrative anomalies and give the consumer greater freedom. However, hire purchase is an exception.

A rise in Bank rate is an effective check in most money markets because "true interest" is a large proportion of the total interest charge. A one per cent rise in Bank rate is effective against mortgages and debentures whose interest rates are only four or five per cent, and against common stocks whose effective rates of return are three to seven per cent. The rates on hire purchase are much higher and consist mostly of "risk premium" and administrative costs. An increase in the "interest" element of these rates amounts to a small increase in the total rate, and one cannot expect the increase to have much effect on the volume of hire purchase credit. In view of the rates that people are willing to pay in order to buy on hire purchase, it is difficult to believe that an additional one or two per cent would have any effect on them. Given continued high incomes the consumer will finance any extra charges or risks which the market feels it must cover.

In consequence, a damper can be put on hire purchase credit only by a radical increase in the monthly outlay of the buyer, and this can be assured only if the payment period is made short enough to raise the monthly payments by a significant amount.—Yours faithfully,
WALTER C. NEALE
Yale University.

Price Maintenance Defended

SIR—In *The Economist* of March 5th your correspondent, Mr Harris, writes: "... the system of price maintenance must cover the least efficient and highest cost traders..." This statement surely discloses ignorance of how a modern trade association functions and how a price is decided.

When prices are based on the production costs of a group of manufacturers the costs of those producers which reflect inefficiency are normally discarded by a trade association. It is sometimes decided that the figure of the lowest cost producer should be used as a fair basis for deciding a price, but this cannot always be done. The figure may, for instance, relate only to par-

ticular circumstances of short duration and may not be representative. The aim is normally to find the average cost of efficient production, and regular revisions are made, taking into consideration quantities produced and improved efficiency in manufacturing processes.

The efficient cost figure set by an association naturally becomes the figure after which each manufacturer strives. If he fails to reach it, he soon loses ground in competition with his rivals within the association. Furthermore, if the expensive producer does not improve his efficiency he may have to sell at a loss and find himself faced with bankruptcy. There is no question of protecting the "least efficient" producer, as Mr Harris believes.—Yours faithfully,
London, S.W.7

COLLIN BROOKS

Making West Africa Pay

SIR—Whilst I hesitate to add to a controversy that has perhaps gone on too long, I feel that some of your reviewer's remarks in your issue of February 26th on Mr P. T. Bauer's "West African Trade" cannot pass without challenge.

The reviewer gives the impression that, in the long argument concerning the marketing boards in West Africa (now in its fifth year), the opposition has been routed and Mr Bauer left in victorious possession of the field. There are many who would not agree with this view.

Your reviewer summarises Mr Bauer's condemnation of the past policies of the boards. In some cases, however, the data required in order to give a final verdict on the effects of these policies are just not available. This particularly applies to the effects on production and incomes.

Mr Bauer's book contains the case for the prosecution, fully documented, but substantially the same as that which he has put forward elsewhere. Mr Bauer has had the opportunity of reaching a large and important public opinion through newspapers, the academic journals and, more recently, on the BBC. Given the authority and persuasiveness of his attack the surprising thing is that he appears to have had so little influence; today the marketing boards continue to operate as they did when founded, and those in control of them must either have regarded Mr Bauer's case as wrong, or as irrelevant, or both. The puzzle is to explain why the African politicians and administrators who are now in effective control of the policy of the boards have not seen fit to change them.

THE ECONOMIST, MARCH 19, 1955

Part of the answer is probably that while Mr Bauer's economic analysis is often irrefutable, his political economy is unacceptable to the West African political scene today. For example, whilst there have been a few cases of criticisms by Africans of the pricing policies of the boards, nobody has seriously proposed any change in the system. What little agitation there has been has favoured extending it to other products, particularly hides and skins.

West Africans are reaching political independence to find that eighty per cent of their export trade is not in the hands of expatriate firms, but of public boards that are ultimately under their control. This is, perhaps, the main reason why the long attack on the marketing boards seems to have had such little influence in "the dark places of colonial treasuries."—Yours faithfully,
E. K. HAWKINS

West African Institute of Social and Economic Research, Ibadan

Forbidden Topic

SIR—In your issue of March 5th you argue that landowners ought to get their rents up to an economic level rather than ask for more state aid in the form of grants, lower death duties and cheaper long-term loans for improvements. As you say, the machinery for raising farm rents is available, and on the face of it it appears odd that rent should lag so far behind increases in costs.

I should like to explain briefly some of the reasons. If a landowner cannot get agreement over a revised rent with his tenant, he must go to arbitration. This is expensive, as it may involve him in professional fees amounting to a considerable sum. Arbitrator's awards refer to *current* conditions, but do not start to operate until many months after they have been made (anything up to eighteen months or more). So, with rapidly rising costs, the new rents may already be out of date by the time they begin to operate, and they must run for at least three years before they can be revised again. On top of this, one must take into account that some awards are undoubtedly influenced by the current average level of rents in the neighbourhood, and are seldom "economic," taking all the landowner's commitments into account. There is, however, a tendency for professional men to begin to approach problems of land valuation and rent in the light of changed modern conditions. But it is a very slow business to alter the climate of opinion as to what is an equitable rent, and meanwhile the gap between outgoings and rent is inadequate to meet the heavy investment necessary to modernise agricultural equipment on top of the normal programme of maintenance.—Yours faithfully,

W. R. BURRELL,
Chairman of Policy Committee
Country Landowners' Association, S.W.1

Atlas-Copco puts compressed air to work for the world

In the hands of a sculptor, small pneumatic tools by Atlas-Copco are producing work in Norway which may live for centuries. Atlas-Copco concrete breakers, in the hands of South American workmen, are demolishing relics of the past to make way for new roads which will eventually bring the benefits of modern civilisation to many more thousands of people. As in Northern Europe and South America, so in

almost every part of the world—Atlas-Copco is on the job wherever compressed air is working hardest. It is almost impossible to name an industry in which Atlas-Copco has not found some justifiable application for compressed air. Add to this, the servicing and delivery facilities of allied companies* in 37 countries, and you realise why Atlas-Copco are among the world's leading compressed air specialists.

*Atlas-Copco embraces companies trading under the names Atlas, Atlas Diesel, Atlas Polar, Atlas-Copco, Copco, Delfos and Sampa. Enquiries in the U.K. should be addressed to THE ATLAS DIESEL COMPANY LTD., Beresford Avenue, Wembley, Middlesex.

Men who guide the destinies of the world wear Rolex watches

YOU KNOW their names as you know your own. You know their faces from a thousand newspaper photographs, their life stories from a hundred magazine articles. You have seen them and heard their voices on newsreels and on your television screen. Their actions and decisions influence the pattern of our lives.

We cannot mention their names, or show pictures of them. It would not be fitting to do so, for they include royalty, the heads of states, great service commanders. But we invite you to look carefully at the next pictures that you see of them, at their wrists as well as their faces and clothes. You will notice that in almost every case they wear a wrist-watch. That watch will most likely have been made by Rolex of Geneva.

We are proud of the service given by Rolex watches to so many eminent men. It is scarcely necessary to point out that the performance of these watches is, in the highest degree, accurate and dependable.

The Rolex Oyster Perpetual Datejust, the most remarkable achievement in watchmaking today. The extraordinary accuracy of its chronometer movement is attested by the fact that every Datejust is awarded an Official Timing Certificate by a Swiss Government Testing Station, with the added distinction "Especially good results." This movement is protected from all hazards by the famous waterproof Oyster case, invented by Rolex. It is automatically self-wound by the Perpetual "rotor" mechanism, another Rolex invention. This keeps the tension on the mainspring constant and makes for even greater accuracy. The date is shown on the dial, changing automatically each night at midnight, and magnified by a "Cyclops" lens for easy reading.

A ROLEX
RED SEAL
CHRONOMETER

The Rolex Oyster Perpetual—culmination of three Rolex triumphs. In 1910 Rolex gained their first Official Timing Certificate for a wrist-chronometer. Now Rolex have produced 250,000 Officially Certified wrist-chronometers—three times as many as the rest of the Swiss watch industry combined. In 1926 Rolex invented the Oyster case, the first truly waterproof case in the world. The rugged and sturdy Oyster protects the movement, permanently, from water, dust and dirt. In 1931 Rolex invented the first "rotor" self-winding mechanism. A new refinement of this Perpetual "rotor" powers the Oyster Perpetual, silently and automatically, actuated by every slightest movement of the wrist.

The Done Thing

THE SOCIAL FOUNDATIONS OF WAGE POLICY.
By Barbara Wootton.
Allen and Unwin. 200 pages. 15s.

THE central thesis of Mrs. Wootton's long-awaited book (first planned when, just before the war, she discovered her own earnings to be exactly the same as those of the riding-elephant at Whipsnade) is that wages and salaries are socially rather than economically determined. What settles them is much less the push and pull of market forces, as argued by economic theory, than social pressures and conformities, the Done Thing. There is "a correspondence between the social and the economic hierarchies," and remuneration is settled, whether by collective bargaining, legislation or arbitration, by appeal to a mixed bag of discordant principles most of which are ethical and conventional. There is the earnings-of-comparable-occupations principle; it is right that similar jobs should be similarly paid. There is the cost-of-living argument; it is right that standards of living should—not merely individual by individual but job by job—be safeguarded. There is the traditional-differentials argument; it is right that greater skill or responsibility should carry their traditionally greater reward. There is, for once in harmony with economic theory but not arising from it, the special-disadvantages theory; it is right that dirty or dangerous work should carry higher rates of pay. And finally, far behind the rest in importance, there is the straight economic manpower-needs argument; if this industry lacks workers, it must bid higher to get them.

Mrs. Wootton shows these principles diversely at work in negotiation, debate and official or TUC pronouncements since 1941, and emerges with "a certain cynicism" and with the conviction that the common factor on both sides of every conference table is sheer conservatism, variously disguised stand-pat. Neither economically nor ethically is this a good thing. A positive policy is wanted; a policy with a sound ethical foundation can, in a setting demonstrably governed by ethical arguments, be put over by a government and a public opinion which has clarified its ideas; the ethical standard should be one of equality, to which practice should conform as fast as possible; the only exceptions should be those which, in the interests of economic necessity, use higher pay to attract workers to industries and occupations which (by social, not profit-and-loss, standards) are under-

manned. This at least is coherent. One may fail to share Mrs. Wootton's unshaken faith in the omniscience of governments, and have reservations about the role, behind the façade of ethics, of sheer brutal bargaining power. But without discarding so light-heartedly as she does the market forces which play on the wage or salary bargain, one can welcome her realistic emphasis on the determinative force of the Done Thing; and whole-heartedly agree that it is better to pursue equality, via the Done Thing, in gross incomes than to impose enormous and disincentive taxes on gross incomes which are widely unequal. Whether equality, as against the relief of poverty, the ironing-out of anomalies, and an ever-wider opening of the career to talent, should be pursued any further than at present is, however, quite another question. Mrs. Wootton has no hesitations. Equality is right and democratic, inequality is wrong and undemocratic, and that is that.

It is remarkable that so human and sensible a thinker should never ask herself what a truly equalitarian society—a £14-a-week - average - minimum - and - maximum-in-one society—would actually be like; what would be its adaptability in a changing world, what its leadership, what its intellectual, administrative and cultural achievements; that she should dwell so undeviatingly on the unimportance of the supply-price of excellence and the ethical irrelevance of its rewards, and ignore so blankly the importance of its necessary conditions. Social justice, interpreted as equality, has a price of its own. No community has yet, whatever its original intentions, found that price worth paying. Britain may be the first; but one doubts it.

Enlightened Empress

THE MEMOIRS OF CATHERINE THE GREAT.

Edited by Dominique Maroger; translated by Moura Budberg. Introduction by G. P. Gooch.

Hamish Hamilton. 400 pages. 25s.

IT is a pity that the translator and publisher of this volume have not explained the origin of the text. What does "Edited by Dominique Maroger" mean? Was his version taken from Rousseau's early edition (which was itself translated into English)? It does not seem to correspond to the better known edition of Herzen of 1859; for that opens with a sentence which does not appear here, nor does it include

Part II of this volume—70 pages of letters and fragments that are of the highest interest. Do these represent the "other documents" which were read along with the "Memoirs" by Arsenieff (as he told Herzen in 1840); and is their authenticity equally certain? It must be added that the English translation is pedestrian, and does nothing to lighten the tedium of domestic detail in which the reader soon finds himself involved.

On the other hand, nothing but praise is due to the introduction. Dr. Gooch knows his Catherine as a great historical figure, and appreciates at their proper value the "eighteen years of ennui and solitude" (it is her own description) during which she schooled herself for the thirty-four years of her reign as Empress. "A consummate actress," he calls her, "waiting eagerly in the wings for her call to the footlights"; and it was with a genuine feeling of relief that the audience turned from the tired regime of the Empress Elizabeth, the handsome self-indulgent daughter of Peter the Great, to the liberal and enlightened administration of the little German princess whom Elizabeth had chosen to marry the Grand Duke Peter and thus provide her with an heir to the throne.

How the heir was provided, apparently out of wedlock, and the background of court intrigue against which Peter was first put upon the throne and then removed from it—actually by assassination, but the official account was that he drank himself to death—is the main theme of the "Memoirs"; but it is complicated and confused by endless details of court balls, coach journeys, intrigues and amours, with only occasional references to international politics or the Seven Years' War. Peter and Catherine were married in their teens, and apparently the union was never consummated. He never grew up; he preferred playing with toy soldiers or with a puppet theatre, scraping his violin or beating his dogs, designing a Capucin convent in which all the court were to dress as monks, and of course drinking and practical joking, to the riding and reading with which Catherine varied the emptiness and boredom of her existence. It is charitable to suppose that he was insane, and the few months of his rule were enough to make his death desirable.

The real interest of this volume, then, lies not in the unfinished "Memoirs," which break off in the middle of a vital interview between Catherine and Elizabeth three years before the old Empress's death, but in the autobiographical and other fragments that follow. Here is her account of the death of Elizabeth, her letter to Poniatowski about her seizure of the throne, portraits of her ministers, a note found in a copy of *Télémaque* outlining her moral ideals, and the often quoted list of the achievements of her reign. There is evidence here that she deserved her title of "The Great"; and English readers will not forget that she purchased

the Houghton collection of pictures, presented Reynolds with a gold snuff-box accompanied by an autograph message of thanks for his "Discourses to the Royal Academy," and that it was believed that she had ordered the translation into Russian of Dr Johnson's "Rambler"—"so I shall be read," he proudly remarked, "on the banks of the Volga."

Soviet Babbitts

THE THAW.

By Ilya Ehrenburg. Translated by Manya Harari.

Harvill. 230 pages. 10s. 6d.

IF you ask a good dounce Soviet citizen what he thinks of this novel, he replies that Ehrenburg is a gitted man and should not have wasted time writing about unhappy people; when so few of the inhabitants of the Soviet Union are troubled by personal problems or discontents, why bother with those who are? It would be a bold Russian who answered otherwise, for "The Thaw" has been condemned with bell, book and candle, although Mr Ehrenburg wears his sanbenito with a slightly impenitent air. From this admirable translation the English reader will quickly learn why the novel achieved such popularity when it was published in Russia, and why the Communist Party took such strong exception to it. For "The Thaw," to put it briefly, blows the gaff.

It depicts a dreary little town somewhere in the great Russian plain, with a factory that produces machine tools. The factory manager, a well-meaning, modest and basically brave and kindly man, has been so warped by the system that controls him that he will do anything rather than draw the attention of his bosses in Moscow. A Soviet Babbitt, he looks resolutely at the brighter side of things, hoping that the other one will go away. He is genuinely saddened when he "peers into the damp, bleak hovels" in which his employees have to live because he misappropriated the house-building funds to meet Moscow's demands for plan fulfilment; but he knows better than to run into trouble by raising his voice.

Around him revolves a little society which is startlingly bourgeois in character; it consists solely of white-collar technicians, teachers and aesthetes, travels largely by taxi and takes champagne parties for granted. "The workers" get scant, and only collective, mention. The bourgeois characters themselves are drawn strictly from stock, but with enough anger to make them interesting. One artist is disillusioned and simply out to make money by flattering those in power; he expects 20,000 roubles for a heroic portrait of the manager, and thinks of buying a car with the money. Another artist starves for his ideals. A Jewish woman doctor is unnerved by the anti-semitic "doctors' plot" campaign, an actress broken by a life of "intrigues, cliques, little rooms in dirty hotels." An engineer unlucky enough to have rela-

tives abroad is resigned to the fact that he comes under a cloud each time some rival learns about them and denounces him. And there is a bossy matriarch: "if there were more like her, Communism would come very soon, but feelings she neither could nor wished to understand." She is the unhappy heroine's mother.

Feelings, Mr Ehrenburg hints, ought to be understood, even if it means delaying the millennium; and he ends his book with a symbolic ending of winter, some reunions and reconciliations of lovers, and a suggestion that the ice of hypocrisy and bleak conformism is breaking up at last. But even at the time when he wrote he was evidently not too hopeful. He makes his pleasanter characters ashamed at the idea of behaving naturally, appalled by the contradiction between their better instincts and their training. The ugly system which he implicitly condemns is sustained by simple faith as well as by fear; and the Party bosses who in turn condemned his over-honest book were, no doubt, sure of the backing of a multitude of scandalised Babbitts.

People on the Move

BRITISH POSTWAR MIGRATION.

By Julius Isaac.

Cambridge University Press. 329 pages. 30s.

ALTHOUGH there has been a vigorous controversy over the pros and cons of emigration since the end of the war, it has been based on a somewhat imperfect factual basis. Remarkable figures have been issued of the outflow of migrants to the dominions since 1947, and the query has been raised whether this is for Britain's economic good. But statistics of emigration and immigration into Britain are so crude—with permanent settlers mixed up with temporary residents and mere visitors—that it has never been really clear whether Britain has been losing man and woman power heavily—whether the limit of a net annual outflow of about 80,000 which the Royal Commission on Population thought was the maximum the country could stand has been reached in any year.

Dr Isaac now throws a flood of light on the whole situation. Between 1946 and 1950 the net outflow has, according to his careful researches, been 140,000, or 1 per 1,000 of the total population per year. This is, of course, a negligible figure. Although in that five-year period some 1,224,000 people left to settle abroad, an almost exactly similar number came in, about two-thirds of them from the continent and Ireland. Thus Britain has in fact been peopling the dominions with British stock on the one hand, while absorbing and Anglicising Europeans on the other. Dr Isaac's researches indeed show that the extent to which Britain is a transit camp has been little realised; the movement of population in and out of the country has been remarkable.

Demographically, the picture may not

THE ECONOMIST, MARCH 19, 1955

be quite so favourable, with more of the younger age-groups leaving than arriving; but more women have left than men and more men have arrived than women. The losses of skilled workers have been great, but most of those who have left have been in the clerical and professional classes. From the point of view of Britain's economic health the picture is by no means so unfavourable as is sometimes supposed.

Dr Isaac believes that in years to come both the outflow and the inflow may slow down, which may make problems for dominions in search of population. The interesting thing about Dr Isaac's study is, however, that at a time of full employment and increasing welfare, Britain was able to lose and to replace workers on such a scale. Only those who wish to see a dispersal of population from Britain to the Commonwealth will be disappointed. It is certainly clear that the modest scheme for encouraging overseas settlement now in operation carries little danger of a declining British population. The upshot seems to be that at a time when Britain and the Dominions have had years of boom, both motherland and dominions have attracted migrants. It is less easy to see where they will come from in the future, unless the doors are opened wider to Italians and Germans.

Gods, Graves, Scholiasts

THE GREEK MYTHS: Volumes I and II.

By Robert Graves.

Penguin Books. 370 and 412 pages, respectively. 3s. 6d. each.

IN the course of his venturesome life, Mr Graves must have discovered the manuscript notes for Burton's "Anatomy of Melancholy" and decided to publish them in two bewitching, exasperating and brilliant volumes. For no one save Burton could pick his way so deftly and with such occult delight amid the most obscure mythographers of antiquity, the most recondite scholiasts of Alexandria and the barely known authors of marginalia in Hellenic texts. Lactantius on Statius, Didymus quoted by Eustathius, Ptolemy Hephaestionos, Scholiast on Tzetzes's "Lycophron," Stephanus of Byzantium *sub* Dryope, Second Vatican Mythographer (!)—they crowd the pages of this dictionary; and behind them come the anthropologists from Cambridge, the archaeologists from Mohenjo-Daro and Knossos, the astronomers and the comparative philologists. And at the head of the procession, brooking no challenge and brandishing "the double-axe, representing the conjoined waxing and waning moons," strides Mr Graves, pontifex to the White Goddess.

What is ingeniously described on the cover as "a companion to the Penguin Classics" is nothing of the kind. Anyone wishing to find out what is usually understood by the name Zeus or Orpheus or Charybdis had better stick to Smith's "Dictionary of Classical Mythology." The ancient world of Mr

THE ECONOMIST, MARCH 19, 1955

Graves is a more dangerous place for the uninitiate. In it a fierce battle is being waged between the White Goddess, the Goddess of the moon and poetry, the Great Ishtar, the matriarchal arch-queen of life who ruled from Elam to Ireland, and her male rivals, the new gods breaking in from the north. "Early Greek mythology is concerned, above all else, with the changing relations between the queen and her lovers, which begin with their yearly, or twice-yearly, sacrifices; and end . . . with her eclipse by an unlimited male monarchy." "True myth," moreover, "can be defined as the reduction to narrative shorthand of ritual mime." Consequently, Mr Graves's landscape is constellated with strange rites, orgiastic mysteries, horse-cults, human sacrifices, fertility symbols and blood offerings. It is a world that contrasts glaringly with the white and blue of the Attic temper. It is Asiatic, brutal and Cimmerian.

What Mr Graves has written is a guide, not to classical mythology, but to pre-classical rites and vestiges as revealed by archaeology and interpreted by certain schools of religious anthropologists. This is a companion, not to the Penguin Classics, but to some future collection of texts that would include Cretan linear inscriptions, Proto-Elamite tablets, Etruscan writings and the "Gilgamesh." But there is no doubt that these two inexpensive volumes are one of the most exciting and rewarding books to be published in many a lunation (to use Mr Graves's calendar). Figures consigned to dusty respect—Orpheus, Hercules, Daedalus—spring back to strange life. Mr Graves's "explanations" are among the finest of his novels. Countless critics will carp at him: his astronomy is rather personal, and some of his philological derivations, particularly from early Greek dialects, are far-fetched. But no one except Mr Graves (unless it is Burton after all) could have written these two volumes or bamboozled Penguin Books into foisting them on its innocent public. The latter will never have been led by its nose to more fascinating placés.

Shorter Notices

TAKE THESE MEN.

By Cyril Joly.

Constable. 367 pages. 15s.

The fighting in the Western Desert in the last war has found curiously little reflection in fiction. Despite the drama, both of the setting and the finely balanced conflict with Rommel, we have had nothing resembling a "Cruel Sea" to tell the story of the desert war in human terms.

Now a Regular Army officer, who served in the 7th Armoured Division in North Africa, has done something to fill this gap with what is clearly a personal memoir in fictionalised form. Colonel Joly cannot claim the narrative power of a Monsarrat, nor, with the exception of the portrait of one remarkable commander, has he depicted his characters with much depth. But his story rings with authenticity. The true atmosphere of those armoured battles, as experienced from within the confines

of a jolting, lurching tank, comes through admirably. This book, despite its limitations, contains the very stuff of the desert war.

★

A HISTORY OF THE WORKING MEN'S COLLEGE, 1854-1954.

By J. F. C. Harrison.

Routledge and Kegan Paul. 234 pages. 16s.

This book tells the story of an educational institution unique a hundred years ago, and still unique today. The Working Men's College in St Pancras was unique in 1854 because its founder, Frederick Denison Maurice, was determined to see that it fell into none of the pitfalls that had befallen previous ventures in adult education. The patrons and directors of earlier experiments had remained aloof from the students; the founders of the Working Men's College themselves taught in the classes. Maurice was surrounded by a keen group of young Christian Socialists. It was, however, his enthusiasm, ideals and driving determination that carried all before it. This book brings out his pre-eminence with vivid clarity; a pre-eminence thrown into clearer relief by the failure of some of his contemporaries to realise it. Thus John Stuart Mill said, "There is more intellectual power wasted in Maurice than in any man I know," and Matthew Arnold spoke of him as "beating the bush with deep emotion but never starting the hare."

Mr Harrison suggests that the chief strength of the Working Men's College lay in its founder's insistence that adult education work must be reciprocal if it is to succeed. The new conception of teachers and taught meeting together in a spirit of fellowship in which each gave and each received superseded the old ideas of instruction. In the words of the founder, "The College was established first for the benefit of us the teachers, secondly for the benefit of those whom we taught." It is not only the oldest adult educational institution in the country; it is also the only such organisation which derives no support from public funds. This book is a worthy tribute to a great experiment in adult education.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Eisenhower's Conservatism

Washington, D.C.

THE deep-reaching differences which are developing between President Eisenhower and the Democratic Congress over important aspects of his legislative programme are little understood even in Washington. This is because, while the President is acting within the frame of a political philosophy, he has never explained it to Congress and the public; nor has he shown how his recommendations fit such a plan. He has given it a label, "dynamic conservatism" which, like so many White House slogans, is more concerned with sales value than with accuracy. In the first tests in Congress, the complaints have been that the programme is too conservative and not dynamic enough. The President's proposals for school construction, his suggestions for a vast development of highways, and his plan for federal re-insurance for private health insurance schemes are among the major measures under fire.

The President's failure to explain himself results from a curious conviction that people do not want to hear speeches on economics, although one of his predecessors, Mr Roosevelt, used to wrap the esoteric in simple parables and stir the voters to cry for more. A philosophy, however, has been worked out and carefully articulated within the Administration, even if only privately, and the President, after due study, has adopted it. The authors, not needing to sell it and trying only to describe it truly, call it "modern conservatism." The Eisenhower programme seeks to practise what the doctrine preaches. In fact, therefore, a system of thought is on trial in Congress but, because it is not known that a system exists, the several controversies are regarded as separate skirmishes with no connection between them.

The modern conservative, or "Eisenhower Republican," chooses what he wishes to preserve from the past and seeks to adapt it to the singularly difficult present. It is one of destiny's jokes that this permits him to make proposals which seem to be plagiarised from latter-day Democrats, until their internal structure is examined and the underlying conservatism is discovered. The modern conservative wants to preserve a free market and a free price system as a means of rationing goods among consumers. He wants to keep incentive and reward among the principal propulsive forces of a free economy. He advocates equal opportunity, not equal shares. He dedicates himself to a sound

dollar, regarding it as indispensable to a sound economy. He believes high levels of economic activity can be attained without inflation.

Above all, perhaps, he protects and stimulates private capital investment, emphatically choosing it over increases in consumer buying power as a path to economic expansion. Disenchanted with governmental compensatory measures, he pins his special hopes for expansion on an economic element he has discovered called "anticipatory investment." This causes proprietors to add plant (and so to increase jobs and business activity) to satisfy a capacity for additional consumption which is not visible in current statistics—but which is there to be exploited if producers are ready to meet it.

To keep a rein on the free economy, the modern conservative relies on monetary and fiscal management rather than direct controls. He is committed to the awakening of individual, local, voluntary effort rather than to the application of federal effort. Intellectually, at least, he believes in free international markets; knowing this runs counter to ancient Republican writ, he counts on Mr Eisenhower to elevate a partisan issue to the level of permanent national policy. He is not frightened by a large national debt, nor is he committed with absolute rigidity to a balanced budget. But he regards an approximate balance as a handy device to regulate government expenditures which otherwise would get out of hand.

He concedes that modern conservatism can be hard on the individual, who may at times find himself priced out of the free market, or unemployed while investment equips itself for new opportunities, or burdened by taxes in defence of the dollar's integrity, or short of electric power while localisation and decentralisation go their clumsy way. Admitting this, the modern conservative recognises that the government has an obligation to lessen some of these costs of freedom, although not necessarily all. He approves and would extend the reforms of the nineteen-thirties, such as social security, unemployment insurance, the minimum wage law and, that later device, government support for the price of basic agricultural commodities.

President Eisenhower's school construction programme is true to several tenets of the doctrine, and the criticisms brought against it show why the doctrine gets into trouble. The dynamically conservative President agrees with the Democrats that more classrooms are needed in a hurry.

The Democratic solution is direct financial aid by the federal government to local school agencies in large amounts. Mr Eisenhower put forward a fearsomely intricate scheme which would hold down federal grants and rely on indirect use of federal credit to help build schools. This modern conservative approach did not involve dipping deeply into the federal purse to meet a problem deemed to be a state and local responsibility. It sought to achieve the dizzy delights of large spending and deficit financing by the federal government without technical guilt.

This blend of dynamism and conservatism holds connotations of deviousness and expediency which would have called down Republican condemnations had the late President Roosevelt tried it. Again, in tune with modern conservatism, the proposed school programme is decentralised. It would be slower and clumsier than direct federal appropriations, federally administered, but modern conservatism accepts those disadvantages as a price worth paying for the enlistment of local responsibility, interest and thrift. But in testimony before the Senate Committee on Education, it was said that not one section of the plan was workable. No state school officer could be found to defend it. It was described as a "Banker's Bill," full of book-keeping devices to avoid federal obligation, and as carrying federal intrusion into local school affairs to new extremes.

The President's recommendations for a ten-year highway development plan costing \$101 billion ran into similar difficulties. Again, the President wanted dynamics while conservatively by-passing their cost, and he came up with a tentative proposal for a National Highway Corporation to issue bonds outside the national debt. The powerful issue bonds outside the national debt. The powerful democratic Senator, Mr Harry Byrd, who as governor of Virginia from 1926 to 1930 put that state on a strict pay-as-you-go basis for highway construction, denounced the corporation as a trick to "violate financing principles, defy budgetary control, and evade federal debt law."

★

Its first trial runs in Congress have shown that Mr Eisenhower's conservative policy, whether it is called dynamic or only modern, is deficient in political appeal. Yet it marks out the ground upon which the President and those genuinely faithful to him are ready and willing to conduct their political engagements. This is the ground upon which they are prepared to meet the Democrats now and in the next presidential contest in 1956. It is the ground upon which they are ready to fight it out with the old-style conservatives in their own party, who already assail the new doctrine as being questionable Republicanism.

It is not going to be an easy battle to win in either case, and the Democrats are going to be especially hard to deal with when they wake up to the fact that the President, if he has pirated their goals, has left them their politically attractive techniques for getting things done. The willingness of the Eisenhower command to accept battle on such terms is due in part to its belief that its methods will appeal to some deep, traditional instinct of freedom and self-reliance in Americans and so, in good season, win political support. Partly, too, it is evidence of a stern self-discipline in the task of giving the Republican party an up-to-date creed likely to win enduring majority support. Finally, it is realistically noted that the philosophy is applicable almost exclusively to domestic affairs and that, if

the economy can only be kept on a reasonably even keel, Mr Eisenhower can be re-elected on a "peace" platform, however his philosophy may have fared in the legislature.

Bangs and Whimpers

THE awesome realities of the nuclear age are being brought home to the American people with increasing starkness. It now appears that the bomb detonated at Bikini a year ago was a hydrogen bomb in a casing of natural uranium, U-238. The latter is far cheaper and more prevalent than its rare variant, U-235, or plutonium, both of which have reportedly been used in atomic bombs. In the resulting explosion, the H-bomb acted as a trigger, providing high energy neutrons which split the uranium and caused the gigantic fall-out of radioactive fission by-products. This means that it has become terribly inexpensive to create "super-hydrogen bombs," and that America's lead in the field may be far smaller than had been hoped. At the same time, there are wild rumours of an intercontinental ballistic missile, carrying a thermonuclear warhead, and the latest series of atomic tests in Nevada is illuminating cities hundreds of miles away.

These developments are bringing the long-neglected problem of civil defence to the fore. With a sudden touch of melodrama, Mr Val Peterson, the Civil Defence Administrator, has urged everyone in the United States to build some sort of underground shelter "right now" and stock it with food and water to last five or six days. He added: "We had all better dig and pray." Using a more calm approach, the governors of New York, New Jersey and Connecticut have conferred with Mr Wagner, mayor of New York, to study the question of evacuation and civil defence in an area grouping some 15 million people. Experts believe that with sufficient drill and two to six hours of warning, it would be possible to evacuate the four million New Yorkers crowded in Manhattan. But it was also pointed out that the preparation of the required transport and road facilities could not be undertaken without federal help and guidance. The same cry has gone up in other quarters: the mayors of Philadelphia and Milwaukee accuse President Eisenhower of failing to alert the nation, and the governor of Massachusetts has pointed out angrily that local authorities were not being given the "know-how" of survival from Washington. The fact that the nation's capital is thought to be comparatively easy to evacuate—it would be "no worse than rush hour"—is not much comfort to the rest of the country.

A more hopeful note has been struck by the confirmation of Dr John von Neumann for membership on the Atomic Energy Commission. Through its unanimous action, the Joint Congressional Committee on Atomic Energy has done something towards healing the rift between top-flight science and the government caused by the tragic dismissal of Dr J. Robert Oppenheimer. Dr von Neumann may restore to the AEC some of the sense of integrity it so badly needs. This appointment coincides with the start of the international school of atomic technology at Chicago. Mr Eisenhower greeted the 31 students from 19 countries as the first beneficiaries of his "atoms for peace" plan.

are now "mothballed" in the government's reserve fleet, and another 1,500 have either been sold to foreign owners or have been transferred for operation under Panamanian, Liberian and other foreign flags. Only about one half of the remaining tonnage—which has again shrunk to 15 per cent of world tonnage—is employed in foreign service, and it carries less than a third of America's foreign trade.

The cause of this decline is clear: it costs roughly twice as much to build a ship in an American as in a foreign yard, and the cost of running an American flag ship, which must be manned by an American crew to exacting standards, is on the average, at least four times as high as the cost of operating a foreign flag ship. American seamen's unions are strong and the shipping industry can offset high wage costs by mechanisation only to a limited extent. The willingness of Congress to grant to American shipping lines subsidies equal to the difference between American and foreign operating and shipbuilding costs has provided only sporadic relief. In order to qualify for a subsidy a shipping line must accept restrictions affecting, among other things, its trade routes, the replacement of

ships, and the size of its profits. Only 16 shipping lines, with a combined fleet of 281 ships, have so far been willing to accept these unpalatable conditions. On the other hand, one-half of the non-subsidised tonnage is employed in coastal traffic from which foreign shipping is completely debarred, and two-thirds of the tanker fleet works for the major oil companies who want no truck with "conditional" subsidies.

Of all the ships in the American merchant marine, the plight of the tramp fleet is the sorriest. This fleet owes its existence to the government's cut-price disposal of Liberty ships built *en masse* during the war. Its ships were obsolete when they came off the slipway, its wage costs are four times those of its foreign competitors, and it has no means of fulfilling the conditions attached to operating subsidies. Of the 140 ships remaining in the American tramp fleet last August, half have since transferred to a foreign flag, and most of the rest would transfer if they were given permission. The question whether an American tramp fleet is essential to security remains open.

But while lip service to national security costs nothing, an increase in shipping subsidies—which wins few votes—is abhorrent to a Congress intent on either balancing the budget or securing tax reliefs. The Merchant Marine and

Fisheries Committee of the House of Representatives, which is the focal point for all shipping legislation, is a junior and ill-favoured body, which is frequently overruled by the senior, conservative and powerful Appropriations Committee. The latter has just cut by \$25 million the Maritime Administration's request for subsidies. This latest cut is evidence of a chronic delay in payments, and the American Export Lines have been forced to borrow \$14 million.

In any case, subsidies, which prop up efficient and inefficient operators indiscriminately, lead inevitably to a general surplus of shipping and consequently to demands for further government assistance to secure not only competitive charges but also cargoes. Hence the "cargo preference law" which requires that at least 50 per cent of foreign aid or other government-guaranteed cargoes be carried in American vessels. Flag discrimination has the specious attraction of providing protection to American shipping without apparent pain to the American taxpayer, and it is about the only policy on which the entire merchant marine ever gets together. Americans, both in the shipping industry and outside it, see no reason why American gifts should not be carried entirely in American ships. To an essentially non-maritime nation the dangers of a world of rapidly increasing flag discrimination are only dimly apparent. The main dissenting voice comes from the farmers who are alarmed at the reluctance of some foreign countries to purchase government-owned food surpluses under 50-50 rules.

SHORTER NOTES

The Administration's reciprocal trade extension Bill is meeting with the same stiff opposition in the Senate as it did in the House of Representatives last month. In spite of urgent appeals from several cabinet members, including Mr Dulles, that the programme be continued for another three years without restrictive changes, many Senators are in favour of requiring the President, except in cases of national security, to yield to the Tariff Commission's recommendations in setting import duties. The protectionist spokesmen of business and labour, including the oil, mining and chemical industries, are also busy.

The Supreme Court has ruled for the first time on the issue of the immunity of a sovereign nation from legal action. By a narrow decision of four to three, reversing the judgment of the Circuit Court of Appeals, the Court held that the Chinese Nationalist government, which had sued the National City Bank to recover a \$200,000 deposit made in 1948, was not immune to a counter-claim by the bank of \$1.6 million based on defaulted Chinese treasury notes.

Statehood for Hawaii and Alaska was recommended by the House Interior and Insular Affairs Committee in a 126-page report submitted to Congress. But as long as the Republicans oppose the admission of Alaska, which votes Democratic, and the Democrats will not accept Hawaii alone, there is little chance that the report will be acted upon.

The glamour of the steam train yields ground to the clean, swift, economic efficiency of electric locomotion. More and more railways throughout the World are being electrified. The Engineers of the BICC Group—British Insulated Callender's Cables Limited and British Insulated Callender's Construction Company Limited—have had unrivalled experience in this work. The Group has electrified hundreds of miles of track in every continent and is fully equipped to undertake complete schemes of all types of railway electrification in any part of the World. A recent contract in this country was the supply and erection of overhead line equipment for the Manchester-Sheffield-Wath Lines of the Eastern and London Midland Regions of British Railways. Another project being undertaken is the electrification of 232 track miles of the New South Wales Railways, the contract for which was awarded to the BICC Group in the face of keen international competition. On the left we list some of the railways for which the Group has carried out electrification work. Further details are available in Publication No. 13 "Railway Electrification" which will be sent to you on request.

"Daddy, where does the water

Water, you tell him, comes down from the sky in the form of rain. It is collected in giant reservoirs and pumped along pipes to our taps.

But the story is not always as simple as that. Over huge areas of the earth's surface man has to delve and pump to find water for his thirsting, arid lands. And for that he needs power—diesel power.

In Egypt, French Morocco and South Africa, for example, diesel engines supplied by The National Gas and Oil Engine Co. Ltd., a member of THE BRUSH GROUP, provide power for irrigation schemes that enable barren land to produce cotton, maize, rice, bananas and general farm produce. All over the world BRUSH GROUP diesels are forcing the desert to retreat.

New Chance for Nepal

FROM OUR SPECIAL CORRESPONDENT LATELY IN NEPAL

THIS week there has been a change of monarch in Nepal, which may well prove to be a turning-point in the country's history. The 1950 rebellion against the Rana rulers—the hereditary prime ministers who had usurped the King's power in 1846—brought the royal family back into politics; and the Nepalese have for their royal family a more than British loyalty, for the King is the incarnation of Vishnu. The late King Tribhuvana, who died this week, did not do much more than provide a rallying-point; but his eldest son, the new King, Mahendra Bir Bidran Shah, is both serious-minded and universally respected. As Regent for his father while the latter was undergoing medical treatment in Europe, he has already made his mark. And in his first proclamation to the people of Nepal he has appealed to them for unity and co-operation in the work of national reconstruction.

Before 1950, nothing at all had been done for the people of Nepal. The Rana rulers treated the country like a large private estate. There are a few mission schools, but no colleges, no university, only one hospital, only one road from the rail-head at Raxaul to the bridge path at Bhimphedi. Goods have to be carried to Katmandu, the capital, on human backs or by ropeway. There are no industries, except a couple of jute mills in the Terai, no public utilities, no legal codes, no administration and, strangest of all for a country world famous for its Gurkhas, practically no army. There is not even a proper taxation system, for the Ranas used to get their revenue from Customs, from the Gurkha capitation fee, and from farming out the country's natural resources—timber and rice—to minor relations who kept most of the benefits for themselves. The Rana Maharajas took an annual revenue of £1.5 million from Nepal; 90 per cent they kept for themselves, for investment in India, overseas or in jewels; 10 per cent they spent on such necessities as a sham army recruited from the unmartial people of the Valley of Katmandu, on runners and on *chowkidars*, watchmen who even today act as government information agents. It would still take nineteen days for an invasion from Tibet to be heralded in Katmandu. India has

installed a few radio sets in key places, but they are perpetually out of order and no one knows how to operate them.

Nepal has to be seen to be believed. In the twentieth century it is difficult to visualise a land where, except for natural beauty, rice fields and the monuments to the vanity of a few men, there is nothing. The capital is littered with huge palaces in disrepair, and some 2,700 tumbledown temples, but there are neither roads, nor municipality, nor taxes for its 150,000 people; and, except for the occasional honest foreigner, nobody pays for the trickle of light they call electricity. The Customs official who looks at passports is illiterate; the bandits who roam the hitherto peaceful valley of Katmandu are policemen. In such a situation it is fashionable to describe a country as "ripe for Communism."

Yet in the case of Nepal this would be quite wrong.

It is true that the country occupies a strategic position on Tibet's border; that China, which shows Nepal as Chinese territory in its latest maps, has just opened a three-ton lorry road from Northern China to Lhasa via Chamdo and is actively extending it to the Kuti Pass. But aggression against Nepal would be unprofitable for

many reasons. The valleys all run the wrong way. There is a high Himalayan mountain ridge between each valley and the next. Nobody in Nepal, except the few Bhutias, speaks Tibetan or Chinese. Nepal's boundaries are backed by an Indian guarantee. Nepal's allergy to foreigners is so universal that the country would rise like one man against an invader. Above all, Nepal is only worth having as a dagger in India's back; and if China ever wished to invade India, the Na-tula Pass in Sikkim would be easier.

Nevertheless, one cannot altogether dismiss the possibility of Nepal going Communist. There are many Indian Communists in the Terai, and the few literates—under 3 per cent—read the *Times of India* and listen to All India Radio extolling China's friendship and India's own remarkable progress. Were the educated to revolt, the whole administrative structure is so negligible that Dr K. I. Singh, the Nepalese rebel leader now in exile in China, might come back with his core of trained followers and

capture power. Dr K. I. Singh is reputed to be honest and able as well as a Communist; he is not a foreigner and his countrymen's habits of passive and unquestioned obedience would play into his hands. The success of the Indian military mission in building up the Nepalese army may, however, soon make any such *coup* impossible.

India cannot ignore Nepal. In 1950, when the revolution against Rana oppression flared up, the late Mr Kidwai (not Mr Nehru) in effect allowed the revolutionaries to use India as their base. It was perhaps incorrect of him; yet he had no option. To have left the Ranas would have been to invite a Communist *coup* at some later date. Nepal's relations with India are ambivalent. There are deep bonds—linguistic, religious, racial, cultural. To the foreigner Nepal is like a very backward India. Nevertheless, there is in the country a deep-seated suspicion of outsiders. This ambivalence puts India in a very difficult position. The kinship is such that the two countries cannot treat each other quite like any other foreigners; yet the Nepalese allergy to strangers is so great that whatever India does is wrong. The Nepalese politicians swarm to the Indian Embassy for advice; and go away to attack India. Nepal cannot manage without Indian missions and then does not act on their advice. Nepal's budget—25 per cent in deficit—is far too small for any real development; so most of the development is done from India's £6 million, much of which is given under the Colombo Plan. India's money is paying for the building of roads, an all-weather airport, training the army, giving scholarships and helping all round. Other help—from the United Nations and the Americans—is by comparison a dribble. But while the people are grateful for it, they are not grateful for Indian help; they complain that the Indian army, which pays the labourers on its roads 3s. 6d. a day, is upsetting the labour market.

Sixty-nine Political Parties

One difficulty is that the 1950-51 revolution was incomplete. The new government was split into two, with three ministers from among the old Rana ruling caste and three from the new middle-class politicians who had been English-educated in India. The Ranas, headed by General Mahavir, the financier of the revolution and Nepal's black angel, did not co-operate with the politicians. Government after government tumbled while General Mahavir, taking advantage of the King's poor health, made money and fomented intrigues. The politicians, frustrated by the Ranas, instead of ushering in the promised reforms, quarrelled among themselves until there are now 69 political parties in the Valley of Katmandu. Thus the first four years of democracy brought chaos and lawlessness instead of progress.

Nevertheless, the situation is far from desperate. The new King began well before ever ascending the throne. At the beginning of this month, shortly after he had been made Regent, he dissolved the Cabinet, asked the politicians to prove the size of their following, announced the introduction of income tax and decided to tax the large land holdings of the Ranas. Moreover, because he alone has a position totally independent of anyone's support, he alone can ask India for the aid—which need not be very great—that his country needs to create the necessary administrative and technical services. The new King at least has the opportunity. He, and perhaps only he, could turn his obsolete Himalayan state into something approaching an Asian democracy.

Divisions in Germany

FROM OUR SPECIAL CORRESPONDENT

THE period when economic reconstruction was pushed forward in a framework of comparative political stability seems at an end in the Federal Republic. The crucial issue of rearmament in alliance with the West has rent the political fabric of the country, even though no party in the government wants to break up the present Bonn coalition. Splits have appeared in all the parties—least among Dr Adenauer's own Christian-Democrats—and in the Evangelical Church and the trade union federation. At the same time, the Russians appear to be making an effort to form an unholy alliance with some nationalist and former Nazi elements.

The split in the Evangelical Church (a union of the Lutheran and Reformed Churches which is much more akin to the Church of Scotland than that of England) was not healed at the all-German synod held last week in the Federal Republic. On the contrary, the chief result of the meeting was to make clear how many of the East German Protestant clergy accept the Soviet Zone regime, and how many of their colleagues in the west oppose the Paris treaties, on the grounds that they prevent reunification and foster civil war. To understand this phenomenon it must be recalled that the strength of the Protestant church lies in former Prussia, and its tradition is to submit to the state, whose ruler before the 1918 revolution was at the same time spiritual head of the church. At last week's synod, Herr Heinemann, who leads a small neutralist political party, was not re-elected to the post of Moderator, but he was brought into the church "government"; and Pastor Niemoeller, another neutralist pacifist, was confirmed as head of the church's "foreign office." The rank and file of the clergy were left without unequivocal guidance on the burning question whether they should take part in politics, and, if so, on which side—for or against the Paris treaties. Under these circumstances, it may be expected that the Russians will continue their efforts to use the pastors for their own purposes. One of their instruments is the Metropolitan Alexius of Moscow. This propagandist for "peace" is a modern version of the Orthodox and Calvinist churchmen who tried to bring the two bodies together on an anti-papal platform at the time of the Reformation. The attempt failed then, and may fail again, but it certainly will not be for want of trying by Soviet wire-pullers.

Dr Dehler Burns His Boats

The second split which has come into the limelight in recent days is in the Free Democratic party, the largest of Dr Adenauer's coalition "partners." The party chairman, Dr Dehler, burned his boats with the Chancellor by attacking him fiercely during the debate on the Saar agreement last month, and the internal fight revolves round the question whether the party should support their leader. There are various factions in the FDP, ranging from South German liberals to right-wingers who think that the party should be the political home of ex-Nazis. The tendency in recent weeks has been to strengthen the right wing under Herr Middelhaue, a deputy-chairman and a minister in the North Rhine-Westphalian government, but in Berlin the FDP has strongly criticised Dr Dehler and Herr

SNOWBALL

London Transport believes it knows the sort of bus service that London needs and London deserves. Consider, for example, the No. 11 route from Shepherd's Bush to Liverpool Street Station. The service as planned should provide a bus every 600 yards or so; at any moment there should be three in Victoria Street, all moving steadily along. But we know it is not like that; there are traffic delays and buses sometimes come in bunches. And a similar story is true for all the routes that thread Central London. Congestion of the streets is strangling public transport.

The Londoner who owns a car may try to solve his individual problem by driving to work. But his logic is at fault. His car is adding to the demand for road space until it is finally lodged in garage or park (if indeed he is not obliged to leave it in the street). In solving his own problem he is adding to the problems of others. The crowded streets are made more crowded, the bus service becomes even less satisfactory. More bus passengers lose heart and in their turn take their cars to work. The snowball grows...

But if this melancholy progress could be reversed. If the motorist, frustrated and unhappy, would leave his car at home and entrust himself to bus or tube, then in time the clutter would begin to disappear from the streets. The buses would go through without delay and difficulty. Bus services freed from the shackles of over-crowded roads would regain the efficiency and regularity which is the right of the Londoners who use them.

The World is their Market

COVENTRY

Coventry, once famous for fine woollens, is now a city of engineers. And much of its engineering skill is employed in the production of cars. Coventry's cars—designed and built for the world—come off the assembly line power-packed and beautiful to look at. But in Coventry they know that the end of the assembly line is only half way to prosperity. The cars they make must be sold—sold in a world market that grows more and more competitive.

It's the same in any industry. Making products for the world is only half the job. You've got to show them, sell them—and sell them hard—wherever a market for them exists. Many manufacturers—including Britain's leading car manufacturers—are doing this very successfully through TIME, The Weekly Newsmagazine.

SELLING IN OVER 100 COUNTRIES

TIME'S net paid audited circulation exceeds two-and-a-quarter million copies. 93% of the readers of TIME hold influential positions in business, government and the professions. They look upon TIME not only as the best means of keeping abreast of international news, but as an introduction to the world's foremost companies and products.

There are five separate editions of TIME* with the same editorial content. One circulates only in the United States. The other four—the International Editions—are published simultaneously and read by important people in over 100 countries outside the U.S.A. You can buy advertising space in just the editions you want, covering the world markets in which you are most interested.

Middelhaue. The Berliners demand that the party should support Dr Adenauer's policy of strength as the best way of dealing with Moscow.

The picture of disunion is the same, though not so visible, inside the leadership of the Socialist party and the trade union federation. The BHE, or refugee party, is also split on the crucial issue of the treaties, and even the Christian-Democrats are not as united as they were. The opposition is really directed against the Paris defence treaties, and the Saar settlement is only brought to the fore in the attack because it forms the weakest spot in Dr Adenauer's defences. As the Social-Democrats well know, if the Saar agreement is not ratified by the *Bundesrat* or if an appeal to the constitutional court can be used to block it, the result may be the downfall of Western European Union. The door will then be open for talks with Moscow on one of the forms of neutrality for Germany which the Socialists have in mind.

Mr Strijdom's Hundred Days

FROM OUR CORRESPONDENT IN SOUTH AFRICA

MR STRIJDOM'S South Africa is very much like Dr Malan's—only more so. Although the new Prime Minister has spent a good part of his three months in office reassuring various sections that his government's intentions towards them are strictly honourable and that they have nothing to fear, there are no indications that Mr Strijdom or his principal lieutenants are going to modify their political approach now that they are in power. The speech from the throne promised not only that Parliament would continue to seek means of depriving the Coloured people of the Cape of their common roll franchise rights, but also that it would seek to establish its own sovereignty *vis-à-vis* the courts. The Prime Minister still has to reveal his plans for achieving these goals, but it is difficult to see how another bitter constitutional crisis is to be avoided.

Mr Strijdom is far more determined than Dr Malan ever was to "establish the sovereignty of Parliament." He has come to link this—which in his view means depriving the courts of such testing rights as they may possess—with the ultimate attainment of a republic, and is determined that no court is going to prevent him from achieving this life-long goal. He is perfectly sincere, no doubt, in saying that Parliament at the moment is not sovereign because it cannot do precisely as it wishes by ignoring its own rules, for his party regards the South Africa Act as a "foreign" statute.

This does not mean, however, that Mr Strijdom will do anything rash or precipitate about either the Cape Coloured voters or the sovereignty of Parliament. Nor will he take action to establish a republic until he is ready and he thinks the moment opportune. He has already said that in the life of this Parliament there will be no official move to establish a republic. His three months in office suggest that the Prime Minister is quite as shrewd as his old predecessor, and he may in time also develop Dr Malan's patience and sense of timing.

In the realm of administration, Mr Strijdom is already reaping the fruits of shunting Mr Sauer out of the Ministry

of Transport and replacing him by Mr Schoeman, who lost no time in taking energetic steps to overcome the railway crisis brought on by the system's inability to carry the goods offered it. The business community is especially pleased with Mr Schoeman's vigour; and although it is early to speculate, Mr Louw's tenure at the Treasury might well be nearly as acceptable to industry, mining and commerce as Mr Havenga's was. Although the decision to entrust him with External Affairs as well as Finance has been criticised as impracticable, it is unlikely to be reversed. The present Cabinet team will probably remain basically unchanged for a long time, with Mr Strijdom, Dr Verwoerd, Mr Swart and Mr Louw as the Big Four. And it becomes clearer every day that after the Prime Minister—some observers would even say with him—the biggest of the Big Four is Dr Verwoerd, the Minister of Native Affairs. His handling of the Western Areas removal scheme—the thoroughness of the preparations, the determination to brook no interference, the staggering display of force, and the Minister's provocative and intemperate attacks on all who either gave him friendly advice or threatened to say him nay—all this has finally stamped Dr Verwoerd as the implacable, ruthless politician that his opponents have always thought him to be. He is setting the pace in Parliament this session as he did last, and not even the outcry that met his fantastic scheme of some day clearing the Western Province of the Cape of its African population—which today numbers about 178,000—has deflected him. Dr Verwoerd has linked *apartheid* with the survival of the white man in Africa, and whereas Dr Malan and Mr Havenga might have slowed down his pace, Mr Strijdom shares his views so wholeheartedly that the Minister of Native Affairs is able to forge ahead.

Nobody knows where Verwoerdism will end, but a good many people are most apprehensive. There are even Nationalists who express private concern about Verwoerdism, just as there are many followers of Hertzog who are deeply unhappy about the party's treatment of Mr Havenga. In the Free State a former Hertzogite MP, Mr Fullard, has resigned in disgust because, he alleges, former Havenga men are being treated like "bywoners" (sharecroppers). There is no doubt that a small section of the Nationalist rank and file is bitter about Mr Havenga's ejection, and among them are Malan men who feel that their leader's wishes were flouted when the parliamentary caucus chose Mr Strijdom. These rumblings in Nationalist ranks are at the moment only a sign of unrest, partly personal and partly ideological, but they could also arise out of concern over the course upon which the uncompromising leadership of the party has embarked.

French Senators on the Brink

THE charming Luxembourg Gardens in Paris lie between the Latin Quarter, the once Proustian, now "existentialist," St. Germain and artistic Montparnasse. Within stands the Luxembourg Palace, somewhat reminiscent of the Florentine Pitti. Since 1800 it has been, with only brief interludes, the seat of France's upper chamber. It is here that the Council of the Republic should within a

few days decide whether or not France will finally put its reluctant signature to a document authorising Germany to rearm. Not only an outright veto but even an amendment to the London and Paris agreements would be enough to make necessary a second reading in the National Assembly; that is, it would involve at least the indefinite postponement of ratification and more probably the burial of the whole project of Western European Union.

It may seem strange that this critical decision is to be made by an institution which is the result of an afterthought. At the birth of the Fourth Republic its ancestor was so discredited that no provision was made for the senate in the first constitutional draft. The proposal for a unicameral parliament was, however, rejected in a referendum. The Communists and Socialists, who were then in a majority, opted for the second best: a weak upper chamber, whose political make-up should not differ greatly from the lower one. Thus the Council of the Republic can meet only when the National Assembly is in session and its legislative powers are chiefly of a delaying nature. But with the Third Republic coming back into favour, the Council has tended to regain the importance of the former senate. In the present case, indeed, the Council's delaying powers are almost equal to a veto. A bill rejected or amended by the Council would have to be debated all over again by the Assembly and even if the latter did not change its mind—which is far from certain—the Council could still postpone ratification by an additional hundred days. Both Washington and London have made it plain that they will not wait so long. Thus only if the Council's reservations—such as a request for four-power talks before implementation or for a clarification of the Saar agreement—are expressed in the form of a pious hope, can trouble be avoided.

The delaying power of the Council has become important because the draftsmen of the constitution did not succeed in their second objective. A glance at the accompanying table shows that politically the upper chamber is no longer the image of the lower one. It was so at first thanks to an electoral system which could be defined as indirect proportional representation. But the system has been changed. The bulk of the 320 senators (246 for metropolitan France and 74 for the overseas territories) are elected on a majority vote, not by proportional representation. The electoral college has also been altered drastically. It now consists not only of deputies and county councillors, but also of 100,000 representatives of municipal councils. A combination of indirect election, rural bias, and predominantly majority voting explains the relative weakness of the Communists and the strength of conservative elements. The small number of Christian Democrats is due to the fact that the Council was originally elected at the height of the Gaullist wave.

One half of the Council is elected every three years and the next senatorial poll in fact takes place this June. Since many senators are also directly or indirectly involved in next month's local elections, the Communists have seized this opportunity to stage a pressure campaign in the Luxembourg lobbies under the slogan: "No votes for the supporters of the *Wehrmacht*." M. Fauvet, however, has calculated in *Le Monde* that, because of the indirect voting procedure, few senatorial candidates are really greatly affected by the Communist threats. The situation would be different if the Gaullists joined in an all-out campaign against German rearmament.

On the eve of the debate the remarkable thing is the astonishing apathy of the Gaullists. The General himself has as yet made no appeal against ratification; his supporters in the upper chamber seem, on the whole, resigned to the inevitable. Indeed, at this stage, this would appear to be the prevailing mood among all the opponents of the Paris agreements, with the exception of the Communists. Parliamentary arithmetic, lassitude, the desire to avoid a second debate in the Assembly, in some cases fears of a swift western reaction and consciousness of the futility of a French veto—all these factors seem to contribute to this mood. Unless the Gaullists launch a last-minute counter-offensive, M. Pinay should get the treaties through. Yet the French parliamentary mood is fickle. So much will depend on the atmosphere of the debate itself. Adroit speeches on the Saar or on negotiations with Russia could sway many a vote. The air of the quiet Luxembourg garden may be filled with drama next week. With all eyes fixed on it, the Council has to decide: will it write the epilogue to one crisis or the prelude to another?

Strong Medicine for Danes

FROM OUR CORRESPONDENT IN COPENHAGEN

LATE on Monday evening, after a three-day extraordinary session which was both broadcast and televised, the Danish Folketing adopted by 89 votes to 86 an emergency programme introduced by the Social Democrat minority government to combat the steadily worsening balance of payments position. Hr H. C. Hansen, who took office after Hr Hedtoft's death in February, has thus survived the first major crisis to confront him as Prime Minister. The government plan was supported by the Social Democrats and Radicals and—in dramatic defiance of his own party—by Professor Thorkil Kristensen, the former Liberal finance minister and one of the shrewdest opposition politicians.

To halt over-consumption by mopping up surplus spending power is the emergency programme's aim. The new indirect taxes, which become effective immediately, together with various economies, will provide an estimated 900 million kroner (£45 million) over the next two years. Purchase tax of 10-15 per cent on a wide range of domestic articles, including clothing and plastics, should produce 275 million kroner (£13½ million) annually. Taxes on petrol, tea, coffee and cinema tickets are raised. Many non-essentials—radios, television sets, furs and jewelry among them—will become dearer. Milk subsidies are abolished, but children's allowances are increased. Postage and railway freight charges will rise.

The new plan constitutes the third and most drastic instalment of correctives applied since the Social Democrats took office in September, 1953. It may be recalled that last June clouds on the economic horizon caused the government to raise the bank rate from 4½ to 5½ per cent, to cut public building and curb imports of American cars. In September the continued drain on reserves led to higher taxes on beer, spirits and tobacco and restrictions on hire-purchase transactions. As the price of their support, the neutralist Radicals exacted cuts in defence expenditure, reduction of military service from 18 to 16 months, and the exemption of 3,000 men from the 1955 call-up.

These earlier measures proved ineffective. The new plan represents a real attempt to stop the rot at the risk of unpopularity. The broad masses are to have a taste of what Hr Kampmann, the Finance Minister, described as "strong medicine." A neat piece of financial jugglery ensures that the higher prices resulting from the new taxes will not have the effect of raising the cost of living index (to which wages are linked). The government will issue 400 million kroner worth of 5 per cent bonds to taxpayers, graded according to taxable income.

When presenting the Economic Survey for 1954 last week, Hr Krag, the Minister of Economics, painted a dismal picture; and it was against this background that the government acted. The 1954 trade deficit of 1,470 million kroner (£73½ million) was double that of 1953; the drain on reserves for the year reached the equivalent of £25 million. At the end of February Denmark's dollar reserves stood at the equivalent of £28½ million, but the country owed £35 million to the European Payments Union, from which additional credit facilities are limited to £8½ million.

Over-consumption, resulting from full employment and high wages, has been the root cause of Denmark's economic difficulties. Last year nearly the entire labour force received a 6 per cent increase in pay. The higher cost of living automatically brought further increases this year. Contributory causes were the poor harvest (13 per cent below 1953) and the breakdown of trade talks with Russia. Furthermore, towards the end of 1954 the terms of trade turned against Denmark. However, barring misfortunes—like the inopportune threat of agricultural workers to strike next month—the crisis plan stands a fair chance of success.

Honourable Duty for Chinese

CHINA is showing great caution in building up its conscript army. A draft conscription law, drawn up by the State Council and debated by the Standing Committee of the National People's Congress last month, is now being circulated for local discussion. The State Council (the body which consists of the ministers) is clearly anxious to discover the public's reactions. The local "people's committees" have been instructed to send in reports by the end of next month, and the law will finally be submitted for approval to the next annual session of the National People's Congress, probably in the autumn.

This anxiety is reflected in Chinese propaganda about conscription. The *People's Daily* of Peking had admitted that "some difficulties are expected" when compulsory military service is first enforced. "Because of their inade-

quate understanding of the system, some people still have doubts and worries of varying degrees. . . . We must carry out extensive publicity among the people," the paper said. The preamble to the draft law stresses the need for patriotism. In a passage almost worthy of Kant's gradations of obligation, it refers to the "sacred duty" of citizens to defend the fatherland and their "honourable duty" to perform military service as required by law.

The new proposals are based on the experience gained from last September's conscription order, under which 450,000 men have been called up during the winter months. The September order was clearly designed as a "trial run" for the conscription machine. Its main provisions are embodied in the present draft law. For NCOs and privates in the army full-time conscription will last for a period of three years, in the air force four years and in the navy five years. Exemption may be granted to men who are only sons or the sole support of their families, as well as to those medically unfit and to students. "Counter-revolutionaries, feudal landlords and bureaucratic capitalists deprived of their political rights" are denied the privilege of serving their country. Otherwise every man between the ages of 18 and 40 is liable, and after his active service he will be transferred to the reserve. Men reaching the age of 18 will register by July 1st each year, but enlistment will be delayed until November, after the harvest.

How Many Conscripts?

How many men can China conscript each year? In theory, something like three and a half million young Chinese might register every year, and about two million of them would actually go into uniform if exemptions were granted on the same system as in Britain. In fact, neither the economy nor the administrative machine could deal with anything like that number. From the diffidence with which the Chinese are approaching the problem it seems that this winter's intake of 450,000 has been troublesome enough. It is emphasised by the *People's Daily* that what is now being done is part of a "gradual enforcement" of conscription. There is to be no swift release for the existing volunteer army: the draft law provides for their retirement by stages in accordance with requirements. The number of conscripts actually to be called up each year will be decided by the State Council, which will allocate quotas to the provincial authorities, who will in turn allocate sub-quotas to smaller areas.

The State Council knows that with a population of nearly 600 million, not all of them fully disciplined yet, universal conscription in China would create a monster. The Council wants the monster to grow up slowly under its control. To

"Motor Business"

help enforce discipline the Chinese have borrowed from Russian experience. Officers, instead of being designated by their function—company officer, battalion commander, and so on—will now be given orthodox military ranks. Officers of the reserve will enjoy various privileges under the proposed legislation—expenses when they report for training, leave with pay from their places of work and the guarantee that their posts will be kept open for them. The conscription law mentions no such privileges for other ranks. In addition, the Standing Committee of the National People's Congress last month adopted a series of regulations providing for the award of campaign medals and orders for distinguished service. These will be retrospective; one of the medals, that of the "1st August," will be awarded to men who fought in the revolutionary wars in the ten years after the establishment of the People's Liberation Army on August 1, 1927.

A sort of officers' training corps is also provided for. Students at senior middle schools are to be given military training before conscription, and those at higher educational establishments will be trained to become officers of the reserve. Training at both school and university is apparently to be universal and compulsory. It looks as though something like a class of professional officers is to be fostered—the *People's Daily* has referred to "career officers" who are required to make the safeguarding of the country "their long-term job or even their career."

In the process of conscription considerable power will be wielded by the "military enlistment bureaux." These, the draft law is careful to specify, are military organs to be set up in each enlistment district to administer the work of enrolment. Since the number of men required for active service each year is likely to be considerably smaller than the total number of those who register, the enlistment bureaux will enjoy wide discretion. In rural areas especially, they are unlikely to have long lists of deferred occupations to guide them in their choice of whom to enrol and whom to leave out (as America draft boards have). This may be a clue to one of the secondary aims of the new conscription law; it may be a weapon to brandish over the heads of those who make themselves unpopular with the local authorities by a "reactionary" attitude.

It is most unlikely that China's aim is to create a monstrous and unwieldy conscript army ready for action in the near future. More likely the purpose is to provide replenishment for the existing army, for which the flow of volunteers is proving inadequate, and gradually to build up a competent reserve force which is better trained than the present militia. There are vast problems of morale and administration to be solved before the Chinese can throw their conscription machine into top gear.

Shadows over Argentina

FROM A CORRESPONDENT

THE talks in Buenos Aires about the new Anglo-Argentine trade agreement have taken place against a disheartening background. Past experience in this trade ought to have taught the lesson that agreed figures set down on paper have little relevance to the amount of trade

eventually done, which depends on such hard facts as Argentina's ability to earn foreign exchange and Argentina's needs. These facts remain hard, in spite of all the efforts made in Buenos Aires to blur their edges. While Argentina admittedly has a sizable surplus of wheat for sale, much of this is already committed under existing bilateral agreements (the recent trade pact with Brazil alone calls for a million tons a year). The meat situation is still unpromising; the quota required by the last Anglo-Argentine protocol, which should have been shipped by June of last year, is only now being completed. The recent drought severely damaged the maize crop, which would otherwise provide a major export commodity. In January exports of maize were completely suspended; and it seems that all the available supplies will be needed for the home market unless other grains can be substituted for maize for stock-breeding purposes.

The outlook for Anglo-Argentine trade might, of course, improve substantially if Argentina could step up its domestic production of petroleum and thus reduce its requirements of foreign oil. For that, however, it must obtain more assistance from foreign capital, and this remains an uncertain factor. Last week President Perón's campaign to attract foreign capital marked a signal success when the Export-Import Bank in Washington approved a \$60 million line of credit to help finance the sale of American equipment for the \$250 million steel plant that is to be built on the Parana river. But the bank's action has been vigorously criticised in the United States, not only as implying official approval of the Perón regime, but also as being a poor risk. Many potential investors are still far from convinced that the *Peronista* leopard has changed its spots.

Wooing Foreign Investors

The extremity of Argentina's present need for foreign assistance is reflected in the foreign tour lately undertaken by Sr Hogan, the minister for agriculture. Sr Hogan, a former ambassador in London and a widely respected representative, was an obvious choice for the task of encouraging British and American investors. Less convincing are the arguments now deployed in favour of new British ventures. The British are alternately warned that German and Italian capital is rushing in ahead of them and reassured that American capital is not. To the shrewder of them the fine words of the new law on foreign investments seem less important than the fact that in Argentina official corruption, especially in state-controlled commerce, has reached an unprecedented peak, and that inflation is again a pressing threat to the whole economy.

Some two years ago a government spokesman admitted in the Argentine Congress that President Perón's first five-year plan had only been financed by recourse to inflation, but he claimed that the second plan would avoid this. Inflationary pressure was, indeed, checked during the interlude between the two plans, but now the government is working the printing presses hard again. Between January, 1954, and January, 1955, the note issue rose by over 5,300 million pesos, an increase of a fifth. Banking loans and deposits show comparable increases, and loans still overtop deposits by about 70 per cent. Nor is this at all likely to prove a brief episode. The projects of the second five-year plan commit the government to heavy capital investment, and it seems bound to have recourse to further inflation.

man and tree

If nature is kind, a man may live in health to a hundred years, a tree to a thousand. Man's knowledge of the chemistry of health is increasing. Through science man is gradually making nature kinder and more predictable.

Fisons are in the business of chemicals.

Their main manufacture over the last hundred years has been chemical fertilizers to enrich the soil.

But they make chemicals for medicine and industry, too.

Fisons contribute to Britain's harvests, health and wealth.

Well-padded Cell

Senior executives condemned to spend long hours sitting on committees should consider this new Heal chair, especially designed for conference and boardrooms. The well-padded arms and well-sprung seat will see you through even an all-day meeting in a very high degree of comfort indeed. There is a choice of covering materials—though we particularly recommend hide for long wear—and a special high-backed version to preserve the dignity of the Chair. Come and try out this chair in our Contracts Showroom, where you can always see a wide selection of Heal furniture for boardrooms and offices. Your visit will show you just why so many of today's leading and most progressive companies—both in Britain and abroad—bring their furnishing and decorating problems to Heal's. If you cannot call, please tell your secretary to write for our booklet, *Furniture for Special Needs*.

THE BUSINESS WORLD

Guidance for Retailers

THERE have been great changes in the pattern of retail trade in this country since the war, but until now they have had to be sensed rather than measured. The retail economy, with its vast annual turnover, long lay in statistical twilight with no figures about the number, distribution and turnover of shops and distributors until the first Census of Distribution collected them in 1951. The publication of this enormous volume* of new material was not completed until late in January with the appearance of the third and final volume. Retailers and their suppliers who have managed for so long on a mixture of intuition and judgment without this pile of statistical hard tack may well ask whether such figures can have much value in the day-to-day running of their businesses.

