In the Engineering section, price movements in Indian Irons were subject to settlement adjustments. The scrip, after opening at Rs. 35-0, touched Rs. 36 in mid-week, when profit-taking caused the rate to recede to Rs. 35-0, to finish better on Wednesday at Rs. 35-12 at which level the settlement rate was fixed. On Thursday, sentiment buoyed up again on a sharper Bombay advance, resulting in a sharp rise to Rs. 36-2, to finish the week at Rs. 35-11 on rumours of an increase in the interest rate by the Allahabad Bank. Among other Engineering scrips, Jesop closed a shade easier at Rs. 35-12 against Rs. 36-2 touched early in the week; TEXMACO at Rs. 16-2 against Rs. 16-9; Richardson Cruddas at Rs. 16-14 against Rs. 17-1 and Kumardhubi at Rs. 12-10 against Rs. 12-15. Indian Standard Wagon were marked up to Rs. 129 from a level of Rs. 118, while Britannia changed hands on the ex-dividend basis at Rs. 37. Braithwaite moved between Rs. 24-1 and Rs. 24-6 and Indian Galvanizing between Rs. 21-2 and Rs. 21-7.

Miscellaneous scrips shared the general trend of the market. In the Paper section, Orient touched a low of Rs. 27-1 from Rs. 27-14; Bengal Paper Rs. 61-12 from Rs. 62 and Titagur Rs. 43-2 from Rs. 44 to finish the week at Rs. 27-4, Rs. 63 and Rs. 43-4 respectively. In the Mining section, Indian Copper were a narrow market around Rs. 3-8, while Orissa Minerals turned ex-dividend at Rs. 27-2. In Oil, B.P.F. had some buyers up to Rs. 3-13 from Rs. 3-11, while I.B.P. were almost maintained at Rs. 129. Among other scrips, B.I.C., after touching a low of Rs. 7-15 from Rs. 6-8, improved again towards the close to Rs. 6-8 on some outside buying enquiry. Robtas opened higher at Rs. 24-8, Dunlop Rubber at Rs. 37-2 and India Steam at Rs. 23-0 to finish a shade easier at Rs. 23-2, Rs. 36-6 and Rs. 7-11 respectively. Indian Cable continued to have good support at rates varying from Rs. 24-14 to Rs. 25-2; Martin Burn at Rs. 24-15 to Rs. 25-2 and Jardine Henderson at Rs. 116-8 to Rs. 118.

THE CENTRAL BANK OF INDIA LIMITED.

NOTICE IS HEREBY GIVEN that the Forty-fourth Ordinary General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Friday the 25th day of March, 1955 at 4 P.M. (S.T.) to transact the following business:—

- To receive the Report of the Directors and the Audited Accounts for the period ended 31st December, 1954.
- To declare a dividend.
- To elect Mr. Chimanlal B. Parikh and Mr. Framroze J. Guddar who vacate their seats as Directors under Article 84 of the Articles of Association and who are eligible and offer themselves for re-election.
- To elect three Directors in place of Mr. Dinshaw D. Romer, Mr. Dharamsey M. Khatau and Mr. Manmohandas M. Amersey who retire by rotation under Article 92 of the Articles of Association read with Regulation 78 Table 'A' of the Indian Companies Act and who are eligible for re-election.
- To appoint Auditors and to fix their remuneration.

By Order of the Board,
H. C. CAPTAIN,
Managing Director.

Bombay, 8th March, 1955.

N.B.—The Transfer Books of the Bank will be closed from Monday the 7th day of March, 1955, to Saturday the 26th day of March, 1955 (both days inclusive).

N.B.—Dividend Warrants for the half-year ended 31st December, 1954 will be posted to the Shareholders at their registered address on and after the 28th day of March, 1955. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

The Alkali & Chemical Corporation of India Ltd.

Steady Improvement & Production Maintained

Mr. N. D. Harris's Address

Presiding over the 18th Annual General meeting of the Alkali and chemical Corporation of India Ltd. held on the 10th March 1955, in Calcutta, Mr. N. D. Harris, the Chairman, said:—

Gentlemen,

The audited Accounts and Directors' Report for the year ended 30th September, 1954, have been in your hands for some time and with your permission I propose to take them as read.

The working of the Calcutta Factory at Rishra was satisfactory throughout the year, and I propose to give you a brief review of the operation of its separate units.

The extension to the Chlorine and Caustic Soda plant were completed satisfactorily during the previous year, thereby providing greatly increased production capacity. The total production capacity for Chlorine throughout India has, however, temporarily over-reached

consumption and, because of keen competition, it has not been possible to use the capacity of our plant to the full. Nevertheless, sales of Chlorine were reasonably satisfactory. We had no difficulty in disposing of all the Caustic Soda manufactured.

We are giving much thought to finding new outlets for Chlorine, in particular for the manufacture of other products. The Hydrochloric Acid plant, a consumer of Chlorine, has recently been operating at its maximum output and the maximum quantity of Chlorine is also being used in the Benzene Hexachloride plant. Extensions to these plants will be considered if desirable, as well as the manufacture of other products. A small

plant for production of Zinc Chloride was installed during the year.

In my speech last year I mentioned that the crude Benzene Hexachloride (B.H.C.) plant had not fulfilled our expectations but I am glad to report that we have overcome our initial difficulties and full rated production has now been achieved. As a result, the Tariff Commission's recent recommendation that your Company should use its full capacity for the manufacture of Benzene Hexachloride has already been implemented. Despite keen competition, the high reputation enjoyed by our "Gammexane" formulations particularly, our "Gammexane" Water Dispersible Powder has assured us of a good demand. The insecticide market is extremely competitive and each year new factories are planned for their manufacture. I mentioned to you last year that Tatas were putting up a B.H.C. plant which is

expected to be in production this year. The Government D.D.T. plant located at Delhi will shortly begin to produce and another Government D.D.T. plant is under consideration. Both are so planned as to permit their initial yearly capacity of 700 tons being doubled.

The Paints unit has worked well and production has been maintained at a high level to meet the increasing demand. We have had to meet keen competition but "Duco" and "Dulux" have earned a high reputation in the market and the technical service our selling agents are equipped to render gives us a substantial advantage. Our technical advisers, Imperial Chemical Industries Limited, have given us every assistance in maintaining a high degree of plant efficiency and we are grateful to them. Consideration is being given to increasing the capacity of the existing plant.

(Continued on next page)

Our varnish plant was completed during the year and meets most of our requirements. We have also put on the market, under licence from American Chemical Paints Company, a full range of metal pretreatment products. These products are used for treating metallic surfaces before the application of paint to ensure a clean surface and with it good adherence. We have also constructed a paints development laboratory to study technical problem connected with this industry.

The technical service station erected by our selling agents, Imperial Chemical Industries (India) Limited, has proved invaluable and customers have made full use of the facilities offered.

You will remember the sale of our Khewra alkali works in Pakis-

tan was completed in 1953, and this year's accounts are the first without Khewra sales.

The previous year's accounts included the sales from the Khewra Factory for eight months of that year which accounts for the lower turnover this year. Despite the lower turnover, the nett profit of Rs. 8,37,316/- is slightly higher than last year's figure of Rs. 8,14,151/-, a result which may be regarded as satisfactory. With the addition of the balance brought forward from the previous year of Rs. 1,03,311/- there is a balance available for distribution of Rs. 9,40,627/-. There is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 3,00,000/- has been transferred to Reserve for

(Continued from previous page)

Deferred Income Tax Liabilities. The dividends on the Preference Shares for the year absorbed Rs. 1,55,000/- and the Directors recommend the payment of a dividend at the rate of 6% on the Ordinary Shares. This will leave a balance of Rs. 1,13,627/- to be carried forward.

During the year Mr. Edward Martley, General Manager of the Rishra Factory, resigned from the Board on his retirement from service. Mr. Martley was connected with the Rishra Factory since the formation of the Company and was largely responsible for building it. Mr. P. M. G. Hutton was appointed an Additional Director.

The Directors retiring by rotation are myself and Sir Biren Mookerjee and my colleagues on

the Board recommend our re-election. Mr. P. M. G. Hutton ceases to be a Director under Article 113 and is recommended for re-election. A resolution seeking your permission to Mr. Hutton occupying a position of profit under the Company is also being put to you for your approval.

The auditors, Messrs. Lovelock & Lewes, also retire and you are requested to re-appoint them for the current year at a fee of Rs. 6,000/- which is the same as that for the previous year.

(The Report and Accounts were adopted, Mr. N. D. Harris, Sir Biren Mookerjee and Mr. P. M. Hutton were re-appointed Directors. The Auditors, Messrs. Lovelock & Lewes, were re-appointed.)

60 YEARS

IN THE SERVICE OF THE MOTHERLAND

The Punjab National Bank, the oldest name in Indian national banking, celebrates its Diamond Jubilee on 13th April this year.

The establishment of a swadeshi Bank in 1895 was nothing short of an adventure. It was an uphill task, for in addition to foreign competition, our countrymen, too, had to be convinced that Indians could run a modern Joint Stock Bank.

The history of the Bank during the past sixty years is a glorious record of teamwork, determination and selfless devotion on the part of the Directors, officers and members of the staff and continued confidence and goodwill of its vast clientele, who have always preferred to patronise this swadeshi Bank. The story also depicts how the Bank, starting in a very humble way with a paid up capital of Rs. 20,000/- has come to occupy second position amongst the Joint Stock Banks of the country.

The close of 1954 saw the Bank reach the record working figures of over Rs. 91 crores and Deposits of over Rs. 75 crores. Serving the country through a network of 314 offices, it has plans for expansion in India and abroad to serve the expanding economy of the country.

First to be established, first in the service of the Motherland—the Punjab National is the Nation's own Bank.

For the Investor

Cautionary Attitude

Investment Gossip:

Stock exchange prices have ruled steady; and the undertone is firm.

The current week witnessed two important incentives. The first is Sir Chintaman Deshmukh's announcement of the halving of the excise duty as proposed in the Finance Bill, so far as coarse and medium cloth is concerned.

The second is the hope that the steel retention price may be raised. Tatas have made a representation to this effect. And, doubtless, Martin-Burns will follow suit.

Considering the stupendous expansion programmes undertaken by TISCO and IISCO, the higher price asked for must be viewed as directly bearing on the large new capital outlay required. The Government are, surely, determined to facilitate the smooth materialisation of their plans; and they must recognise that the request for a higher price is fully justified.

That the additional profit, directly attributable to the increase, must be earmarked for expansion projects, is a condition which the companies will cheerfully accept.

The Finance Minister's reply to the Budget Debate in the Parliament avoided all reference to the much-vexed controversy over the amendment of Section 23A of the Income-Tax Act.

The Bombay Stock Exchange authorities, who are known to be zealous about the wide-spread distribution of the shares of the Companies listed in Bombay, have suggested that the words "75 per cent" be substituted for "fifty per cent" wherever they occur in clause (i) and (iii) of the explanation in the Finance Bill.

If Sir Chintaman is not prepared to go so far, a reasonable compromise is to substitute the words "55 per cent".

Suggestions for change are being made by people who appreciate

HIGHLIGHT

Eavesdropper completes, this week, his analysis of the significance of the Andhra elections. He finds that the explanations given range from the fantastic to the diabolical. And he wonders why the simplest explanation of all is being overlooked by the pundits.

Eavesdropper sees in the Andhra results the active acceptance of the thesis of a socialistic pattern of society for India; and this leads him to lash out at muttered complaints from a new quarter, that pleads poverty, on two thousand a year.

the practical difficulties which will be caused by the proposed amendment. Income-tax officers will be totally unequal to the complexity and tedium of the investigations that may seem necessary in quite a number of cases.

While the amendment seeks to solve one problem, it will raise quite a number of other grave problems.

The very announcement of this amendment has caused speculative activities in stocks which seem suitable from this point of view.

The gents who are prone to activities allied to cornering of shares are, thus, vouchsafed a rich present on a platter.

The gain to the Treasury is doubtful; the upset to market behaviour is certain.

Wall Street and Throgmorton Street have in no sense recovered their poise. The immediate and near outlook is uncertain. The British Budget, due to be announced in the third week of April, adds to the uncertainty.

Operators in India, too, are inclined to have light commitments for the time being. There is sense in this cautionary attitude.

£ R S

Investment Notes:

Cotton Mill shares, after ruling dull for the past few weeks, are now gathering strength. The main inspiration is the announcement of a reduction in the excise duty on the coarse and medium varieties of cloth from one anna to half an anna per square yard. There is an appreciation in the values of prominent scrips like Bombay Dyeings, Centurys and Kohinoors in the Bombay market and Kesorams in the Calcutta market. In Madras, there is a good demand for Metturs, Coimbatore Cottons, Lakshmis and Virudunagars.

The shares of the Punjab National Bank are again in limelight, having advanced to Rs 43-12 from Rs 42-4 quoted at the end of last week and Rs 37-8 at the end of January. The Diamond Jubilee of this bank is to be celebrated on April 13. Rumours are now set afloat that the bank is likely to announce a bonus issue to mark the occasions. The latest balance-sheet position does not, however, permit any possibility, as a special bonus to shareholders on such occasion might necessitate a similar benefit to employees which, in turn, involve large amounts.

An extraordinary general meeting is to be held on April 18 to consider the voluntary liquidation of the Mysore Gold Mining Company and distribution of shares of the Mysore Gold Mining Company (KGF) Limited.

Imperial Tobacco Company has announced an interim dividend of 4 per cent for the year ended 31st March 1955, payable on or after the 30th April. The final dividend is not expected to be less than 2 per cent, thus making a total distribution of not less than 6 per cent for the year.

£ R S

Investment Briefs:

Bengal Coal has maintained the dividend at Rs 15 per share for the half-year ended 31-10-1954.

Duncan Brothers have announced an interim dividend of 5 per cent for 1954, payable on or after the 26th March, 1955.

Bormah Jan Tea has announced an interim dividend of 10 per cent for 1955, payable on or after the 11th April.

Shree Ambica Jute has maintained the dividend at As 8 per share for the half-year ended 31-3-1954.

Premier Construction, Bombay, has raised the dividend to Rs 7 per share for 1954 from Rs 6 for 1953 and Rs 4½ for 1952.

Indian Aluminium Company has again passed over the dividend on the Ordinary Shares for 1954, the dividends on the Cumulative Preference shares being paid.

Mafatal Fine Spinning & Weaving Company has reduced the dividend from Rs 17-8 to Rs 15 per share for 1954.

Shorrock Mills and New Shorrock Mills have maintained the dividends at Rs 20 and Rs 35 per share respectively, for the year ended 31st December 1954.

Waterdog presents below the reviews of Bank balance-sheets. Bank figures are important figures for the Investor.

Central Bank

I remember that, last year, when I reviewed the Central Bank accounts in these columns, my attention was drawn to a statement that was capable of misinterpretation. And, on that occasion, Eavesdropper made a careful distinction between Banks and, for our purposes, we could consider the Central Bank the largest of its kind in India. In that view, I was looking forward with not a little anticipatory keenness to the Central Bank accounts; for, I wanted to see to what degree the Central Bank had participated in the comparatively happier figures that Banks were blessed with in and for 1954.

I was not disappointed in my anticipation. Deposits and other accounts have marked a strident rise of Rs 6 crores to Rs 123.97 crores; and the increase in Current accounts is one of Rs 4 crores to bring the figure to Rs 59.66 crores—or slightly less than half of the total of deposits and other accounts.

Another happy feature is that Borrowings from other Banks, shown in 1953 at Rs 5.04 crores,

are reduced to the negligible level of Rs 21 lakhs.

With these two changes more or less offsetting each other, the balance sheet total is found higher by Rs 1½ crores at Rs 144.92 crores.

There are changes of equal import among the assets, though cash

balances are more or less maintained at a total of Rs 17.28 crores.

Investments are Rs 1.21 crores lower, as a result of a decline in holdings of gilt-edged from Rs 50.82 crores to Rs 48.52 crores. The market value of gilt-edged is again lower than the book value, although

the difference has been reduced from Rs 3.13 crores to Rs 2.53 crores.

The advances portfolio has been expanded by Rs 1.76 crores to Rs 60.07 crores—or a level slightly higher than current account deposits.

The Bank's income by interest and discount has risen sharply by Rs 23 lakhs to Rs 4.43 crores; and income by commission, exchange and brokerage is Rs 4 lakhs higher. The total income registers a rise of Rs 30 lakhs to Rs 5.41 crores.

But all this income (or almost all of it) went to meet increased expenditure. Interest paid claimed Rs 10 lakhs more at Rs 1.65 crores; salaries and allowances cost Rs 14½ lakhs more; and rent, taxes, insurance, lighting are shown higher by Rs 4½ lakhs. In consequence, the balance of profit is revealed to be higher by the small margin of Rs 1.37 lakhs at Rs 77.89 lakhs.

I do not have the appropriation account figures; these, therefore, I shall leave over for consideration together with the speech to be delivered by the Chairman at the annual meeting.

Indian Bank

In common with the experience of scheduled banks in 1954, the Indian Bank Limited reports just those changes which we might have expected. It was possible for the Bank to increase its Reserve Fund and other Reserves by Rs 1 lakh to Rs 76.50 lakhs. The statutory Reserve Fund (under section 17 of the Banking Companies Act 1949) rises by Rs 1 lakh to Rs 58 lakhs, the free Reserve Fund is of the order of Rs 9 lakhs and there is a Sinking Fund of Rs 9.50 lakhs.

Deposit and other accounts show a smart rise of Rs 3 crores (or nearly one seventh) to Rs 24.85 crores. This is due largely to an increase of Rs 1.84 crores in fixed deposits to Rs 8.67 crores.

Borrowings from other banks, placed in the last balance sheet at Rs 15 lakhs, are shown at nil in the accounts as at December 1954.

That the Indian Bank participated a little more in foreign business is indicated by the rise in the contingent liabilities on forward exchange contracts from Rs 2.23 crores to Rs 2.91 crores.

We find, among the assets, that cash in hand and with the Reserve Bank and with the Imperial Bank has registered a rise of Rs 52 lakhs to Rs 2.60 crores; balances with other banks are also higher by Rs 13 lakhs at Rs 96.97 lakhs; and money at call and short notice has shot up from Rs 2 lakhs to Rs 44 lakhs.

A distinctive feature about the Indian Bank's balance-sheet for 1954 is that investments have gone up—though it is only by the nominal amount of Rs 16 lakhs to Rs 9.78 crores. And this is wholly to be accounted by the larger holding of gilt-edged at Rs 9.49 crores. The disparity between cost price and market value of gilt-edged held by the Indian Bank has been reduced from Rs 61 lakhs in 1953 to Rs 57 lakhs.

If roughly Rs 1 crore of the increase in deposits was reflected in

larger cash balances and the small rise in investments, the rest has gone towards more accommodation to the Bank's constituents. Advances are shown to have risen from Rs 11.26 crores to Rs 13.01 crores.

The Bank's income by interest and discount is better by Rs 6 lakhs at Rs 94.79 lakhs, while the income by commission, exchange and brokerage is also higher by some Rs 3 lakhs. But such improvement in income was almost wholly absorbed by the rise in interest paid on deposits (Rs 4 lakhs to Rs 49.99 lakhs) and in salaries and allowances (another Rs 4 lakhs to Rs 40.53 lakhs).

On balance, however, the profit before taxation has moved up by Rs 1.03 lakhs to Rs 13.94 lakhs.

In the Directors' Report, we find that the dividend and bonus have been maintained at 12 per cent. The provision for taxation has been increased sharply from Rs 2.60 lakhs to Rs 5.75 lakhs. In consequence, the transfer to the Reserve Fund stands reduced to Rs 1 lakh. The carry forward, however, is slightly higher at Rs 1.31 lakhs against Rs 1.23 lakhs brought in.

It is to be noted that taxation has eaten far more sharply into the profits of the year than was the case in 1953. Thus, but for this factor, it should have been possible for the Indian Bank to make a much larger allocation to Reserve.

It is understood that the Indian Bank Limited will be opening a branch in Calcutta in the near future. The branch will constitute an important addition to banking facilities available in this city.

Imperial Bank

The Imperial Bank of India shared handsomely in the gains that were recorded in the deposits of Indian scheduled banks in 1954. The balance-sheet as at the end of 1954 reveals that deposits and other accounts have moved up by over Rs 24 crores to Rs 231.36 crores. The whole of this rise has been due to the increase in current accounts from Rs 144.12 crores to Rs 169.63 crores.

The one other point of note among the liabilities appears under contingent liabilities. It is to be seen that the outstanding forward exchange contracts are shown at the lower level of Rs 12.70 crores against Rs 14.60 crores at the end of the previous year.

Among the assets, we find that cash in hand and with the Reserve Bank has been added to by some Rs 15½ crores to Rs 32.25 crores. Similarly, balances with other banks are also higher by Rs 1.13 crores at Rs 4.39 crores. Money at call and short notice shows a negligible change upwards at Rs 1.23 crores.

The investment portfolio discloses a sharp rise of Rs 14½ crores, suggesting that the Imperial Bank was called upon to take up more of gilt-edged when Indian scheduled banks seemed disposed rather to stay off Government securities. Gilt-edged held by the Imperial Bank is higher by nearly Rs 12 crores.

It is not without significance that, while scheduled banks were generally showing a larger volume of advances, the Imperial Bank figures as having reduced its

advances from Rs 104.84 crores to Rs 100.82 crores. It could be that the necessity (or the pressure) to invest in gilt-edged prevented the Bank from increasing its accommodation to constituents.

The profit and loss account of the Imperial Bank for 1954 indicates that income as a whole improved by Rs 27½ lakhs, the result equally of an increase in the interest and discount earned from Rs 5.50 crores to Rs 5.63 crores, and of the income by commission, exchange and brokerage going up

from Rs 1.71 crores to Rs 1.85 crores.

The rise in the expenditure is, however, a much smaller one. The important head under which expenses are shown higher is salaries and allowances, which are Rs 13 lakhs higher at Rs 3.85 crores.

It was, therefore, possible for the Bank to publish profits which were fully Rs 10 crores higher at Rs 1.37 crores.

The dividend, maintained at 16 per cent, absorbed Rs 90 lakhs.

looking
for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

The provision for bonus to staff is also unchanged at Rs 40 lakhs. The amount transferred to Pension Funds is nominally higher at Rs 5.97 lakhs. The carry forward is roughly at a level that is one lakh better.

The better volume of profits in 1954 is reflected in the fact that the carry forward is an amount in excess of the sum brought in. It may be recalled that, when provisions from profits were more or less the same in 1953, it was necessary to cut into the carry forward from the previous year. The amount brought into 1953 was Rs 42.08 lakhs, but the carry forward from that year was reduced to Rs 33.25 lakhs.

8,867 to be carried forward. The dispersable balance this year is Rs 60,124; but I do not know whether the dividend has been raised; I wouldn't be surprised if it has.

Investments have much more than doubled from Rs 22 lakhs to Rs 51 lakhs. Cash balances are a shade (or Rs 1.59 lakhs) higher. Accommodation to clients has amounted to Rs 11 lakhs more. Advances being shown at Rs 73.61 lakhs.

Finally, the balance-sheet total marks an increase of Rs 48 lakhs to Rs 1.82 crores—or a rise of some 36 per cent.

The figures in the abridged balance-sheet confirm the expansion and progress of the Pandyan Bank—a fact that was attested to last week by the opening of two new branches.

Pandyan Bank

I do not have the full balance sheet of the Pandyan Bank Limited for 1954. But such of the figures as are available seem to me quite extraordinary for a Bank just 8 years young.

In the first place, Reserves have been added by Rs 1 lakh to Rs 8.2 lakhs—this is a level higher than the capital; and not many Indian Banks can boast of such a position, least of all one so tender in age as the Pandyan Bank.

Secondly, the increase in deposits is a noteworthy one of Rs 41 lakhs to Rs 1.48 crores.

Next, the disposable balance was, in 1953, Rs 46,867, the dividend paid was at 5 per cent, absorbing Rs 40,000 and leaving Rs

United Commercial Bank

The United Commercial Bank Limited have published their accounts for 1954, and these reveal that the changes in figures are all for the better. The first point to note is that the Bank have been able to transfer Rs 6.5 lakhs from profits to the Reserve Fund, raising it to Rs 86.5 lakhs against the paid-up capital of Rs 2 crores. The second concerns deposits and other accounts, which have risen by some Rs 2.7 crores to Rs 40.42 (Continued on page 644)

Dividend Raised by Bangalore Woolen, Cotton and Silk Mills

Balance-Sheet Reviews:

AS in the case of the Buckingham & Carnatic Company the balance-sheet of which was reviewed in these columns last week, the working results of the Bangalore Woolen, Cotton and Silk Mills Company, in the same managing agency of Binny & Company, for

the year ended 31st December 1954, are equally satisfactory. The Company contrived to keep their whole installation working practically to continuous full capacity though for a time this involved carrying rather heavy stocks, particularly of those goods for which demand was seasonal. In spite of (Continued on page 644)

The Handloom Week

THE Handloom Week, organised by the All India Handloom Board, represents a big step forward in the transition to modern levels of organisational efficiency, for an industry which provides bread to well over a crore of families and clothing to a quarter of India's population. The transition would have had little special significance, if it implied merely the effort of a strong industry to get stronger. In the present case, it is the effort of an industry which had nearly gone to the wall, to resuscitate itself on sound and hopeful foundations.

The character of this effort is determined by the advice furnished by more than one body of experts, who studied its problems, last year, and by the general framework of the industrial policy adopted by the State. The experts, including a few competent foreigners, have no doubt that the industry could prosper. The State is determined to promote its prosperity

in every possible way. For some time, there was confusion over the means of pulling up the handloom industry. There was a tug of war between the Union and Madras Governments over the extent to which the mill industry could be compelled to withdraw from the general domain of cloth production or otherwise disabled, in favour of the handlooms. This stage is now happily over. There is a certain demarcation of spheres and the mills are also making a small contribution to the rehabilitation of handlooms. This relation may be regarded more as that between two complements than rivals, the stronger of the two lending a helping hand to the weaker. In the circumstances of today, even the mill industry deserves some protection against foreign competitors, actual or potential. If this fact also is borne in mind, a correct relation between these two principal wings of the Indian textile industry could be maintained.

The Price Enigma

FOUR years ago, when the First Five Year Plan was emerging in detail, it was shadowed by the prospect of heavy deficit financing and inflation; these two were thought of as inexorably linked, especially in the circumstances obtaining in India. On the eve of the fifth year of the Plan, the country has had a considerable though not the expected measure of deficit financing but no trace of inflation. The relative priority given to and concentration of expenditure on agriculture, assisted by three successive good monsoons, has resulted in a net addition to agricultural output which more than wiped out the food deficit and carried the country close to self-sufficiency in its two principal industrial fibres, cotton and jute. Price levels, instead of rising, fell. As the dreaded danger of inflation is nowhere to be seen, even in distant prospect, the Union Finance Minister feels encouraged to inject a much larger amount of created money into the economy, so that the scheduled expenditure on the Plan could be completely fulfilled.

But the Gods seem to have favoured a little too much. Against the absence of one danger, another, though somewhat less disagreeable, has come up. Prices for some agricultural commodities have fallen too low, in relation to those for others, particularly industrial. The trend started about a couple of years ago. Over the last one year, the decline was steep and substantial. Food-grains, oilseeds and pulses are the worst affected. The wholesale price index for cereals has dropped from 431 in the last week of February, 1954 to 344 in the corresponding week of 1955; for pulses there has been a fall over this period from 370 to 232; oil seeds dropped from 500 to 358. In the agricultural sector, the industrial fibres alone have either maintained their price levels or gained. This means that the bulk of agricultural production is in a relatively bad way.

An accurate explanation for this phenomenon, i.e. the adverse trend of agricultural prices both absolutely and in relation to the prices of most industrial raw materials and manufactured goods, is not readily forthcoming.

Established 1928

March 26, 1955

"The Wise Man in His Attitude towards the World has neither Prejudices nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

The handloom industry's hope for the future rests mainly on the fact that the State has started giving it large-scale material aid and organisational advice, instead of mere lip-sympathy and emotional support. On the Board's recommendation the Union has sanctioned Rs 6.16 crores to the States for disbursements to the industry. But only about a quarter of this amount has actually reached the weavers. More expeditious assistance would be possible if the transformation into cooperatives becomes general. Immediately this is the task ahead. A mechanised and cooperative structure alone will ensure for this industry the capacity to hold its own, unaided. Cooperation can and must come quickly. Mechanisation will have to be spread over a period so that whatever displacement of labour it involves could be gradual and absorbable elsewhere.

are unwilling to extend the principle in general. Alongside they have taken steps to liberalise exports of produce which entered into industrial production. There was even talk of free gift of wheat to other countries. But price support as a matter of general policy has not yet found favour. In the course of the debate on the motion of thanks to the Presidential Address, the Finance Minister referred to the difficulties in the way of such a policy and sought to show that a policy of limited price support and increasing public expenditure should provide the necessary corrective. Last Monday, replying to the budget debate, he returned to the subject and indicated the possibility of forming a corporation to undertake open market operations as a means of establishing prices.

The caution evinced in limiting the area of price support is understandable and praiseworthy. The agricultural producer in India does not form a compact group; the majority, perhaps, belong to what is termed the non-monetary sector; and of the rest, there is the agricultural labourer who would prefer a lower price for foodgrains and cloth than a higher one. It is only the comparatively small sector of those who have considerable surpluses to market, who will be gainers by the high price. After all, even at present rates, the cereals index is 244 per cent over the 1939 level; pulses are 132 per cent higher; and other commodities 152 per cent higher. Oil seeds are better than even cereals. In the early postwar years, it was the ambition of the Central Government to stabilise domestic prices at about 180 per cent of the pre-war level. Every commodity is now selling at substantially higher levels; cereals and oil seeds at nearly twice as much high.

Relatively, of course, the agricultural sector is in a poor plight; and those who under a different price relation between agricultural produce and manufactured goods raised the cry that precious money was being drained off into the rural areas, should now be prepared for a return compliment in the argument that the industrial sector is now fattening at the

expense of agriculture. From the practical point of view, these arguments have very little import. But they can create obsessions and prejudices which impair economic thinking. Sir Chintaman Deshmukh has categorically assured that there was no need to have the feeling that industrial development would be carried through at the cost of the peasantry. This assurance is necessary because the extent to which agricultural price tend to influence politics is getting enlarged. When total money supply in the hands of the population has also

Transport to Assam

Double Track Railway Line—II

By B. K. BANERJEE

IT is with reference to this slightly revised suggestion that Mr Shanker Rao wrote his second article mentioned at the outset. He wrote—"The question of importance and what needs attention is not so much an alternative rail link or double line communication between Dhubri and Manihari Ghat or some other suitable place on the Ganges river but the vital need to provide a totally alternative route to the Link which could always be relied upon irrespective of floods and other calamities. For one thing, if and when floods occur, railway lines doubled or trebled, are not going to be spared and the entire outfit may be washed away as has happened on a number of occasions in recent years".

The Indian Tea Planters' Association's suggestion is the construction of a double track railway line. The Association is convinced that the existing line which runs parallel to the Bhutan boundary and at a short distance from it along the foot-hills where the gradient is too sharp can never be relied upon as the permanent life line of primary communication for North Bengal and Assam. The Association, therefore, wanted a permanent line further down and this it suggested as a long term project in 1947. The present railway line and the National Highway were together expected to be able somehow to meet the immediate need of a link, independently of the river route through Pakistan. It was not expected to be an effective substitute for the lost railway communications eastwards via Santahar and Parbatipur or northwards through Parbatipur.

This Association suggested then, as it is doing even now, the urgency of an all-season railway line and with the said object in view suggested an alignment on 8-1-47 and has only re-iterated the same plan with slight modifications lately. The earlier suggestion is virtually the same as the present one. This long term proposal was made because the Association was convinced that the present line was open to risks of—

- (1) being constructed too near the Bhutan frontier,
- (2) being constructed mostly along or very near the points where the hill streams debouche from their hill fastness into the plains and are likely to carry away everything which may obstruct their flow at such places.

The latter apprehension of the Association has been amply vindicated by the floods of 1950, 1952 and 1954 when the rail and road bridges along this alignment were swept away and, in particular cases, more than once.

The Association is now more convinced than ever before that its long term proposal is fairly fool-proof as its alignment is across the plains to the south and much further off from the site of the present line; below are given a few instances how, in between the present line

shown a significant increase, the disparate trends between agricultural and industrial prices call for a satisfactory explanation, no less than a corrective. Of the two methods available for correcting it, price support is admittedly of limited applicability. The alternative of ampler productive investment, which in turn could lead to the desired redistribution of purchasing power, is clearly the easier and the more congenial remedy. The Central Government's preference for this remedy is well-placed.

and the proposed alignment, there are road and/or railway bridges on the same streams which have not been damaged by the floods of 1950, 1952 and 1954. These cases are—

- (1) The Kulai has damaged Highway No. 31 at the place.
- (2) The Malnadi and the Neora Nadi have both damaged the existing railway bridge.
- (3) The railway bridges over Moortee river and a few other bridges further east have also been damaged.
- (4) The bridges over the Hatinalla and the Diana have been breached. Hatinalla bears a road bridge about 4½ miles lower down which has stood the stress of all the floods of 1950, 1952 and 1954.
- (5) All the streams beginning with the Moortee on the west and ending with the Diana in the east join up within about twenty five miles to the south of the railway line where this joint stream known as the Jaldacca is crossed by a bridge of the National Highway No. 31. This bridge has not been damaged by these floods.
- (6) The Holong Bridge at Madarihat, a new construction on the Assam Link over one branch of the Toorsa river, has already been twice damaged by floods but nothing so far has happened to the railway bridge over the joint flow of the three branches of the same river only about thirty (30) miles lower down near Cooch-Behar.

The secret of the safety of these bridges lies mainly on three factors:—

- (a) They are constructed in the plains where the river is much less turbulent.
- (b) They are constructed not across the flow of the river immediately above or below a bend in its course.
- (c) The guide banks, wherever such banks have been constructed, the height of the bridge over the bed of the river and the abutments of the bridges leave ample passage for the flood water to flow through when they are in spate.

Mr Shanker Rao's article especially his criticism of this Association's plan, is not based on a correct appreciation of the actual facts. Probably he has not seen the blueprint of the alignment proposed by the ITPA. He does evidently know that the present line cannot afford to run adequate number of passenger trains also as it has to arrange running of both Passenger and Goods trains both ways on a single track line.

We admit that no railway line is absolutely safe from the risks of flood or earthquakes; still railway system is being built up and extended and improved on permanent basis in every country apparently along the safest possible alignment in each case and the alignment proposed by this Association is, in its opinion, the best. We do not say that there may not be some technical difficulty here and there. Any modification to meet such difficulty is a matter for consideration by experts; but that is only a matter of detail which the language of the proposal does not preclude from the scope of its practical application.

It should be noted that this Association is the mouthpiece of the users of the railway line who suffer for its shortcomings and that such suffering is a continuing one ever since August 1947. Had it been a mouthpiece of the Steamer Companies, it would have pleaded for further opportunities for them. Had it been a mere panegyrist of the railway administration, it would have upheld the administration's attempt at side tracking the issue by attempting to join up Ramshai on the Lataguri—Ramshai Branch with Binnaguri by a short construction including a major bridge over the Jaldacca and about three or four minor bridges. The administration has evidently raked up a suggestion, at least sixty years old, from the old records of the now defunct Bengal Dooars Railway and quoted in the Jalpaiguri District Gazetteer. If this line is opened, it will help local communication and transport and solve the problems of the users of the line to the east of Binnaguri station; but what about breaches of railway line in the area lying between Mal and Banarhat stations, or between Sevoke and Mal Junction? What about the breaches between Binnaguri and Fakiragram? There were, indeed, too many breaches on these sections which have so far been only patched up. It is strange that attempts are still being made to keep going an old and already damaged alignment in spite of the fact that its capacity for meeting the demand for both passenger and goods traffic is too meagre and stability highly doubtful. Proximity to Bhutan border is itself a risk. The other two are flood and earthquake.

Now to Mr Shanker Rao's own suggestion—if and when all that he wants become available, the transport problem between Sakrigall and Siliguri Junction, which is the smallest part of the entire problem, may be solved to some extent; but what about the rest? He has also not taken into consideration the fact that railways do not accept packages which are above two maunds in weight if these are to be taken as headloads to the north bank of the Ganga or Brahmaputra. The problem is graver for the part of the railway between the Teesta and Dhubri town. In this area, both the railway and the National Highway have repeatedly suffered severely from the floods; both these communication systems, including bridges in their course, have been breached at many places, many bridges have been wholly or partially washed out and some more than once. The same story may be repeated hereafter. Mr Rao has not given any suggestion for this length of approximately 100 miles of Railway. The suggestion of this Association for meeting the normal requirements and emergencies are—

- (1) The present line should not be scrapped so that, with repairs, it may answer the needs to such an extent as it is ordinarily capable.
- (2) The double track line which is suggested will have much increased capacity for handling goods and passengers and, being a double track one, the transport work will naturally be expedited.

(Continued on page 640)

The Exodus from East Bengal:

According to an official estimate, about one lakh of Hindus have crossed over to the Indian Union from East Bengal during the last six months; and this rate of influx is expected to continue, if adequate counter-measures are not taken in time. Barring a small fraction, the refugees are keen on settling in West Bengal, already heavily overcrowded. The financial and administrative burden of the phenomenon is colossal, whether it falls on the Union or on the State. To streamline rehabilitation measures is essential; but that will not be an answer to the problem of the influx. On the contrary, prompt and satisfactory resettlement might even turn out to be an invitation for more people to come. Pathetically enough, exaggerated reports of refugee attrition in West Bengal also seems to be one of the causes for the recent migration tide. Over the last seven years, more than a quarter of the original Hindu population of East Bengal have found their way to the Indian Union. If there were to be a corresponding reciprocal flow, the position would not have been so unbearable. For various reasons, the exodus has remained, after the initial phase, mostly one-sided. Pakistan disclaims responsibility for Hindus leaving the State. The blame is placed on the community, which can only make some helpless charges against the State and leave the rest to drift. Periodical joint tours of Ministers serve to allay the flood, for some time. They cannot stop its resurgence. As the Indian Union is having all the worries and Pakistan all the advantages of this one-sided exodus, there is no use appealing to humanitarian or moral

Editorial Notes

principles. There should be some step which must be of a more compelling character. The Hindu Mahasabha has been suggesting two propositions, either an orderly exchange of population or the carving out of an autonomous Hindu area in East Pakistan. In Parliament, one private Member has put up a plea that the UN should take charge of the issue. Mohammad Ali Jinnah himself had thought that some rough segregation of the communities would be desirable. The plausibly high-minded opposition to this sound idea had only one consequence—a gradual squeezing out of the weaker community. It is astonishing that the Indian Union has only abject patience to show on this highly provoking issue.

A Tantalising Speech:

Addressing a public meeting at Chandigarh, Pandit Nehru announced that in another few days his Government would be taking a decision, intended to tackle the problem of unemployment. This announcement formed part of a speech, in which references were also made to the goal of socialistic pattern, the need to do away with caste and to end the language controversy in the State. From the summarised reports of the speech available, it is difficult to see if all these themes were mutually linked up or remained isolated from each other. Pandit Nehru has no love for the caste system. He has again described it as pernicious. Nor is he alone in this attitude. Is he thinking of legislation against caste or of incentives for fusion? That caste feelings gravely impair the sense of national solidarity is widely realised. But no one seems to have any clear and workable idea of how to improve the state of affairs. Direct State interference with the caste system may provoke resistance and hostility. To leave the initiative for timely reform in the hands of society and groups may well end in none doing anything. It is a dilemma from which a way has to be found. If the State takes up the task the path may turn out to be full of dangers. The Prime Minister however seems determined to tackle it, as the perpetuation of the system is regarded as militating against democracy and the socialistic pattern. For the time being however the promised solution for unemployment should evoke far greater interest. Is there something up his sleeve which the Planning Commission and the Finance Minister have not come to know or having known not dared to disclose? The caste system and employment are also directly linked in some respects. Is he then seeking to solve unemployment by hitting at caste

first? The period of suspense may not be long as the decision is to be expected 'in a few days.'

Railway Expansion:

The grievances voiced by representatives of industry and commerce from time to time about railway bottle-necks tend to obscure the rapid expansion that is taking place in this branch of transport. The railways are like a servant with too many masters. There is the increase in population which currently runs at the annual rate of 4 million; then there is the big expansion of industrial production and the consequent increase in the flow of trade; there is also the emergence of new industrial areas demanding prompt additions of railway lines. If an occasional bottle-neck occurs here or there, it must be viewed in relation to the growing range of new demands which are being made on the Railways. The Chairman of the Railway Board announced last week that there are plans to increase total capacity by as much as 20 per cent before the advent of the next season, and in the course of the Second Five-Year Plan period, this capacity would go up by another 50 per cent. This would involve the construction of another 3,000 miles of track and the doubling of a 1,000 miles of existing tracks. Already, six new lines are nearing completion; and the opening up of these lines are so phased in instalments that there would be the minimum gap between construction of any considerable length and its utilisation. The prevention of wastage in servicing has become the key-note of policy in almost all spheres. As wagon supplies are inadequate, it has been decided to introduce nightwork in goods sheds. The progress towards self-sufficiency in rolling stock is indicated by the fact that out of 33,000 wagons which will be received by the railways by the end of the current year 12,000 will be of indigenous make; of the 277 new locomotives received between April 1954 and January 1955, 116 are manufactured in India.

Development Designs:

The United Nations Study on the processes and problems of industrialisation in underdeveloped countries, released this week, points to circumstances, which are mostly familiar in contemporary India. Any late-comer in the field of industrialisation has the advantage of being able to benefit by the examples and lessons of others much ahead. But this benefit has to be set off against what might be described as the obstinacy of socio-economic habits and tradi-

tions which militate against spectacular speed in achievements. As the Study points out, it is just because that some of these forces are inimical to the smooth evolution of an industrial economy, that the state has to assume an important and active role, in economic direction. But too much should not be made of this necessity. Even in the underdeveloped countries surveyed, it is found that the rate of industrial growth in some of the centrally-planned economies has not been markedly greater than that achieved in some of the countries which have less of central direction. This conclusion should put fresh heart into the private sector, about its own capacity, to make good. How far it will impel a revision of national state policies is scarcely predictable, because the latter are not determined solely with reference to the comparative operational merits of the two sectors. Particularly where democracy obtains, these policies have

World of Finance

An Explanation, But no Apology

Calcutta, Thursday Evening.

AN esteemed fellow-scribe is disposed to think that our recurrent exposition of the extent and manner of created money in recent weeks is very much of a "much ado about nothing." He leans to the view that such reiteration can serve no good purpose and does not show any good taste. Its only use may be to inflame speculative activities; and is this the time, it is asked, and are these the conditions in which such spurs to speculation are deliberately furnished? These are charges which we must squarely face and convincingly rebut. We admit that, in our appraisal of the money market influences and developments in the early weeks of January, we highlighted the materialisation of deficit financing as an important step in ways and means planning; and there is no need for us to be apologetic about our doing so. For, over a period of three years, there has been much talk of deficit financing which was regarded as an impending portent in certain quarters and hailed as a significant promise in some other circles. The threat or promise was, during this period of three years, never implemented in a way which could readily be recognised from the weekly financial returns. Our own contention was that the budget estimates of large-sized deficit financing were reduced to next to nothing by the time the actuals could be got ready; and that, up to the end of December 1954, actual recourse to deficit financing was inconsiderable. The Reserve Bank returns for the first week in January contained the first recognisable evidence of the much-publicised deficit financing; and, as the week-by-week interpreter of monetary events, it was incumbent

on us to bring home that recognition to those who have aught to do with the money market either as active participants or shrewd observers. Our role as a reliable guide to the money market interests would have suffered seriously if, in ignorance or by inadvertence or through mistaken scruple, we had failed to locate and assign the proper place to deficit financing in the current and prospective economic happenings in India. Our task is more than posthumous recording of events; we have also, as far as possible, to peer into the future and gauge the shape of things to come. So, we had not only to report the manner and measure of created money in the first week of January, but to estimate how far it foreshadowed its recurrence in the weeks ahead. It is thus that our responsibility as the reporter and interpreter of the money market could not be shirked.

There is, in the special circumstances of this deficit financing, need for detailed exposition. For, in the earlier phases of the creation of ad hoc Treasury Bills, there was a kind of furtiveness so that the operation was, so to say, sneaked through as in the case of adjustments vis-a-vis Pakistan or the transfer of securities to the British Government against sterling pensions liabilities. Off the present occasion, the policy and plan of deficit financing have been proclaimed from the house-top; and ad hocs are created by design and with deliberation. This procedure, moreover, is not in one sharp and substantial operation but in instalments in accordance with needs and circumstances. The character and schedule of deficit financing in the present context may, therefore, be said to impose four distinct tasks on the money market reviewer: First, to record deficit financing as and when it takes place; second, to interpret it in relation to the needs of the Treasury and the circumstances of the economy; third, to explain the "mechanics" of the operation each time it is resorted to; and, fourth, to visualise what may be expected in this regard in the immediate future. We have understood our obligation in this light, and have endeavoured to discharge it to the best of our light and knowledge.

As regards the quantum of created money from time to time, it is, of course, necessary that we report all the available information; and there can be no question of its giving fillip to speculation. The Finance Minister, for his part, is banking on the stimulating

effects of created money. And stock exchange operators have only taken their cue from him. Other interests, too, are, as eagerly, looking forward to beneficent results in the sense that many of the present deflationary and depressing influences may be, speedily and effectively, corrected by currency inflation. Currency expansion in the present circumstances can in no sense be inflationary; it will serve as much-needed reflation. To the extent that we draw pointed attention to deficit financing as and when there is recourse to it, we are positively helping reflationary forces to gather strength and do their good work.

This good work can be done and can continue to be done only if deficit financing is in correct measure and in appropriate time. That is to say, there has to be continuing vigilance on the state of the economy; and the Treasury must needs be skilled in the disciplined use of the instrument of created money. From this point of view, we have to examine closely the financial and economic circumstances of each instalment of created money.

The mechanics of created money is one thing when ad hocs are issued, in one single operation, for a specific situation, and quite another when the creation of ad hocs is an extended and recurrent process. In the first case, all that is involved is addition to the Rupee Securities held in the Issue Department.

Created Money: Rs 44 Crores?

THE returns of the Reserve Bank for the week ended March 18 bear the impress of the year-end monetary needs of the Centre. Government's expenditures have apparently continued on a large-scale; and, for proper understanding of what such monetary needs could have been, it is necessary that the following points are borne in mind:

1. Active notes have declined by Rs 4.01 crores to Rs 1,277.18 crores.
2. Notes held in the Issue Department are higher by Rs 4.55 crores at Rs 15.28 crores.
3. Foreign Securities in the Issue Department have registered a decline of Rs 34.78 crores to Rs 843.37 crores.
4. At the same time, Rupee Securities are higher by a like amount, the rise being Rs 34.79 crores to Rs 507.43 crores.
5. The Centre's deposits with the Reserve Bank have improved by Rs 12.73 crores to Rs 67.95 crores.
6. State Governments' deposits are sharply risen by Rs 34.91 crores to Rs 53.42 crores.
7. Foreign Balances register a rise of Rs 36.04 crores to Rs 88.77 crores.

ment of the Reserve Bank. In the second case, we have to take note of a number of factors such as the week-to-week sale of ad hoc Treasury Bills to the Reserve Bank, week-by-week renewals of ad hocs, Rupee Securities in the Issue Department, Centre's cash balances and Reserve Bank's Investments. These are figures that can be gleaned from published financial returns. The disposition of cash Investment Balances of the Centre and the States from time to time is veiled in mystery; and, often-times, it may be necessary to try to pierce this veil, if a complete picture of the developments in regard to created money is to be had. In the last ten weeks, we have tried to keep our readers abreast of the integrated study which is necessary in relation to the current phase of created money and currency inflation. There has never been anything like that integrated study before. And we venture to think that, as on earlier occasions of developments with respect to distress gold in the thirties and recurrent doses of reflation following devaluation in September 1931, it is meat and proper that we keep our readers fully informed with every phase of the developments in connection with the novel, daring and far-reaching experiment of instalmental deficit financing in the interest of an economy which is neither too over-developed or too under-developed.

Sterling and Elections —Sir Winston's Dilemma

By PAUL EINZIG

A fierce battle is raging between those in favour of an early general election and those who would prefer to wait till the autumn. It is fought mostly behind the closed doors of the Cabinet room at 10, Downing Street. The decision rests with one man only—Sir Winston Churchill. His Ministers and other political supporters, and the Conservative newspapers, are sharply divided on the expediency of a rushed election. On the one hand, there is the political argument of the troubles in the Labour Party, and the economic argument of the possibility of a deterioration of conditions by the autumn. On the other hand, it is arguable that the split between the two opposing Socialist factions is liable to widen in the course of time, and that the high Bank Rate may have produced its beneficial effects by the autumn.

The opponents of an early election have won the first round. There is to be no "snap" election before the Budget, nor has the Budget date been put forward for the sake of earlier election. April 19 has been fixed as Budget Day. This means that it would be just possible to rush through the Finance Bill in time for having the general election during the last week of May, though it would not be easy. Unless this could be done, the Prime Minister would probably prefer an autumn election to a June election, owing to the disturbing effect of the holiday season and of the beginning of the busy season in agricultural areas.

Yet, even if we were to disregard the political argument which in fact cuts both ways, there seems to be a very strong economic argument in favour of an early election. For, it seems probable that the next six months will witness a deterioration rather than an improvement of economic conditions in Britain. In particular, it seems probable that there will be a substantial loss of gold during the summer and early autumn.

It seems that the economic argument favours an early election irrespective of whether or not the high Bank Rate will produce its desired effect. For the only possible way in which the Bank Rate can reduce excessive consumption and imports would be through creating a certain amount of unemployment. And even a slight increase of unemployment would mean the loss of millions of votes by the Government. In the absence of an increase of unemployment, the wages spiral would continue to increase the inflated purchasing power of consumers in Britain in spite of the high Bank Rate. During the last few days, wages claims amounting to well over £120 million per annum have been conceded. In face of this fact even some of the most fanatic

believers in the all-curing effects of high Bank Rate had to admit that amidst overfull-employment the remedy is apt to be ineffective.

Possibly a further increase of the Bank Rate, coupled with a much more effective tightening of credit, might result in a certain amount

of unemployment, and this would check the rising trend of wages. But it would be inexpedient for the Government to wait with the election until after such result has become evident.

In the absence of a marked curtailment of consumption, the balance of payments is liable to remain adverse. For the present this factor is more than offset by the influx of short-term funds attracted by high interest rates, and by some reduction of inventory stocks enforced by high interest rates.

But these factors are apt to be temporary, and, in the long run, the increase of "hot money" and the running down of stocks of imported commodities is liable to react against sterling.

More important than any of these considerations is the prolongation of the uncertainty through a deferment of the election until the autumn. Most political prophets agree that, should there be an election tomorrow, the Conservative Party would increase its majority.

Bitter Sweet

IT was made categorically clear by the Taxation Enquiry Commission that no sort of duty should be imposed on salt; and we might, therefore, suggest that salt has been so sweetened. But, in the case of sugar, if we correctly understand all that was said by Mr Gulabchand Hirachand in his Presidential Address at the 22nd Annual General Meeting of the Indian Sugar Mills Association, the sweet commodity has turned bitter.

The number of points that Mr Hirachand has raised as making conditions difficult for sugar is many; and it must be conceded that Mr Hirachand has made his points forcefully in simple, terse and straight-from-the-shoulder language. It may not, however, be possible to agree with each one of the conclusions that the ISMA President has drawn; and this he conceded towards the end of his speech, when he said: "I might have even raised certain controversial issues on which complete agreement between various interests concerned may not be easily forthcoming."

But, such lack of unanimous agreement withal, when we reckon that sugar is the second largest industry in the country, it may perhaps be of even greater importance sympathetically to consider those very points on which there is difference of opinion. It follows that careful note should be taken of the long list of difficulties that Mr Hirachand has enumerated; or at least such of them as are, by their nature, prone to be controversial.

The first is the recent increase in the excise duty on sugar. Mr

Hirachand has charged that the fresh impost of 50 per cent is an onerous one, and suggests "that the new burden might well prove crippling for the industry." It would seem to us that the justification for the new list of articles and commodities brought under the purview of excise duties was set out in clear terms by the Taxation Enquiry Commission. It is but fair that those industries which have grown because of the imposition, in earlier years, of protective import duties should now make good to the Government exchequer a moiety of the losses of revenue consequent to the large-sized decline in imports and, therefore, in the income by import duties. It is altogether another question that the sum of duties and taxes and levies proves to be more than a justifiable load. Again, if, as Mr Hirachand has mentioned in his speech, it would never be possible for sugarcane to be grown and sold in India at a price on a parity with world prices, should it bother him that, equally, the price of sugar in the country will not reach the world level? The excise duty is only a form of indirect taxation; and the Government desire is twofold; firstly, that a curb might thereby be placed on consumption; and secondly, that sugar might yield revenue in lieu of the import duties that might be lost.

But when Mr Hirachand asks that the cane cess should be fully utilised towards improving the conditions for sugarcane, his request is one that cannot be denied. All too often, specific levies raised are not used for the purpose or reason for which they were im-

posed in the first place. It is to be remarked that the Union Minister for Food, Mr A. P. Jain, suggested (in another context) that the challenge was being offered the sugar industry of adding substantially to production; if so, we may suggest that a similar challenge faces Government: it is in their power, by proper utilisation of the cess collected, to ensure that improvement in production techniques (and, therefore, in production) ensues. Mr Hirachand, then, has a good point when he asks that "the industry should in some way be associated, at least in an advisory capacity, in preparing programmes of works to be undertaken from this levy."

The second controversial point that bothered Mr Hirachand refers to the reported decision by Government to permit the establishment of two sugar refineries in the country. The experience of the past two years, in both of which a very poor production of sugar resulted in acute shortages, necessitating as they did a substantial import of sugar, might possibly have weighed with Government when they considered the scheme for the two refineries. It stands for reason that it would be preferable to refine sugar in the country rather than to import refined sugar. But Mr Hirachand is of the opinion that, in the long-term view, it would not be in the national interest so to set up the refineries. He argues that imports of sugar should be resorted to until domestic production catches up; and that it would not be prudent to burden ourselves permanently with refineries. It was in this regard that Mr Jain tossed in his challenge to the sugar industry.

In the context of a more or less certain increase in the demand for sugar (what with the raising of standard of living by the two Plans), the industry has first to prove that it is capable of the increased production that would be needed. Unless we can be reasonably sure that the industry will rise to the

occasion, it might be needless waste to import sugar from year to year when we could effect some savings by way of the refineries.

Mr Hirachand would have been somewhat reassured by Mr Jain's statement that Government had postponed their decision on the setting up of the refineries. But, in the final analysis, whether or not we have the refineries would depend upon the sugar industry. In Mr Jain's words:

"Here is a challenge to your skill, ingenuity and sense of enterprise inasmuch as the extent to which you can reduce the shortfall between the production and consumption of sugar, the case for setting up refineries will be weakened."

Thus, if sugar today is bitter, some part of the blame must attach to the industry; and it is within its own power to sweeten that sugar.

★

The Tea Industry:

That the Tea Industry has definitely turned the corner is amply proved by its excellent performance during the past year; and the improvement in its position has surpassed the most optimistic expectations. Among the notable influences contributing to this improvement were the substantial rises in consumption in overseas countries, especially in the UK, which is the largest single consumer of Indian tea. The concerted activity of the tea estates to regulate output was also extremely helpful. Labour relations were also satisfactory, there being only 31 strikes as compared with 281 in 1953. On the whole, the demand for all varieties of tea, both for export and internal sales, was strong throughout the year and prices showed a steady advance, the main inspiration being the keen demand from the UK where prices ruled very firm due to continued acute shortage of tea.

In this connection, Mr Mackay Tallak, the Chairman of the Indian Tea Association, has recently referred to the continued and increased prosperity of the industry. He states that the mere increase in demand for tea in 1954 cannot be the whole explanation for the rise in prices and the industry's prosperity. His explanation lies rather in forces and policies that prevented the increase in output reaching markets quickly in order to match the increase in consumption. He adds that tea's prosperity will prove less permanent than is generally expected and it is for this reason the industry is now watching with concern the manner in which consumer resistance is growing. If we take Mr Mackay Tallak's view that delayed delivery of the crop has been the important factor for the rise in prices, then we might expect that there is not going to be any gap between supply and demand. Another implication of his analysis of the industry's situation is that prices will continue to fall though the statistical position does not warrant any serious collapse.

World of Jute

Reaction

THE past week has brought further evidence in support of the contention, that enough raw jute has been produced both in Pakistan and India during the jute year 1954-55 to meet the requirements of World Jute mills, which I have so often made in these columns. Readers may also remember that I had anticipated a sizeable increase in the arrivals of raw jute from Pakistan in the remaining months before the new crop becomes available. During February, arrivals of raw jute into Calcutta and mill station from Pakistan amounted to 1,62,514 Bales. During the same period 4,27,269 bales of raw jute were received from Indian sources, making a total of 5,89,783 bales for the month. Thus it will be seen that arrivals from Pakistan have increased by 56,514 bales.

This concrete confirmation of the adequacy of raw jute supply seems to have encouraged mills so much that they have gone to the extent of completely ignoring jute of Indian origin in the past few weeks. With buyers showing no interest, the raw jute dealer had no other option but to mark down prices.

The news that came in the course of the next few days was hardly of an encouraging nature to him either. Mr. Sinclair Murray's crop reports both for India and Pakistan only confirm earlier expectations. In Pakistan, especially, the amount of sowings is fairly well ahead in some areas, while in India, land preparations for sowing has been taken in hand in certain West Bengal, Orissa and Assam areas.

Presumably, the bulls in the jute markets have at long last considered that their position has become untenable. At the time of writing prices are as below compared with a week ago:

	Latest Rs. a.	A week ago Rs. a.
Assam Bottoms (per maund)	32 8	35 8
Brislan 40" x 10 oz.	43 15	45 1
Ready	44 14	44 12
July/Sept.		
B. Twills:		
Ready	123 4	129 0
July/Sept.	115 0	125 0

One surprising thing about the fall in prices is, that all along there has been considerable enquiry for sacking. Even Hessians have been provided with hope in the shape of a rumour that Argentina is likely to enter the Calcutta market for her requirements very soon.

It is clear, however, that the speculators have become extremely nervous in the face of the overwhelming evidence against their thesis of a shortage of raw jute. And naturally, being what they are, no one can stop them from indulging in panicky

sales, when they find they are backing the wrong horse. The abnormally low or high prices are just not their business.

But anyone who cares to pause for a while and study the behaviour of the jute markets in Calcutta will not fail to notice the incalculable harm the speculators are wreaking on the entire jute goods industry. In this context it is profitable to hear what the Chairman of the IJMA himself has to say on this menace. Speaking at the annual meeting of the Association Mr. G. J. Gardner has pointed out that the recent serious inflation in raw jute prices is "an ominous reminder of problems

awaiting solution, which if not dealt with will endanger the whole competitive position of our industry."

While it is true that the unconscionably high levels to which raw jute price have been pushed up in February of this year have stemmed from certain unilateral action taken by the Pakistani Government in cancelling licences as well as imposing other restriction on raw jute exporters in that country, it is the lack of proper guidance that has been responsible for the deplorable conditions the jute trade has experienced since the turn of the year. The IJMA cannot be absolved from all responsibility in this connection. For it was not till March did they come out with what they called a more "realistic estimate" of the 1954-55 jute crop. Till then they were publishing figures which by their own reckoning "unrealistic."

This does not mean that the Government of India have no responsibility in this matter. In their

decision on the Jute Enquiry Commission report, they have accepted the possibility of the need for "emergent action to meet a crisis." The Resolution *inter alia* says: "There may conceivably be occasions when emergent action is necessary to meet a crisis. In such conditions if the Government find it necessary to intervene, action will have to be taken with the full authority of the law and not merely in an advisory manner." It goes on to say that "should it become necessary for Government to use any of these powers for fixing statutory prices, the setting up of a Jute Board on the lines recommended by the Commission might well be worth considering." It is no wonder that Government machinery being what they are, have not yet found that in February of this year and earlier there had been plenty of "occasions" when "emergent action" would have been called for. One cannot but agree with Mr Gardner when

World of Tea

Background of Price Decline

IT is a known fact that the boom in Tea, that was noticed during the past year, was mainly the result of two fortuitous facts—the dearer price of coffee and cocoa, and the low stock position of tea in the United Kingdom. The stock position has now become tolerably satisfactory, as will be clear from the following figures (in million pounds):—

Stock as on the 11th March, 1955 160.41
Stock as on the 4th March, 1955 132.11
Stock as on the 11th March, 1954 148.71

Thus, stocks have now almost reached the level of what they were about this time last year and double the quantity of what it had been a few months back. So far as the prices of coffee and cocoa are

concerned, these have been fast falling during the past few weeks. For instance, Santos grade 4 Coffee now quoting at 57½ cents per pound is 10 cents per pound cheaper than the price in late January and 30 cents below the peak price of last August. Similarly, the price of cocoa has come back to 32½sh. per cwt. from 37½sh. per cwt. in January last. That such drastic fall in the prices of competitive beverages will demoralise the tea trade in the UK goes without saying. At the same time, auctions are proving a bleak and cheerless affair. Mincing Lane is presenting a dull and lifeless spectacle. Local auctions, too, are not producing encouraging results and the price of Export

quota has already come down to 30 pies per pound, to quote better at 60 pies at the commencement of the week as against 360 pies quoted in December last.

There is a belief that the drastic cuts made by some of the leading packers in the UK had the effect of making the entire trade nervous about bidding at the auctions. Otherwise, the cuts made are bigger than what the fall in prices will justify. Since the price of British tea rose to a peak in January, some distributors reported a fall in sales between 5 and 10 per cent and that suggested to them that the price of tea had risen to a height where the law of diminishing returns was beginning to work.

In analysing the reasons for the high prices ruled for tea, the Chairman of the Indian Tea Association has stated that there had been an increase in demand, the per capita consumption in Britain having risen to 10 pounds per annum. In USA also, the high price of coffee and the efforts of the Tea Council had

led to a considerable increase in consumption and the general prosperity of Middle East oil-producing countries had led to a remarkable revival of exports to those countries. By putting the increase in world consumption of tea in 1954 of 65 million pounds against the increase in world production of 80 million pounds, he shows that the mere increase in demand cannot be the whole explanation for the rise in prices and the industry's prosperity. His explanation lies rather in forces and policies that prevented the increase in output reaching markets quickly in order to match the increase in consumption. These forces and policies were the tardy release of extra export quota by the Indian Government, damaged communications between the gardens and the Port and finally labour trouble in Calcutta and London Ports. He adds that it is for these reasons that he has been watching with concern the manner in which consumer resistance is growing and in which the industry's liabilities are increasing.

These are undoubtedly evil omens for Indian tea. Nevertheless, they do not point to any slump in the offing. The standard of Indian teas have been good and little criticism regarding packing has been received. Yet, there are unmistakable signs that consumer and buyer resistance is growing. Moreover, there has been a great improvement in the stock position and a greater realisation amongst buyers that some of the causes of the 1954 shortage were of a temporary nature. It must be expected, therefore, that prices will continue to fall though the statistical position does not warrant any serious collapse. It is generally expected that the industry will be able to sell all the good tea it can produce at satisfactory prices.

Meanwhile, offerings in the Export Sale had at Calcutta this week, consisted of about 11,196 packages. There was a fair general demand from internal buyers, but the big exporters showed very little interest. The commonest and cheapest varieties were the strongest feature of the sale and sold at As. 2 per pound above brokers' valuations. Whole Leaf grades and any teas with clean black appearance were firm to dearer, while Fannings grades met with limited interest. All other kinds were rather irregular and were one anna to two annas per pound easier.

Offerings in the Internal Sale consisted of 17,930 packages of Dusts. The Dust market opened with fair demand at last week's rates, but eased as the sale progressed and ended 2 to 3 annas per pound easier. The strongest feature of the sale were again the good liquoring CTC sorts from Upper Assam, and these were only 1 to 1½ annas per pound easier. Those Dusts with a grey and fibrous in-different appearance were difficult of sale, some having to be withdrawn without bids. Following rates were quoted pound:—Medium Doosars Dust Rs 2-4 to Rs 2-4-6; Medium Assam Grainy Dust Rs 2-6-6 and Best Assam CTC Dust

World Overseas

Britain

ECONOMIC PROGRESS IN INDIA SURVEYED

Reports By Exchange Banks' Chairmen

Economic development in India and neighbouring countries is surveyed by the chairmen of the exchange banks in statements issued in London this week in preparation for their annual meetings.

Tribute to India's Five-year Plan is paid in the report by the chairman of the Chartered Bank, Mr V. A. Grantham. During the year, he recalls, most primary products of the East enjoyed steady markets. "With export earnings more assured, the economic outlook of the East has shown corresponding improvement. Various development schemes intended to raise Asian living standards continue to make good progress, and economic prospects in the East during the present year do not appear unfavourable."

"It is encouraging," says Mr Grantham, "to review the progress that has been made during the first three years of India's five-year development plan. Already there has been a substantial improvement in India's agricultural production, and although estimates vary, it is likely that production of food-grains has increased by as much as 30 per cent."

Although in practice it is improbable that the plan will be completed within the stipulated period, Mr Grantham notes, various projects in progress are likely to gather impetus in the next two years. "This will, to some extent, save the Indian economy from the strain that would be imposed on it by a steep rise in development expenditure, and, incidentally, render necessary a lesser degree of deficit financing."

He adds: "A committee appointed by the Reserve Bank and presided over by Mr A. D. Shroff suggested that banks might endeavour to provide a measure of indirect long-term finance by subscribing to special institutions. This bank (the Chartered Bank), in common with the other Eastern exchange banks and in association with the Commonwealth Development Finance Company Ltd., and a number of insurance companies, has subscribed part of the capital of the Industrial Credit and Investment Corporation of India. The corporation should be able to make a considerable contribution to the financing of private industrial development in India, and this bank's participation is an indication of our interest in Indian economic progress."

Thus although there will be some regret for the decision which ended the bank's long association with the internal trade of China, evidence of its policies of adjustment and adaptation may be adduced in the growing field of the bank's activities in Southern and South-East Asia. Despite the difficult working conditions of the past year, the bank's balance sheet, expanded by about £17 million while almost three-quarters of the increase in current accounts and fixed deposits is attributed to the

purchase of bills and the granting of advance."

A general appreciation of the satisfactory trends of development in India and Pakistan was the keynote of the speech made by Mr J. K. Michie, Chairman of the National Bank of India. He was particularly happy to recall that "the pattern of events in our various fields of operations was distinctly more chequered." Thanks to good monsoon and long-term agricultural planning, India, he said, had succeeded in increasing considerably her production of foodstuffs for the second year in succession—"an achievement which is saving a large expenditure on foreign currency and, I trust, will be reflected in a rise in the standard of living."

He added: "The economic policy of the Government is balanced somewhat precariously between re-assurances to the 'Private Sector' based on doubt on the need for the development of industry with the help of foreign loans and investment and a trend towards socialistic thinking in the form of industrial development and ownership by the State". Referring to the new Industrial Credit and Finance Corporation, he said that it would be "of great help in the provision of financial aid which might otherwise not be readily obtainable for really sound projects or the further development of existing industries and companies".

Pakistan, however, had "an uneasy year", economically, and was now better off. He observed: "The food situation is at present satisfactory and there is even a considerable quantity of rice available for export, while the programme of industrialisation has made steady progress. One result of this is a large reduction in the export of cotton from Karachi, a crop which previously almost wholly went abroad but 50 per cent of which is now to be consumed locally."

The jute export trade of East Pakistan, which is a vital part of its economy, was recently somewhat disturbed by the cancellation of the licences of 13 important shippers, on the grounds that they had contravened Government regulations. The situation is slowly being clarified but temporarily Pakistan suffered a loss of foreign currency through the delay in getting shipments effected."

Commenting on India's progress in recent years, Sir Kenneth W. Mealing, Chairman of the Mercantile Bank of India, referred to 1954 as being "the most successful for India in practically all spheres of activity since Independence". He said: "Internally, the food situation has vastly improved, the working class cost of living has shown some recession, and trade and industry have enjoyed an active year... India has become alive to the fact that the present increase in population necessitates urgent steps to increase agricultural production and industrial

capacity. To meet this situation the Indian Government have vast plans for irrigation, hydro-electric power, heavy industrial production, fertilizer plants and are now planning nation-wide rural and agricultural credit and banking facilities under the aegis of a State Bank now in process of formation. The growing use of fertilizers by the agriculturists and the gradual spread of family planning are two important steps towards meeting the problem of increasing population."

Viewing the trends in Pakistan, he observed that the economic situation, which had improved in 1953, showed some signs of deterioration. At present, however, he added, "the internal financial position of Pakistan appears to be sound, and very considerable industrial advances are taking place under the Pakistan Industrial Development Corporation under the efficient guidance of Mr Ghulam Faruque which has 24 projects in hand involving an investment of Rs 70 crores and including ship-building, heavy chemicals, paper, cement, sugar, heavy engineering, textiles, jute, pharmaceuticals and petroleum and natural gas. Concerning the latter, the large gas-field at Sui is likely to be the most important single factor aiding the economy of Pakistan which has so far occurred."

Shortage of foreign exchange is, at present, a serious problem, but when American aid starts coming forward this should result in a considerable saving in foreign exchange which in turn will enable Pakistan to spend more of its own foreign earnings on consumer goods thus bringing about a reduction in the cost of living. The food position is far more comfortable; indeed in 1954 Pakistan was a substantial exporter of rice and it is not anticipated that there will be any shortage of grains."

In the area of the Eastern Bank's operations—Iraq, the Persian Gulf region, Aden, Malaya, India, Pakistan and Ceylon—the report of the chairman, Sir Evan Meredith Jenkins, records a satisfactory year's working. "Some improvement in trade is shown by the value of confirmed credits opened."

Of India's Five-year Plan, Sir Evan Jenkins says: "Execution is still somewhat behind the programme, but it is understood that in 1954-55 progress has been more rapid and is likely to be maintained in 1955-56". He goes on to instance the considerable increase in food-grains production, and recalls the opening of the Bhakra-Nangal project. "As this and the other river-valley schemes come into full operation, the permanent effect of the plan on the country's food supply will be apparent."

Sir Evan notes that the Industrial Credit and Investment Corporation of India "is to receive loans from the Government of India and the World Bank; its share capital is being subscribed by private capital in India, the

United States, and the United Kingdom—including, in the UK, exchange banks."

Reviewing business conditions in India during the past year, Sir Evan finds these remained reasonably good, with some liberalizing of import quotas and a steady off-take from fairly well-stocked markets.

"With a favourable balance of trade, a notable increase in external assets, and a cash surplus at the end of the official financial year, Ceylon did very well in 1954", says Sir Evan.

Reviewing "another eventful year" in Pakistan, the Eastern Bank chairman says: "No very marked improvement can be expected in 1955, though the underlying position is by no means bad. Resources are being developed on a

large scale, and the food situation has been easy enough to permit fairly substantial exports of rice".

*

Tribute to the "realism" with which India had faced economic facts was paid by the chairman of the Hong Kong and Shanghai Banking Corporation, Mr C. Blaker, at the bank's recent annual meeting in Hong Kong.

In a statement reviewing the bank's operations over the past year, Mr Blaker said: "Economic assistance is greatly needed in South-East Asia, and the available capital is limited. The Colombo Plan was the first in the field, and has proved generally acceptable throughout Asia because it has not been suspect on account of any national or political tinge."

Mr Blaker recalled that the British Foreign Secretary, Sir Anthony Eden, had said: "Economic development is the key to all that may follow in South-East Asia." This was a fact, the chairman remarked, "of which all Asian governments are fully aware".

Some were already financing part of their development programmes by budget deficits, but "if internal finance cannot be raised for development needs, the safest way out of the difficulty is to seek external finance, either private or governmental."

Referring to the establishment of the Industrial Credit and Investment Corporation of India, the chairman said: "Here we see a promising international-cum-private investment concern which, if successful, may well prove to be a

model for similar ventures in other Eastern countries. I am glad to say that we are one of the British banks that have taken up shares in this corporation."

Without blinding our eyes to the trend of events in the East", Mr Blaker concluded, "we feel confident that British bankers still have an important part to play in Asia as elsewhere. New measures are being adopted for the mobilization of capital to assist industrial development in the free countries of the East, and particularly in the area of the Colombo Plan countries."

In these areas the expansion of trade is growing rapidly, and will continue as the countries increase their development rate and raise their standards of living. We are well aware that we must continually adapt ourselves, as we have done in good times and in bad throughout the past 90 years of the bank's existence. And you may be confident that we will do so."

USA

ASIA-AID PLAN

By GUY SIMS FITCH.

With the return of Foreign Operations Administrator Harold E. Stassen from a three-week visit to the Far East, the spotlight this week is on the long-rumoured new programme of economic aid to that region—a programme which has been in preparation for a number of months.

Latest reports confirm earlier appraisals that this may well be the start of a long-term and co-operative effort to raise living standards in free nations from Afghanistan to Japan. And it is hoped that European nations can join the United States and the Asian countries in this effort.

It also has become clear, as indicated previously, that the projected Asian programme will bear little resemblance to the four-year Marshall Plan that helped revitalise free Europe's economy after World War II. While many details still have to be worked out, it is quite certain that the Asian programme will call for no such initial sum as the amount appropriated for the first year of the Marshall Plan in 1948.

What sum the Eisenhower Administration has in mind may become known in three or four weeks, when the President is expected to present the programme to Congress. Information here is that it will be close to the \$800 million made available for Asia in the current fiscal year ending June 30.

Preferred method of financing, probably, will take the form of long-term, low interest loans, repayable largely in local currencies. This is believed to be the most effective means of stimulating the kind of basic development the Asian countries need, in contrast to the rapid reconstruction the Marshall Plan spurred in industrialised Europe. Grants also may be used, but chiefly when a loan would impair the

credit standing of a recipient nation.

Technical co-operation will be an important part of the Asian programme, whatever shape it may take. More than 50 countries and territories, including nine in the Far East, already participate in this growing effort to share technical knowledge and skills.

Much of the Asian aid, probably, will be handled on a bilateral basis. But such existing channels as the Colombo Plan which already embraces some 17 lands in the Asian and Far Eastern region as well as the United States and the United Kingdom, also will be utilized.

In addition, there has been talk of a regional fund to finance development projects involving two or more Asian countries. One of its purposes would be to finance the export of capital goods from Japan to South-East Asia—considered by many economists as essential to the balanced development of Far Eastern economies.

Behind administration thinking lies the conviction, also held by most experts, that economic development cannot be exported. The United States and industrialized nations in Europe can help, of course, particularly in stimulating the flow of needed new capital. It is noteworthy that US net private investment in South and South-East Asia has averaged only \$12 million a year in the nine post-war years. But the main effort and the main incentives must come from the Asians who will be putting the development tools to use.

Most heartening in this connection is the report Mr. Stassen brought back from his Asian visit. He pointed out on his arrival here that the free nations of Asia, through their own self-help programmes and their intelligent use of the aid already extended, are laying a firm foundation for a successful development effort.

Asia, of course, will not be the only beneficiary of US economic assistance next year, any more than in the past. Included in the approximately \$3,500 million in new foreign aid funds the Administration is planning for the fiscal year beginning July 1, 1955, will be sizeable programmes of economic assistance to less-developed lands in Africa and the Near East and Latin America as well.

All told, the United States has expended about \$50,000 million on foreign aid since World War II. The major portion of this has gone into economic assistance to help other peoples re-build their war-shattered facilities and develop their industrial and agricultural potential.

It is fully understood here that contributions of this kind can do more than foster economic growth in less developed lands. As these expand and diversify their economies, they can become increasingly important participants in a thriving world market, thereby furthering the prosperity and welfare of all.

Israel

GOVERNMENT revenue for the first nine months of the current fiscal year—April 1, 1954 to March 31, 1955—is approximately 75% of the estimates, and since experience has shown that revenue is always highest in the last quarter of the year, there is reason to believe that income will exceed expenditure by March 31.

At the end of December 1954 the Government had spent IL. 446,700,000 and had taken in IL. 443,100,000 during the current fiscal year, leaving a deficit of only IL. 3,600,000, which is already IL. 1 million less than at the end of the previous month.

Income tax is expected to exceed the estimated revenue from this

source by IL. 10,000,000, and among others, purchase tax, land improvement tax, and excise on various articles are all expected to exceed the estimates. On the other hand the revenue from customs duty will fall short of the amount anticipated.

The foreign currency revenue for the first nine months of the current fiscal year exceeded the estimates for that period by \$24.5 million and amounted to \$284 million. This increase was achieved despite the fact that receipts from the U.S. Grant-in-Aid amounted to only \$29.5 million instead of the estimated \$55.5 million which is three-quarters of the estimated \$74 million for the entire fiscal year. In the same period of the previous fiscal year foreign currency receipts amounted to \$260 million.

Israel's foreign currency debts at the end of 1954 totalled \$417.7m of which \$354m were Government debts and the rest Government guaranteed bonds

In his budget speech made in the Knesset (Parliament) on February 8, the Minister of Finance, Mr. Levi Eshkol, announced that a concentrated effort was to be made to encourage mass savings, which should be directed into channels of investment. He also mentioned that a savings project was to be organised with the aim of enabling people to take root in the country by acquiring their own apartments.

A housing scheme to be financed through savings has now been drafted by the Ministry of Labour and submitted for approval to the Ministerial Economic Committee. It is hoped that the scheme in its

MORE CRORES FOR PROSPERITY

NEW INDIA CELEBRATES ITS SILVER JUBILEE YEAR: The Company signalled its 25th year of life business by underwriting a record new business of Rs. 43 crores and more, in the year 1954.

NEW INDIA'S RECORD:

During 1954, the Company wrote New Life Business of about Rs. 12 lacs daily, as against Rs. 5½ lacs in 1953 and Rs. 2¼ lacs in 1947. Thus, the NEW INDIA has recorded the most dynamic progress achieved by ANY Life Insurance Unit ANYWHERE in the world.

For this magnificent record, the Company expresses its deep gratitude to the public for their co-operation, and to its Field Force.

IMMENSE POTENTIAL:

And yet, more and more crores can be harnessed to the nation-building tasks. For, there is an immense potential for the growth of Life Assurance in India—AT LEAST 10 TIMES MORE. The NEW INDIA, in keeping with its unique record, is pledged to contribute

its utmost to the progress of Indian Life Assurance.

DEDICATION:

The Company's trained representatives have dedicated themselves to bring to every hearth and home in the country a Life-belt of Security. We invite you to avail of their expert advice and services.

11/1111 ACC-543

final form will be completed and approved during March when it is intended to invite the participation of the public. In its present form the building of three different categories of flats is contemplated which will range in price from a minimum estimate of IL. 4,800 to a maximum of IL. 7,200. A person wishing to acquire a flat through this saving scheme will be required to make a down payment of from IL. 500 to IL. 1,000, depending on the cost of the flat, and thereafter he will be required to make a monthly payment of IL. 25 until threequarters of the total

cost has been paid when he will be given occupation of the dwelling. Every participant in the scheme will be granted a mortgage of IL 2,800, irrespective of the category to which the flat belongs, IL 2,000 of which sum coming from Government funds.

Building of the first houses in the framework of this scheme is to start in 1957, and it is contemplated that a maximum of 5,000 units will be built each year. The scheme is intended primarily for persons now living in temporary or slum areas, to assist veteran agricultural settlements and settle-

ments in the development areas, and for young people reaching marriageable age, and at present it is estimated that some 60,000 units will be required to cover all these categories.

Two other savings scheme will include the possibility of acquiring plantations now being planted by the Government through a similar savings scheme, as well as the possibility to invest in productive enterprises which rank as national utilities and which will issue special shares to be acquired in this way by the public.

A consignment of citrus concentrates worth £65,000 shipped from Haifa at the beginning of February was the first part of a 1,500-ton order for citrus by-products from the British Ministry of food.

Shipments of canned fruits, vegetables and juices will no longer be exported bearing the names of the individual canning factories from which the products originated. In future all exported canned juices and fruits would be sold under the newly adopted trade name of the Association—"Jaffa Gold".

No exports will be approved with this name by the Association until the consignment has received a clearance certificate from the Association's test laboratory.

During 1954 citrus by-products to the value of \$2.6m were exported, as well as canned fruit and vegetables worth \$345,702.

Seventy-five per cent of these exports went to Great Britain, the rest being divided between France, Czechoslovakia, Finland, Denmark, Germany, Norway, Sweden, the United States and several other countries who between them bought only 2.6% of these exports. Over 81% of the value of these exports was sold for hard currency, 14.3% being sold under trade agreements and 4.4% to "clearing countries".

At the end of its first year of production the American Israel Paper Mills Ltd. of Hadera—an enterprise involving an investment of \$3.7 million and IL 600,000—was exceeding its scheduled level of production—40 tons a day and 1,000 tons a month—having manufactured 1,063 tons of paper in December 1954, with a daily output on certain grades reaching as high as 48 tons. Its total production during the first year of operation was 7,613 tons of paper of all kinds.

The plant is now entering a new state of expansion, which it expects to complete by mid-1955, and which will enable a daily production of 75 tons. With this projected expansion the plant expects to be able to supply 40% of all local requirements of paper during 1955.

A Central Institute of Industry has been established as an affiliate of "Hevrat Ordini", the General Co-operative Association of the General Federation of Labour (Histadrut), which controls all economic enterprises directly or indirectly affiliated to the Histadrut.

The Institute has been set up to co-ordinate the various industrial branches of the Labour sector, to establish a joint Export Company, to co-ordinate the import of raw materials, and to deal with problems of efficiency and productivity, industrial management and vocational training. The Institute will also act as the representative body of co-operative industry in its relations with Government, with industries of the private sector, and with the various economic institutions of the country.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".

I BELIEVE that the simplest explanation of the overwhelming vote for the Congress in the Andhra elections (whose domestic significance I promised to discuss this week) is also the truest explanation. As I indicated last week, the perspective of this election has been somewhat distorted by the exaggerated interest attached to it owing to accidents of the cold war. All kinds of meanings were read into the victory, and reasons adduced for the outcome ranged from the fantastic to the diabolical. It was freely stated, for example, in certain circles, that the victory of the Congress was due to the rather curiously timed (from the Communist point of view) testimonial to the Nehru Government from the Pravda. Though it is a fact that the Communists were seriously embarrassed by this unsolicited hit to their opponent from their oracle, and the Congress tacticians made good use of it, it is silly to consider it in any way decisive. On the other hand, the Praja Socialist air of fastidious disapproval of the electioneering resources of large parties—although politics were a parlour game—is either hypocritical or simple-minded. Nehru's personality, of course, is a comforting alibi for parties that have failed to score, since it can always be made out that the Congress won because of him and not because of anything else it had to offer. This is a flattering enough unction to lay on bruised self-esteem; but, as an explanation of the Andhra results, it is inadequate. Why not, then, accept the simplest explanation—that the policy of the Congress as enunciated at Avadi on the eve of the elections was what converted the voters to the conviction that the Congress as a national party, despite its local shortcomings, would deliver the goods? I know

pundits will jump up, and find a hundred reasons to disprove this contention; but it seems to me that any other explanation involves far more unproven assumptions than this hypothesis of mine.

The affirmation by the Congress of faith in what has been called, rather loosely, "the socialist pattern of society" at Avadi has taken the wind out of the sails of many a nominal socialist party in the country, each of which was claiming a prescriptive right to the creed. The original compact between the various components of the United Congress Party was, no doubt, motivated by a common opposition to Communism. But the subsequent merger unconditionally of Ranga's party with the Congress shows that the cementing factors had their positive aspect of a community of ideas. It is also reported that many members of the Praja Socialist Party are contemplating a return to the Congress; and the Forward Block has already decided to merge itself with the Congress. I do not rule out the motivation of opportunism in all these acts, for, politics is at best a sordid game, and you cannot play it long without coming to terms with the cruel and cynical demands, compromising your notions of sea-green incorruptibility. But it would be superficial to think that the game can be played without any regard to fundamentals of some sort. So, it would be reasonable to read in the current return to the fold of the prodigals some kind of a recognition of the new determination of the Congress to work out the welfare of the people on lines which they recognise as their own.

Now, this socialistic pattern of society, which the Congress and the Government have declared as their objective, need frighten no one. Confusion on this issue has been wide-spread largely because of the tendency to stratify twentieth century reality in a linguistic framework that would have served the purposes of the nineteenth century adequately, but which is quite unequal to the task of intelligibly expressing our problems and their solution. It would be such a help in discussion if we could make do without this dead linguistic lumber, and state our

aims in terms of concrete targets. Now, socialism is defined by Mr Nehru as nothing more and nothing less than "social control and/or ownership of production." If we forget jargon, and address ourselves to the real tasks, our aim in the course of the next generation is to bend our energies to the exploitation of our resources to the maximum extent so that enough wealth may be produced, and so that this wealth may be shared in an equitable manner. I cannot imagine anyone objecting to this ideal. Well, then, I put it to you that this cannot be done without some kind of planning, which is the same thing as "social control." If maximisation of production is the end in view, then it must be clear to the meanest intelligence that neither the private sector, by itself, nor the public sector, on its own, can take on the job single-handed. You have, therefore, to divide the job more or less equally. This is exactly what has been planned tentatively for the Second Five-year Plan. Take steel, for example. The six million tons that are the target for the Second Five-year Plan cannot be produced either by the Government or by the private industrialist interests acting individually. In other words, the Government and private enterprise have, by sheer logic of circumstances, to accept the inevitability of the complementary nature of the two broad spheres of production. There is every indication that the Government have done so, and are not hamstrung by any doctrinaire commitments on this issue.

Many people are heard to complain that the Socialistic ideal of the Congress is either a fraud or is so vague that it cannot at all be precisely defined. This is a curiously intellectual complaint, for, only in the world of pure mathematical logic can you have a self-complete and explicable closed system. In real life, ragged edges and loose ends are inevitable, and, in dealing with human problems, it is better to have these loose ends rather than fit human beings in pre-conceived theories of social behaviour and economic determinism. Mr Nehru is no leisurely writer of text-books on socialism, but a man in a hurry to get his country moving towards prosperity; and he has the good sense to see

the need for coming to terms with stern economic facts; but, at the same time, he is determined that nothing should be allowed to block the way of general welfare unless the violent removal of the obstacle would take more time and energy than is worth the bother. He would, in such a case, rather make a detour and get going. Critics find his assertions about the socialistic ideal exasperatingly non-committal because they (the utterances) have the virtue of being sensible and pragmatic. Now, Mr Nehru did not talk about socialism with as much insistence two years ago as he does today. Why? I think the reason is that he has a pressing premonition that, unless something is done to raise the standard of life of the large masses of our people in the next ten years or even five years, it may be too late to talk about democracy to them. His experience of the First Five-year Plan has shown him that only by extension of planning, which is the same thing as social control of production, can we at all get somewhere in realising this idea. Hence this insistence on socialism which, he explains incessantly,—I think,

'Phone—BANK 2321 (8 lines)

rather too incessantly—does not involve any kind of doctrinaire expropriation of sources of production, for the simple and sensible reason that it would hamper production and thus defeat the ultimate aim.

There is some indication that the interests directly affected by a too rigid interpretation of socialism have seen the inescapable nature of this logic and have come to see the whole question in the context of a national regeneration that

offers a remarkable scope for personal initiative. As "hard-headed" businessmen, they have always been accustomed to reduce a thing to its bare essentials. In such a reckoning, they have come to see that, at the present moment, there is no possibility at all of state initiative in production elbowing them out of the scene. Further, indications of positive desire on the part of the Government to aid their endeavours by budgetary measures like the Development Rebate have reassured

them. On the whole, it must be said that business and industrial circles have taken the socialistic ideal of the Government and the Budget that was framed in the light of such an ideal with remarkable lack of fuss.

There is, however, evidence that a rather curious development is taking place in another quarter. One does not see it reported in newspapers, but one notices it in private grouses and semi-public utterances at a club or a social

gathering. I am referring to the discontent of the upper middle classes about the inevitable sacrifices that they are obliged to make in the fast-changing economic landscape in the country. I have heard, within the last twenty days, bitter complaints about the Budget, how unfair and crippling it has been and how its provisions have been designed (with malice aforethought) to impoverish them. The managerial class in the widest sense of the term, including administrative personnel and professional men of moderate success, have seen in the Budget the beginning of the end. I say this is curious, because I have been told by text-books of sociology that this is the age of the managers, and if any one is assured of a place in the sun in the present-day society, it is the member of the professional and managerial class who has, in the detestable jargon of the day, the "know-how." But apparently a section of the Indian managerial class, despite its considerable other accomplishments, is curiously illiterate in sociology, and has an old-fashioned passion for money and none at all for the newer and more exciting source of power, namely, responsibility. And, though I have every sympathy with their difficulties arising out of inelastic sources of income and unexpected adjustments, both psychological and financial, in a climate of increasing egalitarianism, I do believe that they have not much of a case on merits. In a country where the poorest has to make do without the barest necessities, it is scandalous that a man should plead poverty with two thousand a month. And, with the much advertised grievances regarding the taxation of perquisites, I have no sympathy at all. It is a lucky thing that they had been getting away with it all these days, the sums involved escaping taxes at both ends. I can visualise hard cases, but I think the difficulty can be overcome by suitable readjustments of overt remuneration of the employee concerned.

The broad fact of the situation which the Andhra elections have underscored is this: The masses are willing to give a chance to those sober forces in the country which will work out their salvation in a peaceful way. This they are prepared to do at considerable self-denial and by a courageous and responsible resistance of tempta-

Gateway Gossip

What Does Trombay Mean?

DURING the war years, a statement that was heard quite often from the evacuees who had travelled the tortuous route through Assam to safety was "Burmah's Hell." And that was an irrefutable statement of fact. Death and disease took a heavy toll, and nightmares of the Hell that was Burmah were so deep impressed upon some of the survivors that theirs became akin to a chronic condition of fear. And, at that time, those that were journalistic wags tried to maintain that Burmah's Hell was a mispronunciation even as the "nowhere" was enunciated by the youthful student of English as "now here."

But let us make no mistake about it: They that are in their employ rather consider that Burmah-Shell is heaven on earth. I think there are few managements in India who are, as it were, as employee-conscious as Burmah-Shell are. If I have heard it right, the allowances that may be earned by the fortunate employee are almost of a prodigal nature. The employee-consciousness of Burmah-Shell is once again in evidence, with the formal inauguration of their refinery at Trombay.

The Trombay refinery, by Indian standards, must be termed a gigantic venture. Said to cost some Rs 30 crores, it would represent one of the largest single investments in industry; and it may also claim to be the largest single foreign investment in India. But such alone are not the adjectives that can be used. It is proper that we address ourselves the question that has been cropping up regularly in the latest series of Burmah-Shell advertisements: What does Trombay mean to me—that is to the Indian citizen and to India?

The bare facts (figures would be a more apt word) themselves make an interesting reading. The total cost, I repeat, is of the order of Rs 30 crores. During the peak period of construction, as many as 14,000 workers were on the job.

Before construction could be begun, some 600,000 cubic yards of earth were moved. Steel used amounted to 80,000 tons (this is roughly 2 months' production of IISCO!). Concrete gobbled up by the buildings and foundations measured 30,000 cubic yards. There are 160 miles of pipelines and 12 miles of road at the site. Water for cooling that would be drawn from Bombay Harbour is 200,000 tons per day. Trombay will, moreover, require 1 million gallons of fresh water each day. The annual intake capacity of the Burma-Shell refinery is said to be 2 million tons of crude oil. From this crude oil, production of motor spirit will be 156 million gallons; 72 million gallons of kerosine; 37 million gallons of high speed diesel oil; 33 million gallons of light diesel oil; and 160 million gallons of furnace oil, not forgetting that this refinery will be the sole source of bitumen in India. One final figure, which bears testimony to the eagerness with which a Burmah-Shell job is sought: applications for staff posts number as many as forty thousand.

So, in one sense, we might say that the meaning of Trombay to the Indian citizen lies in the petrol and the kerosine, in diesel and furnace oils; in the employment that was created in the construction, in the employment that now is available at the refinery itself. But there is more, much more to it than this.

I do not quite know the proportion of refining that will be taken on hand by each of the three refinery companies. But I understand that the Burma-Shell refinery will account for something better than half of total refinery products in India. In as much as the total investment on the three refineries is estimated between Rs 50 and Rs 60 crores, and since the Burmah-Shell refinery has cost roughly Rs 30 crores, there is the confirmation that Burmah-Shell may account for a little more than half of refined products in India. Another fact is that, when all three refineries are in production, as much as 80 per cent of India's refined oil needs will be found indigenously. This, again, is an index of the important part that Trombay will play in the Indian economy.

What does Trombay mean to India? Not only that an industry, a key industry, will have been established which will make us self-sufficient in the commodity to the extent of roughly 80 per cent of our needs, but that foreign exchange of some considerable amount (representing the differ-

ence between the costs of crude oils and refined oils) will have been saved.

But we can measure Trombay's worth in more than concrete foreign exchange or (to put it correctly) liquid oils. It is to be hailed most importantly of all because it may well represent the changing attitude of foreign capital in respect of India. The refineries agreements have been exemplary of what co-operation can achieve, of the Indian Government's encouraging attitude towards foreign investment. The fact that both the Standard Vacuum refinery and the Burmah-Shell refinery were completed ahead of schedule (in the face of difficult weather conditions), would suggest two further conclusions of not a little significance.

In the first place, I think that the achievement of completing the projects well ahead of schedule should indicate the efficiency of the Indian worker. We are fond of believing that the productivity of the Indian labourer compares poorly with that of his counterpart in other countries; and this is no belief mistakenly held. For the same reason, it may, perhaps, also be true that Indian labour is not as inexpensive as it is touted to be. But these two factors have obscured one another of greater importance, and that concerns the efficiency of the worker as such. Lower productivity may in part stem from the handicap of working on machinery that is near obsolescence. But, given the machines, and shown the way to work them, I don't doubt that the Indian worker can measure up to the standard of any in the world. As such, the first conclusion to be drawn from the speedy execution of the refinery plans so far would, in my view, lie in the discovery that, given the chance, the Indian worker is an efficient worker.

The second conclusion relates to the wonders that know-how can bring. For, if, on the one hand, the efficiency of the Indian worker contributed towards the completion of the refinery ahead of time, it was necessary, on the other hand, that the know-how represented by the technical supervision should have been as expeditious in giving the directions. In other words, these two conclusions may be summed up as signifying the achievements that Indian efficiency and foreign know-how, working in concert and co-operation, are capable of.

When the Burmah-Shell refinery was formally declared open last week by Sir Sarvapalli Radhakrishnan, the keynote of the speeches made on the occasion referred to co-operation. First,

it was the turn of Mr J. F. Sinclair, Chairman of the Board of Directors of Burmah-Shell Refineries, to request the Indian Vice-President to declare the refinery open. And, in so doing, he had words to say on foreign co-operation which are worthy of careful note by and in New Delhi:

"Free enterprise and an outstanding liberal Government have achieved something which I believe is a vindication of a principle, which any country rejects at its peril. Quite simply, it is that we, the business men and the State, have complementary—not conflicting—roles to play in the development of the country. And the more this is recognised, the quicker will be the inspiring type of progress we see around us today."

If Mr Sinclair can refer to a Government as being "outstandingly liberal" if it provides and approves of facilities such as were given for the construction of the oil refineries in India, we may be sure that this is an attitude of Government which must be taken to mean that India is sympathetically disposed to consider any plans that call for co-operation between India and foreign capital. But, if we are to interpret Mr Sinclair's words as holding a brief for, to coin a phrase, "uncontrolled free enterprise," Sir Sarvapalli quickly supplied the answer. "Unfettered free enterprise," he said, "is comparable to a wild growth of a forest where wheat and tares are mixed together." Thus, the Government's liberalism would be of a sort that, nevertheless, ensured a "garden laid out on a set pattern" instead of the "forest" that he talked of.

We may, I think, continue the lines of imagery that the Vice-President indicated. At one extreme, there is the danger of a forest wherein the weeds and the tares will choke out the flowers (Continued on page 642)

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

The Pulse of Industry

A THERMOMETER is a useful instrument for measuring the temperature, and therefore for discovering the state of health, of a person. As far as concerns the body that is business, it is customary for reliance to be placed upon the statements that are issued by leaders of industry. It has long been the fashion for leaders of industry to make known their views of the economic situation in their country in the speeches traditionally delivered at annual general meetings of companies. In India, however, there has not been as much of keenness to publicise such statements. And, when they appear, press comment takes the form of a review of the speech rather than as an understanding analysis of it. If the statements of company chairmen are to serve a useful purpose, in that they should reveal the inner thoughts and mental attitude of the World of Business within the country, it may be necessary that more attention was paid to such facet of studying a chairman's speech.

A second factor that obtained in India was the relative indifference to publishing such speeches for the benefit of as large and influential a readership as possible. It is heartening to note that this trend now seems ended; and we are now given many more opportunities for feeling the business pulse of the nation.

In one of the most important fields in Indian industry, we had last week the expression of a statement of beliefs. At the last annual general meeting of the Kohinoor Mills Company, Limited, the Chairman, Mr. E. D. Sheppard, delivered himself of a frank and forthright tabulation of the factors which may be said to be responsible for disheartening the private sector. It is not necessary that we should here undertake to list what are undoubtedly the favourable aspects in the Indian economy. That such a responsible leader as Mr. Sheppard should have thought it fit, and should have considered it necessary, to air such views is a fact

which deserves the keenest study of the scribe.

While, generally, Mr. Sheppard is in a position to hall the 'definite improvement in economic conditions' within the country, he is troubled—understandably—by a number of factors. If, for example, there has been a progressive fall in the prices of foodstuffs, it would have been natural to expect that the cost of living index would have also declined. But the fact in Bombay is to the contrary. And, since the dearness allowances that are required to be paid by the industry are dependent upon the

World of Cotton and Gateway Markets were not received from Bombay and, consequently, these two features are not published in this issue.

levels at which the cost of living index rules, we can appreciate that he would be troubled over the matter. Mr. Sheppard said: 'I for one cannot see any reason for this increase in Bombay City alone and hope that Government will institute a searching enquiry into the method of compiling this index figure.'

It is understood that this is a contradiction, a paradox, which is difficult to explain. The authorities in the State would do well to institute the sort of searching enquiry that Mr. Sheppard suggests.

Mr. Sheppard's next point has regard to the 'unusual severity' of the Budget proposals. He has referred to the 'progress made by the United Kingdom' since the income-tax reduction of two years ago in that country. As he puts it, the recent proposals of the Finance Minister have brought a hopeless feeling to business executives in the country. It is a pity—and it is not a fact that we can afford to be complacent about—that Mr. Sheppard should have such feelings. But, in the context of the socialistic pattern of society that we have set for ourselves, and having regard to the fact that there is as yet not quite so clear an understanding of what this phrase means we may perhaps be in a position to appreciate the financial and taxation policy of the country only after some time.

One other grievance that Mr. Sheppard had has since been set right—partially at least—by Government. The reduction of excise duties on some varieties of cloth would, we may be sure, be a measure such as Mr. Sheppard asked for.

Finally, Mr. Sheppard on the Kohinoor Mills itself. Mr. Sheppard reveals that 'the programme of modernisation and rehabilitation'

is 'nearing completion' and 'the benefits which it is hoped will be derived therefrom should soon become apparent.'

It may be said, then, that the very fact of an expression of such sentiments by a leader of industry of the stature of Mr. Sheppard should be taken serious note of in New Delhi. That some of these are reasonable grievances, it cannot be denied. That some of these grievances can be redressed is also a fact that seems irrefutable. Except in the matter of personal taxation, the points that trouble Mr. Sheppard could, we imagine, be satisfactorily cleared up.

A Significant Group:

The conference of representatives of small-scale industries held recently at Ahmedabad under the auspices of the Gujarat Chamber of Commerce has served to air their grievances, some of which are peculiar to the locality. The small and medium-scale industries in and around Ahmedabad mainly fall under three heads: textile accessories, engineering auxiliaries and dyeing and printing. These employ over 10,000 people with an invested capital of about Rs. 2.2 crores on the Gujarat Chamber's estimate. There are no fewer than 464 units of textile accessories; the section producing pickers, bobbins and shuttles claims to supply 80 per cent of the country's needs. The engineering units, about 250 in number, are practically the monopoly of hereditary blacksmiths who produce iron and steel goods like cycle spare parts, sewing machine parts, small-horse-power engines, electric fans, centrifugal pumps etc. Another thriving small-scale industry is the manufacture of 'isab-gol' exported chiefly to the US and is a valuable dollar-earner.

These industries with an importance that is much more than local are faced with bottle-necks stemming mainly from lack of proper organisation. Some of them are in the power of the Government to remove, the problem of adequate facilities for rail transport for instance. Bombay's Finance Minister who attended the conference drew attention to two forthcoming events of importance to the industry; one is the proposed multi-purpose Institute of technology and the other the national productivity centre under the auspices of the ILO both in Bombay. But complaints such as inadequate supply of raw material, paucity of finance, difficulties about fuel, etc. make one feel that they are largely inherent in the undeveloped techniques of tap-

Private Sector's Performance in Five-Year Plan: An Eye-Opener

THERE is a general impression that the First Five-Year Plan has assigned a very insignificant role to industrial development; and that private enterprise has failed to come up even to this modest expectation. The big plans and the large outlays on the multi-purpose projects for irrigation and power generation have monopolised attention; and hardly any notice has been taken of the detailed schemes and targets envisaged in that section of the Plan which dealt with 'Programmes of Industrial Development'.

While the grandiose river valley schemes have received recurrent publicity—adverse in the early stages, and superlatively flattering in recent months—and while, from the Prime Minister downward, there is a kind of propagandist zeal in telling the public the story of the gigantic effort and the stupendous achievement in this respect, the man in the street who is content with headline news has been led to identify the First Plan with exclusive activity under State auspices. So far as he could make out, hardly anything was happening in what has come to be repeatedly referred to as the private sector.

Nor, till recently, did the stalwarts in the private sector think it worth while to put the man in the street in possession of the true facts. On the other hand, if the Government version tended to over-emphasise the progress in the public sector, the version of the private sector was to play down its own plans and projects and to make out that these plans could not make headway in the absence of a positively helpful policy on the part of the Government. This was in line with tactics designed to keep alive a formidable list of grievances against the Government alike for what the Government did, and did not do. Private enterprise revelled in self-induced sulks, and derived a vicarious satisfaction in predicting that the country was going to dogs.

That mood has now passed. Private enterprise is now resolved to underscore and emphasise the second word in its description. It has now recovered its self-assurance and intends to make its contribution to national economy in good heart and with abundant zest. The transformation in this regard can be clearly seen by the keen and observant student of current affairs. Mr. B. M. Birla,

from his position as retiring president of the Federation of Indian Chambers of Commerce, expressed the new mood in noble language and in positive terms: 'if the good intentions behind our economic policy as adumbrated in the Resolution on the subject at the recent Avadi Session of the Indian National Congress are to take concrete shape within a measurable period of time, then forthwith the forces of creativeness must be liberated. If the impulse to creative activity is so liberated and quickened, then soon a strong and prosperous India will emerge and play a more effective role among the comity of nations'.

Thus determined to pull its full weight in the final year of the First Plan and in the five years of the Second Plan, private enterprise has realised, at the same time, that its performance in the context of the First Plan was quite impressive. That, in these four years, it did not make much of a showing, was all self-delusion. It was, likewise, a popular fallacy. Let the past record be examined; and let the results of such a study be made public—the business community particularly, and the public in general, will thereby be enabled to get a true measure of what has so far been achieved in the private sector.

Such a study has recently been undertaken by the Federated Chambers; and its results are set forth in a memorandum released this week.

The performance of the private sector in the plan period is examined, first, in respect of increases in installed capacity; second, in terms of industrial investments; and, third, in reference to actual industrial production. It may be recalled that the Five-Year Plan, in the section 'Programmes of Industrial Development,' laid down expansion plans for forty-two industries. As some of these are predominantly in the public sector and, in regard to a few others, full data were not available, such industries could not be included in the Federation's analysis. On the other hand, more than one kind of manufacture, and this has the effect of increasing the list of manufacturing industries that are relevant for the purpose on hand. For these reasons, the Federation deals with forty-seven manufactures, as compared with forty-two industries embraced in the Plan.

As regards these forty-seven manufactures, the results are summarised in two tables, the first table dealing with the annual rated capacity as on March 31, 1954, and the second with the annual rated capacity as expected on March 31, 1956. The latter table is based upon the information gathered in respect of licences granted between March and September 1954.

Table I establishes that, in more than 50 per cent of the items covered, the performance in the first three years of the Plan exceeds sixty per cent of the target indicated for the five-year period. In four more cases, the performance is 40 to 60 per cent of the planned increase.

Table II gives a yet more reassuring picture. It reveals that, in the case of eleven more items, the targets laid down in the Plan will be realised ahead of the Plan period.

If Tables I and II are studied together, the conclusion emerges that, of the forty-seven manufacturing industries analysed by the Federation, targets will be achieved as regards thirty-five industries. Only twelve items show a shortfall. This, too, is apparent, rather than real. Thus, for example, in the case of finished steel, although the capacity reported at the end of 1953-54 represents only 22 per cent of the increase envisaged over the Plan period, it appears, from such figures as are available about the investment programme of the two main producers in the private sector, that the target will be more than fulfilled. Steel is again an exceptional case in the sense that 'expansion of capacity, by the very nature of the case, takes time and the "Programmes of Industrial Development" recognised this fact in indicating that the expansion programmes were expected to be completed only by 1957-58.

The Federation, therefore, stresses the conclusion that, on the whole, so far as installed capacity is concerned, in almost all cases the expansion plans embodied in the 'Programmes of Industrial Development' have been completed or are on their way to completion and that, in the few cases where there is a shortfall, it is due to factors beyond the control of industry or other special factors.

If expansion in terms of installed capacity is according to schedule, it follows that expansion in terms of investment must, likewise, be in accordance with plans. This over-all conclusion is confirmed by the analysis the Federation has given; and there can be no justification for clinging to the belief that the private sector is meeting

with insuperable difficulties in securing the needed finance for the larger investments visualised by the Plan.

While it will be news, and welcome news with an element of pleasant surprise, alike to the Government and to the public to learn that the performance of the private sector has been very satisfactory in respect of the targets of installed capacity and in respect of the targets of industrial investment, there has been wide-spread appreciation, in all quarters, of the proven fact that, year by year, industrial production has been steadily increasing. In broad terms, the index of industrial production, from a level of 105 in 1950, rose to 135.3 in 1953 and to 144 in 1954. That is to say, actual production in the industrial sphere has expanded by over 35 per cent in the first 3½ years of the Plan period. Bald statistics of this kind provide, however, only an inadequate description of the extent and many-sidedness of the progress.

For one thing, the industrial picture today is far different from that in 1946 when the relative weightages were determined for the compilation of the index. The practical effect is that the rise in the index under-estimates (a) the increases in production in industries which have been given relatively smaller weights, and (b) the diversification of the industrial structure. For instance, the Federation argues, cotton textiles has a weightage of 43.49 per cent in the construction of our production index and this is based upon the value added by that industry in 1946 as a proportion of the total value added by the 20 industries which are included in the production index. To the extent that important industries not included in these 20 have grown in the last 8 years and to the extent that the rate of growth of industries other than textiles is faster than that of textiles, the overall index of production with 1946 as the base will tend to under-estimate the rate of industrial growth. That new industries, such as, textiles machinery, automobiles, miscellaneous chemicals and dyestuffs, petroleum refining, wagons and coaches, etc., have either come to be newly established or expanded considerably is well known. But they do not find any place in our present index of production.

Attention has also been drawn to the better performance of some of the industries. While the textile index (1946=100) moved from 101.3 in 1951 to 122.7 in 1954, the upward movement in the case of certain other commodities which

North Indian Notes

A Star Lion-Tamer

Again and again, Sir Chintaman Deshmukh wins recognition and commands admiration as a star lion-tamer. Day after day, in both the houses of Parliament, he was faced with lions to his right and lions to his left, with lions in front of him and lions behind him, roaring and thundering. At the end of it all, he is able to say, blandly and sincerely "Thanks very much for many individual acts of kindness and tokens of understanding". The way he deals with the parliamentary simhas, one would think that this is what he has been doing all his life; that he is soaked in politics and skilled in debates through years of experience; that, in short, practice has made him perfect in this respect. As everyone knows, the special requirements of his early career demanded that he keep aloof from politics; that he refrain from the ready retort and sharp repartee. Political life for Sir Chintaman began at fifty-five; and he is just a four year old parliamentarian.

Unfitted by the earlier equipment, training and duties, and even by temperament, for the thrusts and counter-thrusts of the nation's sovereign debating society, Sir Chintaman has been easily at home in this exacting role and has conducted himself with a convincing blend of dignity, aplomb and assurance. He has never faltered or fumbled; nor has he ever over-reached himself. His has always been the right word at the right time, the right gesture in the right context. By universal acclaim, he is the round peg in the round hole; and, where seasoned politicians and veteran parliamentarians have not always succeeded in carrying the entire House with them, he has evoked the approbation of his colleagues and compelled the appreciation of his opponents. Wherein lies the secret of a deportment so correct, of a stand so poised?

It may be said, I think, that, just as Mahatma Gandhi proved that the highest truth is the most powerful diplomacy, Sir Chintaman has shown that courtesy in the statement of one's case and considerateness in rebutting the other man's case make for Parliamentary success. Add to these, a graceful spirit of humour, an informing, but not overpowering, sense of culture, apposite scholarship and an unerring instinct for values—and you have a sum-up of the reasons which account for Sir Chintaman taking to Lok Sabha as fish does to water.

The Finance Minister's reply to the five-day Budget debate is characteristic of him; if anything, he

has excelled himself. It has all the attributes and excellences which a model reply to a Budget debate must possess. Meticulous care in dealing with every important point urged by MPs; responsiveness to constructive criticism; readiness to make concessions where the facts justify; firm stand on the issues which are of fundamental import, these are traits that have made everyone feel that the discussion on the Budget has been most fruitful.

The Communists, aided and abetted by the PSP members, have suggested that the Budget panders Big Business; that it betrays solicitude for the capitalist interests; that, in short, it is a travesty or the much-publicised socialist pattern of society. These critics point out that, far from any leanings towards socialism, the development rebate and the concessions with respect to business losses confirm and ratify the capitalist bias. Sir Chintaman deals with such critics frankly and fully. The Communists and their friends will not be satisfied with a budget which does not relentlessly constrict, strangle and throttle private enterprise; and, in this attitude, they are consistent to the requirements of their ideology. But, the Government have to be true to their declared policy; and what is their declared policy? The Parliament passed the economic policy resolution barely three months ago; and the resolution clearly lays down that the country cannot, at least for some years to come, do without the private sector, for purposes of economic development. The resolution has not only affirmed that "there is such a place for the private sector but also made it clear that, as long as there is such a sector and as long as it is subject to overall social control, it has to be actively encouraged." And the Finance Minister added pithily and tersely: "Some of the provisions of the Finance Bill are calculated to do just this." Sir Chintaman regards this point to be so important that he reiterates the Budget standpoint in these terms: "I am sure all reasonable members will agree that this sort of criticism is somewhat misconceived, and that all that we are trying to do is to be a little more consistent and to carry out the policy honestly to which this House lent its support only a few months ago."

The Finance Minister also dealt with the critics who allege that private enterprise has been making large profits. If it does make large profits, how can the Government, asks Sir Chintaman, be con-

sidered blameworthy? How can it be otherwise if their aim to promote and accelerate the country's economic development is in fact being realised? If there is in fact such accelerated development, how is the private sector to be denied a place in it? Rather, is not the contention that industry is faring better now than before a complete vindication of Government's policy?

At the same time, the Finance Minister has given the assurance relevant to the issues involved:

"What is important was that this development of the private sector should not take place at the expense of the public sector or at the expense of the general public as a whole. About that I would assure the House that the Government are watchful and any steps that are necessary in this direction will certainly be taken. For example, if it happened after a lapse of time that certain individual units are making much larger profits because of certain windfall advantages as a consequence of the country's efforts at development then, certainly, the Government will not hesitate to take suitable action."

If the Communists have their ideology, and the socialists, too, have their own, they must not fail to realise that the Congress has, likewise, its ideology. The Congress, however, is not disposed to indulge in vague theories and prefers to fight shy of phrases and slogans which sound grandiose. So, the Congress will rather not talk of its ideology; it is modestly satisfied with a realistic policy. It is determined to carry out that policy so long as the Government in power is of members belonging to the Congress. Progress in the direction and implementation of its policy is sure and steady. Sir Chintaman has eloquently summed up the policy and the progress in these terms:

"Our objective is an egalitarian, egalitarian and progressive society, and to this end all the real resources available have to be harnessed. We recognise that men will not give of their best until structural relations in society conform to reasonable standards of equality. We recognize that institutional changes have to be made. The tempo of such changes may be slow in the beginning though I do not subscribe to the view that what has been achieved in the last few years is insignificant."

The abolition of zamindari and liquidation of other feudal elements, imposition of estate duty, substitution of institutional for private credit in rural areas, the rural credit survey amendment of the Company Law, the measures to control stock exchanges which are under way—all these represent an excellent beginning and they are portents of the coming times."

The new pattern is clearly and firmly emerging; but it is the essence of the Congress policy that the changes be effected peacefully and democratically. Those who urge haste are blind to the waste. Sir Chintaman, starting as a competent lion-tamer, ends as a consummate swimmer: "It is only an

inexperienced swimmer who has to make all kinds of violent movements of hands and legs to keep afloat; whereas a skilled swimmer remains more or less placid and inactive, but I am confident he will show better results."

So, with perfect justice, Sir Chintaman claims that his budget is the first, and a very significant, step towards the socialistic pattern of society which India is resolved to strive for and achieve.

*

Crisis in Agriculture:

The continuing fall in agricultural prices in the Punjab and the other North-Western States, where agriculture is the mainstay of the population, has called for constant vigilance from the top executives of the States. The topic is a recurring theme in the budget discussions of the Assemblies; which doubtless indicates the urgency with which remedial measures are enlisted. At Chandigarh, last week, the Finance Minister argued for checking the flow of food imports. PEPSU's concern is clearly reflected in the speedy discussion and the subsequent unanimous adoption, of two non-official resolutions—one urging the Centre to take steps to arrest the fall and the other to peg the price of sugarcane to a definite level. Similarly, in other States, the fall, if unchecked, threatens to bring about a complete collapse.

Dr P. S. Deshmukh reasons that the downturn is due to "unprecedented" production. But whether this is the only villain of the piece is doubtful. The problem seems to be too complex to be attributable to one particular cause. The measures to combat this trend should, therefore, be many and varied. In the first place, the Central Minister has stressed the usefulness of encouraging exports and State-purchasing. For the Punjab, particularly, a good deal is to be gained with the abolition of the food zone which now comprises Delhi, Punjab, PEPSU and Himachal Pradesh. The State Finance Minister has suggested the export of pulses, gram and cotton abroad, so that prices could be stabilised. As things are, there seems to be little need for weighing and winnowing the possible long-term effects of these measures on the state of the economy. The entire prosperity of the State seems to be at stake; and the abrupt steep fall spells disaster to more than eighty per cent of the State's population. A speedy redress of the unexpected catastrophic results of the fall is what is urgently needed in most of the States. In the attitude of the authorities, there is the assurance that such redress will not be unduly delayed.

North Indian Markets

Supply Outstripping Demand?

THERE are now facts and figures to prove that the current season will be a surplus one for Sugar. The production is estimated around 14 lakh tons and this will be augmented by imports to the tune of 6 lakh tons. The season's supply will, therefore, amount to 20.70 lakh tons, including the carry-over of 70,000 tons from the previous season. This will be further augmented by refining of raw sugar to the tune of 1.35 lakh tons. Thus, the overall supply will amount to 22.05 lakh tons. Against this, consumption may be estimated at 16.00 lakh tons, leaving a surplus in hand, to be carried forward to the next season of 6.05 lakh tons. This carry forward of about 6 lakh tons has now given considerable headache to the industry which expects the price of the commodity to fall to further lower levels.

It is generally believed that domestic production plus imports of foreign sugar will exceed consumption in the country. Last year's record consumption at about 18 lakh tons was due to a switch by consumers from gur to factory sugar. In this connection, the President of the Indian Sugar Mills Association has stated that the overall consumption of sugar, i.e. sugar, khandsari and gur, in the country has not increased and the sudden jump in the consumption of factory sugar last year is a freak phenomenon caused by a sudden fall of an equal quantity in the production of gur during that period. He has given expression to a wide range of reactions on the behalf of the industry—distress at the increase in the excise duty, dismay over the proposal to start refineries, apprehensions regarding the fairness and practicability of new cane price formula and dissatisfaction at the mode of sugar releases from factories.

The Union Food and Agriculture Minister, to whom the long list of complaints and representations was presented, has managed on the whole to give reasonable satisfaction except, perhaps, on the score of the excise duty. He has announced that the question of a price formula for cane—linking the farmer's price with the sucrose content of the cane as well as the factory selling price of manufactured sugar—has been referred to an expert committee for further examination. He has reiterated the decision to stop all sugar imports after three years. Because of the uncertainty about consumption, the Central Government have deferred their decision on the setting up of sugar refineries. If it is ultimately decided to issue licences to the refineries, they will function as

'shock absorbers' in the event of the production in the country falling short of consumption. He adds that, in no case, the sugar produced by the refineries will be allowed to compete with the indigenous sugar.

Meanwhile, conditions in sugar markets continue to remain dull with mill delivery prices showing a further drop of As 4 per maund from the previous week's levels. In the Hapur market, business remains restricted as traders have been following a 'wait and see' policy due to the rumours that the Government might reduce the proposed increase in the excise duty on sugar. The supply position is reported to be very satisfactory and mills are getting enough cane for crushing. The following mill delivery rates are quoted per maund:—Jaswant Rs 30-3; Simbhauli Rs 30-4; Mowana Rs 30-12; Daurala Rs 31-12; Amroha Rs 29-9, Binjor Rs 29-10; Mansoonpur Rs 31-12 and Rampur Rs 33-7. The Meerut market continues to rule weak with practically no business and prices have recorded a decline of another As 4 per maund. Small grain quality is quoted around Rs 30 per maund, while bold grain is quoted at Rs 31-14. In the Delhi market, rates have shown a modest setback on lack of buyers against better arrivals.

The production of crystal sugar, in the current season upto 26th February 1955, amounts to 9.67 lakh tons and arrivals to 2.80 lakhs tons as compared to 7.95 lakh tons and 1.93 lakh tons respectively in the corresponding period of last season. Despatches of sugar from factories during the same period were 2.49 lakh tons as compared to 3.98 lakh tons in the corresponding period. Stocks with the factories, as on the 26th February 1955, were estimated at 7.75 lakh tons as compared to 5.95 lakh tons on the corresponding date of last season.

*

In the Hapur market, ready Gur prices showed a small improvement at Rs 8-12 to Rs 9-8 per maund as against Rs 8-4 to Rs 8-12 in the previous week. This was due to better demand at the reduced rates. The Uttar Pradesh Government has been continuing their purchases of best quality gur at Rs 10-4 per maund though their purchases are hardly 25 per cent of the stocks in the market. The outside demand has been diverted to small mandies at Biana and Gulaoti where no State purchases are being made. Stocks have swelled to 1,02,500 maunds, including about one-third owned by the State Government. Daily arrivals average 3,000 maunds.

In the Meerut market, gur prices recorded a fall of As 8 per maund for average quality. Government purchases at the floor price of Rs 10 per maund for the best quality were halting and very few which did not satisfy producers. Buyers in the open market were mostly stock-builders, and an estimated quantity of 35,000 maunds was put on the market by producers. Though the Uttar Pradesh Government is reported to have urged the Centre to allow the export of gur outside India as a measure to check the fall in prices, traders do not hope that such exports will materialise to a degree when they will record any appreciable rise.

*

Following the Government decision to withdraw zonal restrictions on the movement of wheat, wheat prices, in the Hapur market, improved by As 8 per maund to Rs 13 for Dara quality. Fine quality was quoted at Rs 14-8 as demand from Bihar was good. Coarse grain prices, however, continued easy due to very good crop prospects. Barley and Bejhar prices eased further by about As 8 per maund to Rs 5-2 and Rs 4-12 respectively. The seasonal demand for Malze and Bajra has gone down and are nominally quoted at Rs 5-12 per maund. Peas was very much in demand during the week. Arrivals of new peas have begun and the price is quoted at Rs 4-12 for dara quality and at Rs 5-6 for white quality. Arhar prices improved during the week from Rs 6-0 to Rs 6-6 per maund due to good outside demand and to fears of a poor crop. Other pulses were quiet.

Prices of foodgrains in the Meerut market have, however, shown a decline from the previous week's levels. Traders' apprehensions of a substantial fall in wheat prices, when the new crop begins to come in next month, were confirmed by the Union Food Minister who announced the abolition of the zonal restriction on the movement of wheat. The Government are also considering to enter the market to purchase wheat at Rs 10 a maund for specified periods in selected centres if the price will decline below this level.

In the Delhi market, the declining trend of wheat prices was checked by the timely announcement of the removal of the zonal restriction on wheat movement. The turnover was good, particularly in wheat. Though the rates for Dara and better qualities touched at one time the low levels of Rs 10-8 and Rs 13 per maund from the opening levels of Rs 13 and Rs 15, closing rates for the week were better at Rs 12 and Rs 14-4 respectively on the above announcement. Arrivals of wheat from the Punjab and PEPSU were reported to be about 45,000 and 50,000 bags respec-

tively. Gram prices improved due to poor arrivals and good enquiries from the Madras side. Rice was quietly steady, while Jowar prices declined by about As 8 to Rs 1-8 per maund.

The Government decision to remove restrictions on the inter-zonal movement of indigenous wheat has been widely welcomed in the Bombay market. The price of white American wheat, released to the trade by the Government, shot up to about Rs 140 per candy against the official issue price of Rs 121-8. The price of Khandwa quality hardened by about Rs 15 to Rs 20 per candy, while a more or less similar improvement has been noticed in the Pissal quality. Also, the prices of certain qualities of superior rice grown in the Thana district moved up by about Rs 5 to Rs 10 per candy, while other varieties remained steady. Rice interests in the State are reported to have represented to the Government that exports should be extended to September, 1955. The overseas demand has been good and there are hopes that a substantial business will be put through if the trade request is conceded. Trading in Pulses has, however, been dull and featureless and this has led to an easiness in prices.

*

OLYMPUS

(Continued from page 615)

have a much smaller weightage is very much greater. For instance, the index for cement has moved from 207.2 in 1951 to 282.7 in 1954. In the case of chemicals during the same period, the rise was from 280.2 to 595.5 and in the case of general and electrical engineering goods from 285.7 to 317.5.

The achievements of the private sector are reinforced by developments which are, so to say, outside the purview of the Plan. TISCO have nearly completed their scheme for the establishment of a steel factory (which will meet the requirements of steel castings in the manufacture of locomotives) and a steel tube mill in collaboration with Stewarts and Lloyds. A number of licences have been given for the manufacture of mixed fertilizers. In the field of engineering also, the range of production has widened and several new items are being manufactured for the first time in the country. These include industrial boilers, mathematical instruments, industrial sewing machines and several other items. There has been a steady development of the synthetic organic chemicals industry comprising coal-tar distillation, dyestuffs, solvents and intermediates.

The Peninsula

The All-India Handloom Week

HANDELOOM cloth carries an appeal all its own to the millions who live and labour in rural India. The village folk, particularly of South India, men and women alike, have long known the superior merits of the handwoven fabric. It washes better and easier. It is cheaper in that it lasts longer. The colour of its dye, the texture of its weaving and the strength of its yarn are to their liking. It stands wear and tear and suits the way of their life. Small wonder, then, that Madras boasts of the largest number of handlooms in the country; it is a matter of cause and effect. However, the tradition of the Charka and the handloom, rather weakly described the term 'cottage industry', is common to all the States of India. The number of handlooms in Madras is over five lakhs; Assam, Andhra, Bombay, Bihar and M.P. follow in that order.

An exquisite pageant of deep rich colours and beautiful patterns, a modern Handloom Emporium has behind it a proud history that stretches from the distant past into the late 18th century; behind it lies also the present-day story of an up-and-coming industry recuperating from the evil days that had befallen it in the interregnum—an industry that augurs to be a potent force in the country's economy and promises to be a salutary solvent of growing unemployment. The very fact that it showed remarkable resilience to many an economic upheaval through the centuries proves indubitably that it is part of a heritage that refuses to be wiped out.

Ever since Gandhiji emphasised the rightful place of the Charka in our rural economy, small-scale industry has had votaries progressively increasing in number. But it is not uncommon that both mill-owners as well as well-wishers of the handloom are inclined to set the two interests one against the other. This elegantly false argument has done no good to the mills, while it did impede the progress of the other. In his latest letter to the Pradesh Congress Chiefs, Pandit Nehru has taken pains to point out that there is essentially no inherent conflict between large-scale and small-scale industries. It must be clear that one cannot take the place of the other, because the value of the handloom industry in a country which is labour-intensive is much more than its intrinsic worth; its importance is as much social as economic.

Of all cottage industries, the handloom industry is the biggest.

In the rural sector, its importance is second only to agriculture. Fifteen years ago, there were twenty lakhs of handlooms. Today, on the estimate of the Textile Enquiry Committee, the number of handlooms on cotton yarn alone would come to that number. Besides, there are several ancillary processes prior to weaving which provide part-time employment to the members of the weavers' family. The industry's employment potential apart, it clothes about twentyfive per cent of India's population and is a good earner of foreign exchange.

When the cry of industrialisation is everywhere, it is a hopeful augury that the Government have decided to take upon themselves the mission to rehabilitate the handlooms. The record of the past eighteen months has made the Bombay Chief Minister, Mr Morarji Desai, declare that "the handloom industry had turned the corner."

In fact, it means nothing, but it does suggest an important change that is taking place. The first step the Government took was to appoint the Textile Enquiry Committee, popularly known as the Kanungo Committee. The Committee published a report after two years of intensive study. Some of its recommendations were viewed with raised eyebrows, for instance, by the All-India Handloom Weavers' Conference held last January in Madras. One of the points of objection was that the statistics available were not fully reliable. The Committee has calculated that each handloom on an average provided work for about 1.25 workers; the weavers point out that since weaving involves several preparatory processes like winding, warping, sizing, piecing, beaming, etc. each loom provides for a minimum of 2.5 persons.

Nevertheless, the broad recommendations of the Committee are soundly conceived; these include: (1) continuance of the reservation of the fields of production for the handloom industry till 1960; (2) improvement of the handlooms with the aid of mechanical devices in order that they become efficient instruments of production and also the quantum of production per handloom should be increased; (3) organisation of the industry on a co-operative basis; (4) production of cloth at the rate of 7,200 million yards a year, the annual mill production being pegged at 5,000 million yards; (5) gradual conversion of the handlooms into power looms; and (6) technological improvements, standardisation of handloom fabrics, provision

of research facilities and collection of up-to-date statistics regarding the industry.

The advisability of change-over to power looms has caused some controversy. It is estimated that about one lakh of power looms could displace twelve lakhs of handlooms, so that, if the measure is carried out, it would mean further unemployment on a gigantic scale. But the reasoning is fallacious. The Committee has not advocated any sudden shift to power looms. The process has to be carried through gradually and with caution. Older techniques must needs give way to the new. As electricity becomes increasingly available in our villages, improvement in techniques is bound to follow. It is, perhaps, the only way to prevent our traditional arts and crafts from dying out because of the advent of the machine age.

The suggestion to peg the target of mill production at 5,000 million yards has also disquieted the weavers; but their fears are more fancied than real. The present mill production is about 4,000 million yards and a rise in the target cannot aggravate the problem of the handloom industry, if the latter keeps up a corresponding pace of expansion. And, on all tokens, it promises to do so.

The aid that Government have so far given the industry is mainly financial. It is the State policy to tax mill-made cloth to subsidise the hand-woven cloth. Long periods of severe depression have alternated with comparatively favourable conditions and State help has been invaluable for the survival of the industry in the teeth of opposition by textile mills with ample monetary resources. The grants sanctioned include loans for working capital to be advanced to Weavers' Co-operative Societies; this has enabled them to undertake production activities and give employment to a larger number of handlooms. Loans have also been given for the purpose of share capital to bring in more weavers into the co-operative fold for increasing the marketing facilities, for installing bleaching, calendaring and finishing plants, dye-houses, etc. The All-India Handloom Board, during the last eighteen months, has recommended to the Government of India handloom development schemes costing about Rs 9 crores.

Though the pattern of development suggested by the States vary violently, the Central Organisation is able to bring them smoothly into line at least to the extent of giving the whole programme a national colour. The Government have also decided to give a rebate on the sales of handloom cloth at

the rate of As 1½ per rupee; this would go reduce the wide margin between mill-made cloth and handloom fabrics.

One of the most important problems of the handloom industry is that of organisation. The continuous employment of the weaver has no meaning to him unless his living standards are improved. The State is wedded to the policy of organising weavers on co-operative lines. A body of inter-dependent self-employed weavers is quite in keeping with the professed socialism in economy. A beginning has already been made by converting two mills in Malabar into industrial co-operatives. Efficiency, productivity as well as marketing facilities would be greatly enhanced by the reform. But it should not be forgotten that such conversion is possible only by substantial subsidies and concessions which would place the factory on a different footing from others in its financial aspects. The step has to taken with caution lest unnatural trends come to the surface in the field of competition.

The importance of providing adequate marketing facilities has rightly been recognised by the Government. For this purpose, the Centre has placed more than 65 lakhs of rupees in the hands of the State Governments to advance loans to apex weavers' co-operative societies. Weavers' co-operative societies, multi-purpose societies, consumers' stores and approved fair-price shops are authorised to grant a rebate varying from one anna to two annas in the rupee. At present a Central Marketing Organisation functions at Madras with branches at Bombay, Calcutta, Banares, Nagpur and Gwalior. The duty-free export of handloom cloth is expected to get a fillip following the appointment of Marketing Officers, one each, at Singapore, Rangoon, Colombo and Baghdad. A trade centre is to be opened shortly in New York.

With respect to domestic consumption, it seems advisable to reserve certain items exclusively for the handlooms. Mr C. Rajagopalachari's suggestion for reservation of coloured saris and bordered dhoties has met with the weavers' approval and deserves to be given a trial.