To this, the only answer is that they ought to have. The census could be the plain man's guide to the state of retail trade. It can be made to throw a great deal of light on the state of retailing in a typical High Street of a town of any given size, or in a given part of the country. From its elaborate tables, the ordinary shopkeeper can measure the strength of the multiples and of the co-operatives, the kind of turnover that different shops secure and (as some partial measure of efficiency) the sales per head effected by their different staffs. He can get some idea of his competitor's trading margins, and the kind of turnover that those margins appear to support. But all this has to be mined from the tables, like gold from quartz; there are no nuggets just for the picking. It is putting the case for the census at its lowest level to say, as some of its apologists do, that traders will gain automatically from improvements that it is bringing about in the Board of Trade's monthly

retail figures. These have been based on a sample that was known to be incomplete and suspected (rightly as it seems) of being inadequate. Some of the improvements that the census makes possible have been put into effect in the January retail trade figures published last week-end, and others will follow during the year. Yet the census has cost the taxpayer £710,000 and it has cost traders much expenditure of time to complete the forms. These costs can be justified only if its results prove of positive value to shopkeepers.

No one has attempted to "sell" the census to retailers, and they cannot be blamed if they blench at the idea of using it. Yet with a little digging and a bit of guesswork the amateur statistician can draw useful conclusions from this gritty volume. Sales of clothing can be taken as an example. Here is a branch of retailing where some of the biggest changes in structure have occurred in this generation, particularly in the rise of the multiple chains. In 1950, when the census was taken, there were 531,000 shops of all kinds in the country and their combined turnover was £5,000 million. More than 2½ million people were employed by them and more than 400,000 people either owned their shops or were working without pay in them. Out of this total, just under a fifth (89,000) were clothing shops, scoring nearly 18 per cent of the country's retail turnover with sales of £885 million. They averaged nearly £10,000 of sales per shop, and their staff of 384,000 made sales of roughly £2,300 per head.

The census results show that these figures compare reasonably well with other kinds of shops. Sales per clothing shop and sales per head of staff conform to those for the retail economy as a whole. Had they not done so,

* HMSO. Short report 2s. 6d.; Vols I-III £2 5s. complete.

it would have been fair to assume that the clothing shops lagged in efficiency behind other types of retailer. On the other hand, one might have expected that the clothing group, which has the highest gross sales of any group apart from the food shops, should have set a lead in trading efficiency. The clothing shops as a whole do not seem to do this. Can the census explain why?

Its tables reveal a marked variation in the turnover of shops in different parts of the country. In Greater London, average yearly sales exceed £13,000; in parts of the north and midlands, they are less than £9,000 per shop. The south, south-west, the east, some other northern districts and Scotland record turnovers of £10,000 and £11,000 a year. This geographical variation in sales is a point of importance; but in addition there are marked differences in the size and turnover of different clothing shops in a given area. For example, in the country as a whole nearly 20,000 clothing shops (more than a fifth of the whole) sold less than £1,000 worth of goods in 1950; but at the other end of the scale, 2,367 shops did more than £50,000 of business each.

★

These figures vary in turn according to the particular part of the country to which they relate; if one takes the south-west as an area where clothing sales are reasonably high—they average more than £11,000 a year for its 4,700 clothing shops—the census shows that 16 per cent of the shops rank as very small (a smaller proportion than for Britain as a whole) and 141, or 3 per cent of the total, can be classed as big, with turnover exceeding £50,000. In Bristol, with a population of 442,600, there are 792 clothing shops with sales totalling £8.4 million. If Bristol is in any way typical of a big town, it is reasonable to assume that 175 of those shops are small, doing about £600,000 worth of business between them; at least 100 will be of moderate size with sales of £10,000 to £25,000 each, and that nearly half of the clothing trade of the city was probably done by about 30 big shops with sales of £50,000 or more.

How are these shops likely to be organised? In Britain as a whole, the multiples (defined as chains with ten or more shops) did a third of the trade in clothing. But they are not so strongly established as this in the south-west of the country. A higher proportion of shops belong to chains—17 per cent as against a nationwide average of 13.3 per cent—but their sales amount to less than 31 per cent of the region's clothing trade. It would not be wise, however, to conclude that what is true of the south-west as a whole is also true for a city of the size of Bristol. In such big towns the multiples account for more than 40 per cent of total clothing sales. Allowing for the relative weakness of the multiples in this part of the country, and balancing this against their known strength in big towns, the figures suggest that the multiple shops might have accounted for about 38 per cent of Bristol's clothing trade in 1950 with com-

bined annual sales probably amounting to £3 million out of the £8.4 million total. Again, in this district, the co-operatives do not seem to have made much headway; their sales in the country as a whole were of the order of 6 per cent of the total, but they took less than 4 per cent in the Bristol area.

To sum up: judicious use of the census suggests that the prospects for clothing shops in Bristol are rather better than in the country as a whole; the chances of survival for really small businesses are not, perhaps, as good as they might be elsewhere; a higher proportion of business seems to be done by the big, independent clothing shops than in other towns of similar size. It is possible to do this kind of exercise for towns of any size in any part of the country and not only for broad groups; in clothing itself the retailer can make similar estimates for shoe shops with, and shoe shops without, repairs; for men's shops, women's shops, milliners, furriers, corsetières and even second-hand clothes dealers. And clothing is only one of the many groups of retailing with which the census is concerned.

Then the census throws some light on the question of efficiency. The small clothing shops seem to need a high mark-up. The average for all shops is a little less than 25 per cent, but the smallest shops add nearly 31 per cent. This compares with 24 to 26 per cent for the bigger shops, many of whom deal direct with the manufacturers while their smaller competitors deal through wholesalers. The rate of stock-turn varies from $3\frac{1}{2}$ times to $5\frac{1}{2}$ times a year, but the really big shops with trade in the region of £1 million turn over their stock more than 7 times a year. It is possible to compare the sums paid out in wages in clothing shops of different size and the differences in sales per head that their staff achieve. How does it happen that the staff of a quarter of the 2,254 shops with sales of £25,000 to £50,000 a year sell £3,670 worth of clothing in a year while those working for some of the others cannot do more than £2,010? How do a quarter of the retailers in this turnover group manage to work to a margin of 19.4 per cent while the same number add margins of more than 26 per cent? The comparisons suggest a great spread between efficient and inefficient shops.

All these figures—the merest sample of many thousands to be gleaned from the census tables—admittedly give a static picture of conditions that existed five years ago when price controls and continued shortages made trading conditions difficult. Something can be done to bring the figures up to date by combining them with the Board of Trade's own monthly index of retail sales. It will be easier to do this when the index has been revised in the light of the census, but some rough and ready calculations can be made to show at least the movement of trade since 1950. Last week-end the Board of Trade published its estimates of retail trade during the retail year February 1954 to January 1955. In conjunction with the census figures, the index suggests that clothing sales during those twelve months were about £965 million for the whole country.

Bristol trader might estimate from this that sales in his town were about £9.2 million for the period. He would note that according to the Board of Trade the sales of the multiple shops were 40 per cent higher in 1954 than they were in 1950 (whereas average clothing sales were up about 9 per cent for all shops) and he might conclude that the turnover of the multiples in Bristol could have been of the order of £4.2 million. If the guess is correct, the multiples would seem to have gained ground at a spectacular rate, since they would have done about 45 per cent of the city's clothing trade. It is a calculation in line with the rapid advance of multiple trading since controls were lifted.

Selling Through the Slot

IN the last year or so some of the rusty and forlorn slot machines that have been standing empty on railway platforms up and down the country have been replaced by shiny new machines that work. Rationing and restrictions on cigarettes and confectionery, and together with changes in taxation and prices, had relegated automatic sales to a limbo lasting fifteen years. But the scrapping of sweets rationing in 1953, the recent lifting of cigarette quotas, and more freedom to import coin machines from the Continent, have given the designers and operators of these machines their cue to resume business.

Before the war there appear to have been up to 70,000-80,000 slot machine columns in use (the industry understandably counts the number of columns in operation, and not the number of individual machines, from the which may contain any number of columns, from the single scarlet sentinels of the Nestlé chocolate penny machines to batteries of twelve or more). Very few of these prewar machines can be used today, even after considerable adjustment and attention. Operators have had to start largely from scratch, and it will undoubtedly be some time before even the prewar selling capacity is regained. Since 1953, when the first batch of new machines appeared, only about 4,000 to 5,000 columns appear to have been installed, and the companies, in looking forward to 1960, do not expect that more than about half of prewar capacity will be in use even then.

How much business can the manufacturers and operators of these machines hope to attract? No estimate has ever been made of the size of automatic machine sales before the war; developments that have been taking place behind the scenes recently indicate that there will be several new features in postwar automatic vending that may carve out entirely new markets for the operators. By designing new types of machine, by widening the range of packs that are offered, and by experimenting with new sites, the industry hopes to exploit further the two principal advan-

A comparison of later returns with the census may also show whether that growth has at last been checked.

The scope of the census may be frightening to the High Street draper, but he, or his trade association, or his Chamber of Commerce, ought to make use of the information it contains about his own trade, his own area, and his own town. He can use it as a test of his own efficiency in retailing, and if he is honest he will have to admit that it contains evidence of inefficiency in all ranks of retailing. Its figures relating to sales per head, to turnover and to trading margins, point the way to improvement.

★

The penny, the sixpenny bit, and the shilling were the three coins around which machines were built before the war. Today the coins most used are the sixpence and the florin, though chewing gum machines still use coppers, and the shilling is a useful intermediary coin on other machines. But the high value of the coin the customer is obliged to insert, the more likely is he to require some change. Change giving machines have been practical for some time—for over twenty years London Transport has used them—but some operators believe that the giving of change is an unnecessary frill, even though it makes a

machine generally more adaptable to changing prices. The danger of spurious coins is said to be much exaggerated, and the loss ratio is apparently very small. The traditional types of machine have been given a more compact and modern design, which allows a fuller display of the packs they contain. BAC are launching a neat array of standard machines with columns that fit side by side on a wall, on a stand, or in a recess, or grouped in a semi-circle or circle around a central post. These are British machines; for cigarettes, BAC is importing a Danish model that takes florins and automatically returns the change, whatever sum that may be. For cigarettes, particularly, operators need machines that can be adapted easily to any change in retail prices.

These are the traditional models that have been brought up to date. But if operators are to realise the full potentials of their automatic salesmen, they must develop machines capable of offering new packs, of assorted shapes and sizes, and of varying prices. This combination of needs is partly met by the composite machines that are beginning to appear on the larger railway stations. BAC's automatic shop, as these machines are called, is the "Vendol." In appearance this is rather like a squat telephone booth. But the window reveals a revolving tier of eight circular trays, each divided into compartments, to which access is obtained by a series of sliding doors that open on the insertion of the appropriate coin. The Vendol has not yet been launched; the automatic shops that have made their entry are the "Elmer" and the "Hiram," made by a British telecommunications company. The largest version offers up to 25 different articles which the customer can obtain by pressing the correct button. Neither machine gives change; the Elmer and the Hiram, however, accept any number of pennies, sixpences, and florins to make up the correct price—if the customer has the coins in his pocket—and the Vendol packs can be made to fit the three standard prices.

★

To what extent these machines will produce extra sales, swelling the total of sales through all channels, it is difficult to conjecture. The automatic vendors in the United States that have boosted sales are for drinks, tea, coffee, and soup. Four machines for this trade have appeared or are about to appear in this country. Some use bottles and some paper cups; some are refrigerated, or offer cooled drinks, whilst others provide hot and cold drinks at the turn of a switch. Technically and hygienically these machines have not been easy to design, but they have achieved some success, and development is unlikely to dawdle once the highly competitive soft drinks industry takes them up.

Customers for these machines, and those that sell ice-cream, fruit, and packed food, must be sought in places where large numbers congregate, where inten-

sive sales are possible, and where other outlets are lacking or would be uneconomic. Factories are the first on the list of soft drink machine operators. But universities, colleges, sports stadiums, amusement parks, cinemas, and dance halls, if American experience is a guide, may soon be tried. Insurance companies installed their automatic insurance peddlers at air terminals some time ago. But servicing and maintaining machines at widely scattered points soon taxes the resources of operators; they find that agents on the spot, employed by the site-owner, are the better answer. Responsibility for maintenance is usually retained by the manufacturer or operator; it is here that most damage could be caused to the reputation and acceptance of automatic machines, and the more complicated the machine the more important becomes the need for repeated attention. The increased cost of outlay, compared with the smaller proportionate increase in retail margins, is one more reason why operators are seeking fields for automatic vending outside the traditional models and packs and places used before the war. It will be some time before the success of this venture into wider markets becomes measurable. Even if these newer packs, American operators have found that machines are still a high cost method of retailing. There remains some doubt about the attitude of retailers, who always used to be rather suspicious. The retailer needs to be convinced that coin machines mean net extra business, not just extra sales outside the shop offset by fewer over the counter. The public, too, has had many years without slot machines, and the industry may have to begin with selling the idea of automatic vending (the free packet comes in here). The trend in the food trade towards more and better packaging certainly helps the operator; and the policy of sticking to branded and advertised goods also seems right. Articles that already possess a reputation will sell themselves and they will also help to sell any new method of bringing them to the customer. Shoddy goods, and machines that break down, would soon destroy confidence.

Business Notes

Decline and Rally

Two events that may be significant for investors occurred on Wednesday. A sharp—indeed an ominous—decline in the market was checked by a smart rally, and the first account of a new Stock Exchange year began. The new year will need to be glorious if it is to live up to the standard set by its predecessor. Yet even in a magnificent year like that just ended the inexorable force of high taxation on partnerships and unlimited companies leaves scars. The erosion of the jobbing system that distinguishes London from other markets still goes on, and as the new year begins it is learned that another merging arrangement is shortly to be made affecting the gilt-edged, foreign stock and oil share markets.

The investor has also just experienced an uncomfortable reminder that even in good years the course of security prices must adapt itself to big changes in monetary policy. The fall that started in industrials early in February and continued until the beginning of this week has been sharp—almost 11 per cent in five weeks (it is probably not significant that a slightly lower point was touched in the indecisive markets of the first two days of this week). The fall that continued in fixed interest securities from mid-November until the end of last week was naturally smaller, for it is the nature of fixed interest securities that they are less volatile; but a fall of a fraction over 8 per cent in

sixteen weeks is not one that investors can afford to ignore. It is not possible yet to say that the turn for the better on Wednesday marks the end of the downward movement; it might be no more than a pause, even though the recovery was held in Thursday's less decisive markets. It is certainly not yet possible to claim that the adjustment to dearer money linked with higher wages has finished working through the security markets. Industry itself is only beginning to feel the impact of dearer money. Will there be no more repercussions on industrial ordinary shares? Nor can it be claimed that the parallel adjustment in America

that showed itself in the sharp break on Wall Street last week and early this week is necessarily finished.

What can be claimed is that the resilience of the British economy and its strength remain great, and that investors with big funds building up are aware of it. That showed itself forcefully in the markets on Wednesday when investors suddenly decided to take the big new bout of wage increases in their stride. In the industrial market the turn was sharp; in the gilt-edged market the bears were quickly squeezed, and institutions that had been holding off became buyers

ORDINARY SHARE PRICES

	Peak, Feb. 3, 1954	Trough, Mar. 11, 1955	Mar. 16, 1955
Imperial Tobacco (£1)	61/6	60/9	61/9
ICI (£1)	44/9	40/1 ¹ / ₂	41/4 ¹ / ₂
Unilever (£1)	78/6	75/-	79/-
Courtaulds (£1)	42/3	36/-	36/9
Turner & Newall (£1)	114/6	98/-	100/6
GUS (5/-)	60/9	48/6	51/6
British Petroleum (£1)	85/-	71/-	75/6

on a moderate scale; in the new issue market lists for the offer of the Thomas Firth and John Brown ordinary shares and debenture stock were quickly closed with heavy over-subscription; the debenture stock was subscribed about ten times over and the ordinary shares about twice. In the gilt-edged market it has taken the institutions a little while to decide that the yields of a fraction either side of 4 per cent now obtainable from long-dated stocks lie within their target range, but that decision appears to have been taken.

The Rate for the Job

THE stream of industrial companies seeking to raise money through the market has certainly not been stopped by the fall in share prices. It has been slowed down only to the extent that companies—Debenhams for example—find it necessary to pause and take their bearings. In time the fact that money costs more, however it is raised, must appear and act as a restraint, though that restraint will seldom be conclusive if earnings are expanding and the means of carrying an additional interest charge seem to be at hand. Where plans were already being made to fund a bank loan, the first reaction to dearer bank loans is to hasten those plans along.

But some of the effects of dearer money are already apparent in the new issue market, as issuing houses and brokers struggle with fair success to find a new price basis. The yields established by the ordinary shares and $4\frac{1}{2}$ per cent debenture stock of Thomas Firth and John Brown when that market has settled down should give a useful guide for other offers. The indicated yields there are 6.4 per cent on a good class steel ordinary share and about £4 12s. per cent on a good thirty-year debenture. At the moment the market is still feeling its way. At the most speculative end no change can yet be detected.

But on industrial prior charges of good medium quality the change is obvious. Well over $4\frac{1}{2}$ per cent to redemption must now be offered. The offer of £600,000 $4\frac{1}{2}$ per cent unsecured loan stock 1967-70 at £97 in Lines Brothers, the toy manufacturers, gives a redemption yield of £5 os. 9d. per cent. The £500,000 of 5 per cent unsecured loan stock of Crossfield and Calthorp offered to existing stockholders at par offers just 5 per cent. One of the best placings this week—the £750,000 of $4\frac{1}{2}$ per cent debenture (1970-85) in George Angus at £98, offers £4 12s. 5d. per cent. By way of contrast in mid-February between the Bank rate moves but when part of the fall in gilt-edged had already taken place, the Truman Hanbury 4 per cent debenture 1980-85 could still be offered at £98 to yield £4 2s. 3d. and the Electric and Musical Industries $4\frac{1}{2}$ per cent unsecured loan stock could be offered at par. A month has made a difference of almost exactly one-half per cent in the yield expected from industrial prior charges.

Squeezing the Shunters

THE recovery of sterling in the exchange markets has continued during the past week, the official rate on the dollar rising to its highest since November. The best level reached early this week, namely \$2.79 $\frac{1}{2}$, has not, however, been held; the rate has fallen back slightly to \$2.79 $\frac{1}{4}$. But there is reason to believe that the authorities have intervened in this market to prevent too sharp a rise—and that they may thus have regained some of the gold and dollars lost in last month's operations in the opposite direction, in support of sterling in the London market. That is not to say that, on balance, the Exchange Equalisation Account has been netting hard currencies in the last few days; it appears to have had to continue its supporting operations in the transferable sterling market, where the rate has kept significantly steady at \$2.76 $\frac{1}{2}$. It is evidently the policy of the authorities to keep the discount on the transferable rate just small enough to deter commodity shunting operations. Thus official policy has a double objective—to narrow the margin by holding the transferable sterling rate up and at the same time by preventing the official rate from rising at the full pace induced by market forces.

The battle against commodity shunting is being reinforced, too, by certain European exchange authorities. In particular, the Bank Deutscher Laender has voluntarily come to the aid of sterling. This is in keeping with the co-operative attitude of its president, Dr Vocke, and follows the recent meeting of central bank chiefs at the Bank for International Settlements in Basle. The German central

bank has now put a barrier in the way of most of the commodity "switch" business by which dollar imports were bought for EPU currencies, mainly through Belgian purchases in the London markets. The deals included purchases of dollar cereals and cotton, which a British merchant can legally re-export to Germany or to any other country outside the sterling area only on a "dollar for dollar" basis. Ingenious continental merchants had, however, found ways of evading these restrictions and of securing dollar wheat and cotton through channels that enabled them to make payment in sterling. When the German authorities authorised allocations of sterling for these purposes they were in effect financing "reverse shunting"; now they will discontinue such allocations, and dollar commodities will have to be bought for dollars, whether in the London market or direct.

German Co-operation

THIS measure does not in any way affect the freedom of German or any other merchants in dealing on British commodity markets when the "dollar for dollar" clause does not apply—for example, in copper and sugar, and in certain essentially sterling commodities such as rubber, tin and cocoa. These commodities may be imported and exported without restriction, irrespective of the currencies in which payments are made in each direction. But the German initiative should bring considerable relief to sterling. In the last quarter of 1954 the German authorities allocated about £10 million of sterling for "dollar transit imports."

In Germany, the Bank Deutscher Laender's action has been criticised, on the ground that it has taken at the request of the Bank of England and to be against German interests. The effect of buying for dollars instead of for soft currencies will be, on the one hand, to cheapen dollar imports into Federal Germany, because the "shunting" premium will no longer have to be paid. On the other hand, the critics argue that Germany's dollar reserves will diminish and its EPU surplus will increase, whilst it is unlikely that the fall in the cost of imports will be reflected in retail prices. The Bank Deutscher Laender has, however, accumulated such large reserves in gold and dollars—these now stand at close to \$2,000 million—that it can take this step without danger. It is, indeed, quite in keeping with the German policy, which is now directed towards increasing and cheapening imports by lowering tariffs and extending liberalised dollar trade.

HP Overdrafts in Perspective

HIRE-PURCHASE finance has been a nigger in the woodpile of bank credit expansion, but it has certainly not been the only or the biggest one. The latest quarterly classification of bank advances for the first time shows separately the amount of bank loans to hire-purchase finance companies. Last month total

lendings by all members of the British Bankers' Association under this head amounted to £30.5 million. This is a much smaller total than might have been supposed after the attempt to make hire purchase the scapegoat for over-expansion in the domestic economy generally. It is fair to note, however, that the new category does not—and cannot—include bank lending that may have served to finance hire-purchase, trading through less direct routes than the finance companies. Moreover, the rate of growth in the disclosed lendings has been rapid. Twelve months previously the total was only £11.2 million; in the ensuing nine months it rose by £8.5 million and in the latest three months by £10.8 million. Even this latest rise, however, was equivalent to no more than one-thirteenth of the expansion of bank advances as a whole, and the disclosed loans still account for only 1.4 per cent of all advances.

The aggregate, as expected, rose faster during the quarter than ever before—by £142 million to £2,095 million. This is £39 million above the peak reached in May, 1952. An important slice of this new credit has been swallowed by the nationalised public utility industries, whose borrowings during the quarter rose by £43 million to £162 million, likewise a new peak. In the £99 million of net new lendings to all other borrowers—which in the similar period last year absorbed £57 million and in 1952-53 £10 million—a significant share has been taken by the big "personal and professional" group. This shows its biggest rise for a number of years, by £14 million to £393 million. Otherwise, the expansion has been fairly evenly spread over the categories, with the notable exception of the steel group, whose net borrowings have dropped by £15 million, obviously in consequence of the repayment by the Iron and Steel Realisation Agency, out of the proceeds of its recent sales, of the £30 million of bank loans shown as still outstanding in its end-September accounts. The most notable rises in

Fall in Commodities

COMMODITY prices seem to have passed the peak. On January 25th *The Economist* commodity price indicator stood at 103.6 (1952=100), the highest point reached in the last three years. Since then the indicator has fallen steadily, reaching 96.0 this week. That should eventually bring a welcome—though small—relief in the cost of British imports. It is possible that dearer money in Britain has recently assisted the decline, but it can hardly yet be playing its full part. Consumer resistance has pricked the boom in tea, coffee and cocoa. Weakness in rubber has followed selling by speculators, and cotton prices have dropped owing to uncertainty about the acreage to be fixed for the new American crop.

Several commodities have moved against the general trend. The prolonged recession in sisal is over, and prices have rallied sharply. Wheat and wool are firm, copper is still very high and prices of other non-ferrous metals are steady.

the industrial categories were £17 million for food, drink and tobacco (down by £0.5 million twelve months previously), £7.8 million for retail trade (up £4.4 million), £9.3 million for builders and building materials (up £2 million), and £10.6 million for textiles and notably cotton (£7.8 million).

The extent of the industrial spread will enable the banks to claim that all this represents good and justifiable business, the seasonal pressure from which has been heightened by the block in the new issue market in recent months. But, however "good" the business, it all adds its quota to the building up of the excess of domestic demand that has perforce spilled over into the balance of payments. The lesson from these figures is that monetary policy needs to be kept fully taut. Only thus will the banks learn to keep a tighter rein on their lendings.

Television Advertising Rates

THE rates for advertising time on the Independent Television Authority's London transmitter were announced this week by the two London programme contractors. Both companies, Associated-Rediffusion which will operate from Monday to Friday, and Associated Broadcasting Company, which will operate during the week-end, are quoting flat rates to be charged regardless of the size of audience or even of the probable number of sets within the transmitting area that are capable of receiving the second programme. They differ, however, on their estimate of what the traffic will bear, and in general, the week-day rates proposed by Associated Rediffusion are the higher of the two. This

company has established a basic rate of £650 per minute. For the peak viewing time from 8 p.m. to 10 p.m., the rate is raised to £975. Off-peak times in the mornings are rated at £325 a minute.

The week-end charges proposed by Associated Broadcasting Company show a wider variation. Morning rates are lower, at £200 a minute, so are the afternoon rates of £350 a minute on Saturdays and £600 on Sundays. Between 7 p.m. and 8 p.m. it is proposed to charge £600 a minute and the peak charge of £1,000 a minute is proposed only for the 90 minute period between 8 and 9.30 p.m. After that, the rate is reduced again to £600 a minute. The company will operate the Birmingham transmitter, when it is completed, during the week-days and its rates in this area are roughly half those fixed for London, reflecting a rough measure of the difference in population in the two transmission areas.

Advertisers may find these rates high. Many of them have considered paying £1,000 a minute for advertising time on the whole network (probably more at peak hours) and there is a big difference between booking a network covering about 50 per cent of the population and time on a single station covering only the London area. But by buying time on the London transmitter in its opening weeks, advertisers will be able to book the most favourable positions to the exclusion of less venturesome competitors, and in addition, to try out the techniques on this new advertising medium before a moderate-sized and no doubt receptive audience. There will probably be no lack of early support for the two companies. The testing time will come when the service has established itself, when methods for measuring the audience for given programmes have been introduced and when advertisers have had time to consider what returns they have had for their experimental outlay.

Credit Insurance Extended

FOR fully a year the pressure of a buyers' market has been steadily eroding the dividing line between the short- and the medium-term insurance facilities offered by the Export Credits Guarantee Department. British exporters of certain types of light engineering products have found that in many markets buyers demanded credit beyond the six months that the Department would insure under its short-term policy. Yet the business itself made it unsuitable for medium-term cover of up to about five years. That type of guarantee is designed for exporters of capital goods and each transaction has to be insured separately at a premium appropriate to its character. It is cumbersome and expensive for exporters of light engineering products, for their orders may be numerous and small. The short-term policy, on the other hand, can turn his type of business to good account. Because the business is spread over many markets the Department's risk is also spread. The Department will therefore insure either an exporter's whole turnover, at fixed premiums, the business being notified to the Department as it is done, or it will similarly insure his turnover in a selected number of markets if these give an acceptable spread of risk.

To meet the need for an extension of short-term cover for such exporters, the Department recently allowed some

of its "whole-turnover" policies to apply to credits granted up to one year. It has now decided that it can offer a general extension under that or the "selected markets" policy for certain engineering products sold on credits of up to a maximum of two years, where the average period of credit is not more than one year. The new cover will be limited to 20 per cent of the exporter's annual turnover in the past two years' trading, or 20 per cent of the business offered to the Department in a policy year, whichever is the lower, and the Department reserves the right to refuse business.

In addition to this extension, the Department has recently stepped into the new field of insuring earnings from invisible exports. This is a business that does not fall into neat categories, but the principle of spreading the risk can sometimes apply, as in the royalties on a book. Other types, such as payments for a large-scale survey of mineral resources taking several years, must be treated as an invisible export of a capital good, and charged accordingly.

Putting Votes into Roads

THE proposal of a new "super-authority," as the Minister of Transport calls it, to build roads for Britain has apparently been deemed worthy of a super pressure group. A new body called the Roads Campaign Council, which claims to represent the "road transportation community" in Britain, began public operations last week, advocating a National Highways Authority as the instrument by which the country should spend £75 million a year as soon as possible on new roads and major improvements. The Government's latest programme, it may be recalled, provides for a level of spending that will not reach £50 million a year until 1959. In addition to the British Road Federation, which itself has the support of a hundred trade bodies with 250,000 member firms, including motor and cycle manufacturers and dealers, garage owners, and private road hauliers, the new Council covers independent and municipal bus and coach operators and, through the membership of the AA and the RAC, over 2 million of the private owners of cars and motor cycles. All told, the council, as its chairman puts it, has between two and three million letter boxes at its disposal. By using these and by organising meetings, films, petitions, and exhibitions the council aims to put votes into roads, believing that this is the only way that any government will be made to listen.

The council's attempts to increase investment in Britain's decrepit road system deserve the strongest of support; but the proposal that the money should be raised and spent by another vast nationalised authority, quasi-independent of Treasury control, remains a very dubious one. Unlike other nationalised bodies, a road authority would earn no revenue with which to service and redeem its loans, unless it were allotted some fixed proportion of road and motor taxation, or adopted, on a vast scale, the toll-system that the council so heartily dislikes. An authority concerned only with new construction by the 1,285 local highway authorities in the country, each with several schemes in its own area, would also duplicate the Ministry's own organisation for making grants for normal maintenance to local authorities. It could

Only B.O.A.C. offers *double-decked* **Stratocruisers** on First and Tourist Class transatlantic services!

FIRST CLASS

Luxury "Monarch" services now from London to New York direct or via Boston; to Montreal direct or via Prestwick; to Bermuda, Nassau and Montego Bay. Soon, from Manchester to New York via Prestwick.

The gay spacious atmosphere of a double-decked "Monarch" Stratocruiser

Relax in "Coronet" comfort all the way across the Atlantic

TOURIST CLASS

"Coronet" Tourist services soon from London to New York or Montreal via Prestwick; to New York via Prestwick and Boston; to Chicago via Prestwick and Montreal.

Spacious Stratocruiser airliners soon will be used exclusively on all B.O.A.C. transatlantic services!

Choose the "Monarch" for extra luxury, incomparable cuisine, impeccable service. Fully-reclining seats . . . delicious meals served from silver trolleys . . . spacious lower deck cocktail lounge. No extra fare, but slight additional charge for private berths.

Or plan to fly "Coronet" and enjoy the finest transatlantic Tourist travel—at much less cost!

For industrial development

LAND The three great Liverpool
trading estates at Speke, Fazakerley
and Kirkby offer manufacturers ideal
conditions for industrial development.

LABOUR A great advantage of
siting plants on a Liverpool industrial
estate is the large labour force available,
particularly of young men keen to train
and skilled technicians. New housing
schemes for workers, with full
community amenities, are related to the
requirements of developing industry.

SERVICES The estates are well
equipped with public services and are
adjacent to main roads. Easy access to
docks, airport and railways.

FINANCE Mortgage facilities are
available for the purchase of factory sites
and the building of new factories.

hardly be "master in its own house," since loans would not divert the financial burden—and hence ultimate control—of road development from the Exchequer, though an authority might have more success than a supine Ministry in screwing firm promises of long-term expenditure out of the Treasury.

Parking Plans Move Forward

WITH the report stage completed this week and its formal third reading next Tuesday, the Road Traffic Bill—a rag bag of reforms and adjustments in road legislation—has almost completed its four months' argument through the House of Lords. The Bill now goes to the Commons. The one major innovation in it to have survived so far in more or less its original form is the section that will allow parking meters to be installed in busy city streets.

Once this legislation has been passed, the Government's plans for clearing congested streets of parked cars can go forward. The busier thoroughfares will be cleared or pruned of stationary vehicles by the wider use of no waiting and unilateral waiting regulations; the short-term parker, who stays less than two hours, will be able to leave his vehicle in minor streets and in places suitable for parking meters that may possibly be less convenient for him but are less burdened with moving traffic; and the long-term parker, who is responsible for two out of three of the cars parked in central London, will be encouraged to use the off-street garages already available and those that will be constructed. The Bill stipulates that the revenue from parking meters must be used exclusively to provide off-street garages either by the local authority or in grants to other bodies, including private firms, building them; and a Government amendment now enjoins the Minister to consider how much garage accommodation is available or is likely to be built out of street parking charges before he authorises a local authority to instal meters. An elaborate procedure has been evolved before a local authority may instal these meters; a public enquiry may be held, the consent of the Minister obtained, and the order laid before both Houses of Parliament.

Parking charges may vary slightly from area to area, but the Government has in mind 6d. for one hour and 1s. for two hours, with a sharply rising scale up to 5s. or more for longer periods that will make garage charges more favourable. In central London garages are only three-fifths full, even in the busiest periods, because motorists have preferred to compete for free kerb-side parking space. The merits of building costly underground garages are still not clear, but restrictions on the use of the highway for parking should encourage local authorities and private firms to build multi-storey garages. This week plans were announced for the first garage to be built in London for 15 years, and the LCC agreed to be responsible for building and operating similar garages in its area provided it received a 75 per cent grant (equivalent to the grant for a Class I road) for any losses incurred. The Government may be disinclined to accept this, but the revenue from parking meters should go some way towards offsetting losses on garages.

World Bank in Sterling Territories

DURING his recent visit to London, Mr Eugene Black, President of the International Bank for Reconstruction and Development, suggested that in the current year the bank might well match last year's total of \$115 million for loans to Commonwealth countries. Australia is known to be seeking \$50 million, and Mr Menzies has been in Washington during the past week. Pakistan is negotiating for \$30 million to be used for power and port development in Karachi, and a paper mill in East Bengal. There is the possibility that the bank will assist a power project in Malaya. And this week has brought the formal completion of the arrangements for a loan of \$24 million to the East Africa High Commission for rail, road and harbour works in Kenya, Uganda and Tanganyika. The bank's loan will cover a quarter of the total development programme, the bulk of which is being financed in London; but most of the imports on which it is expended will come from the United Kingdom, and the proceeds will thus swell the sterling area dollar reserves. The loan (which carries a British guarantee) is for twenty years, and carries interest at 4½ per cent, including the bank's 1 per cent statutory commission.

The World bank has proved itself a model of international public enterprise, and it is now securing an increasing element of private participation in its loan operations; indeed the last nine loans up to the end of February were of this combined type. Mr Black has also revealed that the charter for the new International Finance Corporation is being drawn up, in the hope that it may be able to start work next year. The international IFC is expected to have an initial capital of \$100 million, subscribed *pro rata* by member governments, and it will be able to take equity participations, without government guarantees, in private industrial developments. These participations, it appears, may be in the form of convertible debentures which could be sold to the public after new projects have been nursed into success. Already some interesting tentative proposals have been submitted, and there ought to be useful work for a new institution of this kind, supported by the World Bank's experience.

Revising Coal Wages

ONLY coalminers who are "daywagemen"—they include almost all the industry's surface workers, and a large proportion of the men underground who are not directly employed getting coal at the face—are affected by this week's revision of the wages structure in coal. They number about 400,000 of the industry's 710,000-odd miners; under the new agreement, which establishes thirteen main grades into which all the variously-named jobs they do have been classified and which increases the minimum wage for the lowest grade, about 95 per cent of them will receive extra pay. The amounts vary according to the rates laid down for the new grades, the grading of the miner's particular job, and what he has been earning; some men who were already earning as much as the new rate for their

grade get no increase, and the few lucky ones who were earning more do not have to relinquish their extra pay. Given the labour situation of the industry and the strength of the mining union, it would have been hopeless to expect any revision of anomalous wage scales that brought excessive rates down as much as it raised those that were too low. The only revision the unions would accept meant bringing most miners' wages up to varying levels that the NUM and NCB consider to be better related to the nature of the work. But this increase, which covers little more than half the industry's labour force, and probably much less than half its total wage bill, is a substantial one. It is expected to cost some £13 million a year, or about 1s. 3d. per ton of coal. If the revision of piece rates that is now following agreement on the daily wage rates should arrive at a similar method of revision by paying almost everybody more, that may cost the coal consumer a much larger sum.

The miners' union has always favoured an ironing out of the differences in wages for similar jobs between the country's 20 wages districts, and the "juster and more equitable basis" now agreed does bring about greater though not quite complete uniformity. Certainly the former pattern of wages had little logic to it, and embodied more of the history of local custom and bargaining strength than of modern variations in the supply and productivity of labour; differences between wages for the same job among pits in the same area were sometimes greater than the differences between coalfields. At present the pattern of earnings per manshift bears little relation with the pattern of productivity, if NCB divisional averages are taken. The effect of this week's revision of wage differentials on costs has yet to be seen, and it is of course only a first stage, with revision of piece rates to come. Nevertheless, it may somewhat alter the relative costs—and hence the relative profitability—of different pits and areas. The whole revision, indeed, might affect the financial prospects of capital developments that, in the Coal Board's 15-year plan, were decided partly on the basis of relative costs back in 1949.

British Banks and China Trade

FEW British institutions have been worse hit by the retreat of China behind the Iron Curtain than the Eastern exchange banks, yet they now seem prepared to re-enter Chinese business in the more limited sphere dictated by the People's Government. Last week Mr Vincent Grantham, of the Chartered Bank of India, Australasia and China, stated that the Chinese had intimated that they would welcome the participation of British banks in the finance of external trade. Now Mr C. Blaker, chairman of the Hongkong and Shanghai Banking Corporation, has reported that "the question of Chinese representation has been raised with us and we have expressed our willingness to come to some arrangement after our closure at Shanghai has been effected." Mr Blaker is plainly impressed with China's recent industrial and agricultural development, and he believes that British merchants and manufacturers may benefit even though the strains caused by the United Nations' embargo on many capital goods are growing "more and more serious." "The potentialities," he

claims, "are as great as they have been for over a hundred years."

The Hongkong and Shanghai bank operates in nearly all the major Asian countries, and Mr Blaker's review ranges far and wide. On the general plane, he has doubts about the economic aspects of the Manila treaty, fearing that, owing to the "unrepresentative" nature of Seato, it may "divert attention and finance from the wider sphere of the Colombo plan." But for the individual countries in which the bank is interested Mr Blaker can report good progress. The firmness of certain key primary products made for a prosperous year for most countries of free Asia—and, with them, the Hongkong and Shanghai bank. Its deposits rose only fractionally, to 2,673 million Hongkong dollars, but advances rose by \$184 million to \$829 million, and trade bills by \$168 million to \$495 million. Published profits were \$2 million higher, at \$19.3 million; the dividend for 1954 was maintained at £5 a share (of \$125), but it is hoped to maintain this payment on the capital as recently increased by a one-for-four scrip issue.

Competition in Small Cars

AT the Geneva Motor Show last week Fiat unveiled its new small "600" saloon car, successor to the "500" Topolino, which has had nearly 20 years of life. This new car seems to be an attractive vehicle capable of production at low cost. The engine is an "over-square" water-cooled four cylinder of 633 cc, developing 21½ BHP, mounted behind the rear axle; the body accommodates four passengers, with about as much space as the Austin A.30 or Standard 8, except for slightly less head room. It would be reasonable to expect a performance a little more sluggish than that of the two English competitors, which develop respectively about 5 and 7 more horsepower, but weigh about 2 cwt. more.

The Italian car is thus about 15 per cent lighter than its British competitors; this can be put down partly to the smaller engine size and to some use of aluminium, but chiefly to the rear engine position. The saving in manufacturing cost—under parallel conditions—should be fully 10 per cent, and a similar increase may be achieved in miles per gallon. This saving in weight and cost, and the reduction in overall length due to the mounting of the engine next to the driving axle, is exploited also by the other three leading Continental economy cars, the Volkswagen, the 4 cv Renault, and the 2 cv Citroën. In addition, the passengers are carried in a slightly better position and, when the engine is at the rear, there may be a reduction in the amount of engine noise that reaches the passengers. To offset these advantages, and the saving in costs, there is a reduction in the space available for luggage. No English manufacturer has yet shown any inclination to adopt this Continental practice, and most of Britain's small car designs are so recent as to make such a major reconsideration unlikely—though conceivably Ford might do so in a successor to the Popular. For the present, therefore, no opportunity seems likely of testing the preference of the British customer for the position of the engine in small cars, since import duty does not allow the small Continental car a fair price comparison in this market.

The City Hugs Its Chains

IN these past few years of progress towards a freer economy there have been many pleas for more forthright effort to restore a genuinely free capital market, but none has been more eloquent than the *cri de cœur* that appears in the current issue of the *Three Banks Review*. It comes from Sir Oscar Hobson, that doughty champion of liberal economics whose welcome appearance in the New Year Honours was, above all, a tribute to the fearless candour, sheer commonsense and unquestioned sincerity of his day-by-day writings through the years. On the crucial question of how the distribution of capital resources should be determined, this candour has devastating force:

Personally, I am less impressed by the wisdom of the market than by the conspicuous lack of wisdom which the congregations of experts and officials, of which we have recent experience, have always displayed. Of two evils I hesitatingly choose the less.

The greater evil, Sir Oscar unhappily admits, must persist in the sphere of nationalised industries, but that is no reason why like deficiencies should be tolerated in the private sector.

The price of efficiency there must be a new effort to restore the effectiveness and flexibility of the capital market. The problem of "take-over" bids and the undue reliance of businesses upon plough-backs as the source of new finance are both demonstrations of the grave distortions that exist. In his quest for a solution, Sir Oscar aims a glancing blow at the 2 per cent transfer duty and then delivers a frontal attack upon the distributed profits tax—which "must constitute a strong incentive to the retention and ploughing back by companies of profits, irrespective of whether they would be employed to best advantage there or somewhere else." To provide such incentive was, indeed, the very purpose of the tax, but whatever may have been its justification in the conditions of the early postwar years, this is now a wrong purpose. Moreover, the tax is unjust in its uneven incidence upon companies (varying fortuitously according to the nature of their capital structures), and its

burden wholly falls upon "just that class of risk-bearing investors which in the present circumstances of rapid technical progress needs to be most encouraged." Sir Oscar also objects to the undistributed profits tax, but he puts forward as a practical proposal the suggestion that the two rates should be unified at as low a figure as possible—and that the investment allowance started in the last budget should perhaps be scrapped as the means of enabling the Chancellor to keep it low.

Making Gas at the Refinery

IF a gas undertaking is ready, economically, to use petroleum instead of coal as a raw material year in year out, and if it can, technically, design plant able to gasify a wide variety of petroleum products, there may be obvious advantages in putting the plant at an oil refinery and using whatever the refinery can best supply as feedstock. This is the idea that British Petroleum and the South Eastern Gas Board are examining for BP's refinery on the Isle of Grain. The gas board has developed a catalytic gasification process—christened "Segas," the plant is being built under licence by Power Gas Ltd—that can produce town gas efficiently from products ranging from butane-gas to heavy fuel oil. Operated to handle whatever products the refinery could conveniently let it have, the plant could make a useful contribution to the flexible operation of the refinery and at the same time put gas into the area board's developing gas grid with the regularity of supply that statutory obligations require.

The company and the board have not yet settled the economics of this possible collaboration—who is to own and operate the gasification plant, and at what prices the refinery products or gas will change hands. These questions led to the breakdown of talks some time ago about the supply of gas from Esso's refinery at Fawley to the Southern Gas Board; this week, following the announcement about the BP refinery, it was announced that Esso and the Southern Board were talking the matter over again. The gas industry

THE WORDS ON THE NEWSPAPER he reads are written in characters that are twirled, convoluted, sinuous: like Eastern acrobats mocking the solemn dignity of this, our more sedate alphabet. Yet Asiatic scripts have a grace all their own. And whether they are read from left to right, right to left, or up and down, one important fact emerges: they are spelling the end of illiteracy. Throughout South East Asia representatives and agents of the Bowater Organisation maintain the flow of paper that is the flow of civilisation. For here, more and more people are reading for information, for news . . . increasing their knowledge and understanding of the world about them.

From the mills of the Bowater Organisation in Europe and North America comes newsprint for the newspapers and journals of the world; other printing papers for magazines and reviews; and paper for packages of almost infinite versatility.

Switzerland is one of the few truly international markets for cars, and the annual Geneva Motor Show that has just ended provides a useful yardstick against which to measure the competitive strength of different models. The cars are shown in order of power; it is impossible to make provision for minor model changes that all manufacturers introduce from year to year, but where a substantial change has been made in the cubic capacity of the engine, this is shown as a separate entry. In all cases the prices of the cheapest models exhibited have been used. All foreign cars are shown in italics.

The evidence suggests that prices are weakening slightly; where there has been an increase on last year's, the model has usually been improved. But price cuts are not so general as they were in 1954.

The case of the *Culicine larvae*...

In Algeria the still, shallow waters of the rice fields are perfect breeding grounds for mosquitoes; anopheline mosquitoes that transmit malaria and culicine mosquitoes that plague man and beast. Control measures are now being intensified throughout the infested areas, aimed at controlling all mosquitoes in the larval stage. The Shell insecticide dieldrin—in granule form—has been chosen for this important work.

Dieldrin granules have been chosen with good reason. Dieldrin is deadly to all species of mosquitoes, even the difficult-to-control culicines. In the rice fields, conventional dusts and sprays are caught by vegetation above the surface and largely wasted, but the specially prepared dieldrin granules, applied from the air, penetrate the foliage and get right down to the larvae in the water.

15 to 20 lbs. of granules to the acre—only a few ounces of actual dieldrin—are bringing even the heaviest infestations under complete control.

dieldrin

dieldrin and aldrin are  insecticides for world-wide use

For further information apply to your Shell Company

Dieldrin's range of control is unique: all mosquitoes and all other major disease-carrying insects. More powerful, exceptionally persistent, giving surer kill at lower dosages, dieldrin is the outstanding insecticide developed in recent years for the protection of health against insect attack.

Another recent Shell development is aldrin, fast becoming recognised as the most widely effective and most economical of all insecticides for use in the soil.

Have you an urgent pest problem in your area?

Issued by The Shell Petroleum Company Limited, London, E.C.2, Eng.

traditionally drives a hard bargain when it buys gas—mainly coke oven gas—from outside, though its purchases of refinery gases have occasionally been at comparatively high prices where these have made it possible to close down old and high-cost coal gasification plant. If agreement can be reached upon the economics of the operation, the technical details of the plant seem already fairly clear. It would initially handle about 50,000 tons of petroleum products a year—the total output of the Kent oil refinery is about 3½ million tons of products—producing 15 million cubic feet of gas a day, and would be designed for extension to three times that capacity.

Sharp Rise in Silver

THERE has been an unaccustomed and sharp rise in the price of silver in both London and New York during the past week. The London quotation has risen from 74½d. per ounce to 77½d., while in New York the price was last Tuesday raised at one bound from 85½ cents an ounce where it had remained since January, 1953, to 89½ cents. In these moves it is the New York market that has called the tune, even though the more flexible London market had shown a slight hardening of prices a day or two before the bound in New York. That movement in New York has been caused by the withdrawal of Mexican supplies from the market at a time of a fairly active demand. Mexico has recently concluded a large contract to supply silver coinage to Saudi Arabia.

The rise in the New York price has almost reached the point at which silver mined in the United States will be attracted to the market. Under existing legislation the US Treasury guarantees a price of 90.41 cents to domestic producers. If the New York market price reaches 90½ cents a considerable flow of additional silver may well reach that market, not only from producers in the United States, but from the substantial stocks of free silver held by the US Treasury itself.

SHORTER NOTES

Holders of maturing 3 per cent Defence Bonds (4th issue) bought between May 7 and July 31, 1945, which mature between the same dates this year, are offered conversion into the current issue of 3½ per cent Defence Bonds. They may continue the existing bonds until August 1st when six months' interest at 3 per cent per annum will be paid, plus the redemption premium of £1 per cent and they will receive the like amount of bonds in the 3½ per cent issue on which interest will be payable on February 1st and August 1st.

Travellers from the United Kingdom may now take out £10 in sterling notes, against £5 previously—though the Treasury points out that the purpose of this facility is to

cover only expenses on British ships and planes and not for the exchange of the notes abroad. The amount of foreign currency notes that may be taken out of the United Kingdom has also been increased, from £10 to £25, to be deducted as before from the basic travel allowance of £100.

★

The Government has raised the rate on new tax reserve certificates from 1¼ to 1½ per cent, tax free—the highest rate since the certificates were first introduced in 1941. The increase follows closely on that from 1 to 1¼ per cent made in mid-February. The first increase, which was intended to bring the rate more or less into line with the rise in short-term interest rates, was out-dated by the further rise in Bank rate last month.

★

The board of the Legal and General Assurance Society propose to capitalise £750,000 of reserves to discharge the uncalled liability of 15s. on each £1 ordinary share. The steady growth of pensions business, in which this life office has a major interest, is evidently reflected in the proposal to raise the final dividend to 5s. 6d. per £1 share (5s. paid), making a total of 8s. per share or 160 per cent, compared with 6s. 9d. per share or 135 per cent for 1953.

★

Group profits before tax of Swan Hunter and Wigham Richardson, the Tyneside shipbuilders and engineers, rose by £541,000 to £2,725,000 in the year 1954, and the net profit of the parent company rose by £138,000 to £1,166,000. A final dividend of 10 per cent is proposed on the ordinary capital of £3,422,000. The capital was doubled by a free scrip issue last July, and the total dividend for 1954 is effectively 12 per cent, and 2 per cent higher than in 1953.

★

Figures issued by the Radio and Television Retailers Association give the association's estimate of the percentage of sets sold on hire purchase to the end of 1954.

PERCENTAGE SALES ON HIRE PURCHASE

	Radio		Television	
	1953	1954	1953	1954
September	37.28	52.60	51.29	66.65
October	38.99	52.89	51.35	65.99
November	41.93	53.90	49.26	62.85
December	41.61	50.67	47.21	63.73

The figures, though based on a light sample, do not point to any further extension of hire purchase practice in the last two months of the year.

Company Notes

FORD MOTOR CO. All that has happened to the Ford company in the past two years has pointed towards a great surge forward in turnover, in profit, and in the size of the undertaking. The 100 per cent scrip issue in May, 1953, the effective increase in the dividend a year ago, the £65 million expansion plan announced last October and the further 100 per cent scrip issue announced in January of this year all point to a great and growing business, bidding fair to capture a larger share of the British home and export market, particularly in smaller cars. The preliminary figures just announced detract nothing from that estimate.

In 1954 the group sold 291,468 vehicles, compared with 234,379 in 1953. Its turnover—a useful figure that shareholders receive possibly because Ford is a subsidiary of an American parent—rose to £127.3 million, compared with £105.9 million. The directors add that turnover has been maintained at a satisfactory level since the end of 1954. The final dividend

	Years to Dec. 31, 1953	1954
Gross profit.....	18,373,245	23,368,485
Less:—

Ordinary dividends.....	1,287,800	1,609,750
Ordinary dividend (per cent)	12	15

of 10 per cent, making 15 per cent, compared with a single payment of 12 per cent, roughly coincides with market expectations. And the comparison is straightforward, since the latest 100 per cent free scrip issue, for which CIC permission has now been obtained, is not yet in operation. The rise in the group net profit from £5,527,302 to £9,892,654 is better than the public's expectation. It owes something—but not everything—to the demise of EPL, which cost the group £2,765,940 in 1953.

Ford Motor Company is carrying to reserve for replacement of fixed assets a slightly reduced sum of £3,420,808, compared with £4 million. But after meeting the reserve appropriation and the preference and ordinary dividends, the amount carried forward on consolidated profit and loss account rises from £4,521,315 to £9,369,345, which is a formidable revenue reserve. It is buttressed by group capital reserves amounting to £21,425,078, compared with £18,013,375. Together these reserves provide a useful start for the £65 million capital programme.

CANADIAN PACIFIC. The quip that "Canpac" is anything but a railway stock is old enough to be a chestnut, but it has lost none of its point. As the 1954 results show, the non-railway interests give what little buoyancy there is to earn-

ings but the ordinary dividend for 1954 is maintained at 6 per cent for the fifth successive year. In 1952 and 1953, the years of the Canadian boom, gross earnings from the railways of the group were going up, but net earnings remained almost unchanged at \$28.9 million. In 1954, when the boom subsided, the company's gross railway receipts fell by about 10 per cent (by \$48 million to \$422½ million) and net earnings declined by \$1.9 million to \$27 million. The grain traffic on the railways fell by about one-third and "while increases were reported in many commodities decreases occurred over a wide range of manufactured and miscellaneous goods." It was only through economies in maintenance and the increased use of diesel power, that working expenses were kept down and the decline in net railway receipts was no greater. But the result of railway operations over the year represented a return on net railway investment of only 2.15 per cent.

The improvement in Canadian Pacific's earnings from other sources—by \$1 million to \$17.8 million—was not sufficient to offset the decline in railway earnings. And following an increase in interest and rentals paid, the net earnings applicable to preference and ordinary stockholders fell by \$1.6 million to \$29.8 million. The dividend of \$1.50 per ordinary stock unit of \$25 absorbs over \$20.7 million. The

	Years to Dec. 31, 1953	1954

Net balance.....	7,609,402	6,020,829

sum to be retained in the business is only about 44 cents on each ordinary stock unit.

Investors, having noted the increase of \$1 million in "other income," must have also noted with some misgiving that as much as \$700,000 of this increase sprang from a saving in income taxes. Another disturbing figure is the loss of \$2,055,000 reported by the company's shipping interests. That loss is four times as large as the deficit of \$512,000 in 1953. Long term possibilities of this varied enterprise must always be intriguing but as yet Canadian Pacific Railway does not appear to earn enough from its outside interests to compensate for its sluggish railway earnings, and those outside interests have shown themselves to be vulnerable.

INTERNATIONAL NICKEL. A dividend of \$2.90 per common share in 1954, compared with \$2.35 in 1953, and an increase in the first quarterly payment in 1955 from 50 to 55 cents could only point in one direction—to further records from International Nickel Company of Canada.

The company's full report discloses these records. They were achieved in nickel deliveries, ore mined, net earnings and dividend payments.

The company mined 14,456,254 short tons of ore, compared with 13,667,095 short tons, yet its proven reserves of ore remained unchanged at over 261 million short tons. By delivering 282 million lb of nickel in all forms the company provided about 70 per cent of the supplies of the free world. Deliveries were as much as 30 million lb up on the 1953 total. Stockpiling absorbed the greater part of this increase and, again drew off some of the nickel intended for industry. Nevertheless, current defence orders for nickel were lower so that the total amount of nickel delivered to civilian industry was actually higher even though it still could not completely satisfy demand.

* Excluding a non-recurring capital gain of \$1,865,851 from the sale of Birlec to Associated Electrical Industries.		

From nickel, copper, platinum, gold and silver, the company received \$352 million, \$14 million more than in 1953. Net earnings at \$68½ million, compared with \$63½ million, were also a record, and this figure was the more noteworthy for being computed after charging a provision for depreciation swelled by the introduction in Canada of the equivalent of initial allowances. Net earnings per common share worked out at \$4.34, not merely higher than the 1953 figure of \$3.54, but also above the previous record figure of \$4.17 of 1951.

Last year's achievements are enough to satisfy the most carping of critics, but records then established may be broken yet again this year. Mr John F. Thompson, the chairman, could not be more definite: "We confidently expect that during 1955 industrial demand for nickel will continue at a high level and that we will operate our mines and plants at full capacity. Decreases in defence requirements for nickel will probably be offset by larger civilian demand." And in November the price of nickel was increased, so that the improvement in net earnings already apparent in the last quarter of 1954 can be expected to continue.

UNITED STATES STEEL CORPORATION. United States Steel is among the biggest companies in the world. From its many works it produces more steel than any other group. It makes about one third of all the steel produced in the United States. Its steel making capacity falls little short of the combined steel production of Britain and Germany or of that of Soviet Russia. Hence, even

though it was working at only about three quarters of its rated capacity in 1954, its report for that year is not merely impressive—it is staggering.

In 1954, the year of "readjustment from the high levels of production and shipments that prevailed in 1953," United States Steel produced 28.4 million tons of steel ingots and castings, compared with 35.8 million tons in 1953. Its turnover totalled \$3,250.4 million—15.8 per cent less than the figure of \$3,861.0 million the year before. The income from sales after tax was \$195.4 million representing a return of 6 per cent on turnover; in 1953 an income of \$222.1 million gave a return of 5.8 per cent. Dividends on the preferred and common stocks, amounting to \$110.7 million, took 56.7 per cent of net earnings. The year's dividend on the common stock was stepped up from \$3.00 to \$3.25 per common stock notwithstanding the decline in earnings. That increase, the chairman, Mr Benjamin F. Fairless, states, is a "tangible recognition" of the fact that "a return on invested savings is the most powerful known catalyst for creating more savings, more investments and more jobs." He also heralds the proposed share split as making the stock "more readily available for investment purposes." This frank recognition of the value and purpose of investment should carry a moral for some of the more stuffy boards of directors on this side of the Atlantic.

The march of the United States Steel figures does not end with the dividend payment. Last year, having ploughed back \$84.7 million, the corporation spent \$227.4 million on capital account, bringing the gross book value of its fixed assets up to \$4,361.4 million. (Small wonder that the directors are worried about the inadequacy of normal depreciation in an economy of changing money values.) The corporation's working capital at the end of last year amounted to \$752.0 million, compared with \$346.0 million. That increase in net current assets—to use the more familiar British nomenclature—reflects the

proceeds of the sale of \$300 million of debentures last July.

The report, containing all these figures and many more, is sent to 275,833 stockholders. Its presentation of the figures is as impressive as the figures themselves, and for that reason, too, it deserves study on this side of the Atlantic.

DE BEERS. The preliminary statement of De Beers Consolidated Mines for 1954 is a thin document. That is in keeping with the customary reticence of by far the most important company in the diamond trade. The statement presents stockholders with three facts: the deferred ordinary dividend has been left unchanged for the fourth successive year at 10s. per 5s. share (or 200 per cent); earnings before tax are slightly down, from £11,317,801 to £11,010,344; net profits are almost unchanged at £9,210,344, compared with £9,317,801 in 1953.

There is not much sparkle in this report, and the sparkle in the equity itself had disappeared before the report was published. At the turn of the year diamond equities shone brightly, the extra brilliance coming in part from the increase in the price of gem stones made just before Christmas. That was the second increase within a year, the first having been announced in January, 1954. But the announcement that the total value of diamond sales had risen by £1 million to £62.1 million in 1954, thanks to heavier sales of industrial stones in the last quarter of the year also helped the rise. Share values then came down abruptly with the report that synthetic diamonds had been manufactured in the United States. The De Beers deferred bearer 5s. shares are now quoted at 115s., to offer a yield of 8.7 per cent. Perhaps Sir Ernest Oppenheimer may make some comments on them in his next statement to stockholders. It will be interesting to see whether a synthetic stone apparently quite small and costly to produce will cause immediate concern.

LONDON STOCK EXCHANGE

Next Account begins: March 30th
Next Contango Day: March 30th
Next Settlement Day: March 22nd

The closing days of last week saw a sharp fall on the Stock Exchange, in which nearly all sections became involved. The opening days of this week produced a pause in industrials, together with the beginnings of a rally in gilt-edged. By Wednesday a fairly marked rally had developed in all sections. The fall in London had coincided with marked weakness on Wall Street. The subsequent rally in industrials coincided with a firmer market there also. The result has been that in the week running from Wednesday to Wednesday, gilt-edged have on balance gained ground. The *Financial Times* index of government securities having risen from 98.42 to 99.11, while industrials have on balance lost ground, the index having moved from 181.3 to 179.4. Movements on Wednesday were most marked in the long and undated stocks, War Loan 3½ per cent gaining 1½ to 84½.

Buying orders came in for Japanese bonds, the 5 per cents of 1907 rising sharply; at 168½ the unassented bonds show a small net rise in the week. Canadian Pacific Common have also rallied, despite the weakness of Wall Street and the disappointing financial results; at 53½ they show a net fall on the week of only ½.

With the start on Wednesday of the new Stock Exchange account and the new Stock Exchange year a moderate amount of new time buying and of bear closing in industrials developed. Imperial Chemicals rose 1s. 1½d. to 41s. 4½d. Some sharp recoveries took place in the stores group that had been found vulnerable when the market was falling. United Drapery gained 1s. 9d. to 42s., having been down to 40s. last Friday. Even William Whiteley that fell 4s. 4½d. on Tuesday on the chairman's revelation that there would be no ordinary dividend, rallied 1s. 10½d. on Wednesday to 50s.

Copper shares have held their ground well during the fall, and they also rallied with the rest of the market on Wednesday to 50s.

Kaffirs, teas and rubbers all enjoyed a firm market when the general rally began.

(¹) Relates only to prices in capital cities for Austria, France, Greece and Turkey. Cost of living in Paris based on 1949=100, and wholesale prices in Western Germany on July-December, 1948=100. (²) Index numbers of unit value which compare the current average value of trade with its value in 1948; they are influenced by changes in the composition of trade as well as price movements. Index numbers for Germany based on 1950. (³) Notes only for France and Austria. (⁴) Holdings of the government and central bank at end of period; figures for Greece are gold reserves only. (⁵) Beginning May, 1954, a new drachma equal to 1,000 old drachmas was introduced. (⁶) Average for third quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended March 12th there was an "above-line" deficit (after allowing for Sinking Funds) of £14,827,000 compared with a surplus of £21,913,000 in the previous week and a deficit of £5,256,000 in the corresponding period of last year. This brought the cumulative account to a surplus of £495,303,000 (compared with a surplus of £214,176,000 in 1953-54). Net expenditure "below-line" last week reached £11,732,000, bringing the total cumulative surplus to £37,737,000 (compared with a deficit of £181,726,000 in 1953-54).

THE MONEY MARKET

The stringency of credit conditions in Lombard Street shows little sign of abatement. On Thursday and Friday last week a few houses were again forced into the Bank; in the remainder of the week covered by the Bank return the market succeeded in repaying the previous week's loans without further borrowing at the penal rate, but only with the help of official purchases (which on Monday reached moderate proportions). On Wednesday, when no repayments were due, official disbursements made conditions more comfortable, and there was a good demand for May and June maturities at 3½ per cent.

At last week's Treasury bill tender, the market maintained its bid unchanged for the £270 million of bills on offer. As outside tenderers lowered their bids the market's allotment jumped from 50 to 61 per cent, and the average rate of discount rose by nearly ¼d. to £3 16s. 0.65d. per cent—despite the fact that applications rose by a further £3.2 million to £393.9 million.

Business in the gold market declined early this week. The price at the fixing fell from 251s. 3d. a fine ounce on Thursday last to 251s. on Wednesday in sympathy with the rise in sterling.

The Bank return shows a fall in discounts and advances of £8.4 million to £18.5 million, reflecting the market's net repayments of seven-day loans. The active note circulation rose further by £2.3 million.

THE LONDON OMNIBUS

A VEHICLE
OF INFORMATION

WHEN Shillibeer's omnibus first clattered its way through the city streets in 1829 the citizens of London realized that here indeed was a public service worth knowing and using.

Likewise, the London Assurance offer the public another kind of useful service by journeying into print with selections from their own omnibus collection of insurance policies.

Better Terms

When school fees come in, some fathers find themselves wrestling with sums. Others have discovered, however, that the right answer to this particular problem is to take out an Education Policy with us well before schooling begins. It's just a matter of good arithmetic.

"How to be Well Assured"

The many different kinds of Life Assurance we provide deserve a volume to themselves—and they have one. Our booklet "How to be Well Assured" has helped many people to find the Life Policy that suits them exactly. Would it help you?

Valuable Advice

"Rings on her fingers and bells on her toes, she shall have cover wherever she goes" if her jewellery, furs and other valuables are safeguarded by our All-Risks Policy.

There's more to be said . . .

If you would know more about any of the policies outlined here, if we can provide any information about any other particular policies or about insurance problems generally—pray make what use of us you wish. Our address is 1 King William Street, Department X6, London, E.C.4.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in the Colony of Hong Kong)
(The liability of members is limited to the extent and in manner prescribed in Chapter 70 of the Laws of Hong Kong)

REPORT OF THE DIRECTORS

SUBMITTED to the Members at the Ordinary Yearly General Meeting held at the Head Office, Hong Kong, on Friday, 11th March, 1955

The Directors have pleasure in submitting the Balance Sheet at 31st December, 1954, together with the Profit and Loss Account for the year ended at that date. The Profit for the year, after providing for taxation on profits earned to date and after making transfers to the credit of Reserves for Contingencies, out of which Reserves provision has been made for any diminution in value of current assets amounts to ... HK\$19,290,451 9,859,542

To this must be added the undistributed profit brought forward from the previous year ... 20,149,993

An Interim Dividend of £2 per share, free of Hong Kong Corporation Profits Tax was paid on the 9th August, 1954, amounting to £320,000 at 1/2-27/32 ... 5,173,895

leaving a balance available for distribution of ... 23,076,098

This balance the Directors recommend be appropriated as follows:—

Amount to be written off Bank Premises ... HK\$6,000,000 7,760,842

A Final Dividend of £3 per share, free of Hong Kong Corporation Profits Tax, £480,000 at 1/2-27/32 ... 13,760,842

leaving a balance to be carried forward to next year of ... HK\$10,215,256

The above appropriations have been incorporated in the Accounts. Before closing the books for the year, an amount of HK\$32,000,000 (£2,000,000) was transferred from Inner Reserves to the published Reserve Fund, thus raising the latter to HK\$128,000,000 (£8,000,000). An Extraordinary General Meeting of Shareholders will be held immediately following the Annual General Meeting on 11th March, 1955, to consider and, if approved, to authorise the capitalisation of HK\$5,000,000 of the Reserve Fund and the distribution of the additional shares thus created to Shareholders in proportion to their holdings on that date. The consent of His Excellency the Governor of Hong Kong to the increase in capital, as required by the Bank's Ordinance, has been obtained. DIRECTORS.—During the year Mr. A. V. Farmer resigned his seat and Mr. C. B. Cook joined the Board in his place. Mr. B. T. Flanagan, Mr. R. Gordon and Mr. J. H. Hamm, retire by rotation but, being eligible, offer themselves for re-election. AUDITORS.—The Accounts have been audited by Messrs. Peat, Marwick, Mitchell & Co. and Messrs. Lowe, Bingham & Matthews, who are eligible for re-appointment. By Order of the Board, C. BLAKER, Chairman.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong with the audited accounts of the London Office and with the returns received from the other Offices which have been signed by the Branch Managers. We have obtained all the information and explanations we have required and in our opinion such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Corporation's affairs at 31st December, 1954, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and by the returns received from the other Offices.

Hong Kong, 14th February, 1955.

PEAT, MARWICK, MITCHELL & CO. Chartered Accountants.

LOWE, BINGHAM & MATTHEWS Auditors.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1954			
Interim Dividend of £2 per Share, free of Hong Kong Corporation Profits Tax, paid 9th August, 1954, £320,000 at 1/2-27/32	HK\$5,173,895

		HK\$20,149,993	
Special Administrative Expenses, including Chief Manager's emoluments, Directors' Fees and London Committee Fees amounted to HK\$889,568.			
			HK\$20,149,993

STATEMENT IN CONNECTION WITH SUBSIDIARY COMPANIES

(1) The Investments in Subsidiary Companies appearing in the annexed Balance Sheet represent the issued Share Capital of three Trustee Companies and three Nominee Companies wholly owned by the Bank. No Group Accounts have been submitted as the Directors are of the opinion that such Accounts would be of no real value to the members of the Bank.

(2) No part of the Profits earned by the Subsidiary Companies has been dealt with in the Accounts of the Bank. The net aggregate amounts of the Subsidiaries' profits after deducting the Subsidiaries' losses are as follows:—

(i) For the year ended 31st December, 1954 ... HK\$36,043

(ii) For previous financial years ... 197,365

HK\$233,410

BANKING CORPORATION

SATISFACTORY RESULTS IN A DIFFICULT YEAR

MAIN PROBLEM IN CHINA STILL UNRESOLVED

BRITISH BANKERS' IMPORTANT ROLE IN ASIA

MOBILISATION OF CAPITAL TO ASSIST INDUSTRIAL DEVELOPMENT

MR C. BLAKER ON CHINA'S CLAIM FOR "PEACEFUL CO-EXISTENCE"

The ordinary yearly general meeting of The Hongkong and Shanghai Banking Corporation was held on March 11th at the Head Office, 1 Queen's Road, Central, Hong Kong.

Mr C. Blaker, MC, ED, the chairman, who presided, said:

Ladies and gentlemen,—The hour for which this meeting was called having now passed, I will call upon the chief manager to read the notice convening the meeting.

Mr Michael W. Turner having read the notice convening the meeting, and a representative of the auditors having read their report, the chairman continued:

Ladies and gentlemen, before I proceed to comment on the accounts I want to draw your attention to two anniversaries connected with this bank which may not have come to your notice. The first was on August 6th last year. It was the 90th anniversary of the meeting held in Hong Kong on August 6, 1864, to form a provisional committee to undertake the establishment of this bank.

The second anniversary was on March 3rd last week. That was the 90th birthday of the bank, which opened for business for the first time on March 3, 1865.

The bank's centenary still lies ten years ahead but ninety years is a long time to all of us and it happens to be a suitable occasion for bringing about a small change in the capital structure of the bank and so to benefit shareholders as has not been done since 1921. I shall be referring to this matter again in a few moments.

I am particularly happy at being able personally to call attention to these anniversary dates, as a predecessor of mine, Mr H. B. Lemann, of Gilman and Company, was one of the original directors of the bank. Moreover, Gilman and Company, together with David Sassoon and Company, are the only firms which were represented on the original board and are still represented on the board as constituted today, ninety years later.

Incidentally the first London manager of the bank was Mr W. H. Vachell previously a partner of Gilman and Company, and of Ashton and Company, the London branch of Gilmans. For a short time the bank appears to have had its office in Gresham House, Old Broad Street, where Ashton and Company were established.

THE ACCOUNTS

I will now turn to the accounts. The net profit for the year amounts to HK\$19,290,451 which is some HK\$2 million in excess of last

year's figure. As in previous years the published profit has been arrived at after transferring to our inner reserves such amounts as your directors have deemed appropriate, out of which reserves full provision has as usual been made for all known bad and doubtful debts and contingencies. The balance of profit brought forward from last year amounts to HK\$9,859,542, and the total available for appropriation is accordingly HK\$29,149,993. In view of the heavy expenditure which it has been necessary to incur in recent years on new bank premises, it is proposed that a sum of HK\$6 million should this year be written off bank premises account and, after allowing for this transfer and the interim dividend of £2 per share, it is recommended that the final dividend should again be £3 per share, leaving a balance to be carried forward to next year of HK\$10,215,256.

As shareholders will be aware, it is proposed to increase our share capital by the issue of one new share for every four shares now held, and an extraordinary general meeting is being held after this meeting to pass two resolutions for this purpose. In this connection it is hoped, provided, of course, the profits of the bank are maintained, to pay the same annual dividend of £5 per share for the current year on the increased capital.