There are, no doubt, definite signs that the prospects of this vital industry are brightening; the earnings have improved, the number of active looms has increased, and the sale of handloom fabrics has gone up. All the same, reports of accumulation of dead stocks and diminution in the offtake are not so exceptional as to be

(Continued on page 628)

South Indian Notes

T-C Budget

Unfriendly critics might say that the reason why the Finance Minister of Travancore-Cochin has delayed announcing the budget estimates for 1955-56 was his desire to exceed the deficit on revenue account of every other Part B State. A deficit of over Rs 437 lakhs for a revenue exchequer of about its 1,718 lakhs is ripping. The Minister, however, assures that the unusual deficit is no cause for alarm in view of a saving of more than Rs 724 lakhs in transactions since 1951-52. If, therefore, the State's financial position is not really weakened, the budget can claim to be one of the boldest announced during this month. The unstable political conditions of the past have not reduced the tempo of industrial and agricultural development which in the coming year will be at its highest.

No major additional taxation is proposed, except a small revenue from estate duty estimated to yield about Rs 3½ lakhs. Betterment levy on lands benefited by irrigation works would total Rs 6 lakhs. Sales-tax on handlooms is to be abolished and the rate on mill-made cloth enhanced. The sales-tax on motor spirit including petrol is to go up. But the Motor Vehicles Tax, which was found to be too high for the efficient functioning of public motor transport will be reduced. That the Taxation Enquiry Commission's Report is not fully studied may be the reason why the Finance Minister fights shy of raising more resources by taxation.

Under revenue and capital account, the budget provides expenditure larger than for any previous year. The total cost of the Five-Year Plan has been stepped up to Rs 30 crores from about Rs 27 crores. All the six major irrigation works in the State under the Plan, the Minister assured, would be completed positively next year. During the last four years about 550 miles of road have been specially surfaced and made dust-free; in the coming year the scheme would be extended to another 250 miles. Of the 13 major bridges at busy river-crossings, two have already been completed, five are in good progress and the rest would be taken up next year. Besides these several other projects are under way on the National Highways with funds supplied from the Centre. An amount of Rs 21 lakhs is allotted in the budget for improving rural communications. Another 25 lakhs go to expand the water supply scheme. The State has an enviable record in the matter of power-generation. Extension of the Pallivasal Scheme and the Sengulam project are

complete; the next year would see the completion of all the other schemes taken up during the Plan period. The rural electrification programme is likely to overstep the original target of electrifying 800 villages. The Government of India have promised a loan assistance of Rs 250 lakhs for financing the Plan in 1955-56.

The State Finance Corporation, which up to now has sanctioned loans to the value of over Rs 37 lakhs, have done much to resuscitate industries languishing for want of capital and other facilities. With the help of the Pay Commission, a scheme of comprehensive revision of salary scale to all categories of public servants and teachers of private schools has been drawn up and sanctioned.

The budget for education has been remarkable for its year-to-year swelling. The budget grant under this head stood at Rs. 2.64 crores in 1950-51 and crosses in five crore mark in 1955-56, when education up to Form III would be free. In the field of Public Health the Government is aiming at the minimum target of a hospital per taluk.

The most important problem facing the State is unemployment. Absorption in small-scale industries like handloom and cotton manufactures is encouraged, but it is doubtful if the State by itself can work out a remedy. Another disquieting feature is indiscipline among labour with its consequent adverse effect on capital investment by enterprising industrialists.

*

Tax on Plantations:

Ever since the Land Revenue Reforms Committee made its recommendations, it was Madras Government's intention to levy agricultural income-tax over and above land revenue. A beginning is being made through the Plantations Agricultural Income-Tax Bill, recently passed by both Houses of the Legislature. There were no major amendments to the Select Committee's draft. In the first instance, coffee, tea, rubber, cardamom and cinchona plantations will be covered. The tax is on a graded scale ranging from 9 pies to 5½ annas, the maximum leviable on incomes over Rs 25,000. However, income-tax has been compounded on an acreage basis for different crops; tea plantations under five acres and other plantations under fifteen acres have been exempted. The total revenue this taxation would yield is not accurately known, but the Minister puts it roughly at Rs 75 lakhs. The

measure seems to be in the nature of an experiment.

The principle behind the Bill is unassailable. The criticism of some Members that it did not go far enough, that the rates should be steeper and that super-tax should also be levied for over Rs 25,000 as in Travancore-Cochin, is hastily conceived. The Government are inclined to make further adjustments in the light of experience gained in time to come. But whether the tax will sap the incentive to cultivate fresh lands and impair the chances for improving working conditions of plantation-labour is a pertinent question. Will it be a deterrent to replantation and the general rehabilitation of the industry. Or, as one Member put it, will it be a drag on efficiency and a penalty on success? Even if the answer were to be in the negative, it cannot be so obvious. The plantations in the State cover over 300,000 acres involving a total investment of Rs 8 crores, and employing more than 200,000 workers. The conditions are vastly different, say, from those obtaining in Ceylon where the industry is better run, and the workers better cared for. The process of improved working conditions have started according to Minister Subramaniam, but is by no means complete or even halfway through. Again, the positions of the various crops differ considerably. The tea plantations are large and owned by fewer persons compared to the coffee estates, 80 per cent of which are small holdings. The dependence of the plantation products to a very large extent on foreign markets is an important factor to be taken into account. 70 per cent of the coffee produced is consumed at home while 75 per cent of the tea is exported. In the face of fierce competition, a false move at home might spell disaster for the industry. But the present Bill exempting as it does 17,410 owners out of 18,760, it might have been thought, does not necessitate the above considerations. It is however, clear that the different crops might not lend themselves to be treated on the same footing and distinctions are bound to be made in future adjustments. It seems better to replace the land revenue altogether by agricultural income as is done in the case of plantations in T.-C., Bengal and Assam. The thesis that the industry is facing a crisis is more visionary than real; an acre in the plantation is nearly as good as an acre in the delta area.

Symbol of happy relations:

That a French Institute of Higher Studies should be established in Pondicherry not when it was a French colony but after the de facto transfer agreement is significant more than it is interesting. Last Sunday the French Ambassador in India inaugurated the Institute which is symbolic of a peaceful approach by France and India. It may be recalled that during the transfer of power Pandit Nehru assured that Pondicherry was to become a seat of French culture and language and a live link between the two countries. One may even say that the unhappy political relations of the past have stood in the way of enthusiastic French scientists and Indologists from devoting themselves more

Administration of Justice:

A stimulating, if controversial, discussion took place in the Madras Assembly last week when the demands under Administration of Justice came up for consideration.

South Indian Markets

Further Decline in Yarn Prices

YARN markets have continued to rule weak with mills announcing substantial price reductions in their sales. In the Madras market, 40s and 60s have lost As 4 to As 12 per bundle of 10 pounds. There has been very little demand as buyers are reluctant to close deals. In Madurai, buyers are scarce with mills disposing of ready stocks at lower prices. Prices of Harveys 20s, 24s and 32s eased by As 2 to As 4, and 36s and 40s by As 3 to As 4 a bundle. A moderate volume of business is, however, being done at lower rates. Among Coimbatore varieties, 20s, 26s and 40s are marked

down, the decline being As 4 in the case of 20s, As 3 in 30s and As 8 to As 10 in 40s, per bundle.

Business, in general, is confined to ready goods, while consumers are buying only on hand-to-mouth basis. With mills dumping heavy stocks of low counts yarn prices, in the Salem market, particularly that of 20s and 40s receded by As 12 to Rs 1-8 per bundle. As the export quotas of mills are linked to actual delivery of yarn, mills have been reducing the prices and tempting local buyers to purchase them. Stockholders, having heavy stocks, are, however, affected by

this. Some Coimbatore mills are reported to have even sold as many as 1,500 bales of 20s yarn at Rs 15½ to Rs 15¾ as against the price of Rs 17-0 per bundle quoted some time back.

The Cotton market also continues to rule weak. In the Madurai market, about 1,000 candies of Tinnelly-Karunganni cotton were sold, during the past week, at prices ranging from Rs 846 to Rs 710 per candy of 784 lbs. About 80 candies of Uganda Hybrid (old crop) were also sold at Rs 1,146 per candy. In the Davangere market, most of the millers abstained from buying cotton. Kapas arrivals were heavy, but most of the ryots were holding

back their stocks on account of the slump in the market. Rates for full pressed cotton were quoted nominally as under:—MA/5 certified Rs 1,100 to Rs 1,140; Uncertified Rs 950 to Rs 985; Lakshmi Rs 710 to Rs 730; Jayadhar Rs 680 (all per candy of 784 lbs).

The Madras Groundnut market continued to rule quiet with prices drifting to lower levels in the absence of any buying enquiry. Arrivals averaged 30 to 40 tons per day. Buyers kept aloof due to the uncertain trend in the oil section, while sellers were not equally anxious. The quotation for the ready superior-oil-quality seeds was done at Rs 92 to Rs 94 per candy, while the bold quality was quoted around Rs 89 per candy.

In the Groundnut Oil section, except for stray transactions and some covering business by shippers, there was little activity. There is a general reluctance to sell at the prevailing rates, while buyers, too, are unwilling to operate. Ready oil is quoted at Rs 203 per candy, while March and April is quoted around Rs 202. The rate for the UK and the Continent was quoted around £90 per ton for April-May delivery.

In the Madras Tanned Hides market, arrivals of Cow hides were fair, while clearances were moderate. Arrivals of Cow Calf and Buff Calf were normal with prices ruling steady. Arrivals of Buff hides were also normal, but clearances were done at slightly higher levels. In the export section, business done was restricted as sellers continued to resist any reduction in prices. Some business was reported done in 10/12 lbs. averages at 44d. There was some enquiry for 5½ lbs. 'fifths' at 47d and business was done at this level. Sporadic business took place in genuine Erode tannages in 5½ lbs. at 69d. and 10-12 lbs. at 46d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were at the previous week's levels and there was fair clearance, but prices remained almost unchanged. In the export section, trading was restricted due to the progress of the London auctions.

In London auctions, on the first day, prices of all types of goat skins declined from 3d to 6d and occasionally 9d per pound. On the second day, the market was unchanged for good quality and, on the third day, sales were as on the previous day. On the fourth and last day, prices for Goat primes and best tannages remained unchanged while those of other qualities were 8d. down. German buyers were conspicuous by their absence at the auctions. With the result,

From SWAMPS To SMILING PADDY FIELDS

SONARPUR-
ARAPANCH
SCHEME

What was a swampy waste, breeding malaria, is to-day a lovely sight with its vast expanse of golden corn.

Reclamation of water-logged areas of Sonarpur by draining out water with the help of pumps is an event of historical importance. It is not only the first of its kind in India but is also the biggest in Asia.

West Bengal Government's remarkable achievement under the Sonarpur-Arapanch Drainage Scheme has already turned 58 square miles (over 1,00,000 bighas) of swampy area into cultivable lands yielding over 3 lakh maunds of the much needed paddy.

Electrification of the adjoining areas will also be possible soon through the help of the electric transmission line from Majerhat.

A REMARKABLE ACHIEVEMENT TO

build a

Better Bengal

More land for so many
refugees and more food
for so many mouths.

Issued in public interest by the Government of West Bengal.

THE UNITED COMMERCIAL BANK LIMITED.

(INCORPORATED ON 6th JANUARY, 1943)

TWELFTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1954.

The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,52,320-7-3 brought forward from the previous account, amounts to Rs. 32,58,724 8 9

The Directors have made the following appropriations out of the net profit:

1. Transfer to Reserve Fund	6,50,000 0 0
2. Provision for Taxes	12,50,000 0 0
3. Provision for Bonus to Staff	2,50,000 0 0
4. Balance	11,08,724 8 9
	Rs. 22,58,724 8 9

Out of the balance of Rs. 11,08,724-8-9 the Directors recommend to the shareholders payment of Dividend at Rs. 2-8 per share, free of Income-tax, which will absorb Rs. 10,00,000 leaving Rs. 1,08,724-8-9 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 19,958 as donations. Including Rs. 15,000 to the Nanyang University of Malaya.

The documents of title to the Bombay flats purchased by the Bank have still not been completed on account of delay in legal formalities.

The Bank's business has continued to expand during the year and there is an increase in deposits at the end of 1954 as compared with the corresponding figure for 1953. Looking to the monetary, credits and trade conditions in 1954 in the countries in which your Bank operates, your Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year, the Bank opened sub-branches at Ballygunge (Calcutta) and Jalalhalli (Bangalore) and a branch at Bassein in Burma.

The Directors have to report with great sorrow the death, in April, 1954, of Mr. Rajnath Jalan, who was a Director of the Bank since its inception and who was held in high esteem and respect by his colleagues. The Directors wish to place on record their deep sense of appreciation of the great service rendered by Mr. Rajnath Jalan during the long period of his office.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the high sense of, and devotion to, duty of Mr. B. T. Thakur, your General Manager and Mr. S. T. Sadasivan, who acted as General Manager and thank them for their ceaseless and untiring efforts in the Bank's interests. The Directors also thank the officers and staff of the Bank for their hard work and loyal service.

Under Article 95 of the Bank's Articles of Association four of your Directors,

Shri I. P. GOENKA,
Shri A. O. LAW,
Shri NAVINCHANDRA MAFATLAL,
Shri R. L. NOPANY,

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

CALCUTTA,
4th March, 1955.

Balance Sheet as at 31st December, 1954

		Rs.	A. P.	Rs.	A. P.			Rs.	A. P.	Rs.	A. P.
CAPITAL AND LIABILITIES.						PROPERTY AND ASSETS.					
1. CAPITAL:						1. CASH:

THE UNITED COMMERCIAL BANK LIMITED, BALANCE SHEET—(Contd.)

Profit and Loss Account for the Year ended 31st December, 1954.

EXPENDITURE		Rs.	A.P.	INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)		Rs.	A.P.
1. Interest paid on deposits, borrowings, etc.		76,47,996	9 9	1. Interest and Discount		1,42,41,592	0 3
2. Salaries and Allowances and Provident Fund (including salaries and allowances of General Manager Rs. 1,11,000*)		70,16,871	10 7	2. Commission, Exchange and Brokerage		73,16,624	10 4
3. Directors' (Rs. 31,950) and Local Committee members' fees and allowances		43,650	0 0	3. Rents		1,15,545	12 10
4. Rent, Taxes, Insurance, Lighting, etc.		11,60,337	0 5	4. Net profit on sale of investments, gold and silver, land, premises and other assets		55,300	3 8
5. Law charges		1,42,180	0 6	5. Net profit on revaluation of investments, gold and silver, land, premises and other assets			
6. Postage, Telegrams and Stamps		4,46,542	0 0	6. Income from non-banking assets, and profit from sale of or dealing with such assets			
7. Auditors' fees for statutory and periodical audits		96,611	13 1	7. Other receipts		1,758	0 8
8. Depreciation on and repairs to the Banking Company's property		6,44,130	4 3	8. Loss			
9. Stationery, Printing, Advertisement, etc.		6,52,404	2 11	Total Rs.		2,17,30,820	10 11
10. Loss from sale of or dealing with non-banking assets		7,73,923	0 11				
11. Other Expenditure		31,06,404	1 6				
12. Balance of Profit (Subject to Taxation)							
Total Rs.		2,17,30,820	10 11				

*In addition Rs. 24,000 being increment for 1953, accepted during the year, has been paid.
Note:—Rs. 9,051-8-0 paid as law charges to a Solicitors' firm of which a director is a partner.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

PROGRESS CONTINUES IN SPITE OF TRADING AND EXCHANGE RESTRICTIONS

IMPORTANT CONTRIBUTION TO INTERNATIONAL UNDERSTANDING AND GOOD WILL

MR. V. A. GRANTHAM SURVEYS WIDE FIELD OF OPERATIONS

The One Hundred and First Ordinary General Meeting of The Chartered Bank of India, Australia and China will be held on March 30 in London.

The following is an abridgement of the statement by the Chairman, Mr. V. A. Grantham, circulated with the report and accounts for the year 1954:—

Last year, when I addressed you, it appeared that the painful readjustment imposed on most Eastern economies by the collapse of the Korean war boom had on the whole been completed and that the future could be regarded with rather more hope. During the past year most of the primary products of the East have enjoyed steady markets and tea and rubber prices in particular showed substantial increases towards the end of the year. Rice is in a special position for, although its price has fallen to the disadvantage of producing countries like Burma and Thailand, the vast populations elsewhere in South East Asia who depend upon it as a vital foodstuff have benefited. With export earnings more assured, the economic outlook in the East has shown corresponding improvement. Japan, whose position a year ago was causing anxiety, has succeeded in restoring some measure of stability, and the Indian economy has made substantial progress. On the other hand, the situation in Indonesia continues to cause grave concern and, although the fighting in Indo-China is mercifully at an end, the task of rehabilitating the Vietnamese economy after so many years of war remains considerable.

The various development schemes which are intended to raise Asian living standards continue to make good progress and economic prospects in the East during the present year do not appear unfavourable.

In some of the eastern countries there persist political, social, and economic problems which appear to be increasingly difficult to solve but in every land to which its establishment extends the Bank is still able to make important contributions to the prosperity of its

hosts by facilitating the international exchange of goods and services. Because the Bank is peculiarly fitted and particularly well equipped to discharge this function it may be less exposed to nationalist prejudice than other foreign enterprises engaged in purely domestic trade and industry countries newly emancipated and over conscious of their independence.

It has never been possible for the bank to rest upon its laurels since any failure to adapt itself to mutable world conditions and changes in the direction of international trade would have led to stagnation. Although the bank may again be able to participate in the financing of the external trade of China, the conditions under which it can be accomplished will bear no resemblance to those which obtained when our branches conducted a thriving general banking business in the former treaty ports. Almost a generation has passed since we were engaged in what was the most interesting and fascinating of all banking businesses, the operation of the Chinese silver exchanges, but in taking advantage of new opportunities for development presented to us since the end of the Second World War we have not forgotten how important was the China field of operations. It was important not only on account of its proportion but because it constituted a vital part of the international organisation of the bank as a whole. The connection of the bank with China quences of our withdrawal from China will have been obscured from the stockholders by the expanding scope of the bank's activities in Southern and South Eastern Asia but your directors are persuaded that there must now be expansion in other directions and a start has been made by the opening of two branches in Aden, a development to which reference was made in my last statement.

COURT OF DIRECTORS AND GENERAL MANAGERS

Two years ago I intimated that Lord Colgrain, because of his advancing age,

had found it necessary to retire from the Court. Lord Colgrain died after a short illness in November last and it is fitting that I should again pay tribute to his character and to the statesmanship and qualities of leadership he displayed while presiding over the British Bankers' Association and the Committee of London Clearing Bankers during the war. Lord Colgrain was a member of the Court for thirty years and we shall always hold his memory in honour and affection.

In previous statements and at the annual general meetings of the stockholders I have referred with gratitude and admiration to the services rendered to the bank by its chief general manager. Early in January to this year the Court of Directors recorded their pride and satisfaction upon learning that Her Majesty the Queen had graciously signified her intention of conferring upon Mr. Cockburn the Order of Knighthood. On January 15 Mr. Cockburn retired from the chief executive post to which he was appointed in 1940, and my colleagues and I were very happy to elect him to membership of the Court. The stockholders will be invited to confirm his election at the annual general meeting.

Mr. H. F. Morford, until recently deputy chief general manager, has been appointed chief general manager, and your directors have every confidence in him as a worthy successor to Mr. Cockburn.

I should like to place on record our grateful thanks to the staff wherever they may be, and whatever their rank, for their skill and loyal devotion to duty which so greatly helped us in the achievement of our annual general results.

THE BANK'S BALANCE-SHEET

As the result of an increase of approximately £17,000,000 over last year's figure the total of the bank's balance-sheet has once again exceeded £200,000,000. The increase, due in part to rises in world prices of tea, rubber, tin, and other staple commodities indigenous to the countries in which the bank operates, is also a heartening indication that we are more than holding our own in the face of competition and in spite of the protective trading and exchange restrictions, particularly in the field of import control and licensing, which the Governments of the countries concerned have had occasion to impose or maintain.

On the left hand, or liabilities side of the balance-sheet, current and other accounts, fixed deposits, bills payable and acceptances on account of customers show increases of £11,726,018, £3,370,412, £293,798, and £1,206,195 respectively.

It will be seen from the assets side of the balance-sheet that nearly three-quarters of the increase in current accounts and fixed deposits has been employed in the purchase of bills of exchange and the granting of advances,

which figures show rises of £23,411,530 and £7,498,627 respectively. Our holdings of cash in hand, at call and at bankers and our investments in Government and other securities (other than those lodged against our note issue) have also increased by £2,120,729 and £3,521,983 respectively.

It is, of course, essential that we should maintain the liquidity of our over-all position and in this there has been no material change, the ratio between cash and call money to our "demand and time" liabilities, excluding notes in circulation against which security has been lodged, being only fractionally lower at 18.54 per cent against 18.98 per cent last year.

The completion of a new office building in Singapore, to which I make further reference later in my statement, coupled with the continued implementation of our programme for the provision of houses for our eastern staff officers and the expansion and renovation of our bank premises generally, has given rise to an increase in the net figure for bank premises and furniture, after allowing for a further £200,000 written off, of £204,887.

PROFIT AND LOSS ACCOUNT

The net profits for the year amount to £723,147. An increase over those of last year of £29,349.

Difficult working conditions have persisted but our balance-sheet testifies to rather better conditions generally, in addition to which working costs which have been rising each year are at long last showing signs of greater stability.

We paid an interim dividend in October last of 7½ per cent less income-tax, absorbing £144,375, an increase of ½ per cent over the interim dividend of the previous year, and it is now proposed that, out of the balance now available, a final dividend of 7½ per cent less income-tax, should be paid, costing £144,375, making the total distribution for 1954 15 per cent, as compared with 14 per cent in 1953.

We propose to repeat the allocations made in each of the past four years to the pension fund and widows' and orphans' fund of £125,000 and £20,000 respectively.

We have again applied £200,000 towards writing down bank premises and furniture account.

It is proposed to transfer £100,000 to contingencies account as compared with £75,000 last year and to carry forward the slightly decreased balance of £392,910.

INDIA

It is encouraging to review the progress that has been made during the first three years of India's Five Year Development Plan.

Already there has been a substantial improvement in India's agricultural production and, although estimates vary, it is likely that production of food grains

has increased by as much as 30 per cent. Two favourable monsoons have contributed substantially to this encouraging increment, but the extension of irrigation works and the improvement of peasant technique have already shown considerable effect and give ground for optimism in future years.

Although Government investment in industry during the first three years of the plan has been well below schedule, Indian industrial output has increased by more than a third, an indication that the private sector of industry is playing an effective part in the country's economic expansion.

In practice it is improbable that the plan will be completed within the stipulated period, although the various projects in progress are likely to gather impetus in the next two years. This will to some extent save the Indian economy from the strain that would be imposed on it by a steep rise in development expenditure and incidentally render necessary a lesser degree of deficit financing.

It is interesting to note the proposal which has been accepted in principle by the Government, to establish a State Bank of India, the main object of which is to set up a nation-wide system of branches and thus increase rural banking facilities. A committee appointed by the Reserve Bank and presided over by Mr. A. D. Shroff, suggested that banks might endeavour to provide a measure of indirect long-term finance by subscribing to special institutions. This bank in common with the other eastern exchange banks and in association with the Commonwealth Development Finance Company, Ltd., and a number of insurance companies has subscribed part of the capital of the new Industrial Credit and Investment Corporation of India. The corporation should be able to make a considerable contribution to the financing of private industrial development in India and this bank's participation is an indication of our interest in Indian economic progress.

PAKISTAN

The past year has again been one of difficulty for Pakistan. In the early months the defeat of the Moslem League in the first provincial election held in East Pakistan since partition was followed by labour unrest and rioting in that area, which seriously affected the jute and paper industries. Later East Bengal suffered disastrous floods which caused extensive damage to the jute crop and in September exceptionally heavy rain was followed by further floods in the Punjab. Political instability and the strain on the country's exchange-reserves imposed by the industrial development programme tended to cause anxiety, but the strengthening of the government in October and the announcement that United States economic aid to Pakistan would be substantially increased, went far to restore confidence.

Last year, in reminding you that Pakistan has no coal, I suggested that the natural gas which had then been recently discovered might provide an important source of industrial power. This bank and five other eastern exchange banks have now joined with the World Bank in granting a loan to the Sul Gas Transmission Company, a transaction which is particularly notable as the first World Bank loan in which the British exchange banks have participated. The project has been jointly sponsored by the Pakistan Industrial Development Corporation and the Burmah Oil Company (Pakistan Trading) Ltd., and it is pleasing to report that progress has already been made in laying the 350 mile pipeline from Sul to Karachi.

BURMA

In Burma, as in Thailand, the government organization which had been entrusted with a monopoly of rice sales abroad, was slow to react to the changed conditions in overseas markets. The policy of attempting to maintain high prices has only led to the accumulation of substantial unsold stocks, which are subject to considerable risk of deterioration while in store. While this surplus remains unsold, the country must forgo much-needed earnings of foreign currency, while the exchange reserves are being reduced at a rapid rate in order to finance government purchases abroad of capital goods and equipment required

in connexion with economic development schemes.

Ceylon

It is pleasing to report a progressive improvement in Ceylon's economic position during the past year. In 1953 the essential problem continued to be the adjustment of the country's economy to the new conditions prevailing after the collapse of the Korean war boom and the reduction of the trade deficit from the high level it had reached in 1952. Last year, except for a negligible deficit in June, the balance of trade was in Ceylon's favour month by month, and the external reserves, which in November, 1953, had fallen to their lowest level for a decade rose throughout the year.

MALAYA

The year 1954, against the background of two particularly difficult years which preceded it, presents a happier picture for Malaya, for the country and its economy have benefited by an improvement in the security position and by a considerable increase in the price of rubber.

Final details of Malaya's overseas trade are not yet available, but it is reasonable to assume that the trade deficit for the full year will be smaller than in 1953.

Rubber production rose by some 10,000 tons to 584,434 tons and contrary to the expectation of many producers a year or so ago that there would be a substantial surplus production, world purchases of natural rubber have actually increased and more than set off the increase in production.

During this coming year the prosperity of Malaya may be affected to a greater degree than hitherto by the production of the synthetic rubber industry since GRS synthetic rubber is at present cheaper than the comparable grade of the natural product. The importance of this consideration was emphasised by the publication in October of the report of a mission, presided over by Sir Francis Mudie, which conducted an investigation into various aspects of the competitive position of the Malayan rubber industry.

The mission's recommendations have aroused considerable controversy within Malaya and for the time being government has taken no decision but is awaiting the report of the World Bank mission, which visited Malaya early in 1954.

Production in Malaya of tin at 60,691 tons was the highest annual output recorded since the war.

The confidence is well exemplified by the opening of a second branch in Singapore, housed in a six-storey building recently completed in the Shenton Way development area.

REPUBLIC OF INDONESIA

Observation upon the trend of affairs in Indonesia tend to become repetitive. I am not to be numbered among those who predict an early break up of the Republic, but I have been again to report a further deterioration in its economy.

The deterioration during 1954 was probably greater and was certainly more obvious than in any of the preceding years and almost the only reassuring factor is that the balance of trade has turned in Indonesia's favour and foreign exchange holdings were appreciably higher at the end of the year than at the beginning. This is not to say that the holdings, even at the increased figure of Rp. 2,853 millions, give grounds for complacency, for this improvement has only been effected by the most drastic import cuts, and even now it is doubtful whether the country can trade without an adverse balance of payments. High world prices for rubber and tea inevitably lead to illicit tapping and plucking, with resultant smuggling and loss of exchange, whilst on the other side of the book the lack of essential consumer goods must eventually be remedied.

The factors I have mentioned combine to make the future of our branches in Indonesia far less promising than was expected when we, in the infancy of the Republic, so wholeheartedly and deliberately accepted risks we should hesitate to take in a more mature country in order to help Indonesia's new merchant class and administrators. It is to be hoped that the Government will endeavour to come to grips with the many problems and abuses that now exist before it is too late.

THAILAND

Thailand has passed through an uneasy year and, notwithstanding the production of various expedients to halt the adverse trend in its balance of payments, imports exceeded exports by over 800 million ticals. The main reason for this disappointing result was that rice exports, which account for approximately half the country's foreign exchange earnings, have fallen year by year and in 1954 were, at one million tons (plus 200,000 tons of rice flour), lower by about one-third than during the post-war peak year of 1951.

Little comfort can be taken from early estimates which placed the exportable surplus on the 1954/1955 crop at 750,000 tons only, to which of course must be added a carry-over from previous crops of 400,000 to 500,000 tons.

The real trouble has been a government policy which was gradually pricing the country's rice out of world markets, and it has yet to be seen whether the terms on which the rice trade is now being returned to private dealers will prove sufficient inducement for merchants to shoulder the burdens imposed and yet work to increase sales in the highly competitive markets that exist to-day. As, however, the Government has to take a realistic attitude towards its rice exports, no doubt the recent regulations will be amended where necessary to ensure that their objective of increasing overseas earnings will be achieved. In any case, further reductions in the quantity exported in the near future might result in a serious deterioration in the quality of existing stocks and a serious monetary loss.

VIETNAM

The coming of peace in Vietnam based as it was on the unfortunate partition of the country did not ease this bank's problems and, as indications to date suggest that there is unlikely to be any future for Europeans under the Viet-Minh regime, we have had to follow the example of others and close our Haiphong office. In any case, with the approach of the fighting towards Hanoi earlier in the year, we had already run down our commitments. At one time it was thought that Tourane, close to the 17th Parallel and with a good natural harbour, might become an important centre of trade between the north and the south but an on-the-spot examination convinced us that potential developments did not justify our opening a branch there.

Our future in Saigon, although difficult to assess, may be more secure and promising than is seemed to be a short time ago. There are signs that Vietnam may achieve social and political stability notwithstanding the necessity for its economy to be based henceforward mainly upon agriculture.

CAMBODIA

Not the least important result of the withdrawal of the French from Indo-China has been the coming of national independence to the states of Cambodia and Laos. It was in anticipation of Cambodia having a separate government and becoming an important state in South-East Asia that we took steps more than a year ago to establish an office at Phnom-Penh and I am pleased to announce that our branch there is now conducting full banking business.

THE REPUBLIC OF THE PHILIPPINES

For the last few years the finance department and the Central Bank have, by drastic control over imports, succeeded in maintaining the Republic's foreign balances at a figure of U.S. \$300 millions, which is roughly equivalent to the note issue and it was very surprising to find a departure from this policy in the last two months of 1954, during which period the reserves were run down to U.S. \$270 millions, mainly by ex-quota allocations for textiles. These are the lowest published figures since the crisis year of 1949 and would cause more concern were the position not overshadowed by the favourable terms agreed upon for the renewal of the Bell Act, which should ensure such benefit to the Philippine economy that the future can be viewed with quiet optimism.

Our relations with the Central Bank are as always on a most proper and friendly footing and during the year it has been encouraging to find more lati-

tude given by the central institution to carry out its avowed policy of providing loans to commercial banks when necessary for refinancing purposes of an essential nature.

HONGKONG

Hongkong's total external trade in 1954 fell in value by 11 per cent from its level in the previous year. Trade with the China mainland decreased by approximately a quarter during the same period and it has apparently suited the Chinese authorities to conduct the bulk of their trade with the free world direct with the countries concerned rather than to use the entrepot facilities of Hongkong.

Meanwhile, the discontinuance from January, 1955, of special export licensing of British exports destined for Hongkong, is a timely recognition by the authorities of the adequacy of the colony's security controls over trade with China.

An encouraging feature of Hongkong's economy is the continued development of local industry for, luckily for the colony, this offsets to some extent the fall of entrepot trade and the serious social problem posed by the great increase in population. Exports of locally manufactured goods now form 28 per cent of total shipments and the most important of the local industries, cotton spinning and weaving, has maintained a satisfactory level of sales abroad despite difficulties in markets such as Indonesia and Pakistan where shortage of foreign exchange has curtailed orders.

Our own faith in Hongkong is witnessed by the fact that we have completed, our plans to rebuild completely our old office building there which has outlived its usefulness. Our new building should be one of the most imposing structures in Hongkong.

CHINA

During the year we have made good progress in winding up our affairs in China. It is quite clear that the People's Government of China will not permit the re-entry of European enterprise into China but, on the other hand, we have been given an indication that China will welcome the participation of British banks in the finance of their external trade, and our future policy will be aligned to meet these changed conditions.

JAPAN

I mentioned last year that in order to curb the dangerous inflationary trend that was threatening the Japanese economy the Bank of Japan had introduced a tight money policy. As was to be expected, this and other deflationary measures did not take effect for some months, but a pursuance of the policy, notwithstanding a change of government, has resulted in a healthier state in the country's affairs. Month by month in the second half of the year exports exceeded imports, and Japan closed the year with a favourable balance of approximately U.S. \$100 millions; a great improvement and in marked contrast to the deficit of U.S. \$200 millions during 1953.

This successful reversal of the adverse trend of the previous year is, however, on close examination, not so encouraging as one would hope, for it has been achieved only by running down stocks and by resorting to various export-promotion devices and special trade systems such as link and barter. There is an obvious limitation to the use of artificial stimulants, and any system such as that of bonus imports which necessitates producers charging high prices in domestic markets to recoup losses on overseas sales cannot fail to accentuate inflationary pressure.

CONCLUSION

I am encouraged to conclude upon a note of restrained optimism, bearing in mind that periods of economic stability in the East have been relatively few during the past hundred years. For a long time the Bank was beset by recurring crises of confidence and unpredictable fluctuations in the world price of silver, but nowadays most of our difficulties arise from attempts to put into operation untried political and economic theories. Notwithstanding the fragmentation of what were formerly unified trading areas of great extent into self-regarding national states, our branch organization has been able to cross the new frontiers and, by facilitating international trade, to foster international understanding and good will.

Kohinoor Mills Company, Limited

Modernisation & Rehabilitation Almost Complete

Production Maintained: Profits May Increase

Plain Speaking By Mr. E. D. SHEPPARD

Addressing the Sixtieth Ordinary General Meeting of the Shareholders of The Kohinoor Mills Company, Limited held at the Registered Office of the Company, Home Street, Fort, Bombay, on Thursday the 17th March 1955, the Chairman Mr. E. D. Sheppard said:—

"Gentlemen,

I expressed the hope when I last addressed you that wiser counsels would prevail all over the world and some lasting agreement would be reached among nations for the preservation of world peace. During the course of the year we saw the end of the war in Indo-China and, once again, India was in the forefront of those who were attempting to bring about an armistice in this war-torn area. When finally an armistice was signed, a three-nation committee was set up under the Chairmanship of India to undertake the onerous task of partitioning of the country, evacuation of contending forces, repatriation of prisoners-of-war and general rehabilitation. Once again it has been proved that the Indian Army is second to none in its impartiality, its discipline and its efficiency in dealing with difficult situations. It would seem, however, that we are not yet free from the attentions of the many-headed hydra of war as no sooner was Indo-China relieved, than trouble started between the two Chinese governments, and the People's Army has started its offensive against the Nationalist Chinese Government in Formosa. The world situation is again explosive, and it is to be fervently hoped that this issue will be localized and will not evolve into a wider conflict. The Prime Minister of India along with others is sparing no effort to bring about a peaceful solution of this vexed problem.

Nearer home I am afraid the situation remains a stalemate. Despite meetings between the Prime Ministers of India and Pakistan the setting up of Joint Commissions, etc., the problem of an understanding between these two neighbours eludes solution. There is little improvement in trade between the two countries, and they still go their several ways, with a consequent strain on both their economies. At home, during the course of the year, there was a definite improvement in economic conditions and, after many years, India achieved self-sufficiency in food with the consequent abolition of rationing all over the country. There has been a progressive fall in the prices of foodstuffs but, unfortunately, this fall has not been reflected in the cost of living

index compiled by the Government of Bombay. This is difficult to understand.

A plentiful monsoon saw the end of the bogey of electric power rationing. Furthermore, after years of deliberation, the Government of Bombay at last gave the green light to Tatas for the erection of the second half of their thermal power station of 100 MWS at Trombay. The commissioning of further sets in the Government/Railway Power House at Kalyan, has further eased the situation and, at the present time, power is fairly freely available for all normal expansion of industry. Early this year, the Government also started work on their Koyna Hydro-Electric Scheme, and it would now seem that, for some years to come, at least Bombay will not again be handicapped, as it has been in the recent past, by a shortage of that essential for economic growth and expansion—the watt. In the wider context, the first Five Year Plan is nearing completion and the second is getting under way. With the setting up of major industries like Steel & Chemical Works, Oil Refineries and the development of river projects, India is making a start towards its goal of economic and industrial self-sufficiency.

Turning now to the Mill Industry, conditions during the year under review were not quite so good as in the previous year. Although a fairly satisfactory demand for cloth and yarn continued, there was a definite downward tendency in prices and this became more marked towards the end of the year. The off-take from your Mills was as good as could be expected in the circumstances, and they also had their fair share of the export trade where the demand continued to be good. The export duty on coarse counts continued throughout the year but has recently, under the new budget, been reduced to 6½ from 10%. This should improve the demand for export, but Government have seen fit to enhance the excise duties for local consumption. Whereas, before there were four categories, superfine, fine, medium and coarse, these have been reclassified into two, superfine and others. The duty on superfine remains at 2½ annas, fine goes down from 1½ annas to 1 anna, coarse and medium

are enhanced from 6 pies to 1 anna. The duties previously leviable on the linear yard will henceforth be applicable to the square yard. The effect of these changes is very serious, they would cost your Company Rs. 8 lacs per annum, and the Millowners' Association is sparing no effort to persuade Government to revise their policy and reduce this extra impost levied on your industry. The additional excise of 3 pies per yard for the development of the handloom industry continues. It would also seem that the policy of Government is to ban or, in any case, to restrict the installation of extra loomage, although they are prepared to sanction increases in spindleage.

Apart from the additional levies on the textile industry the budget proposals are of unusual severity especially in regard to direct personal taxation. I recall that two years ago, Mr. Butler, the Chancellor of the Exchequer, in presenting his budget to the House of Commons, after referring to the "numbing effect of excessive direct taxation," said "We must banish the hopeless feeling that extra effort is not worthwhile." He then proceeded to reduce the rate of income-tax. The progress made by the United Kingdom since then is a clear vindication of the policy of alleviating direct taxation and the concessions then given have most certainly paid good dividends.

Unfortunately in India the recent proposals of the Finance Minister have brought "the hopeless feeling" to business executives all over the country, and indeed many may be excused for wondering whether any effort is now worthwhile.

You all know the story of the man who killed the goose that laid the golden egg. In the context of those embarking on new ventures it now seems that the Government of India is proposing to strangle the goaling before it can reach the stage of laying an egg at all!

Let us hope that the Finance Bill will emerge from the Select Committee with at least some incentive restored to honest industrialists to develop and expand their undertakings so that India may enjoy the benefits of increased production and employment.

I would like to mention one point of very great interest to you all. Very recently, the Appellate Tribunal of the Industrial Court awarded an extra 5% to mill labour on the bonus paid to them in respect of the year 1952. This has cost the industry a sum

approximating Rs. 50 lacs. Furthermore, the Tribunal has also enhanced the rate of dearness allowance payable in the following manner:

Between C.L.I. 325/335 ..	5%
" " 336/350 ..	7½%
Above " 350 ..	10%

This measure will cost your Company Rs. 8 lacs and the industry approx. Rs. 2 crores per annum, as long as the index figure remains above 350.

In this connection I would refer you to the remarks I made earlier in the speech. Although the rates of most commodities have declined sharply, the Bombay City cost of living index has even at times increased. To take a comparison, until recently the D.F.A. in Ahmedabad was about Rs. 20/- higher than in Bombay, but in the last few months it has gone considerably below the Bombay level. I for one cannot see any reason for this increase in Bombay City alone and hope that Government will institute a searching enquiry into the method of compiling this index figure.

As regards prospects for the future, I do not look for any marked change as far as your Company's affairs are concerned. The new Excise rates and the increased dearness allowance will of course reduce the potential profits to some extent. On the other hand, your Mills remain in a strong financial position and with the programme of modernisation and rehabilitation nearing completion, the benefits which it is hoped will be derived therefrom should soon become apparent. I would mention here that the limit of development has now been reached in the present Mill premises and if it is decided that further expansion is desirable in the interests of your Company, then additional property will have to be acquired.

This will require careful consideration and one cannot escape the feeling that should the level of profit rise, then the lion's share will fall to the predators of Industrial Courts and that Excise enthusiast, the Finance Minister.

Before I conclude, I know you would wish me, on behalf of you all, to thank all the staff both at the Mills and in the Head Office for their hard work throughout the year. That so much erection and re-arrangement of machinery could have been carried out without loss of production indeed calls for congratulations.

Our Selling Agents have served us well in a difficult year and deserve our gratitude. Bombay, 17th March, 1955.

THE NATIONAL BANK OF INDIA, LIMITED AND TWO SUBSIDIARY COMPANIES

CONSOLIDATED BALANCE SHEET AS AT 31st DECEMBER, 1954

	1954 £	1954 £
Capital—Authorised and Subscribed—4,502,500 Shares of £1 each	4,502,500

NOTES:

- Securities to the nominal value of £1,127,227 (1953—£1,027,643) have been lodged as security for Government and Special accounts and for guarantees issued to Indian Government Departments.
- Bills receivable rediscounted £159,532 (1953—£139,534) of which up to 7th March, 1955, £96,788 have run off.
- Forward contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers £41,844,837 (1953—£38,926,499).
- Liabilities have been incurred in respect of building contracts for new premises amounting to approximately £489,000 (1953—£427,000).
- There are contingent liabilities in respect of confirmed credits outstanding amounting to £10,743,503 (1953—£9,609,362).
- There are contingent liabilities in respect of guarantees entered into in the ordinary course of business and for uncalled capital in shares held as nominees.
- Overseas Current Assets and Liabilities have been converted at the rate of 1/6d. per Indian Rupee, 1/6d. per Ceylon Rupee, 1/6d. per Burma Kyat, 3/2d. per Pakistan Rupee and £1 per 20 East African Shillings, and other currencies at the rate of exchange ruling on 31st December, 1954.

CONSOLIDATED PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1954

	1954 £	1954 £
Balance brought forward from previous year	75,000	75,000
Net Profit for year ended 31st December, 1954, after providing for Taxation and transfers to Staff Pension Funds and to Contingencies Reserves, out of which Reserves provision has been made for diminution in value of assets	109,785	385,923
First Interim Dividend paid at the rate of 7 per cent for the year ended 31st December, 1954	125,469	
Second Interim Dividend payable at the rate of 8 per cent for the year ended 31st December, 1954	235,254	
Balance of Profit unappropriated—		
National Bank of India, Limited	273,404	
Retained in Subsidiary Companies' Account	52,862	
	326,266	
	5706,520	5706,520

NOTE:—The aggregate amount paid in respect of Directors' fees was £16,209 of which £839 was borne by a subsidiary (1953—£16,629 and £807 respectively).

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1954.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, gives a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

Chartered Accountants.

The National Bank of India, Limited

Year of Steady Economic Progress

Continued Growth and Satisfactory Results Achieved in Difficult Circumstances

Need to Strengthen Sterling Area Currencies

Mr. J. K. Michie's Review of Operations

The Annual General Meeting of the National Bank of India, Limited, will be held on April 5 at 24, Bishopsgate, London, E.C.

The following is the statement by the Chairman, Mr. J. K. Michie, which has been circulated with the report and accounts for the year ended December 31, 1954:—

First I wish to refer to changes during the year in the directorate. To our great sorrow Sir George Morton, O.B.E., M.C., who joined the board in 1947, died a few days after our last annual general meeting. Sir George had a distinguished career in commerce in India, and we greatly miss his wide knowledge and mature wisdom.

In April last, Sir Henry Guy Cooper, M.C., D.C.M., was elected to the board, and his appointment now comes up for confirmation. Sir Guy has had a long and intimate experience of Indian affairs and of the oil industry, and I confidently recommend him to you.

YEAR'S RESULTS

While at home 1954 was a year of steady economic progress the pattern of events in our various fields of operations was distinctly more chequered. Nevertheless, the figures in our balance-sheet reflect continued growth and we are satisfied with the results achieved in circumstances of some difficulty.

Our deposits have risen very substantially and the total of our consolidated balance-sheet at £162,031,432 not only tops last year by £25,578,455 but considerably exceeds the highest previous figure of £147,283,647 shown at December 31, 1951. This expansion, I am glad to say, is spread over the whole area of our operations. The figure for the National Bank of India, Ltd., alone shows an increase of £23,704,466.

We propose again to allot £75,000 to Reserves account, and as I have previously told you this account will continue to grow until our major building and rebuilding operations are overhauled. The two large offices still under way are at Dar-es-Salaam and Aden, but as we expand it must be accepted that further investment in bricks and mortar is inevitable.

After full provisions for taxation, bad and doubtful debts, and other necessary reservations our consolidated net profits are £385,923 against £387,646 for the previous year.

As you are aware, a second interim dividend of 8 per cent has been declared, making 15 per cent for the year on the increased capital. I think this return is a liberal interpretation of the implied promise I made last year and a standard we have every hope of maintaining.

The resultant balance enables us to transfer £70,000 to contingencies and to carry forward the slightly increased figure of £326,266.

INDIA

For the second year in succession helped by a good monsoon, but also a result of long-term agricultural planning, India has succeeded in increasing considerably her production of foodstuffs—she is even exporting a little—an achievement which is saving a large expenditure of foreign currency and, I trust, will also be reflected in a rise in the standard of living.

The economic policy of the Government is balanced somewhat precariously between reassurances to the "Private Sector" based on doubt on the need for the development of industry with the help of foreign loans and investment and a trend towards socialist thinking in the form of industrial development and ownership by the State. One hope for private industry lies in the formation of the Industrial Credit and Finance Corporation of India Ltd., shares in which are now being offered to the Indian public. Along with other Exchange Banks we have made a substantial subscription to the capital of the Corporation and I am quite certain it can and will be of great help in the provision of financial aid which might otherwise not be readily obtainable for really sound projects or the further development of existing industries and companies.

Mr. P. S. Beale, until recently chief cashier of the Bank of England, has arrived in India to assume the general management of "Second Five-Year Plan" is being launched by Government, a primary object of which is to create twenty-four million additional jobs in industry by 1967, thereby absorbing the existing unemployment and the inevitable increase in population. Simultaneously it is hoped to raise the general standard of living.

Other features of official thinking are reflected in projected legislation which includes amendments to Article 3 of the Constitution and the Indian Companies' Act. The former will remove the right of individuals whose property is compulsorily acquired by the State to recourse to the Courts over questions of compensation. The latter proposes the progressive elimination of the Managing Agency system—which goes far beyond any previous suggestion.

Both proposals are a cause of anxiety to business men in general but particularly to foreign capital, which is mainly British, so I hope sincerely the protagonists of these measures will think again.

Mr. Deshmukh's budget statement is a mixture of encouragement to industry and disappointment to individuals.

The over-riding proposal is deficit financing to the extent of Rs. 340 crores out of Rs. 578 crores required for capital purposes—and this sum will be obtained by the issue of Treasury Bills.

He reports a notable fall in wholesale prices during 1954 and a drop in the cost of living index of 7 per cent.

Customs duties on cotton cloth are to be reduced from 10 per cent to 6 per cent and a slab system will replace the present flat rate export duty on tea. A development rebate of 25 per cent on the cost of new machinery is proposed.

Supertax will be levied on individual incomes over Rs. 20,000 (instead of over Rs. 25,000) and taxes are to be introduced on company directors' entertainment allowances and perquisites. Compensation for loss of employment or for the loss of a Managing Agency will also be taxed. The "Manchester Guardian" considers these provisions will have a very adverse effect on the morale of the British serving firms in India.

A few months ago it was announced that the Imperial Bank of India and several other indigenous banks operating mainly in what were the Princely States are to be amalgamated and the major ownership acquired jointly by the Government of India and the Reserve

Bank of India. Details are awaited but it has been stated that no departure from traditional banking principles and practice is contemplated.

PAKISTAN

Pakistan had an uneasy year politically and economically. She has opted to become a republic within the Commonwealth on the same lines as India and has also decided to have only two states or provinces, East and West Pakistan.

The new Constitution is being drafted and it will be interesting to see what form it takes.

A few months ago the Governor-General dismissed the Constituent Assembly. This action has been held by the Sind Court to be unconstitutional and the result of an appeal to the Federal Court must now be awaited.

The food situation is at present satisfactory and there is even a considerable quantity of rice available for export, while the programme of industrialization has made steady progress. One result of this is a large reduction in the export of cotton from Karachi, a crop which previously almost wholly went abroad but 50 per cent of which is now to be consumed locally.

In East Pakistan the jute mill industry continues to expand.

The jute export trade of East Pakistan, which is a vital part of its economy, was recently somewhat disturbed by the cancellation of the licences of 13 important shippers, on the grounds that they had contravened Government regulations. The situation is slowly being clarified but temporarily Pakistan suffered a loss of foreign currency through the delay in getting shipments effected.

A major development during the year is the formation of the Sul Gas Transmission Company which is to produce and market large reserves of gas discovered by the Burmah Oil Co. Ltd. at Sul in Baluchistan. Along with other exchange banks operating in Pakistan we are subscribing to the loan capital. This gas supply will be an invaluable addition to Pakistan's fuel resources.

CEYLON

Ceylon has been the fortunate Isle for prices of tea and rubber have been buoyant, while the cost of her rice imports of over 400,000 tons per annum has fallen materially during the year—so her revenues and her balance of trade both have benefited. Altogether the picture is a complete change from that of two years ago and in consequence prospects for 1955 are favourable.

A development finance corporation is to be formed in Ceylon on the same lines and with the same objects as the Indian Corporation I have already referred to, and it is expected that the exchange banks will be invited to provide some of the capital.

The modernization of Colombo harbour is not now expected to be completed until 1957 so is somewhat behind schedule.

On the retirement of Lord Soulbury from the Governor Generalship this position was filled by the appointment of Ceylon's veteran statesman Sir Oliver Goonetilleke, who makes history by being the first native of Ceylon to occupy this high position.

TEA

Two years ago the tea growing industry in India and Ceylon had just emerged from a crisis caused by prices falling so

low that in some cases they hardly met the cost of shipping and marketing—a situation which naturally was of no concern to consumers. To-day, owing to an all-round increase in consumption, the position is radically different and over the past year prices have risen considerably, particularly in overseas markets which have to bear the oncost of export duties.

Recently a great deal has been said and written in this country about tea and tea prices, much of it ill-informed.

At the moment of writing prices have had a sharp fall and time will show whether this is or is not temporary, but I am quite sure that nothing would better please producers, shippers, merchants and retailers alike than to see a more stable market at a less high level of price than we recently saw. But the simple fact is that particularly with Indonesia exporting 80 million pounds less than in pre-war days production just cannot keep pace with the steadily increasing consumption induced by large world populations and by increased purchasing power. In the United Kingdom alone consumption has risen by 20 per cent since de-

rationing while it is estimated that in India it has expanded by around 70 per cent compared with prewar and it must be expected that this trend will continue.

The suggestion that in the country a reimposition of rationing combined with a satisfactory or acceptable answer to the present level of prices is purely political wishful thinking and takes account neither of the statistical position nor of the fact that prices in this and other importing countries bear export taxes of 1s. 11d. per lb. in Ceylon and 11d. per lb. in India. I trust these taxes will not be perpetuated at the present levels for I continue to believe that export duties almost invariably in the last event have a boomerang effect on the countries imposing them and are therefore an unsound fiscal weapon.

Within the next two years—that is, when adequate and suitable storage accommodation has been provided—it is expected that a much larger percentage of Northern Indian teas will be auctioned in Calcutta.

BURMA

The economic position of Burma continues to be governed largely by the trends and policies I remarked on last year. Falling rice prices, quite apart from the very low rates, she has been forced to accept for large stocks carried over from 1952-53 and a continuance of large capital expenditure on harbours, railways, inland water transport, and many major projects of an industrial nature, necessarily mean a drain on balances previously built up when rice prices were high.

Without question the really urgent needs are to recondition ports and improve all forms of transport as rapidly as possible so that increasing quantities of rice can be promptly marketed and exported, otherwise the cultivator will be discouraged and Burma's main source of income will be a declining one.

To some extent the rice trade has been "liberalized" in that while the State Agricultural and Marketing Board is the sole "entrepreneur" any one can now buy rice from it for shipment abroad. This is a step in the right direction and will, I hope, enable Burma to begin to recapture some part of her traditional

markets, but it is still a long way from free marketing.

The Colombo Plan continues to develop its financial and technical assistance to the great benefit of the countries concerned.

EAST AFRICA

In the early summer of 1954, after an interval of five years, I revisited East Africa and was able to see a large number of our branches, many of which were non-existent in 1949. It was an encouraging experience and one noticeable feature was the steadily increasing awareness of the African population of the advantages of banking facilities.

I was particularly pleased to be able to attend the official openings of our new premises at Kampala, Nakuru, and Moshi. As you will see from the photograph reproduced in this report Kampala office is a particularly fine one and His Excellency the Governor of Uganda, Sir Andrew Cohen, did us the honour of performing the opening ceremony.

KENYA

Mau Mau, I regret, is still with us and although real progress has been and is being made no sign is yet evident of an early cessation of its activities. The attitude of the upcountry Kikuyu however is much more encouraging in that they are showing far less fear of co-operating with the authorities and their employers and this is all-important. An announcement has just been made that subject to the approval of Parliament Her Majesty's Government will make a grant of £10,000,000 and an interest-free loan of £4,000,000 to the Government of Kenya to help finance "Emergency" expenditure.

During 1954 Kenya was remarkably prosperous in the circumstances, helped by reasonable rains and high coffee prices. Local industries continue to expand, and given political peace and adequate transport facilities, there is little doubt but that Kenya would have a steadily expanding economy.

Income from coffee—and this applies equally to Uganda and Tanganyika—promises to be much reduced this year as a result of the heavy fall in prices caused by the action of the Government of Brazil in creating a special exchange rate for her coffee exports.

UGANDA

The difficult political situation in Uganda of a year ago was followed by a

buying boycott which affected trade considerably for some months.

Fortunately the settlement proposed by the Hancock Commission seems to be generally acceptable and in due course the Kabaka will return to Kampala.

Uganda had a good cotton crop, and as coffee is her other main product her agriculture had a profitable year. Cultivators benefited by the higher guaranteed prices fixed by Government for both commodities.

Over the past 10 years or so Government have accumulated about £30 millions out of the export prices received for cotton and coffee through the two controls, and it now proposes that this sum should be spent over a period of five years in the general development of the Protectorate. Roads, waterways, irrigation, agricultural, and industrial development all come into the plan which should ensure a great increase in the productivity and so of the prosperity of the whole country. There is a great deal of most excellent agricultural land in Uganda which only awaits clearance, population, and the elimination of the tsetse fly. As it is known that the best means of driving out the tsetse is to introduce people and cut down the jungle, the Government plan has great possibilities.

TANGANYIKA

Although sharing with her two neighbours certain prosperity from coffee and cotton—in fact her cotton crop was a record one—her large interests in sisal had a less fortunate experience and prices fell as low as £70 from £103 in January, 1954. At the moment values have revived to about £80 and the prospects of at least holding this level seem to be reasonably good.

A few months ago we opened a branch at Bukoba, one of the main coffee growing centres in the territory.

Last year Tanganyika enjoyed the dubious advantage of a visit from a team of inspection nominated by the United Nations Organization and this mission recently issued a report which has caused both controversy and concern. It seems a pity that the mission did not allow itself time to make an adequate survey of such a large territory and correspondingly large subject. In these days it is almost fashionable to attack or decry Colonies and Colonial Governments however enlightened although there is no immediate alternative except chaos

EAST AFRICAN HIGH COMMISSION

Railways and ports in the three territories come under the control of the Commission and real progress has recently been made in improving these facilities which are absolutely vital to the development of production and industry.

A three-year plan is now in operation and it has been announced that the World Bank will provide 20,000,000 dollars of the funds required.

ZANZIBAR

During 1954 the price of cloves remained fairly steady but this 1954-55 crop was a very poor one following a bumper yield the previous year from which fortunately there was a large carry-over.

ADEN

The event of the year was the putting into operation of the B.P. (Aden) Ltd. new refinery at a cost estimated at £45 millions. It has a yearly refining capacity of five million tons and will "inter alia" provide bunker oil for the 4,500 ships which annually visit the port.

Another development is the growing of cotton in the Abyan district which will provide a valuable cash crop for the territory.

SOMALILAND PROTECTORATE

The volume of trade is still small in this area and the habit of banking slow to be acquired, but some progress is being made and we must be patient in the knowledge that we are supplying a necessary service.

SUBSIDIARIES

The profit shown by Grindlays Bank Ltd. is again lower, but branching out into new territories is inevitably initially expensive and it will take some time before operations in the Rhodesias show favourable returns. Prospects, however, are encouraging.

The operations of the Finance and Development Corporation continue to grow and to be profitable.

GENERAL

Until it is brought about and possibly even after that event, convertibility of the pound sterling, by which I mean free or absolute convertibility, will be a much debated question, but I am glad to see Mr. Butler recently made a pronouncement that "the conditions for convertibility have not yet been fulfilled" and this view he has since reinforced by the recent drastic increases in the Bank Rate from 8 per cent to 4½ per cent.

Indeed one has to look no farther than the discount at which "convertible" sterling stood until the Chancellor took remedial measures, or the slow tempo of our accumulation of gold and dollar reserves to see the justification for Mr. Butler's statement. Sterling has to show a much stronger front before it can safely be declared convertible and that means an all-round strengthening of the economy and currencies of the whole sterling area. We know that last year production in this country increased by around 5 per cent, but much of that increase seems to have been consumed internally which reflects an inflationary trend and does not improve our "A" important external budget. In fact, to plagiarise Lewis Carroll, "It takes all the running we can do to keep in the same place." A great deal has been accomplished, but until our balance of trade has been considerably bettered it will be difficult to justify more than mild satisfaction, especially when we remember that never before in times of peace has such full employment been enjoyed. In these circumstances, while there are good general grounds for optimism, I fear the Chancellor of the Exchequer will still find it necessary to skim off the froth of inflation in our economy by taxation of one kind or another. Money is now dearer in the United Kingdom than it is in India, Pakistan, Burma, or Ceylon.

N.B.I. REVIEW

October, 1954, saw the appearance of the first issue of the "N.B.I. Review," a quarterly which is to be devoted to the consideration of the specialized problems of eastern banking. In this respect it breaks new ground and the first two issues have had a favourable reception. We hope to maintain the standard that has been set in the belief that the Review will be of practical use as well as of interest to our constituents and correspondents at home and overseas.

STAFF

We are again beholden to our staff throughout our business for their vital contributions to the achievement of the results we show and our thanks are sincere. We believe that the best service to our customers can only be provided by a staff with a true esprit de corps and this is our continuous aim to cultivate. Barring major imponderables I can see no reasons why the business of the bank should not prosper in 1955.

girl BOP Rs 3-6-0 and Black well-made OP Rs 2-13. Export Sale No. 7 will be held on the 29th March, 1955.

Tea shipments from Cochin have shown an improvement from 4.79 million pounds in January 1955 to 5.88 million pounds in February, 1955 as compared with 3.2 million pounds in the corresponding month of last year. The increase in shipments is mainly accounted for by the UK which has increased her offtake from 1.14 million pounds in January to 3.8 million pounds last month.

THE PENINSULA

(Continued from page 620)

ignored. The problems arising out of unhealthy competition have to be tackled at the production level rather than at the consumption level. The scope for expanding the present activities is immense; to avoid bottlenecks greater consultation between the States would be helpful. The weavers, on their part, have to forget petty differences between themselves. The consumer-public have to show greater patronage. An annual reminder such as the Handloom Week would greatly serve to focus attention on the importance of the handloom weaver.

CLIVE STREET GOSSIP

(Continued from page 612)

tions of more spectacular and immediate wealth for themselves at the cost of expropriation of others and those others richer than themselves. It is the barest thing we could do in return to put up with a little deprivation by measures of taxation. Nay, it is even more self-regarding than that. It would be an act of ultimate self-interest, for the extra tax that we now pay is the insurance premium for a stable and reasonable Government under which we shall be allowed to retain our pay packets though we may have to yield up the taxes on them.

LEAVESDROPPER.

The Indian Bank Limited, Madras

(ESTABLISHED—1907).

Directors' Ninety-Fifth Report

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1954. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 13,93,898-14-8 and together with the sum of Rs. 1,23,088-2-3 carried from the previous year's account, makes a total of Rs. 15,16,785-0-11.

3. Out of this sum, the Directors have made the following interim appropriations:—
An 'ad interim' dividend at the rate of 5 per cent and a Bonus of 1 per cent (both free of Income-tax) was paid which absorbed Rs. 3,48,000 0 0
The Directors now recommend that the following further appropriations may be made:—
To pay a final dividend of 5 per cent and a bonus of 1 per cent (both free of Income-tax), thereby making the dividend and bonus for the year amount to 12 per cent Rs. 3,48,000 0 0
To provision for taxes Rs. 5,75,000 0 0
To transfer to the Reserve Fund under Section 17 of the Banking Companies Act, 1949, raising it to Rs. 59 lakhs Rs. 1,00,000 0 0

To transfer to Bank's Buildings account Rs. 15,000 0 0
To carry forward Rs. 1,30,785 0 11
Total Rs. 15,16,785 0 11

4. The Bank rate remained unchanged at 3½ per cent during the year under report.
5. Offices of the Bank were opened during the year at Alwarpet, and Nungambakkam in the City of Madras and Coonoor R. S., Rajapalayam, Pattukottai, Sankaranarayanan, Secunderabad (Dn.) and Tirupattur (Ramnad).
6. Mr. M. A. Chidambaram Chettiar, who was associated with the Bank as a Director for nearly nine years resigned his seat on 8th February, 1955 and the Directors record their great appreciation of his valuable services to the Bank. In his place Kumararajah M. A. M. Muthiah Chettiar of Chettinad B.A., was co-opted.
7. In accordance with Articles 85 and 86 of the Articles of Association of the Bank four Directors, Messrs. Kumararajah M. A. M. Muthiah Chettiar of Chettinad, R. K. Venkatchalam, R. Sundaram Iyer and Rao Bahadur M. R. M. S. Perannan Chettiar retire this year by rotation and they, being eligible, offer themselves for re-election.

WORLD OF TEA

(Continued from page 606)

Rs 3-3. Offerings of other grades consisted of 9,047 packages. There was a good demand, but prices were irregular. Those teas with clean leaf appearance and good liquors were firm and sometimes dearer, but the remaining descriptions were 1 anna to 3 annas per pound easier. The best liquoring CTC sorts were well supported; but, towards the end of the sale, they declined in price and became difficult of sale. No quotations were given. There will be no sales next week. The next sale will be held on the 4th April.

At the auction held at Colombo last week, about 6,772,080 pounds were offered. Though the opening of the sale was hesitant with sellers reserved, better enquiry developed towards the close. Best quality Nuwara Eliya teas were sold readily at about brokers' valuations, but there were some withdrawals of the less attractive invoices. Among high-grown teas, a few BOPs with flavour continued to sell at firm rates, but intermediate types showed a slight decline on the previous week's rates. Among medium-grown teas, prices of Broken grades were a few cents per pound dearer, especially at the close of the sale, while Orange Pekoes were distinctly dearer, par-

ticularly when well-made. Among low-grown teas, bold Leaf Pesian Gulf types continued to decline and were about 10 cents per pound lower. There was active demand for Tippy Fannings at dearer rates.

In the Cochin market, a total of about 16,00,000 pounds was catalogued for sale last week. The quality of Nilgiri teas was well maintained, but that of other descriptions showed a falling away. There was a very restricted demand from the outset and about two-thirds of the quantity on offer was withdrawn. Best liquoring teas met with quite good demand at a drop of As. 10 to As. 12 per pound, but buying was most erratic, the prices realised for many lots bearing no relation to their comparative value. The better Medium descriptions were sold at As 8 to As 10 per pound below last rates, but Commons and Low Mediums were generally neglected, the majority being withdrawn. Black Leaf Middle East types were difficult of sale, while all whole Leaf grades registered a drop of As 8 to As 12 per pound. Following were the rates quoted per pound:—Low-grown Travancore BOP Rs 2-4-8 (nominal); Medium-grown Travancore BOP Rs 2-8-8 (nominal); Anamallais BOP Rs 2-13-6; Best Liquoring Nil-

	(4) On Forward Exchange contracts Rs. 2,90,70,919-7-10.		
	There is a liability of Rs. 37,191-11-0 on account of income-tax for the year 1941 which has not been paid but adequate provision has been made.		
	In respect of the additional assessment for the year 1942 on account of Malayan Offices which has resulted in a demand of Rs. 3,04,782-6-0 as was referred to in the earlier Balance Sheet, the assessment has been set aside on appeal and a fresh assessment has been ordered to be made. In view of the small profit for the year 1942 it is expected that the further liability to income-tax for 1942 will be negligible.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Indian Bank Limited, as at 31st December, 1954 and also the above Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the authenticated returns from branches and sub-offices and report that:—

(a) We have obtained all the information and explanations we have required;

(b) Such information and explanations have been found to be satisfactory;

(c) The returns received from the branches have been found adequate for the purpose of our audit;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;

(e) In our opinion, the Profit and Loss Account shows a true balance of Profit for the period covered by the Audit;

(f) In our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law.

GATEWAY NOTES

(Continued from page 614)

Using the resource-potential. However, industrial maturity cannot be reached except by the better organisation of the industries. Obviously, there is much scope for the small and medium scale industries of Ahmedabad to unite into a powerful body and tilt the scales in their favour. It is high time that the State Government set up a small-scale industries board as in some other States; financial aid to the needy is only one aspect of possible State help. Only a well-equipped and efficient Department of Industries can effectively tender technical aid and advice, tools and equipment, marketing facilities, etc. The conference has rightly commended to the Government the policy of Japan towards its smaller industries.

Saurashtra Budget:

The Saurashtra State budget for 1955-56 reveals a revenue deficit of Rs 113.79 lakhs. The

receipts are estimated at Rs 1289.75 lakhs and expenditure is placed at Rs 1403.54 lakhs. Fresh taxation takes the form of an increase in Sales Tax on the following commodities from half anna to one anna in the rupee: (1) hydrogenated vegetable oil (2) tobacco and (3) tea leaves, coffee seeds and coffee powder. Also, Sales Tax would be levied on groundnut and sesamum oil at the rate of half anna in the rupee. Larger provision is made in the budget under irrigation, education, medical and public health, agriculture and veterinary, civil works, Community Development Projects and National Extension Service. A grant of Rs 125 lakhs is expected from the Centre next year under the Five-Year Plan. This Part B State, which came into existence in 1948 by the merger of over two hundred principalities, has since then shown remarkable progress in agriculture and industry. The State's major industries like cotton, cement, wool and pottery have greatly benefited by the Five-Year Plan under which more than Rs 14 lakhs was set apart for their develop-

ment. The completion of the Kandla Port in the nearby Bay of Kutch would enhance the tempo of commercial and industrial activity.

Uplift of Adivasis:

During the Prime Minister's recent visit to Madhya Pradesh, he inaugurated the All-India Tribal Conference at Jagdalpur. The name of the conference is rather deceptive, since the active participants were experts, anthropologists, Government officers, non-official workers and a few educated persons from among the tribals; the majority of the Adivasis sat mutely hearing speeches they could not follow. But the divergent views expressed on the subject of tribal welfare makes one doubt if the discussions were not in danger of becoming academic. According to the 1951 census there are over 19 million tribal peoples in India. Along with the Scheduled Castes and other backward classes, they are provided constitutional safeguards. Several States have passed legislations to speed up their wel-

fare activities and constituted Tribal Advisory Councils. The Constitution provides for their special representatives in Parliament and State Legislatures for a period of ten years. Their problem is, however, different from that of the Scheduled Castes and is less complicated. These inaccessible people who live in jungles and hills have their own dialects, dress, mode of cultivation, handicrafts, customs, dances and other cultural forms. Training of social workers from among the tribals, improving their methods of agriculture and handicrafts as well as the facilities for their education, their general economic uplift, these are some of the measures called for; but their other characteristics deserve to be preserved. An unjudicious approach would make the Adivasis suspicious and uncooperative while indiscriminate help might serve only to pull them out of their homes into the towns in large numbers only to be disillusioned. On the pattern of social and economic uplift to be adopted and the form of aid, the report of the Kalelkar Committee may shed helpful light.

We had no occasion to send Mr Rao any copy of our proposal or of the plan or to inform him about the facts which led us to suggest as we did and we presume that he had to proceed on incomplete data as the basis of his remarks, some of which at least, we believe, would not have appeared in print if he had all facts before him in time. Moreover, the alternative he has suggested is only for the portion where

EDITORIAL NOTES

(Continued from page 601)

to take account of popular aspirations and fears which may have only remote links with the logic of economic facts. Moreover, as mentioned in the Study, industrialisation has played a larger part in the policies of the centrally-planned countries. To look for conclusive proof for the relative merits of the two types of economies, from the point of view of industrialisation, from the data available, is to invite disappointment. The controversy seems endless. To the question, what relation should obtain between development in the different sectors in a national economy, the Study has provided an answer, beyond simply stating the obvious that all the sectors must proceed in step. The principal criterion, for framing priorities should be the level of industrial maturity obtaining in each country, whose major ingredients are the resource endowment, the availability of capital and the relevant qualities of the population. In its broad indications the Study endorses principles which, though they have already found wide appeal here, are not altogether acceptable; preferring industries which need the least capital and skill and those which can be economically organised in multiple small units and are likely to fit most readily into the existing pattern of local demand. In fact, it is the task of reconciling an over-flow of human labour with economical production which remains the most baffling.

STERLING AND ELECTIONS—SIR WINSTON'S DILEMMA

(Continued from page 603)

No political prophet would dare to forecast the result of an election in seven months' time. There is bound to be uncertainty and suspense throughout the summer and early autumn, and most foreign holders of sterling would prefer to be on the safe side.

Should the British authorities support transferable sterling in face of such a selling pressure, they would inevitably lose hundreds of million of dollars. A decline of the gold reserve would deprive the Conservative Government of a large part of the credit they claim for the achievements of their administration. Should the Exchange Equalisation Fund abstain from bolstering up transferable sterling, its rate would depreciate considerably. This, in addition to being bad for the Government's prestige, would lead to a large-scale revival of "commodity-shunting" operations, which again would entail considerable loss of gold.

Moreover, in anticipation of a depreciation or devaluation of sterling under a Labour Government, overseas buyers of British goods would defer their orders, or they would at any rate defer payment for the goods, in the hope of being able to pay with cheaper sterling. This again would lead to heavy losses of gold. It is no wonder that pressure is brought to bear on the Prime Minister to

spare the country of such unfavourable developments by deciding in favour of an early election.

Opponents of an early election, on their part, argue that a flight from the pound might produce a favourable effect on the Government's election prospects. They believe that it would frighten the electorate into voting Tory, in the same way as happened in 1931, for fear that the return of a Socialist Government would mean a depreciation of the currency. It would be risky, however, to depend on such a psychological effect.

Sir Winston Churchill is not likely to indicate his intentions in the immediate future. But the Government will have to show its hand on Budget Day. In order to be able to go to the country at the end of May it would be necessary to repeat the procedure of 1929 when a brief and non-controversial Finance Bill was rushed through in record time. This would have to be made clear by Mr. Butler in the course of his Budget speech on April 19. Should he foreshadow a more or less normal Finance Bill, it would be the end of hopes or fears of a May election. In that case, the odds would definitely favour a deferment till October, irrespective of the political and economic disadvantages that course would entail. (Copyright).

WORLD OF JUTE

(Continued from page 605)

he says that the problem of mills being held to ransom has not received that continuous and vigorous attention which it deserves."

Trading in the Jute Goods market, during the past week, remained dull and quiet with prices developing an easier tendency in the absence of any business with overseas buyers and on reports of rains in some of the jute-growing areas. Also, shippers were keen sellers for even forward positions, resulting in a substantial increase in the difference between the ready and forward delivery rates. Most of the operators were planning their hopes on Argentine buying; but, as there was still no evidence of her intention to enter the market shortly, there was unloading by one or two big operators. Prices, however, showed a slight recovery towards the close due to some covering business at lower levels. The following table will show the trend of prices during the week:—

	Last	Week's	Week's
	Week	Opening	Closing
Hessian:	Rs. a.	Rs. a.	Rs. a.
Ready	45 1	44 4	43 10
April/June	45 5	44 7	44 2
July/Sept.	44 12	44 2	43 14
40" x 8 oza.	35 10	35 2	34 8
40" x 7½ oza.	33 14	33 4	32 14

H. Cees	127 8	123 12	122 0
(Green)	131 8	127 8	124 4
Cornacks	155 6	151 8	149 0
Cubans	162 0	159 0	156 0
A. Twills	147 8	141 8	137 8
L. Twills	148 0	147 8	146 0
D. W. Flour	140 0	137 8	135 0

The Raw Jute market continued to remain depressed in the absence

of any buying interest. Sellers were anxious for business, but mills did not show any interest. In general, mills are fully confident about their raw jute supply position and they also expect a further fall in prices when arrivals of Pakistani jute make their appearance on the market. Except for some business in Daisee Mesta Bottoms at Rs 28-0 per maund and Pakistan Northern Cuttings at Rs 120 per bale, no other mill business was reported done during the week. Assam Bottoms were marked down to Rs 32-8 per maund from Rs 36-0 quoted in the previous week and Rs 41-0 in February last.

Crop Report: The Crop Report, issued by Sinclair Murray for the week ended March 19, states that Assam has experienced beneficial rainfall, which has enabled cultivators to proceed with land preparation and to start sowing. Weather conditions in other jute-growing States has been hot and dry. In Pakistan, thunderous storms were experienced in most districts during the past week. The amount of sowings is fairly well ahead in some areas and river levels are normal for this time of the year.

GATEWAY GOSSIP

(Continued from page 613)

and the wheat. At the other extreme, if the caretaker allows nothing to be done, not the smallest detail, without his immediate and personal supervision, it will take aeons before land could be cleared and before the garden could be made to bloom. At one end, we could have a super-abundant growth in which there would be many elements that might be undesirable. At the other end, there might be no growth at all, or stunted growth only. What we need is something in between, that will allow of planning for the land of India as a whole, such that India will be as a garden; in that planning, the duties and responsibilities of the different sectors would be clearly indicated and the caretaker, when he has the confidence that his workmen really have it in their aim to make a garden of India, will cease his unnecessary and time-wasting attention to details.

In the course of his speech, Sir Sarvapalli Radhakrishnan referred to the fact that "the British are well known for their art of making the best of what is inevitable." In the context of Indian development, we might hold that the best is inevitable—by that I mean the good of the common people. And, if for "British" we substitute "the private sector", we have an inkling of the moral that the Indian Vice-President might have intended to make.

Again, I ask the question: What does Trombay mean...? Perhaps, that we can be sure of Shell giving of its best to India; that it is very much in India's life; that it has long been part of it; and that, with the refinery products now available, it will also be in every (moving) part of it.

SOUTH INDIAN NOTES

(Continued from page 619)

fully to oriental studies. Few would have known that France was the first country in Europe to establish in 1814 a chair for Sanskrit.

The Institute at Pondicherry will have three sections devoted to (1) the study of the French language and civilization (2) Indology and (3) the application to India of French technical and scientific approaches. It would give an easy access to Indian students to what France has to offer. In the scientific field, France and India are already collaborating, for instance, in exploring the peaceful uses of atomic energy. This crowning example of peace and friendship should naturally influence the Lisbon authorities whose sole concern, apparently, is the maintenance of Portuguese culture in Goa and the two other settlements.

SOUTH INDIAN MARKETS

(Continued from page 620)

some of the bales were withdrawn at the later stages of the auctions in order to avoid further decline in prices.

Prices of Raw Hides in all centres are ruling steady and supplies of good quality hides are slowing drying up.

Tobacco exports have recorded a substantial improvement last year after a continuous decline for several years. Total shipments amounted to 73 million pounds last year as compared with 52 million pounds in 1953, showing an increase of over 40 per cent. Value of exports, however, was slightly lower at Rs 11.06 crores as compared with Rs 11.9 crores in 1953 due to a fall in prices. The UK was the main buyer and imported 31 million pounds.

According to the grading report, about 89 million pounds of tobacco worth Rs 9.6 crores was graded and marketed for exports during 1954 as compared with 70 million pounds worth Rs 9.4 crores in the previous year and 102 million pounds worth Rs 13 crores in 1952.

In addition to the reduction in export duty, the Government of India have extended the scope of the Exports Promotion scheme to cover tobacco and issued ad hoc import licences to overcome exchange difficulties experienced by countries importing Indian tobacco. To promote the sale of Indian tobacco, a delegation was sent to China, Japan and other Far Eastern countries and officers were appointed in several countries. Moreover, a tobacco-silk deal was signed with China under the trade agreement.

Firm conditions continued to prevail in the Madras Rice and Paddy markets. As the supplies of rice were plentiful from neighbouring areas of the City, there was not much demand for Andhra and Tanjore rice. Paddy prices hardened by As. 4 to As 8 per bag. Among raw rice varieties, Ramsagar variety rose by Rs 1 to Rs 1-8 per bag due to reports of poor stocks.

RUBBER

RUBBER PRODUCTION AND CONSUMPTION In December 1954

GROUPS	Production during Dec. 1954	Consumption of rubber by Manufacturers during Dec. 1954
--------	-----------------------------	---

FOR THE INVESTOR

(Continued from page 598)

keen competition by other manufacturing countries in overseas markets, the company's exports are still substantial and vigorous efforts are taken to maintain them. Although, at times, during the year, the prospects of demand for the company's woollen goods seemed uncertain, the turnover was finally satisfactory; but the trading result of this section made no contribution to the profits of the year.

Sales for the year are higher at Rs 4.72 crores as against Rs 4.32 crores in the previous year and this is mainly due to the continuity of full production in all sections, a useful contribution to this result being made by increased production and offtake of "Cotswol" fabrics. The net profit, before providing for Taxation and Depreciation, is substantially higher at Rs 73,80,399 against Rs 47,81,133. Due to this increase in profit, the directors have been able to raise the amounts set aside for various Funds. The Depreciation amount has been increased to Rs 16,30 lakhs from Rs 12,92 lakhs and the "Depreciation based on Replacement Costs" to Rs 6,00 lakhs from Rs 4,00 lakhs. The directors have found it necessary to increase these Depreciation amounts in order to cover the expenditure on Buildings and Machinery brought into use during the year under review. The General Reserve is raised to Rs 10,00 lakhs from Rs 3,50 lakhs; Workpeople's Housing Fund to Rs 2,50 lakhs from Rs 1,50 lakhs and Taxation to Rs 25,25 lakhs from Rs 15,50 lakhs. Even after these increased allocations, the directors have found it still possible to raise the dividend on the Ordinary shares from Rs 25 to Rs 30 per share for the year.

It would be recalled that the directors, in their last report, referred to their proposal to capitalise Rs 81 lakhs of the General Reserve by the issue of two Ordinary shares for each Ordinary share held. An application for sanction was submitted to the Government who informed the company that no decision could be given until after the report of the Taxation Inquiry Commission was published. As this report has recently been published, the company is awaiting developments.

The reconstruction of the "Cotswol" section of the mills is nearing completion and the directors have under consideration plans for the replacement of some of the cotton-manufacturing machinery and for the installation of new plant, generally with a view to further improving efficiency.

E.R.

Dividend tripled by Ouchterlony. The working results of the Ouchterlony Valley Estates, for the year ended 31st October 1954, are very impressive, the net earnings having shown a substantial increase over the previous year. A total crop of 9,34,800 pounds of tea and 13,825 cwt. of coffee was harvested during the season as compared

with 8,28,640 pounds and 8,449 cwt. respectively in the previous year. The tea crop realised an average price of 231.37 cents per pound as against only 170.19 cents in the previous year. The entire coffee stock has been valued at Rs 2/8/0 per point and payments received to date from the Coffee Board amount to Rs 2/9/0 per point or Rs 191.98 per cwt. A total crop of 242 lbs. of Cardamom was also harvested at a cost of Rs 795 and realised Rs 958. As collection of further crop has become uneconomic, the cardamom area has been abandoned.

The net profit for the year, before providing for Taxation and Depreciation, amounts to as much as Rs 17,66,766 as against only Rs 3,72,126 in the previous year. This is mainly due to the substantial increase in proceeds of tea crop to Rs 20,32,379 as against Rs 14,03,273 and of coffee crop to Rs 27,77,172 from Rs 15,53,733. Due to this rise in profit, the directors have, apart from setting aside a sum of Rs 5.60 lakhs for Taxation Reserve, been able to raise also the Depreciation amount to Rs 2.02 lakhs from Rs 1.81 lakhs and the General Reserve to Rs 4.50 lakhs from Rs 22,990. The dividend is tripled to 30 per cent.

The balance-sheet, as at 31st October 1954, shows a paid-up capital of Rs 19,45,980 in shares of Rs 2 each and the Debenture Stock at Rs 3.53 lakhs, which the directors propose to repay in full on the 30th June, 1955. A sum of Rs 1.00 lakh has been transferred from Debenture Stock Redemption Reserve; and the position of Reserves now stands as follows:—Debenture Stock Redemption Reserve Rs 5.00 lakhs; Buildings and Development Reserve Rs 5.00 lakhs and General Reserve Rs 14.00 lakhs.

E.R.

Ryam Sugar Company:

A circular letter, issued by the Ryam Sugar Company this week, states that, at the request of the majority of the Ordinary shareholders of the company represented by General Fibre Dealers Limited, an extraordinary general meeting will be held on the 31st March for the purpose of passing a resolution requesting Begg, Sutherland & Company Limited to resign from their office as Managing Agents of the company on payment to them by the company of the sum of Rs 1/2 lakhs as compensation for the loss of that office. Although the agency agreement is not due to expire until the 30th November 1963, the managing agents have agreed to resign, if so requested by the shareholders, on payment to them of the above-mentioned sum; but they have made a condition of their agreeing to resign on the above terms that General Fibre Dealers Limited should purchase from their parent company (the British India Corporation Limited) their holding of 5,480 Ordinary shares and 5,480 Preference shares in the company at the price of Rs 25 per

Ordinary share and Rs 10 per Preference share (inclusive of any dividend which may be declared on such shares in respect of the period ending 30th June, 1955) and should offer to purchase the shares of all other shareholders at the same prices. General Fibre Dealers Limited have agreed to do this.

E.M.

Century's Results:

The working of the Century Spinning and Manufacturing Company, during the year ended 31st December 1954, reveals a net profit, before providing for Taxation and Depreciation, of only Rs 84,08,920 as against Rs 94,81,653 in the previous year. Sales are, however, slightly higher at Rs 7.88 crores against Rs 7.25 crores. The directors have, after setting apart Rs 12.00 lakhs (Rs 12.50 lakhs) for Depreciation on Machinery and Rs 29.50 lakhs (Rs 32.50 lakhs) for Taxation, maintained the dividend at Rs 22 per share. Due to the decline in profits, no allocations have been made for General Reserve and Dividend Equalisation Fund as was done in the previous year.

The directors, in their report, state that the company has secured land at Kalyan for the Rayon factory and the first instalment of plant and machinery has already arrived. The work of the building of the factory is progressing satisfactorily.

E.R.

Dividend halved by Brushware:

Brushware Limited has reported a net profit, before providing for Taxation and Depreciation, of Rs 15,958 for the year ended 30th November 1954 as against Rs 5,510 in the previous year. After setting aside a sum of Rs 3,500 for Taxation, the directors have raised the Depreciation amount to Rs 6,000 from Rs 5,000. The dividend is, however, halved to As. 8 per share.

BANK REVIEWS

(Continued from page 598)

crores. This is accounted for largely by fixed deposits, higher by Rs 1.22 crores at Rs 15.17 crores; and current and contingent accounts have registered a rise of a little more than a crore to Rs 21.46 crores.

That the United Commercial have been able to increase their foreign exchange business is indicated by a note under contingent liabilities. Forward Exchange contracts outstanding as at the end of 1954 were of the order of Rs 17.75 crores—an increase of nearly Rs 3½ crores over the figure in the previous balance-sheet.

Among the assets, we find that cash balances have been reduced from Rs 6.86 crores to Rs 6.08 crores. This is to be accounted for by the sharp reduction of Rs 1.1 crores to Rs 20 lakhs in money at call and short notice.

Investments held by the Bank also stand reduced, by some Rs 73 lakhs, at Rs 17.18 crores; and the decline in Government securities held is one of Rs 57 lakhs to Rs 14.54 crores.

The money released by cash balances and by the lower level of investments, as well as that made available by the higher volume of deposits, has gone towards a substantial increase in the accommodation to constituents by the United Commercial. Advances show a sharp rise of Rs 6.76 crores to Rs 24.64 crores.

As a result of these, the balance-sheet total has mounted by Rs 4.25 crores to Rs 62.16 crores.

The profit and loss account reveals that income by interest and discount has risen by Rs 15 lakhs to Rs 1.42 crores while that by commission, exchange and brokerage showed an improvement of nearly Rs 14 lakhs to Rs 73 lakhs. Rents are a new source of income, being placed at Rs 1.15 lakhs. The improvement in income, as a whole, is one of Rs 29 lakhs to Rs 2.17 crores.

Expenditure, though higher, has not kept pace with the increase in income. For example, interest paid is shown some Rs 13 lakhs higher, while the expenditure on salaries and allowances and provident fund has gone up by a little more than Rs 6 lakhs.

With expenditure in check, the balance of profit has shown a substantial rise from Rs 23.01 lakhs last year to Rs 31.06 lakhs in 1954.

Every one of the figures in the Directors' Report shows the impress of the higher profits. Firstly, the transfer to the Reserve Fund is Rs 1½ lakhs higher at Rs 6.5 lakhs. Secondly, the provision for taxes has been raised by Rs 3 lakhs to Rs 12.5 lakhs. Thirdly, there is provision made for bonus to staff of the order of Rs 2.5 lakhs; and, finally, the disposable balance is Rs 1½ lakhs higher at Rs 11.09 lakhs against Rs 9.52 lakhs.

The dividend recommended is the higher one of Rs 2-8-0 per share as compared with Rs 2 per share for 1953; the carry forward, however, is shaded down to Rs 1.09 lakhs from Rs 1.52 lakhs.

In sum, a satisfactory year for United Commercial; and prospects would be bright, viewed in the context of the substantial increase that is likely in bank deposits consequent on Plan expenditures.

BOMBAY STOCK EXCHANGE

(Continued from page 639)

to be more far-reaching in character than at first sight appeared. The main object of Section 23A is to tighten up the provisions for preventing avoidance of super-tax by shareholders of private companies resulting from insufficient distribution or non-distribution of profits in proper time. It has been pointed out that because of the legal friction contained in the explanation to the section, some companies are likely to be treated as private companies in certain conceivable circumstances in spite of the fact that avoidance of super-tax by shareholders of private companies resulting from insufficient distribution or non-distribution of profits in proper time.

WORLD OF FINANCE

(Continued from page 602)

Sales of ad hocs to the Reserve Bank totalled more than Rs 54 crores. There is reason to believe that renewals of Treasury Bills in the week would have been in the vicinity of Rs 10 crores. But Rupee Securities in the Issue Department have risen only by Rs 34.78 crores, while fresh ad hocs sold may have been of the order of Rs 44 crores. Again, the Centre's deposits have risen by Rs 12.73 crores while those of the State Governments are higher by Rs 34.91 crores.

We may take it that the Centre's balances were replenished to the extent of some Rs 35 crores against ad hocs. This amount, in turn, would have been passed on to the State Governments, representing their share of the income-tax proceeds. At the same time, it is to be seen that, in spite of such transfer to the States, the Centre's balances are risen by Rs 12.73 crores. This could be due to one of two reasons: on the one hand, it may be that the surplus of receipts over disbursements of the Centre, during the week, was of this amount. On the other hand, in as much as the fresh ad hocs amounted to Rs 44 crores, it is possible that Rupee Securities in the Issue Department were actually increased by this amount of ad hocs; but that, thereafter, Rs 10 crores of marketable securities were transferred from Rupee Securities in the Issue Department to Investments in the Banknig Department; next, securities to this amount were sold to such of the States as had plethoric balances.

The second explanation would remove the discrepancy between the increase in Rupee Securities in the Issue Department and the amount of fresh ad hocs sold. The rise in Rupee Securities, coupled as it was with no call for an increase in the money supply, would have led the Reserve Bank adjustments in respect of Foreign Securities. It is manifest that Rs 34.78 crores of Foreign Securities have been transferred from the Issue Department to the Banking Department, wherein Foreign Balances show a rise of Rs 35.77 crores to Rs 88.77 crores.

At this stage, we may recapitulate some of the facts and figures that we have noted. Created money in the third week of March has been a minimum of Rs 35 crores—and may be as high as 44 crores. But, since the ad hocs were sold more or less for the specific purpose of meeting the liability of the Centre to the State Governments in respect of income-tax proceeds, a series of adjustments has taken place which has left unchanged the total money supply.

The next set of figures with which we need concern ourselves pertains to the continuing demands of the busy season. Although money supply has not increased, it is a noteworthy fact that other

loans are higher by the sharp amount of Rs 8.88 crores to Rs 46.32 crores. Again, advances to banks against usance bills are higher by nearly Rs 6 crores at Rs 24.42 crores. Thirdly, the tender for the weekly auctions of Treasury Bills has just managed to be above the amount on offer. Fourthly, the rate on Treasury Bills has risen for the third successive week. Fifthly, a large part of the loans advanced by the Reserve Bank is accounted for by the Imperial Bank. These would indicate that banks' financing of the busy season continues at a high pitch; and they have, therefore, been obliged, firstly, to secure an additional Rs 8.88 crores from the Reserve Bank (of which Rs 6 crores is against usance bills) and, secondly, to be almost neglectful of the Treasury Bills auctions.

In sum, therefore, the returns for the third week of March indicate that there has been substantial recourse to created money and confirm that seasonal demand is mounting to its peak.

+

The returns of the Reserve Bank for the week ended March 18 reveal a drop of Rs 4.01 crores in active note circulation to Rs 1,277.18 crores. Notes held in the Banking Department have risen by Rs 4.55 crores to Rs 15.28 crores. On the assets side, foreign securities have declined by Rs 34.79 crores to Rs 643.37 crores, presumably due to the transfer from the Issue to the Banking Department where Foreign Balances have shown a rise of Rs 35.04 crores at Rs 88.77 crores. Rupee securities have risen by Rs 34.79 crores to Rs 507.43 crores due to tender of ad hoc Treasury Bills by the Government. Rupee coin is higher by Rs 53 lakhs at Rs 101.64 crores.

In the Banking Department, Central and Provincial Governments' deposits have risen by Rs 12.73 crores and Rs 34.91 crores respectively, the substantial rise in the latter case being due to the share of the Provincial Governments in Income Tax. Bank deposits are shown at Rs 47.72 crores and other deposits at Rs 22.08 crores against Rs 48.47 crores and Rs 21.68 crores respectively. "Other Loans and Advances" have risen further by Rs 8.88 crores to Rs 46.32 crores, which includes Rs 24.42 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 32.15 crores. Investments are lower by Rs 1.19 crores at Rs 50.17 crores.

+

The statement of the Imperial Bank for the same week discloses a drop of Rs 2.51 crores in deposits at Rs 224.70 crores. Borrowings from other banks have risen by Rs 5.00 crores to Rs 12.50 crores, while other liabilities, including

inter-office adjustments, are lower by Rs 17 lakhs at Rs 2.57 crores. On the assets side, cash balances have declined further from Rs 19.55 crores to Rs 18.21 crores, while investments have risen from Rs 104.84 crores to Rs 105.67 crores. "Advances and Loans" are higher by Rs 2.94 crores at Rs 127.87 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 3.38 crores and "Bills Discounted and Purchased" for a drop of Rs 1.44 crores.

+

There has been an expansion of Rs 7.7 crores in Scheduled Banks'

credit during the week ended March 11. But, at the same time, total deposits have increased by Rs 4.97 crores, mainly due to the increase in Time deposits, which are shown at Rs 376.47 crores against Rs 371.29 crores. There is a sharp rise of Rs 9.11 crores in borrowings from the Reserve Bank, while there is a drop of Rs 43 lakhs in those from the Imperial Bank. Cash and other balances are higher by Rs 1.72 crores at Rs 80.66 crores. Money at call and short notice standards at Rs 15.16 crores against Rs 15.00 crores, while investments remain almost unchanged at Rs 347.46 crores.

*

WORLD OF BUSINESS

(Continued on page 604)

Perhaps the future of no Indian industry is so continuously in doubt as that of the jute goods industry. The reason for this uncertainty is not far to seek. Depending for the absorption of over 90 per cent of its production on foreign consumers, it is small wonder that it is to reckon with imponderables that are far more numerous than in the case of other Indian industries. Apart from the common determining factor of supply-demand, jute goods are also governed by other factors that are non-existent in the case of others. First in this category is the uncertainty regarding the supply of raw jute. The difficulty of arriving at a correct estimate of the size of the jute crop from year to year has always been a potent influence in the world of jute. The position in this regard has considerably worsened after partition. With the largest producer of jute goods and the largest grower of raw jute coming under the control of two separate governments who, for obvious reasons, are not seeing eye to eye with each other, the uncertainty has deteriorated into a positive anxiety.

Almost simultaneously with this development which has placed the Indian mills at the mercy of the raw jute grower in Pakistan in the years immediately following partition, there has emerged a tendency in the erstwhile consuming countries to become self-sufficient in jute goods. The move has further strengthened during the past year. Pakistan herself has not been slow to realise the advantages to be gained by having a jute goods industry of her own.

The fact that India has succeeded in attaining near self-sufficiency in raw jute in the course of the last three or four years, has not in the least altered the situation. On the contrary, with Pakistan ready and willing to sell her raw jute to whomsoever may want it, continental manufacturers equipped as they are with modern mills, have been enabled to offer more attractive prices as had happened several times in the past couple of years. Over and above these depressants, the industry has to counter continuously the allurements of substitute packaging materials like paper bags, which have a powerful propaganda machinery to back them up.

These and kindred problems facing the Indian jute goods industry were referred to by Mr G. J. Gardner, Chairman of the IJMA at the annual meeting of the Association last week in Calcutta. According to information received by the IJMA, Egypt, Iraq and Iran, Burma, Thailand, and Philippines have either already constructed or have plans to construct, jute mills. One of the most serious developments of last year, as far as the Indian Mills are concerned, is the emergence of Japan as the "second largest supplier of jute goods after India" to the United States. It is, however, gratifying to note that Mr Gardner, while recognizing the fact that expansion of the Indian industry along traditional lines is unlikely, is confident that new vistas will open up for it with the enormous development of industry, agriculture, transport and housing in the underdeveloped countries of the world. Meantime, it is the duty of the Government of India, the Indian raw jute cultivator, the jute mills and the jute workers, to see to it that while production is kept at a high level, prices of jute goods are never allowed to reach such levels as may be considered either unremunerative or unattractive by foreign consumers.

Zagreb Spring Fair:

OWING to the late arrival of spring in Europe, the Zagreb Spring Fair which was scheduled to be held from 25th March to 3rd April has been postponed to commence from 8th April. Though the postponement may cause some disruptions in bookings, it is justifiable since a Spring Fair should take place only in Spring.

ANNOUNCEMENT.

Secretaries of Public Companies are requested to furnish their full Names, Qualifications, Employers' Name and Address for statistical purpose to Institute of Secretaries, Lentin Chambers, Dalal Street, Bombay—1.

For the Investor

Echo Answers: "What?"

Investment Gossip:

WHILE Wall Street rises and falls, rises more, then falls less; while Throgmorton Street keeps falling, and again falling after half-hearted and faint-hearted rallies, Dalal Street and Royal Exchange Place are content to mark time and to await developments.

From the point of view of Industry, that is to say, from the point of view of prospective earnings and likely dividend distribution, the situation in New York and London, in Bombay and Calcutta continues favourable. It is the extraneous forces which keep casting doubt and causing uncertainty.

For the Stock Exchanges, uncertainty spells diffidence; and diffidence leads to sagging prices and contracting turn-over.

Discriminating purchases of selected scrips are, however, taking place all the time; and the point to emphasise is that the genuine investor in India is learning to discriminate, to pick and choose. For over two years, the selective attitude has been more and more prominent.

This is, doubtless, a healthy development.

Professional gladiators, however, continue to confine their attention to a few gambling counters, particularly in Calcutta. The Katni market thrives like the green bay tree; and Indian Irons monopolise the status of the one and only active counter.

For the time being, professional operators suffer from lack of big news calculated to frenzy the bull or excite the bear. It is the sheer

considerations of the market's technical position that have the main significance. Is the market overbought or oversold in the speculative scrips? The budlee differences provide the periodical answer and shape prices accordingly.

On the poser: "What are the immediate prospects?", Echo answers "What?"

Some echoes, however, are positive and answer back: "Bullish!" and it must be admitted that such echoes emanate from knowledgeable sources.

E.R.

Plea for Timely Action

Investment Special:

What kind of future faces the investor in shares of electric supply undertakings?

For answer, he must peer into the labyrinths of law courts and search the corridors of the New Delhi Secretariat. No industry has a more tantalising experience of law's delays and the lawmaker's tactfulness.

Do the Government desire this important industry's survival or success? If the answer is Yes, it is time that the authorities concerned act with a sense of urgency, decide in a spirit of understanding.

If the answer is No, let Government say so in plain terms and be done with it. That will be some kindness which will end for the industry the present lingering perdition worse than death, and for investors an intolerable suspense.

Two issues on which there have been tedious talks and unending negotiations are the Standard Rate of Return and provision for Deferred Tax Reserve.

The case for an increase in the Standard Rate of Return rests on unassailable grounds. It is the Government's policy which is responsible for substantial up-grading in the structure of interest rates. That policy was put into ruthless effect as part of the tough monetary technique heralded by a rise in the Bank Rate. This has necessitated the Government's offer of higher interest on new loans, on savings certificates, on even provident fund certificates. Why, then, this procrastination in initiating a similar procedure in the case of electric supply undertakings?

The Government have, indeed, accepted the principle. The formula suggested by Government is to link the Standard Rate with the Bank Rate with a differential of 2 per cent. The Bank Rate is of significance mainly in connection with short-term money rates. To link the

THE STORY OF TEA No. 6

Tea Tasting (Calcutta)

A question of taste...

The 'Tea Taster' now takes over. He is the expert who decides the way the tea is to be blended to get the best flavour, aroma and taste.

Samples of tea are weighed, brewed and allowed to infuse in rows of pots. The liquor is drained off into another row of bowls, and is then ready for tasting.

When the taster is satisfied with the trial blend, the bulk blending of the tea commences.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world.

And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

BB 52 (A)

Brooke Bond Tea

Fresher because delivered Quicker

Standard Rate with Bank Rate is, therefore, to base a long-term question on a short-term development.

This consideration is of paramount importance; and the request made by the electric industry is, definitely, on sounder economic principles.

There are other considerations, too. The Chairman of Ahmedabad Electricity Company has referred to this proposal; and this is what he says: With the Bank Rate at present ruling at 3½ per cent, a basic maximum return of only 5½ per cent would thus be permitted, a mere ½ of 1 per cent more than now applies, and the Industry has continued to press the case for a higher differential.

½ of 1 per cent is a crumb thrown to an industry in need of a meal!

As for the other issue, the Chairman of Ahmedabad Electricity reports that the principle of allowing for a Deferred Tax Reserve seems to have had a fairly wide measure of backing at the level of State Governments; and, following the debate at the Conference, it is understood that the related Ministries at the Centre are

now giving consideration to the precise method to be followed.

The Taxation Enquiry Commission have dealt with this question and have recommended appropriate action. The following is the relevant passage from the Commission's report:

"We consider that the best way out of the difficulty would be to allow the concerns to put into reserve any extra surplus that they get as a tax relief on account of the initial and extra depreciation allowances. We recommend that the Act be amended so as to permit the creation of such a Reserve." While New Delhi is ready to plan grandiosely for the future, it will do well to realise that an important industry of the present is entitled to reliefs designed to promote planned development; and that reliefs given in time have twice the benefit.

past few days. In the Calcutta market, Carews are a special feature, having spurted to Rs 13-5 from Rs 10-13 quoted last week. There are rumours that the company has decided to sell off its Darsana factory in Pakistan and established a new factory in India.

On the Madras Stock Exchange, Deccan Sugars, after a very long time, are now in request, Rs 25 paid-up shares being marked up to Rs 35 and Rs 10 paid-up shares upto Rs 14-4 as against Rs 11 and Rs 27-12 respectively quoted in the previous week. For the first time after 1951, this company has announced an interim of 5 per cent for 1955.

Richardson & Cruddas are now easily absorbed at rates varying from Rs 17-5 to Rs 17-10. The company has already announced an interim dividend of As 8 per share for the year ended 30-6-55. This company has proposed to expand its manufacture of industrial equipment in view of the increasing demand for the same. Also, it has recently acquired a link with Jessop & Company through an element of common ownership.

Gillanders Arbuthnot & Company has, it is reported, resigned its managing agencyship of the Searsole Coal Company with effect from the 15th March, 1955. The company will henceforward be managed by a Board of Directors.

Premier Constructions, in Bombay, are ruling very firm around Rs 157. The dividend has been raised from Rs 6 to Rs 7 per share for 1954. The company is reported to have secured a big contract in Uttar Pradesh for

the construction of Rihand Dam Works. This work is expected to keep the company busy for another six to eight years.

The shares of Surat Electricity Company are quoted around Rs 126-4. This company is going to make a fresh issue of capital in order to finance its expansion plan, which is now under way. The issued capital will be raised upto the authorised issue of Rs 75 lakhs and will be offered to the existing shareholders in the proportion of 1:3, subject to the sanction of the Controller of Capital Issues.

The Pandyan Bank has resolved to make the second call of Rs 5 per share. The amount is payable before the 1st May, 1955.

INVESTMENT BRIEFS

Investment Briefs:

In the Jardine-Henderson Jute group, Kamarhatty and Kankarnar Companies have raised the dividends to Rs 5 and Rs 4 per share for the half-year ended 31-12-54 from Rs 3 and Rs 2½ per share respectively in the previous half-year.

Okayl Tea has announced an interim dividend of 5 per cent for 1955 as against nil in 1954.

Tata Mills, Bombay, have raised the dividend from Rs 1½ to Rs 2½ per share for the year ended 31st December 1954.

Trichinopoly Mills have raised the dividend to 9 per cent for 1954 from 7 per cent in 1953.

Jawahar Mills have declared 12½ per cent for 1954 as against 7½ per cent in 1953.

Radhakrishna Mills have doubled the dividend to 16 per cent for 1954.

Indian Aluminium Reduces Loss

Balance-Sheet Reviews:

THE Indian Aluminium Company has presented its report and accounts for the year ended 31st December, 1954. Reflecting the overall advance in the economy of the country and the intensified efforts to sell in new markets, the company's sales of aluminium semi-manufactures have, during the year under review, risen to Rs 198 lakhs from Rs 118 lakhs in the previous year, exclusive of the sale of agency products (Rs 40 lakhs). Yet, the company has not been able to make any profit during the year. During the first nine months of the year, market conditions were highly competitive and remunerative price levels were not attainable. The adverse results for the year are, however, largely attributable to the loss of smelter production, resulting from power reductions and higher initial costs incurred during commissioning of new equipment at the rolling mills.

Due to the increased requirements of raw aluminium, which could not be supplied from the smelter due to power cuts resulting in substantial loss of ingot production, the company had to purchase raw aluminium during the year to the extent of some Rs 40 lakhs in order to fulfil its commitments to clients. In the preceding year, purchases of metal from outside sources amounted to less than Rs 2 lakhs. The larger-scale plant operations are

reflected also in the increase in purchases of other raw materials and supplies from Rs 42 lakhs to just under Rs 70 lakhs—a rise of almost 65 per cent.

The net loss for the year, before providing for Depreciation of Rs 51,679 (Rs 33,037), amounts to Rs 3,68,500 as against a loss of as much as Rs 11,32,538 in the previous year. In this connection, it may be mentioned that these figures include Rs 83,298 and Rs 1,99,768 as over-provisions for taxation in 1954 and 1953 respectively. Due to the loss, the directors have not recommended any dividend on the Ordinary shares; but they have proposed that a dividend of 5 per cent, less Income Tax, be paid to holders of the Cumulative Preference shares in respect of the year under review from Rs 4.96 lakhs available for disposal at the end of December 1954.

The directors, in their report, state that the hardening of prices in world non-ferrous metal markets augurs well for 1955, more particularly as the intensive efforts made by the company to develop new outlets for its products are beginning to bear fruit. Increased demand for aluminium paste, used in the manufacture of paint, resulted in the operation of Kalwa Works, located outside Bombay, at near capacity during the last half of the year. Installation of the extrusion plant at Alupuram, which will be the first such plant in India. (Continued on page 657)

Planned Progress— And Inadequate Results

IN the official assessment of the progress of the Five-Year Plan, the main criterion, frequently the only one applied, is expenditure. The Planning Commission's report of progress mentions the amount of expenditure in respect of every detailed item and the percentage it does the target. This is admittedly a rough indication of achievement; but in the absence of data of material results such as extent of acreage brought under cultivation or electric power consumed, it is impossible to estimate actual benefits. In industrial ventures like the Chittaranjan Works or the Sindri Fertiliser Plant, it has of course been possible to give figures of locomotives manufactured or of the tonnage of output. Even with regard to total agricultural production, we have no means of discovering the specific net contribution of expenditure under the Plan. In the Progress Report issued in September 1954, it is stated that provisional statistics of land utilisation in 1951-52 were available, which means that for the period of the Plan there is complete dearth of information. We are told that as a result of the minor irrigation schemes that were executed during the first three years of the Plan, "about 5.3 million acres have been or will be brought under irrigation" against the 11.2 million acres target for the entire Plan period. Data of total area irrigated during 1952-53 and 1953-54 are not available. The search for figures of actual land utilised in the new schemes is wholly futile.

The absence of statistical data would not be so much lamentable, if it were not for the fact that extensive areas, for which new irrigation facilities are already available, lie unused. The same is the case with the consumption of electricity. We are having a large mass of data about the production of electric power. But the progress of consumption remains a closed book. It is a considerable time since the Tungabhadra Project has been opened on the Hyderabad side; by April 1954, according to the Planning Commission, 33,000 acres should have been brought under irrigation in this area; the planned target for the year was, however, more than three times as much. It is gathered that barring a tiny fraction of this area the land remains barren. There are mistakes in official estimates of expenditure, technical blunders and misdirection of energy and prising to see that there has been scarcely any governmental initiative towards the prompt and suitable utilisation of land which has been rendered cultivable through the Project; it was envisaged that the responsibility in bringing under cultivation such land would be shared by the State and private parties who would be deriving State help.

When agricultural prices are slumping and many fundamental uncertainties hang over the agricultural economy, it is natural that private initiative is reluctant to take up the reclamation of new land. It is also in a way good because it would leave the field open for the State to organise utilisation on a basis which would reflect current national requirements in every detail. Just now production of food-grains seems to be a little ahead of consumption needs. Sugar, on the contrary, has become absolutely and relatively scarce. There is, therefore, an urgent need to encourage sugarcane cultivation on an extensive scale,

wherever possible. As there is also the readiness to start sugar factories in the South, there is a golden opportunity for the Governments of Madras, Andhra and Hyderabad to initiate sugarcane cultivation, particularly in the newly-irrigated land. Unfortunately, nowhere does the State appear to have taken notice of it. The States Budgets for 1955-56 provide no clues to expenditure in this direction. There is no doubt that unless the State assumes the role of a pioneer, private interests would be unwilling to enter the field. State farms are the only answer to meet this vital lag.

The utilisation of power apparently creates problems more complicated in character. As minor, small-scale and cottage industries are being looked upon to provide demand for power generated from the multi-purpose projects, and as all these are allotted to the private sector, the State will have to be content with providing the necessary facilities and encouragement. It is reported that in Bihar, the pace of growth in consumption demand, either for domestic or for industrial purposes, is flimsy in relation to the output of power. The problem is by no means simple. But howsoever complex, it is the business of the Union and the States Governments concerned to see that the fruits of the colossal expenditure on the multi-purpose projects do not fail to reach their destination in due time.

Perhaps the position would have been far more sound and creditable, if the Union Government had greater authority over the direction of economic effort in general. As it is, they have chosen to be content with the role of no more than a financial milch cow for the States; the bulk of the expenditure on these projects is being met directly by the Union Government or through grants and loans to the States concerned. The administration of the projects, except in one or two instances, is left either to the State Governments exclusively or to bodies where the latter have the larger say.

The regrettable consequence of this highly anomalous position is the defiant irresponsibility this has bred in some of the States Governments. When the Public Accounts Committee of the Punjab Legislature found that there were serious irregularities in expenditure on the Bhakra Nangal Project and started to probe into the reasons, the Punjab Government had no excuse to offer except the lack of experience of the staff. When the Central Public Accounts Committee wanted to take up the matter, they were politely told that it was none of the concern of the Union Government, and that the administrative and financial accountability for the Project rested with the State Government. Unfortunately, this happens to be the technical position. Two weeks ago, when Mr Tulsidas Kilchand pleaded in Parliament that the Union Government should examine the manner in which the

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

States Governments have been spending loans and grants granted to them, the Finance Minister replied that the Comptroller and Auditor General would see how loans and grants were dispersed; he also pointed out that the Government went into this question in 1946 and found that the Centre would not be in a position to spare any considerable surplus for distribution to the States. We are sure that this reply and reference would have convinced none, because the circumstances have totally changed since 1946. Even if they had not, it is a matter of sheer logic and fairness that an agency which finds money to the tune of hundreds of crores—on Bhakra Nangal the total expenditure is estimated to be Rs 170 crores and almost the whole amount is found by the Centre—should enjoy the decisive voice and some control over how it is expended. There is scarcely any multi-purpose project in India about which irregularities and waste have not been brought to the notice of the Union Government. And yet this silly position of helplessness against the extravagance and corruption on the part of those who spend the money is being continued. The Union Government are keenly averse to any kind of foreign influence or direction in the affairs of the national economy. But they have conceded the World Bank's claim to scrutinise and supervise expenditure on projects where the Bank advances money. This concession is made as a matter of principle. Because, a complete divorce between the source of supply of funds and the agency for spending it is seldom desirable. It is time that this salutary principle is adopted in the matter of Central control over expenditure on projects financed by the Union Government. And the best method of ensuring effective control is to put every big project in charge of a Board, the majority of whose members owe their appointment and allegiance to the Union Government.

That, in this respect, there could not be smooth sailing, is also obvious, as long as the constitutional position remains what it is. To mention one recent instance, the Union Government have been long pressing the Madras Government for the constitution of an Electricity Board, as envisaged in the Electricity Supply Act of 1948. But the suggestion is being resisted. What is more, the Madras Cabinet has gone to the extent of even challenging the principle of a Board. Last week we heard one of the Ministers extolling the virtues of government management of electric supply as against the alternative of management by a Board. In these matters, it is indispensable that the Constitution should be suitably amended as to enable the Union to exercise the necessary authority with a view to ensure that big projects involving gigantic sums do not become sinks and that the industrial and agricultural resources released for exploitation do not run waste.

Anomaly in Cost of Living Index

IN any economy not subject to complete central direction, the impact of new trends on the fortunes of different groups is invariably likely to be diverse. In India we have seen striking illustrations of this, during the varying phases since 1939. The last fifteen years

could be described as being made up of a series of price movements, favouring this group or that, largely at the expense of some other, from time to time. While there has been a big and general rise in money incomes, the extent of rise in real incomes has been

small, after making allowance for the rise in population—and its distribution far from uniform.

The relation between the price and industrial cost of living indices obtaining at the end of 1954 bears out this conclusion. In the first week of January 1955, the all-India whole sale food index stood at 312 against 380, for the corresponding week in 1955. Cereals, particularly, showed a drop of about 91 points, from 438 to 347; and pulses dropped from 435 to 233 points. These are the two main items which account for the variations in the cost of living of the industrial working class, especially where tenements are provided by the mills and cloth sold at factory cost. The item classified as 'others' in the food group is also important, but even here, there is a fall of 30 points from 282 to 232. Where cloth has to be purchased from the bazaar it may also be taken as having a substantial share in the variations in cost of living. For purposes of comparison between the two dates, cloth can safely be left out because the textile group has shown a variation of only less than 2½ per cent. The price of coarse and medium cloth has remained nearly standstill. Food articles must be the dominant factor accounting for variations in the cost of living. If there were to be a roughly corresponding fall in the cost of living index, a logical relation could be established between the wholesale price levels and the cost of living of the working class.

Strangely enough, for no centre, for which the figures are periodically reported, has the cost of living shown even an approximation to the measure of variation in the wholesale index. For Bombay, there was a net rise of less than 1 per cent, over the year. For Calcutta there was a net drop of 2 per cent. Madras and Delhi record wider variations to

the extent of about 5 per cent, and Kanpur shows as much as 10 per cent, which represents the nearest measure of agreement with the wholesale index. It has to be presumed that the benefit of the fall in the wholesale index was not communicated to the retail pur. Otherwise the position would have been different.

There are hardly any independent figures about price movements in fuel, soap etc., which are relevant when examining working class cost of living. Regional variations of food prices are also difficult to obtain, at any rate these are not systematically provided through centralised sources. It would therefore be difficult to explain variations for each Centre with reference to the wholesale index. But even after making allowances for the relatively obscure aspects, it could be asserted that in no industrial area is the fall in cost of living commensurate with the fall in food prices. The all-India difference between the two—against an 18 per cent fall in the wholesale food price index, the cost of living index has fallen by 5 per cent—further underlines this fact.

This brief analysis also indicates the inadequacy of official statistical data for purposes of drawing comparisons between the cost of living index and the price index. The Union Labour Bureau does give a fairly comprehensive list of price relatives of certain selected articles, for thirty centres in India. This is the only source of guidance for whatever detailed conclusions that could be drawn; but the centres selected are not the same as those for which the Economic Adviser gives his figures. A new synthesis for the production of price and cost of living indices is clearly called for.

Why I Expect the U. S. Economy To Expand 40% by 1965

By JAMES C. WORTHY

AFTER a downward adjustment in the United States which was less severe than many had feared, we have had gratifying indications of business improvement in recent months which bode very well for the period ahead. We are not, of course, satisfied with merely maintaining a constant rate of economic activity. Even though business last year was at near-record levels, we want to see the economy expand as it has in the past; we want to see continued improvement in our standard of living.

In a recent comment on the present economic situation and the outlook for the future, President Eisenhower envisioned an increase in the national production to \$500,000 million annually within the next decade. In the course of this statement the President said:

"But we must not rest. In our economy, to stand still is to all behind. Our labour force is growing. Productivity is rising. We must do more than simply to plan against trouble or accept unemployment at its present level. Rather we must advance toward and beyond the goal I mentioned earlier—within 10 years, a national production of \$500,000 million."

This is a breath-taking prospect. What are our chances of being able to achieve it?

I believe our chances are excellent. We have, for example, the record of the past.

Our economy has withstood many drastic changes over the years—in its political climate, in its relations with other nations, and in the structure of business and industry. While the

rate of progress has not been even, the cumulative growth has been great indeed. Despite prolonged depression and the most destructive war in history, the physical volume of the nation's output in 1954 was about twice as great as in 1929.

The fact the physical volume of the nation's output has increased about 100 per cent since 1929 means that the rate of expansion has averaged about 3 per cent a year. The implications of this statement are enormous. The number of persons producing this output increased by only about 1 per cent, whereas production per manhour showed an annual average increase of about 2 per cent.

Much of the expansion, therefore, came from increased productivity, in both manufacturing and distribution.

Increased productivity, in turn, was made possible chiefly by a high and increasing rate of capital investment, by rapid and accelerating technological improvement, and by continuous improvements in organization and management. Other contributing factors were advances in the education and skills of the working population, shifts of workers to industries where output is larger per unit of labor input, and improvements in health and working conditions.

Are these factors still in existence and continuing to operate? They are—all of them; some at a stepped-up rate.

Let us examine some of the basic factors which are involved in continued economic expansion.

FIRST, is the dynamic influence of a continuing high rate of population growth. Barring war, there can be no question on the fulfillment of this condition. The birth rate has been at a high level since the end of the war. Since 1947 there has been an average net growth of about 2.5 million a year. During the past year the population increased by about 2 3/4 million persons. The Bureau of the Census estimates that if recent fertility rates continue, the total population, now 164 million, will be about 190 million in 1965. This would amount to a net addition of some 25 million to the population during the next 10 years.

SECOND, technical research has been greatly expanded and intensified in recent years, and is currently backed by expenditures amounting to some \$4,000 million annually. While much of this is directed along military lines, we can expect it to produce important results both in the way of new products and improved techniques of production. Here again the prospects are good.

THIRD, is the volume of capital investment. It is essential for the maintenance of a vigorous and prosperous economy to minimize fluctuations in investment and to provide incentives for the maintenance of capital outlays at high levels consistent with the growth of the population and the economy.

An important forward step in this direction was taken last year with the passage of a tax bill which contained provisions designed to stimulate business capital outlays.

The primary requisite for a high level of business investment is confidence in the future. The roots of the present-day confidence in the sound future of the American economy are many and deep. We have faith in free, private enterprise, and belief in the soundness of the President's economic program and government policies for the years ahead.

I believe that this confidence will continue to justify and stimulate the sustained and increasing level of business investment which is essential to economic progress.

FOURTH, are the requirements of traditional Federal, State and local government expenditures for such major public investments as highways, schools, etc. The expanded population, the decentralization of industry, and the rapid growth of suburbanization have stepped up tremendously our needs for highways, schools, hospitals, sanitary and water systems, and other basic facilities living.

The provision of these facilities represents an important part of the over-all investment process and is as essential for economic growth and stability as a continued high and increasing rate of private investment.

FIFTH, are the opportunities for increased foreign trade and foreign investments. An increase in the flow of goods among the free countries of the world, continued efforts toward equitable adjustments in tariffs, simplification of tariff structures, and safeguarding and encouraging foreign investments—these can greatly aid the sustained and healthy growth of our domestic economy, while fostering the conditions of economic growth and political stability abroad.

On all these counts, the present Administration is moving forward with a constructive and realistic program.

SIXTH, the reduction now under way in the proportion of the military consumption of total output will permit a rise in the proportion of output going into civilian consumption. Already, with the lowering of taxes, both consumer dispensable income and spending have increased to record totals.

Future expansion of the consumer market will be aided by trends clearly discernible at (Continued on page 694)

Coordination in Plan:

One of the major drawbacks of the First Five-Year Plan has been its failure to coordinate fully the various aspects of economic development. While targets were fixed and the means chalked out to attain them, mutual impact of expansion in different spheres was almost wholly neglected. It is for this reason that the country was somewhat taken by surprise as unemployment failed to contract and price levels began to show disparate trends. The Second Five-Year Plan is not likely to suffer from similar neglect of judgment. Besides the lessons of the First Plan, the State is also having the benefit of well-informed criticism and suggestions from organisations which have made detailed and careful study of prospects and possible pitfalls. The All India Manufacturers Organisation at its annual conference held in Hyderabad, last week, has laid its hands on the need for well-proportioned expansion of employment in the small scale and cottage industries on the one hand and the heavy and large-scale ones on the other. This is an easy suggestion to make; every one is still groping as to how to work it out in practical detail. Faith in the cumulative effect of investment and example through the Community Projects and National Extension Units is sound and well placed. Work in these projects generates larger sources of income and the will of the people to live better. To this extent the effect of such expenditure has a proliferating character but there does exist a snag; the fact that the measure of employment carried by these projects is dependent on funds largely drawn from extraneous sources. When once the flow

Editorial Notes

of these funds stops, employment may again contract. It is necessary, therefore, that the Planning Commission should start thinking of new sources of funds for development activity, sufficiently large to neutralise this adverse effect. To a large extent the harmonious expansion of the economy through the Second Five-Year Plan would depend on the creation of large-scale stable employment opportunities in the rural areas. The Commission have been promptly warned of this co-ordinating risk, both by facts and by expert studies based on them. Meanwhile, the Congress President has made an interesting calculation about the volume of prevailing unemployment and under-employment and the amount of investment required to relieve it; his estimate is that there are more than three crores of unemployed and under-employed people and that it would cost Rs 3 to Rs 5 thousand to provide one job.

★

Party Vs. Government?

Addressing a meeting at Bombay, the Congress President said that it was time that the Government started following the Congress lead instead of the Congress being directed by the Government as hitherto. He maintained that the Government could not change the society while the Congress could. The provocation for these observations is obscure. At present the Governments at the centre and in all the States, belong to the Congress Party; and no one would seriously dispute that virtually the State is Congress. When this is the national situation, there is no reason why the party President should refer to the Congress and the Government as two mutually isolated, let alone opposing entities. The legislatures and the Governments are committed to carrying out policies prescribed by the party. They function as the party's instrument. This is an inescapable fact. Therefore, to argue that the Government should follow the party would be grossly misleading. There is scarcely any evidence, of any Cabinet trying to go against the mandates of the party. The Prime Minister himself is the most forceful and influential spokesman of the creeds and methods which the Congress professes to represent. The party President's statement in these circumstances is likely to create the impression that secret differences have cropped up or that the party's high command is not quite in sympathy with the way in which approved aims are being pursued by the Government. For superficial observers these impressions might even be dangerous; because, when a conflict is posed between the Government and the party, the prestige of both is likely to get impaired. It is unimaginable

that the Congress President would seek popular support at the expense of the Government; but words definitely seem to have been badly chosen unless, of course, newspaper reports carry a thoroughly incorrect story. If what is desired by the President is to give a constitutional form to the virtual fact of the complete identity of interests between the State and the party, now prevailing, it is undemocratic and pernicious because the type of loyalty which the political party can demand is fundamentally different from what could be by the Government and once the superior and prior claim of the Government on public loyalty is challenged, it would only open the way for chaos. The membership of the Congress cannot justify the claim advanced by the President that the party and the country are one. It is only to the verdict of the people expressed through the elections which were clearly intended to indicate whom they would like to be governed by, that the party should seek a conclusive indication of its strength. There is scarcely any logic or advantage in asking the Government to follow the party as it is already doing so or in asking the people to follow the party instead of the Government.

★

National Defence Pattern:

Ethical and financial considerations alike compel restraint on the Indian Union's defence expenditure. The Government do not believe in war as a method of settling international disputes; it follows that defence expenditure should be kept at the extreme minimum; nor could the country spare sufficient funds to create and maintain forces on the levels of the other big powers. As there is no half way house between competition in atomic armaments and the bare protective forces based on conventional weapons, a Government which rejects the first as either impossible or unworthy should be sensible enough to be content with the second. This is what is being done in India. The Prime Minister reaffirms this policy during the debate on defence demands. The pattern left back by the British could be of little use in the context of post-war scientific developments and international relations. Adjustments have taken place mainly in two directions. Inevitably, the defence forces had to be nationalised in personnel. Just now there are no more than a handful of senior British Officers in the Indian Defence Services. Of its three branches the navy alone has a foreign chief. It may not be long before the needed change takes place here also. Of greater importance is the association of the civilian in the defence organisations. The territorial army

and the National Cadet Corps are undergoing gradual expansion representing a vital civilian complement to the regular forces. These two bodies symbolise a responsibility which every citizen ought to be made to feel. In democratic countries the obligation to serve in the army is universal. In India, the separate functional classes have long since disappeared as such. The army is already fully national in character. The process of dispersal of the liability to serve from regular services to the nation as a whole is well advanced.

Experiment in Rural Self Help:

A brochure entitled "Rs 1000 million a Year Self-Help Scheme" by Mr B. L. Jalan, gives details of an experiment on rural reconstruction conducted in a group of villages a short distance off Calcutta. On the results of this experiment, the author hopes that if the principles and methods of work embodied therein are to be copied extensively it should be possible in this country to secure an annual increase in national income (Continued on page 658)

World of Finance

This Week's Conundrum

Calcutta, Thursday Evening.
THIS week's financial returns present a tough conundrum. The relevant figures may be thus summarised under the customary heads:

1. Rupee Securities in the Issue Department of the Reserve Bank have declined by Rs 3.48 crores.
2. Foreign securities in the Issue Department have risen by a like amount.
3. Rupee coin has expanded by Rs 56 lakhs.
4. Active note circulation shows an insignificant contraction of Rs 9 lakhs.
5. Central Government's deposits have declined by Rs 8.50 crores to Rs 59.45 crores.
6. On the other hand, the balances of the State Governments have risen by Rs 6.85 crores to Rs 60.27 crores.
7. Deposits of member banks are unchanged at Rs 47.72 crores.
8. "Balances held abroad" in the Banking Department are less by Rs 5.62 crores.
9. "Other Loans and Advances" show a rise of Rs 1.55 crores at Rs 47.87 crores.
10. Investments are lower by Rs 79 lakhs.
11. Notes held in the Banking Department show a small increase of Rs 64 lakhs.
12. Imperial Bank's borrowings from other banks are higher by Rs 1.50 crores at Rs 14.00 crores.
13. Ad hoc Treasury Bills issued in favour of the Reserve Bank in the week ended March 25 are reported at Rs 1.23 crores.
14. Renewals of ad hocs in the same week must have been of the order of Rs 3.11 crores.

The conundrum is this: While ad hocs to be renewed in the week under review must have been at least Rs 3 crores, Treasury Bills issued in favour of the Reserve Bank are shown to be only Rs 1.23 crores. It is obvious that there has been no created money in the week. On the other hand, there is reason to presume that a moiety of created money may have been cancelled. The fall of Rs 3.48 crores in the Rupee Securities of the Issue Department suggests that ad hocs for nearly Rs 3½ crores have been transferred from the Issue Department. The question is: To what head has the transfer taken place? If the transfer is to the Banking Department, Investments in the latter should show a similar or some rise. On the contrary, Investments have shrunk by Rs 1.55 crores. Can the transfer of ad hocs from the Issue Department have meant return of these Bills to the Government? If so, the cash position of the Centre would have sustained a loss to that amount. Can the Centre afford this loss in the last but one week of

March? Without being too sure, we may advance an explanation on the following lines: The Finance Minister, who rightly is zealous of close approximation between Budget estimates and actuals, might have taken the view that the Centre's balances with the Reserve Bank on March 31, 1955 must be round-about Rs 50 crores in accordance with the Budget assumption. Current balances, after allowing for the considerable addition of created money in the week ended March 18 and for the payments in the remaining days of March, and after providing for increased last-minute disbursements, may appear, in the Finance Minister's calculation, to be likely to be two or three crores higher than the target of Rs 50 crores. On this calculation, he may have thought that reducing created money by Rs 3½ crores may be appropriate now, especially as he can reverse the process and resort to even more created money if, at the close of banking hours on March 31, the actual balance with the Reserve Bank is short of Rs 50 crores. It is to be noted that this balance as on March 25 were in excess of the target by Rs 8½ crores. The payments due to be made by the States on account of the instalments on the consolidated debt of each debtor-State may also take place in the last week of March.

If this view on the fall in rupee securities in the Issue Department proves the correct solution for the conundrum, the increase in Sterling Securities need not mystify us: It only means that, in the interest of its cash in the till, the Reserve Bank expanded currency against Foreign Securities to offset the contraction against Rupee Securities.

"Other Loans and Advances" have increased by Rs 1.55 crores, all of which is accounted for by the Imperial Bank whose borrowings have gone up by Rs 1½ crores to Rs 14.00 crores.

The returns of the Reserve Bank for the week ended March 25 reveal a contraction of currency to the amount of Rs 3.48 crores against Rupee Securities, and a corresponding expansion against Foreign Securities, so that, in the result, the status quo is maintained. Active note circulation shows a very small fall of Rs 9 lakhs; on the other hand, rupee coin to the amount of Rs 56 lakhs has returned from circulation. Notes held in the Banking Department are higher by Rs 64 lakhs.

In the Banking Department, Central Government's deposits have risen by Rs 8.50 crores to Rs 59.4 crores. The balances of State Governments have increased by Rs 6.85 crores to Rs 60.27 crores. The disbursements by the Centre to the States on account of the latter's

share in income-tax were heavy in the previous week but have, presumably, continued in the present week. Banks' deposits are unchanged; and money market conditions, judged by the figures disclosed in the Reserve Bank returns, do not show much of a change, as the increase in "Other Loans and Advances" is largely accounted for by Imperial Bank's increased borrowings. Foreign balances are lower by Rs 5.62 crores, of which Rs 3.48 crores is accounted by transfer to the Issue Department. The balance of Rs 2.14 crores represents the net loss of sterling in the week under report. Investments are slightly lower by Rs 79 lakhs at Rs 49.38 crores.

The statement of the Imperial Bank for the same week shows a slight decrease in deposits at Rs 224.12 crores as against Rs 224.70 crores in the previous week. Borrowings from other banks have risen further by Rs 1.50 crores to Rs 14.00 crores, while other liabilities, including inter-office adjustments, are higher by Rs 35 lakhs at Rs 2.92 crores. On the assets side, investments have fallen from Rs 105.67 crores to Rs 105.46 crores. "Advances and Loans" have risen by Rs 1.12 crores to Rs 128.99 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 4.71 crores and "Bills Discounted and Purchased" for a rise of Rs 5.83 crores.

There is a further expansion of bank credit of over Rs 3 crores during the week ended March 18 as disclosed by the returns of the Scheduled Banks. There is actually a use of double this amount under the head "Advances and Bills". This explains the sharp decline in deposit liabilities and increase in borrowings from both the Reserve Bank and the Imperial Bank. Total Demand Liabilities have declined by Rs 10.74 crores to Rs 572.23 crores and Time Liabilities by Rs 67 lakhs to Rs 375.80 crores. Borrowings from the Reserve Bank have risen by as much as Rs 9.00 crores to Rs 35.43 crores and those from the Imperial Bank by Rs 93 lakhs to Rs 9.75 crores. Cash and balances with the Reserve Bank are lower by Rs 2.64 crores at Rs 78.02 crores. Money at call and short notice stands at Rs 12.03 crores against Rs 15.16 crores. Advances and Loans have risen by Rs 5.82 crores to Rs 615.00 crores, while investments have declined by Rs 1.57 crores to Rs 345.89 crores.

FREE WORLD MAKES PROGRESS TOWARD BALANCED ECONOMY
THE free world made substantial progress toward a better economic balance last year and the trend seems likely to continue, the Federal Reserve Bank of New York reports.

Two outstanding achievements, according to the bank's February monthly review, were:

1. An increase of \$1,900 million in the gold and dollar holdings of other countries.
2. Major relaxations, particularly in Europe, of trade and foreign exchange controls.

The rise in gold-dollar reserves of other countries was \$700 million less than in 1953, but was "all the more significant" because it was attained in the face of a moderate economic decline in the United States and large advance payments by several countries on financial obligations to the United States.