BALANCE SHEET FEATURES

From the balance sheet, it will be observed that our published reserve fund now stands at HK\$128 million (£8 million), the increase of HK\$32 million (£2 million) representing a transfer from contingencies account of funds which are no longer required for the purposes for which they were originally put aside. With regard to the other items in the balance sheet, it will be noted that the excess note issue has been decreased during the year by some HK\$80 million, which is reflected in a corresponding reduction in the total of certificates of indebtedness. Current and other accounts and acceptances on behalf of customers have increased by HK\$36 million and HK\$46 million respectively.

On the assets side of the balance sheet, cash, call money and Treasury bills have decreased by approximately HK\$300 million, and the funds thus made available, together with the increase in our total funds during the year, have been mainly re-employed in trade bills and advances to customers which have increased by HK\$168 million and HK\$184 million respectively. It is a source of some satisfaction that we have been able to employ these larger funds during the year in their rightful sphere of financing

international trade and commerce. As a result of the reduction in cash, call money and Treasury bills, the ratio of the bank's readily realisable assets to its total liabilities to customers has decreased from last year's figure of 65 per cent to 58 per cent, which, however, still represents a satisfactory degree of liquidity.

As shareholders will be aware, trading conditions in the territories in which we operate have, in general, continued to be difficult, although the increase in the prices of certain primary commodities in the latter part of the year rather changed the picture in some areas. In all the circumstances your directors feel that the results of the year must be regarded as satisfactory.

The printed statement which is in your hands today deals with the political and economic situation in the Eastern countries where we have offices. It also refers to the position in China, and to our negotiations regarding final closure of our Shanghai office. I will now only say that while the bank's main problem in China is still unresolved, our offices at Swatow and Tientsin have been wound up during the past year and Peking is likely to be closed soon.

In Vietnam we have shut our office at Haiphong, but to counter-balance this, as you will see from the statement, we have now completed arrangements for opening an independent branch at Phnom-Penh, the capital of Cambodia.

CHIEF MANAGER'S EXTENSIVE TOUR

Most of you know that our chief manager, Mr Michael Turner, has had a busy time this year. I do not refer so much to all the varied matters with which he has to deal in his office here in Hong Kong, as to the extensive tour he has made of our offices throughout the East and in America. He has visited every one of our offices in Japan, Malaya, the Philippines, and Borneo including Brunei, and Indonesia. He has been to Bangkok and Saigon, and in addition to spending some days at San Francisco and New York he has also paid a visit to Washington to make contacts with our Embassy and with the US Treasury. Wherever he went he interviewed government officials and our banking friends. He now proposes to take a few weeks' leave in England but at the same time he hopes to complete the circle by visiting those offices he has not yet seen. I am sure that the personal contacts made and the personal knowledge gained by the chief manager will prove to be of great value to the bank in the future.

I am glad to say that Mr Turner reports favourably on our staff of all nationalities.

He has been able to take steps to ensure that their welfare is properly assured. We are most grateful to them for their loyalty and efficient service to the bank.

During Mr Turner's absence, Mr G. H. Stacey, who holds the appointment of deputy chief manager, has very efficiently taken charge of the head office.

There is no need for me to say anything about the changes in the board of directors, but I much regret that I have to record the death last September of Major General Sir Frederick Sykes, GCSI, GCIE, GBE, KCB, CMG. Sir Frederick joined the board on October 8, 1943, while it was established in London as a result of the war, and after the board moved back to Hong Kong he sat on the London committee up to his death. He had a very distinguished and varied career and will be greatly missed by his many friends.

Ladies and gentlemen, the report and statement of accounts having been in your hands for the required period I will now formally propose their adoption as presented.

After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions which shareholders may wish to ask.

The resolution having been seconded the report and accounts were adopted.

CHAIRMAN'S STATEMENT

The following is the statement referred to by the chairman:

Last year we noted that the world-wide cold war continued without abatement, but that in Asia there had been progress in economic development programmes in spite of a continued deterioration in foreign trade. We also referred to the great need for capital investment in the under-developed countries and to the difficulties lying in the way of this.

The year 1954 brought about some improvement in the cold war. It became less cold, though I fear that already in 1955 there has been some reaction. It is clear that the Geneva Conference which lasted from the end of April to July 21st effected a change of atmosphere in the relations between the West European powers and China. This was not due so much to the agreements then concluded nor to the cease-fire in Indo-China, although these were important and cheering, but rather to the intangible consequences and advantages of the presence at Geneva of important political leaders of the Asian administrations and particularly to the presence of Mr Chou En-lai, the Chinese Prime Minister. The opportunities of direct contacts and discussions between leading eastern and western diplomats which the Geneva Conference brought about for the first time since Communist governments were set up in East Asia unquestionably effected a clearing of the air.

I am afraid that the subsequent Seato Conference in the Philippines dampened down some of the cheerfulness created by Geneva and the more recent developments in the sea areas between the mainland of China and Formosa have brought downright gloom. Yet Article III of the Manila treaty was promising, in that it bound the signatories to co-operate with one another in the further development of economic measures, including technical assistance, designed both to promote economic progress and social well-being.

Unfortunately the unrepresentative nature of the Seato Conference gave rise to fears lest the economic steps there visualised would divert attention and finance from the wider sphere of the Colombo Plan. However, in the debate in Parliament on November 8th

when the House approved the policy of HM Government in regard to the Geneva Agreements and the Manila Treaty, an official assurance was given that the Colombo Plan would not in fact be impaired by any commitments arising under Article III of the Manila Treaty. But doubts prevail. Economic assistance is greatly needed in South East Asia and the available capital is limited. The Colombo Plan was first in the field and has proved generally acceptable throughout Asia because it has not been suspect on account of any national or political tinge. It remains to be seen if there is any way in which the Manila proposal can be consolidated with the Colombo Plan arrangements.

AID FOR UNDER-DEVELOPED COUNTRIES

The question of economic aid for the under-developed countries in Asia has been dealt with from this chair on many occasions. Not long ago in a Parliamentary debate Sir Anthony Eden said, "Economic development is the key to all that may follow in South East Asia," and this is a fact of which all Asian governments are fully aware. It is one of their most pressing preoccupations, for they need more capital investment and on more generous terms than hitherto offered.

Some South East Asian countries are already financing part of their development programmes by budget deficits and caution is therefore needed as has been pointed out by a recent Ecafe working party. There have been so many instances during the last two decades of inflation getting out of hand in eastern countries that the risks must be clearly in the minds of the financial authorities responsible for any inflationary action and the responsibility is a serious one.

If internal finance cannot be raised for development needs, the safest way out of the difficulty is to seek external finance, either private or governmental. But foreign private investment has not hitherto received much encouragement towards venturing capital in the less developed areas. Political uncertainties, nationalistic suspicions and rigid restrictions have antagonised and frightened potential investors, but I am glad to say that recently some signs of a change of policy in this respect have been noted in some countries. On the other hand, even foreign governmental aid, if coming from one exclusive source, has been looked at with some suspicion in recent years and Asian countries mostly prefer joint international action such as the Economic and Social Council of the United Nations has for some years been trying to get adopted.

INTERNATIONAL FINANCE CORPORATION

Now at last a new phase seems to have been reached after about four years of discussions in the United Nations and by the authorities of the International Bank, and it looks as if a step is being made in the right direction. This is the establishment of an International Finance Corporation as an affiliate of the International Bank and with an initial capitalisation of US\$100 million. The corporation is designed to increase private investment in less developed countries. This project was dealt with in some detail, and on the same lines as now formally proposed, in the report of the International Bank for 1951/52. The care expended on the project has thus a good chance of bearing fruit. Similarly, the establishment of the Industrial Credit and Investment Corporation of India is another step forward. Here we see a promising international-cum-private investment concern, which, if successful, may well prove to be a model for similar ventures

in other eastern countries. The Government of India, the International Bank, the Commonwealth Development Finance Company, certain Indian banks and insurance companies and a group of British exchange banks, insurance companies and industrial firms, are participating together with a strong American group. I am glad to say that we are one of the British banks which have taken up shares in this corporation.

CHINA

From the vantage point of Hong Kong we have seen or heard much about the considerable number of British delegations of one kind or another which have visited China. Their members, as compared with those of earlier visits, represented more varied points of view and interests covering political, cultural, professional and commercial affairs. They had opportunities to see a fair amount of the areas they visited in the short time at their disposal, and they were thus able to bring back a broader picture of People's China than has hitherto been generally available. What these travellers reported was fresh to many persons interested in China and in the Chinese impact on world affairs. They have not revealed much that was new to those of us in Hong Kong who have had our eyes open in the past few years. However, even fleeting visits such as these are worthwhile and most of the travellers who took part were careful not to claim omniscience in regard to China and its recent developments. Some of them may have put rather undue emphasis on "peaceful co-existence," a phrase which has become so wellworn in pronouncements from the other side of the curtain. But this phrase has recently received wider recognition through its adoption as point 5 in the principles which were agreed last year between China and India, as a guide to relations between these countries. In its literal English sense peaceful co-existence is a good phrase which expresses the desires of many millions of people to live in peace free from fear of war. But we are on unsubstantial ground when we come to ask whether this phrase "peaceful co-existence" means the same to all people. It is doubtful whether even Mr Clement Attlee and his colleagues got clear and satisfactory explanations on this particular point. Their visit received considerable publicity in China as well as in the west and we all hope that that particular visit, joined with the many other visits to China by British parties, may have brought us forward a little way towards bridging the east-west gap which is still a wide one. Mr Nehru has consistently been working towards this aim and the Burmese Prime Minister has added his support. We now look hopefully to China for a move from that side.

SETTLEMENT NEGOTIATIONS—EXTREMELY SLOW PROGRESS

Our own particular hopes about China are that the negotiations for the settlement of our problems in closing our offices, which have been carried on now for nearly four years, should be satisfactorily concluded. Progress has been extremely slow. One stumbling block is that of US dollars held by us on Chinese account, which the US Government froze in December, 1950, and which it is totally out of our power to release, as is demanded by the Chinese. This matter rests in the hands of the US Government and all the representations we have made, even with the help of our own government, have so far been unavailing. Nevertheless we hope that before long we shall be able to come to a settlement with the Chinese about all outstanding matters, including the repatriation of our manager at Shanghai. Meantime the question of future representation in China

has been raised with us and we have expressed our willingness to come to some arrangement after our closure at Shanghai has been effected.

POSSIBILITIES OF FUTURE TRADE

We sent a representative with the British Trade Mission which visited Peking last November under the auspices of the Sino-British Trade Committee, in order that he might investigate the possibilities of future trade. We hoped that at the same time he might get an opportunity to clear up some of our difficulties. His journey was worth while for many reasons, and especially because he was able to see our manager in Shanghai and discuss his problems on the spot.

Another trade mission will be going to Peking this month, and still more visits, whether by individuals or by organised parties, will probably follow. In terms of the volume of trade concluded such visits may not effect a great deal considering the total trade of the United Kingdom, but it is to the possibilities of expansion that merchants and manufacturers look and from which they hope for real benefit in the future. The potentialities are as great as they have been for over a hundred years. As in the past century, so now they would in actuality be greater if political and ideological difficulties and suspicions could be swept out of the way.

You are aware that China's trade with the Soviet bloc now probably covers four-fifths of her total trade. When the blockade is removed the switch of trade to other countries is bound to be slow and it is hardly likely that China's trade will ever go back fully to the prewar channels. No doubt Japan will get a fair share, so the slice left for Europe and America may not be large. Much of course depends on the extent to which China is able to proceed with her development plans and in this connection what will count is the way in which China's export trade develops and whether greater quantities of minerals and agricultural products will be available for shipment overseas. Only thus will it be possible to obtain sufficient foreign exchange for use in the purchase of the capital goods required for industrialisation purposes.

REMARKABLE DEVELOPMENTS IN AGRICULTURE AND INDUSTRY

It is not possible under existing circumstances to give shareholders a reliable analysis of what agricultural and industrial progress has been made in China throughout the past year. If one were to confine attention to the speeches made by officials in Peking, all would seem to be well and the progress astonishing. If one were only to read the controlled Chinese press emanating from the mainland, one would note certain frank criticisms indicating that there were serious difficulties, that planned targets were not always being reached and that in some cases they had been reduced. If one were to rely upon anti-Communist publications it would seem that all official reports from China were nonsense. Yet without giving chapter and verse, but basing opinion on evidence collected from many sources, I think we are justified in deciding that very remarkable developments in agriculture and industry have taken place since the People's Government came into power: there may have been some slackening of progress or even some deterioration in agricultural output in 1954, but the industrial progress during the year has continued at a rapid pace in spite of the United Nations Embargo on shipments to China of many categories of capital goods. It is clear that the strains on the country caused by the embargo are getting more and

more serious, but strict regimentation and careful economy in materials is enabling the country to overcome a great many difficulties. Nevertheless China must surely attach very great importance to obtaining easier conditions and wider opportunities for importing the wide range of materials required for industrial expansion. The 156 industrial units for which large scale Russian help is being received have no doubt progressed rapidly, but the significance of this number of plants, and of the whole Five Year Plan should be put in the proper perspective of the tremendous size of the country, and its vast population of nearly 600 million people. One wonders if Russia and the Soviet bloc can do much more than they are now doing in the direction of loans and technical assistance to China. So far China has followed the Soviet road because there has been no other road to follow: that is why many of us think it would be wise policy for the democratic countries to open an alternative route. But still wiser would it be for China, upon whom the onus rests, to come to terms with the United Nations, and so to provide an opening for that "peaceful co-existence" she claims to desire so much. We had hoped that the Secretary General of the United Nations, when he was in Peking in January, would have been able to clear the way for diplomatic negotiations leading to a solution of many of these problems, but tempers have flared up about the Formosan question, so we shall have to wait for a more propitious occasion.

HONG KONG

From China we must now turn to Hong Kong which does not attempt to conceal the fact that what happens in China, how she prospers, how her trade fares, whence it comes and whither it goes, all are matters of great concern to the colony. This is natural and inevitable. In the political field Hong Kong is dependent externally on HM Government to ensure that the peace and security of the colony is upheld by all the means at its disposal and Hong Kong's omission from the scope of the Manila Treaty does not therefore cause us any perturbation. Internally Hong Kong is dependent on the police and defence services together with the help of all dutiful citizens, to maintain law, order and stability. We are thankful to say that in this respect all has gone well with Hong Kong in the past year.

In the commercial field Hong Kong has of course since the war and particularly in the last few years, done a lot to adapt her trade to the new conditions. In this there has been help from external capital which, especially since 1949, has found its way to the colony from surrounding areas and has added to and improved upon many of the existing industrial activities. It is estimated that in 1947 about 10 per cent or HK\$120 million of Hong Kong's annual exports, represented goods manufactured in the colony. In 1954 locally manufactured goods, including some items not recorded separately, are believed to have amounted to one-third of the export trade. In 1954 328 new factories were registered bringing the total of registered factories up to nearly 2,500 and the total labour employed in such factories up to over 115,000. Nearly two-thirds of Hong Kong manufactured exports are cotton goods the majority of which were sent to Indonesia last year. The United Kingdom took HK\$75 (or £4½) million of Hong Kong's products of which about a half were cotton goods. This is a drop in the ocean when compared with the total annual imports of the United Kingdom, which are in the region of £3,500 million. Questions in Parliament or in the press about alleged small irregularities over a few minor shipments of Hong Kong goods surely ought to be looked

at in the proper perspective. Attacks on Hong Kong from other sources in regard to alleged infringements of the embargo on trade with China have, I am glad to say, died down. Hong Kong is, of course, still suffering seriously from the continuation of the embargo, and it is indeed only too aggravating to know that others are benefiting from the relaxation of restrictions on trade with the Soviet bloc.

SCOPE FOR GREATER INDUSTRIALISATION

There is still scope for greater industrialisation in Hong Kong, as was confirmed by the report of a recent interdepartmental committee, which recommended the reclamation of land suitable for new sites for factories at Kun Tong on the eastern shores of Kowloon Bay. This recommendation having been approved, preliminary work has already started on the area, but a decision is awaited as regards the price and method of disposal of the sites. It is to be hoped that the procedure of preparing sites and developing common user services adopted in Singapore by the Colonial Development Corporation will be copied in Hong Kong so as to provide strong inducement to industrialists to move their existing factories or to start up new ones on the Kun Tong reclamation area.

The future of Hong Kong may well depend on the encouragement at the present time, when capital is available, both of additions to the present scale of industrialisation and also of the removal of existing factories which are in many cases situated in crowded and unsuitable areas and in most hazardous buildings. It is also a matter for serious consideration whether Hong Kong should not go even further and provide, as is done in other underdeveloped countries, more specific inducements to encourage the establishment of factories of a larger and more up-to-date type to take the place of small units operating inefficiently on a hand-to-mouth basis. Ample unskilled labour is, of course, available in Hong Kong, and some of this must be trainable for skilled work. This gives special point to the remarks made only a few weeks ago by Mr Edward Hambro, when, in reporting to the United Nations on the refugee situation in the colony, he stated that there were 667,000 refugees here and that he thought that these would have to be settled and integrated into Hong Kong.

TRADE TENDENCY

Hong Kong's trade in 1954 fell off about 11 per cent in value, although cargo tonnage changed little as compared with 1953. But it was satisfactory to observe that there was a slowly rising tendency in the figures recorded month by month throughout the year, even if the average monthly figures remained lower than we would like them to be. Trade with East Asian countries dropped in almost all cases except S. Korea, and in the case of China the reduction was HK\$315 million (£20 million)—from HK\$1,397 million in 1953 to HK\$1,082 million in 1954. There were local reasons for the drop in trade with some countries, such as Indonesia and Thailand, and a reversal of this situation may well appear before another year passes. Shipping statistics show a drop in the number of entrances and clearances, but this is counterbalanced by slightly improved quantities of cargo carried.

Business on the Hong Kong Stock Exchange was exceedingly buoyant and reached its peak in December. Moreover, land prices in the central districts reached record figures and remain high everywhere. It seems probable that a partial explanation for what might be called a boom in these activities was an inflow of capital from neighbour-

ing countries, to which we may add increased confidence in the stability of Hong Kong.

ECONOMIC COMMISSION

We had the pleasure, some two months ago, of welcoming to Hong Kong a representative gathering of members of the Economic Commission for Asia and the Far East which met here to discuss certain trade problems. The conference, I am glad to say, came out strongly in favour of multilateralism in international trade as being a desirable target. One interesting fact it publicised was that the region covered by the Ecafe organisation which contains almost half of the world's population and also immense raw material resources, only accounted for 10 per cent to 12 per cent of the world's trade. When one considers how backward in development most of the countries in this region are, this small percentage figure is not altogether surprising. But it only underlines the remarks recorded in the beginning of this statement about the need for international efforts to remedy this state of affairs.

COLONY'S FINANCIAL POSITION

Before passing on from the subject of Hong Kong I must refer to the financial position of the colony which was dealt with so lucidly and comprehensively by the Financial Secretary, Mr A. G. Clarke, last week. It was very satisfactory to hear that a surplus of HK\$21 million was expected for the current year and that the figure might prove to be even higher. This did much to temper the disappointment that the estimates for the financial year 1955/56 showed a record deficit for the colony of HK\$32 million. Revenue was expected to amount to HK\$413.7 million and expenditure to HK\$445.7 million.

However, Mr Clarke was able to point out that the colony had satisfactory reserves in the general reserve balance and revenue equalisation fund which would shortly be over HK\$400 million—that is to say more than the current year's total expenditure. Under the circumstances it was not proposed to increase direct taxation or duties. It was proposed, however, to look into the possibility of increasing various forms of licence fees such as for motor vehicles and of stamp duty on assignments.

The expenditure on education, public health and public works non-recurrent is estimated to cost no less than HK\$193 million in the forthcoming year. While the colony wants all these things including the larger airport and more reservoirs, the people of the colony must not forget that they will have to pay for them out of their own pockets.

It was interesting to see that both the Governor and the Financial Secretary dealt with the importance of encouraging sound local industries by such methods as the provision of land at reasonable prices in cases where a definite contribution to the well-being of the colony would be made.

I cannot complete my remarks about Hong Kong without saying how pleased we are that Sir Alexander Grantham is still with us and will be remaining until towards the end of the year.

JAPAN

Japan has not yet fully re-established her position in the political arena in the east, partly because she has failed to reach agreement about reparations with the Philippines and Indonesia and partly because of her undefined relations with China, Russia and South Korea. However, the Reparations

Agreement, which Japan and Burma signed in November may well be the precursor to further developments and recent overtures to and from Russia and China indicate a desire for negotiations on trade if not on other outstanding questions. Trade between Japan and China did indeed increase a good deal in 1954 but from the very low levels of 1953. Whether formal negotiations with Russia and China take place or not depends on the policy of the Government emerging from the elections which have just been held. The government in power will have to take account of the west as well as of the east and trade, while very important for Japan, is only one of many matters to be taken into consideration. Hong Kong, like Japan, considers trade with China of great importance but both Hong Kong and Tokyo are probably agreed that there are potent reasons why neither should be short-sighted in regard to this matter.

Meantime it is to be noted that discussions are proceeding between Japan and the United States as to the way in which some US\$85 million worth of farm surplus products are to be made available to the Japanese Government. Japan has also taken over responsibility from the United States authorities for the defence of Hokkaido where some big development projects are now being rapidly pushed forward.

A REMARKABLE TRANSFORMATION

Internally, 1954 witnessed a remarkable transformation in the economic situation from one of inflationary dangers at the beginning of the year to an economy brought back to a reasonably sound basis at the end of 1954 by a successful deflationary policy. A few figures will help to illustrate the change that has taken place. Japan's foreign trade returns show that whereas there was an adverse balance of US\$1,135 million in 1953, it was down to US\$770 million in 1954. Imports were about the same in the two years but exports were 27.8 per cent higher in the past year. The balance of payments indicated a surplus of about US\$100 million in favour of Japan over the calendar year 1954 as compared with an adverse balance of US\$194 million in 1953. There were surpluses of £44 million and US\$68 million respectively with the Sterling and Open Account areas and a deficit of US\$92 million with the other currency areas. In this connection the falling off of special procurements by the United States authorities destroyed hopes of a still higher favourable balance last year. Japan's foreign currency balances were also higher at the end of 1954 at approximately US\$1,060 million. Furthermore the Note issue at the end of the year broke a twenty year record by falling below the figure at the end of the previous year instead of rising. The deflationary measures have also been successful in bringing down wholesale prices: this in turn is causing a fall in export prices which is expected to be as much as 10 per cent by March 31st, the end of the fiscal year. It is thought that if this reduction is accomplished it will go a long way to putting many of Japan's export quotations more on a level with international prices.

INCREASE IN UNEMPLOYMENT

One unfortunate result of the past year's deflationary policy has been a considerable increase in unemployment which is likely to get worse so long as there is no relaxation in this policy. A number of industrial concerns have had to close down for the same reason but the number has not been as high as was at one time expected. The Economic Council board nevertheless considers that the present policy will, within five years, bring about full employment. Amalgamations and other steps to put industry on to a

more efficient basis have increased notably and there are clear indications of a return to the prewar pattern of Zaibatsu combines although at present on a much smaller scale.

The long drawn out negotiations regarding Japan's full membership of Gatt seem likely to be renewed when present tariff discussions now proceeding at Geneva have been concluded. The need for safeguards is underlined by the 61 per cent increase in Japan's exports in 1954 to the sterling area. Nearly 60 per cent of those exports were textile goods although such shipments to the United Kingdom itself appear to have been lower than in the previous year.

The Anglo-Japanese sterling payments agreement is due to expire at the end of this month and in principle, but subject to certain discussions, an extension for three months is reported to have been agreed. It appears that the figure of £209 million for the trade each way is not likely to be reached in the period of the agreement.

INDONESIA

Indonesia has not been much in the limelight of the world in the past year because, fortunately for her, she has not been seriously affected by any of the current international polemics. Her Government has maintained its position notwithstanding a near crisis in December and in spite of Communist support which antagonises Moslem groups within the country. Yet the internal economy is far from healthy and a few weeks ago a famous economic journal did some straight talking in regard to the barriers obstructing foreign trade and restricting the operation of foreign concerns resident in that country.

It would not help matters to reiterate the complaints regarding regulations which make normal trading impossible, which upset established procedure and which discriminate against non-Indonesians. Such factors naturally give rise to a feeling of frustration and make it useless to expect the investment of foreign capital which is badly needed in order to turn to good account the potential wealth of the country. The Indonesian Government issued a statement a year ago with a view to encouraging foreign investments but almost at once afterwards a levy of 40 per cent on overseas remittances was imposed. We agree with the governor of the Bank Indonesia when he expressed the hope, in his report for the year 1953/54, that the promised elaboration of that statement "would be formulated in such a way that at least as far as official conditions are concerned, Indonesia may become an attractive field of investment for foreign investors." He added the hope that there would also be a "positive improvement in the investment climate in Indonesia." Another remark of his was:

"Only as and when many of the obstructionist factors—which I shall not go into here because they may be assumed to be well known—will have been swept away, is it to be expected that the Government's efforts to attract foreign investments will be crowned with success."

Official trade returns for the full year 1954 are not yet available but it is reported that the unorthodox system under which import licences continue to be issued did at any rate limit imports, which were therefore expected to be some Rps. 800 million less than in 1953. On the other hand exports increased Rps. 70 million in value. If the oil companies' returns are omitted (as they are on a special basis), there should be a small favourable balance of trade in 1954.

The restrictive system applied to imports has resulted in a considerable reduction in

1042
the availability of consumer goods and a consequent rise in prices. Rice production has been steadily improving and imports during the past year have again been reduced considerably. Exports of both rubber and tin from Indonesia increased as compared with 1953. In the case of rubber the increase was as much as 24,000 tons and the fortuitous rise in price in the latter part of 1954 accounted for some of the increased value of exports and also helped to maintain the ratio of gold and foreign currency holdings to the local issue.

The returns of the Bank Indonesia show that gold and convertible foreign exchange figures rose steadily in the latter part of the year from about Rps. 1,535 million in June to Rps. 2,127 million in the middle of January, 1955, while the note issue increased in the same period from about Rps. 5,790 million to Rps. 7,395 million.

In April last year the Minister of Finance announced that his draft budget showed a deficit of Rps. 1,200 million. In September he stated that the deficit was then estimated at Rps. 2,600 million. Later on this figure appears to have been once more revised upwards to Rps. 3,500 million or over. It was not therefore surprising that as long ago as last June the governor of the Bank Indonesia should have shown some alarm at the Budgetary situation.

THE PHILIPPINES

The Philippine Islands have had a prosperous year but the government has not had an easy time owing to internal political antagonisms. President Magsaysay's reputation for probity, sincerity and hard work has been enhanced and he deserves much credit for his vigorous efforts to push through a programme of rural development, striving to make the country self-sufficient and to reduce unemployment. Administrative difficulties have, however, slowed down many of the best intentions of the government.

In the President's "State of the Nation" message to the joint session of the House and Senate on January 24th, after dealing with rural development and labour legislation, he referred to encouraging results in manufacturing and processing, but confessed that industrial developments did not measure up to their needs. He then gave a word of welcome to foreign capital. He said that to encourage and facilitate its entry into the Philippines the essential conditions governing such entry should be specified.

Perhaps one of the most important events of the year was the conclusion of negotiations or the revision of the Bell Trade Act. Ratification has not yet taken place so detailed comment would be premature, but the Philippines appear to have gained considerable concessions from the United States. In the meantime the free trade period of the Act is being extended for 18 months to January 1, 1956.

In the financial sphere few significant changes took place in the year, but the international reserves dropped moderately from \$5296 millions to \$5273 million while the general fund at November 30th last owed a surplus of Ps10.7 million as compared with a deficit of Ps48.7 million in the period of 1953. The re-appointment of Mr Miguel Cuaderno as governor of the central Bank for a further term of six years is much welcomed by all bankers.

Much legislation has been in the hands of Congress during its sessions in the past year. Many important bills have been adopted, out of some 45 so-called "nationalisation" bills introduced only one passed into law. This was the very controversial Act to regulate the Retail Trade, which aimed at restricting such business to Philippine nationals. After many protests, particularly

by Chinese traders, at length an amending law has been submitted to the House. In the explanatory note attached to this amending bill it was stated that the original Act had been found to have had a far-reaching effect on the national economy by causing the withdrawal of foreign capital and by heightening the problem of unemployment. It added that by "nationalisation" they were not only driving away foreign capital which intended to enter, but were also dislodging capital already established and contributing to the progress of the nation.

How widely the above views are held in the Philippine Congress is not known, but they indicate that there is a growing realisation that ultra nationalistic measures, if applied to business concerns operated by foreign private enterprise, may likewise deter new capital and even cause long-established undertakings to withdraw from the country.

MALAYA

Important constitutional changes came under consideration during the past year both in the Federation of Malaya and in Singapore. There was first the report of the committee appointed to examine the question of elections to the Federal Legislative Council and shortly afterwards the report of the Rendel Constitutional Commission in Singapore.

The Federation Report included a surprisingly large number of unanimous recommendations: the main disagreement being on the question of the composition of the new Legislative Council. In due course General Templer recommended a compromise providing for 52 elected members out of a total of 98, excluding the Speaker. This was approved by the Secretary of State and the Bill, which put the new proposals into effect, was passed on August 18th. The Bill covered not only the Legislative Council but also election procedures and many other matters of detail. When one bears in mind the complicated structure of the Federation of Malaya, with nine separate states and two settlements and a community of a particularly varied nature, it was a remarkable feat to bring about agreement on such a unique constitutional arrangement within a period of about a year.

We were glad to see that in moving the third reading of the Bill the Attorney General of the Federation made it clear that Britain had not, and is not going to relinquish its responsibilities for the protection of the people in that country until the present threat of communist force is removed. At the same time he added that the policy of self-government had not been forced on Malaya by Great Britain, but was entirely in accord with her record elsewhere. The Attorney General reminded the Council that self-government would not produce any miraculous changes: the hard facts and problems would still remain and hard work would have to be faced and accomplished.

We are firmly of opinion that HM Government has taken the right line in regard to these constitutional changes and there seems no reason to fear any untoward consequences. Adequate powers have for the present been reserved to the High Commissioner in the Federation and to the Governor in the colony. Moreover there is a very widespread feeling in responsible circles in Malaya that the strong link which binds the territory with HM Government and the Commonwealth must be firmly maintained without any time limit.

The elections to the Legislative Council take place next July and will give great responsibilities to the leaders of the political parties. Considering how serious the so-

called "emergency" still remains and how many difficult problems in regard to financial, economic, social and administrative affairs still face the government, the elected party will have a heavy burden to carry.

FEDERATION'S FINANCES

The finances of the Federation were dealt with very clearly by the Financial Secretary, Mr E. Himsworth, in his budget speech to the Legislative Council on November 17th which, in spite of the state of figures, was well worth reading for the pertinent comments, not only on the budget, but also on taxation, on the basic conditions necessary for the encouragement of investors, and on the need for extensive capital investment with which to expand the production of agricultural products, to set up new industries and so to strengthen the national economy.

Put shortly, the accounts of the Federation of Malaya show an expected deficit of M\$173.6 million in 1954 which will be covered by the reserve balance which was M\$355.5 million on January 1, 1954. After deducting this deficit for 1954 and adding grants-in-aid from HM Government, the M\$30 million loan from Singapore and other items, the reserve balance comes to about M\$289 million. Against this there is an estimated deficit for 1955 of about M\$148 million, but the Financial Secretary warned councillors that expenditure was rising more rapidly than revenue and that one day the gap would have to be closed by the efforts of the country without outside aid. He emphasised that no country could be financially stronger than its basic industries, which in Malaya, meant rubber and tin, for the prosperity of which everything possible should be done, even at the expense of other desirable projects.

There was a significant sentence in the speech of the High Commissioner of the Federation, Sir Donald MacGillivray, when he opened the budget meeting of the Legislative Council on November 17th last. He said that a very approximate computation of the cost to the British Treasury of the forces engaged in duties connected with the emergency in Malaya was M\$550 million per annum; that is more than the total annual income of the Federation. Few Malaysians realise this fact.

RENDEL COMMISSION'S REPORT

We referred above to the report of the Rendel Commission which recommended a big step forward towards self-government, a step regarded by some as dangerous and by others as not far enough. Much depends on the leaders of opinion in Singapore as to whether the electorate accept their new responsibilities in going to the polls and electing as members of the Legislative Council, persons who will discharge their duties for the real benefit of all sections of the community. The large increase in the number of elected members who will sit in the new Legislative Council gives them responsibilities greater than those put upon similar assemblies in other territories. Singapore is a city which has developed a pride in its important status in the east and, indeed, in the world. These constitutional changes will give it an even greater position of importance. Its future will depend much on its elected representatives. We all hope that the leaders of the commercial community as a whole will stand together to ensure that no rash experiments will be attempted, but that safe, sound and orthodox policies will be adopted.

The new Legislative Councils in the Federation and in Singapore will have many

complicated problems to face. One of the most important concerns the organic differences existing between the Federation and the colony. Nevertheless the two territories are so interdependent that necessarily each government has to ensure that whatever legislation is introduced in the one will not be prejudicial to the other. For this reason veto powers are held by the High Commissioner and the Governor, which of course limit the authority of the legislatures and will impede progress towards self-government until a federal or other solution is evolved. A joint co-ordination committee has had this matter under consideration for some time but no information as to its progress has been made public.

INDUSTRIAL DEVELOPMENT

The Governor, Sir John Nicoll, recently urged the expansion of industrial development and the attraction of capital investment. A comparison with Hong Kong's industrial progress has been made and special inducements to encourage secondary industries have been suggested. This is a subject which is no doubt receiving the attention of the government departments concerned. Our Singapore branch has been playing its part in the encouragement of new factory developments. As a step in line with this policy our manager, Mr J. A. D. Morrison, has recently provided finance for and become chairman of the Federal and Colonial Building Society, an organisation sponsored by the Colonial Development Corporation and by the Federation Government to encourage the building of houses which are so much needed in these territories. There are many other developments in Malaya which could be mentioned if there were more space. In particular Singapore's magnificent harbour with its easy berthing facilities and docks has not in recent years received its due meed of praise. The tonnage of vessels berthed and docked and of cargo dealt with has been increasing rapidly in the postwar years and the improvements now under way will make the port in many respects the best equipped in the East.

A number of development projects and other plans are being held in suspense awaiting the report of the International Bank Mission which visited Malaya early in 1954. I understand the delay is due to the sickness of one of the members of the mission.

RUBBER AND TIN

There is no need to comment in detail on the subject of rubber and tin as reports on these commodities are published in profusion by those closely connected with the two industries. The natural rubber industry is so important to the Malayan economy that the improved statistical outlook and the rapid rise in price from under 1s. 5d. a lb in January, 1954, to nearly 2s. 4d. at the end of the year naturally brought considerable optimism and benefit to Malaya. Although the average prices for the full years 1953 and 1954 showed little change, exports from Malaya increased by 67,900 tons in 1954 compared with 1953. There is, however, a fairly general feeling that the rise in price since last August has been overdone for reasons not entirely connected with the market position. Let us hope that the recent setback will be no more than a healthy jolt to speculators.

The Mudie Report on the Malayan rubber industry which was published in September met with a mixed reception. Government and producers are now trying to work out a compromise in regard to differences on the controversial parts of the report. The synthetic industry remains an uncertain and

potentially dangerous factor overhanging the natural rubber industry.

Tin prices per ton in 1954 fluctuated between £620—the lowest point—and £785—the highest, but the average for the year was £708 compared with £731 in 1953. The International Tin Agreement has not had a smooth passage since it was signed in June, 1954, and ratification by the necessary number of countries is still awaited before the agreement can be put into effect. If this proves abortive the industry will no doubt be able to adjust itself, although some sections will undoubtedly suffer. Malayan exports were 70,333 tons in 1954 as compared with 61,734 tons in 1953.

The Malayan trade returns for the year 1954 show a moderate reduction of about 3 per cent in imports to M\$3,140 million and a rise of 6 per cent in export values to M\$3,109 million.

Before I pass on to other countries I must refer to the retirement of the Governor of Singapore, Sir John Nicoll, which is to take place this spring. Sir John's departure will be much regretted by the commercial community in that colony where he has worked wholeheartedly for the good of all classes and races. It is regrettable that he should not see the constitutional changes and the many local projects commenced under his influence and guidance steered through their critical stages. However, Mr R. B. Black, whose sterling qualities we in Hong Kong know so well, will worthily don the mantle and we wish him well in the important post which he will shortly be taking up.

NORTH BORNEO

We are glad to be able to record that on May 22nd last, the Governor of North Borneo, Mr R. E. Turnbull, was kind enough to open our new bank premises at Jesselton and that during the year our new buildings at Kuala Belait and Tawau were also opened for business.

The budget debate of the colony's Legislative Council in November brought the good news that at last agreement in principle had been reached with the Government of the Philippines, which will, it is hoped, make possible the introduction of Filipino labour to work and settle in Borneo. At any rate a partial solution of the labour shortage there seems likely in the course of this year. It was not so welcome to hear that income tax on companies was to be increased from 30 per cent to 40 per cent. But still more unfortunate does it seem that HM Government are to make no further direct grants to the colony after this year as distinct from grants under the Colonial and Development Welfare Fund. Borneo suffered greater devastation than any other area as a result of the war and has, I believe, only received about £1 million for direct war reconstruction. Various changes in town planning arrangements have retarded rebuilding in some towns, but we are glad to note that a definite scheme for the rebuilding of shops has recently been put into effect and we are assisting the work by providing building loans on easy terms under government guarantee. Rubber replanting legislation has recently been adopted and we have co-operated in the establishment of a fund for financing this project. A rubber cess will be imposed which will be refundable to producers after replanting is carried out.

We were glad to see satisfactory increases of about 50 per cent in the case of timber and copra exports in 1954 as compared with 1953. The happy position of Brunei State is shown in the budget estimates for the current year of M\$100 million for revenue and M\$43 million for expenditure.

THAILAND

A recent article on Thailand in a prominent British newspaper was headed "cautious pessimism." Such also seems to be the general feeling of the mercantile community in Bangkok, who fear that widespread corruption will bring about an upset such as took place in China not so many years ago. Others consider that this is not a fair comparison, that Thailand's leaders realise the dangers and have laid their plans to cope with any internal or external dangers. These speculations indicate that the political outlook is by no means stable. Naturally many eyes are turned to the Laos frontier about which much nervousness exists.

The economic situation is also rather a difficult one. Currency controls are strict and constantly changing: the official rate of exchange has remained unchanged, but an active open market is permitted by the exchange control authorities. A rice surplus of 400,000 tons was accumulated from last season owing to the Government's refusal to sell at the reduced world prices, but the new crop is smaller owing to unfavourable weather, so the total available for export in 1955 is estimated to be about 14 million tons. As from January 1st of this year trading in rice once again reverted to private hands and inter-governmental contracts have ceased. Rubber exports increased some 17,000 tons over 1953 and totalled about 114,000 tons, but tin and teak exports were reduced.

BURMA

The British have a spontaneous liking for the Burmese which is, I think, reciprocated. So it was not surprising to read in the report of the United Kingdom Industrial Delegation to Burma how much they appreciated their warm reception in Rangoon. The Delegation paid tribute to the "enthusiasm and deep sincerity which lie behind the Government's development policy and their desire to improve the economy of the country and the conditions under which the people live and work." They felt bound to add a mild word of warning against the Burmese attempting too much in too short a space of time. We ourselves hinted at this danger in our remarks about Burma this time last year. However, it is common to all Asian countries whose development is somewhat retarded to feel they must hasten to make up lost ground; and some of them are indeed succeeding in their efforts. There are signs that the Burmese Government are aware of the dangers of their ambitious plans and the newly appointed Minister of Trade Development appears to be proceeding with some caution.

The 1955 rice crop is estimated to provide an exportable surplus of 1½ million tons, of which 900,000 tons has been sold on a government-to-government basis: the remainder has been put at the disposal of merchants for private sale under certain conditions. So far as figures are available it appears that exports of the leading products of the country were lower in 1954 than in 1953 and that imports were higher. As a result external assets fell some kyats 400 million in the year ended October, 1954. The Finance Minister proposes to make a determined drive to increase internal savings this year and he has said that if there is then still need of capital he hopes to obtain a loan from the International Bank.

During the year other important matters which took place in the country, but with which we cannot here deal in detail, were the establishment of the State Commercial Bank on August 11th, which I fear is deliberately being favoured to the detriment of private commercial banks; the first steps in the implementation of the Land Nationalisa-

tion Act; the assumption of its formal duties by the Karen State Government in districts where law and order have been restored; and the initiation of a local administrative system in villages, towns and districts.

Finally, there was the signature on November 5th of the Burma-Japan Reparations Agreement, by which Japan is to give to Burma as reparations "the services of the Japanese people and the products of Japan" equivalent in value to US\$200 million in ten equal annual instalments. Some fear has been expressed lest the effect of this and other clauses of the agreement might mean the Nipponification of Burma, but the Prime Minister has ridiculed the suggestion.

INDIA

Thanks to the personal prestige of Prime Minister Nehru, India has, in recent years, been steadily increasing her influence and standing in international affairs. There has even been talk of the germination of a future Monroe doctrine for Asia led by Mr Nehru and the Asian powers which attended the Colombo-Kandy conference last April. A possible step towards the integration of Asian countries was seen when, as a consequence of Mr Chou En-Lai's visit to Delhi in June, a declaration of five principles was proclaimed to govern relations between India and China. These principles re-stated some fundamental conditions upon which international relations are based, but they did not indicate any special change in policy.

As regards economic policy, Mr Nehru is reported to have said that he wants a "peaceful social and industrial revolution." It is clear that the Prime Minister dislikes Communism even more than he dislikes capitalism. On the other hand he has claimed that there is plenty of room for private enterprise which must be given "scope, freedom and encouragement to develop." Mr Nehru's right hand man is Sir Chintaman Deshmukh, the able Finance Minister, whose policy gives ample evidence of the practical financial mind which has maintained firm control of India's financial economy in the last few years.

The problem of keeping a grip on economic development and planning in a country like India is immense. The unemployed and under-employed run into millions and the annual income is barely £20 per head. But the facts are being faced with realism. The Finance Minister has claimed with justice that the increase in food production is substantial, that industrial production is steadily rising, that inflation has been wiped out and that the balance of payments has improved. Moreover private capital has been encouraged to go ahead without hindrance in certain fields of operation. We saw last year the establishment of an industrial development corporation (a government concern) and of the Industrial Credit and Investment Corporation to which reference has already been made above. Now an extensive steel industry seems to be well on the way to establishment with new units which will probably be set up with the help of British, German and Russian capital.

There are of course fears and uncertainties which are widely held by merchants of many nationalities. Maybe these apply not so much to the present as to the future. Indianisation is not being pressed unduly but it remains a threat of uncertain cogency. The revision of Article 31 of the Constitution may not be harmful at the present time, but there are fears as to what may happen when new people come into power. Similarly the managing agency firms have been told that they are unduly apprehensive, yet their fears for the future are not assuaged. Finally, the nationalisation of the Imperial Bank of India was done with worthy motives but

it caused a bad impression as it was not thought to be necessary nor desirable.

It is difficult to sum up the pros and cons but we are inclined to regard the solid achievements of the past few years as giving grounds for hope that the clouds ahead of India will disperse before they are reached.

CEYLON

The outstanding event of the year in Ceylon was the visit of HM The Queen in April. It was an unqualified success and the enthusiasm of the crowds was unmistakable. By her grace and charm Her Majesty endeared herself to all who met or saw her.

On July 17th the inauguration of the first Ceylonese Governor General, Sir Oliver Goonetilleke, took place and a further event of importance during the year was the conference of five Asian prime ministers.

Ceylon has indeed experienced a remarkable year, not least in that she staged a notable economic recovery. Whereas at the end of 1953 there was an adverse trade balance of Rs40 million, at the end of 1954 the picture was completely reversed, the preliminary figures being exports about Rs1,800 million and imports Rs1,400 million, giving a record favourable balance of about Rs400 million. The main contributions to this recovery were first the high tea prices which averaged Rs2.56 per lb in 1954 compared with Rs1.92 in 1953 and secondly the favourable rubber contract made with China under which some 56,000 tons were shipped to China in the year out of the total exports of about 90,200 tons. The rice part of the contract with China has not proved so successful owing to the fall in rice prices and Ceylon appears to be trying to dispose of some of the Chinese rice to other markets. The government has meantime been pressing forward with attempts to improve and expand local rice production and a joint United Kingdom and Australian rice mission has recently visited Ceylon and issued a report dealing with this matter.

The financial position of the government has also improved in line with trade, and external assets are reported to have risen from Rs607 million in December, 1953, to Rs863 million at the end of last October. The Minister of Finance announced last July a small deficit in the budget which he proposed to meet by new taxation or borrowing. He stated that the government did not propose to adopt any form of deficit financing. The crying need for capital for development purposes is to be met by raising loans authorised by the Ceylon Development Loans Act which was enacted early last year. This provided authority for raising loans internally, in the United Kingdom, or from the International Bank. Soon afterwards a loan of £5 million was successfully floated on the London market and the International Bank granted a loan equivalent to about US\$19 million to finance a second stage of the Laxapana hydro-electric scheme. When moving the second reading of the above Act Sir Oliver Goonetilleke, then Minister of Finance, reiterated that the Government's policy was to welcome foreign capital, that there would be no nationalisation or expropriation of any enterprises and that no special fields of development would be reserved for nationals of Ceylon. This was a very encouraging statement coming from so authoritative an official.

INDO-CHINA

Our office in Saigon is now situated in the independent state of Vietnam, more generally known as South Vietnam, which is, of course, distinct from the Democratic

THE ECONOMIST, MARCH 19, 1955

Republic of Vietnam (Vietminh), which controls the area called North Vietnam. The name "Indo-China" appears to have become an anachronism, though it is still useful in referring to the combined area of the four governments at present holding authority there.

The agreements signed at the Geneva Conference in June and July last year have been criticised from many angles according to the particular bias of each individual. They brought the cessation of hostilities, yet they postponed many decisions until the proposed elections in 1956. Much may happen before then but it would be foolish to speculate about the future. It is difficult enough to follow the present events and policies of those in positions of authority. The three states of Vietnam, Laos and Cambodia have recently been granted complete independence by the signature of "quadrupartite agreement" in Paris on December 29, 1954. The Pau Convention has thus been abrogated. Each country now has full control over its own currency and there are three autonomous exchange controls. An agreement has been reached regarding shipping on the Mekong and the use of the port of Saigon by the three states, but Cambodia is contemplating the establishment of her own port on the Gulf of Siam.

PHNOM-PENH BRANCH

Although the French are anxious to come to an agreement with the Vietminh authorities about French industrial interests in Tonkin, the prospects of a satisfactory arrangement are obscure. Owing to the precarious outlook we decided to close down our Haiphong office, but we have obtained the Cambodian Government's permission to open a branch in Phnom-Penh and our arrangements there are well under way. Cambodia, like the whole area of South Indo-China, produces large quantities of rice and a considerable amount of rubber. Phnom-Penh, its capital, is a pivot point through which much of the trade of Laos must pass, as well as that of Cambodia itself. When the latter gets its own port it will no longer be dependent on Vietnam for an outlet for its foreign trade.

BRITISH BANKERS' IMPORTANT ROLE

The above notes on the various countries in which we operate have taken shareholders rapidly round the eastern seas. We might have been more comprehensive, but we would then have risked being tedious. We have tried to state our viewpoint categorically and yet to see the picture from the other side. Without blinding our eyes to the trend of events in the east, we feel confident that British bankers still have an important part to play in Asia as elsewhere. New measures are being adopted for the mobilisation of capital to assist industrial development in the free countries of the east and particularly in the area of the "Colombo Plan" countries. In these areas the expansion of trade is growing rapidly and will continue as the countries increase their development and raise their standards of living. We are well aware that we must continually adapt ourselves, as we have done in good times and in bad throughout the past ninety years of the bank's existence and you may be confident that we will do so.

At a subsequent extraordinary general meeting the two resolutions referred to, increasing the capital of the corporation from HK\$20 million to HK\$25 million and capitalising the sum of HK\$5 million by the issue of one new share for every four shares now held, were carried.

REPORT OF THE AUDITORS TO THE MEMBERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns, in our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1954.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

LONDON, 8th March, 1955.

THE NATIONAL BANK OF INDIA, LIMITED

BALANCE SHEET REFLECTS CONTINUED GROWTH

MR J. K. MICHIE ON STERLING CONVERTIBILITY

The annual general meeting of the National Bank of India, Limited will be held on April 5th, at 24 Bishopsgate, London, E.C.

The following are extracts from the circulated statement by the chairman, Mr J. K. Michie, on the year 1954:

While at home 1954 was a year of steady economic progress the pattern of events in our various fields of operations was distinctly more chequered. Nevertheless the figures in our balance sheet reflect continued growth and we are satisfied with the results achieved in circumstances of some difficulty.

GROWTH OF DEPOSITS

Our deposits have risen very substantially and the total of our consolidated balance sheet at £162,031,432 not only tops last year by £25,578,458 but considerably exceeds the highest previous figure of £147,283,674 shown at December 31, 1951. This expansion, I am glad to say, is spread over the whole area of our operations. The figure for the National Bank of India, Limited alone shows an increase of £23,704,466.

We propose again to allot £75,000 to premises account and as I have previously told you this account will continue to grow until our major building and rebuilding operations are overtaken. The two large offices still under way are at Darassalaam and Aden but as we expand it must be accepted that further investment in bricks and mortar is inevitable.

After full provisions for taxation, bad and doubtful debts and other necessary reservations our consolidated net profits are £385,923 against £387,644 for the previous year.

As you are aware, a second interim dividend of 8 per cent has been declared, making 15 per cent for the year on the increased capital. I think this return is a liberal interpretation of the implied promise I made last year and a standard we have every hope of maintaining.

The resultant balance enables us to transfer £70,000 to contingencies and to carry forward the slightly increased figure of £326,266.

INDIA

For the second year in succession, helped by a good monsoon but also a result of long-term agricultural planning, India has succeeded in increasing considerably her production of foodstuffs—she is even exporting a little—an achievement which is saving a large expenditure of foreign currency, and I trust will also be reflected in a rise in the standard of living.

The economic policy of the Government is balanced somewhat precariously between reassurances to the "Private Sector" based no doubt on the need for the development of industry with the help of foreign loans and investment and a trend towards socialist thinking in the form of industrial development and ownership by the State. One hope for private industry lies in the formation of the Industrial Credit and Finance Corporation of India, Limited, shares in which are now being offered to the Indian public. Along with other exchange banks we have made a substantial subscription to the capital of the Corporation, and I am quite certain

it can and will be of great help in the provision of financial aid which might otherwise not be readily obtainable for really sound projects or the further development of existing industries and companies.

Mr P. S. Beale, until recently chief cashier of the Bank of England, has arrived in India to assume the general managership of the Corporation.

SECOND FIVE-YEAR PLAN

An ambitious "second five-year plan" is being launched by Government, a primary object of which is to create twenty-four million additional jobs in industry by 1967, thereby absorbing the existing unemployment and the inevitable increase in population. Simultaneously it is hoped to raise the general standard of living.

Other features of official thinking are reflected in projected legislation, which includes amendments to Article 3 of the Constitution and the Indian Companies' Act. The former will remove the right of individuals whose property is compulsorily acquired by the State to recourse to the Courts over questions of compensation. The second proposes the progressive elimination of the managing agency system—which goes far beyond any previous suggestion.

Both proposals are a cause of anxiety to business men in general but particularly to foreign capital which is mainly British, so I hope sincerely the protagonists of these measures will think again.

PAKISTAN

Pakistan had an uneasy year politically and economically. The food situation is at present satisfactory and there is even a considerable quantity of rice available for export, while the programme of industrialisation has made steady progress. One result of this is a large reduction in the export of cotton from Karachi, a crop which previously almost wholly went abroad but 50 per cent of which is now to be consumed locally.

In East Pakistan the jute mill industry continues to expand.

The jute export trade of East Pakistan which is a vital part of its economy was recently somewhat disturbed by the cancellation of the licences of 13 important shippers, on the grounds that they had contravened Government regulations. The situation is slowly being clarified, but temporarily Pakistan suffered a loss of foreign currency through the delay in getting shipments effected.

CEYLON: TEA POSITION

Ceylon has been the fortunate isle for prices of tea and rubber have been buoyant while the cost of her rice imports of over 400,000 tons per annum has fallen materially during the year—so her revenues and her balance of trade both have benefited. Altogether the picture is a complete change from that of two years ago, and in consequence prospects for 1955 are favourable.

Two years ago the tea growing industry in India and Ceylon had just emerged from a crisis caused by prices falling so low that in some cases they hardly met the cost of shipping and marketing—a situation which naturally was of no concern to consumers. Today, owing to an all-round increase in

consumption, the position is radically different and over the past year prices have risen considerably, particularly in overseas markets which have to bear the oncost of export duties.

Recently a great deal has been said and written in this country about tea and tea prices, much of it ill-informed.

At the moment of writing prices have had a sharp fall and time will show whether this is or is not temporary, but I am quite sure that nothing would better please producers, shippers, merchants and retailers alike than to see a more stable market at a less high level of price than we recently saw. But the simple fact is that particularly with Indonesia exporting 80 million pounds less than in prewar days production just cannot keep pace with the steadily increasing consumption induced by larger world populations and by increased purchasing power. In the United Kingdom alone consumption has risen by 20 per cent since derationing, while it is estimated that in India it has expanded by around 70 per cent compared with prewar, and it must be expected that this trend will continue.

The suggestion that in this country a re-imposition of rationing combined with a regression to bulk purchase would be a satisfactory or acceptable answer to the present level of prices is purely political wishful thinking, and takes account neither of the statistical position nor of the fact that prices in this and other importing countries bear export taxes of 1s. 11½d. per lb. in Ceylon and 11d. per lb. in India. I trust these taxes will not be perpetuated at the present levels, for I continue to believe that export duties almost invariably in the last event have a boomerang effect on the countries imposing them and are therefore an unsound fiscal weapon.

OTHER COUNTRIES

Burma.—The economic position of Burma continues to be governed largely by the trends and policies I remarked on last year. Falling rice prices, quite apart from the very low rates she has been forced to accept for large stocks carried over from 1952-53 and a continuance of large capital expenditure on harbours, railways, inland water transport and many major projects of an industrial nature, necessarily mean a drain on balances previously built up when rice prices were high.

The Colombo Plan continues to develop its financial and technical assistance to the great benefit of the countries concerned.

East Africa.—In the early summer of 1954 after an interval of five years I revisited East Africa and was able to see a large number of our branches, many of which were non-existent in 1949. It was an encouraging experience and one noticeable feature was the steadily increasing awareness of the African population of the advantages of banking facilities.

Kenya.—Mau Mau, I regret, is still with us, and although real progress has been and is being made, no sign is yet evident of an early cessation of its activities.

During 1954 Kenya was remarkably prosperous in the circumstances, helped by reasonable rains and high coffee prices. Local industries continue to expand, and, given political peace and adequate transport facilities,

ties, there is little doubt but that Kenya would have a steadily expanding economy.

Uganda.—The difficult political situation in Buganda of a year ago was followed by a buying boycott which affected trade considerably for some months.

Fortunately, the settlement proposed by the Hancock Commission seems to be generally acceptable, and in due course the Kabaka will return to Kampala.

Uganda had a good cotton crop, and as coffee is her other main product, her agriculture had a profitable year. Cultivators benefited by the higher guaranteed prices fixed by Government for both commodities.

Tanganyika.—Although sharing with her two neighbours a certain prosperity from coffee and cotton—in fact her cotton crop was a record one—her large interests in sisal had a less fortunate experience and prices fell as low as £70 from £103 in January, 1954. At the moment values have revived to about £80 and the prospects of at least holding this level seem to be reasonably good.

A few months ago we opened a branch at Bukoba, one of the main coffee growing centres in the territory.

SUBSIDIARIES

The profit shown by Grindlays Bank, Limited is again lower but branching out into new territories is inevitably initially expensive, and it will take some time before operations in the Rhodesias show favourable returns. Prospects, however, are encouraging.

The operations of the Finance and Development Corporation continue to grow and to be profitable.

STERLING CONVERTIBILITY

Until it is brought about and possibly even after that event, convertibility of the pound Sterling, by which I mean free or absolute convertibility, will be a much debated question but I am glad to see Mr Butler recently made a pronouncement that "the conditions for convertibility have not yet been fulfilled" and this view he has since reinforced by the recent drastic increases in the Bank Rate from 3 per cent to 4½ per cent. Indeed one has to look no further than the discount at which "convertible" Sterling stood until the Chancellor took remedial measures, or the slow tempo of our accumulation of gold and dollar reserves to see the justification for Mr Butler's statement.

Sterling has to show a much stronger front before it can safely be declared convertible and that means an all-round strengthening of the economy and currencies of the whole Sterling area. We know that last year production in this country increased by around 5 per cent but much of that increase seems to have been consumed internally which reflects an inflationary trend and does not improve our all-important external budget. In fact, to plagiarise Lewis Carroll, "it takes all the running we can do to keep in the same place." A great deal has been accomplished but until our balance of trade has been considerably bettered it will be difficult to justify more than mild satisfaction, especially when we remember that never before in times of peace has such full employment been enjoyed.

In these circumstances while there are good general grounds for optimism I fear the Chancellor of the Exchequer will still find it necessary to skim off the froth of inflation in our economy by taxation of one kind or another. Money is now dearer in the United Kingdom than it is in India, Pakistan, Burma or Ceylon.

Barring major imponderables I can see no reason why the business of the bank should not prosper in 1955.

JUTE INDUSTRIES

RESTRICTION OF CROP BY PAKISTAN

INCREASING DEMAND FOR COMPANY'S PRODUCTS

CONSTRUCTION OF NEW SPINNING MILL

HIGHER LEVEL OF EXPORTS

MR W. G. N. WALKER'S STATEMENT

The thirty-fourth annual general meeting of Jute Industries, Ltd., was held on Thursday, March 10, 1955, at Meadow Place Buildings, Dundee, Mr W. G. N. Walker (chairman and joint managing director) presiding.

The secretary (Mr W. A. Jeffray, CA) read the notice convening the meeting and the report of the auditors.

Addressing the meeting, the chairman said: With your permission I will take the accounts and the report of the directors as read. (Agreed.)

DECONTROL OF RAW JUTE

Last year I told you that the Government had decided to hand over the purchase of raw jute to private buying. In July, 1954, the Jute Control made final allocations to spinners of its raw jute supplies, at the same time authorising them to commence purchasing on their own account. Your company took full advantage of this opportunity of entering the raw jute market and has been able to contract for supplies of all qualities which, together with the Jute Control allocations—the last of which were taken up in February, 1955—should enable maximum production to be maintained until imports of next season's raw jute crop are freely available.

CROP RESTRICTION AND ITS EFFECTS

In my last address, when referring to Pakistan's crop restriction policy, I hoped that she had taken into consideration her good fortune in having had favourable weather for her last three crops, as by the law of averages unfavourable weather during the current crop was possible. Unfortunately my fears were only too well founded, and as a result of the abnormal floods in the jute growing areas from the end of July until the middle of October, considerable damage to the crop, both as regards quantity and quality, took place causing a rise in prices of about 30 per cent since the middle of last year. It was fortunate that there was a carry-over of one million bales from previous crops, but even with this surplus it appears that supplies may only be just sufficient for world requirements during the present jute season.

The Pakistan Government's recent announcement that the 1955/56 crop is again to be restricted appears to indicate an unwillingness to learn from last year's experience and to ensure the safety of supplies of raw jute, or to allow prices to fall to a more economic level in world markets.

Stability of prices at a reasonable level is not only in the interests of spinners, manufacturers, merchants and their customers, but also of the growers. Rapidly rising prices usually result in sizeable stock profits, but these seldom compensate for the subsequent losses and dislocation of business when prices fall. It is recognised that price fluctuations cannot always be avoided, but when high prices are the direct result of attempts by the Pakistan Government—regardless of the

vagaries of the weather—to control the output of a major agricultural crop, it is a serious matter.

Pakistan's action, although perhaps helping her balance of payments position in the short term, can, by encouraging bulk handling and the use of substitute materials, do great harm to the jute manufacturing industry throughout the world and also to her own long-term economy.

In view of this it is hoped that wiser counsels will prevail and that sowings will be permitted in excess of the area already prescribed, thus allowing for a margin of stocks to be carried over into the next season.

DOUGLASFIELD WORKS

Although those of our establishments which have been equipped with sliver spinning machinery since 1937 are running two and in some parts three shifts per day, we are still unable to meet the demand for jute yarn of the quality produced by your company. It is necessary, therefore, to add another spinning installation to those already in operation. We have been fortunate in owning a number of large establishments which with little structural alteration could house economic units of the most modern spinning machinery, but the stage has now been reached when we have no unused floor space of sufficient area available for further spinning expansion. Not only is extra floor space required, but that floor space must be suitable for producing at the lowest cost, thus taking advantage of the latest developments.

Your directors have decided, therefore, to construct a new spinning mill to be called Douglasfield Works, and to erect it on ground earmarked by the Dundee Corporation for industrial development on the north eastern perimeter of the city. The acquisition of this ground was referred to in my statement to you two years ago. It is situated in the centre of large new housing estates and is therefore strategically sited for labour recruitment. In conjunction with a well-known firm of consulting engineers the new building has been specifically designed for the purpose. While the cost will be considerable, in your directors' opinion it is thoroughly justifiable capital expenditure. It will operate as an integral part of our spinning organisation and not as a separate entity, thus ensuring maximum productivity combined with quality and flexibility. Douglasfield Works will be in production before the autumn of 1956 and will facilitate developments and expansion not only on the yarn but also on the weaving side of our business. Capital commitments in respect of this project had not been entered into before September 30, 1954, but since that date firm contracts amounting to £300,000 have been placed; others will be negotiated in the near future.

EXPORTS

The present level of company taxation in the United Kingdom, coupled with a relatively high standard of living, is pricing us

out of world markets for standard goods even if these goods are produced on the most modern machinery working on a multi-shift basis. It is only in quality goods that we can hope to compete, and it is on these that we have concentrated in recent years. I am glad to be able to report that the level of jute cloth exports of our own manufacture has again shown an appreciable increase over the previous year. It is on quality that this volume has been built up, and it is on quality that our future performance in world markets will depend.

DEMAND

The demand for your company's products is on the whole well maintained, and order books are in general better filled than they were this time last year. The spread which we have within our industry, coupled with flexibility of manufacture, should—unless there be a sudden and unexpected reduction in activity amongst consuming industries—ensure that next year's accounts will again be satisfactory.

SUBSIDIARY COMPANIES

Our subsidiary companies have all contributed to the favourable results of the past year. Within the last few weeks we have acquired a controlling interest in JOHN LOWSON, JUNR. & CO. LTD., Forfar—an old established weaving firm whose products are complementary to our own. This acquisition will further diversify the spread which we already have in the textile industry.

MANAGEMENT

Your directors and senior executives are constantly on the move both within and without the British Isles: it is only in this way that we have been able to take full advantage of modern developments and to assess new markets.

We are very conscious that the future of your company depends as much as anything else on first-class management, and that the necessity of training for management is more than ever important. This matter is being given high priority, and the results so far achieved are encouraging.

The successful results achieved by your company over the past few years are due to the loyal and conscientious service rendered by all concerned. To all executives, management, staff and employees at home and overseas I would like to convey my most sincere thanks.

The report and accounts were adopted.

THE STERLING TRUST

The thirty-eighth annual general meeting of The Sterling Trust, Limited, was held on March 8th in London, Mr Michael F. Berry (the chairman) presiding.

The following is an extract from his circulated statement:

The past year has again shown an increase in income, the total for 1954 being £370,270 against £334,052 a year ago. Most industrial companies have enjoyed a remarkably prosperous year, and we hope that this prosperity will again be reflected in our own results for 1955.

The board have placed £40,000 to reserve, compared with £40,000 last year, and recommend a final dividend of 11 per cent, making 15 per cent for the year, against a dividend of 12½ per cent for 1953.

The board have decided on another important recommendation. As a result of the very substantial appreciation in the market value

of our securities and the large increase in income since the Second Great War, the issued capital of the company now falls far short of the value of the funds employed in our business. In order to bring the balance sheet closer to reality, therefore, the directors recommend that the sum of £437,500 be taken from the revenue reserves and applied in paying up in full a like number of ordinary shares of £1 each, for distribution, credited as fully paid, to the ordinary stockholders in the proportion of one such share for every £2 of ordinary stock held.

The report was adopted and at the subsequent extraordinary general meeting the board's capitalisation and scrip issue proposals were sanctioned.

ALDERS (TAMWORTH), LIMITED

EXCELLENT TRADING RESULTS

INCREASED DIVIDEND

SCRIP ISSUE APPROVED

The nineteenth annual general meeting of Alders (Tamworth), Limited, was held in London on Monday, March 14, 1955, and the chairman, Mr James H. Black, JP, CA, stated *inter alia* that during the year under review trading had been consistently good and represented the normal results of a full order book, which satisfactory state of affairs had continued to date.

Whilst inflation tended to increase, supplies of woodpulp and other raw materials had been easier, though currency regulations were still in force, resulting in certain restrictions in buying from abroad, but any deficiency, as hitherto, was made good by having plant capable of dealing with home-produced raw materials, including straw.

The further issue of ordinary shares, fully paid up, was of special interest in that two-thirds of the amount required for this purpose was provided by premiums paid by shareholders in connection with a previous issue.

The statement continued:

Considerable alterations and extensions have been made to plant and machinery, the effects of which will only be fully realised during the current year, and the company can look forward to the future with every confidence.

The Burnley Paper Works reconstruction is resulting in steadily increasing profits, which the board feel are best retained in the business at present as additional working capital. The trading results are proving this to be a first-class investment and will greatly extend the scope of the group's activities.

The figures show a very substantial increase on last year's profits, and a final distribution of 18½ per cent, less tax, on the ordinary share capital of the company is, therefore, recommended, making 27½ per cent for the year.

Mr S. C. Green seconded the adoption of the report and accounts, which was carried unanimously, and Mr William Howard Tripp was duly re-elected a director of the company.

At a subsequent extraordinary general meeting resolutions were passed approving the increase in the capital of the company to £1 million by the creation of 5 million new ordinary shares of 2s. each and the capitalisation of £150,000 and its distribution as ordinary shares to the ordinary shareholders in the proportion of one new ordinary share for every two ordinary shares held.

BRITISH HOME STORES

INCREASED PROFIT

MR HORACE MOORE'S STATEMENT

The twenty-seventh annual general meeting of British Home Stores, Limited was held on March 16th in London, Mr Horace Moore (the chairman) presiding.

The following is an extract from his circulated statement for the period of fifty-two weeks to January 1, 1955:

The profit for the period is £1,310,496, an increase of £107,090 over the previous year. Profit after taxation is £560,496, as against £428,406.

Your directors have transferred £325,000 to general reserve, and recommend a final dividend on the ordinary stock units of 6d. per unit, making a total of 7d. for the year against 5d. for 1953.

It has been decided to recommend by capitalisation of reserves, the issue to existing ordinary stockholders of one fully paid "A" ordinary share of 1s. for each existing ordinary stock unit held.

TRADING

Nineteen hundred and fifty-four was a year in which wages and practically all other expenses of operation again increased. A fully competitive market prevailed, there were many changes in consumer demand but we were able to ensure flexibility of production for the large range of goods we carry. Our experience in the Christmas season was satisfactory. Cash turnover, the highest in our history, showed a good increase over 1953. We are very appreciative of the confidence that so many customers have shown in us, as these facts indicate, and we shall do our best to justify it by providing an ever-improving range of goods in variety, quality and value.

DEVELOPMENT

In July, 1954, we opened the first phase of our new store at Sheffield. Construction work is now proceeding apace upon our new store in Coventry, which will be opened in a few months' time. Work is also well ahead at our store in Cardiff, a town in which we have not been represented, and we have commenced to build at Plymouth. These stores should be in operation by the end of the year. Extension works are proceeding at a number of other stores which will give, in some cases, substantial additions to existing selling space.

There have been delays with rebuilding at Swansea and Bournemouth, and they will not be open until 1956. We anticipate that work will commence during 1955 on one or two additional new stores, but these will not be completed this year.

The new stores which we are opening are much larger than those built prior to the war. We require considerably more counter footage in order to display our ranges of goods to the best advantage and additional space for modern catering facilities.

I would mention that the majority of our properties are held on long leases with an average of approximately 80 years to run at prewar rentals. These leaseholds constitute a very valuable asset to your company.

I would not propose to forecast the results which we shall be able to achieve in the current year. We are again faced with increased wages and other costs of operation, and I can only say that we shall continue to strive for higher targets and the further improvement of our goodwill with the public.

The report was adopted.

THE SCOTTISH MUTUAL ASSURANCE SOCIETY

RECORD NEW BUSINESS

The seventy-second annual general meeting of The Scottish Mutual Assurance Society was held on March 16th in Glasgow. Mr Wm. Bannatyne, FFA, who occupied the chair, said:

The year 1954 has been a good year for life offices generally and we have again to report a record amount of new business. In the ordinary classes the increase over the previous year was 30 per cent, but in group business the sums assured showed a fall, so that the increase overall was reduced to 19 per cent.

Life Assurance Revenue Account: The premium income again shows a satisfactory increase. Consideration for annuities is a small item which fluctuates quite widely and the 1954 figure is double that of 1953. Our rates for this class of business are especially good and no doubt this has affected the figure.

The interest income shows an increase as is to be expected with an increasing fund. The gross rate of interest earned on the fund has risen from £5 4s. 11d. per cent to £5 8s. 11d. per cent, an increase of 4s. per cent following an increase of 3s. 7d. per cent in the previous year. The increase is again accounted for mainly by increased dividends on our holdings of ordinary shares and the more advantageous terms on which the substantial amounts of our new money over the last two years could be invested. The net rate earned has risen from £4 2s. 10d. per cent to £4 7s. 10d. per cent, an increase of 5s. per cent following a fall of 4d. per cent in the previous year.

On the outgo side, claims by death are up by over £120,000. In 1953 the claims by death were exceptionally light and although they are substantially higher this year they are still well within the amount expected by the mortality tables used in our valuation. Claims by maturity were almost exactly the same as in 1953 but this is mere coincidence as the amounts which mature in any one year are determined by the new business transacted over a period of many years.

Surrenders, which were especially high in 1953 for a reason which I explained at the time, are back to a more normal figure.

SAVINGS AND LIFE ASSURANCE PREMIUMS

It is difficult to say what the effect of the higher Bank rate will be over the next few weeks, but clearly one of the objects is to reduce inflationary pressure and in this direction an increase in our business will help. Inflation is commonly described as too much money chasing too few goods, and it is clear therefore that every life assurance premium paid helps to reduce inflation. Life assurance is in fact one of the best, if not the best, method of saving both from the point of view of the individual and of the nation.

Last year about this time the Millard Tucker Committee published its report and made recommendations regarding the tax treatment of retirement benefits, but we still await the Government's decision. It is hoped that this year the Chancellor will take the opportunity to put right some long-standing anomalies. The Chancellor can in this way grant a long overdue tax concession without increasing inflationary pressure. When the proposals are adopted they will entail much work for the life assurance offices.

The report was adopted.

ARISTON GOLD MINES (1929), LIMITED

MAJ.-GEN. W. W. RICHARDS ON YEAR'S OPERATIONS

The twenty-fifth annual general meeting of Ariston Gold Mines (1929), Limited, was held on March 10th in London.

Major General W. W. Richards, CB, CBE, MC, chairman, presided, and the following are extracts from his statement circulated with the report and accounts for the year ended September 30, 1954:

The net profit for the year after taxation is £170,251 against £145,901 for last year.

The gold produced realised an average price of 249s. 7d. per ounce, a reduction of 12s. 11d. per ounce against the average price for the previous year.

The reduction in the average price of gold was offset by the management increasing the tonnage milled to 398,850 tons for the year, and, further, by a reduction in total costs of 6s. 4d. per ton, against 1953. The record gold recovery of 130,923 ounces realised a bullion revenue of £1,636,684.

THE NEW WINDER

The new winder at the Central Shaft of a capacity of not less than 40,000 tons per month, has been satisfactorily commissioned and is now in operation. A running-in period is to be expected, and we are looking forward to an increase in the near future in monthly crushing up to the full capacity of the winder. The ability of the mine to supply tonnage not far short of that figure even under the previous winding arrangements has been shown during recent months—one of the essential features of the installation of the new winder, however, is the capacity which would otherwise not have been possible, to carry out development of the mine at depth. The major capital construction programme (including the new Central Shaft winder) has now been completed.

The board has recommended the payment of a final dividend for the year of 6d. per unit (20 per cent), making a total for the year of 9d. per unit (30 per cent), the same as for 1953.

ORE RESERVES AND UNDERGROUND DEVELOPMENT

At a crushing rate of 40,000 tons per month the ore reserves of 2,684,342 tons are nevertheless equal to over 5½ years' supply of ore. On the recommendation of the general manager, supported by the technical advisers, a programme of an increased rate of development has been started to open up fully the North Orebody as so far disclosed, and to explore the deeper sections of the mine under the north and main orebodies.

You will have noted from the general manager's and technical advisers' reports that it is expected large additions will be made to the ore reserves during the current year, and, to use the technical advisers' words "the ore reserve position is, in fact, most satisfactory."

Since the date of those reports, confirmation has been received from the mine that the first exposures of the main reef have been made on the horizon of the 25th and 26th Levels (the lowest so far reached in the mine) in the vicinity of the No. 2 winze, which is situated about 1,000 feet north of the Central Shaft, and the manager reports that the exposures indicate the great strength and persistence of the reef fissure at depth. Under the present programme, No. 2 winze will be sunk to the horizon of the 30th Level.

The report and accounts were adopted.

THE SCOTTISH PROVIDENT INSTITUTION

MUTUAL LIFE ASSURANCE

ANOTHER YEAR OF SUSTAINED PROGRESS

In presenting the report and accounts for 1954 to the one hundred and seventeenth annual general meeting held in Edinburgh on March 15, 1955, the chairman, Sir Hugh Rose, Bt, TD, referred to 1954 as "another year of sustained progress, a year of record new business, a year in which the Institution's funds increased by a record amount." The new ordinary sums assured at over £8½ million were more than 12½ per cent greater than the 1953 figure, which was itself an all-time record for the Institution. The total premium revenue was almost £3½ million and the funds had increased during 1954 by over £2½ million, the rate of interest being substantially higher than in the previous year. In a year of keen competition these splendid results were evidence of the sound value of the policies offered by the Institution.

MUTUAL ASSISTANCE IN HOUSE PURCHASE

On the assets side of the balance sheet the salient points were increases in the figures for mortgages and for debenture stocks and preference and ordinary stocks and shares. The increase in mortgages was accounted for almost entirely by advances to members to assist in the purchase of houses. This was one of the ways in which a mutual institution could be of help to its members and was itself a source of new business inasmuch as these loans were all covered by policies of life assurance. The increases in the other items mentioned showed that the directors were conscious of their obligations to the country as well as to the policyholders, in that they were ready to take advantage of any suitable opportunities to make part of the funds available for the expansion of commerce and industry where this could be done with safety and a reasonable return. The total market value of the assets substantially exceeded the sum of £36 million shown in the balance sheet, and the impressive strength of the Institution was unquestionable. The lower prices in Stock Exchange securities which have followed the recent increase in the Bank rate were not unwelcome. It was of prime importance to any life assurance company to be able to invest the excess of income over outgo at a satisfactory rate of interest, and the lower prices meant that higher yields could be obtained.

LIFE ASSURANCE—THE IDEAL METHOD OF SAVING

The attractions of life assurance were many. It was in practice the only method of saving possible today, since the premiums for it enjoy special income tax rebates. It provided a magnificent service to industry, to employers and employees alike, in facilitating the setting up of pension and similar schemes. It was also of major importance in enabling individuals so to arrange their affairs as to mitigate the burden of estate duty, and the staff of the Institution was specially qualified to give advice on all these matters.

In concluding his remarks Sir Hugh Rose referred to the remarkable expansion in recent years in industry and commerce generally, and to the burdens which this had placed on the staff of the Institution as of other similar concerns. The problems have been energetically dealt with, and thanks were

due to the officials and staff for the part they had played in achieving the very successful results which he was privileged to report.

The report was adopted.

EASTBOURNE MUTUAL BUILDING SOCIETY

INCREASED NUMBERS OF ADVANCES

The seventy-eighth annual general meeting of the Eastbourne Mutual Building Society was held on March 16th at Eastbourne.

Mr Laurence A. Caffyn (the chairman), in the course of his speech, said: The year has been one of great activity in the whole of the building society movement, and this society has played its part in the general expansion.

During the year 1,240 advances were made by the society, being an increase of 319 in number over 1953. The total amount advanced was £1,276,000. This has been sound business. The average advance for the year excluding further advances was £1,209 as opposed to £1,474 in 1953. The policy being pursued by your board of making smaller advances on more and widely spread securities must offer even greater security than ever.

The facilities offered by the society for investment and means of saving have again proved attractive to our members. Investments received during the year on share account show an increase of £100,000 as compared with 1953. The net increase of

balances on share account at the end of the year was £438,000.

It is equally part of our thrift movement that we encourage home ownership. The demand for new houses will not be satisfied for some time to come, and there is still great and important work to be done in this sphere. It is our ambition to see this country a democracy of home owners. Good borrowers in good houses are the real strength of the society. Your directors will continue to encourage members in their desire to buy their houses and make them real homes. There still remains great work for the building societies to do.

The report and accounts were adopted.

VOSPER LIMITED

(Shipbuilders and Engineers)

FACILITIES FULLY EMPLOYED

The eighteenth annual general meeting of Vosper Limited was held on March 17th in London, Mr Owen R. Guard (the chairman) presiding. The following is an extract from his circulated statement:

During the year under review we have earned a net profit of £101,135. After writing down the value of the two trawlers by a further £40,000 there remains a net profit of £61,135. Your directors recommend a dividend of 12½ per cent.

Our facilities for the design and construction of high-speed and other small craft for the Royal Navy and Ministry of Supply have

been very fully occupied during the year under review. This position will certainly hold throughout the coming financial year, but as can be gathered from the daily papers, the Royal Navy, at any rate for the time being, have slowed up on the inshore mine-sweeper programme in which we were heavily engaged.

There is still a considerable amount of interesting work being undertaken by us of a prototype or development nature, including running trials of HMS 'Grey Goose' for the Royal Navy, in which two Rolls-Royce RM 60 gas turbines are installed. We are also at this moment running trials of an all-welded aluminium high-speed launch for the Ministry of Supply, which incorporates two Rolls-Royce 'Griffon' marine engines. Performance of hull and machinery as so far assessed indicate most favourable and interesting results.

TRAWLER ACTIVITIES

The trading of the trawler 'Maythorn' has shown a great improvement during the last year. She is now fishing from Hull under new management and proving to be one of the most successful trawlers working on the distant fishing grounds. The second of the trawlers, which have been referred to previously, has now been completed and is also fishing successfully from Hull in distant waters.

Nevertheless, efforts are continuing to disperse of these vessels.

I am glad to report that the output of our workpeople has been very satisfactory.

The report and accounts were adopted.

UNIVERSITY OF LONDON

The Senate invites applications for the appointment of STAFF TUTOR under the Tutorial Classes Committee. Applicants should have high academic qualifications in relevant fields to assist in the development of adult education, particularly among trade unionists. The appointment may be either as Staff Tutor, salary scale £700-£50-£1,400 per annum with a bar at £1,000, or Staff Tutor (Junior), salary £600-£50-£700, according to experience, the initial salary in both instances being determined in accordance with the qualifications and experience of the successful candidate. Family allowances are paid and the post carries membership of F.S.S.U. Particulars and application forms from the Director of the Department of Extra-Mural Studies, Senate House, W.C.1. Application forms to be submitted before April 30.

DO YOU KNOW EXPORT?

If you do and are in your early forties; if you know how to assess market requirements and can co-operate with Engineering departments and factory to get the right goods to sell, then you may be interested to join a leading Radio and Electrical Manufacturer. It is an important job carrying a good salary and prospects. Write, in confidence, giving full details of experience, age and salary level, to Box 868.

THE COUNCIL OF INDUSTRIAL DESIGN requires a Promotion Officer to plan and execute all forms of promotion and publicity, except press. Successful experience in promotion essential and knowledge of broadcasting and television useful. Starting salary £1,260-£1,410, according to experience and qualifications, rising to £1,510 (men). Applications by April 13.—Write for further particulars and an application form to the Establishment Officer, Tilbury House, Petty France, S.W.1.

RETAIL DISTRIBUTORS' ASSOCIATION requires Assistant Secretary, man or woman, aged 25-35, for office and committee, together with statistical work. Experience of department store advantageous. Salary £750.

Apply in writing to Secretary, R.D.A., 23 St. George Street, Hanover Square, W.1.

SALES EXECUTIVE required in a medium-sized company manufacturing accessories for the vehicle trade. The company has Sales and Service Branches throughout the country, and the successful applicant would be required to control the activities of Salesmen and Representatives calling on manufacturers and operators. The position offers an excellent opportunity for progress in a virile and expanding organisation, and the successful candidate should preferably have experience in the industry.—Please send full particulars of age, qualifications and experience, with salaries earned, to Box 869.

WORKS MANAGER required for a light/medium Engineering Factory in the Home Counties employing 1,500. The successful candidate will be a trained Engineer, with previous executive responsibility and knowledge of negotiating procedure as applying to a industrial establishment, and he will also be able to lead a mixed team of Production and Administrative personnel with energy and enthusiasm. The post is a senior one and offers considerable future prospects in a virile and expanding organisation.—Please send full particulars of age, qualifications and experience, with salaries earned, to Box 870.

FOR SALE: Economic Journal, June, 1930-April, 1941; Economic History 1936-1940; Manchester School 1938-1940; Economica 1948-52; L. & C. Economic Survey, Sept., 1935-Feb., 1941, and 1948-51.—Box 865.

THE NATIONAL BANK OF INDIA, LIMITED

NOTICE IS HEREBY GIVEN that the Annual General Meeting of the Shareholders will be held in the Bank's premises at 24 Bishopsgate, London, E.C.2, on Tuesday, April 5th, at twelve o'clock noon precisely, to receive the Accounts to December 31st last with the relative reports by the Directors and the Auditors; to elect Directors; to fix the remuneration of the Auditors; and to transact all such other business as can be transacted at an Annual General Meeting of the Company.

By Order of the Board, G. T. GILLESPIE, London Manager, 26 Bishopsgate, London, E.C.2. March 10, 1955.

NEW ZEALAND MARKET

A well-established, keen and experienced importing firm with first-class trade credentials and offices in Auckland, Wellington and Christchurch desires to expand its activities. We seek exclusive agencies from manufacturers. Can we discuss the sale of your product in New Zealand? References Bank of New South Wales, London. Write direct to Mair and Co. (Importers) Ltd., P.O. Box 1477, Christchurch, N.Z.

HER MAJESTY'S OVERSEA CIVIL SERVICE

Applications are invited for the following post:

STATISTICIAN, EAST AFRICA HIGH COMMISSION

Candidates should be not more than 40 years old and should possess a good Honours Degree in Mathematics, Economics or other appropriate main subject combined with Statistics. Experience in practical statistical work an advantage. The appointment is pensionable, subject to two years' probation. The salary is in the scale £816 to £1,620 per annum (including a pensionable allowance) plus a non-pensionable cost-of-living allowance which is at present 10 per cent of salary with a maximum of £162 per annum. Income tax is at local rates. Free passages are provided on appointment and leave for the officer, his wife and children up to the cost of three adult passages. Liberal home leave is allowed on full salary.

Apply in writing to the Director of Recruitment, Colonial Office, Great Smith Street, London, S.W.1, giving briefly age, qualifications and experience. Mention the reference number BCD 59/88/02.

SOUTH PACIFIC COMMISSION

Applications are invited for appointment as Technical Assistant to the Deputy Chairman of the Research Council with the South Pacific Commission, Noumea, New Caledonia. Commencing salary according to qualifications and experience, but will not be less than £Stg.950 plus a Post Allowance of £Stg.439 (single) or £Stg.732 (married).

Applicants must have good academic qualifications in economics and be experienced in statistical enquiries relating to agriculture, industry, commodities or national accounting. Fluency in English and French very desirable.

The successful applicant, who would be appointed for a period of from two to three years with a view to permanency, will be required to assist with technical documentation and statistics relating to the Commission's work programme which includes projects in economic, social and health fields.

Further information on conditions of employment may be obtained from The Under-Secretary of State, the Colonial Office, Church House, Great Smith Street, London, S.W.1. (Ref.: PAC 16/01.)

Applications, with full particulars of qualifications and experience, should be forwarded by airmail to The Secretary-General, South Pacific Commission, Noumea, New Caledonia, and should reach him before April 16, 1955.

HARLOW DEVELOPMENT CORPORATION

Applications are invited from graduates in statistics and demography with research experience for appointment as temporary Statistical Assistant at £580 per annum in Grade V(a).

Appointment for approximately one year. Applications, supported by two testimonials, by April 1, 1955, to the General Manager, Terlings, Harlow, Essex.

ENGINEERS for Management and Industrial Consulting. Applications are invited from qualified engineers, preferably with a University Degree, who have served an apprenticeship followed by good practical experience and a senior executive position in industry. There are exceptional openings for first-class men with initiative requiring permanent posts in this type of work. There is a generous starting salary, first-class training at the firm's expense, good prospects and exceptionally good Superannuation schemes. Age should be between 27 and 40. Write, giving age and full details of education, qualifications and experience, to BS, Box 864.

"THE BIRMINGHAM POST" will shortly have a vacancy for an assistant to the City Editor in its office at 88 Fleet Street, E.C.4. Experience of financial journalism desirable. The successful candidate will become a member of staff pension scheme.—Applications, in writing, giving a full statement of qualifications, experience and age should be addressed to the Editor, "The Birmingham Post," 38 New Street, Birmingham.

PERSONNEL OFFICER required by the makers of Johnson's Wax Products, to help establish and eventually administer personnel policies covering the fields of recruitment, remuneration, training, communication, and employees' services. The successful candidate must have had a thorough training in the principles of personnel management plus at least two years' practical experience. He will probably be between the ages of 25 and 30. Excellent prospects in a rapidly expanding company for someone who can be original, thorough, and convincing.—Apply, with full details of education, experience and present salary, to the Managing Director, S. C. Johnson & Son Ltd., West Drayton, Middlesex.

JUST PUBLISHED: INDUSTRIAL DEVELOPMENT IN INDONESIA, by A. M. de Neuman. Available from Students' Bookshops Limited, Cambridge. Price 4s. 6d.

YOUNG LADY required as Personal Assistant to Chief Accountant of London Group for investigation and research work of a non-routine nature. B.Sc.Econ. or Accounting qualification would be an advantage, but previous experience not essential. Permanent position. Commencing salary £400 to £500 p.a.—Box 863.

NUFFIELD COLLEGE OXFORD

RESEARCH FELLOWSHIP IN AFRICAN STUDIES

The College proposes, providing a suitable candidate is available, to elect a Research Fellow for two years to engage in research in either the economic or the political aspects of Africa. Preference will be given to candidates willing to concentrate on the study either of capital investment or of elections.—Further particulars may be obtained from the Warden. Applications should reach him not later than May 9th.

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above Studentships, tenable for one year in the first instance and renewable for a further period not exceeding two years. The Studentships are normally of the value of £250 or £300 per annum. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University. Applications should be sent not later than June 1, 1955, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY COLLEGE OF SWANSEA

TEMPORARY RESEARCH ASSISTANT IN ECONOMICS

Applications are invited for the post of Temporary Research Assistant in the Department of Economics to assist with research on the structure of property and property ownership in postwar Great Britain. The appointment will be for one year in the first instance and may be renewed for a second year. Salary between £400 and £500 per annum, according to qualifications and experience. Applications should be sent by March 31, 1955, to the Registrar, University College, Singleton Park, Swansea, from whom further particulars may be obtained.

UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited for post of Senior Lecturer in Economics who will be required to institute a Department of Economics to teach for the B.A. General degree of University of London and will be expected to undertake research.

Present salary scale, £1,000 x £50 — £1,500 p.a., point of entry determined by qualifications and experience. Child allowance £80 p.a. per child (maximum £240 p.a.). F.S.S.U. Unfurnished accommodation at 5 per cent basic salary. Passages paid for appointee and family on appointment, normal termination and study leave (once every three years). Duties to be assumed as soon as possible.

Applications (six copies), detailing qualifications and experience, and naming three referees, to be received by April 14th by Secretary, Inter-University Council for Higher Education Overseas, 1 Gordon Square, London, W.C.1, from whom further particulars may be obtained.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability).—NOTICE TO SHAREHOLDERS.

The Seventy-fourth Annual General Meeting of the Shareholders of this Company, for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the fourth day of May next, at the principal office of the Company, at Montreal, at twelve o'clock noon (daylight saving time, if operative). The Ordinary Stock Transfer Books will be closed in Montreal, Toronto, New York and London at 3.30 p.m. on Tuesday, the twelfth day of April, 1955. The Preference Stock Books will be closed in London at the same time. All books will be reopened on Thursday, the fifth day of May, 1955. By order of the Board, F. BRAMLEY, Secretary. Montreal, March 14, 1955.

THE B.Sc.ECON. DEGREE of London University is open to all without University residence. It is a valuable qualification for ambitious men and women engaged in accountancy, secretarialship, banking, finance, commerce, public services. Wolsey Hall (est. 1894) provides postal tuition of a high order for the three (in some cases two) examinations, at reasonable fees. More than 1,000 Wolsey Hall students have passed London B.Sc.Econ. (Final) exams, since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies Dept. P17 WOLSEY HALL, OXFORD.

A PROGRESSIVE MINING COMPANY with widening overseas interests requires an Assistant Secretary who, in addition to secretarial experience, has legal qualifications. Commencing salary £1,300 to £1,500, according to qualifications, but could be greater. Pension scheme. Age 30 to 35.—Please write, giving details of training and experience, to Box S.336, c/o Streets, 110 Old Broad Street, E.C.2.

A MEMO TO THE MANAGING DIRECTOR. More business and a better business awaits your executives if they have the use of a 1954 self-drive car. Lowest possible rates. Contract hire by arrangement. Free third party, fire and theft insurance. No maintenance costs. You can also take advantage of our guaranteed re-purchase scheme. Ask your secretary to write for our new brochure, which gives full details.—Autohall, Dept. 2-A, 302-306 King Street, London, W.6. RIV. 2881. Telegrams: Autohall, Wesphone, London. Cables: Autohall, London.

EXPORTERS require executive to handle on own initiative general merchandise, especially textiles, hosiery, underwear.—Box 862. THE Economists' Bookshop, 11-12, Clement's Inn Passage, London, W.C.2, invites you to submit lists of books on Economics, History and Social Services, you may wish to sell (periodicals excluded).

EXPERT POSTAL TUITION

For Examinations.—B.Sc.Econ., LL.B. and other external London University Degrees; Law Society; Bar; Accountancy; Banking; Secretarial; Civil Service; Commercial; General Certificate of Education, etc. Also many non-examination courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination (if any) or subjects in which interested, to the Secretary (G 9/2).

On taking din with your dinner

MANY PEOPLE will admit to a preference for the soft lights/sweet music type of atmosphere for their own meals. But consider what goes on in the works canteen. There, the scrape of the chairs, the clatter of cutlery, the tinnabulation of trays make their own noisy contribution to the lunch-time chatter. A lot of factory canteens are—let's face it—just a bit makeshift, so far as construction goes. A partition here, a little hardboard there and a corner is labelled "Works Canteen". Well, space is limited and such things must be, but the noise takes its toll in tempers and digestion, and edgy nerves affect productive efficiency. Ask the Works Doctor.

There are, however, answers, and simple ones at that. It's fairly easy to absorb much of the surplus noise by the application of

acoustic insulating materials to walls and ceilings, thereby preventing the reflection of unwanted sound. Newalls (Reg'd Brand) Paxtiles for instance, are one of the most widely used acoustic tiles available for this purpose and, what's more, they are decorative and easily fixed—normally without any interruption of the daily use of the area concerned. For irregular surfaces Newalls Sprayed 'Limpet' (Reg'd) Asbestos, which is applied by spray gun, adheres on impact and is, therefore, free to follow the shape of any surface to be treated.

Listen to the din in your canteen today and get in touch with us about making your works a less noisy place. You can expect economy-conscious suggestions to put matters right. Consultation is gladly offered and will cost you nothing.

ADVERTISEMENTS WORK VERY WELL INDEED
THE READER'S DIGEST

—a magazine strictly for reading, which has achieved a million sale. This means several million readers—responsive and intelligent people, men and women well worth selling

By Appointment to the late King George VI
Manufacturers of Land-Rovers
The Rover Co. Ltd.

It's revealing to drive a ROVER . . .

You'll be astonished at the way the car takes rough surfaces smoothly in its stride. Ruts and potholes seem almost non-existent as the car glides over them.

The Rover co-ordinated suspension system allows plenty of vertical road wheel movement, while spring tensions and shock absorber settings ensure a smooth ride. The central bearing to the propeller shaft checks 'whip' and vibration.

You'll enjoy having both pace and quiet at your command. Even at high speeds, engine and transmission noise has been reduced almost to vanishing point.

The special cylinder head design of Rover engines sets the Rover pace, whilst the extensive use of rubber pads and mountings, spraying with sound-absorbing material and heavy carpeting make the naturally quiet engine almost inaudible.

You'll appreciate the infinite care and thought that has been paid to the comfort of driver and passengers.

All passengers sit well within the wheelbase, with front seat adjustable for height and rake and wide centre arm rests front and rear. Heating, demisting, ventilating and draught-proofing are exceptionally efficient.

You'll feel confident even in the thickest and trickiest traffic, because a Rover is such a well-bred, obedient car to handle.

Direct central gear change with synchromesh on 2nd, 3rd and top, controlled free wheel for clutchless changes and well-planned dashboard layout make clumsy handling of a Rover practically impossible.

ROVER

Sixty • Seventy-Five • Ninety

Body and chassis are identical throughout the Rover range. However, three different engine sizes give motorists a made-to-measure service in which design and workmanship are uniformly high. New features common to all 1955 models include re-shaped luggage boot, larger rear window and flashing type direction indicators.

"Soonest", said the company secretary, "that means you'll be flying TWA, my lad... that means there won't be any need for you to change airlines between here and Los Angeles... you'll stay..."

... in TWA's good hands all the way. They do all the worrying about arranging through flights for you... their knowledge of America makes it easy for them... it'll save you a lot of time and trouble."

It did, too... as soon as I boarded their Constellation—they've got the largest fleet of them in the world—everyone in TWA seemed to be working for me... I was in a hurry...

... but TWA looked after me so well I nearly forgot how urgent the job was (better not tell James that). It's really wonderful what TWA's brand of comfort can do for one's morale... In fact...

... when I arrived at Los Angeles, I felt completely calm, collected and rarin' to go... good thing I was... James and I had a pretty hard selling job to do for those contracts we wanted.

Coming home? We knew exactly what we were going to do... as I told James, "Can't think why we ever flew any other way. Let's hurry back TWA—it'll give us time to relax".

For full details of daily TWA services from London to 60 U.S. cities and particulars of TWA's Air Travel Plan (for business travellers) or TWA's Time Pay Plan (for travel now and payment later), see your travel agent, or 'phone Trans World Airlines, 200 Piccadilly, W.1. An eye for Colour

A wide choice of near-white fluorescent tubes is available today. Each has its own particular field of application, each represents a suitable compromise between the conflicting claims of accurate colour rendering and high efficiency. An object is only revealed in its true colours when illuminated by a light containing those colours, and to give accurate colour rendering the light from a fluorescent tube has to contain a controlled proportion of all colours.

But the human eye is most sensitive to the central or yellow-green range of the spectrum, so that broadly speaking, the higher the proportion of light emitted in this region, the higher will be the efficiency of the tube. Shades of red or blue will not be shown to the best advantage, as the proportion of light of the other colours has been reduced.

Now, there are many industrial and commercial plants where high efficiency lighting is of much greater importance than accurate colour rendering. There are others where the matching of colours plays an essential part. The Osram range of fluorescent tubes has been carefully planned to cover every need, and to provide the highest possible efficiency with the colour rendering properties required.

A highly qualified lighting service is maintained by the G.E.C. and specialists are available at each of the Company's branches to advise you, not only on this question of colour and efficiency in your fluorescent installation, but also on any other lighting problem.

Fasten Seat Belts

IN this week's burst of speculation and comment on the prospect of an early general election it has been impossible to miss the note of relief and thankfulness that the wearisome uncertainty seems to be nearly over. It is also impossible not to echo it. The country—not merely the predatory young Tories—has been waiting for this; it seems inconceivable that the hour of departure can again be postponed for any sort of political engine-trouble. It has been increasingly clear since last autumn that the present Parliament has exhausted its usefulness, vitality and purpose; that the mandate of 1951 (such as it ever was) has completely run out; and that a new situation—new but not necessarily less difficult—faces the nation. Straightforward, honest-to-goodness electioneering, in place of electioneering disguised as day-to-day Government and Opposition, will be both a boon and an enjoyable change.

No doubt discussion is still in the realm of "chatter in the press." Nothing is definite until Sir Winston Churchill discloses his personal plans to the Queen, and the choice of the date of the general election will be formally his successor's—after he has succeeded. But hope is strong that Sir Anthony Eden has virtually decided that it must be either May 26th or June 16th; and though in the long run there may seem little to choose between them, the earlier date would keep the world guessing three weeks less. It would also give the incoming government three weeks more to get to grips with economic realities—and, although events are not moving nearly as fast as they were in the autumn of 1951, the less time wasted the better.

Either date is infinitely to be preferred to October. It may be a nice point whether Sir Winston is picking his time for retirement because Sir Anthony, and the Conservatives generally, now feel that they dare delay an election no longer; or whether the longed-for election at last becomes possible because Sir Winston has decided not to stay on. In either event the way is open for a prompt appeal to the electorate. The argument that Sir Anthony needs six months to work himself in as Prime Minister has little to recommend it; after all, he first started to work himself in as a Cabinet Minister twenty years ago. So far as seeing him in action goes, the public has been fully accustomed to the idea of him as the next Conservative Prime Minister, and its appreciation of his efforts as Foreign Secretary to ease world tension is perhaps his strongest card just now. From the purely electoral point of view, it was not Sir Anthony who—for whatever reason—failed to bring off a Big Three meeting; that goes for the minority who suspect, as well as for the majority who crave, such a meeting. It leaves Sir Anthony free to make what earnest undertakings to the public on this subject that he will. But he is not free to choose a run of good fortune for his first six months as Prime Minister in a tag-end Parliament, in which the bulky gap on the Government front bench would contribute

powerfully to the sense of anti-climax. A new setting, if it can be successfully contrived, would be much better for his debut.

Whether or not an early election is in Sir Anthony's best interest, it is certainly in the country's interest. Another six months like the last would be very dangerous. The most courageous decision of the period, and as it happens the latest, the raising of the Bank rate, points the moral: it is the sort of decision that may be required of a responsible Government in the months ahead—the sort of decision easy to take at the beginning of an electoral term, but hard towards the end. Intricate problems of financial policy are not likely to be wisely handled at a time when Labour may be gaining electoral points from its propaganda that the Tory boom is, if not burst (even in Lancashire hardly anybody has lost his job), on the point of bursting.

More typical than Bank rate of the pre-electoral atmosphere in which Parliament and nation are living have been the Government's piecemeal surrenders to sectional interests, to the pensioners, the railwaymen, and the farmers in turn. It is all too plain that the temptation to do something about Lancashire, where at least five Conservative seats are in jeopardy, is becoming irresistible. An October election would require that the budget should warm the electorate's heart all through the summer, whatever the holiday weather.

No doubt the choice of a spring election will not be made without misgivings among the Tories. Some will set the possibility of further (or renewed) demoralisa-

tion of their opponents against the hazards and exasperation of more delay. But their leaders must be presumed to believe they can win. The high water mark of the Government's economic fortunes was probably touched last October. Since then the tide has been on the turn, though the ebb may still be hardly perceptible. Something, however, has been done to convince the public that the cost of living has risen culpably; and that prosperity is not really prosperity when Mr Butler has to tinker with it. And Sir Winston has not brought back peace with honour from a top-level meeting with the Russians and Americans. How far all this has at last built up a tendency to vote against the Government is quite unknown.

On the other hand, it is important in everybody's interest to get an electoral verdict on the claim of a party as rent by schism as Labour to take over the Government. Though Labour almost confessed its incapacity by going to the country during the economic crisis of 1951, the Conservatives achieved their narrow majority more by picking up unattached Liberal votes than by drawing votes from Labour; even so they won only a minority of the total poll. A larger number of electors voted then for incapacity; are they prepared now to vote for disunity—which has been made more obvious, because more piteously papered over, by Mr Bevan's reprieve? This is, too, something that has to be put to the test. There is no question of a walk-over. This election has to settle some vital issues that can wait no longer. The country should be asked to settle them with no more hanging about.

Design For Disarmament

PRESIDENT EISENHOWER'S appointment of Mr Harold Stassen to a new cabinet post as Special Assistant on Disarmament should be accepted in the spirit in which it was obviously made. There is no question of reducing American determination and ability to meet the threat of Communist aggression; Mr Stassen's post is advisory, and his conclusions will require the "concurrence" of the National Security Council and the approval of the President before becoming "basic policy in questions of disarmament." He will nevertheless be responsible for taking into account "the full implications of new weapons," considering "future probabilities of armaments," and weighing "the views of the military, the civilians and officials" of the American and other governments. This is an attempt, at the heart of the American Administration, to give a very high priority to the problems which have grown up in the great thermo-nuclear shadow that has fallen across the present age. And, to anyone who recognises the personal character of the President, the attempt is no mere eyewash.

What can Mr Stassen do? And what should be his

aim? Mr Eisenhower gave it as one of the reasons for creating a special post in his cabinet to deal with disarmament that negotiations under the aegis of the United Nations had "again resulted in no progress." The special five-nation sub-committee of the UN Disarmament Commission—the United States, the Soviet Union, the United Kingdom, France and Canada—which has been meeting at Lancaster House since February 25th has in fact got nowhere. Few may have expected that it would; nor can this series of meetings be finally condemned until it comes to an end—which it has not yet done. But Mr Eisenhower has now confirmed what had been suspected for some time, that the slight Soviet amenability shown during last year's disarmament talks has entirely disappeared. Instead, the Russians are back to their parrot cry of "Ban the H-bomb" and to their demand that all nuclear weapons be destroyed, without any regard for the political realities.

It is not wholly coincidence that the decade in which mankind has reached the threshold of possible self-destruction should also have seen the emergence of the most potent threat of world domination in history.

Though the secret of the atom was cracked open in Hitler's war, Communist expansionism has since provided the spur to further discovery in the field of thermo-nuclear science. On the other hand, it is by no means the existence of Communism which in itself has produced the H-bomb. And it may be that, although the threat of Communist aggression makes the danger of thermo-nuclear annihilation real, a few years hence the Communists will be seen in fact to have missed the tide, to have arrived on the scene just too late to conquer the world by force before the H-bomb era made a general war impracticable. That, after all, is the implication, first, of the atomic umbrella which saved postwar Europe before the Nato build-up, and now of the present uneasy balance of H-bomb power for which Sir Winston Churchill recently prophesied another three or four years.

★

This background to Mr Stassen's appointment makes his new post at once peculiarly imaginative and realistic. For the dilemma of the West is acute. If the only way to achieve any kind of *modus vivendi* with the Communist empire is to be strong, how can disarmament ever become possible? Yet if the existence of the H-bomb in increasing quantities on both sides makes a general war in the old sense more and more impossible, as the recent British White Paper on Defence suggests, what is the point in spending the present vast sums on conventional armament? On the other hand, if possession of the H-bomb is the crucial factor, what contribution can any disarmament in conventional weapons make to world security? Can it lead in any way to real disarmament, that is to say to the scrapping or genuine international control of the H-bomb? These are problems that Mr Stassen and his office must now study. The aim must be to produce coherent logic out of a situation the implications of which are as confusing as they are appalling. For one thing is certain. The West must take disarmament seriously. Not only is there otherwise a seemingly endless vista of crippling expenditure ahead, but western public opinion will never remain firmly united behind government policy.

Even now the urgent political question of German rearmament is as critical as ever. The vote on the Paris agreements in the French Senate is not yet known. But, whatever happens in France or to Western European Union, the other western powers have rightly accepted the view that there can be no turning back on the decision to enable Germany to rearm. It is by no means the be-all and end-all of western policy, but an essential element in the strategy of the West.

In the Federal Republic itself, on the other hand, the Russians are already making inroads into Dr Adenauer's general support, with the argument that there can be no approach to disarmament by rearming Germany. And once the crucial stage of decision has been passed, so that Western Germany is on the road to rearmament either as part of Western European Union or within the

command structure of Nato, there will be much to be said for moving forward slowly. There are increasing signs that, for the Germans at any rate, the political and economic arguments against rearmament really have produced a climate of opinion in which rapid progress would be difficult. Dr Adenauer has adroitly picked up General Gruenther's point that the proposed German contribution to the Nato forces could and should make the difference between Western Germany becoming a battlefield or not. With it, a "forward strategy" is possible at Shape; without it, the front line must be based on the Rhine. But his need to do so emphasises the fact that the long-term desire for some more stable form of co-existence than an endless armaments race is a political force which cannot simply be ignored. And although Germany presents the most immediate problem, as well as the most practical challenge to western ideas, what is true of German opinion is also to be found reflected in one form or another throughout the free world. The fact of Mr Stassen's appointment, for instance, may even have a considerable propaganda value during the forthcoming Afro-Asian conference at Bandoeng.

★

There are, in fact, only three realistic choices open to the West. Led and sustained by the United States, the western nations can go on as at present with the stockpiling of H-bombs, with the development of the means to deliver them, and with a huge parallel expenditure on conventional weapons including tactical atomic equipment. This may be unavoidable, pragmatic, and a matter of common prudence, but there is so far no clear doctrine as to where it will end. A second alternative is to disarm unilaterally without equivalent Russian concessions. The case for somewhat reducing expenditure on conventional weapons may well now grow, as western military and political leaders become more familiar with the lessons of the thermo-nuclear age. But on the main issue, there is little more disposition among the western peoples to surrender to tyranny than there has ever been. This leaves only the third course of seizing every opportunity, while remaining on guard, to negotiate a settlement with the Russians and the Chinese. Moscow's apparent determination to move not an inch to meet the other participants at the London disarmament conference is an unhappy augury. But whatever the fate of Western European Union, some form of negotiated settlement with the Communist powers is the only long-term alternative to catastrophe. Some day it will be possible to negotiate a settlement without surrendering to them—or requiring them to surrender. As President Eisenhower has publicly emphasised in a new and significant statement this week, there should be a ceaseless probing to see whether that day is dawning.

This is not, it need hardly be said, a plea for an immediate meeting on the highest level—or on any level other than the accustomed planes of diplomacy. In

any case, when the long period of uncertainty about German rearmament has been brought to an end either by France's ratification or by its failure to ratify the Paris agreements, the prior need will not be a conference with the Russians but a review among the western powers themselves. Before they can deal with Moscow, they must know their own minds, decide what they can afford to let go, and determine what they most want to gain in the new range of circumstances that is arising. To rearm Germany was never an end in itself. It was always a means to an end, the peace and security of the free world. But, in order to attain it, recognition

must be given to the changes which have taken place since Mr Acheson first confronted Mr Bevin and M. Schuman with the prospect of German rearmament nearly five years ago. These changes have been scientific and military as well as political. And, if the free world is to win its struggle with the Communist bloc, it must show itself determined to do everything possible not only to live in strength with this monster, but genuinely to achieve disarmament and German unity as well. This, indeed, is the challenge which Mr Stassen's new appointment is rightly and sensibly designed to meet.

Local Elections for What?

THIS week two ripples are stirring the usually placid surface of English local government. The first bout of local campaigning which leads up to the county council elections between March 31st and April 6th is proceeding vigorously; and the Minister of Housing and Local Government, Mr Sandys, has made his long-awaited statement on local government reform. Both events have an important bearing upon the health of local democracy, and upon the efficiency of the vast array of public services for which it is responsible. But both are also symptoms of the disease with which local government is now beset. The real issues at local elections are being ignored because national politics have entered into them, and the real problems of local government structure are being ignored because national politicians want to keep away from them.

The present local elections are regarded by the party machines mainly as an opportune rehearsal for the general election that is to follow. The extent and the evil of this intrusion from the professionals can, admittedly, both be exaggerated. In the first place, independents still dominate most of the thousand-odd district councils as well as some of the more rural counties, while intelligent electors of the larger councils still appraise the records of individual candidates and sometimes split their votes. Secondly, the entry of party politics into the larger instruments of local government is not wholly bad, because it can bring about more coherent policies and a clearer focus of responsibility than the shifting factions of independents can achieve.

In general, however, the permeation of local government by highly partisan politics, backed up in the council chamber with increasingly tight discipline, is an obvious threat, not so much, as some people aver, to the system's best traditions, as to any clear thinking by the public about what the system is meant to do. The main issues in the local government elections, this time as last, revolve around housing, education, and public spending. But the issues are being discussed in terms of crude national slogans instead of local realities. The

parties vie with each other in manipulating statistics of housing and school construction, and in alleging extravagance or pleading the mounting benefits of social welfare. Meanwhile distinctive local issues—whether building is going up in the right places and with the right sort of balance between houses and flats, what kind of rent scheme would work best on council estates, how local traffic conditions might be improved, and how and where service costs might actually be reduced—are being largely ignored.

This year's manifestos for the elections for the London County Council have provided an almost ludicrous case in point. After 21 years of power, the Labour party is asking now for "the key of the door"—presumably to wield until it is superannuated, half a century hence. Despite Labour's considerable achievements in London, the Conservatives could this time find some excellent ammunition to use. Besides the dying embers of the civic restaurants' fiasco, there are several other services in which extravagance can be convincingly demonstrated—in particular the enormous weight of additional housing subsidies (i.e. those that fall on the local rates, not on national taxes) that are paid to keep tenants happy. There is also the fascinating question of comprehensive schools—an issue over which Labour is surely to be warmly applauded for trying an interesting experiment and roundly condemned for pushing it to the point of a destructive uniformity. Yet the weakness for dragging in national politics has put the Conservatives off their aim. It is absurd to compare—as their manifesto does compare—Mr Macmillan's national housing record with the falling output of the LCC, when the latter is due wholly to a shortage of sites for which (if anyone is to blame) it is the late Housing Minister; and to add a promise that more playing-fields will be secured inside the county—thus inevitably reducing the land for housing—makes the argument still sillier. It should be added that the manifestos produced by both sides for local elections outside London are certainly of no higher an order.

As far as the present elections are concerned, this concentration on irrelevant national issues is irrevocable. The outcome of these elections will depend solely on the national swing between the main parties—and, since the outgoing councillors were elected in 1952, that swing will almost certainly be sufficient to win the Conservatives a few seats. But is there any hope that future local elections might be fought on more relevant arguments? Is there any way in which either party could be given the incentive to formulate clearer ideas about the local problems that councillors are supposed to be elected to solve? To these questions there is a clear answer. The only way to get the parties interested in local problems is to get the voting public interested in them; and the first step—it would only be the first step—towards that would be to reform the structure of local government itself. The essential features of any such reform should be to ensure that any authority with large powers will also be large enough to set up an efficient organisation to manage them, and to clear up in the voter's mind the appalling confusion of councils that now exists. It is with these problems that Mr Sandys's statement on local government reform this week should have been concerned.

His statement contained one familiar and one novel feature. The familiar element was yet another plea for more time to study the thorny issues involved—which the Ministry has now enlarged by including a review of finance alongside that of areas and functions. The novel and surprising element was the announcement that the various local authority associations "have now agreed upon common proposals covering a number of the main issues upon which they had previously been divided." As the associations concerned have been fighting with each other for the last half-century, this agreement is a considerable achievement for Ministerial diplomacy.

Unfortunately, like most diplomatic triumphs, it is a compromise that will patch, instead of reconstruct, the present system. The agreement seems to be in three parts. First, and most remarkable, the associations have agreed upon new principles and procedures for determining which towns should be promoted to county borough status. (A county borough is one that has all the attributes of a county as well as of a borough, and which therefore forms no part of the surrounding county for any local government purpose; its citizens pay no rates to, and elect no members of, any other body than their own town council.) Secondly, there is to be a review of the distribution of functions between counties and county districts (that is, the smaller towns, or urban districts, and the rural districts); the intention is apparently that some of the more populous districts should get additional powers. Finally, the county district councils—after amalgamations of some of the

weaker brethren—will apparently also secure enhanced responsibilities through delegation schemes.

The nature of the resulting settlement may perhaps be hazarded. A very few towns—including some or all of the luckless trio of Ilford, Luton, and Poole who have again been asked to withdraw their private Bills—will become county boroughs. A number more will be mollified by receiving important direct powers which might cover part or all of the important fields of education, health, and welfare. The smaller authorities will get the palliative of acting as agents for the county councils on various matters. In return for these concessions, the position of the county councils will be safeguarded through the addition of rigid and restrictive rules about further changes. Action along these lines would remove some individual injustices and anomalies, and might place local government as a whole upon a steadier basis. Yet the basic weaknesses of the system would remain.

★

Indeed, in some respects the seeming palliatives would hinder the introduction of more basic remedies. Collectively there are already too many counties and county boroughs, and to add a few more (however individually justified) will do little good unless accompanied by the elimination of the weaker members and a drastic review of county areas—of which there seems little hope. Their elevation would be largely a reflection of the first fundamental dilemma of local government: although many existing county boroughs are too small to operate efficiently, it is impossible to take their powers away—and it thus becomes politically necessary to give county borough status to other towns that are slightly larger and could be slightly more effective. Again a greater use of delegation sounds sensible; yet in practice such schemes tend to be expensive and unsatisfactory to both parties. Their extension is really a way of dodging the second fundamental dilemma: should the smaller authorities be left to die a natural death or be amalgamated drastically enough—which would mean throwing in town with countryside—to be given worthwhile powers in their own right?

Mr Sandys is wrong in supposing that an agreement between the existing vested interests—however skilfully engineered—will ever provide an adequate formula for Government policy. Indeed the very effort to get agreement is liable to rob the ideas that were the original basis of discussion of their most promising features, such as schemes for providing integrated services for the large conurbations. One result may be that Greater London will again get left out of any interim settlement. More generally, however, the Minister should appreciate that a healthy local government is more than the sum of its parts; and that reform designed simply to satisfy existing interests is very likely to come away in his hands.

M. Poujade Goes to Town

LAST week the world saw the sad spectacle of a French Chamber of Deputies most of whose members seemed to be mesmerised by an uncouth demagogue sitting with his acolytes in the public gallery. The incident gave a striking illustration of French parliamentary weakness. Frenchmen know well that on many other occasions powerful lobbies and pressure groups have dictated the course of voting. Never, however, has the pressure been so undisguised as last week, when many right-wing deputies seemed to owe no other allegiance than to M. Poujade, the provincial bookseller turned leader of the shopkeepers' anti-tax rebellion. True, the government finally managed to survive and to postpone the fiscal battle to another day, but this delay was gained only after numerous retreats and after many deputies had "grovelled"—to use his own expression—before M. Poujade. When the leader of a mass movement can command parliamentary operations from the public gallery, order deputies about and then pour violent abuse on those guilty of "disobedience," he ceases to be an amusing example of French individualism. He becomes a menace to democracy.

It is no accident that Poujadism sprang up in central and south-western France and was, for a time, limited to those areas. These are France's underprivileged regions. In the south-west, for example, less than one-fifth of the working population is employed in industry and about three-fifths in agriculture, which is less efficient and profitable there than in most other parts of the country. This backward sector of France cannot help but feel acutely the growing pains of any period of competitive modernisation. Its poorer farmers, shopkeepers and artisans are those "marginal units" which in economic textbooks disappear for the good of the community. In French practice they have clung desperately to their jobs, helped partly by protection and partly by tax evasion, and often at a bare subsistence level. But today they can read the signs of doom. The good harvests of the last two years have done little to benefit the small, inefficient farmers, and for the shopkeepers the end of inflation has meant that they can no longer pass the burden of taxes on to the consumers. When the government decided last year to tighten its fiscal regulations, the showdown was near.

For many artisans and shopkeepers tax evasion was the only chance of survival. The government offensive left them with the alternative of bankruptcy or rebellion; to exploit these grievances was the chance of a Poujade. When the young bookseller from Saint-Céré realised that tax inspectors could be resisted and that such resistance would receive widespread tacit support, Poujadism was born. It spread like a bush-fire through France's impoverished regions. Its success attracted

many wealthier men, who until then had stood sceptically aloof. Could not resistance to tax inspection be used to conceal the profits of the rich as well as the meagre incomes of the inefficient? They climbed on the band wagon alongside the poor people with real grievances. The Loire, that traditional frontier between poorer and wealthier France, was crossed, and circumstances were propitious for further advances. M. Poujade could rely on the sympathy of the peasants who were discontented with falling agricultural prices. The anti-alcoholic laws of M. Mendès-France gave the movement the support of the influential beetroot growers. The funds grew, although their source was sometimes obscure. Committees were established throughout the country and at the close of last year M. Poujade claimed a million adherents. Critics granted him less than half that number—but this was still as many as the membership of the Communist party.

M. Poujade now felt confident enough to march on Paris. When the shopkeepers flocked to the capital earlier this year, outsiders were still amused. But when the *chef* packed the Velodrome d'Hiver—the Paris Harringay—with a bigger crowd than any political party could readily mobilise, they watched with greater concern. The technique was reminiscent of Germany in the 1930s. The leader climbed on to the rostrum only when the audience had been warmed up by his lieutenants. He offered no constructive remedies, no alternative sources of revenue. He merely appealed for lower taxes and the abolition of the hated controls and penalties. He called for a tax-strike and, in vaguer terms, for the non-payment of debts: "We shall close the taps until the government gives in." His language was as vulgar as it was colourful.

In spite of these insults, the *Palais Bourbon* was now within the scope of the provincial bookseller. With France on the eve of elections—for the local councils next month, for the Council of the Republic in the summer, and for the National Assembly next year—parliament was now very sensitive to pressure. The left was worried by M. Poujade's success in the traditionally radical regions, and the right discovered how attractive his slogans had become to middle class and peasant voters. So when M. Poujade presented the deputies with a questionnaire there was a rush to sign on the dotted line. The conservatives, Gaullists and a large number of Radicals became the parliamentary representatives of Poujadism. The Communists adopted an equivocal attitude. At least some of them, unable to learn from bitter experience, thought that

grievances could be usefully exploited and Poujadism transformed into an ante-chamber to the Communist party. Only the Socialist and Christian Democrat deputies have, on the whole, resisted his pressure.

Thus, the stage was set for last week's performance. At the head of a government dependent on the backing of M. Poujade's conservative supporters, M. Faure was forced to seek survival in compromise. He won a respite by promising to abolish the law authorising the closer inspection of books and the imposition of heavier penalties for fraud. Apparently the government now intends to launch a counter-attack. M. Poujade may have overreached himself and last week's antics may well have been the climax of his brief career. There is already talk of a counter-offensive by the urban taxpayers—the wage and salary earners—against the tax evaders. But even if M. Poujade himself falls, the consolation will be small if the price of his defeat is capitulation to Poujadism.

Admittedly the French fiscal system is inequitable, but Poujadism is not an attempt to distribute the burden more fairly. Indeed, if that were done, the poorer supporters of M. Poujade would be crushed and the richer would lose their windfall profits. In fact Poujadism is a reaction to the government's attempt—a timid enough attempt—to let economic forces take effect, that is to prevent tax evasion from being a shield to the inefficient. Growth and adaptation are always painful processes and the present unrest has shown that any attempt to disturb what has been called "the paradise of the inefficient" will meet with violent opposition from those who are affected. For a feeble executive there is therefore a strong temptation to let things slide.

On the face of it there has been a remarkable French economic recovery in the last two years. Superficial recovery, however, ought not to conceal the deep-seated causes of economic stagnation. The latest report of the Economic Commission for Europe gives a timely reminder of the slowness of French economic progress in the last half century. It shows that in the economic race France has failed to keep pace not merely with the two giants—the United States and the Soviet Union—but also with its two natural competitors, Britain and Germany. Sir Winston Churchill's reference to the "empty seat" in Europe, Mr Attlee's unexpected criticisms in the House of Commons and the revelations of what was said about France at Yalta have all rubbed salt into the wounds of French national pride. In their resentment some Frenchmen have even argued that France can restore its prestige only by brandishing an H-bomb. But if France is to regain its proper place on the international stage, its chief problem is not one of acquiring new weapons but of rapidly adapting its economy to the real conditions of the mid-twentieth century. And now above all this has to be done in the

face of resistance of the Poujadist type. It is one thing to crush a Poujade, quite another to dig out the roots of Poujadism. It has been judged politically impossible and socially unjust to let the French economy be modernised solely by the ruthless forces of the market. Only if the modernisation of agriculture in the backward parts of France is accompanied by a programme of industrial decentralisation, to create jobs for surplus labour, can the causes of Poujadism gradually be eliminated.

The French government is thus faced with the gigantic task of effecting a painless transition—or at least as painless a transition as possible—to a modern economy. Last week's tragi-comic performance leaves little hope that it will find the funds and authority necessary for the work. The eyes of the world have been fixed this week on the Council of the Republic to see whether France will accept German rearmament and keep its place in the West European Union. Yet in the long run France's position in the world may depend even more on its handling of the problem of Poujadism.

The Tax on the Press

There is nothing which experience has more clearly established than the futility of all attempts to conciliate the opposition of vested interests, when they become the objects of a liberal and enlightened legislation. They beat round the bush in the first instance, in the hope of finding some vulnerable point. If they succeed, they seize upon it, and direct all their opposition in relation thereto. If the promoters of the measure succeed in removing such objections, they are not a bit the more satisfied or appeased. Other objections are easily started. . . . If ever there was an example of this kind, it is now to be seen in the measure before Parliament for relieving the newspaper press of the tax of a penny stamp. . . . The measure now proposed by Sir Geo. C. Lewis . . . leaves the whole law and economy of the newspaper press exactly as it exists at the present moment, except that it relieves it entirely of the necessity of being stamped, preserving the option to be used only as the price for postal conveyance. But the moment one objection is removed, another and another is started. It is first of all contended that the measure will involve a loss of revenue. . . . And lastly, it is said, that as unstamped newspapers will be cheaper papers they will necessarily be worse papers, and that the character and influence of the press will be injured by being relieved of the penny tax. At first sight it may appear unaccountable that a trade subjected to a tax upon its production should object to its removal. But this is not new. It generally happens that those engaged in a trade, having themselves made arrangements in respect to existing restrictions, regard them in the light of a protection rather than, as they always really are, an impediment to their business. They dread their removal in apprehension of the new competition which will follow. Instances of this kind of a familiar kind readily present themselves. . . . When the repeal of the beer duty was proposed, it was not a favourite measure among brewers. . . . The last is the present effort of the proprietors of newspapers to maintain a tax upon their production—avowedly, as many of them have the candour to admit, to prevent a greater competition than now exists.

Notes of the Week

Tories on Manoeuvre

IT may be useful to set the rumours in their right chronological order. The first rumour that began to circulate in the corridors at Westminster was that the Prime Minister was about to retire because his party wanted to call an early general election. The "inside-out" rumour, that the Conservatives were debating fiercely whether they should call an early election now that the Prime Minister was about to retire, followed later. It still seems more likely that the first story held on to the right end of the stick. It is a reasonable guess that Sir Winston may have promised Sir Anthony some time ago that he would hand over the reins shortly before the poll, whenever that might be; and that Sir Anthony may have returned from his mission to the East determined that the poll should be brought forward—for Bank rate, brakes on hire purchase and backdoor convertibility must have given him poor breakfast table reading in Bangkok. The first stories of a summer election, indeed, began to circulate immediately after Sir Anthony's return to this country, and before the Bevan split in the Labour party; at that time they were associated with a report that the Cabinet wanted the Budget to be presented on March 29th, which the Treasury has found impossible for what may have been purely technical reasons.

If this is the right reading, then the die for a May or June election (probably a May one) is already cast. Most Conservative backbenchers are assuming that it is, and the thought has brought a sudden access of caution about the election's result. This caution is not based on disappointment about the probable reprieve of Mr Bevan; indeed, individual Tories claim to welcome this, for it gives them a chance to make play with the split, the marginal elector's bogeyman and Mr Attlee's leadership at the same time. But backbenchers from marginal seats are anxiously explaining that there are a lot of axes that the Government must grind for them in the remaining weeks of this Parliament's life. In this bustle of special pleading, the Lancashire Tories—with their requests for purchase tax reliefs on textiles and quotas on Indian imports—are very much to the fore.

Hot Chestnut from the Fire

MR ATTLEE'S anxiety to save Mr Bevan from expulsion will earn him applause from the left and in the centre of Labour's battle line, but it threatens incalculable harm to his party's future. When he pushed his compromise

motion through the National Executive this week, by the narrowest possible margin of 14 to 13, he found himself allied to all the Bevanites and the left-wing trade unionists; but opposed to all the right-wing leaders, including Mr Morrison and Mr Gaitskell. It is just possible—but only just—that Mr Attlee is showing Machiavellian cunning. As a result of Mr Attlee's motion, Mr Bevan is to appear before an eight-man committee, deputed to secure assurances from him of future good behaviour. Knowing the man, Mr Attlee may be hoping that Mr Bevan in such circumstances will prove his own executioner. But Mr Bevan will be extraordinarily foolish if he does. His tactics now may be to eat a little crow, concentrate his speeches in the next few weeks on domestic rather than foreign affairs, hope that Labour loses the election, and trust that this week's tiff between Mr Attlee and his lieutenants will fester in the months to come. His main fear must be that this week's unpleasantness may bring about Mr Attlee's early retirement, if the country refuses to return Labour to Downing Street; if that happened a nettled Mr Morrison might seize the first opportunity to draw the knife again from its sheath. But, apart from this danger, Mr Bevan now seems better placed than ever before in the struggle for the Labour leadership, which has always been his primary aim.

Unless he is being Machiavellian, Mr Attlee's action is presumably based on the belief that Labour is not bound to lose the election. He may think that few votes will be lost by his present willingness to become a national joke, and that many constituency battles might have been impaired—through sheer lack of organisation—if the average party worker had been too dispirited by Mr Bevan's expulsion to address an envelope. This may be true, but Mr Attlee has thought of it too late. The decisive moment in the whole affair was the Shadow Cabinet meeting, at which it was agreed to demand the withdrawal of the whip from Mr Bevan. By all accounts, even some of Mr Bevan's sternest critics on the Shadow Cabinet counselled caution; and if Mr Attlee had then shown the same energy that he seems to have exerted this week, he could probably have killed the idea of punitive action at birth.

Riddle of the Calendar

SEVENTEEN working days must elapse between the dissolution of a Parliament and a general election. How far will the fact that the Budget is not to be presented until April 19th make it difficult to call an election before the summer holidays? Inevitably, the easiest comparison is with 1929. In that year the Chancellor of the Exchequer, Mr Winston Churchill, presented his Budget on April 15th,

THE ECONOMIST, MARCH 26, 1955

at a time when the election was known to be imminent. Ten days later, on April 25th, Mr Baldwin announced that Parliament would be dissolved on May 10th and that the poll would be held on May 30th.

To make this timetable possible, the Finance Bill was divided into two parts. The first Bill contained the necessary clauses for protection of the revenue—such as continuation of the income tax—and three specific tax reductions; the most important of these, incidentally, was Mr Churchill's decision to bring down the price of tea by abolishing the duty upon it. The Bill was hurried through Parliament before the dissolution, with a full week to spare. The second Finance Bill contained Mr. Churchill's more technical and debatable proposals, including a small increase in the taxation on betting and a small decrease in the tax on traders in alcoholic liquor, both of which had managed to offend Nonconformist conscience. This second Bill was held over until after the election, and Mr Ramsay MacDonald's Labour Government (which was returned to office) did not proceed with it. For what it is worth, this experience suggests that a pre-election Budget need not necessarily be an uncomplicated or uncontroversial one.

It also suggests that, by this or some other device, the decks could probably be cleared for an election on Thursday, May 26th, which is one of the current favourites in the speculation stakes. The main objection to this date, apart from the Budget rush, is that the start of the general election campaign would then coincide with the close of the local election campaign (the polls for borough district and parish councils take place in the week of May 9th-14th); tired party organisers lay more emphasis on this disadvantage than individual MPs, who might quite like parts of their machines to be revved up at somebody else's expense. If May 26th does prove impossible, it would be very difficult to hold an election before Thursday, June 16th; the campaign for any election held between these two dates would have to rage through the Whitsun holiday (which is the weekend of May 28th-May 30th). After mid-June, wakes weeks, the hay harvest and ordinary holidays might lead to the absence of an inconvenient number of voters. At this writing, the odds, therefore, seem to be on May 26th or June 16th; there may be a slight preference for the former date.

Voices from Yalta

THE Prime Minister made a reasoned and sensible reply to a parliamentary question on Tuesday about the publication in the United States of the collection of documents on the Yalta Conference. But he said nothing to resolve two significant questions for the future. First, if the private meetings of statesmen are suddenly to be thrown open to the blinding glare of the public gaze, are there no means by which everyone can at least be enabled to see the same thing? Now that the American State Department has published its own version of what was said at Yalta, much of it in the form of unauthenticated notes made by individuals, the Foreign Office is considering publishing a British version. And no doubt the Russians are thinking up some special gloss of their own. So far they have merely plugged

the line that the American disclosures are intended to prevent any early conference between the Big Three, Four or Five—regardless of President Eisenhower's confirmation on Wednesday that the time is approaching for new "exploratory talks," and that, if it were worthwhile, he himself "would go anywhere."

Already American publication of documents on Potsdam is probably only a matter of time. And then no doubt there will be the Quebec, Teheran and Cairo conferences too. On future occasions of this sort, less mischief might be caused later on if representatives of those present sat down immediately afterwards and tried to agree on what exactly did happen. They might not see eye to eye, but at least their disagreements would be as interesting as their agreements. And they would certainly help to keep the record straight.

The other question on which Sir Winston Churchill made no observation was the proper length of time which should elapse before publication. At present the British and Americans are poles apart. The British still think in terms of half a century and like to obstruct all but chosen teams of historians until that time; the Americans tend to let historical documents leak like news. The best course lies somewhere between the two, and probably no inflexible rule should be laid down. But, in the light of the recent Yalta publication, two principles should be followed. The first is that anything which makes secret diplomacy more difficult is a bad thing. And the second that early publication should not be made if any one who was actually present has reasonable objections. With regard to the Yalta papers, Mr Dulles and the State Department are guilty on both counts.

The Saar Hurdle Still to Come

IN Bonn, Dr Adenauer has now steered the Paris treaties over the last parliamentary hurdle before the finishing post. On March 18th the Bundesrat rapidly approved the only part of the treaties which required its sanction—the agreement on German sovereignty—and rejected a Social-Democratic effort to set up a committee which would re-examine the Saar settlement, jointly with the Bundestag.

This, however, is not the end of the matter. The Social-Democrats have still another barrier to put up. By roping in Berlin deputies, whose qualification for the purpose is doubtful, they have managed to send a claim to the Constitutional Court, stating that the Saar treaty is unconstitutional. It is not certain whether the Court will examine the appeal, and still less, how it would pronounce upon it. If there is no interim injunction from the Court, President Heuss may soon put his signature to the treaties. At present he is holding his hand, and a favourable vote in the French Senate would probably encourage him to take this final step.

In the meantime, Dr Adenauer has tried to bring his interpretation of the Saar treaty into accord with the French. After sending an envoy to Paris, he has written to M. Pinay, laying down that political freedom is to be "total" but that activities before the peace treaty must not endanger the Saar Statute. This is squaring the circle, and it is left to the future European Commissioner in the Saar to see that the

operation is translated into practice. Other interpretations will be examined when M. Pinay meets Dr Adenauer after ratification is completed.

French Pact with Herr Hoffmann

IT would have helped Western European Union if the French, having secured an extraordinarily favourable agreement on the Saar, had now given plain proof that they would interpret its vaguer clauses generously. But the latest positive moves from Paris and Saarbrücken seem to show that M. Pinay's good intentions do not go so far. Admittedly the government has had to play up to the Senate during the ratification debate; but, after negotiations in Paris with the Saar premier, Herr Hoffmann, it has published the outline of a new Franco-Saarland convention, which makes bad reading in Bonn. The clauses in the draft Saar Statute which offered the Saarlanders and the Germans the hope of freer exchange of goods were ambiguous and obviously left loopholes for the French to keep the Saarland tightly in their control. They have now been clarified bilaterally between Herr Hoffmann and Paris, behind the backs of the Germans, and before the Statute is in force. And the provisions that have been made public seem to show that the French economic grip on the Saar has been reaffirmed, though some concessions have been made to Herr Hoffmann, and some imports from Germany may be increased.

Herr Hoffmann was anxious to have the pact settled and to secure greater advantages from the French with which to face the plebiscite and elections which take place after the Statute comes into force. He is said to have been stung by Dr Adenauer's argument in the *Bundestag*, that the Statute was the only chance of preventing the rule of Herr Hoffmann and M. Grandval, the French High Commissioner, from being perpetuated. Last week he threw another spanner into the creaking works. His party in the Saarbrücken government demanded that there must be a definitive interpretation of the whole Statute or it will not be accepted. In Bonn this *démarche* is thought to have had M. Grandval's approval. It can hardly be a help in smoothing out the existing difficulties.

Perplexing Wrexham

IT was obvious that Labour would hold its seat in the by-election among the miners and steelworkers of Wrexham, where memories of the depressed 1930s bite very deep. It was expected that the Welsh Nationalist would increase his share of the poll; Nationalists usually do fairly well in safe Labour seats at by-elections, when the choice of a government is not at stake. But the pattern of voting at Wrexham, on the day after Mr Bevan was driven out of the Parliamentary Labour Party, will have come as a mild shock to those Conservative optimists who have supposed that winning the approaching general election will be as easy as falling off King Log.

THE ECONOMIST, MARCH 26, 1955

Compared with the general election of 1951, the Welsh Nationalist increased his share of the poll by just under 7.7 per cent, of which a full 4 per cent was won from the Conservative and just under 3.7 per cent from Labour. The Nationalist was of the fairly extreme type, whose candidature would normally have been expected to draw more votes away from Labour than from the Tories. Nobody knew whether the Labour candidate was a Bevanite or not; he told questioners that his private opinions about an internal party quarrel were none of their business. After these replies—illogically certainly, typically just possibly—he not only won the by-election, but can justly claim to have gained a fractional swing to the left.

War on the Unborn

IT was entirely proper that the House of Commons should debate the genetic dangers of continued trials with thermonuclear bombs. But the outcome was not very illuminating, notwithstanding the self-congratulatory remarks of members on the non-party spirit displayed. If there is one thing worse than the disagreement of experts, it is the disagreement of laymen quoting experts on a scientific matter. Unless the Minister of Health, simply by virtue of his office and access to official scientists, is held to be the best authority, the man or woman in search of information comes out of the arguments where he or she went in. Nobody knows how unhealthy is the increase in radioactivity in the atmosphere; the Government hopes that it will be able to find out. There is every reason to expedite research, if that is possible. As was pointed out at the end of the debate, discussion centred upon the increase in radioactivity caused by 65 explosions in the last ten years. But presumably the hydrogen bomb explosions of the last eighteen months are by far the largest contributors. The question is: if atomic war is avoided, but three or four hydrogen bombs are let off yearly for the next ten years, will the further increase in radioactivity have the disastrous

THE ECONOMIST, MARCH 26, 1955

effects on human stock that the more pessimistic scientists say they will? It is an ironic thought that—even in testing the deterrent which will, it is hoped, prevent hot war breaking out—the powers may be able to destroy themselves just the same over a longer period (solving the population problem en route for those who worry so much about it).

The only constructive proposal that arose from the debate was Mr Nigel Birch's undertaking to give favourable consideration to the publication of a white paper containing an independent report by British scientists. The Opposition's request for a conference of scientists to which the Russians should be asked to send some of theirs was turned down on the grounds that it would queer the pitch for the forthcoming conference on peaceful uses of atomic energy, and that Russian scientists would not be impartial in any event. Presumably that goes for the Russian scientists who are coming to the other conference. Neither objection seems very sensible. The real problem for the Russian scientists, apparently, would be to dress up in scientific language for western consumption the morale-shaking view that atomic weapons promise to destroy mankind, and use the same facts in Russia to strengthen morale by proving that Communism would survive radioactivity even to the third and fourth generation. On balance, it would seem not unhelpful to test Russian powers of scientific doublespeak.

Guns in North Africa

DURING last week's debate on the French Finance Bill the Prime Minister, M. Edgar Faure, made the point that a third of France's security forces (*forces de l'ordre*) was now busy in North Africa. He might well have said "in Algeria and Morocco," for it is in those two territories that insecurity is greatest and depression weighs most heavily on the minds of all reasonable men.

In Algeria, physical unrest prevails only in limited areas—chiefly in and around the Berber district of the Aurès mountains where, whenever winter weather has permitted, military operations against rebels have been in process since November. This week the Faure cabinet has decreed a "state of urgency" for the whole territory, with powers to limit it to certain areas—a step less drastic than a "state of emergency," but which legitimises control over movement from place to place, and trial by military court for a given list of crimes. The object of the decree is to prevent waverers and recruits from joining the Aurès rebels. Maybe their ravages can be localised, but there is no localising the general wave of depression that has set in. All Moslems and most liberal Frenchmen are worried at the growing volume of evidence that, no matter how great Paris's will to implement a policy of equal opportunity for all French citizens irrespective of religion or race, actual progress is always baulked by the feudal French diehards, who own the local press and control enough votes in Paris to prevent any substantial changes in Algeria.

In the cities of Morocco, and Casablanca in particular, a similar degree of depression is discernible, but it is accompanied by a much greater degree of physical insecurity. As at one time in Chicago, gunmen are registering kills at the rate of about three a day. Moroccans are firing not only on Frenchmen, but on Moroccans loyal to France;

and now French killers are bumping off French policemen who try to curb black-and-tan French activities and are waging a war by tract, and threatening tract at that, upon Frenchmen of moderation. Their targets, as set out in their pamphlets, include the men who run the liberal newspaper *Maroc Presse*, and those who dare to belong to unmuzzled groups such as the *Conscience Française*. The Resident General, M. Lacoste, has proclaimed that this terrorisation must cease before "reforms" can be set on foot; but, so long as reforms remain promises, what incentive is there to stop shooting? This vicious circle, familiar enough in dependencies today, is exacerbated by partisanship, both in Morocco and in Paris, over the Sultan and the ex-Sultan. Compared with France's problem in Morocco, that in Tunisia (described in an article on page 1097) is simplicity itself.

New Look for Gatt

THERE is ample evidence in the White Paper released last Monday of the labours, the conflicts and the compromises, which kept several hundred officials from 34 countries in Geneva from late October until early March for the ninth session of Gatt. The changes which it discloses in the old Gatt agreement (summarised on page 1101) are generally in the direction of bringing the code of rules governing tariff and trade matters into line with actual practice. Thus it will henceforth be easier to make many countries, notably the United States, live up to the spirit as well as the letter of the law. The other chief novelty is the greater latitude in tariffs and trade restrictions now available under article 18 to underdeveloped countries and, to a lesser degree, developing countries, such as Australia. As against these improvements, there has been little tightening up of the rules on the use of artificial restrictions by countries in balance-of-payments difficulties, as the British delegation had originally proposed. Another disappointment is the comparative mildness of the provisions that have been added to Article 16, dealing with export subsidies.

The greater flexibility of the new Agreement and the increased numbers of escape clauses should be counter-balanced, however, by the emphasis on consultation in the revised version. Besides the creation of a permanent institution in the new OTC (Organisation for Trade Co-operation), which should ensure greater continuity and co-operation, there are a number of new clauses in the Agreement which oblige the contracting parties to consult either in advance or, if not, at some subsequent date, when resorting to certain specified actions. In addition to this, provision is now made for annual and biennial reviews by the OTC of the use being made of trade restrictions. Another gain is the greater stability of tariffs, which should result from the mandatory binding of tariffs for three-yearly periods and the written obligation to hold further multilateral negotiations from time to time. But there is no denying that the new Agreement is less "tight" than its predecessor; its success depends now more than ever on the loyal co-operation of its signatories. A good omen, therefore, is that the Americans were the first to sign. But the price that their partners in Gatt were willing to pay to secure it—American agricultural protection—will be money down

the drain if Congress, which still has the last word on the so-called organisational provisions including the setting up of the OTC, refuses to ratify the Agreement itself.