The expansion in gold and dollar holdings was largely confined to the countries of continental Western Europe, the sterling area, and Canada. Latin American countries failed to add to their holdings while the non-sterling area nations of Asia experienced a "moderate loss". The bank estimated foreign countries' gold-dollar reserves at the end of 1954 at \$25,000 million. The figure includes the dollar holdings of the Soviet Union but excludes Russian gold stocks.

Of the \$1,900 million increase in foreign gold-dollar reserves last year, \$900 million was accumulated in the form of gold. Less than 40 per cent of the gold was bought from the United States, more than half stemmed from new production, and the rest apparently came from the Soviet Union which reportedly sold \$50 million to \$100 million worth in Western Europe in the second quarter of 1954.

Net gold sales by the United States were \$327 million in 1954 compared with \$1.164 million the previous year.

The principal reason for the slower rate of increase in foreign gold-dollar reserves, the bank said, was the reappearance of a large surplus in the US balance of foreign payments.

For the first nine months of 1954, the United States rolled up a surplus of \$497 million in current payments with foreign nations. In the same period of the preceding year, the United States paid out \$284 million more than it received. The payments were made for goods and other items such as emigrant and charitable remittances.

The surplus arose largely as the result of a \$637 million drop in US imports. A contributing factor was a rise of \$124 million in US non-military exports.

But foreign countries were helped in their drive to boost reserves by a fivefold increase in the flow of American private capital abroad. The bank put the total for the first nine months of the year at \$1,019 million—\$834 million more than in the corresponding period of 1953.

About half of that rise was attributed to purchases of foreign securities, notably Canadian stock shares, and of obligations of the International Bank for Reconstruction and Development. The rest consisted of a "sizeable" outflow of short-term capital, mostly in the form of exporters' and banks' credits to Latin American countries.

The improvement in foreign nations' reserve position was accompanied by "major moves" toward freeing foreign trade and payments.

"Relaxations of exchange and trade controls were probably more extensive than in any year since World War II," the review commented.

The type of action on this problem taken by Great Britain, Den-

(Continued on page 663)

World of Business

BIC's Problems

WHEN news first came that the British India Corporation, Limited had decided upon the declaration of no more than a nominal dividend of one anna per share on the ordinary shares, business circles were not unduly surprised, although, in the Stock Exchange, it was somewhat of a shock. For, the industries with which the BIC is connected and concerned are those which have the doubtful pleasure of possessing controls and restrictions of a bewildering variety. Thus, the World of Business had anticipated in some measure a tale of woe from Sir Robert Menzies; and, in point of fact, the BIC Chairman had foreseen that such difficult conditions would obtain when, last year, he addressed the shareholders at the 34th Annual General Meeting.

Sir Robert's revelations at the 35th Annual General Meeting must evoke considerable thought: for all that the BIC has variegated interests, it is some shock to find that scarcely one line is permitted to pay its way and, perhaps, take care of deficiencies or smaller margins of profit in another.

If, for example, it is cotton textiles, (and BIC is interested in them), Sir Robert has stated that controls in textiles "still exist in so far as production and the purchase of new plant are concerned; such controls naturally are harassing." Added to these is the continuing misunderstanding of, and continued opposition to, rationalisation by labour. Redundancy of labour has cost the BIC dear, and not least in the cotton branches. It had been hoped, reports the Chairman, to absorb some part of the redundant labour by means of a third shift at the Cawnpore Cotton Mills branch; but what is necessary is the co-operation of the workmen, for, without it, any attempt at rationalisation of this nature is likely to prove futile.

Similar difficulties face the BIC in the other branches of working. The Footwear branches were hard hit by the ad valorem excise duty imposed in the Budget last year; and, moreover, Sir Robert reveals that "orders received for Government supplies" in respect of heavy footwear "have been quite inadequate" with the result that the Corporation, in order to keep a certain amount of work going, was compelled to secure orders "at prices which were unprofitable."

Far from any realisation of the hope that the BIC Chairman had nurtured, about a possible reduction in the excise duty on Footwear, the new Budget had fresh shocks for him. The excise duty

on woollen cloths has moved Sir Robert to say that, with "all the industries represented by the Corporation's Branches" now affected by excise duties, "the goose which in the past had laid the golden eggs is slowly but surely being strangled."

It is important to consider the points that have sorely troubled Sir Robert. The first of these is the new set of excise duties: the justification for them would seem to be clear, in that they now return to the Central Exchequer a moiety of the revenue that was earlier available in the form of import duties. But excise duties themselves would seem to indicate that some other factors have to be taken care of.

For, the other point made by the BIC Chairman is the great difficulty that is being experienced in carrying through schemes of rationalisation. The Government are committed to the recognition of the need for modernisation and rationalisation in regard to the jute goods and cotton textiles industries. There is a proviso, in that there should not be a severe displacement of labour. But, when, as it would appear is the case with the BIC, an attempt to achieve the BIC, an attempt to achieve just this form of rationalisation is met with a sullen lack of co-operation from labour, surely, there is need for Government action.

Again, while the excise duty is primarily supposed to be a form of indirect taxation, such industrial units as are in need of modernisation and rationalisation will find it impossible to pass on the increase in costs to the consumer and will, consequently, have to bear it themselves.

In this view, it is to be suggested that the authorities showed the same sense of urgency in regard to rationalisation as they displayed in the matter of announcing the new excise duties.

"Vital Measures".

Sir Homi Mody, it might be recalled, mooted the idea some months ago of forming an association of industrialists such that they would dissociate themselves from those who, by their anti-social proclivities, had earned a sorry reputation for industry in India. And it would be acknowledged that Sir Homi is fully representative of all that industry in India has done to earn prestige. When, therefore, he thinks it necessary to think aloud on what he terms as "vital measures" before the country, it is proper that we took careful note of what he said.

The occasion was the recently held annual general meeting of the Central Bank of India Limited; and, as its Chairman, we should have normally expected Sir Homi to have reviewed Indian economic conditions generally and the Bank's activities in the year past in particular. But Sir Homi, after running lightly over such routine matters, has seized the opportunity offered of giving air to his views on the "vital measures" that we have referred to.

These are the Company Law Amendment Bill, the Constitutional Amendments and the Budget presented by Sir Chintaman Deshmukh a month ago. Sir Homi is understandably anxious that the case of industrialists and investors, in regard to a reform that might mean in effect the elimination of the Managing Agency system, should "not go by default." There has already been some sort of Government recognition of the abilities and efficiency of the managing agency system; it is, therefore, to be hoped that this recognition will bear fruit in the form of an understanding and sympathetic consideration of the question when Parliament takes up the matter.

As far as the Constitutional Amendments are concerned, Sir Homi has asserted that they present "a very alarming picture." In his opinion, says Sir Homi, nothing has happened "to warrant the drastic curtailment of the rights which holders of property enjoy in every other free society."

The clarification given by Mr Nehru is apparently not enough for Sir Homi; but such, perhaps, is an inevitable situation when, as India now is placed, there is an attempt to create a new form of socialism altogether—a socialistic pattern of society.

The only reason which, finds Sir Homi, could justify the increased taxation in respect of the middle and upper income groups would lie in a Government desire to eliminate the savings from which investment capital is created. And this, in turn, would seem to indicate that the desired policy of Government is to

destroy all incentives. The Central Bank Chairman holds that the Taxation Enquiry Commission have made "some very radical suggestions" which, if implemented, could only result in the economic development of the country being "seriously jeopardised."

But there can be little doubt that the Taxation Enquiry Commission's recommendations are not all of them such that they can be implemented in the near or immediate future; and, in this view, Government policy in accepting and putting into effect suggestions will have to be dynamic. That is to say, the changes in economic conditions wrought by the implementation of the most important suggestions might make it necessary for revisions of other suggestions.

It may, therefore, be that Sir Homi's apprehensions about the Commission's recommendations will not be borne out.

FOR THE INVESTOR

(Continued from page 652)

devoted exclusively to the extruding of aluminium, is well advanced. Commercial production is scheduled to commence in March 1955 instead of December 1954 as originally planned due to delay in supply of certain items of electrical equipment.

£ R S

Dividend Maintained By New Beerbhoom Coal:

The increase in despatches as well as in sales is reflected in the working of the New Beerbhoom Coal Company during the half-year ended 31st October, 1954. Raisings for the half-year totalled 2,23,942 tons as compared with 2,20,627 tons in the previous half-year and despatches 2,56,752 tons against 2,08,199 tons. Sales have risen to Rs 42.22 lakhs from Rs 32.62 lakhs.

The net profit, before providing for Taxation and Depreciation, amounts to Rs 3,92,080 as against Rs 2,45,671 in the previous half-year. The directors have, after setting apart Rs 1.47 lakhs (Rs 1.82 lakhs) for Depreciation and Rs 1.29 lakhs (nil) for Development Reserve, maintained the dividend at As 6 per share.

World of Jute

Manipulations

IT is an indisputable fact that Pakistan occupies an important place in the World of Jute. Being the sole supplier of raw jute to mills in many a country, the manner in which she conducts her jute policy has naturally been of utmost interest to the jute trade as a whole. Depending presently on this source for the supply of a good portion of her requirements, India's concern in this regard is no less.

It is a notorious fact that the uncertainty with regard to the supply of raw jute from jute year to jute year has all along played an important role in determining the course of the jute markets. With the coming into being of Pakistan, the position has become much worse. The Pakistan Government have not been slow to realise that they have the whip hand in the proceedings and they have utilized every conceivable opportunity to squeeze the highest prices out of the mills both in India and abroad. With raw jute constituting a vital item in her limited lines of exports, the country is naturally interested in keeping the price of raw jute as high as possible. One of the ways of achieving this is by limiting production. But it is well-known that jute cultivators never follow their Government's directions. The area of cultivation increases or decreases according as demand in the previous year is large or small.

In the last jute year, the jute cultivators in Pakistan had grown jute in a larger area than had been allowed by the Government. Thanks to the extensive floods, the Government claimed that the work of the licensing staff entrusted with the destruction of the crop in areas in excess of the licensed limit, had

not only been rendered unnecessary but was actually overdone. That is to say, the crop had turned out to be even less than that was planned.

Now Pakistan has earned quite a reputation in meaning exactly the opposite of what she says, at least with regard to her estimate of the size of the jute crop from year to year. Responsible organisations even in that country find it hard to place any reliance on their Government's figures.

Not satisfied with the steep fall brought about by them in their estimate of the jute crop for 1954-55, the Government set about taking steps in November 1954 that were calculated to dislocate the jute trade throughout the world. The cancellation of licences of a number of exporters had the desired effect and raw jute prices skyrocketed. In India, the repercussions began to be felt from late December of last year and reached the climax in mid-February, when raw jute prices touched an all time high.

From the third week of February and the following weeks upto the end of the third week of the current month, there were signs that conditions were returning to normal. Raw jute prices came down rapidly from their giddy heights of mid-February closely followed by jute goods. All well-wishers of the jute mills industry welcomed this development as a means of helping the industry to regain the goodwill of foreign consumers which it was fast forfeiting.

But what has been hailed as a thing to be devoutly wished, by a large section of the trade, has for obvious reasons not been palatable to Pakistan. Hence, just when it

appeared that the world of jute had settled down to normal conditions after successfully relegating the bogey of raw jute shortage to the back-ground, out comes Pakistan with her ban on forward exports sales of jute at discount prices, together with a renewed warning that raw jute will be in short supply during the remainder of the current jute year.

The communique issued last week after a joint conference between the Central and provincial ministers points out that the conference after careful analysis of the available data has come to the conclusion that there is very little likelihood of the entire world demand being fully met by the existing stocks. The communique goes on to prophesy that the next crop will not exceed the prescribed limit. In support of the latter contention, it says that conditions for the cultivation of jute have not been favourable so far in the new season.

Referring to the recent fall in the raw jute prices in Pakistan, the communique asserts that the easier conditions have been brought about by certain interested elements in the trade who have deliberately exaggerated figures of jute production during the current season, to serve their own nefarious ends.

Since the release of the above communique, the jute markets in India seem to have regained some exuberance. Assam Bottoms March-April delivery, which was quoting Rs 32-8 per maund last Saturday, has firmed up to Rs 34-8 in the course of the past three or four days. The goods section has also steadied up in sympathy. This rally in itself is not to be viewed with alarm provided prices show no further tendency to get out of hand as they did in mid-February. If however, they once again become out of tune with current and prospective rates of overseas demand, no one but Pakistan will be responsible for the bitter consequences that the entire jute trade may have to face. If the Pakistan Government believe that by such a short-sighted policy which, no doubt, may bring to them immediate benefits, they are doing good to the jute cultivator in their country, it is time that people interested in the continued welfare of the jute cultivators and the innumerable traders and merchants who derive livelihood from jute, told their Government that their short-sighted policy would spell ultimate ruin to the very elements they profess to protect.

Except for a slight recovery in the prices of Heavy Goods from the recent low levels due to enquiries from foreign countries, trading in the Jute Goods market, during the past week, remained dull. Price movements were generally influenced by the speculative manipulations in Phatka where bulls tried to corner Heavy Goods. The firmness in raw jute prices also imparted some strength to the manufactured goods section. Hessians ruled steady due to support from bulls who were expecting the Argentine to enter the market short-

ly for her purchases. The following table will show the price trends.

	Week's Opening	Week's High	Week's Closing
Hessian:	Rs. a.	Rs. a.	Rs. a.
40" x 10 Ozs.—			
Ready ..	44 6	44 10	44 8
April-June ..	43 10	44 12	44 10
July-Sept. ..	44 4	44 6	44 4
40" x 8 Ozs. ..	36 12	36 2	36 0
40" x 7 1/2 Ozs. ..	33 6	33 6	33 2
Heavy Goods:			
B. Twills ..	124 8	128 4	127 0
Heavy Cees ..			
(Green) ..	123 0	126 0	125 2
Cornacks ..	126 0	127 12	127 8
D. W. Flours ..	146 8	149 0	148 0
Cubans ..	149 8	151 0	148 8
A. Twills ..	156 8	158 0	156 8
Sugarbages ..	137 8	139 0	138 0

Prices in the Raw Jute market steadied up a little from the recent low levels on reports of the Pakistan Government taking steps to check the speculative activity which, they felt, was responsible for the recent fall in prices. Moreover, the Pakistan Government's determination to see that there was no sowing of jute in excess of the licensed area, also gave further strength to the market. But, mills were generally content to make purchases only to meet their immediate requirements, being still confident about their raw jute supply position. The following mill business took place during the week in:—Assam Bottoms at Rs 34-0; Dalsee Mesta Bottoms at Rs 31-0; Dhubri Bottoms at Rs 34-8; Pakistan Jat Bottoms at Rs 35-0 (all per maund) and Pakistan Jat NC Cuttings at Rs 120 (per bale).

EDITORIAL NOTES

(Continued from page 655)
come of the order of Rs 1000 crores. This increase is substantially higher than what is envisaged by the Planning Commission and what is estimated to have been already obtained during the first phase of the Plan. The experiment near Calcutta springs mainly from the most outstanding fact of Indian economics, an abounding supply of manual labour with no corresponding availability of finance. The organised cooperative labour of its eighty families in which each individual gave an hour's daily work for the common cause has provided the village of Langalberria with habitable houses, roads and several other amenities. Very little capital as such was utilised. What was found necessary was borrowed and repaid without difficulty out of the new income generated by the process of cooperative self-help. The villagers started by brick-laying and the bricks not only built houses but gave them the little extra money needed for purchases of other materials. The success of this experiment inspired a number of neighbouring villages to follow suit; and there are now ten villages within a radius of six miles which have benefited through this method. They have all found new sources of income and a better standard of life. If difficulties in the way are not more than what the brochure refers to, the experiment must attract national interest. Mr. Jalan seems to have successfully recaptured ideas and means which were embedded in the pre-modern economy of the land.

World of Tea

Rise in Exports

ACCORDING to official figures released this week, India has earned Rs 131 crores from exports to foreign countries in 1954. This represents an increase of Rs 28 crores in India's tea exports as compared with the preceding year. It is explained that the increase in the value of total export trade is due to high prices. In quantity, the total exports last year were 449 million pounds—51 million pounds less than in 1953. Owing to heavy carry-over, the actual exports in 1953 exceeded the export quota by 63 million pounds. While earnings is more from exports, home consumption of Indian-made tea has increased by 77 million pounds in 1954 as compared with the preceding year in which it was 108 million pounds. The proportion of tea exports to production at home has declined to 70 per cent as against 82 per cent in the preceding year.

Although Britain's imports of tea for consumption this January fell short of the amount she took in January 1954, the total was still higher than the monthly average for the past twelve months. The latest statistical summary, issued by the International Tea Committee in London, shows that the UK tea imports (net) for consumption in January 1955 totalled 43.37 million pounds. The figure for January last year was 47.43 million pounds, while the total of UK tea imports (net) for consumption during 1954 was 507.31 million pounds, setting up a monthly average of 42.28 million pounds.

Average prices at London tea auctions cited in the summary show that Ceylonese tea, which in the first week of February was fetching, on an average 7sh. 2.1d. per pound, had fallen to 5sh. 10.4d. per pound by the first week of March. In the first week of March 1954, the average was 4sh. 9.1d. per

pound. Comparable figures for Indian and Pakistani teas are given below:—

	First Week February 1955
Northern India ..	6sh. 10.7d.
Southern India ..	6sh. 10d.
Pakistan ..	6sh. 8.9d.

	First Week March 1955
Northern India ..	5sh. 6.8d.
Southern India ..	5sh. 5.7d.
Pakistan ..	5sh. 6.3d.

	First Week March 1954
Northern India ..	4sh. 6.4d.
Southern India ..	4sh. 6.2d.
Pakistan ..	4sh. 5.2d.

The summary also shows that United Kingdom tea stocks held in warehouses, during the past three months, have been running at a lower level than a year ago. These figures are based on reports of the London Tea Brokers' Association and relate to tea remaining in London and provincial bonded warehouses at the close of work on the last Friday in each month. They were as follows:—

Month:	(In Pounds)
December, 1953 ..	103,421,000
January, 1954 ..	123,729,000
February, 1954 ..	131,483,000
December, 1954 ..	91,261,000
January, 1955 ..	108,195,000
February, 1955 ..	127,448,000

The 1950/55 International Tea Agreement, which regulates production and export of tea in India, Pakistan, Ceylon and Indonesia, is due to expire at the end of this month. The Sub-Committee, appointed by the International Tea Committee, has already submitted its recommendations to the Governments of these countries concerning the renewal of the agreement. It is believed that if the agreement is renewed, it will place no restrictions on the extension of the acreage as this will help the producing countries to increase the output in order to meet the rising demand. Under the International Tea Agreement, the export quota permitted to India is 135 per cent of "standard exports". In 1953, the export quota permitted to India was 135 per cent of "standard exports". In 1954, the export quota was fixed at 122.5 per cent. In 1955, the quota was gradually increased to meet the increasing world demand and finally fixed at 133.5 per cent. Apart from rising consumption in the UK and the USA, internal demand has also been steadily increasing in India. Liberalisation of production is not, therefore, ex-

pected to result in excess of supply, because each producing country will still be able to regulate its own production through a system of licensing.

As far as Northern India is concerned, this season's tea is now nearly sold and the last auction will take place on the 4th April with fair chances of current prices being well held. It is too early to predict the probable size of the next crop; but the possibility of a substantial increase in the next North Indian crop is generally considered slender due to the drought conditions prevailing in upcountry areas and the difficulties of tea estates in getting adequate supplies of manures and coal in view of the transport difficulties. In the case of South India, production and export in the first two months of the year are encouraging. If this rate can be maintained for the rest of the year, the South Indian share of India's total production will be much larger.

In the Cochin market, a total of just over 2,80,000 pounds were offered last week. The market opened quietly to a fair demand which strengthened as the sale progressed and prices were generally half to one anna per pound easier. Residual types were, however, again difficult of sale. Most high-grown sorts and coloury Medium descriptions came to a fully firm to dearer market, while black Leaf Middle East types met with only limited demand at a

drop of about one anna per pound. Internal Sale "G" will be held on the 5th April, 1955.

Following were the shipments made during the period from 1st January to 9th March 1955 as compared with the previous year (figures in pounds):—

Destination.	1-1-55 to 9-3-55	1-1-54 to 9-1-54
United Kingdom ..	7,560,296	5,343,991
U.S.A. ..	1,730,817	1,814,773
Canada ..	1,049,105	1,261,906
Australia ..	172,827	453,220
Other Countries ..	614,462	388,095
Indian Ports ..	975,326	548,077
Total ..	12,102,833	9,810,064

Offerings in the Colombo market amounted to about 66,67,890 pounds. There was active and general demand at dearer rates. There was a wide selection of Nuwara Eliya teas though qualities were irregular. Best Broken grades generally reached valuation, but Leaf grades were slightly easier. Buyers continued to select the choicest high-grown teas, resulting in a rise in the price upto Rs 3 per pound. Demand was also very strong for medium-grown teas with all bright liquoring coloury sorts advancing by 10 to 15 cents per pound and Planer sorts by 10 cents per pound. Among low-grown teas, Persian Gulf types were irregular. Bold Leaf BOPs were sold at about last rates, while Tippy kinds were slightly easier.

FREER WORLD TRADE
By Guy Sims Fitch

The action at Geneva this week by the 34 members of the General Agreement on Tariffs and Trade (GATT) has brought closer to realization the prospect of freer world trade, one of the main objectives of President Eisenhower's foreign economic policy.

These decisions not only strengthen and modernize GATT trading rules. They also set up a permanent organization—the Organization For Trade Co-operation—to see to it that these rules are followed.

There is general satisfaction here that the new GATT code meets the essential needs of its members. It removes many obstacles to the flow of goods and services without imposing undue hardships on individual countries.

One of its principal improvements lies in the greater continuity it gives to the trade relations of the GATT partners. Tariff concessions will remain in force until the end of 1957 and will be renewed automatically after that for additional three-year periods.

Less-developed countries receive a number of special benefits designed to meet their problems. They are allowed greater leeway, for instance, in modifying tariff rates and imposing other restrictions which may be needed to promote industrialization and economic advancement.

Officials here are especially pleased at the removal of trade restrictions imposed originally to protect a country's balance of payments position, but which are no longer necessary, this could mean less discrimination against American goods by nations that have been able to improve their trade trade balances in recent years.

One new curb admittedly has particular application to the United States. In the case of agricultural products, GATT members are barred from using export subsidies to gain more than a fair share of the world market for any commodity. This may have only limited effect, however, since it has been US policy to dispose of surplus commodities with due regard for world market conditions.

Spokesmen here are willing to concede the necessity or desirability for many of the waivers in the new code that take account of special national difficulties. As a case in point, they cite the one important waiver granted the United States—the right to place quota on price-supported agricultural products as required by US law.

This waiver could have one beneficial effect, apart from any protec-

tion it may afford American farmers. It conceivably could help win approval for the OTC from an American Congress that is highly sensitive to farm problems and traditionally suspicious of the power that could be wielded by a permanent world trading organization.

Spokesmen for the Eisenhower Administration have made it known that the President will submit the OTC Agreement to Congress in a few weeks, as soon as the proper papers can be assembled. They point out that approval of the OTC, since it is not considered a formal treaty, will require only a simple majority in both the Senate and the House of Representatives. This could be an important factor in view of the unexpected strength demonstrated by the protectionist forces in their bitter—though as yet unsuccessful—fight against the three-year extension of the US Trade Agreement Act.

Whatever happens to the OTC, however, US participation in GATT will not be affected unless Congress decides to make it an issue—something it has not done in the past. The Administration is not planning to ask Congressional approval for the new trade rules, since multilateral negotiations are conducted under GATT through executive authority granted by the Trade Agreements Act—authority that has been exercised continuously since 1934.

In any case, the Geneva Agreements in themselves do not constitute a final answer to world trade problems. OTC is primarily an interpreter and a supervisor of trade rules. It can recommend punishment of GATT violators, but its decisions are not binding—and few governments would have it otherwise.

Britain

MARKED PROGRESS IN U.K. ECONOMY DURING 1954
By John Kingsley

FROM the statistical data now available, it is evident that 1954 was a year of marked progress for the British economy. The expansion of production and overseas trade which had started in the second half of 1953 continued—a trend most clearly demonstrated in the development of industrial production. This showed the largest increase over the previous year in the first quarter of 1954, at seven per cent, but it was still four per cent, in the last quarter, and the expansion has continued into the new year. (Production in January was four per cent, higher than in January 1954.)

The expansion in output during the year was accompanied by an increase of 350,000 in the labour force, and last January unemployment was at the very low level of

1.8 per cent. Vacancies unfilled were 29 per cent, higher than a year earlier, and more than the number of unemployed.

Thus employment is, if anything, "overfull", and it is unlikely that there can be a similar growth in the labour force this year. This factor of maximum employment also explains the slowing-down in the rate of expansion. Obviously, production rises more quickly when the increase can be achieved not only through higher productivity but also through the employment of a greater number of workers. When, as at present, expansion depends mainly on increased productivity, the rate of progress is necessarily slower.

The main rises in production were recorded in metal goods, oil refining, chemicals, paper, and vehicles. Smaller increases were reported for textiles, leather goods, clothing, and the food industries. Increased activity necessitated higher coal consumption. Thanks to the improvement in fuel efficiency, the industrial use of coal, however, rose by only three per cent.

Progress in the steel industry was satisfactory, output rising by five per cent, to the record figure of 18,500,000 tons.

The year's production figures for manufactures are, as yet, available in only a few instances. In any case, a lengthy enumeration would be tedious. Outstanding expansions were recorded by motor vehicles, chemicals, and paper. Production was also satisfactory in all branches of the engineering industry, and in durable consumer goods such as refrigerators, washing-machines, radio and television sets, and furniture.

This increased production has to meet three competing demands—domestic consumption, investment, and exports. No doubt domestic consumption has profited from the increased availability of goods, taking up about half the increase. But although the recent measures taken by the authorities—particularly in the sharp rise in the Bank Rate to 4½ per cent—are designed to prevent domestic demand growing too fast and to ensure a continued balanced growth, no dangerous renewal of inflationary pressure developed.

Admittedly, there was a substantial rise in the demand for household goods, and it is this demand which the new restrictions on hire-purchase seek to restrain. However, side-by-side with rising consumption there has been a strong growth in personal saving—another indication that no seriously unbalanced position was developing.

A strong volume of investment is necessary if Britain's industry is to continue its growth and to maintain its competitive position in the world market. There are no complete statistics yet available on fixed investment; but all pointers are most encouraging. According to Board of Trade figures, approvals of new industrial buildings were rising throughout last year.

Machine-tool deliveries and orders, a good indicator of future invest-

ment plans, have also shown a tendency to expansion. Many large manufacturing concerns have announced major investment plans. Thus, the motor industry plans to spend £150,000,000 in the next few years, and expects an output of 1,500,000 vehicles in 1960—an increase of 50 per cent over last year. To give an example of an industry developed after the war, the production of contractors' plant (earthmoving equipment) rose over the last four years from £33,000,000 to over £60,000,000, of which one-half is being exported.

To look at another field, the Wilton plant for the production of "Terylene", the promising synthetic fibre of British invention (known as "Dacron" in the United States) has started operation. Far-reaching investment plans have been announced for railways and roads, and the steel industry plans an output of 22,500,000 tons in 1958.

More investment will help British industry to maintain its share of the growing world market. Last year, the volume of exports was six per cent higher than in 1953; in other words, exports rose proportionately as much as production, whereas the relative increase of consumption was less. Imports rose by only two per cent in volume. Admittedly, since the last quarter of the year imports have been rising more steadily because of the need for more materials to keep up the expansion of production, and also of increased requirements of food and feeding-stuffs as a result of the unfavourable harvest.

In order to maintain this higher level of imports, and to meet higher import prices, exports have to be further increased. As this analysis of production trends has shown, there is no doubt that British industry will be able to meet the increased demands of the export markets, and thus to provide the means of keeping up the highest level of imports required to sustain the continued expansion of the country's economy.

WORLD OF TEA

(Continued from page 659)

Medium Fannings were 10 to 15 cents per pound dearer, while better quality sorts followed the line of Broken grades. No sale will be held on the 11th and 12th April due to the Easter holidays.

The Ceylon Government has given permission to the Ceylon Tea Propaganda Board to join the Central Tea Board of India and the German Tea trade in a campaign of joint tea promotion in Western Germany. The Corporation, as it now exists in West Germany for the promotion of the tea trade, comprises the German Tea trade and Indian Tea Board. The entry of another producer means that shares will have to be split up by agreement between producers. Meanwhile, Ceylon is expected to ask the International Tea Committee for increased export rights, because most of her tea has to be sold to overseas countries.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—Shakespeare

CLIO, the Muse of History, must be a cynical old dame and irony must be, I rather fancy, her favourite figure of speech. What with her gift of prescience of what is in the womb of time and her long and bitter memory of old forgotten (by others) far-off things, she must be laughing up her sleeve all the time at man's incorrigible self-sufficiency, his arrogant vaunts which even as he utters them, she knows to be empty, and will return to make mock of him. She has seen a hundred times, if once, the spectacle of the wheel of fortune doing its inexorable revolutions along the path of time and humbling the insolent whose downfall she foresaw even while they, in their "hubris", thought they were riding the wheel and not tied to it. One of Clio's most ironic moments must have been fifty years ago, when Lancashire used to brag that it could supply all the needs of the home market before breakfast on Monday and devote the rest of the week to clothe the rest of the world. Current grouches in Lancashire regarding unfair competition from India must recall to her the 'thirties when, grudgingly, it was conceded that "the Indian cotton textile industry is entitled for its progressive development, to a reasonable measure of protection against the import of United Kingdom yarns and piece-goods." One needs to be a lot less informed about the way of the world, and a lot more charitable than, I fancy, the Muse of History to resist a cynical smile at this reversal.

But it is not my intention, I assure you, to discuss the current situation in Lancashire as though it were Greek Tragedy; though it is rather difficult for an Indian to avoid overtones of emotionalism in discussing cloth, especially Lanca-

shire cloth. The reason for this is, of course, that Lancashire cloth played a decisive part in what social psychologists would perhaps call the neurosis of Indian nationalism. So much besides economics and even politics has accreted itself to this question by Gandhiji's insistence on burning foreign cloth and taking to Khadi, that it is quite conceivable that, in all our observations on the subject, there is a compulsiveness deeper than that of logic. But then, the effort to look at the current controversy purely in economic terms is worth making because part of Lancashire's present attitude derives from a psychological conditioning that is the obverse of that which characterised it in the days of aggressive boycott of foreign cloth. Deep down, the resentment proceeds from a smouldering disinclination to accept the harsh fact of Indian emancipation and all that goes with it. Such ills are hardly ministerable by anyone, least of all an Indian. I can, therefore, only set out the case in logical terms and leave it at that.

Now for a little history: In the earlier phases of Indo-British relationship, England was, as everybody knows, at the receiving end and one of the things that used to be highly prized was Indian textiles. The onset of the Industrial Revolution, and mass production of textiles, however, completely reversed the situation, and it became imperative that markets for these products be found. The ruthless extermination of a great deal that was priceless in us that this meant, I shall pass over, for, as I said earlier, I have no desire to open old wounds. (The scars, however, are there for all to see). I shall even concede charitably that a great deal of all this was no one's fault in particular, and was inevitable in so decisive an historical process as the Industrial Revolution. When we move on to the twentieth century and the First World War, the fortunes have already begun to change, and Lancashire had serious rivals in the Indian and Japanese mass production of cheap textiles. The end of the war saw some queer and wrong-headed attempts to dump British textiles in India, including currency manipulation. Following the recommendation of Babington, Lick's report, the exchange rate of

the rupee was fixed at 2 shillings, though the resources of foreign exchange of the Government were quite unequal to cope with the resultant situation. Within a matter of months, the older rate had to be restored, and the importers who had placed the orders for the goods, but had made no provisions for exchange, were left high and dry holding the babies. The situation became quite impossible, and the concurrent preaching of the gospel of the Charka dealt a decisive blow to Lancashire, from which it never quite recovered. With the removal of the excise duty on cloth (an odious device to bolster up Lancashire), Indian textiles were allowed to work out their destiny in some security. The 'thirties also saw the conclusion of the Mody-Lee pact, from which I quoted earlier, and which conceded that India is entitled to insist that its own textile industry should not be strangled in its infancy by competition from Lancashire. Within two generations of the conclusion of this pact, we see a complete reversal of the situation: Lancashire has now come out with the articulate complaint that India is an unfair competitor to her!

But what are the facts of the present situation? The world market for Lancashire is contracting for various reasons. The most important of these is that every country that wants at all to industrialise starts with cotton textile mills, with the result that, on a long range view, trade in textiles, at any rate in quality textiles, is bound to shrink to insignificant proportions. Lancashire, along with other British industries, has been enjoying the fruits of the accident of Britain being the first nation to industrialise on a large scale, but the time has come when this fact has no significance. But Lancashire, taking a short-term view, says that the contraction of British exports to India is due to India's prohibitive import duties. This alleged tariff wall is linked up with the import into England of duty free grey cloth from India which, it is claimed, is affecting her own domestic market. The production of this coarse cloth in England itself is ruled out because of the high labour costs and the world cotton prices, which are substantially higher than those at which

the Indian mills get their cotton. Therefore, it is demanded that (1) the British Government should bring pressure on the Indian Government to reduce the duty on goods imported by India and (2) the grey cloth imported into England should be subjected to duty to put a curb on "dumping" into England, or alternatively the Government must have a State buying commission or a system of quotas.

Now, to take the imports into India first: the rate of duty on British piece-goods is actually a preferential rate compared to "the most favoured nation rate." India is, in other words, giving Britain a rate that is far more favourable than what she gives to any other outsider. More than that she cannot do consistent with her national policies. Secondly on the question of cotton prices, I do not see why the Government of India should not make available to her own industries raw materials at rates much lower than artificially supported world prices. If India has an advantage of nearly a shilling

in the price of a pound of cotton over England, it is not her fault.

★

Now, what is the Indian side of the picture? First of all, it is not true that India is getting any special advantage at the expense of Lancashire, for the imports into England of cotton yarn and fabrics from all sources have actually shown a downward trend from 1952 to 1954, and any advantage that India has had has been at the expense of other suppliers to England. Total imports of cotton yarn and fabrics into England were of the value of £36.1 million in 1952, and, in 1954, they were only £21.6 million. (In 1953, they were even less with a total of only £10.9 million). India's share of these was £802,000, £965,000 and £690,000 for 1952, 1953 and 1954 respectively. Secondly, it is somewhat misleading to refer to the Indian cloth imported into Britain as "cloth", for, it is really semi-manufactured grey cloth which is processed and resold both abroad and in England. The charge that these imports are seriously competing with Lancashire in the domestic market is untenable. Firstly, it is the processed and finished product on which a section of the textile industry in Britain thrives that actually competes with the home product. Secondly, the proportion of the reprocessed Indian cloth sold in Britain itself is not very much. Mr Thorncroft,

President of the Board of Trade, estimated the total of grey cloth retained in the UK in 1954 at 80 to 100 million square yards, which is about 10 per cent of the domestic market. And what about the re-export industry which is earning valuable foreign exchange for the country? It is true that distress in any particular part of an industry cannot be assuaged by the prosperity of some other part of it; but then, it is a dilemma inherent in large-scale production dependent on world markets and the scapegoat should not be found in Indian imports. After all, we may ourselves take to the reprocessing industry and capture the overseas re-export market of the UK, and would that please the other section of Lancashire textile industry.

★

It would, again, be extremely short-sighted for the British Government to do anything in haste to placate Lancashire interests. I shall pass over the political repercussions in India, for, as I said in the beginning, Indian attitude to Lancashire has aspects now forgotten in new-found amity, but which it is easy to exacerbate. It may be irrational, but there it is, and it will have to be taken into account. I do not think that the risking of Indo-British estrangement at the present juncture in world affairs for a temporary advantage for a section of one

particular industry in Britain is at all worth while. Secondly, from Britain's own point of view, any attempts at tariff restrictions would only jeopardise Indo-British trade in spheres in which India is now largely looking to Britain because of historic associations. Britain's exports to India were of the order of £115 million, which included machinery and electrical goods five times the value of grey cloth imported by Britain from India. Any misunderstanding between the two countries is bound to affect the volume of trade between them. I do not imagine that many Indians would welcome the prospect of strained relations between England and India, especially in matters of trade and commerce. Moreover, any restrictive action will clearly violate the Ottawa Pact and the subsequent trade agreement between India and Britain in 1939. And what about professions at conferences on the GATT and elsewhere about removing obstacles to free trade? Quotas, which have been freely mentioned in the House of Commons debate, are permissible under article 19 of the GATT only when it is non-discriminatory and is in the nature of "emergency action"; when imports were increased to an extent that would "cause or threaten serious injury to domestic producers." Whether such a situation has arisen in Lancashire is a matter of opinion, and, in any case, the imposition of quotas would weaken Britain's efforts at

persuading others to give up the system of quota restriction.

★

The trouble is that the difficulties of Lancashire do not admit of any short-term solutions. In the context of contracting world trade in cotton textiles, the only solution for Lancashire is to concentrate on quality goods which people all over the world will want on aesthetic rather than on utilitarian grounds. In attempting this, Lancashire may have to undertake market research which would reveal the needs of the connoisseurs to whom she could cater. Secondly, Lancashire may have to modernise her industry with special reference to this new role she must assume. The problem of British industry as a whole is of a sort that can only be solved by increasing the skill content in its products with corresponding reduction in the value of raw materials. As area after large area becomes free from colonial rule, the only solution for a country with no raw material worth speaking of, and a labour force both well organised and used to a high standard of living, seems to be to get the highest value for every penny of high wages paid. In the context of Lancashire, this means that it must content itself with being the producer of quality articles, leaving it to the tropics to produce cloth that will serve the simpler and more utilitarian needs of clothing.

EAVESDROPPER.

A "Standstill Budget" Expected

By PAUL EINZIG

THERE have been remarkably conflicting Budget forecasts in circulation during the last month or two. The prophets usually agree on the question whether the Chancellor of the Exchequer is likely to reduce taxation or increase it, even if they disagree about the nature and extent of the prospective changes. On the present occasion, politicians and financial experts have been until recently fairly evenly divided between those who believe that Mr Butler is likely to make generous tax concessions and those who expect him to introduce an "austerity Budget."

Those who expect him to reduce taxation base their forecasts on the following arguments:—

- (1) The Government is bound to make concessions as a bid for popularity on the eve of a general election. It could not possibly afford politically to increase taxation or even to leave it unchanged at its present high level.
- (2) The financial year is likely to close with a substantial revenue surplus. At the time of writing the surplus is estimated at £400 million. Even those, who realise that under British fiscal practice such a surplus is automatically used up for the reduction of the public debt and it is not stored up for distribution in the next Budget, feel that the favour-

able result would justify the forecasting of a large revenue surplus for 1955-56, which again would justify, from a purely fiscal point of view, extensive tax concessions.

- (3) Even though, generally speaking, business continues to be prosperous, there are bad patches, such as the Lancashire textile industry suffering from Indian and Japanese competition and the furniture industry affected by the recent restrictions on instalment selling. The motor industry is expected to be hit by the Australian import cuts. These and other trades are in need of stimulus by means of tax concessions.
- (4) Now that the increase of the Bank Rate and restrictions on credit expansion have been adopted, the Chancellor could afford to be liberal in the fiscal sphere without risking inflation.

Those who expect Mr Butler to increase taxation argue on the following lines:—

- (1) The political factor cuts both ways. The responsible section of British opinion would be favourably impressed by unpopular measures on the eve of a general election, in face of the unfavourable outlook of the balance of payments. It is recalled that in 1931 the Gov-

ernment adopted unprecedented tax increases just before the general election and, in spite of this, it secured the largest majority the Conservative Party obtained in modern times.

- (2) A large part of the prospective revenue surplus has already been given away in the form of higher pensions and other social service benefits, the granting of equal pay for women in Government service etc. The surplus in 1954-55 has been largely the result of reduced expenditure through delays in arms deliveries. It seems probable that there will be no such delays in 1955-56.
- (3) In spite of the high Bank Rate and credit restrictions, inflation continues unabated, mainly in the form of a continuously rising wages spiral. It would be a mistake to add to this by releasing purchasing power through tax concessions.
- (4) The prospects of the balance of payments are very discouraging, and a drastic reduction of domestic demand is the only effective way in which sterling could be reinforced in the long run.

During the last week or two, a third school of thought emerged and is gaining ground in political circles. It holds the view that Mr Butler will make no substantial changes in either direction. Indeed he may make no changes at all.

is duly realised that a "standstill" Budget is not popular, because the Government is always expected to "do something". But it now seems that, should Mr Butler favour a standstill Budget, he would have an unanswerable excuse for it. At the time of writing it seems more than probable that the Government will decide in favour of an early election at the end of May or early in June instead of waiting till the autumn as it originally intended to. Owing to the brevity of Parliamentary time, this could only be done if the Chancellor were to introduce an exceptionally brief and non-controversial Finance Bill. To that end, the number and extent of changes would have to be reduced to a minimum. Indeed, under the British unwritten Constitution, all the Chancellor would have to do would be to introduce a two-clause Finance Bill providing for the renewal of Income Tax and one of the indirect taxes at the existing rates. Any changes would be left for a second Budget and a second Finance Bill, to be introduced after the general election.

It would, of course, be possible for Mr Butler to indicate in his Budget statement on April 19 the broad outlines of the fiscal measures he intends to introduce in the new Parliament. There is no need for him to do so, however. Nor would it be necessary for him to introduce the second Budget immediately after the opening of the newly-elected House of Commons. He could wait till the autumn. By that time it

No Change of Horses in Mid-stream

LAST week-end's announcement with regard to the Government of the Reserve Bank of India had, doubtless, its element of surprise; but the surprise evoked was of the most pleasant, and, as I shall show, of the most reassuring kind. Sir B. Rama Rau, who was to have retired on June 30, has been given an extension two years; and Sir N. Raghavan Pillai (who continues to be popularly known as Mr N. R. Pillai) will remain the Secretary-General in the External Affairs Ministry. When, after a great deal of search on the part of the Government and after an extended period of speculation on the part of the public, the final choice for the Governorship fell on Sir Raghavan, it was universally hailed as being eminently satisfactory. Not that it was not known that he did not have even a nodding acquaintance with the problems and techniques of Central Banking; but Sir Raghavan stood, in the esteem of the Government and of the public alike, for the kind of veteran and consummate civil servant who had such instinctive versatility and comprehensive grooming that he could easily master the intricacies and technicalities of any work he is called upon to undertake, and could be depended upon to discharge any responsibility entrusted to him in a high sense of duty and with exemplary competency. In every one of the important offices Sir Raghavan has held for over two decades, whether under British regime or in Independent India, whether with the old type of members of the executive council or with the present kind of popular minister in a cabinet imbued with joint responsibility, it has been recognised, on every hand, that he is an able administrator from the point of view of the department entrusted to his charge and a trustworthy and reliable, but unobtrusive, counsellor from the point of view of the member or minister concerned. Versatility, integrity, thoroughness in mastering a subject, incisiveness in understanding, decisiveness whenever necessary, complete poise in every relation and in any situation—these are the attributes associated with an ideal civil servant; and Sir Raghavan possesses them in such measure and in such blend that, when he was selected for the highly technical job of the Governorship of the central banking institution, there was not even the whisper of the question. What does Sir Raghavan know of Central Banking? It was taken for granted that, even

as he had proved himself to be equal to every task assigned to him in his distinguished and successful career, he would make superlatively good as the head and chief of the Reserve Bank.

At the same time, there were not a few who wondered how ever the Prime Minister was going to spare him. I have heard Sir Zafulla Khan express in his time a similar sentiment about Sir Raghavan's indispensability. Sir Raghavan have also known Mr Nalini Ranjan Sarker held a like view about him when Sarker was the Commerce Member and Pillai the Joint Secretary and, later, the Secretary in the Commerce Department. And there is every reason to think that Pandit Jawaharlal Nehru regards Sir Raghavan as one on whom he can completely rely. Since Sir Girija Bajpai's departure from New Delhi to take the Governorship of Bombay, the Prime Minister has turned to Sir Raghavan for the one hundred and one things that need specialised and constructive approach, intimate exchange of ideas on a level of kindred thinking, and nimble and adroit execution once decisions are made. It was obvious that what would undoubtedly be a great gain to the Reserve Bank would also be a grievous loss to the Central Cabinet generally, to the Prime Minister in particular. The inevitable question has been: Can Sir Raghavan be spared from New Delhi? Mr Nehru has now answered the question in the negative.

Reversal of an earlier official decision, which has been duly publicised, may sound unusual; but it will be widely appreciated that it was natural in the circumstances. Particularly so because there can be no inconvenience or upset of arrangements so far as the Reserve Bank is concerned. That is to say, the continuance of Sir Rama Rau as Governor for another two years is a solution which is equally natural in the circumstances. I suppose Sir Rama Rau is in his mid-sixties. Let me touch wood, and say that, by the sheer test of physical fitness, anyone would guess that he is in his mid-fifties. A man of punctilious habits, with self-discipline as his way of life, the present Governor is not the person who can hanker for rest and retirement. He is considerably senior to Sir Raghavan as a civil servant; and his record fits him for the distinction of an ideal civil servant. The variety of offices he has held in his long and illustrious official career and the

un-varying success which has marked everyone of his assignments constitute a unique record in the annals of the Indian Civil Service or for that matter, in the annal of the Civil Service of any advanced country in the world. With a tested and proven reputation to take on any task and to rise to any and every occasion, Sir Rama Rau received, six years ago, the call to blossom into a Central Banker. One can well imagine that, of the many duties which he had been requested to discharge at home and abroad, this requisition to preside over, and shape the destiny of, India's bank of banks might have occasioned in the seasoned civil servant a twinge of diffidence. If so, it must have been momentary. For, soon enough, Sir Rama Rau as Central Banker was in his full stride.

The economic situation at the time he took charge was such as to cause a hydra-headed drain on foreign exchange. First, the price of jute ruled at giddy levels; and, apart from the constant concern to keep Calcutta's biggest industry functioning without interruption owing to raw material shortage, the Reserve Bank had to find anything like the equivalent of Rs 75 crores in foreign exchange. Second, cotton consumed foreign exchange for another Rs 75 crores. Third, India was acutely dependent upon foreign countries for large quantities of food-grains; and the Reserve Bank had to find foreign exchange for anything like Rs 100 crores to Rs 150 crores per year. These startlingly and disturbingly new developments ate up foreign exchange of the order of Rs 250 crores in each year. Besides grooming himself into a Central Banker, Sir Rama Rau had, thus, to become an expert in jute, cotton and food-grains.

Meantime, the inflationary forces threatened to get out of hand. The corrective measures on the monetary side were his responsibility. He did not flinch from tough techniques. However, he went one better than every other Central Banker who had to tackle a like problem; and he paralleled dear money with adequate money, that is, adequate for legitimate purposes. The three important steps he took in this respect were: (1) speedy adoption of rediscounting facilities against usance bills and execution of the scheme with drive, sympathy and understanding; (2) establishment of a structure of interest rates and a pattern of gilt-edged yields; and (3) provision of facilities to enable banks to get over the awkward situation caused by depreciation in gilt-edged holdings. All this energetic action, while ensuring the effectiveness of monetary policy, provided appro-

priate relief to such effect that a busy season which began most menacingly ran its course in the smoothest style. Sir Rama Rau's regime as Governor of the Reserve Bank will, for ever, be memorable for the practical and forceful implementation of the long-discussed scheme to popularise and then to maximise the utility of usance bills as a money market instrument.

Further responsibilities were, meantime, being fashioned for the central banking institution. The colossal task of periodical inspection of every scheduled bank was imposed upon the Reserve Bank by statute. A whole new department had to be created; and an army of staff had to be recruited and trained. At the same time, the new department and the new personnel had to be guided to deal with the new work fairly and firmly, with thoroughness but without fuss. That the statutory inspection of banks is smoothly functioning and has greatly toned up banking methods and streamlined banking practices, is, indeed, a big feather in Sir Rama Rau's cap.

Other responsibilities were falling on the Reserve Bank in a down-pour. The stupendous rural credit survey had to be initiated and deftly guided. The provision of increased banking facilities for private enterprise had to be undertaken with the utmost expedition. Arising from the results of these surveys, consequential action, many-sided and far-reaching, has to be initiated.

From the point of view of these developments, the Reserve Bank may be regarded as being in mid-stream. That Sir Raghavan's indispensability in New Delhi ensures Sir Rama Rau's continuance at the Reserve Bank must give around satisfaction that no change of horses in mid-stream is now under contemplation.

mark, Western Germany, Netherlands and others "indicated that the idea of purely 'formal' convertibility, with little or no easing of trade restrictions, had been abandoned; relaxations of import controls proceeded hand in hand with moves toward greater convertibility of major currencies."

All the developments of last year, the bank said, "pointed to further progress toward a sustainable economic balance in the free world."

The "gradual but steady" advance toward freer trade, the review concluded, "would undoubtedly be stimulated by an endorsement of more liberal trade policies by the United States Congress as called for by President Eisenhower's special message to Congress of January 10."

Bombay Review

The Tata Touch

It is to be expected that Mr J. R. D. Tata is in his best form when he addresses the Court of the Institute of Science. Tatas have made an unique contribution to the many-sided progress of India; and not the least notable in this respect is the Institute consecrated to research in science and to the training of scientists. If Mr J. N. Tata's vision was responsible for the founding of the Institute in Bangalore and his generosity for its establishment and growth, its development to its present pre-eminence owes much to the loyal and fervent devotion to his idea and his ideal on the part of his successors. In the impressive setting and the inspiring atmosphere of the Institute's campus, Mr Tata feels impelled to pose the question: What can an institute such as this do to gear itself to the enlarged opportunities for service which will arise in the years to come? As Mr Tata sees it, it will not be enough for the Institute to impart advanced training to a few hundred scientists and technicians whose services can then be put to good use in the industry and scientific establishments nor will it be enough for the Institute to lend a hand to industry in the solution of a few problems. The head of the Tata House laid emphasis, in the first place, on the calibre of the students trained in the Institute, and said:

"From this Institute must go forth men not merely competent in their respective branches of science and technology, but imbued with knowledge and understanding of the broad human problems that will face them and their compatriots and equipped with a mental outlook which keeps with the fast changing world. A constant revision of the content of the knowledge that is being imparted and continual exploration of the practical uses to which that knowledge is put are called for. Above all, the conviction must never be lost that knowledge is not enough, that it has to be informed by values and standards and that on these alone can be based a world of order and beauty."

What should the Institute do in the next ten or twenty years in the new environment in which it will function and what are the specific directions in which it should develop? These questions are urgent. With the establishment and functioning of the National Physical Laboratory and the National Chemical Laboratory, there should be no need to undertake further expansion in the Institute's Physics and Chemistry Departments; and it should be useful to devote future development plans to the Department of Power Engineering and that of Internal Combustion, which seem to have special potentialities for accelerated progress. An abundance of cheap power is undoubtedly the key to man's material well-being. Developments in the application of atomic energy to peaceful purposes and the possibility, in the years to come, of harnessing solar energy, are bringing them to the threshold of an era in which unlimited power will be available for the needs of man. Similarly, although in a more restricted field, the industrial gas turbine offers promise of valuable service to the community. For these new tasks and enlarged opportunities, the Institute of Science should, urged Mr Tata, make plans and prepare schemes from now.

Labour & Justice:

The rather controversial topic of the procedure for settling labour disputes in industries would take a new turn if certain reported decisions of the Government of India come into force. It is learnt that the Labour Appellate Tribunal of India with its four benches at Bombay, Calcutta, Lucknow and Madras is to be abolished, by suitably amending the Industrial Disputes Act of 1947. Vital changes in the existing procedure are also envisaged. Broadly, these involve a 'National Tribunal' to settle all major disputes of an inter-State nature and such of those within a State which might have all-India repercussions; it will decide disputes referred to it by the Central Government; a State Tribunal to

decide issues referred to it by the State Government and also a Labour Tribunal to dispose of the minor disputes under the State Industrial Acts. A notable feature of these three bodies is that their decisions will be final in their respective jurisdictions. The present official conciliation machinery is, however, to be kept in tact. But the State Government will continue to have the discretion to refer any disputes either to the State Tribunal or the Labour Tribunal. Also, the Act will be suitably amended to enable conciliation officers to inquire fully into the disputes and report to the Government. Though the reaction of the Trade Unions to these amendments is not known as yet, it is certainly a step to extend the administration of effective and speedier justice to the sphere of labour disputes. The present pyramidal structure, it may be noted, gives way to three practically independent bodies with well-defined juridical powers. Distinction is made on the basis of the territorial origin of the dispute as well as on its character and its possible repercussions. It will no doubt, be a step forward and is to be welcomed.

Development of Heavy Industries:

Is the labour-intensive method or the capital-intensive method most suitable for the economic development of India? The answer, of course, depends on a variety of factors. For one thing, no method could be considered most useful without reckoning the possible short and long-term effects on employment. Any measure designed to put into full effect the unutilised labour resources, with a simultaneous increase in national income via increased production, should be most welcome. Prof Mahalanobis' suggestion, given at the Gokhale Institute of Economics in Poona last week, seems to be a half-way house which seeks to meet the criticisms that may be raised from both the Right and the Left. He prefers to put more emphasis on the development of heavy industries, though he is aware of the fact that employment is not likely to increase greatly in the short run. Considering the state of what we may call the semi-development of the Indian economy and also the economic potential of the country, his suggestion for capital investments in, and the expansion of, the basic industries is certainly to be hailed. On a rough basis of ten to twenty thousand rupees of investment per engaged person, a huge (and necessary) investment of Rs 100 crores, he says, would provide, only 50,000 to 1,00,000 new jobs. Although immediate employment opportunities are not greatly increased, this process sets in motion a chain sequence which is likely to absorb all the unemployed in due course. In the

first place, the injection of money into the economy through capital investment leads to more of effective demand for consumer goods. With due encouragement to consumer goods industries, it would be possible to step up both consumption and investment—a feature which leads to the stage of full employment. Thus, it is clear that Prof. Mahalanobis stresses the need for increasing consumption simultaneously with investment to ward off the acute unemployment problem. There is another school of thought which stresses the necessity of bringing about forced saving through reduced consumption for financing development projects. Curbing consumption expenditure, it may be argued, is not the right thing to do at the moment, since it would defeat the very purpose for which it is intended. In the present context of mounting unemployment and underemployment, Prof. Mahalanobis' solution will, doubtless, receive careful consideration.

A Timely Advice:

To anyone who has been watching the rather long-drawn-out political counter point game of public sector versus private sector, Mr Shantilal Shah's wise words spoken to the Deccan Manufacturers' Association is a break in the monotony. One was in the danger of believing that industry was a matter entirely between the Government and the leading private owners. There are other aspects, perhaps as important as governmental policy. One is the relationship between the industrialist and the labour and the other between the industrialist and the community. Both these links have to be cemented anew if the effect of industrial development in national economy is to be as wholesome as is expected. Minister Shah told the Deccan Industrialists to consider themselves trustees of the means of production and regard labour as their partner. It is clear that this is the only way for the private entrepreneur to steer clear of the scathing charge of acquisitive instinct and profit motive. Labour must feel, not merely told, that their interests are safeguarded. "Industrialists must take care to see that profits were not accrued at the cost of others"—a timely exhortation in clear terms to move with the times. The Association President Mr Kirloskar lost no opportunity to point out that the attitude of society towards industrialists must also undergo a change. The tendency to make the manufacturer the scape-goat for every adverse economic condition will have to change. The State can create a suitable economic climate for the proper functioning of industries; but one should not exaggerate its importance in creating a new socio-economic order.

World of Cotton

Sharp Decline Once Again

THE cotton market is once again in a demoralised state. Prices which had improved in the wake of relief in excise duty on cloth have once again relapsed. The market lacks incentives in view of mills still continuing to buy from hand to mouth. Hopes have been entertained of late following the announcement of the Food and Agriculture Minister, Mr Ajit Prasad Jain, that the Government would come out with an export quota of 75,000 lakhs of staple varieties out of this season's crop. It was generally believed that Mr T. T. Krishnamachari, Minister for Commerce and Industry, who came here would like an opportunity of acquainting himself with the latest development in cotton trade and do the needful to arrest the declining trend of prices. However, hopes have not been given up about export quotas but trade circles are doubtful as to whether this will help materially cotton prices to look up in view of the comfortable supply position. Though offtake in cloth has expanded, mills are rather reluctant to carry out purchases knowing it well that they are in a position to dictate the market in view of their bargaining position.

As indicated some weeks ago, the Board of the East India Cotton Association, by amending the Bye-law 55, has tried to reduce the disparity between the spot prices of cotton and the prices of the contract in the case of August 1955 contract and thereafter. This has been done at the instance of the Forward Markets Commission which took a serious view of the position hitherto and the litigation which took place last year. The new Bye-law 55 provides that the tendering differences for the different varieties and staple lengths of cotton tenderable against the Indian cotton contract will be fixed on the basis of the prices at which the basic and other descriptions of cotton tenderable are sold in the Bombay spot market, taking also into account the spot prices of the respective descriptions of cotton in the interior. The new Bye-law will apply to trading in the I.C.C. August 1955 delivery and thereafter. Trading in I.C.C. May 1955 delivery, however, continues to be governed by the previous Bye-law 55. The rate for this nearby May 55 contract dropped to Rs 548-8 on Tuesday. Business in I.C.C. August started on 29th March at Rs 571 to react to Rs 567.

Cotton Statistics:

Indian as well as foreign cotton receipts in Bombay from 1st September 1954 to 24th March 1955 have aggregated 251,585 bales as against 222,547 bales for the corresponding period of last year. Stocks of Indian as well as foreign cotton held by exporters, trade and mills in Bombay as on 24th March were estimated at 478,099 bales as against 514,580 bales same time previous year. Imports of foreign cotton from 1st September 1954 to 24th March 1955 have aggregated 251,585 bales as against 222,547 bales for the corresponding period of last year. Export of Indian cotton have recently slackened. Total exports to this season have amounted to 111,938 bales as against 93,477 bales last year.

Foreign Cotton:

The New York cotton market was quiet, May position formally standing at 33.64 cents. The market is still facing an uncertain situation in view of lurking doubts about export subsidy. Though the

U.S. Agricultural Department is not anxious for supporting the subsidy move, Congressional leaders are pressing for speedier disposal of U.S. surpluses. The Agricultural Committee of the House of Representatives approved an amendment to public loan 480, whereby selling some of its huge surpluses for foreign currencies is permitted. The amendment has already been approved by the Senate and its passage by the House is expected.

According to the final ginning report of the season 1954-55 season,

the U.S. cotton crop in running bales was placed at 13,594,000 bales which is equal to 13,672,000 bales of 500 lbs. each. The final crop is therefore 103,000 bales more than the official December estimate of 13,569,000 bales.

On the Karachi cotton market, a quiet tendency prevailed as export demand has been rather slack. Sind Deshi was quoting Rs 65-8, Punjab Deshi Rs 58-8, 4F Roller Rs 63-12, 289F N.T. Roller Rs 68-12, 289F Punjab Roller Rs 71, while the forward rate of N.T. RG quoted at Rs 68-8.

GATEWAY MARKETS

Gold & Silver

THE affairs of the Bombay Bullion Association have come in for severe strictures at the hands of one and all interested in the Bullion trade. As the Board of Directors of the Association failed to guard the interests of the general body of traders, trading remained suspended as a protest against the Board's policy in recent weeks. Matters were somewhat straightened out with the Government intervention, but even then the bulls were in no mood to give up the grip. The application of margin to Chaitra delivery under bye-law 33A has been challenged and an injunction was applied against the Board from enforcing the same bye-law. Thus the bull operators had not to pay margin on their outstandings on 26th March. The hearing of the case with regard to the interim injunction will take place on 7th April. In the meanwhile, the Chaitra delivery will expire. The Government following the strong plea made by the trade has brought into effect the application of 33D whereby graded margins will be levied on consideration of quantum of backwardation charges; but at the same time it has been made clear that the margin money will be taken into consideration for taking delivery in the maturing settlement. Trade circles are inclined to await further developments but certain sections are inclined to believe that the application of 33D in Chaitra delivery may be challenged as it has been brought into effect immediately.

Rampant speculation has been the main evil confronting the bullion market in the face of limited stocks. As such the professional operators are not slow in exploiting the situation. Both bears as well as bulls are responsible for creating an unhealthy situation. Imports of both silver and gold continue to be prohibited. Apart from Kolar supplies, the

gold market is to a certain extent fed by smuggling activity, while in silver the supplies emanated mainly

For Stock Exchanges
See page 693

as a result of economic distress in several parts of the country. The floating supplies of silver throughout the country are estimated at 4,300 bars while, with the season still ahead, they will be reduced to about 3,200 bars at the end of the season as against 2,200 bars last year. As against this, speculative business in the Bombay market is estimated at 14,000 bars, while for the whole of India, the business is estimated around 30,000 bars. The floating stocks of the white metal are commanded mostly by bull operators and as such they have been encouraged to manipulate the market in their favour by boosting up prices as well as exacting high backwardation charges. The recently-elected Bullion Board has been accused of showing a preferential attitude towards bulls and it has failed to take a bold stand in the broad interests of the trade. Present high prices will be maintained so long as the bulls are able to squeeze the bears; but once the grip is lost, there will be a sudden and sharp fall in values. Business in Baisakh and Jeth deliveries was started on Tuesday.

Silver prices for Chaitra delivery rose to a new high level of Rs 168 for the first time after last May to react to Rs 165-14 to be placed at Rs 166. Spot silver was quoting at a premium of annas 14. Silver Baisakh was quoted at a discount of Rs 2-4 and Jeth Rs 4-8 from Chaitra delivery.

Forward gold fluctuated between Rs 92 to Rs 92-14 to be placed at Rs 92-8. Baisakh was placed at a discount of annas 13. The premium for spot Mysore gold over Chaitra was Re 1. Sovereign prices hovered around Rs 59-8.

Olympus

Blue Print for Second Plan

AS the Tata Plan was the first in the field in the period preceding the inauguration of the First Five-Year Plan, the credit for initiative in the context of the Second Plan goes to the Federation of Indian Chambers of Commerce. In the case of the Tata Plan, the brain-trust comprised, besides Mr J. R. D. Tata, distinguished leaders like Dr John Matthai, Mr G. D. Birla and Mr A. D. Shroff. The present enterprise of the Federation of Chambers is at a humbler level; it is the courageous venture of the Federation's secretariat. The authors modestly claim no more for it than as a basis of discussion—a foundation on which the Committee may build. The Federation Secretariat deserve to be congratulated on a significant effort which should prove of value to a wider circle than the members on their Committee. Apart from the conclusions and suggestions, this blueprint of the Second Plan gets together all the relevant data and figures which should form the basis of the Second Plan in its final shape.

The draft Note prepared by the Federation provides a good basis for discussion and would help to crystallize views on the scope and content of the Second Plan. It uses the First Five-Year Plan as the springboard without projecting any of its distinguishing features on to the future. In fact, the points of emphasis and the order of priority are drastically changed, cogent reasons being given for so doing. It is more a formulation of policy rather than a criticism of methods of operation or organisation.

However, an evaluation of the First Plan provides the background for the Second. In the First Plan, top priority was given, perhaps unavoidably, to agriculture, including irrigation and power; this naturally placed a limit on the investment which could be undertaken in industries, the large-scale industries especially, either directly by the public sector or by way of assistance to the private sector. The investment on schemes for agricultural improvement was about 38.5 per cent of the total planned expenditure of Rs 2290 crores; whereas investment in industry was only 8.4 per cent. Thus, agricultural production has gone even beyond the targets; but, in industry, it meant nothing more than a collation of what the individual units proposed to do. As against the target of Rs 94 crores for industrial projects in the public sector, the performance in the first

three years, the Federation points out, is much behind schedule. On the other hand, industrial investment, including working capital, in the private sector, expected to be of the order of Rs 120 crores annually, was between Rs 105 and 110 crores in the first three years; also, indications are that investment by private enterprise is tending to increase. Thus, the target for expansion, modernisation and replacements in the private sector, in the Plan, estimated by the Planning Commission at Rs 233 crores, would be achieved during the Plan period. The general index of industrial production, with 1946 as base, has risen from 105 in 1950 to 144 for 1954. The per capita income has also tended to rise a little more than envisaged in the Plan; the planned target of Rs 261 for 1955-56 has been achieved by 1952-53. But the Federation notes with concern that the employment situation in the country has not improved and that, in spite of the increase in per capita income, the standard of living has not risen to any appreciable extent, primarily due to lack of purchasing power.

This leads the Federation to define the objectives of the Second Plan: (1) raising the standard of

North Indian Markets appears on page 673

living of the people and (2) creation of productive employment. It is admitted that adequate levels of consumption of food may not be reached in a period of five years. It is observed that "every effort needs to be made to secure considerably increased production of food supplies of all kinds". In the matter of clothing, the present per capita consumption is estimated at about 16 yards; the aim in the next five years should be to provide a minimum of, say, 22 yards of cotton textiles per head per annum. Civic amenities like drainage, electricity, water supply and medical facilities reach only a small fraction of the population. Also, a vastly greater effort is called for, under the next Plan, in the fields of housing, education and health, particular attention being paid to environmental hygiene.

It is realised that a rise in the living standards of the community will be possible only through increase in productive employment. The problem here is two-fold. Firstly, there is the need for avenues of more productive non-agricultural employment for those

that are added to the working force annually. Assuming that 40 per cent constitute the working population, and the annual rate of population increase is about 4½ million, it is calculated that the net addition to the number seeking employment every year will be 1.8 million annually. Secondly, the aim should be to withdraw from agriculture progressively increasing numbers into other occupations, not to its detriment, but to relieve congestion and improve productivity. It would mean the absorption of some two million people every year in large and small-scale industries, transport, commerce, construction etc. These avenues have, therefore, to be developed at a rate faster than at any previous period in our economic history.

These considerations, then, determine the priorities in the Second Plan. Developmental expenditures envisaged in the Plan total Rs 7,475 crores. Manufacturing industry receives the highest priority with an allotment of Rs 2,000 crores. This greater emphasis on manufacturing industry is for two reasons: (1) apart from creating direct employment, it multiplies other avenues of employment in transport, commerce, banking, insurance, professions etc.; (2) modern-large scale industry makes possible higher earnings to those that are employed, both directly and indirectly, than would be possible in occupations which use inferior techniques or little capital. Excluding working capital investment in industry in the first Plan was of the order of Rs 110 crores per annum; against this, the next Plan should aim at a rate of investment of about Rs 400 crores annually; as a sharp increase in investment cannot be expected all of a sudden, the average will have to be achieved by stepping it up much more towards the end of the Plan, which means the rate has to increase from about Rs 200 crores to Rs 600 crores in the course of the five years.

It is pointed out that, when industrialisation has not proceeded far, there are a number of items which cannot be produced in the country on an economic basis, because the demand for them is relatively small. At the same time, the demand continues to be small partly because of the high price of the imported product, the difficulty in obtaining it and because no concerted effort is made towards speedier industrialisation. Thus, an integrated plan of development simultaneously increasing both the demand for and the supply of the various industrial products is called for. There is also a relatively

greater emphasis on heavy industry. Nearly 65 per cent of the total investment on industries is scheduled to be on heavy industries. During the past five years, industrial machinery worth about Rs 40 crores is imported annually. The demand for it in the next plan is estimated to be higher because the rate of development would be higher and because the replacement demand will also tend to grow. With the aim of creating installed capacity over a period of time for manufacture of all kinds of machinery, in the course of the next five years, an investment of about Rs 150 crores will be necessary in the field of machinery manufacturing.

Substantial development will have to take place in metallurgical industries and mechanical and electrical engineering. For instance the production of steel by the end of the Second Five Year Plan should be at least 5 million tons and the installed capacity about 7½ million tons. "Our plan should anticipate demand rather than wait on it." Two more steel plants of annual capacity of one million tons each towards the end of the next Plan are proposed. Also, steps will have to be taken to produce specialised types of steel which, at present, are imported and the demand for which will increase in future.

Other major industries like manufacture of agricultural implements and machinery, railway rolling stock, machine tools, textile machinery, electrical engineering goods, fertilizers and chemicals, paper, cement, cotton textiles and sugar are to be expanded to give substantial additional employment. It is suggested that the railways should receive Rs 1250 crores; the carrying capacity should be increased by adding some 7,500 miles of track, transshipment facilities are to be improved, and marshalling yards extended; the number of wagons to be increased from two lakhs to four lakhs; of locomotives from 8,000 to 13,000; and of coaches from 22,000 to 30,000.

A total outlay of Rs 400 crores is envisaged on roads. The expenditure on road transport is suggested to be Rs 100 crores, on suggested to be Rs 100 crores, on ports and harbours and inland navigation Rs 100 crores, on shipping and civil aviation Rs 90 crores, on communications Rs 135 crores, and on power development Rs 400 crores. Irrigation and agriculture (including cottage and rural small-scale industries) should receive Rs 1,200 crores. In agriculture, the State policy should aim at: (1) growing enough cereals to achieve an availability of 16 ozs. per adult

(Continued on page 693)

North Indian Notes

In Wrong Proportion

The President of the UP Merchants' Chamber deserves credit for his clear and cogent analysis of the state of the Indian economy in 1954, the causes and cures for the continued fall in agricultural prices and, last but not least, his explanation—or, is it exculpation?—of the role of the private sector and its achievements during the first Five-Year Plan. So far as the statement of facts is concerned, one finds little reason for any kind of disagreement; but the twist these facts receive in the distillation of his conclusions does not, however, bear him out in toto. Thus, for instance, it is agreed that "the year 1954 closed with a note of optimism and confidence in future"; that the agricultural sector was most affected by the "downward adjustment" in the trend of prices; and that this down-trend, in consequence, has become "a matter of serious concern". But it becomes hard for anyone to swallow the pink pill he offers in defiance of the stock remedies suggested from time to time for stemming the price-fall. The suggestion of a Corporation, as obtains in the USA, which could undertake open market operation in foodstuffs and aid in the purchase, storage and sale of food grains on State account, is summarily rejected on the plea that "a mechanical adaptation of foreign ideas and institutions in this line may not be conducive to our interests". Instead, his own solution for the present economic malaise seems to be as vague as it is uncertain: thus, much of the present "worry and inconvenience" could be obviated if "Government expenditure and policies of taxation are properly co-ordinated to the factors determining equilibrium and all of them are fitted within the framework of overall economic development".

Secondly, though he argues for a national sector—properly considered, the only sector in economic development—Mr Krishan Narain, at one point, tries to justify, and even to exalt, the achievements of the private sector at the expense of the public sector. The remarkable progress of the private sector, he says, is attested to by the number of tariff enquiries in the last three years. And almost in the same breath, he adds: "When operations in the public sector are viewed in the light of comparative disabilities to which the units in the private sector are subject, the measure of success achieved in the public sector does not stand out in any great prominence". A vindication of the

the private sector, by itself, is praiseworthy; but a vindication at the expense of the other sector is blameworthy.

There is, besides, a note of scepticism in the President's analysis—a scepticism which, in view of the proposed massive industrialisation programme envisaged in the Second Plan, would appear to be unwarranted. "With three million tons of steel output in the next few years", remarks Mr Krishan Narain, "the prospects for the consumption of that steel will appear bleak indeed...." This point of view is out of tune with the recent emphasis on industrial expansion and with the arguments raised in favour of the installation of three, even more than three, steel plants in the country.

Among the other points he has raised, one, however, deserves special mention. He sees clearly the urgency for crying a halt to the promiscuous use of our valuable exchange, particularly for the purchase of agricultural commodities. Out of about Rs 540 crores worth of imports from abroad annually, more than Rs 120 crores worth of imports is in the agricultural domain. In the context of a growing abundance of agricultural products inside the country, the import of agricultural produce is undesirable. If such imports could be reduced, both the glut of foodgrains and the huge loss of exchange could be avoided. Owing to increased production of foodgrains as well as of cotton in India, there is every likelihood of a considerable reduction in the exchange drain on this account.

★

Agreeable to Purse and Palate:

For those whose train journeys are confined to the Northern regions, a four-anna food packet may sound too good to be true. When it is stressed that the food so served must be good in quality and adequate in quantity, incredulity is bound to hit a new high. Yet, for a number of years, the travellers in the Southern Railway (South Indian Railway, as it was called then) have got accustomed to a two-anna food packet. Sambar cum rice with a service of fried vegetable costs two annas; and the same price applies to curd and rice with a piece of pickle. One may well ask: How do they of the South do it? These packets are sold on the platform in every important station on the Southern Railway; and the passenger does not have to betake himself to the Indian Dining Room, gobble a hurried meal and, on return, find his seat filled by someone else. Seated where

he is, he buys two annas worth or four annas worth according as he is a medium or big eater, has his sumptuous feed and throws away the plantain leaf and the wrapping paper. It is all so simple as that, and so cheap, and so satisfying. To return to the poser how the caterer can at all do it, our answer is that, among the few lakhpaths of the Peninsula, railway catering contractors used to figure prominently. There was keen competition for the concession of running a railway restaurant; for it was both good business and profitable business. Even to this day, the man with fastidious tastes can have a full course meal served in his compartment for eight annas. Apart from the variety of dishes, there is service, too. The food, in a clean and bright stainless steel container, is supplied by a clean and bright-looking server who lets you go about the business unhurriedly, provides you with clean water to wash the food down, and attends on you up to the next halt of the train. This is Service with a capital S, this is Cheapness with a Capital C.

If all this can be done in the South, why has no experiment on these lines been so far attempted in the Northern Railways? Why are passengers being obliged to pay between Rs 1-8 and Rs 2-4 according as the description is ordinary or special? Why have the travellers in these parts allowed themselves to be fleeced and tolerated food which is of indifferent quality and which is served cold? Why have the authorities, some of whom should, surely, have travelled on the Southern system and partaken of the economical and wholesome food, never experienced the urge to initiate the good example from the South? The writer of this Note took up the question, some years ago, with the head of a railway administration in the North; and he was invited to a conference in which the most prominent part was taken by one of the catering contractors who had also been specially invited. The conclusion was that the caterer was doing his best—no change was called for. So, to the question as to why the four anna packet had not invaded the North, the answer is: the vested interest of the catering contractors and the line-of-least-resistance on the part of Authority. The Alagesan Committee is to be congratulated on its peremptory recommendation to introduce the handy and reasonably-priced food packet in all the railway systems in the country. It will be a great boon to the third class passenger; and, if the plan is launched with competency and drive, even those who prefer the air-conditioned, first-class and second-class style of travel, will find the new service agreeable alike to the purse and the palate.

Refugee Rehabilitation:

It is all too easy to view the desolate drift of refugees from across the border as the aftermath of a monstrous muddled dichotomy. But that seven years is not time enough to pay the price for freedom—and partition—is disconcerting. The Government, for their part, seem to be torn between the moral duty of rehabilitating people who by no stretch of imagination can be considered as foreigners and the utter helplessness to check the influx, which has amounted to something like a unilateral resignation to fate; this latter aspect reserves immediate consideration at the diplomatic level. But one does not have to go far afield to see the yawning gulf between Governmental blueprints and the relief that reaches the refugees. Over seven millions have come from West Pakistan and half that number have rushed through the eastern corridor. The majority of these had depended on land in some way or other for their livelihood; mostly, they are unskilled workers. At present about one half of the refugees are absorbed in the rural areas. In the Punjab, Pepsu, and Delhi, settlement on land and ancillary occupations, was relatively easier since large areas of agricultural land were left vacant by the Muslims and also much culturable waste land was available. Paucity of land in West Bengal, coupled with the refugees' predilection to stay in that State, has aggravated the position in the Eastern region. Extensive farms run on a cooperative basis should prove more beneficial than the allocation of small plots to individual families. The same farm absorbing several families may prompt the refugees to go to more distant states. In the matter of urban employment much is being done to initiate them in small-scale industries. Also, giant projects like the D.V.C. and the Chittaranjan are encouraged to employ the refugees. But a comprehensive scheme to train them in large numbers in specific vocations is yet to be undertaken. The present choking of the employment avenues at once suggests that the West Bengal Government should be helped to open large institutes to train the refugees as carpenters, masons, upholsterers, lashkars, operators of machines and for a number of other similar jobs. The realistic and lively approach of the new Rehabilitation Minister Mr M. C. Khanna could strike a deviation from some of the defective methods in the past.

★

Price Stabilisation:

The urgency of checking agricultural price-falls is clearly reflected in the gravity with which the Government have set to tackling the problem. A number of measures, new

The Peninsula

Madras Shows the Way

THE Madras Government have shown the way in the practical demonstration of the complementary character of the State's responsibility and private enterprise's responsibility in planned industrial development. Government spokesmen have, at a conference held last week-end, outlined their policy without ambiguity and without reservation. The Government frankly recognise that the State is industrially backward; and that, to make up the lee-way and to achieve progress parallel to the progress elsewhere, private industrialists have to make an important contribution. In inviting this co-operation, assurance in the clearest possible terms has been given that the State Government will render all possible assistance; and that, considering the special circumstances of South India, the centre may be expected to provide aid in an understanding spirit and in a substantial measure. The South Indian industrialists, who participated in the deliberations of the conference, have made constructive suggestions which will be considered in more detail by the Standing Committees that are shortly to be set up. The labours of the conference were marked by a sense of realism, a spirit of urgency, and an alround readiness to be cooperative.

The initiative was taken by Mr M. Bhatavatsalam, Minister for Industries. Finance Minister C. Subramaniam expounded important aspects of Government policy. And there was a representative and influential gathering of industrialists. The purpose of the conference was to explore the possibilities of the State for industrial development and to consider proposals for the Second Five-year Plan. As the basis for discussion, the Government placed before the conference a memorandum, prepared specially with a view to keep the discussion within bounds and to direct it along precise and clear-cut lines. In particular, the industrialists were requested to offer their views and suggestions on the following points:

It is a matter of common knowledge, the Government note said, that the Madras State, except possibly for the textile industry, is industrially backward. There are few major industrial units in the State; nor does the State make any great showing in the sphere of medium and small-scale industries. During the First Plan period, the emphasis has been on increasing

the supplies of foodgrains and raw materials; and the time is appropriate for direction of attention to industries so that there will be a better balance between agricultural development and industrial development. There are a vast number of industries which could be established in the State with reference to the availability of raw materials, technical and labour personnel and internal markets, leave alone foreign markets. Examples, by no means exhaustive of industries in this category, are glass, particularly sheet-glass; paper; paper-board and straw-board; heavy and light machinery including electrical machinery; electrical equipment such as transformers, switch gear and other accessories; a large range of light engineering industries, such as manufacture of typewriters, watches, clocks air-conditioning plants, etc., electrical goods and accessories such as water heaters, cookers, table lamps, regulators, switches, etc., heavy chemicals, drugs, light chemicals and pharmaceuticals, production of scientific instruments, photographic

**South Indian Markets appears on
page 674**

equipment, etc., and a large range of industries in the ceramic field such as sanitary ware, insulators, pipes, fire-bricks, crockery and other china-ware, etc. The co-operation of industrialists is indispensable if the potentialities in these respects are to be transformed into actualities at no distant future and in no inadequate measure. This cooperation is requested by the Government in no half-hearted manner or in any patronising spirit. It is frankly admitted that, in a matter involving the preparation of a comprehensive industrial Plan as part of the Second Five Year Plan, to fit in with social and economic conditions in the State, taking due note of availabilities of supplies of raw material, labour and markets, the Government of the State can achieve little without the active advice and cooperation of persons who have knowledge and experience of industrial and technical matters, and also of those who are concerned with investment and finance.

In opening the proceedings, the Minister for Industries emphasised that a large part of the industrial field was left for development by private enterprise; and "such development in the private sector will be fostered and actively en-

couraged by Government". Small units of the pilot plant type may be set up by the State in order to show the way where it is considered necessary; and this must encourage private enterprise to establish similar but larger industrial units. The State Industrial Finance Corporation is ready to afford financial assistance; and the Government department, including the Department of Industries, is there to give them "other legitimate assistance." For the problem of unemployment, small-scale and cottage industries are likely to furnish the answer. The Minister drew pointed attention to the variety of ways in which the Centre is prepared to provide special facilities for the establishment and operation of small-scale and cottage industries, by way of training of personnel, facilities for setting up units, such as establishment of industrial estates which would arrange for land, workshops, power, drainage, railway sidings, etc. and for marketing, particularly to fill Government requirements of manufactured products.

In the subsequent discussion, there was repeated reference to the possibility of satellite industries. Mr S. Anantaramkrishnan stressed this point at length. In the USA, he said, the automobile industry has brought about almost by itself the industrial prosperity of the State. It covers some 700 subsidiary and ancillary industries, employing nearly 50 per cent of the industrial labour. Similar results can be achieved here, too, but they should proceed cautiously and steadily. We have excellent labour, which is capable of high precision work and is as good as labour in any part of the world. It is also cheap enough. Mr Anantaramkrishnan has also made an interesting suggestion which should greatly stimulate the engineering industry. In the engineering industry, it is wasteful for each unit to have its own forging and casting plant. In other countries, there are common forging and casting plants whose products are used by the industries. If Government should take steps to establish such mechanised foundries and forges, they will help industries very much.

On the role of an industrial township, to which the Minister for Industries had already referred, Mr Easwara Aiyar leant his weight by reference to examples from other countries. In South Wales he saw how much estates were of great help in starting industries. One who wanted to start a new industry need not have to think of investing much on buildings, etc. In such estates, buildings are avail-

able on long-term lease. Such estates are located in places where plenty of labour is available in the neighbourhood and also within easy reach of power resources. Engineering colleges and laboratories of such institutions help the industrialists by doing research for them in quality processes, equipment performance, etc., for which the industrialists otherwise may have to spend much money.

Madras, by its own experience, realises the value of an industrial estate in facilitating and quickening industrial progress. After the construction of the Mettur Dam had been completed, the Madras Government offered the Mettur township on favourable terms to such industrialists as could take full advantage of the ready-made facilities. The Mettur Industries and the Mettur Chemicals owe their origin to the offer then made by the Government. And it may be expected that the plan of an industrial estate will make good headway in South India's industrial development.

The conference saw the special advantage which the State had in an intelligent, efficient and industrious labour. Mr Anantarama Krishnan, in the interest of the smooth functioning of industry, pleaded for a fair deal for labour. While labour is excellent, something should be done to keep labour a minimum standard. And, whatever minimum is fixed as reasonable should be paid by all employers who employ that category of labour, so that none will be at a disadvantage in competing with others. Government should see to it that this minimum is adhered to by all. This will save all the time wasted in arguing and arranging matters between employers and labour. This, he said, would be the largest single factor in helping industrialists to establish and expand industries.

Mr M. A. Chidambaram was somewhat pessimistic on account of the impediments to industrial progress but said that it was for the Government to make clear what they proposed to do in the public sector; private enterprise will, then and only then, be able to decide and plan what it can do for its part. Mr Chidambaram visualised great expansion through Neyveli lignite; and such expansion will embrace both the public and the private sectors.

Doubtless, the issues raised by Mr Chidambaram and other participants in the conference will be considered carefully and constructively by the Standing Committees whose personnel and terms of reference are due to be announced in the next few days.

South Indian Notes

The Pride of Tradition

Buckingham and Carnatic has a unique status among South Indian joint stock enterprises, even as Buckingham products enjoy the unique affection of the large body of their traditional users not only in all parts of India but in several fastidious foreign markets. Buckingham cloth has throughout maintained an uniformly high, and a progressively higher, standard; and, in recent years during which export promotion strategy has paid special attention to cotton textiles, it is no matter of surprise that more than twentyfive per cent of Buckingham's output has been taken up by overseas' customers. This repute for the highest quality and the fairest deal is greatly prized by the management, and is consistently sustained by a constant and continuing solicitude to maintain the plant and machinery in the highest state of efficiency and to align manufacturing processes to the latest technological developments. It is not just profit-making, but pride in the organisation, pride in the property, pride in the products, pride in the great tradition over a long period of years, that distinguishes Buckingham and Carnatic from most other cotton mills in India.

Addressing the shareholders at the annual general meeting held this week, Mr R. E. Castell was proud to report "sufficiently good" results for 1954, following the successful trading in 1953. The improved distribution of dividend has been maintained. Reserve allocations are, as usual, impressive. General Reserve receives Rs 6 lakhs; and Debenture Redemption Fund is strengthened by Rs 5 lakhs. Rs 12 lakhs has, very appropriately, been transferred from Taxation Reserve to the Provision for Increase Replacement Costs of

Bangalore's Good Year:

Mr R. E. Castell, presiding at the annual general meeting of the Bangalore Woollen, Cotton and Silk Mills, was in the happy position of telling a tale that must have greatly cheered the shareholders. 1954 was marked by generally satisfactory trading conditions. The entire installation worked practically to continuous full capacity. A high level of production was thus achieved throughout the year. The Company's cotton products as well as Cotton maintained their popularity with the consumers. In view of these circumstances, it has been possible to pay a total dividend for the year of 30 per cent on ordinary shares. A bonus of 3½ months' basic wages is payable to employees. At the same time, substantial allocations to reserves have been made: Rs 10 lakhs to General Reserve, Rs 1.2 lakhs to Fire and Accident Insurance Fund, and Rs 6 lakhs to Additional Provision for depreciation based on replacement costs. Rs 2½ lakhs has been set aside for the Work-people's Housing Fund; and the housing programme is to be energetically pursued. Rs 81 lakhs of the Reserves are to be capitalised; and, there-against, bonus shares are to be issued. The sanction of the Government is being awaited. Like every other industrialist, Mr Castell is bothered by onerous taxation and, particularly, by the complexity and unending clerical work connected with the confusing state of inter-state Sales Taxes. Doubtless, there is much to cause headaches to the public at home and abroad appreciate fully and in practical terms the Binnys hallmark of quality and fair-dealing, there will always be much to cheer the heart of shareholders.

Development of the Small Unit:

Anxiety about growing unemployment seems to be the one and only reason to many people for advocating small-scale and cottage industries. People are inclined to believe that small-scale industries have use only during the transitional period from a rural economy to large-scale industrialisation and that all will be well when a network of huge factories comes into being. Another point of view is that in the immediate future industrialisation will have to be in the nature of establishing heavy industries and increasing the installed capacity of machinery manufacture, so that small-scale industries will have a greater share in the production of consumer goods. One is told that for some time therefore one may even have to put up with a lower quality in the interests of

long-term development. Listening to Mr K. V. Karantha, Chief Electrical Inspector to the Madras Government, one realises the danger of negative attitude to the small units in the village or the town. Addressing the Institute of Engineers on 'Engineer and India's Industrial Development', he pointed out that the spirit of modern industry, namely the thirst for perpetual improvement and inventiveness could permeate and vitalise the small-scale industries as exemplified in the case of Switzerland and Japan. Cottage industries in India carry little appeal because they are undeveloped in technique. Like Japan, India could imitate Western methods with necessary modifications to suit her resources, tradition and genius. It may not be a sound proposition that India should commit herself to small-scale industrial development in every sphere. There is greater scope for such development in the South because South India can ill afford to start big industries as in the North. Mr Karantha has some specific suggestions to offer; there should be a limitation regarding size, number of workers and capital employed; no one should own more than one factory of each type; there should be protection of local markets to the small units against huge rival units; young technologists should be sent abroad in greater numbers for studying particular industry; and also private agencies should start research laboratories to help technically trained owners work out their own problems. One may as well add that engineers should participate more readily to develop small-scale industries into something more a stop-gap in the country's progress.

Priority for the Homeless:

Madras City, according to Mr A. B. Shetty has more than 20,000 pavement-dwellers. It is understood that the City Corporation has submitted a comprehensive scheme to the State Government for the improvement of slums as well as for the accommodation of pavement dwellers. But Mr Shetty has indicated in the Assembly that neither the State Government nor the Centre are in a position to give financial help to the Corporation, which by itself is unable to tackle the problem. **The City Improvement Trust**, however, has taken up the matter and seems to be hopeful in acquiring vacant lands within the city for building tenements to over 600 families. Most of the pavement dwellers have no regular work and live precariously on a lenten fare. That their colonies should be as near their work-spots as possible has no more than a theoretical appeal. It would be a pity that after making a sizeable financial outlay, the effort should serve only add to the num-

ber of slums within the city. To many of the pavement-dwellers tenements free of rent would help to make both ends meet. To find room for the housing colonies within the city or in its suburbs is not impossible. To find finance to make them a reality, governmental reticence should not thwart the corporation's efforts.

*

NORTH INDIAN NOTES

(Continued from page 667)

and exotic, have been suggested. In the Lok Sabha, the Food Minister announced his decision to send abroad a trade mission consisting of leading traders to study foreign markets and re-establish the contacts broken during the period of control in India. Secondly, he has also proposed to appoint a committee which would carefully study the "wide fluctuations" in the prices of foodgrains and other agricultural products in different markets and to suggest remedies. The Government are, besides, contemplating the construction of a chain of warehouses where it would be open to cultivators to deposit their foodgrains and obtain credit instead of selling stocks in the open market soon after harvest. Since the lifting of the ban on inter-regional movement of wheat cannot by itself effect much, the Government have declared their intention of developing means of transport in regions where they do not exist and also to develop marketing in areas where it does not prevail.

These are, no doubt, long-term measures; and the present situation demands immediate redress of the difficulties of the agriculturists. According to the wholesale price index of cereals, the aggregate fall has been 21 per cent. The price of rice fell by 18 per cent last year and wheat by 13 per cent. The chronic effect of the fall in agricultural prices has become still more acute in the absence of any drop in the price of manufactured goods. Agriculture being the mainstay of the population in India, the measures adopted by the USA for price stabilisation are not wholly applicable. As Mr Jain pointed out, "any scheme of price stabilisation as in the USA will have to be substantially financed by the agricultural sector and that will be no remedy". The major responsibility has, therefore, to be shouldered by the Government. It should indeed be a heartening feature that the proposed deficit financing to the extent of Rs 350 crores in the next financial year and the developmental expenditure of Rs 1,000 crores per year in the Second Five-Year Plan would put more purchasing power in the hands of the people which will certainly go a long way in solving some, if not all, of the evils in the agricultural sector.

THE HIND BANK LIMITED.

DIRECTORS' REPORT

To
The Shareholders of
THE HIND BANK LIMITED.

Gentlemen,
The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1954.

	Rs.	A. P.
The Profit and Loss Account after deduction of all working expenses shows a profit of	6,55,597	0 10
to which must be added the amount brought forward from previous account	1,01,223	5 10
Total Rs.	7,56,820	6 8

which the Directors have disposed of as follows:—

Amount transferred to Reserve Fund	1,50,000	0 0
Provision made for taxation	2,80,000	0 0
Bonus to staff	39,000	0 0
Amount transferred to Gratuity Fund	25,000	0 0
Balance	2,62,820	6 8
Total Rs.	7,56,820	6 8

Out of the balance of Rs. 2,62,820-6-8 the Directors recommend to the shareholders payment of Dividend at Rs. 1-8 per share free of Income-tax which absorbs Rs. 1,50,000-0-0 leaving Rs. 1,12,820-6-8 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved are satisfactory. The investment policy of the Bank during the year 1954 continued to be the same. About 54 per cent of Time and Demand Liabilities are held in Cash and Investments. Of the Investments, about 94 per cent are held in Government of India and State Government bonds, of which about 92 per cent mature within the next 7 years. The Banks Investments in the Balance Sheet stand at below market value as at the end of December, 1954.

The Directors have to report with regret the resignation of their colleagues Mr. Ohimani B. Parikh, Mr. Jai H. Mehta and Mr. J. R. Jacob and they desire to place on record their sincere appreciation of the valuable services rendered by them to the Bank.

During the year under review Mr. B. V. Jacob of Messrs. B. N. Elias & Co., Ltd., at the request of your Board, joined the Board of Directors. You are requested to confirm his appointment on the Board as a Director.

Under the provisions of the Articles of Association of the Company Mr. K. P. Goenka and Mr. B. Kumar Birla retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Goutgia & Co. and Messrs. Dalal & Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the numerous constituents for their support in the growth of the institution and also to the members of the Local Advisory Boards at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and branches.

For and on behalf of the Board of Directors.

Dated, Calcutta, the 10th March, 1955.

K. P. GOENKA,
Chairman.

Balance Sheet as at 31st December, 1954.

CAPITAL AND LIABILITIES	Rs.	A. P.	Rs.	A. P.	PROPERTY AND ASSETS	Rs.	A. P.	Rs.	A. P.

NORTH INDIAN MARKETS

Appreciable Fall in Wheat & Rice

Nasik, Thana and the adjoining areas; and the inflow is likely to increase in the next few days. With the result, prices of Khandwa and Pissli qualities have declined by Rs 15 to Rs 20 per candy, the former being quoted around Rs 140 to Rs 160 and the latter at Rs 125 to Rs 140. American wheat, released by the Government, has dropped by more than Rs 10 per candy to Rs 130. Rice has recorded a fall of about Rs 5 per candy due to the reduced demand from shippers. The Government's silence about rice exports has perturbed the trade since the present export policy expires at the end of this month. Traders have already represented to the Government for the extension of this facility up to the end of September. Business in coarse grains, such as Jowar and Bajra, has continued to be dull. Arrivals of both the grains have improved to some extent, while the consumer demand has been limited to their immediate requirements. The demand for Pulses has slackened once again with prices recording a fall of about Rs 5 per candy. Except for a small rise in Gram prices in the early part of the week following the Government announcement to allow free exports, the market for this grain remains generally dull.

The fall in Gram prices has, however, been checked due to the Government announcement to allow free licensing of exports of this commodity from all Ports up to the end of June. The commodity is now quoted around Rs 6-4 per maund for Deshi quality and Rs 6-14 per maund for the Punjab quality. The new crop is expected by this week-end.

On the whole, India has now 16 lakh tons of foodgrains in her national reserve to meet any emergency. Out of this total, 8 lakh tons were Burma rice, purchased earlier in 1954, while heavy quantities are still expected from this country. India has received 39,712 tons of foodgrains from abroad during the week ended March 16, 1955; and the total arrivals since January 1, 1955 are:—Wheat 1,51,800 tons and Rice 1,75,700 tons.

Madras Review

A Record Export Trade in Plantation Crops

THE year just passed has witnessed a record export trade in plantation commodities through the Cochin Port. Exports of Tea, Coffee, Cashew, Pepper and Lemongrass Oil were higher as compared with 1953. Rubber shipments created a new record; and roughly about 21,800 tons of raw rubber went through the Port and it realised about Rs 6.35 crores—the highest recorded in quantity and value. Tea earned, with roughly 60 million pounds less than 1953, Rs 38 crores more or Rs 121 crores for 439 million pounds. The highest earning from the export of Coffee on record was made with shipment of 10,124 tons, realising a value of Rs 7½ crores. Cashew exports, during the last three years, were in the order of 27,900 tons in 1954, 23,880 tons in 1953 and 21,334 tons in 1952; but there was a sharp reduction in earnings, which dropped from Rs 13.72 crores in 1953 to Rs 10.22 crores in 1954. Pepper exports jumped up to 270,767 cwt. from 218,453 cwt. in 1953 and 241,786 cwt. in 1952. Despite this increase in volume, the earning on that account was lower at Rs 9.12 crores due to the sharp fall in prices. The export of Cardamom was the largest in the four years with 974 tons and it fetched Rs 1.76 crores. The export of Ginger has been steady in quantity; but, last year, there was a pick-up in value yielding nearly Rs 51 lakhs for the export of 49,300 cwt. A record volume of 799 tons of Lemongrass Oil was exported from Cochin and the value realised was the highest since 1950. Thus, the total earnings from plantation crops, during the year January to December 1954 were a record, exceeding Rs 166 crores as compared with only Rs 126 crores in 1953. The previous highest earning was in 1951, at Rs 149 crores.

The Madras markets for Groundnut kernels exhibited a steadier tendency following the recent announcement of the fresh release of export quota for groundnut oil. On a rough estimate, total exports during the period April-June are likely to be 30 to 40 thousand tons. Sizeable quantities are reported to have been taken up by dealers and shippers for April delivery. Arrivals were about 30 tons a day; and smaller crushers were absorbing some quantities of superior oil quality seeds. The rate was quoted around Rs 96 per candy. In the South Arcot market, arrivals of kernels were poor during the past week. Sowing of summer groundnuts is in progress.

In the North Arcot markets, the demand for kernels was poor, while farmers and village merchants were reluctant to dispose of their stocks. The rates moved between Rs 87 and Rs 90 per candy in Vellore and between Rs 85 and Rs 97 in Tiruvannamalai. In the Davangere markets, demand was slack with prices ranging between Rs 19-8 and Rs 19-12 per cwt. for loose quality.

In the Groundnut Oil section, the rate for the ready position was firm around Rs 199 per candy, while April delivery was quoted at Rs 200. UK-Continental indications were £90 to £91 per ton; but advices from these sources indicate that an increase in price levels is likely. The Burmese Government have once again placed groundnut oil under OGL and buying enquiry from this country is expected shortly. Although the Government of India have announced further quotas of groundnut oil for export, prices in the Davangere markets did not improve, quoting at Rs 8-8 per maund.

In the Madras Tanned Hides market, arrivals of Cow hides were as usual and prices ruled firm as there was no selling pressure. There were some enquiries from the UK for premium marks at unchanged prices and also for lower grades in ordinary marks at an advance of ¼d. to 1d. Inferior fifths continued to be scarce, with the result prices for these ruled firm. There was no change in the prices of Cow Calf and Buff Calf. The demand for Cow Calf of premium marks of 1½/2 lbs. continued to be in evidence and a small amount of business was reported done. As arrivals of Buff hides were small, prices ruled firm.

In the Tanned Skins section, prices for market quality Goat skins remained unchanged with Sheep skins about one anna per pound cheaper. The London Tanned Sheepskins auction continued on March 21 when prices were unchanged to 6d. cheaper. On the next day, prices were 3d. to 9d. cheaper for all types and closed the following day without any further change. After the auction was over, there were some enquiries for goat skins of good tannages. Business was reported done in 11/12 lbs. fifths at 9sh. 6d. to 9sh. 9d. and 8/9 lbs. runs at 12sh. 3d. to 12sh. 6d.

Conditions in the Madras Yarn market, during the past week, remained a little steadier. Mills continued to sell at lower prices and demand, in consequence, was limited. 20s, however, showed a steadier tendency, while 40s and 60s ruled weak with demand from upcountry centres almost nil.

South Indian Markets

In the Coimbatore area, some mills have reduced the production of 60s yarn and increased the production of 20s. The Millowners' Association, Coimbatore, has sent a memorandum to the Government and made suggestions to check the fall in prices. There has not been much change in the yarn prices which are quoted as follows:—20s Rs 15 to Rs 16; 26s Rs 17-12 to Rs 18-12; 30s Rs 19-8 to Rs 20-8; 40s Rs 22-8 to Rs 23-8; 60s Rs 38 to Rs 41 and 80s Rs 58 to Rs 61. Due to heavy accumulation of handloom cloth, worth over Rs 50 lakhs, weavers are not generally inclined to enter into new trade agreements with the mills.

Although prices in the Madurai market continued to move downward, a large volume of business was reported to have been done during the past week. Business was done in Harveys 20s, 22s and 24s at a decline of As 2 to As 4 per bundle;—in 30s at a decline of As 6; in 32s at a decline of As 4; in 36s at a decline of As 3 and in 60s at a decline of As 4. There was no change in the price of 60s due to paucity of ready stocks. According to market circles, Coimbatore mills have sold out about 2,000 bales of 20s, 36s and 40s for both ready and April-May deliveries at reduced prices.

ORIENT PAPER MILLS LIMITED.

NOTICE is hereby given that the Thirty-fifth Ordinary General Meeting of the above named Company will be held at 8, Royal Exchange Place, Calcutta on Friday, the 29th April, 1955 at 2-30 P.M. for the purpose of adopting the Directors' Report and the Audited Accounts for the half-year ended 30th September, 1954 and declaring dividends.

The Share Transfer Books will remain closed from the 18th to 29th April, 1955 both days inclusive.

By Order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.
8, Royal Exchange Place,
Calcutta, the 28th March, 1955.

To all the Shareholders of the above named Company and in particular to Mrs. Bechubai Anklesaria, L. D. Buckley, Ct. P. R. Periakaruppan Chettiar, Mrs. Dosi Bai Dinshaw, A. Rudolph D'Abres, Mrs. M. D. Forest, Mr. Ebrahim Khan, Begum Doulat Khanum, Miss Hajya Essop Mia, John Rodricks, Francisco Baptista Ramos, Pran Ballav and D. N. Kalyanvala.

Note:—The dividends, when declared, will be payable on or after the 16th May, 1955.

JUBBULPORE ELECTRIC SUPPLY COMPANY LIMITED.

NOTICE is hereby given that the Fifty-sixth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 14th April, 1955 at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th September, 1954 and the Balance sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 8th April, 1955 to the 14th April, 1955 both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.
CALCUTTA,
The 28th March, 1955.

Calcutta,
11th March, 1955.

The Buckingham & Carnatic Co. Ltd. Successful Trading Despite Numerous Difficulties Administrative Problems Raised by Sales Tax Returns

Review of Conditions in 1954 by the Chairman, Mr. R. E. CASTELL

Presiding at the Thirty-fourth Annual General Meeting of the Shareholders held at the Company's Office, 7, Armenian Street, Madras, on Thursday, 24th March, 1955, Mr. R. E. Castell said:

Gentlemen,
The Report of the Directors and the Accounts for the year ended 31st December, 1954, having been sent to you in due time, I propose with your permission to take them as read but will be glad to answer questions later.

In my speech last year, I had occasion to review a successful trading year following a year of adversity. I am glad now to be able to comment on a year the results of which are sufficiently good to justify the same improved distribution of dividend as for 1953.

These results have been achieved despite a number of difficulties. The general effect of which has been to lower selling prices and profit margins. There is no doubt that for the products of the cotton textile industry as a whole, the purchasing power of consumers has been adversely affected by the heavy incidence of sales tax both State and inter-State, and of excise duties.

In overseas markets, competition from other manufacturing countries has become very keen and has prevented India from attaining her export target of 1,000 million yards of Mill cloth. Nevertheless the export of 698 million yards in 1954 was a substantial improvement on the preceding year. Your own Company succeeded in exporting in 1954 over one-fourth of its total production, but this result required a strenuous effort and price reductions.

During 1954 the export duty on cotton cloth applied to the coarse category only and was at the rate of 10% ad valorem. From 28th February, 1955 the rate has been reduced to 6½% but a revised classification has been introduced for the purpose of applying export duty. By this change, many cloths including some long-established varieties, hitherto classed as medium and therefore free from export duty, will henceforth be liable to a duty of 6½% and will to this extent be less competitive overseas.

are due mainly to the high level of production achieved throughout the year during which the entire installation worked practically to continuous full capacity and to the continuing popularity of the Company's cotton products and the expanding demand for "Cotswol".

For various reasons your Directors consider that the Company will be fortunate indeed if it proves possible to continue earning profits at or near the level attained in 1954. We have to bear in mind the purchasing power of consumers which is strained by taxation both direct and indirect, the latter including Central Government excise duties and cess and State sales taxes. On account of consumer resistance and sustained high production, serious competition developed in the course of the year in the industry

I now come to the Accounts again and if you will turn to the Capital and Liabilities side of our Balance Sheet you will observe that from our profits for the year we have transferred Rs. 6 lacs to the General Reserve and Rs. 5 lacs to the Debenture Redemption Fund. As mentioned in the Report, the Directors have considered it prudent to increase the amount set aside to the Redemption Fund in order to equalise the appropriations over the remaining period to the final date of maturity in 1972.

You will also note that an amount of Rs. 12 lacs has been transferred from the Taxation Reserve to the Provision for Increased Replacement Costs of Buildings and Machinery and, as this represents the relief from taxation on our profits of 1952 and 1953 through the operation of the allowances for initial and extra normal depreciation, it is but logical to utilise it for the purpose for which it was intended by the Government of India, that is, to finance expansion or reconstruction programmes.

In this connection I am sure that shareholders will join with me in welcoming the additional relief which has been provided in the Finance Bill 1955. The proposed development rebate of 25% of the cost of new machinery will mean a considerable reduction in the amount of tax payable which we shall, of course, utilise in full in the financing of our capital programme.

Debentures to the face value of Rs. 4 lacs were redeemed and cancelled during the year and in accordance with our policy, a similar amount has been transferred from the Debenture Redemption Fund to the Provision for Increased Replacement Costs of Buildings and Machinery.

The overdraft with our Bankers is higher than last year by approximately Rs. 62,67,000 and this is chiefly accounted for by an increase of Rs. 4½ lacs under Stock in Trade mainly on raw materials as we began our buying for the 1954-55 cotton year earlier than in the previous season.

One of the most difficult of our administrative problems during the year has been to satisfy the demands for

retrospective and current sales tax returns from 20 different States. Considerable additional staff has had to be engaged solely for this purpose and the various States' Authorities do not appear to appreciate the difficulties with which manufacturers and traders are burdened arising from the preparation of the tremendous mass of detail required for current returns, and the enormous amount of work which has been caused by the retrospective effect of inter-State sales tax.

It may interest shareholders to know that, in our capacity as collecting agents for the Government of India and the various States, we have had to add to our selling price Rs. 23 lacs for Excise Duty and Handloom Cess, Rs. 10½ lacs for Export Duty and just over Rs. 9 lacs for Sales Tax on behalf of the States in which we sell our products. In addition there is the Sales Tax on our purchases of raw materials, stores and other essentials which adds appreciably to the cost of production.

Let me should understate the incidence of sales tax. I would point out that the amount shown against this item in the Profit and Loss Account represents only the sales tax on our purchases of raw materials.

Whilst these difficulties have been appreciated by the Taxation Enquiry Commission it seems to me, after having studied their recommendations, that it will be some time before any simplification of inter-State sales tax can be expected.

I now refer to the new excise duties proposed by the Finance Bill 1955. There is a change in the assessment of duty from a linear to a square yardage basis, but the handloom cess of 3 ples continues to be per linear yard. Your Company makes cloths mostly in the narrower widths and it so happens that the new duties will benefit consumers of our fine cloths.

As a result of representations from various quarters and of further consideration by Government, the original proposals have been modified in certain respects and in the case of our own Company, consumers will not suffer as

the result of the duties now applicable to Coarse and Medium varieties.

For the industry as a whole, the new structure of excise duties will create some anomalies such as a substantial increase in the duty on wide cloths, and duties which are excessive in proportion to the value of certain cheaper varieties of cloth. So much for Central Excise, but the States Governments show no inclination to moderate their demands for sales tax, special or additional sales tax or inter-State sales tax. On the other hand, the tendency seems to be to increase the scope and scale of their income by these means.

As, under the regulations affecting the cotton textile industry, your Company cannot expand its manufacturing installation: as wages and the cost of benefits to labour continue to increase, and as the purchasing power of the public is restricted by heavy taxation, both direct and indirect, the Management will continue to endeavour to maintain satisfactory trading results by every possible improvement in efficiency throughout the range of its manufacturing processes.

Your Directors' Report mentioned the progress made with the new Weaving Shed which now contains 1,100 looms, all in full production and ultimately, nearly 1,700 looms will operate in this building. The Company's new Power Station recently began partial operation and is expected to be fully commissioned by June this year.

The Mill Labour Advisory Organisation has continued to deal satisfactorily with the settlement of internal industrial affairs and I am glad to report that the year has passed with no loss of production arising from stoppages of work or our labour.

As you were informed last year, the Workpeople's and Employees' Provident Funds accounts, having been transferred to the Trustees, no longer appear in the published accounts of the Company, but it may interest you to know that the liabilities of these Funds as at 31st December, 1954, amounted to Rs. 115,48,504 and Rs. 13,30,086 respectively. Corresponding amounts have been invested in Trustee Securities.

Central Bank of India Limited

Substantial Improvement in Banks' Operations

Plan Targets Achieved in Several Industries

Answer to Unemployment: Expansion of Production & Distribution

Comment by Sir Homi Mody, the Chairman, on Some Vital Measures

Speech delivered by Sir Homi Mody, Chairman, The Central Bank of India, Ltd., at the Forty-fourth Ordinary General Meeting of the Bank on 25th March, 1955.

"The operations of banks in India", observed Sir Homi Mody, Chairman of the Central Bank of India Limited, in the course of his speech at the Annual General Meeting of the Bank on March 25, 1955, "recorded a substantial improvement in volume during the year 1954. Total deposits of scheduled banks averaged Rs. 887 crores in 1954, as compared with 853 crores during the preceding year, but they were still below the peak of 990 crores attained in 1948. Demand deposits showed an improvement of 16 crores as compared with the previous year, while Time deposits maintained the continuous rise witnessed since 1948. The average amount of bills and advances of scheduled banks during the year was 532 crores, as compared with 508 crores in 1953".

Sir Homi pointed out that the economic position in India, following the general pattern in the U.S. and Britain, had shown a further improvement during the year under review. "The food deficit", said Sir Homi, "which necessitated at one time considerable imports involving heavy commitments of foreign exchange, was practically wiped out and controls were lifted. Side by side with this, a substantial recession in food prices took place, and that has posed a somewhat difficult problem, but if the deficit financing envisaged in the Budget materialises, it is bound to arrest the decline in prices, and may even lead to inflationary pressures".

Referring to the substantial improvement in industrial production, Sir Homi observed that in several industries the targets fixed under the Five Year Plan had been achieved or exceeded. A number of new enterprises had been started and both in the public and private sector, substantial improvements were recorded. Inland and foreign trade were also at a higher level than in the previous year.

Commenting on the employment situation which had continued to cause anxiety, Sir Homi said that the malady was deep-seated and short-term remedies were not likely to provide anything more than a palliative. He felt that only by large scale expansion of

production and distribution would it be found possible to reduce it to manageable proportions.

Sir Homi then commented on some of the measures vitally affecting the future of industrial development in this country initiated during the year. He first referred to the Company Law Amendment Bill. The changes proposed in the Select Committee stage of the Bill were very drastic, and they would in effect mean not the reform of the Managing Agency System, but its total elimination in due course. He hoped that when the Report of the Select Committee was published and the full implications of the measures proposed were appreciated, industrialists and investors alike would make an organised effort to press their views before Parliament and see that their case did not go by default.

The Constitutional Amendments, now before Parliament, presented a very alarming picture, said Sir Homi, and he felt that steps should be taken to ensure that Parliament was not left in any doubt with regard to the reactions of the public which is affected towards measures which would largely do away with the Fundamental Rights secured to the citizen under the Constitution. "Section 31 of the Constitution," he continued, "relating to compensation for acquisition of property, had been framed after prolonged and anxious deliberation, and nothing has happened, in my opinion, to warrant the drastic curtailment of the rights which holders of property enjoy in every other free society."

Although the Budget presented to Parliament did not come under a review of the events of the past year, Sir Homi felt that it was impossible to avoid a reference to it. "While the Development Re-

bate of 25% which the Finance Minister has proposed should be of undoubted benefit to industry, the proposals for direct taxation in respect of the middle and upper income groups can be understood only if it is the declared policy of Government to eliminate the savings from which investment capital is created and to destroy all incentives. The Report of the Taxation Enquiry Commission contains some very radical suggestions, calculated still further to cripple the capacity of the entrepreneur to perform his functions. Some of the recommendations already find a place in the Finance Bill now before Parliament, and

if the process goes any further, I cannot but think the economic development of the country will be seriously jeopardised."

Turning to the Directors' Report and Statement of Accounts for the year, Sir Homi stated that the total gross earnings of the Bank showed an increase of nearly 30 lakhs, but that due to substantial increase in expenditure, the ultimate net profit for 1954 was only Rs. 1,38,000 more than in the previous year. He pointed out that the increase during the year under 'Interest paid on Deposits, Borrowings, etc.' and 'Salaries and Allowances, etc.' shown on the Expenditure side of the Profit and Loss Statement, accounted for nearly Rs. 25 lakhs.

Sir Homi next dealt with the Item relating to Interest on Deposits, Borrowings, etc., which showed an increase of nearly Rs. 10 lakhs. "This was on account of the continuance of the high rates required to be paid on Deposits, particularly on Call and Short Term Deposits. There are no signs of any appreciable diminution of such rates in the near future. In this connection, you will appreciate the Bank has to maintain its long standing connections with its valued constituents and cannot afford to forego Deposits and let business pass to other Institutions".

Sir Homi also stated that the Establishment Charges increased by nearly Rs. 15 lakhs, more than two-thirds of which was accounted for by the emoluments of the Clerical and Subordinate Staff.

Referring to the Balance Sheet, Sir Homi said, "On the liabilities side you will see that the figures of Deposits show an appreciable increase compared to the previous year; the aggregate total was higher by Rs. 6 crores.

"The increase in Bank's business in 1954 is further reflected in higher figures under the heads 'Bills Payable', 'Bills for Collection' and 'Acceptances, Endorsements and other Obligations'.

"On the Assets Side of the Balance Sheet, I would refer you to the item of Investments. At every suitable opportunity endeavours have been made to reduce our Investment Portfolio so that the proceeds realised therefrom may be utilised in other channels like Advances and Bills yielding a higher return. Securities of the Central and State Governments and other Trustee Securities accordingly stand reduced by

nearly Rs. 2,30,00,000. Under other heads, such as Shares, Debentures and other Investments, there have been increases of a few lakhs, with the ultimate result that the grand total shows a reduction of Rs. 1,20,00,000.

"At the end of 1953, the difference between the Book Value and the Market Value of the Bank's Investments stood at Rs. 3,13,00,000. The difference has since come down to Rs. 2,41,00,000. It has been our constant anxiety to see that the gap is narrowed and we hope that the profits of the Bank in future years would enable the Directors to set apart larger amounts. In the year under report, it was not found possible to transfer to the Bank's Investments a larger sum than Rs. 15,00,000".

Sir Homi then called the attention of the shareholders to the Item relating to the Advances and Bills business of the Bank which on the closing date showed an aggregate increase of a little over Rs. 2 crores & 85 lakhs, including a rise of over Rs. 1 crore & 94 lakhs under the heading of "Monies at Call & Short Notice"; the average during the year stood at a still higher figure.

Sir Homi regretted that after making the necessary Appropriations which were no more than required in the present circumstances, the ultimate available surplus in the hands of the Directors did not permit the provision of a higher Bonus to the Staff than one-twelfth of the Basic Salary earned by each member during the year. In this connection, he repeated what he had said last year, that if the position had warranted it, nothing would have pleased the Board better than to have sanctioned a larger amount by way of Bonus.

At the conclusion of his speech, Sir Homi thanked all those engaged in the service of the Bank. "The Managing Director, Mr. Captain," said Sir Homi, "has not spared himself in the performance of his duties; he is carrying a burden which has become particularly onerous in the times through which we are passing. Mr. Karanjia, Manager, Branches, and Mr. Cooper, Secretary, have heavy responsibilities which they are discharging to the entire satisfaction of the Board. To them, and to all other members of the Staff, as also to the local Committees at the various centres, I desire to convey our grateful thanks".

The United Commercial Bank Limited

Satisfactory Progress in Bank's Business

Keen Competition for Securing Bank Deposits

Comprehensive Review of Economic Situation

Mr G. D. BIRLA, the Chairman, Analyses Indian Economic Indices

Speech delivered by Shri G. D. Birla, Chairman of the United Commercial Bank Ltd., at the Twelfth Ordinary General Meeting of the Bank held on 30th March, 1955.

Gentlemen,

I have great pleasure in welcoming you to our Twelfth Annual General Meeting. Before proceeding with the business of the meeting I have to report to you, with great sorrow, the death of Mr. B. N. Jalan who was a member of the Board of Directors since the inception of the bank and who, during the period of over a decade of his Directorship, rendered great service to the bank and brought to the deliberations of the Board the benefit of his wise counsel and experience.

The Balance Sheet and Profit and Loss Account of the bank have been in your hands for some time and you would, no doubt, have been pleased to note the improvement of the bank's business to which the figures bear testimony.

BANK BUSINESS

DEPOSITS.

You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1954 stood at Rs. 40.42 crores as compared with Rs. 37.72 crores at the end of 1953. The increase in deposits of Rs. 2.70 crores represents a rise of 7.1 per cent and though the increase is somewhat smaller than the 22 per cent recorded in 1953, it should, nevertheless, be considered as quite satisfactory.

CASH.

Cash on hand, balances with banks and money at call and short notice together accounted for Rs. 6.08 crores and represented 15 per cent of our total deposit liabilities.

INVESTMENTS.

The investments of the bank in Government and other approved securities stood at Rs. 17.16 crores which shows a small reduction of Rs. 72 lakhs as compared with the figure at the end of 1953. The reduction is due to a moderate lightening of our holding of Government securities and a substantial reduction in debentures of Joint Stock Companies. The ratio to deposits of our investments, after deducting the amounts borrowed thereagainst, is 33.6 per cent. Cash resources and unencumbered investments together amount in the aggregate to Rs. 19.66 crores giving a liquidity ratio of 48.7 per cent to total deposits. The bank's investments are shown in the balance sheet in accordance with our usual practice, at below the prevailing market rate.

BILLS.

The amount of bills discounted and purchased has increased during the year from Rs. 7.79 crores to Rs. 8.87 crores. Bills constitute a very desirable self-liquidating asset and it is gratifying to note that these form 21.3 per cent of the total deposits of the bank.

TOTAL LIQUID ASSETS.

The total of our most liquid assets—cash on hand and with banks, money at call and short notice, unencumbered investments and bills—represents 69.8 per cent of our deposit liabilities. We have always aimed at keeping a high liquidity

ratio, and I trust you will agree that this is a correct policy.

FOREIGN EXCHANGE BUSINESS.

The bank continues to make satisfactory progress in the field of foreign trade financing and though the balance of bills payable outside India on the balance sheet date shows a slight reduction the total business handled during the period under review has been larger than previously. The total of outstanding acceptances, endorsements and other obligations, which is an index of our activity in the finance of foreign trade, has shown a gratifying rise over the year and, with the relaxation of import and export controls, it is permissible to look forward to a satisfactory expansion of business under this head.

ADVANCES.

The advances of the bank, which from the point of view of revenue contribute the largest return, have increased from Rs. 11.99 crores to Rs. 16.07 crores. The increase is largely due to the high level of industrial and commercial activity of the year 1954. The removal of control over foodgrains and the financing of the storage and movement of grains through normal banking channels is one important factor in the higher level of bank advances. The advances of the banking system as a whole stood at Rs. 467 crores at the end of 1954 as compared with Rs. 419 crores at the end of 1953. This represents a rise of 11.5 per cent for all scheduled banks.

The combined total of our advances and bills rose during the year 1954 from Rs. 19.79 crores to Rs. 24.84 crores and it now forms 61 per cent of our total deposits.

PROFIT.

Turning to the Profit and Loss Account it is gratifying to note that the profit for 1954 is Rs. 31,06,404-1-6 as compared with Rs. 28,01,201-5-8 for 1953. The growth of the resources of the bank and their profitable employment in advances and bills have more than offset the increase in working expenses and the higher cost of money. The results have been arrived at after providing Rs. 6.52 lacs for depreciation of bank's property, furniture and fixtures and other equipment.

The earnings of the bank under the head of 'Interest and Discount' has gone up by Rs. 15.00 lacs and under the head of 'Commission, Exchange and Brokerage' by Rs. 19.71 lacs. On the expenditure side 'Interest paid on deposits and borrowings' is higher by Rs. 13.14 lacs, salaries and allowances by Rs. 6.90 lacs, and other working expenses by Rs. 1.77 lacs.

APPROPRIATION OF PROFITS.

As stated in the Directors' Report the net profit of the bank for the year 1954, including the sum of Rs. 1,52,320-7-3 brought forward from 1953 accounts, is Rs. 32,58,724-8-0. Out of this amount the Directors have already transferred Rs. 6,50,000 to Reserve Fund, which now stands at Rs. 12,50,000 for Income-tax provision of Rs. 2,50,000 for bonus to staff, and of Rs. 2,50,000 for bonus to staff, leaving a balance of Rs. 11,08,724-8-0. In view of the improved working results the Directors have thought it right and proper to recommend to you that the dividend be increased from 4 per cent per annum

paid last year to 5 per cent per annum, free of Income-tax, leaving Rs. 1,08,724-8-0 to be carried forward to next year's account.

BRANCHES.

During the year, the bank opened sub-branches at Ballygunge (Calcutta) and Jalabail (Bangalore) and a branch at Bassein in Burma.

Consequent on the merger of the French establishments in India with the Indian Union, the Banque de l'Indo-chine, which had the prerogative of issuing bank notes in French India and which had a branch at Pondicherry for the last 80 years, decided to close down its office there and we have purchased the premises and taken over the valuable business of its Pondicherry branch with effect from 14th March, 1955. Our already existing branch at Pondicherry has now been shifted to the more commodious and more prominently located premises acquired from the Banque de l'Indo-chine.

MANAGEMENT.

At the end of November last, under medical advice, your General Manager Mr. B. T. Thakur, had to fly to London to undergo a major operation. I am glad to say that the operation was successfully performed and his health has improved. He has now resumed his duties. During his absence your Deputy General Manager Mr. S. T. Sadasivan, acted as General Manager of the Bank in addition to doing his own work. I am glad to say that Mr. Sadasivan performed the additional duties of the General Manager most satisfactorily. I also take this opportunity to mention the valuable contribution made by the officers and staff at the Head Office and branches to the achievement of the successful results of the past year and to thank them for their loyal and devoted service.

TREND OF DEPOSITS.

It is gratifying to note that the deposits of scheduled banks have shown a decisive expansion in 1954 and this is in strong contrast to the stagnant or declining tendency during the past several years. The total deposits of scheduled banks on 31st December, 1954 were Rs. 932.91 crores as compared with Rs. 838.19 crores on 31st December, 1953, and Rs. 838.79 crores on 31st December, 1952. Expressed as a percentage there is an increase of 10.9 per cent on 1953 and 12.2 per cent on 1952 figures.

There are several factors which influence the trend of commercial bank deposits, the chief of which are—(1) the balance of external payments and export and import policy, (2) the inventory position with manufacturers, merchants, and producers of raw materials, (3) the degree of promptness of disbursements on government account for supplies and services, and (4) Government's policy as regards tax collections. It is axiomatic that if the country is running a surplus on its balance of international payments account the deposits tend to expand and vice versa. The balance of payments position is governed by conditions abroad and also by the Government's policy as regards imports and exports. In the year 1951, when we had an adverse balance of nearly Rs. 147 crores on trade account the deposits of commercial banks contracted by Rs. 16.5 crores and advances moved up by Rs. 100

crores. If inventories are high as a result of increased production or of over-imports or of inability to export, deposits of banks begin to contract. If the Government makes quick payments for the supplies and services secured by it deposits of commercial banks tend to increase but on the other hand if there is delay in these payments the growth of deposits is retarded. The considerable expansion in deposits during the war time was, among other things, due to the advance payments made in anticipation of supplies and services; but with the passing of the emergency, advance payments gave way to delayed payments with the result that, as stated at the meeting of the Associated Chambers of Commerce and Industry in January, a sample survey of overdue bills on the Government indicated that payments were in arrears to the extent of about Rs. 121 crores to the limited number of members, who had sent in returns. If a complete census of the amounts overdue from the Government is taken the figures will probably be startling. If this state of affairs is remedied and prompt payments from the Government become the normal rule, the resulting de-frosting of frozen money will have a very healthy effect on deposits.

Again, the pace of collection of taxes determines the extent to which tax provisions continue to remain in the banking system and to make a welcome, though temporary, addition to banking resources. Government policy, therefore, largely determines the growth of commercial banks deposits.

Though in the first Five-Year Plan government disbursements have been very large these were not reflected in increased bank deposits, but only in somewhat higher circulation of currency. The decisive expansion of deposits in 1954, may, however, be taken as the first sign that the financial disbursements arising from the execution of government plans are at last beginning to percolate into the banking system, and it is to be hoped that the operation of the second Five-Year Plan will result in a healthy growth of the resources and strength of the banking system.

While the long-term outlook for deposits may, therefore, be considered as fair, competition among banks for available deposits is getting keener and the rate of interest paid on deposits has tended to keep quite firm. Moreover, by reason of the stiff rise in the Bank of England rate London is becoming unattractive for borrowers and there is, therefore, keener competition from Exchange banks in India to secure all available surplus funds in the local market. In this situation, it is a matter for regret that it has not been possible for banks to arrive at an inter-bank agreement governing the rates of interest to be allowed on deposits. Last year I had drawn the attention of my banker friends to the necessity of arriving at an understanding and chiselling out an agreement on interest rates with a view to avoiding uneconomic competition. In this connection I must acknowledge the help given by Sir B. Rama Rau, Governor of the Reserve Bank of India, who called an informal meeting of the Imperial Bank of India, the Indian Banks Association and the Exchange Banks Association to discuss the large increase in rates of interest on deposits that had taken place and to point out the desirability of arriving at an agreement governing the rates which

would be fair to depositors and banks alike. After protracted negotiations it was found that no agreement could be reached. The majority of the big Indian banks were willing to enter into such an agreement but some of the Exchange banks did not agree to fall in line and the scheme had to be abandoned as it was considered inadvisable to proceed with it unless all the major banks agreed to it. It is regrettable that Exchange banks who find it so easy to work within the framework of fixed rates of exchange should not consider it fit to join the Indian banks to work within a framework of an integrated interest rate structure. The Exchange banks not being content with a major share of the business connected with the foreign trade of the country, are making a great drive for capturing domestic business also with the offer of higher rates of interest on deposits. For healthy development of banking there should be an equitable distribution of business and closer cooperation among banks as regards rates and margins of profit.

ESTABLISHMENT EXPENSES.

In April, 1954, the decision of the Appellate Tribunal, presided over by Mr. Justice Jeejeebhoy, was announced. The Appellate Tribunal's decision increased the starting salary of employees in several grades and enhanced the dearness allowance and other benefits granted by Sastri Tribunal to such an extent that, by reason of the resultant increase in establishment charges, the banks would have been obliged to close down several of their branches. In response to the representation made by the banks to the Government of India, the Appellate Tribunal's decision was modified. The modified award of the Government retained the pay scales and dearness allowance of the Sastri Award with certain changes. In order that no employee may be adversely affected, all on a sudden, the modified award also provided that the total emoluments of an employee should not in any case be reduced in the first year and that any excess now received by him over what he would be entitled to under the modification be adjusted thereafter in three yearly instalments. The Government also instituted a fact-finding enquiry presided over by Mr. Justice G. S. Rajadhyaksha. The terms of reference were to examine the effects on the banking structure of the Sastri Award, the Appellate Tribunal's decision and the modified award and to make recommendations to the Government regarding salaries, dearness allowance, etc. bearing in mind the need for ensuring an equitable treatment to bank employees consistent with the capacity to pay of various classes of banking companies or individuals units. In making recommendations, the Commission was directed to pay due regard to the desirability of avoiding widespread closure of banking companies or their branches to the necessity to promote development of banking

in the country generally and in rural areas in particular and to any possibilities of economies in the expenses of banking companies. Detailed information regarding their working for several years was submitted by the banks to the Commission. Unfortunately, however, when Mr. Justice Rajadhyaksha was about to complete his work he fell ill and expired after a short illness. His death is a great loss to banking as it was expected that on account of the confidence of banks and employees alike in his sense of justice and fairplay he would have given an award which would have put an end to dispute. Mr. Justice Gajendragadkar has now been appointed to continue the enquiry and I hope his decision will be given soon.

The dispute between the banks and their employees has dragged on for the past several years. Conditions are further deteriorating as no final decision acceptable to both parties has, so far, been arrived at. The outturn of work, efficiency and sense of service on the part of employees have considerably gone down. After all, the success of any institution depends upon the combined and co-ordinated efforts of the management and the staff and it is essential that the employers should consider the changing times and work in close co-operation with the employees. It is also the duty of the employees to work devotedly for the institution as it is only with their increased efforts higher income can be earned which in turn would enable the management to pay higher wages. Mutual recriminations must cease and everybody's energies should be directed towards the improvement and smooth working keeping always in view the increased production.

Before proceeding to review the economic conditions in India, I shall first briefly comment on the conditions in the overseas countries where we have branches.

MALAYA.

During 1954, Malaya had an overall adverse trade balance of \$28.7 million compared with an adverse trade balance of \$206 million in 1953. This improvement in the trade position was mainly due to better rubber and tin prices during the second half of the year, and to a general improvement in trade conditions. Production of rubber in 1954 at 583,126 tons was higher by 10,334 tons than 1953, and its exports from Malaya rose by 67,903 tons to reach 915,114 tons as compared to 1953. The average price was 66.56 cents per lb., the average during 1953 being 67.00 cents. Exports of tin during 1954 totalled 60,831 tons—a rise of nearly 7.4 per cent on 1953; the average price during the year was \$353.59 per picul (133.1/3 lbs.). The increased production of rubber and tin indicates that conditions were less disturbed in the interior of Malaya. As a result of this improvement the Straits Dollar strengthened against Sterling.

The prospects for Straits-Indonesian trade appear somewhat poor. Indonesia continued to be a large supplier of petroleum, rubber and copra but it took much less of Malayan exports than previously. Singapore merchants are hopeful that the trade will recover when the internal political and economic difficulties of Indonesia are brought under control but, for the present it would appear that the Indonesian authorities are pursuing a policy of import trade control which seems to be aimed at re-orienting the country's trade through its own ports and this policy is likely to have an adverse effect on the business of Singapore.

If the political conditions in the Far East do not deteriorate during the current year and if the U.S.A. maintains the same policy regarding stock-piling, we can confidently hope that steady prices will prevail for Malaya's principal commodities, rubber and tin, which will have a very beneficial effect on the country's economy and its Government's revenues.

BURMA.

During the year 1954 internal security conditions in Burma improved further with a corresponding improvement in communications.

Trading conditions have been somewhat difficult on account of the changed world situation in foodgrains. The total amount of rice exported during the year 1954 was nearly 14 times that exported in 1953. Japan and India were the largest purchasers of Burma rice. India entered into a contract for the purchase of 500,000 tons most of which was lifted by the close of the year. However, due to the lower price which it fetched, the value of exports was almost identical to that of 1953. The exportable surplus from the 1954-55 rice crop is expected to be 1,600,000 tons and efforts are being made to dispose of this surplus. Japan has already entered into a contract for the purchase of 200,000 tons while Ceylon is likely to purchase the same quantity. The agreement with China which has been concluded provides for a sale of 150,000 tons on partly cash and partly barter basis and it appears likely that the U.S.S.R. may also purchase a reasonable quantity. As rice forms about 75 per cent of the exports of Burma the Government is engaged in pressing forward with schemes for disposal of rice through Government and trade channels.

The Government has continued to nationalise many foreign-owned enterprises. A joint venture agreement on oil was signed between the Government of Burma and the Burmah Oil Company and other associated companies and Government made an initial payment of Rs. 3.30 crores to the oil company under the said agreement. A new refinery is being built at Syriam by the Burmah Oil

Company (1954), Ltd., and when this comes on stream in about a year's time the output of refined products should reach 350,000 tons a year, which would make the country self-sufficient in oil. The scheme is, however, not big enough to permit Burma to export oil as she did before the war.

The budget for the year ending 30th September, 1954, showed a deficit of Rs. 32.40 crores. A mission from the World Bank visited the country during the latter part of 1954 and a report on its findings is awaited with interest.

Burma has a large programme for the development of the country and the need for foreign equipment for the implementation of these programmes is reflected in the ceaseless flow of tender notices issued by the Government authorities and in the activities of the various Government Purchasing Missions. Development projects include the Balu Chaung Hydro-Electric Scheme, a medium sized steel mill, sugar mills, jute mill and tea blending and packing factory. The result of all these schemes is likely to be felt in about a couple of years.

During the year the State Commercial Bank was established under an Act of Parliament and it started work with initial capital funds of Rs. 1.20 crores contributed by the Government.

HONGKONG.

During the year there was little change in the political situation in the Far East, though the settlement in Indo-China certainly improved the business prospects in this region. Consequently the trade pattern remained unchanged.

The economy of Hongkong is vitally connected with the countries of South East Asia region like Indonesia, Thailand, Malaya, etc. who have been good buyers of her manufactured products. The continuous fall in the prices of the primary products of this area has badly depleted the purchasing capacity of these countries and this was partly responsible for the decline in the total value of trade of the Colony which showed a decrease of 11 per cent as compared to the previous year. The volume of total trade, however, increased slightly which shows that the fall in the value of trade was accounted for mostly by the fall in commodity prices.

Imports of cotton, rayon and woollen textiles from Japan have risen and have supplanted Italian and British supplies. Exports to Indonesia and Malaya are on the increase. India and Japan are both selling more cotton textiles to Hongkong and Japan's decision to reduce her overall cotton textile export by 20 per cent should be welcome news to exporters of textiles in India.

During the last few years the 'entrepot' trade has fallen off considerably but the steady development of the local manufacturing industry has been a bright feature and it has helped to sustain the economy. Hongkong's industries, though young, have continued to progress and during the last year so that they now employ nearly 200,000 workers. Locally manufactured products form 25 to 30 per cent of the total exports and the value of such exports increased from \$635 million in 1953 to \$682 million in 1954.

The outlook for the coming year does not seem to be very bright and much depends on the course of political events in the Far East and the progress that the countries of South East Asia region make in stabilising their economies. A settlement in the Far East, with possible removal of the embargo on trade with China may have beneficial effect on her trade. Improvement in the economy of neighbouring countries would give further impetus to her industrial development.

PAKISTAN

Pakistan's foreign exchange earnings have been progressively dwindling since the bumper earnings of 1951 and this has resulted in increased restrictions on foreign exchange expenditure on essential items. Pakistan's earnings have been derived principally from the sale of raw jute and cotton and the prices of agricultural commodities generally have

FOREIGN TRADE OF INDIA.
(Merchandise by Sea, Air and Land).

1948	670.80	475.08	-195.72
1950	558.96	561.00	+ 2.04
1951	854.40	783.84	- 70.56
1952	803.16	618.48	-184.68
1953	577.44	531.72	- 45.72
1954*	585.96	547.92	- 38.04

* Estimated.

been subject to unpredictable fluctuations in the world markets. Internally, Pakistan's industrial production, particularly of jute goods and cotton textiles, have gone up considerably and these two industries are experiencing near-boom conditions. An agreement has been entered into with the U.S.A. for large-scale economic assistance and it is expected that this will help Pakistan to improve her position, and result in increased imports of more consumer goods of which the country had been on short ration for some time past.

UNITED KINGDOM.

The United Kingdom had a remarkable year of prosperity with industrial production, employment and consumer expenditure reaching new peaks. The terms of trade, however, turned somewhat adverse and the rate of increase of gold and Dollar reserves slackened. During the second half of the year Sterling turned weak in terms of the Dollar and the prolonged weakness of Sterling indicated the presence of elements of inflation and an expansion of internal consumption on the basis of instalment purchase to the detriment of the export trade. Timely action has, therefore, been taken by putting up the Bank Rate first to 3½ per cent and then to 4½ per cent and the increased Bank

Rate is already proving effective as is indicated by the rise in the quotation of Sterling in the foreign exchange markets of the world. Convertibility of Sterling, however, still appears to be far off but improvement in the technique of controlling exchange rates by the intervention of the Bank of England in the transaction of the Sterling market might bring about a closer integration of the official and unofficial rates of sterling and pave the way for convertibility sooner than it is permissible to hope for now.

GENERAL CONDITIONS—INDIA
COMMITTEE ON FINANCE FOR THE PRIVATE SECTOR

The Committee on Finance for the Private Sector, of which your General Manager, Mr. B. T. Thakur, was a member, published its report in April 1954 and made several valuable recommendations calculated to facilitate the undertakings by commercial banks of new re-taking to help the industry directly and through the medium of specialised finance corporations. The Committee also made recommendations regarding the assistance which should be extended by the Reserve Bank to Commercial Banks with special reference to rediscounting and remittance facilities and it is a matter for gratification that the Reserve Bank has implemented several of these recommendations. In particular, the Reserve Bank has extended the facilities of the Bill Market scheme to all licensed scheduled banks and has brought down the amount to be borrowed at any one time and the amount of individual bills to Rs. 10 lacs and Rs. 50,000 respectively.

ALL-INDIA RURAL CREDIT SURVEY.

The Committee appointed by the Reserve Bank of India, under the Chairmanship of Mr. A. D. Gorwala, to enquire into Rural Credit problems has also published its report. The principal recommendations of this Committee are:

1. The establishment of a State Bank of India by the integration of the Imperial Bank of India and the major State-associated Commercial banks under the effective control of the Government of India. The opening of new branches by the State Bank of India with a view to taking over cash work from non-banking treasuries and sub-treasuries, providing vastly extended cheap remittance facilities for co-operative and other Banks and developing rural banking facilities effectively and on a country-wide scale in effective consonance with the national policies as expounded through the Central Government and the Reserve Bank of India.

The Committee has made it unambiguously clear that the whole object of the programme would be, not the nationalisation or near-nationalisation of commercial banking in the country, but the provision for and the increasingly effective evolution of, an integrated, India-wide, commercial banking institution associated with the State and responsive to its policies, especially its policies for the benefit of the rural areas.

2. The progressive organisation, on a co-operative basis, of the processing and marketing of agricultural commodities and the development of state warehousing facilities through an All-India Warehousing Corporation and State Warehousing Companies.

3. The progressive organisation, on a co-operative basis, of as large a sector of rural economic activity as possible, e.g., farming, irrigation, transport, milk supply, dairying, live-stock breeding and cottage industries.

The Government has accepted with modification the recommendation of the Committee to assume effective control of the Imperial Bank of India forthwith and the question of integrating into the new State Bank other institutions which are already doing treasury work of the various State Governments is still under consideration. The Committee's recommendations on rural credit are very valuable and when they are implemented the problem of agricultural credit and marketing which had baffled generations of bankers will be nearer a satisfactory solution.

TAXATION ENQUIRY COMMISSION REPORT.

The Taxation Enquiry Commission presided over by Dr. John Mathai has made a thorough enquiry into the changes which have taken place since a earlier Commission reported thirty years ago and have made recommendations regarding systems of taxation, sources of revenue, state commercial enterprises, state trading and a number of other important subjects. In the opinion of the Commission there has been very little addition to the national tax-effort in the last two or three decades; while the national income and public revenues have kept pace with each other in money terms, neither of them has shown any significant increase in real terms. Their distribution 'vis-a-vis' different groups in the country has undergone alteration. A greater degree of elasticity of revenue is now available and, with the disappearance of the old rivalry between the Central Government and State Governments as regards sources of revenue, there is now complete co-ordination in improving revenues from well-demarcated sources. The Commission recommends the need for utmost restraint in the growth of non-development expenditure and stress the existence of room for economy and avoidance of waste in public expenditure. The Commission emphasize the roles of taxation and of borrowing in the financing of development programmes and suggest that deficit financing should be kept at a minimum. Increases in both direct and indirect taxation are recommended. Direct taxation has to be stepped up with a view to reducing inequalities and a ceiling on net personal incomes is to be achieved by stages over a period of time. The recommendations for rationalisation of taxation include

ECONOMIC TRENDS

Rs. CRORES

INDEX

Rs. CRORES

We must, therefore, fit ourselves into the task of reconstruction and help the nation with our experience and talent to reach the goal instead of worrying about the means. It is the goal that matters and not the means which scare some unnecessarily. If we do not progress quickly towards the objective, the means must undergo changes.

fundamental right to property. Under the proposed amendment, while compensation would presumably continue to be payable for property compulsorily acquired, the quantum of compensation would, in certain spheres, be a matter entirely within the discretion of the Legislature, and no Court would in those spheres have any jurisdiction to go into the adequacy or reasonableness of the compensation; in short, the issue of compensation in such cases would become non-justiciable. The amendment which is most significant to the Electric Supply Industry is the enabling provision which empowers the Central and State Governments to extinguish or modify any of the rights accruing by virtue of any Licence to supply electric power; and any law covering such modification or variation, if it received the assent of the President, would not be open to question in Court. In introducing this proposal the framers of the Bill appear to me to have given little regard to the nature of the surveillance which the State has long had over the Electric Supply Industry by virtue of two very comprehensive Statutes.

During the debate in the Lok Sabha, while referring the Constitution Amendment Bill to a Joint Select Committee, the Prime Minister stated that full compensation cannot be paid when property has to be acquired for sociological considerations. I personally feel that such considerations can hardly be involved in the acquisition of Electric Supply undertakings, as the method to be followed in the acquisition of such undertakings has for years been elaborately laid down in the Law which has governed, and still governs, the original issue of a License to a Licensee incorporating the terms of his franchise. All relevant considerations have been brought very fully to the attention of the Central Government and of the Joint Select Committee now considering the Bill. Perhaps the Select Committee will agree that the proposal as it stands will detract from the confidence of investors which has hitherto been inspired by the terms of our Licenses, and that it will thus have deleterious effects upon the future electric development of the country.

An interesting feature of the debate when the Bill was referred to the Select Committee was that the element of the Opposition which abhors the principle of compensation was exceedingly vocal about the property rights of "the small man" being protected. Among the investors in our Industry the number of these "small men" with small holdings is legion. In the ultimate analysis the test of any legislation in the industrial sphere is how far it serves to liberate the springs of honest human endeavour. I would submit that in the case of an industry such as the Electric Supply Industry, which has so sound a record of service in the past and such ambitious plans of expansion for the future, there is no call for further measures which could engender uncertainty. Even the vast hydro-electric schemes being built and being planned by Governments will have to rely very largely upon Licensees' undertakings for purveying their power.

An important development in this State since I last addressed you has been the formation of the State Electricity Board which was constituted on 6th November, 1954, and which now comprises four members. We welcome Mr. M. H. H. Premji who is the Chairman, and I may tell you that he has already visited our Power Stations at Sabarmati. There are now four States Governments to implementing the provisions of the Act in this respect. Credit is due to the Central Government for continuously pressing the States to constitute the Boards. At the Conference in February the Union Minister for Irrigation, Power and Planning, Shri Gulzarilal Nanda, referred to the obvious urgency for rapid development of the Electric Supply Industry and indicated that he attached great importance to the development of electricity being entrusted to autonomous Boards as envisaged in the Electricity (Supply) Act, 1948.

Emerson urged his fellowmen to make no small plans, and your Company has

been following this gallant concept in its expansion. In the expectation of course that ultimate justice will be done to it. In this context progress with 'C' Station has been most satisfactory, and of the immediate programme only the third Turbo-alternator Set and the fourth Boiler remain to be commissioned very shortly. You will have been able to gather some idea of how we have progressed from the picture on the inner cover of the Annual Report & Accounts. The highest peak demand on combined 'A', 'B' & 'C' Stations has been given as 91,200 kW during the year under review, but has since risen to 95,600 kW.

With the increase of our generating capacity a commensurate increase of distribution capacity is being effected. There is a growing emphasis on the need for rural electrification. While this Company is doing everything it can, and has already made considerable progress, uneconomic connections cannot be installed without subsidisation by other consumers. It would greatly assist the ends of social justice and the interests of would-be rural consumers themselves if they would get more together and produce to the Company reasonable and economically integrated propositions.

You will remember, indeed are unlikely to have forgotten, that we had proposed to revise our charges for Electric supply as from April 1954. The increase of rates which we had intended to implement averaged about 15 per cent but our proposals were overtaken by the appointment of a Rating Committee. As the Committee's Report has been published I shall not offer any detailed comment on its findings. There were some basic disagreements between the views of the Committee on the one hand and those not only of this Company but of Electricity Undertakings throughout India, on the other. One of the most important points over which we disagreed was the question of the treatment of interest on loans under the provisions of the Sixth Schedule to the Electricity (Supply) Act, and this issue has since been referred to Arbitration. Although our expectation of several months' standing has not yet been realised, we are still hoping to get a verdict "any day now".

Government as you are aware, did not pass any orders on the report of the Committee. Instead we agreed with Government to defer revision of our tariffs for supply. Therefore we urgently need the answers to the several important matters I have already mentioned so that we can reopen the matter. Interest on loans, powers to create a Deferred Taxation Reserve, and increase in the Standard Rate of return, these are the most important points that remain to be settled.

There is I find a certain amount of confusion about the real significance of the term Standard Rate and the Reasonable Return which we are permitted to earn. The emphasis is on the word "permitted". The mere fact that an undertaking is allowed to earn a certain figure contains no guarantee that it is able to do so. Certainly no undertaking can earn its Reasonable Return nor make provision for its various reserves, if its rates are forced to remain static when changing conditions from time to time require those rates to be enhanced. I have already said that our rates needed revision. Because they were not revised as planned, your Directors have had to withdraw no less than Rs 8.8 lacs from free Reserves in order to maintain the same modest dividend this year as last, namely 6½ per cent net.

You will realise that our free Reserves are limited, and that under the stringent provisions of the law they will be hard to replace. Besides we have no adequate buffer against the various tax contingencies mentioned in the Notes on the Balance Sheet. This situation will persist until Government takes cognisance of the difficulties with which the Industry is faced. Capital expenditure needed for development in other industries can be, and indeed is to a substantial extent, met either from net profits or from the accumulated profits of previous years. For us it is not a question of financing capital expansion from re-

venue; that is almost out of the question as the law stands. The question is can we maintain our dividend. I must warn you that unless the various issues I have mentioned are satisfactorily settled in the very near future it may not be possible to maintain the dividend next year at the present figure.

I must also point out to the authorities that to the extent our shareholders' dividend might suffer, the Company's credit in the investment market will decline. Our last issue of Capital of Rs 1,75,00,000 made in September 1954 was an outstanding success and was heavily oversubscribed. This shows remarkable confidence in the good intentions of our Government, as well as in the intrinsic worth of your Company. I sincerely trust the confidence will prove well founded.

Apart from dealing with the withdrawal of Rs 8,80,000 from the Equalisation of Dividends Reserve, which I have already done at some length, I should mention the fact that our calculation of Clear Profit for the year once again discloses a substantial shortfall below our figure of Reasonable Return. Otherwise the Accounts together with the notes appended to the Balance Sheet are, I think, sufficiently informative to obviate the need for my dealing with them in detail. Your Directors, after careful consideration, have decided to recommend a Final Dividend of Rs 4/- per share making, as I mentioned ear-

lier, a net 6½ per cent for the year, which is the same as last year.

Quite apart from anything I have had to say on this and other occasions, you are all very well aware of the vast developments at Sabarmati just now coming to fruition. This year, therefore, there is a special feeling of physical achievement. While saying my sincere "Thank you" to the Resident General Manager and his staff, I should like to acknowledge our gratitude also to our Consultants, to our Suppliers, to our Contractors and to all who have contributed towards the building of our Power House, now one of the greatest in the East. We must seek to preserve this pre-eminence position and it is our endeavour to do so by various training schemes for all levels. Your Company must continue to have first class management, the most capable supervision and highly skilled staff "Training Within Industry" pioneered in India at Ahmedabad and rapidly gaining wide recognition, is intended to improve not only efficiency but mutual understanding. Our trainees sent abroad have started to return to serve with greater skill and wider knowledge. The Cadet Executive Scheme will in years to come prove its full worth. Ahmedabad is already a great industrial City, yet it can become greater. You have many contacts with Industry and Industrialists, I would suggest you make use of this slogan whenever you have a suitable opportunity—"Have you considered Ahmedabad as the location for your new factory?"

JUST OUT

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1955.

Complete:—Contains complete information about all companies quoted on the Calcutta Stock Exchange. No other book contains that.

Accurate:—Checked and rechecked to ensure maximum of accuracy.

Up-to-date:—Brought right up to the minute.

Informative:—Contains information about date of foundation, business and property, management and directorate, managing agents remuneration and qualification, capital structure, date of meeting, names of auditors, condensed balance sheets for two periods, and summary of profit and loss account for ten periods of all companies known to the Stock Exchange.

Special Features:—Comprehensive statistics on National Economy & Five Year Plan: Rates of Income-Tax & Super Tax; Summary of Estate Duty Act & Estate Duty Rates; Stamp Duty Schedules; Stock Exchange Holidays; List of Members & Bye-laws; Interest Calculator; Rupee-Sterling Exchange Table; A List of companies having Preference Dividends in arrears; A List of companies in liquidation since 1939 with names and addresses of Liquidators; Latest Amendments to Trustee Investment Rules; Approved Securities under Insurance Act; Financial Provisions governing Electricity Companies; Complete information about Rubber Companies; and so forth.

Indispensable:—Invaluable to Banks, insurance and financial companies, Joint Stock Corporation, Governments and Local Bodies, Investors and Stock-brokers, accountants and businessmen, and students and teachers of commerce and economics.

Statesman:—Calcutta: "This compilation of facts and figures can be strongly recommended not only to investors but to all interested in industrial and commercial enterprise".

Price Rs. 12/8. Postage Rs. 1/12 extra.

Stock Exchanges

STEADIER MARKETS

Watch-Dog Writes:

STOCK markets have, on the whole, been displaying a steady tone though the turnover has shown hardly any expansion. General interest, in fact, has been on a limited scale due to lack of follow-up support and the activity is confined to only a few issues in Engineering, Textile and Sugar sections.

Steady conditions were noticed on the Calcutta Stock Exchange where activity was mostly confined to selected Engineering, Tea and Sugar shares.

Prices, on the Bombay Stock Exchange, after initial firmness, turned a shade easier towards the

close on tired liquidation in the absence of any encouraging news.

Except for Planting and Textile issues which continued to attract good attention, conditions in other sections on the Madras Stock Exchange remained dull.

Price movements on the London Stock Exchange were rather irregular and business was limited to selected issues.

Wall Street finished the week on a firm note.

Calcutta

Calcutta, Thursday Evening. PRICES on the local Stock Exchange, during the past week, displayed a steadier tendency although trading was mainly confined to Engineering, Tea and Sugar sections where selected scrips registered a good turnover at improved levels. Price movements in Indian Irons were subject to settlement adjustments. Jute shares lacked sustained support, while other Industrials showed little change in values. The market finished the week on a steady note.

The market for Giltedged securities lacked any definite trend. Business continued to be restricted and institutional investors were not inclined to make fresh purchases due to the stringent conditions in the money market. 3 per cent 1986 Conversion Loan moved narrowly between Rs 80-9 and Rs 80-13 to finish the week at Rs 80-11, while 3 per cent 1970-75 changed hands at Rs 86-12 to Rs 86-15; 3½ per cent 1984 at Rs 98-8 to Rs 98-9 and 3 per cent 1957 at Rs 99-4.

In sympathy with the securities market, Bank shares ruled generally quiet. The only exception was Punjab National which were taken up to Rs 44-12 on hopes of a Jubilee Bonus, to finish the week on the ex-dividend basis at Rs 43. Imperial F.P. were done at Rs 1,575 and Hindustan Commercial at Rs 10-0.

The firmness in Jute shares, that was noticed during the past few weeks, was only short-lived. Prices suffered a mild setback in view of the slight firmness of raw material prices. Even the announcement of the increase in dividends by two prominent mills, viz., Kanknarrah and Kamarhaty, had no effect on market sentiment. The speculative Howrah was marked back to Rs 29-10 from Rs 30-2, while National moved narrowly between Rs 34-4 and Rs 34-8 as against Rs 34-11 quoted in the previous week. Nudde changed hands at Rs 54-8 to Rs 54-12; Standard at Rs 155-0 to Rs 156-12 and Barnagore at Rs

(Continued on page 693).

BENGAL JUTE MILL COMPANY LIMITED

NOTICE.

Notice is hereby given that the 24th Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company at 8, Dalhousie Square East, Calcutta, on Thursday the 28th April 1955 at 4-15 P.M. for the purpose of receiving the Directors Report, passing the Audited Accounts, declaring the Dividend recommended by the Directors for the year ended 30th June, 1954, electing Directors in place of the retiring Directors, appointing Auditors and for transacting any other business of the Company that may be transacted thereat.

OLYMPUS

(Continued from page 666)

equivalent of the population; (2) increasing production of protective food like milk, vegetables and fruits; (3) increasing the yield per acre with a view to altering the crop pattern to give more area to commercial crops like oilseeds, cotton, jute, sugarcane and tobacco and for plantation and fodder crops.

An outlay of Rs 1,550 crores on social service and housing is proposed, while urban small-scale industries are allotted Rs 250 crores.

On the basis of these development plans, the national income in 1960-61 would be Rs 13,300 crores as against the figure of Rs 7,800 crores in 1948-49 and Rs 10,000 crores in 1955-56. The annual rate of investment is expected to reach 14 per cent in 1960-61 from the rate of about 7 to 8 per cent in 1955-56. Over the five years, the total additional employment is expected to be 10.7 million. This increase is anticipated as follows: 1.7 million in mining and factory establishment, 1.8 million in small enterprises, 1.1 million in railway and communications, 4.0 million in banking, insurance and other commerce and transport, and 700,000 in professions and liberal arts.

As to the resources for financing the Plan, capital formation is estimated to rise by about 25 to 30 per cent of the additional income of each year during the Plan period. The total domestic resources are calculated to be about Rs 6,200 crores. But this will have to be supplemented by about Rs 1,000 crores of external assistance and/or deficit financing. The extent to which deficit financing can be so used will depend on several factors: the scale on which investment outlay is deficit financed, the purposes for which deficits are used, the extent to which additional incomes created by the outlay return to the Exchequer, the effectiveness of the investment undertaken in bringing about an increased flow of consumable output, the period taken for this flow to emerge, the behaviour of money wages to any initial rise in prices, the success of the measures undertaken to prevent significant rise in the prices of basic necessities during the investment period and also on the balance of payment position in the country. The quickly maturing schemes, for instance, could be financed by created money without much danger of inflation.

The Federation adds that "it would be wrong to under-estimate the dynamic significance of the peoples' propensity to consume; both consumption and investment can and ought to increase side by side". It also pleads for allowing a large increase in the agencies, both public and private, which undertake investment. The whole scheme may appropriately be viewed as a shift from "the power and irrigation plan" to an "industry and transport plan".

CALCUTTA STOCK EXCHANGE

(Continued from page 685)

178 to Rs 180. Anglo-India were, however, maintained at Rs 225.

Coal shares continued to remain dull in view of the obscure outlook for the industry. Burrakur moved narrowly between Rs 12-3 and Rs 12-5 and South Karanpura between Rs 10-0 and Rs 10-2. New Beerbhoom shed quarter of a point to Rs 18-1, while Bengal Nagpur were enquired at Rs 12-10 and Central India at Rs 7.

The recent announcement of the reduction in excise duties on coarse and medium cloth had no marked effect on Textiles, which continued to meet with limited enquiry. The

WHY I EXPECT THE U. S. ECONOMY
TO EXPAND 40% BY 1965

(Continued from page 654)
The present time. For example, the growing proportion of younger and older people in the population and the very great increases in various forms of social security will undoubtedly tend to lift the volume of consumption.

The expectation that we can have an economy of some \$500,000 million by 1965 is based on the extension of our past history. All things considered, I think it is an expectation we can look forward to with confidence.

I do not mean to imply that the increase to a \$500,000 million economy in the next decade will be automatic or inevitable; neither do I mean to suggest that growth will proceed at a regular pace.

We all know the workings of the market place sufficiently well to recognize that pauses, spurts, and declines occur at varying intervals. Moreover, their effect is uneven; some lines of trade, some industries, some localities may be in the doldrums while others are enjoying increasing business.

But these are merely some of the characteristics of a free economic system; a certain degree of instability is a requirement of growth.

We accept the necessity for hard work, imagination, and enterprise; they will be needed in the future no less than in the past when such vast accomplishments were recorded.

The task right now is one of preparation, not just for the next buying season or the next fiscal year, but for the greatly expanded market several years ahead. Ours is not an easy economy in which to live. It puts a tremendous premium on resourcefulness and adaptability; it requires shrewd judgment, and courage of a high order. And it requires increasingly skillful management, by which I refer primarily to the highest levels of policy direction and control.

Consider, for example, the task of handling the increase in sheer physical volume of merchandise that will have to flow through the nation's distributive system. After allowing for government and investment consumption, the consumer's part of the \$500,000 million total output in 1965 will be perhaps \$340,000 million. This is roughly two-fifths more than total consumer buying of all goods and services during 1954.

What does a 40-per cent increase in total physical volume mean in terms of plant, fixtures, warehouse, personnel, organization, and the like? Suffice it to say, our present distributive facilities will be largely unequal to the task, not only because of the far greater demands which will be placed upon them but because of normal and perhaps accelerated obsolescence.

The capital requirements of retailing in the years ahead will be far greater than in the past. Therefore, it is not too early to begin thinking about how they can be met.

These projections over the next decade assume a continuation of relative world peace. That, of course, is this nation's goal, and government policies are directed to that end.

If the ambition and self-seeking of others make it necessary to devote more of our resources to military preparedness, then, of course, less of our productive potential can be devoted to satisfying the demands of our private economy for consumer goods and capital expansion. If, despite all our efforts, including preparedness, a general war should develop, the destructive power of modern weapons would leave those fortunate to survive in a state of utmost poverty.

However, I am confident that the efforts of the President and his advisers will help the world find its way to more peaceful pursuits and thus make possible the attainment of our economic potentials.

For the Investor

Improving

Investment Gossip:

STOCK Exchanges took a slight turn for the better, reinforced by the greatly increased production figures of IISCO in 1954-55 and reassured by Mr K. C. Reddy's statement in Parliament the other day.

But, as it presently stands, the stock exchange may be said to be in a state of flux. There seems a desire on the part of operators to wait for some specific news—what news it is nobody knows.

Technically, it appears that the bigger bull operators find it difficult to liquidate or reduce their commitments and to take their profit. At the same time, the chief bear operator is said to be one who is almost fanatic; he seems to have not the slightest desire to cover his commitments—although even the current prices are substantially above the average price of his sales.

On balance, it would appear that the market is slightly over-bought.

While the technical position of the market may be depended upon to correct itself in due course, it is difficult to say when the anticipated news of an increase in the steel retention prices will come. For the rest, the Indian economy is on an even keel; deficit financing goes apace; prospects for continued deficit financing are sure.

Over and above these, there is the fact that the cloud that had cast a shadow over Wall Street is now disappearing.

It appears certain that the result of the friendly study made of stock exchange activity in America by a Senate Committee will not be such as to bring about any major—or even minor—changes in stock exchange legislation in that country.

Wall Street has plucked courage and resumed the confident trend.

The Chairman of the General Motors Corporation predicts the emergence of the most prosperous era in US economy.

In London, too, the belief is growing that, of the gratifying sur-

plus disclosed in 1954-55 Budget and of even the more gratifying surplus likely in 1955-56, half will be utilised for tax-reliefs.

The economic pundits may disapprove; but the political leaders insist on this sop to the population on the eve of elections.

Indian stock exchanges could, therefore, take cheer in this.

Investment Background:

The special meeting of the shareholders of the Imperial Bank of India passed a resolution protesting against "the Government's decision to assume effective control over the Bank without giving an opportunity to it and its shareholders to express their views thereon".

The resolution has also stressed that Government should consider the following issues in the event of its deciding to assume effective control over the Bank:

(a) Compensation payable for acquiring shares should be based on the average market value of the shares over a fair period prior to February 1948 when the Government made its first announcement to nationalise the Bank as this declaration artificially depressed prices of the shares.

(b) Every shareholder should be given an option to sell his shares to the Government and/or the Reserve Bank of India at the valuation rate fixed.

(c) Compensation payable should be given fully in cash to all shareholders. If this be not acceptable to the Government, the compensation should be given in Government securities to be issued on terms which would give a yield approximately equivalent to the dividend they had been receiving from the Bank, after taking into account the fact that such dividend had always been free of income-tax.

(d) Compensation should be paid promptly to shareholders, within a period not exceeding three months from the date of the Government taking over the Bank.

Investment Notes:

It would be recalled that a circular letter, issued by the Ryam Sugar Company in the third week of March, stated that an extraordinary general meeting would be held on the 31st March for the purpose of passing a resolution requesting Begg, Sutherland & Company to resign from their office as managing agents of the company. It is now learnt that Begg, Sutherland & Company has been paid a sum of

BRANCHES AND AGENCIES THROUGHOUT INDIA AND THE EAST.

Rs 2½ lakhs as compensation. In accordance with the arrangements made by Begg, Sutherland & Company and the British India Corporation Limited with General Fibre Dealers Limited, the latter have authorised the Directors to pass on to the shareholders their firm offer to purchase the shares in the company. The terms of the offer are as follows:—(1) The price payable for each Ordinary Share will be Rs 20; (2) The price payable for each Preference Share will be Rs 10; (3) In all cases, the purchases at the above prices will include any dividends which may be declared in respect of the period ended 30th June, 1955 and (4) The offer is conditional upon its acceptance on or before the 31st May, 1955 and upon due delivery of the relative transfers and share certificates on completion of each purchase.

Tea shares are again the centre of attraction on the Calcutta Stock Exchange. Despite profit-taking at every rise, prices of selected scrips have continued to forge ahead. Cornering operations are still going on. There are also rumours of bonus issues by certain companies.

Engineering shares have continued to receive steady support. Scrips like Burn & Co., Jessops, Richardson & Cruddas, Indian Galvanizings, TEXMACOS and Indian Standard Wagons are keenly sought after. Optimism is based on the hope that larger allocations for industrial development under the Second Five-Year Plan will mean larger orders for all these firms.

Peermade Teas, on the Madras Stock Exchange, are presently quoted around Rs 47-8. The working results of this company, for the year ended 31st December, 1954, are very encouraging; and the dividend has been raised from 3½ per cent to 55 per cent. This is the highest dividend declared so far by any estate for the year 1954. The yield at the present price works out to 11.6 per cent—an attractive yield indeed.

Investment Briefs:

Jayshree Tea has announced a dividend of 10 per cent for 1954 as against nil in 1953.

Ramnugger Cane has reduced the dividend to Rs 1½ per share for the year ended 31-8-54 from Rs 2 per share in the previous year.

Sonal River Tea has announced the payment of arrears of dividends on the Preference Shares for four years ended December 1954, payable on or after the 18th April, 1955.

Pussimbling Tea has announced an interim dividend of 5 per cent on the Ordinary Shares for 1955 in addition to the payment of arrears of dividends on the Preference Shares for four years ended December, 1954, all payable on or after the 18th April, 1955.

Modern Mills, Bombay, have maintained the dividend at Rs 5 per share for 1954.

Valkundam Rubber, Madras, has raised the dividend from 20 per cent to 22½ per cent for 1954.

HIGHLIGHT

What are we to understand by the Yalta disclosures?
Do they signify an American frankness?
Or was it a leak to the Press consequent to pressure by Republican Senators?
Do they show that we live in a world of adolescents?
Or are they right in attaching a new meaning to Yalta even as Munich gained a new significance in the Hitler era?
These are some of the questions that Eavedropper deals with in this week's Gossip.

Andrew Yule Jute Group Results

Balance-Sheet Reviews:

BALANCE SHEET REVIEWS. Sleebuo THREE Jute mills, viz., Caledonian, Cheviot and Orient, in the managing agency of Andrew Yule & Company, have presented their reports and accounts for the half-year ended 30th November, 1954. The working results are very impressive, all the mills having shown an increase in sales as well as earnings. Caledonian has raised the dividend to Rs 5 from Rs 4 per share in the previous half-year and Cheviot to Rs 8 from Rs 6 per share. Orient has, however, maintained the dividend at Rs 5 per share.

The Caledonian Jute Mills Company has reported an increase in sales from Rs 47.40 lakhs to Rs 50.02 lakhs, while the net profit, before providing for Taxation and Depreciation, is substantially higher at Rs 4,63,481 against Rs 1,82,000 in the previous half-year. Apart from setting aside Rs 50,000 for General Reserve, the Depreciation amount has been raised to Rs 1.10 lakhs from Rs 1.05 lakhs and Taxation to Rs 1.50 lakhs from Rs 28,000. Even after these increased allocations, the directors have found it possible to raise the dividend from Rs 4 to Rs 5 per share.

In the case of Cheviot Mills Company, sales are shown higher at Rs 45.93 lakhs against Rs 44.38 lakhs. The net profit amounts to as much as Rs 4,95,155 as against Rs 2,64,220 in the previous half-year. As in the case of the Caledonian, the Depreciation amount has been raised to Rs 54,000 from Rs 50,000 and Taxation to Rs 1.93 lakhs from Rs 90,000. A sum of Rs 75,000 (nil) has been set apart for General Reserve. The dividend is increased from Rs 6 to Rs 8 per share.

The Orient Jute Mills Company has shown an increase in sales from Rs 42.73 lakhs to Rs 45.29 lakhs and in net profit from Rs 2,11,382 to Rs 4,56,447. The directors have, after setting apart Rs 1.25 lakhs for General Reserve, raised the Depreciation amount to Rs 48,000 from Rs 46,000 and Taxation to Rs 1.48 lakhs from Rs 66,000. The dividend is, however, maintained at Rs 5 per share.

Dividend Reduced by Jenson and Nicholson:

The affairs of Jenson and Nicholson (India) Limited continue to be satisfactory despite severe and increased competition. The improvement in the Tea garden business was maintained throughout 1954 and substantial orders were booked for protective coatings, though despatches were somewhat delayed towards the end of the year due to labour troubles on the River Transport routes serving Assam. With the result, a percentage of the orders was not actually despatched until early in 1955, so the full benefit of the upward trend of sales to the tea industry was not reflected in the working results.

The net profit for the year ended 31st December 1954, before providing for Taxation and Depreciation, is just maintained at Rs 7,61,697 as against Rs 7,61,322 in the previous year. The directors have, apart from setting aside Rs 50,000 for Contingency Reserve, raised the Depreciation amount to Rs 2.61 lakhs from Rs 2.27 lakhs and Taxation to Rs 1.77 lakhs from Rs 96,320. The dividend on the Ordinary Shares is, however, reduced to 6 per cent from 9½ per cent paid in 1953.

According to the directors' report, the company, during the year under review, maintained close contact with its Associates overseas, especially with the Central Research Laboratory in London, obtaining from them the very latest formulations for all types of protective coatings, thus enabling the company to maintain its position in the forefront of the Paint Industry in India.

£ R S

Savamalai Estates Reduce Dividend:

The decline in the coffee crop is reflected in the working results of Savamalai Estates during the year ended 30th November, 1954.

The net profit for the year, before providing for Depreciation of Rs 13,626 (Rs 7,887), amounts to only Rs 1,35,263 as against Rs 2,14,104 in the previous year. Due to this decline in profit, the dividend has been reduced to 25 per cent from 30 per cent paid in the previous year.

A Subsidiary Port for Calcutta

IT HAS always been the endeavour of Indian Finance to present constructive suggestions such as are capable of being translated from words or plans to deeds with relatively small effort; and a notable feature about them has been that, sooner or later, the authorities or interests concerned have accepted and acted on the suggestions. Very much in the news presently are two such proposals that were first mooted in these columns.

It may be recalled that we brought out an Iron Ore Supplement some time ago, in which two specific issues were examined. The first was the need to evolve a plan which would allow of sizeable export of iron ore—a commodity that India possesses in plenty, and one that is quite eagerly sought. Allied to this proposal was the scheme for a new port, which could handle, if necessary, iron ore exclusively; for, Calcutta as a port already has more work than it can handle efficiently or swiftly.

Primarily, our suggestion was one which sought to increase foreign exchange earnings of this country. The argument was that such earnings would, in a very short spell of time, not only cover the additional expense that would be involved in providing the facilities that would be required for export of iron ore of the size envisaged; we felt that, moreover, it would be possible for capital to be built up such that it could be the basis for new ventures in steel-making.

Subsidiary, but as important, was the need for a new port. Both the practical scheme for export of iron ore and a workable plan for a new port necessitated their examination from technical and detailed viewpoints. Consequently, we sought the help of Mr P. E. Mehta and his firm of Consulting Engineers. And, in the Iron Ore Supplement that was published, we presented a full scheme, in all its details, for the export of iron ore from India as well as plans for the subsidiary port that was called for.

We now understand that the scheme is receiving the close and studied attention of the Government of West Bengal. In fact, at an occasion in connection with the trip to an occasion in connection with the trip to Calcutta of the India Steamship vessel, Indian Reliance, the Chief Minister, Dr B. C. Roy, explicitly referred to the project that commended for a port such as Geonkhali is increasingly being recognised; and it now appears that it will be but a matter of time before the proposals originally made in Indian Finance will come to fruition.

It is, perhaps, the fact that the difficulties encountered in Calcutta port are increasing in number that has revived interest in the project. For, freight costs to Calcutta are rising directly as a result of the longer time it takes for a ship to discharge its cargo and take on fresh goods. Again, Calcutta is scarcely in a position to handle any increase in tonnage. Thirdly, there is the real attraction offered by the iron ore scheme as a source of revenue. But all three are reasons why a second port had seriously to be thought of.

It would be well to recapitulate the main features of the port of Calcutta as well as the advantages that are inherent in the choice of Geonkhali as the site of the new port. Calcutta is a riverine port and, consequently,

the draft is gradually going down such that it can handle ships of 7,000 to 10,000 tons only. Mechanical equipment at the port dates back to half a century. Loading is done largely by manual labour; and, at present, such loading is proving to be uneconomic. There is, then, that fact that, due to the high cost of dredging so that the river can be kept open the year round, and having regard to the slow rate of loading, Calcutta port is one of the most expensive in the world for ships to touch.

On the other hand, Geonkhali is favourably situated so as to handle bulk heavy cargo from the hinterland of Bengal-Bihar-Orissa. The Iron Ore Supplement suggested that minerals such as iron ore, coal, manganese and mica could be safely entrusted to the new port. Secondly, Geonkhali is immensely better located from the viewpoint of navigation. The new port could handle ships of far larger tonnage than presently touch at Calcutta. Thirdly, Geonkhali is not exposed to bore-

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

tides, and is an all weather port that is unaffected by monsoon storms. Fourthly, the new port is certain to be welcomed by shippers and exporters, who would find that there is a much quicker turn-round of ships.

It would appear, for these reasons, that the authorities would do well to expedite their consideration of the scheme for a mechanical loading station to be set up at Geonkhali. If anything should come of the many projects that are talked of for Durgapur, it would be invaluable to have ready the subsidiary port of Geonkhali; nor is it unlikely that the negotiations between Government and British steel interests will prove fruitful in that a steel plant will be decided upon for Durgapur in West Bengal. To such readers as would like to refresh their memories about the scheme in toto, we would suggest a re-reading of the Iron Ore Supplement, in which, we repeat, were provided the detailed plans that were drawn up by Messrs. P. E. Mehta.

The Big Nine

THAT there are now nine Indian Commercial Banks with deposits in excess of the twenty-crore mark, is a measure of the progress achieved particularly in the last decade and a half. In the late forties, the accelerated development was to some extent fostered by the then prevalent inflationary forces which, for obvious reasons, had to be regarded as malevolent. The 1954 results of the Big Nine are of significance as revealing the stimulus of genuine and wholesome expansionist influences. Inflation, while apparently conferring some ephemeral good, causes a great deal of permanent harm. Expansionism, on the other hand, has the healthy quality of self-propelling augmentation. 1954 may be hailed as the year which marks the materialisation of conditions conducive to the sure, confident and inevitable progress of Indian banks.

These conditions are evoked by the colossal disbursements made by the Centre and the States in the last four years in connection with the development projects embraced in the First Plan. Such disbursements in any country which has an integrated economy, a compact money market and a sensitive banking system would have had instantaneous results. In India, however, the return of funds from the point of view of the money market proper is tortuous, delayed and sluggish. What was a trickle in 1953 assumed the proportion of a fair-sized stream in 1954; and the present signs and omens indicate a spate, as the tempo of expenditure rises in the final year of the First Plan and is further accelerated during the execution of the Second Plan.

At the end of this article are given tables embodying the more important balance-sheet figures of each member of the Big Nine. Every bank has, in more or less degree, shared in the expansion of deposits and in the increase in net profits. Nearly all of them show increases in loans and advances, and yet have maintained higher cash-balances. The study of each one of the Big Nine confirms 1954 as a good year for Indian banking in spite of increased establishment expenses and higher rates paid for deposits. Allocations to Reserves

are less than what may be considered satisfactory in present conditions; and, towards this end, a more compelling initiative needs to be taken by the Reserve Bank so as to arrive at a workable convention as regards a ceiling on rates payable on deposits and a floor for rates chargeable on loans and advances.

There can be no doubt that a substantial addition to published reserves and a considerable strengthening of inner reserves are needed to help the banks face foul weather as well as fair weather with consummate confidence and without any ugly feature disfiguring the balance-sheet. An increase in earnings through an agreed maximum rate for deposits and a minimum rate for advances is also necessary to take care of the measures which (Continued on page 758)

Sir Winston Retires:

All speculation is finally ended; conjecture that Sir Winston Churchill would step down from his office of Prime Minister on Tuesday last was proved true, as he formally placed his resignation in the hands of Queen Elizabeth. Similarly, all speculation as regards the successor to Sir Winston has been laid to rest: Sir Anthony Eden has been named by the retiring statesman to succeed him. General elections are to take place soon: and Sir Anthony will seek the vote of his people for holding the office of Prime Minister. But it is pertinent and interesting to seek the reasons behind such speculation as obtained. Why is it that Sir Winston held on so tenaciously to his office, through periods in which it is now known that he was ill? Why was it that, at one time, it seemed as if the nominated leader of the Conservative party would be a person other than Sir Anthony Eden—who had been schooled for long years for the very job. And why, finally, did the Churchillian retirement come at this particular moment.

There would appear to be two reasons why Sir Winston's has been a delayed laying down of office. The first is the doubt that there could have been about the personal ability of Sir Anthony (then Mr.) Eden adequately to handle the task of leadership that would devolve upon him. Again, Sir Winston, perhaps, did not seriously consider any other Tory leader for the office. But, when Sir Anthony was in ill-health some time ago, it was inevitable that it should have given rise to conjecture about a successor other than Sir Anthony to Sir Winston. The second reason for the continuance in office of the retiring Prime Minister could very

Editorial Notes

well be the high hopes he had entertained of arranging a Big Three Conference. With world tensions on the increase, and with Britain fortunately placed, in as much as India provided a liaison to the other power bloc, it was natural that Sir Winston should have desired to crown his career with the achievement of a Big Three meeting which could have reduced world tensions. But the eclipse of Malenkov should have changed Sir Winston's mind; his hopes of such a top level conference should then have received a rude blow. Mentally, therefore, from the point of view of a crowning achievement, Sir Winston must have resigned himself to the improbability of such an opportunity offering itself.

We may now consider the reasons for the timing of the resignation. In the first place (as already indicated) Sir Winston could have no more been hopeful of a final achievement of compelling importance. In the second place, all doubts that he might have had about Sir Anthony Eden's ability to don the mantle of leadership must now have been dispelled. Sir Anthony handled the London Conference and the Paris talks with rare diplomacy. Finally, it must have been that the Tory party considered it of not a little importance to choose their time of election at a juncture when there was conspicuous lack of unity among the Labour party leaders.

All conjecture has been laid to rest by the retirement of a great statesman; it may still be that fate has appointed, to repeat that phrase, that crowning achievement. But, such a finale or no, Sir Winston will surely have done by his country in a most praiseworthy manner, in time of peace and in time of war.

Friendly events in Pakistan:

The appointment of Dr Khan Sahib as the Chief Minister of the West Pakistan Province could be interpreted from the standpoint of the Indian Union as the most friendly event which has taken place in the sister State ever since its inception. The extra-ordinary significance of this appointment derives from the fact that Dr Khan Sahib is the only Congress leader who has not abjured his loyalty to the organisation or to his old colleagues. He is sensible enough to understand that in the post-partition set-up, the practical manifestation of this association and allegiance will have to be very different from what it was before; and as a loyal citizen of Pakistan he is patriotic enough to put the interest of his own State above every other consideration. Such a leader could be most helpful for disentangling the relationship between the Indian Union and Pakis-

tan from the confusing cobweb of political and economic issue surrounding it. The Pakistan Governor-General's skill as a diplomat and a statesman is unquestionable. It is to be wondered if he has not chosen Doctor Khan Sahib as Chief Minister more with a view to straighten out things with the Indian Union than to enable the smooth plotting of West Pakistan as a newly-formed administrative unit. The postponement of the Ali-Nehru meeting has caused keen disappointment in the Indian Union. Dr Khan Sahib's new appointment must again clear the atmosphere and dispel doubts and misgivings. He can talk to Pandit Nehru in terms much more cordial than any other Pakistani national now in authority. The Pak Governor-General has also undertaken to issue a Constitution on his own initiative and submit it for approval by a representative body. The ignominious fate of the old Constitution will not be mourned anywhere, except perhaps in the secret conclaves of those who drafted it. Mr Ghulam Mohammad's new Constitution is bound to be devoid of

World of Finance

1954-55 Deficit Financing: Rs 116 Crores

THE Reserve Bank's returns for the week ended April 1 disclose year-end adjustments which are, necessarily, of considerable magnitude and which are, largely, determined by the Centre's and the Bank's requirements for cash in the till. There has been expansion of currency for Rs 29.80 crores against rupee securities; and, as the decline in investments held in the Banking Department is only Rs 1.80 crores, the increase in rupee securities in the Issue Department cannot be due to transfer from the Banking Department. It may, therefore, be inferred that ad hoc Treasury Bills are the backing for this currency expansion. This operation is pure and simple created money, and is in accordance with the Finance Minister's ways and means intentions. Cash for Rs 29.80 crores has, thus, been released to the Centre's deposits in the Banking Department which, after providing for year-end payments and the routine month-early disbursements, show an actual increase of Rs 5.57 crores to a level of Rs 65.02 crores. While the Central Government were obliged to strengthen their cash through created money, the Reserve Bank's need for cash in the till was of comparatively modest dimension. So, the expansion of currency to the extent of Rs 29.80 crores against rupee securities has been partly offset to the extent of Rs 19.87 crores against sterling securities. This accounts for a sharp rise in foreign balances in the Banking Department. The latter show a rise of Rs 14.62 crores to a total of Rs 97.77 crores. As the transfer of foreign securities from the Issue Department to the Banking Department amounts to Rs 19.87 crores, and as the foreign balances in the Banking Department reflect a rise of only Rs 14.62

crores, the net loss of sterling in the week may be presumed to be Rs 5.25 crores.

The net currency expansion is, therefore, Rs 9.93 crores. There has also been a small outflow of rupee coin to the extent of Rs 11 lakhs. In the result, total notes issued are higher by Rs 9.82 crores. Active note circulation is, however, higher by Rs 14.50 crores to a level of Rs 1,291.59 crores. This has caused a fall in the notes held in the Banking Department by Rs 4.67 crores to Rs 11.25 crores. The Reserve Bank may have allowed cash in the till to decline to just over Rs 11 crores in the hope that the Centre's balances next week may be replenished to the amount of Rs 5 crores against rupee coin for Rs 5 crores, which the Centre is entitled to tender to the Reserve Bank under the Act.

It will, thus, be seen that, in the last week of the financial year, recourse to created money has been had to the extent of nearly Rs 30 crores. So far as we can judge from officially published financial statements, created money in 1954-55 has been concentrated in the final quarter. It was in the week ended January 4 that there was the first recognisable evidence of created money. It is instructive to assess the total of created money in 1954-55's last quarter. On December 31, 1954, Rupee Securities in the Issue Department stood at Rs 417.75 crores. By April 1, they have gone up to Rs 533.75 crores. There are reasons to think that all this expansion has occurred against ad hoc Treasury Bills issued by the Government in favour of the Reserve Bank in pursuance of the declared and confirmed policy of deficit financing. Total created money in 1954-55, thus, is of the order of Rs 116 crores.

The original Budget estimates for 1954-55 provides for issue of ad hoc treasury Bills to the amount of Rs. 250 crores. The revised estimates brought down this figure to Rs. 220 crores. The actuals, as we have analysed them, show that ad hoc created in 1954-55 will be of the order of Rs. 116 crores. In 1953-54, a similar discrepancy (for the better) was shown by the actuals. The original Budget estimates for 1953-54 assumed that ad hoc would have to be issued for Rs. 110 crores; the revised estimates placed the figure at Rs. 80 crores; and the actual amount of ad hocs issued was a bare Rs. 20 crores. To the extent that, both in 1953-54 and 1954-55, the actual increase in ad hocs fell short of the original estimates by as much

as Rs. 220 crores, the position in 1955-56 is intrinsically strengthened.

In important respects, most of the changes in the Reserve Bank figures have taken place in the last quarter of the fiscal year. In the first nine months, the relevant figures have hardly any significance from the point of view of deficit financing. This is mainly because of the satisfactory yield from the New Loan and, possibly, also because of foreign aid receipts proving to be in excess of original assumptions. We give hereunder the more important figures in this respect:

	April 2, 1954	Dec. 31, 1954	April 1, 1955
(In Crores of Rupees)			
Issue Dept.: Active Notes	1207.04	1200.40	1291.59
Foreign Securities	658.15	663.15	626.98
Rupee Securities	421.34	417.75	533.75
Banking Dept.: Central Deposits	63.80	54.80	65.02
Other Govt. Deposits	38.95	16.74	61.50
Bank Deposits	42.00	59.13	66.27
Other Deposits	44.80	34.89	21.24
Balance Held			
Abroad	96.04	67.64	97.77
Other Loans and Advances	22.20	21.20	24.14
Investments	66.84	79.84	47.48

The returns of the Reserve Bank for the week ended April 1 bear the impress of the year-end adjustments of the Central Government. There has been an expansion of currency against ad hoc Treasury Bills to the extent of Rs 29.80 crores. On the other hand,

there has been a contraction of currency against foreign securities to the extent of Rs 19.87 crores. In the result, the net expansion of currency is of the order of Rs 10 crores.

Notes in circulation have risen by Rs 14.50 crores to Rs 1,291.59 crores. Notes held in the Banking Department have declined by Rs 4.67 crores to Rs 11.25 crores. On the assets side, foreign securities have declined by Rs 20.13 crore to Rs 626.98 crores, while rupee securities have risen by Rs 29.80 crores to Rs 533.75 crores. Rupee coin is slightly lower by Rs 11 lakhs at Rs 102.09 crores.

In the Banking Department, Central and Provincial Government deposits are higher by Rs 5.57 crores and Rs 1.32 crores at Rs 65.02 crores and Rs 61.59 crores respectively. Bank deposits are shown at Rs 46.27 crores against Rs 47.78 crores and other deposits at Rs 21.84 crores against Rs 21.53 crores. Balances held abroad have risen by Rs 14.62 crores to Rs 97.77 crores. "Other Loans and Advances" have shown a rise of Rs 27 lakhs to Rs 24.14 crores, which includes Rs 27.17 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 47.68 crores. Investments have declined by Rs 1.80 crores to Rs 47.48 crores.

Is The Bank Rate Effective?

By PAUL KENZIG

EVER since the bank rate was raised to 4½ per cent its effects have been awaited with considerable interest in political circles. There was, of course, an immediate reaction in the money market, where interest rates rose to above 3½ per cent and in the foreign exchange market where sterling became distinctly firmer. The publication of the March figures of the commercial banks was awaited with unusual interest, because it was expected to indicate whether and to what extent the higher Bank Rate was accompanied by a contraction of credit. These figures have now been published; and they show no sign of any credit squeeze.

It is true bank deposits, at £8,401.6 million, show a decline of £123.2 million on the month; but this may be the result of seasonal tax payments. Indeed, the amount of Treasury Bills held by the banks declined by over £100 million because the Treasury having received large tax payments was able to reduce the volume of the Treasury Bill issue. It remains to be seen whether, after the cessation of the seasonal tax payments, deposits will increase once more to the vicinity of their previous high level or even above it.

The fact that advances, instead of declining, showed an increase by £24.5 million seems to indicate that

the credit expansion has not even been halted, let alone reversed. Other things being equal, this should mean that, but for the seasonal tax payments, deposits today would be even higher than they were before the increase of the Bank Rate. From this point of view, at any rate, the increase of the bank rate seems to have been quite ineffective.

The reason why before the War bank rate increases were invariably accompanied by a contraction of credit was that they were regarded as a warning signal, as a result of which lenders were inclined to call in credits and lend less, and borrowers were inclined to repay credit and borrow less. Amidst the changed conditions the present substantial increase of the bank rate seems to have failed to produce this psychological effect. There has been so far no evidence of banks refusing credit to finance sound business propositions. There is an almost complete absence of complaints by borrowers on that ground. While in 1952 the credit squeeze resulted in a wave of complaints and criticisms, so far we have not come across any on the present occasion. Nor have borrowers been queuing up before their banks in their anxiety to repay their advances rather than pay the higher interest rates.

World of Business

A Square deal for the Workers

A few months ago the Indian National Trade Union Congress issued a memorandum on wages, which attracted wide attention in industrial circles. It was prepared by its former President, Mr Khandubhai Desai, who is now the Union Labour Minister. The memorandum asserted in brief that wages in industry were very low, that real earnings had shown no improvement in spite of higher production and that therefore there was an "immediate" and "irresistible" need for a substantial increase in wages.

Many thought at that time that the I.N.T.U.C. had exaggerated its case and that it was deliberately trying to under-estimate the improvement in the average workers' condition in recent years. The Union Minister for Labour Mr Desai must be having a kinder appreciation of the latter fact. "I have no hesitation in saying", Mr Khandubhai Desai told Parliament last week, "that so far as workers are concerned, after 1947 they have received a square deal". He added that real wages were "certainly higher" in 1955 than in 1939. He also observed that in recent months the cost of living has also fallen and that to that extent, real earnings have risen further.

The same thesis has been convincingly argued in a pamphlet "Industrial Labour in India" by the Employers' Association, Calcutta, published a few days before Parliament began its debate on the affairs of the Labour Ministry. The pamphlet establishes that the industrial worker today is not only better off than before but he is also able to enjoy a higher standard of living than the average citizen.

Analysing the wage structure in detail, the Study observes that the average annual earnings of workers in all industries have gone up from Rs 285 in 1939 to Rs 1,084 in 1952, of plantation labour from Rs 94 to Rs 400 and of coal-mining labour from Rs 124 to Rs 716. The earnings of cotton textile workers amounted to Rs 1,267 in 1952 against Rs. 320 in 1939 while for those employed in the engineering industry the rise has been from Rs 264 to Rs 1,371. There has been a significant increase in the wage bills of major industries. From Rs. 41 crores in 1939 the wage bill of "all industries" (excluding plantation and mining) has jumped to Rs 237 crores in 1953. Textile industries had the highest wage bill in 1952 at Rs 117 crores of which cotton textile alone accounted for Rs 83 crores. The increase for engineering industry has been from Rs 4 crores to Rs 48 crores; minerals and metals from Rs 1.78 crores to Rs 22 crores;

chemicals and dyes from Rs 1.42 crores to Rs 7.21 crores; plantations from Rs 1.42 crores to Rs 50 crores and coal mining from Rs 2.5 crores to Rs 25 crores. The disparities in the wage levels of different regions are also being steadily narrowed down.

Among the major industries, for the cotton mills of Bombay City, the average monthly earnings of the worker which was only Rs 32 in 1939 are now about Rs 147 inclusive of bonus, employers' contribution to provident fund, etc. The average annual income of the employee in a leading steel company has gone up from Rs 768 in 1939-40 to Rs 2,202 in 1953-54. Apart from an increase in regular wages, labour both in factories and in mines has also come to enjoy a progressive accretion of several amenities.

The Study examines the wage structure in relation to the cost of living and points out that real wages in India in 1953 rose by 14% compared with 1939. Facilities like free medical aid, greater leisure, free buses or houses at nominal rents, etc. have resulted in an additional increase of 5 to 6%. In other words, the worker's money wage along with his invisible income has raised his real wage by 20% between 1939-53. A stage has been reached when further increase in wages and amenity would depend primarily, if not wholly, on the contribution the workers themselves make towards larger output.

Copper Soars:

The price of Copper has been taking an upward trend during the past two weeks following the broadening of demand both at home and abroad. Inquiries from Germany, Italy and other Continental countries have lifted the quotation by £20 to £366 per ton and this, in turn, has pushed the rate in Bombay for electrolytic copper to Rs 245 per cwt. As these rates are lower compared to Calcutta, upcountry merchants are even reported to be buying their requirements in Bombay. Even at the higher prices, stockists are inclined to withhold supplies of wire and ingots.

The present upward movement in prices is to be attributed to a severe world shortage of the metal, resulting partly from flourishing demand and partly from a long series of strikes late last summer, and early this year in the copper belt of Northern Rhodesia. Moreover, two of the world's "big three" copper producers—the Phelps Dodge Corporation and the Anaconda Copper Mining Company—have increased the price of refined copper

by 3 cents a pound to 36 cents, effective from the 29th March. The Kennecott Corporation, the third major producer and the largest domestic miner in America, has, however, not taken any immediate action on a price advance, though many industrial authorities are expecting that Kennecott and other suppliers will match the new price within a few days. Again, the Chileans, who have been selling about half of their production in Europe at the much higher prices in effect there, are reported to have been pressing for higher prices for the other half, which has been going to the USA.

These factors have naturally created fear in the minds of the consumers. The brass and wire division of the industry in the USA has made representation to the officials of the business and the Defence Service Administration to reduce the export quota to half of the previous quarter, ban the export of domestic copper for the remainder of the year and stop the stockpile purchases. The present position of stocks with the USA fabricators is 323,425 tons as compared with 335,105 tons a month ago.

European demand still continues very high and Germany is reported to have paid very high prices due to her normal American supplies having been cut off in view of American restriction on exports of copper. It appears that there is no way out of the present tight supply position unless, in the interest of the stability of the market, the US Government make the metal available to the trade out of stockpile stocks. Though Indian quotations are below the London parity, the prospects of substantial imports from overseas countries are ruled out. Sheet-rollers have, therefore, pleaded for setting up a Copper Pool to ensure a fair price for the raw material.

Without Bias:

As we had observed on more than one occasion in recent weeks, it is refreshing to note that the public statements of the more discerning

spokesmen of the business community are being couched less and less in a complaining and more and more in a constructive tone. There is a great deal in recent legislative measures which the business community has not found possible to accept in a friendly spirit. But a certain willingness has grown of late to view these in proper perspective and to analyse without bias the aims and reasons of these measures. Mr Morarji J. Vaidya's Presidential address at the All-India Manufacturers' Organisation is certainly not wholly friendly to the Government. In fact he is very critical about certain aspects of Government policy and pleads for suitable adjustments therein so that incentives for private enterprise could be reasonably maintained. But he has something to say towards the business community also. He asks them to adjust their way of life and their actions and ambitions to the over-all needs of the country. It is profitless to examine the indictment implied in this plea. It is not a small or insignificant change that is called for. There has to be an entire overhaul in the outlook of this important group.

Only by achieving this change can the Indian business community ensure an effective role for itself in the future and receive due consideration at the hands of the State, which after all, as Mr Vaidya explains, is not so unfriendly as is frequently asserted. One point Mr Vaidya mentions is of special interest. Even "where the State itself is not the entrepreneur and the financier of its own volition, as in the public sector" the State has been the main provider of capital resources to major industries like steel, shipping and electric power supply. Objectively viewed this position should appear to be helpful rather than inimical to the private sector, and at least to some extent it neutralises the charge that the State is absorbing funds which ought legitimately go into investment in the private sector.

WORLD OF FINANCE

(Continued from page 704)

The statement of the Imperial Bank for the week ended April 1 shows a sharp rise of Rs 7.16 crores in deposits at Rs 231.28 crores. Borrowings from other banks have declined by Rs 3.00 crores to Rs 11.00 crores, while other liabilities, including inter-office adjustments, are slightly lower at Rs 1.62 crores against Rs 2.92 crores. On the assets side, cash balances have fallen by Rs 3.02 crores to Rs 15.38 crores with investments rising by Rs 69 lakhs to Rs 106.15 crores. "Advances and Loans" show a rise of Rs 20 lakhs at Rs 129.19 crores— "Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 23 lakhs and "Bills Discounted and Purchased" for a drop of Rs 2 lakhs.

There has been a further rise in bank credit of Rs 6.90 crores, according to the returns of the

Scheduled Banks for the week ended March 25. It is significant that the increase is mainly on account of "Inland and Foreign Bills Purchased and Discounted in India". There is a slight decline in money at call and short notice from Rs 12.03 crores to Rs 11.36 crores and in advances from Rs 514.17 crores to Rs 512.39 crores. Both Demand and Time Liabilities have shown increases of Rs 2.14 crores and Rs 1.08 crores to Rs 574.37 crores and Rs 376.88 crores respectively. In addition to the increase in liabilities as above, there is also an increase in borrowings from the Reserve Bank to Rs 37.07 crores from Rs 35.43 crores. Borrowings from the Imperial Bank have, however, shown a decline of Rs 1.68 crores to Rs 8.07 crores. Cash balances are slightly lower at Rs 77.79 crores against Rs 78.02 crores.

Curbing Speculation

MR P. DROLLAS, Chairman of the Calcutta Jute Fabric Shippers' Association, speaking at the annual meeting of the Association last week wondered "how the fortune of an industry of the size and national importance of the jute industry could be at the mercy of a few powerful speculators in Calcutta." He said that the speculative elements were financially very powerful and were able to manipulate prices as they liked. According to Mr Drollas, no remedy had been found so far. The establishment of a well regulated futures market would be expected to eliminate the evil considerably; but, he regretted that progress in this direction had been painfully slow.

The twin criteria for the prosperity of the jute goods industry are uninterrupted supply of goods to markets all over the world and reasonable price levels. The fact that, despite a rapid expansion in the world's economy in the last decade, jute goods have not been able to make much headway admits of only one conclusion, namely, that either one or both the criteria have not obtained during that period. It is an open secret that speculators have played an important part in making conditions extremely unstable from day to day. The speculators' vice-like grip on the markets has recently assumed alarming proportions, and the entire industry has

been made to pay heavily just because certain people with large financial resources have pitched up on the jute markets to satisfy their gambling propensities. No action can be taken against them; because their activity does not involve any infringement of the law. Only the Government are capable of taking effective measures which will drive away such anti-social elements; and it is their duty to protect the thousands of cultivators and workers who have a vital stake in the matter.

How we might stop such speculation is, therefore, a difficult question to ask. As Mr Drollas has said, the answer would seem to lie in the setting up of an establishment of a regulated futures market. Currently, however, interest tends to be on raw jute rather than jute goods.

For, we are coming near the end of the current season; and it will seem problematical, in the minds of some, as to whether or not we should be able to secure all the raw jute that is necessary to sustain the 48-hour week that our jute mills have been working on.

Word from Pakistan is of a mixed nature. But this much seems sure: provided the weather is favourable, sowings both in Pakistan and in India should be of a very large size whatever be the attempts of the Pakistan authorities to licence or

restrict the crop. As I understand it, we shall possibly end the current jute year with some carryover—not of negligible proportion—but of sizable proportion. The outlook definitely seems to be for bumper availability of raw jute in 1955-56. Although raw jute prices in Pakistan have firmed up, I do not think they should be interpreted to mean that there is a shortage of raw jute.

Some weeks ago, when raw jute prices began a slight movement downwards, hardly any purchases were in evidence. But it now appears that speculative circles are once again interested in raw jute. I fancy that raw jute prices should be equally steady; they might rise somewhat, but they would be purely nominal prices and not prices at which business would be done. Immediate outlook: I should think that there should be improved demand for hessians; we might keep barely steady in sackings; raw jute prices should be firm—something to be welcomed, because it will ensure that sowings will be very good.

X

Prices in the jute goods market last week displayed an irregular tendency. In the earlier sessions, sentiment was buoyed up considerably by persistent rumours of impending purchases by Argentina. The speculative elements promptly exaggerated the importance of the reports to push up prices to high levels. By Saturday, it was known that both sections of the market had received encouraging news. Sackings were cheerful because of moderate business having been done with Australia and West Africa. Reports had it that the Argentine Government had invited tenders

for hessian. On Monday, it was further reported that business to the extent of 8,000 tons had been concluded by Argentina with Continent and India had secured orders to the tune of 3,000 tons out of this deal. On Tuesday rumours were afloat that the Argentine Government were interested in a further quantity of about 20,000 tons.

It was, however, proved on Wednesday that the market could not thrive on rumours all the time. Even after three days, the reported Argentine interest had not progressed beyond the stage of rumour. Meantime, the attention of marketmen was diverted towards another important aspect of the industry, news of which was eagerly awaited. There were whisperings that March-end stocks had shown heavy increase both in sackings and hessians. In the continued absence of any foreign business, bulls were subdued. The bears were not slow to drive home their advantage. With the increase of bear pressure, prices especially in the sackings section were marked down and the undertone of the market at the close was quiet.

The following table shows the trend of prices during the week.

	Week's Opening	Week's High	Week's Closing
Hessian:	Rs. a.	Rs. a.	Rs. a.
40" x 10 oz.			
Ready ..	44 4	45 4	45 0
April-June ..	44 8	45 7	45 2
July-Sept. ..	44 2	44 12	44 8
Sackings:			
B. Twills			
Ready ..	124 12	126 4	124 12
April-June ..	121 0	123 0	121 8
July-Sept. ..	115 0	117 4	115 8
Bycres Green	123 12	126 0	124 8
Cornsacks ..	125 4	128 0	127 0
Cubans ..	148 0	149 8	147 8
A. Twills ..	155 0	157 0	156 0
L. Twills ..	139 0	141 0	140 0
D. W. Flour	146 8	148 0	147 8
Sugar bags ..	135 0	136 8	135 0

After an easier opening, prices in the raw jute market firmed up as mills began to show interest. Towards close good mill business was reported done in Local Northern Bottoms at Rs 35, Indian Northern and Dhuhri Bottoms ex-Agency at Rs 35-8, all per maund. Business was also reported in Pakistan N. C. Cuttings at Rs 135 and Habi Jabi at Rs 145 per bale for April-May shipment. Assam Bottoms April-May shipment was done at Rs 34 per maund throughout.

Weather reports from both India and Pakistan for the week-ending April 2, strengthen the earlier view that the new crop will be large. Though weather conditions have been mainly hot and dry in other jute growing areas, in Assam where sowings have taken place, the condition of plants is considered very satisfactory. The crop report for Pakistan for the same period says that weather conditions have been seasonal. It is said that cultivators are well ahead of last year as far as quantity of sowings is concerned. Plants are also reported to be in a healthy condition.

World of Tea

Rise in Exports

IT would be recalled that the Budget for 1955-56 prescribed a slab system for export duties on Tea in lieu of the existing flat rates. At the present time, a flat rate of duty is levied. While this is suitable for a period of relatively stable prices, it becomes harmfully rigid and inflexible when the market happens to swing widely. When prices fall sharply, a flat rate of duty becomes an excessive burden on the producer, and when prices rise rapidly, the Government fail to get their due share of export duties. A slab system was, therefore, intended to steer clear of both the difficulties. The principle of the slab system is that the duty will remain constant over a given range of prices, but will rise or fall as the price move up to the next higher price range or drop to the next lower price range.

The Government of India have now issued a notification fixing the price of tea for the purpose of determining the export duty, at Rs 3-8-9 per pound as against Rs 4-3 per pound announced on March 1, 1955. The export duty at this price will be As 8 per pound, being a reduction of As 2 per pound from the duty hitherto in force. The price is fixed on the basis of the weighted average price of all Indian teas sold in the London auctions during the previous month. This price will be notified on the first of every month. No deduction is made from the

London auction price for transport, insurance, etc., as these factors have already been taken into account in the fixing of the slabs in the Finance Bill.

Meanwhile, Ceylon's Finance Minister, it is understood, has advised the Ceylon Government against immediate reversion of export duty on tea from one rupee thirty cents to one rupee, though the trade has wanted this reversion in view of the falling prices of Ceylon tea. The Finance Minister feels that the price has reached the bottom of the decline and will not drop further. He is understood to have told the Cabinet that, while the sliding scale of duty is in theory a better levy, in practice it will lead to speculation and evasion of export duty. But the Chairman of the Ceylon Chamber of Commerce has urged the reduction of the export duty as an encouragement to the industry to build up reserves.

In the Export Sale held this week, offerings consisted of 21,600 packages, which were mainly end-of-season in character though quite a few useful invoices were still available. The market opened irregularly from 4 to 6 annas per pound easier and a good demand was forthcoming at these lower rates. There was strong demand for types suitable for Middle East and any teas with clean black appearance and tippy teas, whole leaf grades and

stylish BPS's were sold at dearer rates. All other offerings were several annas easier. No quotations were given.

In the Internal Sale, offerings consisted of 23,000 packages of dusts. There was a fair general demand at irregularly easier rates. The strongest feature of the sale was Medium Assam teas, black and grainy types being one to two annas per pound easier, while the smaller sorts had good support and were about steady. Medium Doars Dusts and Commons declined generally by As 2 to As 3 per pound. Upper Assam CT good liquoring teas were As 3 to As 4 per pound easier, while the fibrous ones were sometimes more. The weakest feature of the sale were the fibrous residue end-of-season types and these were very difficult of sale and sold at As 4 to As 6 per pound easier; and a good quantity of this type of tea was withdrawn without bids. Following rates were quoted per pound:—Medium Doars Dust Rs 2-2; Medium Assam Grainy Dust Rs 2-5 to Rs 2-5-6 and Best Assam CTC Dust Rs 2-15 to Rs 3.

Following figures will reveal the tea stock position in London:—

	(In Millions Pounds)
As on the 25th March, 1955	14.97
As on the 13th March, 1955	13.32
As on the 25th March, 1954	132.89
Landed between 19th and 25th March, 1955	15.16
Deliveries during same period	8.52

It is too early to predict the probable size of the next crop, but the possibility of a substantial increase in the next North Indian crop is considered slender, because of the drought condition prevailing in up-country areas and the difficulties of tea estates in getting adequate supplies of manure and coal due to transport difficulties. Also, there

have been no rains in Nilgiris, Wynad and Malabar since November, with the result that the South Indian crops have suffered severely. One estate, which had on record 35,000 pounds of tea in two months, is reported to have harvested only about 5,000 pounds in the same period. Almost all crops have been affected by drought. Ceylon is, however, expected to produce more tea in the current year than the exportable quota fixed under the International Tea Agreement.

In the Cochín market, offerings last week amounted to 14,50,000 pounds including 2,80,000 pounds of reprinted teas from the previous sale. The quality of tea from the Nilgiri district was generally well maintained, but that of other sorts showed a decline. There was a good but rather irregular demand. Best liquoring teas were keenly sought after and sold at fully firm to dearer rates and, where quality was improved, prices often advanced by As 3 to As 4 per pound. Medium teas registered a drop of one to two annas, while Low Medium descriptions were up to one anna per pound easier. Plain teas met with good demand and were generally sold at firm to dearer rates. Black Leaf Middle East type BOPs met with keen competition at As 2 to As 3 per pound above last rates, while similar types of Fannings were about steady. The strongest feature of the sale were Whole Leaf grades, particularly the better sorts, which registered advances of from As 2 to As 3 per pound. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 2-4; Medium-grown Travancore BOP Rs 2-6-8; Anamallai BOP Rs 2-12; Best Liquoring Nilgiri BOP Rs 3-7 and Back well-made OP Rs 2-15. Sale No. 8 will be held on the 19th April, 1955.

Australia

BANKING PROBLEMS FOR 1955

FOR almost two years the Australian economy has experienced relative stability, and the movements in economic indicators have reflected seasonal variations in a picture of general economic growth rather than, as in previous years, violent adjustments of prices and costs in conditions of mounting inflation. Yet immediate economic problems—the possible re-emergence of locally generated inflationary pressures on top of an already high cost structure, despite a deterioration in Australia's balance of payments—pose difficult questions in the formulation of banking policy which must be resolved not by indiscriminate controls but through imaginative support for those undertakings which can be established on a competitive basis and which will most readily advance the economic development of Australian resources.

The post-war boom reached its full stature during the 1950-51 export season, when wool prices reached unprecedented heights. Internally the wages-price cycle was boosted by the Arbitration Court's award of an additional £A1 a week to the basic wage and subsequent quarterly adjustments. At the end of the season the central bank held 45 per cent of the banks' total deposits in special account, and advances were equivalent to only 39 per cent of deposits.

A year later the scene was very different. Wool prices had receded to almost half their extraordinary record, and the unexpected delivery of an enormous quantity of previously unobtainable imports had drastically altered the balance of payments situation and at the same time transformed conditions of inflationary scarcity into almost embarrassing surpluses in many lines. To finance the influx of imports bank advances rose sharply until July 1952 when they were equivalent to 65 per cent of deposits, and the

necessary releases of special accounts brought the latter below 20 per cent of deposits. In spite of gloomy forecasts of unemployment and depression made during that winter, the export season opened buoyantly and by the new year economic activity entered that phase of steady growth which has been the outstanding feature of the past two years.

As the main force of the post-war inflation spent itself in the adjustments of 1951-52, some of the wartime controls over banking were relaxed. When the market yield on Commonwealth bonds rose to the vicinity of 4½ per cent in mid-1952 the Commonwealth Bank revoked the National Security Regulations fixing maximum rates of interest but asked the banks to observe 5 per cent as the maximum rate for overdrafts, without invoking its power under the Banking Act to control interest rates on banking transactions. Later in 1952 the specific directions of advance policy were removed and the banks were allowed once again to make loans according to their judgment of commercial needs. Yet liability to special account calls continued, although on a somewhat modified basis after the 1953 legislation whereby

calls were restricted, broadly speaking, to 75 per cent of increases in deposits. In the same Act the provision requiring approval of the central bank to the purchase by trading banks of government bonds was repealed.

These modifications gave the banks greater nominal control over their own affairs, but in practice consultation was continued with the central bank. In the more favourable conditions of general economic stability of the ensuing two years, demands for bank credit grew from all sectors of the community, even though in the earlier stages this trend was partly obscured as excessive stocks of 1952 were cleared to consumers. During 1954 bank deposits and advances rose to fresh peaks as the volume of business activity expanded and as rural industry experienced some lags in clearing their export surplus because of weaker market conditions. By September advances of the eight major banks had risen to a new peak of £A841,200,000, which surpassed even the level reached in mid-1952. Although liquidity was not as tight as at that period, advances represented 59 per cent of deposits, and the banks' free liquid resources were

Britain

ECONOMIC SURVEY REVIEWS PROGRESS IN 1954

THE underlying strength of Britain's economy has been proved by the degree to which output and productivity have been raised in the last two years. Production continued to expand in 1954, employment was at a record level, the standard of living rose, there was an increase in the rate of industrial investment, and personal savings were maintained at a high level. Major programmes of new investment were undertaken in atomic energy as a source of power, in iron and steel, roads, and railways.

These are some of the encouraging features of Britain's recent economic progress reviewed in the 56-page Economic Survey for 1955, published in London on March 29 by the United Kingdom Treasury.

The Survey is less favourable when it gives, for the first time, details of the balance of payments for the second half of last year. This showed a slight overall deficit of £12 million including defence aid, but, taking the year as a whole in overseas trade and payment, the United Kingdom earned a substantial surplus. In fact, if defence aid, is excluded, the surplus was roughly the same as in 1953.

Although the position of the rest of the Sterling Area was less favourable than in the previous year, progress was made in building up the gold and dollar reserves, despite substantial debt repayments.

Dealing with the balance-of-payments situation, the Survey points out that Britain bought £68,000,000 worth more goods from abroad in the second half of last year than in the first. This is due partly to the natural result of rising industrial production and also to a worsening in the terms of trade.

After outlining the reasons for the fall in the gold and dollar reserves and the weakening in market quotations for sterling in late 1954 and early 1955, the Survey reviews the vigorous measures taken by the Chancellor of the Exchequer early this year to remedy the situation.

At the end of January the Bank Rate, which had been reduced to 3 per cent., the previous May, was raised to 3½ per cent., and a month later there was a further increase to 4½ per cent.

These and other corrective measures were designed to moderate the expansion of home demand, and thereby to limit demand for imports and give added encouragement to exports. On Britain's export trade, the Survey records the fact that overseas sales rose by nearly 4 per cent., between 1953 and 1954, reaching the highest level ever. The volume of the increase between the two years was 6 per cent.

Looking forward, the Survey sees better opportunities for raising exports than were discernible a year ago. This appears to be particularly true of North America, where busi-

ness activity has increased in recent months, and of Persia and Egypt, where recent agreements have improved trade prospects. Several colonial territories should also provide larger markets for exports as expenditure on development increases.

The Survey draws attention to the role played by Britain in the liberalization of trade when it refers to the assistance given to international trade by the policy of cutting down restrictions pursued by the United Kingdom as well as by other countries in Western Europe and the Commonwealth.

Turning to the increase in production, the Survey shows that last year output rose in all the main sections of the economy in response to higher demand. Gross domestic production rose by 4 per cent., and industrial production by 6½ per cent. One-third of the rise in output was due to the rise in exports, and one-sixth due to increased investment in buildings.

The Survey says there is a good deal of evidence to suggest that the demand for investment by private manufacturing industry took a fresh upward turn last year. Fixed investment of all kinds rose by 5 per cent., between 1953 and 1954 (an increase of £125 million, at 1953 prices). A little more than half this increase was in plant, machinery, and vehicles, and rather less than half in new buildings. Most of the latter was in commercial and industrial building.

So far as the future is concerned, the Survey believes a further increase in investment may be expected in iron and steel, motor manufacture, chemicals, and synthetic fibres.

At home, there was a 4 per cent. rise in the volume of consumption. The main categories of goods which sold well in 1954 were household articles and motor-cars. Purchases of clothing and food were also up, reflecting a generally higher standard of living. In fact, consumption of food, in terms of energy value and fat content, was the highest for any year on record.

At the same time, thrift was not neglected and personal savings were well maintained. In the last two years, between 7 and 8 per cent. of total personal income remaining after tax deduction was saved.

On incomes, the Survey says the rise in productivity in manufacturing industries last year kept pace with the increase in earnings, so that labour costs per unit of output remained roughly constant.

At home, the chief object of the Government's economic policy is to ensure the provision of adequate incentives for long-term expansion. This involves the maintenance of full employment and of the kind of economic climate that is stimulating to industrial development and research. Coinciding with this, the Government's external policies aim at promoting the growth of international trade, since it is recognised

Russia

AGRICULTURAL CRISIS IN RUSSIA & EAST EUROPE

By W. N. Ewer

Communist satellites follow Moscow fashions with the fidelity of dressmakers copying the latest Paris models. And M. Nagy in Hungary, like M. Malenkov in Russia, is eased out of power without being immediately disgraced or accused of treason.

But in this case, there may be good reason for the pattern which has been adopted. It may well be that, both in Moscow and in Budapest, it is realized that the policies associated with the names of Malenkov and Nagy had found great popularity, that their reversal is a delicate operation, and that any immediate, drastic action against two popular figures (Beria, on the other hand, was generally hated) might provoke more trouble.

And that, no doubt, is why in all recent policy pronouncements the peasantry have been carefully reassured that the concessions made to them are not going to be revoked. For, perhaps, the biggest headache of Communist leaders, both in the Soviet Union and in the satellite countries, is the deepening crisis in agriculture, the failure to produce adequate amounts of food for the needs of the growing urban population. And to create new resentments among the peasants, expressed in a further falling-off of production, might be to turn crisis into disaster.

This, one may assume, is one of the reasons for the latest Soviet edict—signed by both Prime Minister Bulganin and Communist Party Secretary Khrushchev—promising decentralization of controls and of planning, and wider freedom for collective farms to run their own business of agricultural production in the light of their own skills and their local expenditure.

But I think that it has another significance. It is the mental habit of Soviet leaders to look for quick, drastic, and immediate cures for economic ills (which, by all Marxist teaching, should not exist at all). And ever since the war, they have been looking for some spectacular method of increasing agricultural production.

There was 'the Stalin plan for changing nature'. There were the great Lysenko discoveries, with their promise of fantastic crop increases. There were the 'great projects' for irrigation. There was M. Khrushchev's idea of industrializing agriculture and collecting the peasants into agricultural townships. There was the plan for cultivating new millions of hectares of the 'virgin lands' of Kazakhstan and Siberia.

Some of these have been forgotten. Some, like the 'great project', seem to have been delayed. Some, like those in the 'virgin lands', are encountering unforeseen difficulties.

I am not suggesting that all have been complete failures. But none has begun to solve the problem. Now, a new remedy—decentraliza-

tion—is suddenly evolved and decreed. It might, if it is really applied, prove more effective than its predecessors. That is, if the collective-farm 'chairman', to whom it seems authority and responsibility are to be allotted, proves capable of shouldering them.

The suddenness of the new decree and its drastic character are one more proof—if proof were needed—

(Continued on page 712)

Pakistan

PAKISTAN'S federal budget for fiscal 1955-56 envisages a deficit of about Rs 1.4 crores, with revenue receipts estimated at Rs 119 crores and revenue expenditure at Rs 120.4 crores. Announcing this in a broadcast speech, Mr Mohammad Ali, the Finance Minister, disclosed as to how the Government had in view the gradual conversion of this deficit into a nominal surplus of Rs 5 lakhs through fresh taxation by way of increase of excise duty on cigarettes and rayon, and the reimplication of the export duty on tea. A striking feature of the budget on the expenditure side is the high proportion of defence expenditure in relation to the country's national income. Thus, the overall defence expenditure under the capital and revenue taken together stands at Rs 80 crores and would continue to be met from Pakistan's own resources. In addition, further expenditure would be incurred to the extent of Rs 8 crores for the reorganisation of the Defence Services in order to make use of the equipment received from the USA under the Military Aid programme.

It is interesting to compare the new Budget with the revised estimates for the current year. According to these revised estimates, revenue receipts are expected to amount to Rs 115.4 crores as against Rs 119.5 crores originally estimated, while the expenditure has gone up from Rs 111.4 crores to Rs 117.9 crores. The resultant net deficit has been attributed to grants-in-aid of Rs 3 crores to East Bengal and Rs 1.5 crores to Pakistan Punjab for flood relief.

While there are taxation proposals for increases in the rate of excise duty on cotton and rayon, reliefs in the fields of customs and duties for the next year include reduction in excise duty on coarse cotton cloth by 50 per cent to provide relief to poorer sections; exemption from export duty on rice, raw hides and skins, and jute ropes with a view to encouraging exports and ensuring better returns to the producer; and also an enhancement from 20 per cent to 44 per cent of the rebate in import duty on the component parts of radios.

A significant aspect of East Pakistan's budget, on the other hand, is that, despite a budgeted deficit of over Rs 2.7 crores, the Government have no new taxation measures in view. Excluding the receipts from the Central grants for social uplift

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It

FOLKS friendly to America find themselves confronted every now and then by American actions that they find exasperatingly difficult to assess adequately. In saying this, I have in mind not so much their alleged unpredictability (alas, no longer a fact) as the difficulty of making up one's mind about their precise effect and their immediate and ultimate justification as valid moral or political acts. From one point of view, the Yalta disclosures, for instance, are not only an amusing event, but an instructive event in that they have shown up the vagaries of human leadership, and the anarchy of political motivation with its incredible mixture of cynicism, naivete and idealism. There are elements in the Yalta documents that properly belong to the ruralian politics of comic operas and they reveal sufficient seaminess to make a politically squeamish man sick with disgust. To the observer more robust and more used to the spectacle of the involutions of the power game seen from the inside, the picture that emerges is not one drawn in contrasting black and white, but a blur of confused motives. He is less inclined, therefore, to draw morals about the duplicity in current political motives, the disparities between concurrent public professions and private confidences: after all, many a man not necessarily a politician permits himself a freedom of expression in the privacy of the table talk that he scarcely allows himself in public (nevertheless, I shall never feel the same about Roosevelt after reading about his alleged hope that Marshal Stalin would again propose his toast to the execution of 50,000 officers of the German Army. It is not the blood-thirstiness of the suggestion that shocks me, nor even the ironic moral light it throws on professions of "four

freedom", but the infatigability of the suggestion). Again, it is not even the chasm that divides acts and professions, both private and public, that is new in these documents. For, many a politician is a helpless victim of expediency. What strikes one about the revelations is the co-existence in the participants of the conference of political cynicism and political idealism, and even the motivation of the former by the latter. Clearly, Machiavelli and his political ambivalence are a recurring and even permanent motif in political psychology. How else can one explain Roosevelt bartering away whole series of concessions to Stalin in return for Russian participation in the Japanese war, which he obviously wanted only in order to save American lives? Even at the moment that the United Nations was being formed, the Big Three were preoccupied with the Veto that established their own special importance. Clearly, these not wholly insincere architects of world peace based on justice and equality were of the view that all animals are equal but some animals are more equal than others. From the strictly moral point of view, therefore, the washing of this particular diplomatic underlinen in public is an act of courage. America, the enfant terrible of international diplomacy, has acted on a characteristic elemental impulse, which, while it has set a flutter in diplomatic and political dovescotes, has had the effect of bringing to light the complicated impulses behind political settlements.

★

But, then, the pranks of the great god Pan affirming the Life Principle are welcome only as a whiff of anarchy in a life which is ordered on a series of shifty compromises and shame-faced coming to terms with facts. The Holi is but an interlude in a life dull, useful, and laboriously fruitful. We look wistfully at the shirts splashed with colour, but don ourselves in grey flannels and go about our dull ways. An year in which all days were New Year's days would destroy society. And, to those actually in the power game, the rules of the game have to be observed. To these men, in all the chancelleries of the world, the Yalta papers came as an embarrassing surprise. Small wonder that

they were not inclined to be as detached about them as I have tried to be in the earlier paragraphs. They point to certain facts which certainly make the disclosures (if you accept the rules of the game) not only a diplomatic faux pas, an irresponsible act of political immaturity, but an act even more diabolical.

★

Certainly, the circumstances of publication of these papers were curious in the extreme and, in some ways, fantastic. Even now, the mystery is not entirely cleared up. It is well known that there has been pressure from Republican sources for the publication of the Yalta records for what appears on the balance of evidence to be purely party-political reasons. The late Republican Senate voted the funds for the purpose in the hope that the facts revealed may come in handy for the elections held last year. For some reason, this could not be done in time for the elections, and then came British objection. (Incidentally, I shouldn't have cared, were I an American, to have been anywhere within earshot of Churchill when he first heard of these disclosures despite British objection. I am sure that what he said then would have been more damaging to Anglo-American relations than anything revealed by the papers themselves! which shows, I suggest, the limitations of these disclosures as indicative of national policies). It would appear that the State Department then offered to give the documents confidentially to certain senators, including some Democratic senators. The offer was, not unnaturally, rejected. And now comes the famous "leak" to The New York Times. It seems rather curious that, in a country whose passion for investigation is pathological, no one has bothered to find out who leaked it. Anyway, this leak, it is said, took the matter out of the hands of the State Department, and the entire set of documents was released to the press.

★

I dare say this is what happened, since this is the sort of thing that is happening all the time in America. Americans have certain views on the responsibilities of the press, and what constitutes news and methods of getting it and presenting that are somewhat different from what obtain in certain other

old-fashioned countries. But the whole background of agitation for the disclosure of the Yalta Minutes and Mr Dulles' quite unaccountable show of temper at the airport at what was, after all, a pertinent question of topical importance, seem to point to an inference that "the leak" is not the whole explanation. To clinch the issue, a report carried by Reuters puts an even more sinister meaning on the disclosure. According to the report, in a letter to the Democratic Senator, Mr Hubert Humphrey, the Department said that Mr Dulles made up his mind on March 15 to authorise the publication and officially confirmed it on March 16 (that is to say, long before the actual date of disclosure, but perhaps before British objection). According to the spokesman, "a factor which influenced the timing of the release was that it was certain that German and French ratification of Paris accords would lead to more intensive consideration of another conference with the Russians. It was obvious that the full story of Yalta illuminates graphically the dangers as well as possible values of such talks."

If we are to assume that the report is correct (there is no particular reason to doubt it), then the last sentence is revealing with its unqualified asseveration of the dangers of talks with Russia and the insinuation of doubts about the "possible values of such talks." Irony can hardly be more heavy-fingered than in the last phrase. In the context of this revelation, it is hardly surprising to learn that Mr Dulles thinks that the high level talks that Mr Eisenhower referred to last week may take months to materialise. The plain fact, then, seems to be that there are powerful forces in America which simply fail to see the issues of the cold war as matters that admit of negotiation at all. Arising out of this is the desire to discredit the principle of negotiation itself by

showing up an earlier agreement as a fraud on the peoples of the world and as an ignoble playing into the hands of the Communists. The principle of secret negotiation and the whole apparatus of diplomatic frankness behind closed doors are, therefore, to be attacked on specious grounds of democratic candour, of "open agreement openly arrived at" and so on. Mr Harold Nicholson has written an entertaining and instructive little book on the subject, in which he is quite scathing on this kind of diplomacy. As anyone who knows anything about international affairs knows, negotiation is the only way to settle affairs if the alternative of war is to be eschewed, and negotiation implied privacy, give and take, and calm appraisal of issues involved in a spirit of alert but

accommodating self-interest. Any attitude of austere self-righteousness as was exhibited by the US during the Geneva negotiations is proper only to a world wholly populated by either saints or adolescents.

★

About the contents of these papers themselves, there is little of substance that was not already known either by the actual acts of the parties concerned in pursuance of the agreement, or by revelations in the memoirs of persons connected with the conference. There is a lot of material in the present disclosures, which are meat and drink for a sensation-hungry press, little tittle-tattle about jokes cracked and anecdotal backchat. But the outlines of the main agree-

ments have been known for quite some time. Historical evaluation of these will certainly be, as Mr Dulles said, a matter for debate through the ages. But, already a section of the American press is investing the word Yalta with all the associations that went with the word Munich, and expressions like betrayal and sell-out are being freely used. But, I think, there is not much evidence that things might have been different had the Yalta agreement not taken place. On the four specific questions on which decisions were arrived at—Poland, Germany, United Nations and the Far East—it could not be said that the seeds of the subsequent events were sown exclusively at Yalta.

★

The original impulse for the conference was itself unexceptional. About the time the war against Germany was drawing to a close, Churchill was bothered by a recurring misgiving that "the end of this war may well prove to be more disappointing than the last." Therefore, he made Roosevelt and Stalin agree to a conference in which final operations against Germany were to be coordinated, an agreement on post-war Europe, with special reference to Germany, was to be forged, the principles of a World Organisation were to be agreed upon, and, finally, the terms on which Russia is to enter the Far Eastern war were to be finalised. In its hindsight, and in its changed loyalties, the present generation sees the concessions to Russia at the conference as unnecessary. The answer to this kind of criticism is, first, that, in the prevailing atmosphere in 1945, these concessions were inevitable. I agree, historical judgment does not make extenuations for lack of foreknowledge. So, the second defence is, Yalta did not give anything that the Russians might not have had if there had been no Yalta. Poland, for instance, was more or less entirely occupied by Russia at the time of Yalta. What Yalta did was to see that this occupation did not lead to permanent annexation, at least nominally. Again, in its self-induced forgetfulness of the excesses of Germany, the present generation can hardly recall that, in 1945, in the estimation of every one that thought about these things, Germany was a far greater danger than Russia. Even today, there are people in England and France who are

Gateway Gossip

Look Before You Leap

IT had all the poignancy of a funeral. The chief mourner was Sir Vithal N. Chandavarkar. The near and dear ones were present in full force, amidst touching scenes. Yet, it was not exactly the funeral. It may not be even funeral-eve. That is to say, if the chief mourner's moving words were appreciated in the real spirit by Authority, and if their logic and force were to have their true effect, there must be a last-minute reprieve for the Imperial Bank of India.

To deserve the death sentence, what exactly has the Imperial Bank done? So guilty of gross mismanagement that it must submit itself to this punishment? Or so renowned for its successful management that it must submit itself to this sacrifice?

Is the status of the Imperial Bank so abject and forlorn, is it so friendless, that, ex parte, without notice, without an opportunity to know its impending fate and without any effort to avert it, it can be doomed to extinction?

Yesterday, it was a thrice-pulsant institution, India's biggest bank, the sole and trusted agent of India's central banking institution. Now lies the bank, condemned and doomed, none willing to hear its plaints, none to respond to its pleadings.

The rise, growth and fall of the Imperial Bank was described by Sir Vithal at a special meeting of the shareholders called for the purpose of considering the situation arising from the Government's declared intention to secure control over the Bank.

Sir Vithal, as everyone will admit, is no professional agitator, no political firebrand. He is conservative by instinct and training, cautious in judgment, circumspect in assessment and meticulously correct in language. If such a man were to make grave allegations and use strong language, he must needs compel attention. New Delhi must needs pause and take notice.

In effect, the charges against the Government are: superciliousness, breach of pledges, hasty decision, and suicidal policy.

It was on December 20, 1954 that the morning papers contained the startling disclosure of the Government's decision to "nationalise" the Imperial Bank. It was also on December 20, 1954 and also from the morning papers that the Directors of the Bank came to learn of this decision.

No prior consultation. No, not even a hint in advance of what was coming. It was a bolt from the blue. The utter inconsiderateness

(to put it mildly) of the Government is incredible, except that it is Sir Vithal who has described the episode in some detail:

"It came therefore as a complete surprise to your Board, when they were made aware of Government's present intentions by the Press Note of the 20th December, 1954. This Press Note which was based on the Report of the Committee of Direction of the All-India Rural Credit Survey was the first intimation your Board received on the subject and it is a matter of great regret that no prior reference whatsoever had been made to them in regard to a scheme with such far-reaching consequences for the Bank, in spite of assurances given in the past that the Board would be given an opportunity of expressing their views before action is taken on any proposals which might affect the Bank."

This outrageous discourtesy is shown to a board which boasts of such distinguished leaders as Sir Vithal, Sir Badridas Goenka, Sir Biren Mookherjee, Sir Bejoy Prasad Singh Roy, Hon Sushil Sinha and, by no means last, Mr Hundoo, the first Indian to be Managing Governor of the Imperial Bank. The public will, certainly, like to know what steps the directors took to avenge the insult.

The Press Note of December 20, 1954 was a bolt from the blue, not only in the sense that it took the directors unawares who were denied the courtesy of advance information, let alone advance consultation, but in the sense that earlier pronouncements of Finance Ministers had lulled everybody into the false security that nationalisation of the Imperial Bank was unlikely.

This question first came into prominence in February 1948, when Sir Shunmukham Chetty, Finance Minister at that time, announced in the Parliament that it was the Government's intention to nationalise the Reserve Bank of India and the Imperial Bank of India. The Reserve Bank was, in fact, nationalised in due course of time. The impression grew that the project of nationalisation had been abandoned—at any rate, for the time being—so far as the Imperial Bank was concerned.

The Board of the Imperial Bank submitted a memorandum in March, 1948, and, likewise, in various discussions between them and the Government, they were able, in Sir Vithal's words, to convince Government that criticisms levelled against the Bank were unfounded and that nationalisation was not only unnecessary but positively harmful to the interests of the Bank and the country.

Dr John Matthai, in his regime as Finance Minister, confessed that he had once said hard things about the Bank, and made amends, in a

speech on March 20, 1950, by tendering a gorgeous bouquet. Dr Matthai said:

"I must bring to the notice of the House my own experience last year. We were faced in the course of 1949 with a very acute crisis with regard to certain banks in the country. It gave me a very anxious fortnight and in the end what enabled me to find the assistance required for stopping the run that had taken place in respect of certain banks, was the prompt assistance that I was able to secure through the Reserve Bank from the Imperial Bank of India."

Sir Chintaman Deshmukh, the present Finance Minister, was even more generous in his tribute and more precise in his assurance:

"I believe that quite a substantial portion of the shareholding in the Imperial Bank is now owned by Indians and the process of the nationalisation of the staff is going on apace and in a few years' time we have reason to believe that there would be hardly any non-Indian officers left. I think it is a very fine instrument of banking, technically considered, and it is going to be amenable to our control as the years pass by. It seems prejudicial to our own interests to take any hasty action which will impair the use of that instrument. In the banking system of the country I think the Imperial Bank forms the backbone and it is in our interests to see that nothing is done to impair the value of that leavening in our present banking system, especially as we are making attempts to see that banking is consolidated on sound lines with the help of the new Banking Act."

So, to the question whether the death sentence now passed is for any act of misdemeanour or mismanagement, the authoritative answer is No.

On the other hand, the Committee of Direction of Rural Survey seems to have been led to make this recommendation on account of its view that the Imperial Bank is an eminently suitable agency for providing rural credit facilities and for promoting co-operative banks. The present decision of the Government is directly based on this recommendation of the Committee of Direction.

The Committee's approach to this matter is unrealistic; and there does not appear to be any reason why the data on which it bases its conclusion should be considered adequate or even relevant. As Sir Vithal points out, a study of the questionnaire of the Committee of Direction does not indicate even remotely that the Committee's enquiries would extend to an investigation of the future status and constitution of the Imperial Bank, let alone the submission of proposals involving radical changes in the Bank's constitution.

On the other hand, again in Sir Vithal's words, it is difficult to see what justification there can be for an institution primarily engaged in commercial banking to be merged into a system of co-operative banking for the purpose of revitalising the latter or for

expanding rural credit at the possible expense of commercial banking. From a perusal of the data provided by the Committee of Direction, a case may be made out for the creation of a separate State-assisted Bank to provide agricultural credit and to assist co-operative banking, but why should the entire status of the Imperial Bank be changed for the purpose of achieving this object?

Mr Pranlal Devkaran Nanjee, as sedate a banker as you would like to meet, cannot also see the necessity or wisdom of removing "from the field of banking some of our well-known, popular and successful banking institutions"; and his plea is that the objects which the Committee of Direction have in view will be served by the establishment of an All-India State Agricultural Bank. Tried and proven in the field of commercial banking, the Imperial Bank's staff have to learn rural credit and co-operative banking from the letter A. Why not set up a State Agricultural Bank with staff at a higher level of the requisite knowledge by harnessing, in its guiding personnel, such veteran co-operators like Mr V. L. Mehta?

While the Imperial Bank will be a novice and a rank amateur in rural India, its new tasks and responsibilities will create a vacuum in a field in which its staff are now operating with the competency acquired by extensive training and strengthened by traditions built over one hundred years. What will undoubtedly be an irreparable loss to the commercial banking world will be in no way a worth-while gain to rural banking. There will be as much sense in transferring the Chief Surgeon of the All-India Cancer Hospital to the charge of the dispensary in Kuchnahi village!

There has, doubtless, been indecent haste, unjustified hush-hush, and a total failure to visualise the full implications. To convert a well-established, well-organised, well-directed and well-staffed institution with a personality of its own and with a traditional field of specialised service into a shape and form and role which is bound to be a distortion and contortion—well, there is no economic justification or even political sense in a course of action which originates in accumulated prejudices and predilections.

There is no need to look upon the Imperial Bank's nationalisation as a settled fact. Retracing of steps, where a definite wrong step has been taken—it involves no loss of prestige. It is just, common sense. More, to own a mistake is a sign and symbol of courage and character.

Gateway Notes

A Necessary Revival

An institution as old as India's social history, the village Panchayat retains a character, essentially modern in its implications. The Constitution enjoins the State Governments to organise Panchayats and enable them to function as units of self-government. Almost all the States have passed Panchayat legislations; some have even granted judicial powers, albeit in a limited sense. The Planning Commission have quite fittingly conceived the Panchayat as an agency for development and village planning. But how far it lends itself as an effective medium for developmental activity is quite a different question. Introducing a Bill that provides thirty per cent of the land revenue as grant to Panchayats, Bombay Minister Mr Y. B. Chavan found it necessary to comment that village Panchayats were sitting idle when the Government were spending crores of rupees on rural development. Anyway, the Minister's remark is a sure indication that all is not well with the working of the Panchayat. It may be admitted that the implications of its new role as an agency for planning from below have yet to be worked out. But its inherent vitality can but thinly veil certain glaring limitations arising as much from lack of training, guidance and supervision and the existence of factions as from inadequate resources. The existence of authority without work, or scope for it, has made many a Panchayat the hotbed of rivalry and consequent demoralization. Functional efficiency apart, it serves only about half per cent of the total number of villages in India. Only in a few States, namely, the Punjab, UP, Madhya Bharat, Mysore and Travancore-Cochin, every village has the benefit of a Panchayat. What it can do, if properly directed, is strikingly testified by the Shramdan Campaign in UP. Besides, as a device for equitable power distribution, a training ground for local leadership and an effective means of decentralisation of administration, its importance cannot be over-emphasised. The Local Self-Government Ministers of the various States will have to set about organising Panchayats in a more scientific way, giving a lead where necessary and in seeing that grants are fully and fruitfully utilised.

★

Tatas show the Way:
Industrial Relations acquire a fresh import as the old view that productivity depends almost entirely on the capital employed and the productive techniques used, gives way to accommodate a multiplicity of causes. Today, what may be called the human factors are accepted to be at least as important as the

technical factors. This is what Mr J. R. D. Tata meant by his terse statement that the management of men has become even more important than the management of machines. Inaugurating the first Tata Management Conference and Seminar on Industrial Relations, Mr Tata said: "we are conscious of the questions that beset us in the realm of industrial relations and not at all sure of our answers. If we knew the answers, we would not be here". The Tatas have the reputation as fair and enlightened employers. The present venture by the Industrial Relations Section of the Tata Industries is striking proof of the energy and receptiveness to new ideas on the part of the management. Maintenance of industrial peace which is of primary importance in a planned economy is impossible without giving labour an increased share in the working of industry. The strength of collective bargaining, the effectiveness of joint consultation, the need for proper development of Management Leadership, the reciprocal nature of the obligations of the management and the trade union, these have been conceded on all hands. A favourable attitude on the part of workers towards greater industrial productivity can be created only by bringing home to them that the interests of the employers, workers and consumers are too common to be pitted one against the other. The Tatas had pioneered in the cause of creating a proper psychological climate in industry and it is heartening that they continue to do so.

★

A Mission with Goodwill:

If the British Textile Delegation now touring India succeeds in its mission, it has to thank primarily, its own realistic approach to an extremely delicate problem. Apart from the task of impressing on the Indian Government the need to reduce duty on British imports, the main concern of the Delegation is to study market conditions in India. After a short tour in Western India, Mr A. D. Campbell the leader of the Delegation is in the happy position to say that the mission had already succeeded in finding avenues for the export of Lancashire cloth of particular type without coming into conflict with Indian goods. Goodwill has borne its fruit. The Englishmen have appreciated the aspirations of the indigenous industry whose representatives, in their turn, have shown readiness to accommodate exports of over a dozen specialised varieties of cotton textiles. In fact, the prospect of stepping up the present quota of 3.5 million yards of Lancashire exports in certain varieties which were

either not produced or produced in a small quantity in India, is not inconsiderable. Mr Powell, a member of the Delegation gave the following trade figures over the past years. In the pre-war year of 1937 British exports to India totalled 320 million yards; it became 9 million yards in 1951; six million in 1952, five million in 1953 and three and a half million yards in 1954. On the other hand, India's exports to Britain had considerably gone up in recent years. India exported 27 million yards in 1951, 10 million yards in 1952, 20 million yards in 1953 and 130 million yards in 1954. Mr Powell however, admitted that 50 per cent of cotton textiles exported into Britain were re-exported.

★

Co-operative Movement in 1952-53

In so far as figures are any indication, the Co-operative Movement in India during 1952-53 has recorded an all-round, if not spectacular, expansion. The Statistical Statements relating to the Movement published last week by the Agricultural Credit Department of the Reserve Bank of India give detailed information about the number of societies and members, composition of working capital, and transactions under the various heads. The number of the societies stood at 1,85,650 at the end of 1951-52 and showed an increase of 2 per cent, compared to an increase of 2.5 per cent the previous year. The credit side of the movement continued to be predominant constituting more than 68 per cent of the total number of primary societies. Agricultural credit societies showed a larger increase than other types. The membership of primary societies during 1952-53 rose by 3.8 per cent from 137.92

lakhs to 143.16 lakhs. Roughly 19.2 per cent of the country's population were served by the Movement. The rise in the total working capital may be considered more significant than the increase in the number of societies; from Rs 306.34 crores at the end of 1951-52, it shot up to Rs 327.10 crores a year after. Deposits formed more than 38 per cent of the total working capital, while share capital plus reserves constituted 31 per cent. However, the total loans advanced fell by about 2.2 per cent. Short-term loans disbursed by central financing agencies recorded a precipitous fall. The year saw the birth of one apex bank which took the number of apex banks to 17. Though the total number of central co-operative banks including banking unions declined slightly, their membership showed a substantial increase over the year. The agricultural credit societies had a membership of 51.26 lakhs and a working capital of Rs 49.18 crores both of which stand at a higher level than in the previous year. Fresh advances made by these societies totalled Rs 25.69 crores, Madras and Bombay between them accounting for 60 per cent of the total advances.

In the matter of long-term credit, the pattern of development varied widely with the different States. By the end of 1952-53, only eight States had central land mortgage banks; these States accounted for 251 primary land mortgage banks of which 130 were in Madras. In fact, looking back over the years since 1907, there is a progressive upward trend in the wholesale development of the Movement, but there does not seem to be an uniformly sustained progress in all its branches, suggestive of a healthy growth.

★

RUSSIA

(Continued from page 708)

The Party—the Soviet people were soon afterwards told—had a 'majestic programme' for agricultural development which would bring a 'great upsurge' of agricultural production.

That was 18 months ago. Now there is yet a new policy. It will, says the decree, 'make possible a sharp increase in the production of crops and animal produce', and 'help to solve within the shortest time the national problem of achieving an upsurge in agriculture'.

Immediate steps were, of course, being taken to remedy all this.

The agricultural crisis, both in Russia and in the satellites, still exists. It is one of the basic reasons for all the other troubles, and for the conflicts that have worried the Communist high command—and so for both the fact and the manner of the fall of M. Malenkov and M. Nagy.

Olympus

Recipe for Peace

THE DEBATE on demands for grants for the External Affairs Ministry provided the Prime Minister with as fine an opportunity as he could have wished for embarking upon a sweeping survey of the world political situation as he saw it. We have grown to expect, in such statements by Mr Nehru, some bit of repetitive emphasis; and we have, equally, come to anticipate that one issue rather than a group would be singled out for his especial attention. But, what was remarkable about the speech he made last Thursday was that both these generally expected features were missing. Firstly, there was scarcely any point which, once dealt with, came in for further review later in the course of the proceedings. Secondly, Mr Nehru seemed content to sum up political conditions in each particular sphere; and it appeared as if he considered each separate issue was no less important than any other that he talked about.

The underlying tone of course, was peace. And what he said mirrored his sentiments as expressed recently in London. 'I do not think there is any immediate danger of war or danger of war in the near future.' But he is apprehensive of the general trend of world conditions, which lead him to fear that the end result, if such conditions continue, might not merely be "worsening of the situation but catastrophe itself." The uneasy sense of living from day to day, with the ever present uncertainty that any event might touch off a misunderstanding or incident of grave character, is worrisome to the Indian Prime Minister. There is, then, his creed, simply stated: "I am interested in the peace of the world." Perhaps this is so because Mr Nehru is keenly aware of the relatively greater havoc that a war might wreak on the underdeveloped countries of the world.

It is strange that the inner impulses that are responsible for Mr Nehru's continuing striving for peace are not understood. To the outside world, perhaps the world situation is no more than a clear demarcation of two power blocs with a third area that is uncommitted. And it could be likened to a chess game, with the pawns and pieces being shifted across the checker board so that there is no difference in the facade that each presents. The pawns are not considered very important; but they have a potential importance that Mr Nehru clearly understands; and this understanding leads him to see the threat that is offered to the pawns in case of war. Put simply, Mr

Nehru's main concern is that the underdeveloped countries are in need, not of military strength, but of economic amelioration. And he is confidently fearful that war will so distract attention as to make the fight for economic amelioration an almost impossible battle.

The consequences of war Mr Nehru sees as disastrous; and he quoted Professor Einstein's story that the war after the next in the world would have to be fought with bows and arrows. In this view, he is led to repeat what he said in London:

"Let us take a realistic view of the situation and not talk about peace vaguely and do everything which encourages an atmosphere of fear and war. It is an extraordinary thing. I have no doubt that except some maniacs, nobody wants war in the world. Yet, inevitably, we indulge in activities which take the world to war. You may say this country is at fault, that statement is at fault. We are all to some extent at fault."

What he said in London was that the greatest threat to world peace was the recurrent talk of war and thought of war. Is it because war alone is thought to be a positive concept? And because the West cannot clearly comprehend the meaning of peace?

Peace in Western history, at least in the last forty or fifty years, has been an illusory thing. In the wars of the recent past, the conqueror has had for his lot a share in fresh troubles; the conquered, on the other hand, have won the peace. It is, therefore, understandable that, in the West, the reality is war whereas peace is almost an intangible, and an illusion. But, to repeat, Mr Nehru sees peace to be a positive force, and his foreign policy, similarly, is neutralist in its positive aspect. It is neutralist, if by that we mean a refusal to align ourselves with one bloc or the other; but the real ends is peace, because peace is the real necessity for the development of our economy. Thus, in the debate, Mr Nehru was concerned to survey the trouble spots in the world wherein there were the dangers to peace, the seedlings of war.

The trouble with the world today, according to the Prime Minister, "is not perhaps so much of aggressive intentions of any country, though individuals may have them, but the terrible fear of each country that the other has aggressive intentions and, in order to prevent the other becoming aggressive, you become aggressive yourself. This is an extraordinary situation."

It is thus that the great chess game takes on all the attributes of a stale-mate. All measures that are taken are measures of defence, measures that are 'preventive' in character. Each is said to be motivated by peace; and each is said to further the cause of peace. But each, in effect, reflects the 'talk' of war and 'thinking' of war that Mr Nehru referred to. In other words, the preparations for peace have all the form of making ready for war. It is unfortunate, but true, that peace is therefore considered in its negative aspect.

Is there any way out of this vicious circle in which the world finds itself today? There seems to be one, but it is one that is very difficult of acceptance. The most important form of the preparations

for peace is the continued stockpiling of atomic and nuclear weapons.

In Mr Nehru's view, then, the atomic weapons would not be the Great Deterrent; it would merely be that stockpiling of them has reached what he calls the Saturat'on Point. It would seem that he implies what Mr C. Rajagopalachari has long been asking for—a unilateral renunciation of the atom bomb.

By all accounts, war is a cruel thing; and the path of peace seems an indescribably more difficult course for the free world to take. It is certain that the world has not yet reached the stage when we could expect either of the power blocs to renounce unilaterally such a weapon as the atom bomb is. But it is certain that, were we to talk and think more of peace, prospects of war would recede.

★

IS THE BANK RATE EFFECTIVE?

(Continued from page 704)

The reason why the bank rate appears to be ineffective in this sphere lies in the assumption that in existing circumstances the Government could not possibly afford to have a business recession, and that the inflationary wages spiral will continue. Businessmen are not unduly worried by the higher interest rates. In most lines of business there is an adequate profit margin to cover the extra cost. In any case, prices are still rising, so that the additional interest charges can be added, in many instances, to the prices charged to the buyer. Generally speaking, consumer demand in most branches of retail trade continues at its former high level, and for this reason producers are not inclined to curtail their borrowing from their banks for the requirements of their businesses.

In the absence of a contraction of credit, the higher bank rate cannot be expected to lead to a curtailment of consumer demand. It is doubtful whether it will even induce most manufacturers and merchants to reduce their inventories in spite of the higher cost of financing them. There is no reason to suppose that the high bank rate caused a decline of production. The slight increase in unemployment in the Lancashire textile industry is due to causes entirely unrelated to the bank rate change—imports from India and Japan, restrictions in Australian imports of British textiles and uncertainty about the future price of cotton. Even the Socialists are not suggesting that the high bank rate is to blame.

In other trades full employment continues to prevail. There is again a waiting list for motor car deliveries. Various industries continue to suffer from labour shortage and continue to offer bonuses and other inducements to workers in order to

entice them from rival firms or from other industries. Wages demands by the Trade Unions continue to be met in almost every instance, at any rate to a large extent. Evidently, employers are not in the least afraid that, as a result of the increase of their wages bills, they might find it difficult to borrow the extra money from their banks.

This ineffectiveness of the high bank rate amidst over-full employment came as a complete surprise to the overwhelming majority of British financial experts. They imagined that, once the Government has decided to revert to traditional methods of monetary policy, the time-honoured rules about the effects of orthodox devices would operate as a matter of course. On the basis of the experience of the past month they now have to think again. They may derive comfort from the fact that amidst conditions prevailing in post-war Britain the unorthodox fiscal devices of monetary policy have proved equally ineffective. Under over-full employment a Budgetary surplus is no more capable of checking inflation than a high bank rate. So it cannot be said that Keynesian monetary policy has withstood the test of post-war experience any better than has pre-Keynesian monetary policy.

The experience of the 'thirties has proved the limitations of the effect of bank rate reductions amidst a business depression. It was then believed that, although the monetary authorities may be unable to force people to lend and borrow more, they have practically unlimited powers in the opposite direction when they want to check an inflationary boom. The experience of the 'fifties shows that, in that respect, too, their power is limited under conditions of over-full employment.

North Indian Notes

Projects and Progress

Progress of work in the Community Projects and National Extension Blocks has quite clearly demonstrated the value of such schemes in rural areas and also the enthusiasm with which they have been backed up by the rural folk. Covering as they do 100,000 villages dotted all over the country, their practical utility hardly needs any detailed recounting here. According to a government estimate issued here last week, altogether 828 project blocks are in operation in different parts of the country; and owing to the success of the projects, there was, recently, a proposal to convert 132 blocks out of the present extension blocks into the intensive Community programme.

The main object of the Community Programme is to promote a change in outlook among the villagers so as to enthuse in them a sense of team-spirit and confidence to take up work for their own betterment. The earnestness with which the villagers have sought to achieve their aim is reflected in their contributions in cash, labour and kind, which have amounted to more than half the total of Government expense. As against a total amount of Rs 13.48 crores of expenditure on the blocks, the amount of people's contribution is valued at Rs 7.48 crores, constituting nearly 55 per cent of the total expenditure. In the Extension Blocks in particular, people's contribution has actually exceeded the government's share.

In the agricultural field, attention has been given to intensive cultivation methods and to measures for enriching the soil. Agricultural demonstrations, an important feature of the Extension Programme, have been given considerable emphasis. Above all, construction of roads has evoked the biggest response among the people. During the period of operation of the programme ending December 1954, over 12,000 miles of roads exclusively incorporating people's land and labour, have been constructed. On the whole one gets an impressive picture of the working of these projects. Nevertheless, a good deal more of improvement could be effected if misdirection of funds and inefficiency in certain spheres could be prevented. In the wake of these improvements, it is not difficult to conceive of a state in which the Community Projects Programme could shine impercably under the floodlight of voluntary publicity.

Jubilee Celebrations:

The Pusa Institute, which celebrated its Golden Jubilee on April 1, could feel legitimately proud of its achievements in these years. It has consolidated its reputation as a centre for advanced research and training in agriculture and now compares favourably with similar institutes in other countries of the world. The practical and scientific benefits of the work carried out by the Institute include evolution, by breeding, of improved strains of wheat, known as Pusa wheats, and also of the world-famous canes at the Coimbatore sub-station. Since its transference from Pusa to New Delhi in 1938 the Institute has made substantial progress. The plant-breeding work on wheat carried out at Pusa has been followed up here by the development of a new series, some of which have shown considerable resistance to rust and smut attack. Besides its research activities, the Institute has grown into an important centre of education by integrating within itself the Central College of Agriculture. The post-graduate department of the Institute offers a two-year course of research and training in different branches of agricultural science and many trained here are holding responsible positions under the Government of India.

The Golden Jubilee, just as it has occasioned a review of its achievements, necessitates a flashback into its past history. This Institute saw the light of day in 1905 at Pusa in Bihar, thanks to the generous help of an American philanthropist who donated £30,000 for solving the then chronic poverty of the Indian citizen. With years of elaborate and painstaking efforts, the Institute is now on the threshold of an era of still greater service and usefulness to the public. The Technical Co-operation Mission of the US have also extended their co-operation for determining the optimum dose of manure application needed in various types of soils. As Dr P. S. Deshmukh stated on the occasion, with the aid of the expanded facilities, the Institute stands better equipped to tackle the practical aspects of increasing the total crop production of the country.

Railway Strikes:

Mr Lal Bahadur Shastri's address to the railway workers at Udaipur should serve as a mild and yet useful admonition to all those who have been inclined to set great store by strikes and hartals

for the achievement of minor objects. Strikes and lock-outs lead to national waste; and what India needed at the moment was hard and incessant labour for fifteen years to entrench herself on firm foundations. India could well follow the inspiring examples of Japan and Switzerland in the matter of nation-building. The remarkable pace at which Japan has reconstructed the fabric of her war-torn economy is within the memory of all. For India, too, such rapid strides of progress are not out of reach. Essentially, for business to flourish, the development of railways is a vital necessity. The present schemes of railway expansion in the country are heartening indeed, and, no doubt, call for concerted and concentrated action. Two Railway Training Institutes will soon be started—one at Udaipur and the other at Dohad on the Western Railway—for establishing proper training facilities for the initial recruits, and for providing training in refresher courses for all the staff. (The choice of Udaipur is to be hailed in view of its central location and pleasant climate). Besides, the Central Government have decided to create a railway network of 5,000 miles during the next five years. The survey work of 1,500 miles long railway lines will be undertaken next year. The Udaipur-Himmatnagar railway line, in particular, passing through the zawar mines, would abridge the distance between these places and the business centre of Ahmedabad and would give a fillip to the development of new industries. The quicker completion of these works would, of course, depend on the continued efforts and co-operation of the workers. Any loss of time would impede progress; and strikes, on this score, stand wholly condemned if any more national waste is to be avoided.

UP's Industries' Budget:

UP has evolved an ambitious plan for the rapid development of village industries—small and medium—to enable it to solve quicker the problem of unemployment. Mr C. B. Gupta, Minister for Planning and Industries, based his claims for an "industries budget" of over Rs 5.8 crores on the "unassailable and encouraging record of achievements of the industries in the Province and on the scope for their improvement. The record of State enterprises also is highly interesting. The cement factory in Mirzapur, for instance, is at present working to 80 per cent of its installed capacity and will shortly attain its full production capacity of 700 tons of cement a day. The Precision Instruments factory in Lucknow, a pioneer State enterprise,

has started producing water meters and microscopes.

Partly because of the large number of people dependent on village industries, especially the cottage industries, the UP Government have lately become more aware of their responsibility to ameliorate the conditions in this direction. Indeed, UP depends "more on the development of such industries than any other State in the Union". Out of a total allocation of Rs 3 crores for cottage industries about Rs 2.5 crores has already been spent in the State. Recently, the Government have increased their financial assistance from Rs 5,000 to Rs 10,000 in the case of individuals looking after cottage industries, and from Rs 10,000 to Rs 15,000 to each industrial co-operative. Most of the co-operatives now functioning in the State—there total about 1040—are the co-operatives of handloom weavers. The Government are now considering the formation of other types of industrial co-operatives. The recently-established State Financial Corporation, with an authorised capital of Rs 3 crores for financing small and medium scale industries, is also expected to play a leading role in their development. Compared to the other States in the Indian Union, UP's unemployment problem is less acute; even so, the enthusiasm with which the State has launched out its industrial schemes affords a very good example for other States to follow suit.

BRITAIN

(Continued from page 708)

that a satisfactory rate of expansion cannot be achieved at home unless world trade is expanding also. "The United Kingdom is working towards the objective of a multi-lateral system of trade and payments on the lines agreed with the rest of the Commonwealth in 1952 and reaffirmed at the meeting of the Commonwealth Prime Ministers in January this year," says the Survey. "The aim is to secure reasonable security in tariff levels and a limit to the quota restrictions which can be imposed upon the United Kingdom's exports. These aims have been pursued through the General Agreement on Tariffs and Trade and through the Organisation for European Economic Co-operation, where the United Kingdom has taken a leading part in moves to extend freedom of trade."

Finally, says the Survey, should the terms of trade move against Britain, it may be necessary to limit the increase in home demand so that resources can be diverted to meeting export orders. "But", it concludes, "the economy should be able to adapt itself to moderate fluctuations in the terms of trade without serious internal repercussions."

The Peninsula

Personalities in the New Andhra Cabinet

THE resounding victory with which the Congress party emerged out of the Andhra elections has been hailed as an event of international significance. This is the first time that a State election in India has received so much and so enthusiastic a publicity in the world's non-Communist Press. The election results provided agreeable surprise even to the most hopeful elements in the Congress; for foreign observers they represented a thrilling setback to Communist ascendancy in this continent. That the verdict strengthened the hands of Pandit Nehru in his efforts to secure a higher standard of living for the Indian masses and greater economic stability for the country as a whole, was another circumstance which caused jubilation in discerning and friendly quarters abroad.

This political reconversion of a young and important State in the Indian Union therefore throws on the State leaders a very onerous responsibility. They have got to look upon the Congress victory as an opportunity which an intelligent and public-spirited electorate has given them to build up a foundation which will not shake at every passing vicissitude in popular moods.

The party alignment which took place in response to the environment created by the redefinition of Congress economic aims at the Avadi Session, besides contributing to the crushing defeat of the Communist party, also shows up a lesson which no political observer can afford to overlook. Perhaps at no time since the transfer of power had the middle groups, mainly the socialist party, held the promise of becoming either an effective opposition to the Congress or an alternative party for running the Government. If at all any group were entitled to claim this status, it was the Communist Party. In the Union legislature, the Communists have become the formal opposition. In Travancore-Cochin, in Madras and in Andhra they had functioned as such; in West Bengal, their effective influence is substantial. Even in the recent Andhra elections, they secured nearly a third of the total votes polled. While political groups organised on communal lines have always remained virtually impotent, at one stage it was

at least possible to hope that the Socialist party and its associates might some day gain the strength and grow in status. This hope could now be laid aside for ever. The apparent readiness of the Praja Party, to back up the Congress and possibly to bury even its ideological distinctiveness, points emphatically to these conclusions; that the party has lost every trace of confidence about its own future; that the only hope of furthering its aims is to lose itself into a bigger friendly group; that democracy in India will not have to risk the confusion and frequent shifts familiar to multi-party States such as France; and that if at all there were to be a choice of the form of government and the party which should run it, it can only be between Congress and the Communists. In this respect the Andhra elections are not an isolated event, devoid of consequences on the broader field of national politics. The elections have set a pattern to which the future need only give the final touches. Since the elections, we have seen the decision of the Forward Bloc in favour of merger with the Congress. One after the other, the smaller fish are moving into the bigger net. Till now, the Congress net alone has yielded fresh catches. The Communists have started probing into the causes of their rout; they are bound to enlist new ideas and new tactics to retrieve the position; for the present, however, they are utterly helpless against the Congress which strides like a colossus over the entire sub-continent.

The Andhra Congress leaders, in these circumstances, have also to guard against any setback in the influence or power of their party. The continuous and active association of the Congress president and his all-India colleagues in activities connected with the choice of leader was intended to ensure that old personal feuds within the Congress and between the constituents of the United Front did not revive. There was near unanimity of opinion on vital choices. During the few days of negotiations and talks, Mr Prakasam found himself somewhat isolated from the rest. There may still be persons who feel that this hallowed veteran of Andhra did not receive sufficient courtesy. He himself at one time expressed resentment at the way in which leadership and Cabinet

formation were being discussed. Luckily, Mr Prakasam saw the wisdom of allowing the flames of youth to burn unhindered.

Mr B. Gopala Reddi who has been sworn in as the Chief Minister of the State though comparatively young, even in relation to the majority of his new Colleagues, can claim parliamentary and ministerial experience as old as any other Andhra leader. Mr Gopala Reddi belongs to Bazwada, which to borrow a term from the industrial economics, is a great locational advantage. Though Karnool is the capital of Andhra, Guntur and Bazwada continue to remain the mainspring of political activity. Mr Reddi was in charge of Local Self-government in Mr Rajagopalachari's first Madras Cabinet formed in 1937. A member of the Syndicate of Andhra University since 1944 and its Pro-chancellor since 1951, his experience extends to many spheres besides politics and public administration. That he is the only candidate in the election to be returned from more than one constituency reflects the genuine hold he has on the affections of the Andhra public. Mr Gopala Reddi has gathered what looks like a robust and well-knit team of Cabinet colleagues. Mr Sanjeeva Reddi seems to have been an automatic choice for the Deputy Premier's place, which he had occupied in the Prakasam Cabinet as well. As President of APCC, and till lately a member of the Congress Working Committee, he can claim up-to-date experience in party direction, both on the State and on the national levels. Mr K. Chandra Mouli, the oldest member of the Cabinet comes from Tenali, another of the most active political centres in Andhra. He is a recognised expert in agricultural problems and was Minister in Local Administration in the Cabinet of Undivided Madras from 1947 to 1952. Mr Kala Venkata Rao is another old bird. He has served as Revenue Minister in the Undivided Cabinet twice; was the General Secretary of the All-India Congress Committee from 1949-51, and vice-president of the APCC since January 1954. Mr Latchanna, a house-hold word among the Andhra Kisans was President of the State INTUC and Agriculture Minister in the Prakasam Cabinet, a place which he resigned on the issue of the location of capital. Mr D. Sanjivayya, the youngest member of the Cabinet was Minister for Cooperation in the Second Rajagopalachari Cabinet in Madras, from where he became the Minister in charge of Public Health and Planning in the Andhra State.

Dr A. B. Nageswara Rao and Mr N. V. Rama Rao, the two other members of the Gopala Reddi Cabinet are new to ministerial jobs. Dr Nageswara Rao has long experience in Municipal affairs and Mr Rama Rao is associated with a number of marketing and cooperative institutions in the State.

This cabinet, which is likely to be expanded in the immediate future, is a group which is well-balanced, in terms of territorial representation, of political and administrative experience and group proportions. The stability of this Government is not likely to be impaired through machinations of Opposition parties or through rivalry between one party and another within the Cabinet. Because for one thing, the Congress by itself has an absolute and substantial majority in the legislature; for another the KLP has merged itself completely in the Congress. The PSP, which is closer to the Congress than at any time before has only the Communists to hobnob with outside Government ranks. In the present situation, this would be a very remote possibility. Though the Press has already started speculating on the prospect of personal rivalries again cropping up between Congress leaders, we have the assurance from all the members of the new Cabinet that every one of them would resist this temptation and would never think of sacrificing the requirements of the State, in deference to personal advantages. There is every reason to think that this assurance is well-considered and genuine. The State, even within its brief existence, has had sufficient experience of the extent of harm factious politics could do. The leaders must have been chastened by this experience.

The first public statements of the Cabinet members after they assumed office are also reassuring, to the extent that they presage official policies in respect of a few issues which confront the State. Addressing a public meeting at Kurnool, the Chief Minister said that his government would be working in utmost harmony with the neighbouring States, that Andhra did not expect to achieve any prosperity at the cost of any of its neighbours and that no minority had any reason to entertain fears of any kind. The Deputy Premier assured the people of Kurnool that the question of shifting of the capital would be taken up only after Visalandhra was formed. All these mean that delicate and controversial issues would be kept aside as long as possible and handled whenever necessary with the utmost tact and tolerance.

South Indian Notes

A Many-Sided Problem

Legislations become perfect perhaps only by the method of trial and error. It is little more than a month since the Madras Assembly passed a bill on taxes on plantations, the main features of which were discussed in these columns. And now, the Union Government's Plantation Enquiry Commission which is to go into the economics of the tea, coffee and rubber industries, is touring the State. The memoranda submitted to the Commission show that three distinct communities, the plantation owners, the labour and the dealers in plantation products have grievances, peculiar to each. What intrigues the planters is that the attractive depreciation allowances applicable to other industries are not available to their industry. Land which is their principal asset, unlike plant and machinery, is not eligible for any kind of depreciation. The planters' point of view deserves to be considered in two different contexts: in relation to the existing condition of the plantation industry and secondly in relation to the future trends in taxation policy with respect to agricultural income. In the first place, it cannot be asserted that the industry, the condition of labour and market included, is in a flourishing phase. Improved living conditions for workers, need for replantation, scope for extension of the industry to available new land and such other prospects will be nipped in the bud at least in the case of the smaller holdings by an indiscriminate tax policy. Secondly, the Taxation Enquiry Commission has laid bare the anomalies of the distinction now being made between agricultural and non-agricultural incomes. It has recommended the extension of the agricultural income-tax so as to make the land revenue system more equitable and to end glaring disparity in income-tax between agricultural and other incomes. This principle, if conceded, would indirectly reinforce the plea for putting the plantation industry on the same footing as other industries.

While the grievances of the coffee dealers are coloured by certain local marketing trends of no more than a temporary character, the fluctuations in the tea market, pertain to a wider region. The movement in prices calls for a certain degree of flexibility allowing from time to time suitable readjustments in taxation on grounds of equity.

As for labour, it is stated that the Plantation Labour Welfare Act has overlooked practical difficulties in carrying out its provisions, that the managements are not implementing the Minimum Wages Act and that legitimate Trade Union activities should be permitted in estates. It is only natural if the worker in the

plantation compares himself with his counterpart in the factory.