Mistakes in the Copyright Bill

THE Government's new Copyright Bill faithfully follows some of the recommendations of the Beard of Trade committee that reported two and a half years ago. A comprehensive Bill, presumably covering the committee's other recommendations, is being drafted.

The first purpose of the present interim measure is to enable Britain to participate in two international conventions which the Government has signed. They are conventions of very differing value. One of them, the Universal Copyright Convention of 1952, sponsored by Unesco, has been warmly welcomed in this country because it is the first international copyright convention to be ratified by the United States. Hitherto, British copyright owners have been unable to obtain full copyright protection for a book sold in America unless it is not only registered there, but printed from type set up there. The Americans have at last agreed to remove this restriction—which has always been peculiar to them—in favour of those countries that ratify the Unesco convention. There must be much more doubt, however, about the Government's decision to ratify the Brussels revision (made in 1948) of the Berne Convention. At the moment the general period of copyright in Britain runs for fifty years after an author's death; but any publisher can publish a book in the last twenty-five years of this period by paying the copyright owner royalties of 10 per cent—and many cheap issues have been brought out under this system. The Government can, however, accede to the Brussels revision only by revoking this provision of the Copyright Act of 1911 and thus giving the copyright owner an unqualified protection for fifty years after the author's death. This may well prevent a cheap edition of any works of Bernard Shaw from being published until the year 2000.

The other, and even more questionable, feature of the Bill is that the Government is setting up a new form of copyright. It is giving the BBC and the Independent Television Authority an exhibitor's right in anything televised, which means that the two bodies can charge a licence fee to third parties that give a public showing of the programme. The purpose of this provision is to enable the BBC and the ITA to obtain some revenue to compensate promoters of sporting events who allow matches and races to be televised. But it means, as Opposition speakers in the Lords debate were quick to point out, that boarding house and hotel keepers who provide "television in the lounge" as an amenity for their guests will infringe the copyright if they do not obtain a licence. The Bill is also bound to strengthen the position of the actors' and musicians' unions, who will use their bargaining powers with the BBC to compel it to refuse a licence to a hotel—or village hall—that could in their view employ live entertainers or musicians. Copyright protection for an original work is one thing. But in the case of mechanical reproduction of these works, such as gramophone records, it has already gone too far, and the Government's proposal would extend it beyond all reason.

The Lonely Old

OLD age has always been a problem—mainly for the old, but partly for the young. The increase in longevity and the decline in the size of the family are now producing more old people than the young have tolerance and chimney-corners for. Lord Beveridge rightly emphasised this aspect of the problem in the House of Lords this week; and as the number of people of pensionable age rises from the 7 million of to-day to the 9½ million of 1979, the problem will become more noticeable. It is not, or it need not be, solely an economic problem; the difficulty is that the cost of certain things which they vitally need—personal services, in particular—is likely to rise faster than the cost of nourishing food, heat and light, entertainment or even suitable accommodation which can be truly dignified with the title of "home."

Here and now, there is the real difficulty of 1½ million pensioners who need national assistance; there is also the problem of rising prices. But the future of old age is more accurately summed up in the figure which Lord Beveridge gave of one million elderly people living by themselves—1 in 7 of the old. This proportion will tend to increase, and the problem will be to enable the old to live by themselves and look after each other, up to the point where hospital care is needed. Even now, Lord Beveridge indicated that, while there are 7 million old people, there are only 30,000 whole time and part time home helps, which is far short of the proportion of old people who need them. His suggestion of "half way homes"—arrangements for the elderly and frail that would fall short of full hospital care—is already being explored by voluntary effort; and a recent circular from the Ministry of Health to local welfare authorities emphasised the importance of homes for the infirm among the many residential homes for the old that are being provided, and asked them to encourage old people to bring in their own furniture with them.

It is obvious that the amount of manpower that can be diverted to the care of the aged is limited. One way of mitigating the problem is to enable the old to work longer themselves. The other must be so to organise the physical environment of retirement that what help there is can be made to go further. Lord Beveridge suggested that there was good business here for the insurance industry. But an increasing population of old people, preserved by an ever more efficient science of medicine, must face the fact that the real scarcity may lie not in drugs or diets or hospital beds but in people to lift and carry. More will be heard of this problem—and of the growing actuarial risk to the elderly of death by neglect.

Sweden's Lifeline to the West

OF all the neutrals, Sweden follows perhaps the straightest and narrowest path in its foreign policy. Some embarrassing questions, however, are raised for Swedes by the scheme to create closer economic links between central Sweden and the Norwegian port of

Babaçu oil is but one of many curious commodities to be observed on the list of Britain's imports from Brazil. Its uses are perhaps less exotic than its name suggests, for the oil from the nut of the babaçu palm is one of the raw materials from which soap and certain foodstuffs can be made. Although it is not among the most important products of Latin America, you will find babaçu mentioned in the commodity market reports in the *Fortnightly Review*, published by the Bank of London and South America.

This publication is an invaluable guide for all who wish to enter Latin American markets, whether as buyers or as sellers, for it summarizes the latest reports on trading trends, import regulations and exchange control, received from our 51 branches in South and Central America. We shall be glad to send you a specimen copy, on application to:—

SHREDS OF EVIDENCE...

But evidence of what? Some happening, back in geological time, left behind this strange material, with its long, thin, hairlike fibres; but, so far, the fibres have kept their secret. Their present usefulness, however—a usefulness which springs directly from this unique, fibrous composition—is no mystery at all. There is scarcely a branch of industry which does not make use of Asbestos in one form or another, either for its remarkable resistance to heat, or for its other highly distinctive properties. Asbestos, we suggest, is a material well worth looking into.

AIRCRAFT v SUBMARINE

IN THE EARLY YEARS of the last war the submarine demonstrated its power: the attrition of supply fleets was enormous. Yet whilst the necessity to keep our sea lanes of supply open remains as vital today as ever, by modern standards the last-war submarines were slow, short-ranged and fought with crude weapons. Ocean going submarines today displace some 1,500 tons, have crossed the Atlantic and Pacific without surfacing and are capable of speeds in excess of 20 knots whilst submerged. They can dive to greater depths in a shorter time, and carry acoustic and sinuous trajectory long-range torpedoes and various novel offensive and defensive homing weapons, some of which may be released whilst submerged, rise to the surface, take to the air and home onto an attacking aircraft with the speed of a shell.

But comparably with the advance of submarine development, the effectiveness of anti-submarine aircraft has also greatly improved since the war. Modern centimetric radar can get an echo from the body of a submarine's snorkel breathing tube, small though it is. Magnetic airborne detection equipment can discern the presence of a submerged submarine from the local change its hull makes to the earth's magnetic field. The sonobuoy is a float that can be dropped from the air and when it reaches the surface it lowers a microphone and listens. The transmitted recordings from a battery of sonobuoys dropped near the submarine can be used to plot its under-water track. Another detection method of particular use with helicopters is Dipping Asdic. Once the speed and heading are known the submarine can be attacked from the air using a number of different types of projectile. One method is to lay down a barrage of small mines which sink and explode on contact. Any one that touches the hull can blow a hole in it big enough to be fatal. Depth charges can be used. There is also a type of guided weapon that can both fly and propel itself under-water to find its way to the submarine by the shortest air and sea route. The electronic guidance system in missiles from the submarine that rise up out of the sea to attack the aircraft can be jammed from the air or if they use a proximity fuse the mechanism can be pre-detonated harmlessly.

There are three classes of anti-submarine aircraft: (i) the long range landplane able to span the Atlantic from bases on either side; (ii) the carrier-based patrol aircraft for certain remote areas in the Pacific and for standing patrols over convoys; and (iii) the medium or large sized helicopter operating from merchant ships or naval escort vessels. At Bristol we are concerned with the first and last of these categories: a maritime reconnaissance version of our Britannia airliner is being built for the Royal Canadian Air Force by Canadair Limited in Montreal, and we have a large production programme for twin-engined twin-rotor helicopters capable of carrying the various special detection equipment and offensive weapons required for modern anti-submarine warfare.

THE BRISTOL AEROPLANE COMPANY LIMITED

221P

Trondheim. Committees of experts appointed by each government have just reported in favour of three projects, and it is thought that by the summer or autumn the Swedish *Riksdag* will have given its approval in principle and that the first funds will have been allotted. The Norwegian parliament is not expected to cause any delay. It is proposed to build a good road, at a cost of nearly £2 million, over the mountains between Trondheim and the Swedish province of Jamtland; to cut the tariffs on traffic carried over the existing railway; and—most important of all—to construct a harbour for tankers in Trondheim fiord, complete with oil storage tanks built into the mountainside, which would be owned and run by a Swedish company. Once approval is given, the work will take about three years to complete.

There are good economic arguments behind the plan. It will mean lower transport costs for industry in central and northern Sweden, and will revive the historic link between Jamtland and central Norway. But the Swedes admit that one of their main motives is to provide themselves with a

safer supply line for their vital imports, especially oil, in case of war. Sweden's own ports along the Kattegat in the south-west are very vulnerable to blockade, mine-laying and atomic attack; Trondheim fiord stands a much better chance of staying open to shipping. If a war comes—in which Norway, as a

member of Nato, will almost certainly be involved—the Swedes will have to take some delicate decisions. It is already being suggested in Sweden that escorts will have to be provided for Swedish ships using Trondheim harbour. And what of the protection of Swedish installations along Trondheim fiord—and of the oil pipeline over the frontier which, though not one of the present recommendations, is still under consideration and may be built later? The Swedes reject any suggestion that they are compromising their neutrality, and no doubt they will make this clear to Mr Gromyko; but if they put so much value on this lifeline to the West they are bound to consider what steps they might have to take to keep it secure.

Mr Hatoyama Slows Down

AMONG the several particularly interesting aspects of the Afro-Asian conference in Bandoeng during April will be the fact that the new Japan will be making something of a debut. After some hesitation, Mr Hatoyama accepted the invitation on behalf of his country shortly before the recent elections. And now that he has been re-elected prime minister—in the Diet a week ago—it will be for him and his new cabinet to decide on the line that Japan will follow in Bandoeng. What this will be is not yet clear. But two

pointers suggest that it may not be as favourable to the Communists as at one time seemed probable. The first is that Mr Shigemitsu has been reappointed foreign minister, in spite of his many reservations about the interest Mr Hatoyama has lately shown in closer dealings with China and Russia. The second is that one of the new government's first acts has been to arrange to send a special envoy to Washington to reassure the United States on Japanese aims.

Although Mr Hatoyama won a striking electoral victory by appealing to Japanese desires for more normal relations with the mainland, he appears to have been less successful in the Diet. There he has failed to draw the Liberals into partnership with him, and he is opposed by a formidable combination of Liberals and Socialists. This makes his position much less secure than had generally been expected, and he failed in fact to prevent the election of a Liberal as Speaker, with a Socialist as Vice-Speaker. The consequences for Japanese foreign policy may be mixed, but they are unlikely to be wholly bad. In so far as the Hatoyama government is now in no position to pursue too dramatic a line abroad, there will be a tendency to revert to something akin to the well-established relationship with the United States. If so, the Japanese role at Bandoeng, whether by design or not, may well be to act as the major interpreter of American views in Asia. And, while this by no means rules out any steps towards a peace treaty with Russia and China, it does accord with the essential facts of Japan's position as well as the genuine needs of Asian politics.

Young Technicians

THE headmasters of secondary technical schools, who recently held their annual conference, represent only a small fraction of state secondary education. There are only 300 of these schools with 90,000 pupils, or about one in twenty of those in the secondary schools. But it is an important fraction, as the headmasters could justly claim, at a time when industry is crying out for good technicians and technologists.

The technical schools could ease the shortage of technical graduates in two ways. One would be by actually producing them—although this is a task for the future, since only a few technical school pupils at present go to universities. The other way would be by making it possible to use graduate technologists and scientists more economically. At the best technical schools the abler pupils usually pass on to a technical college, equip themselves with a Higher National Certificate and go into industry as technicians. If employers are to economise in the use of scientists (as the Federation of British Industries recently asked them to do) they must employ good technicians in some of the jobs hitherto done by graduates.

In order to play their full part in this process, the technical schools need to develop in both quantity and quality. The quantity is being increased by 85 new schools built, building or planned. The need for them is not evenly spread. Boys' technical schools require some flourishing industry to which they can be linked, and a large catchment area, so that a big school population can make it worthwhile to install expensive machinery and to employ highly skilled staff. The need for better quality also varies from place to place. Some technical schools

aim at nothing higher than, say, a builder's foreman, while others already give excellent courses in various kinds of engineering. The key to better quality lies partly in equipment, but chiefly in selection at the age of eleven. Over half the children in these schools were transferred, usually from modern schools, at the age of thirteen. If more technical schools are to develop sixth forms they must have children who are bright enough to have done well at a grammar school, yet also show talents of a practical kind. And if they are to attract such children they must convince parents that, in addition to vocational opportunities, they also offer a sound, general education.

Prince of His Church

THE fight between the Vatican and Cardinal Segura, the Archbishop of Seville, is moving into the open. Early last November the Vatican appointed Msgr Bueno y Monreal to be Coadjutor to Cardinal Segura, with the right of succession. The Vatican had hoped that Cardinal Segura would relinquish his administrative powers and retire to a monastery. But in true Renaissance style the prelate has refused to budge, and he now appears to be involved in a violent pamphleteering campaign against members of the Holy See and a former Papal Nuncio to Spain. Supporters of Cardinal Segura, among them the celebrated Countess Ibarra, claim that the Archbishop has been the victim of Roman intrigue, and that he is perfectly qualified to carry on his diocesan duties. True, he is seventy-three, but "what matters 73 for those who belong to the venerable

College of Cardinals! The Holy Father is nearing 80 and Cardinal Tedeschi is already of that age."

Behind these developments lies a long feud between Cardinal Segura and the rest of the world. Although he was exiled by the Republicans, he has also constantly sniped at the Franco regime. He finds its programme of social reform inadequate and dangerously secular. He sees in the Madrid-Washington pact the re-admittance into Spain of heresy and irreligion. And as Archbishop of Seville, the holiest of Spanish cities, he regards the presence of Protestant chaplains on Spanish soil as intolerable. It is not even certain whether Cardinal Segura favours the restoration of a monarchy based on the removal of the legitimate claimant, Don Juan, and on the moulding of young Don Carlos in the image of the Franco state.

For a long time the Vatican remained strictly neutral, and sought to balance liberal elements in the Spanish Church, particularly Msgr Herrera of Malaga, against Cardinal Segura. But last year it chose to support General Franco against the Cardinal's extremism. In particular, it promised to place the See of Seville in more docile hands. There may be a good deal more ecclesiastical acrimony before that promise is carried out.

Russian Trade in Reverse

SEVERAL million pounds worth of last year's Soviet orders with British firms now look like falling through as a result of a sudden unexplained shift in Russian buying policy. In some cases definite orders have been cancelled, the Russians submitting voluntarily to the penalties stipulated in the agreements; in others the Soviet authorities have announced their intention of not taking up orders covered by letters of intent; and there are a few instances where the position is unclear and the firms concerned are still seeking clarification from Moscow. This blow to British exporters will particularly affect those firms which had tooled up in special anticipation of the Russian orders continuing.

The main reason for the cancellations is probably to be found in the internal changes inside the Soviet Union itself. Most of the abandoned orders are for consumer goods or for machinery used in consumer goods industries, and it may be assumed that, with the switch-back to heavy industry, the departments responsible have had their foreign exchange budgets trimmed. On the other hand, the recent adverse trend of the Soviet bloc's balance of payments with the outside world would sooner or later have necessitated further sales of gold anyway. And the Russians, with the support of their faithful apologists abroad, will now no doubt try to make the best of a bad job by foisting the blame for their action on western policies in general, including the London and Paris Agreements on German rearmament.

The episode is remarkable, nevertheless, in that the Russians have apparently been willing to smirch what has hitherto been an almost spotless trading reputation. Once a contract has been signed they have normally been scrupulous in sticking to it, at least in dealing with British firms. It is ironical, moreover, that this reversal of policy comes at the very moment when the Russian delegate at the current meeting of the Economic Commission for Europe in Geneva

has been putting all the blame for the relatively low level of East-West trade on the West's controls on strategic exports. The incident underlines the fact that business with Communist countries always involves a special risk.

Japan Looks for Communist Trade

A NEW drive to increase Japan's trade with China and the Soviet Union is a certain outcome of Mr Hatoyama's election success. During the campaign both the Prime Minister and, in a lesser key, his Foreign Minister, Mr Shigemitsu, harped on the theme of trade and thereby won the support of powerful business interests who want to see a more vigorous approach to this problem. Recently Tokyo has given official support to a private trade mission to Peking, and preparations are in hand for a return visit in the near future by a Communist trade delegation.

Japan's desire to widen its economic contacts with its Communist neighbours is understandable. The loss of markets and important sources of supply on the mainland has been a crippling blow to the Japanese economy. But it is unlikely that, in present circumstances or indeed in any probable future circumstances, trade between Japan and the mainland could approach its prewar levels. On the one hand, China's industrialisation drive, its closer economic links with the Soviet Union, and its own rapidly

growing population have absorbed practically all the former surpluses of coal and iron, together with the agricultural products that used to be exported to Japan. On the other, Peking's planners show no enthusiasm for Japan's consumer goods. They would like to buy capital goods, but the Japanese are bound by their international obligations in COCOM (the committee co-ordinating the control of strategic exports) to limit the export of certain strategic machines and materials.

In spite of the obvious limitations of China's foreign buying power, pressure has been mounting in Japan to secure a further relaxation of the embargo. This move has been encouraged by the Communist-inspired Council for the Promotion of International Trade (CPIT), which was set up in Moscow after the Economic Conference there in 1952 and has branches all over the world. Recently the British Embassy in Tokyo was forced to issue a firm denial of a misleading statement concerning the operations of COCOM put out by an official of the British branch of this organisation, who used the occasion of his visit to Japan to sow mischief. It is not surprising, therefore, that American officials in Japan are unhappy about the exaggerated attention the new Japanese government is giving to increasing trade with Communist countries, and about the encouragement it is receiving from Communist-inspired organisations in the West through the CPIT. The Chinese will certainly do all they can to exploit Japanese desires in their own interest. If Mr Hatoyama is determined to sup with the devil, he should take care to provide himself with a long spoon.

UNEMPLOYMENT IN GREAT BRITAIN THOUSANDS

Letters to the Editor

The Done Thing

SIR—In his kindly notice of my book, "The Social Foundations of Wage Policy," in your issue of March 19th, your reviewer appears at one point to have misread my proposals. The mistake is in one way flattering, since it would seem to imply my identification, if not with the late George Bernard Shaw, at least with the intelligent woman to whom Shaw addressed his plan for complete equality of income. But mistake it is.

Your reviewer takes me to task for not asking myself "what a truly equalitarian society—a £14-a-week-average-minimum-and-maximum-in-one society—would actually be like." I have not done so, because neither in this book nor anywhere else have I suggested that equalising policies should be carried to such lengths. If your reviewer will be good enough to turn to page 177 of my book, he will find a formula which I have suggested as illustrative of the kind of wage policy which seems to me desir-

able at the present time. It reads as follows:

priority to all advances in the under £8 a week class; increases in, say, the £800-£1,000 a year range normally to be tapered; further tapering above £2,500; no advances over £5,000.

This formula could not ever produce equality in the region of £14 a week. It might, I suppose, if carried to its ultimate mathematical conclusion eventually result in levelling everyone up to £5,000 per annum if that is the standstill figure, and everything below comes up at varying rates! But that possibility is too remote to be worth discussing. In any case, as I have said in their context, the figures are purely illustrative and not to be interpreted rigidly. The substantial issue is whether we wish to increase or to diminish present inequalities. The scale of these differences being what it is, we could follow the second course a very long way without risk of fetching up in a Shavian Utopia—Yours faithfully, London, S.W.6 BARBARA WOOTTON

Negotiating from Sense

SIR—Your conclusion (February 26th) is that the Communists' objective is nothing less than "domination of a Eurasia uncluttered by American presence or American power." As against this, the Western Alliance might put as its objective a Eurasia uncluttered—outside the boundaries of pre-1939 Soviet Russia—by Russian presence or Russian power. To state these objectives is to admit that there can be no solution except by war. We must therefore find a compromise which is acceptable to both sides.

It is essential to begin by compromising on small points or, shall we say, in this case, over a small area. Let us take a line drawn north and south through Berlin at the "waist" of Europe, with the western salient of Czechoslovakia compensated by a similar eastern salient for the western zones of Austria (roughly equivalent to the Iron Curtain boundary) as a point of departure, not because it is ideal but because it is near the reality of the situation. Would it not be possible, borrowing a term from the not-so-distant past, to create a "cordon sanitaire" of a given width—say a few hundred miles—on either side of this line, inside which there would be no Soviet Russian nor Anglo-American military installations except radar and local defence? Inside this area of agreed strengths and equipment,

and here is the *sine qua non* of the thought, an attempt could be made to practise mutual inspection and control of armaments.

It will be said that this would be valueless in itself because aggression can originate and a blow can be delivered at vast distances nowadays. My reply is that the principal value of this proposal would be as a testing ground of the possibility and practicability of mutual supervision and inspection which we are rightly so anxious to enforce, and its secondary value would be to make the possibility of surprise attack, at least by conventional armaments, just that much more remote.—Yours faithfully,

JOHN ALEXANDER

Rome

Price Maintenance

SIR—Mr Brooks asserts that trade associations do not maintain prices so high as to cover the least efficient traders. If this is so, maintained prices afford no protection against competition, and he must explain why traders are so foolish as to pay subscriptions to trade associations. Why, too, he may be asked, are small traders—on the whole less efficient, as your own study of the Census shows—always more vocal in these bodies than large ones?

Frankly, it is not possible to believe Mr Brooks, nor even to guess on what kind of evidence he could base so wide an assertion. Perhaps he means only that the high costs of the least efficient trader of all are—for very shame—not taken into account? This may well be, but what about the average firm? Surely the whole *raison d'être* of trade associations is to protect the average from the best. It is both easy and proper to define "least efficient" as including "averagely efficient."—Yours faithfully,

New College, Oxford P. J. D. WILES

Growing Productivity of Capital

SIR—In your commentary upon Mr Colin Clark's broadcast talk on "The Declining Importance of Capital," you accepted his view that as industrialisation proceeds, the marginal efficiency of capital resources employed tends to rise more than proportionally. You pithily expressed your disagreement with his inferences by saying "he sometimes seems to be standing on his head." However, it is with your agreement rather than your disagreements I would deal. What makes it possible for the marginal efficiency of capital to rise progressively as industrialisation proceeds? Partly the fact that whereas in the early stages invested capital results in machines to displace labour-functions, in the later stages invested capital results in machines to displace machines. In

the early stages the labour-force per unit of capital investment tends to increase, in the later stages it tends to decline, but to become more highly specialised. Partly it is this increasing specialised skill of the labour-force which makes possible increasing output with decreased capital investment. Consider, for instance, a unit of labour-power used to operate the waterframe in the nineteenth century with a unit of labour-power used to operate an electronics machine. Or consider the respective qualities of the inventors of the waterframe and an electronics machine.

Assuredly the continuous improvement of the personnel of industry, trade and commerce over time is an important factor in the rising marginal efficiency of capital. For that reason ought not the cost of that improvement in terms of pounds, shillings and pence to be included in the total of national investment? Besides the national expenditure upon education, the cost of the health services ought also to be included, inasmuch as it cannot be denied that a healthy worker is more productive than one suffering ill-health. I suggest that if the term "investment" is widened to include all expenditures that contribute to the productive efficiency of the nation, it will be found that so far from declining, it is steadily rising. What is undoubtedly declining (relative to output) is investment for private profit or interest.—Yours faithfully,

Bargoed, Glamorgan

J. B. JONES

Graphs or Tables?

SIR—I have long wondered why you have fallen for the fashion of presenting statistics graphically instead of tabulating them. You confine this practice, it is true, to the lighter and more frivolous two-thirds of *The Economist*, but even those who explore no further scarcely deserve methods of representation designed to instruct the semi-literate.

I wanted to note the changes in the circulation of some London dailies given on p. 892 of your issue of March 12th. If you had tabulated the figures to the nearest thousand (or 50,000) for each paper in 1925, 1937 or 1954, instead of drawing columns of different shades, I for one should have got what I wanted in a form which to me is far clearer. One cannot talk in shaded columns; one quotes approximate figures, and one likes them to be accurate, not guesses at the right translation.

I fancy a majority of your readers may well feel as I do, and I write this letter in the hope of eliciting their views. Is what began as an aid to popular education now regarded as a decorative art existing for its own sake? Is it even becoming someone's vested interest?—Yours faithfully,

Maidstone

W. A. CLAYDON

Turkey's Economic Troubles

SIR—It is to be feared that Turkey's economic troubles are fully as great as your article of January 22nd indicates. The trade deficit has been seriously increased because the cost of Turkish products is out of step with world values by reason of the depreciation of the currency and the consequent increased cost of production. The restrictions on imports now threaten a breakdown in production and activity in many directions. Wholesale prices and the cost of living are getting beyond control, and shortages and hoarding are having a serious effect.

Turkey has indeed made great strides in recent times, but it is questionable whether the effort will yield the rewards expected as smoothly as was hoped for. The great progress made in public works and industry should in the long run serve the country's interests.

But much material has to be imported and it is becoming increasingly evident that neither the Turks' capacity for long hours and hard work, nor the wealth derived from the soil, richly endowed as it is by nature, are great enough to pay for so much that the country has not so far been able to produce itself and is not likely to be able to produce for a long time. The roads throughout the country now carry immensely increased loads. Trucks, buses, cars and tractors may now be counted by tens of thousands where only trains, carts, camels and oxen operated before. Moreover, public works and industrial enterprises must also import virtually all their equipment. Until these enterprises become fully productive the strain on the country's resources must be great.

Turkey is going through the unprecedented process of intensive modernisation, but only time will tell whether all has been wisely conceived and timed to achieve the calculated end without too much difficulty and the sacrifices and hardships which now loom ahead.—Yours faithfully,

E. H. GIRAUD

Izmir, Turkey

Paying for Brains

SIR—Two American firms advertised in your issue of March 5th for qualified and experienced Englishmen to go and work in America: one firm wants several electronics engineers, the other a market research executive.

The payment for brains in this country has not kept pace since the war with that for organised labour; behind this there seems to have been some vague but misguided social purpose. International competition for British brains will now restore the balance, and they will all emigrate in the process—unless British employers are prepared to pay brains their worth and to give them satisfying scope and conditions.—Yours faithfully,

MARTIN MADDAN

West Malling, Kent

Starch does surprising things

IN SUCH SURPRISING PLACES

Example:

STARCH IN EXPLOSIVES AND FIREWORKS

The word 'Cornflour'—coined by Brown & Polson in 1854—is more readily associated with culinary than with military arts. Starch is, nevertheless, used in many ways by manufacturers of explosives. Starch nitrate, for instance, has been used as an active ingredient in demolition charges. More important is the wide use of starch itself as a filler to give weight to nitroglycerine in dynamite. In fireworks, quite apart from the large quantities of dextrine used in the paper wrappings, starch is used as a binder for the explosive and sparkling materials and also to control the rate of combustion. Corn Products Company Limited, the Industrial

Division of Brown & Polson, produce all the various forms of starch required for the manufacture of explosives ranging from dynamite to catherine wheels.

Brown & Polson Industrial Division produce 200,000 tons of starch products a year: more than 400 different products, which are helping more than 80 different industries to reduce production costs, to make better products, or even to make products that could not otherwise be made at all. We have spent more than 100 years in building up this large and varied business. We have learnt a lot about the industrial uses of starch products, and our advice is freely at your disposal.

CAN STARCH HELP YOU?

When you read in these advertisements how starch products are helping other industries you may see new possibilities of turning them to account in your own business. We shall be glad to discuss them with you.

Lands of Spices

QATABAN AND SHEBA.
By Wendell Phillips.
Gollancz. 335 pages. 21s.

THIS exciting book has two main ingredients, the zest of its brash author and the immense interest of the archaeological discoveries that it describes.

Dr Wendell Phillips is a young man equipped with a degree in paleontology, war experiences ranging from Okinawa to Paris via a bed of polio, a "basic technique of fund raising" that requires "split-second timing," and a desire to run scientific expeditions. Clearly, he also has tireless energy and the kind of faith that moves mountains, with (as he at one point remarks) "the added essential of meeting and knowing the right people."

Meet Dr Phillips! At ten, he developed an ability to "speak with speed and precision" by selling newspapers during the depression; at twenty, he absorbed Mr H. G. Wells's dictum that "Wendell, the only way to write is to write"; at twenty-six he led an expedition that covered "the whole of Africa" in twenty-five trucks and twenty-six months; at twenty-eight, he had popped his head round the door of enough rich and important men to beg endowment in cash and kind on setting up the "American Foundation for the Study of Man." In this resounding name, he leads the four fruitful expeditions that this book describes. Its dust cover says that he is still only 33; maybe he was 34 a split-second ago.

The target of the expeditions was a study of the south Arabian kingdoms that prospered for about ten centuries on the spice route from Asia to Europe, and then disappeared. They flourished because, once man had tamed the camel, they conceived means of keeping Indian ships to the east, and Egyptian ships to the west of the Strait of Bab-el-Mandeb, so making themselves into overland carriers, middlemen and levers of toll on one of the most profitable trade routes in the ancient world. They pined and died after the great discovery, in the first century B.C., that the Indian ocean monsoon blows seasonally in each direction—a find which led to the building of ships big enough to bypass Southern Arabia. The expedition, which was endowed with archaeological and scientists of several nationalities and of world renown, aimed at establishing a chronology for these little-known kingdoms and this it first

achieved on the site of ancient Timna, once the capital of Qataban and now a mound in the East Aden protectorate. It also found there statues and other fragments of great beauty which are illustrated in excellent photographs.

Discoveries at Timna took the expedition back to within perhaps a century and a half of the reign of the most famous of the world's little-known women—the Queen of Sheba. The third of the expeditions pursued her to her capital at Marib in the inaccessible Yemen. Its story there is a sad tale of local ignorance and oriental mistrust; the Yemenis reasoned that strangers so keen to dig and to take latex impressions of inscriptions must be after something monetarily valuable. Endlessly, therefore, permissions were revoked, obstacles erected, finds confiscated, until finally, the expedition had to flee for its life, carrying only its cameras and its notes, and leaving behind it \$200,000 worth of equipment, not to mention great discoveries semi-excavated and of worth only to scholars. These are now, no doubt, being mauled by the untrained fingers of inquisitive officials and ignorant tribesmen.

Among the merits of the book are the excellence of its simple descriptions of archaeological technique, and its capacity for conveying not only the excitements but also the anxieties and strains of expedition life:

I know from experience that good rest and good sleep are the basic requirements of an expedition in the field, as important as good food and water and more important than good working conditions.

This praiseworthy scale of values marks some, though not quite all, of Dr Phillips's views on life; he is much better than many westerners at getting on with Arabs, but his brusque ways round obstacles seem to be anathema to many officials of his own nationality. Maybe these are too *protocollaire*, but maybe, also, he is too ready to dive under their elbow. This weakness has cost him a failure to get permission to dig in Saudi Arabia; he is therefore pursuing the spice route eastward to Dhofar and Oman. He leaves his reader pommelled, panting, and unsure that he would care to be tackled by such a customer, but rapt in admiration for a man who can keep going at such a pace and with his head so permanently unbowed.

How You Vote

STRAIGHT FIGHT.

By R. S. Milne and H. C. Mackenzie.
The Hansard Society. 174 pages. 10s. 6d.

DESPITE all the words lavished upon elections and their prospects by politicians and journalists, remarkably little is known about what really determines their outcome. Who votes for what party? Who changes his mind? Above all, how are political conversions made? "Straight Fight" is to be warmly welcomed as the first published attempt to analyse in detail the influence of a British election campaign on individual voters. The authors, lecturers at Bristol University, interviewed, with the aid of their students, 500 randomly chosen electors in the constituency of North-East Bristol two weeks before polling day in 1951 and again after voting. With extreme statistical care they have set out their findings on how the electorate divided between the parties in terms of age, sex, social class, past voting, membership of a trade union, exposure to political propaganda, and views on major political issues. They have examined with especial thoroughness those who apparently changed their minds in the course of the campaign, or between 1950 and 1951.

The main value of their book lies in its conscientious documentation of what sophisticated agents and observers have long suspected—the ineffectiveness of an election campaign. The number of genuine converts discovered was almost negligible, and neither the personality of the candidates nor any single issue—not even the "warmonger" theme—seems to have had an appreciable effect on the outcome, at least in this one fairly typical borough constituency. The main effect of the campaign apparently lay in the hardening of existing prejudices. Those few who did "float" or waver between the parties seem to have been drawn very evenly from all groups in the electorate.

Although some of the more technical passages may prove heavy going, this is an absorbing book for anyone interested in politics, either as a humble canvasser or a national commentator. It is, of course, a pioneer venture. It would be interesting to see a great many more such studies, even though at times they could do no more than confirm the obvious, identifying the social composition of each party's support and demonstrating how few open-minded electors exist. This study makes plain that irrefutable answers to the questions "Who votes for whom?" and "Who changes his mind?" are within reach. But the question "Why?" is still far from being solved. Techniques far more intricate than any yet developed, certainly than any used in this book, would be needed to explain satisfactorily why people vote as they do or what converts them. But perhaps one should rejoice that academic research has not yet presented politicians with the key to the voter's heart.

The Settlers' Case

WHITE AFRICANS.

By J. F. Lipscomb.
Faber. 172 pages. 12s. 6d.
OUT OF BARBARISM.
By C. T. Stoneham.
Museum Press. 190 pages. 15s.
KABONGO.
By R. St. Barbe Baker.
George Ronald. 127 pages. 10s.

THE Kenya settlers have not had a very good press since the Mau Mau outbreak; and even before Mau Mau they had a reputation—much exaggerated—for being the last and most ludicrous backwater of pre-1914 upper- and middle-class privilege, sustained by immense *latifundia* worked by black labour. Their position is now in growing doubt. Their exclusive rights in the White Highlands are clearly in for reconsideration. So many utterly unreasonable and reactionary statements by a small group of settler politicians have appeared in the British press that the British public is inclined to see them as more Blimpish than they are. They have every reason to try to put over to the British public the central role which they really play in Kenya affairs, and the incalculable contribution that they have made to its progress in the past.

Unfortunately, neither Mr Lipscomb nor Mr Stoneham finds it possible to do this without contrasting the mighty and humane achievements of the master-race with the backwardness and savagery of the African, painted in lurid colours. They thus both of them give the fatal impression that they dislike and despise the African; they both hint, if they do not say, that his lack of cultural progress in the past is an indication of his inability to become civilised in the future. They both insist on the appalling condition of East Africa under the Arab slave-trade before the British took it over; Mr Lipscomb devotes much attention to the backwardness of African cultivation, on which he can, as a white farmer, speak with understanding—but, again, without sympathy. Against all this barbarism, laziness, superstition, treachery and sheer inefficiency is set the White Tribe, immaculate, capable, full of loving-kindness and triumphantly expand and towns rise in the hunting grounds of lions. Mr Lipscomb admits that the Whites may have a few of the recent years are not quite those of Kenya's golden age, when farmers were noblemen and gentlemen, officials were at least gentlemen, and missionaries, though not of course gentlemen, knew their place.

For a serious discussion of how each of the three races can contribute its special gifts to Kenya's future, on the basis that Africans will inevitably become more educated, more numerous and more aspiring, the reader looks in vain. It is continuously implied that the African is always wrong, and always through his own fault. Neither Mr Lipscomb nor Mr Stoneham seems to

THE ECONOMIST, MARCH 26, 1955

realise that much is expected of him who has much—or else they think that the African has already received all anyone could have expected the Whites to give him. The eroded land, the Nairobi slum, the fear of the witness to tell the truth lest he die for it—all, all are the fault of the black man (though, of course, the Colonial Office and the British intelligentsia, often mentioned in Mr Stoneham's book, have made things worse). Neither Mr Lipscomb nor Mr Stoneham shows any awareness that, in the span of human history, even British culture is a recent achievement and indebted to those that bred it. The African did not invent the wheel; but neither did the Kenya settler. Mr St. Barbe Baker's short biography of a Kikuyu chief puts things more reasonably; his Africans are barbarous—but not culpably so.

This impression of pride mars at any rate one very useful book. For Mr Lipscomb has much of importance to say about Kenya agriculture, both white and black. It is a pity that settlers in general were not so interested in African agricultural problems before Mau Mau as was Mr Lipscomb. But at least it is a good thing that some Kenyans are now thinking systematically about the practical problems of living with 5½ million Africans. For in the end only they can show whether a white community can exist alongside Africans and Asians in the tropics. A sense of their own worth is necessary, but it need not be entirely divorced from a sense of humility and service. Is it to be said of the white settlers that they brought the tractor and rust-resisting wheat to Kenya, but left *noblesse oblige* behind them in Wiltshire or Wimbledon?

Spain in Sharp Colours

A STRANGER IN SPAIN.

By H. V. Morton.
Methuen. 384 pages. 18s.

ONE never quite knows what one is going to come across next in this book. On one page it may be a gay and amusing description of the vicissitudes encountered while travelling in a Spanish bus; on the next it may be the story of Florinda, a virtuous and exquisite maiden, and King Roderick, the last of the Gothic kings of Spain; while on a third it may be an appalling bromide about history having many a question mark or John of Gaunt's daughter being a fine woman "for she had three splendid sons and there can be no better tribute to any mother." One thing one can be reasonably certain of not coming across is any reference to Spanish politics. Mr Morton, who seems to have all the rest of Spanish history at his finger-tips, leaves the last quarter-century—except on a very few occasions—severely alone. In view of the astounding naïveté of his reaction to the Barcelona guide who was so bitterly anti-Franco that Mr Morton "began to wonder if he were a member

THE ECONOMIST, MARCH 26, 1955

of some subversive group," this is perhaps just as well.

On the whole, however, this book will be an asset for other strangers in Spain. Mr Morton is good at ferreting out useful or esoteric information about the places he visited, such as the distinctive characteristics of the local Virgin or the refinements of local cuisine. Moreover, he tells his anecdotes well and he pots his history readably, whether it be the exploits of Cortés and Don John of Austria or the various incursions of British royalty into Spanish history. Yet the book produces a rather cloying effect because, one feels, the author is so determined to be pleased. He tends to see a place through a rosy and romantic haze when other people would find it slightly depressing or even sordid. He speaks of "the Gothic vigour that you notice northward from Avila," but says nothing of the sad northern villages made partially derelict in the civil war. Mr Morton's colouring, in fact, is sometimes a shade too garish.

Australian Melting Pot

ITALIANS AND GERMANS IN AUSTRALIA.

By W. D. Borrie.
F. W. Cheshire for the Australian National University.
London: Angus and Robertson. 255 pages. 21s.

BETWEEN 1945 and 1951, Australia received 721,800 immigrants, of whom just over half were non-British; in subsequent years the proportion has been much the same. Thus Australia is becoming a plural society, if not to the same extent as the United States. The Australian theory of immigration, however, is based on the full assimilation of all newcomers, British and others, to the Australian pattern. Whether this will happen is not certain with such a sizeable minority. Australia's actual experience of assimilation is, in fact, confined to the small German and Italian minorities, whose behaviour in the Australian environment is analysed by Mr Borrie in this meticulous study undertaken at the behest of a Unesco social science programme.

Both Italians and Germans have come in for unpopularity on political grounds; both have won from fair-minded Australians admiration for their ability to farm this harsh and alien soil. The Germans did much to create Australia's wine industry; the Italians have been conspicuously successful in sustaining the only cane sugar industry in the tropics run by European labour. The Australians have generally felt a bias in favour of Teutons as settlers against Latins, fearful that the latter would bring low standards of life with them that would undercut Australian wage awards. But in fact Mr Borrie shows that it has been easier to assimilate Italians than Germans. The Germans, who have been settlers for longer, remained for decades in distinct cultural groups with their own religion, customs

and press, and they showed some sympathy with the rise of Prussia from 1866 onwards. Despite the fact that they mainly settled in heavily populated Australian areas, it was only after they ceased to be considerably reinforced by new German-born settlers, after about 1891, that assimilation became rapid.

The Italians came later, and have continued to arrive. They have largely settled in the north of Queensland, though they are to be found everywhere. They intermarry with Australians relatively little in the first and apparently even in the second generation; they have retained their language. But they have abandoned almost everything else—even their strong church organisation. Their interests are essentially economic; even before the war they were uninterested in politics, Italian or Australian, and there was less contact between the Venetians and the Sicilians than between their Australian neighbours and either. Today, assimilation of the third generation, brought up like the second in Australian schools, is quite rapid; as the Italian-born die out, identification with Australia (as opposed to the British colonies to which the Germans came after 1850) is becoming complete.

Mr Borrie is highly statistical and factual. His evidences of cultural contact, and indeed cross-fertilisation, are derived from the figures and are less interesting than one would wish. Australians consciously tend to a norm, and it is from the inflow of new and diverse cultures that, one would hope, new flowerings of the creative spirit should develop. So it has been in the United States, indeed in Britain also. It may perhaps be early to expect signs of this. It hardly appears from demographic statistics, schools questionnaires and analysis of trade names in telephone directories. But it is to be hoped that the "New Australians" will contribute more than new farms and factories to the achievement of a nation that has still to show its full prowess in a fully rounded national culture.

Studying the Neighbourhood

HISTORICAL GEOGRAPHY.

By J. B. Mitchell.
English Universities Press. 372 pages. 10s. 6d.

AMONG the numerous purchasers of topographical literature, there must surely be some who are anxious, not only to observe the beauties of a countryside, but also to understand the way in which its details have been created by the hand of man, working through the ages. These will find in Miss Mitchell's "Historical Geography" a clear, reliable and often stimulating guide. To the purist, of course, such an evolutionary study is not, strictly speaking, historical geography, which is held to be concerned with the social, economic and political geography of a region at some period in the past, studied in its own right, irrespective of whether

this past geography has survived into the present or not. Fortunately for the reader, Miss Mitchell, after acknowledging the correctness of such a definition, promptly abandons it in favour of the evolutionary approach for the purposes of this book. Consequently, each chapter is concerned with the development through time of one feature of the geographical scene, such as the farm, the village or the route.

In such a short account, the writer is wisely content to show briefly how these various topics repay geographical study, to indicate the sources of information available, and generally to stimulate the reader to investigate his own neighbourhood for himself. The way the historical geographer works in practice is shown by constant reference to the methods and results of particular investigations, the most interesting of which are drawn from the writer's original work in the rural areas and small towns of the Cambridge region. The treatment of industry and industrial towns is less authoritative; too much attention is paid to familiar economic history, as in the account of technological and locational changes in the British iron and steel industry, while the changes brought by nineteenth century industrialism to town and country are mostly passed over. As a whole, however, this clearly written, moderately priced and, with one or two exceptions, clearly mapped book is an indispensable introduction for students of the subject.

The Big Leak

Washington, D.C.

THE Secretary of State was doing his department an injustice when he implied that it was routine practice to publish diplomatic documents in uncorrected galley proofs with deletions marked lightly in pencil. The State Department usually does better than that.

The decision to publish the Yalta papers, which was made in the State Department with the knowledge of Mr Dulles, but not, it seems, on his initiative, was almost casually arrived at in an attempt to earn a respite from the perpetual badgering by right-wing Republican Senators. Senators Knowland, Bridges and Dirksen, prime movers in the agitation to expose the "shameful secrets" of Yalta, all serve on that powerful body, the Senate Appropriations Committee. Their goodwill is not to be lightly forfeited if money is to be forthcoming for overseas ventures in which the State Department is interested. They were not amused by the notion that objections from foreign governments were thwarting the express wish of the Appropriations Committee; it voted special funds during the last session of Congress to enable the State Department to publish the Yalta papers, out of sequence, before the end of the current fiscal year.

Mr Dulles's yearning to be liked by the leaders of his party involves him in a periodic search for some new shadow that can be conceded to Republican prejudice in the hope that only Republicans will take it for substance. He does not seem to have attached too much importance to the issue either way, and the American principle has always been: "When in doubt publish." Since it was contrary to international protocol to publish the documents over Sir Winston Churchill's veto, the State Department's hand had to be "forced." The idea of "lending" documents overnight to a favourite journalist has been a well-liked device ever since the press became an important factor in diplomacy.

Unfortunately, the amateur politicians who handle these matters for an overburdened Secretary of State tried to be doubly ingenious by arranging matters so that the blame should implicitly fall on Congress and more especially on Democratic committee chairmen. It was decided to send galley proof copies of the Yalta papers to congressional leaders, under seal of secrecy. In practice, of course, the contents would have leaked quickly to the press. However, Senator George, the wily old chairman of the Foreign Relations Committee, saw through the transparent device and returned his copy unopened. At this point the press stepped in and the documents were obtained by Mr James Reston of the *New York Times*, on condition that they

would be published in full if they were published at all. But before they could appear, pressure from other newspapers had ensured that the Yalta documents should be made available to everyone.

★

The net result of this undignified procedure has hardly been as gratifying to the Republican party as right-wing Senators must have hoped. Between them they had three distinct objectives in pressing for publication. First, and shared by them all, was the desire to make political capital at the expense of the Democrats. Second, and mainly a personal obsession of Senator Knowland, was the wish to prevent any more big power meetings. For this the Senator gives two reasons: that it is immoral for any small group of nations to carve up the map of the world, and that in fresh meetings the roles of Yalta would be reversed. The United States would be left in a false and isolated position because more "appeasement minded" allies would be prepared to compromise on principles. The third objective was to build up fresh steam behind the Bricker amendment to limit the President's constitutional freedom of action over foreign policy.

It is doubtful if any of these causes has been greatly aided. There is such a thing as censorship by saturation. The impact on the popular mind of a thirty-page supplement to the *New York Times* was infinitely smaller than a single sentence by the Attorney General in 1953 which accused Mr Truman of knowingly promoting a Communist spy. On the other hand, the very fact that the Yalta papers are now available for public scrutiny disperses the atmosphere of mystery with its hints of conspiracy and "secret clauses" which had been built around the name of Yalta. The documents reveal, in fact, practically nothing that was not already known from published memoirs. More Americans than the Republicans had bargained for are reacting in much the same way as the *Detroit News*, which commented:

The remarkable fact is that we gave less than was asked and nothing that it was in our power to deny. And we conceded this not to an enemy but to an ally.

In this sense, publication of the Yalta papers may have made a big power conference after the ratification of the Paris agreements more, rather than less, possible. Most Republicans, when challenged, would argue that Mr Eisenhower could do better than Mr Roosevelt, particularly when, since the publication of the report on "atomic fall-out," the mood in America has come increasingly to favour some dramatic move to lessen tension.

THE ECONOMIST, MARCH 26, 1955

It is doubly significant that, only three days after the papers, Senator George was proposing such a conference at the summit. It is significant that a leader should consider the timing of his proposal wise. And it is significant that he has decided, perhaps as a reaction to the distasteful move which tried to throw blame for the leakage on the Democrats, to respond to a demand from liberal Democrats that "loyal opposition" should play a more creative role in formulating foreign policy.

While Mr Stevenson and Governor Harriman, who is naturally enough the American who comes out best in the Yalta papers, have been urging the Democratic party to develop an independent foreign policy, Senator George has hitherto contented himself with piloting the Administration's proposals on Formosa very efficiently through the Senate. A group of young Democrats in the House of Representatives, headed by Mr Reuss of Wisconsin, have tried to seize the initiative by bringing forward a programme which includes United Nations trusteeship for Formosa. But in the Senate the liberals have realised that their position would be least assailable if Senator George could be induced to take the lead.

It is one of the cardinal principles of this Administration that Senator George should never be attacked and the President and his advisers have been responding in a more or less muffled way to his suggestion. Indeed, at his first press conference after the secrets of Yalta became public property, Mr Eisenhower went so far as to agree that, although he wants some evidence of good faith from the Russians before he will take supper with them, he does not mind much what particular evidence it is. But this concession from the President should be viewed not only in the domestic light of Senator George's prestige but also in the international light of this week's vote in Paris on the German rearmament treaties.

A Model Economy?

Washington, D.C.

THE Joint Congressional Committee on the Economic Report could hardly have been expected to produce an uncritical and unanimous endorsement of the President's latest annual review of the country's economic condition and of the prospects of achieving maximum employment and production. But even in the dissenting opinion, far longer than the innocuous statement which all the members were prepared to sign, the Democratic majority did not express any serious alarm about the economic outlook for 1955. It is evident that even the liberal Democrats in Congress are lending no more than half an ear to the depressing analyses constantly being turned out by Mr Leon Keyserling, who was chairman of President Truman's Council of Economic Advisers, and his vocal band of progressive macro-economists.

This is all the more significant because the Keyserling type of analysis is so convincing. Using the familiar tools of his trade, Mr Keyserling builds models. He starts with the fully employed economy of mid-1953, takes conservative figures for the growth of the labour force and of produc-

tivity since that time, and then produces a figure for the desirable rate of annual output if full employment is to be provided. Then Mr Keyserling and his fellows take a consensus of the estimates of what gross national product will probably in fact be in 1955 and "prove" that such a level of activity—even though 2 or 3 or even 4 per cent above 1954—will not only be far short of what is needed for full employment, but will actually result in an increase in unemployment.

The model builders examine carefully the prospects for each of the major components of national demand and, after adding them up, conclude that there will be a deflationary gap of fairly precise—and disturbing—proportions. When challenged with the recent improvement in almost all of the economic indicators, they reply that unemployment—at about 3,380,000 in February—is still much too high and that the upturn has been artificial anyway because it is based on non-sustainable production in the automobile and housing fields.

To the present Republican Council of Economic Advisers, this sort of analysis verges on the nonsensical. True, they

GROSS NATIONAL PRODUCT

At Annual Rate

billion dollars

Figures for potential gross national product assume maximum employment of the growing civilian labour force and a continued rise in hourly output. The estimate for 1955 is based on the President's Economic Report. The staff of the Joint Congressional Committee on the Report are responsible for the calculations on which this chart is based.

too make their models—but only for internal consumption; this much annoys all the members of the Joint Committee, whose staff have now made up the deficiency by publishing the attached pictorial forecast, with the warning that such a steady expansion in 1955 would be a "substantial achievement." The Economic Advisers distrust models because they believe that the assumptions needed for model building are much too flimsy to be useful. Dr Arthur Burns, the chairman, stated in a written reply to a committee member's question that to use projections of gross national product in the President's Economic Report "would not render a useful service" and might create the impression that economists can estimate reliably such things as the output needed for full employment or the quantitative impact of government programmes on the economy; this, said Dr Burns acidly, "may become true in the future but it is not true today."

This difference in method is important because it accompanies and mirrors a profoundly different feeling about the economy and the government's role in it. Dr Burns's approach is a courageous form of modern conservatism. It was, after all, only a few months ago that he and his colleagues peered over the rim of serious recession; they continue to confront an uncomfortably long public memory of what the last Republican Administration seemingly pro-

duced in the way of economic conditions; and they are still living in a world in which full employment, despite some reassessment here and abroad, is a paramount goal of all governments. And yet they are analysing and prescribing in a spirit quite different from any the United States has known since the "modern" era began after the war.

This spirit is visible in many places and especially in the intriguing section of this year's Economic Report which deals with the role of government in maintaining economic growth and stability. The first activity on the list was not, as might have been expected, the duty to counter the business cycle or to use compensatory fiscal policy. Instead it was to "focus attention upon augmenting the number of young people who have scientific, engineering and technical skills. . . ." Then there is the remark of Dr Burns himself before the Joint Committee on the subject of tax cuts. Though Mr Keyserling (with many others) thinks it is "preposterous" to claim that a slight increase in the deficit in the federal budget could possibly be inflationary in the face of the current "slack" in the economy, and though the recent American past indicates that the economy can absorb substantial deficits without serious inflationary pressure, Dr Burns calmly said that it would be "taking a grave risk with the country's money" to increase the deficit under present conditions.

★

None of this means that Dr Burns and his Council belong to the unsophisticated group which regards all government action as evil and government deficits as always bad. But they do believe that government action is usually more evil than good, and that deficits are bad except in very unusual conditions. The Economic Report itself calls "extreme and doctrinaire" a position which it describes as follows:

Some citizens, lacking faith in the ability of the private economy to generate a high level of activity, espouse a steadily increasing role for government. They urge new public undertakings and unbalanced budgets as devices for augmenting private demand, often with little regard to the cause or magnitude of any deficiency in demand.

Further, the Report takes pains to point out as one of the key "lessons" of the 1953-54 recession that

contraction may be stopped in its tracks even when governmental expenditures and budget deficits are declining, provided effective means are taken for building confidence.

Behind this new conservatism is, quite probably, a belief not only—to use the words of the Report—that current conditions in the American economy are "peculiarly favourable to economic progress," but also that inflation is a greater possibility than deflation in the American short and long term future. A challenging analysis of this likelihood is currently being offered in *Harper's* magazine by Mr Peter Drucker, who is convinced that, on the basis of existing trends in population, the problem of the United States for the next twenty years will be to produce enough rather than to consume enough. He fears that demands from the rising number of non-workers (old people and persons in school and college) will shortly outpace the supply of goods that can be produced by a labour force that will grow only very slowly, and that inflation is the chief threat. As for the near-term future, Mr Winfield Riefler, chief assistant to the chairman of the Federal Reserve Board, undoubtedly expressed the Burns viewpoint when he told the Joint Congressional Committee that the "problems which will concern you during the months ahead

will, in my judgment, be increasingly associated with exuberance rather than lethargy in the economy."

Fortunately, perhaps, for the layman, 1955 will probably provide a fairly precise test of the merits of the Burns and Keyserling schools of analysis. Mr Keyserling is on record as believing that "we are threatened by a long-term trend of rising chronic unemployment" and that the "true level of unemployment in 1955 will be considerably higher than in 1954." The Joint Committee, while refusing unanimously to recommend major new reflationary measures, issues a warning that trouble may be ahead. Meanwhile the economy—at least temporarily—is performing more and more briskly, and among government economists the fear is that it may over-exert itself. By December the statistics may have shown who is right.

Spring in the Air

THE seasonal "exuberance" which can be detected in the American economic air arises not so much from the statistics of current activity, although these are pleasantly buoyant, as from the forecasts of future trends. These make it easy, although perhaps not justifiable, to argue that the new recession, which has been prophesied for the end of the year, may not materialise. Meanwhile the seasonally adjusted index of industrial production in February stood an encouraging 33 per cent above its 1947-49 base, with the record heights of 1953 again in sight. The most striking component of this rise is the automobile index, at 172 in February compared with 160 in January and 86 last October. Output of cars has continued to rise this month, with production nearing 175,000 units a week, and sales seem to be keeping pace unexpectedly well. The usual spring upturn has apparently not been swamped, as it was feared it might be, by the exceptionally heavy purchases of new cars during the winter months.

Automobile manufacturers are so confident that they will probably not be discouraged by the latest forecast of consumer demand prepared on behalf of the Federal Reserve Board. This annual survey shows that this year not quite so many people are planning to buy new cars as were intending to do so last year, although those who do propose to buy are prepared to pay more. Nevertheless the survey is one of the main factors in the present ebullience, for it shows that in other respects consumers are more ready to spend money than they were in 1954—and it was they who were mainly responsible for last year's recovery. Now they feel more certain of the future than they did in the early months of 1954.

Another cheerful forecast of a rise in demand is the combined effort of the Securities and Exchange Commission and the Department of Commerce. They find that businessmen are now planning to spend slightly more on new capital equipment this year than they did in 1954. As recently as December the decline in this important section of the economy, which persisted throughout last year, had been expected to continue. But now an upturn in such expenditures, to an annual rate of \$27.4 billion, is looked for in the second quarter of 1955. This rise will be concentrated, however, in retail shop building and in gas pipeline construction rather than in the heavy industries.

Turning Back the Clock

THE Hoover Commission, which is charged with finding ways of improving the economy, efficiency and service of the executive branch of the federal government, has issued what may prove to be one of its most controversial reports. It deals with 104 agencies which administer the government's lending, insurance and subsidising operations. Mr Herbert Hoover, the only Republican ex-President, heads the commission and takes a broad view of its terms of reference. He is a violent opponent of centralised government and feels that private business should be allowed to finance and insure the citizen. He argues that the commission's forty-eight recommendations would result in annual savings to the government of \$200 million and would restore to the Treasury something like \$6½ billion in capital funds.

Among the principal targets of this report are crop loans made by the Commodity Credit Corporation and the mortgage insurance programme of the Federal Housing Administration. The commission recommends that most of the agencies involved should raise their fees in order to cover the cost of money borrowed from the Treasury, and it asks the government to close down some of its operations altogether, in order to let them become part of the private enterprise system. Over the dissent of five of its twelve members, moreover, the commission urges Congress to abolish the Export-Import Bank's authority to make short-term loans to foreign traders analogous to those of commercial banks.

It is doubtful whether this attempt to turn back the clock to 1930 will be taken very seriously either by President Eisenhower or by Congress. In practice the commission's recommendations are aimed at the farmer and the potential home-owner and at certain categories of ex-servicemen. No one in the Administration will be eager to handle this kind of political dynamite with an election year in the offing. Representative Holifield of California, a Democratic member of the commission, wrote a vigorous minority report. In it he suggested that the commission had gone far beyond its proper scope and had injected an extremist and partisan note into what were supposed to be impartial surveys and technical appraisals. Two members of the present Administration who are serving on the commission also expressed their doubts about the value and motives of its findings. It would be a pity if Mr Hoover were to abandon the high and respected functions of his commission in order to make of it an apologia for his own past.

In Defence of Watches

New York.

THE embattled Swiss watch industry has suddenly found an American ally in an unexpected quarter—the Department of Defence. Dealt two blows last year—the first by President Eisenhower, when, on the advice of the Tariff Commission, he increased the import duty on watches by 50 per cent, and the second by the Department of Justice, which filed an anti-trust suit against 24 Swiss

THE ECONOMIST, MARCH 26, 1955

watch importers and assemblers, the Swiss have just received a third blow from the United States Treasury. This is a change in the Customs rules so that higher duties are now levied on imported watches ingeniously designed by the Swiss for "upjewelling" after arrival in the United States. There has been a recent increase in the imports of such watches which contain metal end caps, known as "duo fix" features, to facilitate the insertion of additional jewels by American assemblers.

The main argument put forward for protection by the "big four" American watch manufacturers—and one they have found most effective—is that the safety of the country requires the preservation of their skills, which in time of war are needed to turn out precision time fuses. Even General Omar Bradley, now the chairman of the board of the Bulova Watch Company, which is in the equivocal position of being, at the same time, a major domestic manufacturer and an importer of more profitable Swiss watches, has been at pains to put national defence requirements above the financial gain of his stockholders. The Office of Defence Mobilisation, which conducted a comprehensive investigation into the "defence essentiality" of the American jewelled watch industry, concluded that a minimum of 2 million jewelled watches—rather more than were produced in 1954—should be made yearly in the United States, in order to provide employment for 4,000 vital precision workers.

Now the Department of Defence, which has never given more than lukewarm support to the arguments of the watch makers, has released a formerly secret departmental study, which concludes that no preferential treatment for the jewelled watch industry is necessary, and that manufacturers in other industries are quite capable of producing the time fuses the military services need. The Defence Department's conclusions, embarrassing though they may be to President Eisenhower, who allowed the watch tariff increase largely on defence grounds, shine a welcome beam of sanity on the whole "defence essentiality" argument, now relied on indiscriminately by ailing manufacturers of everything from lace to lead pencils. And the British bicycle manufacturers, waiting for the President's decision on the Tariff Commission's latest recommendation to raise the tariff on imported bicycles, may have cause to thank the Swiss watch importers for their fight for "freedom of assembly."

THE ECONOMIST, MARCH 26, 1955

Visit to "Aiova"

FROM A CORRESPONDENT IN IOWA

SPEAKING in Moscow in January, Mr Khrushchev made a blistering attack on the shortcomings of Soviet agriculture and extolled the hybrid maize and livestock cycle developed in the United States. Mr Lauren Soth, an editorial writer on the *Des Moines Register*, wrote a playful piece inviting

any delegation Khrushchev wants to select to come to Iowa to get the lowdown on raising high quality cattle, hogs, sheep and chickens. . . . We ask nothing in return. We figure that more knowledge about the means to a good life in Russia can only benefit the world and us.

The *Christian Science Monitor* reprinted the piece and before long a Tass representative confirmed that Moscow was interested. At his press conference on March 3rd, President Eisenhower observed that he believed "good, and good only" could come from a meeting between Russian and American agricultural experts and he recalled his own visit to Soviet collective farms. After that, it was only a matter of time and nagging before the State Department and the Department of Justice agreed to waive the usual security and immigration regulations in order to allow the Russian delegates to enter the country.

Iowa's maize and livestock farms and the agricultural research and education facilities at Iowa State College draw a constant stream of foreign visitors. As early as 1930, the Amtorg Trading Company hired eight Americans, five of whom were from Iowa, to go to Russia as advisers to the Soviet swine trust. Hybrid seed maize from Iowa and other parts of the "corn belt" has been much used in Europe in recent years, and recently a Moscow-trained official from the Yugoslav Ministry of Agriculture came to Iowa to buy hand corn planters—which are obsolete and hard to find.

The fact that the last Soviet official to visit Des Moines, at the invitation of the Chamber of Commerce, turned out to have been an atomic spy has not dampened enthusiasm for the coming exchange of delegations. Individual farmers have expressed a wish to have Soviet boarders and such organisations as the Iowa Farm Bureau Federation are preparing to put their best hog forward.

Any Old Iron?

New York

FLOURISHING European factories, hungry for metals, are bidding scarce supplies away from indignant American fabricators. Copper scrap is most difficult to obtain, but the alarm is spreading to aluminium and steel scrap users. With copper prices on the London Metal Exchange soaring to 45 cents a pound last week, 12 cents a pound above the recently increased prices of the large American integrated producers, there is every incentive for European firms to buy scrap copper in the United States even at premium prices, and for Chilean copper normally shipped to the United States to be diverted to Europe. While strikes cut the delivery of copper to American users by 16 per cent last year, exports of copper scrap from the United States, mainly to Western Europe, more than doubled. The government, anxious to keep American fac-

tories in full production, and suspicious that some copper scrap exports are ultimately destined for consumption in Eastern Europe and China, has prohibited all exports of domestic refined copper, and imposed strict licensing and quotas on exports of copper scrap. During the second quarter of 1955 only 12,000 tons may be sent abroad.

Even in the aluminium industry, where production is at record levels, the diecasters have asked for a government embargo on exports of aluminium scrap. These rose from 9 million pounds in 1953 to 72 million pounds in 1954, while imports dropped sharply. With foreign buyers paying premium rates, aluminium scrap has risen by more than 50 per cent in the last two months, even exceeding the price of the primary metal. The diecasters, who normally use scrap for 80 per cent of their aluminium alloy castings, have been forced to buy primary aluminium, thus creating a further shortage. But there is evidence that the high price of scrap aluminium is already restricting exports, without the need for government intervention.

Steel scrap stocks are higher, and in many cases adequate, but with the automobile industry's voracious appetite unassuaged, and steel output approaching record rates, aggressive foreign bidding for American scrap steel is also causing concern. Exports of steel scrap during the first two months of this year were running at an annual rate of 3.6 million tons, compared with 1.3 million tons last year and only 271,000 tons in 1953, despite a price increase of 40 per cent during 1954. Export licensing is in force but, as the licences issued far exceed even the rising exports, the government is tightening its controls.

Already deliveries of both copper and aluminium to the government stockpile have been diverted to private industry. Such diversions and export controls together may provide temporary relief, though the copper shortage remains acute. But unless the European market weakens, no substantial easing of supplies is expected until the demand from the American automobile and construction industries slackens off—probably later in the year. The danger is that this form of relief could be too drastic.

Competition by Coupon

New York

WHEN the American housewife wants a pair of nylons she may well buy a bar of soap or a pound of margarine—to collect the necessary coupon. This device, known as "cross-couponing," is becoming as common in American grocers' shops and supermarkets as are the 5 or 10 cent discounts allowed on repeat orders of the same brand of product, or purchases of other brands supplied by the same wholesaler. The instigators of the coupon craze are the manufacturers, who, in the highly competitive grocery world of fewer and larger supermarkets, must force their way on to the open shelves and elbow out competitors by every possible means. Where coupons are redeemed on the spot the shopkeeper is allowed by the manufacturer a handling fee, which is usually 2 cents a coupon. But to the shopkeeper who is forced to accept these flamboyant promotional devices in line with his competitors, coupons may bring more headaches than profit. Most retailers claim that costs of handling them exceed the allowance made by the manufacturer, and they dislike

forms of cross-couponing that force them to stock goods they normally do not carry.

Another device, but one adopted less by manufacturers than by retailers trying to attract customers into the shop, is the ubiquitous trading stamp. These stamps are sold by special stamp companies, at slightly more than their face value, to shopkeepers who give them to their customers in proportion to their purchases. The customer sticks the stamps into a book which, when full, can be redeemed with the stamp company for some nationally known product worth, usually, about 3 or 4 per cent of his original outlay; on occasion, "stamp wars" double or treble the allowance of stamps made to customers. Some shopkeepers prefer to run their own stamp schemes. Others, such as Sears Roebuck, the nation's largest mail order house, organise their own subsidiary stamp companies whose stamps are redeemable only at the parent shop. However, the larger supermarket chains, such as the Great Atlantic and Pacific Tea Company and Safeway Stores, continue to hope that the whole stamp movement will run foul of the courts. They claim that stamps merely give a spurious impression of saving, since some shopkeepers raise their prices to allow for the cost of the stamps.

The common argument that trading stamps help the small shopkeeper is inconclusive, since many of the larger chains have joined in the race. The charge that their use is illegal under the fair trade laws, although frequently made, has seldom succeeded in the courts, but many retailers now feel justified in cutting the price of "fair trade" products—those subject to resale price maintenance—by the equivalent of the stamp discount offered by their competitors.

Leverage with a Colour Bar

Washington, D.C.

WITH three members of their race in the House of Representatives, and one of them chairman of a committee, the Negroes are beginning to arrive as a political force. A recent study by Professor Carleton and Mr H. D. Price, published in the quarterly *Antioch Review*, suggests that this is even true of certain southern states, such as Florida (on which the study is based).

The starting point was the decision of the Supreme Court in 1944 which stopped the exclusion of Negroes from the primary elections at which the parties choose their candidates. In Florida, the ultimate victory of Democratic candidates is nearly automatic; hence the primaries are the decisive elections. In 1944 there were 20,000 registered Negro voters in the state, all Republicans; ten years later the figure had risen to 128,000, and of those only 8,000 were Republicans. The Negroes changed parties in order to influence the only election that counts. According to Professor Carleton and Mr Price, they form political leagues to interview rival white candidates and endorse those who make the best impression. The extreme fragmentation of the Democratic party in Florida and the high number of nominations for any important office give an organised minority considerable weight. On the other hand, the Negroes keep their endorsement secret until the night before the election, when they hand out endorsement cards to Negro voters, lest unendorsed candidates should

rally support among whites on a basis of race antagonism.

At the level of state politics, Negro voters suffer from two handicaps. The absence of a genuine two-party system in Florida robs them of the chance to hold the balance of power. Secondly, the "poor white" rural voters in the plantation areas, who are the Negroes' normal allies in national politics, are their bitter foes in local politics because they have a high social stake in white supremacy. Nevertheless, Negroes feel that they are reaping benefits from their participation in Democratic party primaries. In precincts where their vote has been large, they have received better police protection and fairer treatment from judges who may depend on them for re-election. And they are receiving the traditional symbols of emergence into political influence by a hitherto suppressed racial group: street lights, pavements and macadamised streets.

SHORTER NOTES

Five Southern Democrats who voted with the Republican opposition gave the Administration its victory in the Senate fight over the Tax Bill. The Democrats had proposed a \$20 tax deduction for every head of a household and the repeal of tax benefits granted last year to businessmen and shareholders. The Senate version must now be reconciled with that passed by the House which gives a straight reduction of \$20 to every income tax payer. In the end the President is expected to get what he wants, a continuance of excise and corporation taxes at present rates, with no income tax concessions.

★

The Senate has at last confirmed the appointment of Judge John Marshall Harlan to the Supreme Court. The long delay between the President's nomination of the Justice last November and the Senate's final decision has prevented the Supreme Court from attaining a full bench to consider the implementation of its order against racial segregation in the schools.

★

The chairman of Montgomery Ward, Mr Sewell Avery, has called upon the Senate Banking Committee to investigate the "interests" supporting the efforts of Mr Louis Wolfson to gain control of the giant mail order company's rich reserves. Mr Avery is anxious that a full disclosure regarding Mr Wolfson's financial backers and his claim to control 500,000 shares of Ward stock be made available to the company's shareholders before the annual meeting next month.

★

The Department of Agriculture has taken another step to discourage farmers from transferring to other price-supported crops land which they are no longer able to plant to wheat and cotton. To check excessive production of oil-seed crops, and thus to ease the burden on the government, guaranteed prices for soyabeans, flaxseed and cottonseed have been reduced substantially.

ROLLS-ROYCE AERO ENGINES LEAD THE WORLD

AVRO
knows
how...

TO TRANSLATE BLUE-PRINT APPROVAL INTO LARGE-SCALE PRODUCTION

It was early in 1947 when the Air Staff laid down their requirements for a new Jet Bomber for the R.A.F. This top-secret specification called for a bomber with the speed of a fighter, able to carry a heavy load and quickly adaptable to a variety of new weapons. Avro's design study group immediately began to work out the problems involved. The specification posed formidable requirements which at one time seemed beyond achievement in the light of existing knowledge. The design gradually evolved from conventional studies into the familiar triangular shape of the Avro Vulcan. Throughout the development of this new aircraft, the knowledge and experience of Avro Production experts was incorporated in the prototype. That is why the whole complex operation of translating the original designs into terms of quantity production moved smoothly to completion. A steadily increasing stream of Avro Vulcans is now beginning to flow from the Avro assembly lines. Today the traditional Avro talent for quantity production (which results in a peak output of 42 four-engined Lancasters a week during the last war) ensures the successful large-scale production of the mighty VULCAN—super priority bomber for the R.A.F.