Cost of Production:

"While raw material and labour in any industry cost the same in India as they do in Japan, the manufactured product costs twice as much more in India", so observed Japanese Engineer Mr Kozima recently addressing the Indo-Japanese Association of Mysore State in Bangalore. The reasons, as Mr Kozima saw them, were the very large factories and overheads in this country and the absence of up-to-date machinery. In drawing an analogy between the industrial and economic development of Japan and India, one is in danger of equating the conditions obtaining in the two countries. A small country with a hardy people, Japan built up her industries in a natural way. She was able to establish a large group of small industries, up-to-date in machinery and technique. Thousands of these small units formed the base of a pyramidal structure with the top composed of large-scale factories. The product of the factory whose components were made in small-scale and home industries became comparatively cheaper. Making due allowance for the rather superimposed structural growth of Indian industries up to now, much has to be learnt from the Japanese speciality. Even as Mr Kozima pointed out ordinary small tools like spanners, switches, screws, scissors etc., are all imported into this country. Also, it is high time that a clear division was made between small-scale industries and large-scale industries with industrial organisation conceived as a whole. Vagueness as to which industries should be carried on a small-scale is as dangerous as a total neglect of them.

Power in Andhra:

Andhra is one of the most power-hungry States of India. The per capita consumption of electricity is as low as five units. The State's Electrical Chief Engineer reviewed the position of power supply at present as also the progress of the projects on the way to completion. Now there are three steam stations at Visakhapatnam, Vijayawada and Nellore aggregating to 24,000 kw., and 15 diesel generating stations totalling to 11,000 kw. In these, the peak load has reached the limit. None of the State's multi-purpose projects would be ready for tapping before the middle of the Second Five Year Plan. But the Andhra Government did not allow the programme of electrification to correspond-

ingly suffer. The shortage is to be tidied over with the help of the neighbouring States of Madras and Mysore. Additional power will thus be available to Rayalaseema, Chittoor and Nellore areas. The per capita consumption, however, promises to be doubled by the end of the first Plan. The balanced development of the Machkund and the Tungabhadra hydro-electric projects would receive first priority in the Second Five-year Plan. Also, a thermal station at Nellore and the initial development of Sileru and Nandikonda hydel projects are envisaged during the next five years. Meanwhile, the Andhra grid would take full shape with transmission lines running across the whole State.

It is clear that the problem of power development in Andhra is both peculiar and costly. The Tungabhadra and the Machkund projects between them cost Rs 24 crores, three-fourths of which has already been spent. The ambitious Nandikonda project near the Andhra-Hyderabad border is estimated to cost about Rs 31 crores. The foreseeable prospects for heavy industries in the State are meagre barring the possibility of a ferro-manganese industry. The chance of countering the cost of these schemes through speedy utilisation of power is, therefore, remote. What the new Ministry can do is to see to the proper use of funds, the lion's share of which is provided by the Union.

Price Support Policy:

The new Congress Ministry in Travancore-Cochin have put their hands on to the plough and set about doing things in a business-like manner. The previous P.S.P. Ministry had done valuable spadework, so that the Congressmen have little to undo and much to continue. A boldly conceived budget presented a few weeks after they came to power promises to pull the agriculturist from out of the present depression, while paying every attention to industrial expansion. A concrete step in the former direction was taken when the Assembly passed last week the Government's move for constituting a Tapioca Market Expansion Board to advise the Government in working out a price support policy for tapioca, in promoting cultivation and the progress of the industry and its trade. Though tapioca forms a major food item for the poor and the lower middle classes, the demand for it has substantially declined due to availability of food-grains. The tapioca cultivators are thus left in a sorry plight with the rock-bottom prices paying not even their labour. The general depression in agricultural prices makes even a change-over to some other crop not worthwhile. Moreover, most of the tapioca-growing land would be classified as barren in relation to crops like sugarcane. A judicious regulation over the cultivation, restricting or expanding it

Commodities

Coffee

ACCORDING to official figures released this week, India's coffee production totalled 29,410 tons in 1953/54—the largest crop during the present century. The 1954/55 crop which is under picking, is estimated at 24,000 tons, consisting of 15,000 tons of Arabica and 5,200 tons Robusta. The bulk of the crop will be gathered by the end of May, 1955.

The present trend in coffee planting is for the Robusta acreage to expand more rapidly. During the 11-year period ended 1953/54, Arabica acreage recorded a 4.63 per cent increase and now stands at 1,68,722, while the Robusta acreage showed a 133.56 per cent increase and now stands at 77,578. A field survey of the vast under-developed area in the States of Madras, Mysore and Coorg is being made under instructions of the Central Government as part of the plan for the expansion of the coffee industry.

The quantity of coffee, released from the Coffee Pool for the internal market, exceeded 21,000 tons in 1954. This constitutes a record, the previous best being 18,407 tons in 1946. In the same year, 9,613 tons of coffee—the highest since the inception of the Board—was sold for export. During 1954, internal prices at Pool auctions showed a high degree of stability. The pool auction prices for Plantation "A" ranged from Rs 197/14 to Rs 218/15 per cwt as against Rs 158/5 to Rs 199/1 in 1952. In the same year, the export prices were 50 per cent to 100 per cent higher than the internal prices, the range for Plantation "A" being Rs 281/7 to Rs 462/8 per cwt.

Groundnut

Trading in the Madras Groundnut, during the week under review, remained rather dull and prices were inclined to be easier in the absence of any fresh incentive, slackness in demand and on reports of good arrivals. The rate for Bold varieties hovered around Rs 91-0 per candy, while the superior quality was quoted at Rs 95-0. Arrivals averaged 30 to 40 tons a day. There were no eager buyers and only small crushers took up some quantities. In the North Arcot district, only about 60 tons of kernels were received in the Tiruvannamalai market, while arrivals at Vellore were negligible. In Tiruvannamalai, the rates moved between Rs 89 and Rs 96 and in Vellore between Rs 88 and Rs 90, per candy.

In the Groundnut Oil section, business done was very poor and the delay in allowing additional export quotas for h.p.s. groundnuts disappointed the exporters. The rate for the ready position declined to Rs 193, to finish the week better

at Rs 196. There was a fair volume of business in April and May deliveries at Rs 197 and Rs 199 per candy respectively. Overseas enquiry continues to be far from encouraging and the anticipated improvement in foreign prices has not materialised. Latest indications are £90 to £91 per ton for April delivery. Burma took up small quantities around Rs 1,275 per ton. In the Tiruvannamalai market, the rate was quoted around Rs 185 to Rs 190 per candy of 500 lbs. and, in the Poilachi market, at Rs 13-6 per tin of 35 pounds.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were fair last week. Clearances were good, and prices advanced by 6 pies per pound. There was some demand from the UK for premium marks at about unchanged prices. Inferior fifts continued to be scarce and the prices for these, as a result, remained very firm. Arrivals of Buff Calf and Cow Calf were on previous week's levels and the market was steady in the former, while prices were quoted slightly higher in the case of the latter. There was good demand for Cow Calf from the UK for premium marks of 1½ lbs. and 2½ lbs. averages. Arrivals in the bazaar were, however, mostly of poorer quality and selection. With the result, there was very little business in ordinary quality marks though prices ruled firm in sympathy with the premium marks. Arrivals of Buff hides were fair and prices ruled steadier. Day-to-day arrivals were meeting with ready demand. It is reported that total shipments of hides to the UK, during March 1955, were about 4,500 bales.

In the Tanned Skins section, arrivals of both sheep and goat skins were at the same level as in the previous week and the market for both classes of skins were higher by As. 2 per pound. There was good clearance of sheep skins and the small quantities, that were coming into the market, were promptly cleared. In the export section, there was good demand for light weight goat runs and inferior fifts, but supplies were not plentiful as most of the producers were reported to have made forward commitments. Limited business was done in semi-prime sheep skins 6/7 lbs. at 20sh. 3d. for runs and 13sh. 6d. for fifts.

Raw Goat skins were reported to be Rs 10 per 100 skins higher in Bangalore and Rs 10 to Rs 15 higher in Bezwada. Raw Sheep skins prices remained, however, unchanged.

Cashew

It is reported that about 60,000 tons of African Cashewnuts have been landed so far in the Cochin market and another 15,000 tons are expected this month. It is possible that the season's total may exceed 80,000 tons. The Indian crop has not been as good as expected as the follow-up rains failed after the

heavy blossoms. The total Indian crop may not exceed 40,000 tons, according to the present estimates. The sudden rise in kernel prices have upset the processors, who are finding the raw nut prices against them at the original contract rates. The current price of New York basis works out to 45 cents per pound.

Yarn

There was fair demand for Yarn throughout the week; but prices did not improve due to selling pressure from mills. As the period for the completion of deliveries for the export quota has expired, there are better prospects of stabilised price levels. In the Madurai market, following rates were quoted:—20s Rs 16-13; 24s Rs 18-3; 30s Rs 20-9; 32s Rs 21-10; 36s Rs 23-0; 40s Rs 24-4 and 80s Rs 63-4.

Sugar

Sugar markets continued to rule quiet and dull due to good supply position. In the Hapur market, mill delivery prices declined by As. 8 to As. 12 per maund and the following rates were quoted per maund:—Jaswant Rs 29-4; Simbhauli Rs 29-8; Mowana Rs 29-8; Daurala Rs 30-8; Mansoorpur Rs 30-8 and Rampur Rs 31-8.

The production of crystal sugar amounted to 11.17 lakh tons and the arrivals of imported sugar to 3.21 lakh tons up to March 31, 1955. The figures for the corresponding period of the last season (1953/54) were 8.91 lakh tons and 1.94 lakh tons respectively. The despatches of sugar from factories during the period were 2.90 lakh tons as compared with 4.64 lakh tons in the corresponding period of the previous season. Stocks with the factories on March 15, 1955 stood at 8.84 lakh tons as compared with 6.25 lakh tons last year.

Gur

Following the recent announcement of free cane jaggery export, Gur prices in the Hapur market showed a slight improvement over the previous week's levels. The rate for the ready position improved to Rs 10-0 from Rs 9-8 per maund. Stocks were estimated around 1,09,500 maunds, including about 45,000 maunds owned by the Uttar Pradesh Government.

Foodgrains

Prices of foodgrains, during the past week, showed a mixed trend. In the Hapur market, Wheat prices recorded a steady outlook with Dara quality quoting better Rs 12-0 per maund as against Rs 11-12 early in the week. Daily arrivals averaged 100 maunds, which were easily absorbed. The announcement of free Gram exports had a sobering effect on the market. Gram prices appreciated fractionally to Rs 6-8 for the local quality and Rs 7-0 for the Punjab quality against Rs 6-4 and Rs 6-12 per

maund quoted respectively in the previous week. Peas prices hardened slightly due to good outside demand with Dara quality quoting at Rs 5-4 per maund and white variety at Rs 6-0. Arrivals averaged 500 maunds daily and despatches were mostly to Madras. Arhar continued to rule steady at Rs 6-6 due to poor stock position.

With the exception of some grains, which were slightly easy, the Delhi market remained steady. On balance, prices of both Dara and fine qualities wheat were about As. 8 to Re. 1 per maund higher than in the previous week. Gram prices, after initial steadiness, eased off slightly towards the close on the commencement of arrivals of new crop in the market. Owing to the lack of buyers, Rice prices were easier by about As. 8 to Re. 1 per maund lower. Pulses ruled generally steady.

Recently when the zonal arrangements were withdrawn throughout the country, the Government of India had permitted the flour mills in Calcutta and Bombay to purchase their requirements of wheat for three months from the internal markets. It is understood that the Government have now decided not to allow the flour mills to import any wheat from abroad for the time being. This is intended to ensure that the flour mills start purchasing wheat from the internal markets immediately. The monthly requirements of wheat of the Calcutta and Bombay flour mills are of the order of 55,000 to 60,000 tons, which means that the mills will have to purchase 1½ to 2 lakh tons of wheat from the internal markets. These purchases, it is felt, will give necessary support to the wheat market and help in making prices stabilised at a suitable level.

Cotton

THE Cotton trade is in a demoralised state and is groping in the dark. Though rumours about export quotas have been recurrent, no announcement was forthcoming till Tuesday. Except for a temporary spurt, which might result therefrom, the fundamental outlook is not likely to be changed and the general tendency, despite low prices, is likely to remain easy. The market still feels the import of the crop arrivals, while genuine buying is still scarce despite broadened domestic demand for cloth. In view of the prevailing situation and comfortable supplies, it is considered likely that the withdrawal of quota system, which was effected in January, is likely to be extended in May when the situation is to be reviewed.

It may, however, be noted that the spot interests this year have suffered heavy losses due to declining trend of prices since the beginning of the season in last September. After a modest decline, these dealers turned "long" thinking

The Punjab National Bank Limited

Directors' 108th Report to the Shareholders for the Year ended 31st December, 1954

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1954.

The transactions for the year under report have resulted in a profit of Rs. 56,86,180-2-0 (including Rs. 3,10,289-1-7 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes:—

	Rs.	A. P.
1. Transferred to Income-tax Provision ..	16,00,000	0 0
2. Transferred to Contingency Reserve ..	12,50,000	0 0
3. Transferred to Reserve Fund ..	2,47,140	4 6
4. Transferred to Bonus to Staff Account ..	9,50,000	0 0
5. Transferred to Charity Account ..	40,000	0 0
6. Transferred to Gratuity to Staff Account ..	50,000	0 0
7. Ad-interim Dividend at Re. 1 per share, free of income-tax paid ..	3,50,000	0 0
Total Rs. ..	44,87,140	4 6

The Directors recommend that the balance of Rs. 11,99,039-13-6 be disposed of as follows:—

	Rs.	A. P.
(a) Dividend at Rs. 2 per share, free of income-tax making the total at 12 per cent per annum ..	7,00,000	0 0
(b) Carry forward to the next year's account ..	4,99,039	13 6

The Bank rate remained unchanged at 3½ p.a.
The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors.
S. P. JAIN,
Chairman.

Delhi, 5th February, 1955.

Balance Sheet as at 31st December, 1954

(Continued from page 716)

as is called for in particular localities with special reference to improved methods, developing cottage and large-scale industries for production and utilisation of tapioca products, providing storage and marketing facilities, standardising tapioca products, carrying out propaganda and research work, these are some of the measures the Government propose to take. As regards the price support policy, the Government intend to purchase about ten per cent of the two lakhs tons of the surplus produced.

(FOOTNOTE FOR JUTE COMPANIES).

(a) For four half-years from 1st April, 1948 to 31st March, 1951.
 (b) Bonus shares of Rs. 10 each to be issued in the proportion of one for one in lieu of dividend.
 (c) Has worked the Lohian Jute Mills as issues.
 (d) After transferring Rs. 79,264 from General Reserve.
 (e) Includes Rs. 66,499 being revaluation of jute stock.
 (f) After transferring Rs. 1,30,000 from General Reserve.
 (g) After transferring Rs. 1,50,000 from Reserve Account.
 (h) Arrears of dividend for two years ended 31st March, 1950 at 8 per cent per annum.
 (i) After transferring Rs. 3,00,000 from Dividend Equalisation Fund and writing back Rs. 43,068 from provision for liabilities in previous years.
 (j) After transferring Rs. 50,000 from Genl. Reserve.
 (k) After crediting Rs. 2,15,779 being refund of E.P.T. and writing back Rs. 1,72,249 from Taxation Reserve.
 (l) After writing back Rs. 1,70,000 being surplus tax provision.

(k) After writing back Rs. 1,25,000 from provision for taxation and Rs. 2,976 from provision for doubtful debts.
 (l) After transferring Rs. 6,50,000 from jute Stock Reserve. Rs. 2,40,000 from Taxation Reserve and writing back Rs. 1,22,174 being over provision for liabilities.
 (m) After writing back Rs. 40,000 from provision for taxation.
 (n) After transferring Rs. 2,50,000 from jute Stock Reserve and Rs. 1,50,000 from taxation Reserve and Rs. 84,356 from provision for liabilities.
 (o) For four half-years ended 31st December, 1953 at 3 per cent per half-year.
 (p) For three years ended 31st December, 1953 at 6 per cent per annum.
 (q) Dividend at 6 per cent per annum for the years ended 31st December, 1952 and 31st December, 1953 and additional dividend at 1 per cent per annum for year ended 31st December 1953.
 (r) Includes Rs. 2,47,399 being surplus reserve for taxation written back.
 (s) After transferring Rs. 34,506 from General Reserve.
 (t) Preference shares carry a dividend of 10 per cent of which only 8 per cent is cumulative.

(u) After transferring Rs. 1,29,804 from General Reserve.
 (v) After writing back Rs. 1,75,000 from provision for taxation.
 (w) Includes Rs. 4,99,972 being refund of E.P.T.
 (x) After transferring Rs. 3,09,560 from General Reserve.
 (y) After transferring Rs. 4,34,975 from General Reserve.
 (z) For five half-years ended 30-8-54 at 4 per cent per half-year.
 (aa) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.
 (ab) After transferring Rs. 1,30,000 from jute Stock Reserve. Rs. 1,30,000 from Rehabilitation Reserve; Rs. 1,93,698 from provision for taxation and Rs. 98,033 from provision on Forward puto contracts.
 (ac) After transferring Rs. 1,36,869 from Rehabilitation Reserve.
 (ad) Leased out to Albion Jute.
 (ae) After transferring Rs. 9,78,000 from Reserve and Rs. 2,75,000 from Stock Reserve.
 (af) After transferring Rs. 7,00,000 from Reserve

Others ..	3,168	859
Total ..	1,995,092	1,923,094

Exports for 7 months i.e. from 1st September 1954 to 31st March 1955 have totalled 120,651 bales as against 96,116 bales, the particulars for which are as follows:

	1954-55	1953-54
United Kingdom ..	16,802	11,005
Continent ..	28,692	20,116
Japan ..	59,049	51,009
U.S.A. ..	13,340	12,283
Other Countries ..	1,258	1,452
Total ..	120,650	96,116

The New York cotton market has ruled steady during the week under review with May recovering to 33.70 cents from 33.64 cents. The US Secretary of Agriculture has denied the possibility of subsidy for exports for this season, but the situation with regard to next season is uncertain. Measures, however, will be devised to boost exports.

Cotton prices early this week tried to look up after recording new low of Rs 547 for May position. The rate rallied to Rs 553, to relapse to Rs 547-8, to be placed at Rs 549-8. The August position was quoted at a premium of Rs 14-8.

		The price range in I.C.C. May for				
the last few weeks was as follows:		High		Low		
Week-end		Ra. a.	Ra. a.	2Rs. a.	Closing	
Feb.	5th	584	0	562	8	576 12
	12th	582	8	565 12	4	574 0
	19th	577	8	566 4	7	577 0
	26th	582	8	573 8	7	579 0
Mar.	5th	578	8	561 8	8	569 0
	12th	563	0	554 4	4	555 0
	19th	562	8	547 12	5	557 8
	26th	563	8	556 0	0	559 8
April	2nd	557	0	547 0	5	551 12

Business activity on the Sewri spot market was hampered by the intervening holidays. Inquiry was spasmodic as advices from Saurashtra were rather weak. Morbi was placed at Rs 35 off, Wagad Rs 40 to Rs 45 off, Manevadar Rs 50 off for April, Vijay for five stations at Rs 137 to Rs 140 'on', Mansa 320F, Rs 615, Navsari Rs 895 to Rs 900, and Sangrur Rs 645.

There was practically no business worth nothing in foreign cotton. BP-52 African was reported at Rs 1,610 and Jingi at Rs 1,430 to Rs 1,440.

In view of the better quality this year, Surti cotton this season has been rather absorbed easily. About 130,000 bales have so far been sold down out of an estimated crop of 185,000 bales. Demand from Southern and Bombay mills was good as the 2087 type fetched this year higher prices in view of the lower quality of Laxmi cotton grown in the Deccan region.

Consumption of Indian as well as foreign cotton for the first five months of the season 1954-55 totalled 1,995,092 bales as against 1,923,094 bales for the corresponding period of the previous season.

The Cloth market has evinced a better tendency in view of active domestic demand. Prices in certain varieties have advanced moderately. Situation is likely to remain encouraging for at least one month. However, exports are slow. With Australia having decided to cut exports by 33.1/3 per cent and the feasibility of early measures by UK Government to check the free imports of Indian grey cloth, the export trade is likely to suffer a further setback. Comparative ex-

Gold & Silver

The bullion market after keeping firm turned subdued during the latter part of the week on operation of margin at the rate of Rs 500 per silver bar and at the rate of Rs 75 per tola in gold. The bull operators made frantic efforts to avoid this margin under bye-law 33D; but as the Government of Bombay took a firm attitude with regard to application of margin on all outstanding transactions, they had eventually to submit to the wishes of the Government. Otherwise, at the outset, their designs were to pay margin on fresh business done as from the 25th March when the Government implemented the clause in demand to the general wishes of the trade. The Advocate General was consulted on this point and he was reported to have expressed the view that the contract would be affected, if the scheme of graded margin was to be operated from the start of business in delivery.

The Government, however, has consulted their legal luminaries

advance, and it was advised, that there would be nothing wrong if the margin was applied to all long transactions in Chaitra delivery. Government enforced this clause to all outstanding and as backwardation charges in silver were over Rs 2, and in gold annas 12, the margin became effective. In view of the heavy margins paid, the bull operators preferred to lighten their commitments but at the same time to face heavy odds in view of the fact that silver offtake has remained somewhat slow while arrivals continue large. Thus, these professional bull operators might be able to hold on for some time but ultimately prices will have to come down in consonance with the prevailing general price structure. In this fashion, they cannot hope to maintain their hold over the market. Start of business in three settlements at a time has gone against the interests of the bulls and this is a major handicap for them to manipulate the market any further.

The gold section, however, ruled steadier due to enlarged offtake on account of the forthcoming marriage season. Floating stocks however have been depleted while the illegal arrivals by way of smuggling are at a low ebb. However the premium of spot Mysore gold narrowed down to annas 12 in view of the maturing chaitra delivery. Gold chaitra moved down to Rs 91-10 to recover to Rs 92-8, while Balsakh delivery was quoted at a discount of annas 12. Sovereign prices hovered around Rs 59-8.

Silver chaitra delivery came down to Rs 164-5 from Rs 166, to recover to Rs 165-12 to be placed at Rs 165-8. Silver Baisakh was quoted lower by Rs 2-10 and Jeth Rs 5-4 in relation to chaitra.

Oils and Oilseeds

The oilseeds market has continued to adopt stone-throwing tactics, with the result that price movements besides being narrow, have been rather irregular. In view of the comfortable supply position, buyers still lack confidence despite the fact that exports this year especially of groundnut oil are excellent due to liberal export policy. Hopes that the duty on castor oil will be reduced have not materialised. Linseed prices after the recent firmness have lost ground due to the import of the crop arrivals. Kardiseeds and nigerseeds are selling at Rs 18 per cwt. as against Rs 22-4 five months back and kardiseeds at Rs 10-12 per cwt. as against Rs 14-12. The Grain and Oilseeds Merchants Association has urged for free exports in spite of the fact that despite heavy export duty of Rs 7-8 per cwt., on these commodities, there is good demand for the same in overseas markets.

Castor seeds for May which had only last month touched a new low of Rs 69-12 rallied to Rs 73 on hopes of cut in export duty on castor oil. Later on, the rate reacted to Rs 71-14. Castor Madras ready was being sold at Rs 14, while castor oil commercial was quiet at Rs 8-8 per quart.

Groundnuts bold ready came business at Rs 20-8 to Rs 20-4. Apr

May delivery moved between Rs 20-6 to Rs 20 to be placed at Rs 20-2 and June-July delivery after fluctuating between Rs 21 to Rs 21-8 was finally reported at Rs 21-1.

Linseed bold spot which had recently gone up to Rs 21-4 receded to Rs 20-4, while April-May and June-July delivery were marked down to Rs 20-3 from Rs 20-12. Linseed oil met with sellers at Rs 12-8.

Art Silk Yarn

The art silk yarn market was slightly better following further restrictions on imports. The rate for 150D April delivery was quoted at Rs 731. The staple fibre yarn market was easier in view of somewhat restricted offtake. There are however reports that cotton mills instead of turning out staple fibre yarn might get interested in producing more of cotton yarn. Staple fibre yarn for April delivery declined to Rs 571-8 from Rs 583 to close at Rs 575, while May delivery was quoted at a premium of Re 1 only.

STOCK EXCHANGES

(Continued from page 723)

week and, after touching a high of Rs. 35-10 on Wednesday, finished at Rs. 35-7. Among other Engineers, Indian Standard Wagon had buyers upto Rs. 138-8; TEXMACO upto Rs. 17-3; Richardson & Cruddas upto Rs. 17-9 and Braithwaite upto Rs. 24-10. Marshalls, however, eased off at the close to Rs. 6-10 after touching Rs. 6-13 early in the week.

The Miscellaneous section, provided a few bright spots. In the Paper section, Titagdur had buyers at Rs. 44-2 to Rs. 43-14; Bengal at Rs 64-12 to Rs 67 and Orient at Rs 26-13 to Rs 27-1. In Minings, Indian Copper hardened further to Rs 3-11 from Rs 3-9 on higher advices from the metal market. In Oils, BHP were a narrow market around Rs 3-15 with IBP moving between Rs 126-8 and Rs 127. Among others, Dunlop Rubber were enquired upto Rs 38-4 from Rs 37-6 in view of the forthcoming dividend, while Rohtas changed hands at Rs 24- to Rs 24-9; Indian Cable at Rs 25 to Rs 25-2; Oiler at Rs 17-3 to Rs 17-5 and BIC at Rs 8-3 to Rs 8-6.

Bombay

Bombay, April 6.

CONDITIONS on the stock market have continued to remain quiet. Price variations were rather small as trading interest continues to remain at a low ebb. Intervening holidays were also responsible. The market seems to be uneasy in view of the delay in the eagerly-awaited announcement of increase in Steel retention prices. Though certain bull operators hope that the announcement would be forthcoming in the near future, there are certain well-informed circles who feel that the Government will take its own time in deciding the issue. The market perhaps may be exhausted and as such needs further stale liquidation might come forth. Thus, the movement in Tata Steel shares are likely to remain irregular.

Textiles have brought forth some scattered support at lower levels on encouraging reports about domestic output of cloth, but the export performance is rather poor. Tata Mills have suffered a sharp setback as disappointment was felt over the dividend of Rs 2-8 without deduction of tax. The profits of Finlay group for 1954 are lower in relation to those of 1953, mainly on account of the provision for increased dearness allowance as well as higher bonus which had to be made following the Award of the Labour Appellate Tribunal. In the case of Finlay mills, this provision had to be made to the tune of Rs 6.40 lakhs, Sw. Rs 4.75 lakhs, and in Gok Mohun Rs 3.5 lakhs. Thus, after making these pro-

sions, the profit of Pinlay Mills came to Rs 15.93 lakhs as against Rs 20.33 lakhs in 1953. Swan Mills' profit amounted to Rs 22.34 lakhs as against Rs 23.74 lakhs, while Gold Mohur's profit was materially lower at Rs 7.33 lakhs as against Rs 17.93 lakhs.

Textiles: Prices in this section moved narrowly. Bombay Dyeing was done at Rs. 464-6 to Rs. 471-4, to terminate at Rs. 469-6. At the annual general meeting of the company on Thursday, 7th April, the shareholders are likely to show their discontent over the recent statement of the Management with regard to the issue of Bonus shares. India United Mills were easy. Kohinoor and Century kept quietly steady at Rs. 314 xd. and Rs. 380-8 cd. respectively. Svadeshi steadied up around Rs. 190.

Steels: Tata Steel Ordinary moved between Rs. 239 and Rs. 240-4 to be placed around Rs. 240. With the account year of 1954-55 coming to a close and the production having been more or less maintained despite the programme of renovation and replacements, the general feeling is that the dividend will be maintained at Rs. 10-8.

Miscellaneous: In this section, Bombay Burmah were quietly steady at Rs. 470. Belapur kept quiet at Rs. 313 as the permission for bonus share has not been obtained so far. Alcocks were weak at Rs. 275—a new low level as against Rs. 300 this time last year. Walchandnagar was steady at Rs. 225 cd. (Rs. 16). Large parcels of Larsen & Toubro shares changed hands at Rs. 11-12, resulting in late recovery to Rs. 12. Premier Construction were featureless at Rs. 158. Tata Oils recored a new low level of Rs. 39-8 after a lapse of few months. WIMCO's dividend is awaited, but the general feeling is that the bonus of Re. 1 may be passed over. Killick Industries were firm at Rs. 172. National Rayon, after being sold down to Rs. 190, met with buyers at Rs. 201-8. Scindia moved between Rs. 15-2 to Rs. 16-4.

EDITOR'S NOTE

For the convenience of investors, we publish below a list of companies whose accounts have been incorporated in the Tabulated Balance Sheets section. This now makes it possible for investors to keep track of the latest balance-sheets, and enables them immediately to make a comparison with other companies in the section.

List of companies whose accounts have been incorporated in this issue:—

THE BIG NINE

(Continued from page 701)

From this point of view, the Bank of India's performance is outstanding. With deposits at Rs 60.38 crores (less than half of the Central Bank's), the Bank of India records almost the same profit as the Central Bank. The 1954 profit of the Bank of India is Rs 77.01 lakhs, Rs 98,000 higher than the 1953 profit. Deposits are higher by Rs 5.49 crores; and borrowings, too, by Rs 2.00 crores. Loans and Advances have risen by no less than Rs 8.17 crores to Rs 39.75 crores. Cash is higher by Rs 1.39 crores and Investments by Rs 51.85 lakhs.

The Punjab National Bank has forged ahead in strident style. Deposits have increased by as much as Rs 10.33 crores to Rs 75.64 crores. The extra resources have been used partly to strengthen the cash balances (plus Rs 3.58 crores) and partly to make more advances (plus Rs 6.85 crores to Rs 32.40 crores). Investments show a small decline of Rs 76.77 lakhs to Rs 35.38 crores. The net profit has spurted from Rs 39.86 lakhs to Rs 53.76 lakhs; and the dividend has been stepped up from 8 per cent to 12 per cent.

The United Commercial Bank, too, has raised the dividend, due to a 25 per cent increase in net profit. Deposits at Rs 40.42 crores show an increase of Rs 2.70 crores. Borrowings are higher by Rs 57.17 lakhs at Rs 3.92 crores. Advances have sharply risen by Rs 4.86 crores to Rs 19.79 crores; and this has resulted in cash being lower by Rs 78 lakhs. Investments have fallen slightly by Rs 62.60 lakhs. Net profit shows a satisfactory increase of Rs 8.05 lakhs to Rs 31.06 lakhs; and the dividend has gone up to 5 per cent (against 4 per cent).

The outstanding feature of the Bank of Baroda is a substantial expansion of the advances portfolio. Loans and advances have risen by Rs 7.51 crores to Rs 25.50 crores. The

increase in deposits (plus Rs 4.00 crores to Rs 34.85 crores) has been most helpful in this respect; but it has also been necessary to increase borrowings from banks by Rs 3.49 crores from a bare Rs 25 lakhs to Rs 3.74 crores. Net profit is 25 per cent higher at Rs 28.02 lakhs.

The Allahabad Bank's deposits at Rs 33.02 crores are higher by Rs 3.21 crores. Almost the entire amount of additional resources has been put to use as loans and advances which have risen by Rs 3.33 crores to Rs 18.98 crores. Net profit is more or less unchanged at Rs 16.15 lakhs.

The United Bank of India has increased deposits at Rs 30.48 crores (plus Rs 3.54 crores). Neither in 1954 nor in 1953 do the year-end accounts show any liability under Borrowings from other banks. The larger deposits account for increases under all heads on the assets side. Cash balances are higher by Rs 1.21 crores, Investments by Rs 1.27 crores and Advances by Rs 53 lakhs. Net Profit at Rs 13.06 lakhs is Rs 98,000 higher.

The Indian Bank shows a jump in deposits of Rs 2.99 crores to Rs 24.85 crores. Borrowings from other Banks are shown as nil. Cash has gone up by Rs 1.07 crores; Investments by Rs 16 lakhs; and Advances by Rs 1.75 crores. Net profit has increased by Rs 1.03 lakhs to Rs 13.94 lakhs.

The consolidated figures of the Big Nine make equally good showing. Deposits have risen by Rs 62.41 crores to Rs 654.98 crores. Borrowings from other banks have risen by Rs 77.89 lakhs to Rs 9.87 crores. Cash resources have expanded by Rs 23.29 crores. Investments are higher by Rs 13.85 crores (accounted for by the Imperial Bank) at Rs 286.73 crores. Advances have increased by Rs 28.73 crores to Rs 329.05 crores. Net profit is higher by nearly 10 per cent and has gone up from Rs 4.06 crores to Rs 4.48 crores.

For the Investor

A Time to Wait

Investment Gossip:

THE waiting mood continues; the speculatives keep steady, but scarcely more than that; teas are becoming more attractive yet; but the waiting mood continues.

I have heard of a lull before a storm; I know that there is the still aftermath to a storm; there can, perhaps, be a lull between storms. But the lull such as we have had in Indian Stock Exchanges in the recent past is one difficult to explain away.

For, I do not think that it can be a false serenity that holds out the threat of tornado to come. Except that there needs a full clarification from Government as to their attitude towards the private sector, it hardly seems likely that any major shocks are in store for the investing world.

Nor can it be that it is a lull after a storm. In point of fact, the 1955-56 Budget was an incentive-providing for Stock Exchanges. It may be that the Amendment to Article 31 of the Constitution constituted a storm. But, generally, the investment climate has by no means changed drastically for the worse; if anything, it has emerged better since the Budget.

For the very reason that there is scarcely the likelihood of shocks to come, it cannot be that it is a lull between the storm just past of the Constitution Amendment and a storm still yet to come.

Why, then, are Indian Stock Exchanges marking time? Are we to think that lassitude will continue to prevail in the markets for some

many weeks more? How are we to look upon the current phase of slower tempo on Stock Exchanges?

In my view, the answers to the three questions are briefly these:

First, the technical position of the market is such that it will not allow of swift fluctuations either way; such changes can occur only after the slight disequilibrium between bulls and bears is rectified. As I indicated a week ago, the bear element is anxious not at all to square its position; and any similar attempt by the bulls will result in such declines in prices, that they prefer to hold on to their shares. It is not quite a stalemate; but the correction in the technical position is taking a longer time than is normal.

Second, the time that the lassitude will continue is dependent largely on item one; of course, a sudden burst of news, either favourable or unfavourable, will bypass the significance of the technical commitments in the market.

Third, we are surely to welcome the "go-slow" activities on the Stock Exchange; it is better that the tempo of activity should keep pace with industrial development in the country; as such, it might be a bad thing if a speculative burst took up prices too steeply.

ER4

Investment Notes:

The demand for Tea shares, on the Calcutta Stock Exchange, continues unabated with selected ones touching new higher levels for the week. The main inspiration is the expectation that tea companies will be paying substantially higher dividends for 1954.

National Rayons, in the Bombay market, are now better around Rs 202-5 as against Rs 201-0 quoted early in the week. Apart from the speculation with regard to the announcement of the dividend for 1954, there are reports that the company has decided to issue Debentures worth Rs 1.50 crores carrying interest at 8½ per cent, the issue price being at par. The redemption period is expected to be 10 to 15 years. Out of this amount, Rs 40 lakhs is expected to be utilised for the payment of the loan from the Industrial Finance Corporation of India and the balance towards the setting up of a caustic soda plant and for expanding the capacity of the present rayon plant.

It is learnt that the Orient Paper Mills have decided to issue 50,000 Preference Shares of Rs 100 each forming part of the unissued capital of the company. The shares will be issued at par for cash and will carry a fixed cumulative preferential dividend of 5½ per cent per annum, tax-free. They will be redeemed at

THE STORY OF TEA No. 7

Automatic packing (Calcutta)

Untouched by hand...

The blended tea is now ready for packing. In the packing room, the tea is fed into one end of the machine to emerge at the other in an unceasing flow, of neatly made packets.

The operation takes place in such clean surroundings that not a speck of dirt can enter the packet. The entire process is carried out automatically—untouched by hand. The packets are then carefully wrapped in parcels packed into cases and sealed.

Protectively and hygienically packed, in all its freshness, the tea is now ready for despatch to distributing centres.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

Fresher because delivered Quicker

par at any time, at the option of the company, before 31st March, 1957. It is said that most of these shares have already been placed privately.

Velimalai Rubber Company, Madras, has decided to redeem the outstanding Debentures in full on the 30th June, 1955.

Dividend Maintained by Dunlop Rubber

Balance-Sheet Reviews:

Dividend maintained by Dunlop Rubber:

THE Dunlop Rubber Company (India) Limited has presented its reports and accounts for the year ended 31st December, 1954; and the working results reveal an increase in sales to Rs 13.70 crores from Rs 12.58 crores in 1953. The net profit, before providing for Taxation and Depreciation, amounts to Rs 1,26,57,709 as against Rs 1,20,86,430, reflecting a substantial increase in the volume of goods sold. Sales turnover is also high in spite of further reduction in sel-

ling prices, though the ratio of profit to turnover is lower. The comparative profit margins in relation to turnover for the last three years have been:—

	1954	1953	1952
Before Taxation	7.0	7.4	7.7
After Taxation	4.3	4.6	4.8

With regard to allocations to various Funds, the provision for Taxation at Rs 37.75 lakhs against Rs 37.50 lakhs in the previous year is less in relation to net profit, but last year's provision included certain exchange losses on Pakistan assessments for previous years. The General Reserve has been raised to

Rs 30.00 lakhs from Rs 24.00 lakhs in order to provide the resources necessary for the expansion of the business and the increase of employment. Additions to the extent of Rs 29.70 lakhs were made during the year, mainly to Plant and Machinery; but these are offset by the Depreciation provision of Rs 30.20 lakhs which compares with Rs 27.78 lakhs for 1953. After these increased allocations, the dividend on the Ordinary shares is maintained at 15 per cent.

The balance-sheet, as at 31st December 1954, shows General Reserve at Rs 1.68 crores and Dividend Equalisation Reserve at Rs 11.00 lakhs as against a total paid-up capital of Rs 2.30 crores. The Debenture Stock is shown at Rs 1.30 crores. Liquid assets amount to as much as Rs 4.84 crores as against Sundry Liabilities, at only Rs 2.38 crores. Inventories are higher by Rs 33.22 lakhs and "Debtors" by Rs 41.40 lakhs as compared with the previous year; and these figures reflect the increased level of production and turnover.

Jessop & Company maintains Dividend:

Jessop & Company has reported a slight increase in net earnings for the year ended 31st October, 1954. Though the company's works were fully employed, the import section of the company's business continued to be handicapped by licence difficulties and affected by growing competition. Sales are higher at Rs 5.03 crores against Rs 4.02 crores in the previous year, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 30.06 lakhs against Rs 28.09 lakhs. The amount set aside for Depreciation has been raised to Rs 3.10 lakhs from Rs 2.62 lakhs; Taxation to Rs 10.10 lakhs from Rs 10.00 lakhs and General Reserve to Rs 4.00 lakhs from Rs 2.50 lakhs. Special Reserve is, however, maintained at Rs 4.75 lakhs. After these increased allocations, the directors have found it possible to only maintain the dividend at 15 per cent.

The directors, in their report, state that 44 per cent of the shares of this company, which were so long held by the London Company, are now sold to Indian interests. Thus, after nearly 170 years, the shares of the company are now entirely on the Indian market and the company may be considered to be wholly Indian-owned. This change will not affect the company's affairs, which will be conducted in the same manner as heretofore.

Results of Coal Companies:

Three coal companies, viz., Bengal, Amalgamated and Pench Valley, have presented their reports, the first one for the half-year ended 31st October 1954 and the other two for the half-year ended 30th September, 1954. With the exception of Pench Valley, the working results of the other two companies are satisfactory. Bengal Coal has maintained the dividend, while Amalgamated Coalfields have raised the dividend to 5 per cent from 3½ per cent. Pench Valley Coal has, how-

ever, reduced the dividend from 8½ per cent to 7½ per cent.

The Bengal Coal Company has reported an increase in sales to Rs 3.22 crores from Rs 2.82 crores in the previous half-year, while the net profit, before providing for Taxation and Depreciation, is higher at Rs 33.76,358 against Rs 27,90,537. The directors have, after setting aside Rs 13.15 lakhs (Rs 11.06 lakhs) for Depreciation; Rs 6.75 lakhs (Rs 7.50 lakhs) for Taxation; Rs 25,854 (nil) for Capital Reserve and Rs 5.00 lakhs (Rs 2.50 lakhs) for General Reserve, have maintained the dividend and bonus on the Ordinary Shares at Rs 10 and Rs 5 per share respectively.

The Amalgamated Coalfields Limited has reported a net profit, before providing for Taxation and Depreciation, of Rs 8,00,034 for the half-year ended 30th September 1954 as against Rs 5,70,668 in the previous half-year. Raisings are higher at 4,01,400 tons against 3,90,636 tons, while despatches are lower at 3,77,585 tons against 3,82,889 tons, mainly due to transport difficulties. Due to the increased earnings, the directors have been able to raise the Depreciation amount to Rs 3.54 lakhs from Rs 2.75 lakhs; Taxation to Rs 1.94 lakhs from Rs 98,031 and Machinery Replacement and Development Reserve to Rs 1.25 lakhs from Rs 1.00 lakh. Even after these increased allocations, they have found it possible to raise the dividend to 5 per cent from 3½ per cent.

The decrease in raisings, despatches and sales is reflected in the working results of the Pench Valley Coal Company. Sales for the half-year ended 30th September 1954 are lower at Rs 32.38 lakhs as against Rs 38.68 lakhs in the previous half-year. Raisings are shown at 2,15,388 tons against 2,51,508 tons and despatches at 2,11,473 tons against 2,52,289 tons. The net profit is lower at Rs 5,15,936 against Rs 7,33,691. The directors have, after allocating Rs 1.49 lakhs (Rs 2.03 lakhs) to Depreciation; Rs 1.51 lakhs (Rs 2.18 lakhs) to Taxation and Rs 1.18 lakhs (Rs 1.38 lakhs) to Development Reserve, reduced the dividend to 7½ per cent from 8½ per cent.

£ R₹

Deoria Sugar Reduces Dividend:

The working of the Deoria Sugar Mills, during the year ended 31st August 1954, reveals a decline in net earnings, mainly due to poor crush coupled with a low percentage recovery. The quantity crushed was only 10,69,075 maunds as against 23,80,871 maunds in the previous year and the average recovery was 8.87 per cent against 10.07 per cent. This was due to the unprecedented amount of damage done to the cane crop by drought conditions in the earlier part of the crop life and by extraordinarily heavy floods during the monsoon.

Sales of sugar and molasses for the year amount to Rs 62.44 lakhs as against Rs 64.49 lakhs, while the net profit, before providing for Taxation and Depreciation, is lower at Rs 2,18,474 against Rs 2,91,893. Due

(Continued on page 805)

The Amendment

THE Constitution Amendment Bill, as revised by the Select Committee, has secured a nearly unanimous vote of approval in the Lok Sabha. Only five members voted against the Bill. It is seldom that an amendment to the Constitution receives such overwhelming support. The present Amendment has raised a storm of controversy. And before it was referred to the Select Committee, critics even within the Congress Party were numerous. It is undeniable that the Select Committee has made drastic changes in the Bill. As Pandit Nehru himself presided over the Select Committee, it was possible that taking stock of the criticisms the method previously received, he succeeded in persuading his colleagues in the Committee to accommodate as much of Opposition viewpoints as possible. Otherwise, the proportion of the voting in the Lok Sabha would have been far different, though majority support is always assured. The Lok Sabha vote clearly reflects the strength of opinion in favour of the Bill in the Committee as a whole. The public do not seem to be seriously pre-occupied with the issues which this Bill has thrown up. On the contrary, they seem to be impressed by the progressive spirit of the Bill and its close consonance with state policies.

Impact of Buoyant Economy on UK Balance of Payments

By PAUL BAREAU

ONCE a year the British Government publishes a survey of the economic situation. Its appearance normally precedes by a short period the presentation of the Budget and it provides a general framework in which not only the Budget picture but the whole economic policy of the Government has to be set.

The Economic Survey for 1955, published at the end of March, is one of the most interesting and varied of this now well-established series of reports. It is made particularly interesting by the contrast which it presents between the buoyant domestic economy and the signs of strain in the British balance of payments which have recently become apparent and which have demanded the imposition of fairly severe remedial measures.

Of the buoyancy and appearance of prosperity of the domestic economy there can be no doubt or question. At home 1954 was an exceptionally successful year. Production continued to expand. For the whole domestic product, the increase over the previous year was 4 per cent, and for industrial production the increase, as measured by the index of industrial production, was 6 per cent.

It was not only production, but production per man that increased last year. For the whole of industry this productivity must have risen by about 4 per cent—a figure which far outstrips the rate of increase in the population in this particular year.

Rising production was matched, perhaps, more than matched, by the rise in effective purchasing power. Personal income last year rose from £13,589 million to £14,408 million. The lion's share of this went to wages and salaries, which increased by 7½ per cent.

These are gross figures, and after allowing for direct taxation and other charges on income, the total disposable income of the country rose by £245 million, or nearly 5½ per cent. It will be seen that this rise in disposable income was not very far out of line with the concurrent movement in production.

To the small section which looks upon this bill as a dreadful measure, the Prime Minister has given categorical and comprehensive assurances; he has stated that it was not the intention of the Government to take over any kind of property without fair compensation, as far as circumstances permit and justify, and that the Government would never take a light-hearted view in respect of the quantum of compensation. In other words, between the potentialities of the Bill and what the Government actually intend to do, there is a wide gap which must be wholly agreeable to those who are unable to view the measure with approval. The Prime Minister has thus fulfilled the desire of an overwhelming majority to see the measure in the Statute Book while, at the same time, undertaking to be extremely fair and circumspect in the matter of its implementation. The Bill could have been more conservative; but, in that case, the Leftist groups in the country would start dangling revolutionary ideas before the masses who, in their turn, may fall easily into the trap. Critics of the Bill would hardly desire this kind of development. They should, therefore, be grateful to the Government for taking the wind out of the sails of their opponents.

The fear is now expressed that, in the event of another party coming into office, it might utilise this measure for expropriation without compensation or with no more than nominal compensation. This fear is amusingly naive. For a party with totalitarian principles were to oust the Congress from power, it may throw the entire Constitution into the dustbin and do everything in its own way. In the continuance and the strengthening of the Congress Government lies the greatest assurance for private property. Those interested in the preservation of private property, and of a democratic Government under which alone it can thrive, would, therefore, do well to do everything in their power to strengthen the hands of the present Government, or at least to desist from any carping criticism of a measure like the present amendment, which eventually might turn out to be beneficial rather than inimical to private property. It is not this measure which is dangerous but the possibility of a rival party coming into power, if the Congress were to weaken. Judged in the proper long-term perspective, the Amendment is more a safeguard for, than a dagger at, property rights as these are understood in democratic countries.

and has, in addition, consumed some of the resources that should have gone to the export market. These influences became evident in the trend of the balance of payments towards the end of the year. The monthly trade returns in late 1954 and early 1955 showed that imports were rising sharply in value, while exports lagged behind. The gold and dollar reserves began to fall and the exchange rate of sterling against the dollar approached the lower limit of £3.78 in the official market and fell to a substantial discount in the free market.

There were two main reasons for these developments. One was the increase in the volume of imports, due, in the main, to rising industrial production. The other was the reversal, during 1954, of the favourable trend in the terms of trade which previously had persisted since 1951. On the average, Britain's imports cost 4 per cent more at the end of 1954 than at the beginning of the year, while the average prices for exports, held down by increasing competition from other industrial countries, remained virtually steady.

There is, thus, no inherent contradiction between the picture of a buoyant domestic economy described in the Economic Survey and the strains on the balance of payments which are also a part of the scene it reviews. The two are in fact complementary—the opposite sides of the same medal.

The steps which have been taken in Britain to deal with the situation are an increase in the Bank Rate, new restrictions on hire-purchase transactions, and a general tightening of bank credits. They should suffice, provided their good is not undone by excessive wage increases and other inflationary developments.

These measures, however, are not to be taken as a sign that contraction in economic policy as a whole is now the order of the day. That is far from being the case and the Economic Survey ends on a note of optimism and expansion.

The Punjab National Bank's Diamond Jubilee

THE history of the Punjab National Bank makes fascinating reading. Few Indian Banks have had to face the peculiar brands of difficulties and obstacles that beset the Punjab National. That it has triumphantly overcome all the obstacles and crises that were thrown up is no mean

achievement. Last week, the Bank—the first Indian Bank to do so—completed sixty years of service. To commemorate the diamond jubilee, an Indian Finance supplement is published with this week's issue. One of the special articles that were written for the occasion is published below.

Role of Private Enterprise in the Second Five Year Plan

By P. R. SRINIVASAN

THE role of private enterprise in India's planned development has been subject to not a little misunderstanding, for reasons which are historical only in part. The more powerful factor in such misunderstanding is a surprisingly widespread inability to visualise the practical tasks connected with the raising of the general standard of living in this vast, over-populated and poor country and to judge dispassionately how best these tasks can be accomplished. This inability is due less to the circumstances of recent years, which created a great deal of prejudice against private enterprise, than to the facile faith in the self-sufficiency of State action which modern leftist thought has induced in the minds of the masses and in those of our political leaders. The fact that the idea of the omnipotence of the State in the economic sphere originated in countries which had actually experienced the paradoxical phenomenon of poverty amidst plenty has been more or less completely forgotten. Forgotten, too, is the other and equally important fact, that undeveloped countries which have developed themselves through collectivist planning have not as yet achieved the improvement in the general standard of living which the masses in India are yearning for, more than anything else. That the State in India can do all that is necessary for raising the standard of living is not a conclusion arrived at after enquiry, but just an assumption which is in tune with the times. Any inclination to test or question that assumption was destroyed by the regrettable experience of profiteering and other anti-social acts of some sections of businessmen in the war and post-war years. These experiences have blinded many to the bright side of the record of private enterprise as well as the shortcomings of State enterprise in this country. The result is that the place of private enterprise in India's planned development is determined not by unfettered rational preference for the better method, but by the pressure which expediency exerts on a Government which has gone all over to the left, but has, in sheer prudence, reserved to itself a certain degree of freedom of action. It is this interplay of expediency and ideological preference that has so far defined the role of private enterprise in planning in India. It is this interplay that accounts for the Avadi resolution being accompanied by affirmations of an important place for private enterprise, for the 1948 statement of industrial policy being followed not long after by emphasis on the impracticability and undesirability of the State acquiring established industries. But all these show that the attempt is yet to be made to specify and size up the innumerable practical tasks and, on that basis, to determine the relative spheres of State enterprise and private enterprise.

The radical difference between the first Plan and the second from the point of view of the

place of private enterprise lies in the fact that the second Plan, unlike the first, calls for an attempt to size up the practical tasks of planning in relation to two questions which the first Plan could shelve, viz. employment and standard of living. In the conditions which obtained immediately after the partition, planning could justly limit its aim to the removal of shortages of food and raw material, and the overcoming of inflation by increase in the supply of goods and the strengthening of the agricultural foundation of the national economy. These aims required the inauguration of irrigation and power projects and the stepping up of industrial production without much of addition to productive capacity. The first Plan was therefore, drawn up with little reference to the position or needs of private industry or of industrial development. Total available resources also, it was thought, did not permit any appreciable allocation for private industry. But as the Plan progressed, it was realised that much had to be done not only for industrial development, but also for private industry. The establishment of a number of new industries and the expansion of many of the existing ones were planned for at later stages.

It is significant that, while the first Plan is unquestionably a success, having worked the projects according to schedule and exceeded the specific targets of production, its effect on the average man is almost wholly inconsiderable. It is true that shortages have been replaced by surpluses in many lines. But the purchasing power of the common people has not increased. Indeed, it is possible that it has fallen. Unemployment has not decreased, and the increase in the population cannot constitute the whole of the explanation. The explanation lies in the fact that the first Plan was not meant to tackle the problem, though much was expected by way of incidental effects. If it is remembered that, through its various power and irrigation projects, the Plan only sought to facilitate economic progress and not actively engineer it, then it will be recognised that far more work, and work of a different nature, top, will have to be done, if employment and the standard of living are to be favourably affected to any considerable extent. It is now realised that the content of the second five-year Plan has to be very different from that of the first. There is much talk therefore of physical and financial planning, of the need to provide a sound statistical basis for the second Plan and to aim at the provision of two million jobs a year and, for that purpose, to make an outlay of Rs 5,000 to Rs 6,000 crores on the second Plan.

But all this contains no indication of the schemes or the new lines of productive activity which can be trusted to provide economic employment on this scale. There is reason to think that the Government are setting more

store by small-scale and cottage industries than by private large-scale industry. The elaborate attempts that are made to revive the handloom and other cottage industries suggest that the big target of two million jobs a year will be striven for mainly through this means. A general revival of the rural economy however, will no doubt provide a little more work for the under-employed. But it can offer no relief to the problem of unemployment in the form in which the average man as well as the Government has to view it. For employment in this context must be equated to a salaried job. And the fact that the Rs 1,000 crores already spent by the State has had no perceptible effect on employment shows that the problem can be solved only by measures which can help employment to gather volume in snowball fashion. State enterprises by their very nature are restrictive in the incidence of their benefits; and more increases in the outlay on State projects do not add appreciably to their value for providing employment.

In India's national economy in the years ahead two sectors may be clearly distinguished. The first is that in which the State inaugurates large projects, whether for irrigation or for industrial production or the heavy industries in which private industry will no longer be allowed to enter freely. And the other is the vast expanse of the rural economy, which has to be essentially individualistic, but which at the same time, has to be spoon-fed by the Government in various ways, whether directly or through cooperatives. Between the State-directed, State-managed big projects on the one hand and the State-aided rural economy on the other, there will have to be a link, which the State in the present condition cannot provide, but which is necessary for deriving the best advantage from our planned development. It is in this sphere that every enterprise will tend to create more and more employment through the processes with which every free economy in the West is familiar.

To deny the appropriateness of private enterprise in this sphere is to shut our eyes to the fact that the alternative is the continuance of the present poverty and unemployment or complete collectivisation as in Russia. Hatred of inequalities and determination to reduce them need not stand in the way of allowing private enterprise to function as it should. For the means of limiting personal incomes has been perfected; and nothing will be lost, and much may be gained, by allowing private industry to develop freely and bring to the country the benefits of a truly expansionist economy.

But the question remains: What chances are there of the value of private enterprise being fully recognised by the Government? As was mentioned at the beginning, pressure of incapable facts is the only factor that can be relied on. It is possible that allocations to private industry may be made in the second Plan in about the same spirit as loans were given to the iron and steel industry out of the profits of iron and steel control. But much more is needed. And that would depend on a number of circumstances. The first mood of disappointment with the effects of the second Plan on unemployment may bring about a more reasonable attitude to private enterprise. Secondly, the Government must be faced with the fact that dissatisfaction in urban areas about the state of employment is not balanced by the comfort that they may be able to bring to the rural folk. And thirdly, private industry may succeed in showing that its contribution to employment, despite all its shackles, is more than that of the State. It will be some time before the politicians and the general public will improve their attitude to private enterprise. But of the importance of private enterprise to a plan that seeks to eliminate unemployment in ten years, there can be no doubt.

On the Wrong Side?

The Commerce Minister's address at the Annual Session of the Rajasthan Chamber of Commerce contains sentiments reminiscent of the recent controversy which led to his momentary separation from the Union Cabinet. The circumstances under which he was reconciled to a reunion, are not fully known. Whatever they are, the Rajasthan speech betrays lurking differences on vital issues. The Taxation Enquiry Commission maintains that industrial investment in India on the required scale would be impossible except through some tightening of the belt, as far as current consumption goes. The innumerable excise duties figuring in the latest Union Budget, are a practical endorsement of this view. The Union Government have no doubt, in spite of criticisms to the contrary, that consumption has to be restrained wherever possible, with a view to stimulate investment. In view of the controversy which has arisen on this point, official policy going one way and the business communities' views running exactly opposite, it might be thought that at least members of the Union Government would speak with one voice. Mr T. T. Krishnamachari does not seem to agree that in this respect official policy is sound. He is inclined to think that as there needs no longer be any fear of inflation, economic planning could proceed without restraint on consumption. He even goes to the extent of contending that restraint may not be helpful at all. It cannot be that he became a sudden convert to this view by the sheer impact of an alluring environment. He must have always been secretly disapproving of the Union Government's policy, to the extent it touched on current con-

Editorial Notes

sumption. Another controversial theme which he persuaded himself to refer to was the freedom allowed to the Industrial Finance Corporations. That these institutions, as he points out, have not come up to expectations in their allotted role, would be a matter of general agreement; but on the reasons for their cramped activity, there is no unanimity. Mr T. T. Krishnamachari is willing to believe that the inquisitorial eye of the legislatures is the major reason. Unfortunately, it is invariably difficult to strike the golden mean between the limits of regulation and those of discretion, for such bodies. It was when Parliament came to face complaints about the Central Corporation that legislative scrutiny was tightened and certain changes made in the composition of the management. Perhaps, the Industrial Credit and Investment Corporation which has subsequently come into being on more or less a similar role, may be able to set standards which will prove appropriate correctives to the inhibitions and prejudices alike which disable the Industrial Finance Corporations for adequate functioning.

Ominous Charge:

The tragedy of the Air India International crash on Monday off Sarawak is heightened by the charge of sabotage by the Peking authorities. This charge though levelled only against the US and Nationalist China, is bound to cause some remote embarrassment to the Indian Union. Perhaps, in future, she may think a hundred times before deciding to make available her planes for carrying diplomatic personnel belonging to other countries! In the present instance, not only the Indian Union but the whole world will have a deep sigh of relief that Chou En Lai was not in the ill-fated plane nor was there any top-ranker among Peking leaders. As in certain crime stories, where the real clue may lie far removed from the usual tracks, and superficial presumptions are all too easy, there are a few circumstances which give a respectable look to the sabotage theory. The Peking authorities had given a prior warning to Hongkong, through the UK Charge De Affairs in Peking. The Hongkong watch and ward seem to have been specially alerted by instructions from the latter. And in answer to the charge, they have stated that there was no probability of any intruder interfering with the plane or of any neglect on the part of the crew or the ground staff in regard to the usual check-up of the plane. Only the passengers luggage was admitted without customs inspection. As the crew alone have survived, it has

now become impossible to say whether the luggage was the source of the mischief; because even the refreshments taken on board from Hongkong are claimed to have been thoroughly checked.

According to the ground engineer in the plane, who is the first among the survivors to make a statement, the crash was due to fire in the hydraulic system in the left wing of the plane, and that the air craft having broken into three on hitting the water, he got out through the tail and the other two through the cabin. In this statement there is basis to proceed on towards the cause of the tragedy. A Washington State Department spokesman says that there is not the slightest foundation in the world for such an "outrageous suggestion" as is made by the Chinese Communists. No well-meaning individual, whatever be his nationality, will desire to think that the crash is anything but sheer accident.

ECAFE Survey:

The latest annual Survey, issued by the Economic Commission for Asia and the Far East, presents a picture which is on the whole brighter than that of the previous year. The most outstanding progress is in the realm of food production. In 1954 the production of food-grains in the ECAFE region is estimated at 11 per cent above the 1934-38 average. The difference represents a striking improvement; all the same, considered in relation to the growth of population, the relative position gets reversed. It is pointed out that 1954 food output comes only to 92 per cent of the pre-war level per head. Industrial production, notably in textiles, cement, iron and steel, fertilisers electric power and transport has also substantially increased. Post-war increase in India form a major contribution to the progress of the region in the industrial sphere. The trend in respect of balance of payments is less agreeable. There has been a deterioration over the two years, 1952-54. In a few countries the adverse balance of payments is a result of the import of capital goods for development purposes. In fact, it is a matter of policy for some governments, to draw moderately on credits abroad. For the region as a whole, there is no net foreign reserve to fall back upon. Even if there were one it would not be sufficient to meet the gigantic requirements of development expenditure. The ECAFE Survey calculates that this region, including Communist China and Japan, needs Rs 2,500 crores a year for development. Domestic savings could provide no more than Rs 1000 crores; a balance of Rs 1,500 crores will therefore have to be met from external sources. Again, the ur-

gency for stepping up foreign investment in the area is sharply pressed into attention.

Sweet-tooth Lacking:

A complaint that has been made by the India Confectionery Manufacturers' Association is that Indian children are not sweet-toothed enough. Their tongue waters, as they think of the high demand for "candy" in America; and they have now asked for State aid, on the plea that the Indian child has reduced his consumption of sweet tooth-somes. For our part, this report has raised a number of intriguing questions: Does the missing sweet-tooth signify a lack of sweetness in the Indian child, on the premise that sweets are only for the sweet? And, perhaps, are we to praise the Lord for the fact that the Indian child is not overfond of sugar? For, let us remember that sugar is directly translatable into terms of energy; and we are under no delusion that the Indian child is less mischievous, as it is (sweet-tooth lacking), than his Western counterpart.

World of Finance

A Tough Conundrum

THE financial returns for the week ended April 8 disclose many-sided and drastic changes; and the interpretation is rendered more difficult as there appear to be some missing links, and these missing links have to be assumed on the basis of pure surmise. However, shrewd such surmises may be, their validity is beyond our resources of verification. Nevertheless, it is important that, subject to this unavoidable disability, we embark upon the task of interpretation in respect of figures which have a great bearing on the role of deficit financing as a cure for deflationary forces. At the outset, we may list the figures dis-

closed in the current money market returns:

1. At the weekly auction on April 12, tenders for Treasury Bills received were exactly equal to the amount on offer, viz., Rs 1 crore. The average rate of accepted tenders was Rs 2-9 per cent per annum.
2. During the fortnight ended April 8, ad hoc Treasury Bills issued in favour of the Reserve Bank amounted to Rs 70,95,25,000.
3. In the fortnight ended January 7, ad hocs sold to the Reserve Bank totalled Rs 13,63,25,000. In the week ended January 14, ad hocs sold to the Reserve Bank amounted to Rs 50,44,25,000.
4. Rupee securities held in the Issue Department of the Reserve Bank were unchanged at Rs 533.75 crores. On the other hand, foreign securities show an increase, reflecting an expansion of currency to the extent of Rs 25 crores.
5. Rupee coin has risen by Rs 3.35 crores to Rs 105.44 crores.
6. Active note circulation has increased by Rs 31.18 crores to Rs 1,322.77 crores.
7. Notes held in the Banking Department have fallen by Rs 2.83 crores to Rs 8.42 crores.
8. Central Government's deposits with the Reserve Bank have declined by Rs 7.21 crores to Rs 57.81 crores.
9. The balances of the Provincial Governments have fallen by Rs 31.43 crores to Rs 30.16 crores.
10. The balances of banks at Rs 44.95 crores show a decline of Rs 1.32 crores.
11. The Government of India Treasury Bills held in the Banking Department have risen by Rs 1.70 crores to Rs 11.78 crores.
12. Balances held abroad at Rs 73.96 crores are down by Rs 23.81 crores.
13. 'Other Loans and Advances' show a sharp reduction of Rs 17.19 crores to Rs 30.95 crores.
14. Investments show a small decline of Rs 55 lakhs to Rs 47.23 crores.
15. The Imperial Bank's statement shows the following changes:
 - (a) Deposits are down by Rs 7.93 crores;
 - (b) Borrowings from other banks have been reduced by Rs 10.00 crores;
 - (c) Other liabilities show an unusually sharp rise of Rs 7.79 crores;
 - (d) Cash is down by Rs 1.24 crores;

(e) Investments show a decline of Rs 1.91 crores, and (f) 'Loans and Advances' have shrunk by Rs 1.44 crores.

The first reconciliation to be effected is between (a) ad hocs sold in favour of the Reserve Bank in the fortnight ended April 8 being Rs 70,95,25,000 and (b) the increase in the rupee securities in the Issue Department being only Rs 29.60 crores in that fortnight. There is thus Rs 41,10,20,000 to be accounted for. A part of this amount is, doubtless, connected with renewals of ad hocs. In the fortnight ended January 7, ad hocs sold to the Reserve Bank totalled Rs 13,63,25,000. The ad hocs that became due for renewal in the fortnight ended April 8 should include not only ad hocs sold in the fortnight ended January 7, but, possibly, the ad hocs sold on January 8 to 10, as February was a month of 28 days. There is no manner of knowing the amount of ad hocs issued on each of the days between January 8 and 10. All that we know is that the ad hocs sold in favour of the Reserve Bank in the week ended January 14 amounted to Rs 50,44,25,000. How much of this were sold between January 8 and January 10 is a matter of conjecture. Unless the bulk of the Rs 33,44,25,000 being ad hocs sold in the week ended January 14 were actually sold between January 8 and January 10, a moiety of the ad hocs reported as sold in the week ended April 8 will remain untraced in published figures. It is permissible, however, to assume that a part of the substantial decline of Rs 31.43 crores in the balances of the Provincial Governments represents the ad hocs sold to the States for investment of the latter's surplus funds. If the assumption as regards investment of States in ad hocs be conformable to facts, the amount so invested by the States in ad hocs represents the deficit financing of the week. It will greatly help the student of statistics if the Reserve Bank were to publish a weekly statement giving the daily sales of ad hocs in favour of the Reserve Bank.

In the week ended April 8, there has been an expansion of currency against foreign securities to the extent of Rs 25 crores, these securities being transferred from the Banking Department. There has also been an expansion of currency against rupee coin for Rs 5 crores, this representing the coin tendered by the Government under the Reserve Bank Act. While rupee coin in the Issue Department has thus received an augmentation of Rs 5 crores, rupee coin as on April 8 shows an increase of only Rs 3.35 crores. The balance of Rs 1.65 crores represents the amount of coin that has gone into circulation. While coin in circulation has thus expanded by Rs 1.45 crores, notes in circulation have expanded by Rs 31.18 crores. In the result, notes held in the Banking Department have declined by Rs 2.83 crores to Rs 8.42 crores.

The Centre's deposits have declined by Rs 7.21 crores. Many of

the cheques issued at the close of the financial year and on April 1 might have been presented for payment between April 2 and April 8. If, as we surmise, these have been some measure of deficit financing in the week ended April 8, it follows that actual disbursements by the Centre must have been much larger than is indicated by the decline of Rs 7.21 crores in deposits. The substantial fall in the balances of Provincial Governments is accounted for, partly by month-early disbursements and delayed presentation of cheques issued in the closing days of March and on the first day of April; and, partly, possibly by some of the States using their surplus funds to buy ad hoc Treasury Bills.

The increase of Rs 1.7 crores in the Reserve Bank's portfolio of Treasury Bills may mean that some of the banks—perhaps the Imperial Bank—have sold Treasury Bills to the Reserve Bank for strengthening their cash position. This is borne out by the fact that 'Other Loans and Advances' show a unusually large reduction of Rs 17.19 crores, of which no less than Rs 10 crores is accounted for by the Imperial Bank. The balances held abroad in the Banking Department show a fall of Rs 23.81 crores. This must have been Rs 25 crores if the transfer of securities to the Issue Department were alone taken into account. It may, therefore, be inferred that the net increase in the Reserve Bank's foreign assets in the week under review is Rs 1.19 crores.

The statement of the Imperial Bank for the week ended April 8 shows a sharp decline of Rs 7.93 crores in deposits to Rs 23.35 crores. Borrowings from other banks have declined by Rs 10 crores to Rs 1.00 crore, while other liabilities, including inter-office adjustments, have risen by Rs 7.79 crores to Rs 9.41 crores. On the assets side, cash balances are lower by Rs 1.24 crores at Rs 14.14 crores and investments by Rs 1.91 crores at Rs 104.24 crores. 'Loans and Advances' have fallen from Rs 129.19 crores to Rs 127.75 crores—'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 2.16 crores and 'Bills Discounted and Purchased' for a rise of Rs 71 lakhs.

Scheduled Banks' credit for the week ended April 1 has risen by a further Rs 7.66 crores, which is mainly due to the sharp rise in 'Advances and Bills Discounted'. There is also an increase in total deposit liabilities which is accounted for by the increase of Rs 6.55 crores in Demand Liabilities. Borrowings from the Reserve Bank show an increase of Rs 83 lakhs to Rs 37.90 crores and those from the Imperial Bank of Rs 1.53 crores to Rs 9.59 crores. Cash and balances with the Reserve Bank are slightly lower at Rs 77.65 crores against Rs 77.79 crores with investments higher by Rs 14 lakhs at Rs 34.31 crores. Money at call and short notice stands at Rs 9.07 crores against Rs 11.38 crores.

Britain's Labour Deadlock

By PAUL EINZIG

AT the moment of historical changes in British politics, Britain is without national newspapers, owing to a strike of some 100 electricians and maintenance engineers. Their excessive wages claim resulted in a standstill of London newspaper production, and may throw some 50,000 printers and distributors out of employment. The strike is anything but popular even among the Socialists whose sympathies are with the printing workers, and who feel that the absence of newspaper is working out to their disadvantage at the local elections which are in progress. Above all, they are aware that the strike is largely inspired by the Communists, as is indicated by the fact that the Communist 'Daily Worker' is the only London daily newspaper which is published. Yet neither the Labour Party nor the Trades Unions Council can do anything about it.

The newspaper proprietors are unable to satisfy the claims of the 700 strikers without having to concede corresponding increases to between 15,000 and 20,000 other workers, and the burden of such an around increase would be more than their finances would stand. A handful of men hold the industry and the whole country at ransom. If the Printing Workers' Unions agreed to the replacement of the strikers by workers who do not belong to the Engineers' and Electricians' Unions, the result would be a nation-wide strike of engineers and electricians. The fight is not so much between the employers and the 700 employees as between the various Unions. Printers feel they are entitled to higher wages than engineers and electricians working with them, and they are determined to maintain the existing differential between their respective basic wages. So long as this attitude prevails, there can be no solution and the strike must continue. The result may well be the disappearance of some of the financially weaker newspapers.

This deadlock is characteristic of the labour situation in Britain today. Every now and again there is a strike resulting from conflict between rival unions. And it is seldom possible to confine a strike to within the narrow limits of the sphere where it originates. The Trade Unions, in order to resist Communist competition for leadership feel impelled to back up unwarranted claims and to endorse unofficial strikes. Workers of different industry have come to consider it their moral duty to support each other's strikes, irrespective of whether they consider the claims justified. While in private conversation Socialist politicians and Trade Union leaders readily condemn the present newspaper strike as 'anti-social', none of them would dare to say this in public. British industry is caught in the intricate network of inter-union relationship. This state of affairs is one of the results of the scarcity of labour which prevails in Britain. And the

workers and their unions are determined to maintain this scarcity. There is a strong resistance to new entrants to most industries. On a recent occasion the workers of an under-staffed motor transport company quite candidly admitted that they were opposed to an increase of the staff because it would mean less overtime pay for them.

Faced with a labour shortage, employers display much less discipline and solidarity than their workers. In industries where wage rates are determined nationally or regionally, individual firms very often resort to the payment of bonuses in addition to the wages

agreed under collective bargaining. Even more frequently such bonuses are disguised in the form of additional recreation amenities, or subsidised prices of meals in staff canteens. All this, together with the rising trend of the basic wages, makes for an increase in the cost of production. Although, judging by the figures of higher output, productivity is increasing, the benefit of more efficient methods cannot be passed on to the consumer in the form of lower prices. Indeed the rising productivity is not even able to prevent a continuous increase of prices owing to the wages claims which surpass the extent of the increase in productivity.

Senior Union officials are doubtless aware of the inflationary character of this wages spiral. But

they all maintain that their particular wages claim is the consequence and not the cause of the rise in the cost of living. So they make the utmost use of their bargaining power to secure the maximum of wages increases, irrespective of the effect on the general situation. The big Unions, whose membership runs into many hundreds of thousands, are of course in a strong position to enforce their claims. The effect of a prolonged strike in the coal industry, or in the engineering industry, or any of the major industries, would be disastrous. But even the small unions, whose members are in a key position, are able to exert considerable pressure. The importance of being unimportant' is illustrated by the example of

World of Business

Puzzlement

THE FOND hope had been that, once the recommendations of the Taxation Enquiry Commission were made known, and once Government had indicated the attitude that they would take in respect of the suggestions made by that body, it would be possible for the World of Business to be more or less certain of the treatment it stood to receive from Government in the future. That hope was nurtured, firstly, because it was anticipated that clear indications would be available in the Report as to the form that future development in India should take; and, secondly, there were those who believed that the Commission could come to no other conclusion than that the rates of taxation in this country would not admit of any further increases. In such view, it was common to hear the year 1954-55 described as one of uncertainty and some uneasiness. But the focus of attention for the World of Business was the Budget that Sir Chintaman was to reveal for 1955-56 in which, it was known, the main features of the Commission's Report would be disclosed. Unfortunately, that fond hope has now been disillusioned; and, although there is many a point in the Report which could be considered as incentive-inspiring for industry, there were as many others (if not more) which seemed to augur prospects not quite so cheerful. In fine, the reactions as they now have started

to pour in are of the mixed-feelings variety.

The Presidential Address made at recent meetings of Chambers of Commerce in the country are suggestive of such a trend in business sentiment. There was a time when the forum offered by a Chamber meeting was seized to present the resentments entertained at controls policy or import policy or export policy. Today, the Chamber meetings understandably are utilised for giving vent to business views on the economic policy that Government seem to have delided upon.

Of this genre, for example, is the speech made by Mr Peary Mukherjee at the 68th Annual General Meeting of the Bengal National Chamber of Commerce a fortnight ago. Mr Mukherjee has expressed justifiable puzzlement at the course that (it seems to him) Government attitude towards Private Enterprise is taking. His puzzlement is the more because he speaks as an industrialist who is fully aware of the realities of the situation. He knows the duty that Private Enterprise owes to society: 'It has to adjust its operations in such a way as not to create prejudice and bias against it among the public. It has to recognise that the days of unlimited profits, irrespective of the economic conditions and interests of other elements in the Society have gone, and that any one section of the commu-

nity can not prosper at the expense of any other.'

It is, therefore, in this knowledge that he seeks to present a case for a better role for private enterprise than has seemingly been allotted to it in the Second Plan. Essentially, the economic composition of industry in future India should, according to Mr Mukherjee, be a happy combination between the State and private enterprise. But where the BNCC President felt cause for anxiety was in the avowed intention of setting as our objective a socialistic pattern of society. This indicates, to Mr Mukherjee, the probability of conditions in which private enterprise would be unable to function.

It would seem to be clear that, in the mixed economy we are now evolving, there will be an undoubted role of importance for the private sector. On the one hand, the private sector is eminently fitted to take on the task of development and industrialisation in a number of fields; and, on the other, even if the Government wished it so, they would scarcely be able to muster the financial resources needed to 'go it alone' in the matter of the rapid industrialisation of the country they so ardently desire.

In our view, a socialistic pattern of society and an honourable role for private enterprise are not incompatible. For, a socialistic pattern of society such as we have in mind would not only allow of the fullest co-operation between the two sectors (that is to say, envisage conditions in which the tasks of the State and of private enterprise would be complementary in character), but even require such co-operation to be a vital necessity for achieving that objective.

Unfortunately, if we are clear in our mind as to what should consti-

tute, in the economic conditions in India, a socialistic pattern of society, the private sector has yet to come to that realisation; and, moreover, Government, even if their views are not far divergent from ours, have been almost jealously careful about not sharing such views with others. In other words, a better and fuller exchange of ideas about the connotation of the socialistic pattern of society that is so much talked about should enable all doubt and diffidence to be cleared away. It is to be hoped that such clarification will emerge before the schemes and preparations for the Second Plan are at too advanced a stage. For, given that clarification, it should be possible to ensure that the Second Plan will be a success in degree much more than could be hoped for in the present circumstances.

It is again, the Budget and the recommendations of the Taxation Enquiry Commission which have received the serious attention of another Chamber President. When the Annual General Meeting of the Indian Chamber of Commerce was held a week ago, Mr G. D. Binani expressed a similar genre of puzzlement. In his case, there is a better understanding of what the socialistic pattern of society might be tantamount to. But Mr Binani is anxious about the very point on which we have, in the earlier note, asked for clarification.

Is the development in the years ahead to be the exclusive task of one or the other of the sectors? Is it to be that the State will increasingly take upon itself all endeavours in future expansion? These are questions that have led Mr Binani to suggest that 'if one expands at the expense of the other the economy as a whole does not benefit.

Obviously, if we understand rightly the particular promise of an honourable role for the private sector in Indian development, industrialisation of the country is to be the responsibility of no one sector alone. As Mr Binani puts it, 'the public sector and the private sector have both to expand simultaneously and to the fullest extent.' What needs, therefore, to be stressed is the essentially complementary character that should comprise the efforts of the two sectors. If Government policy is such as to dissuade the efforts of the private sector, the consequence might be, not only that no expansion would take place or be possible, but that the tempo of activity in existing industry would suffer.

How is this nice balance to be struck, one that will ensure the most fruitful results from co-ordinated and complementary endeavours between the State and the private sector?

Government policy in these respects must be said to be in the formative stages. But what seems to be responsible for the misgivings of today is the fact that the private sector has to wait upon a clear enunciation of the exact nature of the role that Government will decide upon for it. In the final analysis,

World of Jute

First Quarter Disappointing for Jute Goods

WRITING on the situation in the Indian world of jute a month ago, I ventured to prophesy on the basis of the first set of figures made available then, pertaining to the working of jute mills, that February would prove to be an unsatisfactory month for the industry.

Figures relating to stocks of jute goods at the end of March 1955, released early this week are, if anything, indicative of a further deterioration in the condition. As against 82,900 tons at the end of February, stocks have gone up by 11,500 tons to stand at 94,400 tons at the end of March. Hessians have increased by 7,200 tons to 33,900 tons while Sackings have gone up by 4,000 tons to 58,900 tons. Other varieties are also higher by 300 tons at 1,600 tons.

Though the upward movement of stocks has been apparent from October last year when mills began working 48 hours a week, the rise has been rather steep from month to month since the turn of the year. From 69,600 tons at the end of December, closing stocks for January 1955 jumped to 76,400 tons, taking another leap to be placed at 83,100 tons at the end of February and finally now executing a long-jump to stand at 94,400 tons at the end of March.

The implication of these figures is obvious. Though the first three or four months of the year are generally dull months for the jute goods trade, the successive increases in stocks should have also stemmed from the diminishing interest evinced in our jute manufactures by overseas customers, as will be seen from the following table:

1954	Despatches (tons)
December	91,900
1955	
January	76,600
February	74,800
March	77,900*

*Theoretical position.

The statement that overseas demand for jute goods is usually slack in the beginning of the year may be valid in normal times. But after the extraordinary situation created by the last war and later on by new developments like the emergence of Pakistan as an independent country, controlling the major portion of the jute growing areas of the world, the jute material from Pakistan severely retarded by the various difficulties created by the East Bengal Government in the matter of issuing licenses etc., the raw jute dealers have been further encouraged to hold on to their stocks. That is why mills have not shown any interest in business at prevailing levels though it would appear that buyers were interested. With the raw jute dealers and the mills reserved

tive as possible to the buyer. This is particularly true of the jute goods industry 90 per cent of whose production is to be exported.

But strangely enough, one is finding jute goods pricing themselves out of the favour of buyers. It is no doubt true that the industry has taken a step in the right direction by deciding to work 48 hours a week so as to keep production of jute goods at a high level. But as luck would have it, the villain of the piece this time has been raw jute. The scare of a raw material shortage became such a powerful nightmare to mills who had not built up sufficient stocks of raw jute, that the entire jute trade was put out of gear. Higher and higher raw jute prices resulted in higher and higher prices for jute goods. It has been estimated that raw jute prices have gone up by over 80 per cent during the scare period. Despite the fact that mills were prepared to bear the additional impost by way of high raw jute prices, they could not but follow up the increase in raw material prices by considerable increase in prices of jute goods as well, if they were not to go out of business altogether. All this resulted in a situation in which sellers of jute goods had to be content with what little business they could manage to obtain at the enhanced rates quoted by them. With foreign consumers of packaging materials not entirely dependent on jute goods, it is but natural to expect them to wait till prices reach levels that are considered equitable by them.

It was about a fortnight ago that the first rumour about an Argentine order began to circulate in the market place. At that time also there were indications the jute goods market was returning to normal after the intense speculative activity witnessed in mid-February last. But subsequent events have proved that conditions are far from becoming normal. Though the scare of a raw material shortage has to a large extent subsided, as far as mills are concerned, raw jute dealers continue to cherish the hope of getting high prices in view of the somewhat alarming statement issued by the Pakistan Government regarding the size of the 1953-54 jute crop in their country. With the free flow of the raw material from Pakistan severely retarded by the various difficulties created by the East Bengal Government in the matter of issuing licenses etc., the raw jute dealers have been further encouraged to hold on to their stocks. That is why mills have not shown any interest in business at prevailing levels though it would appear that buyers were interested. With the raw jute dealers and the mills reserved

—the former because of their unwillingness to discount prices and the latter because of the slender or no margin at all of profit at current goods prices—the market is fully in the hands of speculators.

Irregular price movements characterised trading in the jute goods market during the past week. After a quiet opening, market gradually firmed up on bear covering in the Fatka. Sentiment was further aided by fresh enquiries for cotton packs, grain sacks and A Twills from overseas countries. It was generally anticipated that business would materialise after the Easter Holidays. Though the undertone continued to be influenced by expectation of fresh orders when the market reopened on Monday, by close of the day prices had fallen steeply all along the line as it was rumoured that jute goods stocks at the end of March were higher than those of the previous month by over 11,000 tons. When news came through that March-end stocks had increased by 11,500 tons, a wave of selling hit the market. With bear selling and bull unloading Hessian Ready fell by six annas to Rs.44.4 and B Twills dropped three points to Rs 120-12. Though the next day ended on a quietly steady note, by week-end fully steady conditions began to prevail as shippers evinced keen interest in cornsacks and heavy cees. Other contributory factors were enquiries from Africa, Egypt, Port Sudan and Australia, for several categories of heavygoods.

The following table shows the trend of prices during the week.

	Week's Opening	Week's Lowest	Week's Closing
Hessians:	Rs. a.	Rs. a.	Rs. a.
40" x 10 Oms.			
Ready	44 14	44 4	44 8
April-June	45 2	44 8	44 10
July-Sept.	44 6	44 0	44 2

Sackings:				
B. Twills:				
Ready	123 10	120 12	122 12	
April-June	120 4	117 12	117 12	
July-Sept.	114 8	113 8	114 4	
Heavy Cees				
(Green)	124 12	122 12	123 12	
Cornsacks	126 8	124 12	128 0	
Cubans	148 0	146 8	146 8	
A. Twills	158 0	155 0	156 8	
L. Twills	139 8	138 8	139 8	
D. W. Flour	147 8	147 0	151 0	
Sugar Bags	138 0	134 0	134 0	

Though over the week, Assam Bottoms have declined by half a point to Rs 33-8 per maund, the undertone of the market continued to remain steady throughout. After an unimpressive start, market steadied up on Monday only to turn quiet again on subsequent days. As a matter of fact stalemate conditions prevailed on most of the days as both sides—raw jute dealers and mills—were entertaining different ideas about the size of the old crop that was still unsold. With jute goods prices in doldrums, mills were not prepared to pay the prices currently quoted by dealers. Raw jute dealers, on

the other hand, seemed to be confident of making the mills pay the price asked for in view of the low ebb of raw jute arrivals from Pakistan.

In the meantime, reports about the progress of the new crop both in India and Pakistan continue to be encouraging. During the past week, fairly good progress has been made with sowings in Pakistan although certain areas indicate that more rain is required. The standing crop is making good progress and the river levels are fairly normal for this time of the season. In general, the quantity of sowings done is ahead of last year.

The crop report for India during the same period says that the weather continued to be mainly hot and dry in all areas. In Upper Assam, however, cultivators carried on with sowings and the river levels are also receding.

SUMMARY OF STOCKS.

	Feb. 28, 1955.	Mar. 31, 1955.	Inc. over or dec. from last month.*
	(000 tons)	(000 tons)	(000 tons)
Hessian:

in the long run...

Dulux Synthetic Enamel is not only famous for its

high gloss, but goes much further

and lasts much longer. It has exceptional

properties of flexibility and adhesion to metal,

wood and other surfaces. Easily applied by brush or spray.

Dulux has good flow and dries quickly to a hard abrasion

resistant finish. Use Dulux for every job where

outstanding durability is required.

'DULUX' for the finest finish

World of Tea

Exports Decline in 1954-55 Season

WITH Export auctions over, it is now possible to undertake stock-taking. The end-of-the-season enquiry from abroad is confined to the Middle East and the price level has been kept down in sympathy with the steady decline in London prices. While exports for the next season are covered by the renewed International Tea Agreement, this is expected to place no restriction on the extension of the acreage planted or on replacement of the bushes. In turn, this will help the producers to raise output.

According to the latest figures available, shipments of Northern India teas have, despite the 0.52 overseas demand, declined to 309.6 million pounds in the 1954-55 season from the high level of 388.7 million pounds in the previous season. This was mainly due to the Government's policy to restrict the total allocation of export quota to ensure adequate supplies for internal consumption. Shipments against Special licences were also limited to 9.5 million pounds as compared with 41.00 million pounds. The only market to which exports showed a substantial fall was the UK, which imported only 261.7 million pounds in 1954-55 as compared with 285.5 million pounds. Shipments to other destinations were, however, 4.7 million pounds higher at 107.8 million pounds. The most remarkable rise in offtake was recorded by Australia, which accounted for 7 million pounds in 1954-55 as compared to 1.4 million pounds in the previous season. While shipments to the USA also increased by nearly 3 million pounds to 22.5 million pounds, exports to Canada were maintained at 14 million pounds. The Irish Republic increased her offtake further from 20.9 million pounds to 22.7 million pounds, while Iran took 2 million pounds more at 2.9 million lbs. Shipments to other Middle East countries, however, showed a marked

decline, though exports to Egypt were well maintained at 8.4 million pounds. The following figures will show the distribution of North Indian teas during the past two seasons (in million pounds):—

Destination.	(In million lbs.) 1954-55	1953-54
United Kingdom	261.7	285.5
Irish Republic	22.7	21.0
USA	22.5	19.6
Canada	14.0	14.0
Australia	7.0	1.4
South & Central America	1.2	1.7
Amsterdam	4.9	4.4
London	4.2	3.8
Istanbul	2.0	5.0
India	2.9	0.9
Far East Gulf	9.0	10.8
Egypt	8.4	8.8
Arab Sea Ports	5.4	7.3
Burma	0.6	0.7
Others	2.9	3.7
Total	309.6	388.7

The demand at internal sales is generally good. In the Internal Sale held at Calcutta this week, offerings consisted of about 17,445 packages of Dusts for which there was a fair demand at irregular rates. The Medium Assams and Dooars with useful leaf appearance and liquors in cup were irregular and were slightly easier in rates. These Dusts with indifferent leaf and liquors were easier by As 3 to As 4 per pound, while the very fibrous end-of-the-season types were up to As 6 per pound easier and were at times difficult of sale. The Upper CTC good liquoring Assams again showed a drop of As 2 per pound. Following rates were quoted per pound:—Medium Assam Dust Rs 2-1-8; Medium Assam Grainy Dust Rs 2-5-0 and Best CTC Assam Dust Rs 2-1-3.

In the Export Quota section, the rates moved between 60 and 65 ples per pound for the Special Export Licence. Some business was done in new season's Export Quota at 96 to 108 ples per pound. Meanwhile, the Tea Board has circularised an interim release of 50 per cent of the crop basis of estates in respect of

the season 1955-56 Export Quota. This may be taken as approximately 150 per cent of the former Standard Export figure, which corresponds to 36.00 million pounds. The amount of the total Indian export allotment of tea for the same season will be announced later. As the next crop is expected to be made ready for despatch from the gardens earlier than usual, producers will be able to export their output to overseas markets in time on the basis of quotas which will be soon allotted. Furthermore, export rights, that will be brought forward from 1954-1955 season into the next season, will amount to about 19 million pounds—12 million pounds for North India and 7 million pounds for South India.

Meanwhile, India and Ceylon are expected to sign an agreement, within a month, for a joint tea propaganda campaign in West Germany. In this connection, the Chairman of the Indian Tea Board has stated that it only remains for these two countries to decide the extent of Ceylon's share in the West German Tea Corporation. At present, India is the sole producer country of tea in the West German Corporation, sharing 50 per cent of the cost of propaganda with the local trade. The Chairman has added that, before the final signing of the agreement, India will have to decide how much of her 50 per cent shares she is prepared to allow Ceylon to buy. India and Ceylon are already co-operating in joint campaigns in the USA and Canada. India's contribution to the US campaign is 475,000 dollars and Ceylon's 375,000 dollars. In Canada, India is spending 205,000 Canadian dollars and Ceylon 155,000 dollars. In addition, India, in co-operation with Indonesia, is conducting a campaign in Holland. In the Irish Republic, where India is the only producing country, she is spending 7,500 pounds.

In the Internal sale, held at Cochin during last week, a total of about 4,75,000 pounds was offered. There was a poor demand for fibrous residual types which were again difficult of sale; but other sorts met with fair demand at rates which were generally an irregular one to two annas per pound below last levels. High-grown descriptions were about steady, while Medium sorts and Black Leaf Middle East types came to an irregular market. In the Export Quota section, business was reported done in Special Licence Export Rights at 66 ples, while there were buyers of New Season's Quota upto 84 ples per pound with no sellers.

Following were the shipments made from Cochin (figures in pounds):—

Destination.	1-1-1955 to 25-3-1955	1-1-1954 to 25-3-1954
United Kingdom	8,442,778	8,997,289
U.S.A.	2,152,558	2,636,610
Canada	1,843,131	1,566,456
Australia	172,827	453,220
Other Countries	830,126	467,066
Indian Ports	1,464,681	594,367
Total	14,806,098	11,817,040

In the Colombo market, offerings amounted to about 6,50,000 pounds. The quality from Western districts showed a slight improvement, but manufacture was extremely poor with a considerable quantity of stalk in the offerings from the bulk or high-grown estates. There was very limited demand and prices declined sharply. Offerings of Nuwara Eliya teas were large and although quality was fairly well maintained, offers were lacking. There was a fair demand for high-grown teas, particularly for good liquoring sorts. Among medium-grown teas, useful liquoring types were sold at a decline of 20 to 25 cents per pound, but this liquoring stalky kinds were again neglected, resulting in heavy withdrawals. Among low-grown teas, Tippy BOPs and bold Leaf types continued to receive support at a decline of 10 to 15 cents per pound. Orange Pekoes, however, met with good competition at rather lower rates. Tippy Fannings continued at fully firm rates with best qualities selling considerably above the rates paid for the corresponding BOPs.

In Chittagong, the opening sale of the 1954-55 season will be held in the middle of June. In view of the recommendations made by the Executive Committee of the Tea Buyers' Association, London, Pakistan Brokers' Limited has decided to employ the new terms 'Plain Tea' and 'Plain Broken Pekoe' in the place of 'Common Tea' and 'Clean Common Broken Pekoe' respectively. During February this year, 4.9 million pounds of teas were exported from the Chittagong Port as compared with 5.1 million pounds in the corresponding month of the previous year. Total shipments from April 1954 to February 1955 were 47.8 million pounds as compared with 48.5 million pounds in the corresponding period of the previous year. While exports to the UK rose by 1.1 million pounds to 24 million pounds, shipments to Karachi fell from 25.3 million pounds to 23.1 million pounds.

BRITAIN'S LABOUR DEADLOCK

(Continued from page 769)

the strike of the 700 engineers and electricians in the printing trade in London.

There could only be one solution to the deadlock so long as full employment continues to prevail—the adoption of a national wages policy. This is opposed by employers and employees alike. It is difficult to imagine that the Trade Unions could ever come to an agreement about their relative claims. The experience with the present newspaper strike shows how difficult it is to bring about an agreement on wages differentials. As for employers, they do not care for a rigid wages structure the adjustment of which to changing conditions would encounter great difficulties. So it looks as if the wages deadlock would have to continue, much to the detriment of the interests of the consumers, of production, and of the balance of payments. (Copyright).

World Overseas

Britain

1955 A YEAR OF CHALLENGE FOR BRITISH INDUSTRY

By John Kingsley

FURTHER expansion in production and exports is called for in the British Government's Economic Survey for 1955. It is essentially a Survey with a forward look. That is inevitable, since measures have already been taken—through the raising of the Bank Rate, intervention in the market for transferable sterling, and re-imposing restrictions on hire-purchase—to correct the drain on dollar resources and the setback in the balance of payments which took place in the second half of 1954 and the first two months of this year.

In the second half of 1954 the United Kingdom had a current-account payments deficit of £12 million compared with a surplus of £172 million in the first half of the year. In the Sterling Area as a whole, the deficit in the second half of the year was £164 million against a surplus of £171 million in the first half.

So far as the United Kingdom is concerned, these developments arose largely through a sharp drop in the price of raw materials. This was, in the main, the natural result of rising industrial production and consumer demand. It was also the result of minor storing-up of materials in expectation of higher prices and the worsening of the terms of trade. Among other things, the autumn fall in wool prices affected the rest of the Sterling Area's position.

This, then, is the situation the Government hopes to correct, through higher production—particularly of coal, steel and feedingstuffs—to replace imports, through greater exports of finished goods, and by a calculated risk of a higher level of consumer demand.

Coal output last year increased by less than 1 per cent, although 2½ per cent had been agreed with the industry as a reasonable expectation. The result has been reduced exports and higher imports of coal. This is one of the main problems which the recently reorganized Coal Board must tackle this year.

In the steel industry, extensive plans for increased output, even above the current record levels, are in hand. One leading group plans a 25 per cent increase in ingot production by 1957, with the addition of only 500 to its labour force.

And this must be the main pattern of Britain's industrial expansion—the increase of production with the minimum increase in manpower, i.e., through increased productivity. Costs must be kept down by offsetting higher labour and material charges with improved production methods and techniques.

This year the benefits of capital investment in a wide sphere of in-

dustry should be felt. This is particularly so in the motor-manufacture, chemical, and synthetic-fibre industries, while in the engineering trades the full benefits of last year's 4½ per cent increase in the engineering labour force has yet to be seen.

Last year industrial production rose by 6½ per cent, and about half the increase was due to higher private demand at home. Purchases of household goods were up by 10 per cent, spending on cars and motoring increased 20 per cent. There was bigger spending on food, particularly meat and sugar. Even so, between 7 and 8 per cent, of personal income, after tax deductions, was saved. This savings level will have to be increased this year if inflationary tendencies are to be held at bay.

It may well be asked how further expansion of production, coupled with a fresh round of wage increases pointing to still higher consumer demand, can be reconciled with a high Bank Rate, hire-purchase restrictions, and demands for greater exports.

The answer is that a balance must be struck between the inflationary effect of rising home demand and the desirability of increased exports. Production this year is confidently expected to rise to a level which should take due care of increased home demand, even though production last year rose by 6½ per cent. But, at the same time, home demand must not be allowed to grow to the point where it may jeopardize the export position. That is what happened late last year.

This situation is already providing a severe test of the Government's endeavours to make the Bank Rate and other attendant monetary and credit restriction methods work during a period of full employment.

By the outlining of heavy programmes for railway, road, and nuclear-power developments as well as for State-owned basic industries, the Government has indicated its determination to continue a full-employment policy. The imposition of economic discipline within that policy will place a considerable strain on the remaining method of control—the monetary curb.

But there are some signs that the measures taken earlier this year are already having good effect. The pound is stronger, both in the official and in the transferable-account markets. Higher interest rates have slowed the rise in bank advances.

Such curbs are necessary to provide temporary corrections in an economy which is to expand, but which must not be allowed to overreach itself. It would be wrong, therefore, to regard the Economic Survey's plans for high production, and suggestions of still higher consumer demand, as in opposition to

the current slight rein on expansion. One is needed to regulate the pace of the other.

But neither will be fully workable this year unless new export markets are developed by British industrialists. Temporary restrictions in Australia—Britain's best market for many products—will test the ability of exporters to find new markets elsewhere. Other parts of the Commonwealth, South America and, indeed, North America—now recovered from a minor economic shake-out—are the markets to be developed in a year which, for British industry, holds out a new challenge in world trade competition.

The Survey itself sets the right note in its conclusion where it says "the rate of progress will depend on how fast we expand our productive capacity and raise productivity. Productivity should benefit from the added incentive to effort which the prospect of rising consumption affords."

"An economy in which production and productivity are rising fast, and new lines of production are being continually developed, should be in a good position to hold its own in export markets. General confidence in the possibilities of expansion is, in fact, achieved".

USA

STATE OF THE ECONOMY IN THE FIRST QUARTER

By Guy Sims Fitch

THE experts are taking a long and hard look at the United States economy as the first quarter of 1955 comes to an end. Their attention is concentrated, for the most part, on two industries that have shown the greatest vitality—automobiles and construction.

Both are operating at record levels. Automobiles are being produced at the rate of nearly 9 million vehicles a year. New homes are going up at a yearly rate of better than 1.4 million units, while the over-all rate of new construction exceeds \$41,000 million a year.

And the second quarter, traditionally the most active industrially, is just starting. Already steel executives who find the automobile and construction industries their best customers, are saying their output in the April-June period may surpass all quarterly records.

It may seem paradoxical that such a strong and rapid recovery from last year's downturn should be a cause of concern. Yet some business men and economists are beginning to question whether this breakneck pace may not be a source of trouble later in the year.

Specifically, they are asking whether demand will keep up with supply. They note that recent consumer surveys, while optimistic on the whole, show a disappointing number of persons planning to buy new cars this year. Moreover, home construction has excelled one million a year in each of the past five years, and has begun to outstrip the rate of new family formation.

They are asking, too, whether purchases of homes and automobiles, as well as other items, are being sustained at the risk of a runaway credit boom. Mortgage debt on home purchases has passed \$75,000 million mark, and is being expanded at a rate of \$15,000 million a year. Consumer credit, to which instalment buying of automobiles contributes the largest part, totals \$29,500 million.

Experienced automobile makers are less concerned, pointing out that sales have been keeping up well with production. In March, a record 710,000 new cars were sold of a record 790,000 built—an excellent sales-to-production ratio for this time of year. They concede that output will probably decline seasonally during the third quarter, the usual vacation period and the time for planning new 1956 models. But they expect it to rebound in the fourth quarter, and have set their sights on making 7.5 million new cars this year.

The housing field already shows signs of self-correction, if any is necessary. In the past two months, the rise in home construction has been less than seasonal. Bankers and other lenders have begun to tighten up on mortgage funds, which have been flowing freely in response to easy terms authorised under last year's housing legislation. Moreover, the rising trend in business and commercial construction may offset any drop in home building.

As for the credit situation, executives in this field point out that the \$29,500 million Americans owe makes up less than 12 per cent of their spendable income—about the same ratio of debt to income as in 1940, when consumers owed only \$7,000 million. They also note that more purchases are being made for cash now than last year, and that old debts are being paid off about as fast as new ones are incurred. In fact, the total of consumer indebtedness is a little lower now than it was three months ago, although instalment debt has continued to increase.

Nevertheless, watchful eye is being kept on credit development. There are signs that the government may be tightening its credit programmes, shifting from a policy of "active ease" to a more neutral position now that last year's downturn has been so sharply reversed.

In January, for instance, the Federal Reserve Board raised to 60 per cent the margin requirements—the amount of cash needed—for the purchase of stocks. In recent weeks the Federal Housing Administration has begun to restrict its insurance of home mortgages in 17 housing areas.

There is the danger, of course, that economic hypochondria will prove as debilitating to progress as will overweening optimism. In an expanding economy such as that of the United States, activity is constantly seeking new and higher norms; it is not always possible to measure current trends in terms of past records.

In any case, the flexibility in government policy plus the strength of

NOTIFICATION OF SALE

Messrs. J. Thomas & Co., Ltd., will sell by public auction, unless previously disposed of by private treaty, at their office at 8, Mission Row, Calcutta-1, on the 28th April, 1955, at 12 noon, under instructions from the owners, the Merchant Tea Co., Ltd., 17 St. Helen's Place, London E.C. 3, Murmuria Tea Estate (including Hattichungie Division) in one lot as a going concern as from the 1st January, 1955.

For conditions under which the Tea Estate will be sold and arrangements for inspection or further particulars, inspection of title deeds or any information relating to the Tea Estate intending purchasers should apply to J. Thomas & Company, Ltd., 8, Mission Row, Calcutta-1 or Dignam & Co., Solicitors, 29, Netaji Subhas Road, Calcutta-1, or James Warren & Co., Ltd., 31, Chowringhee Road, Calcutta-16.

the current recovery are considered reasonably sure safeguards against later tailspin. Not even among those who are firmest in the belief that the current pace is bound to slacken is there any inclination to question the continuing stability of the American economy.

Australia

BANKING PROBLEMS FOR 1955

(Continued from last week)

While in both these dominating sectors of the economy a period of quiescence and even contraction is suggested, it is in the fields of investment by business and industry, of house building, and of consumer spending on motor vehicles and household goods that additional demands will be made on the financial structure as a whole. Achievement of a relatively stable balance of prices and wages has encouraged many enterprises to put in hand plans for new ventures, new building and equipment, and renovations and replacements which had been held over during the earlier period of rising prices. No adequate statistical measure is available of the size of this planned expenditure, but the visible evidence of commercial and factory building, of renewed scarcities of tradesmen, and of record new capital issues by companies supports a picture of renewed pressure on resources and rising construction costs.

In addition to their heavy commitments in financing current production, the trading banks have been called upon to assist this volume of capital expenditure. Their support has been limited by the capacity of the building industry, for recent experience has demonstrated that easy financial conditions do not increase the rate of building, but directly cause higher costs. In other forms of construction the banks financed the actual building operations pending the provision of capital by shareholders, or over a medium term, by the accruing resources of the firm.

As well as their support for installation of capital equipment and for expanded volumes of production and trade, the banks have recently been called upon to assist more extensively in financing a higher rate of consumption of some of the more expensive and durable adjuncts of modern living. By its nature, lending in this field is usually in the form of a hire-purchase contract, and two banks have entered directly into this business, although the others have preferred to leave it to specialized finance companies, which in turn rely on bank advances for a significant proportion of their funds. Steady wages and removal of capital issues control have contributed to a rapid expansion in hire-purchase finance after continued post-war restriction. This has maintained a high level of demand for many engineering industries, but it has added to the problems of the banking system by absorbing an appreciable proportion of the increase in advances. At the same time finance companies have been able to com-

pete with the banks with more attractive terms for fixed deposits.

Although, on grounds of normal lending prudence as well as for considerations of liquidity, the banks have recently curtailed their new lending, they are faced with a large body of would-be borrowers, and will perhaps be charged by some with unduly restrictive policies. On the other side, however, the central bank, as explicitly stated in its annual report, believes that the trading banks have advanced too liberally. Indeed its ideal is that the banks should maintain about 25% of their deposits in liquid form in addition to the amounts called into special account. On that standard, given the volume of deposits and special accounts of the trading banks in September 1954, advances would be limited to a base figure of about £A60,000,000. Of any further increase in deposits, 15% would be callable to special accounts and the remaining quarter would be required to maintain the requisite liquidity. Advances to meet the needs of a growing economy could increase only so far as the central bank chose not to call the full amount into special account, or, as at present, if the trading banks were to allow their liquid assets to fall below the central bank's 2% target.

The central bank has always held that all permanent capital requirements for business, even for seasonal fluctuations, should be provided by the business itself or found outside the banking system. This is a counsel of perfection, but in Australian experience, probably because the financial structure is simpler than in the British model, the banks have been more closely involved in the finance of expansion of both primary and secondary industry. Particularly in recent months it has proved impossible to maintain the liquidity ratio suggested by the central bank, because of the overdraft requirements of established customers, and in September the average for all banks was down to 17%, and for some banks the ratio was even lower. It should be remembered, however, that special accounts were a further 23% of total deposits.

The criteria for sound bank lending have become more complex than before the war or during the period of detailed central bank advance policy. The main concerns were then the commercial feasibility of the proposition, the character of the borrower, and a smaller third, the formal security offered. Central bank advance policy added a further screen in its attempts after the war to limit lending to a number of restricted avenues of economic expansion, but there is little evidence to suggest that this had much positive influence in promoting a balanced industrial structure.

Before the war the generally accepted liquidity ratios set a fairly rigid limit to the volume of bank credit. Because of the relatively minor role of government finance, the chief influence on the credit base at that time was the balance of overseas payments which regulated in large measure the level of economic activity. Additional advances served directly to expand productive activity, for in most of

the inter-war years resources were generally underemployed. In the post-war period government policy and generally prevailing inflation have ensured at least the nominal full employment of resources and manpower, and in these circumstances there is always a danger that expansion of bank-lending, even within the range of prudent banking nations, may merely add to inflationary pressures.

To the former bank lending criteria must therefore be added a more important condition—the resultant effect on aggregate demand and supply. This criterion, which really implies a judgement on the comparative efficiency of alternative uses for already employed resources, is far more difficult to apply. It necessitates a constant watch over the trend of costs and prices in the particular industry under consideration, for it is all too easy for additional bank finance merely to add to competitive increases in wages and prices. It also requires a close acquaintance with the business of the individual borrower and of his competitive position in his industry. It may be that a bank advance can be justified only if it helps to add to the stream of production or to attain a reasonable level of stocks without bidding up prices or wages in the process above the general level. These are considerations for the individual banker, and even a detailed directive by the central bank on advance policy is a poor substitute for this judgement.

These considerations of individual efficiency and need must apply even more strongly during the ensuing year, when the credit base will be affected by contractions from the influences of overseas balance of payments and government finance and when the strength of demand in many industries and economic fields may fluctuate in the not-too-distant future. The problems for Australian banks will therefore be to maintain adequate reserves to meet the legitimate demands of their customers for assistance and to support the expansion of those lines of production which will promote the country's economic growth and its competitive efficiency.

(Concluded)

Germany

ON March 4th, 1955 a German delegation and representatives of the US Government ended their talks on the problem of German assets, blocked in the USA since 1941 and partly liquidated since 1948. Head of the German delegation was Mr Hermann J. Abs, well-known banker and President of the Sueddeutsche Bank. His appointment by Federal Chancellor Adenauer is significant for the interest and concern the German public takes in this controversial and complicated matter. Mr Abs represented the German Federal Republic in 1951-52 at the London Debt Conference.

The value of the German assets vested in the US Office of Alien Property according to the War Claims Act of 1948 amounts to about

450 million dollars, half of which have been used for the indemnification of American veterans and other persons who were interned during World War II in the Pacific or European Theater as POW's or internees. In the years after 1952 a special sub-committee of the Senate has investigated the activity of the Office of Alien Property. In its report to the Senate, this committee recommended the return of the assets to their original owners in consistency with traditional American policy, the mainstay of which is the sanctity of private property. A bill, introduced to the Senate by Senator Dirksen (Illinois) in the spring of 1954, while endorsing the recommendations of the committee, reflected the increasing tendency of Republican and Democratic spokesmen to follow this old tradition. However, no decision was made on this issue before the Senate adjourned in August 1954. During Chancellor Adenauer's visit in Washington in October 1954 the Chancellor and President Eisenhower agreed that experts of both governments should discuss the problem of German vested assets along with certain American War Claims.

The experts of both countries met in Washington on February 10th 1955. They carried out their task in a spirit of mutual understanding, the result of which was announced in a joint statement on March 4th, 1955. The object of their discussions, the statement says, was not to arrive at bilateral agreements but to compare views on a solution of the problem of vested German property and American Claims arising out of World War II. The United States delegation will submit to Congress a proposal along the following lines:

...Vested German assets or the proceeds of their liquidation are to be returned to natural persons up to a limit of 10,000 dollars per owner, including those persons whose assets exceed this, minus costs of administration. Copyrights and trademarks are to be returned irrespective of their value and subject to existing licensing arrangements. It is also proposed to return cultural property. It was indicated that arrangements will also be made to include residents of East Germany within the programme once re-unification of Germany has been achieved.

The programme further provides for the settlement of War Claims up to about 10,000 Dollars for each American claimant. This programme would be financed by means of 100 million dollars from payments to be made by the Federal Republic on its debt to the United States on account of post-war economic assistance. The joint statement includes the following paragraphs:

"The German delegation expressed the desire for a broader solution of the property problem but appreciated the United States plan which they consider, in the light of prevailing circumstances, to be a constructive step in the solution of the property problem.

Gossip

TODAY is Easter Sunday; and, as I write, millions all over the world, not all of them professing Christians, are turning their thoughts to what was, in any manner of reckoning, one of the most decisive events in the history of the human spirit. To the Christians themselves, of course, it is very much more. For it is the day on which the son of God died so that they might live, a symbol at once of man's deepest humiliation and greatest hope. There is something contemplative and serene about Easter: Christmas, on the other hand, has increasingly tended to become the season of synthetic joy, the occasion of frenzied and breathless good fellowship and heartiness, part of which, at least, is assiduously promoted by merchants with their eyes on their balance-sheets. Easter, partly because it commemorates a more sombre occasion, is quiet and calculated to make the brashest among us pause and think. Introspection is inevitable at the recollection of the supreme martyrdom and the deathless words: "Father, forgive them, for they know not what they do." One appraises one's conduct in the course of the year, and attempts to find out how far one has lived in the light of "Glory to God in the highest and on earth peace and goodwill towards all men"; and how far, in our personal and communal lives, one has realised the ideals of Faith, Hope and Charity and love towards all men. In any such reckoning, he would indeed be a very self-assured man who could give himself the testimonial that, in all that he has done, he has been an honest Christian and a true servant of God.

It would indeed be difficult to see in these troubled times indications that mankind was behaving as though it had any inkling of the "living presence of God." Ours is not a faithless age; quite the contrary, in fact. Any advertisement expert would tell you that there is nothing at all you cannot put across to the average man today provided you make it plausible enough and address it to the sensibility rather than the mind. The blindest superstition besides which belief in witches and necromancy is so prevalent in the popular mind today. Their reason for this somewhat odd spectacle of

a passive materialism going hand in hand with a pathetic thirst for faith is at least partly historical. If you will permit me to summarise in rather general terms a very complex historical process, the present state of affairs is the result of a historical process that began with the European Renaissance in which the human spirit has been progressively and deliberately ridding itself of its third dimension. In other words, mankind has been deliberately choosing for itself only one mode of apprehension of reality, namely, that based on the evidence of the senses. It has looked increasingly askance at a mode of grasping reality that you may describe variously as faith, imagination or intuition or what you will. Such a deliberate self-immolation, crippling even to the most gifted, was absolute disaster to the average man, who found his life lacked depth and did not know why it was so and what to do about it. The deepest springs of his nature were unsatisfied, and this left him dangerously vulnerable to all manner of assaults on his sensibility, a situation shrewdly cashed in on by commerce and advertisement.

Even reports of evidence of more direct interest in religion based on statistics of church attendance and enthusiasm for revival meetings are not so much an indicator of an active and meaningful faith in God as a desperate desire for the consolations of faith. At least part of the explanation of this revival of interest is the increasing sense of emptiness and void, the profound feeling of insecurity, boredom and ennui that are afflicting mankind today, which neither the ingenuity nor the resources of pleasure-manufacturing industries are able to overcome. Even among those who have taken to church-going and the miscellaneous comforts of revivalism, many shrink the more strenuous demands of faith, and require that faith be presented in predigested forms. This is the impression that is inescapable if you examine a certain type of current religious propaganda which employs the techniques and apparatus of high power publicity that commerce habitually uses. All such attempts at "selling" religion by gratuitous justification of the consolations of faith as though God Almighty was a jolly good fellow

encourage the most profound spiritual sloth that evades the strenuous responsibilities of faith.

The common man's attitude to religion, then, is passive and indifferent except when he is driven by the very excess of his emptiness to seek solace in plausible forms of faith. He has no particular views on religion, and finds their discussion an embarrassment. If he is born in a church-going family, he gets himself baptised at church, married by a priest and has a funeral service conducted on his death. For the rest, he conducts his affairs on the assumption of "every man for himself and the devil take the hindmost." (I must add, by the way, that the predicament is not particularly Christian or western. All that I have said above is increasingly true of the professors of other faiths, too. My terms are Christian, because the occasion is Christian). But, what about the active aspect of the current religious situation? What about the churches and the leaders of men? Surely, one may ask, they must be engaged in the promotion of ideals that are specifically Christian and discouraging activities that go against the spirit of Christ? He would indeed be an optimist who sees in the present situation overwhelming evidence that the spirit of Christ is active. All over the world, there must be. I concede, many men and women who are consciously moulding their lives in conformity with the spirit of Christian love and charity. But the major events of current history do not, sanctimonious assertions to the contrary notwithstanding, point to their having been inspired by Christian love and fellow-feeling. Take the question of racialism, for instance. Dr Malan, till recently the Prime Minister of the Union of South Africa, is a staunch churchman. I cannot see how anyone can square his blatant profession of unchristian arrogance towards one's fellow beings with the teachings of Christ. I agree that the churches all over the world deeply deplore this attitude, but it is not indicative of a deep pervasion of Christian spirit when a professing Christian acts in outrageously unchristian ways.

Or, take, again, the question of war. There has hardly been any war in the history of man in which the rival participants have not

claimed the exclusive possession of the right cause, and churches of these countries have prayed to God to confound their enemies. Sir John Squire quipped at the beginning of the 1914-18 war:

"To God embattled nations sing and shout,
'Gott strafe England' and 'God save the King'.
God this, God that and God the other thing.
'Good God,' said God, 'I've my work cut out.'"

Apart from the logical absurdity of a situation like this, how could any one reconcile the current production of weapons of mass destruction with the profession of faith in the preacher of the Sermon on the Mount? I do not say that the choice in favour of Christianity is either easy or automatic, but what I do say is that the choice is inescapable to a professing Christian.

There is, therefore, very little in the events of the world today that would appear to encourage the faith that the Son of God did not die in vain. Still, here and there you find indications that the spirit of

Christ is very much alive, and that there are men and women who make conscientious efforts to live their lives in the spirit of Christ. Gandhiji is no longer with us, but, if ever there was a life that was informed by the spirit of Jesus, it was his. Then, you have Vinoba, whose dedication to a basic revo-

lution in human institutions is in the central Gandhian tradition of Christian political and social action. And, in the thick of equatorial swamps, you have Dr Schweitzer, whose life is another example of Christian sacrifice. There must be countless other people whose doings we never hear

about, and who must be, with greater or lesser success, attempting to live in the light of Christ. One's hope of the ultimate survival of civilisation is pinned on such men and women rather than on those who are at the moment charged with the task of running our lives.

London has been a city starved of newspapers for many a day now; and I am disposed to offer Londoners my sympathies. For, I find that the newspaper habit becomes almost a wicked vice. When, as sometimes happens in Calcutta, there is no morning newspaper, I am afraid I feel somewhat lost. The day does not seem to have begun, until one has taken in that aroma that is a distinctive feature of the newspaper, the printer's ink. And, if perchance one is a crossword addict, one's morning quite definitely does not begin properly—if the newspaper does not reach your house. They say, or claim, that the species of crossword originated in The Times (which the Statesman publishes by arrangement) is meant to be a mental exercise that sharpens your wits in the morning. I think it is a just claim: and the Sunday crossword is spice hardly strong enough. Now, I understand that the Londoner is peculiarly a slave to this crossword habit. My sympathy for him, therefore, is the more, because, in a sense, he misses what he takes with his morning tea.

★

One result of the absence of London newspapers is that the provincial newspapers are in great demand; and the Manchester Guardian is as manna to a starved London. I note it that the MG has firmly declined to increase its print order; what the reasons are, I am not sure. But I should think that the publication of a newspaper is a public service; and, therefore, it might have been just as well if the MG had been prevailed upon to succour Londoners. It is, perhaps, too late now so to look to the MG; for, the strike has continued long enough, and it is hardly likely that it will be permitted to continue much longer.

★

If I might return to the reading habit: I remember a thesis that was advanced some time ago in America, that the spread of television was preventing American youth from spending as many hours with books as would be desirable. A series of articles went so far as to charge that children were not being taught to read in schools. I am not quite sure, in my mind, whether television is alone the culprit. If it were so, there surely wouldn't have been ground for the crusade now under way against comics—a crusade that was partly occasioned by spiralling sales of such comics. The crusade, it is true, is against the horror and obscene comics; and, in India, too, there is now a movement to ban the imports of such undesirable reading material. The reading habit, therefore, is there all right: but such reading seems to be concentrated on material not worth the perusal. The American problem, then, especially as regards American youth would be: how correct reading habits may be induced. It will do little good to make television the scapegoat.

EAVESDROPPER.

It's a BIG job.... running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead." For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

Gateway Gossip

The Sixth Major Port for India

INDIAN shipping is poverty-ridden in more ways than one. It is not only that Indian ships carry a very small proportion of the cargo imported to or exported from India: the port facilities that we possess are not of the variety that may be said to envisage at all any substantial increase in the tonnage handled by Indian ports. For a coast line as long as the one India possesses, it is strange that we should have no more than five major ports. Again, it has been a sorry experience of Indian ports that they are very expensive as far as the shippers are concerned. Calcutta knows a peculiar kind of labour which boasts recurrent spasms of "Go Slow" work. Moreover, the riverine port of Calcutta is by no means an easy one to navigate. Dredging is a constant, daily and continuous task; and dredging alone it is which enables such passage of ships to Calcutta port as is now found possible. But, as I say, the experience of Calcutta port has been that the turnaround of ships is pathetically slow. Rich, therefore, though the hinterland that feeds Calcutta might be, there is an inclination, quite understandable, to channelise goods to India through a port other than Calcutta.

Another strange fact is that Madras, too, is generally held to be an expensive port. My information is that economy is effected by a number of shippers if they route their goods to the minor port of Tuticorin in preference to Madras. For, although a natural port, the harbour of Madras nevertheless seems to present certain difficulties which those interested in the shipment of goods would prefer to avoid.

Two other major ports, by and large, are satisfactory. These are those situated at Cochin and Vishakhapatnam. But the fifth major port, Bombay, whose hinterland, both from the point of view of the demand for imported goods and of its position as a supplier of export goods, is almost as rich as Calcutta's, lately experienced a degree of trouble in the docks, of disension on the waterfront, which is to be deplored. More-over, ever since 1947, Bombay has had to undertake the onerous responsibility of handling, in addition to the flow of goods which has always passed through it, cargoes which had formerly gone to the port of Karachi, with partition, India lost what had been its sixth major port. Since 1947, since, that is to say, Independence, the authorities were seriously considering the question of building a new major port on the West Coast. Various committees held sessions. In point of fact, even before partition, some time in 1944, the Ports (Technical) Committee had reported on the need

for a new port and had stated that "we note that a good natural port is waiting for the removal of obstacles (political and geographical isolation of Kutch) in order to become, so far as the Committee could judge, a useful and desirable addition to the ports of India". Thus, in 1946, though first began to be bestowed upon the choice of Kandla as the site for the sixth major port in this country. The political isolation that the Committee referred to lay in the fact that Kutch was a State, a princely State in British India. By 1948, the political isolation disappeared with the integration of the princely States with and in the Union of India. The second obstacle consisted in the fact that, geographically, Kutch had few communications with the outlying States. This obstacle, too, was done away with in 1952, when the Kandla-Deesa rail link was inaugurated, thus erecting a rail link between Kandla and the metre gauge system of the Western Railway.

It was then a matter of time. But, first, there was to be further support for the choice of Kandla as the site. In 1948, the West Coast Major Port Development Committee, which was presided over by Mr Kasturbhai Lalbhai, strongly recommended the selection of Kandla. Then, in 1949, the project was given the green signal by the Government—a project begun in 1949 which was translated into terms of achievement by the beginning of this month.

A Development Commissioner was next appointed. It was his task to see that there was proper coordination between the establishment of the Port of Kandla and the construction of the town that would be Kandla. Early in 1950, a firm of consulting engineers of repute was called upon to prepare an outline project report; and this was submitted in May of that year. But the decision to build a port cannot be taken too hastily. It had first to be determined whether, from various technical considerations, Kandla as a site would be adequate. For, although the geographical location fitted Kandla well to lighten the load that Bombay Port had to bear, it was necessary to make sure that Kandla would be in a position to receive ocean-going steamers of size. Thus, the next aspect of the Kandla project was a series of surveys—surveys which included a detailed mapping of the ocean floor in the creek that led to Kandla. A number of soundings had to be taken the tidal flows—these would, if favourable enough, enable Kandla to receive larger ships than would be the case normally—had to be studied. The collection of such data lasted until November 1950.

Then, from the industrial or business aspect of the matter, it was an exciting time. Tenders were invited from harbour engineering firms for designs and construction. Five months later, in April 1951, the tenders were received. The technical aspect of the tenders was studied by Professor Agatez; thereafter, an expert committee of Indian engineers sifted through the tenders. Finally, a German firm which was working in association with an Indian firm was given the contract for the project.

The project is to cost nearly Rs 14 crores. Just about half of this represents work on the harbour itself. For, the balance of Rs 6.82 crores is budgeted to be expended on such items as provision of port buildings, cranes, harbour equipment, roads, water supply, staff colonies and drainage arrangements. The harbour itself—or, to put it technically, the harbour works—may be described under the following five heads: (i) A cargo jetty 2,700 ft. long providing for four deep water alongside berths for ships 600 ft. long each, including three transit sheds each 450 ft. by 120 ft. The quay will be 75 ft. in width and provides for three railway tracks and two road tracks so as to enable direct despatch of cargo by rail as well as by road. The rail track is designed for metre gauge operation in the first stage and conversion into broad gauge operation when necessary in the future. (ii) A bunder suitable for the accommodation of both lighters and sailing vessels. The Bunder wharves will be equipped with cranes including provision for unloading heavy cargo up to sixty tons. (iii) A passenger berth for passenger launches. (iv) A floating dock berth for maintenance of port craft. (v) An Oil Jetty for handling oil tankers up to 20,000 tons capacity.

Once the plans were finalised, once the work was begun, it might have been expected that the rest would have been smooth sailing. Unfortunately, it was not quite the case, as Mr M Ganapati, Development Commissioner, has revealed. Organizational difficulties persistently made their appearance, such that Kandla Port is running behind the planned schedule. Personally, I can understand Mr Ganapati's impatience at the delays in construction. For, Mr Ganapati is a remarkably efficient man; and this is the impatience of a mind that thinks much faster than the body can work. He has behind him, notably, the record that is Chittaranjan; and, perhaps, Mr Ganapati is chagrined that a project which he has been entrusted with should allow of falling behind schedule. It is not to be doubted that, but for the capable job of co-ordination that Mr. Ganapati would have imparted to his task, the completion of the first stage (that was marked

with ceremonies a week ago) would have taken some months yet. As it is, just about a week ago, the oil tanker discharging facilities were inaugurated at Kandla Port by the Union Minister for Transport and Railways, Mr Lal Bahadur Shastri.

Although the project will be completed in full only some time in 1957, it is significantly important that we hail the milestone that has been marked by the formal inauguration of the first stage in Kandla Port. For, financially speaking, the first stage is the most important for Kandla. Although the new port will eventually be fitted for handling general cargoes of all types, its most important function will be to take care of the oil tanker discharge facilities that are required by the oil companies of India. It has been estimated that oil imports will account for some 5 lakh tons of cargo handled at Kandla as against total important cargo handled of just under 8 lakh tons.

What of the future? To the extent that the pressure on Bombay will be released, of course, Kandla is first to be hailed. But it seems to me a far more important thing that Kandla is a symbol of the progress and development that must be anticipated in the future. In the wake of the second Five-Year Plan, it is not to be doubted that India's foreign trade will appreciate considerably. There will, therefore, be the need to have not merely a sixth major port, but, perhaps, a seventh as well. After Kandla, what I have in mind is the scheme that this journal has presented before. I refer to the plans that are afoot for the establishment of a subsidiary port at Geonkhali. If Kandla may be depended upon to absorb some of the additional pressure that besets Bombay, we may be equally sure that a subsidiary port at Geonkhali will take care of the congestion in Calcutta Port. To me, therefore, Kandla is not only important in that it marks the sixth major port in India; what is more significant is that it may be a precursor of what could be a seventh port of major importance—at Geonkhali.

EASTERN RAILWAY TENDERS.

Tender No. CSR/56/KG/48/55 is invited by the Controller of Stores, Garden Reach, Calcutta—23 for Handling of materials at Shalimar Stores Depot and Yard during 1st July 1955 to 30th June, 1956 on Rate Contract basis. Tender Form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta—23 (P.G. Section) on remittance of Rs. 2/- by Money Order (not refundable) in case of Mofussil Firms and on production of Cash Receipt from the Asst. Chief Cashier, Garden Reach by Local Firms. Earnest Money Rs. 250/- in cash. Valid Income-tax Clearance certificate must accompany the tender. Closing date 6th May, 1955 at 12 noon.

Bombay Review

Railway and the Plan

Railways are bound to figure prominently in the Second Five-year Plan, in view of the large-scale industrialization contemplated in the years ahead; besides, the normal process of expansion has to proceed at a quickened pace considering the rush of passenger traffic and the heavy pressure caused by agricultural produce seasonally. A year ago, the Railway Ministry had thought it difficult to construct even 1,000 miles of new lines during the Second Plan, but the target now stands at 5,000 miles. Declaring open the 35-mile long Bhuj-Gandhidam metre gauge line linking Bhuj, the Capital of Kutch and the Kandla Port, Union Minister Mr. Lal Bahadur Shastri disclosed that his Ministry has planned to allot Rs 1,200 crores to railways in the next plan. Almost all the States have demanded new lines, but increasing of line capacity is only one aspect of Railway expansion. The number of locomotives have to be increased. And, these have to be produced as far as possible within the country. The increased target of manufacturing 20% locomotives each year at the Chittaranjan Works would be achieved by the end of the First Five-year Plan. The Telco Workshop at Jamshedpur turning out metre gauge locomotives would also step up its output from 50 to 100 per year. Also, the production of wagons and coaches have to be stepped up on an unprecedented scale.

But the need for certain long-pending reforms and readjustments is different from, but not unrelated to, the problems of expansion. Roughly, it may be estimated that the goods and passenger transport would be increased by 80 per cent in the next five years. Thus a vastly greater responsibility devolves on the Railways' technical and administrative staff. The question of passenger comforts and crowding in trains is still only in the process of being studied, according to a spokesman of the Railway Board. The possibility of putting high power engines on crowded trains so that more coaches could be put on them, and running fast trains in congested sections is yet to be given a trial. As for running the trains to time schedule, the all-India performance average is 80 per cent, while on the Southern Railway the percentage is only 60. It must be remembered that the addition of another 5,000 miles of track will only go to aggravate the present problems, unless special attention is paid to them.

Appeal of Advertisements:

Listening to Mr. A. D. Shroff at the Annual Meeting of the Indian Society of Advertisers in Bombay would create the impression that

the line that divides commercial advertisement and popular mass-education has worn very thin. If it has, it is in no small measure due to the striking progress in the activities of the Society of which Mr. Shroff was re-elected Chairman. The three year-old ISA has an impressive record. It has earned the goodwill and the recognition of the leading newspaper publishers. In its relation with the Government and the advertising agencies, Mr. Shroff claims, it has become the authentic spokesman of national advertisers in the country. Everyone knows that the aim of the producer is to create a monopoly around him by differentiating his products through advertisement. Consistent with this aim, can he fruitfully act as a collateral agency for instance, to popularise the national plans? In fact, the professional advertiser is in a better position to subscribe to national aspirations more than any other non-governmental agency. In India the art of merchandising and salesmanship is still in its teens. In a sense, it is good that it is. For instead of allowing advertisement to degenerate into a mere snob-appeal it can be used as a medium to snap the veil of ignorance that intercepts the common people from the often silent processes of advancement. Several agencies have already linked their advertising campaigns with the Five-year Plan; admittedly to their advantage, it is also in the national interest. The trend deserves to be increasingly fostered by private agencies and governments alike.

Important Achievement:

The successful completion of the first phase of the Kandla Port re-bounds to the credit of the authorities who planned it, no less than to those who brought about its speedy execution. Paying warm and glowing tribute to the Government, Mr. R. T. Burton, General Manager of the Standard Vacuum Oil Company gave assurance of the maximum co-operation of the Company in effecting the greatest benefit to the people of the area. Considering the fact that oil and oil products will form more than 50 per cent of the imports through Kandla in the first stage, Mr. Burton's assurance is indeed encouraging. It has to be noted that the immediate benefits of the new port are two-fold. First, it would siphon off part of the traffic from the other systems of transport and, thereby, lessen the pressure on the railways in particular. The agricultural and industrial development programmes under the Second Five-year Plan will result in 80 per cent increase in goods tonnage requiring transportation; and the heavy increase in tonnage could be partly

borne by the additional port facilities in and around Kandla.

Secondly—and this is more important—import of oil will have to be continued for some time, despite the over-all capacity of the Bombay refineries estimated to cover about 85 per cent of the country's total requirements. To the extent that these products are required for meeting internal demand, the new port should prove useful in bringing quicker and cheaper distribution. Moreover, the petroleum products from the Bombay refineries will be channelled through Kandla, which means a saving in both transportation costs and use of railway wagons. Although the oil industry's traffic tonnage carried by the Railway is only 2 per cent of the total, the use of petroleum products accounts for about 25 per cent of the country's energy requirements. Of late, the Railways have set apart more investment funds for the provision of goods and tank wagons necessary for moving petroleum products. The utility of the Port coupled with the more efficient use of tank wagons over the shortest possible distance, as assured by Mr. Burton, will surely benefit the consumer. Above all, here is an instance where the public and the private sectors have joined hands to render the cost to consumers as cheap as possible.

Blue-print for another Port:

Ratnagiri, a small district town between Bombay and Goa promises to develop into another important port on the Western shore. Hydrographic survey has revealed that the Killa Bay near the Ratnagiri harbour will be a suitable site for development into an all-around port. The survey was undertaken by the Bombay Government but it is understood that the Union Government will now take up the project in their hand. Ratnagiri can easily be linked to Bombay by road. The development of more ports on the West Coast is inevitable in view of the pressure of traffic in the existing ports. Kandla, the first phase of which has been completed, will relieve Bombay to a great extent. But the increasing coastal trade backed by the inland produce of Maharashtra would still sit heavily on Bombay. Kandla and the Bombay Marine Oil Terminal Project were financed solely by the Union Government. The sum of over Rs 24 crores for developmental expenditure allotted for Ports in the First Plan does not cover Ratnagiri. Apparently, the finances have to come from the Centre.

Jail Reform:

It is learnt that every long-term illiterate prisoner in the Bombay State leaves the jail as a literate person. It comes as no surprise as Bombay is in the forefront in the

matter of liberal reforms. Imparting elementary education is only one aspect of what is done in Bombay's jails. Prisoners are given moral and religious lectures; they receive pieces from the scriptures before they go for their daily work. Training in useful industries as well as in improved agricultural methods is part of the prisoners' curriculum. The doing away with hard and inhuman labour certainly marks a radical change from the old approach of retaliation and retribution. Corrective and reformative treatment is far from being inconsistent with a strict enforcement of the law; on the other hand it shows the proper understanding of the spirit of the law. The Bombay Government, ahead of any other State in the country, seem to have caught the essence of Beccaria's famous dictum that certainty of punishment is a better deterrent than severity.

The End of a Dispute:

Bombay Government's decision to permit Primary, Secondary and High Schools to teach in any medium of instruction they choose puts an end to a protracted dispute. It follows the Supreme Court's Judgment that parents have the right to decide the medium in which their children should receive education. It may be recalled that in January, last year the State Government asked Primary and Secondary schools to confine the English medium to pupils whose mother tongue was English. In viewing the whole story that passed between the Government's first circular and the present revocation, it is not the protection of individual rights that vexes one's mind, but the ineffectual way in which languages are being propagated.

Under the new policy, schools that now use a medium other than English, will be permitted to change over to English provided the change is brought about progressively. Schools are allowed also to run parallel divisions with English and Indian languages as media. It is clear that the appeal of a language cannot be anything but its own intrinsic merit. Propagation of Hindi or the regional language cannot therefore be achieved by shunting off English. Happily, the new policy of the Government bears the impress of a realistic approach instead of just conforming to the Supreme Court Judgment.

The proprietary schools of Bombay, however, face another crisis. Fifty schools in Greater Bombay, it is feared, may have either to close down or increase the pupils' fees, owing to the Government's policy to stop completely grants by 1956-57. Both the alternatives are equally injurious: a higher fees rate will end the school days of the poorer pupil while closing down will increase the congestion in the remaining schools.

World of Cotton

Cotton Market Continues Depressed

THE Cotton market is still in the throes of depression. Prices, after further modest recession to new low levels, have been trying to stabilise; but the market is meeting with difficulties. In consonance with nervous advices from Saurashtra, the market met with further liquidation; but hopes that the Government would announce the export quota for staple varieties any of these days did bring about scattered support off and on. Moreover, at lower levels, mills carried out some purchases of Wagad, Kala and Morbi cotton which, in turn, enabled prices of these varieties to rally by about Rs 5 to 10 per candy. Mills, however, were still proceeding cautiously and hence the crop arrivals continued to have a depressing effect on the psychology of the trade. Thus, in view of the hedge pressure and absence of any professional bull interest in the forward market, the cotton market is still unable to fathom the bottoms. It is difficult to say as to when the situation will take a turn for the better. As pointed out last week, even if the export quota of staple varieties is released, there will not be any change in the fundamental position due to comfortable supplies. It is, however, believed that, if the Government reduces the export duty from the present level of Rs 250 per candy, the market might receive certain fillip. Otherwise, the situation will make very little difference. It may be here noted that only Bengal Deshi has been in good demand for export, while exports of other varieties have been very meagre. Thus, the position on the export front is not so encouraging; but, even then, the Government are not likely to reduce the export duty on raw cotton.

After the bitter experiences of the past, the professional operators have desisted from taking any aggressive attitude in bull positions and nobody is in a mood to absorb the large deliveries in the maturing May contract. I.C.C. May, after declining to Rs 544, rallied to Rs 550, to be placed at Rs 548-8. The August position was quoted at a premium of Rs 12-8.

The price range in I.C.C. May during the past few weeks was as follows:

Week-ended	High	Low	Closing
5th March	578 8	561 0	565 0
12th "	563 0	554 4	555 0
19th "	562 8	547 12	557 8
26th "	563 8	556 0	559 8
2nd April	567 0	547 0	551 12
9th "	560 0	544 0	549 0

Last year this time, I.C.C. May was quoting at Rs 671 and August Rs 685.

Change in Bye-Law:

Reference was made in these columns regarding amendment to bye-law 55, as sanctioned by Government, which will apply to trading in the Indian cotton contract August 1955 delivery. For the existing bye-law 55, the following has been substituted:

Trading differences i.e.

(a) differences between basic cotton and the other descriptions of cotton tenderable and for 'class' or 'grade'.

(b) 'on' allowances for staples of 1/32", 2/32", 3/32" and 4/32" above the staple lengths specified in the Hedge Schedule, but

Up to 13/16" for Punjab/American, 4F, R.G. and S.G.,
Up to 27/32" for Kalyan,
Up to 29/32" for basic Jharilla and H. 420, Vijay, P/American, L.S.S., R.G. and S.G.

Up to 15/16" for Western, Coompta, Karunganni, Parbhaan/American and Gaorani 6 & 12.

Up to 31/32" for Jaydhar, and Up to 1" for Surti, Cambodia, Laxmi, Buri/American and 216F Punjab/American, R.G. and S.G.

(c) 'Off' allowances for staples of 1/32" and 2/32" under the staple lengths specified in the Hedge Schedule, shall be fixed on or about the 25th of the month preceding the commencing of a delivery period. For the purpose of fixing such differences, the Board will appoint a Special Committee consisting of seven persons actively connected with the spot market and representative of all Panels. The Special Committee

will fix the tendering differences on the basis of the prices at which the basic and other descriptions of cotton tenderable are sold in Bombay spot market, taking into account the spot prices of the respective descriptions of cotton in the interior markets.

Spot Cotton:

Business on the spot Sewri market was rather patchy as mills were trying to bargain despite easier tendency. In delivery contracts, Wagad, which was sold down to Rs 55 'off', recovered to Rs 45 'off'. Manavadar was placed at Rs 55 'off' and Morbi at Rs 35 'off'. In April-May delivery, Bengal fine was reported at Rs 525 to Rs 530.

In ready cotton, Vijay was placed at Rs 630 to Rs 685, Berar Jarilla at Rs 575; Mogal Jharilla at Rs 545; Berar 197/3 type at Rs 585; Laxmi at Rs 770; Jaydhar Bagalkot at Rs 635; Jaydhar Hubli at Rs 705; Punjab L.S.S. at Rs 605; 320F at Rs 615 and 216F at Rs 655. Kalyan was being put through around Rs 565; Morbi at Rs 512; Wagad at Rs 500 and Mathia at Rs 445.

Among foreign varieties, business was almost negligible with B.P.52 ready at Rs 1655; Bushoge at Rs 1625; Bukhadi at Rs 1605; Jinja at Rs 1505; Karnak 154 at Rs 2380 and California strict Middling at Rs 1575.

Cotton Imports:

The Government of India have prescribed the procedure for imports of USA cotton stapling 1.1/16 inches and above. Based on the procurement authorisations, so far issued by the FOA in the United States, such imports can aggregate to a total of 12 million dollars. These imports of USA cotton will be paid for in rupees under the American Aid Programme to India.

Imports of cotton from 1st September 1954 to 7th April 1955 have totalled 259,749 bales as against 271,468 bales for the corresponding period of the previous year. Particulars are as follows:

	(In bales of 392 lbs. each)	1954-55	1953-54
American	76,206	35,532	
Sudan	19,738	25,630	
Egyptian	73,708	168,064	
East African	89,861	52,242	
Others	236		
Total	259,749	271,468	

Foreign Cotton:

The New York Cotton market ruled quietly steady during the past week with narrow movements, but subsequently gave way under pressure. The May position finished at 33.45 cents as against 33.64 cents. The US authorities are worried over

the disposal of the surplus cotton and other farm products. The British Government, which is opposed to subsidy, has protested to the US Government saying that the subsidy, if given next season, will upset the world's textile industry.

The Egyptian cotton market has been ruling rather easier. France recently bought Ashmouni and Giza 30 valued at over 2 million pounds sterling. Demand for Sudan cotton is at a low ebb. The crop is now estimated at 281,000 bales of 415 lbs. each.

The East African cotton crop is estimated under 3 lakh bales with demand remaining slow.

The Karachi cotton market is also ruling easier with Punjab Deshi at Rs 53; Sind Deshi at Rs 60; 4F Roller at Rs 57-8; 289F Roller at Rs 64-8 and 289F Punjab Roller at Rs 65-4 (per maund of 82 lbs). Production of raw cotton in Pakistan during 1954-55 is now estimated at 1,462,000 bales of 392 lbs. each as against 1,371,000 bales in 1953-54. Cloth Market:

The Cloth market has been ruling steadier with fairly good domestic demand, while export demand continues somewhat restricted, Burma

Gold & Silver

Enough movements in the silver section were rather irregular, the gold section ruled strong on grip of the bull operators following the maintained supply position in ready which forced several shorts to cover after sales in view of the large backwardation charges. The Chaitra deliveries in gold and silver expired at Rs 14-5 with backwardation charge of Rs 1-9 and in silver at Rs 165-8 with backwardation charges of Rs 12. On the last day of the Chaitra delivery in gold, bulls were called upon to pay a margin at the rate of Rs 25 per tola but after its expiry, bulls had to pay again a margin at the rate of Rs 7 per tola in Baisakh delivery as backwardation charges were over annas 12 for transfer of business to Jeth delivery. The introduction of amendment in the Sea Customs Act in the Parliament and the shortage of floating stocks have been mainly responsible for the new high levels recorded in gold after a lapse of over a year. The dispute regarding the recommendation of higher royalty to Kolar gold fields has been viewed with misgivings and if the Mysore State accepts the recommendation of the Committee for higher royalties, it is apprehended that the

gold mining industry might suffer a severe setback and may even close down. Thus with smuggling activity being out of the picture at the moment, the gold market is likely to keep firm for a few days more.

The trend in the silver market has been rather irregular as some of the professional operators are inclined to liquidate their holdings as the slack season will commence after a month or six weeks. The leading Calcutta bull operator is still clinging to his holdings but in the Baisakh settlement, he is expected to reduce his commitments.

Gold for Chaitra delivery after rising to Rs 94-7 from Rs 92-8 expired at Rs 94-5 on 9th April. Baisakh delivery advanced to Rs 93-8 from Rs 91-12 while Jeth delivery moved up to Rs 92-10 to be placed at Rs 92-8. Mysore spot gold was done as high as Rs 95-6, while sovereign prices firmed up to Rs 60-4.

Silver for Chaitra delivery after rising to Rs 166-3 expired at Rs 165-8 on 11th April, while Baisakh delivery after moving between Rs 162 to Rs 163-5 was quoted at Rs 163-3 and Jeth delivery at Rs 160-4.

Gateway Markets

Oils and Oilseeds

The tendency on the oilseeds market continued to remain subdued despite the fact that exports of groundnut oil from India during the last four months have amounted to well over 75,000 tons. Sentiment in groundnuts was still apathetic as fresh support was rather lacking while holders were not so keen on keeping their stocks for long. Linseed was steady while castor seeds after a modest setback were marked up to a small extent on short covering induced by reports that business in September delivery will be subjected to a scheme of graded margin, the exemption limit being 15,000 candel. Hopes of reduction in export duty still continue but it is doubtful as to when it will materialise. Overseas demand especially from USA for castor oil remains rather poor.

Groundnuts bold ready were done at Rs 20-8 to 20-4, while April-May delivery came to business at Rs 20-2 to 19-14 and June-July between Rs 21 to Rs 20-12. Groundnut oil moved within a narrow range of 2 annas with spot quotation at Rs 11-2, April Rs 11-1, May Rs 11-1-6 and June Rs 11-2-6 per quarter.

Linseed bold ready improved to Rs 20-12 from Rs 20-4 per cwt. while

April-May and June-July delivery were marked up to Rs 20-10 from Rs 20-3. Linseed oil kept steady at Rs 12-8.

Castor seeds May delivery after easing off to Rs 70-8 rallied to Rs 72-8 to be placed at Rs 72. Madras quality ready was placed at Rs 14-2, while castor oil commercial has gone down to a new low level of Rs 8-3 per quarter.

Nigerseeds were weak at Rs 15-12 and Kardiseeds Rs 11 per cwt.

Art Silk Yarn

Though the tendency in art silk yarn remained steadier, movements in staple fibre yarn were rather irregular, but two sided. Art silk 150D for April delivery moved between Rs 730 to 733 to finish at Rs 733. Staple fibre yarn for April was done between Rs 572 to 584 to react to Rs 577 to rally to Rs 582, while May delivery was quoted at a discount of Rs 3.

There is no change in the imports of 150 and 120 deniers bright except that clarification has been made to the effect that the deniers from 101 to 119 and 121 to 149 and 151 to 159 will not be allowed to be imported as before. This clarification has been made so as to prevent imports by unscrupulous importers, who have during the last few months tried to import nearer deniers with a view to circumvent the import policy of the Government with regard to import of 120 and 150 deniers bright.

Metals

A steadier tendency prevailed on the metal market. Copper continued to remain firm with spot quotation at Rs 250 and forward at Rs 225 per cwt. Zinc was slightly better at Rs 63-8, while lead met with buyers at Rs 75-8. Tin hovered around Rs 117-8 per quarter.

WORLD OF COTTON

(Continued from previous page)

and Afghanistan have evinced active interest in certain varieties. In view of the reduced levels of raw cotton, domestic buyers are inclined to bargain, but mills are holding firm. It is, however, considered likely that prices after a month may recede somewhat. However, no steep fall is anticipated.

Following the recent steady tone of the Middle East markets, an Ahmedabad industrialist, Bhri Arvind Narottambhai, has expressed the view that, if the export markets are to be retained, our mills will have to be modernised by the latest type of equipment, otherwise the export markets will be lost. He expressed the hope that the labour leaders as well as the Government will understand the implications of the position and agree to the rationalisation scheme.

Olympus

Asian Problems

THE Asian Conference which highlighted Delhi's public life last week was a kind of informal prelude to the full-fledged Asia-African Conference meeting at Bandung two weeks later. The organisers of the Conference, largely Congressmen, wanted to make it completely non-partisan in consonance with the spirit of India's foreign policy and the principles which guided the Bogor meeting. Twenty-five Asian countries were invited to participate; eighteen accepted the invitation and fourteen attended. The Burmese delegates could arrive only on the second day of the Conference. The participating countries were India, Burma, Ceylon, Pakistan, Nepal, Japan, China, Lebanon, Syria, Egypt, North Korea, North Vietnam and Transjordan.

I said that this Conference was a prelude to the forthcoming Bandung Conference. That was what it actually turned out to. The sponsors, however, made it clear that it was something wholly independent and there was no formal link between the two. Their intentions and professions notwithstanding, observers could not escape the impression of a close link; many of the delegates who attended this Conference would be participating at Bandung also. We may also here the same note in the speeches and deliberations of both the Conferences. It is a pity that the bunch of Chinese delegates who took off from Peking and were on their way to Indonesia to attend the next Conference lost their lives in the air crash near Sarawak reported on Tuesday morning. This tragedy casts a cloud over the Conference which went before and the one which is in prospect.

The Government of India were not in any way associated with the Conference. It was an entirely non-official affair. To that extent, its dissociation with its larger counterpart in prospect could be accepted. This is the first occasion that unofficial India has played host to a Conference of this character. There have been innumerable international gatherings in India since the transfer of power, but all of them were either Government-sponsored or sponsored by particular political parties, notably the Communist party. This is an entirely non-partisan meeting, at least on the face of it. One is excused for a diversion on this point because though the organisers were keen on keeping its non-partisan and non-controversial character, they could not be quite sure, as the Conference

proceeded, that this character could be maintained, because Communist delegates particularly had not the least compunction in seizing this opportunity to air help views freely and to throw recriminations and challenges against countries unfriendly to them. For instance, the North Korean delegate stated his Stage was the aggrieved party in the Korean War and the aggression was from the other side. The theory contradicts UN findings which the Indian Union endorsed.

It is reported that Pandit Nehru received a communication from the Government of Indonesia expressing concern over the New Delhi Conference held so embarrassingly close to the Asia-African Conference at Bandung and that at a meeting of the Congress Parliamentary Party he has given expression to his embarrassment over this unofficial conference. The sparse attendance of leaders, Congress and Communist at the inaugural session was also significant.

The Panch Shila was inexorably the burden of the majority of speeches in the Conference. The Panch Shila figured conspicuously in the welcome speech of the Chairman of the Reception Committee. Mrs. Rameswari Nehru who spoke on the first day drew attention to a vital aspect of Asian understanding. She pointed out how just now Asian people generally knew more of the history, traditions, languages and cultures of Western people than those of their own neighbours. "At present we know more of European history, literature, art, music, we should provide means of knowing more of our Asian neighbours".

This appeal is most timely; because, intelligent co-operation on great common purposes will proceed only on the basis of intimate understanding of each other, and between nations, this understanding must largely belong to the realm of history. One is tempted to put this idea as the most constructive result of the Conference; not that one is inclined to dismiss the value of the Resolution passed on other subjects or the many brilliant speeches made. It is only because Mrs. Nehru has given something which might be the starting point for a new line of organised activity among the various nations of this continent. In fact a beginning was made in this direction in the Conference itself when each delegate started talking in his own language. Very few outside the language group could have understood what he said except with the

help of translators who of course were there; but at least all the delegates had an opportunity of knowing a number of other languages through sound.

There was emphasis on the point that peace in Asia which all the Asian countries must strive for at all costs would lead to world peace. Individual problems were not gone into in any great detail though subjects such as Israel came up for vehement expression of views. Among the suggestions made, the following are of special interest; (1) (active control exchanges on all labels), preservation of ancient monuments and publication of studies on various Asian national cultures. (2) women of Asia should help promote consolidation of Asian rural and agricultural economies through cottage industries and crafts. (3) the setting up of an agency for promoting co-ordination in the field of science and the exchange of information on trade and economic development. One of the Resolutions demanded immediate lifting of embargo on trade with China. August 6, 1955 was decided to be observed as a protest day throughout Asia against the use of Atomic, Hydrogen and other weapons of mass destruction; on this day falls the tenth anniversary of Hiroshima. The principles embodied in the Panch Shila were reaffirmed and blessed. The Conference also expressed great concern over the situation developing in the Middle East "which is kept at a boiling point by constant outside interference".

The ECAFE Conference which had a very long session at Tokyo and which ended just on the eve of New Delhi Conference concentrated on economic subjects. Discussions were tuned to a less exciting key though outstanding controversies like the trade embargo on China could not be avoided. The only difference is that in the Tokyo Conference the political background received less notice and the presence of the US and other Western representatives the complexion of the controversial debates, was less needed.

The Indian delegates and the Chinese were obliged to present two separate reports on the political agenda of the Conference. The Chinese delegates were not satisfied with the Indian Report; and presented another which materially differed in attitude and tone from the Indian.

The session of the ECAFE Committee on Industry and Trade was marked by a wide measure of agreement on the desirability of foreign trade being conducted on a multilateral rather than on a bilateral basis, and by demands from Asian countries for stabilisation of prices for export commodities and problems of export mar-

keting. In answer to misgivings expressed, the US representative reaffirmed his Government's interest in an "orderly" liquidation of stocks and assured that the US would not dump any surpluses on the world's markets and that it had no desire to "undermine the position of its friends." The Committee felt that Asian countries should meet their import needs in commodities from within the region as far as possible. The Indian proposal that producer and consumer countries might make use of ECAFE's good offices to tackle the problem of rice and other raw material surpluses was accepted.

India, Burma and Indonesia maintained that trade of the countries of the region with China should be normalised and that this question should be considered from the point of view of trade, and not of politics. The Conference surveyed a number of other industrial and commercial issues as well.

Differing views were expressed on the novel proposal for Asian-European trade consultations, to be organised by ECAFE along the lines of similar consultations arranged in Europe by ECE. These consultations would, if agreed on, take place between countries participating in the work of the two Commissions. They would provide for bilateral negotiations against a Multilateral setting. A Resolution adopted by the Economic and Social Council had called on ECAFE to express no opinion on this question.

Several delegates, among them India, Indonesia, Burma, France and the USSR, favoured the proposed trade consultations, on the ground that such a new technique might open up new channels and improve and diversify trade by providing to the countries of the region more detailed knowledge of supply and market possibilities. In the Committee, a number of countries felt that the proposal had better be considered by the Committee, and that it should be the subject of careful examination before any recommendation was made. It was also observed that conditions between the ECE and ECAFE regions differed and that techniques used by the ECE might not be suitable for the ECAFE region and that other methods for promoting trade, such as trade fairs, exchange of trade delegations etc., might yield more profitable results. Among other points which came up for reference, the presentation of a Geological map of the region has vast unexplored wealth. On the insistence of USSR, Red China's claim for participation in the work of the Committee was also discussed at the meeting.

Facts on Plan's Progress

There is a legitimate feeling that the affairs of big industries and projects run by the State are shrouded in much greater obscurity than is desirable. The unfriendly revelations which are being made from time to time in the Reports of the Estimates and Public Accounts Committees whet public appetite for more information about the way in which money is being spent on the bigger industries and projects and the periodical progress which these are making. Statements made by the Production and Planning Ministers in the Lok Sabha on April 5, throw some new light on these matters. These two statements carry the data further from what the Planning Commission had given in last year's Report on the Progress of the Plan.

Mr K. C. Reddy is obviously not in a position to present a thoroughly satisfying picture about the working of industries, of which he holds Ministerial charge. He readily admitted though not quite explicitly that all the industries managed by the State were not making profits. He was of course speaking only on behalf of industries under the direct control of the Union Government. If enterprises undertaken by the State Governments are also taken into account, the general record may be less impressive. Anyway there is room for satisfaction in the fact that some of the major Central enterprises such as the Sindri Fertilisers are running on profit. State Railway Collieries, on the whole, are on the surplus side. It is conceded that particular units are not able to make both ends meet; that is an old story. The Hindustan Shipyard is perhaps an extreme instance of a State-run industry under chronic deficit. Here no apologies are necessary, because it was taken over from private management as a deficit concern and, as the Minister reminds us, shipping in any country does enjoy some form of financial assistance from the State, direct or indirect. The dimensions of the loss on the Shipyard might get reduced when the shipyard attains full expansion and carries a full load of work.

These facts should contribute to a generally favourable impression about the fortunes of and prospects for State enterprises; but Mr Reddy could have waited a little to offer the challenge he has set out to private industry. He has a comparative study of the industries in the private and public on an objective basis. From a point of view of statistical basis for an objective of achievements in the

two sectors, this kind of study would be very timely; but the country is still far from the stage at which decisive conclusions in favour of one or the other sector could be drawn. The public sector, in most part, is still in its early infancy; it has still a great deal to learn by way of trial and error.

Mr Gulzarilal Nanda was more lavish with facts and figures; he concentrated on power and irrigation. The total expenditure in multi-purpose schemes incurred by the Centre including the provisions for the last year of the Plan, would total Rs 241 crores; Rs 163 crores was spent during the first three years of the Plan by the States, and for the budget year of 1954-55, they would have spent another Rs 80 crores. Only a small amount seems to have been left over for expenditure for the last year of the Plan as far as the States are concerned. The Centre and the States together have fulfilled nearly the entire expenditure. If at all there were to be a shortfall, it will be only of the order of about 1 per cent of the total expenditure.

Against a total national target of 29 million acres, the new irrigated area already thrown open for cultivation till the end of March 1955 is 4.9 million acres representing 58 per cent of the additional area targeted for. As regards power, up to the end of March, 7 lakhs k.w. has been produced against the planned target of 11 lakhs k.w. This means that the scheduled pace has been kept up.

Mr Nanda also gave fairly up-to-date details on the progress of projects; the Bhakra Nangal, the Nangal Hydel Channel, the Bhakra Canal system and the power house were completed by the end of 1954. The work of remodelling Rupar and Sirhind headworks has, for all practical purposes, been completed. All the tasks set for this year for the project had been carried out according to schedule. In the initial stage, a number of construction programmes had been prepared for the project. The programme prepared in 1953 after the appointment of construction consultants still held good. According to the programme, concrete dam had to be completed in 1959 and the project would be completed by 1960. In Hirakud rapid progress is being maintained; 76 per cent of masonry, 68 per cent of compact earth at main dam and 85 per cent on the dykes and 91 per cent on the main canal and branches had been done up to the end of February 1955. Progress in the distributaries was somewhat behind schedule due mainly to delay

in land acquisition. In Damodar Valley, the Bokharo Thermal station with an installed capacity of 150,000 K.W. and the Thilaya power stations with an installed capacity of 4,500 K.W. had been brought under commercial operation. The D.V.C. had appointed construction engineers to examine the cause of delay, to enable the corporation to take remedial measures. In Tungabhadra, dams on the Mysore and Andhra sides had been completed except installation of shutters which was in progress.

The latest Progress Report of the Planning Commission contains much additional information on expenditure and fulfilment of targets. While the 1953-54 preliminary accounts indicate an increase in the outlay on the Plan by about Rs 70 crores over 1952-53, the outlay in 1954-55 has been stepped up by more than Rs 200 crores over 1952-54. The final figures of production of food grains in 1953-54 turned out to be 68 million tons, about half a million tons more than what was indicated in the last Progress Report. The All-India second estimate of rice for 1954-55 and the first estimates of other crops do not indicate any noticeable changes in the level of production attained in 1953-54. The third forecast of cotton for 1954-55 anticipates an increase in production from 32.97 lakh bales in 1953-54 to 36.6 lakh bales in 1954-55. In jute there is no perceptible improvement. The all-India second estimate of sugarcane puts gur production at 4.8 million tons as against 4.6 million tons in 1953-54. The position in oil-seeds is definitely better, particularly in the case of groundnut.

The general index of industrial production averaged 146.6 during April-September 1954 as against 134.8 in the corresponding period of the previous year. In September 1954-55, the index touched the all-time high of 152.4. This increase in industrial production is attributable to the achievement both in the public sector and the private sector. In the Sindri Fertilizer Factory, the production of Ammonium Sulphate during April-September 1954 was 135,000 tons as against 128,000 tons during the corresponding period in 1953. In the Hindustan Shipyard Limited during the six months, apart from the construction work in the shipyard, two ships of 5130 G.R.T. were completed and delivered, and construction of two more was in progress. The Chittaranjan locomotive Works produced 68 locomotives during April-September 1954, as against 64 during the full year of 1953-54. The progress of work in the Indian Telephones Industry,

Hindustan Cables Limited, Machine Tools Factory, Penicillin Factory at Pimpri and the D.D.T. Factory at Delhi, is also satisfactory. The U.P. Government's cement factory at Churk which started production on September 1 1954, has reached its rated capacity of 700 tons of cement per day.

During the period under review about 74 miles of new railway track were opened and nearly 250 miles of dismantled lines restored. However, to enable the railways to meet the growing demands for traffic the programmes for procurement of rolling stock have been further increased and accelerated. Under the national highways programme, 30 miles of new roads were constructed, 334 miles of existing roads improved and 5 major bridges completed. The progress on the Central sector continues to be satisfactory. Work has commenced on the Rs 10 crore programme of inter-State roads of economic importance, sanctioned towards the end of 1953-54.

PEPSU's Plan:

PEPSU's blueprint of the Second Five-Year Plan reveals its chief concern for reducing the pressure of population on land. Pride of place is given to the provision of employment opportunities through the development of industries; thus, jobs for an additional 25,000 persons and indirect employment for 1,50,000 have been contemplated. Although the State Development Council has not given its final and decisive consideration, it is fairly certain that the employment avenues in the State would be augmented by 100 per cent. The Plan, as it has emerged from the inter-departmental committee, foresees an expenditure of Rs 3 crores, both in the private and the public sector. It envisages the establishment of 2,500 mechanised cottage industry units in rural areas with the use of cheap electricity available from the Bhakra project. Model workshops are proposed to be opened in each tehsil. Average village blacksmith and carpenter and other artisans are to be initiated in the use of small machines. Marketing depots will be set up to facilitate supply of raw materials to the cottage industries. Industrial estates would also be formed modelled on those obtaining in foreign countries.

A characteristic feature of the Plan is the stress laid on setting a new pattern for industrialisation in future. Efforts are being made to promote co-operative and decentralised ventures. A diffused system of production by entrusting preliminary operations of manu-

North Indian Markets

A Further Fall in Sugar Prices

SUGAR markets continue to remain depressed and mill delivery prices, during the week under review, have declined further by As 2 to As 4 per maund. The supply position remains easy following the recent release of heavy quantity of Indian sugar for open sales by the Government of India. The Government's decision to reduce further the price of imported German sugar by Re 1 per maund to Rs 29-8 and to appoint an expert Committee to examine the formula for linking sugarcane prices with the price of sugar realised by factories, are also factors that have contributed to the depressed sentiment in the market.

With regard to the cut in the issue prices of German sugar, the Uttar Pradesh Sugar Dealers' Association has expressed the fear that a crisis is round the corner. In this connection, it may be mentioned that there have been three changes in the issue prices since February 1. Early in February, prices of Polish, French and East German sugar were cut by As 8 per maund to Rs 29-8. Following the increase in excise duty imposed by the Budget, prices of all foreign sugar were put up by about a rupee per maund. Now comes a cut in the price of East German sugar. To add to these, there have been two changes within the past three months in the minimum quantity released to the trade. According to the above Association, sugar prices have not only failed to absorb the additional excise duty proposed by the Budget, but also shown distinct declines from the pre-Budget levels.

As there have been changes several times in the sale prices of imported sugar, stockists are naturally hesitant to carry the usual stocks with them. The Association has, therefore, expressed concern that a such a state of affairs is bound to affect sugarcane production also. Moreover, Government stocks are said to be mounting, while floating supplies in the market are getting depleted. The following are the latest mill delivery rates quoted at the Hapur market (per maund):—Jaswant Rs 29-0; Simbhauli Rs 29-2; Mowana Rs 29-4; Daurala Rs 29-14; Amroha and Bijnore Rs 28-16; Mansoorpur Rs 29-14 and Rampur Rs 31-0.

The Meerut market continued to remain dull. Even though there was small demand from Madhya Bharat and Rajasthan, prices depreciated fractionally. The prevailing prices are about As 6 to As 8 per maund lower than the Budget-era prices. In view of the

expected increase in production this season, abundant stocks of imported sugar in the country and the possibility of further good arrivals, traders do not hold the prospects bright. They do not savour further release of any quota by the Government for open sale till the present stalemate ends.

The steadiness in the price of ready Gur, that was noticed last week, was fully maintained during the week and the rate improved further to Rs 9-14 from Rs 9-8 per maund. Daily arrivals in the Hapur market averaged about 400 maunds daily. There was better outside demand and the loading facilities were also adequate. The Uttar Pradesh Government are continuing their purchases of small quantities at the fixed "floor" prices of Rs 10-4 per maund; but the State's Chief Minister has hinted that the Government cannot continue giving price support for long.

In the Hapur market, Wheat prices ruled firm due to poor stock position of old quality wheat. Arrivals of the new crop are meagre and hardly sufficient to meet the day-to-day needs of the market. Wheat Dara quality was quoted at Rs 12-12 per maund and fine quality at Rs 14-4 as against Rs 11-12 and Rs 13-4 respectively quoted in the previous week. Traders generally expect a fall in prices when new crop arrivals increase within a fortnight. Rice prices (coarse quality) sagged by As 8 per maund to Rs 11-8 in line with a fall in prices in Madras where the Government had released a part of their stocks for open sale. The steadiness in Gram prices, that was noticed last week, was not maintained and prices eased appreciably by As 8 per maund to Rs 6-0 for the local quality and Rs 6-10 for the Punjab quality. Arrivals of new crop have already begun in small quantities. Barley and Bejhar prices also declined with the increase in daily arrivals of the new crop which are estimated at 50 maunds and 75 maunds respectively. Pulses also recorded a fall in sympathy with the general trend of the market with Dara quality quoting around Rs 4-1 per maund and white variety around Rs 5-4.

In the Delhi market, wheat prices eased by about As 8 per maund due to better arrivals and lack of demand. Arrivals of new crop wheat have already started in UP mandies; and, in the Punjab also, arrivals are expected to begin

next week. Gram prices were also soft, while Barley rates were quiet. Rice, however, hardened by about As 4 to Re 1 per maund due to good inquiry and shortage of arrivals. The markets for other grains were quietly steady with price movements confined to a narrow range.

In the Bombay market, prices of white American wheat have shot up from Rs 142 to Rs 158 per candy during the past few days, while red wheat of the same origin has been fetching Rs 114 per candy against Rs 104 quoted a week ago. This marked firmness in prices is attributed to the shortage of white wheat in the market. Prices of indigenous varieties, such as Khandwa and Pissi, have however kept steady in view of the smaller arrivals and better advices from upcountry markets. The undertone in the Rice section has been slightly steadier due to reduced arrivals. Experts have, however, been maintained at a fairly satis-

factory level. Fresh business is reported to have been booked for Africa and the Middle East and shipments to these destinations are expected to be made during the middle of this month. The coarse grains section presented a dull atmosphere with the prices of Jowar and Bajra remaining steady.

The Government of India are reported to have agreed to advance about Rs 12 crores for the purchase of wheat on their account in case the prices tended to decline to the uneconomic level. This means, that the Government have now taken measures to stabilise wheat prices at reasonable levels; and these measures include:—(1) Withdrawal of zonal restrictions, allowing the demands of important deficit pockets, like Calcutta, and Bombay, to operate on the internal markets; (2) Banning of import of wheat by flour mills from abroad for the time being and (3) Per-

WORLD OF BUSINESS

(Continued from page 770)

then, what is necessary is full clarification from Government as to the attitude they will adopt. In as much as the Second Plan is now being drawn up, it is possible to suggest that all such misgivings must be done away with before we embark upon it.

A second point, of perhaps greater importance in some ways, touched by Mr Binnani concerns the Government view on consumption. The Taxation Enquiry Commission have indicated clearly and categorically that consumption today must be restricted in the interests of making free resources for further productive activity. To what extent this view of the Commission (accepted, it would appear, by Government) is correctly arrived at, it is difficult to say. For, in the first place, consumption in the country is already at a pathetically low figure. If further curbs on consumption are sought—if, therefore, demand for goods is perceptibly to decline, industry as such might find that it will have to resort to a cut in production. And, as far as the small savings that might be engendered consequent to the curb on consumption, will they really be appreciable? Whether or not we should have such a curb on consumption is a question that has to be studied in greater detail. Such study can profitably make use of the opinions that Mr Pirani has expressed at the last annual general meeting of the Indian Chamber of Commerce.

Yet another aspect of the economic conundrums of the future was dealt with at the 55th Annual General Meeting of the Bharat Chamber

of Commerce. When Mr Bhagnath Bangur presided over the meeting, which was held in Calcutta on the last day of last month, the most important point he made was about employment or, rather, unemployment. As Mr Bangur sees it, in the interests of employment, a definite policy has to be decided upon which will ensure that the greatest amount of jobs will be made available. In this view, said Mr Bangur, 'the issue today is not what should be the limits of the enterprises to be undertaken by the Government or by the citizens themselves. The criteria for every decision in such matters should be how far and how quickly an enterprise helps to widen the scope of employment and production.

If, therefore, the end of maximisation of production is to be kept in view as more important than any other consideration, it would appear that there is a case for the fullest utilisation of the energies of Government and industry towards such development activities. This, in turn, has led Mr Bangur to express his opinion as to the specific fields that, for example, might be taken up with zest by the State. In referring to the importance of the distributive trade, he has suggested that the scope for employment in transport and other commercial services is not adequately realised. Trade and commerce, he says, 'provide a very wide scope of employment in the non-agricultural sphere. He would seem to imply that expansion of trade and commerce and transport would be fruitful in providing employment opportunities. This point well worth careful

Planning from Below

THE modus operandi of building the Second Five Year Plan upwards from the village level has been explained, in full detail and in precise terms, in a memorandum issued by the Madras Government. The First Plan was improvised on the basis of a number of disparate projects which had already been taken on hand, or which were nearly ready for execution, and on the basis of a number of blueprints that had been got ready in some context or other. The method thus adopted for the formulation of the First Plan made it a super-imposition from the top. The criteria were: Is this a workable project? Is this a worthwhile project? Is this a project for which finances can be found or must be found? By the application of such tests, a number of projects were brought together; and the credit goes to the Planning Commission, for imparting a coherence and essential consistency to the projects thus brought together and for making a make-shift arrangement have all the meaning and purpose of an organic plan. With the experience gained in the First Plan and the achievements recorded both in the style of execution and the realisation of targets, it has come to be realised that the Second Plan should be aimed to bring home the benefits of planning to the entire population. This objective can be achieved only if the Second Plan is devised as the People's Plan, only if it is fashioned at the village level and proceeds upwards, rung by rung, to the District level, to the State level, and, finally, the all-India level. It is easier to state the objectives and the purposes in these terms; but to evolve concrete steps and precise procedure is far from easy. For one thing, planning on such lines has no precedent to go upon, no example to copy. From this point of view, the Second Plan has to have all the attributes of originality, of creative effort.

The Planning Commission have been giving careful attention and constructive thought to the preparation of the Second Plan from these points of view. Their general ideas have been communicated to all the State Governments. In turn, the State Governments must suitably instruct the chief agencies in the form of district administrations. The Government have bestirred themselves in this respect, and it should be useful for other States to follow the action taken by Madras in the preparation for ap-

propriate projects for numberless villages, to integrate them into district plans, and to raise the structure of the State plan on such foundations.

The first step in planning from below is to define the suitable territorial unit for intensive development. A medium-sized village with a few hundred families should be ideal. The preparation of the village plan devolves primarily on a broad-based organisation of villagers. It has to be representative of all the sections of the population. Local leaders who can command the respect and confidence of the villagers and with practical ability and experience form the nucleus of the so constituted Village Development Committee.

The role of this Committee is two-fold: functioning as a planning agency to formulate the village plan, and secondly, to undertake the implementation of the plan, in co-operation with the villagers, when it returns to them as part of a larger plan embracing the whole district. Efficient practical farmers, experienced social workers and experts in animal husbandry, health, co-operation, education, cottage industries form the backbone of the village committee. Where statutory panchayats have been constituted, the formation of the planning agency will be easier. In areas without statutory panchayats the villagers will elect from among themselves the Village Development Committee which may be regarded as their duly authorised representatives for the formulation and implementation of the village plan.

Quintessentially, planning implies a correct assessment of available resources in the form of natural potentialities, capital and labour, and secondly, the maximum utilization of these, which in its turn, means an a priori solution of potential bottlenecks as well as the avoidance of technical blunders, and wastage of resources. It presupposes, therefore, an intimate knowledge of local conditions and needs, and the extent to which a plan is practicable. A central planning agency even with elaborate statistical equipment will find it difficult as well as expensive to have a detailed and foolproof estimate of village conditions from time to time. The Village Development Committee comes in just not to list the needs of the village or even merely to fix the order of priorities, but to formulate organic plans and dis-

cuss them threadbare, with reference to their suitability, the availability of funds, the commitments they involve, the raw materials and other facilities that may be locally available. It is thus that it becomes their own plan.

The village plans then go to the next higher level. Each district is divided into convenient planning areas, in forming which all relevant factors and the facilities for special developments will be taken into account. The Development Committee for the planning area will consist of all the important officers, representative agriculturists and other special interests and Members of the State Legislature in the area; the Revenue Divisional Officer will be the Chairman. It will be the task of this Committee to scrutinize and integrate the village plans as also to incorporate any special lines of development that may be possible in the area.

At the District level, a special staff consisting of a Deputy Collector, Deputy Tahsildars and Revenue inspectors, will work out a plan on the basis of the plans they receive. They will also incorporate specific plans from each municipality and major panchayat so that ultimately each town should have a plan of its own which would be a defined part of the district plan.

The main feature of the present programme is that simultaneous with providing the elementary requirements of the people in the matter of primary education, medical assistance, rural sanitation, etc., the aggregate productive output is to be substantially raised. For instance, the Government hope to double agricultural production in ten years. This would involve improved techniques and better tools. It also increases the State's obligation to provide the supplies and finances needed. The Government consider that it would not be unrealistic if their contribution to each district is of the order of Rs 2 to 3 crores over the five-year period. To this naturally will have to be added the contribution of the villagers in the form of money and labour.

Voluntary labour is, in fact, a new factor that has entered the economics of national development. A time-old practice of villagers getting together in a spirit of self-help and common endeavour, its revival is both salutary and necessary. The paucity of capital has to be countered by the abundance of labour. Since the benefits accrue from such labour is not confined only to the actual workers, the curtailment of the need for finance can be hoped to be substantial. Experience in the recent past has shown how

wholesome is the effect of large-scale voluntary labour on under-employment. Chronic unemployment, however, can be remedied only gradually; but, when a whole nation puts its shoulder on to the wheel of progress, it sets in motion a chain of creative activities that will fruitfully absorb the unemployed in increasing numbers.

Having the say in the formulation of the plan, the villagers' interest will naturally be sustained at the time of its implementation. The project of their vision, they see it grow under their eyes, with their labour. At present, instances are not rare where expensive projects suffer due to lack of proper maintenance.

It has been wisely recognised that for planning from below the pace has to be set from above. The broad directive principles have to come from the Centre. In order that these may not be lost sight of at any of the different stages of step-by-step planning, a well-trained staff who can attend to planning work is indispensable. Today, outside the Community Projects and the National Extension Service, there is no special staff suited for the purpose; even the existing cadre has proved to be grossly inadequate in numbers and in quality.

That planning is a continuous process, that each year is the beginning of a planning era has also been fully recognised. The Planning Commission have suggested that, if a two-year period is taken as the basis for specific village programmes, each year the village could add one more year to its immediate programme, so that it always has a two-year programme ahead of it.

However, the division of the various stages of planning into water-tight compartments can well be the dangerous prelude to a gross oversimplification of the problem of village uplift. The village can no longer be considered as a distinct unit, whose problems can be solved by itself. If popular aspirations are to be reconciled with considerations of economic stability and feasibility and if the chopping and changing of the village plans at higher levels is to be reduced to a minimum, the village people have to be guided in their deliberations by qualified advisers. Much depends on how the district administration will gear itself to the new task that has devolved upon it.

Planning from below is the cardinal principal of the democratic way of life translated into reality. Here then is what our Prime Minister calls "the exciting adventure of building a new India".

South Indian Notes

Agricultural Tax in Mysore

Last week saw the introduction of a new bill in the Mysore Legislative Assembly, to provide for the levy of a tax on agricultural income. Several States have already passed similar bills. The increasing needs of State exchequers and the changing pattern of agricultural economy both call for a departure from the past modes of assessment of land revenue. Surcharges on the land revenue may be considered to be one way of making the system more responsive to fluctuations in price levels. The changes that are taking place in the tax system are indicative of a transitional phase, a transition to what the Taxation Enquiry Commission calls a merger of agricultural and non-agricultural incomes preparing for the levy, ultimately, of one income-tax. Of course, this has to be a long-term objective. The only way to end the anomalous distinction between agricultural and non-agricultural incomes is to levy a tax on the former as in the case of the latter. Further, it is common knowledge that especially in the case of commercial crops, the burden of land revenue has steadily and, from the point of view of the government, drastically declined in the past years.

The Mysore Agricultural Income Tax Bill strictly confines to commercial crops. The rate of the tax varies on a graded scale from nine paise to five annas six paise in the Rupee, the maximum leviable on incomes of over Rs 25,000. Incomes less than Rs 3,500 are exempted. Also, for a person deriving an income from not more than 18 acres growing carqamman, coffee, rubber, ground-nut, tobacco, cotton or oranges and not more than six acres of the other crops, the tax shall not be payable. In the case of smaller estates provision is also made to allow for the compounding of the tax to be paid in a lump sum at certain fixed rates. Another concession is the provision for the carrying forward of losses in agricultural income in the year to the following year and setting it off against the income for that year; but no loss can be carried forward for more than six years. In computing agricultural income deduction is allowed for land revenue and municipal taxes, rent paid to superior landlords, expenditure on the maintenance of productive work for the benefit of the land concerned, repair, capital asset depreciation, buildings and machinery and cultivation and transport expenses.

On the whole, the bill is more accommodating than the Madras Planning Tax Bill without sacrificing in the least the principle behind it.

Falling Prices:

It is not clear how far the Ad Hoc Committee appointed by the

Madras Government is able to handle the problem of fall in prices of 100 grains. The State is not alone to face this disastrous trend. The Union Government have naturally applied themselves to remedy this common malaise of all the States; but their approach leaves one in doubt whether they are able to take fully into account regional peculiarities and changing local trends which are bound to have their influence. For instance, there seems to be little liaison between the Ad Hoc Committee and the Union. Recently about 12,000 tons of rice stocks were released by the Centre. According to the Union Deputy Minister, Mr Krishnappa this step has not affected the price. The Committee, however, recommends that simultaneous with this release, stocks have to be purchased to that extent from the producers for storage purposes, so that the price level might not be adversely affected. It may be noted that during the past months the price has been almost steadily, though gradually, falling in Tanjore and other producing areas. Are the Union Government well advised in their policy of releasing large stocks? Presumably, they propose a similar sale in the near future.

That the position in the neighbouring State of Andhra is even worse, is apparent from the statements made last week by the Agricultural Minister Mr Kama Rao. The economic stability of that State is almost wholly dependent on agricultural production. On behalf of the Centre, Mr Rao has, however, successfully pleaded with the Union Minister to suspend the proposal of selling the stocks in the open market. The only sensible way out is to sell the stocks to the State Government at the prevailing prices, the loss due to the difference in prices being borne by the Centre. Also, the State by itself cannot be expected to buy fresh stocks and stabilise the prices. The fall in paddy prices has gone much below the procurement levels between 1949 to 1953. Since 1953, the gap between the industrial price index and the agricultural index has been steadily widening. In Andhra, the impact due to this fall has been calculated to be Rs 20 crores for this year alone. Greater co-ordination between the States and the Centre should help to avoid glaring discrepancies in approaches to crucial issues.

The District Plan:

In the matter of the preparation of the Second Five-year Plan at the village level, the ball has already been set rolling at a conference of officials and non-officials of Chingleput District. The district is expected to make available a sum of

Rs 10 crores during the plan period out of which Rs 2.03 crores will be spent on works at the village level. Each village unit has a minimum population of 1,000. A division has been made between community or public projects and projects intended for private amenities. The amount of reliance on contributions from the villagers is by no means unrealistic. The paucity of money has been recognised. For the public projects, the local contribution is to be half the cost, but this might be secured by a grain levy at harvest time on an acreage basis. This will be stored by the Village Development Committee to feed the labour employed. Public amenities include schools, dispensaries, maternity centres, veterinary hospitals, roads, community centres, children's parks, libraries, radio and drinking water wells. The principle on which these have to be distributed within the district has also been defined. Subsidies for private amenities touch almost every phase of the village life: construction of new houses, and repairing of the old, reclamation of waste land, improving agriculture through green manure, the Japanese method, etc., afforestation, cottage industries, poultry farming all these will receive a helping hand from the Village Development Committee.

It is estimated that to each village unit about Rs 10,000 would be available. The amount would be divided nearly equally between public and private amenities. Also, on an average the additional expenditure per head for the five year period comes to Rs 10. But this would be a partial representation of the whole programme. The aid and subsidy from the Government through the Village Development Committee is essentially in the nature of encouragement in a desirable direction. Only one who is innocent of the diverse factors that determine rural progress will expect that the face of the Indian village will be changed in another five years. Albeit on a humble scale, the present programme, if properly carried through, should goad the people to greater activity leading to a higher output and living standard.

Sharing the Waters:

The way in which the issue of the use of Palar waters is being lacerated anew by the Governments of Madras and Mysore is, to say the least, unedifying. The allegations and the counter-charges would serve only to create ill-will and misunderstanding where harmony and co-operation should prevail. It was in 1892 that the two States entered into an agreement to share the waters of the river. Apparently, during the last three decades, the ryots of the North Arcot and Chingleput districts covered by the Palar Basin have experienced periodical

scarcity of water. The present turn is caused by their representations to the Government. Mysore, for its part, says that the ryots of that State have equally suffered and no breach of the terms of agreement is involved. Mysore's contention is that the waters in a particular tank under dispute were used for the domestic and manufacturing uses of the Kolar Gold Field and not for agricultural purposes.

Madras has now approached the Union Government to sanction the Appointment of a Commission to go into the matter as provided in Article 263 of the Constitution. Presumably, no approach on the State level has been made; no conference has been convened to untie the knot; why this is so is un-understandable. There is a glaring contrast between the discussions of the same issue by the two Governments. But it is still not too late to resolve the issue at the State level.

GERMANY

(Continued from page 774)

"The United States delegation acknowledged the German desire for a wider solution of the problem but stated that, while the future cannot be predicated, a broader plan is not envisaged by the Administration."

This proposal of the American delegation, which will now be submitted to Congress for legislative approval was warmly welcomed in Germany. As the joint statement points out, about 90 per cent of the owners whose property was vested will receive full compensation. Thereby some of the hardship arising out of measures taken against German owners during and after World War II will be alleviated. The steps envisaged for the settlement of American War Claims were proposed in view of article 5 of the London Debt Agreement of February 28, 1953, which makes it impossible for the Federal Republic of Germany to consider war claims until a final settlement is possible under that agreement.

The outcome of these negotiations marks a decisive turning point towards the re-affirmation of the principle of private property. It will not fail to have an impact on international law as well as on the restoration of confidence in trade and commerce. It is perhaps not without significance that these measures will be taken in a country which has been the leading power of the western world since World II.

Last not least it should be mentioned that the spirit of understanding which prevailed through these discussions is a fine tribute for the friendship which exists between the two countries in both political and human relations.

paid-up shares it is proposed to call of Rs. 5 on the partly paid-shares this year.

INCREASED TAXES.

It is to be noted that taxation has eaten far more sharply into the profits of the year than was the case in 1953. We are making a provision of Rs. 5,75,000 for taxes.

So far as the Directorate is concerned we had to accept with great regret the resignation in February of Mr. M. A. Chidambaram Chettiar, who we are glad

to say is now elected as the Mayor of Madras and in his place we have co-opted Sri M. A. M. Muthiah Chettiar, Kumara Raja of Chettinad. The Board of Directors have already recorded their great appreciation of the services rendered by Mr. M. A. Chidambaram Chettiar to the Bank for the period of 3 years during which he was associated with the Bank as a Director.

It now remains for me to express our thanks to the Secretary and other members of the Staff for their energetic work and for their devotion to the best

interests of the Bank. We should also express our thanks to the members of the Local Advisory Boards, who have assisted the various branches of our Bank by their sound advice. We have always been careful in scrutinising the work of Overseas Branches of the Bank in Colombo and Malaya. On the whole, we are satisfied that the general progress is maintained. We have to make much greater progress in future.

This Bank was started in August, 1907 and embodied a bold and far-reaching effort in indigenous Banking by our

people and we are happy to feel that we will be celebrating our Golden Jubilee in two years with great enthusiasm and joy.

Messrs. Kumararajah M. A. M. Muthiah Chettiar, of Chettinad R. K. Venkatachalam, R. Sundaram Iyer and Rao Bahadur M.R.M.S. Periananth Chettiar were re-elected Directors of the Bank.

Messrs. B. Purushottam & Co., Messrs. Sundaram and Srinivasan, Messrs. V. Soundararajan & Co., and Messrs. Brahmayya & Co., were elected Auditors of the Bank for the year 1955.

THE INDIAN PAPER MAKERS' ASSOCIATION

Speech delivered by the Chairman, Mr. C. J. E. Keene, at the Annual General Meeting of the Association held in Royal Exchange on the 5th April, 1955.

Gentlemen,

I have to regret that the Report of the Association has not been in your hands for very long. With your permission I will take as read the notice calling this Meeting.

My predecessor on this occasion last year described the previous year as being not a particularly eventful one. This year, I think, the industry has had a greater number of problems with which to contend, culminating in the major event on March 1st this year of an Excise Duty of 10% 'ad valorem' being imposed on the indigenous production of paper. The on indigenous market reactions to this effects of, and market reactions to, this additional burden take a little time to be fully assessed, but it is certain that this additional cost will increase the difficulties that lie ahead in the maintenance of our industry. I shall refer to Excise Duty in greater detail later.

Prior to this event there had been no violent fluctuations in market sentiments during the year, and whilst there has been a healthy demand for our products, broadly speaking the position between supply and demand has been well balanced. This situation has also generally applied to supplies of raw materials, coal, chemicals and railway transport. In many ways it has been a progressive year, and production of paper in the country has again shown a gratifying increase. 158,328 tons of paper were manufactured in India during 1954 as against 139,704 tons in 1953. These figures may be compared with 108,912 tons, manufactured in India in 1950. Unfortunately, during the year serious loss of production, owing to illegal strikes, was again experienced, otherwise the 170,000 tons mark would have been exceeded.

SUPPLIES TO GOVERNMENT.

The Government Contract for 1955-56 for supplies of paper has, I am sorry to say, not yet been concluded. Since Government take such a large percentage of the Mill's production, it is an advantage to the industry to have the Contract finalised before the contract period begins so that production programme can be planned ahead, deliveries spaced evenly, so far as transport facilities permit, throughout the contract year, and thus an even and uninterrupted flow of supplies also maintained to the civil market. Delays have, however, frequently been experienced, and this year when only 15 days remained before the new contract period was due to start we were requested by Government to agree to an extension of two months, under the same terms, of the 1954/55 Contract. Under the circumstances, it was considered the better course to accept this extension, pending finalisation of the Contract for the remainder of the year.

PRODUCTION COSTS.

Costs which is becoming of increasing concern to units of our industry is the upward trend of manufacturing costs. Despite the installation of much the most modern production and industrial methods, which should result in a number of reasons for this, which have been referred to in

previous years—withdrawal of concessional freight rates on Bamboo, increased cost of Bamboo and forest royalties, higher coal freights, poor quality coal, etc.—we have been compelled to use, and increased labour costs being among them. During the past year there has been no indication of this upward trend being halted. Many items continue to increase, in particular labour costs and Railway freight rates on paper have recently been increased. Added to this, we now have to make provision in the selling price of our products for the recently imposed Excise Duty. By the very nature of the uses to which paper is put, it is essential that it should be a cheap commodity and no restrictions placed on its free use and availability. For our primary raw materials we can only afford to use materials whether of rag and textile wastes, or materials such as Bamboo, grasses, reeds, etc., which, for economical paper-making, must be products which are of no commercial interest to other industries. This is a fundamental principle on which the paper-making industry is founded.

EXCISE DUTY ON PAPER.

It is against this background that our concern on the new Excise Duty is based. If paper becomes too expensive, it becomes subject to economy as regards quantity and quality, resulting in a diminishing market. A very large portion of the production of the Member Mills of this Association is paper for educational purposes. Pure Printing paper for school text books, Pure Cream Laid for school exercise books, Drawing Cartridges, etc. The 10% Excise Duty will therefore be a heavy burden on these important consumers of our products at a time when the country is making every effort to improve its literacy. It will tend to hamper development and improvement, and possibly mean plans for expansion in other sections of industry. Another aspect which has caused considerable misgivings is the Newspaper is exempt from Excise Duty. Members of this Association fully appreciate that Newspaper should be available as cheaply as possible to the Newspaper, but we have had previous unfortunate experiences of Newspaper, or paper imported under the guise of Newspaper, finding its way into the Indian market outside the Newspaper industry in competition with our qualities of paper. As an example Newspaper has been used for such purposes as printing school text books, the initial cost of which may be cheaper, but in the long run it is no economy as Newspaper is not manufactured to be durable, and the student eventually has to purchase two, or possibly more, books, when one should have sufficed. We are of the opinion that the tendency for Newspaper to compete unfairly in the market against our qualities will increase, now that the difference in price is increased by the amount of Excise Duty which is leviable on our quantities of paper.

The Association has expressed its regret to our Government, therefore, that this Excise Duty on paper should be imposed, but if in the overall picture of industrial development in the country it is unavoidable we have requested that consideration should be given to devising

a simpler method of assessment than on an 'ad valorem' basis. Paper is not a bulk commodity like cement, sugar or coal, there being a very wide range of different qualities of paper, each subdivided into various thicknesses, sizes, colours and finishes, and again subdivided by subsequent process of embossing, kullotining, ruling, cutting, watermarks to position, etc., after actual manufacture. A somewhat complicated price structure is unavoidable and the Excise Duty will add to these complications. Also, part of the service of the paper is to have stocks in the various specifications available to consumers at upcountry depots, and since publishers, do not see a return on their money for many months after the actual sale, they are not prepared to extend credit facilities frequently have to be given. These are among the facilities and the 'ad valorem' customs and usages of the trade of benefit to consumers which, under the rigid rules of Excise, may have to be withdrawn, or at least considerably amended. So far as imports of Newspaper are concerned it is to some extent reassuring that Government announced two days ago that Newspaper is to be removed from G.O.L. and imports are to be regulated.

RAW MATERIALS.

On the subject of raw materials, previous Chairman of the Association have referred to forest policy. Our vital interest in this does not diminish and I therefore make no apology for bringing it forward once more and repeating our frequent request that the Central Government should co-ordinate all State Forest policies. For some years the policy of many of the States appears to have been only to derive the highest possible revenue in the shortest possible time, by means of annual auctions of forest areas. Such a short-term policy can only result in the forest wealth of the country being gradually dissipated. Some of the forest areas are being ruined by unscrupulous contractors, whose only interest in the lease is to make as large a profit as possible during its short term. The Paper Industry asks that Mills should be granted long term leases on reasonable terms, and in their own interests they would ensure that the areas are properly developed and conserved to give adequate supplies for the present without jeopardising requirements for the future. Another aspect concerning Forest policy which has been brought into prominence during the year, is the question of allocation of raw materials to Mills, in the period of expansion of the industry. It cannot, of course, be regarded as true expansion if, in increasing installed capacity, existing units are deprived of their established areas for raw materials, compelled to go further and further afield for their supplies, and thus of virtue of their present sites become uneconomical units. This question has been carefully studied by the Planning Commission, and it is a source of great satisfaction to Members that in the Planning Commission Publication (Programmes of Industrial Development 1951-56) the industry's point of view has been fully supported. This matter is of such importance to us that I would like to quote the relevant portions:—

"The main problem of the industry is the shortage of raw materials which was accentuated by the partition of the country, as the factories in West Bengal were deprived of their supplies of bamboo previously obtained from East Bengal. In view of the projects

already under implementation and other expansions which are contemplated the demand for the various raw materials is expected to expand considerably. In this connection, it may be stated that a number of units in Bengal and Bihar have to depend on supplies of bamboo from Orissa. It is, therefore, essential to organise adequate supplies of this raw material to the existing factories in the first instance, and later on to the new projected units."

If this wise counsel is observed we shall be quite satisfied.

During May last a serious situation developed concerning supplies of Salt Cake from the Rajasthan Government. This material is obtainable only from the unique natural deposits in Rajasthan, and without it, the Mills' pulp producing plants cannot operate economically. Failure of supplies would therefore be a calamity to the Mills. During the previous year we had experienced acute difficulties, but last year the position deteriorated to such an extent that large scale dislocation of pulp production appeared imminent. It was evident to the Association that these valuable deposits were not being administered in an efficient manner—at one stage supplies were erratic due to the comparatively trivial difficulty of the Department having no empty bags in which to remove the Salt Cake. The Association therefore represented these serious difficulties to the Government of India, and when the gravity of the situation was realised, considerable and much appreciated assistance was extended by Government Officials in organising more efficient arrangements. I am glad to say that for some months past there has been a considerable improvement and regular dispatches have been maintained. Our thanks are due to Government for the assistance given and I hope that this improved supply position will continue as it is necessary for the Mills to build up stocks of this material to carry them over the monsoon period when work in the salt pans comes to a standstill.

LABOUR PROBLEMS.

On the subject of labour matters, over recent months there have been no major stoppages of work at the Mills, but the past year has again seen prolonged closures, serious loss of production and wage money among large units of the industry, due to illegal strikes. This has again been the dark spot of the year's working, and, as in the previous year, has been brought about by the workers being misled by certain of the Union leaders not employed in the Mills. In organised industry, ours is among the foremost in improving the lot of our workers, and it is to be allowed to work in peace. It is a matter of great regret that with present labour legislation largely benefitting the worker, Government machinery for settling differences is frequently disregarded and illegal strikes resorted to, with serious losses to all concerned.

RAILWAY TRANSPORT.

In connection with Railway matters, whilst at the beginning of the year the industry experienced great difficulties in obtaining adequate rail transport, particularly as regards our seasonal requirements in conveying raw materials to the Mills, for the major part of the year there has been a considerable improvement. Wagons have been more readily available, and operational restrictions less. A point which has been par-

ticularly noticeable is the more rapid arrival of wagons at destinations which must result in quicker turn round and more economical use of the available wagons. I think great credit is due to the Railway Authorities in achieving this gratifying improvement. Unfortunately, we have recently again struck a spell of transport difficulties, apparently of a seasonal nature, which also coincides with the industry's seasonal requirements for raw materials; in particular one Member is experiencing great difficulty in securing wagons especially in the Waltir and Khurda Road Districts of the Eastern Railway for the transport of grass, just at the peak period of their grass season. We shall, therefore, greatly appreciate urgent assistance from the Railways in overcoming this latest difficulty.

FUTURE OUTLOOK.

On the subject of the future outlook of the industry, I have referred to some of our difficulties and uncertainties, but on the other hand there are a number of promising features. India can, with pride, regard herself as a pioneer country in developing the manufacture of high class paper from Bamboo, and some of the finest pulp and paper-making plant in the world has been, and continues to be, installed in India to process this raw material. Members of this Association have taken a leading part in this development. From time to time we hear reports of the world's diminishing timber forests due to over-exploitation by the wood-pulp industry, and Bamboo, with its prolific growth, should place India in a strong position as a paper-making country. The Indian market for paper should expand considerably as educational programmes and the industrialisation of the country develop. With careful husbandry of her forests, there-

fore, the Indian Industry should be able to look forward to a period of expansion and not only fulfil the growing demands of supplies of paper for the nation, but even go further and develop a healthy export trade. Adjacent countries, of course, are also aware of this position, new pulp and paper industries are being built up and the Indian Industry therefore needs every encouragement if it is to keep its lead.

We have maintained our usual friendly relations with the Forest Research Institute at Dehra Dun and also the Indian Paper Mills' Association. During the year Members of both Associations have benefited from our mutual discussions. During the year I have had the honour of representing our interests on the Industrial Affairs Sub-Committee of the Bengal Chamber of Commerce and Industry.

I should like to tender my sincere thanks for the able assistance and advice I have received from the Vice-Chairman and other Members of the Committee. In passing, I should also like to mention that whilst appreciating the great distance and difficulties of travel, attendance of upcountry Committee Members at least at some of our meetings, is of great assistance in our deliberations. I also wish to express my gratitude to the very able Secretaries who have served during the year, Messrs. Nish and Windridge.

NEW COMMITTEE.

The Association elected Mr. V. Mehta of Shree Gopal Paper Mills Co., Ltd. as Chairman and Mr. C. I. Turcan of the India Paper Pulp Co., Ltd. as Vice-Chairman for the year 1955-56. The Committee of the Association for the year will consist of Messrs. P. H. Sykes, L. Shuttleworth and P. K. Mehta.

THE INDIAN IRON AND STEEL COMPANY, LIMITED.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ended 31st March, 1955.

The Preference Share Registers will be closed from the 20th to the 30th April, 1955, both days inclusive. Payment will be made on or after the 1st May, 1955, to those Preference Shareholders whose names are on the Company's Register on the 30th April, 1955, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. LESLIE MARTIN,
Director,
Managing Agents.

12, Mission Row,
Calcutta,
11th April, 1955.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-seventh Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 2nd May, 1955, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th September, 1954 and the Balance Sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 28th April 1955 to the 2nd May 1955, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.
CALCUTTA,
The 14th April, 1955.

ENVEE ESS LIMITED

Representatives:—Messrs. Ironside Limited, London
Manufacturers' Representatives IMPORTERS AND EXPORTERS
Sole Agents in Ceylon for:

MOVADO & RALCO Watches

Chief Agents for:
THE HANOVER FIRE INSURANCE COMPANY AND THE NEW HAMPSHIRE FIRE INSURANCE COMPANY

Principal Agents for:—CALEDONIAN INSURANCE COMPANY
P. O. Box No. 500, COLOMBO. Telegrams: "ENVEESSUBBU".

JESSOP AND COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the TWENTY-THIRD ANNUAL GENERAL MEETING of the Members of Jessop and Company Limited, will be held at the Registered Office of the Company on Friday, the sixth day of May, 1955, at 11 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October, 1954.
2. To declare a Dividend.
3. To re-elect Directors.
4. To re-appoint the Auditors.
5. To transact any other business of an Ordinary General Meeting.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63, Netaji Subhas Road,
Calcutta,
25th March, 1955.

Note:—A Member entitled to attend and vote is entitled to appoint one or more Proxies to attend and vote instead of him. A Proxy appointed specifically for this Meeting must be a Member of the Company.

The Ordinary Share Transfer Registers will be closed from 18th April to 6th May, 1955, both days inclusive.

THE RAMNUGGER CANE AND SUGAR COMPANY, LIMITED.

Notice is hereby given that the Eighteenth Ordinary General Meeting of the Shareholders of THE RAMNUGGER CANE & SUGAR COMPANY, LIMITED will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, on Wednesday, the 4th May, 1955, at 12 noon, to transact the following business:—

1. To receive the Report of the Directors and to pass the Audited Accounts for the year ended 31st August, 1954.
2. To declare a Dividend on Preference Shares.
3. To declare a Dividend on Ordinary Shares.
4. To elect Directors.
5. To appoint Auditors and to fix their remuneration.
6. To transact any other business which may properly be brought before the Meeting.

NOTICE is also given that the Share Transfer Registers will be closed from the 18th April to 4th May, 1955, both days inclusive.

By Order of the Board,
ANDERSON WRIGHT, LTD.,
Managing Agents.
Calcutta, the 30th March, 1955.

SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR. (SOCIETE ANONYME)

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at Clive Buildings, Netaji Subhas Road, Calcutta on Tuesday the 17th May, 1955 at 12 noon for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1954.
2. To elect a Director.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business which may properly be transacted at the Meeting.

Notice is also hereby given that the Register of Members will be closed from the 4th May to the 17th May, 1955, both days inclusive.

By Order of the Board,
For SOCIETE GENERALE INDUSTRIELLE DE CHANDERNAGOR (SOCIETE ANONYME)
For Gillanders Arbuthnot and Company, Limited.
K. R. FETTES,
Managing Director,
Agents.
Calcutta, 11th April, 1955.

MACNEILL & BARRY LTD.

Notice is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 31st March, 1955.

Payment will be made on 1st May, 1955 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,
A. H. FORSTER,
Secretary.
2, Fairlie Place,
Calcutta, 13th April, 1955.

THE BENGAL FLOUR MILLS COMPANY, LIMITED.

The Board of Directors has decided to recommend to the forthcoming Ordinary General Meeting of the Company a dividend @ 30% p.a. for the half-year ended 31st December, 1954.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
Managing Agents.
21, Netaji Subhas Road,
Calcutta, 12th April, 1955.

Stock Exchanges

LACK OF INCENTIVE

Watch-Dog Writes:

TRADING in stock markets continues to remain generally dull and featureless. Incentive is lacking due to uncertainties of the outlook caused, partly by the Companies Act Amendment Bill and the Amendment of the Constitution. Market interest now seems to be centred round the question of revision of steel retention prices and finalisation of expansion plans in the private sector.

Hectic buying of selected Tea shares at substantially higher levels was the outstanding feature on the Calcutta Stock Exchange, while conditions in other sections remained dull.

The Bombay Stock Exchange experienced yet another dull session with restricted activity. The closing tone was quiet with most issues showing minor losses on balance.

The Madras Stock Exchange ruled steadier with activity mostly confined to Planting and Cement issues. Textiles came in for limited buying.

The London Stock Exchange made a satisfactory showing and persistent investment demand produced fairly widespread small gains on balance.

Wall Street finished the week on a firm note.

Calcutta

ONCE again, activity on the local Stock Exchange was confined to the Tea section where selected scrips were easily absorbed at rising levels. The Sugar and Miscellaneous sections provided a few bright spots, while others remained dull with prices moving within a narrow range in the absence of any fresh interest. On the whole, the market's behaviour was encouraging though business continued to be restricted due to various other factors such as, the anxiety over the proposed compensation in case of nationalisation, alteration in the Companies Amendment Bill and Stock Exchange Regulation Bill. The undertone was, however, generally better except in the tea section where activity was still feverish.

Business in the Gilt-edged market continued to be restricted with prices generally showing an easier tendency due to the absence of any investment enquiry from institutional investors. The 3 per cent 1970-75 changed bonds at Rs 86-13 to Rs 86-15; 3½ per cent 1961 at Rs 90-8-6 to Rs 90-1 and 4 per cent 1960-70 at Rs 90-1 to Rs 90-14.

Would-be Punjab National, which were at Rs 46-8 from Rs 45 to mark

the occasion of the Diamond Jubilee of the bank, all other bank shares ruled generally quiet. United Commercial moved narrowly between Rs 45 and Rs 45-4 and Hindustan Mercantile between Rs 13 and Rs 13-2.

Only limited interest was shown in the Jute section where operators were not generally inclined to enter into fresh commitments, pending any definite trend of jute goods prices in relation to the raw material prices. The reports of the substantial increase in stocks with the mills were also a depressing factor. Selected scrips, however, staged a small recovery toward the close due to moderate support. Howrah touched a low of Rs 29-8 from Rs 29-13; National Rs 34-4 from Rs 34-9 and Nuddea Rs 55 from Rs 56 to finish the week better at Rs 29-10; Rs 34-8 and Rs 55-12 respectively. Among the higher-priced shares, Anglo-India changed hands at Rs 222 to Rs 226; Budge-Budge at Rs 192-8 to Rs 197 and Kankarath at Rs 150 to Rs 154.

Coal shares came in for selective enquiry. Burrakur met with some speculative buying upto Rs 13-1 from Rs 12-8, to finish the week at Rs 12-15. Amalgamated changed hands at Rs 23-7 c.d., while New Beerbhoom eased off at the close to Rs 19 from Rs 19-5. Central India moved between Rs 7-2 and Rs 7-6 and Bengal between Rs 615 and Rs 620 x.d.

Better advices from the cloth and piecegoods markets caused a mild flutter in the Textiles section where Cawnpore were taken upto Rs 9-2 from Rs 8-7, while Elkins, after being marked higher at Rs 18, finished a shade easier at Rs 17-12. Kesoram were a steady feature at Rs 26-13 with new Victoria sticky around Rs 1-7.

Sugar shares ruled generally firm due to continued support on expectation of better working results during the current season in view of the larger crush, that is now reported to be in progress. Carew were a special feature, having spurred to Rs 14-8 from Rs 13-6 due to renewed buying from interested quarters. S. K. Gyanoday were pushed upto Rs 18-8 from Rs 18-3 following the maintenance of the dividend for last year, while Darbhanga were enquired upto Rs 17-4 x.d. U. P., however, moved narrowly between Rs 26 and Rs 26-2.

The expectation of substantially higher dividends for 1954 following the encouraging crop reports issued by Gillanders group of companies, reports of an interim release of export quota for 1955/56 to the tea estates and the announcement of an interim dividend of as much as 75 per cent in the case of Ananda (Assam) Tea Company—all these factors imparted renewed strength to the Tea section where selected ones were pushed up to new higher levels. The following table will show the price trends of the most active scrips:—

Scrips:	Last Week	High	Low	Week's Closing
	Ra. a.	Ra. a.	Ra. a.	Ra. a.
Baghmari	31 2	35 12	35 12	
Basmatia	50 8	51 0	51 0	
Betjan	73 0	73 0	73 0	
Brooke Bond	17 15	18 4	18 4	
Bishnauth	51 8	53 4	53 1	
Dimakuri	67 0	70 4	70 4	
Hanspur	33 5	36 2	35 12	
Hasimara	49 2	50 8	50 2	
Rajabhat	37 7	40 8	40 8	
Sonai River	31 4	29 8	28 8	
Telotjan	37 10	41 4	41 4	
Banarhat	612 0	616 0	616 0	
C Cachar	167 0	170 0	170 0	
Hantapara	618 0	617 8	617 8	
Talipara	213 0	232 0	232 0	

There was limited activity in the Engineering section as operators were reluctant to enter into fresh commitments, pending the announcement of the increase in steel retention prices. Indian Iron, after moving narrowly between Rs 35-2 and Rs 35-5, finished the week steadier at Rs 35-5. In "Kerb" trading on Friday, the rate was quieted down to Rs 35-1 with buyers at Rs 35-0-6. Among other Engineerings, Burn had buyers at Rs 268 to Rs 270; Richardson at Rs 17-4 to Rs 17-8 and TEXMACO at Rs 17 to Rs 17-2. Braithwaite were a shade cheaper at Rs 23-13 against Rs 24-4 despite the increase in dividend.

In the Miscellaneous section, dealings in Paper shares continued to be prominent though higher levels could not be sustained till the close due to profit-taking. Tithagur, after touching Rs 44-4, eased off at the close to Rs 43-14. Orient changed hands at Rs 26-10 to Rs 26-13; India Pulp at Rs 256 to Rs 258 and Shree Gopal at Rs 16-4 to Rs 16-6. Anglo Brothers were marked down to Rs 20-6 from Rs 21-7 following the weaker advices from the shellac market. Indian Cable were done at Rs 24-15 to Rs 25-3; Martin Burn at Rs 22-14 to Rs 23-3; B.I.C. at Rs 8 to Rs 8-4, B.B.P. after receding to Rs 3-3 from Rs 3-11.

Following the disappointment caused by the maintenance of the dividend, finished the week better at Rs 3-6. Dunlop Rubber had buyers at Rs 38-2 following the encouraging working results for last year though the dividend is maintained.

Bombay

Bombay, April 13.

STALEMATE conditions have continued to persist on the stock market. The volume of business continues at a low ebb, while fluctuations, in view of the apathetic feeling, are rather irregular but confined to a narrow range. The approval by Lok Sabha of the Constitutional Fourth Amendment Bill regarding fixation of compensation by the State in the event of acquiring private property has disheartened the investors and, as such, the speculative elements are also shy in taking risks. In view of the change in the fundamental position regarding prospects of investment markets in the long run, it is no wonder that the market remains contented with stone-throwing tactics. On one hand, the prospects are certainly good in view of the deficit financing policy, the 25 per cent Development Rebate on new capital expenditure, reduction in cost of living as well as the steady improvement in the economic situation following the execution of the Five-Year Plan and several other factors; but the State having taken powers to fix the quantum of compensation arbitrarily in the event of acquiring property has more than nullified the bull points with confidence in the outlook being impaired.

Stale liquidation has been mostly exhausted, but there is no enthusiasm to enter for equities at the moment. However, it is gratifying to note that no more broads have been made in the values as compared with a week ago. A curb on outburst of bullish enthusiasm has been brought about by the Government's policy in the normal circumstances. Whether that feeling of robust optimism will return to the markets has become doubtful. Moderate improvements might be recorded off and on, but the market will lack the dynamic perspective.

Securities:—The gilt-edged market was quiet. The 3 per cent Conversion Loan met with sellers at Rs 80-5, while 3½ per cent 1961 was slightly better at Rs 90-2-8 following support from special quarters. The 3½ per cent 1964 was done at Rs 98-8. Banks:—There was very little change in this section and the tendency remained quiet. Bank of India were slightly better at Rs 147-8. Imperial FP were done at Rs 1,565 to 1580, to be placed at Rs 1,575, while the Contributors improved to Rs 385 from Rs 375. Expectations are held that the compensation on Imperial Bank FP shares would come to about Rs 1,750.

Insurance:—Affected by the bogey of nationalisation, New India was marked down to Rs 49-8. B.I.G. was done at Rs 13-13 and Indian Mercantile at Rs 44-8. Oriental was reported at Rs 7,235.

Electricity:—Hydro-Electric companies have maintained the interim dividends on increased capital. The dividend on Andhra as well as Tata Power comes to Rs 30 and on Hydro Rs 3. Price variations were insignificant.

Textiles:—Cotton Mill shares kept steady within narrow movements. Better off-take in piecegoods as well as decrease in dearness allowance granted to labour have been mainly responsible for a steady rise in prices. Standards were listed as dividend at Rs 345. The Chairman of this company has indicated that the question of absorbing New China Mills was under consideration and the details are being examined. Swadeshi Mills improved to Rs 195-8 from Rs 189 following the publication of the accounts. Kohinoor was steady at Rs 315, while Century moved between Rs 383 to Rs 377 to finish at Rs 380. Bombay Dyeing was done at Rs 465 to Rs 471-4, to be finally placed at Rs 470-10. Sholapur changed hands at Rs 1,400.

Steels:—Tata Steel Ordinaries, after receding to Rs 236-8 from Rs 240, rallied to Rs 239-12, to be placed at Rs 238-12. TISCO Production in the year 1954-55 was as under as compared to previous year:

	1954-55	1953-54
(In tons)		
Pig Iron	1,134,400	1,150,000
Steel Ingots	1,042,900	1,087,000
Salable Steel	781,200	780,000

Miscellaneous:—This section met with some selective support, but later on buying inquiry tapered off. WIMCO, having maintained a dividend of Rs 10 plus a bonus of Rs 1, were better off at Rs 202-8 though the profit in 1954 is expected to be lower. Premier Construction, on various rumour, firmed up to Rs 165 to meet with profit-taking, to react to Rs 154-8. Alcock's were sold down to Rs 200 on apprehensions of a lower dividend as against Rs 10 in the previous year. Bombay Burrakur met with active support up to Rs 47-4 on optimistic outlook. S. B. Petroli dropped sharply to Rs 3-4 on dividend of Rs 2 and 1½ ples. Killick Industries were steady at Rs 177. National Rayon continued to meet with support on dividend certainty of Rs 10, while certain circles look for Rs 11. Shivajpur suffered a sharp drop to Rs 78 on report of dwindling exports of manganese. A.C.O. kept quiet, while Dayalji looked up to Rs 179 on hopes of a dividend of Rs 9. Tata Chemicals were featureless around Rs 18. Sugar shares kept quiet with little change in values. Scindias were inclined to look up, but reacted to Rs 15-5 from Rs 15-9.

THE METHONI TEA COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday the 6th day of May 1955 at 3-30 p.m. for the following purposes:—

- To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1954.
- To declare a dividend.
- To elect Directors in place of the retiring Directors.
- To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 29th April 1955 to 6th May 1955, both days inclusive.

OCTAVIUS STEEL & CO., LTD.,
Managing Agents,
Calcutta, 16th April 1955.

PROSPERITY THROUGH THE COTTON MILL INDUSTRY

The cotton mill industry of India holds a pre-eminent position in the country's economy. There are more than 450 cotton mills in the country, with nearly half this number being situated in Bombay State.

The installed capacity of the industry is 11.59 million spindles and 207,763 looms. The industry produces annually more than 1,500 million pounds of yarn and nearly 5,000 million yards of cloth. The industry's paid-up capital of Rs. 113 crores represents nearly 15 per cent. of the total paid-up capital of all joint stock companies in the country, amounting to Rs. 772 crores.

entire industrial output is about Rs. 980 crores, of which the value of cotton mill production alone amounts to Rs. 335 crores or nearly 35 per cent. The industry gives employment to nearly 7 1/2 lakh operatives who form 25 per cent. of the 30 lakh industrial workers in the country.

Its annual wage and salaries bill amounts to more than Rs. 80 crores. The average earnings of a textile worker in Bombay are about Rs. 1,600 a year, while the per capita income in India is just a little over Rs. 251. The industry pays more than Rs. 40 crores by way of taxes and levies to the Union and State Governments.

Please watch for more such FACTS about India's premier industry.

THE NEW ERA DAWNS!

Jaimini VEDIC AGE
The ancient lawgiver laid down that land was the property of those who labour on it. The king was entitled to a share of the produce to cover the cost of government.

Kantilya 4TH. CENTURY B.C.
The State was entitled to a sixth part of the produce. Uncultivated land was liable to confiscation.

Yashwantrao Chavan 16TH. CENTURY
The State was entitled to one-third of the produce either in cash or in kind.

Lord Cornwallis 1793
Independent chiefs, collectors and farmers of revenue were made proprietors of estates by the Permanent Settlement without any direct responsibility towards the cultivators.

...and today
As a result of the evolution of new social ideals the cultivator of Bengal will be reinstated in his own rights. A new society will be born as a result of the union of the man and the soil and a new era of agricultural prosperity will be ushered in. From to-day the land belongs to the man who ploughs.

THIS IS YET ANOTHER STEP IN THE EFFORT TO build a Better Bengal

Issued in public interest by the Government of West Bengal

For the Investor

Bark Without a Bite

Investment Gossip:

IT IS not the big issues, but the big bulls and the big bears, that dominate stock exchange behaviour, particularly in Calcutta.

During the current week, one of the big bulls liquidated a moiety of his holdings in Indian Irons; and there was appreciable fall in this scrip.

Weakness in Indian Irons proved contagious, as has always been the case. So, Royal Exchange Place bore a depressed look.

With Royal Exchange Place news dis-spiriting, Dalal Street could not help a sympathetic despondency.

Yet, the big issue of the week is of outstanding significance. That is the impressive and heartening demonstration of New Delhi's responsiveness to commercial opinion and its proved solicitude to promote and foster a hopeful economic climate.

In the annals of ministerial declarations and pronouncements, it is difficult to find a parallel to Sir Chintaman Deshmukh's concessions, and what is more significant, to the genuine spirit of understanding and absolute fairness which informs and inspires the concessions.

The concessions in themselves are of vital import; and I have commented on them elsewhere in this section.

What concerns me here is the assurance of a fair deal, the reality of an "open mind", the guarantee that each question will be considered and decided without ideological bias or pre-conceived opinions.

Businessmen will now realise that, however loud New Delhi's bark may be, it has no bite.

Not less decisive in this respect is the fixation of the compensation for Imperial Bank shares. The average price of the twelve months preceding December 20, 1954 (on which date was announced Government's decision to "nationalise" the Imperial Bank) has been declared to be the compensatory price.

The principle adopted in this case is the same as given effect to

in the case of the nationalisation of the Reserve Bank of India.

The compensation thus awarded caused a rise of nearly Rs 100 in the fully paid-up share of the Imperial Bank. This is sure augury that Stock Exchange circles have received a "pleasant shock" in this respect.

The compensation now given in respect of the first nationalisation scheme after the passing of the Constitutional Amendment Bill in

Investment Gossip:

Two weeks ago, I made detailed reference to the technical position in the market which, I said, overbought as it slightly was, did not allow of a quick correction, because the bull element was fearful that any attempts to square its position would result in a substantial decline in prices, while the bear force, chiefly one of them, was almost fanatic in its view that prices should be headed downwards.

Last week, I said, that there was somewhat of a stalemate in the market; I added that the correction of the technical position was taking a longer time than is normal, but I said, the technical position could be counted upon to correct itself.

Events of the last week have brought about such correction. A prominent bull operator is reported to have liquidated holdings to the extent of as much as five lakhs of shares in Indian Irons. The consequent drop in the price of the scrip has been about one rupee.

The Misinterpreters

Investment Gossip:

I was amused to learn of the reading that was given to the Finance Minister's speech containing the amendments that have been proposed to the Finance Bill.

It may be recalled that Indian stock exchanges are today prone to take their view on flash news. Many a time, such views are on the basis of misinterpretation and misunderstanding.

A typical instance was when the Development Rebate was not understood to be what it actually was at the time that Sir Chintaman announced it in his Budget.

Emphasis is on the Amendments to the Finance Bill. See the Second Leading Article and the section For the Investor.

Stress is on the State Bank of India Bill. See the Leading Article and Olympus.

Parliament must set at rest all doubts and misgivings. The Prime Minister meant every word of the assurance given, by him to the effect that it was their intention to pay a fair compensation in cases involving Government's acquisition of private property—this is the firm and definite conclusion which should be drawn from last Saturday's announcement.

It will be wilful blindness to facts if anybody indulges in any further talk of expropriation or of the right of private property being in danger.

The Congress Government—the very Government which promoted the Amendment to the Constitution—may now be hailed as the most dependable guardian of the rights enshrined in the Constitution.

It is appropriate that the Investor should take full note of what Sir Chintaman said when he moved the amendments. The full text of his speech is given in this section. Preceding it is an analysis of the speech in which Sir Chintaman's amendments were contained.

Technical Correction

This technical correction is to be welcomed. For, with bull and bear commitments more or less square, the market now knows a consolidated position in the chief speculative scrip.

If sales of the order of five lakhs of shares could result in a drop in price of only one rupee, it would indicate that, with consolidated position, prospects are for the advance in prices to be resumed.

It is noteworthy that the technical correction took place at the very time when cheerful news was forthcoming from New Delhi. Thus, the drop in prices is due to no pessimistic view of the future, to no bear knows as such, but merely to a much desirable correction in the technical position of the chief operators.

The hurdle of technical imbalance now removed, Indian stock exchanges bid fair to continue that bright aspect which began soon after the Budget for 1955-56 was announced.

of animal different from that which was announced in the Budget. For, so they said, in the earlier instance, the Budget had spoken of a Development Rebate in lieu of initial depreciation; whereas, now, the Development Rebate was to replace initial depreciation.

Therefore, they said, Development Rebate, as announced in the speech relating to the amendments, was no more than an initial depreciation increased to the extent of 5 per cent.

How wrong this reading is—a reading which was opportunely made to accentuate the declining prices of Monday last—we need not point out here.

Even more amusing was the interpretation given to Sir Chintaman's reference to the carry forward of losses. The words as they occur in the Agency Report read as follows: "The time limit

of six years within which losses sustained in a business could be carried forward and set off has been removed."

This was taken to mean that the original provision in the Finance Bill was now being sought to be removed.

It was not understood that the word 'remove' bore reference to the time limit of six years.

On the plea that, under the amendments, losses would not be permitted to be carried forward beyond six years, further emphasis was given to the downward trend on Tuesday last.

Such, the work of our deliberate misinterpreters and pernicious misunderstanders.

It is appropriate that the Investor should take full note of what Sir Chintaman said when he moved the amendments. The full text of his speech is given in this section. Preceding it is an analysis of the speech in which Sir Chintaman's amendments were contained.

The Tax Concessions

Investment Gossip:

SIR CHINTAMAN Deshmukh displayed a remarkable sense of responsiveness to such pleas for reconsideration of features in his Budget which were either burdensome or, by virtue of their complexity, extremely difficult to implement.

The first important concession that was announced, soon after the Budget, was the reduction in the excise duties on the coarse varieties of cotton cloth. This indicated a sympathetic understanding of the woes of the lower middle class.

The second concerned the promised exemption from the excise impost of hand-made paper; and this could have been anticipated as furthering the intention of providing every assistance to cottage industries.

Next to follow was the relief that was granted in respect of the sewing machine industry; in view of the fact that some proportion of the component parts is being supplied by cottage industries, this measure too (as anticipated in these columns) might have been expected.

The latest list of concessions, embodied in amendments to the Finance Bill, would prove agreeably surprising to all others than readers of this journal. An analysis of the Bill at Budget time indicated clearly where changes would or should take place.

The most important amendment, from the industry viewpoint, is that relating to the new Section 23A, of the Income-tax Act. It may be recalled that a full-length article on the subject appeared in the issue of March 6.

[April 23, 1955]

"I am satisfied," says Sir Chintaman. "that, on principle, the proposed amendment is justified and necessary." I wrote: "To the extent this section seeks to prevent the avoidance of super-tax liability, it is to be welcomed."

The reference here is to the penal tax of a supertax of 4 annas in the rupee on the undistributed profits of a private company which does not, as it is required to do, distribute 60 per cent of its profits by way of dividends.

I suggested at that time that, "in trying to solve one set of problems, Government have created a fresh batch of more difficult ones." Reason: the new definition of a public company would make it difficult for many genuine public companies to set by money for expansion.

Sir Chintaman now recognises that "there may be certain circumstances such as a company newly started or a company under heavy debt to a body like the IFC, or a company of which the shares have been cornered by certain persons, in which exceptional treatment is necessary."

£R\$

In this light, the Finance Minister is "providing that, in such circumstances the commissioner will have power to agree to a lower distribution than 60 per cent" of the distributable profits as dividends.

Also, while the new section sought to make of a company a private company if 50 per cent of the capital was held by six persons or less, Sir Chintaman has provided that, for industrial concerns, six or fewer persons may hold up to, but not exceeding, 60 per cent of the capital without falling under the meaning of a private company.

There is, however, a "sting" in the amendments proposed by the Finance Minister. This is by way of a new provision (which did not find a place in the Finance Bill) that seeks to cover one more loophole that had existed in respect of private companies.

Loans and Advances of private companies (under the meaning of the Income-tax Act) are to be subjected to income tax only if they have been outstanding for less than a year, but the full tax if longer than twelve months.

£R\$

The intention is to prevent money being made freely available to directors of private companies as loans for extended periods of time; ultimately, this offered an opportunity for the loans to be written off by the companies, thus affording tax-free income to the directors.

If the amendment to the Finance Bill hereinabove described is such as to provide further incentive to industry, Sir Chintaman's fresh "proposals" also go some considerable way towards reducing the irksomeness of his Budget to individuals.

And, from the individual viewpoint, the most important of the concessions now announced by Sir Chintaman Deshmukh has regard to a measure about which there had been bitter complaint—the taxation of perquisites.

In the issue of March 12, I wrote: "but it would appear that the provocation for the measure (taxing perquisites) could be the abuse that had existed in the doling out of the perquisites."

£R\$

Sir Chintaman has confirmed this view: "I must first explain that the object is not so much to increase the revenue as to stop abuses of the existing law."

I suggested then that "there may be some who will genuinely be hit hard, and who do not deserve such a fate."

Sir Chintaman now affirms that "it is not necessary that certain payments in cash or in kind, which reasonably go with employment or vocation and have come to be regarded as incidental to such employment or vocation, should be eliminated completely."

The perquisites concessions announced are substantial and will, no doubt, be found substantially satisfactory.

One, free passages for home leave are not to be subject to tax provided they are within reasonable limits.

Two, a deduction of 20 per cent of pay subject to a maximum of Rs 7,500 is to be allowed in respect of persons who had regularly drawn entertainment expenses in the past; new recipients of such allowances will not be allowed any such deduction.

£R\$

(In this regard, I wrote in the issue of March 19: "...only one half of the value of perquisites received will be taxed, provided that the recipient has his salary range between Rs 18,000 and Rs 40,000 or so."

(The maximum of Rs 7,500 would seem to indicate that such deductions are on the basis of a maximum annual salary of Rs 37,500; allowances in excess of this limit will not be entitled to deductions beyond Rs 7,500.

(Again, the Finance Minister's concessions go beyond the limits that I had anticipated).

Third, there is not to be a microscopic examination of perquisites under other heads: reasonable medical facilities will not be questioned; the provision of servants for maintenance of owner's property will be allowed; use of conveyance for office purposes is to be permitted.

£R\$

Fourth, the current system of evaluating rent-free houses provided by the company at 10 per cent of salary if unfurnished, and 12 per cent of salary if furnished, is to

continue on the proviso that the accommodation and the rent for it are reasonable.

There are, next, concessions for the man in the street; the earlier classification of cotton fabrics into four categories has been restored; and the duties on coarse and medium varieties are maintained at the status quo levels.

For the superfine people, the excise duty on superfine cloth stands reduced from 2 as 6 pies in the Finance Bill to 2 annas per square yard.

The duty on fine cloth is to be raised to 1 anna 3 pies per square yard; but this is merely the equivalent of the excise duty that had obtained prior to the 1955-56 Budget.

There is every reason for the

textile industry to welcome the amendments proposed by Sir Chintaman to the Finance Bill.

Sir Rovert Menzies, the BIC Chairman, will have cause to think that, in important respects, his words on wool have had effect.

The existing duty on woollen fabrics has been reduced from 10 per cent ad valorem to 6 per cent ad valorem. Moreover, coarse rugs and "kamblies" are to be totally exempt from duties.

£R\$

Parts of electric batteries will be subjected to excise duty; but double payment is to be avoided: the small assembler will pay duty on the parts that he buys, but the manufacturers are subject to duty on the finished products only.

£R\$

Watch-Dog Applauds Methoni Tea

IS IS a pleasure to be able to start receiving the tea balance-sheets relating to 1954; for, as I indicated early last year, they are of the variety that speak of bountiful profits, of big dividends, of bonus issues announced or likely to be announced. If 1953 was a good year for tea, 1954 is better yet; and, in a matter of a few weeks' time, we shall know whether tea has a future somewhere between the bountiful year of 1954 and the good year that 1953 was.

But, to get back to tea balance-sheets for 1954; the accounts of a company that I have just received promise of highly satisfactory reports to come from the tea section generally. It is not only for its bumper profit in 1954 that I wish to applaud Methoni Tea for: more properly, the applause belongs to the Managing Agents, for the manner in which they have disposed of the available profits.

First, however, in order that our analysis for 1954 may be the more forceful, we might go over the 1953 accounts. The 1953 Methoni crop worked out to 10,037 maunds as compared with 10,588 maunds in the previous year. The average price appreciated by nearly 9 annas per lb to Rs 2-0-9 per lb from Rs 1-7-10 per lb.

Tea sold fetched Rs 16.07 lakhs; garden expenditure absorbed Rs 9.13 lakhs, while Calcutta expenditure (including Managing Agents' Remuneration of the order of Rs 56.346) added up to Rs 1.69 lakhs. The balance transferred from the revenue account to the profit and loss account was Rs 4.95 lakhs.

In the profit and loss account, we find that Rs 35.816 has been provided for staff commission and bonus: the commission on profits paid to Managing Agents was Rs 9,880; the Reserve for Taxation receives Rs 1.17 lakhs. The disposable balance then, inclusive of

the brought forward, was Rs 2.65 lakhs. Shareholders were paid a dividend at 15 per cent absorbing Rs 1.2 lakhs, there was a transfer to the Reserve Account of Rs 1 lakh and the carry forward was Rs 45,435.

The 1953 profits were, thus, disposed of in the following manner: Rs 1.17 lakhs as Tax; Rs 1.2 lakhs for share-holders; another Rs 1 lakh for shareholders by way of transfer to the Reserve Account; and Rs 66,226 for the Managing Agents.

Now, for 1954. The crop was 500 maunds shorter at 9,553 maunds; but the average price appreciated sharply to Rs 3-4-5 per lb from Rs 2-0-9. Result: tea fetched a total of Rs 24.18 lakhs against Rs 18.07 lakhs in the previous year—or fully better by 50 per cent.

Garden expenditure was Rs 83,301 more at Rs 9.97 lakhs; Calcutta expenditure rose by Rs 62,016, with the Managing Agents getting the increased Remuneration of Rs 88,524 against Rs 56,346. The balance transferred to the profit and loss account was, at Rs 11.82 lakhs, more than two and one third the 1953 level.

The provision for staff commission is much more than doubled; the commission to Managing Agents was some Rs 14,000 higher; the Reserve for Taxation received Rs 2.83 lakhs more at Rs 4 lakhs; and the disposable balance carried down is a short of Rs 6 lakhs.

The disposable balance for 1954 is Rs 6.41 lakhs. The dividend to shareholders has been trebled, to 45 per cent, absorbing Rs 3.6 lakhs. Transfers under three new specific reserves takes up Rs 2.3 lakhs against the provision of Rs 1 lakh to Reserve Account last year; and the balance carried forward is more or less unchanged at Rs 45,524.

(Continued on page 842)

April 23, 1955]

Sir Chintaman Deshmukh's Speech on Finance Bill

The following is the text of the speech of the Finance Minister, Sir Chintaman Deshmukh, on the Finance Bill:

Sir, I beg to move:

"That the Bill to give effect to the financial proposals of the Central Government for the financial year 1955-56, be taken into consideration."

I have already explained some of its important provisions and a memorandum prepared in the Ministry explaining the changes in the Income-tax Law proposed in the Bill has also been circulated to Hon. Members. I have taken notice of the comments of Hon. Members both in this House and in the Rajya Sabha in the course of the general discussion on the Budget. It is not necessary for me, therefore, to deal with the various proposals contained in the Bill as originally presented, and I shall confine myself largely to explaining some changes which I now propose to make in the Finance Bill.

But before I do so, I should like to refer to one matter which seems to have attracted some kind of anxious attention on the part of members—I refer to the change of the exemption slab from Rs 1,500 to Rs 2,000 for married individuals and Rs 1,000 for unmarried individuals. Some Members were inclined to think that that implied a discrimination. Mr. Deputy-Speaker: The Hon. Minister has excluded maids.

STEP TOWARDS FURTHER CONCESSIONS

I should like to point out that this kind of discrimination, if it is, is not peculiar to this country and prevails in almost all the income-tax systems of the world, and to some extent I think it is unavoidable if we are to aim at a tax system which will regulate the tax payable, by and large, by an assessee according to his family obligations and other circumstances. And, as I pointed out in the course of my budget speech, this is only a step towards some further concessions in the matter of family allowances. Now, they have been placed on behalf of bachelors who will probably be in this further insult added to injury.

Mr. Deputy-Speaker: They can remedy it themselves. Sir Chintaman Deshmukh: I can only rely on the statistical position that the married state is by far the commonest in this country. So far as civil status is concerned, they are likely to have the same kind of responsibilities as married persons. Mr. R. K. Chaudhuri (Gauhati): Bachelors also may have dependents. Sir Chintaman Deshmukh: I am being interrupted by too many bachelors' voices. I can only urge that justice, if there is any, will be confined to what I have said. I will always remain a small minority. Another point to which some Hon. Members had referred was the change in the basic rates in the slab of Rs 5,000 to Rs 10,000. They think this would affect the middle classes considerably. Now, if one looks into the rate structure alone, that might appear to be so, but as I had occasion to point out, the proper way to examine the question is not to take the liability on particular slabs, but to take the overall liability of the taxpayer himself. Even an income of a married assessee having an income of Rs 10,000 entirely from removal exertion would pay Rs 2 less than that payable under last year's rates. The increase in the tax burden occurs only in cases above this figure and as we have a slab system and not a step system of tax it is only the higher ranges of income which suffer the cumulative effect of all the increases in the lower slabs. If Hon. Members would turn to page 145 of the Explanation Memorandum they will find that taking the case of a married person whose income is Rs 4,900 to Rs 5 lakhs, 51.4 per cent of income of Rs 5 lakhs, there are no sudden jumps or breaks in this rate and the system is thoroughly progressive.

Now, I shall come to the changes proposed in some sections of the Act. Various

perquisites—both in cash and in kind—which were not so far taxable are now being subject to taxes. There has been much criticism of this change. I must first explain to the House that the object of my proposing the change in law was not so much to increase the revenue as to stop abuse of the existing law. To give some examples, we have a case where club bills and school fees of children are paid by the companies and there is no salary where a person on a salary of Rs 500 per month gets an entertainment allowance of Rs 2,300 per month. This is very entertaining. While these abuses are being stopped, we have thought it is not necessary that certain payments in cash or in kind which are for an employment or vocation and have come to be regarded as incidental to such employment or vocation should be eliminated completely. Indeed it is not possible beyond a point to stop these things altogether merely by taxation for it is difficult to prevent the employer from increasing the emoluments of the employee by the amount of the tax payable on these perquisites. After considering the matter and in order not to interfere with legitimate practice, I have come to the conclusion that the following relaxations in the present proposals are necessary.

Firstly, free passages for home leave received by employees for themselves and for members of their families should not be subject to tax, if within reasonable limits. It is our intention that suitable rules will apply only to those whose homes will not in this country and who come here.

Mr. K. K. Basu (Diamond Harbour): Are we making specific provision to that effect?

Sir Chintaman Deshmukh: That is what I am saying now. We should take care that these are only in respect of the existing contracts and in the case of those whose homes are not in this country, in the same way as we have proposed some concessions in regard to technicians.

The second point is this. So far as entertainment allowances are concerned, a deduction of 20 per cent of pay should be made for those persons who were not in receipt of such entertainment allowances in the past. No such deduction will be admissible as a result of this or such allowances. As a result of this relaxation, it will not be necessary to make any immediate changes in the structure of emoluments and the concession will die out, we hope, gradually.

In regard to the other perquisites, it is not my intention that a very meticulous appraisal or valuation of this should be made. Such minor amenities as grant of servants required for maintaining the owners' property, use of conveyance in business purposes, etc., will be ignored and suitable executive instructions will be issued in this regard. As regards provision of houses free of rent, the present practice of evaluating them at ten per cent of the occupiers' income when unfurnished and 12.5 per cent when furnished will be continued.

Mr. R. K. Chaudhuri (Gauhati): Will that apply to Members of Parliament also?

Sir C. D. Deshmukh: I think they get very much larger concession. It will be continued subject to the accommodation provided and the rent paid by the employer being reasonable.

As regards the other proposals leading to an increase in the incidence of tax, I need draw attention only to two—directly compensation received on the termination of managerial agencies or other similar business agreements are being brought to tax. As there have so far been exempt various devices have been adopted to deplete the resources of managed companies as compensation for loss of managing services. One such transaction, the Bombay High Court recently described as "high finance at its highest". Now that such payments will become taxable, I hope that the need for the termination of managerial agency contracts will not be so keenly felt.

Secondly, co-operative insurance societies are also being brought to tax in the same way as profits of mutual insurance

associations. There is really no substantial difference between the two and there is no justification for exempting one and taxing the other. In regard to the provision of relief from tax, I need not worry the House with details regarding the small concessions given for house property, owner occupied and otherwise allowances of collection charges paid to agencies other than the bankers in the case of interest on securities and dividends the deduction up to a maximum of Rs 500 permitted to salary earners for expenditure incurred on books and publications for the purpose of their duties, etc.

I would, however, draw attention to the relief proposed for co-operative societies such as exemption from tax on income from interest on securities and income from property if that income is below Rs 20,000 income of any society from letting out godowns and warehouses and income from investments in other co-operative societies. I hope that these tax concessions will help the small co-operative societies and enable them to provide marketing and warehousing facilities in rural areas.

DEVELOPMENT REBATE OF 25 PER CENT FOR BUSINESS AND INDUSTRY

In the field of business and industry, as the House is already aware and has indeed debated, the most important change is the substitution of a development rebate of 25 per cent for the existing initial depreciation allowance of 30 per cent on certain types of plant and machinery. As I said, this has been already discussed in the House and I have attempted to give a reply to the criticisms made. And I need only add this. I hope that the industry will take advantage of this very important concession and play its part in developing the industrial capacity of the country. I might add that I do not think at this stage of our planning we should act as if every single item of planning both in the public and in the private sector is firmly fixed. There are needs and exigencies of the moment and generally I think we are all agreed that there should be an expansion of industrialisation in the country. So, I do think that this concession that we are giving this year is at least well worth trying and watching the results of another important concession is that the time-limit of six years within which losses incurred in a business could be carried forward and set off is proposed to be removed. A further concession is that such losses carried forward can be set off not only against the profits of the same business in later years, but also against the profits of other businesses, provided of course that the business in which the loss has been sustained is still being carried on. Speculation profits and losses would continue to remain in a separate category.

SECTION 23A PREVENTS UNJUSTIFIABLE ADVANCES

I now turn to a very important matter—Section 23A. In regard to this I have seen a mass of criticism in the Press and I have received a large number of representations from the business community in general. This section of the Act is a complicated one and I must explain in a little detail the implications of the amendment and of the changes I now propose.

Under the Income-tax, when three or four persons carry on business as a firm, the profits of the firm are at the end of the year, distributed among the various partners in terms of their partnership and the tax is levied on each of these individuals according to the personal rates applicable to each of them on the income so received. If, however, the same business is carried on by a company of which these persons are the members, the tax on the profits of the business is imposed not on the individuals, but on the company itself. If Section 23A did not exist, it would be possible for the company to pay tax on its profits at the company rates of tax which are much lower than the tax payable on high personal incomes and retain the balance in the accounts of the company. The fund of the company, being completely in the hands of these few persons, can be utilized for their own personal expenditure by showing them as loans and advances from the company and the business activities of these persons can also be continued in the name of the company. By trading in the name of the company these persons would therefore

be in a position to carry on their activities without paying their appropriate taxes. It is the object of Section 23A to prevent this unjustifiable advantage to persons, who have controlling interest in companies. The section requires that where a company is in the control of a few persons, it must distribute 80 per cent of its profits as dividends, so that Super-tax can be collected from the richer shareholders. In order that the company should not build up large reserves, the section also requires that when the reserves of the company exceed the share capital or the cost of the assets, whichever is greater, it should not be permitted to build up any more such reserves and should distribute its entire future profits.

The question, therefore, is what is the kind of company to which this provision should apply. Up to now it has been applied to companies of which less than 25 per cent of the shares have on the last day of the accounting year of the company been held by the public. This provision has been evaded in many ways, particularly by temporarily transferring some of the shares to certain nominees, on the last day of the accounting year who are then claimed to be the members of the public. It is now proposed that the provisions of this section should apply to companies where less than six persons hold or have a controlling interest in 50 per cent or more of the shares. In other words, the scope of the section is being widened, and more companies will be required to distribute at least 60 per cent of the distributable profits as dividends, and more of the richer shareholders of these companies will be required to pay Super-tax on such dividends.

There are also other changes such as that the burden of the super-tax non-distribution of the required percentage will be placed on the company and not on the shareholders, that account will be taken of certain expenses actually incurred but not allowed for Income-tax purposes, that capital created out of the reserves by the issue of bonus shares will not be regarded as capital for the purpose of determining whether the hundred per cent rule should apply, etc.

Apart from minor criticisms, the main argument against this provision is that it is an impediment to the ploughing back of profits. This is not wholly correct, because once the reserves are actually converted into fixed assets of the company there is no impediment to the gradual building up of fresh reserves up to the value of the new assets. There is no doubt, however, that by enforcing the distribution of profits, the rate of accumulation of the reserves will be reduced. And to that extent the criticism has some point in it.

In this connection I should like to mention that when the reserves of a company are in the control of a few persons it does not necessarily follow that they will either be ploughed back into the industry or even be otherwise properly utilized. We have many cases of the misuse of such reserves. Further the building up of such reserves without payment of the taxes at the personal rates of the real owners of such reserves leads to concentration of wealth and of economic power in a few hands. So long, therefore, as there is no control over the disposition of reserves and so long as other means cannot be found of preventing the concentration of wealth in a few hands, some restrictions, the House will agree, must remain on the reserves that can be built up by companies which are under the control of a few persons.

I am, therefore, satisfied, that the principal amendment to Section 23A is justified and necessary. I recognise, however, that there may be certain circumstances, such as a company newly started or a company under a heavy debt to a body like the Industrial Finance Corporation, or a company of which the shares have been cornered by certain persons, in which case exceptional treatment is necessary and I am therefore providing that in such circumstances the Commissioner will have power to agree to a lower distribution than 60 per cent.

GRADUALNESS IN REGARD TO INDUSTRIAL CONCERNS

It has been suggested that in the case of industrial concerns this change-over of the scope of the section from 25 per cent holding by the public to 50 per cent (Continued on page 820).

Record Sales For Trayons

Balance-Sheet Reviews:

Travancore Rayons Limited, established new records in production and sales during the year ended 31st December, 1954; and earnings have been showing a progressive increase. There has been a considerable progress in the expansion schemes taken up in 1953—most of them will be completed by June, 1955. With the result, the company has been able to pay off all accumulated Preference dividends and to ensure a steady return for the Ordinary shareholders.

Trading conditions, during the year, were satisfactory due to the steady demand for Rayon yarn. The demand for Transparent Film was also good due to the popularity of the company's products and the increased use to which they were put. Expansion schemes for both Rayon and Transparent Film are now taken on hand. At the time of this report, the additional Transparent Film plant has been running and the production of this machine is being made available to the market. The moisture-proof plant and the printing and bag-making machines are expected to function by about June, 1955.

As stated earlier, sales have registered a record in 1954, at Rs. 1.62 crores as compared with Rs. 1.53 crores in the previous year. The net profit, before providing for Depreciation, amounts to as much as Rs. 45.90 lakhs against only Rs. 38.87,524. Apart from setting aside a sum of Rs. 23.59 lakhs (Rs. 23.31 lakhs) for Depreciation, the directors have allocated a sum of Rs. 12.75 lakhs to "Deferred Taxation Reserve". The dividend on the Ordinary Shares has been raised from 5 per cent to 6½ per cent for the year.

The financial position of the company has been gradually improving. With the ploughing back of part of the surplus funds for rehabilitation and expansion, the earning capacity is being strengthened. The long-term loans due to the Travancore-Cochin Government, which were reduced previously from Rs. 96 lakhs to Rs. 74 lakhs, have now been further reduced to Rs. 61½ lakhs as on 31st December, 1954. Another encouraging factor is the increase in block account, amounting to Rs. 42.19 lakhs which is accounted for by the expansion schemes. The directors are taking measures to step up production, improve the operational efficiency and are contemplating new schemes in the course of the next couple of years. All this will naturally lead to an increased investment on block account.

£ R\$

Kankarrah and Kamarhaty Results: The working results of the Kankarrah and Kamarhaty Companies, for the half-year ended 31st December, 1954, are up to market expectations. Due to a substantial rise in sales, both the mills have been able to increase their dividends. Kankarrah Company has reported a net profit, before providing for Taxation and Depreciation, of Rs. 6,49,894 as against

Rs. 3,88,860 in the previous half-year. Sales are higher at Rs. 1.28 crores against Rs. 1.07 crores. The Depreciation amount has been raised from Rs. 1.00 lakh to Rs. 1.50 lakhs and Taxation from Rs. 1.50 lakhs to Rs. 2.60 lakhs. Even after these increased allocations, it was possible for the directors to raise the dividends, both on the Ordinary and "B" Ordinary Shares, to Rs. 4 per share from Rs. 2½ per share. In the case of the Kamarhaty Company, are shown at Rs. 1.49 crores as against Rs. 1.25 crores, while the net profit, before providing for Taxation and Depreciation, amounts to Rs. 11,70,702 as against Rs. 3,90,404 in the previous half-year, though the former figure includes Rs. 2.00 lakhs transferred from "Reserve for Deregulation Expenses". The directors have, after setting apart Rs. 2.00 lakhs (Rs. 1.00 lakh) for Depreciation and Rs. 4.05 lakhs (Rs. 1.45 lakhs) for Taxation, increased the dividends on the Ordinary and "B" Ordinary shares to Rs. 5 per share from Rs. 3 per share. The directors have now, under consideration a scheme for the replacement of some of the obsolete machinery in the company's mills. It is proposed to instal preparing and spinning machinery of the most modern type and an expenditure of about Rs. 35.00 lakhs is contemplated initially. To a substantial extent, this amount will require to be found, in the first instance, from the company's own resources.

£ R\$

S. K. G. Sugar Mills: The substantial decline in the amount of cane crushed as well as in sugar produced is reflected in the working results of Shree Krishna Gyanodaya Sugar Mills Limited, during the year ended 31st July, 1954. The production of Power Alcohol and Spirits at 9,03,122 bulk gallons as compared to 7,82,964 bulk gallons in the previous year is the highest ever since the start of the distillery. The financial results of the working of the distillery have, however, not been satisfactory for the reason that the price of Power Alcohol still continues to be uneconomic.

The amount of cane crushed, both at the Hathwa and Lauriya factories, during the year under review, is only 32,45,643 maunds as against 64,58,099 maunds in the previous year, while sugar manufactured is only 3,16,460 maunds against 6,42,298 maunds. Sales of Sugar and Molasses are higher at Rs. 1.79 crores against Rs. 1.40 crores, while those of Alcohol and Spirit are lower at Rs. 10.45 lakhs against Rs. 11.02 lakhs. The net profit for the year, before providing for Taxation and Depreciation, amounts to only Rs. 6,17,708 as against Rs. 14,68,531. Except for a sum of Rs. 2.20 lakhs (Rs. 6.08 lakhs) allocated to Depreciation, no provision has been made either for Taxation or General Reserve as were done in the previous year. It is, however, satisfactory to note that the dividend has been maintained at 15 per cent.

THE METROPOLITAN INSURANCE HOUSE
CALCUTTA

Unity in Trinity

THE State Bank of India Bill has been introduced in Parliament. The main purpose is to secure Government's control of the Imperial Bank of India.

Events in this respect have moved at a rapid pace—too rapid to allow of clear and circumspect assessment of the far-reaching issues involved in the scheme.

There is all the more reason for the Finance Minister to give careful thought to the criticisms, and particularly to alternative counter-proposals.

And there is every reason to think that Sir Chintaman Deshmukh will be as responsive in this respect as, early this week, he showed, in the amendments to the Finance Bill, his immense consideration to the representations made from several quarters on the Budget proposals.

Again and again, he has stressed that he keeps an open mind where such an attitude of open mind is called for.

Even at this late stage, the question of nationalising the Imperial Bank has to be reconsidered with a mind free from predilections and with an outlook unaffected by prejudices.

Viewing the matter without bias of any kind, the simple and straight-forward question that we must needs pose is this: Is the Imperial Bank, howsoever reorganised, howsoever expanded, howsoever controlled and howsoever rechristened, the proper instrument for achieving the declared objective of promoting rural credit and providing co-operative finance?

As a corollary, the question arises: Will not this solution of one problem create more problems?

It is admitted that the Imperial Bank in its new name must continue to play the same part it has hitherto played as a commercial bank. Neither the Committee of Direction nor the Finance Minister has yet convincingly proved that the new tasks and the new responsibilities will leave the Bank sufficient resources and sufficient zest for the indispensable tasks it has long been performing and the onerous responsibilities it has long been discharging.

In simple terms, will not the diversion of energies and resources to rural and co-operative finance involve a considerable curtailment of the Bank's services to trade and industry?

In this connection, it must be borne in mind that, for tiding over the busy season, the Imperial Bank has been finding it necessary to supplement its resources by large-scale rediscounting of usance bills. Such resources as the Imperial Bank now commands and such facilities as it can avail of are just adequate—and in no sense more than adequate—for its competently functioning as a commercial bank.

Secondly, it is admitted that, apart from over-all policy, Government interference in day-to-day working of the Bank must be completely avoided. The Committee as well as the Finance Minister admit this need

to safeguard the Bank's working from such interference. In practical terms, how is this safeguarding to be effected? Is there any conceivable device which could immunise the Bank from the kind of mud-slinging to which the Industrial Finance Corporation has been subjected and as a result of which its functioning has been more or less paralysed?

What will the fate or future of the Bank be if, in response to demands in Parliament, the Finance Minister were to place on the table a list of persons and parties who have borrowed, say, over Rs. 1 lakh?

What kind of persons will agree to serve as directors of the Bank if their names are to be bandied about as happened in the case of the directors of the Industrial Finance Corporation?

Thirdly, it is admitted that a new drive, an all-out drive is necessary if rural India is to be provided with the credit facilities to which it is entitled. But, does the answer to this problem lie in asking experts in commercial banking to become experts in agricultural finance, in transforming an instrument of pure commercial banking into an instrument of comprehensive rural banking?

The real answer is, as Sir Vithal Chandavarkar has pointed out and as Mr. M. A. Chidambaram has stressed this week, the setting-up of an All-India Agricultural Credit Bank.

The one country which provides a correct lead and a useful example in this regard is the USA, where the provision of finance for trade and the provision of finance for agriculture are in charge of two separate but appropriate agencies.

Fourthly, it is admitted that, in the planned development of banking, integration is of vital importance. But whoever suggests that integration means unification?

Established 1928

April 23, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

Integration is essential. Unification, on the other hand, may be detrimental.

The earnest reappraisal, which, in view of the stupendous issues involved, must not be shirked, is sure to lead the Finance Minister to proposals so revised as to avoid undesirable unification and so as to bring about desirable integration.

The Imperial Bank may be reconstructed and expanded and may even become state-partnered as suggested by the Committee of Direction. That is to say, the Reserve Bank may hold an important stake in its capital, not on the lines contemplated in the State Bank of India Bill, but on the lines chalked out by the Committee. Thus will the Imperial Bank be integrated.

But it should continue to function as a commercial bank—and only as a commercial bank.

The next step in integration is to be carried out by launching an All-India Agricultural Credit Bank which will embody this principle at the highest level by its capital of Rs. 20 crores being taken up in equal shares by the Government, the Reserve Bank and the Imperial Bank.

Most of the proposed features will remain: State partnership, intensive opening of bank branches in rural India, the stabilisation and long-term Funds, the amalgamation of the State-associated banks with the Imperial Bank, concerted attack on the problem by the Government, the Reserve Bank, the Imperial Bank and the proposed Agricultural Credit Bank.

Integration will, thus, mean unity in trinity—the Reserve Bank functioning as the core and centre of the banking world, the Imperial Bank as the core and centre of urban banking, and the Agricultural Credit Bank as the core and centre of rural banking.

Sir Chintaman was criticised when he gave his Budget proposals because some of the measures were "penal" in character; and criticism is now levelled at him, because he seeks to eliminate these self measures that seem, on a second reckoning, of a burdensome nature.

Of the amendments that he has proposed, two are vitally important. The one is of concern to industry, the other relates to a measure that had disconcerted the individual.

In listing the changes that he seeks to make in Section 23A as it stands in the Finance Bill, Sir Chintaman has made it clear that the need for the statute is undoubted, but that he is now providing for those special cases in which the application of Section 23A would cause unwarranted and, indeed, unintended harm.

His first distinction is that, as far as industrial companies are concerned, as much

Open-Minded Shrewdness

THIS, said Sir Chintaman Deshmukh, "is very entertaining." He was referring to cases where an individual drawing a salary of Rs. 500 per month received an entertainment allowance of Rs. 2,300 per month; and, in so referring, the Finance Minister indicated that his proposal to tax perquisites was motivated by the desire to put a stop to such abuse, and not by any anticipation of large contribution to revenue.

Sir Chintaman was moving amendments to the Finance Bill; and these were enshrined in a speech that has been described as a second Budget Speech. His amendments are of a scope and variety that, on the face of it, would appear to make for a complete revision of the Budget.

On this score, on the charge that such fulsome revision is indicative of a Budget that was hastily framed, Sir Chintaman has been criticised.

as 60 per cent of the equity capital might be held by six or fewer persons without such companies attracting the definition of a private company under Section 23A.

This amendment, therefore, ensures that industrial units will not be disbarred by terms of Section 23A from ploughing back profits for expansion—provided, however, that equity capital is dispersed in the hands of the public as defined to the minimum of 40 per cent.

Also, provision has been made for discretionary powers vested in Income-tax Commissioners to permit, in special cases, the distribution of profits by private companies of a proportion less than the 60 per cent laid down in Section 23A.

By virtue of the handsome gift of the Development Rebate in his Budget, Sir Chintaman's proposals for 1955-56 could generally be described as providing incentive for industry. The one fly in the ointment, for industry, lay in the difficulties that were thrown up by Section 23A.

But, for industry, such difficulties have now largely been done away with by the amendments that Sir Chintaman has proposed to Section 23A. In other words, but for the woes of the industries affected by the new set of excise duties, the Finance Bill as sought to be amended will have every characteristic of a Budget that may be counted upon to foster industry and industrial expansion.

For the individual, the whole-sale taxation of all manner of perquisites came as a burden which was almost intolerable to bear on top of the higher prices that would have to be paid for the consumers goods on which excise duties had been imposed or enhanced.

In this case, as Sir Chintaman pointed out, his primary purpose was to eliminate all possible opportunities for abuse of the facility to cloak emoluments under the guise of disproportionate, tax-free allowances.

The Finance Minister has recognised that, for many individuals, the entertainment allowance has become part of the emoluments that have to be paid in certain avocations. Again, some of the perquisites—as for example the provision of tickets for individuals who go on home leave—are of a reasonable nature.

In this view, Sir Chintaman has proposed substantial reliefs in the taxation of perquisites that had been provided for in the Finance Bill.

Finally, in the matter of excise duties, Sir Chintaman has announced a number of revisions. It is not of a little significance that he has readjusted the excise duties on cotton textiles which will cost the exchequer some nine crores of rupees.

Amendments of this wide scope raise the question that we have posed before: do these drastic revisions indicate that the Finance Minister's Budget for 1955-56 had been hastily drawn up?

To some extent, it may not be refutable that the Budget did suffer from a hastiness that sprang from two sources: one was the relatively late receipt of the Taxation Enquiry Commission's Report, and the other could be the desire Sir Chintaman might have had to implement as many of the important recommendations as possible in his Budget.

But this is not to say that the drastic revisions were occasioned by the need to re-appraise what had been a hasty Budget.

And Sir Chintaman, therefore, is not deserving of criticism on this count.

On the contrary, the Finance Minister has earned a bouquet: if it required courage in a Finance Minister to give a Budget which, by virtue of its irksomeness to individuals, made of him a man none too popular, it required uncommon courage to withdraw or tone down some of the important measures contained in that Budget within six weeks after he had made the original proposals.

Moreover, Sir Chintaman has shown that his were not empty words when he announced, at Budget-time, that he would keep an open mind on the proposals.

That reasonable representations and justified complaints have borne fruit in the form of the present amendments, is a fact, therefore, which must be welcomed as denoting rare elasticity and flexibility of mind in the Finance Minister.

Is it, then, that Sir Chintaman is to be criticised because the long list of amendments is suggestive of a hasty Budget? Or

End of "Permanent Settlement"

THE Permanent Settlement of Bengal has ended. Lord Cornwallis who more than a century and a half ago decided on the historic step which was annulled last week, should have believed that he was doing something for eternity. Even as late as the twenties of this century, the Zamindar of Bengal honestly thought that the Settlement was irrevocable. When Lord Montague visited India as Secretary of State, they enthusiastically represented this point of view before him, pleading that it was morally and politically indefensible to tamper with a contract entered into between themselves and the State, which by its very nature and appellation was inviolable. The Imperial Government found it convenient to let sleeping dogs lie; but within the next three decades a number of forces emerged which resulted in completely undermining the prestige and the rationale of the Zamindari system. The Zamindars themselves by their progressive isolation from the masses in many respects, forfeited the confidence and the loyalty of their tenants and the respect of the general public.

It is indeed true that this system bred a social class which by virtue of its wealth, leisure and opportunities, was able to provide the initiative and to take up the leadership in various spheres of activity including politics, art and literature. The epitaph of the Bengal Zamindaries will be thoroughly misleading and lacking in proportion, if it does not include a very generous appreciation of the great achievements of the Zamindars and their middle class dependents, particularly in the field of national literature and art and political awakening. Unfortunately the evils which enjoyment of vast hereditary wealth inevitably breeds got the upper hand in recent decades; and, in the public estimation, obscured the fine and the comparatively ineffable aspects. By the time of the transfer of power, the cup of social antipathy against the Zamindaries had become full. The transfer of power removed its last prop. Even otherwise, the system could not have escaped the powerful onslaughts of the new ideas on agrarian reforms. The complete alienation of public sympathy, however, helped to

should we, rather, have praise for his open-mindedness? Not, we suggest, criticism.

It is undoubted that the changes proposed in Section 23A are consequent on representations made as regards the difficulties that had been created. Thus, in this regard, the inescapable conclusion is that Sir Chintaman's ear is sympathetically bent to reasonable complaints.

On the other hand, it may be that the Finance Minister, fully aware of the tortuous work created by the taxation of perquisites, included the provision as a warning that bare-faced attempts to bypass personal taxation would not be countenanced. If so, this is a shrewdness that we should welcome.

But, whether it is shrewdness or a mind open to reason, Sir Chintaman's amendments should now be doubly assuring. For, with incentive in full measure for industry, and some irksomeness removed for the individual, Sir Chintaman may be said deliberately to have paved the way for a more cheerful industrial and investment climate.

achieve abolition of the zamindaries without any tear being shed outside the ranks of the dispossessed or any hand raised in protest.

The Estates Acquisition Act of 1953 under which Zamindaries in West Bengal were taken over by the State on April 15, 1955, has been a rather long-drawn-out measure. The Government of West Bengal had to face the charge of being tardy in the implementation of a proposal for which the initiative had been supplied long ago by the Congress Party and the National Government. It could have been possible for the State Government to rush through the necessary piece of legislation. But had they done so, they could not have given adequate attention to innumerable issues, not only those inherent in the system and the graded hierarchy of interests into which it had proliferated but others arising in consequence of its abolition. Though it is in West Bengal that the Zamindari system as introduced by the British, was more universal than in any other State and had taken its deepest roots, this very circumstance necessitated the most careful and unbiased understanding of the consequences of the change. The West Bengal Government can now have full satisfaction that they are not taking a leap in the dark or blowing up a framework which had percolated deeply into the entire life of the community. There is realisation on the part of the Government to a lesser degree, and on what this momentous step involves for the social and economic life.

As far as the future of the Zamindars themselves is concerned, a respectable competence is left for them by way of residual property holdings and the compensation offered. Once the traditional scale of living is given up, it would not be difficult for them to carry on in comfort in congenial surroundings. As a large part of compensation will be in the form of bonds, the State will have some control over the direction of spending whatever excess wealth is still available in their hands. The picture is far from pitiable.

(Continued on page 852)

Editorial Notes

Future of Caste:

The casual discussion which took place in the Lok Sabha last week on a private member's Bill to eschew references to caste from official documents must serve to indicate the dearth of well-informed opinion on one of the most perplexing issues of the day. Apparently the Bill was not taken sufficiently seriously by the House and the whole discussion had a perfunctory air about it. Whether this circumstance is a matter for concern or congratulation it is difficult to say. If it means, as is quite likely, that the Hindu community as a whole is indifferent to the future of its social set-up and to the manner of effecting necessary adjustments, then the Lok Sabha debate is a sad eye-opener. The caste system as it now obtains and the attitudes it generates among protagonists and assailants alike could be traced to an understanding of the system more as the guardian of sectional privileges than as the preserver of functions. It is only the student of caste in its true historic aspect as against its present mutilated form, who will be able to offer constructive guidance about its future, whether it be for ending or mending it. The Congress Party is wedded to the goal of a classless and casteless society. Whether 'casteless' refers only to the Hindu remains obscure; or even whether the term also implies "religionless." The domination of one caste in any sphere is no more objectionable than the domination of one religious group amidst many. The ruling party has a definite programme, for bringing about the classless society. It obviously has none to achieve castelessness. Perhaps, the latter is regarded as a secondary aim or one which

could be left to the automatic operation of social forces, with the State standing by as an interested spectator, clapping hands whenever the game gets exciting. If this were to be the position, there is the danger of private individuals and groups taking the initiative, and as we have seen, asking the State to co-operate. The situation is also complicated by the fact that the very groups who are worst affected by the prevailing order are keen on perpetuating their social identity, at least for some time lest they might have to forego much-needed material advantages. One M.P. proceeded to suggest that the Government should declare a general preference for persons marrying outside their caste, for purposes of appointments. Whatever the merits or demerits of these novel suggestions they bespeak a state of general outlook which refuses to recognise the seriousness of the real issues involved—whose sum total is nothing less than the future of Hindu society. Caste is intimately bound up with the thoughts, traditions, practices and even beliefs of the Hindu community. The leaders of the community and of the country should start thinking earnestly on these problems and put out suggestions calculated to ensure that in the process of treating, or if needs be, uprooting certain diseased trees, the garden itself is not transformed into a desert. The problem posed by caste is not merely one of issuing a pompous ostracism, but seeking ways and means to revitalise a great social structure, cracking at many points. The task should neither be neglected nor lightly undertaken.

The Goalpara Incidents:

The reorganisation of States is an issue, which in the circumstances of the day, is bound to raise some excitement, among the interested people. That at least in three areas excitement has led to violence is most regrettable. In Andhra, violence was aimed against Central Government officers and property. In South Travancore, there was a tragic squabble between a section of agitators and the police. The visit of the States Reorganisation Commission to Bihar was the signal for a propaganda warfare, which luckily did not extend to loss of life or property. In Assam, the Commission's visit aroused more vehement feelings resulting in extensive rioting. That the assistance of the military had to be sought shows the extent of linguistic rancour generated. The Congress Secretary sternly warns that his party will not tolerate this kind of conduct among its members. The Union Home Minister has issued a similar warning. It is surprising that these warnings

came after the events. The simple fact is that while all-India leaders were counselling restraint, States leaders have not been quite responsive. The States Commission members, who are not devoid of a sense of humour, might have thought of cutting out further sojourns, after the disagreeable experience of Bihar. Possibly they decided on having the full round, as they are soon completing it. All that they could do to prevent unseemly demonstrations was to proclaim that they would be utterly insensitive to any appeal save that of reason. Those who had a case to present couldn't resist the feeling that a show of strength could not fail to have its impact, howsoever feeble. The result has been tragic, and can be more so in future also, if the Governments concerned do not learn the lesson. Hitherto the trouble has been localised. When the Commission's Report is published, language groups in several areas may have reason to feel disappointed and may try to express their feeling in a manner which authority cannot approve. The Government's duty on that occasion should be understood as more positive than rushing succour to the injured and the fleeing.

C. R. on Hindi:

By a strange irony, Mr C. Rajagopala-achari, one of the foremost protagonists of Hindi and a person who during the last quarter of century has done more than any other to encourage its study in non-Hindi areas, has now turned into a powerful critic of the Union Government's language policy. It is not CR alone who is upset by the frantic attitude displayed by the Union Government and some extremist enthusiasts. The Prime Minister has also advised restraint, on more than one occasion. But somehow, steps are being taken irrespective of what even the Prime Minister thinks. CR condemns the decision to change the medium of All-India Service examinations from English to Hindi as neither fair nor wise. His own antecedents protect him from the charge of being biased or parochial on this question. He points out how even leaders erudite in Hindi, Pandit Nehru not excepting, are not able to express themselves as forcefully and crisply in the language as they are able to do in English. It is not the fault of the leaders at all. It is the fault of the language, which has not grown to the status which the Constitution seeks to accord to it. In other words, the Constitution makers were not sufficiently aware of the immaturity of the language with which they were proposing to replace English. There is nothing wrong in accepting Hindi as National language by virtue of its being the widest spoken language; but it is certainly wrong

to thrust it on the entire country before it becomes adequate as a medium for the conduct of public affairs in its manifold branches and for the pursuit of knowledge in the modern state. CR wants an extension of the period for completing the transformation envisaged; and he suggests that a constitutional amendment is the obvious and simplest method of achieving it. It would be a great pity if this extremely sage counsel, representing the attitude of the entire non-Hindi speaking area in the Indian Union and possibly also, of the more farsighted sections among the Hindi-speaking population, is not given the deference it deserves.

World of Finance

The What, the How & the Why of Currency Expansion

OVER the past three and a half months, we have drawn recurrent attention to the detailed figures in the weekly financial returns with the purpose of accustoming readers to juxtapose such figures in an inter-related study and to appreciate, more shrewdly, the manifestations, techniques and implications of the various devices used for currency expansion, and particularly of the device which presses ad hoc Treasury Bills into service. It may be said, in broad terms, that, since the beginning of January, recourse has been had to four distinct methods of expanding currency. In the first place, mention must be made of expansion of currency against rupee securities. This operation can be either (a) against rupee securities transferred from the Banking Department of the Reserve Bank to the Issue Department or (b) against ad hoc Treasury Bills sold by Government to the Reserve Bank. The second has relevance to the much-discussed deficit-financing, and will be discussed in a later paragraph. We shall confine ourselves here to expansion against rupee securities transferred from the Banking Department to the Issue Department. This is the commonest kind of expansion, particularly in the busy season. Its manifestation is a decline under the head "Investments" on the assets side in the Banking Department and a more or less corresponding rise in Rupee Securities figuring on the assets side of the Issue Department. Its repercussion is that the additional currency so created by an addition to the assets of the Issue Department goes to augment the Notes held in the Banking Department. Its implication is that the Reserve Bank, finding itself short of cash in the till, is parting with a moiety of its Investment in favour of the Issue Department so as to secure a corresponding moiety of cash in

the form of currency notes. This operation serves as the means for enabling the Reserve Bank to supply currency in accordance with, and in response to, demand.