An actual photograph of an Avro Design Team studying a scale model of a research delta prototype. Throughout the development of the Avro Vulcan close co-operation between design and production engineers resulted in sound, practical solutions to production problems as they arose.

The Rule of Law in Pakistan

BY A CORRESPONDENT

PAKISTAN'S fate seems to be to proceed from one political or economic crisis to another. So far as the political variety is concerned, it now does so placidly enough, for the people have been thoroughly inured to political upheavals and constitutional tangles; but the latest crisis was in a sense the most serious of them all. Fortunately, however, it has this week been brought to nothing by the Federal Court's ruling that the Sind Chief Court acted without jurisdiction in holding the Governor General's dissolution of the Constituent Assembly last year to be illegal.

It was not a question of power that was involved so much as a question of principle. If the Federal Court had ruled against the Governor General's action, there can be little doubt that the government would have had to take the law into its own hands. This it could have easily done, for it has the support of the army, the civilian services, and the vast majority of the people of the country; only the professional politicians, who do not like to see civil servants in their domains, are against it. If a show-enforce were necessary, the government would not have had to move a gun, and hardly even a policeman. It is the best government that Pakistan has had and, being led by trained administrators, fulfils the needs of a country suffering from maladministration of politicians.

But—and it is a big but—action on these lines would have cut at the roots of the law. Perhaps the greatest thing that Pakistan has taken over from the British, greater even than the ideals of good administration, is a deep veneration for the rule of law. Admittedly, the past few years have seen a gradual erosion of this; but if the government had gone to the length of flouting the Federal Court openly and setting itself clean above the rule of law, it would have been regarded as the beginning of the end of Pakistan as a free and democratic society.

The government would then have been faced with a terrible dilemma. It could be argued that it should have yielded gracefully and permitted the restoration of the dissolved Constituent Assembly. But in fact it is almost impossible to contemplate this as a practical possibility. The Assembly was dominated by a block of East Bengal Muslim members who may have been fully representative of their province in 1947 but now no longer represent anybody but themselves. They were all members of the Muslim League and, in the 1954 elections to the Provincial Legislative Assembly, that party succeeded in gaining only 10 seats as compared with 223 secured by the newly formed

United Front. The successful party was completely unrepresented in the Constituent Assembly, even on the opposition benches. In fact, therefore, the restoration of the Constituent Assembly would have created a situation which would have been the very negation of democracy, and would have left the making of Pakistan's constitution largely in the hands of a group of politicians whom the country had rejected. Worse still, no one could have got rid of them; they would have been members of a sovereign body, which could not be dissolved by the Governor General and could dissolve itself only when it had completed the framing of the constitution (which had already occupied seven unfruitful years). This would have been a *reductio ad absurdum* of the law as it stood, and it can hardly be doubted that in such circumstances Pakistan's necessity would have known no law.

Happily there is now no need for such speculations. One gets the impression, however, from the terms of the Federal Court's order, that it was a narrow shave for the government and that the facade of legality was preserved only by a hair's breadth. It is significant that the Court made no pronouncement on the main issue, and set aside the Sind Chief Court's ruling only on the ground that it had been acting under a provision of law which was invalid because it had not received the Governor General's assent. Some fifty Acts passed by the Constituent Assembly now become automatically invalid, and the baby has certainly been thrown out with the bath water; but no doubt the government has an ordinance ready to give validity, with retrospective effect, to such of these measures as must be saved.

What comes next? The limelight switches once again to East Pakistan, for the Governor General has made known his intention of summoning a fresh Constituent Assembly or convention elected by the Legislative Assemblies of provinces where such bodies exist. This makes it necessary to re-establish parliamentary government in East Pakistan, even though that troubled province is much happier under governor's rule. But the problem is to find someone to form a government. Properly speaking, the leader of the United Front party, the octogenarian Mr Fazlul Haq, should be called upon, but he made such appalling blunders during his short period as Chief Minister that he would hardly be acceptable to anyone. Moreover, the United Front, which was an *ad hoc* party formed from diverse elements of the province to fight the elections against the Muslim League, has since virtually disintegrated.

Once, however, this difficulty is surmounted, the new Constituent Assembly should have little trouble in bringing the constitution to its final shape, for the trials and errors of the past years have made it plain that the federation must be formed of two more or less equally balanced states, the eastern wing and the western wing. Recent reports indicate that the government is not weakening in its determination to amalgamate the provinces and states of West Pakistan into a single unit, and in this, if it can be safely achieved, lies the solution of several of Pakistan's major difficulties. Meanwhile, an important consequence of the Federal Court ruling is that it gives the Governor General, Mr Ghulam Mohamed, a great measure of power. So long as his health holds out, he will continue to play a very important role. He will be supported by a cabinet of expert administrators which, if it can keep clear of internal dissensions, will be able to continue the good work it has begun. But with all its virtues the present administration does seem to be of doubtful legal paternity, and the best long-term interests of the country require the holding of general elections as soon as possible.

As-You-Were in Soviet Germany

THE Soviet Union's German satellite has now obediently entered its new-old course on the signal from Moscow. The main difference—and a very important one—between the East German Democratic Republic and the rest of the people's democracies is that its economic planners perform their contortions in the full view of the prosperous West Germans, and any of Herr Ulbricht's fellow citizens who find his rule intolerable can escape to the capitalist world. So far, over a million former inhabitants of the People's Democratic Republic have chosen not to live under German Communists, and the stream of refugees continues. It slackened very much after the new course was introduced in 1953, with its promise of better conditions. A trickle of refugees was actually returning to the east last year, though some of these have come back to the west for a second time. Peasants and young workers still form a big proportion of the present flow. There is now an acute labour shortage in the Soviet Zone, and the authorities are having to court more unpopularity by driving workers into the gaps that yawn most widely. Men are being sent from factories producing consumer goods on to the deserted farms and into heavy industry. And everyone is being told to work harder. In all industries, there is a new drive to raise norms, or, in other words, to reduce the wage for the job.

The new-old course means that heavy industry is given greater preference over consumer goods than under the new course. No more is heard of the orders to heavy engineering works to produce pots and pans. It means that the lag on the farms must be overcome. It also involves a fresh effort to increase productivity and lower costs, which are abnormally high. Factories that showed good profits under private ownership are working with losses that have to be borne by the state. In the urge to fulfil the plan targets laid down in East Berlin ministries, factory managers produce large quantities of unusable goods that have to be rejected by other factories which have relied on them in order to fulfil their fixed target. And so the whole system has

been digging itself further into a morass of muddle. From it the Socialist Unity Party bosses every now and then pick men and women who have not shown political zeal, and imprison them as saboteurs, whether or not they are efficient technicians whose loss to the business creates further confusion. The rest of their fellow-workers are then exhorted again to emulate Soviet technique—advice which goes down very badly among the Germans.

Plans to Reform Planning

For the first time, it seems that one inherent fault in Soviet planning is being recognised. The new-old course in East Germany includes a certain reform of the centralised system itself. At an economic conference in East Berlin in the middle of March, attended by Soviet representatives, the SED's chief theoretician, Oelssner, announced that a balanced economy would be created by new means. Rigid centralised planning would henceforth be limited to a few basic fields, and in other industries local plans could be drawn up. In this way it was hoped that production plans would no longer be upset by frequent alterations made by ministries. Moreover, the obsolete basic "standard values" on which targets are computed would be abandoned, and in future there would be no "wangling" when norms were fixed. Economic research would be used and the time needed for a job would be properly assessed.

From the point of view of the Soviet Zone consumer, the most important symptom of the new-old course is a food crisis. Meats, fats, sugar and flour are all scarce and are, it seems, practically unobtainable in some districts. The authorities are alarmed. Herr Grotewohl, the premier, had to call a conference on March 10th, at which he declared that last summer's harvest, which was admittedly poor, was to blame and that rations of sugar, flour and alcoholic drinks had been cut to ensure supplies during the year. He inveighed against the panic hoarding which is taking place. At the same time, he proclaimed that agricultural targets had been stepped up.

A 1949 Promise

This miserable performance in a largely agricultural territory, nearly ten years after the end of the war, is a poor advertisement for Communism. The abolition of rations was promised when the Ulbricht government was formed in 1949, and has been repeatedly dangled before the eyes of the public since. Supplies have, indeed, increased in the off-the-ration state shops, and prices have been lowered over the years; but the present reversal of policy will again postpone the goal of derationing. The government is obviously worried about the excess of purchasing power in the country, and it is hardly likely that prices will be cut considerably until such time as the low level of productivity rises. To combat inflation the Communist authorities are trying to prevent West Berliners from buying in the eastern sector of the city, after having exchanged their money at five-to-one (in favour of the west mark), and efforts are being made to limit the amount of notes which East Germans take out of the Zone. Soviet in the West, which lowers the rate of exchange. Yet against all the evidence the Soviet Zone authorities still insisted at the Leipzig Fair that the east and west marks

are at par, and that—still more oddly—the pound sterling is worth only 6.22 Soviet German marks. This latter rate would make the eastern mark very much more valuable than the west mark, the rate of which is 11.75 to the pound. The sheer nonsense of this juggling is not lost on West German businessmen.

The return to economic Stalinism and the new food shortages will undoubtedly cause great disappointment among the East Germans. In the past year those of the people who had known nothing but a police state and rationing for most of their adult lives were becoming more contented. "It is not so bad now. We get an orange occasionally," was the typical remark of one book-keeper refugee who fled some months ago for fear of arrest. There may be a further increase of refugees to the West as a result of the latest developments. In particular, the West may have to try to accommodate more peasants from the Soviet Zone if Ulbricht steps up the drive to collectivise the farms. Clearly the dilemma of the Communist leaders will be whether to cling to the doctrine of collective farming and risk more land going out of cultivation altogether, or to slacken the drive and risk a revival of the kulaks. It is expected in Bonn that Marxist-Leninist theory will win.

In any event, Ulbricht does not intend, it seems, to bring down the iron curtain again along the interzonal frontier if the Paris treaties are ratified. The Communists' policy is, on the contrary, to keep up the present comparative ease of travel because it suits their purpose. The open frontier smooths the way for Communists to organise their infiltration of Federal German organisations.

M Faure and the Tunisians

FROM A CORRESPONDENT IN PARIS

LAST week, when Franco-Tunisian negotiations on home rule were resumed in Paris, M. Edgar Faure was at pains to emphasise that he was entirely in agreement with the general line of policy set forth in M. Mendès-France's declaration of July 31st last to the Bey of Tunis. The talks are now happening daily and in the course of them the French and Tunisian delegations have united to issue statements about the cordial atmosphere in which they are taking place. But both delegations admit that little progress is being made: none can be expected until the Tunisian prime minister returns from the visit to Tunis on which he embarked last Saturday.

Both sides give different reasons for the fact that nothing has been achieved during a week of talks. The Tunisians say that they agreed to reopen talks at the point where they were broken off when M. Mendès-France fell, and that at that time the entire treaty was ready for initialling with the sole exception of the articles concerning the responsibility for the police force in the southern part of the country. It will be remembered that at that time both prime ministers said that negotiations were on the point of conclusion and that "a few hours of further talk" would solve the difficulty; it is possible that the immense confidence the Tunisians placed in M. Mendès-France personally caused them to take this optimistic view. Now, they say, the Faure government has redrafted and changed much of the text so that many of the important issues that had

been settled must be thrashed over once again. According to the same Tunisian sources, the subjects which need to be reopened include the whole complicated question of Tunisian nationality; that of French participation on municipal councils and on the proposed National Economic Council; the use of the French language in schools and official documents; the question of courts of arbitration and the exact timing of the transfer of the police force in certain areas from French to Tunisian control.

Economic Troubles

If it were not for the present parlous state of Tunisian social affairs, which includes the prevalence of near famine conditions, 500,000 unemployed in the country and a consequent need for immediate and long-term economic aid from France, the Tunisian delegation would already have threatened to break off the talks unless they were based on the draft agreed by M. Mendès-France. The Tunisians say that it is to discuss these points that the Tunisian Premier, M. Tahar Ben Ammar, has gone back to Tunis; he is also intending to discuss them with an influential Tunisian in exile—Salah Ben Youssef, Secretary-General of the *Néo-Destour*, who is in Geneva.

The French picture of what has been happening is not quite the same. Frenchmen freely admit that the text of the proposed treaty has been rewritten and "improved," but the argument is that these changes have only drafting significance, and that talks have reopened more or less where they were broken off. Paris believes that M. Tahar Ben Ammar has left Paris, not to hold consultations about the changed text, but to attempt to heal rifts in the much-divided delegation that he leads. It is patent to anyone, for instance, that there are deep differences between the attitude of the Bey and that of M. Habib Bourguiba, who is the *Néo-Destour* leader still in exile in France. The latter has recently made statements concerning constitutional reforms which make no secret of the fact that he questions the right of the Bey to hold the absolute powers that at present go with his high office. Frenchmen also argue that Salah Ben Youssef is kept in exile by the Tunisian delegation because they resent and fear his power. The French say that so far as they are concerned there is no reason why both Salah Ben Youssef and Habib Bourguiba should not be included in the Tunisian delegation. What is necessary, they maintain, is a delegation which speaks with one voice and represents the territory.

It seems that the main issue still at stake is responsibility for the police force in the southern part of the country. Paris has a theory that the Tunisians are making a fuss

"Motor Business"

The current issue of this quarterly research bulletin for the motor and allied industries deals with:—
The domestic and export markets for agricultural tractors.

Car ownership and purchase in Britain.
Second-hand price indices of cars and vans.
The bulletin is fully illustrated by charts.

about other points, and reopening other questions, in order to fabricate bargaining counters for use in this major struggle. But despite the many important differences between the delegations, it is obvious that both sides urgently want to reach agreement. The feeling in Paris is that there is a fifty-fifty chance of success if M. Faure remains in power long enough to allow what amounts to renegotiation of large parts of the treaty.

Problems of Prosperity in Holland

FROM A CORRESPONDENT IN HOLLAND

STIMULATED by recent private proposals for a revaluation of the guilder, outside observers may have gained an exaggerated impression of Holland's super-abundant economic strength. The country is, indeed, relatively prosperous. There is no boom, but there is a solid foundation on which to be optimistic about the near future; yet an economy so dependent on its neighbours is always vulnerable. Economic development in a country like Holland can never move faster than that of the larger countries to whom it must sell its exports. For the time being, therefore, the question of revaluation is academic, since neither government nor the *Nederlandse Bank* is inclined to consider it seriously.

The suggestion is, in fact, an indication more of concern than of complacency. Wages have risen fairly steeply recently—about ten per cent in the past year. The advocates of revaluation see it, therefore, as a means of avoiding a proportional rise in costs by forcing down the cost of imported raw materials and semi-manufactured goods. Wage increases, resulting in increased costs, threaten the principal advantage Dutch exporters of industrial and agricultural goods still have over their colleagues abroad; for in comparison with other European countries, costs are low.

Dutch government officials point out that it would be difficult for a single country to launch currency changes alone. Moreover, the terms of trade are still developing favourably for them. The government, therefore, prefers to rely on other, more orthodox, ways of adjusting the wage-price ratio. Under the government-launched slogan: "Rest," an injunction aimed at both wages and prices, internal policy now aims at keeping both stable. The country's three large employers' organisations fully back the government's campaign. And meanwhile the government is warning business and agriculture against the abuses of price-fixing and unreasonable profit margins. To round the programme off, it never ceases to stress the need for raising productivity as a means of increasing real wages.

Whenever the fate of the country's export programme is at stake, the Dutch government can count on popular backing, even when it means an arbitrary restriction of consumption. Dutchmen appear to have a streak of economy in their nature; they always put aside a part of their salary as a matter of habit and rarely buy on credit—hire-purchase is virtually unknown. Nonetheless, the government has come to the conclusion that it should not indefinitely force consumption to remain at an artificially low level. Partly

THE ECONOMIST, MARCH 26, 1955

for this reason it has introduced into Parliament a bill cutting taxes by 505 million guilders.

The increase in exports continues. Last year Dutch exports were 9,500 million guilders, 1,000 million more than in 1953. Figures for the early months of 1955 are higher than in the corresponding months of 1954. Imports increased by 2,000 million guilders last year, to a total of 10,673 million. In spite of the import surplus the overall balance of payments remained favourable. On January 1st, total reserves amounted to 4,849 million guilders, 3,015 million of which was in gold and the rest in foreign currency.

The Dutch government is pushing ahead with its programme of freeing imports; liberalisation in trade with OEEC countries is now at 92 per cent. Dollar imports have been freed to the same degree and in consequence have risen rapidly. At the same time, Holland's dollar position has benefited from the listing of Dutch shares (Royal Dutch Shell, for example) in the American market.

The strengthened balance of payments position has made it possible for Holland to resume, on a modest scale, the capital export which was so important before the war. Low interest rates have made borrowing attractive. In the government sector foreign loans are so far restricted to Belgium, which borrowed 160 million guilders last year; a new loan to Belgium has just been announced. Negotiations for a loan to the European Coal and Steel Community are under way. And, in addition to this, Holland has been able to repay in full two large dollar loans before maturity.

The great dangers and the great weakness of the Dutch economy lie within Western Europe. Dutch exports go principally to European countries despite enormous private and official efforts to spread exports outside Europe. Belgium is still its best customer, with West Germany a close second. Holland, however, is still getting dollars from Indonesia by way of contractual repayments of loans granted before the transfer of sovereignty. But the proportion of total Dutch trade going to Indonesia has fallen from 8 to 2 per cent in the five years since independence. Dutch traders and exporters have adjusted themselves to the shift and are concentrating more on other Asiatic countries, especially India and Pakistan.

All these favourable factors must not, however, lead to an overestimate of Dutch economic strength. Though Holland is a creditor in EPU there are indications that it may not indefinitely remain so. It would be one of the first countries to suffer if, for instance, France was forced to retreat from its present level of liberalisation. If the German rearmament orders go to other foreign countries, one result will be that normal German trade with Holland will suffer. These are possibilities that prudence demands must be kept constantly in mind.

Candidates and Crisis in Brazil

FROM A CORRESPONDENT

ON October 3rd, Brazil will go to the polls to elect a new President. As the office-holding candidates must resign by the beginning of April, it is only to be expected that the politicians should now be involved in a frenzy of bargaining and agitation. But two issues of crucial importance to the country's future are adding an unusual tone of urgency to the debates. The first is whether a democracy,

THE ECONOMIST, MARCH 26, 1955

1099

This machine was photographed by kind permission of Conroy Stewart and Company Limited

Twentieth-century penknife

WHEN PENS WERE FEATHER QUILLS, penknives really were *pen* knives, but the nearest thing to a penknife that modern pen makers use is this machine in our illustration. They use it for slitting nibs for modern fountain pens. The blade of this twentieth-century penknife is an abrasive cutting wheel about three inches in diameter and one two-hundredth of an inch thick. It is made of rubber-bonded silicon carbide, and is mounted on a shaft which revolves at 20,000 revolutions per minute. When the wheel is stationary it is fragile and slightly flexible. At 20,000 revolutions per minute centrifugal force keeps the wheel perfectly rigid and steady, and the cutting edge moves at some 170 m.p.h. Gold nib blanks, stamped to shape and tipped with iridium, are presented to the edge of the wheel point foremost, and fed smoothly forward. The wheel cuts a fine, highly finished slot,

clean through the iridium tip and along the centre line of the nib.

Beside these small abrasive wheels for nib slitting, The Carborundum Company Limited make abrasive cutting-wheels of many kinds and sizes: wheels that can cut through a Nimonic-steel bar, three and a half inches in diameter, in 45 seconds; wheels that cut through red-hot sections of high-speed steel in the rolling mill at temperatures up to 1,000° Centigrade; wheels that can cut concrete; wheels that can cut plate glass; wheels that can cut an eggshell cleanly into two pieces without damaging the skin of the egg inside it.

These cutting wheels are finding new uses every year, but they are still only one small group in our much wider range of abrasive wheels for a thousand and one other industrial purposes—grinding, polishing, and honing wheels, of every kind.

so bitterly divided against itself as a result of the suicide last August of President Vargas, can survive a free election. The second is whether the country can save itself—or be saved by others—from the bankruptcy which faces it as a result of the collapse of its coffee exports.

Most Brazilians would be very happy if it were just a question of electing the candidate of one or other of the great national parties. Unfortunately, however, the political undercurrents are not so simple. The 24th of August is rapidly becoming as symbolic to the popular press as the Ides of March were to the Romans. On that date President Vargas committed suicide. A leading group in the armed forces—led by the air force—had decided that the corruption and fraud of his regime must end and that Vargas himself must go. They hoped to give Brazil an era of honest, democratic, government and sound economics.

Old Habits Return

There was only one flaw in this crystal-gazing. The men who led Brazil's *coup*, because they justified themselves as defenders of the constitution, neither wanted nor were able to limit the freedoms guaranteed by the constitution. As the first shock of the new regime wore off, the old political habits began to reassert themselves. By last December it had become clear that the largest party in the Chamber of Deputies—the Social Democrats (PSD), who include some of Getulio Vargas's most active supporters—was planning to run its own candidate. And the Governor of the important mining state of Minas Gerais, Sr Juscelino Kubitschek, who is widely accused of surrounding himself with many of Vargas's more disreputable camp-followers, was actively promoting his own candidature. The military leaders stepped in. They wrote a letter to President Café Filho advocating the idea of a candidate of national union; and every attempt was made, both in public and in private, to suppress Kubitschek's candidature. The PSD ignored these warnings and drafted Kubitschek at its party congress in February—though a significantly large right-wing splinter group refused to go along with it.

Since then all has been confusion. There was much loose talk of a new army *putsch*. But the government has been showing more interest in finding a national union candidate capable of beating Kubitschek in open elections. The anti-Juscelino group has had great difficulty in finding a man who can both appeal to the masses and command sufficiently widely-based support from the mutually suspicious political factions. Many people hoped that General Juarez Tavora, who has come further into the open political arena than most of his colleagues, could be persuaded to stand. But an army candidate would have the disadvantage of driving many fence-sitters into the opposite camp.

Attempts have also been made to involve Sr Janio Quadros, the new Governor of São Paulo—Brazil's great coffee-growing and manufacturing centre. But this enigmatic figure has been blowing hot and cold, counting his cherry stones. He may find it better to be Governor of São Paulo than an unsuccessful Presidential candidate. Hopes are now resting on the relatively neutral—and some would say negative—candidature of Sr Munhoz da Rocha, Governor of the small southern state of Paraná. Meanwhile, Sr Kubitschek is following a sophisticated line. By standing as a strictly constitutional candidate he has been able to accuse his opponents of carrying on an anti-Vargas vendetta long after the reasons for that feud have ceased to

exist. And he has been acting on the sound principle that to be known is to be voted for; already his posters are appearing on the hoardings and his articles in the press.

The financial crisis is giving the election an unusual seriousness; and, in turn, the prospect of an election is making the government's attempt to fight the financial crisis doubly difficult. About its seriousness there can be no two views. Coffee, which last year covered 54 per cent of the total value of Brazilian exports, has slumped on the American market. In January and February of this year exports fell quantitatively by 34 per cent compared with the same period last year; and despite drastic price-cutting there is still no sign of a recovery. With the promise of a bumper crop this year, Sr Gudin is faced with the prospect (which in an election year amounts to a necessity) of buying up huge quantities of excess production which on reliable estimates will amount to about 5 million sacks (or a third of the crop) and cost the state about 10 billion cruzeiros. Inflation is rampant and the cruzeiro is tumbling to new low levels on the free market.

Sr Gudin is doing what he can on the monetary front. He still claims to be determined to balance his budget and is boldly pursuing a tight credit policy. In January, for the first time in many years, total bank loans were actually reduced; and optimists talk of inflation being eliminated in a few months. This month, in the teeth of fierce opposition, he forced through an increase in the premium on the exchange rate which has to be paid for oil imports, thus bringing the exchange rate charged on Brazil's most costly import closer into line with the real value of the cruzeiro—and at the same time providing the Treasury with increased funds to fend off the coffee slump.

Few people really expect these measures by themselves to revive exports. A more realistic exchange rate to stimulate Brazil's secondary exports on the world market could help. So would a further tightening of the already theoretically strict import regulations. But the foreign capital which alone really has the power to give Brazil a new lease of life is unlikely to flow until a very important condition is fulfilled. There must be reasonable certainty that a stable and efficient government with power to take Draconian decisions will stay in office.

The New Gatt

THE ninth session of the Contracting Parties to the General Agreement on Tariffs and Trade (Gatt) in Geneva had as its main object a review of the working of the Agreement in the light of past experience and existing circumstances. The results of this operation have now been published. The following are the main changes proposed:

(A) Amendments to the Agreement

Restrictions to Safeguard the Balance of Payments (Article 12)

Only comparatively minor changes have been made in the drafting of this article. But an important change of substance concerns the obligations of countries applying quantitative restrictions (QRs) to consult with the Contracting Parties to Gatt (later with the Organisation for

Trade Co-operation (OTC) when it comes into existence) "immediately after" applying or intensifying such restrictions. In addition, from a date yet to be specified, Gatt will review annually all restrictions being applied under this Article. If it finds inconsistencies it will advise the country concerned and suggest modifications. If "serious" inconsistencies are found it may recommend means for bringing these into conformity with the Agreement, and if its recommendations are unheeded it will advise the other parties concerned that they are entitled to take appropriate reprisals. In addition, any Contracting Party which is harmed by the action of another country in applying QRs is entitled, if it can make out a case proving that the rules are being violated, to bring it to the notice of the other Gatt signatories, who will then take action similar to that already described above.

Exceptions to the Rules of Non-Discrimination (Article 14)

There is no immediate change; but later, when sterling becomes convertible, provision has been made to ensure that the obligations and rights of a country in terms of the International Monetary Fund Agreement are consistent with those under this Agreement.

Subsidies (Article 16)

New clauses have been added. A distinction is drawn between subsidies on "primary" products and others. The clauses regulating the use of the former are mild; no subsidy on a primary product shall be applied if it causes the country applying it to secure "more than an equitable share of world export trade in that product." No definition of "equitable share" has been attempted. In the case of all other subsidies, the Gatt countries undertake not to introduce any new subsidies, nor to extend existing subsidies after January 1, 1955. As from January 1, 1958, countries are obliged to remove all subsidies, save those on primary products.

Governmental Assistance to Economic Development (Article 18)

This Article has been radically rewritten. A definition has been attempted of an underdeveloped country. In fact, two forms have been identified:

- (1) Contracting Parties which can only support low standards of living and are in early stages of economic development. (Such as India, Pakistan, Burma, Indonesia.)
- (2) Contracting Parties which do not fall into the same category as the above, but which are nevertheless in the process of development. (Such as Australia, New Zealand and South Africa.)

Countries belonging to the first category are allowed considerable latitude in regard to both tariffs and QRs. In order to protect a particular industry essential for economic development, they are allowed to open negotiations on the modification or withdrawal of tariff concessions with the other countries concerned. If agreement proves impossible, the underdeveloped country can appeal to Gatt, which in turn might, in certain circumstances, authorise the country to withdraw or modify the tariff concessions concerned, while granting adequate compensation. In the last resort an underdeveloped country can withdraw or modify a bound tariff concession; but in this case it is open to retaliation. Underdeveloped countries of the first category are entitled to use QRs for balance of payments reasons in the same

manner as other countries, but with the additional dispensation that Gatt will review these only every two years. An underdeveloped country is, in addition, entitled to use QRs to protect a newly established industry; but it must consult Gatt before doing so. Developing countries of the second category are allowed to use QRs to protect a newly established industry; but they must first secure the approval of Gatt.

Modification of Schedules (Article 28)

A new procedure has been evolved. Beginning from January 1, 1958, tariff schedules will be bound for three-yearly periods. At the beginning of each period there will be a brief "open season" during which countries will be entitled to negotiate the withdrawal or modification of concessions. And if agreement cannot be reached they will nevertheless be free to withdraw or modify these concessions; but they are then open to retaliation.

Tariff Negotiations (Article 28 BIS)

A new departure is the specific injunction to sponsor tariff negotiations in which all member countries participate.

(B) Organisation for Trade Co-operation

By a separate protocol and agreement the establishment of a new body is proposed. It is to be known as the Organisation for Trade Co-operation, and will be responsible for the administration of the Agreement. It will consist of an Assembly, made up of all the members of the Organisation, an Executive Committee comprising 17 members elected by the Assembly, and a Secretariat, under a Director-General, which will in fact be the present Gatt Secretariat suitably reinforced.

(C) Waivers

During the session waivers were granted to the United Kingdom in connection with the tariff treatment of imports from dependent overseas territories, and a minor extension of the waiver granted in October, 1953, concerning horticultural imports, and to the United States in connection with import restrictions imposed under section 22 of the US Agricultural Adjustments Act.

An important decision taken in Geneva, and contained in a separate document, concerns the so-called "hard-core" import restrictions. This refers to QRs, which though originally put on for balance of payments reasons have, incidentally, served to protect industries, and therefore cannot be removed without hardship. In this case, the country concerned must, before December 31, 1957, inform the Contracting Parties of its difficulties. Permission may then be granted to that country to retain these restrictions temporarily, but it will be under an obligation to work towards their removal within five years.

The various agreements and protocols containing these changes—five in all—are open for signature in Geneva. To become effective some require the unanimous acceptance of all the parties; others require only a two-thirds majority; while the agreement for the setting up of the Organisation for Trade Co-operation requires the agreement of countries whose trade accounts for more than 85 per cent of the total foreign trade of the Gatt countries. In effect, this last provision means that Britain and the United States must both sign before OTC comes to life; in the case of the United States, which has already signed, the Agreement must be ratified by Congress.

MORE POWER AT LOWER COST

The Eland is a propeller-turbine aero-engine designed for use with a single rotation propeller. It is light in relation to its power and its fuel consumption is extremely low. The small cowled diameter of the Eland (36" for 3,000 e.h.p.) gives it a very high aerodynamic efficiency.

All these factors make the Eland an engine of unusual interest to operators, and a fine example of the Napier principle: more power at lower cost.

THE BUSINESS WORLD

Towards Competitive Railways

THE seed that was sown in the Transport Act of 1953 contained the germ of greater commercial freedom for British railways. It was a new species, developed to replace some rank and tangled growths in the railways' old-world garden—*monopoly triumphans*, over a century old, and now growing upside-down;

charging principle, and has naturally made little appeal to those who fear that their freight charges might go up and care little that the other man's might come down, its course before the tribunal may be hard and long.

The new principles in the scheme are two. First, it sets the maximum charges that the commission

may make for moving freight. It throws out the classification of goods and the standard charges on which the 1921 Railways Act was based. In their place, it provides a maximum charge for each consignment based on its weight and its loadability. Secondly, this is a scheme to set limits to what may be charged, and not a scheme to fix charges. The commission's memorandum, explaining the scheme, rightly declares that "in trans-

port, as in any other commercial business, the most effective price protection for the consumer is competition." There may, indeed, be cases where a trader is bound to the use of railway transport, because there is no competing carrier ready to take his traffic; in that event, section 22 of the 1953 Act protects him, for he can complain to the Transport Tribunal and get redress if he is being unreasonably charged. Within these new maxima, the commission will be able to exercise commercial discretion in quoting rates and

think that they are in danger of being roughly treated. To the Transport Commission since the idea of giving them greater competitive freedom was mooted, and they have now reached the stage of lodging with the Transport Tribunal a draft scheme for a new system of freight charges. Until a charges scheme is approved by the tribunal, the railways will not gain full power to compete effectively with road haulage. And since the scheme embarks on a new

up to 15% FASTER MOULDING with LUSTREX HI-FLOW 55

LUSTREX*, Monsanto's popular polystyrene plastic, is now available in a faster flowing form. With Hi-Flow 55, you can mould at a lower temperature — and cut cycle time by up to 15%! Thus for normal mouldings, Hi-Flow 55 can save time, increase production and cut costs. And for intricate mouldings, particularly those needing a long flow, Hi-Flow 55 greatly reduces the risk of strain and instability in the finished product. Hi-Flow 55 is also specially suitable for very thin wall applications — and thick sections too! Lustrex Hi-Flow 55 needs no special moulding technique — it can be used in standard injection moulding equipment.

Please note that it can be supplied only to commercial users in production quantities. Write now for full details.

What you can make with LUSTREX*

Many different products, cheaply and well. You can make tool handles, and packages for tools. You can make filing trays, and fittings for refrigerators and radios. In fact you can make almost anything — from instrument panels and picnic sets to camera spools and small cable drums — in Lustrex polystyrene plastic.

their object will be to encourage the tendering of traffic in wagon-load consignments.

These new principles command respect, and they are founded on sound economics. The present classification of commodities by value, with scales of charges for each class, averages out the total cost of movement over all the traffic, on a rough basis of ability to pay. It has no very direct connection with the relative costs of moving the different consignments, and it works only under conditions of virtual monopoly. In a competitive regime, charges must be linked to costs, and the latter are governed, to an important extent, by the weight and by the loading characteristics of the consignment. The scheme in fact adopts the ten-ton wagon as standard basis of cost (thus posing the question whether the standard basis itself ought not to be raised as the average carrying capacity of the wagon fleet is steadily improved). "Loadability" is defined in the scheme in this way:

"Loadability" means, in relation to any consignment, the greatest weight of goods identical in every way (save as to total weight) with the goods comprised in the consignment as tendered for carriage, which is reasonably capable of being loaded and safely carried in an open railway wagon with two axles capable of carrying a maximum load of ten tons and with a cubic capacity of 450 cubic feet.

Given the total weight and loadability of any consignment, the charge for carrying it is split into two parts: a fixed charge for the first ten miles; and a charge per ton for each mile beyond ten. These maximum charges for the larger traffics can be summarised thus:

PROPOSED MAXIMUM CHARGES

Weight	Loadability	First ten miles	Per mile thereafter	Average per ton at	
				50 miles	150 miles
tons	tons	per ton	per ton		
10 or more.	10	28s.	3½d.	38s. 10d.	65s. 11d.
8 to 10	8 to 10	31s.	3½d.	42s. 8d.	71s. 10d.
6 to 8	6 to 8	39s.	4½d.	52s. 4d.	85s. 8d.
4 to 6	4 to 6	54s.	5½d.	72s. 4d.	118s. 2d.
3 to 4	3 to 4	72s.	7½d.	95s. 4d.	153s. 8d.
2 to 3	2 to 3	100s.	9d.	130s.	205s.
1 to 2	...	160s.	1s. 3d.	210s.	335s.

Note: If, say, 4 tons of goods of 10 ton loadability are tendered, the trader will pay on the basis of full use of the wagon—that is, on 4-ton loadability. If the railways can put two such loads in one wagon, the advantage will be theirs. Actual rates, in practice, are likely to be below the maxima in most cases.

A scheme of this kind cannot distinguish between different traffics—for example, between raw materials and finished manufactures. If the maximum charges were in fact to be adopted by the Commission as their actual charges, some traffics would have to pay more than at present, particularly those in the lower classifications, as the chart shows. But that is not the Commission's intention:

Most of the rates in active use at the time the scheme comes into force should continue in operation for the time being to enable a progressive and systematic review of all such rates to be made. When carrying out this

review, the Commission will adjust charges, either upwards or downwards, as part of a process of evolving a new and flexible charging system based on sound business principles. It is the Commission's intention to consult with representative bodies of traders in the development of their system of charges...

There are, in fact, three safeguards against excessive charges: competition from road haulage and privately owned road transport; the countervailing power of the large industries (including coal, electricity, gas and steel) that are well able to defend themselves; and in the last resort, appeal to the Transport Tribunal if the railways should try to exploit what remains of their monopoly.

Given these conditions, there is everything to be said for supporting the new scheme in principle. It puts commercial enterprise first; it recognises that the limits of what may be charged for a consignment should reflect the relative costs of carrying it; it gives a pronounced encouragement to the bigger load and the longer haul, for which the railways' costs ought to be lower than road costs, and a pronounced discouragement to the small load and the short haul, for which road haulage is obviously cheaper and more convenient. There are some parts of the country that will not rejoice at these ideas—Scotland in particular. But it cannot be gainsaid that the railways are best fitted for the bulk load and the long haul, and that their charges ought to recognise the facts of their underlying costs.

Opposition to the scheme—and there will be plenty of it, and not confined to details—will have in the end to answer two straight questions. Are the opponents in favour of continued regulation of the railways of such a kind as to deny them any competitive opportunity in the nation's transport business? If so, do they really think it will reduce their transport costs if the railways sink into a state of complete decrepitude? There will be no sense in spending £1,200 million on railway rehabilitation unless costs are to be reduced and the reduction passed on to the trader—or to put the same point in national terms, unless the railways can contribute to a reduction in the real costs of transport that fall on the whole community. The condition for advance on the railways is the regeneration of commercial enterprise. And that, in the end, is the real safeguard for industry when it sends goods by rail. Traders should fasten their eyes on this prospect, and not on "maximum" charges. In the majority of cases the maximum charges will only set notional limits to what the railways have power to charge, whereas their actual charges will at the outset of the scheme be lower and under competition will remain lower. The passage of the scheme before the Transport Tribunal will be the less contentious if these considerations are kept in mind. It would certainly ill become any industry, nationalised or not, that bases its prices on average costs to impede a nationalised industry that is trying to put its prices into reasonable economic relation with its marginal costs.

Selling Cars in Africa

BY OUR SPECIAL CORRESPONDENT

OUTSIDE a car assembly plant at Uitenhage near Port Elizabeth one Sunday last month, employees were swimming in the company pool or lounging with cool drinks under a blazing South African sun. Inside the plant, frozen for the weekend into a purposeful clutter, various shapes and sizes and makes of cars queued on the same assembly line—pastel-coloured Austins, a rich tomato Studebaker, and Volkswagen in gayer colours than are usually sprayed at Wolfsburg. The American managing director told some English visitors that there were seldom less than three and often up to five models coming off the single final line; the mixed operation called for careful control of component stocks and for assiduous training, but it worked, with a very creditable score in standard assembly man-hours. Recently the plant had been turning out about 20 vehicles a day—or 4,200 a year, comprising 2,400 Austins, 1,200 Studebakers, and 600 Volkswagen; it is now up to 32 a day, and capacity is being increased towards about 40 a day. The Austins will be gone before the end of the year, to the company's own big new assembly plant at Blackheath outside Cape Town where the equipment is now being put in. The Uitenhage director was not worried by this move. Everyone hoped that import controls would soon be lifted, and there was a big pent-up replacement demand for cars, apart from expansion; he was thinking, in a year or two, of perhaps 5,500 Volkswagen and 2,000 Studebakers.

Such confidence, looking towards more cars and more competition, typifies the South African motor market today. It is a Commonwealth market, but no ordinary one. Car imports have been restricted for more than six years. There is no formal discrimination against the dollar: American cars took the brunt of the import cut, but a large number are still imported each year from the United States and Canada. South Africa is a motorists' country, with a car for every five white people and vast distances on a road system expressly designed and for motoring, not haulage. Finally, it is almost exclusively a market for cars imported "completely knocked down," with a large assembly industry to look after.

Under import control, Britain has secured a sharply increased share of a market that is still taking only about half the cars that it took in 1948. Then South African car imports were just under 80,000, and more than 60,000 of them were American.* Restrictions on exchange—in fact if not in form—pulled American cars down the next year to 20,000 out of a 41,000 total; and devaluation added its contribution to reducing their share of this price-conscious market. In 1953 the Union imported about 40,000 cars; Britain supplied just over

* Exported from America and Canada.

20,000, the United States 13,410, and the German industry, which had meanwhile arrived on the South African scene, about 3,200. Last year there appears to have been little change in the national pattern of imports: total British sales to the Union were down somewhat. Among the British makes, the order of sales in 1953 appeared to run: Austin, Ford, Vauxhall, Nuffield, Rootes and Standard; only General Motors and the American Ford approached the leading British makes in sales.

All these cars are assembled in South Africa, though only General Motors and Ford at present own the plants in which their knocked-down cars are put together; by this summer Austin will be assembling its own. All the others are assembled in plants built originally to assemble American cars, but owned for the most part in South Africa. The assemblers receive import quotas from the South African Government, and these quotas have been distributed to keep most of the plants at least fairly busy. Although Britain has considerably increased its share of the commercial vehicle market,

too, America still holds a small lead; most of these commercial vehicles, too, are assembled in the Union.

The control has virtually excluded the import of cars already assembled (except for a few token vehicles) because they suffer a sharply differential import duty; this may be six times as much for a car on wheels as for the same car "C.K.D." It has also brought about a rather odd "class structure" in car ownership. No car valued at more than £600 fob may be imported into the Union, which excludes for example the Jaguar, since this can hardly count on a volume of sales sufficient to justify local assembly. But most of the big medium-priced American cars have a "family" assembly plant to call upon—Chrysler and Packard, for example. It is broadly true that the better-off

motorist buys an American car (even the Chevrolet and the Ford are more expensive than any British make that sells widely). Britain supplies the cheaper—and hence the larger—end of the market.

Assembly in Africa, admittedly, lives under the sunshade of a differential tariff. It may be conceded that it is not greatly inferior assembly, or hugely more expensive. The standards of workmanship, on some African-assembled cars at any rate, seem slightly lower and less durable than those of vehicles brought in complete. There is not a great deal to choose between the South African materials that have to be incorporated—tyres, glass, paint, and trim—and those used in British mass production. In terms of man-hours, South African assembly compares fairly well, but with annual runs of only 5,000 or so, amortisation of capital equipment for assembly and of jigs for particular cars must run high. The actual labour costs seem likely to vary sharply with the proportions of races employed—white, coloured or African. Even with significantly higher freight charges a car assembled in Britain can be landed perhaps 5-10 per cent cheaper than the same car assembled in South Africa and using some local materials; but the differential duty much more than wipes this out. Assembly in South Africa is not an economic decision, but a condition of entry to this nationalist-minded market. The pressure for a higher proportion of local manufacture is certain to follow; but the “national car” about which certain assemblers have pipe-dreams still seems a long way off in the veld.

★

Today there is an absolute shortage of new cars, with waiting lists for most makes; among the cheaper and medium-priced cars a second-hand car a year old will fetch almost the list price. There are roughly 550,000 motor cars in the Union, and nearly half of them have been running ten years or more. There may not be much room for expansion of the market; though the British motor industry officially reckons the South African population as 18 per car, 13 of those are non-Europeans with tiny incomes. A few of these own cars; but to reckon the mass of them as a potential market that can be soon tapped for motoring is wildly unrealistic. The trade actually estimates the potential demand, for some years after imports are eventually freed, at 70,000-80,000 cars a year.

Small and medium-sized British cars now dominate new sales in this market, whereas ten years ago hardly any South African had a good word to say for a small British car. South Africa is a land of long, straight, empty roads, and ten years ago even most trunk roads had shifting dirt surfaces. The South African motorist believes that bad roads can only be taken efficiently by averaging about 50 mph along them. Up to the end of the war, therefore, this was a market for American cars; they could be driven constantly at 65 mph or more without shaking to pieces, and their springs were designed for roads often not much better than the African. They are now driven considerably faster; with the improve-

ment of American roads, their springing has become a little soft for African dirt surfaces. But the postwar British car can now hold its 65-70 mph for long periods on the South African trunk roads, many of which have now acquired a tarred surface; and it can put up good averages on the second-class dirt roads.

Where few people used to have a good word, there are still a fair number with a bad word for the British car, from private motorists to Government departments; and many more who without recriminations hope, if they can, to find the difference to pay for an American car. In the arguments for and against the two countries' cars there are elements of snobbery, larger elements of prejudice, and lumps of horse sense. Some of these may be worth recording impartially; all three may have a good deal to do with why a man buys a particular car:

Snobbery certainly has some influence with the richer motorists: with the British “class” car fenced out of South Africa, the done thing is to buy big, glossy and American.

Sheer size matters. In new American cars three people can sit side by side on front and rear seats without touching; and sitting touching anyone under South African sunlight is a warm, clammy business.

Ease of driving—both countries' cars have their advantages here. The expedients adopted to bring American gear linkages across to a right-hand drive are sometimes clumsy and weak; wrenching these big cars around on loose surfaces, or edging them in to park, can be hard work. But many drivers count American electrical gadgets as much more reliable.

Crashes in South Africa are frequent and catastrophic. If the British car survives the high-speed collisions that are commonplace, it will be a cheaper repair job. But some diehards would argue that the modern European chassis-less method of construction is not made for South African accident-prone drivers; they think the chassis that American cars retain makes for a stiffer structure.

Whatever the weight of these various arguments, price hits the American car hard. On the Rand, an Austin A.50 costs £750, a Vauxhall £780, a Volkswagen (standard) £572, a Chevrolet £1,054, and the larger Chrysler £1,850. Such “downward expansion” of the white motoring market as can be achieved, therefore, seems likely to be done with the European car—and primarily the British, since many of the arguing points against the small British car apply at least equally to the Volkswagen. At the moment, in South Africa, Britain leads America about 60-40 in sales. The British companies feel that complete freedom of the market need not pull that balance back to less than 55-45. In this competition two of the American contestants are assembling Vauxhall and Ford cars that earn sterling for the British motor industry. Before freedom arrives the biggest fully-British motor group, the British Motor Corporation, will have its own assembly plant at Blackheath, probably the most modern on the continent. The giants will meet on more equal terms.

Business Notes

Bears at Large

SHARE markets had every excuse for the renewed weakness they developed this week. The growing probability, as many thought, of an early election was added to the existing doubt whether the effects of dearer money had fully worked through the market. In the circumstances industrial ordinary shares did well to avoid breaking through the low point established just under a fortnight ago. At 179.2 the *Financial Times* industrial index still stands decently above the figure of 175.7 of March 15th. With a budget to come on April 19th, and with an early date still the favoured bet for the general election, it is far more likely that markets over the next few weeks will be narrow and will fluctuate erratically than that they will continue steadily to adjust themselves to the idea of dearer money.

But dearer money is there as a restraining influence to modify any optimism that the budget may kindle. Its effect though now evident through the range of fixed interest stocks has scarcely been felt in industry. In time industry must find that not only has it to pay more for money but that bank money is more difficult to get at the price. Gradually also industry must feel a pinch in its markets as the excess spending of the sterling area is cut out. What else than a parallel adjustment by another member of the sterling area are the recent Australian import cuts? Yet profits and prospects over industry seem good, and industry as a whole remains strongly liquid. But the business of the investor in equities is to place his money where the risks of loss are small and the chances of gain are great. The risks now are a little greater and the prizes less glittering. So some holders of low yielding industrials are moving into fixed-interest stocks with a date. The charts on the following page depict the “bull market” of the last 18 months and the fall that has now ensued.

★

A different set of conditions applies to fixed interest stocks. There, too, prices are sagging. The risk exists that the banks may need to sell some short-dated gilt-edged stocks to maintain their liquidity. Not looking for much recovery unless the budget should turn out to be not only good but better than expected, investors are still buying sparingly. And the jobbers, less certain than the theorists that the business cycle has been banished for ever, have cut their books down. The turn, when it comes, must therefore be sharp. Behind that market, too, lies the solid phalanx of money in the institutions that cannot indefinitely be left idle. It is supplemented for the moment by the trickle of other money seeking a safer haven than the industrial share market. Long-dated gilt-edged yielding a shade over

4 per cent may still look dear against short dated money governed by a 4½ per cent Bank rate. But the gilt-edged market has been adjusting itself since last November. It must have less distance still to fall than industrials, which reached their peak in February.

Keeping Bank Rate Effective

THROUGHOUT the four weeks since the increase in Bank rate to 4½ per cent, the Bank of England has been taking good care to keep its rate effective in the money market. At the tender immediately after that 1 per cent increase, the Treasury bill rate rose even more steeply than most banks had expected. It then jumped by almost 1½ per cent, to almost 3 13/16 per cent, which was nearly 2 3/16 per cent above the low point of last November, although Bank rate had risen during this period by only 1½ per cent. At this unaccustomed level Treasury bills became attractive not only to overseas holders of mobile balances but also to substantial domestic investors; the latter, in particular, are showing an increasing interest.

★

There was therefore a possibility that the increasing demand would provoke some relapse in the rate, but in fact the discount houses kept their bid price for the bills unchanged at each of the three succeeding tenders. This maintenance of rates is a measure of the firmness of official policy. Throughout the period the authorities have kept the short loan market on a narrow supply of funds, and on no fewer than nine occasions discount houses have had to supplement the market supply by taking seven-day loans from the Bank of England at Bank rate. The amount of these “penal” borrowings has never been large; there has been no repetition of the violent pressure that preceded the rise in Bank rate to 4½ per cent, when the whole discount market found itself “in the Bank.” But these tactics have left no room for doubt about the authorities' determination to keep rates firm.

One incidental result is that the discount houses are now securing a substantial “turn” on new business, which is helping them to make good the sharp losses incurred on existing bill portfolios while rates were rising. There is no corresponding cushion, however, for their losses on short bonds; the current yields from these remain relatively low—and it can only be reaped by the market when it is able to increase its portfolios and is prepared to take the risk of doing so.

Firth Brown Success

A FEW months ago almost every prophet in the market was predicting that the steel group would be among the first sections of the Stock Exchange to weaken as an election drew near. Now it happens that an election does seem near, but almost the smallest of the fears it raises is the renationalisation of steel. The few pence that steel ordinary shares dropped early this week were no more than in keeping with the general tone of markets. The investor now has other worries. If he is selling industrials steel shares will not claim his first attention. They are still a relatively high yielding group, with yields running from about 5½ per cent to about 6½ per cent—nothing like as high as when the Realisation Agency started selling steel shares to a nervous public on a basis of over 7 per cent, but still well ahead of the average of 4.9 per cent shown on the *Financial Times* industrial index.

Institutions that have been persuaded to take big lines of steel ordinaries are probably happy with them now. They have from time to time murmured that they would like a sprinkling of the prior charges as mixers. The first opportunity came last week with the offer of 5½ million £1 ordinary shares at 25s. and £3 million of 4½ per cent debenture stock 1980/85 in Thomas Firth and John Brown. Those prices gave little away, as the date of the offer approached, but the offer was a success, and the debenture stock—not the ordinary shares—had the best of that success.

The debenture offer attracted 9,000 applications for £31 million of stock. Preferential applications, including those from stockholders of John Brown and Co., received full allotment up to £5,000, the larger applications getting 40 per cent of their needs with a maximum of £40,000 stock. Public applications up to £1,200 received only £100 stock, larger applicants getting 7½ per cent of their applications, with a maximum of £3,750 stock. The ordinary shares were not as heavily over-applied for as some recent steel offers; a mere 42,000 applicants for 15 million shares came forward. The basis of allotment for preferential applicants was up to 200 shares in full, applicants for over 1,000 receiving about 34 per cent of their applications, with a maximum of 17,500 shares. The general public received a flat allotment of 100 shares irrespective of the amount

applied for. Satisfactory opening premiums were established for both stocks. The ordinary started at 9d. premium and have since held at around 6d. premium, while the debenture stock opened at 1½ premium and has since reached 2 premium.

Improving Bank Salaries

BANK salaries, as expected, are on the move again. During the past week, six of the big banks have each announced important new arrangements, and a seventh announcement is imminent. These are not concerted revisions, but all of those for which details are available have one common element: the banks are "consolidating" into basic salaries the supplementary cost-of-living payment (known within the banks as the "cash payment"), which in recent years has been at the rate of 13 per cent. The effect of this is to increase correspondingly the salary ranking for pension (and therefore to add very substantially to the burden of pensions provisions the banks are now carrying) without adding to immediate cash emoluments. The banks apparently hope to avoid any supplementary "cash payments" in future.

Apart from this, the new arrangements, like the old, differ from bank to bank. Four banks—Westminster, Lloyds, Martins and District—have introduced new and improved salary scales and have also raised the payments to staffs that are beyond the span of the scales, the so-called "appointed" and "unappointed" overscale staffs. The National Provincial and Barclays have both announced "consolidation" of the 13 per cent payment, and the former has promised an announcement of "appropriate increases" in a few days' time. The Midland's announcement is imminent, but no details have yet been disclosed. All the changes so far known operate from January 1st last.

Only the Westminster Bank has released comprehensive information, and this makes it plain that the major aim has been to improve the position of the overscale staffs. As in most other banks, the major beneficiaries of earlier postwar revisions had been the junior and other "scale" staff, since the most pressing need then was to appeal to the potential young recruit. The Westminster is now giving flat

Markets—Pause or Turn?

The left-hand chart shows in retrospect the shrinkage in yields during the great bull market on the Stock Exchange running from the end of 1951 up to early 1955 carrying the Actuaries' Investment Index of industrial equity prices up from 102.7 to its peak of 160.1 at the end of last January; a month later the index was down to 148.4. The right-hand chart shows the effect of the adjustment that has taken place in the weaker phase of markets that started in gilt-edged in mid-November and in industrials at the beginning of February.

total, the first 15 are medium-ranged, the next 10 have greater range, and the final 8 are suitable for non-stop North Atlantic operation.

20 Comet IVs, delivery of which will begin in 1958. In performance these are not expected to differ much from the Comet IIIs, but some allowance should be made for engine developments during the next three years. On present indications this version of the Comet will not be able to operate the North Atlantic non-stop.

The 60 engines are Bristol BE 25 turbo-props for re-engining the Britannia fleet when they become available. This should substantially improve the Britannia's performance.

The total cost of this new fleet is in the region of £65 million, but the corporation has undertaken to sell its Douglas airliners when the long-range Britannias can be put into operation on the North Atlantic.

£10 Million for AEI

TO fix the terms of a big capital issue in today's uncertain markets is not easy, but the biggest issue that has come for some weeks, the offer of 5,172,413 £1 ordinary shares of Associated Electrical Industries at 40s. to raise a little over £10 million, seems assured of success. Lord Chandos, the chairman, has rightly decided that if something has to be given away, the stockholders should have it. Nearly the whole issue—4,957,000 of the shares—are offered as rights to existing stockholders, including those whose stock arises from the recent take-over of Siemens Brothers on a one for four basis. The balance of 215,000 shares are offered to the employees on the same terms.

The rights are valuable—and sufficiently so to take care of any foreseeable risk of a further market recession. At the time the issue was announced the ordinary stock stood at 66s. 6d., making the rights worth 5s. 3d. per share. Lord Chandos should have more to say about the prospects at the meeting next week. For the moment, stockholders who have heard often enough that the electrical industry has become a prey to price-cutting will still be impressed by the fact that Associated Electrical Industries' 14 per cent dividend is covered many times by earnings and will expect the new capital, too, to earn its keep. They will assume that the rate should be maintained on the increased capital.

Profits from Drugs

ONE chapter in the two-year-old dispute over drug prices between the Ministry of Health and the manufacturers has been completed with the despatch of a letter from the Ministry to the industry admitting that the prices of unbranded drugs are not excessive and the profit margins quite reasonable. The Ministry investigated the costs of 19 manufacturers over a 3-year period and decided that their profit on capital employed averaged rather less than 14 per cent—a figure that was calculated over their sales as a whole, not only on those made to the

National Health Service. This is gratifying to the industry as far as it goes, but the more serious discussions, on the prices charged and profits earned on branded proprietary drugs, are still grinding on. The standard drugs, to which the Ministry has just given a clean bill, are the bread-and-butter production of the industry; and branded drugs consist, in the main, of all the new products of research and many of the more palatable compounds (the industry's term for these is "elegant"). These are, frankly, the profit earners and their sales have to recoup the industry's heavy research costs.

Unfortunately for the industry, some manufacturers have sold branded drugs at prices that are difficult to justify. The most striking instances are those of inhalants for the treatment of asthma which have been sold for prices six and seven times as high as those of their unbranded equivalents. In its understandable anxiety to protect the National Health Service's drug bill from prices like these, the Ministry has found itself landed with a full-scale investigation of all branded drug prices, reasonable as well as unreasonable. Between the Ministry and the manufacturers there are sharp differences of opinion about how the cost of the drugs should be assessed. The industry objects strongly to the principle of calculating profit on "capital employed" on the ground that it is not working to steady bulk orders, but to constantly fluctuating demands from large numbers of customers. Drug production, it therefore argues, contains a big element of risk for which this kind of calculation does not, in its view, make fair allowance.

An attempt is therefore being made to work out some kind of costing formula that manufacturers will observe once a drug is in regular production. For the first year or so in which a new product appears (the period when the risk of failure is highest, but also the period when the manufacturer has the advantage of a virtual monopoly) prices will be left free. The formula will be applied when conditions have become more normal—probably when the drug has become sufficiently standardised to be included in the National Pharmacopoeia. But it is proving far from easy to arrive at a satisfactory formula.

Britain and Portuguese Orders

PORTUGAL today is engaged on an ambitious, but practical, development programme that calls for much heavy engineering equipment, and British manufacturers have naturally been bidding to supply this. Half a dozen large hydro-electric plants have already been constructed; an impressive bridge now spans the Tagus not far upstream from Lisbon; and the projects planned or already under way include the electrification of main railway lines, an underground railway for Lisbon, a thermal power station near the coalfields on the lower Douro, and several hydro-electric plants in the ravines of the upper Douro, where it forms the frontier with Spain. Since the early stages of the present period of development, the chief British contestants, English Electric, Metropolitan-Vickers and British Insulated Callender's Cables, have worked together as "the British group," thereby being able to put forward the complete "packaged" tenders that the Portuguese usually prefer.

Gas burns clear and clean. It does not waste its substance in smoke. By the time the gas comes to your burners the smoke has been put to work by the Gas Industry in a hundred different ways, all of them beneficial, all of them contributing to keep down your fuel costs. Apart from fighting unhealthy smog, the filthiest and the most expensive blanket in all history, gas gives you a clear

answer to the question: What is the true cost of my fuel? Your bill is for fuel used. Gas needs no special equipment for handling or storage, no replacement stocks, no extra labour to look after these things. Delivery is continuous, of legally guaranteed calorific value. Clearly, there are advantages about gas that you should consider in your plans.

Clear Guidance

THROUGH your Area Gas Board you can bring the full resources of the Gas Industry to bear on your fuel problem. The Boards' Industrial Gas Engineers are always available for consultation and their services are free. Get your secretary to fill in these details (or pin this advertisement to your letter heading) and send to your Area Gas Board or to the Gas Council, 1 Grosvenor Place, London, S.W.1.

As a result, British equipment has taken an important part in the Zezere and Cavado power systems. But a £5 million contract for the first phase of railway electrification has recently gone to a group of Swiss, French and German firms, who also worked as a team, while the Swedes carried off the telecommunications part of the project. It seems that the decision was partly accounted for by the familiar phenomenon of Continental firms anxious to secure work for their shops regardless of profit margin, partly by British insistence on maintaining high engineering standards. But it can hardly be said to provide convincing evidence that those standards should be lowered—particularly in Portugal, where confidence in British quality is as widespread as goodwill toward Britain.

DSIR Overhauls its Plans

A MAJOR review is taking place of the work of the various branches of the Department of Scientific and Industrial Research. Nearly eighteen months ago, the DSIR won two substantial concessions from the Government. The first was a 20 per cent increase in its annual grant and the second, the long-term effects of which were more far-reaching, was permission to budget for expenditure over a period of five years, instead of the annual basis previously demanded by the Treasury. When so many of the DSIR's projects spread over several years, and include substantial capital expenditure on plant, the cost and delivery of which cannot always be accurately predicted, strict yearly accounting with the return of any unspent surplus has been almost as serious a drag on the work of DSIR as actual shortage of funds.

The department's postwar programmes were held up for lack of money, and now that the department has the promise of more adequate income, those plans are partly out of date. This is the reason for the present review. The Advisory Council that governs the Department reports that it should be able before the end of 1955 to submit a new set of plans to the Lord President of the

Council. There are some hints that the balance of the new plans may be shifted from certain traditional types of research towards newer branches of science. It is plain that, as part of the new look, DSIR is going to insist that industry shoulders the cost of what might be classed as routine research. Even DSIR's increased income for 1954-55 amounted to only £6.3 million, out of which it maintained 15 research stations and made grants to 41 industrial research associations. It is important that these limited resources should be employed on work that really deserves Government support, and cannot be done otherwise.

Atomic Balance Sheet

THE Atomic Energy Authority will not present its annual report and accounts until the autumn; its financial year ends in August. But since the expenses of the Authority are met by the Government, they appear in the Civil Estimates, where expenditure during the coming Exchequer year is estimated at £50.5 million compared with £53.7 million in 1954-55. These figures give only one side of the picture—the civil work done by the authority, including its building programme. All military research and production are paid for by the Ministry of Supply and the sum is not disclosed.

The two major items of expenditure listed in the civil estimates are wages and building work. The wage bill has risen from £8.6 million to £14.7 million, which is not surprising in view of the growing scale of the Authority's operations. Building work is expected to cost £24.5 million in 1955-56, compared with £21.6 million this year. The Authority has two major projects on hand: the Calder Hall power station, which should be completed during the year at a total cost of between £15 and £20 million, and the Dounray breeder reactor in North Scotland which will probably cost about £17 million. The progress of work on both sites is reflected in the fact that building expenses during 1954-55 accounted for £12.5 million and plant are reversed: building work is expected to account for £10.9 million, while plant and machinery for the establishment will take £13.6 million. A sum of £250,000 has been allotted for the purchase of land, most of it around Dounray.

Rubber in Balance

INVESTORS in the rubber plantation industry have been treated to forecasts of the prospect from no less than three leaders of the industry this week. Sir John Hay, Sir Eric Miller and Mr F. D. Ascoli all agree on the essential point that production and consumption of natural rubber are likely to be closely in balance this year. Sir John Hay told the shareholders of Linggi Plantations that he estimated world production at 1,850,000 tons and consumption at 1,825,000 tons—each showing an advance of 75,000 tons over last year. The estimate assumes that the use of

Australia Restricts Imports

WHEN Britain's best customer is attacked by a bout of over-importing it hardly becomes this country to jib when remedies are applied. Britain is suffering from another form of the same complaint. In the case of Australia, however, the complaint seems to be endemic. As the acting prime minister, Sir Arthur Fadden, remarked laconically this week when announcing the sweeping restrictions on non-dollar imports, "the present high rate of national development necessarily imposes a strain on the balance of payments from time to time." British exporters must resign themselves to taking the fat years with the lean.

The restrictions take effect in the import licensing year beginning April 1st, and are designed to reduce imports by about £80 million in a full year. That is far less severe than the cut of three years ago. Imports from Britain may be cut by up to £40 million, not a calamitous figure compared with total British exports of £2,670 million in 1954.

Imports of items in category A, which covers raw materials and certain capital and consumer goods, will be restricted to 85 per cent of imports in the base year ending June, 1951. In 1952 imports in this category were restricted to 60 per cent of the base year. They were removed from control on April 1st last year, but on October 1st they were restricted to 100 per cent, but did not formally revert to category A. Imports in category B, which cover most consumer goods, will be restricted to 40 per cent of the base year. These items, which were cut to as little as 20 per cent in 1952, were licensed at 60 per cent from April 1st last year.

Certain semi-manufactured materials and items of capital equipment still free of restriction will be transferred to the administrative category and licensed at 100 per cent of imports in the calendar year 1954. The total value of imports—mainly capital equipment—already subject to Administrative control will be reduced by 20 per cent of imports in the 1954-55 licensing year.

In two tables an attempt has been made to estimate the effect of the restrictions on certain British exports in categories A and B. The value of exports in the second half of 1954, converted to an annual rate, has been taken as the best available datum. The estimates assume that Britain maintains its share of the market, and that importers of goods in category B spend their licences—which are valid for any item in that category—in the same proportions as

before. A similar exercise cannot be attempted for goods restricted to 80 per cent in the Administrative category, for some items will probably be cut more than others; the table merely shows the value of certain British exports which are liable to be cut by 20 per cent. The restrictions are a challenge to British exporters to find additional outlets elsewhere. The motor car manufacturers can perhaps do so with less difficulty than the exporters of textiles, carpets and pottery. But the pottery makers, among others, should be thankful that the slate is to be wiped clean of this year's excess shipments, and few can have doubted that their recent business with Australia was a hostage to fortune.

synthetic rubber in America will rise from 52 per cent of total consumption last year to 56 per cent this year. Sir Eric Miller, chairman of Pataling Estates, endorsed that forecast, and added that private stocks are small. Both he and Sir John Hay emphasised that they had no anxieties about the fall in the price of rubber, from over 31d. per lb at the height of the Formosa crisis, its present level is about 24d. and rubber companies prefer steadier prices.

On his retirement from the managing directorship of Dunlop Plantations Mr F. D. Ascoli made it clear that while he agrees that supply and demand are balanced, that conclusion naturally depends on price competition with synthetic rubber at a moment when the bulk of the American synthetic industry is virtually sold to private interests. On that competition Mr Ascoli has been a good—alas too good—prophet, bringing a realistic chill to the hearts of those natural producers who hoped for a rise in the price of synthetic rubber. His parting guess now is that the price of 23 cents a lb is more likely to go down than up. If all Mr Ascoli's other chickens come home to roost—a yield on the best modern budgrafted rubber of at least 1,250 lb per acre, perfect estate efficiency with all old areas replanted, no rise in taxes and not much change in wage levels—he calculates that sheet rubber could be delivered in London at 1s. a lb without loss. But he admits that there is hardly an estate that has yet reached his prescribed standard.

New Statistics from the "House"

AFTER much toil, the London Stock Exchange has produced a new batch of statistics.* Picking up the whole corpus of securities quoted on the London Stock Exchange, the Council's tables analyse interest payments before tax as related to nominal capital at the end of each of the last five years; the analysis is sub-divided into loan,

CAPITAL AND INTEREST, 1950-54
(£ million)

	Year end				
	1950	1951	1952	1953	1954
DEBTURE & LOAN:					
Nominal capital . . .	17,372	17,943	19,136	19,766	20,296
Interest, before tax . .	506.2	526.7	555.2	584.6	609.3
Average rate of return (per cent) . . .	2.91	2.91	2.90	2.96	3.00

preference and ordinary capital and follows the classification of securities in the Official List. A separate table shows that dividends paid in 1954 when related to market values on June 30th gave an average yield on ordinary stocks of

* Interest and Dividends upon the Securities quoted on the London Stock Exchange. 1950/54. The Secretary, The Stock Exchange, 2s. 6d.

THE ECONOMIST, MARCH 26, 1955

6.01 per cent and of 5.63 on preference stocks. Honest toil is always praiseworthy, and this analysis is honest toil indeed.

But the value of the new figures can be overstated. They may be some small help to the national income statisticians, but hardly a great step forward. The figures contain a serious element of duplication. To reduce it the compilers have excluded investment trusts from the analysis, for the trusts merely re-distribute the income derived from their own investments. But banks, insurance companies and other corporate bodies also derive part of their income from quoted investments. Another part of the interest tabulated in this analysis goes to Government departments, public authorities, boards and pensions funds, and a further part of the interest goes to foreign and overseas investors, while British residents hold many securities not quoted in London. Hence, these new sets of figures can be at best a check for the national income statisticians, who will still have to rely on other sources—such as Inland Revenue Department—for their main information.

What of the value to the general public? Sir John Braithwaite, the Stock Exchange chairman, believes in educating the public on Stock Exchange affairs. It is a courageous task, but his preface shows that he knows that this time the risk is that he will provide the politicians of the four ale bar with a rod for his own back. They will seize on the 20 per cent increase in ordinary dividend declarations last year, conveniently forgetting that these are amounts before tax. If the case for the no par value could be strengthened this document does so, for it shows that the Stock Exchange experts themselves have fallen into the trap of relating dividend payments to meaningless nominal capitals. The average percentage return for 1954 on preference and ordinary shares lumped indiscriminately together and for every sort of borrower was 4.64 per cent. Does this figure mean anything at all?

Insurance Dividend Season

THE insurance dividend season has got off to a flying start. Normally insurance companies are reluctant to move their dividends. This year out of the five first companies to announce their final dividends four have made substantial increases. Two have made other decisions that should

Company	1953 Dividend Total	1954 Dividend Total
Prudential 'A' £1	22s. 6d.*	23s. 6d.*
'B' 4s. paid	2s. 6d.*	3s. 0d.*
Legal & General 5s. paid	6s. 9d.	8s. 0d.
Pearl £1	12s. 0d.	13s. 0d.*
Northern £1 paid	20s. 0d.	22s. 0d.
Equity & Law 30s. paid	5s. 0d.*	5s. 0d.*

* Tax free.

benefit shareholders. The Legal and General is making its £1 shares fully paid instead of 5s. paid by capitalising reserves, and the Equity and Law is to split its £5 shares 30s. paid into five £1 shares with 6s. paid. It is obvious that 1954 was a highly successful year for the insurance companies in their investment operations mitigated to some

SO MUCH FROM SO LITTLE

You are looking at a kilowatt-hour, or one unit, of electricity in its raw state—coal. This lump of coal weighs only one pound. Not long ago—in 1920—the amount of coal required to produce a unit of electricity was much larger, and weighed 3½ pounds. The difference represents, on the basis of last year's electricity demand in Great Britain, the consumption of an extra 60,000,000 tons of coal per annum. Furthermore, this far greater efficiency in the use of fuel is being achieved with much poorer grades of coal, so that the better grades are released for urgent home and export needs and more effective use is made of the nation's coal resources.

To this achievement the Babcock organisation has largely contributed, for it designed and built over half the steam-raising plant in British power stations.

The advance continues, with new developments such as the "Cyclone" firing of boilers and the use of atomic energy for electricity generation.

In all these, Babcock & Wilcox are playing a leading rôle.

Underground movement

African gold; Arabian oil; British coal — wherever the wealth of the earth is won steel lends a hand with the winning.

As likely as not the cutters, the winches, the drills and the engines are made in Britain, of British steel. Every year thousands of tons of mining and drilling machinery leave Britain for the Commonwealth countries.

In practically every civilised country British steel speeds alike the work of the miner and the oilman — and plays its part in the daily lives of nearly everyone.

Wherever there is steel there is British steel.

British steel leads the world
THE BRITISH IRON AND STEEL FEDERATION

extent by the downward movement in gilt-edged stocks since last November.