The second device generally resorted to for currency expansion is against foreign securities transferred from the Banking Department to the Issue Department. During the busy season, when exports are ordinarily much in excess of imports, the foreign exchange accruals resulting from a favourable trade balance account for sales of sterling and other currencies to the Reserve Bank. The foreign exchange so received goes, in the first instance, to swell the Foreign Balances held in the Banking Department. The sellers of the foreign exchange are paid in rupees, which has the effect of depleting Notes held in the Banking Department. For the consequent replenishment of such Notes, a transfer of a moiety of foreign balances is made from the Banking Department to the Issue Department; and the additional currency so issued against the addition to Foreign Securities among the assets held against notability is made available to the Banking Department. This operation also is common in the busy season. Its manifestation is a decline in the Foreign Balances figuring on the assets side of the Banking Department and a rise in the Foreign Securities figuring on the assets side in the Issue Department. Its repercussion is the augmentation of Notes held in the Banking Department. Its implication is the need for reimbursement of cash in the Reserve Bank's till.

The third kind of operation leading to currency expansion is against rupee coin. This usually takes place only once a year. Its timing is the first week of April. Its raison d'être is the option given by the Reserve Bank of India Act to Government to tender rupee coin for Rs 5 crores to the Reserve Bank and to demand currency notes thereagainst. Its manifestation is an increase of Rs 5 crores under the head Rupee Coin on the assets side of the Issue Department, and a like increase in the Central Government's balances on the liabilities side of the Banking Department. There is also a consequential rise in the Notes held in the Banking Department. The repercussion of this operation is augmentation of (a) the Centre's cash and (b) of the Reserve Bank's cash. While expansion of currency by the first two methods discussed above are of significance as helping the Reserve Bank's cash position,

the third method of expansion against Rupee Coin helps swell the cash of the Reserve Bank as well as that of the Central Government.

The fourth device of currency expansion is the operation described as (b) under expansion against Rupee Securities. In this case, Government sell ad hoc Treasury Bills in favour of the Reserve Bank, and these ad hocs are lodged among the assets under the head "Rupee Securities." In return for the ad hocs thus handed in by Government, the latter receive currency notes for the corresponding amount. Such Notes, on transfer to the Banking Department, are reflected on the liabilities side in a rise in Central Government's Deposits and, on the assets side, in a rise in Notes held in this Department. This operation is generally described as deficit financing; and the additional currency that results from the operation is referred to as created money. Its manifestation is an increase in Rupee Securities on the assets side of the Issue Department and, likewise, an increase on the liabilities side of the Banking Department under the head Central Government's Deposits as also under the head "Notes" on the assets side. Its repercussion is, thus, a replenishment of Central Government's cash as well as of the Reserve Bank's cash. Its implication is the need of the Centre for strengthening of its cash resources.

While these four methods of currency expansion have been resorted to in the first three and a half months of 1955, there are two more devices which have not so far been availed of, but whose description is useful to complete the picture of the modus operandi for expanding currency. The weekly return for the Issue Department contains the following heads on the assets side:

1. Gold Coin and Bullion.
2. Foreign Securities.
3. Rupee Coin.
4. Government of India Rupee Securities.
5. Internal Bills of Exchange and other Commercial paper.

The four methods of expansion we have so far outlined pertain to 2, 3, and 4. Expansion is also possible under 1 and 5. It is true, there has so far been no expansion under these heads. But, the point we seek to make out is that, if the Reserve Bank so desires, there can be expansion by these methods also. We may, therefore, describe expansion against gold as the fifth method. While efflux and influx of gold from the point of the currency reserve is a contingency we may rule out as unlikely, the possibility of expansion in the event of Government revaluing the gold stock must be taken into reckoning. For, while gold in the Issue Department is shown at Rs 40.02 crores, its present value is many times this figure. Gold in our reserve still stands at the price fixed in the Currency Act of

1927, that is, Rs 13-5-4 per sovereign. The present value of the gold stock is over Rs 160 crores. If, for any reason, Government decide to revalue this gold at something like current rates, gold will figure on the assets side at, say, Rs 160 crores. If so, there is an excess of Rs 120 crores in this asset. It may result in reducing the ad hoc Treasury Bills held under Rupee Securities and, possibly, in partial expansion. The manifestation of this operation is, in the Issue Department, an increase under gold and, possibly, a decrease under Rupee Securities; and, in the Banking Department, a possible increase under Central Government's Deposits on the liabilities side, and under Notes on the assets side. Its repercussion is a considerable wiping off of ad hocs. Its implication is that we have now a valuable hidden reserve against ad hoc IOUs.

The sixth method of expansion is against Internal Bills of Exchange and other commercial paper. Now that, for four years, the Reserve Bank has been rediscounting usance bills on a considerable scale during the busy season, it follows that, to the extent the Reserve Bank can locate any demand for currency as due to seasonal factors, the most suitable method of providing currency is by transferring usance bills from the head Other Loans and Advances in the Banking Department to Internal Bills of Exchange in the Issue Department. This operation will impart a self-liquidating character to currency expansion. Its manifestation will be a decline in Other Loans and Advances on the assets side of the Banking Department and a rise in Internal Bills of Exchange on the assets side of the Issue Department—also a rise in Notes held in the Banking Department. Its repercussion will be augmentation of cash in the Reserve Bank's till.

The returns of the Reserve Bank for the week ended April 15 reveal an expansion of currency for Rs 10 crores against foreign securities transferred from the Banking Department. There has been an outflow of rupee coin into circulation to the extent of Rs 11 lakhs; and the active note circulation has gone up by Rs 2.55 crores. Notes held in the Banking Department have increased by Rs 7.52 crores to Rs 15.74 crores.

In the Banking Department, deposits of Central and Provincial Governments have both declined by Rs 2.42 crores and Rs 5.84 crores respectively. The deposits of banks have expanded by Rs 5.54 crores to Rs 50.49 crores. As a result of the transfer to the Issue Department, balances held abroad have declined by Rs 10.61 crores to Rs 63.35 crores. Other Loans and Advances have increased by Rs 2.99 crores. As the Imperial Bank's return shows 'Borrowings from Banks' at Rs 9.50 crores (up by Rs 1.50 crores), it is to be inferred that all the other banks have reduced their loans and advances from the Reserve Bank by

(Continued on page 852)

Soviet Gold Sales Resumed

By PAUL EINZIG

SINCE the second half of March Soviet gold and silver reappeared in the London market. The amounts sold appear to have been moderate—their total was estimated at £2,000,000 gold and £500,000 silver by the middle of April—and selling was gradual. This, together with the London newspaper strike, explains why the transactions escaped publicity for several weeks. The resumption of Russian sales of gold, even on a small scale, would have attracted much attention in the London financial press in normal conditions. It will be remembered that, when in 1953 the Soviet Government began to sell precious metals in London and other Western markets, these operations aroused worldwide interest. Admittedly, the sales were then on a much larger scale. But then there is no means of knowing whether the present tentative operations will not prove to be the beginning of a long series of sales the total of which might well prove to be an impressive figure.

Gold transactions have always appeared to popular imagination, largely because they are often surrounded by an atmosphere of mystery. This atmosphere is particularly noticeable in the case of gold sales by the Soviet Union. There have never been any official statistics about the size of the Soviet gold reserve or the amount of the gold output in the USSR. It is, therefore, impossible to form an opinion about the Soviet Government's capacity to unload gold in Western markets if it wishes to do so.

When in 1953 Russian gold made its first appearance in London, Paris, Brussels and other bullion markets, the effect of relatively small sales was that the premium of the free market price of gold over the official American price of \$35 per ounce disappeared. While until then there was much speculation about the possibility of an increase of the official American gold price, the appearance of the Soviet Government as a seller of gold ruled out the possibility of such an increase, since it would have meant a free gift of additional dollars to the Communist Bloc.

For well over a year Russian gold bars stamped with hammer and sickle were absent from the market. Their reappearance may possibly link up with the decision of the Khrushchev regime to reserve Malenkov's policy of producing more consumer goods and less heavy industrial equipment. Since less goods will be produced for the consumer within the Soviet Union, perhaps the Soviet Government wants to make good part of the deficiency by increasing its imports of consumer goods. For that purpose more foreign currency would be needed, and the simplest way of securing it is through the sale of precious metals for which there is always a ready market. The alternative would be an export drive, which might be a difficult and slow process. Besides,

an increase of exports would reduce the volume of goods available for the consumer. It is therefore more convenient to draw on the gold and silver reserve.

Another possible explanation is that sterling and other currencies may be needed for the import of strategic raw materials for stockpiling purposes. It is expected that, should the conclusion of a Peace Treaty with Austria be followed by other conciliatory gestures, the ban on the export of strategic materials and manufactures to Russia would be relaxed. As the Soviet Government's holdings of foreign currencies are believed to be low, possibly it may wish to replenish

them in anticipation of purchases of such goods.

There can be no doubt that the Soviet Government can well afford to sell large quantities of gold. Even in the complete absence of information about the size of its gold reserve, it is generally assumed to be very large. The current output of gold must be also substantial, because of the high priority given by the Soviet Government to gold mining. When in September Mr F. J. Errol, a Conservative Member of Parliament, paid a visit to the Sverdlovsk goldfields, he was very much impressed by the up-to-date character of the equipment and the evidence of a drive to increase the output. Mr Errol is an engineer and a director of a gold mining company, so that he was in

a position to judge. What is important from the point of view of the resumption of Russian gold exports is that, according to Mr Errol, the gold production drive was evidently started long before Stalin's death—it takes years to sink a shaft—at a time when the official policy aimed at increasing the production of industrial equipment while keeping low the production of consumer goods. This means that gold mining was given a high priority long before the advent of the Malenkov regime.

It seems reasonable to suppose, therefore, that, even though the Khrushchev regime has now reverted to the Stalin policy of giving high priority to the production of industrial equipment, gold mining

Journey to Prosperity

The huge, long train chugs and wheezes and groans to a stop. Villagers—eager, expectant, excited—gather round... It is an event of historic importance in the life of the community. For, village produce, the fruit of their labour, will travel to the city in this train.

In the years to come the produce of our villages will flow to the cities on thousands of miles of rails and roads. 3,000 miles of track will be rebuilt during the period of the Five Year Plan. 770 miles of new concrete roads, 66 giant bridges will be constructed to lay the foundations of an efficient communications system. Along these arteries of trade, commerce and culture our people will journey to a richer, more complete life.

Lakes of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

THE TATA IRON & STEEL COMPANY LIMITED

EASTERN RAILWAY TENDERS.

Tender No. CS3/55/K6/43/55) is invited by the Controller of Stores, Garden Reach, Calcutta—23 for Handling of materials at Shalimar Stores Depot and Yard during 1st July 1955 to 30th June, 1956 on Rate Contract basis. Tender Form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta—23 (P.O. Section) on remittance of Rs. 2/- by Money Order (not refundable) in case of Mofussil Firms and on production of Cash Receipt from the Asst. Chief Cashier, Garden Reach by Local Firms. Earnest Money Rs. 250/- in cash. Valid Income-tax Clearance certificate must accompany the tender. Closing date 6th May, 1955 at 12 noon.

S. I. CONTROLLER OF STORES.

Sir Chintaman Deshmukh's Speech on Finance Bill

(Continued from page 813).

cent holding by the public would be too drastic and would affect their present development plans and that, therefore, this should be brought about gradually. There is some force in this argument and in the present need of industrial development we should not take any undue risks. I am, therefore, prepared to introduce an element of gradualness in regard to such concerns. For industrial concerns, therefore, I now propose that they shall be regarded as Section 23A companies if more than 60 per cent (and not 50 per cent as in other cases) of the shares are controlled or held by less than six persons. That is to say, the public holding is raised from 25 to 40 and not 50 per cent as in other cases. I also propose that in special cases they may have their distribution reduced under the orders of the Commissioner as I have just proposed for other companies also.

RIGHT OF APPEAL

Industrial concerns will have the further right of making an appeal against the Commissioner's decision to a Board of Referees composed of two officers of Government not below the rank of Joint Secretary.

In regard to loans and advances from Section 23A companies, the Finance Bill provides that such loans, given to a shareholder out of the accumulated profits of a company will be regarded as dividend. It has been represented that this will cause undue hardship, and, in effect, it will apply to loans taken in the previous accounting years and that some relief should be given for short-term loans. I am, therefore, proposing that in respect of loans outstanding at the end of the previous year relevant to the assessment year 1955-56, full tax shall be charged if the loans have been outstanding for more than a year, but that only income-tax should be charged if such loans have been outstanding for less than a year.

EXCISE DUTIES FURTHER CONCESSIONS

I now turn to Excise Duties. The House will recall that in the course of my reply to the general debate on the Budget, both here and in the Rajya Sabha, I had stated that I would keep an open mind in regard to the proposals that I had originally made and that I would review the appropriateness of each of the excises in the light of representations I had received from the industries affected. I had also announced certain concessions at the time, namely, removal of the duty on sewing machines and parts thereof and reduction of the duty on medium and coarse cloth from one anna to six pies per square yard. In the meanwhile, I had seen a very large number of deputations, and the officers of the Ministry have also collected a mass of material, and the changes that I suggest now are as a result of the examination of this material that has since become available to us.

The most important change that I now propose is the conversion of the existing 'ad valorem' duties in respect of electric lighting bulbs, electric fans, paints and varnishes, and paper into specific duties. The experience of the administration of these excises has convinced me that the application of the 'ad valorem' rates to the commodities mentioned is fraught with considerable difficulties. Competition between certain units is so severe that prices are extremely sensitive to marketing conditions and are likely to change at short intervals. Even where the prices are more or less steady, difficulties in assessment on an 'ad valorem' basis arise from the methods of marketing where, for example, in some industries, the wholesale prices are worked out in such a way as to ensure a uniform all-India retail price, involving the addition to the price of an 'average freight' which has to be paid by the purchaser even at the site of the factory. These and other difficulties will be overcome by the conversion that I have suggested.

EQUITABLE DISTRIBUTION OF DUTIES

In arriving at the quantum of specific duties, the commodities have been classified as far as possible under broad and well-defined categories with different rates for each category so as to attain to the maximum possible extent an equi-

able distribution of the burden of the duties. Secondly, the incidence of the duty has been kept, by and large, at the original level proposed, namely, 10 per cent 'ad valorem', the value for each category being fixed on the weighted average of the production of that category.

CONCESSIONS TO SMALL-SCALE PRODUCERS AND SMALLER UNITS

Thirdly, in pursuance of the Government's policy of helping small-scale producers, smaller units have been exempted from duty in cases where such units are in a position of comparative disadvantage and are otherwise unable to bear the burden of the tax.

CLASSIFICATION OF COTTON-FABRICS

The changes are:—As regards Cotton fabrics, with the reduction of the duty on medium and coarse cloth from 1 anna to 6 pies per square yard which has already been mentioned, I have considered it desirable to restore the classification of cotton fabrics into four categories, namely, superfine, fine, medium and coarse as was the case before 1st March, 1955. The definition of 'cotton fabrics' will also be suitably modified taking the average count of the yarn as the basis for the classification instead of the count of the warp yarn. I have carefully reviewed the rates of duty on fine and superfine. The original proposal in the Finance Bill of taxing superfine cloth at 2 annas 6 pies per square yard will now be changed to 2 annas per square yard as, on an examination, I found that the former is likely to be burdensome. The duty on fine cloth is proposed to be increased to 1 anna 3 pies per square yard which, in terms of linear yard, is roughly equivalent to what it was before 1st March, 1955, namely one anna six pies a yard. There is a slight increase in the duty on fine as from the original Bill.

As regards the handloom cess the handloom cess of 3 pies per linear yard which is being collected at present on fabrics of cotton, artificial silk and woolen fabrics will be converted into a cess of three pies per square yard. This will bring the unit for assessment of the cess in line with the units for assessment of the basic excise duty.

REDUCTION IN DUTY ON WOOLLEN FABRICS: MANY CONCESSIONS

As regards woollen fabrics, after careful consideration of the incidence of the existing duty on woollen fabrics, I have decided to reduce it from 10 per cent to 6 per cent 'ad valorem'. I also propose that manufacturers employing less than five power looms should be totally exempted. In this connection, I have had under consideration the question of implementing the recommendation of the Taxation Inquiry Commission that coarse rugs and similar articles used by the poorer people should be freed from the impost of excise. Even in the tariff as it stands, woollen fabrics other than piecegoods, rugs, blankets and other 'ad valorem' fabrics are exempt from duty, so also are blankets, rugs and other articles, if produced on handlooms. This itself involves a large measure of relief. However, to implement to the largest extent possible the recommendations of the Taxation Inquiry Commission, I propose to enlarge the scope of the relief and to give, by executive notification, total exemption from duty in respect of coarse rugs and 'kamblies' the value of which does not exceed Rs. 10 each.

ELECTRIC BATTERIES: DOUBLE PAYMENT AVOIDED

I now come to electric batteries. Parts of electric batteries have now been included in the definition of batteries. As the House will recall, a concession has been already announced in the case of small assemblers of batteries. But, small assemblers compete, I find on an appreciable scale, with the organised section of the industry, on a much larger scale than I had imagined, nearly 25 to 30 per cent of the total production or perhaps more, being in the hands of small assemblers. There is thus a case for levying duty on 'parts' as well but the duty will be so administered as to avoid double payment. A small assembler, who himself exempt, will purchase parts on which

duty has been paid while manufacturers who are liable to the excise will pay duty only on the finished products.

There are two other changes. The first is regarding the existing concession to small assemblers to which I referred a little while ago. It has come to notice that this concession is so wide as to give an unwarranted advantage even to those units whose production is comparatively large and that the continuance of the concession would seriously affect the position of organised factories and lead to undesirable consequences. The concession was really intended to benefit only the large number of repairers and re-conditioners and very small assemblers of batteries who do not employ more than three or four persons in their establishments. It is, therefore, being modified so as to restrict it to establishments employing five persons or less and this is being given effect to by notification.

'STATIONERY BATTERIES' EXEMPTED

The second is a new concession. This is in regard to what are called 'stationery' batteries. They are used at power houses, telephone exchange, etc., and are, as their name indicates, heavy and not portable and are in the nature of capital equipment. They are not produced in the country, but are generally imported in dismantled condition and assembled in India, with one or two small parts of small value locally made to save transport charges. These batteries are being exempted from duty by executive notification.

I next come to electric lighting bulbs. It is now proposed to exempt 'miniature' lighting bulbs, that is to say, bulbs intended for flash lights, motor cars, telephone installations, etc., from the duty. The industry in these bulbs is still in an early stage of development and is experiencing severe competition from imports which continue to be allowed in large quantities to satisfy the demand in the country. The exemption is being given effect to by means of an executive notification.

As regards electric fans, I propose that certain parts of electric fans, namely, the complete motor and its two principal components, namely rotor and stator, should also be exempted. This change has been made partly because there is a certain amount of trade in spare parts and partly in order to prevent evasion of revenue. The motor accounts for the major part of the value of the fans and the other parts, therefore, have been ignored.

I come to paints and varnishes. According to my original proposal, paints and varnishes were included under one head without any sub-heads. The duty was also applied only if power was used in any of the processes in connection with their manufacture. With the conversion of the 'ad valorem' duty into a specific duty, paints and varnishes have been separated from varnishes and the item in the tariff is made up of several sub-heads. In fixing rates of duty, the larger establishments have been distinguished from the middling one and these again from the cottage or small-scale units which have been exempted. In view of this new classification and also because even the larger establishments, so far as varnish is concerned, do not necessarily use power, the criterion of the use of power has been dispensed with. The exemption limits in the case of paints, etc., are pitched sufficiently high to bring within their scope all small units which do not use power.

Mr. K. K. Basu (Diamond Harbour): Small units which use power.

Sir Chintaman Deshmukh: They also. Both will be exempted.

We have given up the classification of those which use power and which do not use power.

Dr. Krishnaswami (Kanchipuram): And you are going to calculate on the annual value of output? Is that the basis, as in the case of soap?

Sir Chintaman Deshmukh: A similar basis. According to the volume of number of...

Pandit Thakur Das Bhargava (Gurgaon): Number of workers.

Thirty is the maximum for a small unit.

Sir Chintaman Deshmukh: Yes. There is, of course, some relationship between the number of workers and the volume of production.

Dr. Krishnaswami: I should like a full explanation for the debate.

Sir Chintaman Deshmukh: That will be coming.

PAPER—SOME MORE EXEMPTIONS

In regard to paper, it is now proposed to exempt strawboard from the duty. The majority of units producing strawboard are operated by small producers who account for 13,000 tons out of a total production of 31,000 tons. Their operations are confined generally to spot demand. They do not manufacture for stock. Profit margins, even when profits are made at all, are comparatively low. Owing to lack of demand, the industry has been compelled to work at less than half of its annual rated capacity. Prices of strawboard have also fallen to almost pre-war levels. In view of all these considerations, impositions of duty would, we feel, not be justified.

NEWSPRINTS SOME RELIEF

In the definition given in the original Finance Bill, newsprint was excluded from the definition of paper, and consequently from the levy of duty. While paper used as newsprint will still not bear the burden of an excise duty, it has become necessary to make certain changes in the original proposals in order to ensure that paper not so used does not get unwarranted concession. It has come to notice that, both imported and indigenous quantities as cheap printing paper, and therefore competes with printing paper produced in the country. The question of preventing the misuse of newsprint assessed at a specially reduced duty on import has been under the consideration of Government. So far as the indigenous newsprint is concerned, the exemption given by the tariff is now proposed to be withdrawn, but administrative arrangements will be made whereby newsprint supplied to newspaper establishments will be relieved of the burden of the excise duty.

CHANGES IN CUSTOMS DUTIES

Consequential to the changes in the excise, certain changes will be necessary in customs duties. With the abolition of excise duty on sewing machines, the provision for the levy of a countervailing import duty on sewing machines dropped. Provision will be made for assessing parts of electric fans and batteries by levying an increased import duty equal to the excise duty on parts of electric fans and batteries. Excise duty is now leviable on some articles according to the volume of output, and where such different rates exist, the highest rate will be taken for purposes of the countervailing import duty.

I have already given notice of my intention to move the amendments required to implement the changes I now propose.

I shall now deal with the financial effect of the proposals made by me. So far as income-tax is concerned, the rate structure remains unaltered. As regards the other provisions of the income-tax law, I had not in my original Budget assumed any revenue significance. The changes now proposed will not alter this position.

REDUCTION IN REVENUE ESTIMATES

As regards excise duties, the total revenue estimated from the increased duties proposed originally was Rs. 17.7 crores. Out of this, there will be a reduction of as much as Rs. 10 crores on account of the restoration of the duty on coarse and medium cloth to its original level. I mention this because I heard somebody say that these were trifling concessions that had been made. I repeat again that the reduction on account of the restoration of the duty on coarse and medium cloth will cost Rs. 10 crores.

Among the changes that are proposed, (interruption in Hindi).

Sir Chintaman Deshmukh: What is it? (Question in Hindi).

Sir Chintaman Deshmukh: I am not a walking table of duties. It depends on its width and so on. Now it is on the square yard. It is now six pies per square yard. I do not know exactly what the average width of...

Mr. M. L. Dwivedi: It will be 8 feet square.

Sir Chintaman Deshmukh: Then the Member can make his own calculation.

Pandit S. C. Mishra (Monghyr North-East): Six annas.

Sir Chintaman Deshmukh: The rate is known, the width is known better to

(Continued on page 833).

World of Jute
STALEMATE

THE news that US consumption of burlap during March 1955 had been of the order of 71 million yards as compared with 65 million yards during the previous month, coupled with the fact that total despatches during the same month had been higher at 76.674 tons, had not generated as much enthusiasm as one would expect such encouraging bits of information to produce among marketmen.

Hessian 40" x 10 Oz Ready, which was quoting Rs 44-12 and B Twills Ready which was done at Rs 123-12 immediately before the above announcements were made, had steadily lost ground since, to be finally placed at the end of the week under review at Rs 44-6 and Rs 122-6 respectively.

During the same period, speculative activity in the raw jute market increased considerably, with the result Assam Bottoms was marked up sharply to Rs 36-12 per maund at one time. It was, however, found that since mills were naming a price that was nearly two rupees below the price asked for, activity was at a standstill.

It is now evident that mills are again in the same unenviable position as they found themselves some few weeks ago, when raw jute prices were ruling at giddy levels. Current prices of jute goods compared with prevailing rates for raw jute are such that mills will get nothing out of transactions concluded now. At the same time mills are fully aware that price levels that will be satisfactory to them, are next to impossible of attainment.

The solution to the riddle of the poverty of mills amidst the plenty of production as well as demand is to be sought in the situation currently obtaining in the raw jute market. Beginning from the communication issued by the Pakistan Government towards the close of last month regarding the supply of jute in the 1954-55 and 1955-56 jute years, one will notice a systematic attempt being made to revive the bogey of a shortage of raw jute. Knowledgeable quarters have not been slow in warning the industry that some such attempt is to be expected, especially when elements interested in obtaining as high a price as possible for raw jute before the arrival of the new crop have a powerful ally in the Pakistan Government, who by virtue of their position as the only supplier of raw jute to world jute mills are fully exploiting that position.

It is also an anticipated fact, that arrivals of raw jute into Calcutta and mill stations during March will show a declining trend, in view of the obstacles recently placed by the Pakistan Government in the way of a smooth despatch of the raw material across the border to India. As against 2874000 maunds in February, arrivals during March 1955 totalled only 2434000 maunds, made up of 1828000 maunds of Indian and 606000 maunds of Pakistani origin. Such arrivals from Indian centres and Pakistan were 2077000 maunds and 797000 maunds respectively.

Though in the past one month for which figures are available, movement of raw jute to mill stations has been rather slow, the overall picture of raw jute arrivals for the nine months ending March does not justify any pessimism.

For, total arrivals during July-March 1954-55 amount to 2,28,52,000 maunds as compared with 2,05,50,000 maunds during the corresponding period of the previous year. The only disturbing factor, if it can be called so, is the decline in the arrivals from Pakistan, which total 46,58,000 maunds during the 9 months as compared with 58,05,000 maunds during the corresponding period of last year. But arrivals from Indian centres, which for the 9 months amount to 1,81,96,000 maunds are 34,51,000 maunds higher than in the corresponding period of the previous year. Thus, it will be seen that Indian grown jute has more than made up the deficit recorded by arrivals from Pakistan. And it is quite on the cards that arrivals in the next two or three months may again resume their upward trend, new crop conditions being what they are reported to be.

In their Indian crop report for the week ended April 16, Messrs Sinclair Murray & company Ltd. say that weather conditions in most areas have been hot and dry with occasional showers and this has been quite favourable for the promotion of crop growth and to allow cultivators to carry on with the sowings. Condition of young plants is generally satisfactory and germination of seeds has also been satisfactory. In the Daisee districts they estimate the sowings to date to amount to 4 annas against notifiable sowings at the same time last year.

It is also gratifying to note that mills during the past week have not succumbed to the pressure tactics of raw jute holders. With the receipt of the figures of raw

jute arrivals into Calcutta and mill stations during March, bull speculators turned their attention to Assam Bottoms, which was consequently pushed up to Rs 36-12 per maund, the reasoning for such a spurt being that stocks of jute with mills have dwindled at the end of March. It should have been a great disappointment to them to find mills unmoved by their attempt to instil panic among raw jute users.

However, it is to be admitted that mills are not so adequately stocked as to sit out of the market for all time or at least till the new crop becomes available. Furthermore, there is always a certain amount of uncertainty with regard to the shape of the new crop which has to be taken into consideration notwithstanding the good condition of the crop at the present juncture. Such considerations should have weighed with the mills last week when they showed reluctance to transact business at prevailing levels. The position boils down to this: Mills are not buying raw jute; neither are they prepared to sell their manufactures. It needs no great imagination to realise that such a situation cannot continue for long. What is the way out of the deadlock?

It is a well-known fact that jute goods in general and Indian jute goods in particular have to contend against heavy odds.

The only way in which they can win the confidence of consumers is by proving to them beyond doubt that the industry will do its best to make available adequate quantities of jute manufactures at a price suitable to them. Any development that obstructs such a situation from being maintained, is to be viewed with disfavour by the industry as a whole. In this, the responsibility of raw jute dealers is as heavy and onerous as that of the mills. A sizeable share of the responsibility is also to be borne by Pakistan in her present capacity as the principal supplier of raw jute to the world as well as in her capacity as a prospective jute goods manufacturer. It will be no exaggeration to say that the future of the jute goods industry in the world depends to a very great extent on the manner in which Pakistan conducts her jute policy in the next few years.

In the meantime, it is unthinkable, that the giant of an Indian jute industry will have to be left to the tender mercies of Pakistan on the one hand and unpatriotic, unscrupulous speculators on the other. If Pakistan sees sense in time, well and good. If not, India should not lose any more time in bringing about conditions that will assure not only steady markets but new and new markets for her jute goods. The essential prerequisite for such a consummation is 100 per cent self-sufficiency in raw jute.

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

IMPERIAL BANK OF INDIA

The largest of the Indian Joint Stock Banks

NOTIFICATION OF SALE

Messrs. J. Thomas & Co., Ltd., will sell by public auction, unless previously disposed of by private treaty, at their office at 8, Mission Row, Calcutta-1, on the 28th April, 1955, at 12 noon, under instructions from the owners, the Jorehaut Tea Co., Ltd., 17 St. Helen's Place, London E.C. 3, Murmuria Tea Estate (including Hattichung Division) in one lot as a going concern as from the 1st January, 1955.

For conditions under which the Tea Estate will be sold and arrangements for inspection or further particulars, inspection of title deeds or any information relating to the Tea Estate intending purchasers should apply to J. Thomas & Company, Ltd., 8, Mission Row, Calcutta-1 or Dignam & Co., Solicitors, 29, Netaji Subhas Road, Calcutta-1, or James Warren, & Co., Ltd., 31, Chowringhee Road, Calcutta-16

World of Tea

Outlook for Current Season

CARRITT, MORAN & COMPANY LIMITED, the well-known tea brokers, have, in their annual report for the 1954/55 season, stated that the outlook for the coming season is still obscure; but they go on to indicate some reasons for believing that prices will fall.

Tea's future has, indeed, been rendered obscure by the following factors:—(1) The seller's market in tea has now definitely ended. Drastic fall in the prices of competitive beverages like cocoa and coffee and the rapid replenishment of stock in the UK have sounded the death knell to a seller's market in tea; (2) Strong consumer resistance followed by cut in the retail prices of tea in the UK and the continuous fall in tea prices at the auctions both in Calcutta and London markets and (3) Exports to the UK fell last year; and they are to see further fall next season, because of the fact that currently Ceylon is not only expanding her crop, but also increasing her export quota.

Tea export quota, during the current season, may not be in such short supply as was the case last year up to the end of December, 1954, provided the bulk of special licences, estimated at about 19 million pounds, are utilised in the early part of the season. In fact, the season has begun with a carry-forward of 12 million pounds of export quota in North India and 7 million pounds in South India. It seems likely that the high prices and wide fluctuations, seen last year, will not be repeated during the current season. Although the total allotment of export quota during the 1954/55 season amounted to 133.5 per cent of India's standard exports against the permissible release of 135 per cent, higher prices were caused by the restrictive policy followed by the Government in releasing export quota.

As far as consumption is concerned, there has been a fall in sales in the UK in recent weeks. Deliveries to the retail trade have contracted sharply and this may be a result of consumer resistance to higher prices. On the other hand, consumers and retailers may have bought heavily early in the year, because they feared that tea prices were going to rise steadily. Since this rise has been checked, they may now be adjusting by buying less. In this connection, the review states that it may be several weeks before the combined effects of all these factors will be adjusted and disclose the present state of UK consumption.

With regard to production, increased supplies of tea are assured this year. Recent rains in the districts of North India indicate

that conditions there will be very favourable, while heavy crops are reported from Ceylon. The review concludes by saying that it will be reasonable to forecast that the supply position will be much easier before the end of the year and that, after the sale of this quantity teas in July and August, the market may fall to lower levels than those ruling at present.

In the Internal Sale, held at Calcutta this week, offerings consisted of 18,587 packages of Dusts. There was a good general demand which tended to ease at the close of the sale. The strongest feature of the sale were the best CTC Assams and Commons of clean black leaf appearance and these were firm to occasionally dearer. Medium Assams and Dooars received fair support at about last rates. The poorer fibrous CTC Assams were in less demand and were 2 to 4 annas per pound easier, while the residue end-of-season types were very irregular and were generally selling 3 to 5 annas per pound below last rates. Following rates were quoted per pound:—Medium Dooars Dust, Rs 2-1-8; Medium Assam Cranny Dust Rs 2-5-0 and Best Assam CTC Dust, Rs 2-13-0 to Rs 2-14-0. The offerings of Leaf grades consisted of 5,847 packages for which there was a good general demand. The market opened at about last rates, but strengthened as the sale progressed. Teas of clean leaf appearance and good liquors were often dearer by several annas. The remaining offerings, which consisted mainly of residue types and poor liquoring teas, were very irregular but generally dearer.

The following figures will show the exports of Pakistani teas from Chittagong during the past three seasons (figures in million pounds):—

	1954-55	1953-54	1952-53
United Kingdom	22.4	21.2	21.0
Europe	0.8	0.8	0.8
Karachi	29.2	28.4	26.8
Others	0.2	0.6	0.4
Total	52.6	50.2	48.3

At the London auction, which was held this week after the Easter holidays, offerings amounted to about 18,900 packages including 15,249 packages of Northern India teas. Bidding was very restricted and it was only the good quality tea that attracted any attention. Prices for these were about 1d to 2d per pound lower. Medium and Common kinds, especially teas from the Dooars, were slow of sale and prices were sometimes as much as 4d per pound down, with the result many lots had to be withdrawn. Clean Common Broken Pekoe was quoted 4s 9d per pound.

World Overseas

Britain

BACKGROUND OF THE BRITISH BUDGET

By Sir Oscar Hobson

Britain's Chancellor of the Exchequer, Mr R. A. Butler, will face a very unusual situation when he presents his fourth Budget to the House of Commons on April 19. He will show a surplus of revenue over expenditure which he may well find embarrassingly large. Thanks partly to the beneficial effects of booming trade on the revenue, and partly to underspending of expenditure voted for defence, the financial year 1954-55 ended last month with a surplus of no less than £433 million. This compared with an estimated surplus of only £10 million, the big margin being due to income exceeding the original estimate by £205 million and expenditure falling short by £218 million.

The realized surplus goes, of course, automatically to the reduction of the National Debt. But so far as it was due to the buoyancy of the revenue and notably of nearly all forms of taxation, it must be expected, provided industry remains active, that revenue will again increase in the present year.

The Chancellor of the Exchequer will tell us in his Budget speech what his estimates are. The main estimates for the current year's expenditure have already been published. These promise a considerable increase—around £220 million—on the past year's actual disbursements. Yet even so there is every prospect of another large surplus, though doubtless not so large as one as that which has just been realized. At a guess it looks like approaching £300 million.

But why should the Chancellor find any surplus embarrassing? The reason is that he will be expected—particularly in a year in which a general election is a high probability—to devote it to the reduction of taxation, yet he may deem it imprudent, in the present economic situation, to gratify such expectations.

The situation can be briefly described as follows. Last year was a record year for industry and employment. It was a year of general prosperity and high spending, with the standard of living and the standard of nutrition of the people higher than ever before. But in the latter part of the year symptoms of excessive consumer spending began to develop, with a consequent rise in imports and a deterioration in the country's balance of overseas payments. The Economic Survey for 1955, published by the British Treasury at the end of March, showed indeed that the big overall surplus of 1952, 1953, and the first half of 1954 had given place to a deficit in the second half of that year.

After allowing for American defence aid, the deficit was only small but the position cannot have improved in the first quarter of 1955, for the overseas trade returns reveal a substantial further expansion of imports unaccompanied by a corresponding increase of exports.

Moreover, the incomes—the spending power—of the people are still rising. In the first three months of the year many millions of workers have been granted pay increases. These, in the aggregate, represent an annual sum almost as large as the advances granted during the whole of 1954. This money will still further expand demand, and the danger will be that this may both divert to the home market goods which could be exported and lead to yet more goods being imported.

If, then, Mr Butler were to do what Chancellors of the Exchequer normally do when they can foresee a surplus—namely, pass it on to the taxpayer in tax alleviations—he would, it would seem, still further inflate demand and still further increase the inflationary pressure which has been pushing Britain's balance of payments into deficit.

Yet Britain remains one of the most highly taxed, and very likely the most highly taxed, of the world's countries. Are we then, just when the opportunity for some slight alleviation presents itself, to abjure all lightening of our load and gird ourselves up to continue carrying it? Many people will ask that question—are indeed already asking it when they are confronted with the case for another 'tough Budget.'

Mr Butler, therefore, has some difficult decisions to take. If he feels thorough-going austerity to be an impracticable policy for political reasons, he may grant concessions which are specially aimed at increasing 'incentive' and perhaps do not come into immediate effect.

There is certainly very strong popular support for an extension of the income-tax relief of 'earned income'. In his first Budget, three years ago, Mr Butler increased this from one-fifth to two-ninths subject to a maximum allowance of tax on £450 (i.e., earned incomes of £2,025 received the maximum benefit), and he then said that he would have liked to raise it to one-quarter. It is not impossible that he may this year carry out this ambition, perhaps with some extension of the upper limit of income enjoying the relief.

There is the possibility, too, that he may make other adjustments of income-tax incidence in the light of the report of the Royal Commission on Taxation which was recently submitted to him. Should he make any considerable concessions to income-tax payers, he would presumably have to make some reduction in indirect taxation as well, for it has become almost an unwritten law that the two 'ugly sisters'—

which is what a Chancellor of the last century called 'direct' and 'indirect' taxation—must receive similar treatment.

Among indirect taxes those which would rank high for preferential consideration would be purchase tax—notably in view of the cotton trades' present difficulties—on textiles and clothing, and the oil duty which is a tax on transport and an addition, therefore, to all industrial costs.

Sir Winston Churchill, when he was Chancellor of the Exchequer 30 years ago, shortly before one of his Budgets uttered the warning: 'Blessed are they that expect nothing, for they shall not be disappointed.' It would certainly seem wise this time too, not to pitch expectations very high.

ECAFE

REVIEW OF ACHIEVEMENTS

When the Eleventh Session of the United Nations Economic Commission for Asia and the Far East (ECAFE) ended in Tokyo on April 7, its chairman, Tatsunosuke Takasaki, observed that it had provided a unique opportunity for an exchange of information on Asian economic progress and problems and given encouragement to increased efforts towards mutual assistance and co-operation.

In its report to the UN Economic and Social Council the Commission noted that ECAFE has 'steadily grown in stature and on account of its valuable contribution to the economic development, has come to occupy a place in the hearts and minds of the people in the region.'

Over 200 delegates from 26 Asian and non-Asian countries attended the conference, as well as observers from various United Nations specialized agencies and non-government organisations.

Main achievements and points of discussion were:—

1. In a survey of the Asian economic situation, extending for more than two days of the conference, general progress in the region's agricultural and industrial production was noted as well as a firm determination of Asian countries to proceed as quickly as possible with economic development and especially industrialisation, despite difficulties of finance and other basic weaknesses of Asian economies.

2. One of the outstanding and most encouraging features of the conference was the spirit of understanding and goodwill in which Asian and non-Asian countries approached the huge task of Asian economic development as a 'co-operative endeavour' in which efforts of Asian countries were being reinforced by the help from the more advanced countries. The conference also showed an increasing measure of intra-Asian co-operation in the field of technical assistance.

3. Economic progress, though significant, has not yet lifted Asian incomes and food consumption above

pre-war, and a serious plea was made by Asian delegates for foreign aid to be increased to a volume manifold its present size. It was pointed out that the present \$1,000 million annual inflow of foreign capital falls far short of the estimated \$5,000 million amount required to overcome the present 'tendency towards economic stagnation.'

4. The conclusion of international commodity agreements for wheat and sugar was welcomed as a measure designed to defeat the instability of agricultural raw material exports and the hope was expressed that the recently established Commission on International Commodity Trade would produce good results. The US, allaying misgivings especially of Burma and Thailand, gave repeated and firm assurances that US agricultural surpluses would not be dumped and would not unduly disrupt world markets.

5. Much emphasis was laid on achieving a balanced economic development with due recognition being given to the importance of agriculture, since agricultural surpluses were essential to provide the foreign exchange for the purchase of industrial equipment.

6. Considerable support was given to suggestions for increased trade within the region and for greater regional co-operation in such fields as rice, iron ores, coal, etc. One of the proposals made at the conference was that ECAFE, in view of the present difficult rice situation, should bring representatives of supplying and consuming countries together for discussions about long-term solutions of difficulties arising from current rice surpluses.

7. Attention was focussed on the vast human resources in the region on the one hand and the shortage of trained personnel as one of the major obstacles to more rapid economic development on the other hand. The importance was stressed of awakening the consciousness of the masses so that they would 'accept' immediate sacrifice for future economic progress.

8. In view of the considerable unemployment and under-employment in the region emphasis was laid on economic development projects that would utilise the region's human resources, with attention being paid particularly to the progressive development of cottage and small scale industries and community development programmes along the lines of traditional self-help methods of co-operation present in Asian countries and which have proved a marked success in India.

9. Keen interest was shown in the possibilities of the use of atomic energy for peaceful and industrial purposes, and the view was expressed that Asian countries should watch developments closely lest they 'miss the bus again.'

10. The Commission felt that the time has come to give closer attention to programmes of economic development and planning. The secretariat was authorised to proceed with continuing projects and activities on a high priority basis dealing with economic development and planning and providing in particular

Phone: BANK 2321 (8 Lines).

But India does not, on this account, insist on the adoption of her particular mode of evaluating the world situation as long as there is agreement on peaceful settlement of world affairs. The need for co-existence cannot be wished away by removing from the agenda the word "Co-existence" any more than it can be had by merely putting it on the agenda paper.

The Indian desire for an agreed agenda, and the exploration of the largest area of agreement, is not activated by a desire to burke awkward issues, but by elementary practical considerations. In a Conference in which the delegates will have only forty working hours, it is fantastic to attempt to discuss every controversial issue of the region. I wonder whether

they would get through half the agenda that they have finally adopted if they had to translate every speech made, and every nation wishing to speak on a subject insisted on its right to do so. Already, India and China have set a good example by forgoing certain of their opportunities to speak. So, it is necessary to view the value of the Conference in solving specific questions even in their broadest outlines with a great deal of reserve. In justice to the sponsors, it is to be noted that they did not set out to do anything of the sort. A great deal of exchange of views, both in and out of the Conference halls, an assessment of the area of agreement, and the sowing of seeds of understanding by personal contacts and general increase of friendliness and, above all, the focussing of world atten-

tion on the common problems of the comparatively underprivileged peoples of the world—these are the principal aims of the Conference. There is nothing in all this that should bother disinterested observers.

One interesting development of the Conference is the increasing emphasis on economic questions. Each of the Colombo powers has submitted proposals for discussion on the question of economic co-operation. Indonesia has put forward the idea of regional planning; Burma has suggested a permanent Asian Economic Secretariat, while Pakistan is supposed to have urged that all industrially under-developed countries should take a united stand to achieve stabilisation of prices of primary products and raw materials. India, again

showing her practical sense, has already suggested a Conference of Asian powers in Simla next month to discuss the question of proper utilisation of US aid, again demonstrating that she has no particular affiliation to any ideological block and that all she is interested in is the maximum utilisation of help, for the benefit of the under-developed nations, from whatever quarter it comes.

The significance of the Bandung Conference lies, then, in its being a symbolic occasion and the commemoration of a turning point in history. For the first time, representatives of more than half the population of the world, occupying a quarter of the earth's surface, sit together to discuss their common problems. As Mr Nehru put it recently: "Bandung represents the new spirit of Asia which in itself represents the spirit of the time. When anything is in tune with the historical process, it is bound to triumph in spite of difficulties. We are marching in step with history and so success must come to us. That success is not against any country. It means self-justification of Asia in her own right. It means a healthy climate of peace and co-operation in Asia and the world. It means ultimately helping towards the realisation of the one world idea which must be achieved some time or other if the world is to survive."

In twenty years' time, if we are not all blown up by that time, the Conference at Bandung would appear the most important landmark in the history of this idea.

The universal chorus of post-mortem tributes given to Professor Albert Einstein springs from man's instinctive reverence for greatness he can feel without understanding. The actual contribution of the great scientist to fundamental knowledge is not fully grasped by more than a handful, though the few who claim to know do not quarrel over it. Like many other explorers of truth before him, Einstein had his measure of personal suffering, through contemporary politics. A rediscoverer of the universe, he was an exile from his own country. The exploitation of atomic energy has proceeded from one of his formulas, a development over which he has expressed alarm. Einstein left his brain for research and desired that the rest of his body should be cremated—symbolical of a mind which seeks to put everything to the best use.

Bombay Review

Gateway Gossip

Synthesised Views on Rationalisation

THE cotton textile town of Ahmedabad did not have any too good a year in 1953. Ahmedabad has been peculiarly susceptible to the breaking down of negotiations; and agreements which the Ahmedabad Millowners' Association had with the Textile Labour Association for settlement of labour disputes out of court by conciliation and arbitration came to an end in July last year. But, on the whole, relations with labour continued to be cordial, these agreements being extended, by mutual approval, until the end of 1954. But, when the matter of announcing a bonus for 1953 cropped up, all such agreements proved to be of no avail; and all the disputes in this regard were to be decided by the Courts.

This is the sort of picture that has been painted by Mr Surottam P. Hutheesing, when he presided over the annual general meeting of the AMA last week. But, while 1953 was a year in which "a considerable number of mills incurred losses aggregating to a huge sum," the AMA President was able to give the heartening news that the working results for 1954 were "expected to be better in view of the improved supply position of Indian cotton". It is no mean improvement that has taken place in the availability of Indian cotton; it is, indeed, a matter for gratification that the dependence on imports of raw cotton has been largely reduced. In 1953-54, mill consumption of Indian cotton reached the high level of 38.9 lakh bales, while imported cotton used was of the order of 7.2 lakh bales. This last figure represents the lowest amount of raw cotton imported since Partition. What this growing independence from foreign cotton means in terms of rupees and annas can best be understood by the fact that, in 1951-52, 12.4 lakhs bales of cotton had to be imported at a cost of Rs 124 crores, while, in 1953-54, the need for imports was reduced to 6.9 lakh bales costing Rs 56 crores. Side by side with the improved position of cotton in the Indian economy, production of mill-made cloth has, as Mr Hutheesing pointed out, been "the highest in the history of the country."

But what I found interesting in Mr Hutheesing's speech is not so much the specific facts about the cotton and cotton textile economy in past years; of much more import, I feel, is the thoughtful list of suggestions given by him for the future of the cotton mill industry. In this regard, he has referred to what was reported by the Taxation Enquiry Commission, the action that has been taken by Government, statements made on the floor of Parliament and the suggestions put forward by the Kanungo Committee. A synthesis of the views under these four heads is revealing in the extreme; and, for the cotton mill industry, I do not believe that such an analysis has been undertaken before. We may go over these one by one.

The Taxation Enquiry Commission had recommendations of two sorts for the cotton textile industry. The first was that the cess levied on mill cloth for the benefit of khadi and handloom industries was, in principle, a measure which we should not have in the Indian economy. The Commission have stated, in clear terms, that "to link a specific burden on a segment of industry with benefit to another would not be a wholesome practice as it would detract from the unified administration of public finance." Mr Hutheesing deplors the fact that this recommendation of the Matthal Commission has been shelved by the Finance Minister, while the other, relating to enhanced excise duties on cotton cloth, has been accepted and implemented.

Of course, it is understandable that Government should have been faced with conflicting desires. They are more or less pledged to help the khadi and handloom industries as far as is in their power. On the other hand, they are equally pledged to accept, in principle, the recommendations that have been made by the Taxation Enquiry Commission. In the present case, it would appear that the Government ability to help the handloom industry was dependent on the continuance of a form of cess which the Taxation Enquiry Commission have decried. It may be that, in future years, Government will be in a position to offer such help to the handloom industry without extracting the monies for it from the mill industry. It is to be hoped that Government will so reach a position, for, it surely is inequitable that Government should implement only such of those measures as suited them.

Another recommendation of the Matthal Commission, which is not of little significance to the cotton textile industry, is the full-on grant of a Development Rebate of 25 per cent which, in effect, presents the industry with a tax-free gift of the order of a quarter of

the worth of all new plant and machinery. All this is to me good. That this should be a relief to industry and an incentive to industry is undoubted. But, when such new plant and machinery is in the nature of purchases for the purpose of modernisation, obviously no new employment opportunities would be created; on the contrary, with modernisation, the need for labour force might be somewhat reduced. If, therefore, modernisation is to be helped by way of a Development Rebate, it stands to reason that there is equal acceptance of the thesis of rationalisation. For, if there is no acceptance of the thesis of rationalisation, the net effect would be that new plant would have been installed, but the mill would carry a labour force much in excess of its man-power requirements.

At this juncture, I might refer to the resolution that was adopted in Parliament on the need for rationalisation of the textile industry. The cotton textile industry is one of two in India whose plant and machinery are old, obsolescent. Of course, Parliament made it clear that such rationalisation must be encouraged so long as it causes the least amount of displacement of labour and so long as it provides reasonable facilities for the employment of the displaced labour. In an article in this section some months ago, I referred to the fact that rationalisation was the greatest creator of jobs; the line of logic that led to such a conclusion, I need not repeat here. But, as far as India in particular is concerned, rationalisation is looked upon with abhorrent eyes by labour—because it is the general thought that employment opportunities cannot but stand reduced with modernisation of plant and machinery. Thus, while in principle, rationalisation is accepted as something that is desirable for the cotton textile industry, the powerful interest that is labour considers it a body that will involve mass displacement of labour and, therefore, places every hurdle in the way of achievement of such rationalisation.

Now, to come back to the Taxation Enquiry Commission. Mr Hutheesing is very clear in his understanding of the connection between the recommendation of a Development Rebate and the question of rationalisation. He says: "...in my opinion, if full benefit of the former concession (Development Rebate) is to be derived, it would be imperative both for Government and for the labour to adopt a helpful attitude towards modernisation and rationalisation of production and co-operate in bringing about necessary improvement in the industrial set up."

Before we attempt a summing up of the problem of rationalisation, we might examine what the Kanungo Committee has to say on the subject. This Committee's approach is sound: it has realised the need that there is for the rehabilitation of the textile mill industry and the desirability of the installation of automatic looms; the implementation of these two recommendations will, surely, have far reaching effects on the earnings of the workers and on the quality of the product. But, even as Parliament attached a proviso to rationalisation by insisting that there should be little or no displacement of labour, the Kanungo Committee has qualified its support of rationalisation by suggesting that it should be effected over a period of 20 years. Now, 20 years is a full generation's time. In 20 years, we can lose all export markets that we may now possess. Would we be justified in so endangering the prospects of our export industry?

The urgency of rationalisation for the cotton mill industry can the more be appreciated if we take into consideration the fact that, during the war years, it was not possible for the mill industry to obtain any new machinery whatsoever. Not only was new machinery not available; the industry was entrusted with the responsibility of making good the losses of textile cloth availability consequent to the war. Double worked and treble worked, the machinery was in a bad way at the end of the war. But, as I say, modernisation is resisted at every stage.

Another contradiction is that the Kanungo Committee has set a high target for exports of mill-made cloth from India. The ability to export is dependent upon two factors. The first is the competitiveness in price of Indian made cloth. The second is the standard of the cloth that we produce. The obsolete machinery such as the cotton textile industry is saddled with adds to the cost of production, and therefore reduces the competitive advantages of Indian made cloth; secondly, old plant and machinery are less capable of satisfactory production of quality goods. Thus, barriers to rationalisation in effect thwart the hopes that we might have of adding to and maintaining our export markets, firstly, by making our goods more costly and, secondly, by making our goods inferior in quality.

I can understand it that, in a country which already knows unemployment of the size that we unfortunately possess, there should be a marked opposition to any measure or series of measures which might further reduce em-

New Deal for Labour

At the Bombay State Labour Advisory Board's session, last week, the Government made it known that they propose to introduce shortly amendments to five major labour legislations now in force in the State. The legislations concerned are the Workmen's Compensation Act, the Payment of Wages Act, the Minimum Wages Act, the Industrial Disputes Act and the Industrial Employment Act. These measures, would go a long way to safeguard and promote the legitimate interests of labour and towards harmonious relations between employers and employees.

Some of these proposals, the Workmen's Compensation Act, for instance, had been pending for some time now. Apparently, the State Government would have gone ahead in the matter but for the contemplated move of the Union Government to enact a comprehensive legislation.

The details of the proposed amendments are not known, but it is learnt that they would relate to (1) the extension of the Act to cover more workmen, (2) increase the quantum of compensation, and (3) provision for securing expeditious payment of compensation.

The Industrial Employment Act would be applied to all establishments employing at least 50 workmen.

The amendment on the Payment of Wages Act is a direct effort to help the small and growing industries. The financial burden imposed by the provision for payment of lay-off and retrenchment compensation has resulted in the stunted growth of the smaller industrial concerns. It is proposed that compensation should not be payable in addition to other cash benefits like gratuity or in case of temporary or permanent closure for which the

employer could not be held responsible.

Labour relations have, of late, vastly improved as a result of schemes relating to labour and labour welfare brought forward by the State, the more enlightened and realistic policy of the employer and finally the helpful attitude of the employees.

The Labour Advisory Board considered welfare schemes costing Rs 50 lakhs for inclusion in the State's Second Five-Year Plan. The proposed schemes are:

- (1) Establishment of a model industrial canteen
- (2) Setting up of a non-official council for promoting industrial health, hygiene and safety.
- (3) Organization for carrying on research in diseases and hazardous occupations.
- (4) Decasualization scheme for textile workers.
- (5) Government industrial training workshops and extension of existing workshops at Ahmedabad, Sholapur and Kuria.
- (6) Improvement of supervision of the Bombay Shops and Establishments Act.
- (7) Socio-economic survey and collection of labour statistics, and
- (8) Reorganization of the institute for training of labour welfare workers.

The workers' grievances are, however, many and long-rung. Labour welfare schemes have to find a prominent place in the Second Five-Year Plan. The Bombay Government have given a lead in the matter and have shown greater responsiveness to suggestions and representations from the various quarters. It may be hoped that these several legislations would crystallize in the near future into a national policy giving the labour the status of a real partner in industry.

Discussing the Means:

The symposium organised by the Progressive Group in Bombay last week was notable for the range of topics that centered round one theme, namely, the raising of the standard of living in India. Member of the Tariff Commission, Mr B. N. Adarkar dwelt on the decisive nature of a correct taxation and price policy in stimulating a high rate of saving and investment in developmental activities. But he does not get down to define the correct policy. To what extent current consumption is to be curbed, if at all it has to be, is, for instance,

a vexing problem, but nevertheless it has to be defined and made clear.

As regards increasing the volume of national income and employment opportunities, Mr Adarkar favours deficit financing on a large scale. Other measures suggested by him include preventive checks on population growth, increased expenditure on social services, positive measures to reduce inequalities in income and rationalisation of consumption habits to eliminate wasteful habits of the people. Few would dispute the desirability of these remedial measures. But, the problem that faces the planner is to set them through, without upsetting the economy.

A common note that ran through the entire gamut of the discussion was the need to sustain the buoyancy of the private sector. Mr Milne, the President of the Bombay Chamber of Commerce pointed out that the Steel Plant at Kharakela involving an investment of Rs 70 crores would employ only 5000 persons. He then proceeded to say that the gap has to be bridged by large-scale activities in the private sector. But how large-scale ventures in the private sector would absorb relatively greater numbers is not clear.

The Secretary of the Indian Banks Association, Mr S. G. Ramani, was critical of the policy of the Government which he described as impeding the growth of certain sectors of industry so as to help the cottage and medium-sized industries. Now the very argument that small industrial concerns involving large outlays do not provide immediate employment on a correspondingly high scale, reinforces the case for cottage and medium-sized industries. Encouragement to the small unit should not, therefore, be interpreted as a check on large-scale industries.

Worker's Health Insurance:

Even at the time when the Employees' State Health Insurance Scheme was launched, it was recognised that its successful implementation would depend on the spirit in which the medical profession would co-operate. From the memorandum submitted by the INTUC to Bombay's Labour Minister, it is clear that unless the authorities take a more liberal attitude, the scheme may become unpopular with the workers.

It is learnt that the Hind Mazdoor Sabha would submit a similar memorandum to the Union Minister for Labour, setting out the hardships faced by the insured worker and the anomalous working of the scheme.

The main complaint of the employees is that the number of diagnostic centres and panel doctors is grossly inadequate. It is stated that panel doctors, in some places, have

refused to enrol workers so as to avoid paying visits to them. Inadequate treatment and delay in examinations aggravate the plight of the worker.

Also, the panel doctors are advised to see that the cost of the scheme did not go high. That naturally puts a check on the doctor's discretion in prescribing treatment. The hapless worker faces another hurdle at the chemist's shop where he is refused certain medicines in spite of recommendations of the panel doctor and the diagnostic centre.

Sometimes, workers involved in serious accidents are not admitted into the hospital till the accident report from the employer is produced.

The INTUC deputation suggested that a Medical Board be constituted to assess permanent disabilities due to injuries in accident and also to appoint an authority such as Public Relations Officer to solve the workers' difficulties and provide them with immediate relief.

May be, some of the allegations made by the employees will be contradicted by those responsible for the working of the scheme. But, it cannot be disputed that the scheme has fallen far short of expectations. If the workers' contribution is made compulsory, it is natural if he expects a better deal than that which he used to get free before. The State Minister has given an assurance that the defects in working shall be rectified. But, by their very nature, they present a stiff problem unless all concerned co-operate to carry out the scheme in letter and in spirit.

Housing Scheme for Hyderabad:

The Hyderabad Government have chalked out an ambitious scheme to deal with the problem of housing accommodation in the State. The first step in the programme was taken when a bill was introduced in the Assembly to establish a high-power Housing Board competent to contract and to acquire and hold property.

This measure is remarkable for the range of powers and freedom of choice given to the Board. It can undertake works in any area to which the Act applies and incur expenditure as it may consider necessary from time to time. Powers are also granted for the compulsory acquisition of land according to legal procedure for the eviction of unauthorised tenants. Also, for purposes of the Act, all the assets of the Hyderabad City Improvement Board and the Secunderabad Town Improvement Trust shall vest in the Board.

The administrative expenses of the Board will be met by the Government. (Continued on page 836)

World of Cotton

Production Reaches Pre-Partition Level

AS pointed out last week, the announcement of an export quota of one lakh bales of cotton staple or below has not made its influence felt on the Cotton market as the same was unaccompanied by reduction in export duty which continues at Rs 125 per bale or Rs 250 per candy. Prior to this announcement on 12th April afternoon, some inspired buying from knowledgeable circles did come forth, resulting in a modest rise in prices. But, later on, as stale liquidation came forth, the market receded sharply touching new low levels in the recent downward movement. However, lower levels brought forth some replacement buying on slightly better advice. The market again met with selling pressure at higher levels, but lacks confidence in view of the fact that spot dealers have burnt their fingers rather badly this season due to their calculations having been misled. The crop this year has turned out to be exceedingly large around 47 lakhs bales and this is the main reason for the bearish feeling which has been in evidence for the last three months. It is to be noted that the estimate of the crop has been raised upward from time to time; and, against the estimate of 43 lakh bales at one stage, it has now turned out to be around 47 lakh bales.

The mills, knowing well the supply position, have tried to bargain along the line as there had been no outlet for the staple varieties, even this quota has come rather too late when the world cotton markets are in a depressed state. The uncertainty hanging around the move for US subsidy in the coming season, beginning on 1st August, still stares the cotton trade. It is true that the consumption of Indian cotton by the mills in India has increased on the increase and, this season, it is expected to beat all past records; but even then this increase will not mean much in view of the sizable increase in crop. It may be noted that the cotton production has almost reached the pre-partition stage. This is, no doubt, a creditable performance considering the fact that, after partition, the crop had gone down to as low as 26 lakh bales. If the cotton economy of the country which has attained robust health is not to be emasculated, the Government will have to remain vigilant and not allow this season's history to be repeated at any cost. The first mistake that the Government committed for this season was to reduce the selling prices of cotton by Rs 55 per candy and even while the crop was going well, the belated export policy along with the

hand-to-mouth purchase policy of the mills adversely affected the growers' income. The position is now causing anxiety and it is felt that, unless the export duty is reduced, the situation may not brighten up. What is wanted is to arrest further fall in prices to uneconomic levels.

It may be noted that, out of the total consumption of cotton at 46.07 lakh bales during the 1953-54 season, Indian cotton accounted for 38.89 lakh bales. This season, the consumption of Indian cotton is expected to increase to 40 lakh bales. During the first five months of this season ending 31st January 1955, total consumption has amounted to 1,995,092 bales out of which Indian varieties figured at 1,700,352 bales as against 1,638,381 bales out of 1,933,944 bales during the corresponding period of previous season.

The third change effected in the matter of excise duties on cloth this week has been interpreted somewhat bearishly in cotton trade circles. The increase of one pie in excise duty on fine cloth from one anna per square yard to one anna one pie, as well as the change in the basis of handloom ce's of one pie from linear yard to square yard has once again adversely affected sentiment.

ICC May, after rising to Rs 552.4 from Rs 548, dropped down to a new low level of Rs 541, to rally to Rs 554, to react to Rs 550. The premium for August narrowed down up to Rs 7-8 from Rs 12-8.

The price range in ICC May, during the past few weeks, was as follows:

Week ended:	High	Low	Closing
5th March ..	576 8	561 0	565 0
12th ..	563 0	554 4	555 0
19th ..	562 8	547 12	557 8
26th ..	543 8	538 0	540 8
2nd April ..	557 0	547 0	551 12
9th ..	550 0	544 0	549 0
16th ..	552 4	543 0	551 0

Cloth Market:

The Cloth market continued to be in good shape, mainly on account of sustained domestic demand. Up-country centres are carrying out fair purchases, but export demand is still slow. Some of the mills are sold up to the end of June and July. Dealers complain that, on account of the recent constant changes in the excise duties, the latest being effected from 18th April, they have to suffer. The increase in duty on fine cloth is being criticised as it will cost about 4 annas more, while the change in basis from one pie on linear yard to square yard will go to swell the funds for helping the handlooms.

Certain trade circles have opposed the move of the Government of India

to reduce import duty on British cotton textiles with a view to help the Lancashire industry. A Conference of representative millowners and of textile trade has been convened on Thursday to discuss ways and means of giving relief to the export trade of Lancashire with India. The outcome is awaited.

Exports of mill-made cloth in March from India are estimated around 69.7 million yards out of which coarse cloth account for 14 million yards, medium 50.6 million yards, fine 2.7 million yards and super-fine 2.4 million yards.

Exports:

The Government of India released on April 12 a further export quota of one lakh bales of Indian cotton of staple length 2" and below of any crop (i.e. old and new), subject to the condition that, of this quantity, 35,000 bales are to be exported from Saurashtra Ports.

Exports of cotton to foreign countries from Bombay from 1st September, 1954 to 14th April, 1955 totalled 129,940 bales as against 99,473 bales for the corresponding period of last year. Particulars of shipments are as follows:

	(In bales of 392 lbs.)	1954-55	1953-54
United Kingdom ..	17,628	11,212	
Continent ..	31,212	20,855	
China ..	1,634	251	
Japan ..	62,982	63,327	
U.S.A. ..	14,926	12,376	
Other countries ..	1,558	1,452	
Total ..	129,940	99,473	

Stocks of raw cotton held by exporters, dealers and mills in Bombay, or 14th April, were estimated at 4,58,846 bales as against 606,381 bales same time last year.

The Egyptian cotton market kept quiet as foreign buyers adopted a cautious attitude in view of the possibility of subsidy on US cotton next season. Exports for the first seven months of the season, i.e. 31st March, came to 437,061 bales as against 463,717 bales for the same period a year ago.

Foreign Cotton:

The New York cotton market ruled weak during the past week with intermittent reactions. The price for May position dropped down to 33.25 cents from the week's high level of 33.65 cents. Dull activity in the textile and export markets prompted the main depression. Consequently, trading interest in May and July was rather restricted. Traders preferred to switch over to New crop contracts from current crops. Exports of cotton from US this season so far have amounted to 29.61 lakh bales as against 24.83 lakh bales for the corresponding period of last year.

The Karachi cotton market, after keeping weak, tried to steady up. N.T.R.O. May, after dropping to Rs 61, recovered to Rs 62, while July came up from Rs 61-8 to Rs 61-15. In spot section, Sind Deshi was reported at Rs 59, Punjab Deshi at Rs 51-8, 4F Roller ginned at Rs 57, 289F, N.T. Roller at Rs 75 and 289F Punjab Roller at Rs 65.

Arrivals of cotton in Karachi from 1st September, 1954 to 31st March, 1955 totalled 902,000 bales as against 1,043,000 bales for the corresponding period of last year. Stocks in Karachi, as on 31st March, were estimated at 490,000 bales as against 417,000 bales last year. Cotton endorsed for exports till then amounted to 432,160 bales as against 752,610 bales last year.

The Egyptian cotton market kept quiet as foreign buyers adopted a cautious attitude in view of the possibility of subsidy on US cotton next season. Exports for the first seven months of the season, i.e. 31st March, came to 437,061 bales as against 463,717 bales for the same period a year ago.

Gateway Markets

Gold & Silver

THE tendency on the Bullion Exchange, during the past week, after keeping subdued turned better on enlarged off-take. Spot prices in gold have climbed up to a new high level, to react to a small extent. The difficulty of selling smuggled gold in open market due to vigilance of the authorities as well as the passing of the Sea Customs Amendment Act, reports of strike in Kolar Gold-Fields and the seasonal demand were instrumental in pushing up the gold rates. It is considered likely that off-take in gold as well as silver will remain satisfactory for another fortnight, but thereafter it will dwindle so as to cause misgivings in the minds of the bull

operators. The bulls, however, have been taking opportunity to liquidate their holdings in silver on this factor. However, they are proceeding cautiously so as to keep the bears alert and force them to cover the sales. But only the most confirmed bears are sitting tight on their sales knowing well that, with the large carryover of stocks at the end of the season, the bulls will have no other alternative but to reduce their commitments.

The Bullion Board is once again facing a dilemma regarding imposition of margin in Jeth delivery as backwardation charges, no doubt, warrant such imposition. Even the legal opinion, which is obtained, favours this action. There is already

margin in silver and gold for Valsakh deliveries. However, some of the directors, who are taking sides in favour of the bulls, hesitate to take this action which would prove unfavourable from the view point of bulls.

Silver for Baisakh delivery, after reacting to Rs 162-12, improved to Rs 163-10, to be placed at Rs 163-5. Jeth delivery was quoted at a discount of Rs 3 at Rs 160-5 and Ashad at Rs 5 discount at Rs 158-5. Spot silver was quoted at a premium of Rs 3 over Baisakh delivery around Rs 166-8.

Gold for Baisakh delivery moved up to Rs 94-10 from the week's low level of Rs 92, to be finally placed at Rs 94-5. Jeth delivery was quoted

at a discount of Re 1-2 at Rs 93-3 and Ashad at Rs 2-4 at Rs 92-3. Spot Mysore gold commanded a premium of Rs 2 over Baisakh delivery at Rs 96-4. Sovereign prices improved to Rs 60-14.

*

Oils and Oilseeds

The Oilseeds market showed signs of stability after continuous dull conditions which persisted for weeks together. Prices improved allround. With the acceptance of the amended bye-laws of the Bombay Oilseeds Exchange by the Forward Markets Commission, trading in castor-seeds for September delivery commenced on Monday, 18th April, at Rs 76-8 on a premium of Rs 4-4 over the maturing April delivery. The new bye-laws introduce weekly clearings, require contracts to be made in writing and prescribe statements of transactions to be submitted by members. A system of graded margins for outstanding business in forward trading in castor-seeds has also been introduced. No margin will be imposed on outstanding business up to 15,000 candelis. A margin at the rate of one rupee per candy will be levied for the next slab of 10,000 candelis, the margin rising by one rupee for every subsequent slab of 10,000 candelis. The maximum margin, that could be levied, is fixed at Rs 4 per candy which would be applicable to the value of outstanding business exceeding 45,000 candelis.

The Indian Central Oilseeds Committee, which met early this week at Rajkot, decided to recommend to the Government of India to establish an Export Promotion Council for oilseeds and vegetable oils at an early date for promoting the export trade of vegetable oils and oilseeds. The Committee also recommend that export duty on de-oiled groundnut cake as well as groundnut cake from expeller be reduced and a more liberal quota of linseed cake be allowed in view of the reported large accumulation of stocks in India. The Committee sanctioned several schemes of agricultural research and development, village oil-crushing industry and marketing and oil technology.

Groundnuts Bold ready reacted to Rs 19-8 from Rs 20-4, to recover to Rs 19-11. April-May, after being sold down to Rs 19-9 from Rs 19-14, rallied to Rs 19-14, while June-July delivery was marked down to Rs 20-8, to be finally placed at Rs 20-15. Groundnut oil was being put through at Rs 11 to Rs 11-2 per quarter.

Linseed prices hardened by a rupee per cwt. to Rs 21-12 on demand from shippers, while June-July after being done at Rs 20-7 improved to Rs 21-2. Linseed Oil was marked up to Rs 13.

Castor-seeds May delivery moved narrowly between Rs 71 to Rs 72-3.

Delhi Review

State Bank of India

THE scheme of the State Bank of India, as envisaged in the Bill introduced by Sir Chintaman Deshmukh last week-end, differs in some respects from the scheme as outlined in the Report of the Committee of Direction of Rural Credit Survey. In the latter case, the State Bank of India was to be the culmination of a process involving the following stages.

First. Reorganisation of the existing shares of the Imperial Bank of India so as to make all shares have a face and paid-up value of Rs 125 per share, each share of Rs 125 having one vote.

Second. Enlargement of the Imperial Bank by amalgamating the State-associated banks with it, the shareholders of the latter receiving compensation in the form of shares of the amalgamated bank on the basis of a calculation suggested in the Report.

Third. The existing shares of the Imperial Bank and the shares to be issued for compensation are to be named "A" series.

Fourth. The capital of the Imperial Bank is to be increased to Rs 20 crores, the paid-up capital ultimately becoming Rs 15.35 crores.

Fifth. Of the paid-up capital of Rs 15.35 crores, Rs 8.35 crores will represent the existing shares plus the new compensatory shares. The balance of Rs 7 crores is to be raised by the issue to the Government and the Reserve Bank of 5,60,000 new additional shares to be named "B" series, the shares being issued at par.

Sixth. After such reorganisation and expansion of the capital structure and after such amalgamation of other banks and capital-subscription by the Government and the Reserve Bank, the Imperial Bank, so organised, so enlarged and so integrated, is to be christened the State Bank of India.

The distinction between the two series of shares and the relative voting strength between private shareholders and the State were thus summed up by the Committee of Direction:

The "B" shares would be allotted exclusively to the Government of India and the Reserve Bank and would not be transferable to other parties. We suggest that any future issues of "A" and "B" shares should be subject to the same proportion and (as regards the latter) the same conditions as now imposed. One of these conditions, as recommended above, would be the limitation on dividend. We suggest that the statutory limit placed on the "B" shares be expressed as a maximum of 5 per cent; i.e., the dividend on a "B" share may in certain years, if so

decided, be even less than 5 per cent. In view of the restriction on transferability and limitation on dividend the 'new additional shares' would, as stated in the recommendations be allotted 'in part to the Government of India and the Reserve Bank. We suggest that, out of the issue of new additional shares of the total value of Rs. 7 crores, shares of the value of Rs. 4 crores be allotted to the Central Government and of Rs. 3 crores to the Reserve Bank. The net position will then be that, in the State Bank of India, the Government of India will hold 'A' shares of approximately Rs. 1 crore and 'B' shares of Rs. 4 crores, i.e., of Rs. 5 crores in all; the Reserve Bank will hold 'B' shares of Rs. 3 crores; together, Government and the Reserve Bank will hold Rs. 8 crores; and the other shareholders will together hold 'A' shares of Rs. 7.35 crores. All the shares will be fully paid-up; the number of shares in the possession of the Government of India and the Reserve Bank will together be 640,000 and those in the possession of private shareholders will together be 5,60,000 the percentages of votes held being 52 and 48 respectively.

On the footing that this framework is accepted, the Committee of Direction claimed that "the present shareholders, either of the Imperial Bank or of the other State-associated Banks, are in no way disturbed in regard to the more important aspects of either ownership or value of their part of the assets of the particular amalgamating bank in which they happen to hold certain shares."

The proposals announced by the Finance Minister have the appearance of reversing the stages implicit in the plan of the Committee of Direction. The State Bank of India is to be set up as the first step. On the "appointed" date, it will be taking over the Imperial Bank as a going concern. The State-associated banks are to be amalgamated at a later stage. And, in all this procedure, the "disturbance", which the Committee of Direction sought to minimise, may well be maximised. In the Committee's scheme, the shareholders of the amalgamating banks (including the Imperial Bank) would have continued as shareholders of the amalgamated Bank; in the plan now proposed by the Government, on the one hand, the shareholders of the Imperial Bank, which is the only institution dealt with in the present legislation, have the option to take compensation on all their holdings and cease to have any stake in the State Bank while, on the other hand, the Reserve Bank has the absolute discretion to say: "we shall allot only so many shares, and no more". The Committee of Direction recurrently talked of integration—e.g. integration of private shareholders and the Government. The Government seem prepared for the contingency of

shareholders, in large part, washing their hands of the entire business. While the original recommendation was in favour of the Government and the Reserve Bank having, and continuing to have, majority control between them, the present intention is that the majority control will remain solely with the Reserve Bank. While noting that such divergences make clear that Government accept the report of the Committee of Direction in broad principles, but not necessarily in details, I may proceed to deal with the salient features of the State Bank of India Bill.

On a day to be made known as the "appointed day", according to the Bill, the Imperial Bank of India will be taken over as a going concern. From and as on that day, all the assets and liabilities, other interests, rights and obligations will be transferred to and vested in the State Bank of India. Simultaneously, all officers and employees of the Imperial Bank—with the exception of the managing director, the deputy managing directors and other directors—will be taken to hold corresponding offices for

the same tenure and on the same conditions as previously with the State Bank of India. But there is also provision in the Bill by which remuneration and terms and conditions of office may be altered by the State of Bank of India.

Next, as far as concerns the share capital of the Imperial Bank, all shares shall, on the appointed day, be deemed to have passed into the holding of the Reserve Bank of India. Compensation for such shares will be paid by the Reserve Bank of India on a formula on the basis of which the amount of compensation, already fixed, is given in the Bill. The provision for compensation in the case of the nationalisation of the Imperial Bank is similar to the mode that was adopted when the State took over control of the Reserve Bank. Provisions in the Bill which relate to compensation are reproduced in full at the end of this article.

The management of the State Bank of India will be vested in a Board of Directors to be appointed by the Central Government after consultation with the Central Board

in that behalf. The management will comprise:

- (1) A Chairman and a Vice-Chairman to be appointed by Government;
- (2) two Managing Directors to be appointed by the Central Board with the approval of Government.
- (3) six Directors to be elected by the shareholders other than the Reserve Bank;
- (4) eight Directors to be nominated by the Government in consultation with the Reserve

Bank;

- (5) an official Director to be nominated by the Central Government; and
- (6) one Director to be nominated by the Reserve Bank.

The following are the provisions in the Bill for the payment of compensation for the shares of the Imperial Bank which are to be transferred to the Reserve Bank.

1. In this schedule, "shareholder" means any person who immediately before the appointed day is registered as the holder of

a share in the Imperial Bank.

2. As full compensation for the shares in the capital of the Imperial Bank which, by reason of this Act, are transferred to and vested in the Reserve Bank, the Reserve Bank shall pay to every shareholder, in the manner set out hereinafter, an amount calculated at the rate of Rs 1,765-10-0 per share in the case of a fully paid-up share and Rs 431-12-4 per share in the case of a partly paid-up share.

3. Notwithstanding the transfer of the shares in the capital of the

Imperial Bank to the Reserve Bank, any shareholder who immediately before the appointed day is entitled to the payment of dividend on the shares of the Imperial Bank held by him shall be entitled to receive from the State Bank—

(a) All dividends accruing due on his shares in respect of any half-year which ended before the appointed day and remaining unpaid;

(b) Dividends calculated at a rate to be specified by the Central Government in respect of

any period immediately preceding the appointed day for which the Imperial Bank has not declared any dividend.

4. (1) The compensation provided for in this schedule shall be given in Central Government securities, and the form of such securities and the value thereof, computed with reference to their market value, shall be such as the Central Government may, by notification in the Gazette, specify in this behalf:

Provided that where the amount

of such compensation is not an exact multiple of the value of the Government security as so notified, the amount in excess of the nearest lower multiple of such value shall be paid by cheque drawn on the Reserve Bank.

(2) Notwithstanding anything contained in sub-paragraph (1), any person who is registered as the holder of a share in the Imperial Bank on the 19th day of December, 1954, shall if he applies in writing in this behalf to the Reserve Bank before the expiry of one month from

the appointed day, be entitled to be paid, by cheque drawn on the Reserve Bank, any compensation payable to him upto the first 10,000 rupees.

5. (1) Any shareholder to whom compensation is payable under this schedule may apply to the Reserve Bank before the expiry of three months from the appointed day for the transfer to him of shares in the State Bank in lieu of such compensation, and for the purposes of such transfer the value of each share of the State Bank shall be such as

may be determined by the Reserve Bank in this behalf.

(2) If on receipt of an application under sub-paragraph (1), the Reserve Bank, in its discretion, decides to transfer any shares to applicant, it shall issue to the State Bank a warrant in the prescribed form directing it to transfer in favour of the person specified in the warrant such number of shares as may be specified therein out of the shares standing allotted to it under Sub-Section (1) of Section 5, and the

**OVER 1,23,000 POLICIES WERE ISSUED
ASSURING OVER Rs.47,50,00,000**

Way back in 1874, even as its first policy was issued the ORIENTAL adopted as its motto: HEAVENS LIGHT OUR GUIDE. Behind this motto lay the pledge—

- to foster thrift among the people, to help them conserve their saving, to ensure security for their families through life insurance—adequate for their needs and well within their means—and to invest the accumulated savings in Government and other securities that ensure the greatest good to the largest number,
- to provide **TRIPLE-PHASE SECURITY** for the savings of the people—firstly, by introducing in the Policy Contracts benefits designed to completely safeguard every rupee invested; secondly, by handing over a major part of the annual income to the Official Trustee of Bombay to be held in trust for the Policyholders; thirdly, by giving qualified Policyholders the right to attend and vote at meetings of the Company,
- to secure the largest possible returns for the investment of the people,
- to maintain absolute honesty in its transactions.

By steadfastly adhering to these sound principles of working, the ORIENTAL has built up a name that is synonymous with absolute integrity, unimpeachable security and utmost honesty. As a pioneer in Indian Insurance, it has overcome the resistance arising from ignorance and economic backwardness. Its sustained growth has virtually shaped the history of Indian Insurance. And in 1954, which witnessed the triumph of the First National Plan and the Blue-prints of the Second, even as this great Nation of ours made rapid strides towards economic prosperity, the ORIENTAL, this great National Institution, standing foursquare in the forefront of Indian Insurance, recorded another year of splendid achievement by providing greater security for more families and releasing more money for greater achievement in the National economic field.

In conformity with its traditions of serving the people, the ORIENTAL now underwrites every risk that can be insured and, in doing so, it affords the opportunity to its life Policyholders of sharing in the profits of not only life but also all classes of general insurance business.

North Indian Notes

Progress and Prospects

Mr. T. T. Krishnamachari has given a factual and illuminating account of the working of the Ministry of Commerce and Industry in answer to charges of inefficiency. The answer is in the nature of an exposition of the work already carried out and also of targets that are being immediately aimed at.

The most heartening disclosure is a 7½ per cent reduction in the prices of cars by the automobile manufacturers, the initial response to the proposal of the Ministry to go into the cost of production.

Besides, the development of this industry has been satisfactory in recent years. The Hindustan Motors were able to manufacture cars with an indigenous content of 65 per cent; while the Premier Automobiles have touched the 50 per cent level in regard to trucks. The The Standard Motor Company have well been able to stick to their schedule.

The plight of the textile industry has not been altogether neglected. A textile survey has recently been ordered to find out the exact state of the machinery and their needs in the future. It is hoped that imports, as a result, could be planned in advance and worn-out machinery replaced without much difficulty.

Probably, much can be expected of this survey. The survey conducted in the field of machine tool industry, for instance, has served to disabuse men's minds of any conflict between the public and the private sectors. In the absence of any such misunderstanding, green light has been given for augmenting production of machine tools.

In the case of the target for steel, however, Mr. T. T. Krishnamachari has expressed doubts regarding the possibility of producing 6 million tons at the end of the Second Plan. For, any expansion over 4.5 million tons, he says, would involve haulage of 36 million tons of other materials, which constitutes a serious problem for the planners.

One of the new proposals is the erection of three structural units with forging and foundry capacity for taking electricity to the rural and other parts. It is encouraging to note that the private sector is allowed a major or full share in the venture.

Further, Government licences have been issued for setting up three new soda ash factories. Technical assistance for the development of dyestuffs is also being sought from foreign countries. In the case of the tanning industry, the Government are actually trying to bring the small units under a co-operative. While the country has not been wanting in schemes and program-

mes of industrial expansion, unemployment still persists. This is a problem which deserves serious consideration. Mr. T. T. Krishnamachari also refers to disguised unemployment in the rural sector. The solution would be incomplete if, side by side with industrialisation, the development of cottage and small scale industries under proper co-operative organisations is not given the attention it deserves.

Rural Credit:

In his presidential address to the State Ministers' Conference last Saturday, Mr. A. P. Jain stressed the urgent need for expanding rural credit facilities. The magnitude of the problem would be evident when it is realised that, as against the total annual borrowing of the cultivators of Rs 750 crores, only 7.3 per cent of the sum is made available through institutional credit given by the Government, co-operative and commercial banks.

In other words, if the Government aimed at providing half the credit requirements of India through co-operative Organisation, the total value of agricultural credit to be supplied would be eight times that of the sum made available at present.

Clearly, the time has come for rural credit and its associated activities to be geared up "to a rising tempo". The system of credit, accordingly, would have to be strengthened at all levels and coordinated not only internally in relation to different institutional sectors pertaining to short, medium and long-term credit but also with complementary institutions for marketing, processing and other important activities of the cultivator.

The role of the State Bank in extending credit to the rural areas can hardly be under-rated. The Rural Credit Survey Report has been widely discussed and the main steps to be taken for the implementation of the Report have generally been agreed upon. As pointed out by the Minister, the main burden of organising credit co-operative societies at all the levels—apex bank, central bank and primary societies—would fall on the States.

In addition, the States would have to shoulder the primary responsibility for organising co-operative, marketing and processing activities and setting up warehouses at important places. The Ministry of Food and Agriculture would also share the responsibility.

The Reserve Bank, on the other hand, would look after the provision of short, medium and long-term credit and other financial assistance; and the State Bank would be a complementary institution to the

Reserve Bank in its operation in the rural sector.

The immense usefulness of co-operative societies is evident in a number of ways. It is not only the agriculturists who benefit by these societies, but also the artisans and industrial workers engaged in small-scale industries. The needs of the Khadi and cottage industries would also be catered to.

It would, therefore, seem that a dynamic agricultural policy and easy provisions of rural credit are long overdue. Though the Union Minister's address has tilted little that is new, it has served to restate the urgency of the need for reform in the light of recent falling price-trends.

Mechanised Agriculture:

The success which has attended the mechanisation of agriculture undertaken by the Central Government in Kashmir three years ago has tended to make the case for mechanisation stronger than before. Despite the traditional arguments against its introduction in India, the issue has to be reconsidered in the light of recent achievements.

The Central Mechanised Farm in Kashmir, since its establishment in September 1952, has made rapid headway. Over 7,500 acres have already been reclaimed by mechanical means, while the remaining area is expected to be completely restored during the 1955-56 season. A flourishing agricultural colony is gradually springing up amidst what was till recently a wilderness.

The scheme is for a full period of ten years, after which the Farm will be handed over to the Kashmir State. The total expenditure on the scheme is estimated at Rs 1.37 crores; while the corresponding figure of income has been placed at Rs 1.57 crores.

The Farm, irregular in shape consists of a narrow strip of land in contiguous blocks and covers 45 villages. It maintains 39 tractors and other machinery such as threshers, harrow-ploughs, tillers, seed drills, bull-dozers, trucks and trailers. It is engaged in the multiplication of high quality seeds for supply to other states. Aside from Kashmir, Ajmeer and Bhopal have been recipients of large quantities of healthy wheat seeds from this Farm.

The set-up of this Farm in this area has been wholly to the good. Besides a regular and authorised personnel of 125 men maintained on the Farm, casual labour, numbering 300 to 600 per day, is employed on a daily basis. What is more, it has provided seasonal employment to 200 Kashmiri labourers from the Srinagar Valley. The advantages have seeped to the neighbouring villages as well. Several villages adjoining it, which had once been totally neglected, are being rapidly reoccupied. Nearly Rs 3.5 lakhs are

paid every year by way of wages to labourers from these villages.

A reconsideration, therefore, of the need and usefulness of mechanised farming is bound to bear fruit. So long as the objective of intensive cultivation is aimed at, mechanisation seems to offer the right course of action. Should the consequent unemployment problem stare in the face, the success of the new policy will have to depend on the judicious dovetailing of agrarian development with the forthcoming industrialisation schemes.

Rourkela Township:

The Managing Director of the Hindustan Steel Limited who has just returned from a visit to the Rourkela area has testified to the teeming activity that is now noticeable at the project site. This is only to be expected, as agreement over the set-up of the first one-million ton steel plant has already been reached with the Krupp-Dezmag Combine. It is not too much to hope that the other two steel plants will soon fall in line.

What is perhaps most striking is the rapidity with which Rourkela is forging. Already 10,000 men and women are working on the site and work on the new township is fast progressing. About a score of houses would be completed in the first sector of the township.

The acquisition of new land has, however, created a problem. This, though not insuperable, demands prior consideration. About 6,000 persons are likely to be displaced, but the disruption is not expected to be very severe; for, a majority of them have already found employment. The Development officer of Hindustan Steel has also undertaken to find out the exact magnitude of the prospective displacement and to suggest ways and means of providing them with suitable openings. Many of them may be trained as skilled workers and absorbed by the Company.

The Government of Orissa have also evinced their keen concern over the matter; they have erred on the right side by selecting an area to rehabilitate the displaced.

With an encouraging and enterprising start, Rourkela has set an example. Iron ore obtained in this area contains over 60 per cent of iron. The drilling party which has now moved over to the southern section hopes to complete drilling before the rains. The present rate of progress, however, will afford little inkling for speculation over the maximum (six million-ton) output by 1955-56. The Commerce and Industry Minister is only sure of 4.5 million tons. Rourkela has, with reasonable certainty and progress in days to come, every chance of disproving the Minister's calculations.

North Indian Markets

Glut of Sugar

SUGAR markets continue to remain depressed. It is reported that the industry is now facing a crisis in Uttar Pradesh due to accumulation of stocks. According to factory circles, the owners have been able to sell only 20 per cent of this year's production and they have urged the Government of India to drop the extra excise duty on Indian sugar and also to reconsider their sugar import policy. Out of a total of over 60 mills in Uttar Pradesh, only 17 have closed their season and the rest are likely to continue till the first week of May.

The present trend in sugar markets of Northern India has, no doubt, cast a gloomy outlook for the industry in Uttar Pradesh. Prices have so far failed to absorb the additional excise duty, while gur prices, in spite of a small improvement in demand and support from the Government, are unable to display courage. The lethargic state of the market is attributable to the heavy accumulation of stocks and the rise in competitive position of imported sugar by Rs 2-14 per maund. On the basis of the returns for the past five months, the indigenous sugar output is placed at 1.4 millions, while consumption might not exceed 1.5 million tons, though the statistical position has remained unchanged due to heavy imports.

With the sudden increase in supplies and the prospect of a greater increase in production of both gur and sugar next season, sugar interests have naturally begun to canvass the desirability of asking the Government to stop further imports of sugar, falling which, they portend, the Government may be actually called upon to find an export outlet for sugar and even to subsidise it. In this connection, Mr. Gulabchand, the Chairman of the Walchandnagar Industries Limited, has stated that the Government are carrying heavy stocks of imported sugar in their godowns. They have also entered into large-scale commitments for further imports during the year. Production within the country itself will show, during this season, a rise of at least 40 per cent over that of last year and much of this is still held by the factories. Consumption of sugar is definitely on the downgrade and many show a decrease of at least 2 lakh and possibly 3 lakh tons at the end of the year.

As it is, practically every sugar factory in the country is reported to be holding heavy stocks and, in all cases, the storage capacity has been exceeded. Moreover, with the Government releasing so far only about a third of the production from the factories, the tempo of accumulation has been accelerated. Even these releases are said to be not

moving out of the factories due to transport bottleneck. It is complained that the present wagon allotment is so insufficient and irregular that many factories, particularly in Bihar, have been obliged to carry stocks of last year's production.

To make matters worse, the Government have been reducing the selling prices of imported sugar, obviously with a view to reduce their own stocks. As a matter of fact, imported sugar is offered in inferior markets also at the reduced ex-dock price. For instance, there is now a direct competition between imported sugar and the indigenous production in Madhya Bharat where prices have declined by Rs 2 per maund within the past one week. On the whole, the sugar situation in the country has been taking a serious turn and, unless the programme for imports is drastically revised in time, the country may be faced with a big carry-over into the next season.

The Gur market at Hapur continues to rule quiet with the ready rate quoting at Rs 9-4 to Rs 9-8 per maund. Daily arrivals averaged 700 maunds and the demand from outside continued to be moderate. There was a small depletion of stocks to 1.05 lakh maunds, including about 47,000 maunds owned by the State Government which it had purchased under the price-support policy at Rs 10-4 per maund. The State Government is now anxious to sell its stocks which amount to about 2 lakh maunds. It is understood that agreements are being made to export gur to Assam on State account.

Foodgrains markets in Uttar Pradesh continued to rule quiet with prices developing an easier tendency. The improvement, that was noticed in the price of Wheat, was only short-lived; and Dara quality declined again to Rs 11-4 from Rs 12-10 and fine quality to Rs 12-8 from Rs 14-8 per maund. Daily arrivals have increased and totaled 1,200 maunds and a further fall in prices in anticipated with increased arrivals. The market for Rice also continued to remain depressed and the prevailing rates are: Basmati Rs 20 to Rs 25 per maund; Raimunia Rs 20 and Coarse Rs 11-8. A fall of As 2 per maund was marked in the price of Punjab quality Gram, while daily arrivals of the new crop are still negligible. Barley and Bejar prices, however, improved fractionally due to increased seasonal demand and are now quoted at Rs 5-2 and Rs 4-12 per maund respectively. As Jowar prices have fallen to as low as Rs 4-8 to Rs 5 per maund in some parts of Uttar Pradesh, the Government has begun, as a measure,

to support the falling prices of foodgrains, the purchase price of Jowar being Rs 5-8 per maund in Eastern districts. In spite of increased arrivals amounting to about 2,000 maunds daily, Peas price for Dara quality improved by As 4 to Rs 4-14 per maund due to good outside demand, while the stockists desire to build up stocks at low rates. The White quality is quoted upto Rs 6-0 per maund. Arhar prices eased off to Rs 5-14 per maund from Rs 6-4, while other Pulses were quoted fractionally higher.

A sizeable fall in the price of indigenous Wheat was the main feature of trading in the Bombay foodgrains market. Prices of Khandwa and Pilsit varieties declined by Rs 10 to Rs 15 per candy on larger arrivals from Madhya Pradesh, Madhya Bharat and Saurashtra. Although consumer demand was fairly good, traders were generally inclined to lower their rates on the belief that the inflow would improve further in the near future. The demand for Rice has been maintained at satisfactory level. Prices of Jowar recorded a slightly easier tendency with Sholapur quality declining by about Rs 5 per candy on account of some improvement in arrivals. The trend in Bajra was steady despite poor consumer demand, mainly due to better advices from terminal markets in Uttar Pradesh. Meanwhile, the Bombay Government has announced that arrangements are being made to commence regular purchases of indigenous wheat at the minimum price of Rs 10 per maund at ten district towns in the State. Only White variety of wheat of the new crop and of fair average quality will be purchased from cultivators, and wheat below fair average quality will not be accepted. This decision is taken with a view to implementing the Government of India's policy to purchase indigenous wheat at the minimum price of Rs 10 per maund. The price will be for delivery at local godowns.

The Grain market in Delhi showed a mixed trend. Wheat prices drifted lower by about Rs 2 per maund due to lack of buyers against better arrivals. Demand for Basmati Rice was moderate, with the result the rates remained about Re 1 lower at Rs 29 to Rs 35, according to quality. After remaining steady for the major part of the week, arrivals of Gram increased later as a result of which the rates were easy at Rs 6-10. There has been good enquiry for Barley and the rates were easy at Rs 6-10. There has been good enquiry for Barley and the rates were well maintained. Moong and Urad rates steadied up at the close by about As 8 per maund due to better demand from the local pulses mills and lack of stocks.

It is reported that the Government of India held a reserve of 1.6

million tons of Rice some of which is fast deteriorating. They have therefore, initiated 'a grand auction' to reduce their over-flowing stocks. No less than 2.5 lakh tons of rice is offered for sale; and this must be disposed of by the end of June. No Burma rice, however, is involved in this disposal though its turn will come later. The Government hope that the entire amount, offered for auction, will be actually got rid of. But, if the auction does not succeed, the loss, it is reported, will be tremendous. Efforts are also being taken to export 2 lakh tons to Britain and the Middle East countries; but it is privately admitted that the changes of exporting any significant amount are remote.

It is learnt that the Forward Markets Commission is now looking into the question of having a regulated futures market for Shellac. A statement of details of the action taken by the Central Government on the recommendations of the Bihar Shellac Enquiry Committee for stabilisation of the industry is now available. It reveals that the Central Government have turned down the recommendation of the Committee and that export of seed-lac and shellac on consignment should be stopped. The Government have not considered it necessary to interfere with normal trade practices. Exporters are free not to export on consignment account if they find that such exports have not proved to be advantageous. The Government, it seems, do not want to take responsibility of stopping spot sales. The question of introducing quality control is now under the consideration of the Government.

employment opportunities. But, as I say, it is only in the immediate throes of rationalisation that employment opportunities may be reduced. Even over a short-term view, rationalisation can create fresh jobs. Again, there is no reason to set for ourselves moderate targets of per capita consumption of cotton textiles. Also, there is no reason why we should set ourselves modest targets for exports. But such moderation and modesty would be inescapable attributes of a cotton textile economy which finds it difficult to rationalise. But, again, there is no reason why we should not hope that we may be able substantially to increase our production of textile goods; and, what is more, there is not a little hope that such increased production will be taken care of both in the home market and in the export market—provided that the prices are reasonable, and provided that the quality of the cloth is up to the mark.

The Peninsula

The Goose and the Golden Egg

THAT sheer force can drive a wedge once the thin edge is in, is apparent from the discussion on Kolar Gold Fields in the Mysore Assembly.

The State's Minister for Industries, Mr Siddaveerappa, made out a strong case for governmental interference in the working of the mining companies. And, to most members the issue involves nothing short of a blatant breach of agreement and a deliberate attempt to deprive the Government of their dues. With a solitary exception, there seems to be unanimity in the opinion that the State has lost heavily in whole bargain and that, if necessary, legislation should be called in to set matters right.

It is not as if things have suddenly come to a head. Disaffection was brewing for many years past. The revenues to the State were steadily dwindling. Developmental work was long-pending. Indianisation of staff proceeded at a snail's pace.

But even if blame were to be apportioned, it would be unfair to put the sole responsibility on the Companies' managements for the present state of affairs. For a variety of reasons, the managements find it increasingly difficult to make both ends meet, not to speak of appropriating sufficient funds for the much-needed development outlay.

One of the four mines had to close down in 1953 and apparently the others groan under the weight of expenditure which results largely from discrepancies in policy and lack of understanding and co-ordination between the Companies and the Government.

Retrospectively, the relations between the lessees and the lessors do not make pleasant reading. Even as early as 1900, the State Government were making futile attempts to raise the royalty or at least to put it on a sliding scale based on the quantity of gold produced. It was felt that the State was not getting its due share as the royalty was being tagged on to the profits.

The Companies countered such reformist tendencies by the plea of inadequate resources. However, the levy of the gold duty in 1940 during Sir Mirza Ismail's term of office proved to be a boon to the State's coffers.

The existence of the gold duty, however, did not bring in as much revenue in later years as was expected. Also, during 1945-49, the Government sacrificed substantial sums as ex-gratia payments for developmental work. The gold duty was repealed in 1949 with a view to get a fair

share in the net surplus of the mines. The Rupee Companies that came into existence with the 1949 Agreement, as the legatees of the Sterling Companies inherited a proportionately greater share in the liabilities rather than the assets of the Sterling Companies. The unsatisfactory working of the Coragaum mines which closed down two years after the agreement, may be directly attributed to the cross-purposes over the terms of the agreement.

Mr Siddaveerappa points out that since 1947, the Companies had been increasing their working costs. Without informing the Government, a pension fund was created. On account of this, a recurring liability of more than five lakhs a year was palmed off to the Rupee Companies, besides a further liability of over forty lakhs as initial contribution. The Government have refused to recognise this fund and consider it a wanton attempt to deprive them of their share.

About seven months ago, the Mysore Government appointed a Committee with Mr Siddaveerappa as Chairman, to go into the working of the 1949 Agreement and allied matters pertaining to the gold mining industry. The findings of the Committee are, more or less, on the same lines as indicated on the floor of the Assembly.

How the State Government have fared in the entire bargain is indicated by the revenue as against the dividends which went to the shareholders. From 1880 to 1953, the total income for the Government by way of royalty, gold duty and contributions was Rs 16 crores compared to the dividends totalling Rs 34 crores which was many times the total capital invested. In certain years, the Companies have taken annual profits up to 160 per cent of the capital investment. And for a number of years the Government of Mysore have not received anything appreciably more than the royalty.

It is on this ground that the Committee thinks that an upward revision of royalty is called for. It recommends the doubling of the present rate of five per cent. The stand taken by the Committee in this respect is natural and unassailable. The State as the real owner of the mines has the right to secure the most economical results. The Committee has also recommended greater control with respect to the accounts and allocation of expenditure between capital and revenue and restriction on the recruitment of non-Indian staff.

The Companies, for their part, were ill-advised in their negative policy towards the Siddaveerappa Committee. It is clear that the extent to which they co-operated in helping the Committee in their findings was next to nothing. The issue was not discussed across the table. The Companies' stand, in this respect, cannot be absolved. Their version that the Committee was one-sided cannot, therefore, be accepted. Their contention that arbitration is the only forum for discussion and resolution of differences between the two parties is too narrow to accommodate the fact that the gold mining industry is a national monopoly and a matter of special solicitude for the Government and the public alike.

That all is not well with the Kolar Gold Fields is conceded by the Companies also. Their explanation for the diminishing returns is that the price of gold has fallen from Rs 305 per ounce in 1949 to Rs 228 per ounce in 1953, while the cost of mining and extracting has gone high. And that, if the price of gold had remained steady, all would have been well, and that the revenue received by the Government would have been much in excess of the anticipated Rs 20 lakhs a year, in addition to royalty. It is made out that 90 per cent of the additional expenditure was beyond the control of the Company and that 50 per cent of the increase was due to increased payments to labour.

As for Indianisation, sixty per cent of the staff are now Indian, as against 35 per cent in 1949. Eight out of the 21 chief officers are Indian, and not a single non-Indian employee has been engaged since 1952. Moreover, the present royalty of 5 per cent comes to Rs 25 lakhs which, it is said, forms 75 per cent of the net surplus.

It must be remembered that gold production is a concurrent matter which cannot be unilaterally decided by the Mysore Government. The general policy of the Centre in matters involving foreign interests is well-known. In the issue in question, there are however several interests that have to be safeguarded. That the true interests of the State are involved is reflected in the unanimous and categorical demands made in the State Assembly. But the issue equally entails the interests of the labour, the staff and the shareholders as well as the longevity of the industry. The fate of about two and a half lakhs of people is bound up with the future of the Kolar Gold Fields.

Considering the highly specialised and technical nature of the gold mining industry, it has to be admitted that it will suffer, even

beyond repair, in case of immediate nationalisation. Even Mr Siddaveerappa recognises the need for goodwill and co-operation between the Government and the Companies. It is still not too late to bridge the gulf between them. "The Companies are willing" says their spokesman, "cordially to co-operate with the Government and to maintain the friendly relations that they have had over the past 80 years".

What is really on trial is the ill-conceived and short-sighted policy of the past, whoever is to be blamed for it. The need of the hour is the development of the mines on sound lines and the maximum exploitation of gold. Towards a thorough overhaul of the working of the industry, two recommendations made by the Committee greatly contribute: one is for the association of the Union Government with the management and the other a new agreement with the concurrence of the Union Government. While an unitary control over the several mines would be undoubtedly helpful, it should also be sufficiently flexible.

No doubt, the Government wield a big stick in this matter. But it would be hazardous to stake the goose that lays the golden egg. Let the past be remembered only to the extent to which it paves the way for co-operation in the future.

GATEWAY NOTES

(Continued from page 828)

ernment. For implementing its schemes the Board may borrow money from the State and accept gifts and contributions from the Centre or from elsewhere. Each year the Board shall forward a programme with a budget to the Government, which after sanction, shall be placed before the State Legislature.

The constitution of the Board is certainly a step forward. The housing problem in Hyderabad is by no means intractable, compared to the ominous proportions of the task in Bombay or Calcutta.

But, in view of the other schemes under the Five-Year Plan or without it, for town-planning, etc., it seems to be legitimate to doubt how far the Housing Board could fully utilise the rights and powers given it. There are other agencies like municipalities and local bodies who have their own schemes for development. It is quite possible that their programme may overlap and clash with the housing schemes of the Board. And, as far as can be gleaned from the State Minister's exposition of the bill, little thought is given to the possibility of the Board working hand in hand with other responsible agencies. As it is, there is the danger of the Board being able to do either too much or too little.

South Indian Notes

A Legitimate Claim

It is known for some time now that the Union Government propose to start a State-owned factory to manufacture heavy electrical machinery and equipment. As the location is, as yet, not decided upon, the proposal has occasioned a flurry of speculation in several quarters.

Madras, however, puts forth a very strong case for the location of the factory in the State, on account of two main reasons: the State does not possess a single large-scale concern in the field of engineering industries, and the second and the more important reason is that the State has the necessary stock of engineering talent and skilled labour, raw materials like mica, rubber, silk, cotton, shellac and insulating oils, and also, relatively speaking, an abundance of electric power. The proximity of a major port makes it easy to take the essential imports to the factory site.

Now, if the State ranks third in power generation and has a wide-spread distributive system, it also ranks high as a consumer of heavy electrical goods like transformers, heavy duty circuit breakers, industrial motors, etc. which are, needless to say, imported at present. It is estimated that some 3,000 industrial motors of below 50 H.P. and some 80 motors of more than 100 H.P. are annually needed, exclusive of the requirements of agriculture and small-scale industries numbering over 8,000.

It is learnt that Members of Parliament from the State will be meeting the Union Ministers to press their claim, which is both legitimate and economically feasible.

Land Reforms by August:

It may be a little unfair to say that the report of the Land Reforms Committee of the Tamil Nadu Congress Committee has not withstood the close scrutiny that it was subjected to in the past months. Interest in the matter has, however, been heightened by the announcement last week that new legislation will be introduced about August next.

It is clearly evident that the Commission had proceeded with utmost caution at every step, for fear of causing any serious fissure in the fabric of rural economy. Landed interests point out that the recommendations will serve only to estrange the landlord and the tenant, while enthusiasts of liberal reform complain that the proposals do not go far enough.

However, certain facts cannot escape attention. The purpose of fixing a ceiling may well be defeated if the Committee's definition of "personal cultivation" is to be accepted. According to them, a person

is unfit for personal cultivation if he is not a resident land-owner. Physical residence seems to be the only criterion. Again, by fixing a deadline for resuming lands for personal cultivation, the effect may recoil to cause greater injury to tenants, who will be displaced in large numbers.

Errors of judgment can be avoided only if the problem of re-distribution of land is considered in relation to the future of farming in the country. Agrarian reform would have been simple, if it were only a matter of removing inequalities. There can be no doubt that the relics of feudalism have outlived their life-span. There can also be no doubt that the difficulties that used to stand in the way of a new order have been, more or less, removed. Nonetheless, at the time of ushering in a reform that is radical in character, it is essential to weigh its relative advantages, foresee the possible repercussions and calculate the means to avoid or overcome them. It would be hazardous, for instance, if in the process of equalisation, production or the cost of production are adversely affected.

It is therefore that decisions have to be reached, not on the basis of a priori considerations or predictions, but on the basis of an accurate survey of existing facts. The Madras Government have rightly deferred the Land Reform Bill till the completion of the census of agricultural land now under way. More light is sure to be shed on questions like limiting land holdings, maximum area for personal cultivation and the tenant-landlord relationship. The correlation between the size of the holding and the different varieties of crops has also to be carefully studied.

Andhra Prepares the Plan:

The Development Commissioner of Andhra State has alerted all government officers from Heads of Departments down to the lowest rung, in the matter of the preparation of the Second Five-year Plan for the State.

Following the Planning Commission's directives, the State Plan is to grow out of the village plans and the district plans. This is a significant departure from the mode of formulation of the first plan. In conference with the State's top-level officers the Development Commissioner decided that the Plan, should be got ready under two heads, namely the district and village plans and the departmental segment of the State Plan.

The Heads of Departments will send in their proposals for inclusion in the plan before the close of 1955-56. Their suggestions will be made in the light of the experience

gained during the present plan and the actual expenditure incurred during its implementation. They are, therefore, directed, first of all, to review the progress so far achieved before going into the next plan-period.

The Government have laid great stress on the need for village plans. The past experience of the State in this matter is next to nothing. Even the Community Project and National Extension Service leave much to be desired in their working. Apart from paucity of funds the dearth of trained workers was particularly acute. Capital and personnel offer major difficulties to the planner.

It has been thought expedient to indicate to the villagers certain broad targets so that their aims may have greater chance of fulfilment. The District targets will be communicated to the District Collector who will give the necessary instructions to officers under him.

This prescription of broad targets, however, need in no way lessen the importance of the village committee. It is more in the nature of a guideline to facilitate the future completion of the programme. Villagers will have their say in chalking out the village plan, bringing to bear on their decisions the knowledge of local potentialities and needs. It is understood that village planning will get into its stride before May 15, this year.

As regards the departmental segment, officials are already working it out and will be integrated with the provisional district targets.

The Government have issued elaborate instructions on the preparation of district and village plans and have also drawn up a time schedule.

The Technician and Production:

In the years ahead, the rate of increase in urban population, by all indications, will be on an unprecedented scale. It may also be expected that as a result of increase in national income, the per capita expenditure in both the rural and urban areas will increase. The market for consumer goods may, therefore, expand so rapidly that the country's supply of technicians to produce these goods may fall far short of requirements.

In his presidential address to the Conference of Principals of Technical Institutions in India, Dr J. C. Ghosh lucidly and incisively analysed the ways and means of increasing the country's stock of technical skill and knowledge. He made no secret of his fear that unless new and positive measures are taken to secure this end, a potential bottleneck awaits in the near future.

And, Dr Ghosh has to offer something positive and new. His suggestion that a network should be built by actively linking every technical

units, in its vicinity is perhaps the only practicable way out. To turn out technicians in sufficient numbers through regular fulltime courses in technical institutions within a reasonable period of time is almost impossible considering the prohibitively heavy expenditure such a scheme would involve.

Just like the immediate need for a vast cadre equipped with basic medical knowledge to carry on the health service, we need a giant National Technical Service Corps who can make themselves highly useful in workshops and industries.

Dr Ghosh visualises this National Corps as the means to continuously improve the efficiency of the small-scale industrial processes "through man, method and machine, so that the worker may produce more and better goods at lower and lower prices".

Dr Ghosh also suggested that financial assistance from State funds should be given only to those units which have a qualified technician to operate their production section.

It may be argued whether the large-scale production of technicians by imparting part-time training to craftsmen and workers would not amount to sacrificing calibre for expediency. It would be just that, unless a top layer of highly-trained technical personnel guides and supervises the technician. This layer should keep abreast of the latest technique and the use of up-to-date machines.

Also, it is often forgotten that an unending stream of technical men of high calibre can be ensured only by giving all opportunity to the technician at the lower level to rise higher.

Pump-sets for the Farmer:

One of the lacunae in most programmes for stepping up agricultural production is the paucity of improved tools and equipment. And, the pace of progress is bound to be slow if for better appliances the country has to depend on imports. Any advantage accruing from greater production may well be offset unless the cost of production also is pegged at a sufficiently low level.

One of the greatest agricultural problems that faces Madras is irrigation. The dependence on underground water is more pronounced in the rural areas of this State than perhaps in any other region of India. The water is still being drawn by bullocks; for reasons too obvious, pumps, worked by electricity or otherwise, have reached only a fraction of the fields.

Viewed in this background, the installation at Tondiarpet of the new Factory of Messrs. Best and Company for the production of "Worthington-Simpson" pumps is a significant event.

(Continued on next page)

South Indian Markets

Prospects for World Coffee Crop

WORLD Coffee prices, after a steep fall from 68 cents a pound to 55 cents in February, have been picking up, the March average being nearly 59 cents. This is equivalent to Rs 313 for Santos for comparative Indian grades.

It is reported that coffee is being actively planted in Latin American countries and Africa and a bigger world crop is expected during 1955-1956. In order to build up the markets to absorb the prospective crop, the producing countries in the West are planning a European campaign in addition to a stepped-up American one. According to a recent proposal, each producer is to pay to a Promotion Pool 20 cents per bag or nearly Re 1 per bag of 132 pounds. If this comes through, the world coffee promotion campaign will have Rs 2½ crores as backing per annum.

Meanwhile, a resolution calling for the formation of international coffee authority to stabilise prices has been approved at a meeting, recently held by the Coffee Growers' Federation of Central America, Mexico and the Caribbean. The meeting was called for the establishment of an 'emergency stock-pile of coffee' to be created by member countries of the Federation after world demands are satisfied. The various countries will be able to draw on the stock-pile when world consumption exceeds demand.

According to a communique, issued by the Indian Coffee Board, there has been a slight enhancement in the retail prices of raw coffee sold through Indian Coffee Houses with effect from April 1, 1955 consequent on the increase in the release prices. The existing rates for coffee powder of all varieties will, however, continue unchanged. No enhancement is made in rates in conformity with the policy of the Board to further popularise coffee.

The Madras Groundnut market ruled steadier during the past week. Arrivals averaged 30 to 40 tons a day. There was neither keen buying nor selling and only crushers took up small quantities. The rate for the superior oil-quality seeds was quoted at Rs 94 per candy, while the Bold variety was done at Rs 91 per candy. Arrivals in North district centres were poor with rates moving between Rs 87 and Rs 90 per cent in Vellore and between Rs 86 and Rs 90 in Tiruvannamall. Arrivals in South Arcot district centres were also poor. Weather continued to be dry in this district though the condition of the standing crop was fair. The following were the average prices realised (per candy):—Vridhachalam Rs 93; Villupuram Rs 87;

Tindivanam Rs 87; Tirukoilur Rs 86; Cuddalore O. T. Rs 91; Panruti Rs 93; Chinna Salem Rs 91 and Ulundurpet Rs 78.

In the Groundnut Oil section, business was rather restricted. Only a few shippers showed some buying interest, while bazar interests took up limited quantities. The rate for the ready position was quoted at Rs 190 per candy, while April and May deliveries were quoted at Rs 191 and Rs 193 respectively. It is reported that the major part of the export quotas has been completed. There is an improvement in the price offered by Burma, the latest indication, being Rs 1.315 to Rs 1.320 per ton as against Rs 1.275 quoted in the previous week, for April delivery. UK and Continental indications were £95 per ton in bulk for June delivery at which level some business was reported done. In North Arcot district centres, the rate for ready oil was quoted at Rs 185 to Rs 190 per candy in Vellore and at Rs 182 to Rs 188 in Tiruvannamall.

In the Madras Tanned Hides market, arrivals of the Cow hides were as usual, while clearances were rather slow, mainly due to Easter holidays in the UK. Prices, however, remained unchanged. Inferior 'fifths' continued to be scarce and prices for these remained very firm and were considerably above UK levels. Arrivals of Cow Calf and Buff Calf were as usual with little change in prices. There were some enquiries for Cow Calf from the UK for premium marks, but the majority of the arrivals in the local market were only of ordinary quality. Owing to some demand from the USA, Buff Calf advanced by about As 2 to As 3 though the UK buyers did not show any interest at higher prices. Arrivals of Buff hides were fair and these were cleared promptly by the shippers. Northern India buyers were also reported to have operated in the market. With the result, prices were firm and advanced slightly.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were slightly lower; but there was good offtake by shippers at steady prices. Adulteration was reported to be on the increase. In the export section, there was little change in trading conditions. Although there were good enquiries for light weight Goat skins, business was difficult to put through, either due to the non-availability of the right type of skins or the price factor acting as a stumbling block. There was fair demand from the UK for 13/14 lbs and above. There was no change in the sheep skins section.

The Madras Yarn Market continued to rule active during the past week. There was good demand from the Andhra districts for counts upto 40s, besides local demand consequent on the opening of the new year accounts. Bombay and Calcutta dealers showed no interest. Prices for counts upto 40s remained more or less steady. Prices of Californian-cum-African yarns showed a substantial decline. The trend in 60s continued to be easy.

In Salem market, the demand for yarn was good and prices improved by As 2 per bundle of 10 pounds. Adequate stocks of yarn were coming to the market in all counts. There was a marked improvement in the offtake by weavers.

There was a slight improvement in the prices of Cotton. Arrivals in the Maunrai-nam-ad-innevely region, during the week ended April 15, amounted to about 1,260 candies of Tin-levelly Karunganni and 618 candies of Cambodia. About 1,600 candies of Tin-levelly Karunganni were sold at Rs 591 to Rs 696 per candy of 784 lbs. Sales at the cotton markets at Dindigul and Teni, during the same week, were placed at 1,465 candies of Cambodia and Uganda-Hybrid cotton at Rs 635 to Rs 881 and 40 candies of Karunganni at Rs 700 per candy. In the Davangere market, a record quantity of Kapas—over 32,500 maunds—was auctioned in the regulated market last week. As most of the dealers bid at the auctions, prices kept steady.

Foreign Rubber prices are now quoted around Rs 138 per 100 pounds as against Rs 150 quoted in India. It is stated in planning circles that supply and demand for natural rubber will be in parity this year and any undue fluctuation in the use-ratio between synthetic and natural can cause a sudden rise or fall in the price of natural rubber. It is claimed that synthetic rubber can be manufactured and sold for about 23 cents a pound. In any case, would producers are taking 23 cents a pound as the competing point with synthetic rubber, which means they allow further falls in the price of natural rubber.

Meanwhile, a considerable rush in rubber planting is reported to be going on throughout Travancore-Cochin.

In the Madras Foodgrains market, conditions remained generally dull. Continued downward trend in production centres and liquidation of stocks by holders in interior areas depressed the market sentiment. Though arrivals from Andhra and Tanjore district were very small, supplies from areas near the City were good. Exporters were the main

purchasers of Government stocks. As there has been no demand for Nellore and other fine varieties of Andhra rice, there were poor arrivals in the City. Reports from Tanjore district indicate that mirasdars are considerably worried over the slump in the paddy markets there. Even some mirasdars have requested the Government to purchase stocks directly from them in order to arrest the fall in prices. In general, there has been no appreciable demand either for paddy or rice during the past three weeks.

In the Pulses market, prices displayed a downward trend due to poor offtake. Dhais declined by Rs 2 per bag and Gram varieties by As 8 to Rs 1-8 per bag.

SOUTH INDIAN NOTES

(Continued from previous page)

To start with, production in this factory would cover a range of pumping equipment that would cater to the needs of the agriculturists, the tea gardens and to a large extent the requirements of industries, municipalities and local bodies. The next stage of expansion would be the production of the small and economical domestic pumping sets. Working on a single shift, the factory would produce about 300 pumps of assorted sizes for a month.

Mr T. Rogers, the Managing Director, expressed the hope that the imports could be progressively curtailed until a ban was virtually imposed on pumps of sizes up to six inches. The Government have wisely prevented the indiscriminate expansion of manufacturing facilities by declaring the pump-industry a scheduled industry.

But it is extremely doubtful if the agriculturist, whose purchasing power is at the lowest ebb, would be able to make good the opportunity. The burden of the farmer can be eased if the pump sets were owned jointly by many and worked on a co-operative basis, say, by the local bodies. The benefits that can be derived from increased production should be such as to convince the individual farmer that the additional effort and expenditure on his part are worthwhile.

BELVEDERE JUTE MILLS CO. LTD.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 30th April to 13th May 1955, both days inclusive.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents,
Calcutta,
25th March, 1955.

Stock Exchanges

NO STIMULANTS YET?

Watch-Dog Writes:

STOCK markets continue to remain dull and featureless. Despite the substantial fiscal reductions announced by the Union Finance Minister, markets have continued to be bearish. The reason is to be sought largely in the attitude of the patrons of the market towards the future. Even speculators appear to be content with stonewalling tactics.

A mixed pattern of trading was noticed on the Calcutta Stock Exchange. While Tea shares were subject to renewed profit-taking operations, the Engineering, Sugar and Miscellaneous sections provided a few bright spots.

Except Textiles, which responded well to the cut in the duty on superfine cloth, there was virtual lack of buoyant interest in other sections on the Bombay Stock Exchange.

On the Madras Stock Exchange, Textile ruled steadier, while Planning and Miscellaneous issues met with selective support.

The London Stock Exchange failed to maintain the initial firmness which followed the Budget proposals.

Wall Street finished the week with minor gains on balance.

Calcutta

TRADING on the local Stock Exchange during the past week, continued to remain dull with prices developing an easier tendency. There was a general lack of enthusiasm on the part of professional operators to go in for any buying at the moment, while the speculative elements were also shy in taking risks. It was, however, satisfactory to note that, despite the sharp setback in Indian Irons and renewed profit-taking operations in the Tea section, the market provided a few bright spots in other counters on special considerations. The market finished the week on an uncertain note.

The Glitgedged market continued to rule quiet with institutional investors showing limited interest. 3 Per cent 1966 Concession moved between Rs 80-7 and Rs 80-12 to finish the week at the latter level, while 8 per cent 1957 changed hands at Rs 99-1 to Rs 99-3-6; 3 per cent 1963-65 at Rs 93-7 to Rs 93-9 and 8½ per cent 1964 at Rs 98-4 to Rs 98-9.

In sympathy with the securities market, Bank shares also ruled quiet with United Commercial shedding half a point to Rs 44-8. Punjab National were quoted around Rs 45½.

Jute shares remained depressed as operators were reluctant to enter into fresh commitments due to a doubtful feeling with regard to the

working results for the current half-year in view of the poor business done with overseas consumers during the past three months. Reports of the substantial increase in stocks as well as production in March and the renewed firmness of raw jute prices were also depressing factors. Howrah, after touching a low of Rs 29-2 from Rs 29-9, closed better at Rs 29-4, while National were marked down to Rs 34-2 from Rs 34-7 with Nuddea moving narrowly between Rs 55-4 and Rs 55-8. Among higher-priced shares, Anglo-India changed hands at Rs 222 to Rs 225; Barnagore at Rs 175 to Rs 178 and Delta at Rs 253 to Rs 257.

Inquiry in the Coal section was confined to a few selected scrips. East Indian were taken upto Rs 29-6 from Rs 28-14 and New Beer-bloom upto Rs 20-2 from Rs 19-0. Bengal changed hands on the ex-dividend basis at Rs 520 to Rs 524. Burrakur were pushed upto Rs 13-10 from Rs 13 on reports of increased dividend. Equitable were done at Rs 31 to Rs 31-4; Katras Jherria at Rs 48-14 to Rs 49-0 and Bhalgora at Rs 7-6 to Rs 7-12.

Better advices from the cloth and piecegoods markets and the announcement of the reduction in the excise duties on cloth had a favourable effect on the Cotton Mills section where selected issues came in for good support. Kesoram were taken upto Rs 26½; Birlas upto Rs 70 and Elgins upto Rs 17-12. Dunbar, however, lost ten points at Rs 202 following the passing over of the dividend again for the half-year ended 31-12-1954.

Despite the continued easier advices from the commodity market, selected Sugar shares remained firm on expectation of better working results during the current season. The most outstanding feature was Carew which, after surging at one time to Rs 15-12 from Rs 14-9 due to renewed cornering operations, finished the week a shade easier at Rs 14-4 due to profit-taking. Bal-rampore came in for good demand upto Rs 9-7 from Rs 9-1 with S. K. Gyanodaya ruling unchanged at Rs 17-0. Darbhanga moved narrowly between Rs 17-2 and Rs 17-5.

Tea shares, after witnessing hectic activity during the past few weeks, were subject to heavy profit-taking. Operators had a general feeling that, due to good crop reports, supplies of new season's tea would be available in sufficient quantities and consequently prices at the first Export Sale would be lower than expected. Moreover, the statement, issued to the effect that 'the outlook for the new season's tea is still obscure' also contributed to the depressed sentiment in the market. It was, however, satisfactory to note that most of the scrips managed to emerge with small gains on

balance, as well be evident from the following price trends of a few selected scrips:—

Scrips:	Last Week	Week's Low	Week's Closing
Ra. a.	Ra. a.	Ra. a.	Ra. a.
Baghmari	35 12	30 12	30 14
Brooke Bond	18 4	17 13	18 2
Bishnauth	53 1	49 12	49 12
Bormah Jan	25 4	24 10	24 14
Dheishkhat	23 0	21 0	21 4
East India	34 8	32 0	32 0
Grob "B"	23 6	22 2	22 4
Grob "A"	46 4	44 0	44 8
Hasimara	50 2	47 0	48 0
Hansqua	35 6	32 12	33 3
Hattikihra	35 12	34 0	34 10
Jutibari	30 4	29 0	30 0
Sonal River	28 6	27 4	27 6
Teloljan	41 6	37 4	37 4
Tezpor	36 8	35 0	35 3
Banarhat	619 0	580 0	585 0
Tellapara	230 0	224 0	225 0

The Engineering section provided a few firm spots due to renewed demand. Amongst these might be mentioned Jessop, which were taken upto Rs 17-9 from Rs 17-5 and TEXMACO upto Rs 18-6 from Rs 17. In the case of the latter, the dividend is expected to be higher Indian Standard Wagon changed hands at Rs 135 to Rs 13½; Indian Galvanizing at Rs 22-10 to Rs 22-14 and Kumardhul at Rs 11-10 to Rs 11-13. Price movements in Indian Irons were subject to clearing adjustments. Though the scrip moved narrowly between Rs 34-13 and Rs 34-15 till Tuesday, there was a sharp setback to Rs 33-13 on Wednesday due to unloading by a prominent operator. The closing rate for the week was, however, better at Rs 34-4.

In the Miscellaneous section, Paper shares, after ruling firm for most part of the week on renewed demand, eased off slightly at the close due to profit-taking. India Pulp were pushed upto Rs 256; Titagur upto Rs 43-12 and Orient upto Rs 27-12, to finish the week at Rs 254, Rs 43-2 and Rs 27-12 respectively. Shree Gopal were, however, nearly maintained at Rs 18-14. In Minings, Indian Copper ruled quiet around Rs 3-8, while Orissa Minerals were marked down further to Rs 25-2 from Rs 25-8 on reports of poor manganese ore exports. Among other scrips, Rohtas touched at one time Rs 24-11 from Rs 24-2; Dunlop Rubber Rs 36-8 from Rs 35-15 and Martin Burns Rs 23-3, to finish at Rs 24-5, Rs 36-0 and Rs 22-15 respectively. B.I.C. moved narrowly between Rs 7-13 and Rs 8-0; Sohe Valley between Rs 7-9 and Rs 7-11 and Indian Steamship between Rs 7-6 and Rs 7-10.

Bombay

Bombay, April 20. THE stock market is once again in a despondent mood and Steel shares have borne the brunt of selling pressure, the bull operators having been disheartened over the inordinate delay which has been caused in the announcement of the much-eagerly awaited increase in Steel retention prices. The Government of India was to decide the issue on representations from the companies, and expectations were held that the price increase would be effected to the tune of Rs 50 per ton. But, later on, the Government decided to refer the question to the Tariff Commis-

sion which might take some time in coming to a decision. Fears are expressed in certain circles that, in view of the steady increase in the production of Indian Iron and Steel Company resulting in somewhat lower costs, this company might not receive favourable treatment with regard to steel retention prices. This, perhaps, have been the prime factor in inducing the big bull operator to liquidate his holdings of Indian Iron. This, in turn, has also induced a bearish feeling for Tata Steel shares which were also hammered down. The rest of the market tried to keep steady, but subsequently recorded small losses.

The market lacks backbone as even the confidence of the most confirmed bulls has been impaired with regard to outlook for Steel shares. Stocks have been thrown on an unwilling market. The Government's policy regarding compensation for acquiring private property has been the root cause for the unsettled sentiment. As indicated last week, the market will lack the dynamic outlook.

The most important event of the week has been the fixation of compensation of Imperial Bank of India shares which, as stated last week, has been fixed at Rs 1765 for FP and Rs 431-12-4 for PP. This has resulted in an overnight modest rise.

Another event of the week has been the reshuffling of the man-

CORRECTION

THE ANDHRA BANK LIMITED.

In the Abridged Balance Sheet of The Andhra Bank Limited appearing in Indian Finance dated 16th April 1955 on page No. 786 the figures appearing under the head "Profit & Loss Account" on the Liabilities side of the Balance Sheet the item 'Add net profit for the year should be Rs 5,36,679' as against Rs 5,36,678 and the total is Rs 5,43,822 as against Rs 5,43,821.

THE NEW MANBHOO COAL COMPANY, LIMITED.

NOTICE is hereby given that the half-yearly Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company No. 14, Old Court House Street, Calcutta, on Tuesday, the 10th day of May, 1955, at 3-30 P.M. for the following purposes:—

- (1) To receive and pass the Directors' Report and the Audited Accounts for the half-year ended 30th September, 1954.
- (2) To elect a Director in place of the retiring Director.

The Share Transfer Books of the Company will be closed from 3rd May, 1955 to 10th May, 1955, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents,
Calcutta, 18th April, 1955.

The Bareilly Corporation (Bank), Limited

Twenty-seventh Annual Report of the Board of Directors

The Directors beg to submit to the shareholders the audited Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1954.

	Ra.	A. P.
The Net Profit for the year including Rs. 716-1-11 brought forward from the previous year amounts to	1,02,012	2 6
The Directors recommend that the above amount be appropriated as under:—		
1. To provision for income-tax	44,000	0 0
2. To Property Depreciation Fund	11,867	11 0
3. To provision for contingencies	5,000	0 0
4. To pay dividends at—		
6 per cent per annum (less income-tax) on Preference 'A' Shares	4,425	0 0
6 per cent per annum (free of income-tax) on Preference 'B' Shares	6,000	0 0
7 per cent per annum (free of income-tax) on Ordinary Shares	26,008	8 0
7½ per cent per annum (free of income-tax) on Deferred Shares	3,816	0 0
5. To carry forward to next year's account	894	15 6
Total Ra.	1,02,012	2 6

Although credit and trade conditions were not favourable in 1954 but your directors consider the working of the Bank as satisfactory. Steady progress has been maintained in deposits which showed a rise of more than Rs. 7 lacs at the end of 1954 as compared with 1953.

The Managing Director and the Deputy Managing Director have voluntarily foregone a portion of their salaries which is greatly appreciated by your Directors.

Under Article 113 of the Articles of Association Sarvshri Balram Sharma and Nawal Kishore two of your Directors retire by rotation and, being eligible, offer themselves for re-election.

The Directors are thankful to the shareholders and constituents of the Bank for their continued support and confidence and they also express their appreciation of the work done by the staff.

Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
G. K. CAPOOR,
Managing Director.

BOMBAY STOCK EXCHANGE

(Continued from page 839)

aging agency firm of India United Mills in view of the dissensions among the partners of the firm. This had resulted in unsatisfactory state of affairs for the company during the past few years. Mr. Morarji Desai, Chief Minister of Bombay, and Mr. G. D. Birla were appointed arbitrators to end the dispute. They suggested that the six lakh Ordinary and twenty lakh Deferred shares, held by the Managing Agents, should be auctioned among the partners as well as the biggest shareholder, Shri Ramashwardas Bogla, Chairman of the mills, on behalf of his group who made the highest bid at Rs 20 per Ordinary share which included Rs 12 as purchase price for the shares and Rs 8 for managing agency commission. Thus, the deal has been struck at Rs 1.60 crores. The partnership share in the new managing agency firm will be as under.

(in a Rupee)

Mr. Nandalal More As 5
Mr. Rameshwardas Bogla As 4
Mr. Ramkumar Podar As 3 1/2
Mr. Kudilal G. Sekhsaria As 3 1/2

The shares of India United Mills have received fillip following the above developments and hopes for the better in the management.

Securities:--The Glitged market improved following slightly easier tendency in the short-term money market. The 3 per cent Conversion Loan improved to Rs 80-10 from Rs 80-5. Other dated-Loans were steady.

Banks:--Imperial Bank FP advanced to Rs 1680 from Rs 1580 and Contributors to Rs 412-8 from Rs 385 following the announcement of compensation at Rs 1765 and Rs 431-12 respectively. Other bank shares were quietly steady.

Insurance:--As nationalisation was not imminent, New India were marked up to Rs 52-8 from Rs 49-8. Oriental were done at Rs 7225. Jupiter was sold down to Rs 7 from Rs 9.

Electric:--Electric shares were quietly steady. Ahmedabad were listed exdividend at Rs 107-3. Andhra improved to Rs 1407-8, while Tata Power were dealt at Rs 1497-8 cd. Tata Hydro kept quiet at Rs 146.

Textiles:--Cotton Mill shares scored modest rise; but, in the wake of Steels, prices came down from the highest level. The changes effected in excise duties had very little effect. Apollo were adversely affected due to rumours of a lower dividend. Bombay Dyeing, after rallying to Rs 474-6 from the week's low level of Rs 465-10, finished at Rs 468-2 cd. Century were firm and rose to Rs 371-12 xd. (Rs 14), to terminate at Rs 366-8. Finlay were steadier at Rs 261 cd. India Ordinary rose briskly to Rs 12-10 from Rs 10-11 to close at Rs 11-13 following the reconstitution in the managing agency. Simplex were lifted upto Rs 155 from Rs 148 on support from interested quarters, to be finally placed at Rs 153. Svadeshi were just steady at Rs 194-8.

Steels:--Tata Steel Ordinary dropped down to Rs 234-4 from Rs 238 1/2, to recover to Rs 236-12, to stumble down to Rs 232-4, to be finally placed at Rs 232-8.

Miscellaneous:--This section made a mixed show. Premier Construction advanced up to Rs 166-8 from Rs 160 on the reported scheme to extinguish the Promoters' share, but came down to Rs 162. Alcock improved to a small extent to Rs 267 1/2. Bombay Burmah after early setback to Rs 466 1/2 recovered to Rs 474-6, to terminate at Rs 466-14. Sugar shares were quiet, but Walchandnagar Industries improved on better outlook. Cement shares were featureless. Killick Industries Ltd., has maintained an interim dividend of Rs 4 National Rayon were steady on encouraging results. Larson and Toubro advanced to Rs 13 from Rs 12. WIMCO were steadier at Rs 203-12 despite small drop in profit. Sathé Biscuits were done at Rs 95. Tata Chemicals and Tata Oil have failed to attract support even at Rs 14-12 and Rs 40 respectively. Premier Automobiles were weak at Rs 71, while Tata Locomotive found sellers at Rs 135-8.

Madras

Madras, April 19.

PRICES on the local Stock Exchange ruled steadier with attention mostly confined to selected Planting, Textile and Miscellaneous scrips.

Textiles:--Despite the passing over of the dividend, Cambodias had buyers upto Rs 11-10. Maduras were taken upto Rs 45-14; Travancore Rayons upto Rs 14-6 c.d. and Radhakrishnas 'B' upto Rs 110 c.d. Buckinghams were, however, on offer at Rs 156-8 to Rs 157-0 with Janardhanas changing hands at Rs 83 to Rs 84-0.

Plantings:--Rubber and Tea shares were a steady feature. Parkside remained steady at Rs 24-8 despite the announcement of an interim dividend of 10 per cent, while Periakaramalais had buyers at Rs 8-3 to Rs 8-5; Halleyburias at Rs 27-8 and Neelamalais at Rs 7-2 to Rs 7-3-6.

In the Rubber section, Midlands were a shade lower at Rs 17-10, while Rajagiris were done at Rs 16-1; Thirumbadis at Rs 2-0-6 and T. R. Ts. at Rs 12-10-6 c.d.

Coffee shares remained almost unchanged with Consolidated Coffees quoting Rs 19-2 and Ouchterlony at Rs 5-7-6.

Miscellaneous:--In this section, Cement shares were fairly active with India Cements having buyers upto Rs 24-10 and Travancore upto Rs 9-9-6 c.d. Among other scrips, Mysore Tobaccos were quoted at Rs 10-12 and Aluminium Industries at Rs 19-3.

London

London, April 20.

ALTHOUGH there was little to encourage any extension of commitments on the London Stock Exchange, prices developed a hardening tendency in mid-week following

the announcement of the Budget proposals. Gains, however, predominated in Industrials; but Textiles, Breweries and Cinema shares eased on disappointment caused by the Chancellor's statement. Miscellaneous leaders also eased after initial firmness. Oil shares improved initially on the reduction in Income-Tax, but also reacted to close slightly easier on balance.

Following rates were the closing rates of selected stocks and shares: 3 1/2 per cent Conversion Loan £85 5/16 (£85 3/8--week's opening); 3 1/2 per cent War Loan £85 1/2 (£86 3/16); Dunlop Rubber 30 7/8 (30 7/4); Imperial Chemicals 44 1/4 (42-9); Imperial Tobacco £3 3-1/16 (£3 1-1/8); Calcutta Electric 22 3/4 (22 1/6); Calcutta Tramways 25-0 (24 9/8); British Petroleum 75 3/4 (74 5/8); Assam Tea 26 5/8 (25 0); Burma Mines 2 1/2 (2 7/8) and Indian Copper 5 3/4 (5 3/8).

New York

New York, April 19.

PRICES on Wall Street, after initial firmness, developed a slightly easier tendency due to profit-taking. Early trading was marked with active dealings in Specialties, sentiment being aided by good first quarter earnings and second quarter prospects. Another factor, that aided sentiment was the conclusion of selling to raise money to meet the tax deadline. Latterly, however, profit-taking reduced numerous gains and also produced some losses amongst the leaders.

Anaconda Copper finished the week at \$62 1/2 (\$62--week's opening rate); General Motors at \$98 3/8 (\$95 1/2) and US Steel Common at \$84 (\$81 5/8).

GATEWAY MARKETS

(Continued from page 830)

while September delivery was taken up to Rs 77 from Rs 75-6. Kardiseed was better at Rs 11-12, while Nigerseed continued weak at Rs 15-4.

Art Silk Yarn

Conditions on the Art Silk Yarn market were dull with narrow price movements. 154-D moved around Rs 732. Staple-fibre yarn for April delivery changed hands at Rs 580 to Rs 586 and May at Rs 575 to Rs 583. The market is likely to keep quietly steady.

Metals

Copper prices suffered a sizable drop on reports of release of Government stocks both in US and UK, but later on the market recovered partially. The rate for forward delivery dropped down to Rs 212 from Rs 225, to quote at Rs 219. Spot rate was quoted at Rs 245. Zinc prices hovered around Rs 63, while Lead was better at Rs 78. Tin prices kept steady at Rs 118-8 per quarter.

On the London market, copper ingots, ready, which had dropped down to £303 from £340, rallied to £330. Tin improved to £722 from £716. Lead was steady at £105 and Zinc at £89 1/2.

OLYMPUS

(Continued from page 833)

State Bank shall be bound to comply with such warrant.

(3) A warrant issued by the Reserve Bank under this paragraph shall not be liable to duty under the Indian Stamp Act, 1899.

6. (1) The Reserve Bank may, if it decides to transfer, in pursuance of paragraph 5, more than 2,53,125 shares, require the State Bank of India to issue to it such further shares as may be necessary to secure that it holds not less than 55 per cent of the issued capital of the State Bank, and the State Bank shall, without prejudice to the provisions contained in Sub-Section (3) of Section 5, comply with such requirement on the Reserve Bank subscribing Rs 100 for each share.

(2) No share issued to the Reserve Bank at par under this paragraph shall carry dividend at a rate higher than four per cent per annum.

WATCHDOG APPLAUDS METHONI TEA

(Continued from page 812)

To sum up the way the profits were used in 1954; Taxation, Rs 4 lakhs; shareholders, Rs 3.6 lakhs; undistributed profits (excluding the carry forward), Rs 2.3 lakhs; and, for the Managing Agents, Rs 1.12 lakhs.

I have some comment to make as to the utilisation of profits by Octavius Steel; but, before that, we might note the balance-sheet position of Methoni Tea.

The ordinary capital is Rs 8 lakhs (the net profit in 1954 was Rs 11.06 lakhs!). Inclusive of the Reserve Account of Rs 9 lakhs, undistributed profits are of the order of Rs 11.76 lakhs--or nearly 1 1/2 times the ordinary capital. Fixed assets are shown at Rs 14.74 lakhs. Such was the plethora of cash resources, that the latest balance-sheet shows investments to the tune of Rs 2.95 lakhs--in Government securities. Moreover, cash balances themselves add up to Rs 3.56 lakhs. Thusly, the strong balance-sheet position of Methoni Tea.

As I said, the most important point about Methoni Tea is the manner in which profits have been expended. The main heads--four in number--account for Rs 11 lakhs of profits. Of this, 36.4 per cent went for Tax (or the Government); cash payment to shareholders took up 32.7 per cent; undistributed profits accounted for another share of 21 per cent for shareholders; and exactly 10 per cent went to the Managing Agents.

I suggest that this is a proportion that indicates that Octavius Steel are zealous in their duties to shareholders. Cash payment from profits of the order of 36.3 per cent is satisfyingly high; and undistributed profits of the order of 21 per cent are at a prudent level; and, finally, a slice of 10 per cent for Managing Agents is, to say the least, modest.

My applause, therefore, to Methoni Tea and to Octavius Steel.

"End of Permanent Settlement"

(Continued from page 816)

The principal problem arising out of the Zamindari abolition concerns the several lakhs of smaller intermediaries who willy-nilly were securing a livelihood under the old system. That this system bred parasites and a generally degrading setup is a simple truth; it has never been able to maintain the entire host in comfort; the majority of the smaller intermediaries had no more than the nucleus of the income from whatever service they were expected to perform; they had to make up the rest by subsidiary occupation of some kind or other. As the nucleus is now gone which invariably also sustained the subsidiary sources, this vast section is being thrown on the street. The far-sighted and the enterprising among them might have sought and found alternative means of employment in anticipation of the implementation of the Estates Acquisition Act. But the majority could only have drifted. Besides, there are also several times their number of Bargaḍars and landless labourers; these three groups represent a formidable problem in terms of rural unemployment and under-employment.

The debates on the measure and on the Land Reform Bill which has been introduced as a complementary piece of legislation,

show that there is genuine concern over this problem. The Land Reforms Bill which has come in very timely and without which the Estates Acquisition Act would have been a half-measure seeks to ensure that whatever land is available in the State is put to the best use. The Government are anxious to create "congenial condition for extensive, intensive and lucrative cultivation." Wisely they have turned a deaf ear to any blind redistribution of the newly acquired land, which after all amounts to no more than four lakhs acres, among the small cultivators. On the contrary, it is the Government's intention to encourage economic holdings, to prevent fragmentation and to ensure that agricultural land does not pass into the hands of absentee owners. All these are laudable and trustworthy aims; but they will not constitute an adequate answer to a situation which reflects a gross total insufficiency of land in relation to the population.

Viewed in the light of this problem, Zamindari abolition has an element of disillusionment about it. The actual land which this step has made available for redistribution is far too meagre in relation to needs. The State has to find employment for a few millions and if the state does not succeed in it, terrible discontent will follow. Amidst the striving for maximum output through economic holdings, the num-

ber of rural population who will be looking for jobs is bound to increase. It is a facile slogan that industry should come to the rescue; and that the surplus of population on land should be absorbed in and through industrial activity. This slogan has practical value only when the surplus population on hand is manageably small. In West Bengal it is alarmingly big. Even a most earnest Government applying the most inexpensive and perfectly sound methods can provide no answer to the inherent limitations on resources. Actually the Estates Acquisition Act represents a kind of nationalisation of the State's agricultural economy. Rationalisation in industry or in agriculture can seldom avoid throwing out persons from employment. If the same criteria were to be applied to rationalisation in both agriculture and in industry, public attitude should be the same towards both. But the reactions are different; because, of the complicating presence of vested interests. The consequence, however, is similar and inescapable. The Trade Union leaders who oppose rationalisation in industry on the ground that it may create unemployment have no compunction in urging Zamindari abolition which in the case of West Bengal creates many-sided unemployment. It has become the duty of the embarrassed Government to accommodate both the situations.

Soviet Gold Sales Resumed

(Continued from page 819)

will continue to enjoy high priority. After all, gold can be used for increasing the imports of industrial equipment or industrial raw materials as well as of food and other consumer goods. This must have been one of the reasons why the Stalin regime favoured the employment of much-needed productive capacity for the sinking of shafts at Sverdlovsk and elsewhere, even if this diverted productive capacity from the production of arms and from the speeding up of industrialisation.

There can be little doubt that political motives must have played some part in the decision to give

gold mining a high priority. As a matter of prestige, it may be the ambition of the Soviet Government to accumulate a gold reserve that bears comparison with the gold reserve of the United States. Such a gold reserve would confer on Soviet Russia power as well as prestige. This consideration may perhaps explain why the Soviet Government preferred for a long time to accumulate the gold output rather than export it. It would be interesting to know why the Kremlin should have decided that the time has now come for realising some of its gold hoard.

WORLD OF FINANCE

(Continued from page 818)

Rs 54 crores. Investments show a decline of Rs 1.1 crores to Rs 46.12 crores. Ad hoc Treasury Bills issued in favour of the Reserve Bank, during the week ended April 15, are shown at Rs 27.78 crores. All the ad hocs seem to represent renewals.

The statement of the Imperial Bank for the same week discloses a drop of Rs 2.98 crores in deposits at Rs 220.37 crores. Borrowings from other banks have risen by Rs 8.50 crores to Rs 9.50 crores, while other liabilities, including inter-office adjustments, are lower by Rs 5.03 crores at Rs 4.78 crores. On the assets side, cash balances are higher by Rs 2.91 crores at Rs 17.05 crores. Investments have fallen by Rs 17 lakhs to Rs 104.07 crores. Loans and Advances

are shown at Rs 125.83 crores against Rs 127.75 crores. Loans, Cash Credits and Overdrafts accounting for a drop of Rs 2.03 crores and Bills Discounted and Purchased for a rise of Rs 15 lakhs.

EDITORIAL NOTES

(Continued from page 817)

The Company issued 78,275 new policies, worth Rs 23.40 crores. In 1954, its record was 123,500 new policies, amounting to Rs 47.50 crores. Represented in a more picturesque statistical manner, "Oriental afforded life insurance protection of Rs 4,658 to someone somewhere every minute of every working day—i.e., nearly Rs 16 lakhs every working day." In 1954, the Company completed eighty years of existence.

How banking helps the LEATHER INDUSTRY

INDIA produces more than 60 million hides and skins a year. Raw and tanned leather forms her fourth largest export, valued at Rs. 24.38 crores during 1953/54. The bulk of the shipments of leather are made from Madras. Around Madras, too, is a growing industry of mass-produced footwear.

Banking has greatly helped the growth of the leather industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the leather industry.

We at Palai are proud that so many firms, in the leather industry and in every industry in South India, employ the complete banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investment—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head office: PALAI, TRAVANCORE-COCHIN

Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. Also at: Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

UNITED BANK OF INDIA LTD.

★ Offers a complete inland and foreign banking service.

★ 95 Branches all over India and Eastern Pakistan.

★ Foreign Agents and Correspondents all over the world.

For the Investor

Quiet

Investment Gossip:

Markets continued quiet; activity continued to be restricted; the bear proclivities of an ex-bull have continued to make their appearance: Indian Irons were pushed down for the first time in many months to a rate below Rs 34.

This waiting mood of the market can only be explained in terms of the doubt that there presently seems to be as regards the view that will be taken by one who has been one of the more prominent bull operators on the Calcutta stock exchange.

This operator, it is generally held, had had commitments totalling some 8 lakhs of shares; of these, he is reported to have liquidated much the larger portion.

What is not known is whether he will continue to be a seller and

whether he will reverse his earlier stand and become a bear operator instead.

Thus far, large-sized sales of this order have not created much disorder in prices. Nevertheless, I repeat, the feeling is one of some uncertainty, the feeling is one of a mood to wait.

Thus far, large-sized sales of this any significant import. But, as I said last week, the technical position of the market seems to be improving. It may, therefore, be reasonable to conclude that, unless the prominent bull turns bear in as prominent a manner, Indian stock exchanges may be said to have consolidated their position from the pre-Budget situation and that, consequently, it is possible that steadiness and, perhaps, a steady advance in prices, may be the outcome.

ER

Watch-Dog Applauds Dunlops

ANOTHER of the Indian companies that is noteworthy for the large sized figures that its balance sheet contains is the Dunlop Rubber Company (India) Limited. And the big figures are good figures as well.

In the last triennium, Dunlops have been able substantially to increase their sales from the 1952 figure of Rs 12.97 crores. It is true that sales fell, in 1953, to Rs 12.58 crores. But, in the latest year, they have risen sharply by Rs 1.12 crores to Rs 13.70 crores.

The net profit showed the same declining tendency in 1953 when it fell to Rs 120.66 lakhs from Rs 126.09 lakhs. The 1954 figure marks some increase over 1952 at Rs 126.58 lakhs.

The first demand on profits, of course, is taxation. Taxation has gradually absorbed a larger proportion of profits, from Rs 33.05 lakhs in 1952 to Rs 37.50 lakhs and Rs 37.75 lakhs in 1953 and 1954 respectively.

The net profit, expressed as a ratio to sales, is found to have declined before and after taxation. The following table illustrates this:

	1952	1953	1954
Before taxation	7.7	7.4	7.0
After taxation	4.8	4.6	4.3

HIGHLIGHTS

- This is a commodities issue; sugar, linseed oil and cake, copper these are treated in different sections of this week's Indian Finance.
- Again, cotton is the subject of Gateway Gossip.

The ordinary dividend in each of the three years, at 15 per cent, accounted for Rs 24 lakhs.

The transfer to the Reserve Fund, which was reduced to Rs 24 lakhs in 1953 from Rs 39 lakhs in 1952, is placed at Rs 30 lakhs from the profits of 1954.

Meanwhile, the carry-forward is being shown higher from year to year, from Rs 7.01 lakhs to Rs 10.83 lakhs in 1953 and Rs 11.89 at the end of 1954.

The Directors' Report indicates that, although the profits would allow of a larger distribution of dividend, an amount equivalent to nearly 20 per cent of the Ordinary capital is proposed to be transferred so that the resources necessary for the expansion of the business could be built up.

Why such resources are needed—or why the Directors thought it prudent to set by such monies to reserve—can best be measured by an analysis of the balance sheet position of Dunlops.

The gross block has, over the past three years, shown a sharp increase of over Rs 74 lakhs to Rs 4.83 crores. But, with the steady provision for depreciation, the net block is higher only by Rs 20 lakhs at Rs 1.75 crores.

For the rest, the important changes in the balance sheet, among the assets, include an increase of Rs 41.35 lakhs in outstandings, one of a little more than Rs 4 lakhs in investments, and an increase of Rs 5½ lakhs to Rs 20.06 lakhs in cash balances.

The investments that have just been referred to relate to gilt-edged holdings as part of the Debenture Stock Redemption Fund against

the Rs 1.30 crores of debentures outstanding.

With the current transfer of Rs 30 lakhs to reserve, the reserve fund is placed at Rs 1.68 crores as compared with ordinary capital of Rs 1.60 crores.

Moreover, there is a dividend equalisation reserve of Rs 11 lakhs. Besides the taxation reserve of Rs 5.75 lakhs, other liabilities comprise Rs 1.28 crores on account of bank overdraft and Rs 1.04 crores of sundry liabilities.

Thus, the liquid assets of the company work out to Rs 6.14 crores; and, inclusive of overdraft and the taxation reserve, sundry liabilities add up to Rs 2.38 crores.

In other words, the liquid assets are more than 2.6 times sundry liabilities.

These comprise the big figures that the Dunlop accounts contain. The emphasis, it can be seen, is on continuous attention being paid to expansion programmes. For a full understanding of the Dunlop accounts, it is necessary that, over and above the balance sheet, we should see what Mr Cecil Stack had to say at the Annual General Meeting of the company.

Mr Stack has revealed that, in terms of production—and the basis used is the principal raw materials rubber—Dunlops bettered 1953 by 18 per cent. But, with a reduction in the selling prices of the goods manufactured by Dunlops, sales appreciated by only 9 per cent.

Crude rubber consumption at Dunlops in 1954 represents the highest since the factory in Shaha-

ganj commenced production in 1936.

We, therefore, note it that the lower selling prices of Dunlop's manufactured goods have been the reason for the decline in the ratio of profit to turnover.

Dunlop's Chairman, in reviewing 1954, has drawn specific attention to what was undoubtedly an event of major importance: the introduction of the tubeless car tyre in India. What the tubeless tyre can mean in terms of lives saved, it is difficult to exaggerate.

Mr Stack has then gone on to indicate the scope and range of the increase in production achieved by Dunlops in 1954. For example, during the year, says Mr Stack, Dunlops "commenced the manufacture of pneumatic tool, welding and high pressure Braided Hoses by the lead press moulded process." Mr Stack is undoubtedly justified in saying: "This overall expansion of our manufacturing activities, contributed in no small measure to the fact that in 1954 rubber manufacturers consumed approximately 4,000 tons of rubber more than India produced."

Mr Stack has set out in full the reasons why appropriations to reserves over the last ten years amounted to nearly Rs 2.50 crores. These appropriations represent shareholders' profits retained and fully employed in the business. I would like to stress here the great need for such conservation of the financial resources of the Company. In addition to the funds required for development and expansion

INDIAN FINANCE

April 30, 1953

schemes the Company is continually striving to improve the standard of living conditions for its factory employees by providing more residential, hospital, educational and other welfare facilities. During the last ten years the Company has spent over Rs 80 lakhs on buildings for this purpose and very considerable additional expenditure, depending on the continuing prospects of the Company, is planned for the next three years".

The central point, then, in the balance sheet as well as the speech made by Mr Stack, is the expansion in activity and expansion in production. Small wonder, therefore, that Dunlops should be reckoned a blue-chip For the Investor.

£ R S

Investment Notes:

Howrah Mills have spurred to Rs 30-4 from Rs 29-2. There are rumours that this scrip will be included in the forward list shortly.

National Rayons are quoted around Rs 200. Out of the total issue of Rs 1.5 crores which this company has proposed to raise by issuing Debentures, it is understood, that the Bank of Baroda has underwritten Rs 1 crore, while the balance will be taken by the Bank of India and the New India Assurance Company. The loan will be offered to the public by the underwriters in their entirety and carries an interest of 5½ per cent, repayable in 10 to 15 years.

Premier Constructions continue to have good buyers at rates varying from Rs 163 to Rs 166. At the annual general meeting held this week, the company's Chairman has stated that matters relating to the reconstruction of the capital structure and the issue of bonus shares are still under consideration. Final decision will be known shortly.

In the Madras market, Rubber shares have been in good request in

view of the assured price for the commodity in India. The news of the substantial increase in raw rubber production in March is also encouraging.

Anandam Rubbers have spurred to Rs 25-14 from Rs 23. There are reports that the company has made substantial profits. There is every prospect of getting a higher dividend for the year ended 31-12-1954. The dividend paid in 1953 was 10 per cent.

The steady rise in TEXMACO from Rs 18-7 to Rs 18-14 in indicative of the general expectation that the dividend is to be raised from As 12 to Re 1 per share for 1954, though certain circles believe that the dividend will be maintained.

At the Annual General Meeting of shareholders, to be held on May 10, the Board of Directors of KLM Royal Dutch Airlines will recommend payment of a dividend of 5 per cent on the Ordinary and Priority Shares and 4½ per cent on the Cumulative Preference Shares for the year 1954. It may be mentioned here that the dividend for 1953 was 4 per cent on all shares.

£ R S

Investment Briefs:

Belsund Sugar has maintained the dividend at As 12 per share for the year ended 30-9-54.

Rohtas Industries have raised the dividend to Rs 1-8 per share for the year ended 31-10-54 from Rs 1-4 paid for the previous year.

Gele Tea has announced an interim dividend of 10 per cent for 1954 as against a total of 10 per cent paid for the whole of 1953.

Indian Wood Products have declared a final dividend of 17½ per cent, making a total of 27½ per cent for the year ended 30-9-54 as against 25 per cent for the previous year.

United Flour Mills have raised the dividend from 5 per cent to 12½ per cent for the half-year ended 30th November 1954.

£ R S

More Jute Mills Results

Balance-Sheet Reviews:

THREE more jute mills, viz., Bengal Jute Mill Company, Belvedere Jute Mills Company and the Gondalpara Mill, have presented their reports and accounts for different periods. The accounts relate to the year ended 30th June 1954 in the case of Bengal Jute, half-year ended 31st December 1954 for Belvedere Jute and the year ended 31st December 1954 for Gondalpara Mill.

Except in the case of Gondalpara, the working results of other two jute mills have been satisfactory. Bengal Jute has reduced the dividend from Rs 1-4 to Rs 1-2 per share; while Belvedere Jute has maintained the dividend at Rs 5 per share. The dividend has been passed over in the case of Gondalpara Mill.

Sales, in the case of Bengal Jute Mill, are higher at Rs 1.80 crores as against Rs 1.75 crores in the previous year, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 14,97,548 against Rs 14,93,711. With regard to allocations, the Depreciation amount has been reduced to Rs 2.12

lakhs from Rs 2.73 lakhs, while Taxation has been raised to Rs 6.25 lakhs from Rs 5.36 lakhs. A sum of Rs 50,000 (Rs 2.50 lakhs) has been set aside for 'Bad and Doubtful Debts and Advance'.

The Belvedere Jute Mills Company has shown a rise in sales from Rs 58.84 lakhs to Rs 57.83 lakhs for the half-year ended 31st December, 1954, while the net profit is slightly higher at Rs 4,36,945 against Rs 2,89,095. The directors have, after setting apart Rs 47,000 (Rs 37,000) for Depreciation and Rs 1.67 lakhs (Rs 1.08 lakhs) for Taxation, maintained the dividend at Rs 5 per share.

The results of the Gondalpara Mill are rather disappointing. There is a loss of Rs 76,869 after taking credit of Rs 1.50 lakhs on account of commission waived by the agents, as compared with the previous year's profit of Rs 1,17,550. The directors, in their report, have stated that the cause of this poor result was that raw jute prices, during the first half of the year under review, were not in parity with prices obtained for manufactured goods. Despite the

(Continued on page 885)

Sugar Needs a Policy

NO industry has been behaving as capriciously as the Sugar industry. The history of sugar in the last few years shows that there have been surpluses and shortages alternate, and seldom has the industry been able to keep pace with the actual demand. These recurring crises, which benefit no one, appear to have become almost a regular feature of dealings in the sweet commodity.

The industry has, in recent years, been passing through phases of alternating ups and downs of production. The production, in 1950-51, amounted to 11.01 lakh tons; it rose steeply to 14.83 lakh tons in 1951-52, only to fall to 13.14 lakh tons in 1952-53. It was barely 10.01 lakh tons in 1953-54. Now, again, it is promising to register a 40 per cent improvement over the 1953-54 figure, at about 14 lakh tons. This figure was, of course, exceeded in 1951-52 when the Government were goaded to efforts to export a part of the excess.

If production has behaved unpredictably, in no less a degree has also the consumption of sugar. Consumption of sugar went up from 11.63 lakh tons in 1951-52 to over 16 lakh tons in 1952-53 and to 18 lakh tons in 1953-54. It is true that the appreciable increase in consumption in 1953-54 brought to the fore the need for bridging the gap between supply and demand. The increase in consumption was so sudden that production could not keep pace with it and Government had to import large quantities of sugar. It is now felt that consumption, during the current season, will not keep pace with the total supply, due to the relative cheapness of Gur and Khandasari.

Such wide fluctuations in production and consumption have naturally been a source of annoyance both to the producers and consumers. Even in years of peak production, higher prices than would have been necessary if the inflow had been regular. This state of affairs was the result of defects in the administration of controls over the releases of sugar.

It cannot be denied that Government adopted a judicious policy of importing sugar from abroad when the demand started to outstrip the supply. While this has served as an instrument for augmentation of revenue and securing of profit from the sale of imported sugar, the market is now glutted with foreign sugar. At this stage, it will be worthwhile to make a study of the supply position during the current season:

	(In Lakh Tons)
Carry-over from 1953-54 Season	0.70
Estimated Output in 1954-55	14.00
Imports expected	6.00
Refining of Raw Sugar	1.35
Total Supply	22.05
Consumption Estimated	16.00
Surplus expected	6.05

On the position thus revealed, Mr. Gulabchand Hirachand, presiding at the annual general meeting of the Walchandnagar Industries, has made detailed and forceful comment:

"The import programme has not followed any planning. The markets have, therefore, from time to time been subjected to a glut, creating unnecessary

fluctuations in the price structure. The system adopted for some time of supplying sugar on what is known as f.o.r. basis, that is, Government bearing the cost of freight, and supplying sugar at various upcountry centres at the same rate as the Port of entry, had the effect of depriving the factories of the natural markets round about them. In these markets they could command somewhat better prices, because of the saving effected by the buyers in freight. The price fixed by the Government for imports have also varied from time to time unexpectedly and made the disposal of indigenous product more difficult, because of a lack of system in the Government pricing policy. And finally, the method of episodic releases from factories from time to time without any pre-arranged programme has tended to make the marketing of sugar complicated than it used to be in the past."

Result: The Government are carrying heavy stocks of imported sugar in their godowns, not to speak of further imports for which commitments appear to be already made. Government are naturally disposed to clear their own stocks, even if a reduction in the issue prices were necessary as bait. The system of supplying sugar on f.o.r. basis at various upcountry centres has, as Mr. Hirachand has stressed, the effect of depriving the factories of the natural markets round about them.

Pertinent in this connection is the programme of enlarging the supply of sugar also by refining of raw sugar. This season, the quantity of raw sugar to be imported is placed higher at 1.5 lakh tons. As there is a loss of 10 per cent on refining, this will augment supply by about 1.35 lakh tons. Thus, the country is faced with a big carry-over into the next season, with the factories primarily holding the baby.

As a permanent solution, it is necessary to increase production internally as imports

Indian Finance

Established 1928

April 30, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

involve large outlay of foreign exchange. Moreover, dependence on foreign markets for any great quantity also introduces an element of uncertainty. Most important of all these reasons is the fact that a substantial increase in production is possible through full utilisation of installed capacity. The present installed capacity of the industry is 15 lakh tons.

It would be absurd if, having ceased to be a large-scale importer of foodgrains, we become instead heavily dependent on foreign sugar.

There is obvious room for expanding sugar production, especially in South India where cane of higher yields can be more economically grown than in Bihar and Uttar Pradesh where, at present, the industry is largely concentrated. While it is true that many factories are not having access to adequate supplies of cane, it is equally true that there are areas where cane production is not being fully utilised by the industry. For no fault either of industry or of the cane-grower, progress in suitable transplantation of factories has been far from satisfactory, though its success mostly depends on the facilities offered by the respective State Governments in deserving cases.

According to the Development Council on Sugar, we will have to plan for a total production of 22.5 lakh tons by 1960-61. If this target is to be achieved, the present policy of drift and make-shift, of changes and shifts, must give place to a policy marked by consistency and inspired by well-integrated plans.

Discordant Price Trends

THE behaviour of the wholesale price indices for March has resulted in a sharper divergence between agricultural prices on the one hand and the prices of semi-manufactures and manufactured goods on the other.

The index of the food articles group records a fall of 2.4 per cent over the month, and represents a 20 per cent fall from the average for March, 1954. Cereals show the least change; it is no more than 1.2 per cent decrease; pulses have fallen by 3.8 per cent and the "others" by 4.6 per cent.

In relation to the "others", the pulses group, which stands last in the scale, has slightly improved, though after taking account of the March decline, the index for this group has fallen to 63.3 per cent in the course of one year.

The decline for cereals is accounted for mostly by the downward trend in wheat. Tea, coffee, gur and salt have moved down and in spite of sugar being marked up, contributed to a general fall of 4.6 per cent for the group described as the "others", under the major food articles group.

The average for industrial raw materials stands at 5.4 per cent below the February level, fibres and oil seeds contributing the largest share; the first, at 6.8 per cent and the second, 6.1 per cent.

The percentage of annual fall in oil seeds approximates to that of pulses, though in

relation to the pre-war level, oil seeds are about 110 per cent above pulses. In 1954 March, the wholesale price index for oil seeds was the highest at 513; this status is now conceded to jute, rayon and silk, if the miscellaneous articles for which the index for March stands at 553.3 are left out of account.

In sympathy with the fall in oil seeds, vegetable oils, included under the semi-manufactures group, have also lost to the tune of 25.6 per cent over the year. Oil cakes are depressed to the extent of 31.6 per cent.

Whatever the grouping, the fortunes of oil seeds should also be reckoned as part of those of agricultural produce in general. If the sharp decline in vegetable oils and oil cakes, were to be overlooked, the semi-manufactures group would be showing a 'small rise' during March; even with a 9.5 per cent fall for vegetable oils and 3.7 per cent decline for oil cakes, the total average fall amounts to only 1.8 per cent.

In the manufactures group, total average decline is of the order of 0.2 per cent, the annual change amounting to 0.6 per cent.

The lack of coherence between price levels, has thus become even more conspicuous since the end of March. A number of issues emerge from this deterioration in the balance of the national economy.

It is claimed that the national income has risen from 9,860 crores for 1952-53 to Rs 10,600

crores for 1953-54, representing a per capita increase of Rs 16.5 over that of the previous year and of Rs 9.4 over that of 1951-52.

Though a tentative estimate, it thus indicates a trend generally tallying with the expectations of the Planning Commission. Real income is estimated to have risen by 2.5 per cent and 3.4 per cent over the two years from 1952-53 to 1953-54. There can be no doubt that the same trend is kept up for the succeeding year i.e. 1954-55.

The discordant behaviour of price levels is a clear indication that the different sectors of the economy are not benefitting in equal measure through the rise in national income. It can be worse because with agricultural prices registering a fall of 20 per cent over the year and manufactured prices remaining almost stationary, the one must have gained at the expense of the other.

The position of course is not one which could be compressed into any simple formula or statement of proportion, because the prosperity of the industrial sector may be due to conditions in the export market in which case, the domestic rural sector bears hardly any adverse impact. In any case, until the subject is investigated in sufficient detail, only very broad conclusions could be drawn.

If the fall in the price of food-articles could be traced to a decline in demand at least in relation to the recent expansion in supply, it is not altogether a bad sign. The Sugar Development Council is reported to have disclosed that the per capita consumption of sugar has gone up from 6.84 lbs in 1951-52 to 11.4 lbs in 1953-54, the revelation points to the need for a survey of the contents and direction of rural consumer expenditure, with a view to discover possible shifts between ingredients in recent years.

If, in mass consumption, bare food items are giving place in respect of their proportion to total expenditure to comforts and comparative non-essentials, it is undoubtedly a trend towards better standards of living. But such preference must arise after a complete satis-

faction of the bare necessities, judged by proper nutritional and hygienic standards. It is not clear what has taken place in this regard.

We have it on the testimony of an authoritative body like the Bureau of Industrial Statistics, Calcutta, that in certain selected rural areas of West Bengal the average expenditure per head per month is not more than Rs 17 and that even minute price differences between competing products bear great influence on consumers' preferences. The Director of the Bureau recognises in this circumstance one of the basic handicaps of the products of small scale industries and he suggests a thorough survey of the small and village industries on the one side and the state of country-wide demand on the other.

It looks also rather illogical that the prices of industrial goods are being maintained high when agricultural prices are steadily on the decline. This should mean that either the consumption pattern of the average villager is basically wrong or that Indian industry and Indian agriculture are shaping their fortunes largely independent of each other, again a subject on which no conclusions could be ventured without detailed investigation.

Between 1953-54 rice production went up from 22 million tons to over 27 million tons, roughly 20 per cent, wheat from 7.4 million tons to 7.8 million tons, about 3 per cent; other cereals from 19 million to 21 million tons; about 10 per cent; and gram from 4.2 million tons to 4.6 million tons representing a 10 per cent rise. An average fall in price level of the order of 20 per cent, under the circumstances, should mean that the agricultural producer on the whole is not getting even as much as he got in 1953 in terms of cash. The latest Progress Report of the Planning Commission discloses a shrinkage in the area under rice to the extent of 2.82 million acres and a decrease in outturn of 1.86 million tons for 1954-55; this is an ominous trend, and, if permitted to develop, my well put back the country to where it was when food imports were ranging between Rs 100 and Rs 200 crores.

Diplomacy in the Cold War

By Sir ROBERT BRUCE LOCKHART

SOON after the successful Paris talks in October, 1954, Sir Anthony Eden, then the British Foreign Secretary, outlined in a speech to his Parliamentary constituents the three political choices which he felt faced Europe. Either the cold war, with its heavy burdens on all nations, would continue or it would become a hot one, and if this calamity ever overtook mankind no financial or other calculations would matter very much. There was a third possibility. By negotiation from strength the West might be able to bring about a relaxation of tension. It was for this policy, Sir Anthony said, that Great Britain was working and, he added: "The last seven weeks have enabled us to take decisive steps towards it".

Sir Anthony might have gone back, not seven weeks, but seven months, so as to include other successes such as the persevering work at Geneva which ended the war in Indo-China, the agreement on Persian oil, the Canal Zone arrangements with Egypt, and the felicitous settlement of the Trieste question, a problem which his predecessors had been forced to postpone lest a solution might provoke armed conflict. All these successes were achieved by Western diplomacy. It is no exaggeration to say that, to a large extent, they were a triumph for British diplomacy.

It is an axiom, not always remembered today, that diplomacy is the practice of the possible. Infallible dogma has no place in it.

The possible maximum can be achieved only by knowledge, experience of human nature, tact, fair dealing, a sense of compromise, and, above all, great patience. Although diplomacy cannot be effective without strength, those diplomats who possess the qualities which I have mentioned will always have an advantage—at least round the council table—over stubborn and unyielding opponents.

In the cold war the reverse is true. It is the closed world which has the advantage over the Parliamentary democracies. The totalitarian governments allow only one Press. They close their countries to all information from outside in order that without hindrance they may imbue their peoples with any doctrine, true or untrue, that they choose. They alter the connotation of well-known catchwords like "democracy" and "peace". A police State Totalitarian armies are trained to "fight for peace".

Conducted by a totalitarian State, this form of propaganda is effective. Let us go back to 1945. Even before the end of the war Stalin, in gross violation of his war pledges, proceeded to occupy advance positions in Europe and to instal Communist governments in the countries which the Soviet troops had "liberated". By February, 1948, when the Communist coup d'état brought Czechoslovakia into the Soviet orbit, the USSR had established a chain of satellite States wholly subservient to, and economically and politically dependent upon,

Moscow. Satellite armies, equipped, armed and trained on the Soviet pattern, sprang into existence almost overnight. It was the Grand Eastern Alliance on a scale unprecedented in history.

Up to this period the West had virtually disarmed, but when, alarmed by the events in Czechoslovakia, it began to look to its defences, what happened? The East turned on the full heat of its propaganda machine. Peace was in danger. It was utterly wrong for a group of States to ally themselves as a military unit. The East, armed to the teeth, became in Communist propaganda the sole defender of peace. The West became, and remains to this day, the "camp of the warmongers". When the North Koreans, armed and trained by Soviet military experts, invaded South Korea, the Soviet Radio and Press denounced the Americans as imperialist aggressors. The only Koreans who supported them were "Syngman Rhee and his clique". In Communist jargon any group of people which opposes Communism is never more than a clique.

It is true that since Stalin's death and, in particular, during the past six months, Soviet policy has become more flexible. Stalin's name no longer figures in over-size letters in every column of *Izvestiya* and *Pravda*. He is attacked, but he is ignored in a manner which suggests that the new collective Soviet leadership wishes to obliterate the memory of his terror regime from the minds of the people. There has been some relaxation of intensive isolation. Soviet footballers and athletes have been sent abroad to show their remarkable skill. A British Parliamentary delegation has been received in Moscow with traditional Russian hospitality.

This new flexibility, however, must be regarded more as a change in tactics than as a reversal of long-term policy. It is unlikely that the Soviet leaders have ever wanted a military war, because, unless victory were rapid and complete, such a war might bring down the regime. On the other hand, the Soviet Union wishes to maintain the immense advantages in armed strength which it gained between 1945 and 1952, and it is a demonstrable fact that, whenever the West shows signs of strength, the Soviet Government never fails to come forward with plans which, by their plausible, but vague suggestions of peace and disarmament, are designed to dissipate Western unity and to prevent the ratification of accords already reached after months of difficulty. A typical example of this form of preventive diplomacy was M. Molotov's note calling for a new Four-Power Conference and timed to arrive at the very moment when the Paris accords were being signed.

Another feature of the new flexibility in Moscow is insistence on the feasibility of "peaceful co-existence". Here again there is a difference between East and West about the exact meaning of this expression, which was used first by Lenin in order to define a temporary truce necessary to the development of Communism. There is nothing to indicate that this definition has been altered.

By "peaceful co-existence" the non-Communists means a cessation of the cold war and of all interference in the internal affairs of each side. The Communists have quite a different understanding of the expression. In effect they say: "We are in favour of an immediate renewal of trade between East and West; we should like to reach some understanding on disarmament; but we can never abandon our ideological propaganda".

As M. Gromyko remarked in Moscow to Mr. Mavhew, a former Labour Parliamentary Under-Secretary in the British Foreign Office, "We fight with ideas, not weapons". Clearly, too, the Soviet Government regards this propaganda, which is, in fact, internal subversion, as wholly legitimate.

(Continued on page 886)

World Population Trends:

Except for those who cherish boundless faith in the technological possibilities of the world's agriculture, population trends as emerging in recent years must cause concern. According to the UN Demographic Year Book for 1954, two important trends are noticeable. One is towards longer life for the average man; and the other, towards fewer deaths in infancy. In other words, more people survive in this world, and they survive for comparatively longer periods. The relation between these trends and food consumption is obvious. Based on these trends and on the figure available for 1952, the UN Study calculates that at the end of 1953 the world population must have stood around 2550 million. The world's birth rate has been declining since 1946-47 when it touched a peak; but is still above the pre-war level. In Japan, the decline has been as much as 37 per cent. Statistics for Asia and Africa are not as perfect as for the other continents; but they are sufficiently dependable to show that the industrialised countries of the West are having a far lower birth-rate than in these continents generally. Higher longevity is obviously the result of improved sanitary conditions. In respect of the incidence of mortality due to major diseases like tuberculosis, a kind of law of compensation seems to operate. Deaths on account of tuberculosis are decreasing; but heart disease and cancer take a heavier toll. While in the majority of countries, death rate among males is higher, in a few such as Ceylon, the female death rate is greater. The figures of population density are in a way delusive. Central Europe with 150 for sq kilo-metre is far more

Editorial Notes

prosperous than Asia with 51. Africa has only 7 heads per sq. kilometre; but it is nowhere in point of prosperity near America, with only 8 for sq. kilometre. That inter-state migration has also fallen in dimensions since 1951 shows that the only permanent corrective for the mal-distribution of the world's resources in relation to population is, for some reason or other, not being fully utilised. The Year Book also provides a great deal of information of a spicier kind. For instance, Egypt tops in divorces and Japan steals the honour for suicides. In Egypt, every 20 of 1000 marriages end in divorce, with Alaska coming second with 18.7, and US third with 10.4. In Japan the suicide rate works out at 18.5 for thousand. In both, India is far down the ladder.

*

Nutrition and Employment:

The Committee appointed by the Government of India to enquire into the state of the rice milling industry, and to suggest means for expanding the output of, rice hand-pounded is reported to have made a few tentative recommendations for the consideration of the Union and the States Governments. The very terms of reference to the Committee imply an official preference for hand-pounded rice which the Government seek to encourage. The Committee has completed only a part of its tour; but the reported recommendations in favour of restricting the setting up of new rice mills is a conclusive clue as to the nature of the evidence it has gathered. In the competition between hand-pounded and milled rice, the latter is at a handicap of two vital points. There is decisive medical opinion that most of the nutritional properties claimed for hand-pounded rice disappear through milling. It is said that the eating of milled rice has been responsible for the occurrence of diseases like beri beri. Just now a much graver reason against the use of milled rice springs from the necessity of safe-guarding employment in the hand-pounding of rice. Apart from the loss of foreign exchange involved in the import of mill-machinery, every rice mill is found to throw out of employment a good number of women from an age-long, traditional occupation. The Committee's tentative recommendation against the extension of the rice milling industry except through the considered choice of the authorities is thus based on considerations which have great immediate practical import. Public preference for hand-pounded rice also needs not be as lukewarm as it is, say, for hand-loom, as against mill-cloth. There seem to be decided advantages for preferring the one against the other.

A By-product of Bandung:

The treaty entered into by Chou-En-Lai and Dr. Sunario, Indonesia's Foreign Affairs Minister, relating to the status of Chinese population living in Indonesia, has a far deeper significance than is visible on a superficial view. Almost in all the Asian countries, and in many countries in Africa, there is this problem of a heterogeneous population. Ceylon has a few lakhs of Indians, Malaya has Malaysians, Chinese and Indian settlers. Siam has a considerable Chinese minority. There are Asian settlers in various African countries. Almost everywhere, a mixed population has been a source of some kind of discord or other; in South Africa and Ceylon, we find two extreme examples. The arrangement agreed to by China and Indonesia is for deciding the nationality of any individual with foreign origin solely according to his own choice. Every Chinese settler in Indonesia has complete freedom to declare himself as belonging either to the Chinese nationality or to the Indonesian nationality. Further details of the agreement are not published. The basis accepted by itself marks a great step forward towards a solution of a tangled issue present in the larger part of the two continents. If this same principle of determining the nationality of a foreign settler or a settler of foreign ancestral origin is to be accepted by other countries also, there will be a speedy and fair way out of the common problem. The Sino-Indonesian treaty can thus be looked upon as a model and a guidance; it does not, of course, silence all fears or remove every vestige of doubt and suspicion from either side. But it does point to a workable basis, on which the problem of dual nationality could be ostracised from the realm of international relationship.

*

Coinage Reform:

The Union Government's decision to introduce the decimal system of coinage and metric system of weights and measures has a long and interesting history behind it. But for the disapproval of a Secretary of State, the metric system would have come into vogue in India 85 years ago. More recently Mr. C. Rajagopalachari tried to introduce this system. Mahatma Gandhi was enthusiastic about decimal coinage. It is only because of more serious national pre-occupations that these highly-favoured changes were left over for consideration at a future date. The Government, however, were not sleeping over the proposals. The Indian Standards Institution and a special Committee appointed to go into these questions have produced a great deal of background infor-

mation and expressed well-considered views on them. What is more important, the ISI also gave a frank picture of the difficulties in the way of introducing a uniform system of weights and measures all over the country at one stroke. The Committee pointed to the need for much propaganda which should go before. It is on the basis of these reports and suggestions that the Government are now thinking of introducing legislation for a gradual replacement of the existing coinage and the diverse systems of weights and measures. First decimal coinage would come; and later, the metric system of weights and measures. The Commerce Minister expects that no State Government would stand in the way. It is possible for the Union Government to convince the States that this is also a field where integration is necessary and advantageous. The process of simplification of weights and measures has already gone some way through Provincial and States legislation. Dry mea-

Exit: The Busy Season Enter: The Slack Season

CURRENT money market indications seem to warrant the inference that the busy season attained its peak by mid-April; and that the transition to the slack season has emerged from the third week of this month. Attributes of the slack season are in around evidence. Taken all in all, the 1954-55 busy season has run true to form; and, if the slack season, too, should turn out to be normal, we may expect to see it fairly established by May-end or early-June.

The 1954-55 busy season may be said to have made its debut on September 25, 1954, and taken its leave on April 15. During this period, currency was expanded against sterling securities for Rs 48.82 crores, against rupee securities (Mostly fresh ad hoc Treasury Bills) for Rs 116.00 crores, and against rupee coin for Rs 5.00 crores. Total currency expansion was, thus, of the order of Rs 170 crores—which is, we believe, the largest expansion effected in the context of busy season requirements.

With the weekly financial returns providing a necessarily limited range of information, precise conclusions on the magnitude of created money are not possible; but it will be perfectly correct to say that created money was the most important element in the additional currency supply needed for the 1954-55 busy season. It may also be said that, since discussion on deficit financing began, the first four months of 1955 record the first large-scale creation of currency against ad hoc IOUs.

Active note circulation, accordingly, registered a record expansion. The highest altitude of notes in circulation was reached in the busy season just come to an end. Even in reference to undivided India, this constitutes a record. The peak figure was Rs 1,325.33 crores on April 15. The increase in active note circulation in the 1954-55 busy season was Rs 178.19 crores.

Expansion in rupee coin circulation was Rs 6.09 crores. In the comparative table given at the end of this article, Rupee coin shows an apparent decline of only Rs 1.09 crores. But, it must be remembered that, in the first week of this month, Government tendered Rupee coin for Rs 5.00 crores, as provided in the Reserve Bank of India Act.

Money supply in the busy season was also augmented by the increase in the demand liabilities of the scheduled banks to the amount of Rs 34.27 crores. As on April 15 last, Demand Liabilities stood at Rs 591.90 crores.

Time Liabilities, too, have risen by Rs 28.83 crores to Rs 380.98 crores. Taking demand and time liabilities together, Deposits of member banks show a rise of just over Rs 63 crores. As we had stressed on earlier occasions, this provided reassuring testimony that, at long last, the tempo of development expenditure is being reflected in the resources of banks.

The Central Government's disbursements in the last busy season have been substantial. Their deposits with the Reserve Bank have been run down to the extent of Rs 85.81 crores. In addition, most of the additional currency issued against Rupee Securities (Rs 116.00 crores) represents created money arising from the declared policy of deficit financing. That is to say, the Centre's net disbursements in the 1954-55 season are of the order of Rs 200.00 crores.

While scheduled banks augmented their resources to the extent of Rs 63.10 crores from the additional deposits, they had recourse to the Reserve Bank for rediscount of usance bills to the amount of Rs 15.31 crores. They allowed their balances with the Reserve Bank to run down to the extent of Rs 12.10 crores. By these means, banks provided additional credit to trade to the extent of Rs 97.77 crores.

Throughout the busy season, the money market experienced a more or less uninterrupted spell of stringency. The successive increases in the Bank of England rate had the effect of making exchange banks keener bidders for deposits. Mostly, it was all borrowers, and no lenders. The nominal rate was three per cent per annum for call, as well as for term money for one month to six months. Persistence of an unbroken three per cent for call money has no parallel in earlier busy seasons.

Since the middle of this month, there has been a small fall of 1 per cent in the call money rate both in Bombay and Calcutta. The rates payable on fixed deposits remain unchanged. Active note circulation has declined substantially in the week ended April 22. Scheduled bank credit, too, is lower. Those who are in the know see, on the one hand, diminishing demand for fresh advances, and, on the other, returning funds from crop finance. The general impression is that the slack season influences will gather momentum in the coming weeks.

Will they?—this question may be answered in the affirmative in the sole context of seasonal factors as applicable to India. There is the further assurance that, as the Centre's deposits with the Reserve Bank declined to Rs 53.11 crores in the week ended April 22, there is the prospect of more created money for month-early disbursements in May. Moreover, the first quarter of the financial year always accounts for an excess of expenditure over revenue on current account. In respect of the capital disbursements in the last year of the Plan, a considerable outgo may

be expected. It seems reasonable to conclude that created money will continue to be as much the feature of slack season ways and means as it was of busy season finance.

In the light of these factors, the 1955 slack season may be said to hold the promise of really slack conditions.

Can we be so sure?—is the next question prompted by the rising trend of money rates in London and New York. Tougher measures are likely, fear the City circles in London. There are some who apprehend a further rise in the Bank of England rate; and a few believe that, by autumn, sterling may face a crisis. In the USA, the Federal Reserve Banks have raised the discount rate from 1½ to 1¾ per cent, following the unilateral action of the Federal Reserve Bank of Kansas three weeks ago. The Treasury Bill rate is now over 1.65 per cent per annum.

To the extent India has no foreign short-term funds, the 1955 slack season may be relatively immune to the current phase of dear money in London and New York.

(In Crores of Rupees)

Scheduled Banks:				
Demand Liabilities ..	557.62	591.90	+ 34.27	
Time Liabilities ..	352.12	380.98	+ 28.83	
Advances including Bills Dis- counted & Purchased ..	524.88	622.02	+ 97.14	
Investments ..	346.24	342.56	- 3.68	

The returns of the Reserve Bank for the week ended April 22 may prove to be the harbinger of the slack season. A considerable return of notes from circulation as well as return of rupee coin may be construed as the indications of a slackening demand for money.

Notes in circulation have declined by 9.19 crores to Rs 1,316.14 crores. Notes held in the Banking Department have risen by Rs 9.71 crores to Rs 25.45 crores. Rupee coin is higher by Rs 52 lakhs at Rs 105.84 crores.

In the Banking Department, Central Government's deposits have declined by Rs 2.28 crores to Rs 33.11 crores, while Provincial Governments' deposits have risen by Rs 6.10 crores to Rs 30.42 crores. Bank deposits are shown at Rs 48.31 crores against Rs 50.49 crores and other deposits at Rs 22.70 crores against Rs 21.40 crores. Balances held abroad have shown a drop of Rs 5.12 crores to Rs 58.23 crores. "Other Loans and Advances" have risen by Rs 1.21 crores to Rs 35.15 crores, which includes Rs 24.76 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks

against Usance Bills, since January 1, 1955, is Rs 68.86 crores. Investments are lower by Rs 2.49 crores at Rs 43.63 crores. In this connection, it may be added that the Reserve Bank is reported to be a seller of the long-medium loans and it is possible that, with the approach of easier money, investment institutions are steadily purchasing government securities.

The statement of the Imperial Bank for the same week discloses a slight decline in deposits from Rs 220.37 crores to Rs 218.96 crores in the previous week. Borrowings from other banks have risen by Rs 1 crore to Rs 10.50 crores, while other liabilities, including inter-office adjustments, are shown at Rs 4.92 crores against Rs 4.38 crores. On the assets side, cash balances are higher by Rs 96 lakhs at Rs 18.01 crores, while investments are lower by Rs 22 lakhs at Rs 103.85 crores. "Loans and Advances" have declined by Rs 81 lakhs to Rs 125.05 crores—"Loans, Cash Credits and Overdrafts" accounting a drop of Rs 1.10 crores and "Bills Discounted and Purchased" for a rise of Rs 29 lakhs.

A Halt in the "Dash to Freedom"

By PAUL EINZIG

JUST before Parliament adjourned for Easter, Mr Butler announced his long deferred decision not to discontinue the Capital Issues Committee. That institution, which has the right to veto any loan or credit transaction in excess of £50,000 came under fire on the part of Conservative backbenchers during 1954, and there was growing pressure on the Chancellor to induce him to terminate its activities. It was pointed out that the maintenance of Government control over capital transactions was contrary to the declared Conservative policy of restoring economic freedom. It was also argued that, since the proportion of application refused by the Committee was very low in recent years, the practical significance of its activities did not justify the departure from the principle of laissez faire.

It must have been very tempting for Mr Butler to achieve popularity in Conservative circles by yielding to this pressure. For many months he was hesitating whether to do so, or at any rate whether to meet the opponents of the Capital Issues Committee halfway by increasing considerably the minimum limit beyond which transactions come within its jurisdiction. After long hesitation he has now decided against it. The only concession he has made is to exempt from now on any transactions which do not involve the raising of new capital. Thus in future acquisitions and the amalgamations of companies, the formation of new holding companies, issues of stocks to parent companies for cash, issues of shares to redeem loans or to secure unsecured loans, conversions or renewals of securities etc. will be exempt from Government control.

Owing to the newspaper strike, the imminence of the adjournment of Parliament for the Easter recess and the obscure technical form in which the announcement was made, the decision escaped attention and comment. Those Conservatives who noticed it and appreciated its significance considered the concession disappointing. The step it represented towards freedom was indeed insignificant, even though it admittedly relieved businessmen of much inconvenience.

The fact of the matter is that the Government is at present not in a mood for continuing its "dash to freedom" policy, not even at a slow pace which could in no manner be described as a "dash". Liberalisation is a luxury which can only be indulged in amidst favourable economic conditions. Economic improvement during 1953-54 provided Mr Butler with a good opportunity for liberalisation, and he made extensive use of it. Conditions in 1955, however, are such as to make it appear inexpedient for the time being to proceed much further in the same direction.

Notwithstanding the increase of the bank rate, the undertone of the British economy remains distinctly inflationary. In the circumstances

the Government could ill afford to remove its control on capital investment. Excessive promoting activity would aggravate the inflationary pressure. Moreover, the extensive issue of loans and granting of credits would be one of the ways in which inactive bank deposits would become converted into active bank deposits. The effect of such a change would tend to be the same as that of a corresponding increase in the volume of deposits. Mr Butler may have felt that it would be inconsistent with his declared policy of restraining the expansion of credit if at the same time he had opened the floodgate for public issues.

The change in the Government's attitude towards liberalisation was also indicated by its recent refusal to yield to Conservative pressure demanding the liberalisation of the import of jute and newsprint, two of the few remaining commodities which are still subject to direct Government control. It may well be that, having liberalised cotton, grain, metals etc., the Government is now straining at gnats after having swallowed camels. But there can be no doubt about it that conditions have changed in the meantime. Indeed it is permissible to speculate whether the Government will not be tempted in the changed circumstances to restore some of the controls if this were possible without loss of prestige.

Such a retrograde step was in fact taken in the sphere of instal-

ment selling. Simultaneously with the increase of the bank rate to 4½ per cent Mr Butler announced the restoration of a moderate degree of restrictions on instalment business. The extent of the restrictions, under which initial payments must be at least 15 per cent and the period of repayment must not exceed 2 years, is so slight that most trades remain entirely unaffected. This is indicated by the fact that during March the restrictions did not prevent a further sharp expansion in the number of various types of motor vehicles sold against deferred payments. Instalment business in bicycles and in radio and television sets also continued to expand. The only industry which appears to have been adversely affected is the furniture industry, in which the prac-

Policy for Linseed

THERE is a handicap which goes with the phrase 'vested interest', and this phrase is prone to be used in respect of all the Chambers of Commerce who, from time to time, make known their views on the state of the economy and who, consequently, make what are called 'representations'. It is unfortunate, but true, that such representations are, oft-times, given no more than a cursory study for the reason that, having as they do an axe to grind, they are thought to present one side of the picture only. We say it is unfortunate, because many of the representations made are genuine, and they indicate quite clearly the prospects of and the problems before particular fields of industry in the country.

Recently, Rai Bahadur G. V. Swaika, in his capacity as Chairman of the Calcutta Grain, Oilseed and Rice Association, has made an impassioned plea for a revision of Government policy in the sphere of export trade control. His plea is such, on the basis of what he has said, that it may be said to be more than representing mere vested interests: It is the appeal of a section of Indian trade which is in sore straits for no fault of its own. Rai Bahadur Swaika's emphasis is on linseed oilcakes; and the authorities in New Delhi would do well to take particular note of the measures that he has asked for.

It is not as though Rai Bahadur Swaika has merely made known the measures that the linseed oilcake

trade is in need of; he has given an able and comprehensive review of the events and causes which necessitate the revision of policy that he now seeks.

The position in the linseed oil trade is briefly this: Export quota, export duty and other restrictions in India of various sorts improved the competitiveness of other world sellers of linseed oil and oilcake. This was because, while Indian traders were permitted to export linseed oil, there was more or less a total ban on the export of linseed oilcake, though world producers were able, what with the quantum of income derived from sales of oilcake to reduce their prices on linseed oil. The situation then arose where the price ratio, for example, of linseed oil to cake stood reduced from 5:1 to 3:2.

What Government did not appreciate was that linseed cake production had doubled from its pre-war level; moreover, production of cake of other seeds has also increased; and, finally, the production of chemical fertilizers is at a substantially higher level. These, says Rai Bahadur Swaika, are reasons why India could afford to permit export of linseed oilcake.

It is conceded that, since the beginning of 1955, Government have permitted limited exports of various linseed oilcakes. The complaint of the Association is that the total quantities allowed are far too small. It is a fact that there are, in India, large accumulated stocks of linseed

cake for which there is no demand. In the logic that an export of linseed oilcake would enable Indian traders to offer linseed oil on a competitive basis in world markets. Rai Bahadur Swaika has suggested a four-point new policy in the matter of export trade control for linseed oils.

- (1) It is suggested that export policy announced should relate to as long a period as possible; and it is proposed that the crop year should normally be the period for which Government will announce policy from year to year.
- (2) It is suggested that such policy should have regard to linseed oils and to cake; and it stands to reason that, where it is possible to develop the export of linseed cake, there should not be a like reluctance to export of linseed oil.
- (3) It is suggested that Government recognise the difficulties of the industry consequent to the existence of a buyers' market by the removal or reduction of export duties wherever they now obtain.
- (4) In view of the sizeable production of cake in the country, it is finally suggested that, to the greatest possible extent, the quantitative restrictions should be removed.

What could be an important export industry in India now stands in danger of being priced out of world markets. A sympathetic consideration of the points made by Rai Bahadur Swaika would, we suggest, enable this important industry to contribute once more, in sizeable measure, to the foreign exchange earnings of this country.

Setback in Copper Prices:

Hardly a month ago, the supply position of Copper became extremely acute and there was a considerable and persistent rise in demand. It was thought that India would find difficulty in obtaining the metal in the coming months as she imports the bulk of her requirements.

It also appeared that there was no way out of the tight supply position unless, in the interest of the stability of the market, the US Government made the metal available to the trade out of stock-pile stocks.

For these reasons, the price of the metal, which was quoting around Rs 250 per cwt in the third week of March, was pushed up to Rs 262 at the end of March. On the London Metal Exchange, the price soared to an all-time record of £368 per ton.

Prices have now taken a reverse turn in view of the easing in the supply position of the metal following the US Government's decision to release 17,500 tons to the industry for April/June period. Apart from the fact that the US Government have also agreed to divert further tonnages from deliveries to keep US consumers adequately supplied, the British Government have decided to sell 65,000 tons to private industry from strategic stocks held by them.

As a result of these factors, the price of copper has now receded to Rs 235 per cwt, while the London Metal Exchange has registered a sharp decline to £313 as compared with £368 per ton quoted a month ago. In the USA, the price of prompt-delivery copper, which registered a record high of about 46 cents a pound, is now quoting around 38 cents.

(Continued from page 897)

World of Jute

Easy Conditions

DISCORDANT trends have prevailed in the jute markets during last week. While prices of jute goods have declined sharply, raw jute has put up considerable resistance to reactionary ideas.

On most of the days, trading in the goods section has been characterised by panicky sales by nervous holders. Hessian 40" x 10 oz. Ready has lost ten annas while B Twills has shed fully five rupees to be finally placed at Rs 116-12 as against Rs 121-12 a week ago.

Meantime, the raw jute market does not seem to have been disturbed very much by the slump in goods. Though at the close of the week, Assam Bottoms are lower on balance at Rs 33 per maund, indications are that sellers will become once again reserved in view of the latest declaration by Pakistan that she will be taking effective measures to restrict her new jute crop to 55 lakh bales.

In short, the two sections of the jute market are pulling in opposite directions with the result that the interests of the industry as a whole are in grave jeopardy.

It may be remembered that even when goods prices were quoting much higher, jute mills showed little or no inclination to conclude business. Their predicament can easily be imagined now when goods prices have considerably gone down, while no corresponding reduction in the prices of the raw material has taken place.

It is evident, therefore, that the present trend in jute markets has been brought about not by factors that should ordinarily determine the price pattern but by extraneous factors which have no bearing on the real situation.

Experience has shown that speculators in the Calcutta market have always exercised overwhelming influence on its course. Their grip was prominently in evidence last week when for no reason except that some of them had suddenly decided that the time had come for them to sell, prices were pushed down.

Some would like us to believe that there is nothing extraordinary in the present depressed conditions. In support of this they will draw our attention to the absence of foreign enquiries for the past several days as well as to the fact that contrary to earlier expectations Argentina has not given any indication of her reported requirements of hessian. While there is no doubt some justification for the erstwhile steadiness of hessians, it cannot be gainsaid that the violent fluctuations in heavygoods are due to the manipulations of the

speculative elements in the jute goods market.

However, the real solution of the problem facing the industry lies in raw jute, and more particularly in Pakistan's jute policy. So long as our mills depend on Pakistan for a portion of their raw material requirements, it is idle to expect the Indian jute goods industry to be unaffected by what happens in the Pakistani world of jute. Recently the main aim of Pakistan's jute policy has been stated by the East Pakistan Chief Secretary in the following words: "It quite often happens that during the first four months of every jute season the price remains low and it goes up during the latter part of the year when the stocks are in the hands of the traders. We should see that a reasonable high price prevails while the stocks are in the hands of the cultivators".

The ban on forward sales of jute at a discount ostensibly was the direct outcome of the anxiety of the Pakistan Government to see that their cultivators get a good price for their jute. The repercussions of this move, however, on the raw jute trade of the world were so serious that a delegation of the London Jute Association deemed it necessary to pay a visit to Pakistan to obtain clarification. It is now reported that the delegation's mission has been successful and that they have concluded an agreement on procedures of jute shipments to Dundee with the Government of East Pakistan. It is also understood that Pakistani shippers have assured them that the supply of jute to overseas buyers would be maintained at all cost.

No such co-operative attitude seems to have been displayed by Pakistan in resolving the difficulties of Indian buyers of raw jute from her. Far from issuing any further clarification regarding the ban on forward sales, she has not even cared to remove any of the impediments she has put in the way of a smooth flow of the raw material into India.

The jute goods market opened the week on a quiet note. Reports of poor shipping instructions coupled with the continued absence of overseas enquiries depressed sentiment throughout, while speculative manipulations resulted in a two-way movement of prices on particular days. Of the two sections, Hessians were comparatively steady in the earlier part of the week due to fears of a squeeze in this construction on the due date. Backings on the other hand were all along subjected to

selling pressure. On Tuesday, conditions akin to panic developed especially in the Fatka due to nervous selling by weak holders. The report that due to a smaller crop this year Argentina may not show any further interest in Indian hessians in the immediate future has so completely unnerved operators, that reports of some business done in hessian on Wednesday with UK and USA has proved ineffectual in arresting the downward movement of prices.

B Twills Ready opened the week at Rs 121-12 and was marked down to Rs 120-8 the next day. On Monday the rate was another one point lower at Rs 119-8. The downward movement continued to be in evidence on Tuesday also with the quotation pushed down to Rs 118-4. By close on Wednesday the rate had declined sharply to Rs 116-12.

The decline in Hessian 40" x 10 oz had been comparatively slow as in the earlier part of the week sentiment was sustained by hopes of the Argentine order. Starting the week at Rs 44-8 the quotation moved back to Rs 44-5 and then to Rs 44-2, Rs 44-1 and finally to Rs 43-12.

The following table shows the trend of prices during the week.

Hessian:	Opening Rs. a.	Closing Rs. a.
40" x 10 oz.—		
Ready	44 6	43 12
July-Sept.	44 0	43 6
Backings:		
B. Twills—		
Ready	121 12	116 12
July-Sept.	115 6	113 0
Hv. Cees Green	124 0	119 0
Cornsacks	128 6	123 8
Cubans	147 0	145 0
A. Twills	157 0	157 0
L. Twills	140 0	135 8
D. W. Flour	163 0	162 8

The raw jute market after ruling quiet for most of the days due to absence of mill business steadied up in the Fatka towards the close due to reports that crop restriction measures would be strictly enforced by Pakistan. Assam Bottoms which was quoting at Rs 34-8 per maund at the opening steadily declined to be placed nominally at Rs 33 per maund at the close.

INDIAN CROP REPORT

Sinclair Murray & Company Ltd. say in their Indian crop report for the week ended April 23 that weather conditions in all areas have been hot and dry and rainfall is required to allow sowings to commence or continue and to assist the growth of young plants. The condition of young plants in Assam and Forbesganj is generally satisfactory, and germination of seeds has also been satisfactory.

The weather in the Daisee districts has been hot and dry which has been unfavourable for sowings and preparation of land and the growth of seedlings and young plants. Sowings to date amount to 4 annas as against negligible sowings at this time last year. The condition of young plants and seedlings is not good due to lack of rainfall.

PAKISTAN JUTE CROP

Sinclair Murray (Pakistan) Ltd., say in their jute crop report for the week ended April 23 that hot and dry weather has been experienced in most areas during the week under review, with a little rain over the week-end in some places. Sowings in general have slowed down due to lack of rain. The weather in general has not been unfavourable for the standing crop, but more rain would be beneficial. The river levels in general are normal for the time of the year, but a little higher than normal in some places.

Wider seats with ample leg and head room.

World of Tea

Endorsement of Seasonal Forecast

FORECASTS on the coming season, given by Messrs J. Thomas & Company, the well-known tea brokers, show little difference on major points from those of Messrs Carri, Moran & Company to which we referred last week.

In their annual report for 1954-55, Messrs J. Thomas & Company state that "at the time the foundation work on gardens for the reason 1955 was commenced, it was a strongly held opinion that more tea must be produced to meet the daily increasing demand of the world's tea drinking public. Although there are certain doubts as to whether the world can absorb very much more tea, the majority of North Indian garden-

owners have endeavoured to procure as much manure for their properties as will produce the maximum crop they can possibly manufacture in the coming season."

It is understood that Southern India and Ceylon are also capable of producing larger crops of tea than the record production already manufactured in the past season, while Pakistan and East Africa are also quite liable to manufacture enough extra tea for their own internal requirements to allow them to export an increased amount for the world outmarkets.

"It seems likely, therefore, that the amount of tea manufactured by the world producing countries in

1955 may be at least as large as that manufactured in 1954. In order to assess the market, for the coming season, however, it must be considered whether the world consuming public are able to absorb an increased amount of tea, or whether any increase in production over the present world tea crops will flood the market and again produce slump conditions as in 1952.

The reason for the present violent fluctuations in the tea market is the very delicate balance between world supply and demand. Unfortunately, no country has yet settled down sufficiently, since the turmoil of the second world war, to enable the tea buyers and blenders to assess accurately either the number of people drinking tea, their individual financial capacity or their per capita consumption. At times, various figures are produced and published which show that world consumption in all countries is rising to a degree which still makes it seem level or even in excess of world production. But, what these figures probably show in reality is not actual consumption, but a temporary absorption of tea due to stock piling.

It is probable that world production has now reached a stage when it must at least equal world consumption. It, therefore, seems advisable, remembering that there are many acres of young tea which will shortly be coming into full bearing, that the machinery for the voluntary crop regulation scheme which came into being in 1952 should be kept as a safeguard against another sudden and disastrous slump such as took place in that year.

The fact that world production may have at last reached that debatable figure of world demand should not necessarily forecast a sign of bad times for the tea industry. On the contrary, it is to be hoped that this situation will render the big Blending and Distributing Houses able to procure tea at prices economic both to themselves and to the producer and, at the same time, enabling them to hold stocks of tea on their own account large enough to meet any sudden demand from their consuming clients."

In conclusion, the report states that "we anticipate a lower market in 1955 than the extraordinary boom which took place in 1954. We think good and economically satisfactory prices will be paid for well-made and desirable tea while, perhaps, the buyers in auction may be enabled to serve their public by neglecting ill-manufactured and stinky grades, thus improving the blends of tea put out to their clients. Prices should rise to very satisfactory levels when the second flush quality teas are on offer in Calcutta, but there will probably be a recession in September when the quality of tea on offer deteriorates. The extent of this price recession will depend on the amount of tea manufactured to the end of August when the announcement of this crop figure is made in early September. Should, however, world auction prices of tea be too dear to enable world tea buyers to hold adequate stocks, it is

our fear that the tea market may fluctuate somewhat violently to the detriment of the whole trade for several years to come."

In the Internal Sale, held at Calcutta this week, offerings consisted of 17,700 packages of Dooars. There was a better demand, Commons and Dooars Lustr with black leaf appearance being the strongest features of the sale. Medium Assams eased as the sale progressed and closed at $\frac{1}{2}$ to $1\frac{1}{2}$ annas below last week's rates. The best CTC good liquoring teas from Upper Assam were very irregular, but the poorer and more fibrous types, which in previous weeks have been difficult of sale, received better attention and often sold several annas above brokers' valuations. Following rates were quoted per pound:—Medium Dooars Dust Rs 2-2 to Rs 2-2-6; Medium Assam Grainy Dust Rs 2-4 to Rs 2-5 and Best Assam CTC Dust Rs 2-12 to Rs 2-14.

In the Export Quota section, the rate for the Special Export Licence was marked down at the close of the week to 54 pies per pound from 66 pies quoted early in the week. Similarly, the rate for New Season's Quota was marked down to 75 to 78 pies per pound from 84 pies.

In the Export Sale, held at Colombo last week, offerings amounted to 14,17,000 pounds. Nilgiri teas generally showed a slight decline in quality, while the liquors of other sorts were plainer and, in many cases, these teas contained more stalk. Most grades and descriptions met with only fair demand at a drop up to As 6. The very limited quantity of best liquoring Nilgiris, on offer, were keenly competed for at fully arm to clear rates, but other sorts declined by As 4 to As 6 per pound. Medium, Low Medium and Low-grown teas were sold at As 2 to As 4 per pound below last rates. The strongest feature of the sale was Whole Leaf grades with met with keen competition from internal buyers. Following rates were quoted (per pound):—Low-grown Travancore BOP Rs 2-2; Medium-grown Travancore BOP Rs 2-3-6; Annamalai BOP Rs 2-8; Best Liquoring BOP Rs 3-8-6 and black well-made OP Rs 3-0-6.

In the Internal Sale, a total of just over 3,50,000 pounds was offered. The sale opened at very irregular rates with prices As 3 to As 5 per pound below last levels, but it settled down towards the close. Withdrawals were heavy. Well-made grainy descriptions met with keen competition at about firm rates, but other sorts were As 3 to As 6 per pound easier. Residual types were particularly difficult of sale. High-grown descriptions declined by one anna to two annas per pound. Sale No. "T" will be held on 3rd May, 1955.

The Ceylonese Government decided to reduce the export duty on tea by 30 per cent—from one rupee 30 cents to one rupee per pound—with effect from April 22. This reduction follows the uncertainty in the Colombo market as a result of

World Overseas

Britain

THE BRITISH BUDGET

Britain's role in supplying development capital to the Commonwealth was stressed by the UK Chancellor of the Exchequer, Mr. R. A. Butler, presenting his fourth budget in the House of Commons yesterday (April 19).

"We have to resume our traditional position as the main supplier of capital for the development of the Commonwealth and the colonial Empire, which offer such inspiring opportunities," Mr. Butler declared, "we have taken on heavy liabilities to the colonies under the Colonial Development and Welfare Acts and our participation in the Colombo Plan. And we are making increasing facilities available to Commonwealth Governments in the London market. All these external liabilities add up to a formidable call on our resources."

The main note struck in the Chancellor's speech was Britain's expanding economy. Her opportunities in world markets were substantial. Production continued to rise, and this was making her economy increasingly independent. Britain's efforts, he declared, would have "a profound effect on our economy, our morale, and our influence in world affairs."

The Chancellor was able to announce a cut of sixpence in the standard rate of income-tax, important reductions in the purchase tax on some domestic textile goods, and reliefs for the 'family man'.

"Expansion of our economy," said the Chancellor early in his speech, "has brought with it many improvements in living standards for our people. In each of the last two years, the average person has been able to buy for his or her own use four per cent more goods and services than in the previous year."

After detailing the rises in real wage rates, sickness and industrial injury benefit, and pensions, Mr. Butler said: "I have to take account of all these matters. Can we have them and more, too? How, in fact, does this Budget fit into a series designed from the beginning to keep up the momentum of our progress? My aim in 1952 was to rescue and fortify sterling. The following year I deliberately gave the incentives needed to encourage effort and expansion of production."

"A new spirit was infused into the industry. The expansion of the economy continued through 1954, employment kept at a record level, industrial production rose by more than six per cent, the increase in exports—which began in 1953—was well sustained, home demand for manufactured goods expanded, stocks and working progress increased, and the rise in investments continued."

They must now, said Mr. Butler, decide how best they could maintain this progress and at the same time keep in balance with the rest of the world.

Turning to the balance-of-payments position, the Chancellor said the past year had shown them that while it was right to run their island economy in a more independent mood, problems could spring from the very success it had been their happy lot to achieve. Increase in their production, which was so important both for their export trade and for the maintenance of employment, necessitated a rising level of imports of raw materials. They were also eating more and importing more.

The movement of the terms of trade, previously in their favour, had been reversed during the past year. On the provisional estimates for the six months from October last year to March this year, British imports (c.i.f.), at about £1,875 million, were some £225 million higher than in the corresponding period 12 months earlier. But UK exports, at £1,460 million, rose by only about £40 million.

For 1954 the UK surplus was provisionally estimated at £160 million, but they earned the bulk of this surplus in the first half of the year. Although there was a welcome increase in receipts from off-shore contracts, American defence aid was halved as compared with the year before—the total for 1954 being only £50 million.

"We are grateful for this aid, especially for the programmes designed to help our expanding air force," said Mr. Butler, who added amid cheers, "but we are proud that our own efforts, reflected in full employment and rising production, are making us increasingly independent. These efforts have had, and will have, a profound effect on our economy, our morale, and our influence in world affairs."

The recent decline in the level of the gold and dollar reserves must be seen in perspective, said Mr. Butler. In the latter half of last year they not only had to meet the normal annual payment on the US and Canadian loans, but also repaid £40 million to the International Monetary Fund and £39 million to reduce their debt to the European Payments Union (EPU). "Thus," said Mr. Butler, "we fortified our capital account by repaying debts."

The Sterling Area's reserves existed to be drawn upon in case of need. In Sydney, over 15 months ago, Commonwealth Ministers accepted the fact. This was confirmed in Washington last September. The relatively small decline in the reserves had to be seen in proportion.

Mr. Butler affirmed that Britain still adhered to her policy of a collective approach with the Commonwealth, Europe and the USA to the solution of the world's trade and

currency problems. She still sought to find with her partners the best method of freeing her payments to match the widening of her trade and the opening of markets.

Speaking of the international revenue-expenditure picture, the Chancellor said total revenue in 1954-55 amounted to £4,738 million—£205 million more than estimated. While revenue exceeded expectations, expenditure—at £4,905 million—showed a saving of £218 million.

"One success story of the past year," Mr. Butler went on, "is the record of the national savings movement. Over the whole financial year there was a net increase in savings of £120 million, compared with a net loss of £12 million a year earlier. I greet this as a remarkable and heartening achievement in which we can take proper pride in this year's appraisal of our affairs."

Giving details of expenditure, the Chancellor drew particular attention to the defence aspect. "As a result of a full review of our strategic needs and a careful scrutiny of estimates over the whole field, the provision for defence has been kept at a level which, broadly speaking, is not very different from actual expenditure last year."

"This is welcome so far as it goes, but the development of new arms, the changes which will follow the end of the occupation in Germany, and continuing reduction in American aid, all emphasise the importance of maintaining our efforts to secure, within the new strategic framework, all possible economies in this field."

Commenting on the rise in the cost of social services, the Chancellor said: "Investment in human health, wider opportunity and increased technical skill means something more than 'investing in success'. It means assurance of a happily working and socially responsible democracy."

Looking at external prospects, Mr. Butler referred to the efforts made by the Commonwealth as a whole, the OEEC (Organisation for European Economic Co-operation) countries, and the USA, to remove barriers to the free flow of trade and payments. "Last year we were concerned about the possible effects of a recession in America. But the Government and people of the USA did much to stem the threatened decline in their output, and now there is an upsurge of renewed confidence and reinvigorated production in that country."

This general revival of industrial activity in the USA should benefit not only America herself but also the rest of the free world—more so if President Eisenhower's fresh initiative in developing more liberal trade policies commands the support of all men of goodwill.

In Western Europe, trade and production are still rising. It has been a great satisfaction to me, as chairman of OEEC, to watch, applaud and encourage this expansion in Europe—an expansion reflected in current plans for the further removal of restrictions on trade this year."

Referring to change in the General Agreement on Tariffs and Trade (GATT), the Chancellor said GATT emerged as an instrument better adapted to reinforce our efforts to liberate trade. "The instrument was there; it was for member countries to use it."

In general, there were good prospects that world markets would offer Britain substantial opportunities to increase her exports this year.

Coming to his actual Budget proposals, the Chancellor spoke of the burden of taxation, which was 'far too great' and made Britain one of the most heavily taxed nations in the world. Amid cheers, he announced a reduction of 6d in the standard rate of income-tax, from 9s to 8s 6d in the £.

Expressing sympathy in the current difficulties in Lancashire and Northern Ireland, Mr. Butler announced a reduction in the purchase tax from 50 to 25 per cent, on household textile articles of cotton, linen, rayon, and other non-woollen materials.

He was able to give some help to the 'family man'. The child allowance would be realised from £85 to £100.

The Chancellor said he proposed also an increase in personal allowance by £20 for a single person and £30 for a married couple, thus raising the tax-exemption level and freeing many people altogether from paying income-tax.

USA

THE WONDER DRUG FOR POLIO

By Guy Sims Fitch

The development of the anti-polio myelitis vaccine by Dr Jonas Salk is more than a story of medical research; it is also a story of industrial foresight and initiative. In no more graphic form, perhaps, has the willingness of American businessmen to take calculated risks to attain important objectives been so favourably illustrated.

Their readiness to produce mass quantities of the vaccine for testing and to invest in new facilities for its manufacture—long before they could be reasonably certain of its success—helped to make the Salk achievement possible. This includes not only the half dozen phar-

maceutical firms that make the vaccine, but the scores of drug companies that supply them with necessary materials and equipment.

Now that last year's tests have proved successful, the six companies licensed to make the vaccine are expanding their operations to get into commercial production. Parke Davis and Company, which accounts for about 50 per cent of present production, is adding to its laboratories and doubling its output. Eli Lilly, second largest producer, is making the vaccine in a five-story building it converted for this purpose last summer.

Allied Laboratories has been in production since last December, and Sharp and Dohme since last September. The others, Cutter Laboratories and Wyeth Laboratories, also are making substantial amounts.

New facilities for large-scale output have cost these firms many thousands of dollars. In at least two cases, the investment is estimated at more than one million dollars each. And this does not take into account the work of laboratory and production experts in perfecting techniques for making and testing the vaccine. All of this investment in time, money and effort could have been lost had the final tests proved negative.

But the vaccine proved a success. And as a result of their early start, the manufacturers now have sizeable stocks on hand for immediate use. There will be temporary shortages, of course. But these stocks, plus present and future production, are expected to insure the immunization of as many as 45 million persons this year—about equal to the number of United States elementary school children.

By next year, American pharmaceutical companies are confident, enough vaccine will be produced commercially to meet virtually all needs. By the end of 1956, the vaccine may well be a 'saler' item in drug stores and doctors' offices, just as penicillin is today.

From here on, then, the problem will be to turn out enough vaccine to meet the demand as quickly and safely as possible. Packing presents no problem. By the time drug manufacturing began to make the vaccine, researchers had perfected techniques for safe packing. Experience in packing antibiotics and other new drugs proved highly useful for the new Salk vaccine.

Nor will testing be a problem. To assure the quality and safety of the final product, the makers have had to run their own field trials to satisfy government inspectors. And under the nation's pure food and drug laws, every batch made is checked carefully before shipment.

In principle, producing the Salk vaccine is relatively simple. But in practice, it is a painstaking 90-day process that requires a high degree of skill and much special equipment. It involves the removal of a kidney from a healthy monkey, and mixing the tissues with culture mediums containing some 50 ingredients.

The kidney tissue must be kept alive through careful incubation, and the medium replaced by a

fresh nutrient containing proper amounts and types of virus strains. The tissue then must be mixed and the virus reactivated so as to kill the disease-producing, but not the immunizing qualities.

For the time being, some regulation in distributing the vaccine is necessary, both in the United States and other lands. But as production is speeded and supplies increased, both domestic and export needs will be met more fully.

Four American companies already have announced plans to ship the vaccine abroad as soon as the supply situation permits. Some companies are offering technical assistance to other countries interested in producing the vaccine.

In the meantime, the vaccine formula and the US test results have been made available abroad. Scientists in other lands already are at work on their own vaccines, many of them based on the Salk techniques and American production methods.

BIF

BIF: NEW PHASE IN DEVELOPMENT

By C. Kenneth Moore

Life, as we have said, begins at 40. For the British Industries Fair, which was born in the May of 1913, and will this year be held at Olympia, London, and Castle Bromwich, Birmingham, from May 2 to 13, this may well prove encouragingly apt. For with early middle age has come independence. The United Kingdom Government, which has been responsible for every BIF in the last 39 years, will still, however, be giving the Fair a helping hand from 1955 onwards.

So often called the 'nation's shop window', the BIF is under new management. Sir Ernest Goodale, who presided over the Committee which recommended this change in management, now heads the six directors of the private company formed to run the Fair.

The ever-increasing effort to maintain the BIF as the world's leading national trade fair will now be the responsibility of businessmen on behalf of businessmen.

The BIF started modestly enough in 1915. It was organised to encourage home industries to make goods which, till the outbreak of World War I, had been imported. In the winter of 1914 the Board of Trade had held a series of small exhibitions throughout Britain to show manufacturers samples of what was formerly bought in Germany and other Continental countries. The high quality of the home-made article prompted the Board to organise a national fair at the Royal Agricultural Hall, London, from May 10 to 21, 1915.

It opened during a fortnight of sensations. On May 7 the liner Lusitania was sunk by a German torpedo; only a quarter of the 2,000 passengers—of whom 1,600 were American—were saved. During the Fair the spy Kuepferle hanged himself in Brixton jail, rebellion broke out in Portugal, the United King-

dom Cabinet was reshuffled and the Italian Cabinet collapsed.

The first BIF had been cheated of headlines—but it had been a success. Nearly 60,000 square feet of space was taken by 591 exhibitors. Among the first of the 34,000 visitors was the late Queen Mary, who was to become the keenest of all the Royal visitors at subsequent Fairs.

Soon after the war ended, action was taken to make the BIF a permanent feature of Britain's export drive. The only breaks in its continuity since, have been in 1925, to avoid clashing with the Empire Exhibition at Wembley, and from 1940-1946.

In 1920 a section for heavy engineering and hardware products was established at Birmingham. The site chosen was a former aircraft hanger at Castle Bromwich which had been bought by the city's Chamber of Commerce. The London section moved to Crystal Palace, where there was 250,000 square feet of space—three times as much as at the London docks. The number of industrial groups was doubled to ten. In 1921 a section of the Fair was started at Glasgow, but the 400-mile spread over three cities proved too big a travel problem, and the section was discontinued.

Meanwhile, the London section still wandered. Crystal Palace gave way to the White City. From 1931-37 both the White City and Olympia were used. In 1938 the recently completed building at Earls Court was exchanged for the White City.

At the last BIF before World War II the exhibition space occupied had grown to more than 800,000 square feet; exhibitors numbered 2,339. But by this time the whole purpose of the Fair had changed. The aim was no longer to show that United Kingdom manufacturers could make the goods that were formerly imported, but to show the world they could meet every new demand of the expanding markets.

Overseas buyers at the BIFs of the 1930's averaged 5,000. They were attracted not only by the continuing high quality of the goods shown, but by a world-wide publicity campaign which from 1926 has been financed by the Government.

When the BIF restarted in 1947 both the London and Birmingham sections continued to grow. In 1951 more than 1,000,000 square feet of space was taken at Olympia, Earls Court and Castle Bromwich. There were 95,455 home buyers and 19,266 from overseas.

Through the years the split personality of the Fair has in no way impaired its vigour. Both sections, working apart but in collaboration, have proved that Britain means business—at its best. There can be no doubt that BIF which now enters a new phase in its continued progress, will continue to do so.

Pakistan

Thanks to the Pakistan Industrial Development Corporation and private enterprise, the country's jute position is considered to be sound. Mr R. E. B. Willcox, leader of the London Jute Association's Official

Delegation, has recently testified to the 'excellent' quality of Pakistan's jute products. There are about 12 modern jute mills, of which eight are already producing enough goods for home consumption as well as for exports. The progress is striking when it is reckoned that, till recently, the country was importing jute goods for meeting her own domestic demand to the tune of Rs 4 crores.

It is not without significance that the country's solidity in jute position has been much appreciated by other countries. It is reassuring for the Pakistani nationals that the PIDC is steadily extending its activities and help to foreign countries as well.

Pakistan's collaboration in the economic sphere (as well as in the defence sector) has been lately sought by Turkey. Two agreements have been entered into between the two countries. Under one, the PIDC has undertaken to participate, with 4 million Turkish liras, in a sack and canvas factory which is to be established in Turkey. Under the Second Agreement, Pakistan will supply sacks and canvas worth a like amount to Turkey.

Of the middle East countries, Turkey is not the first to seek Pakistan's advice and assistance in building up her jute industry. Already, Iraq has established a jute mill with Pakistan's co-operation and Egypt has followed suit.

Pakistan's exports of jute are likely to increase considerably when all the jute mills go into production. Accordingly, the country expects to earn additional foreign exchange of the value of Rs 9 crores from exports from 1956 onwards.

The PIDC is also helping a good deal in the rapid development of the sugar industry. The sugar mill at Mahimaganj, which is one of the two mills the corporation proposed to set up in East Pakistan on the recommendation of the East Pakistan Provincial Industrial Advisory Council, has made rapid strides of progress. The preliminary work on this project has already been completed. Machinery, already shipped from Germany, is expected to reach Chittagong by July next. When completed, the mill will have a daily production capacity of 54,000 mds.

At present the annual consumption of sugar in the province stands at 19 lakh maunds, the highest annual production from the East Pakistan mills being about 10.8 lakhs.

In the case of wheat, the country has attained self-sufficiency. A high-level Food Conference at Karachi has expressed its satisfaction over the present state of the food situation in the country. It is even likely that there will be a wheat reserve this year to the extent of three lakh tons. The Punjab alone has over one-and-a-half lakh tons of wheat in stock.

As a result of a fresh procurement drive in all the provinces and states, the total procurement of wheat is likely to touch the figure of five lakh tons. It is claimed that this figure, added to the present reserve of 3 lakh tons, will enable the country to pass the year without any imports of wheat.

"Insist for your containers on 'BHARAT'. They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 'BHARAT' BARRELS" price is Rs. 24/-. If you do not get 'BHARAT' BARRELS. Write to Box No. 247, BOMBAY."

THE JOINT communique issued at the end of the Asian-African Conference at Bandung embodying "the unanimous decisions" arrived at after a week of frenzied and bitter debate raises once again interesting questions on the psychology of public opinion in our time. I believe that there is a case for a detailed examination by some of the whole question of the effect of semi-public discussion of diplomatic questions on the course of events and the illumination. At least part of our preference for the methods of "open covenants openly arrived at" derives its sanction from our impatience with mysteries, though, in practice, we find the system an embarrassment. Secondly, the problem is complicated by what is by no means a well-defined matter—the ethics of news gathering. There is a school of journalistic morality which carries its pluralistic logic and professional loyalty to lengths that will justify the obtaining and presentation of news without any reference to larger considerations of a different sort. This kind of self-sufficiency is, of course, never openly avowed, if for no other reason, at least for the reason that the State frowns upon supererogations of this sort. In justice to the press, I must say that this attitude was not particularly present at Bandung, though I have seen reports of journalists obtaining access to secret sessions by bogus delegate badges. In any case, there was hardly any need for this kind of stratagem at Bandung, for, it would appear that every delegation was only too anxious to air its views. I do not wish to appear carping, but I have a feeling that there were far too many people at Bandung and quite a few of them with the apparent view that the whole thing was something of a lark.

It is by no means an easy question to answer. In personal conversation, a transparent ruse like this would take in none. Is it possible, in the context of international relations, that there is a sense in which decisions, there is a sense in which unanimity, unavowedly by verbal jugglery with the real differences? Or, in fact, is this brazen con- is it that, is all this cynical re- tradition, there is a cynical re- lliance on the common man's poli- tical ignorance or apathy? On the whole, I am inclined to think, not in a sense, this development in diplomacy is in consonance with the spirit of the age, which does not appear to subscribe to the old Roman dictum that art lies in concealing art. With something

approaching a self-destructive passion, our age would strip every skill to its elements, and takes as much pride in showing how the miracle is wrought as in the mystery of the miracle itself. The conjuror of old was alone with the bitter pride of his real skill, while the populace admired him for something he knew to be unworthy of admiration. Something in the naive and admirable contempt of our age for any kind of pretence makes us want at once the illusion and the illumination. At least part of our preference for the methods of "open covenants openly arrived at" derives its sanction from our impatience with mysteries, though, in practice, we find the system an embarrassment. Secondly, the problem is complicated by what is by no means a well-defined matter—the ethics of news gathering. There is a school of journalistic morality which carries its pluralistic logic and professional loyalty to lengths that will justify the obtaining and presentation of news without any reference to larger considerations of a different sort. This kind of self-sufficiency is, of course, never openly avowed, if for no other reason, at least for the reason that the State frowns upon supererogations of this sort. In justice to the press, I must say that this attitude was not particularly present at Bandung, though I have seen reports of journalists obtaining access to secret sessions by bogus delegate badges. In any case, there was hardly any need for this kind of stratagem at Bandung, for, it would appear that every delegation was only too anxious to air its views. I do not wish to appear carping, but I have a feeling that there were far too many people at Bandung and quite a few of them with the apparent view that the whole thing was something of a lark.

To get back to what I began with: On the whole I think it is better that we should know everything that happened at Bandung rather than be taken in by the alleged communistic of ideals expressed in the final communique. Now we know that there are certain basic rifts among the Asian-African powers and we know the alignments. The interesting fact has emerged that there are three, and not two camps, and that the third that the common peoples will

have to look for saving it from the consequences of the extremism of the other two. And it did reveal a large measure of agreement even on the questions on which there were sharp differences. And, most important of all, the very fact that unanimity, however nominal, was strenuously and doggedly striven for, is paradoxically the greatest guarantee that the unanimity is not entirely hollow. We now know that there are important differences, but we also know that there was a great deal of anxiety to narrow them.

The real importance of the Bandung Conference, as I said last week, does not consist in the formal resolutions passed, but in the fact that, for the first time, representatives of a large section of the world's under-developed countries met and focussed attention on problems both special to themselves and those that they shared with the rest of the world. They exchanged views and had the opportunity of sizing up the leaders of the various countries who shared their problems. Many that went there met the Chinese Prime Minister, Mr Chou En-lai for the first time, and had an opportunity of watching him and listening to him. To the Chinese Prime Minister himself, it was an opportunity for establishing wider contacts outside the charmed circle of the Communist world. Important dents must have been made in the sullen facade of implacable hostility that the committed nations of the two blocs presented each other at the Conference. I do not know how far Mr Chou has been persuaded to modify his views on Russian righteousness in the context of the cold war ethics, but he would have to be either completely impervious to suggestion or absurdly naive, if he did not realise at the end of the Conference that there is a large body of world opinion which, while not taking sides, does not consider the Communists paragons of virtue. This mutual education of the committed nations of Asia is, I believe, of profound importance to the future of world events.

The personality of the Conference was undoubtedly Chou. Depending upon whether you are a friend or enemy of China, you may

Confucius). His studied snub of the United Nations in the beginning, and the final yielding on the inclusion of references to the United Nations Charter, was a brilliant piece of tactics. In effect, he seemed to say: "I am only a poor relation; and how should I know

about the goings-on at the big house?" And then he allowed himself to be instructed on what the Charter had to say. And finally, he said with an air of agreeable surprise, "now, if that is not interesting! Is it not what I have all along wanted? What a

fool I was to oppose it!" Once again, he was putting the United Nations in the wrong for excluding one who is ready to obey its mandates from its counsels. During the debate on world peace, he gently insinuated the fact that Sir Anthony Eden has, on Nehru's

testimony, supported the Panch-Sila. And he went on to say that Pakistan had conceded that China had no aggressive intention. He paused for a brief moment, when he allowed Mr Mahommed Ali to do his affirmation and destroy, by that gesture, his principal thesis about world Communism's subversive proclivities. Then he went on blandly extending invitations to Thailand and the Philippines to send observers to China to see the border and coastal areas and satisfy themselves about China's peaceful intentions. Again, the SEADO group found itself getting red in the face.

Outside the Conference hall, he was indefatigable in cultivating the delegates and made a point of making himself agreeable. And the two acts of immediate diplomatic importance at the Conference were those of Chou. He predated the agreement on the dual nationalities of Chinese in Indonesia, and thus took the wind out of the sails of one criticism of Communist China's role in Asia. The timing of the agreement was perfect. Secondly, his epoch-making offer to discuss Formosa with the United States was by far the most cheerful news on the Far Eastern situation that we have had for some time now. American reaction to this has been so shockingly ill-considered, that, at least in Asian eyes, Chou has shot up in stature. Even a friendly Western observer like Vernon Bartlett, now in Bandung, reported to the BBC that the "hasty reaction" has been 'disastrous' to American prestige at Bandung. It is ironical that America, which was very anxious that the Chinese should not be allowed to 'exploit' (in the words of the egregious young gentleman of the British Embassy at Tokyo) the Bandung Conference, and went to such pains in briefing the SEADO countries to interpolate its point of view in the final communique, should have by this blunder played right into the hands of China. Chou would indeed be hardly human if, even on the premise that the offer was just a stunt, he did not think that he had reasons to be satisfied with the Bandung Conference.

The most interesting thing about Chou's behaviour throughout was his complete lack of self-consciousness and the way in which he did not give the impression that he was just an appendage of Russia. Ironically again, it was the SEADO nations that clearly spoke in a falsetto that is familiar to the film-goers in this country, who are used to that admirable race called "play-back singers."

As might be expected, Mr Wadia feels disturbed by the amendment of the Constitution, which allots the Chinese Prime Minister was inevitably the principal object of interest

turning oil
into petrol

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery—and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil—in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil—the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

Need for Liaison

THAT facet of the cotton mill industry which belongs to Ahmedabad was dealt with in these columns in last week's issue. We are now provided with the opportunity to have for ourselves a more complete picture of the World of Cotton as it obtains in this part of India with the occurrence of the annual general meeting of the Bombay Millowners' Association. The Millowners' Association can well be said to be both the representative and the authoritative voice for and on behalf of the mill interests around the Gateway of India. And, so important has been the Association to the life of this city, that its management has always been in the hands of a distinguished body of industrialists. It fell to Mr Neville N. Wadia, scion of a family that is renowned for the eminent pioneering tasks that it undertook in the field of cotton textiles, to address the annual meeting of the Millowners' Association.

There is, then, a double interest that we have in the speech that was made. Primarily, of course, it is of importance in that it presents us with a forthright indication of the sentiments and attitudes of management in the mill industry. Secondly, that the address should have been by Mr Wadia provides additional interest because his are words which emanate from a person who has been born, as it were, with cotton textiles in his blood. With this twofold interest, I turned to Mr Wadia's speech to discover to what extent the address would prove to be a confirmation of the views that had been expressed so succinctly by Mr Hutcheson just a few days earlier. Also, I was very keen to find out Mr Wadia's views on what will undoubtedly be the two most important aspects in the India of tomorrow: industry's relations with Government and industry's relations with labour.

In passing, we might note that Mr Wadia has been appreciative of the peculiar complaints that were voiced by the delegation that came from the United Kingdom—a delegation which had as its motive a scaling down of import duties on Lancashire goods. Also, in passing, Mr Wadia has dealt with such subjects as the Employees' State Insurance Act—a measure which is significant in that it seeks to provide social security to the worker, but a measure which has been subjected to criticism both from workers and to the medical profession because of the implications of some of its details.

As might be expected, Mr Wadia feels disturbed by the amendment of the Constitution, which allots the Chinese Prime Minister was inevitably the principal object of interest

scrupulous than the Congress come to power, it would be able to upset the equilibrium of industrial relations.

Again, the proposed amendments to Section 23(A) of the Indian Income-tax Act caused Mr Wadia some anxiety because, as he put it, while, over the short-term view, the peremptory distribution of 60 per cent of profits as dividends would yield the Exchequer more by way of personal income-tax, in the long run, industrial expansion would be handicapped and the Indian economy, consequently, would lose rather than gain.

Equally, it was to be expected that Mr Wadia should have harboured some misgivings about the proposed changes in Company Law, which serve to handcuff the managing agency system, if not to do away with it altogether. In this case, Mr Wadia's suggestion is that the aim of preventing the concentration of power within a small group would be served as well by a measure such as Great Britain has adopted which declares war on monopolies and cartels.

We might deal, then, with these points raised by Mr Wadia before we proceed with the consideration of the two most important matters that I have indicated early in this article.

As far as concerns the Employees State Insurance Scheme, it is almost inevitable that we should find hurdles and difficulties at every step. It is a new India that is trying to evolve a new socialistic pattern; and, in that pattern, new India is trying to fit in a measure which will provide social security for the industrial worker. The worker, for his part, long suffering as he might be, might feel resentful that more is not being done for him than he could desire. Similarly, on the other half of the equation, it is inescapable that the feeling should arise that much more ambitiously is being tackled than we in India have a right to do in such a short period of years. Thus, there will be room for misunderstanding, causes for anxiety, occasions of doubt, instances of diffidence. But these will disappear only by the practical experience that we can gain by working on the scheme. It will do us little good that the scheme is not tried at all. It is much better that we should try, and having tried, that we discover the problems, and having discovered the problems, that we strive to solve them. In other words, the key-words will be co-operation and patience, just as co-operation will be the slogan on which new India can be built.

It is understandable that, as an industrialist, as a trustee in behalf of

shareholders, Mr Wadia should feel perturbed that Parliament has taken upon itself powers which might make his guardianship impossible. This, however, is a contingency that will arise only when there is a drastic change in the composition of Parliament and in the composition of the Government. On such a day, we may be sure that, whether or not there will be such constitutional powers or Parliamentary powers, a revolutionary government would care little for the rights and privileges conferred by a constitution. In other words, I rather think that industry today has to think in terms of strengthening a government which it knows to be scrupulously fair. In such strengthening lies the greatest safeguard for private property—not any opposition to powers that have been taken upon itself by Parliament.

Mr Wadia's fear in regard to Section 23 (A) may, consequent to the amendments that Sir Chintaman Deshmukh has proposed to the Finance Bill, now appear to be somewhat overdone. If Mr Wadia has as his chief ground for complaint the fact that industries required to distribute 60 per cent of profits would not be in a position to set up adequate reserves for expansion, Sir Chintaman's amendments largely answer his complaint. The new definition of a private company (for purposes of income-tax) has been relaxed in the case of industrial units. So long as a minimum of 40 per cent of share capital is dispersed among the public, the industrial unit has no longer to fear that it will be prevented from ploughing back profits for expansion. Thus, the industrial unit to-day can guard against cornering activities and, at the same time, fail to attract Section 23(A). Management, if it so desires, can ensure a majority holding in a company—without the fear that, in so doing, it will subject the company to be held a private company.

Finally, Mr Wadia's thoughtful words on the future of managing agency companies should, I feel, receive the studied attention of our law-makers in New Delhi. To disrupt a system which has unquestionably provided India with what industry we have is surely indicative of both a lack of gratitude and a lack of foresight. It is ingratitude because the managing agency system has done well by India—within its abilities. It is also lack of foresight, because the managing agency system is one which has worked efficiently and advantageously. And, in the industrial expansion which this country must see over the next few years, management ability will not be a commodity available over-abundantly; and the managing agency system is a ready provider of that administrative efficiency and 'know-how' that industrial expansion will

call for. I do not know what exactly the new enactment in the United Kingdom is which prevents monopolies and cartels. I am sure, however, that it is a measure which it would be easy for India to assimilate in our Companies Act.

We now come to the vexing problem of the India of tomorrow—a problem that will be governed by the effectiveness or otherwise of the partnership between the State and the private sector, on the one hand, and between management and labour, on the other. In respect of both of these, Mr Wadia's views are reassuring. He revealed that there has been an instance in which panels are to be set up with representatives both from management and labour; and such panels have it as their purpose to try and resolve a number of points which otherwise, as presently happens, have to be taken to the Court. There can be no doubt that the speed in expansion can be guaranteed only by co-operation. Co-operation of two sorts is necessary. In the first place, there must be recognition by labour that, more than any governmental revolution, it is increased productivity and efficiency which will enable the management to provide more amenities for the workers. To base demands on so-called rights and privileges will never be fruitful in the long run, unless the case for these demands is buttressed by work done in the acceptance and performance of duties and responsibilities. We can take it that management would be equally aware of the vital need to secure the co-operation of labour; no legislation can increase productivity, it is labour which alone can increase its own efficiency. In this view, in the mutual recognition of this mutual co-operation, we must hope that both management and labour will display that patience and perseverance with which the ends of increased production and increased amenities will both be secured.

If co-operation between labour and management is essential, no less essential is proper liaison between the State and the private sector. This Journal has said it before that the key word to progress will be co-operative co-existence. A maze of laws that takes no account of what may be the difficulties of particular industries is something which we must avoid in the larger interests of Indian industries. As such, Mr Wadia's plea that a liaison body should be set up, composed of representatives of industry, is an idea that is to be welcomed. If co-operation is to be the key word, the first step towards ensuring such co-operation can well be the establishment of a liaison body such as Mr Wadia has called for. I wish Mr Wadia would give us a detailed plan for the liaison body that he has in mind.

Gateway Notes

Interdependence of the two
Sectors

The basis of co-existence of public and private sectors in industry is not some ideological compromise reached after a long-drawn discussion. The most important and undeniable reason for their simultaneous and vigorous functioning is that there is need and scope for both. The platform of national development is broad enough to contain both.

This has been increasingly appreciated, of late, by leaders of private enterprise. Ideological barriers have been progressively removed and a spirit of co-operation is noticeable more than ever.

The annual convention of the M. I. T. Alumni Association last week in Bombay offered a striking illustration of friendly competition rather than of a half-hearted compromise brought about by circumstance.

Mr Morarji Desai, who addressed the Convention, said, in characteristic manner, that he was not at all concerned with the controversy over public and private sectors. It looks as if the controversial stage has passed.

Mr S. L. Kiroloskar, who also spoke on the occasion, was not concerned with making out a case for private enterprise. He confined himself to criticising constructively certain Government policies.

Mr Kiroloskar has rightly pointed out that the task of the public sector does not end with the starting of new industries. He enunciated two functions that properly and entirely belonged to that sector. First, there was the question of essential capital formation in the form of roads, railways, communication, irrigation, etc. Progress in this direction will have to be at a quickened pace to enable private entrepreneurs to increase their capital investment.

This aspect of public capital as an inducement to private capital to which Mr Kiroloskar refers, is more significant than it appears to be. The bulk of the private sector is destined to be constituted by small enterprises, rather than by giant concerns. To build a sound basement for development, more and more of them have to come into being. And this cannot be achieved without giving greater incentives.

The second function of the public sector, as Mr Kiroloskar sees it, is to ensure demand for industrial as well as agricultural produce. By implication, he is questioning the wisdom of the school of thought which favours curbing of present consumption in order to increase savings. His views, on this issue, deserve the attention of formulators of policy.

He was critical of the fact that during the First Plan the number of new industries established was negligible—a lacuna that must be made good in the next plan.

Indian Interests and Lancashire:

There have been discussions in the Press and across the table over the intricate problem of easing the difficulties experienced by the textile interests of Lancashire. An authorised proposal in the matter has, however, not been made as yet by either the UK or India. According to the President of the British Board of Trade, the UK Government's stand will be fully clarified very shortly.

As far as any inference can be made from the views expressed by the British Minister in the Board of Trade, Mr. A. R. W. Low, during his visit to India, Britain is eager to maintain and strengthen the political and economic ties between the two countries. The recent visit of the British Textile Mission has served further to sharpen the edge of realism in the British policy.

The problem is, in main, one of Britain; and apparently, it is for the British to suggest a solution. But the attitude of the Indian Government is not just to say 'yes' or 'no' to any suggestion from the other party.

The Government of India are equally anxious that a solution be found amicable to both countries. Mr H. V. R. Iengar, Secretary of the Ministry of Commerce and Industry, told the annual meeting of the Indian Council of Foreign Trade at Bombay: 'It is necessary for us to understand the difficulties of the British and for them to suggest a solution. We can modify or even reject their suggestions. But we cannot quarrel with them. Some solution is needed.'

It stands to the credit of the leaders of British textile industry to have appreciated the aspirations of the Indian industry. From the Indian point of view, the recent growth of our export trade with the UK is purely a normal commercial phenomenon. And, any significant reduction of import duties or enhancement of export duties will have adverse effects on the domestic enterprise.

One way of solution is to restrict the quota of Indian textile imports with Britain, or put duties on such imports. But, as Mr Iengar pointed out, these were against the British concept of free trade.

A possible way out, therefore, seems to be to effect a judicious and

well-planned increase in British textile exports to India. Indian interests have shown remarkable responsiveness to the Textile Mission's suggestion to set apart for imports certain varieties, particularly those of fine quality that are not produced in India.

It may be hoped that the fine gestures shown on both sides will not turn futile.

Employee's Insurance in Hyderabad:

Yet another State to implement the Employees' State Insurance Scheme is Hyderabad which inaugurated it last week. Over 18,000 factory workers in Hyderabad, Secunderabad and suburbs are expected to be benefited.

The Southern States, though started late in the field, are quickly catching up with the North. To date, the number of beneficiaries of the Scheme comes to about seven and a half lakhs, which is calculated to be nearly one-third of the insurable population.

Bombay, Nagpur, Delhi, Kanpur, Colmbatore and several industrial centres in the Punjab and Madhya Bharat are already operating the scheme. It seems to be only a matter of time for other centres like Calcutta, Madras, Bangalore, etc to follow suit.

The Employees' State Insurance provides for five benefits. Apart from medical care, cash benefits are provided in sickness, maternity and employment injury; if the injury causes death, the dependents are entitled to a pension.

There has been a persistent demand on the part of the working population to get themselves insured,

mainly on account of the character of the Scheme as a means of social security.

From the working of the Scheme elsewhere, it is clear that good ethics and half-heartedness do not mix. For its successful implementation it has to muster all the support of the State and Union Governments, the employer, the employee and the medical profession.

The human element apart, the working of this highly useful programme demands a correct assessment of the number and the residential concentrations of workers. According to their needs, medical facilities have to be improved from time to time qualitatively and quantitatively.

Medical care under the scheme, has two aspects: one, to add and improve the already existing medical facilities and the second, to ensure free domiciliary medical care to those who are too ill to go to the dispensary.

It is by no means easy for the employer to provide both outpatient and home care to their workers. But attention should be paid to see that dispensaries and other arrangements are within easy reach of insured persons. Mobile dispensaries may help greatly to secure this end.

Recently, many complaints were aired by the insured workers of Bombay and elsewhere. It may be that the new scheme is having its teething troubles. But one thing cannot escape attention and that is the policy of the authorities concerned must have to be more in tune with the workers' need. In the light of the experience in other States, Hyderabad can possibly make the scheme serve its full purpose.

World of Cotton

Hesitant Tendency in Futures

THE Cotton market has staged a modest rally, influenced by somewhat firmer advices from the spot section. The spot section was rather buoyed up on buying of better quality produce, realising higher prices in view of dearth of quality cotton this season, though the production, as indicated last week, reached pre-partition level. In view of the active domestic demand for cloth, mills were in the market eagerly seeking for supplies of good quality raw material. Thus, the tendency in spot turned firm and this was reflected to a small extent in the futures section. The response, however, was not so well in view of the uncertainty about the tenders in the maturing May contract. Expectations were, however, entertained that the stockists would try to pass as much of cotton on docket in the maturing delivery itself rather than wait till August. The basis fixed for tenderable varieties of fine cotton against May delivery has been considered more or less reasonable as it will be evident from the following table:

Among foreign varieties, American good middling 15/32" was reported at Rs 1,585; Kampe BP52 African at Rs 1,630 to Rs 1,640; Karan at Rs 2,200 and Gara at Rs 1,800. Business, however, in foreign varieties was spasmodic.

M. P. Cotton Crop:

The cotton crop in Madhya Pradesh for the 1954-55 season is estimated at 8.55 lakh bales as compared with 1953-54 crop of 7.15 lakh bales. As against the quantitative increase, there has been a general qualitative decline, most of the cotton being of 11/32" to 25/32". The sharp fall in prices has badly hit both farmers and traders in the State. There are still about 175,000 bales lying unsold with the traders of the State.

Cotton Imports:

The Joint Chief Controller of Exports, Bombay, has announced the procedure for import of US Aid Cotton. It has been pointed out that importers of raw cotton of staple length 1.1/16" and above from the US should inform their suppliers that the transaction was being financed by the Foreign Operations Administration. The relevant procurement authorisation numbers and the special provisions affecting the suppliers in carrying out the transaction should be made known to the supplier. No contract entered into before April 4, 1955 would be eligible for being financed under this sub-authorisation. Contracts must be made on or before October 15. Another condition is, that at least 50 per cent of the linear tonnage or 50 per cent of the tramp tonnage and 50 per cent of the tanker tonnage should be shipped on US flag vessels.

Imports of foreign cotton from 1st September 1954 to 21st April 1955 have totalled 278,150 bales as against 320,621 bales for the corresponding period of last year. Particulars are as follows:—

	(In bales of 50 lbs. each)	1954-55	1953-54
American		22,491	50,091
East African		96,899	69,015
Sudan		22,599	25,631
Others		250	..
Total		278,150	320,621

Foreign Cotton:

The US Administration has still not decided as to whether cotton exports should be subsidised next season. The market, however, has rallied rather bearishly with the July position at 33.70 cents as against 33.45 cents a week back. Exports of cotton from America this season are still about 3 lakhs bales lower than last year. The crop next season will be supported at 90 per cent parity and changes, if any, made in price support, will apply only to the 1956-1957 cotton year. Meanwhile, the Department of Agriculture has offered for sale 750,000 bales surplus cotton at 105 per cent of the current cotton support price plus carrying charges or the domestic market price whichever is higher.

The Egyptian cotton market has ruled steadier with better inquiry in Karnak. Prices of Ashmouni and Giza-30 were unchanged.

The Sudan market has been ruling easier in the absence of buyers at the successive auctions.

The Karachi cotton market has ruled better during the week with

the forward NT RG May improving up to Rs 65. Sind Deshi was unchanged at Rs 59; Punjab Deshi at Rs 51-8; 4F Roller at Rs 59-8; 289F Punjab Roller at Rs 67-8 and 289F NT Roller at Rs 67-8. Cotton endorsed for export up to 7th April came to 447,705 bales as against 802,965 last year.

Cloth Market:

The Cloth market is still in good shape due to sustained domestic demand. It is mainly on account of marriage season that demand has picked up. It is expected, however, to slacken after a fortnight. Export demand is still on a small scale. Exports of mill-made cloth, during the first quarter of 1955, were lower at 192.5 million yards as against 232.9 million yards, showing a decline of 40.4 million yards or 17 per cent. On the other hand, the output of cloth for the quarter has gone up to 1268 million yards as against 1221 million yards in the corresponding quarter of 1954. The production of yarn is also higher at 355 million lbs. as against 379 million lbs. in the same quarter in 1954.

GATEWAY MARKETS

Gold & Silver

BULLISH fervour has once again hit the Bullion Exchange and, in the recent upward trend, prices have hit new high levels on active support from bulls as well as nervous short-covering. The Calcutta operators, who were heavily short both in gold as well as silver, covered partially his sales with a view to avoid further losses as the bulls were the masters of the situation. Even the deterrent payments of margin in the case of gold at the rate of Rs 7 per tola and in silver at the rate of Rs 500 per bar for Baisakh delivery did not prevent them from exploiting the situation in their favour. The Board, however, was reported to be marking time as to whether to impose margin in the next Jeth settlement, though the general view was that all the settlements are considered current and the situation warranted imposition of margin under the bye-law 33d. It may be here noted that the majority view in the Bullion Board favours the bulls and as such nothing has been done so far for imposing margin in Jeth. The offtake in both gold as well as silver has remained excellent. As indicated last week, the floating supplies in gold have been negligible due to sustained demand on account of the marriage season, while the attachment of a parcel of about 3,100 tolas of smuggled gold has unnerved the spot dealers who have been trying to remain aloof from

such unauthorised activities. It is expected that the demand will continue for another week or so and hence for a few days more, the bullion market might continue to present a firm front.

Silver Baisakh delivery moved up to Rs 167-8 from Rs 163-5, to react to Rs 167-0, while Jeth delivery was quoted at a discount of Rs 2-12 at Rs 164-4 and Ashad Rs 5 discount at Rs 162-0. The spot silver was quoted at a premium of Rs 3-4 over Baisakh delivery. It may be noted here that spot silver prices recorded new high level after a lapse of one year. Floating stocks of silver in Bombay are estimated at only 600 bars whereas the estimate for all India is about 3,000 bars.

Gold prices have recorded new high level after a lapse of more than three years. Floating stocks are hardly 15,000 tolas in the Bombay market, while demand remains large. Gold for Baisakh delivery after early setback to Rs 93-8 from Rs 94-4 advanced to Rs 95-14, to be placed at Rs 95-10. Jeth delivery was quoted at a discount of Re 1-5 at Rs 94-5 and Ashad Rs 2-2 discount at Rs 93-8. The spot prices commanded a premium of Re 1-12 over Baisakh delivery. Sovereign prices improved further to Rs 61-4 in the wake of gold.

Distribution of the world's monetary gold stocks have not suffered major changes since 1943. Great

Defence of Budget and Economic Policy

THE number of questions put and the issues raised in the Lok Sabha, during the debate on the Finance Bill, reflect the vastly expansive and far-flung functions which the national Budget has come to represent since the advent of planned economy.

One or two members strayed into regions which did not belong even to this wide range for which the Finance Minister was answerable. In certain other instances, the Commerce and Industries Ministry would have been the more proper source to be addressed, though the telescoping of jurisdictions between one Ministry and another has become so unavoidable that a certain amount of overlapping and confusion has become the inevitable result.

Incidentally, this confusion was the major reason for the misunderstandings which led to the resignation of the Commerce Minister; though the resignation was withdrawn, the confusion seems to continue.

I am referring only to the speech of Sri Manilal C. Shah, Minister of Revenue and Civil Expenditure, made on April 20. As Sir Chintaman Dutt, mukh was indisposed, Sri Shah had to reply on his behalf.

At the outset the Revenue Minister confessed that he would not deal with all the innumerable points raised during the nearly ten hours debate in which 35 members expressed their views. He had only forty minutes at his disposal. But it should be said to his credit that he made the best use of these forty minutes and covered nearly all the more important issues which needed clarification.

As points about shipping were raised by four members, the Minister felt impelled to discuss this subject before he started dealing with questions relating to general economic policy, the Five-Year Plan and the fiscal changes.

At the outset he resisted any possible impression that the Government were not aware of the importance of Indian Shipping, and he pointed out that it would be most unfair to make the charge that the Government were neglecting the Indian Shipping industry.

The facts summarised by him were intended to show that, far from neglecting it, the Government were doing their utmost to promote the interests of Indian Shipping in every possible manner.

Indian Companies are receiving financial assistance at 24 per cent for over-seas voyages and similar

concession rates for coastal voyages. The Government have already sanctioned Rs 19.5 crores for the purchase of coastal and overseas shipping lines and a further sum of Rs 4 crores would have been sanctioned before the end of the First Five-Year Plan period.

Ship-building at Vizagapatam is being subsidised. 13 ships with a total tonnage of 96,245 have so far been constructed and supplied by this shipyard. Another 6 ships are under construction and orders are pending with the yard for yet another 5 or 6 new ships.

The Government have also decided to acquire a fleet of medium-sized tankers for coastal operations at a cost of Rs 2 crores.

There is a well-known controversy over the buying of chartered vessels for coastal traffic and the associated question of Indian shipping plying overseas traffic. Such controversial issues are to be examined in full detail by a commission which the Transport Ministry has proposed to appoint. It is hoped that as a result of the labours of this commission coastal ships would be provided fuller employment and there would be greater co-ordination between rail and sea transport.

As a result of the reservation of coastal traffic to Indian shipping, this traffic now approximates 25 lakhs tons per year, with the total freight and passenger earnings amounting to Rs 12 crores. The Indian Shipping Companies in the overseas trade are earning about Rs 8.5 crores; overseas traffic by Indian Shipping has also expanded.

As regards the transport of oil from the oil refineries in India, the agreement with the oil companies allowed free choice of tankers of any flag for coastal transport.

The Minister for Revenue indicated that there might be an increase in the target for the next Five-Year Plan.

The Minister then turned to the criticisms made on some of the taxation proposals. One of the criticisms was that the new changes tended to favour the rich. It was alleged by a member that certain companies had made during the past 6 or 7 years as much as 300 per cent profit on their paid-up capital, and that a Managing Agency earned Rs 1 crore per year from a Company with a paid-up capital of Rs 3 crores and 60 lakhs.

The Minister expressed inability to give credence to these figures; they appeared to him gross

exaggerations. He could point out in reply that the Government were taxing up to 81.7 per cent on incomes of Rs 5 lakhs and above and that rich men could not get away easily with enormous residual earnings.

The tightening of section 23A was intended to cover a range of incomes in which evasion of tax was possible. Under the revised Section, it was not possible to corner profits even to the extent possible before, which itself was not very much. The talk of any discriminatory treatment in favour of the rich was thus shown to be illogical and incorrect.

Then there was the charge of discrimination in favour of foreigners. Here again, as the foreigner was in every respect on a par with the Indian national in respect of taxation, the Minister could maintain that there was no basis for any such charge.

As for the extension of the Development Rebate to all Companies as against the Taxation Commission's recommendation that it should be confined to certain selected industries, Sri Shah drew attention to the need for giving encouragement to small-scale industries and units with a capital of less than Rs. 5 lakhs, which were exempted from the operation of the Capital Issues Act.

For others, there was little scope for indiscriminate encouragement, because there was the Capital Issues Act, there was the Industries Regulation Act and a Licensing Board, all of which were intended to ensure that investment proceeded on a co-ordinated basis and that there was no over-lapping or waste.

With reference to the charge that out of the innumerable recommendations of the Taxation Enquiry Commission, this year's Budget embodied only two or three, the Minister disclosed that at the time of framing the Budget, the Government had not studied the entire Report of the Commission sufficiently carefully and could not make up their mind to which of their recommendations could be implemented and which could not.

Those who recall the Finance Minister's budget speech might discover a slight discrepancy between what he said on that occasion with reference to the Government's study of the Taxation Enquiry Commission's recommendations and the relation the Budget bore to it and what the Minister for Revenue has said subsequently. Perhaps it is only a difference in wording. Factually, both are on the same ground, because, only those recommendations which could be

implemented immediately had received the most careful scrutiny.

The reference to the proceeds from Death Duty is rather amusing. Perhaps the Finance Minister was either indiscrete or hasty in anticipating an income of Rs 4 to 5 crores in the first year. He certainly had no inkling of the divine mind. Anyway, he quickly recognised the error and reduced his expectations by Rs 2 crores. Strangely enough, the collections have not come even up to this reduced level. Why any Member of Parliament should find fault with the Finance Ministry for this looks strange. The Minister for Revenue has been humble enough to give unto God what is His. "It is not in the hands of the Government to have the proceeds as they like it to be. It depends on the person dying having big properties and it is in the hands of the Almighty God. But he has not failed to do his duty even in a province which he recognises completely beyond human control. Just as the Almighty God has helped to secure self-sufficiency in agricultural produce, the Minister seems inclined to hope that there would be divine help in the matter of Estate Duty collections as well!"

In the speech, the Minister also felt impelled to digress on the controversy of consumption versus investment in an underdeveloped economy. Wishing with due modesty that the Finance Minister would have been the better person to provide light on this subject, Sri Shah proceeded to argue that unlike in a developed economy where resources are fully employed, in an undeveloped economy such as India it is not correct to postulate any unalterable link between investment and consumption; in India the one is not always a sure alternative of the other and it cannot be maintained that the one could be had only at the expense of the other. It was not necessary to reduce current consumption in order to find more resources for investment. So far, the Minister found himself in agreement with the position taken up by the business community in general.

But he does not see his way to go the whole hog with them. What he wants is a relative sacrifice, the increase in consumption keeping behind the increase in aggregate output so that a certain proportion of the additional output could be ploughed back into investment. In other words he conceives a condition in which both output and consumption gain, the first more than the second.

Fourth Amendment

The near unanimity with which the Constitution (Fourth Amendment) Bill was passed in the Lok Sabha reflects clearly the usefulness of the reform contemplated in the matter of compensation payable to property-owners. For such thumping success in the House, Pandit Pant's elucidation of the various points was largely helpful.

Pandit Pant made it clear that, apart from its usefulness, the Amendment was also necessary.

The necessity for this springs from the fact that, in the acquisition of private property by the State for schemes of social reform, the Government could not, in the interests of the common man, afford to pay the full market value.

It has, therefore, to be accepted, asserts the Home Minister with a trip-hammer strokes, that an amendment of Article 31 (2) is inevitable.

Granting its inevitability, the question now arises as to how the measure is to be used. Certainly, it does not say that compensation will not be paid. But the compensation that will be paid will be "appropriate to the circumstances".

Secondly, it will be determined with due regard to all factors, some of which will be outside the jurisdiction of the courts. Reason: The country cannot afford to pay what the courts consider just and equitable.

This does not, however, amount to saying that justifiability has been eliminated. If the compensation is only "illusory" or if it comes to a "fraud" on the Constitution, the courts will have every right to intervene.

In sum, it can be said that the Bill invests the Parliament with ultimate authority for the fixation of compensation. And the decision of the Legislature will not be arbitrary, since "the basic principles of justice, equity and good conscience" would guide its action.

Nevertheless, the problem is not so simple as at first sight appears. There are a few unresolved issues.

In the first place, it is doubtful whether the new Amendment is in strict conformity with what the framers of the Constitution had intended it to be. In all the stages of the debate, the counter points that necessitated a substantial revision of the Bill in Committee were based on this assumption of doubt.

Next, it leaves room for one to suspect whether the case for this Bill was the need for smooth and less costly social reforms or for immediate realisation of the socialistic pattern of society envisaged at Avadi. Finally, the Government's compensation on the appropriate

tion to be paid will have to be made against the claims of particular cases, let alone the State's ability to afford it.

The Bill, when properly weighed, need not make the property-owners panicky. For while the Centre will be guided by "good conscience", the States' action in this matter has been further circumscribed by the need to secure the President's approval.

After all, as Pandit Pant said, there should not be much grudge since property is "only a creature of the State".

National Volunteer Force:

Spurred on by the success of the Auxiliary Territorial Force Scheme sponsored on a small scale in 1953, the Government of India have decided to enlarge it into a National Volunteer Force.

This decision follows the suggestion made by the Central Advisory Committee at its last meeting held under the Chairmanship of the Prime Minister.

Accordingly, thirty-four new camps will start functioning from May 1, in different parts of the country, to give elementary military training to persons between eighteen and forty.

The period of training will last for thirty days during which educational instruction will also be given. The illiterates will be initiated to the art of reading and writing Hindi, while the others will receive lectures on the Five-Year Plan, Community Projects and organisation of civil district.

According to this plan, it is proposed to train 100,000 men by the end of March 1956. And the target set under the scheme is 500,000 men in five years. The Defence Minister has recently pointed out that the target may be considerably increased, should the response from the people be encouraging.

There is little reason to be sceptical about people's response. Already the precursor of this movement has demonstrated beyond doubt not only the increasing demand for such training, but for extending the period of training as well.

Above all, the concept on which this scheme has been based is highly commendable: There is, in fact, a clear recognition of the need for moving with the spirit of the times.

It is explained that, side by side with economic development, people should shape as disciplined citizens, with confidence and self-reliance, and that, for the purpose of developing these qualities, a little military training and self-reliance would

be the quickest and the most effective method.

The supreme merit of this movement would appear to be the inculcation of a desire for national service on a voluntary basis. The camps, it is proposed, will be held, as far as possible, in Community or National Extension Service areas in order to bring the trainees into closer contact with the development work in the country.

The success of the scheme will be watched with interest. It is backed by popular appeal; and its enlarged field of activity should no doubt facilitate central planning and administration in the not too distant future.

Tourism in India:

The ninth meeting of the Central Tourist Traffic Advisory Committee has approved of a six-year plan for the development of tourism in the country. The plan, estimated to cost Rs 15 crores, was drawn up by the Government of India in consultation with State Governments.

Mr O. V. Alagesan, Deputy Minister for Transport and Railways, has outlined the main features of the Plan. Its implementation will be brought under two stages—the first during the next three years including the last year of the present Five-Year Plan, and the second covering the period 1958 to 1961.

Under the first stage, 80 important places of tourist interest would be developed. A number of youth hostels would also be built and assistance provided to non-Governmental tourist bureaus and Associations.

Under the second, facilities would be provided for lower income group tourists with further progress in promoting social tourism.

As very important as the development of tourism is the need for publicity to be given to these schemes. The Committee, in recognition of this need, has approved a publicity programme which envisages the publication of a large number of pamphlets and folders in three foreign languages besides English and six Indian languages.

Tourist publicity, it was agreed, would also be stepped up in the countries of South-East Asia and Middle East.

For this purpose, guides would be trained in India in more number of places, other than in Bombay and Delhi as at present.

The initiation of the scheme during the last year of the Plan is to be hailed. It seems to be a well-planned and timely one. For, Buddhist pilgrims, in vast numbers, are expected to come to India in 1956 on the occasion of the 2500th Buddha Jayanti.

What is more, the International Union of Official Travel Organisations

tion, which will be holding its annual session in India in October, could well stand seized of the encouragement that the development of tourism receives in this country.

By deciding on such development measures at the right moment, the Government have taken the opportunity by the forelock. Partly because of the benefits this plan brings to this country (by way of additional foreign exchange) as well as to the tourists, its scope may profitably be enlarged in the years to come.

Progress of Small Industries:

The small-scale Industries Board, set up by the Ministry of Commerce and Industry, discussed last week the schemes submitted to it by the State Governments for the development of these industries.

The total cost of the schemes for development in 1955-56 is put at Rs 5 crores.

For speeding up the execution of these schemes, the Board has recommended the setting up of a small ad hoc committee.

Concerning the quantum and manner of Central assistance, it was agreed that the existing pattern of Central aid, under which the Centre bears 50 per cent of the recurring expenditure on a scheme, 75 per cent of the non-recurring expenditure and 100 per cent of the capital required, should be continued for some of the schemes, while for others new patterns would be evolved.

Further, in view of greater emphasis being laid on small industries under the Second Plan, the Board has urged the strengthening of the administrative organisation at the State level. Each State will have a top-level officer for dealing exclusively with the schemes.

A training programme has also been accepted in principle under which 200 engineering graduates will be trained in small industries. After training, they would be available for work in Community Project blocks.

Assuring Prospect

Mr M. A. Chidambaram's presidential address at the Annual General Meeting of the South India Chamber of Commerce was candid, matter-of-fact and critical without being unfriendly. As a leading spokesman of the business community of the South, he presented their viewpoint without reserve. It is remarkable that in so doing, he utterly resists the contemporary temptation of mudslinging at the Government and the public sector with a view to vindicate the doings of private enterprise.

As Mr Chidambaram sees it, the private sector is not to be served by an apologetic tone nor does it stand in need of one. The all-round progress, the industries in that sector witnessed in 1954, is there for all to see.