Buyers' Market in Rice

SELLERS are often reluctant to adjust prices to a buyers' market, particularly when the seller is a government agency. Yet to fail to do so invariably costs dear. The main rice exporting countries are painfully learning that lesson now. The seven postwar years of shortage inevitably brought their own corrective. High prices stimulated production in both exporting and importing countries, and world demand was checked not only by the high price of rice but also by competition from cheaper cereals, notably wheat. By the middle of 1953 supply had overtaken demand at prevailing prices. Burma and Thailand, the two largest exporters, then chose to be penny wise and pound foolish. Tardy reductions in price left Burma with a surplus of some 600,000 tons at the end of 1953, and Thailand with about 400,000 tons. Last year both countries began to recognise the need to change their tune. Restrictions on sales to private buyers were eased, and the Thai government decided to return the entire export trade to private hands on January 1st this year. The premiums on rice sold to private buyers were sharply reduced, and rice that had been in store for so long that it was unfit for human consumption was sold at

low prices for feeding-stuffs and for industrial purposes. But Burma held to its basic price of £50 a ton for shipments in 1954 under government contracts, and Thailand made only minor reductions.

Pressure on Burma was eased by two unexpected events. The Indian government bought 900,000 tons of Burmese rice for its reserve stock, and Japan imported more rice—with wheat and barley as well—to make up for the poor domestic harvest. Thanks to these sales, Burma's exports recovered last year by 470,000 tons to 1.4 million tons, the highest since the war, and its carry-over into 1955 fell to about 400,000 tons. Thailand was less fortunate: its exports fell further by 350,000 tons to under a million tons, the smallest figure since the war, and its carry-over rose to roughly 700,000 tons. This year the Burmese government has taken further steps to promote exports. It has reduced the price for shipments in 1955 under government contracts from £48 to £45 a ton—and to £42 a ton for shipments to Ceylon—and it is actively seeking fresh markets. Recently it sold 150,000 tons of old crop rice to China, which has again become a net importer; the price was £40 a ton, of which Burma will receive only 20 per cent in cash, and the remainder in goods from China and other Communist countries. Since then Burma is believed to have sold another 150,000 tons to China for delivery this year, and 200,000 tons to Russia. Thailand still has the advantage of a superior product to Burmese rice, and its surplus may be eased by a smaller harvest this year. But both countries may be troubled by competition from another quarter—American disposals of surplus rice and wheat.

Company Notes

BRITISH-AMERICAN TOBACCO. The shape of British-American Tobacco company's balance sheet on September 30th last is just what might be expected in a group whose preliminary profit statement and higher dividend pointed to a definite improvement in trade. For the whole group stocks have risen from £156.4 million to £165.7 million, and debtors from £32.5 million to £34.4 million. The company is an international trading group whose transfers

On September 30, 1953 1954

Cons. balance sheet:—	1953	1954
Fixed assets at cost ..	56,892,559	63,510,887
Net fixed assets	38,908,527	42,891,914
Trade investments	6,162,366	7,230,090
Net current assets	166,086,260	182,120,831
Stocks	156,379,663	165,728,047
Cash and T.R.C.'s	30,889,480	35,014,958
Debentures and loans	9,988,687	18,519,118
Capital reserves	36,834,421	34,672,921
Revenue reserves	90,309,826	104,085,357
Ordinary capital	35,573,172	35,636,641

of earnings or assets are at the mercy of exchange controls. Hence its working capital needs are usually covered by the retention of profits where they are needed, and not by bank borrowing. By the end of last September revenue reserves had risen by £14 million to over £104 million, balancing the increase in stocks and debtors. Concurrently with the expansion of trade the group is putting more emphasis on local manufacture. The in-

crease in the gross value of fixed assets from £56.9 million to £63.5 million must largely reflect that policy. The new bricks and mortar and the new equipment appear to have been financed by the local issue of debenture and loan stocks by the foreign subsidiaries; in the consolidated balance sheet these debentures and loans have gone up from just under £10 million to £18.5 million. The reverse side is shown in the parent company's balance sheet. Broadly that document relates to the company's British interests—the export business from this country. It shows no change in fixed assets and a fall in stocks and debtors. The two sides of the coin together make sense. The demand for cigarettes and tobacco is rising throughout the world, but more and more that demand has to be satisfied by local manufacture. Hence the number of markets to which the company exports from this country is growing smaller though the group's total trade is not. But that does mean that the company's total exports from this country will necessarily fall; exports may be maintained by bigger sales in fewer markets.

ANGLO AMERICAN CORPORATION. Most of the capital needed for bringing the gold mines in the Orange Free State to production has now

been found. Hence, a bigger dividend from the biggest finance house backing the new ventures, the Anglo American Corporation of South Africa, was due. But it was equally certain that that increase would be only modest, for development is not yet complete and the flow of profits from the gold and uranium mines in the Orange Free State has only just begun. Full spare is still some years away. Anglo American has now lived up to these expectations, disproving some recent reports that it might remain cautiously conservative. It has raised its ordinary dividend from 6s. to 7s. per 10s. ordinary stock unit. A dividend of 6s. has been paid since 1949—through the period when the Corporation was pouring money into the Orange Free State.

The bigger dividend is backed by higher profits, which after tax have risen from £3,265,246 to £4,025,000. There are three elements in this profit: income from rents and fees, from investments, and from share dealings. It was a good year in the markets and a good year for copper dividends.

FREE STATE GEDULD AND FREDDIES. Free State Geduld is one of the most promising and most prosperous of the new gold mines of the Orange Free State. Freddies Consolidated is a much more struggling and uncertain undertaking in the same field that has recently announced it will have to close down its two South shafts. Now F.S. Geduld is to buy the Number 2 shaft and

the price is likely to be in the region of £1½ million. Both mines are in the Anglo American sphere of influence. It looked at first as if the stronger brother was helping to bale out the weaker. But that is not the object—at least not the main object of the deal. It is mainly to provide F. S. Geduld with a ready made shaft and only incidentally to provide Freddie with funds. The transfer does not require any further direct participation in the share capital of Freddie, by either Johannesburg Consolidated or Anglo American.

The Number 2 South shaft of Freddie, one of the two shafts closed down, will be sold, together with about 1,300 claims, to F.S. Geduld—but not for cash. Instead F. S. Geduld will issue 300,000 of its 55. shares to Freddie. In turn, "Johnnies" and Anglo American will buy these shares from time to time from Freddie when that mine needs funds. The price will "have regard to" the market value of F. S. Geduld's shares then ruling; on the basis of current values the deal involves about £1½ million. The two finance houses thus secure shares in a mine in which they are doubtless more than willing to increase their stake. At the same time they help Freddie without involving themselves more deeply in the share capital in one of the least promising of the OFS developers. That is wise at a time when rumour in the Cape describes the property in even harsher terms.

What is in the deal for F. S. Geduld? Why has it taken on claims of doubtful promise? The simple answer is the shaft. In the next few years F. S. Geduld will be concentrating on its two southern shafts. But ultimately it will develop the less rich northern claims and then it will require the new shaft. Hence, the purchase of a completed shaft, from which that development can proceed, at the cost

of an additional £75,000 to its nominal capital plus a little underground driving may be a bargain. As for the Freddie claims themselves, they are not payable, but might not their acquisition by F. S. Geduld mean a loosening of the rather stringent lease terms on that company's original property?

SHELL OIL COMPANY. This company is Shell in America. Its parish is North America. Oil in North America is not always quite in parallel with oil in the world, but it sometimes happens that Shell Oil's results are a convenient trailer to the results of the two parent groups—Royal Dutch, and Shell Transport in the approximate ratio 60:40—not now far away. A sellers' market in oil, a booming chemical industry, a capital expenditure programme that disregards all short term fluctuations, and a net income which forged steadily ahead, those made up the American subsidiary's picture. They easily could fit into the broader picture of the whole group that is to come.

Net income rose from \$115 million in 1953 to \$121 million last year, net income per share from \$4.20 to \$4.41. Dividends paid from \$1.50 to \$1.87½. Crude oil production fell from 104 million barrels to 98 million and more had to be bought from outside, a factor that made the earnings of the second half of the year, \$5,745,000, worse than the first. Chemical sales passed all previous records both in value and in volume, but the rate of increase in the demand for crude oil products was well below recent years and supplies "on the excessive side." Through it all the company kept on investing heavily. Capital expenditure was \$237 million against \$238 million, and the cash resources are accordingly down from \$89 million to \$57 million.

THE ECONOMIST, MARCH 26, 1955

LONDON STOCK EXCHANGE

Next Account begins: March 30th
Next Contango Day: March 30th
Next Settlement Day: April 5th

The recovery in stock market prices continued up to the week-end, and by Friday, March 18th, the *Financial Times* index of Government securities had risen to 99.82 and of ordinary shares to 183.1. The rally was, however, brought to an abrupt halt immediately after the week-end when talk of a general election began a definite influence on the market. The markets were thin, and hence price movements tended to be exaggerated. The approach of the Budget and the Australian import cuts contributed to the uneasy tone. Gilt-edged prices came down with a run, with War Loan losing 1½ points on Monday and then another ½ in a see-saw market on Tuesday. That ½ of a point was recovered on Wednesday, and the markets gained a little more ground on Thursday. Markings on Wednesday at 7.897 bargains were the lowest for the year so far.

The heaviest losses in the industrial market came on Tuesday, when at the close the *Financial Times* ordinary index stood at 177.4. There was little increase in selling that day, but buyers were fewer. The motor and textile groups fared worst, following the Australian import cuts. Stores shares, the most volatile section of the market, also fell sharply. Steel shares, along with engineering issues, were dull at first, but a little more colour came back when dealings began in Firth Brown. An early rally on Wednesday was not fully held, but prices were firm again in early dealings on Thursday. Motor and aircraft shares recouped part of their earlier losses and textile issues were steadier. The two Unilever issues were firm on American buying and Borax put on 1s. 3d. to 100s. after the meeting.

Oil shares followed the pattern established in the industrial market. Kaffirs improved slightly but steadily as the week wore on and closed firm on Thursday after the South African budget, and copper shares responded to some Continental buying. South African industrials went up on the undistributed profits tax proposals.

Financial Statistics

EXCHEQUER RETURNS

For the week ended March 19th there was an "above-line" deficit (after allowing for Sinking Funds) of £39,245,000 compared with a deficit of £14,827,000 in the previous week and a deficit of £68,768,000 in the corresponding period of last year. This brought the cumulative account to a surplus of £456,058,000 (compared with a surplus of £145,408,000 in 1953-54). Net expenditure "below-line" last week reached £13,564,000, bringing the total cumulative deficit to £15,072,000 (compared with a deficit of £278,211,000 in 1953-54).

THE MONEY MARKET

Rather more special aid was given to the money market in the past week than has been usual since the increase in Bank rate. Last Thursday week, and again on Friday one or two houses had to borrow at the Bank. On the two ensuing days, however, moderate purchases of bills (made indirectly through the banks) saved the market from further Bank borrowing. On Tuesday and Wednesday market supplies of credit were adequate, and there was a fair turnover in May and June maturities at 3½ per cent. Earlier in the week June bills had been sold at 3½ per cent.

At the Treasury bill tender on Friday last the market maintained its bid unchanged at £99 1s. per cent for the fourth successive week. Outside tenderers also appear to have maintained their bids (whereas at the two previous tenders they had reduced them) so that the average rate of discount fell back fractionally to £3 15s. 11.64d. per cent. The upshot was that although applications fell (for the first time since mid-February) by £8.7 million, the market's allotment was reduced from 61 to 56 per cent.

The price of silver in the London market fell back slightly from 77½d. to 77¼d. an ounce on Monday, following earlier the reduction in the New York price from 89½ cents to 88½ cents.

The Bank return shows an outflow of notes of £3.0 million.

SPECIALIZING IN CANADIAN INDUSTRIAL FINANCE

Businessmen who are interested in establishing or expanding Canadian industrial facilities might find it worthwhile to consult with the Industrial Development Bank, a wholly owned subsidiary of the Bank of Canada. I.D.B. has wide experience in Canadian industrial problems and specialized knowledge of business practices, markets and many other factors affecting the success of a Canadian venture. Should term financing be required for a plant and equipment of a type not available through regular commercial channels on reasonable terms and conditions, I.D.B. may be able to suggest a practical answer. If you would like more information we suggest you communicate with:

COMPANY MEETINGS

LINGGI PLANTATIONS, LIMITED

INTERNATIONAL TENSIONS THE PRIMARY
CAUSE OF RECENT PRICE MOVEMENTS

NEED FOR STABILITY AT A REASONABLY PROFITABLE LEVEL

SIR JOHN HAY'S STATEMENT

The fifty-ninth annual general meeting of Linggi Plantations, Limited, will be held on March 30th at 19 Fenchurch Street, London, E.C.3.

The following is the statement by the chairman, Sir John Hay:

The period under review terminated on October 31st last and we, therefore, gained little benefit from the recent rise in the price of rubber. The main contributing factor to the welcome increase in our profits was the higher prices received for our production in the form of liquid latex and other premium grades. The plant necessary for the processing of concentrated latex is jointly owned by us and associated companies and although this new enterprise has only been in operation for less than three years we have already succeeded in establishing a reputation for a consistently high quality product, a valuable achievement in a highly competitive specialised market. It will be our continuing aim to maintain this position to the benefit of this company and its associates. An increase in crop and a slight decrease in estate cost per pound were supplementary contributors to our greater profit. But the increase in our profits, such as it is, would not in itself justify our recommending a dividend which is double that of the previous year. In coming to this decision we are influenced by the better prospects for the current year and fortified by a strong financial position, as disclosed by our balance sheet. This position has been reached by following consistently over a long period of years a progressive replanting policy and a prudent financial course. The major benefits of such enterprise and restraint go to the taxing authorities. Moreover, such residue as is left to us is never free from recurring threats of further taxation and it is in these circumstances that we feel a more liberal distribution might well be made, lest the possession of ample funds in the hands of the company should be made the pretext for further exactions. The following table showing the division of profits since November 1, 1950, is illuminating:

	£	Per Cent
Taxation, including Export Duty, Malayan and UK taxes	1,175,282	64.50
Ploughed back into the business	381,632	20.94
Dividends	265,327	14.56
Total profit	£1,822,241	100.00

You will observe that, over that period, for every £1 received by stockholders, governments have taken approximately £4 10s. On the principle that appetite grows what it feeds upon, it would seem, according to some reports, that the Malayan authorities are greedy for still more and are prepared to follow a course seriously detrimental to the progress of the country is upon which the prosperity of the country is so largely dependent. To the foregoing I should add that the average net return to the stockholders on the capital employed in the business over the postwar years was equivalent to less than 4½ per cent and in the pre-

ceding five years, owing to the misfortunes of war, they received no return at all. In considering the significance of these figures one should bear in mind that they relate to a company which might claim to have been outstandingly successful. Unless there is greater incentive and fairer reward it can hardly be expected that more capital will be forthcoming for long-term investment in Malaya.

REPLANTING

You will observe from the schedule on page 4 of our report that no less than 85 per cent of our total planted area consists of high-yielding stock. There is, however, this qualification, that the earliest replantings are reaching the stage when they will have to be replaced, but before we can undertake that operation we must first of all deal with the residue of seedling rubber of nearly 2,000 acres. Of this, 800 acres will be replanted within the next three years. The balance will be dealt with in the manner described in the paragraph which follows this. Since replanting is at times referred to as if it were a recent official discovery which can only be efficiently carried out if put under bureaucratic control, perhaps I may be permitted to mention here that more than 30 years ago we started experimental replanting and some of our estates have reached the stage of replanting to the second generation. Replanting is not an operation to be carried out by a rule of thumb method designed by some official who has acquired a nodding acquaintance with a rubber tree. The selection of the ground suitable for such an operation, the timing and the extent in relation to the probable economic and financial consequences, are all matters for careful consideration and for the exercise of a judgment based on knowledge and experience. Given an adequate incentive, there will always be a sufficient number of estate owners who on their own initiative and in their own interests will undertake replanting to the extent that is deemed necessary and prudent.

SUBSTITUTE PLANTING

I now come to the matter of how to deal with our remaining 1,200 acres of seedling rubber. On this particular area we propose to substitute tea for rubber. The necessary preparation of the soil and other practical considerations render the fulfilment of this programme a slow and gradual process. If we can carry out this programme it will add variety to our operations and, we hope, give an increased stability to our fortunes. Perhaps I should issue the warning that if we are discouraged in this long-term development by further taxation or by any other impediments we shall always feel free to reconsider our plans and, if judged desirable, to amend them.

RICE

In my last statement to stockholders I made a brief reference to the subject of rice, the staple diet of our workers. I then

contended that since the period of shortage had ended and supply was abundant there was no longer any necessity for the continuance of Government control over purchase and distribution. This view did not find official acceptance and control continued. But the pressure of increased supplies could no longer be resisted and Government was forced eventually to abandon a control which had been carried on well beyond the necessary period. Since my last statement there has been a significant fall in price, bringing a welcome relief to the consumer.

PRICE OF RUBBER AND OUTLOOK

In the last few months we have seen the price of rubber following one of its characteristically capricious courses, disconcerting producer and consumer alike, and upsetting the most carefully drawn forecasts. In this instance the main feature was an upward trend bringing one of those rare periods of more liberal profits to the producer. Agreeable as such unwonted prosperity may be, the producer no less than the consumer would prefer a stable price at a reasonably profitable level. In February, the price of rubber rose to 31½d, but fell sharply to 26½d. The price is now 27d. Although at the time the causes for such unexpected movements might have seemed obscure, in retrospect they clearly emerge. International tension respecting Formosa, with its threats of open hostilities to which no precise limit could be set, not unnaturally caused apprehensions regarding the free flow of rubber supplies from the Eastern producing territories already the centres in varying degrees of internal disturbances and political confusion and rendered exceptionally sensitive to any threat of conflict between the larger powers regarding an Eastern territory. This occurred at a time when manufacturers' stocks were low and when US tyre manufacturers were called upon to step up their supply of tyres to match the abnormal output of cars being built against the threat of a strike. Secondary causes were the dock strike and a temporary delay in overseas transport, impeding the delivery of rubber urgently required in this country and overseas. International tensions, the primary cause of recent price movements, have been little relaxed. Past history has demonstrated the extent to which forecasts regarding the probable course of rubber can be falsified by events. I hope, therefore, that what I am about to say regarding the outlook for the current year will be received with a becoming caution and with a realisation that the most carefully compiled statistical data may be seriously upset by events that cannot be foreseen. Subject to such qualifications and all the usual uncertainties, our statistical forecast is that production and consumption of natural rubber should be in close balance with production at 1,850,000 tons, and consumption at 1,825,000 tons, each side showing an increase over 1954 of 75,000 tons. We anticipate that Malayan production will remain at round about 600,000 tons, the greater part of increased production coming from Indonesia and other countries. Despite some disorganisation in Indonesia, the mar-

ginal producer in the form of the small-holder in outlying districts continues to respond to good prices. On the consumption side we look to the USA to increase its total use of natural rubber and synthetics, but under the influence of present prices it seems prudent to expect a more liberal use of synthetics in the ratio of 44 per cent to crude and 56 per cent to synthetics. The proportions last year were 48 per cent and 52 per cent. What the countries behind what is termed the "iron curtain" will take must be very much of a guess, but we assume an increase there of 20,000 tons bringing their purchases up to 145,000 tons. With consumption and production thus calculated, so nearly in even balance, the scales can easily be tipped either way.

COMPANY'S PROSPECTS

I have earlier stated here that the greater part of our output is now shipped in the form of latex which can seldom be sold forward advantageously at a fixed basic price. Out of the remainder of our output we have made some forward sales, with the result that we have sold or contracted to sell 1,979,281 lb. at an average of 31.10d. per lb.

STAFF

It would be the wish of all stockholders that we should accord to our managers and all who serve under them our thanks for their services. Their duties have been performed with high competence. We should specially remember those whose lot is cast in difficult places. Johore, where our Sembrong property is situated, is still much disturbed, and all measures for the protection of person and property have still to be maintained in all their former rigour.

OIL PALMS OF MALAYA, LIMITED

Sir John Hay's statement on the twenty-fourth annual report and accounts is as follows:

The market price of palm oil remained steady throughout the year at between £75 and £80 per ton c.i.f. Palm kernels, on the other hand, declined gradually from £65 to £45 per ton. The net result was that our total income from the two commodities was a little less than last year. There was no material change in the crop and cost of production. Once more export duty, income tax and profits tax take from us over 70 per cent of our profit, after which we are able to transfer £15,000 to general reserve and again recommend a dividend of 15 per cent. This leaves a small sum to be added to the balance carried forward.

Production of palm oil in the first three months of the current year was 2,174 tons, compared with 2,299 tons last year. Harvesting was interrupted in December by very severe storms and floods, which swept away sections of the estate's road and railway system. At the same time our costs are affected by the general rise in agricultural wages which results from the higher price now being obtained for Malaya's major commodity—rubber. Fortunately, an upward movement in the price of palm oil and kernels has so far compensated us for the increase in our cost of production. I can hazard no guess about the future price of palm oil, but if it remains reasonably steady, I hope the results for 1954-55 will not be far out of line with those for the year under review.

MAINTENANCE OF THE ESTATE

Our planting adviser reports that he is highly satisfied with the cultural conditions

on the estate. One-third of our mature area now consists of palms planted since the war. When the trees reach their full growth the yield of oil per acre from these young plantings is confidently expected to exceed that of the older areas.

The oil palm, however, does not give substantial yields until eight or nine years after planting out, and last year only one eighth of the total oil produced came from these young areas. The young palms, because of their meagre outputs, are also more expensive to harvest. The benefit of our new plantings has, therefore, still to be felt, but should increasingly be realised in the results of the next few years.

At the same time we have to continue the replanting of the rest of the estate. Half of these older areas have already passed their twenty-fifth year, after which age the yield of oil declines steadily. An instalment of nearly 1,000 acres has been successfully carried out in 1954. The need to cut out and replant such large areas forbids us to anticipate any great increase in production in the near future. We shall do well to maintain a balanced programme, which will enable us to complete the necessary rejuvenation of the estate without loss of crop.

TERRORISM

Although Government forces have been active and killed a number of bandits in the neighbourhood, life on the estate is still more reminiscent of fictional stories relating to a past age than of a sober business enterprise in the second half of the twentieth century. In addition to the murder of W. J. Berry, of which I wrote last year, the most serious incidents were the murder of an estate labourer on the suspicion that he had given information to the police, two attacks upon the houses of members of the staff and three attempts to shoot others in the fields. In a private report from Malaya we have the situation in this part of Johore well described as a state of uneasy equilibrium between the communist terrorists on the one hand and the representatives of law and order on the other.

These outrages have not deterred the staff from their duties, and in acknowledging their fortitude we must not forget to include their wives, one of whom was slightly injured when her home was attacked.

Security measures, which include the maintenance of defended perimeters, running of armoured cars, and payment of special allowances to give the staff the respite of a regular brief holiday away from the estate, cost us £20,000 last year, and the total spent by the company to date on such measures now falls little short of £200,000.

STAFF AND LABOUR

In these difficult conditions the company has the responsibility of looking after over three thousand workers and dependants. On my visit last year I authorised the construction of a new staff club, which will permit those who bear the greatest strain to relax and entertain friends without leaving the property. I hear that this amenity is much appreciated. A special ward for the Asian staff has just been added to the hospital. Separate Chinese, Indian and Malay schools are maintained on the estate, and religious worship is arranged for all communities. The estate football teams compete in local leagues, and a thriving cinema club exists. I have no doubt that the pursuit of an enlightened policy in these matters is beneficial to the company, and I am glad to record here a commendation by the general manager in his annual report of the team-spirit and loyalty of his staff, which in his words "leave nothing to be desired."

MARCONI'S WIRELESS TELEGRAPH

RECORD TURNOVER

The fifty-seventh annual general meeting of Marconi's Wireless Telegraph Company, Limited, was held on March 17th in London.

Sir George H. Nelson (the chairman), in the course of his speech, said: Last year's record turnover has been exceeded this year. The net profit for the year is £420,373, which shows an increase of £124,384 on the net profit of the previous year. Your directors recommend a dividend of 10 per cent, less tax, on the ordinary shares.

Radio Communications: Your company is, in certain fields, the largest single manufacturer and supplier of radio communication equipment in the world, for more than sixty overseas territories have installed Marconi radio communication equipment.

In collaboration with the Canadian Marconi Company, the control of which we acquired in 1953, we have obtained a very important telecommunication order which will make a valuable contribution to the country's dollar receipts. The new stations will give Canada a greatly improved radio telephone service with Australia, New Zealand and the Far East, and will give Britain an alternative to existing radio telephone links with Australia when the new Trans-Atlantic cable is completed.

Television: It is heartening to be able to say that we have received orders for black-and-white television equipment far exceeding anything received in previous years. Export orders include the first three transmitting stations in Denmark, additional equipment for Pisa and Rome in Italy and an installation in Brazil. Work has also been completed on the Vancouver station of the Canadian Television service.

We feel greatly complimented that the recently created Independent Television Authority and the Programme Companies have, from their very inception, looked to your company for equipment and technical experience, and I am pleased to be able to tell you that a large amount of transmission equipment, for both vision and sound, and studio equipment has already been ordered.

Colour Television: An event of major importance took place in May last year when your company gave the first public demonstration in this country of a fully electronic compatible colour television system. It must be apparent to all who have studied the technical and economic problems involved that the ultimate choice of a system of colour television for any country must rest with those authorities whose responsibility it is, but I would say, however, that Marconi's Wireless Telegraph Company has, by extensive research, gathered a wealth of experience and is ready to advise and co-operate with the authorities who have this problem to face, and to develop and manufacture equipment to comply with the standards they choose.

Sound Broadcasting: While television has captured the public interest, it is a fact that the great majority of people throughout the world will for many years to come still rely on sound broadcasting for their entertainment and enlightenment. Our high-power broadcasting transmitters, which have this year gone into operation in Norway and Denmark, and will soon be in service in Cyprus, the Sudan and Argentina, now bring the total of these large transmitters sold throughout the world to forty-one.

Defence Radar: When the story comes to be told of the part your company has played in re-equipping the radar defences of this country it will be a revelation.

The report and accounts were adopted.

STANDARD LIFE ASSURANCE COMPANY

PROGRESS AT HOME AND OVERSEAS

INTERMEDIATE BONUS 42/- PER CENT COMPOUND

MR A. HARRISON'S ADDRESS

The one hundred and twenty-ninth annual general meeting of The Standard Life Assurance Company was held in Edinburgh on March 22nd with Mr A. Harrison, CA, in the chair.

The general manager and actuary having read the auditor's report, the chairman said:

My Lord, Ladies and Gentlemen,—May I take it to be your wish that the directors' report, which is in your hands, be held as read?

In the first place, it gives me much pleasure to welcome to his first annual meeting of the company Mr J. G. S. Gammell, who joined the board just after the annual meeting a year ago. Mr Gammell's financial experience has been of great assistance to us during the past year, and we count ourselves fortunate in having secured his services. His name will be submitted to you later at this meeting for re-election in the usual way.

It is with deep regret that I have to inform you of the death in June last year of Mr A. F. Baillie, who until a few months previously had been acting as chairman of our Canadian board, of which he had been a member for nineteen years. His wise and far-seeing judgment was of the greatest help to the company throughout that period. To fill the vacancy, Major General George P. Vanier was invited to join the Canadian board, and we are confident that this will prove to be a most valuable appointment.

NINTH SUCCESSIVE RECORD

You will see from the report that the new life assurance business written last year amounted to £39,577,000, an increase of almost £4 million over the previous year's production. This is now the ninth successive year in which the new business written has constituted a record for the company. Included in this year's total is a sum of £16,683,000 of group life assurances. The new annuity business, namely, £10,587,000 per annum, is also a record figure.

It is pleasing again to be able to report a substantial increase in premium income, which you will see from the revenue account of the life assurance and annuity fund has risen by almost £2,500,000 to just under £20 million. The expense ratio, at 8.5 per cent, shows a reduction for the sixth successive year.

IMPORTANCE OF PROFITS

Our income from investments, amounting to over £5,600,000, represents a net rate of interest on the life assurance and annuity fund of £4 8s. 4d. per cent, an increase of 3s. 5d. over the previous year's rate. In this connection I would recall the remarks of my predecessor at this meeting a year ago when he pointed out that the Standard had a substantial sum invested in ordinary stocks. He reminded you that the efficiency and profitability of industry generally, and in particular of the companies in which we have invested, are of great importance to all Standard policyholders as any increased dividends paid by these companies improve the rate of interest earned on our funds. The rate of interest earned on our favourable rate of interest earned on our funds provides a major source of the bonuses accruing to our with profits policyholders and enhances the security behind all our contracts. I shall have more to say later on the

question of bonuses to policyholders; but in the meantime, in view of what was said a year ago, it will no doubt be of particular interest to you to know that almost the whole of the increase in the rate of interest earned on our funds has been due to the greater profitability of industry, which has permitted of higher dividends being paid.

BALANCE SHEET STRENGTH

Before we leave the accounts, I would ask you to turn to the balance sheet from which you will see that the book values of our total assets now amount to over £143 million, an increase of £18 million over the previous year's total. In view of the substantial rise in the prices of Stock Exchange investments generally in 1954, the margin between the market values and the book values of our assets at the date of the balance sheet was considerably greater than it was in November, 1953. As a result of the recent changes in this country's terms of trade and balance of payments and the salutary financial measures taken to restrain inflationary influences, Stock Exchange prices in this country have fallen, on balance, since November 15, 1954, but, on the basis of today's prices, the above margin is still very substantial. Moreover, the fall in security prices means that the new money received by the company can be invested more remuneratively.

WIDE RANGE OF POLICIES

Life assurance thrives on competition. The aim before all companies is to reach the public and make available the most satisfactory contracts to meet all types of life contingencies, and the friendly rivalry between individual companies is a guarantee of a high standard of service. It is significant that at the present time when record amounts of new business are being written the competition between the offices is probably keener than it has ever been and the range of policies offered to the public has never been wider.

It is not possible in a review of this nature to describe all the types of contract which we have available but particular mention should be made of the fact that the company was one of the first in this country to specialise in the provision of group life assurance and pension schemes. Among those whose pension schemes we administer are to be found many of the largest and best-known companies in addition to many hundreds of smaller concerns from among which the giants of the future may arise. A growing interest is now being shown in provision for "Works" employees, and we were one of the first to meet this demand with a special scheme drafted to suit the particular circumstances of their employment. This scheme has already been adopted by a number of companies, and I am confident that there is an important field for development in this direction.

I should like to draw the attention of members also to two other types of contract in which we specialise in this country—the in which we specialise in this country—the House Purchase Scheme and the Minimum Premium Plan. The House Purchase Scheme is run in conjunction with our subsidiary company, The Heritable Securities Association, and in appropriate cases advances up to 80 per cent of the valuation of a house may

be granted and the annual cost to the borrower can be reduced under an arrangement whereby a certain proportion of the loan is allowed to remain stationary, the balance being repaid by means of an endowment assurance policy. The Minimum Premium Plan, which was reintroduced in a new form last year, is an admirably suitable contract for the repayment of a house purchase loan. It gets its name from the fact that, although premiums are only slightly more than the corresponding non-profit premiums, policies under the plan share in bonuses which the policyholder may elect to take in cash, thus reducing his net outlay to a minimum.

CANADA

All our overseas branches continue to make satisfactory progress. Our Canadian organisation now produces a considerably higher proportion of our business than formerly. The figures for the past year show a gratifying increase and the amount of new ordinary life assurances written in Canada in 1954 was about one-third of the total for the whole company. As was stated by my predecessor a year ago, we are developing our business among French Canadians, and it is our intention to open two new branch offices for this purpose in the near future.

The development of natural resources and the industrial expansion which is taking place in Canada are most impressive. The outstanding project is the great St. Lawrence Seaway. This will carry ocean-going ships into the heart of the country and will provide additional sources of electrical power; but it is only one of many indications of the great future which lies ahead of Canada. The investment of our own growing funds, with the assistance of our skilled and experienced Canadian board, enables us to play our part in the expansion of the economy.

WEST INDIES

Our business in the West Indies has also been prospering. We have been established in the islands of the Caribbean for more than a century so that many of our connections there are of long-standing. Although old in time, however, they are youthful in vigour. West Indies affairs generally have come into great prominence during recent years and we look forward to our connections there becoming even more fruitful as the general economy develops.

URUGUAY

Although our branch in Uruguay is the smallest of our overseas centres, its rate of growth at present is larger than that of any other, as the new business obtained in 1954 was almost double that for the previous year. It is now 65 years since we first commenced operations in that country and I am very glad to take this opportunity of congratulating specially the members of our organisation there on the excellent results for 1954 and of expressing the pleasure it gives us to be carrying on business in Uruguay which for so long has had friendly relations with this country.

BONUS PROSPECTS

The year upon which we have now entered is the third year of a triennial period so that

a full investigation falls to be made as at November 15, 1955, with a view to a bonus declaration for the three-year period ending on that date. Two years ago a triennial compound reversionary bonus at the rate of 37s. 6d. per cent was declared, and it was announced that until further notice the rate of intermediate bonus on policies becoming claims by death or maturity would also be 37s. 6d. per cent. A year ago the directors, with the results of the first year of the present triennium before them, decided that the rate of intermediate bonus should be raised from 37s. 6d. per cent to 40s. per cent, and, as you will see from the report, the directors have now decided on a further increase in the rate of intermediate bonus to 42s. per cent.

The declaration of an intermediate bonus of 42s. per cent is a particularly happy event because for many years prior to the last war the name of the company was closely associated with a bonus at this rate. With so many obscurities prevailing in world conditions today, you will not expect me to look forward with any certainty to the future. But I should like to say this. The measures which have been taken in the past, and which are still being taken, to serve the interests of members, have yielded excellent results, and, unless particularly adverse circumstances arise, we see no reason why these should not continue.

I am led to express this view not only because of the strong position of the company, but also because of the excellent spirit of co-operation in our organisation. Between officials and staff, between those working outside in the field and those working indoors, between the head office and branches both at home and overseas, the team spirit is in evidence to a quite remarkable degree, and I am sure you would wish me to express on your behalf, as I do on behalf of the directors, our thanks to the officials and staff for the excellent service they give to the company.

I now move the formal adoption of the report, revenue accounts and balance sheet submitted.

Mr W. E. Davies, in seconding this motion, said: My Lord, Ladies and Gentlemen,—I have listened with admiration and intense satisfaction to the remarks of our chairman. The impressive figures which he has spread before us must be a source of gratification to all who have had anything to do with them, and it only remains for me on behalf of the policyholders to thank you, sir, and your colleagues on the board for the eminently successful direction of our affairs and to express our confidence in the continued prosperity of the company. I have much pleasure in seconding the adoption of the report and accounts for the past year.

The report and accounts were adopted.

DUNFERMLINE BUILDING SOCIETY

FURTHER EXPANSION: FUNDS NOW APPROACH £10 MILLION

The Society's eighty-sixth annual general meeting was held in Dunfermline on March 22, 1955, Bailie Andrew Crocket, chairman of the Society, presiding. The chairman welcomed the Society's president, the Right Honourable The Earl of Elgin and Kincardine, KT, CMG, who then addressed the meeting.

LORD ELGIN'S ADDRESS

His Lordship prefaced his address with congratulations to members on the results for the past year. Building societies generally had found the previous year a very successful

one, large additions having been made to the funds held by them on account of shareholders and depositors. More new houses for owner-occupation were now being built, and this revival in private house building would be encouraged when appropriate by all members of the movement. Concluding, his Lordship said that this was, perhaps, a time when societies might properly stress the need for good design in private enterprise building.

THE CHAIRMAN'S SPEECH

In proposing the adoption of the report and accounts, the chairman said that the Society had had a very successful year. Many more people had joined the Society and total assets, at £9,897,849, had increased by £1,220,783. Advances, at £1,397,497, were slightly greater than in 1953, and mortgage assets now totalled £7,460,097. Total liquid resources, including cash on hand of £326,231, came out at £2,381,884.

The surplus for the year amounted to £243,132, and after paying interest to shareholders, £20,000 was added to general reserve. The carry forward was increased by £7,235. The Society had at present ample funds available for sound house purchase loans and they could regard the future with some confidence. The report was adopted.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED

FIFTH SUCCESSIVE RECORD YEAR

Mr Charles R. Munro, CA, chairman of the board of directors, presided at the annual general meeting of The Scottish Life Assurance Company, Limited, held in Edinburgh on March 23.

In moving the adoption of the report and accounts for the year 1954, the chairman said:

For the fifth year in succession, I have to report that the new life assurance business is a record for the company. The gross new business for 1954 has increased by as much as 40 per cent over the amount completed in 1953; while the net new business, after deducting re-assurances, has risen by 33 per cent. This increase, to which both ordinary life and pensions business have contributed, is, I think you will agree, a remarkable achievement.

New deferred annuities, which are mainly associated with superannuation schemes, have increased by 329 per cent over the 1953 figure; this very substantial increase, coupled with an increase of over 200 per cent in life assurances under pension schemes, measures the success achieved by the pensions manager and his assistants.

New business in the current year has already started well, and I have every hope that in this, the final year of our quinquennium, a further record may be achieved, even though the increase may not be as great as last year.

LIFE AND ANNUITY REVENUE ACCOUNT

At the record total of £1,651,000 our premium income for the year was 15 per cent more than in 1953. This substantial increase of £218,000 is itself a record. The gross annuity fund have again risen, the gross rate being £5 5s. 4d. per cent, against £4 19s. 3d. per cent for 1953, while the net rate, after deducting income tax, was £4 9s. 3d. per cent, as compared with £4 6s. 11d. per cent for 1953. Claims by death, at 70 per cent of the

expectation by the mortality table used in valuing the company's liabilities, are higher than the exceptionally low figure of 44 per cent recorded last year, but the ratio is still more than satisfactory.

BALANCE SHEET

The increase during the year in the life and annuity fund has, for the first time, exceeded £1 million. The main additions to our investments during the year are £523,000 in ordinary stocks and shares, £251,000 in debentures and debenture stocks; and among the non-marketable securities, £419,000 in mortgages on property within the United Kingdom.

There was again a very considerable increase in the market values of our stock exchange securities during the year, especially in the section "ordinary stocks and shares," and the total market value of our investments is now much in excess of the figure at which they stand in the company's books.

PENSION SCHEME WITH PARTICIPATION IN PROFITS

Until comparatively recently almost all pension schemes were written on a non-profit basis, so that both contributions and benefits were fixed throughout. While this method has its advantages, the history of life assurance has shown the superiority of a policy with profits in a good bonus-paying life office, and there is no reason why pension schemes, as well as life assurance policies, should not be issued with profit rights. We have recently, therefore, made available a participating contract to meet the case where pensions arrangements are made individually; and we intend in the near future to bring out a plan under which group pension schemes can be issued with participation in profits, as an alternative to the present non-profit plan.

TAXATION TREATMENT OF PROVISIONS FOR RETIREMENT

Last year I referred to the main proposals of the report of the Millard Tucker Committee, which was published shortly before our last annual meeting. It was hardly to be expected that, in the short time at his disposal, the Chancellor of the Exchequer would be able to take any action on this report in his 1954 Budget. A year has now elapsed and it must be hoped that at least some of the recommendations will be dealt with this year. The principal injustice of the present state of the law is of course that self-employed persons must, as things now stand, provide for their old age out of fully taxed income. The proposals of the majority of the Committee, while carefully thought out, are both for the Inland Revenue and for the Life Offices; while the minority proposals, though cases quite inadequate to remedy the present injustice. This question is one of the greatest urgency and it is to be hoped that the Chancellor will be able to solve it in his 1955 Budget.

QUINQUENNIAL INVESTIGATION

The fifteenth quinquennial investigation and distribution of profits falls to be made as at December 31st next, and in view of the progress made by the company since the last investigation in 1950 the directors are confident of satisfactory results, which to a certain extent have been anticipated by an increasing last year the rate of interim bonus to policyholders and also by increasing the dividend to shareholders. The motion was duly adopted.

ENGLISH ELECTRIC COMPANY

SIR GEORGE NELSON ON THE EXPANDING SCOPE FOR BUSINESS

The thirty-sixth annual general meeting of The English Electric Company, Limited, was held yesterday at Marconi House, Strand, W.C.2.

Sir George H. Nelson, FCGI, MIMechE, MIEE (chairman and managing director) presided, and in the course of his speech said:

The trading surplus before deduction of depreciation, taxation and other charges is £7,289,334, which, when subjected to the deduction of usual depreciation at income tax rates of £1,557,676, and addition of dividends on trade investments, less tax of £73,423, shows, after interest and provisions, a balance on the consolidated profit and loss account before taxation of £5,371,281, compared with £4,779,920 in 1953 accounts. The sum of £225,600 received as taxation relief on investment allowance has been allocated to capital reserve. The group profit remaining after deduction of tax of £3,134,415 is £2,104,219, of which £2,098,609 is applicable to the members of this company.

The board recommends that a final dividend of 8½ per cent, less income tax, be paid on the ordinary stock for the year ended December 25, 1954, making, with the interim dividend, a total of 12½ per cent for the year, and that £750,000 be transferred to general reserve. The carry forward will then be increased to £635,757.

I must point out that this slight increase in dividend over 1953 is not the result of higher percentage of group profits on turnover. On the contrary, due to the increased competition in the export market, the percentage earnings on turnover show a decline from 6.15 per cent in 1953 to 5.85 per cent in 1954, which is appreciably lower than in 1939, when it was 9.81 per cent. I give below a breakdown of every £100 that The English Electric Group received for its deliveries in 1954 and 1953:

	1954 £	1953 £
Materials, including bought and finished articles	48.10	50.00
Wages and salaries	31.50	29.60
Depreciation, maintenance, power, heat, light, rent, rates, insurance, etc.	13.75	13.25
Interest on debentures, bank overdraft and bills	.80	1.00
	94.15	93.85
Taxation	3.20	4.00
Retained in the business ...	1.75	1.35
Net dividends on preference and ordinary stocks	.90	.80
	5.85	6.15
	£100.00	£100.00

Increased profits available for distribution as compared with 1953 arise from increased turnover and relief of excess profits tax.

INCREASE IN AUTHORISED CAPITAL

The company made an offer to acquire the ordinary capital of the Vulcan Foundry Limited and its subsidiary, Robert Stephenson and Hawthorns Limited, which has been accepted by the requisite majorities. As a result, 800,248 new ordinary shares of this company will be allotted to the stockholders of Vulcan Foundry and Robert Stephenson

and Hawthorns, and with the exception of 947,715 ordinary shares, the whole of the capital of The English Electric Company will then have been issued. In view of the great potential development throughout the world in the applications of electric power and other developments in the many fields in which your company is engaged, the directors feel it is necessary to have facilities available to deal at short notice with such expansions that may be open to them, and they therefore recommend that the authorised capital of the company be increased to £25 million by the creation of a further 10 million ordinary shares of £1 each.

OUTPUT AND ORDERS

I am again able to tell you of a further substantial increase, both in volume and value of the production and turnover of the group. This increase in our rate of production has enabled us to keep pace with our expanding order book.

I am also pleased to say that the volume of export orders in 1954 shows an improvement over 1953 (which itself was lower than 1952), but the competition in some countries from European manufacturers has been intense. We hope that both those controlling world manufacturing facilities, and Governments who are providing direct or indirect export subsidies will return to sane world trading conditions as quickly as possible, as the present conditions they are supporting are, in the long view, unhealthy for all parties.

COST OF PRODUCTION

Our greatest forward problem is that associated with the continued raising of basic wages in so many industries and services, which are not associated with any obligation to increase output or improve efficiency.

Take the present position in this great group of companies. The profit on our turnover last year had actually fallen from 6.15 per cent to 5.85 per cent and our workers, paid by results, have received extra rewards for their additional output. A general increase in wages for our industry has just been agreed nationally with no obligation for further extra output. This award will ultimately increase the cost on our present turnover by about 3½ per cent, which, at existing prices, means that our present profit of 5.85 per cent would fall to 2.35 per cent; obviously, we could not continue to trade on this basis and our prices must be increased which will, in the long run, increase the cost of living.

RESEARCH

Our great research laboratories in electric power fields at Stafford; on steam turbines, hydro turbines, diesel engines and atomic energy at Rugby and Whetstone; aerodynamics at Warton; on aero engines at Napier, London and Liverpool; on all fields of radio communication, television and electronics at Marconi's, Baddow and Chelmsford; on electronic instruments at Marconi Instruments and on radio instruments, valves, magnetrons, etc., at English Electric Valve Company at Chelmsford, are making a great contribution to our present fields of engineering activity which will ensure us retaining our appropriate position in these fields in the future.

The report was adopted.

GENERAL INVESTORS AND TRUSTEES

INCREASED GROSS REVENUE

The forty-eighth annual general meeting of the General Investors and Trustees, Limited was held on March 24th in London, Mr Sidney S. Lamert (the chairman) presiding.

The following is an extract from his circulated statement:

The mounting prosperity of the country, after four years of firm and stable government, is fully reflected in the accounts which we present to you today. Our portfolio of investments, as the analysis published with the balance sheet shows, is widely spread over every section of industry, and at valuation over 80 per cent of the whole consists of equity interests. Gross revenue at £235,726 is nearly £40,000 higher than in the previous year and the end-year valuation shows an increase in the appreciation during the period of rather more than £1 million. We recommend payment of a total dividend of 16 per cent on the ordinary stock for the year, after placing to reserve £29,580, bringing that fund up to the comfortable figure of £280,000. We also propose to issue at par new ordinary capital in the ratio of one new unit for every five held. The resulting cash will enable us to carry out one of the principal functions of an investment trust company, namely the provision of new capital for industry.

The report was adopted and the board's proposal to issue for cash at par 143,748 ordinary shares of £1 each in the proportion of one share for each £5 of ordinary stock held was approved.

SCOTTISH AMICABLE BUILDING SOCIETY

INCREASES IN ALL DEPARTMENTS

The sixty-third annual general meeting of the shareholders of the Scottish Amicable Building Society was held on March 21st in Edinburgh. The Right Honourable Lord Inverclyde, KSTJ, DL, president, occupied the chair. In the course of his speech he said:

The figures show that the society has maintained the confidence of investors and continues to attract new investors. Once more I am in the happy position of being able to report increases in all departments.

New subscriptions in the shares and deposit departments amounted to £6,024,901, a net increase of £2,026,026.

The total at the credit of shareholders and depositors is now £21,685,087.

The board has had under consideration the introduction of a new share department for regular savers. Subscription shares would be issued to be paid up by monthly payments of from 10s. to £5, with a maximum holding of £500, thereafter being repaid or transferred to a normal shares account. If subscriptions are paid regularly, interest would be at the rate of 3 per cent, income tax paid by the society. It is hoped to have this scheme operating as from April 15, 1955.

Following their policy, the directors have granted mortgages only on property which they considered suitable security. We do not encourage anyone to purchase a property which is beyond his ability to maintain. The sum advanced during the year amounted to £2,878,938, bringing the total mortgage assets to £16,476,274.

The society's investments in trustee securities purchased at par or under, together with cash at bank, amounts to £6,018,205, equivalent to the value of the assets.

The report was adopted and the dividend distribution of 35 per cent for the year was approved.

REVERTEX LIMITED

RECORD SALES AND PROFIT

The thirty-first annual general meeting of Revertex Limited was held on March 17th in London, Mr D. H. Scott, chairman and managing director, presiding.

The following is an extract from the chairman's statement circulated with the report and accounts for the year ended September 30, 1954:

I am happy to be able to report once again a very satisfactory year's progress for our company. The volume of sales and the net profit have both established new records.

PRODUCTION AND SALES

Demand for Revertex and Revultex—the trade names for the types of concentrated rubber latex we make in Malaya and Ceylon—has been well maintained throughout the year and sales showed a healthy increase over the previous year. Although there has been some further general improvement of security in Malaya, the area of Central Johore, in which we are mainly interested, is still unsettled.

Sales of Emultex—our polyvinyl acetate emulsion—have also shown a satisfactory increase. Our principal customers in the paint trade are optimistic about the prospects for their new emulsion paints and as a result of the installation of additional plant in our Harlow factory we are in a position to meet all likely demands for our products for some time to come. The erection of our second factory at Harlow is now nearly completed. The development of Alcotex—our trade name for polyvinyl alcohol—has proceeded steadily although rather slowly. We are now in regular production on a small scale and hope to increase our output substantially during the course of this year.

ACCOUNTS

Profit before tax amounted to £438,577 as compared with £302,493 for the previous year, and £120,907 for the year before that. The net profit after making full provision for taxation was £190,077 as compared with £101,993 and £43,407 for the two preceding years. Our liability to excess profits levy for the quarter ended December 31, 1953, amounted to £15,000.

DIVIDEND AND PROSPECTS

The directors recommend a final dividend of 15 per cent, less tax, making with the interim dividend of 10 per cent, less tax, a total of 25 per cent, less tax, for the year. The total dividend of 25 per cent, less tax, will absorb the sum of £37,813 net, and after allowing for the £25,000 capitalised last year, unappropriated profits will be increased by £127,264 to £352,677.

In addition, subject to the necessary increase in the authorised capital, the directors propose to issue to the present shareholders 550,000 new ordinary shares of 5s. each, credited as fully paid, in the proportion of one new share for every two shares held. This will involve the capitalisation of £137,500 of the unappropriated profits of £352,677. HM Treasury has given its consent to this issue.

As regards prospects, I am glad to say that our business continues to increase in volume despite growing competition but the margin of profit is becoming somewhat less. The results for the first quarter of our current financial year compare favourably with the corresponding quarter of the previous year.

The report was adopted and the proposed increase of capital and share issue were approved.

HASTINGS AND THANET BUILDING SOCIETY

RESERVE AND LIQUID STRENGTH

At the annual meeting at Ramsgate on March 24th, the chairman, Mr H. J. D. Fuller, in moving the adoption of the directors' report and statement of accounts for 1954, said:

The year 1954 saw a great improvement in two important aspects of the nation's affairs in which the Society was interested; first the building of more houses for sale and, secondly, the increased rate of personal saving.

HOME OWNERSHIP

Through a variety of schemes, building societies could bring home-ownership within the means of a very wide range of people who should be encouraged to accept a valuable stake in the country for the benefit of the nation and themselves. During the past year, more than £3½ million was advanced by this Society, chiefly to people buying houses for their own occupation, many of them being new homes to be occupied for the first time by newly-married couples, on the basis of a small cash deposit and a monthly repayment which they could comfortably afford.

NEW SAVINGS

Savings in Great Britain showed a marked improvement in 1954 to the benefit of the nation and the individual. And it could not be said with too much emphasis that saving through building societies was in the national interest. New savings with the Society in 1954 exceeded £3½ million, the bulk of which was channelled into home-ownership loans, a century of experience of which had provided security to investors of unquestionable calibre. "Safe loans in good homes" might well be the Society's motto.

STABLE INTEREST RATES

By their nature, building societies were mutual institutions serving on the one hand the needs of the prudent investor, with convenient facilities for making deposits and for withdrawing them, plus a fair income return; and, on the other hand, the house-purchaser, who expected to borrow the money provided by the investors at the cost of such money to the Society, plus the income tax, management expenses and a little margin for reserves. Neither investor nor borrower would welcome frequent changes in interest rates, but rather did they expect long periods of stability. Any attempt to adjust building society rates in conformity with Bank rate changes would not only be basically wrong, but would create confusion and instability in a movement which had a reputation for a good degree of constancy. The profit motive simply did not exist within the building society framework.

The directors were at all times desirous of promoting and extending the benefits of home-ownership and they gave particular encouragement to young people who often required small deposit terms and a longish period in which to repay the loan. These young people were being assisted by the Society each day and every day and the Society welcomed the opportunity to serve them. But, the repayment term should not be so long as to make people lose sight of their goal of complete redemption of their

security and it was important to curb unwarranted enthusiasm and ambition and encourage people to buy a good house within their financial orbit.

In seconding the adoption, Mr E. Barber, LRIBA, said:

It was interesting to note that the total assets at over £18 million had more than doubled since 1947; such growth having been natural and accompanied by an all-round increase in strength. Reserve and surplus funds at £952,774 had been well maintained and their importance to any sound business could not be over-estimated. Nor, in an institution like this, could too much care be exercised to ensure an adequate degree of liquidity, that is cash at banks and trustee securities. These together now totalled £2,662,769 and allied to a fine reserve position they were a bulwark of strength, as would be apparent to the most astute scrutineer of balance sheets.

The report and accounts were adopted, the appointment of auditors confirmed, and a vote of thanks accorded to staff, solicitors and agents.

BENEFIT FOOTWEAR

RECORD TURNOVER

The fifty-eighth annual general meeting of Benefit Footwear Limited was held on March 23rd in London, Mr Edward Hill, FCA (the chairman), presiding. The following is an extract from his circulated statement:

Trading profit has advanced from £260,252 in 1953 to £294,382 in 1954. The increase of £34,130 is due to a considerable increase in turnover, which constitutes a record. The larger profit necessarily involves larger taxation provisions totalling £138,500, and after the deduction of these and other items there is left a taxed profit for the year of £104,523, an increase of £10,937 over the corresponding period for 1953.

A professional valuation was carried out in 1954 of the company's freehold properties, and leaseholds with over 800 years to run, the bulk of which were acquired many years before the last war. This valuation amounted to £913,055 and has been adopted in the company's balance sheet. Of the resulting appreciation of £475,769, we are writing off the item of goodwill, £111,711, which has appeared in our accounts for many years. The balance of £364,058 has been carried to capital reserve, bringing that reserve up to £414,081.

During the year our new warehouse and garage at Westland Road were completed, and we have been established there since April. These buildings, adjacent to the company's offices, have provided ideal working conditions, and have added to the efficiency and economical running of this important part of the company's activities.

The new Leicester store, referred to in the last review, was opened in October, and has already contributed satisfactorily to the company's earnings. Our policy of modernisation of the shops continues, and several were refitted during the year under review. Costs are high for this work, but we consider our money well spent in thus ensuring the future high standard of the company's retail establishments.

It is hoped to continue our expansion by the opening of further stores in central positions, but the high cost of freehold property, and the high rentals asked, necessitate caution.

The report was adopted and the final dividend of 19 per cent, making 25 per cent for the year, was approved.

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

A MOST SUCCESSFUL YEAR

MR JAMES T. DOWLING ON

FAVOURABLE BONUS PROSPECTS

The one hundred and twenty-ninth annual general meeting of the Scottish Amicable Life Assurance Society was held in Glasgow on March 23rd, Sir Lynden Macassey, KBE, QC (president of the society), presiding.

In moving the adoption of the report and accounts, Mr James T. Dowling, CA (chairman of the ordinary directors), said that once again the directors were in the happy position of being able to report the results of a most successful year. Individual assurances for net sums assured in excess of £9 million had surpassed the previous year's record by more than £1 million. New group pension and life assurance schemes had been written at the rate of approximately one per week and "group" sums assured in force had increased over the year by £3 million, while deferred pension benefits had increased by more than £1 million per annum. The society's premium income had increased by £700,000 to £5,600,000 and had doubled in amount during the first four years of the present quinquennium. The society's total funds amounted at December 31st last to more than £39 million—having risen by £4,750,000 in the course of the year. The year's mortality profit had reached a record level; a very considerable profit had also resulted from interest earnings. In the result, the year's profit from all sources had been eminently satisfactory and had enhanced the favourable prospects for the current quinquennium. The society's compound rate of interim bonus had been raised to 37s. 6d. per cent per annum on claims arising during 1955 in respect of all premiums paid since January 1, 1951, and the directors look forward with justifiable confidence to the bonus declaration at the end of this present year.

STRONG INVESTMENT PORTFOLIO

The year's increment in the society's funds had been invested mainly in first-class fixed interest securities. The market value of the society's stock exchange investments had shown a further substantial appreciation during 1954—and the margin of appreciation was still substantial despite the sharp setback in markets in the early months of the present year. With a strong investment portfolio and with fresh opportunities to invest new money on profitable terms, the investment outlook was by no means discouraging. For many years past, the society had held substantial interests in the Scottish Insurance Corporation Limited and in the Standard Property Investment Company Limited—interests which offered the society's members facilities for fire and accident insurance and for obtaining loans on the security of property. A further facility was now available to members wishing to anticipate expectations under trusts and settlements as the society had recently purchased the whole capital of Atlas Assets Company Limited—a company dealing in reversions and life interests by way of purchase or loan.

NEW WITH-PROFIT PENSION SCHEME

The society's "Double Bonus Policy," introduced a few years ago, had been an outstanding success and keenly competitive rates were now quoted also for non-profit whole life and endowment assurances. In addition, an attractive form of group pension scheme had now been launched on a with-profit basis, having all the advantages of the society's

traditional bonus system. The ordinary with-profit policy had, by its excellent results throughout the society's long history, justified confidence in the society's bonus earning capacity and there was every reasonable expectation that equally satisfactory results would be achieved under this with-profit group pension plan. A scheme arranged on this basis became, in effect, an integral part of an old-established mutual society—being entitled to share in all the distributable profits of the society while, at the same time, benefiting from the stability and security which flowed from the pooling of risks in a large financial institution. The society was also prepared to issue group life assurances on a with-profit basis, which should provide by way of compound reversionary bonuses a substantial increase in life assurance cover for employees with long service.

The report and accounts were adopted.

THE PATALING RUBBER ESTATES, LIMITED

DIVIDEND OF 30 PER CENT

SIR ERIC MILLER'S SPEECH

The thirty-fifth annual general meeting of The Pataling Rubber Estates, Limited, was held on March 23rd at the Registered Office of the company, 1-4, Great Tower Street, London, E.C.

Sir Eric Miller, the chairman, in the course of his address, said: At our last meeting I said that as there was more than enough rubber pressing on the market we had decided upon a more conservative tapping policy; in the event our crop of 8,801,300 lb was some 1,350,000 lb less than that harvested in the year ended October, 1953. Our sale price, inclusive of lower grades, works out at approximately 1s. 11½d. per lb. London landed terms—about 1½d. per lb less than that obtained for our 1952-53 harvest, but well above the average London market price for sheet during the period. In face of lessened demand we reduced our production of sole crepe; however, economies effected in estate working together with a lower export duty helped to bring the all-in cost of production down by about 1½d. per lb.

The profit before taxation, but after charging export duty and cess, was £371,845. It will be observed, however, that this profit includes a refund of £121,521 from replanting cesses levied by the Malayan Government since January, 1951, of which £65,857 relates to the years 1951 and 1952. The profit of £315,961 for the previous year included a cess refund of £20,276. Taxation in Malaya and the UK on the year's profit absorbs £176,381. We have transferred £63,758 to capital general reserve and £93,570 to cultivation and replacement reserve, and propose a dividend of 30 per cent, absorbing £122,659 net, leaving £159,661 to carry forward to next year.

ESTATES

During the year 940 acres of old rubber were replanted. In the current year we propose to replant 1,100 acres, and we have earmarked a further 2,700 acres for replanting in the calendar years 1956 and 1957.

I have now to inform you that we have recently been approached with a view to agreeing terms which might lead to part of Bikam estate being prospected for tin, and if found payable being sold or sub-leased for dredging to a well-established Tin Company. I have no wish to raise hopes prematurely, as it will necessarily be some considerable time before we know what the prospects are, but

you may rely on receiving prompt advice on any material developments one way or the other.

RUBBER OUTLOOK

The chart of rubber prices shows that at the time of our last annual meeting a year ago the curve was at a low point with No. IRSS quoted in London at about 16½d. per lb. When the then current fears of a serious recession in USA business activity were succeeded by gathering confidence, the price of rubber took a turn for the better and moved upward, first gradually and then rather steeply as tension mounted in the Formosa area, when speculators in Singapore pushed the price for a brief moment up to the equivalent of 31d. London terms. This highly feverish condition could not last; the inevitable reaction was started by the GSA announcement of a slight revision in their rotation policy, of which little notice would have been taken under ordinary circumstances, had it not coincided with an easing of the tension in the Far East. We are now back to 25d.-26d., at which level the market is much healthier—but although both producers and manufacturers would be thankful for a period of steady prices around this level, further movements, up or down, are inevitable.

Current crop is estimated at about 4,000 tons. We have booked forward sales of 234 tons for January-June shipment at an average price of 23.6d. per lb, and 396 tons for July-December shipment at an average price of 25.8d. per lb, both converted to London landed equivalent. We are also participating in some forward sales of sole crepe at satisfactory prices.

USE OF NATURAL AND SYNTHETIC

The pace at which automobiles are being turned out, particularly in the USA, has surprised the prophets, stemming from present ultra-keen competition and the possibility of a struggle with labour in the months ahead. The rise in the price of natural rubber has automatically led to a gradual reduction in its proportional use relative to synthetics in the USA, though not in aggregate use. Taking the world as a whole, supply of and demand for natural and synthetics together are in very near balance with only moderate stocks outside Government stockpiles. We should know by the 26th of this month whether the sale of synthetic plants to private enterprise has passed the Congress of the USA and the nature of their competitive power under new ownership will emerge in the second half of this year.

The use of latex, in the sale of which we are also interested, is going ahead by leaps and bounds in upholstery and carpets, and whatever the short-term fluctuations in the off-take of rubber may be, it is impossible to be other than optimistic about the long-term expansion in its use.

The competitive position of the Pataling Company is, as you know, improving each year as replantings come into bearing and backed by our financial strength we face the future with every confidence.

The report and accounts were unanimously adopted.

Orders and copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:

*The Company Meetings Department,
The Economist,
22 Ryder Street, S.W.1.*

BROOME RUBBER PLANTATIONS

CURRENT TRADING IMPROVEMENT

The twenty-first annual general meeting of Broome Rubber Plantations Limited was held on March 23rd in London.

Sir Lionel Smith-Gordon, Bt (the chairman), presided, and in the course of his speech said:

Owing to unfavourable weather there was

a fall in output during the year covered by the accounts. During the same period, the average selling price of our product fell from 22d. to 17½d., London equivalent. The final result was that, in spite of a reduction from 19d. to 17d. per lb. in production cost, our trading profit fell from £51,702 to £33,337.

While it is obvious that a dividend cannot be paid in respect of the financial year under review, the directors feel that they are justified in declaring an interim dividend of 5 per cent in respect of the year we are now in, ending on June 30th next, as stockholders have received no return on their investment since September, 1952.

In respect of the six months July/December, 1954, the crop of rubber was 1,534,400 lb, which realised the London equivalent of 22d. per lb. The cost of production was the equivalent of 16½d. per lb landed in London. After providing for depreciation, debenture interest and replanting, the profit for the six months on the issue capital of £245,304 is at the rate of 18½ per cent per annum, subject to taxation. Although the price of rubber has fallen from the new high of 31½d. to about 26d. per lb, provided the present price holds the result for the year 1954/55 should be satisfactory.

The report was adopted.

MILK MARKETING BOARD FOR NORTHERN IRELAND

Applications are invited for the post of General Manager to the Milk Marketing Board for Northern Ireland. Candidates must be of British nationality and preference will be given to ex-Service applicants.

Applicants must have had considerable experience, in a senior administrative capacity, of the problems undertaken in a large-scale marketing organisation, preferably in connection with milk. The successful applicant will be responsible, subject to the directions of the Board, for the general control of the Board's activities.

Salary will be on the scale of £2,000-£2,500 per annum, but the Board may pay a commencing salary above the minimum to a specially qualified applicant. The post will be pensionable—on a contributory basis.

Applications must be made on the prescribed form, copies of which may be obtained from the Acting Secretary, Milk Marketing Board for Northern Ireland, Castle Hill Road, Belfast, Northern Ireland.

The latest date for the receipt of applications will be April 14, 1955.

MARKET RESEARCH

Precision Engineering Company in London requires Senior Assistant for newly formed Market Research Department. Preference will be given to graduates in Economics, with Statistics as special subject, aged 26 to 30, who have industrial or commercial experience. The post calls for analytical skill combined with a practical outlook, and provides an outstanding opportunity to build a career in a progressive firm.—Write, giving full details and quoting Ref. M.R., to Box 874.

MONSANTO CHEMICALS LIMITED will shortly have two vacancies for Graduates in the Sales Development Group in London.

- (1) A Chemist, Physicist or Engineer, aged 23-33 years, having an interest and preferably some experience in technical selling to a variety of industries.
- (2) An Economist, aged 24-30 years, with some industrial or commercial experience, preferably in the chemical industry, to establish a Forecasting Section within the Group.

Both positions are permanent and pensionable and may involve travel. Substantial salaries will be offered and there are excellent opportunities.—Apply in writing in the first instance, giving full details of age, education, training and experience, to the Chief Personnel Officer, Monsanto Chemicals Limited, 8 Waterloo Place, London, S.W.1.

AMERICAN OIL COMPANY with world-wide affiliations desires male addition to the staff of its small London office. Some travelling, and ultimate career rests largely with individual's ability. Duties will be general, concerned with statistical reports, oil movements, financial arrangements and representation. Principal qualities required are dependability, initiative, judgment, diplomacy and accuracy. Graduate 25-35, experience valuable but not essential in oil, accounting and/or statistical studies. Preliminary to interview, write name, age, address and brief background to Box 873.

WORKS MANAGER required for a light/medium Engineering Factory in the Home Counties employing 1,500. The successful candidate will be a trained Engineer, with previous executive responsibility and knowledge of negotiating procedure as applying to an industrial establishment, and he will also be able to lead a mixed team of Production and Administrative personnel with energy and enthusiasm. The post is a senior one and offers considerable future prospects in a virile and expanding organisation.—Please send full particulars of age, qualifications and experience, with salaries earned, to Box 870.

SALES EXECUTIVE required in a medium-sized company manufacturing accessories for the vehicle trade. The company has Sales and Service Branches throughout the country, and the successful applicant would be required to control the activities of Salesmen and Representatives calling on manufacturers and operators. The position offers an excellent opportunity for progress in a virile and expanding organisation, and the successful candidate should preferably have experience in the industry.—Please send full particulars of age, qualifications and experience, with salaries earned, to Box 869.

A FIRM of stockbrokers with a mainly institutional business has an opening for a graduate, age below 28, with a good Honours degree in Economics and financial experience in industry or commerce. Commencing salary £600 per annum, with participation in a bonus scheme. Initially the work would be of a "research" character, but the right man would have considerable freedom to work out his own contribution to the firm, with corresponding rewards.—Replies to Box 876.

TO STOCKBROKERS, INVESTMENT MANAGERS.—A former member of the Stock Exchange with 20 years' experience, including 10 as senior member of small broking firm, fully conversant with writing investment letters and handling clients' and institutional business, offers his services in similar capacity. Available after business.—Write Box 8, 397, C/O Streets, 110 Old Broad Street, E.C.2, E.C.2.

EXPER. T. SALES MANAGER required by Kayser Ponder. Applicant must have held executive position and be experienced in selling textiles to European and Overseas markets. Write Managing Director, 24 Albemarle Street, London, W.1.

RAPID TRANSLATION in and from all languages at only 2s. 6d. for 73 words. SECTRA, 20 Buckingham Street, London, W.C.2.

GENERAL INSPECTOR

£5,000 a year, rising yearly by at least £1,000 to at least £10,000. The John Lewis Partnership's General Inspector is about to succeed its founder as Chief Executive. His health has made unavailable two members, to whom the General Inspectorship might have been offered, and there may be advantage in fresh eyes and ideas. The post is one of ten forming the Partnership's cabinet but has no executive functions outside the General Inspector's own department. The General Inspector is purely a Chief Executive who himself and an adviser responsible solely to the Chief Executive who himself has life tenure up to seventy-five, except that in certain circumstances he can be displaced by a council two-thirds elected yearly by secret ballot of the whole Partnership.

Qualifications: conscientiousness, kindness, industry, shrewdness and in sufficient measure the others required for public affairs. Functions: to watch all Rules are properly kept; to advise upon their cancellation or amendment; to investigate and report upon any matters that seem to deserve such attention and generally to contribute to the Partnership's health and vigour in all respects by constant but to the Partnership's health and vigour in all respects by constant

discerning vigilance and by prompt, judicious criticism. The Partnership is a 40-year-old rapidly growing experiment in co-operative production, the establishment and demonstration of a technique for labour's hiring capital and management and achieving satisfactory team-work and discipline. Present membership: 12,000. Pay-sheet above £4 million. Non-contributory Pension Fund already published at 8s. 6d. by Staples Press Ltd.

Appointments will be by the retiring founder and his prospective successor, O. B. Miller, M.A. Oxon, who on the suggestion of the University's Appointments Board joined the Partnership in 1927. Consideration will begin three weeks hence. Filling of the vacancy will be announced here. Applications will not be acknowledged before April 16th.

Candidates must be between 35 and 50. Non-contributory pension from 65 but continuance possible for 10 further years. Beyond that age partners are retained on the Active List only as consultants or in other work involving no executive authority.

Position might suit senior officer contemplating retirement from public service, politician disliking electioneering, successful member of learned profession or occupant of important academic or Trade Union post desiring fresh interests and larger income. Of the Partnership's many similar appointments the majority have succeeded.

Though the remuneration named is below the Partnership's prospective limit for its most important posts, its supreme aim is the advantage of those of its members whose earning-power is lowest. Genuine partnership for all should by its effect on production and social peace be good for almost everyone.

Interviews by appointment only. Please write fully. General Inspector, John Lewis and Co. Ltd., Oxford Street, London, W.1.

NUFFIELD COLLEGE, OXFORD

FELLOWSHIP IN POLITICS

Applications are invited from graduates, men or women, for a Fellowship in Politics.—For further particulars apply to the Warden, to whom applications should be sent by May 20th.

THE B.Sc.ECON. DEGREE of London University is open to all without University residence. It is a valuable qualification for ambitious men and women engaged in accountancy, secretarialship, banking, finance, commerce, public services. Wolsey Hall (est. 1894) provides postal tuition of a high order for the three (in some cases two) examinations, at reasonable fees. More than 1,000 Wolsey Hall students have passed London B.Sc.Econ. (Final) exams, since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P17, WOLSEY HALL, OXFORD.

THE COLLEGE OF AERONAUTICS

CHAIR OF AIRCRAFT ECONOMICS AND PRODUCTION as PROFESSOR AND HEAD OF THE DEPARTMENT OF AIRCRAFT ECONOMICS AND PRODUCTION at the end of the current academic year. It is hoped to make the current range for professorial salaries obtaining in Universities, with superannuation under the Federated Superannuation System will be dependent upon the qualifications and experience of the successful candidate. A house at a reasonable rent will be available if required. Further details can be obtained from The Recorder, The College of Aeronautics, Cranfield, Bletchley, Bucks. Applications for the post should be received not later than April 30, 1955.

THE LEVERHULME TRUST

RESEARCH SCHOLARSHIP IN MANAGEMENT ACCOUNTING in Management Accounting. The value of the Scholarship will be £2,000, plus travelling expenses as indicated below.

The successful applicant will be required to devote one year to the study of the subject, selected by himself, of the development of accounting contribution to industrial or commercial management, and at the end of that period to have produced a thesis suitable for publication.

Arrangements will be made by the Trust for the successful applicant to be given general guidance and direction during the period of the research. The Trust will pay the expenses of any travelling which they consider it necessary for him to undertake in the course of the work.

Applicants should hold a recognised qualification in accountancy and preferably should be aged not more than 35 and have had a wide professional experience.

Application forms may be obtained from the Secretary, Leverhulme Research Awards, St. Bridget's House, Bridewell Place, London, E.C.4. The closing date for applications is May 31, 1955.

OXFORD UNIVERSITY INSTITUTE OF STATISTICS

Applications are invited for vacancies on the research staff. Candidates will be expected to undertake work in the field of applied economics, and should have a good degree in economics and statistics. Previous research experience will be an advantage, but is not essential. The appointments will be for two years in the first instance; the salary will be on the scale £550-£900, according to age and experience. Closing date for applications April 30. Forms can be obtained from the Secretary, Institute of Statistics, St. Cross Road, Oxford.

UNIVERSITY OF CAMBRIDGE

Applications are invited for the Directorship of the Department of Applied Economics which will shortly become vacant following the election of Mr J. R. N. Stone to the P. D. Leake Professorship of Finance and Accounting.—Further particulars may be obtained from the Chairman of the Committee of Management, The Department of Applied Economics, Downing Street, Cambridge. The closing date for applications is May 16th.

UNIVERSITY OF LONDON

The Senate invite applications for the Readership in Social Statistics tenable at the London School of Economics and Political Science (salary £1,300-£1,550-£1,800 a year).—Applications (10 copies) must be received not later than May 10, 1955, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

THE UNIVERSITY OF LIVERPOOL

Applications are invited for a Leverhulme Post-Graduate Fellowship in any Department in the Faculty of Arts. The Fellowship will be tenable for one year at a value of £500, but may be renewed for a second year at a value of £550.

Applications, stating age, qualifications and experience, proposed field of research, and the names of two referees, should be received not later than May 1, 1955, by the undersigned, from whom further particulars may be obtained.

STANLEY DUMBELL, Registrar.

THE UNIVERSITY OF LEEDS

MONTAGUE BURTON CHAIR OF INDUSTRIAL RELATIONS

The Council will shortly proceed to an appointment to the Montague Burton Chair of Industrial Relations, which will become vacant on September 30th next, on the retirement of Professor J. H. Richardson. The salary will be not less than £2,100 a year and the appointment will be effective from a date to be arranged with the successful candidate; it is hoped that this date may be October 1, 1955. Candidates should have academic qualifications and practical experience in the fields of human relations in industry or industrial management. Applications (fifteen copies) stating date of birth, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than May 14, 1955; candidates overseas may apply in the first instance by cable, naming three referees in the United Kingdom.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for the newly created post of DIRECTOR OF BUSINESS STUDIES. Salary £2,000 a year with F.S.S.U. provision and family allowance. The appointment is a new one: the Director will be required to take over and develop University studies in the field of Business Administration and Management.—Further particulars should be obtained from the Registrar, The University, Sheffield, 10, to whom applications (16 copies) should be sent by May 14, 1955.

UNIVERSITY COLLEGE, IBADAN

Applications are invited for (1) Lecturer (Grade I) or (2) Lecturer (Grade II) in Agricultural Economics and Farm Management. Salary scales: (1) £1,300 x £50 — £1,500 p.a. (2) £900 x £50 — £1,200 p.a.

Point of entry determined by qualifications and experience. Child allowance £50 p.a. per child (maximum £150 p.a.) for children resident in Nigeria, or £100 p.a. per child (maximum £300 p.a.) for children resident elsewhere. Outfit allowance £60 on first appointment. F.S.S.U. Passages paid for member of staff, wife and children (under 11 years) on appointment, annual leave and termination. Part furnished accommodation at rent not exceeding 7.7 per cent of salary. Applications (six copies), naming three referees and stating full qualifications and experience, to be received by April 15, 1955, by Secretary, Inter-University Council for Higher Education Overseas, 1 Gordon Square, London, W.C.1, from whom further particulars may be obtained.

SALZBURG SEMINAR IN AMERICAN STUDIES

SCHLOSS LEOPOLDSKRON, SALZBURG, AUSTRIA
Scholarships are offered for the following sessions:
American Studies (Seminars in History, Philosophy, Music, Art and Literature), June 12 to July 9, 1955.
Labour in America, August 21 to September 17, 1955.
Lectures and Seminars at the postgraduate level. Admission is granted for evidence of ability and accomplishment. General age range 23 to 35. Special attention given to those engaged in public life, teaching, or creative work.—For further information and application forms, please write promptly to: Salzburg Seminar, 35 Portman Square, London, W.1.

EXPERT POSTAL TUITION

For Examinations—B.Sc.Econ., LL.B. and other external London University Degrees: Law Society, Bar, Accountancy; Banking; Secretarial; Civil Service; Commercial; General Certificate of Education, etc. Also many non-examination courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination (if any) or subjects in which interested, to the Secretary (G 9/2).

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

THE NEW CEMENT

TRIEF *at work...*

From an oil painting by Charles Cundall, R.A., of the Cluanie Dam in the course of construction

Some of Britain's newest hydro-electric construction projects—the Cluanie and Loyne dams for instance—are being built with TRIEF, the new cement that makes high-grade concrete with many advantages.

TRIEF is a low-heat cement which successfully resists atmospheric attack; it gives a strong, dense, impermeable concrete which is easily placed, and has low volume shrinkage. It contains very little free, or freely-combined lime, making it resistant to aggressive waters. These are some of the reasons why TRIEF is now being increasingly specified.

For more information about TRIEF's advantages, write to **MITCHELL**
Mitchell Engineering Group Limited, 1 Bedford Square, London, WCI

The Indian Scene

1. Poverty and Population

THE Indian economy today is the subject of what is, without doubt, the world's most fateful experiment. Its problems may be expressed in economic terms—in so many millions of investment, in such and such a percentage of the national income—but the outcome is nothing less than the demonstration that underdeveloped economies can—or cannot—achieve progress by Western and liberal means.

It is not easy to establish what are the world's comparative standards of prosperity. Mr Colin Clark, taking as his unit of comparison the amount of goods and services one rupee would have purchased in 1948-49—a so-called oriental unit—gives India a place towards the bottom of the world's scale and about half-way between Asia's upper and lower limits of poverty. While countries such as the United States or Canada enjoy a *per capita* national income of some 7,000 oriental units, the vast bulk of Asia—and Africa—makes do on an income varying from 400 to under 100 oriental units. India—with Iran, Pakistan and Thailand—is in the 150 to 200 units group. South East Asia as a whole and China are even further down the scale.

Expressed in real terms, India's poverty translates itself into inadequate incomes at every level. A science demonstrator in a university may get £2 a week, a lecturer £3 or £4; a school teacher in Orissa has to make do on 10s. The agricultural labourer earns in some states as little as 1s. 6d. a day, and nowhere, even at harvest, will he earn more than 4s. or 4s. 6d.; and he only works perhaps two hundred days a year. The cottage industry worker and the village artisan do little better, a carpenter or blacksmith will make 3s. to 6s. a day, a handloom weaver with a throw shuttle loom sometimes as little as 1s. Only the worker in modern industry does reasonably well; an unskilled labourer in a good firm may get (including his dearness allowance and bonus) £2 a week, a skilled worker £3 or more; but he quite often pays for his relatively high wage with impossibly bad housing. Clerks do no better. In Government service they may begin at £1 a week and do well ever to rise above £3. The big firms, however, pay considerably more.

These figures cover only half India's population. The other half are peasant farmers, often owners, sometimes tenants and a large and growing army of landless labourers. In the main, India is a land of working peasants rather than capitalist farmers. The traditional organisation of India's rural economy is changing with the progressive elimination of *zemindari* and intermediary landholders and other agrarian reforms. But small holdings, subsistence farming and a precarious dependence upon the monsoon

mean pitifully low incomes for all engaged in agriculture. Thus the National Sample Survey recently showed that only 16 per cent of the countryside spent more than £200 a year; fully one-half of all families had less than £100, one-fifth had less than £50 (though this would include many landless labourers). In the great city of Bombay, India's wealthiest urban centre, only 50 per cent of the people have about £100 a year, only 8 per cent above £300.

Such are the figures. In actual standards of life they mean, first of all, for much of the population the wrong sort of food and not enough of it. In a good year, such as 1954, the average Indian gets about two-thirds as many calories as an average Englishman. In a bad year—1950, for instance—he may get little more than one-half, and most of these calories are cereals, wheat or rice or millet. Indians eat more cereals per head than Americans. Accord-

ing to the area, flat grilled cakes made of rice and pulse, or wheat or millet, form part of every meal. But of everything else the Indian diet is painfully short. Average consumption of fat is one third of what it should be, of milk one-half, of vegetable protein one-quarter. Animal protein is little eaten, though in part for religious reasons.

For most of the population, poverty also means few clothes, although people are wearing more than they used to, especially in the south. Another factor is very inadequate housing. In the big towns a clerk considers himself lucky if he has two rooms, a worker usually has to manage with one; in the countryside most villagers' huts are of mud, or bamboo and thatch. Only the well-off can afford wood or brick. Poverty also means an utter lack of amenities. All except the biggest towns are inadequately lit and unprovided with main drainage. Side-streets are usually unpaved. Many towns and nearly all villages still rely for water upon unprotected wells. Most villages still have no culverted road, and may be cut off for days at a time in the monsoon. Not even one per cent of the villages have electricity.

Above all, education and medical services are exceedingly short. Not more than half the children of school-going age are at school, and some of them leave after two or three years, barely literate. Except for untouchables and aboriginals, moreover, there are few scholarships for higher education, so that, on the one hand, fees are pitched so low that few high schools or colleges ever have enough money for proper salaries or laboratories or libraries, yet, on the other hand, in order to pay even these fees, many parents must make a major sacrifice. So, too, with medical attention, country doctors are few and widely scattered and every hospital is so overcrowded that admission is frequently a matter of influence or corruption.

It is not only that people cannot pay fees. It is also

that the state, reflecting the poverty of the community, can help so little. There is little surplus to tax. Only 800,000 have incomes above the income-tax minimum, and two-thirds of the tax comes from 5,000 assessees, many of them corporations. The taxes are high. Income tax and super tax, when one allows for the fact that there are no wives' or children's allowances, are almost at British levels, though the state does much less for the taxpayer than in England. There are as yet neither old-age pensions nor a National Health Service. Indirect taxes weigh heavily on many necessities. There are excise duties on matches and kerosene and cloth, and on the poor man's few luxuries—tea, coffee, tobacco, betel-nut. The taxpayer is squeezed to the utmost, yet taxation represents no more than seven per cent of the national income, and all the taxation of India, central and state put together, adds up to less than half Britain's bill for defence.

Nor is the fact of inadequate resources the core of India's problem. Hitherto the steady rise of population combined with a relatively static economy has planted a dynamism of decay in the heart of the community. Like the Red Queen, India has to run fast even to stand still. The *status quo* means decline. Between 1941 and 1951 the natural rate of increase was 13.4 a thousand and the absolute increase in numbers in the Indian Union (including the influx of refugees from Pakistan) was some 42 million. On a quite moderate estimate, it seems certain that India will add at least a further 35 million souls to its population in each of the next two decades, and that by 1970 the population will have risen from 356.9 million to some 425 million.

This surge of population has been due above all to a steady decline in the death rate, brought about by the control of famine and the growing effectiveness of medical treatment. India's rate of natural increase has been no greater than that of many European countries during their industrial revolution. It is no greater than that of the United States today. The difference is that it has occurred in an economy which has not so far been basically reorganised to meet the increase. It is true that the great irrigation and transport systems built up under British rule, together with the development for export of large-scale rice production in lower Burma, secured an expansion and mobility of food supplies which was adequate until the turn of the century and was, indeed, the main reason why India enjoyed—up to 1943—a unique half-century without major famine. But there was no fundamental rural revolution and only inadequate development of industry. The huge increase was superimposed upon a largely stagnant economy.

The basic unit of the Indian community, the Indian village, in which seventy per cent of the people still live, is a resistant institution and has withstood some thirty centuries of war and conquest and drought and famine. It used to be a self-sufficient community, the peasants producing enough crops to cover subsistence, payments to the village artisans, and the land tax. But while it was remarkable for stability, it was not economically adaptable. The only answer to increased population was a disastrous frag-

mentation of the peasant's few acres and the gathering of more and more unproductive mouths to be fed from static supplies. Rural unemployment—and under-employment—today may be as high as 80 million.

It is true that the density of rural population is not so great as in Java or the Philippines, but the general figure—422 people to the square mile—is misleading. Nearly half the population live in 14.5 per cent of the total area with a density of 755 to the square mile. Even if the village economy of India had not been profoundly shaken in the 19th century by the impact of Britain's commercial and industrial system, a crisis seemed certain since the physical limits of agriculture had apparently been reached.

The figures for the past are not always reliable, but it is probable that from 1925 to 1939 the standard of life of the countryside declined slowly but steadily, though in the 1930s this trend may have been counterbalanced by the increasing numbers and wealth of the towns. Nevertheless, when the first independent Government of India took power in 1947, it faced as a first task, and indeed as the only guarantee against failure, the need to achieve a new dynamism and to secure an expansion of resources greater than the inexorably rising tide of population.

2. The Political and Social Framework

Nothing inherently impossible is involved in India's aim to secure economic expansion. Indian poverty is a fact, but it is probably no more dire than was that of many Western nations on the threshold of the Industrial Revolution. Pressure on the land is great, but India is one of the first governments in the world to give official backing to programmes for controlling population. Moreover, the country has large, unrealised resources. The very low level of agricultural productivity is itself a source of hope, for it suggests how rapidly advances might be secured if better techniques in farming were widely adopted. The country's hydro-electric potential is enormous—one of the largest in the world—and its minerals include iron ore of the highest grade, manganese, bauxite, coal and reserves of atomic materials. India has a developed, Union-wide system of railways and in the West Bengal-Bihar-Orissa triangle it possesses a concentration of resources for development unequalled in the East. Manchuria alone in the rest of Asia has a comparable combination of coal, iron ore, a large labour force and developed communications to serve as a base for industrial development.

India is fortunate, too, in possessing an administrative framework unique in Asia. The Indian Civil Service—the old “steel frame” of the sub-continent—has passed on its officials and its high standards to its immediate successor, the Indian Administrative Service, and the achievements of the last seven years have been herculean. Order restored after Partition, administration provided *de novo* in the old princely states, an election organised with over 100 million voters—these are but a part of the tasks carried through since 1947. Some critics, it is true,

doubt whether these standards can be fully maintained in the future. In many areas, incoming Congress politicians distrusted the Civil Service as first the servant and then the successor to the British *raj* and this distrust, coupled with political interference, impaired administrative efficiency. Reductions in salary and status discouraged some of the better type of recruits. The Service may suffer, too, from the decline in educational standards observable in some university centres. In spite of these forebodings, the Indian administrative services have proved their quality in the last decade and if momentum can be achieved in the economy and higher standards of living introduced, civil servants will share in the growth of wealth and confidence. As in so many other spheres of Indian life, the effective maintenance of the administrative structure is something of a race against time, the growing dynamism of the economy measuring itself against possible counter pressures of disruption.

The political scene follows a similar pattern. India has a federal constitution, and although the bulk of the power is held at the centre, the states not only have their own reserved fields, but they act over a wide area as the executive agents of the Central Government. The achievement of expansion depends essentially upon the willingness of state governments to shoulder their share of the expense and to use their local initiative in carrying out the various projects. Co-operation has been close and fruitful, in large measure because the unchallenged leadership of Mr Nehru and the Congress Party has given an element of unity to the federation. Until this year, Congress controlled every provincial government in the twenty-seven states (to which Andhra has now been added) and India was thus spared the frictions and frustrations which federal systems experience when parties of a different political outlook are in power at the centre and in the provinces.

But the situation is changing. The unchallenged position achieved by Congress as the champion of national independence is beginning to be fretted away by the continuance of economic and social problems to which independence as such is no answer. These social problems reveal the extent to which Congress has been a coalition of differing interests united by the ideal of independence. Now that the aim is achieved, a Congress businessman, landlord or local party boss displays an approach to politics very different from that of a land-hungry peasant or an unemployed graduate. Certainly enthusiasm and recruitment seem to have declined. Party membership is said to stand today at 70,000, compared with 300,000 only a year ago. Mr Nehru's hint last summer that he would abandon the Premiership and the leadership of the party expressed this concern at Congress's growing rigidity. The

recent appointment of a young leader, Mr U. N. Dhebar as President, is designed to stop the drift of youth and enthusiasm away from the party.

Meanwhile, the peasant waiting for land reform, the mill-worker living in a wretched hovel, above all, the young intellectual vainly in search of a job are looking for other outlets to express their impatience, and inevitably they look to the Left. Owing to divided leadership and inadequate resources, the Praja-Socialist party does not appear to be offering an alternative attraction. The field is thus left more or less open to the Communists, who have undoubtedly made progress in the last two years. In the elections of 1952, in spite of contesting elections only in certain areas, they emerged as the second largest party in the country, with 23 seats in the Lok Sabha (House of the People) and 161 in various provincial assemblies. In recent by-elections

the Communist party has increased its strength and in Andhra and Travancore-Cochin it has become numerically the largest party, although in Travancore-Cochin a Praja-Socialist Ministry enjoying the benevolent support of Congress is in office. The Communists have also won 4 out of the 9 seats in Pepsu. At the same time, they have strengthened their guerilla hold on parts of the frontier state of Nepal and in Tripura. But perhaps the most dangerous example of a possible shape of things to come is to be found in Calcutta, with its high rate of intellectual unemployment and its urban misery. The Communists hold four out of the city's five parliamentary seats in the Lok Sabha and can apparently use any local excuse—such as a peaceful sit-down

strike by teachers—to unleash rioting in the streets. The fact that public opinion shows signs of moving to the Left could be a cause of some embarrassment to the Government. Mr Nehru is himself a Socialist and from time to time Socialism is proclaimed to be the ultimate aim of Congress policy and India's plans. In a statement on industrial policy, issued in 1948, it was laid down that the state would be responsible for basic development and would exercise control over all key sectors of the economy. But the Ministers who have been directly responsible for India's economic development—the Finance Minister and the Minister of Commerce and Industry—are well aware of the limits of state action in a community whose administrative resources are strained to the limit. In the last three or four years, realism and pragmatism have become to some degree the basis of official policy. At the end of 1954 the aims of economic policy were restated by the Prime Minister and the Minister of Finance. Their emphasis was placed upon the need for expansion in both public and private enterprise if they are to reach the objective of doubling the national *per capita* income in a generation and

The place of Tatas in India's economy

The Tata Iron and Steel Company, largest integrated works in the Commonwealth, produces 1,067,000 tons of steel, 70% of India's annual output

Tatas started with textiles. Now the four Tata mills each year produce cloth worth £8,500,000, enough to clothe more than ten million people

Tatas are the chief Indian manufacturers of washing and toilet soaps, toilet preparations, glycerine and edible oils (hydrogenated or otherwise)

At the Tata Institute of Social Sciences, graduates study social organisation and new scientific methods of welfare work in many different fields

Nearly 20% of all the electric power now being produced in India comes from the Tata Electric System, still the largest working in the country

More than 65% of India's soda ash is made by Tatas. Caustic soda, zinc chloride, sodium bicarbonate are other important Tata chemical products

About 85% of the capital of Tata Sons is held by charitable trusts. Grants for education and other philanthropic objects are made annually

At the Tata Institute of Fundamental Research, scientists conduct research in physics and allied sciences, and impart training in nuclear techniques

The Tata Locomotive and Engineering Company Limited manufactures steam locomotives and boilers as well as diesel trucks and bus chassis

One in every eight radio sets produced in India is made by Tatas. Their plant, in Bombay, has the highest installed capacity in the country

The Indian Institute of Science, endowed by Tatas, is a living force in scientific training and research; it is now largely financed by the Centre

The Taj Mahal Hotel is the leading hotel in the East, having every modern amenity. It recently celebrated the 50th anniversary of its opening

BY providing three essentials of civilised living — basic materials, manufactured goods and scientific know-how — the House of Tata, one of India's largest industrial groups, is making a significant contribution to that country's advancement.

Tata enterprises today cover:

Steel	Textiles	Electric Power	Chemicals
Locomotives and Engineering	Soaps, Glycerine and Edible Oils	Hotels	Machine Tools
Insurance	Cement	Industrial Investment	Radios
Social Sciences	Scientific Research

providing, over the next twelve years, 24 million new jobs outside agriculture. The public sector might grow relatively more rapidly than the private sector, but the government recognised the need and the place for both.

The Indian government has to reckon with the fact that this realistic attitude towards the necessity of private enterprise—which the Communists denounce as a "retreat from Socialism"—can become a serious electoral disadvantage save on two conditions. The first is the obvious condition—the success of the government's efforts to expand resources and wealth. The second is the growth of a wider sense of responsibility among India's business leaders. In the last forty years, a new generation of Indian leaders has risen to influence in Indian business. They reflect the growth in Indian capital and the expansion of purely Indian management beside the old resident British houses. The development of such indigenous leadership is naturally essential to India's growth. Yet the pattern of Indian business also demonstrates the defects of the new business men. Many members of the business community, particularly in the Marwari and Gujarati sectors, have come to influence and success without any tradition of industrial management. Many of them originally made their money in commodity trading or speculation. Largely as a result of this background, they have shown some tendency to seek profits quickly and to withdraw from long-term ventures. There has even been justified criticism of the financial methods employed by some houses and legislation designed to check irregularities is pending. Some firms, foremost among them the house of Tata, have been notable exceptions to the speculative outlook. The Tata group has undertaken all manner of long-term industrial investment, including India's pioneer iron and steel industry. There are some signs that their example is being increasingly followed by other firms. Such a development is essential, if a solid, progressive, socially acceptable business leadership is to emerge in India.

Two significant processes may be hastening it on. The extension of government control has eliminated to a marked extent the capacity of private enterprise to speculate heavily. At the same time, the respect given to university education in India has encouraged junior members of the leading Indian business families to acquire some knowledge of the humanities, a respect for economic analysis and a new interest in research and in the field of labour-management relations.

Today labour relations are uneasy. Many of the new business leaders have the thrusting nineteenth-century businessman's contempt for the efforts of the working class to protect themselves and enhance their status. They complain that Government support for the trade unions and official bias in the labour tribunals have foisted on to industry a wage-scale which is unrelated to productivity, hampers expansion and thus actually increases unemployment and misery among the workers.

On the side of labour, the largest organisation—the Indian National Trades Union Congress, with affiliations with the Congress Party—numbers 1,400,000, but its position is challenged by the Communist-dominated All-

India Trades Union Congress with some 800,000 members. Both unions officially support extreme socialism. There is little moderate trade union leadership or developing interest in productivity. In short, relations in industry tend to rest on little more than a truce and any worsening of conditions could give the extremists the opportunity to try out the techniques of direct action which are laid down for Communist militants in the current party programme, "The Tactical Line." Once again, therefore, the possibilities of peaceful development depend upon the achievement of dynamism in the industrial economy—and its achievement within the next few years.

Yet the industrial community is still small. Agriculture employs, though not fully, 70 per cent of the working population; small enterprises provide work (but not enough) for 10 per cent and non-agricultural pursuits and industry provide jobs for 30 million. It may well be the peasant, not the town worker, who will determine the type of revolution which India must undergo. In the countryside, there are pressures at work, not perhaps as explosive as the discontent of the cities, but potent and growing. On the one hand, primitive techniques in agriculture keep the villages in a stagnant state of scarcity. On the other, the problem of land reform, though not perhaps as urgent as in China, is inescapable and widely exploited by the Communists.

It is also exceptionally complicated. To Western experience the Indian landlord-tenant relationship appears very strange. The "landlords"—zemindars, jagirdars and inamdars—who are known by fifty different names in different parts of India, are none of them quite landlords in the English country gentleman, fee simple, sense; nor are they quite the same as each other, or even quite the same in all parts of India. They might be alienees of the land revenue, or feudal nobles with their own police and courts and excise, or farmers of the revenue and semi-independent chieftains made owners of the soil by British fiat. Their tenants were often strictly speaking subjects rather than tenants; and more often still they were, and regarded themselves as being, the original owners of the land. From early days, therefore, the rights of jagirdar and inamdar and zemindar were in most parts of India regarded as limited by the rights of their tenants; the first Tenancy Act in Bengal goes back to 1859, and after that, other Acts followed in a steady stream, until by 1947 most tenants were protected reasonably well in most places. What worried the tenant was less the direct incidence of his tenure than the harassments to which he was subject—bribes to the agent, illegal cesses, unjustified suits for eviction. His rights were not always as effective in fact as they were extensive in theory. Moreover, in some areas even theoretical protection was lacking and behind the tenant followed the landless man, usually an untouchable and lodged permanently at the lowest rung of the village ladder. Thus, even if the Indian peasantry has more stability than the Chinese and has also been spared the upheavals of revolution, invasion and civil war, the seeds of disorder are there. The countryside, like the towns, has to discover the dynamism of increasing resources.

The First Five Year Plan

I. Dynamism and Planning

IN theory, at least, the steps can be laid down by which a static subsistence economy is transformed into a dynamic economy based upon exchange. The essential point is to release from agriculture the saving and the manpower needed to develop an industrial sector. It is the essence of the Communists' claim that they, with their revolutionary rural policy, their vast schemes of industrialisation and their saving held at 25 per cent of the national income, have solved the problem of economic dynamism, and this claim is undoubtedly one of their strongest appeals to Asian discontent. It is, of course, yet to be seen whether the method has much relevance to the hungry, overpopulated lands of the East.

There are, in fact, very good reasons for supposing that neither the particular Russian experiment nor the general Communist technique of development is strictly relevant to India's problem. Russia was in 1917, and indeed still is, an area in which population exercises no very great pressure on resources. It follows that the Soviet experiment has not suffered a catastrophic setback from the relative failure of productivity to rise in agriculture. A basic feature of the new Khrushchev policy for expanded food supplies is to bring millions of acres in Central Russia under the plough for the first time. Only a country with considerable reserves can thus rely on extensive cultivation to counter the rise in population. In India, the opening of new land on a very large scale is possible only as a result of elaborate irrigation schemes—in other words, only after a large outlay of the country's scarce capital. Communist China faces the same dilemma since its population of nearly 600 million already exercises an intolerable pressure on the land.

But there is another and more fundamental reason why the Communist pattern of massive industrialisation and forced saving at the expense of the peasant is likely to prove a false guide to Asia. The failure of Soviet agriculture to keep pace with Soviet growth is not a coincidence. It probably represents a flaw, a "contradiction" inherent in Communist policy. The peasant whose standards are depressed to provide capital for heavy industry has no inducement to increase productivity. He is not permitted to eat the extra food. Heavy industry does not provide consumer goods, therefore he has no inducement to sell. His output falls and forced deliveries to the cities only discourage still further his will to produce. Countries such as Hungary and Rumania, which once produced an export surplus of foodstuffs, have had to adopt domestic rationing. In the long run, no doubt, the contradiction can be overcome when at last the Communist leaders come to see that not the power of the state—expressed in heavy industry—but the needs of the people—expressed in consumer goods—are the true end of an industrial system. Then at last the countryside can recover some natural inducement to expand production. But meanwhile

agriculture lags behind. In economies with a food surplus, such as the Eastern European satellites, or in a country like Russia where there is no pressure of population upon resources, starving the countryside and building up heavy industry may prove no more than a costly error from which wisdom can be learnt. But in India or China, any failure of agriculture to keep pace—let alone to suffer such catastrophic falls as have occurred in Soviet stock-breeding or in East European grain production—would denote not an "aberration" but wholesale famine and death.

But Russia is not the only pattern of dynamism. In Japan, for instance, the economic basis of the Meiji revolution was land reform coupled with a large increase in agricultural productivity. Savings could be released from agriculture while agricultural wealth grew at the same time. Industrial development did not exclude small consumer enterprises, and as the peasant's purchasing power increased, there were goods for him to buy. He did not have to content himself with patriotic contemplation of a giant new steel mill. The issue has more than economic implications. Forced saving on a massive scale is virtually impossible to combine, in any very poor country, with the methods of democracy. Rising agricultural productivity and expanding consumer industry help to give a margin of popular content within which free institutions can function.

There is thus no basis for the Communist claim to provide the only or even the most suitable pattern for economic advance in backward areas. On the contrary, neglect of the peasant has so far proved a severe obstacle to higher standards of consumption and to political consolidation. Yet before the Western powers take any encouragement from this "contradiction" in the Soviet pattern, they would do well to remember that it is not enough to point at the shortcomings of the Soviet method if other means fail to give the peoples of Asia the advance they seek. Provided enough people are sacrificed, provided a sufficiently iron tyranny is enforced, provided the intoxication of state power can be maintained as a substitute for personal satisfaction, the Soviet method does produce results. There is much direct evidence from India today to suggest that the Indians of the cities at least want results above all.

The present Indian Government has made its choice of the methods it will use for Indian expansion. The first Five Year Plan, nominally launched in 1951, but only fully in operation for the last two years, reveals at once that the Indian Government has given first priority to agriculture and has rejected patterns of investment which put the possibility of spectacular industrialisation above the risk of inflation or of living standards held down by forced saving or—which is more usual—of both together. According to the forecasts of 1952, Indian national income in constant prices was expected to rise from £6,750 million in 1951-52 to £7,500 million in 1955-56. About eighty per cent of this increase would be absorbed by rising population and perhaps by some small and much needed increase in consumption.

The narrow margin left available for saving would, it was hoped, allow net investment to rise from five per cent of national income in 1951 to seven per cent by 1956. Even the latter proportion would be low—in advanced industrial countries it is usually at least twice as high—but it realistically reflects India's poverty and the degree to which consumption cannot physically be much further reduced. The risk remains that the percentage could fail to generate the needed momentum and might thus prove insufficient to move the whole economy forward into a rising spiral of production.

In monetary terms, total investment during the Plan period should amount to about £2,100 million—just over £1,650 million for the public sector and about £450 million in private industry. But it is very doubtful whether the machinery exists to secure the diversion to saving of the whole £2,100 million. The Plan in fact does not count on the possibility. Some £700 million of public and private investment were not specifically covered in the original estimates.

2. The Rural Sector

In its apportioning of capital between the various sectors of the economy, the Indian Government demonstrated its belief that expansion can come only if the rural community and agricultural production were given first priority. The following tables give the broad orders of magnitude.

TABLE I—DEVELOPMENT EXPENDITURES IN THE PUBLIC SECTOR 1951-56, UNDER INDIA'S FIVE YEAR PLAN

	Million £	Percentage of Total Outlay
Agriculture and community development.....	270.8	17.5
Irrigation and power.....	420.8	27.1
Transport and communications.....	372.8	24.0
Industry.....	129.8	8.4
Social services.....	255.0	16.4
Rehabilitation.....	63.8	4.1
Miscellaneous.....	39.0	2.5
TOTAL.....	1552.0*	100.0

* This figure is the total prior to additions made in 1953.

These general fields of expenditure represent first of all a concentrated effort to bring change and growth to the static, strongly traditional rural life of 70 per cent of India's people. The broad objective is an increase in agricultural production in the following categories:

TABLE II—TARGETS, UNDER INDIA'S FIVE YEAR PLAN, FOR PRINCIPAL AGRICULTURAL CROPS, 1955-56

	Output 1950-51	Target 1955-56	Estimated Percentage Increase 1950-51 to 1955-56
Food grains (million tons)	54.0	61.6	14
Cotton (million bales)....	3.0	4.2	42
Jute (million bales).....	3.3	5.4	63
Sugar cane (million tons)...	5.6	6.3	13
Oilseeds (million tons)...	5.1	5.5	8

But a variety of means was foreseen to secure first these targets and later a steady agricultural expansion in all fields.

Agriculture cannot be changed without changing the agriculturalist. The most ambitious aspect of the Plan is its aim to bring what amounts to a social revolution to over 500,000 Indian villages. Experiments in this direction began as early as 1948 with the various Grow More Food campaigns. But these first attempts suggested that a piecemeal approach—here a ditch, there a well—failed to rouse the country people's imagination and support. Since 1952, therefore, the Government has concentrated upon its plan for Community Projects.

These group together blocks of villages—usually there are about 100 villages and 50,000 people to each block—and in them, with the help of trained village workers, the attempt is made to bring new methods and new knowledge to every aspect of village life.

Since this work came to cover most of the activities of government, it was necessary to fit the new structure of Community Projects into the wide pattern of administration. A Community Projects Administration was established under the Planning Commission and in each State a Development Commissioner designated to co-ordinate activities in his area. Under him, the traditional hub of Indian local administration, the Collector, was to add responsibility for development to his existing functions of collecting revenue and keeping the peace. Below him, each Project has its officer in charge and below again, the village workers maintained direct contact with the villagers.

The Community Projects were steadily extended in 1953 and 1954. Even so, the feeling grew that the pace was still too slow. In October, 1953, the Government inaugurated a National Extension Service to press on with preliminary development work in blocks of about 100 villages each. The two services together should cover a quarter of India's rural population by the end of 1956. By 1961, it is hoped, both services will cover the entire country. By 1966, the more intensive Community Projects should be general.

An essential element in the success of this rural revolution is, naturally, to secure enough trained village workers. Forty-three centres have so far been opened, giving the students about eighteen months' training, of which a year is spent on basic agriculture and six months in practical work in the villages. Over 4,000 workers have gone through these courses. In addition, the Community Projects Administration has started training workers in "social education" and in public health to assist in the general raising of standards in village life, and one day the hope is to have at least two such officers attached to each block of 100 villages. There are also plans for training centres to bring women into rural extension work.

The success or failure of India's Plan may well depend upon this vast effort to reach the peasant and to persuade him not by violence but by education, demonstration and encouragement that a dynamic economy is to his advantage, and that he can play his part in bringing it about. But his readiness to do so depends in some degree upon factors which lie outside the scope of the Community Projects. A villager, for instance, can become interested in improved seed and in the use of fertilisers only to have his optimism blighted by a season's drought. Minor irrigation works fall within the scope of the Community Projects and are exceedingly valuable. But the large scale irrigation which can alone counter the vagaries of the monsoon and open up

new land depends upon the provision of large sums of capital and the organisation of public works on a major scale.

The original Plan therefore devoted considerable resources—£202.5 million—to the building of three large multi-purpose schemes for irrigation, power and flood control in the Damodar Valley, on the Sutlej River at Bhakra-Nangal and on the river Hirakud in Orissa. The Plan also allowed for another £127.5 million to be spent on other major and minor irrigation schemes. The result was presumed to be an additional 20 million irrigated acres—or a 40 per cent increase in irrigated land—while installed capacity of electricity would grow from 2.3 million kW. in 1951 to 3.5 million in 1956. A part of this increase was earmarked for rural electrification on which an expenditure of £202.5 million was forecast for the period of the Plan.

Lack of water or power may be a powerful deterrent to rural reorganisation, but it is not so paralysing as insecurity of tenure and uncertainty of status. If the peasant doubts whether his increased efforts will benefit him or his landlord, his instinct is to cling to the old ways, and not waste work on an increment he may not receive. Moreover, it is at this point, in the peasant's right to his land, that Communist propaganda has found its most successful point of entry in other parts of Asia. Land reform is therefore an essential factor in the hoped-for revival of the countryside. It is not, of course, a new aspiration in India. "The land belongs to Gopal," Mahatma Gandhi used to say; and "the land to the tiller" has been a Congress slogan for a quarter of a century. The aim is to create a society of small owners whose ownership will be permanent (unless they themselves wish to change over to co-operation) and not just a step on the way to collectivisation. The tiller gets the land, but the landlord keeps enough land to become a tiller himself; and he receives some compensation for the rest.

Because there is this double need, to make the tiller the owner, and to treat the landlord as gently as possible, Indian land reform is a complex problem. It is made more complex by the fact that land reform is a State subject, and each State already had a large body of land law in 1947. The State Governments have, however, decided to wipe the slate clean. The proposals for land reform cover four main heads. Zemindari, jagirdari and inamdari are to be abolished everywhere. Tenants are to be given a fixed and limited rent, the right to buy out their landlord, and security of tenure. A start has been made on prohibiting any holding of land larger than a man can cultivate himself; and the land thus made available, together with waste land and land made available by Bhoodan (voluntary land gift) donations, is to be used to give land to the landless. Since each State Government is responsible for its own programme, uniformity of approach and progress could hardly be hoped for, but the main direction of the programme is the same from one end of the Indian Union to the other.

One other impact of the Plan upon village life should be recorded. Some £22.3 million have been set aside for assisting small industries and such village crafts as oil and soap making, hand spinning and weaving, paddy husking and leather work. Handloom textiles are protected by various devices including a cess charged on mill cloth to finance the khadi and handloom industry. Excise duties on cloth, soap and footwear are adjusted to give relief to small producers.

3. The Industrial Sector

Having given first priority to agriculture, the Indian government has approached the industrial sector with modesty and realism. There is no sign of the typical Communist fallacies—the forced pace of industrialisation at whatever cost, the grandiose building up of heavy industry under government management to the exclusion of the private or small-scale production of consumer goods. If the part played by government in the Indian plan is large, the fact reflects only to a certain degree the bias of thought in the Congress party towards socialism as the ultimate form for the Indian economy. The real necessity behind high public expenditure is that in the essential sectors of transport, communications and public utilities—upon which the expansion of the whole economy rests—private enterprise has neither the reserves nor the desire to provide massive investment.

Most new government enterprises in India—many of them started before the present Five Year Plan—are related directly or indirectly with the basic services of the community. The Chittaranjan Locomotive Factory, the Railway Coach Factory at Madras, the Vizagapatam Shipyard, the Indian Telephone Industries serve transport and communications. The fertiliser plant at Sindri is linked to agriculture. A heavy electrical plant is still under consideration to serve the expansion of power. The machine tool factory at Bangalore represents the main excursion into general manufacture. True, the government expects the public sector to expand. It apparently intends that the increase planned in iron and steel shall take place only under government control. But in spite of this policy, the fact remains that the first Plan has limited public investment in industry to one third of the expected investment from private enterprise.

In the private sector, too, the largest expansion has been forecast, not for heavy industry to the exclusion of consumer goods, but for a balanced range of industries serving either the basic equipment of the economy or export industries or the most urgent needs of the consumer. A table (Table IV) on page 14 gives a number of industrial targets with the degree of fulfilment achieved by 1954. Here it is only necessary to point out that some of the largest increases were planned in such fields as fuel and power (the petroleum refineries and a 164 per cent increase in coal and coke), in agriculture (a 148 per cent increase in power-driven pumps and an 809 per cent increase in diesel engines), general construction (a 78 per cent increase in cement), and consumer and export goods (a 26 per cent increase in mill cloth, a 100 per cent increase in handloom cloth, a 425 per cent increase in bicycles). To accomplish these and other targets, private industry was expected to provide £240 million in fresh investment, of which it was expected about half would come from "organised industry." Moreover, these estimates leave out of account the emphasis laid by the government upon village and workshop industry, all of which is engaged in the production of consumer goods and which has the added advantage, in comparison with large-scale heavy industry, of creating maximum local employment. The Indian government has not put the building of sensational labour saving monsters of industrialisation before the more modest problems of the people's daily bread.

WORLD-WIDE DIESELIZATION

THE R6 ENGINE
(For Vehicle application only) up to 108 b.h.p.
at 2,700 r.p.m. Torques up to 240-lbs. ft. (32.11 mkg.)

HUNDREDS OF THOUSANDS OF PERKINS DIESEL ENGINES SERVE IN 300 VARIED APPLICATIONS IN 138 DIFFERENT COUNTRIES

THE P6 ENGINE
(for all applications)
from 35 b.h.p. at 1,000 r.p.m. up to 83 b.h.p. at 2,400 r.p.m.
Motor car rating 90 b.h.p. at 3,000 r.p.m.
Torques up to 204-lbs. ft. (28.0 mkg.)

THE P4 ENGINE
(for all applications)
from 22 b.h.p. at 1,000 r.p.m. up to 55 b.h.p. at 2,400 r.p.m. as rated. Motor Car Rating 60 b.h.p. at 3,000 r.p.m.
Torques up to 134-lbs. ft. (18.5 mkg.)

THE L4 ENGINE
(for Agricultural, Industrial and Marine use only).
Up to 62 b.h.p. at 2,000 r.p.m. Torques up to 182-lbs. ft. (25.1 mkg.)

THE P3 ENGINE
(for all applications)
from 17 b.h.p. at 1,000 r.p.m. up to 41 b.h.p. at 2,400 r.p.m. as rated. Torques up to 101-lbs. ft. (14 mkg.)

Perkins high quality Diesel Engines are supplied in 3, 4 or 6 cylinder units for 300 applications now constantly at work in 138 countries. They have become famous everywhere for:

- Outstanding fuel economy
- Instantaneous cold starting
- Consistent reliability
- Reduced maintenance costs
- High torque characteristics
- Simplicity and accessibility
- Long life
- Universal service and spare parts facilities

Pioneering for Oil

TO THE OILMEN of today goes the credit, and the adventure, of opening up many of the waste places of the earth. Under deserts, prairies, marshes and seas, otherwise bleak and unharvested, may lie oil. Oil for lamps, for cooking stoves, for industry, for farming, for the world on wheels, the ships and aircraft of all nations. The oilmen must always go out and find new sources of supply, so great is the demand. They must drill the wasteland to dredge up the liquid treasure that the earth holds imprisoned.

But that treasure has to be located first. More than a million wells have been drilled for oil through the earth's surface during the last ninety years. But only a fraction of these exploratory drillings have found oil.

Shell Research is constantly advancing the science of oil-finding. Today the aeroplane, the helicopter and the seismograph (measuring waves from man-made earthquakes) help the geologist, the geophysicist, the mineralogist and the palaeontologist.

The search for oil is still an adventure, still an advance into the unknown. The oilmen are like the migrating cranes in Homer, settling ever onwards.

research backs the pioneers

The Plan in Action: 1951-1954 •

I. Agriculture

THERE can be no doubt that the first three years of the Plan have seen startling improvements in India's economic position. The increase in national income has been three times greater than that of population and the per capita income of the Indian citizen has increased by about five per cent—a level which the Plan did not foresee until 1956. This remarkable growth has been due to greatly increased output throughout the economy—an estimated 18 per cent increase over 1951 in agriculture, and in industry a 40 per cent rise above 1950. Particular benefit to the consumer has followed from the achievement of unusual advances in the two main items of consumer expenditure—food grains and cotton goods. Food grains in 1953-54 increased by 11.4 million tons to 65.4 million, whereas the increase forecast for 1956 was only 7.6 million tons. Cotton reached 76 per cent of the 1956 target with an output of nearly 4 million bales.

These achievements have been primarily due to two exceptionally favourable monsoons. The Planning Commission's estimate is that, of the total increase of 11.4 million tons in food grains, at least six to seven million tons must be put down to the favourable weather. The other five million, however, may be due to basic improvements and thus prove a more permanent gain to the economy.

The two factors which more than anything else have contributed to this long-term improvement are the addition of over seven million acres of newly irrigated land and the increasing interest displayed by the peasant in agricultural productivity. Major schemes of irrigation are responsible for 2.8 million acres of newly irrigated land, the remaining acres are the fruit of a variety of small experiments such as the sinking of tubewells, the reconstruction and repair of old wells and the digging of dams, channels and tanks. Much of the work has been done by the villagers themselves under the aegis of the Community Projects.

Perhaps the best index of a growing interest in agricultural productivity is the increased demand for fertiliser. The consumption of ammonium sulphate went up by 50 per cent between 1950 and 1953, and demand in 1954 was higher still. There have been signs, too, of growing interest in improved methods of cultivation—in rice, wheat and cotton. The Planning Commission estimates that the farmers have matched, with their own work and contributions, nearly half the total expenditure incurred by the government for Community Projects—over £2 million.

It is naturally difficult to assess the success of programmes which attempt to touch the livelihood of nearly 300 million country people. In the Community Projects, for instance, so much depends upon local leadership that it is possible for the same approach to produce excellent results in one area and to make little mark upon another. Some objective standard can perhaps be found in the degree to which expenditure under various agricultural plans is keeping up with the estimates originally outlined in the

Plan. In the Part A States (the old provinces of British India) the average outlay in the first three years has amounted to about 50 per cent of the proposed figure and in the old Princely (or Part B) States, the estimate is nearer 40 per cent. In certain states, however, Travancore-Cochin for instance, the expenditure is less than 20 per cent. It is this local variety which helps to explain the different judgments passed in India itself on the success of rural policy. Some critics underline the inadequacies and the growing pains—the shortage of trained workers, the insufficient supplies of fertiliser and improved seed. The Planning Commission itself is concerned lest local schemes become the preserve of the wealthier peasants and fail to touch the mass of ordinary villagers. Other estimates of the rural revolution are, however, more optimistic.

Taking the contribution of increased irrigation to equal a 10 per cent increase in food grains, more intensive use of fertilisation seven per cent and new methods of cultivation perhaps five per cent, some Indian observers contend that there has been a 22 per cent increase in the output of food grains and that such a rise not only covers the annual growth of population but creates a reserve equal to any likely fluctuation in the monsoons. This evidence of rising agricultural productivity they attribute above all to the efforts of the people themselves and see no reason why, as more areas are brought under the dynamic influence of the Community Projects, the rising curve of output should not be maintained. In fact, if the major and minor irrigation schemes forecast for the second Five Year Plan are added, a 30 per cent increase in food grains should be secured by 1961. The problem of food production—the stumbling block so far in all Communist development—is, they maintain, on the way to solution by the non-violent methods of the Indian rural revolution.

Progress in land reform presents a fairly complex picture. The general framework is now worked out. The intermediary landlords—zemindars, jagirdars, and inamdars—are to go, according to principles which vary only in detail from one part of India to another—although only five states have actually abolished them. The land that they cultivate themselves they keep. If that is not enough to give them a reasonable holding, they are in many states allowed to resume some land from their tenants. The rest is all taken over; rent is thenceforward paid to government as land revenue, and the tenant of the land becomes an owner on payment of a sum normally fixed at so many multiples of the land revenue.

Like everything else, compensation varies considerably from state to state, but the principle is to fix it in multiples of the net rent. There are innumerable variations, but the general result is that the little man, of whom there are many hundreds of thousands, will get very nearly the same income from his three per cent bonds (most compensation is paid in three per cent twenty-year bonds) as he received from his land; the wealthy man may find his income reduced to one-tenth or less of what it was. Charities and religious foundations are completely protected against loss of income.

The abolition of these superior tenures is the biggest operation in Indian land reform. Compensation will amount to over £350 million. In many states the scale of compensation is having an inhibiting effect on the government's willingness to press forward with reform. Nevertheless the leadership of Rajput and Brahmin in the countryside, already weakened by universal suffrage, will be further eroded. Control will go finally to the great cultivating castes, the Marathas, for example, or the Reddis, or the Jats.

With this abolition of superior holders, nearly all those who were already protected in their tenancies before 1947 will become owners. Tenancy, however, remains. It probably covers less than a quarter of India altogether, but in some areas—parts of the Deccan, or the Punjab—the tenants are important, and in some districts, Nalgonda or Pepsu, for instance, their problems have led to violence. Legislation to protect them is very uneven. Bombay, since independence, has enforced a complete code, Bihar has done nothing. The Bombay legislation may be taken as typical of the policy other states will follow even if they have not yet started. Under it, rents have been reduced to one-sixth of the crop. Eviction is permissible only on strictly limited conditions. Other provisions lay it down that leases must be for a given number of years with an almost automatic right of renewal, that tenants must be compensated for improvements, and that they can buy their landlords out compulsorily at a price to be fixed by a tribunal. Very strict limits have also been placed on the tenant's power to sublet and to mortgage; experience has shown that otherwise he is liable to lose his land or to turn into an idle landlord himself.

The aim of reform is in general clear. Already in 1951 two thirds of India's agriculturalists listed themselves as owner-cultivators; in another five years the figure may be four fifths or more, and many of the rest will be protected tenants. Indian land is going to the man who tills it on a scale the world has never before seen, and by peaceful means. But there have been, inevitably, weaknesses in execution. Complaints have reached the Congress party of evasions of the law by landlords—village records have been changed, property divided among relatives to avoid its redistribution. There have been widespread evictions, particularly in the Punjab and Pepsu. But perhaps the greatest weakness in Indian land reform lies not in the programmes for the tenant, but in the lack of them for the landless labourer. He is a limited problem, since only one agricultural family in seven is landless; but in some areas, such as Travancore-Cochin and Tanjore, the problem is considerable. Government waste land is now to go to the landless; and the Bhoodan (land gift) movement has already collected enough land for some three quarters of a million families. The surplus from large holdings will in due course provide more. But the problem is not completely soluble except by industrialisation which should draw the extra people away from the land altogether.

2. Industry

The upward movement in Indian industrial production has not only produced levels of output 40 per cent above those of 1950, but it covers a steadily widening variety of

products. The following table gives the figures of production in a number of industries:

TABLE IV—ANNUAL INDUSTRIAL PRODUCTION IN SELECTED FIELDS

	Unit	Prior to Plan	1951-52	1953-54	Plan Target 1956
Iron and steel:—					
Pig iron	tons ('000)	1,572	1,740	1,651	2,835
Finished steel	"	976	1,083	1,081	1,650
Aluminium	tons	3,677	3,905	3,846	12,000
Agricultural machinery:—					
Power-driven pumps ..	no. ('000)	34	46	28	80 to 85
Diesel-engines	number	5,540	7,263	5,244	5,000
Railway rolling stock:—					
Locomotives	"	n.a.	27	86	438
Wagons	"	1,095	3,707	6,892	30,000
Coaches	"	479	673	786	4,380
Electric motors	HP ('000)	99	154	161	320
Electric transformers ..	KVA ('000)	179	202	327	450
Fertilisers:—					
Ammonium sulphate ..	tons ('000)	46	95	307	450
Superphosphate	"	55	57	66	180
Cement	"	2,692	3,281	4,028	4,800
Cloth:—					
Mill-made	mn. yds.	3,718	4,134	4,906	4,700
Handloom	"	742	900	1,200	1,700
Bicycles	no. ('000)	...	101	289	530
Sewing machines	"	...	32.9	68.4	91.5
Jute	tons ('000)	892	931	864	1,200
Woollen manufactures ..	lb. ('000)	18,000	16,900	19,600	25,000

But in spite of undeniable advances, there is some question whether the figures represent a rate of investment sufficient to secure a sustained upward movement in the entire economy. In the first place, the most spectacular expansion—that of cotton cloth—reflects to some extent the increased purchasing power flowing from two good monsoons. High consumption was enough to keep both mill producers and handloom weavers fully occupied. Yet the increase could largely be met by using existing capacity more fully. New industries have, it is true, been established. In 1953/54 alone, six new textile mills, as well as cement, paper and glassworks have gone into production and many companies have expanded their capacity. The rate of fresh investment is also increasing. The average was only £20 million in the first two years of the plan but it rose to £30 million in 1953/54. Capital formation may have risen above nine per cent of national income. Yet these figures leave well over half the original estimate to be invested in the remaining two years of the plan.

Government investment has also fallen behind in the industrial sector; only some £21.8 million have been invested so far out of an estimated £70.5 million. This shortfall means that £48.8 million will have to be found in each of the remaining two years, a formidable figure even though £24.8 million is probably covered by the new steelworks which the German consortium Krupp-Demag is erecting for the Indian government.

It is not simply a question of a general lag. The areas in which the shortfall has occurred are also significant. Government investment is behindhand in some of the basic sectors of the economy—sectors upon which the expansion of the rest depends. Steel expansion has amounted to only

P & O to INDIA

It was in 1842 that the P & O opened the India Mail Service giving to that country its first regular and reliable communication with Britain. Today P & O vessels call at Bombay and at Madras and Calcutta and are as familiar a sight in India's harbours as they were more than a century ago. Travelling to India in one of their ships is still the pleasantest way of getting there, as well as the most comfortable.

FORGING AHEAD

TRADITIONALLY agricultural, India is becoming the scene of much industrial activity, her iron and steel industry being a leading example. Here, as in so many other industries in India, Hollerith is playing an important part.

The Tata Iron and Steel Company introduced Hollerith machines and methods in 1929, and rely on Hollerith for all main accounting requirements. These include accounting for Factory and Sales, Costing Department and Labour Shops, and the control of Stores and Stockyards. Hollerith also forms an essential link between Sales Control and Production.

• Publications of greatest interest to key executives are *THE TABULATOR*, issued periodically, and *IN BUSINESS, TOO* . . . describing Hollerith methods. Copies can be obtained by applying to either of the offices below—on your business noteheading, please.

THE UNITED COMMERCIAL BANK LTD

(Incorporated in India in 1943)

Head Office :
2 ROYAL EXCHANGE PLACE, CALCUTTA

A History of Progress

The eleven years' story of the United Commercial Bank Ltd. is one in which its directors justifiably take pride. In spite of the difficult times that India has experienced in this period the Bank has never ceased to show prudent, solid progress so that it ranks today among the first five Indian banks and has won an honoured place in international banking. The Bank serves a considerable cross-section of industry, commerce, and public bodies, in addition to private individuals. The Quarterly Review, published by the Bank's Economic and Statistical Section, is highly regarded by the world's banking, financial and public institutions as are its special studies of such important commodities as jute, tea, mica, etc. The Bank's ninety branches in India, Pakistan, Malaya, Burma and London and its arrangements with over 55 foreign banks ensure both present and potential clients an efficient world service.

Chairman : G. D. Birla General Manager : B. T. Thakur
Authorised Capital: Rs. 80,000,000 Subscribed Capital: Rs. 40,000,000
Paid-Up Capital: Rs. 20,000,000 Reserve Fund: Rs. 8,000,000
London Office : 15 Throgmorton Avenue, London EC2

14.9 per cent of the proposed target. The delay has been due in part to labour disputes, in part to the slow formulation of plans. Electric power and transport are also somewhat behind schedule. The aim for power for 1956 was an increase from 2.3 million kW to 3.5 million kW. Only about 42 per cent of the target has been achieved. In transport, over 50 per cent of the money earmarked for rolling stock, machinery and track improvements has been spent and 55 per cent of the target in locomotive building has been reached. The difficulty is that the very success of the economy in the last two years has enlarged the demand for transport far beyond the original estimates. The danger is that shortcomings in these sectors could have an inhibiting effect upon other areas where industrial expansion looks promising for the next two vital years of the plan.

3. Finance

The expansion achieved in the last three years has been accomplished against a background of remarkable monetary stability. The inflationary pressure caused by Partition and later by the Korean war has been removed by the firm financial policy pursued by the Ministry of Finance—and also by the crucial American Wheat Loan. The wholesale price index (1949=100), which rose to 115 in 1951, fell to 101 by September, 1954. Similar stability is shown in the country's balance of payments in spite of considerable fluctuations in the last four years. In 1950-51 the Korean export boom gave India a favourable balance of £41.5 million. But in 1951-52 drought and crop failure forced up the imports of food, and the result was a deficit of over £97.5 million. By 1952-53 a surplus was earned once more—of £55.5 million. The favourable harvests made possible lower imports of food and cotton, and again in 1953-54 a surplus of £36 million has emerged. As a result, the sterling balances, which were reduced by £120 million in the famine year of 1951-52, have risen again to over £525 million.

The Indian consumer has enjoyed the benefit of this stable background in the form of steady and falling prices. Yet it

raises the query whether the stability has been due to a proper balance between saving and expenditure or rather to a rate of expenditure too modest to create any very extraordinary inflationary pressure. The second possibility entails the risk that expenditure has been too low to secure a lasting upswing in the whole economy. The expansion achieved could denote no more than the "conjuncture" of two exceptional monsoons with all the release of consumers' purchasing power which they have brought about. But the expansion, to be sustained, must rest on a rising rate of investment.

Expanded output has brought about a five per cent increase in consumption. The rate of investment may have risen by nearly double that figure. This is a much more encouraging outcome than the rise to seven per cent forecast by the Planning Commission for 1956. Yet official estimates of capital expenditure are lagging behind the expected rate. Moreover, those lower figures are not in fact being financed entirely from saving. Of the outlay incurred so far under the Plan, only about 60 per cent represents real savings. About 15 per cent has been provided by foreign assistance. But 25 per cent represents drawing down cash balances, the sale of securities held in reserve and short-term borrowing. The State Governments have been the main offenders. While the Central Government has more than fulfilled its obligation to provide real savings, the States have not covered 50 per cent of their outlay by the provision of real saving. Yet if the targets of the Plan are to be realised, expenditure must be far higher than at present in the last two years of the Plan. Public expenditure for 1955 is estimated at £427.5 million. The figure for 1956 would need to be some £525 million if the proposed level is to be reached. Without a marked increase in domestic savings or in foreign lending and foreign aid, there might be need for £187.5 million in deficit finance in 1955 and nearer £300 million in 1956. Such deficits would carry a real risk of renewed inflation. Nor is the problem one simply of finance. Quite as formidable is the degree of organisation, administration and skilled technical preparation needed in order to spend £975 million in two years—and to do so effectively.

The Next Two Years

1. Domestic Saving

THE Government of India is well aware of the strain which the whole economy is likely to undergo if development expenditure is to be sharply increased. Nothing has been more impressive in the last five years than the handling of India's finances and the extent to which wise policies have controlled inflation and manipulated the calculated risk of renewed inflation which is inherent in large spending in a poor country. The search for new domestic sources of real saving is needed but there can be no doubt that it will be sustained.

A first necessity is clearly to secure new saving from the agricultural sector and presumably the decision to nationalise the Imperial Bank of India and certain State banks

is related to the need to garner the savings of the rural population. Agriculture has received much of the capital expenditure of the last five years. The countryside also received the major advantage—in the cancelling of debt—from the inflation of the war and its aftermath. Moreover, land revenue is one of the major sources of income collected by the State governments and it is they that are falling behind in the provision of new savings for development. This revenue has been increased in some states but could undoubtedly be expanded more generally. The Part A States in 1951/52 collected 50 per cent more land revenue than in 1938/39. But the wholesale price of the most important goods sold by the farmers was nearly six times higher than before the war. The land revenue may have been too onerous before 1939 but, even without restoring the old burden, there is room for marked increase. State governments in Part A and Part B

States also have the right—not exercised by all—to tax agricultural income.

For the future, as irrigation and power and rural services become more widely available to the countryside, the most important task of the states may well be to accustom country people to the idea of paying for the services they receive. Attempts to increase water rates have been resisted in some areas but there has been better success with the introduction of betterment levies on newly irrigated land. The State governments have undertaken to raise £22 million from new or greater levies but this sum is small in proportion to the capital expenditure on irrigation and other services.

In the economy at large, the possibilities of raising further revenue from income and excise taxes are limited. The pressure on Indian salaries is already intense. Most goods, except foodstuffs, are subject to some customs duties or excise taxes and, even though increases may be possible, they are likely to be modest. Higher taxation of business profits needs to be cautious since it entails the risk of decreasing the source of private saving. Since, however, the business community is falling behind in the provision of new saving, higher corporation taxes coupled with generous initial allowances on new capital investment might mobilise industrial saving.

Two other possible forms of saving could supplement direct and indirect taxation. The first is the expansion of social security schemes, always provided that benefits do not outstrip contributions. In 1952, compulsory provident funds were introduced in six major industries and the scheme is being steadily extended. But perhaps the most hopeful field is that of voluntary or "small" savings where the response of the public seems likely to equal the expectations of the Plan. It is true that the recent £112.5 million 3½ per cent National Plan Loan was subscribed only with support from "special quarters." But small savings have already reached an annual figure of £37.5 million against the £40.5 million assumed in the Plan.

However vigorous the efforts made by the Ministry of Finance and the State Governments to track down these possible sources of additional revenue, it is not likely that they can, in two years, fill the potential gap of over £450 million. The likelihood is therefore that expenditure under the first Five Year Plan will fall short of its original aim by some ten to fifteen per cent. Such a shortfall could check the rate of progress which is essential to the upward movement of the entire economy.

2. Foreign Capital

India, however, is not compelled by its political orientation to depend only upon itself. It is part of the free world. No Iron Curtain cuts it off from the immense capital resources and even greater technical experience of the Atlantic world. Admittedly, the prejudices of Asian nationalism and the Government's bias towards State action offer psychological obstacles to private foreign invest-

ment but the attitudes are not irrevocable. Indian suspicions may be lessened by the slightness of India's present dependence upon foreign investment. The war liquidated a large part of its old debt and some repatriation of foreign capital continued after the war. In 1938-39, about 20 per cent of India's exports had to be devoted to servicing its foreign borrowings. The proportion of 1952 had fallen to 2.3 per cent.

Foreign capital, moreover, is often closely associated with Indian capital, and most recent investment has been undertaken in partnership with Indians. It is true that British investors, who are the preponderant foreign interest in India, hold a high proportion of the capital in the tea

industry (60.4 per cent), in coal (14.5 per cent), in other mining ventures (28.9 per cent) and in jute (25.3 per cent). It is also true that British and American investors have major holdings in rubber, petroleum and the new refining industry. Nevertheless, the bulk of the capital in Indian industry is Indian owned. The percentage of the total owned abroad is probably no more than 16 per cent.

At the same time, foreign firms provide the Indian economy with advantages it can hardly afford to lose. Managerial and technical skill, financial experience, probity, good labour relations distinguish many foreign firms from their local competitors and the Indian government is alive to these assets. The responsible Ministers wish to see foreign enterprise shift its emphasis from trading to manufacture—one reason, no doubt, for current legislation to end the managing agency system. They wish to ensure that Indians are trained to technical and managerial responsibility. Provided these conditions are fulfilled, capital from abroad is actively sought.

Conditions of confidence have, however, to be created on both sides. The business world expects security in its investments and in its right to repatriate capital and remit profits. These, broadly speaking, it enjoys; yet anxieties remain. Recurrent official talk of "socialism" confuses business opinion. Businessmen have been disturbed by the recent introduction of a bill to modify Article 31 of the Constitution (which guarantees compensation in the case of expropriation). The legislation ending managing agencies has inevitably increased anxiety. To all this, the Minister of Finance has replied reassuringly, reaffirming the guarantee of fair compensation and pointing to the Second Five Year Plan as a vast field for new private investment. The figure of about £12,000 million has been mentioned as the total for the five years of the next Five Year Plan and the Indian government specifically seeks private participation.

It has in fact taken positive steps to secure this expansion of private investment. Earlier in the year, it set up an Industrial Development Corporation to direct government finance and assistance to both public and private enterprise. More recently, it has agreed with a consortium of British and American firms—banks, insurance companies and business enterprises—to set up, with the support of the International Bank and the Commonwealth Development Finance Company, a new body called the Industrial Credit and Invest-

ment Corporation of India which is designed to encourage and finance private industrial development in India. Its authorised capital is to be £18.8 million, of which, in the first instance, £5 million will be provided by a loan from the Indian government and £2.6 million by Indian investors. British and American companies are to provide sterling and dollars to the equivalent of £1.1 million. The step has more than financial significance, even though it is hoped that this lead will encourage other foreign investors to follow suit. Politically, it is a gesture of partnership between the Indian government and foreign and domestic private interests. Technically, it has a vital role to play in providing the experts and the technicians who can work out India's new industrial possibilities and turn them from possibilities into practical industrial plans.

3. Foreign Aid

Private capital no longer flows—as it did, for instance, into Russia before the first World War—on a scale sufficient to provide the basis of industrialisation. Private capital barely flows at all into those basic sectors of the economy—transport, communications, public utilities—upon which general expansion depends. If India's supplies of capital are to be augmented in any serious way from abroad, a part of the funds may need to come, for the time being at least, from governmental sources.

Some assistance has already been received. Between 1951 and 1954 India received, in loans and aid, £175 million—£67.8 million from the American Wheat Loan, £20 million in loans from the International Bank; in direct aid the figures were £61 million from the United States Point Four Funds and £24 million under the Colombo Plan.

There is some division of opinion on the scale of India's need. Official quarters point to the short fall in investment, to the foreign currency exchange component in many schemes and to the relatively low coverage of public outlay by real savings in the first three years of the Plan. They fear the possible recurrence of inflation if expenditure is raised according to the original estimates. But they realise that capital investment must be increased to sustain the upward movement of the economy. Foreign aid, reinforced by the loan of foreign technical skill, is a certain means of avoiding both hazards and—given the rate of expansion forecast for the next seven years, it would perhaps be reasonable to consider at least a trebling of the present scale of foreign aid. Even so, such a sum would be less than a single year's appropriation to France and Britain under the Marshall Plan.

It is true that in some industrial circles in India the need for foreign capital is beginning to be minimised. The claim is made that India has now proved its capacity to raise sufficient capital by its own efforts. The increase in capital formation to nine per cent of national income, the nature of the capital schemes under consideration, their relatively small claim on foreign exchange, the existence of sizeable sterling balances—all these add up to no more than a marginal

What's happening in the East?

Never before have there been so many variables in Eastern trade. Never have fluctuating economies imposed so great a need for reliable and accurate information.

The Mercantile Bank of India, with branches in every important Asian trading centre, can give you a full picture of local conditions, anywhere throughout the East; and can supplement that information with a comprehensive banking service covering all aspects of Eastern trading.

dependence upon foreign aid. This optimistic hypothesis appears to underestimate the degree of real saving which the expenditure of the next decade should entail. Nevertheless, there is one point which the official and private estimates are in agreement—which is that India does not command the technical and administrative resources to carry through all the development plans which, in fact, the economy can sustain. Most serious Indian commentators would agree that the speed of the next phase of development depends upon securing outside assistance, probably in capital and certainly in skill for the elaboration of a whole range of industrial plans.

To give only a few examples, an immense strain would be taken off India's administrative resources and off its overworked cadres of engineers and irrigation experts if one of the great multi-purpose schemes were taken over by a consortium of foreign firms, the total capital, equipment and technical direction provided from abroad and the work carried through with the unique momentum of modern dam construction. Such a programme would entail no disadvantage to Indian technicians since the training of experts and the association of Indian construction firms with the project could be made part of the contract.

The steel industry is another obvious area for intergovernmental help, especially since the Russians, with their offer of a steel works on easy terms, have entered competitively into this field of "foreign assistance." In fact, the setting up in India of complete industrial units with the aid of foreign technicians and technical knowhow is certainly the most effective way of applying Western aid. Quite apart from specific capital schemes, however, the growth of activity under the Plan must lead to higher demand for food and clothing. The present luck of the monsoons should not be allowed to obscure the fact that one bad harvest could undo some of the advance of the last two years. An international guarantee of a certain annual import of food grains would enable the Indian government to plan more flexibly and to combat without effort any internal tendency to hoard.

★

If the perspective of assistance is extended from the first to the second Five Year Plan, the openings for external assistance are likely to be even greater. The Plan is still at a tentative stage and much depends upon the extent to which the present Plan fulfils its objectives. But it is already clear that much greater emphasis will be placed upon extending industrialisation in the second Plan and this process must make new demands on the import of capital equipment from the developed industrial economies abroad. The hope is to reach a level of investment of between £600 and £750 million a year (corresponding to 10-12 per cent of the national income). Such a figure would enable the country to provide for a steady increase in industrial employment which—on present estimates of unemployment and population growth—should grow by about two million vacancies a year. It would call for steel output rising to about six million tons annually, for a great increase in the heavy electrical industry and in transport. At least £375 million will be needed for completing existing large scale irrigation projects and for financing new schemes, even though medium and minor irrigation is to receive greater emphasis in future. Industries serving agriculture directly—fertiliser production, for instance, or agricultural

machinery—will need to be expanded to meet the demand for modern equipment likely to result from the extension of the Community Projects to the entire Union.

The importance of foreign aid is not purely economic. As the Colombo Plan has already proved on a small scale, opportunities for training and for learning new skills have as important a political and social impact. Training schemes in India and opportunities for training in developed economies abroad, introduced now and financed by foreign aid, may well be the most vital contribution the West can make to Indian advance and stability. Few steps certainly would have a better chance of counter-balancing the evident frustration of India's student and graduate class.

Nor need programmes of foreign assistance be thought of on a purely bilateral basis. If, for instance, the Colombo Plan were taken as an instrument of the free world's co-operation with India, it would undoubtedly be found that, in many cases, some other member of the Colombo group could, with advantage, be associated with schemes of assistance. British or American capital might be given by way of Burma for the provision of rice, for instance, or via Japan for machinery. The area of co-operation would thus be enlarged to create stability in free Asia as a whole.

In the last analysis, however, the question of foreign aid to India depends not upon economic possibilities but upon the Western world's political assessment of India's performance. Is India administratively a reasonable risk? On its economic performance so far, does it give any guarantee that further economic assistance has a chance of bringing about the desired results? The difficulties and the dangers should not be minimised. Some of the elements in Indian stability are wasting assets unless the upward curve of hope and prosperity can be secured. But there can be little doubt about the present answer. It is that India has a strong, stable and efficient government and administrative machine. Yet the strength and efficiency has been used to persuade, not coerce, to lead, not to drive. The Government has not plunged into grandiose industrialisation or brutal forced savings. The peasant, upon whom the whole pyramid of India is based, has been approached as a reasonable and responsible citizen, not as a kulak, a criminal or an outcast. At the same time, the policy of persuasion and moderation has not entailed weakness. The financial policy pursued by the Government has been firm. The results are there for all to see in the economic stability salvaged from war, partition, Korean inflation and the failure of the 1951 monsoon. The surge forward of the last two years would not have been so notable without steady financial control.

It can be argued that these achievements alone give India some claim on the sympathy and support of the West. Western ideals of freedom, responsibility and justice do not root themselves so effortlessly in other traditions and cultures that the supposed lovers of liberty can look on with indifference while India makes its heroic experiment. Since, however, it is probably true that fear still moves the democracies to action more speedily than the nobler emotions, the estimate should be made of the cost that would follow for the free world, in armaments, in economic dislocation, in the darkening of the world's hopes, if India were to follow China, the other vast civilisation of Asia, into the Communist camp. And of this estimate one thing can be said with certainty: it would be infinitely greater than any sum the West could now, usefully and effectively, invest in the Indian Plan.
